NOTES OF THE WEEK.

The progress of the operations at the Dardanelles formed the subject of a model *communiqué* issued jointly by the War Office and Admiralty last week. For the first time something in the nature of the picturesque details associated with "Eye-Witness'" reports was attempted in an official dispatch. The disembarkation of the troops, we are told, began before sunrise, and was carried out on six different beaches. As these places were distributed along some twenty-five miles of the coast, it says much for Turkish preparations under German instructions that at each point our forces should have met with vigorous opposition, finding the enemy "strongly entrenched in successive lines protected by barbed wire entanglements, in some places fifty yards wide and supported by artillery." To these obstacles were added wire entanglements under the sea, land mines and deep pits with spikes at the bottom. In these circumstances the success of the landing operations merits all the praise accorded to it by the Admiral. The movement was not carried out without heavy loss, and we must be prepared for further sacrifices before the goal of the Fleet and Expeditionary Force is reached.

The most difficult beach for the landing operations proved to be at Sedd-el-Bahr at the extreme point of the Gallipoli Peninsula, and it was not until an attack had been made on the enemy by another landing party operating from Cape Teke, that the pressure was sufficiently relieved to enable the troops who had gained the beach to advance. Sadd-el-Bahr itself still remained in the hands of the Turks. The following morning the attack on this position began, supported by fire from the naval guns. When in the early afternoon it was finally stormed it was found to be "a labyrinth of caves, mines, trenches, pits, and entanglements." By this time the British troops were firmly established at the apex of the Peninsula and a concerted advance could begin. The fighting in this theatre of the war is likely to be no less desperate than in any other. A later *communiqué* speaks of strong and determined attacks in mass against our positions, and it is clear that our advance to the neck of the Peninsula is only to be effected by breaking down a scientific and very determined defence.

The British position will be considerably improved if it is possible to close the Peninsula to Turkish reinforcements at Maidos, at the head of the Narrows. The fact that this town was bombarded by the Fleet and was reported to be in flames on April 29, together with the choice of the neighbourhood of Gaba Tepe as one of the landing places, points to some such intention on the part of the Allies. But the authorities do well to deal with the different phases of the operations only when completed. Some ten weeks have now elapsed since we started serious operations against the Dardanelles, and we are still at the very beginning of the task. If it is remembered that Maidos is only a fourth of the distance from the apex to the neck of the Peninsula, and that the Bulair lines will still find the Allied troops nearly two hundred miles from their objective, a clearer conception of the magnitude of the work in this theatre of the war will be obtained.

Of the progress of the French troops landed on the Asiatic side of the Straits we have but little information. At the outset they were subjected to furious counter-attacks, all of which were successfully repulsed. They had then advanced to the line of entrenchments along a ridge running from Thymbra to the Hill of Hissarlik, and had, according to the latest reports, nearly two thousand prisoners to their credit. The strength of the forces landed will determine their plan of campaign. Their primary object is to co-operate with the Allied Fleet in reducing the forts commanding the Straits up to the Narrows, and their main line of advance with this object in view would be along the road leading by way of Erenkeui to Chanak. But the configuration of the country may make this advance exceedingly difficult, unless the high ground well into the interior is also held.

The Russian Black Sea Fleet has continued its operations against the Bosphorus forts, and has been able to make good practice without, so far as is known, incurring any serious damage or losses itself. The Turks would naturally concentrate their main strength in guns and personnel at the Dardanelles; but they would also reserve their fire against the Russian ships in the hope of enticing them within closer range, or into the narrow waters of the Bosphorus. With the experience of the Allied Fleets before them the Russians are not likely to

348266

Digitized by Google

be misled by the inadequacy of the reply of the Turkish batteries. Their Fleet could not expect to accomplish anything by an unsupported advance within the Bosphorus. Its present activities, however, serve to divide the attention of the enemy, and will, no doubt, bear fruit in good time.

Both in the Caucasus and in Persia fresh encounters between the Russian and Turkish forces are reported. In view of the demands made upon the Turks elsewhere, it may be presumed that irregulars now constitute the bulk of their troops in these regions. The details of the fighting point rather to the courage of fanaticism than to the skilled handling which characterised the first Turkish advance across the frontier under German direction. After a series of skirmishes, brought about by the Russian measures to clear the Caucasus, a more serious engagement is reported in the Alashkert Valley, the possession of which was of importance to both sides. This time the Turks assumed the offensive, and, misled by the silence of the Russian artillery, advanced close to the Russian lines before they discovered their mistake. They suffered terrible losses, and the valley was left in the hands of the Russians.

The left of the Russian line in the Caucasus stretches into Persian territory. While the Turkish advance on Tabriz was checked and the invaders thrown back, the Russians have not yet been able to clear the country to the north-west of Lake Urmia of the enemy. Recently there has been renewed fighting in the Khoi and Dilman region, where after a three days' engagement the Russians opened a determined offensive against a Turkish corps under Khalil Bey, and completely defeated the enemy. The Turkish losses, so runs the official report, may be estimated by the fact that after the fighting more than 3,500 Turkish dead were found on the battlefield. This success, however, leaves the situation in the Kermanshah region, a considerable distance to the south, in the unsatisfactory state in which it was last reported. As the Persian Government ordered the Governor of Kermanshah to retire to order to avoid useless bloodshed, no effective resistance is likely to be offered to the Turkish force that is known to have crossed the frontier to the west of the town. The British Consul and members of the British Colony left Kermanshah some time ago and were reported to have reached Hamadan.

If information which reaches Russia from Ispahan is to be believed, the situation at Ispahan is on a par with that at Kermanshah. A fortnight ago it was stated that, in view of the inactivity of the local authorities and the support of the gendarmerie, the attitude of the Germans and Turks was becoming more provocative. The new German Consul, with the help of an army lieutenant, was said to be endeavouring to raise the *Jehad*, while a later message spoke of caravans laden with arms and gold arriving at Ispahan in the charge of German and Turkish officers. There is no lack of evidence of the abuse of Persian neutrality by the Germans and Turks, and some action has already been taken to check German activities in the country. The situation, however, cannot be normal until the Persian Government is given the support required to enable it to protect its own rights.

There would seem to be solid foundation for the belief that Italy's resolve to strike a blow on her own behalf in this war of the nations has at last been taken. The fact is sufficient to cause the most vigorous efforts on the part of Germany and Austria-Hungary to ward off the threatened blow, and we are witnessing these days negotiations in Rome of a most intensive character. Until the first shot is fired the possibility of an arrangement between Italy and Austria-Hungary cannot altogether be excluded; but nobody in Italy believes in it. The Germanic Powers, it may be inferred, having sown the wind are reaping the whirlwind. It will be difficult for them to convince Italy that any promises made to her now will be worth the paper they are written on, if victory should be theirs. No one would doubt for a moment that the first step taken by Germany and Austria-Hungary, if ever they had the opportunity, would be to settle scores with their late partner in the Triple Alliance. On the other hand, it is not likely that the Powers of the Triple Entente propose to guarantee Italy any concessions which she obtains from the enemy as the price of her neutrality. If she is set upon realising her national aspirations, she knows that she can only do so by throwing in her lot with the Entente.

It is unfortunate that Italy should have been made to appear in the light of a Power offering her support to the higher bidder of two sets of combatants. At the outbreak of war her position seemed clear. As a member of the Triple Alliance she found the *casus fœderis* unaffected by the war of aggression waged by the two Germanic Powers against the Triple Entente and its Allies. It is true that her national sympathies would never have prompted her to side against Great Britain; but she was able to fill the rôle of neutral with adequate impartiality. As the war progressed, however, it became apparent that the terms of peace must inevitably include great territorial changes in the map of Europe. To this prospect Italy could not remain indifferent. Through no fault of her own, circumstances had arisen that made it impossible for her to tolerate a situation to which even in the palmy days of the Triple Alliance she had never been reconciled. If Austria-Hungary, whether voluntarily or under compulsion, were going to make concessions to Slav opinion within her existing borders, similar concessions, Italy argued, would have to be accorded to Italian aspirations. The Italian Government had thus a clear basis of negotiations with Austria-Hungary, and she was not to blame if the moment for raising the question found her ex-Ally already at war. On the other hand, the fact of the existence of war in Europe made it inevitable that Italy's action should result in the two sets of combatants competing for her support. History, however, we feel confident will render her justice in this matter.

When all the facts are known, it will probably be found that Italy has other reasons for a breach with her late Allies than the refusal of Austria-Hungary to make concessions to the principle of nationality. Public opinion has been profoundly stirred by a grave incident in Tripoli. At a moment when an Italian force was advancing to give battle, most of the native troops, comprising the bulk of the force, deserted to the enemy. The Italian losses were heavy. The officer in command was amongst the wounded, while the total casualties among the Italian troops amounted to three hundred, including nineteen officers, and among the native troops to seven hundred. The treachery of the Libyan troops was due to a well-known Arab chief, and it is believed that the Italian Government possesses proof of Turkish complicity in the events leading up to the desertion.

If it should be proved that emissaries from the Turks were actually implicated in the intrigues which brought about this mishap to Italian arms, there should be little difficulty in showing that the machinations originated with the German authorities. It would not be the first time, moreover, that Italy has had to complain of Turco-

German intrigues in North Africa. Not the least of Germany's offences in this war of her creation is her treachery to the white man's cause. She has deliberately schemed in every possible part of the world to set natives against Europeans. It has been part of her scheme for waging war, and may be classed with the use of asphyxiating gases and the poisoning of wells. German treachery in this matter is one of the strongest arguments against her claim to the hegemony of the world. Not only has she disgraced civilization but she has proved that she has not even grasped the rudiments of it. To those who know anything of the natives of Africa, it was obvious that German intrigues among the Arab tribes must eventually prove as dangerous to Italy as to the British in Egypt. The event has shown that the Italians have been the first to suffer, and they have good reason to resent the criminal activities of their former Allies.

It is to be hoped that no misunderstanding will arise from any quasi-agreement under which Italy may decide to make common cause with the Entente and its Allies. That any formal convention should have been drawn up at this stage is unlikely; but the Italian Government will not have been tempted to take action before satisfying itself in one quarter or another with regard to the compensations that the Allies may be willing to accord. The possibility of a misunderstanding exists in any failure on the part of the latter to decide amongst themselves upon the extent to which Italian aspirations on the eastern coast of the Adriatic can be realised. Up to the present there has been no indication that an agreement on this point has been reached. In reply to a question on the subject in the Serbian Skupshtina M. Pasitch had to admit that he had no official information of the *pourparlers* between Italy and the Entente Powers. He contented himself with pious hopes that Italy would adhere to the principle of nationality, and would arrange her interests in the Adriatic in such a way that they would not entail difficult consequences either for Italians or for Slavs. All the same, M. Pasitch's words betrayed some fear lest everything should not be as satisfactory as he hoped.

In a letter to *The Times* Lord Cromer has called attention to the presence of a number of Turkish subjects in the concentration camps in this country, and points out that it must not necessarily be assumed that every Turkish subject is a hostile alien. A large number of Armenians, Syrians, Jews, etc., who are Turkish subjects will be warmly in sympathy with the cause of the Allies. Lord Cromer suggests that steps should be taken to investigate the question, in order that there may be discrimination made between those Turkish subjects who are properly subjected to some restraint and others in whose case no such restraint is required. The proposal is thoroughly in keeping with British traditions, and is one which has only to be made to win general support. There can be no reason to suppose that the Government will not be willing to act upon it. Prior to the publication of Lord Cromer's letter the subject had been raised incidentally by Lord Newton in the House of Lords' debate on the treatment of British prisoners in Germany. There must be a number of Levant Consular officials in Great Britain to-day who would be well qualified to carry out an inquiry with a view to liberating from the concentration camps those Turkish subjects who can adduce satisfactory evidence of their friendliness to the Allied cause.

Sic vos, non vobis might be a suitable heading for an article in the *Frankfurter Zeitung* on the progress made in the construction of the Baghdad Railway. The information given, however, if its accuracy can be taken for granted, is of interest. The most important tunnel, piercing the Taurus Mountains at Bilemedik, and 1,826 metres in length, has been bored, and is said to be approaching completion. In spite of the war, or, perhaps, because of it, the work has been pushed on with the greatest zeal. It is clear, adds the German organ, that the railway would be of invaluable assistance to the Turks in their advance against Egypt, and, it adds naïvely, "as a branch of the Mecca Railway across the Sinai Peninsula will be necessary for the transport of their heavy artillery, there will be plenty of time before this is done to complete the difficult mountain section of the Cilician railway." The sections opened to traffic within the last twelve months are the stretch of 160 kilometres between Baghdad and Samarra, and the 60 kilometres between the Euphrates Bridge and Tel el-Abiad, which came into use last February. Including the small branch line Adana-Mersina, which has been acquired by the Baghdad Railway Company, there are some 926 kilometres of line given over to traffic out of a total length of 2,190 kilometres from Konia to Basra. The *Frankfurter Zeitung* enumerates a number of branch lines for which plans have been made, and "which will be undertaken at a later date." It adds: "When these are all completed, there will be a German railway system in Asia Minor of 3,205 kilometres in length."

In opening the session of the Legislative Council of Cyprus last month the new High Commissioner delivered an interesting speech, which was notable for other features than the fact that it made no reference to the state of war with Turkey. From 1906 to 1911 Sir J. E. Clauson was Chief Secretary to the Government of Cyprus, and he was able to record the great advance that had taken place in the interval in measures furthering the general prosperity of the island. The period coincided with the High Commissionership of Sir Hamilton Goold-Adams. Consequently most of, if not all, the improvements, bore traces of his initiative. "Among his undertakings that have already been carried into effect," said the new High Commissioner, "may be mentioned the rapid expansion of the organisation of the Agricultural Department, the creation of an expert scientific staff equipped with modern means of research and experimental demonstration, the extension of agricultural instruction both technical and elementary, the vigorous campaigns against various agricultural pests, and the introduction of new and excellent blood into the equine and bovine stock of the island. Anti-malarial sanitation, railway extension, rural water supply schemes, and road re-construction have been taken in hand on a large scale, and have made rapid strides in this short period."

In the competition for the offensive at the opening of spring the Austro-German forces have secured a lead. With the help of poisonous gases, in flagrant contravention of the Hague Convention, the Germans succeeded in bending back a section of the Allied line north of Ypres, and their attack on the British position is still being pressed. In the eastern theatre the enemy began with an incursion into North-West Russia in the direction of Riga. Before the importance of the raid could be determined, the main effort of the Austro-German forces was shown to be directed against the Russian line east of Cracow. The German version of the fighting was the first to be published. It laid claim to a sweeping victory; but when all the facts are known, it will probably be proved that the enemy's exuberation was studiously exaggerated, with the intention, perhaps, to *imponiren* the States who are supposed to be on the point of abandoning their neutrality. The Russians have fallen back from the Dunajec River, but it remains to be seen whether the withdrawal will involve their position along the Carpathian ridge.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 25.

Trial and Execution of Sultan's Aggressor.

The trial of Mohammed Khalil, the Egyptian who attempted to shoot H.H. the Sultan on the 8th inst., was held this week. It took place at the Native Court of Appeal and started at ten o'clock on Monday morning, continuing with a brief interval for luncheon until seven oclock in the evening, when it was adjourned until the following morning at ten o'clock and ended at about one o'clock on that day. The special military court consisted of: Brigadier-General Frith (president), Lieut.-Colonel Lord Rochdale (who also carried out the duties of clerk), Lieut.-Colonel W. G. Heys, Major C. R. Pilkington, and Major A. F. Cronshaw. Mr. A. S. Preston was judge-advocate, the prosecutor was Major H. L. Knight, who was represented by Mr. G. E. Jeffes, and Mr. C. H. Perrott was counsel for the defence.

For such an important and unprecedented occasion the court-room presented an unusually quiet and sedate aspect, and there was none of that pomp that one might have expected to be associated with the holding of a military court in time of war. The chamber, which is in reality the Cairo Assize Court, is an almost square room, without any decoration, and reminds one, but for the dock, of a lecture-room. The bench, on a platform at one end, consisted of a plain desk-like table with a raised shelf in front. At this sat the five judges. To their left stood the witness-box; to their right sat the judge-advocate, clad in wig and gown. Near the latter was stationed the provost-marshal, and between the bench and the witness-box sat the subaltern in charge of the guard. A plain rail separated the platform from the well of the court, which had benches across it, and at the front of which sat, on the right, the prosecutor with his counsel and, on the left, the accused's counsel. On the left-hand side of the well, against the wall and close to the witness-box, was the dock.

All the military members of the court were, of course, in khaki, whilst the fact that the proceedings were under military law was further emphasised by the sight of British soldiers lining the walls of the chamber, with bayonets fixed. The trial did not appear to awaken amongst the general public as much interest as did other political trials in the recent past. Outside the building and in the corridors there was quite a small crowd, which was easily kept in order by police and a picket of British soldiers that was stationed there with fixed bayonets. Not all of those who had applied for tickets of admission to the trial put in an appearance. But if the general public was not excited by the occasion, it was not so with the higher officials, and amongst those present were the Prime Minister, Sir Milne Cheetham, Sir Ronald Graham, with whom was Sir Valentine Chirol, Mr. R. Storrs, Mr. R. W. Graves, the Procureur-General, and several members of the Mixed Courts.

After the judges and the judge-advocate and the interpreters had been sworn in and the president had read the order of the G.O.C. convening the court, the prisoner was brought in. Mohammed Khalil was decidedly unpleasing in appearance. He was short and sallow, with black eyes, dull in tone, and a black moustache, the long curled ends of which he repeatedly twirled. He was dressed in European style, with tarbush at an angle, and saluted the court as he took his stand in the dock. Once or twice during the proceedings he bent down to speak to his counsel's clerk, but beyond that and a smile during the evidence of Said Pasha Zulfikar and again when he made a remark to his guard and found they could not understand him, he appeared to take little interest in the proceedings, but gazed steadily in front of him with a very bored expression, frequently yawning quite openly. He presented a curious contrast to his escort—three brawny Lancashire lads, who sat with arms akimbo and watched him closely out of the corners of their eyes, the while they solemnly drank in all the evidence and speeches. Their facial expression was at times very amusing—one of them listened to the intricate medical evidence literally open-mouthed with interest and wonderment.

The indictment was to the effect that—

On and before Thursday, April 8, 1915, he maliciously, feloniously, and traitorously did compass, imagine, and devise to bring and put to death H.H. Sultan Hussein, the Ruler over Egypt under the protecting power of Great Britain, and the said treasonable, compassing imagination and device maliciously, feloniously, and traitorously did express and declare by certain overt acts and deeds—that is to say, that in order to fulfil perfectly and bring into effect his most evil and wicked design he did, on the said 8th day of April, 1915, in Abdin Street, Cairo, shoot at H.H. Sultan Hussein with a revolver with intent foully to murder His Highness, contrary to the duty of his allegiance, to the prejudice of good order, in contempt of the military control of Egypt, established by His Majesty's Government by the Proclamation of Martial Law on the 2nd day of November, 1914.

The Defence.

Mr. Perrott, for the defence, challenged the competence of the Court. He pleaded that the constitutional rule was that a civilian who was not and never had been connected with military service, and who was charged with an offence that can be tried and punished by civil courts actually sitting, cannot be brought before a military court, even when war is raging in the land. He pleaded that *a fortiori* this rule applied when no internal disturbance or invasion existed; and contended that this was the situation in Egypt, where the civil courts were still in operation. In support of his plea, Mr. Perrott cited many leading cases and the opinion of prominent authorities, but after considering the question in private for about twenty minutes the Court overruled the plea and the case proceeded.

The first and most important witness for the prosecution was Said Pasha Zulfikar, Grand Chamberlain to the Sultan, who was driving with his Highness at the time of the attempt. He testified to having seen the accused approaching with a bright-coloured object in his hands —some of the subsequent witnesses declared this object was a bunch of roses, in which the revolver was concealed—and to having warned the officer riding at his side to keep the man back. Before the officer could stop him the man had fired, and from the Pasha's evidence it was clear that the Sultan had had a very narrow escape. The other witnesses were the medico-legal expert, Dr. Hamilton, who examined the carriage, and the members of the body-guard and the policeman who took part in the arrest.

The only witnesses for the defence were Dr. Valentin and Dr. Warnock, who spoke in support of Mr. Perrott's plea of insanity. Both these experts maintained that Mohammed Khalil was suffering from a certain form of paranoia, and that he was mentally incapable of appreciating in a normal manner the moral character of his act. He was irresponsible, and was driven to commit his offence by a mental obsession which would cause him to repeat his act if he got the opportunity. The accused was asked if he had any statement to make, to which he replied that he appealed to British justice and to the laws of heaven and of man. After speeches by counsel for the defence and the prosecution and summing-up by the Judge-Advocate, the court retired, but returned after a short while. Some questions as to Mohammed Khalil's antecedents were then asked, and the hearing was closed, it being known by the fact that the accused was taken back to his cell that he had been found guilty.

In accordance with military practice, neither the verdict nor the sentence were made public until General Maxwell had confirmed them. This occurred on the day following, when orders were given to carry out the sentence of hanging. The execution took place on Saturday in the Native Court of Appeal Prison quite privately.

M. Venizelos in Cairo.

M. Venizelos, who arrived in Alexandria on Monday, and whose landing and drive to the house of his host, Mr. Anthony Benachi, were made the occasion for a display of enthusiasm on the part of the Hellenic colony such as has rarely if ever been witnessed in this country, spent the rest of the week in Cairo, as the guest of Mr. D. Casdagli. Another outburst of enthusiastic frenzy marked the ex-Premier's arrival in

Digitized by Google

the capital, and he had the greatest difficulty in getting away to Kasr-el-Doubara. As it was, the pressure of the crowd was so great that his carriage broke down. The party had to get out, and tried to make its way to a motor-car that had fortunately been retained for emergencies. But once on terra firma the ex-Premier and his friends were literally mobbed by the enthusiastic crowd, who could not be persuaded to let the party through. The police were powerless to do anything, and it looked as if M. Venizelos would have to remain where he was indefinitely, when a *deus ex machina* appeared in the person of an Australian soldier, who, taking in the situation at a glance, started to push the crowd away, and who by dint of the exercise of herculean strength managed to clear a path for M. Venizelos and his companions!

The six days of his visit—he returned to Alexandria this morning—have been one ceaseless rush for the ex-Premier. A luncheon with the Sultan and one with the High Commissioner, a trip by steamer to the Barrage, a dinner at the French Agency, visits to practically every Greek institution and every Greek resident of note, the presentation of the diploma of honorary member of the Egyptian Institute, which the latter conferred on him, and a charity performance at the Kursaal are but a few of the items in the programme, which terminated with a brilliant reception at Mr. Casdagli's villa, and to which must be added an interminable number of visitors, who called daily on the ex-Premier, and were all received by him personally. The visit has, indeed, been a splendid success, and whilst part of that success is, of course, due to the assistance given by the enthusiastic general public, the fact that no hitch occurred is due entirely to the excellent measures taken by the Comité d'Organisation, at the head of which stood M. Ambroise Sinadino, who on such occasions always displays extraordinary energy and foresight. M. Venizelos told me that he was profoundly touched at the warm reception he had had from all elements of the population; Englishmen and Egyptians were just as prominent as Greeks in the demonstrations that burst upon the ex-Premier whenever he appeared in public, and it was the unanimity as well as the spontaneity of the welcome that made such a deep impression on him.

NEWS FROM THE SUDAN.

(From A Correspondent.)

Robes of Honour.

The presentation, by the Governor-General of the Sudan, of a Robe of Honour to a Sheikh of Dongola Province marks one of the rare but gratifying ceremonies that the Administration has been careful to maintain in its official relations with the native dignitaries of the country, and which are all the more valued on account of their infrequency. Sheikh Sherif Taha has long been distinguished for his intelligent and loyal support of the Government; he has spared no efforts to bring his people into line with the views of the Provincial Administration in relation to matters of communal and social reform. As Omda of the northern portion of the Khandak Mamuria, he has wielded exceptional influence. Nevertheless, with all his personal sympathy towards the spread of native education, the Sheikh has not been able to assist in the establishment of native schools, and the Khandak district remained for long the only one in the province in which a Government educational establishment was not to be found. Now, however, the building of two second-class Kuttab schools has been practically completed; and no doubt it has been in connection with this event that Sir Reginald Wingate has conferred upon the Sheikh of the northern portion of the Mamuria the much-coveted Robe of Honour.

The Robes of Honour conferred in the Sudan are divided into four classes—the Special Robe, the First Class, the Second Class, and the Third Class—and it is one of the latter category that Sheikh Taha has received. It is made of red cloth, with one pair rosettes only on the breast (the other classes have two or three pairs ; the garment is usually bestowed upon influential Omdas, Sheikhs, and others who have done good work for Government. With each Robe of Honour are presented a sword and a sling. Recommendations for the distinction must come through the Governors of Provinces, and in the case now under consideration the commendation to the Governor-General's favourable notice emanated from Colonel H. W. Jackson, the Governor of Dongola Province.

The number of names submitted must not exceed four in each province—that is to say, for two Religious Robes and two Robes of Honour, the presentations being made by the local head of the Administration. The granting of the robe is a purely personal matter, and after the recipient's death the robe must be returned (as are also such orders as the Garter, the Thistle, St. Michael and St. George, etc., which are conferred by the British Sovereign) to the Government. It must not be retained or worn by any member of the family or heir of the recipient; but the Brevet, which is issued in respect of each robe and signed by the Governor-General, may be kept by the family. Thus, all robes being granted for good service to Government, may, at any time, be withdrawn by the order of the Governor-General if the recipient should, in his opinion, cease to be worthy of the honour bestowed. Very few instances, however, are on record where the distinction, once conferred, has been revoked.

Two New Magistrates.

The usual and commendable procedure of testing the capabilities of British officials newly serving in the Sudan before conferring judical authority upon them has been pursued in the case of Mr. R. V. Bardsley and Mr. T. McNeill, both of whom have just been appointed Magistrates of the First Class under the Code of Criminal Procedure. Mr. Bardsley has seen about eighteen months' service as Third Inspector at Khartoum, and has evinced considerable aptitude in that capacity. He now receives his first important promotion in rather less than the ordinary time of probation. Mr. McNeill, on the other hand, who has served as Third Inspector in Wad Medani, in the Blue Nile Province, where he was well thought of by the ex-Governor, Lieut.-Colonel E. A. Dickenson, has had about two and a-half years' experience of Sudan official life. He is regarded as a rising official, very keen in the performance of his duties, and a competent Arabic scholar.

Some Other Appointments.

After fourteen years in the Sudan Government service, Mr. E. W. Drummond-Hay has been translated from the Sennar to the Berber Province, with official residence at El-Damer, as Senior Inspector. Between the joys of permanent residence in the town of Sennar and those of El-Damer there is but little to choose, both being equally unattractive. On the other hand, El-Damer has become a rapidly improving commercial centre, and has completely superseded Berber as the administration headquarters of the province. There should, therefore, be considerable scope for Mr. Drummond-Hay's undoubted ability as an organiser. The Berber Province is about to lose the services of Mr. R. E. H. Baily, who has been very active and much esteemed as Second Inspector in the distict of Shendi. Mr. Baily goes to Sennar, where he will occupy a similar position either at Singa or at Kurmuk.

Mr. J. G. Matthew, Senior Inspector of the Red Sea Province, has been transferred, as from March 15 last, to the Sennar Province, where he will occupy a similar position. His work on the Red Sea Littoral has been mainly in connection with the supervision of cotton cultivation and irrigation, and the substantial progress made at the Tokar Plantation, a Government enterprise, may be said to have been largely due to his attention and enterprise. Mr. Matthews entered the service of the Sudan Government in May, 1902, and it is considered not improbable that he may receive the next vacant Governorship, for which he has evinced many of those qualities which are deemed desirable in candidates for the post. During the occasional absence of Major C. E. Wilson, Governor of the Red Sea Province, Mr. Matthew has acted as *locum tenens*.

Mr. Matthew will change places with another civilian, Mr. S. A. Tippetts, who removes from Singa to Port Sudan. Mr. Tippetts has been almost as long in the Government service, there being but three months' difference in regard to the two officials' respective employment. It is to be hoped that some better accommodation at Singa will be found for the Senior Inspector of the Sennar Province, Mr. Matthew being a married man and accustomed to the enjoyment of a pleasant habitation of his own at Port Sudan when not living—as was often the case—in the agreeable residence of Major Wilson. The Senior Inspector's house at Singa is a very poor one, and it has long been the desire of the Administration to erect not only a suitable residence at Singa, but to find accommodation for two Inspectors at Sennar.

CYPRUS NOTES

(From Our Own Correspondent.)

Cyprus, April 23.

The Legislative Council.

The Legislative Council was opened on the 13th inst. by his Excellency the High Commissioner, Sir John E. Clauson, K.C.M.G., C.V.O., with the usual ceremony. In consequence of the abnormal circumstances of the war, no indication of coming legislation was given, and it is probable that no fresh Bills will be submitted this session.

A Proclamation published in the official "Gazette" of the 19th inst. declares that, "by reason of the imminence of active service, it is necessary for the public service that the forces in Cyprus should be temporarily subject to the Army Act, as if they were on active service, for the period of three months from the date hereof."

Locusts and Mosquitoes.

A plague of locusts has invaded the island during the last week, coming from Syria. Some consternation has been caused among farmers, but from reports to hand no great damage has yet been done, and as the locusts have now about arrived at the egg-laying stage, it is hoped that their depredations this year will be slight. Steps are being taken by Government to control them, and to watch their movements with a view of ascertaining the places they select as breeding-grounds, and measures will be taken to destroy their eggs. Meanwhile Government is paying for their collection, and some three tons have so far been accounted for. Encampments, the marching of troops, heavy cannonading, and other of the accompaniments of war may have disturbed these creatures in their native haunts, and the invasion may thus be an indirect result of the struggle now proceeding on the opposite coast. Happy shall we be if no worse befall us!

A noticeable reduction for the time of year is observed in several localities in the number of mosquitoes. At Larnaca, which until recently was much afflicted with them, hardly a single mosquito is now met with. The draining and filling up of the St. Lazarus and Bamboula marshes, which has been so thoroughly carried out by the present District Commissioner, has largely contributed to this improvement, while the work done by the anti-malarial campaign, under the Medical Department, has further contributed to the extermination of these health-destroying insects.

Demand for Cyprus Wine.

Cyprus wine has undergone a sudden rise in price. It appears that the French soldiery in Egypt find it palatable! "When we are far from the lips that we love" we have but to "make love to the lips that are near"; and when sparkling Moselle is left behind, and, alas! may never again, perhaps, be tasted, we must turn our affections elsewhere and try to find solace in the strong, lusty Cypriot "Mavrokrasi" in place of the more delicate favourite at home. The fact is, at any rate, that the local stocks of wine, which since last vintage have been almost unsaleable, are now being realised at more than double the lamentable prices of a week or two ago. This is good news to those small people who depend so largely upon their vineyards and whose economic conditions has been very trying of late.

In this connection it is interesting to note what Lord Kitchener wrote in 1879 from Lefkonico Camp:—"The hill slopes grow vines in profusion, and these vineyards might be greatly extended. Many beautiful spots exist among the hills lying completely waste, grown over with scrub, hiding the old rock-cut wine presses that show where in ancient times there were once fruitful vineyards."

FIGHTING THE BEDOUIN.

A correspondent sends us for publication a letter written (March 6) by an officer of Indian cavalry serving with the Persian Gulf Expeditionary Force. After referring to the difficulty of finding time to write letters the officer goes on to say:—

Especially has it become difficult during the last three weeks. The situation has become very much more a real one for us, and day and night we are going for the enemy. War in all its deadly earnestness is with us, and, as I say, the situation has developed greatly in the last week or two. At —— we were face to face with the Turkish infantry and Arabs in position, both of us being in extremely strong positions. In fact, it was more or less stalemate. Since last writing I have been transferred to other climes, this time on the edge of the Great Arabian Desert. The whole of my unit is here. To get here we had to ride eleven miles through a solid sheet of water up to our horses' girths. Now we are camped in large fortified positions on edge of the barren desert. In fact, we ourselves are in the desert: sand, sand, sand everywhere; a well or two here of brackish water, nothing else. As compared with the other place this might be 10,000 miles away. Owing to this sheet of water in our rear luxuries can't reach us, and our supply column confine themselves to strict necessaries. These are of the barest. Often men and horses, especially the latter, have to go without. Our poor horses find it very hard to drink the salty, brackish water, and are suffering a great deal. In fact, except that we are all well, this is absolutely the worst place on the earth. . . .

To-day we are elated with the news that the Dardanelles is being forced by the combined French and British Fleets. Good old Fleet, that ought to end the Turkish resistance! It is a rotten country to fight in really, in spite of its archæological interest. Our great complaint is that it is inhuman. We take prisoners and look after them, but we dare never leave wounded men lying on the ground, because the enemy, who now are wild desert Arabs, cut them in pieces. This wounded question worries one a great deal. It hampers our cavalry reconaissance work greatly. You see, we must move fast towards enemy in attack and away from him if in retreat. We are in touch with him daily. Especially is this wounded question a difficult one when we are hard pressed. Our opponents are now the wild desert horsemen, and they are very formidable, and simply come in hordes from nowhere. The Turks have turned these gentry on us, they themselves being in a position some twenty-five miles away from here. It is most interesting fighting, but most merciless. These wild Bedouin are perfect adepts at attacking from behind mirages, coming up in the thick of dust storms, and employing a thousand and one other stratagems. They really are marvellously bold and hardy chaps. A lot of us cavalry, two regiments and horse battery, went after them the other day. We saw nothing for hours and hours, when suddenly, like a whirlwind, from nowhere, rushed some 5,000 horsemen, and all but surrounded us. We fought a very stiff rearguard action for seven miles, keeping them off with well-regulated and directed rifle fire, and eventually got to our supporting infantry, who came out from camp to meet us. It was easily the stiffest fighting I have ever experienced in these parts. Our horse artillery at one time, near the end of the day, found itself in very heavy ground and could not gallop. That meant protecting it and general delay. We then had a very critical half-hour. The enemy pressed us very boldly, getting right in amongst some of our squadrons. Five officers were killed and two badly wounded in the two regiments. We saved the guns by a miracle. All the team were shot or fell exhausted; but only temporarily was there confusion. We reformed on the infantry and gave our pursuers "what for," killing, I think, several hundreds all told. I had one fine tussle with one brawny fellow. He kept on circling round me on a fine Arab horse, firing his revolver point blank at ten yards. He never hit me, though his shots whizzed by my head each time. I finally cut him down as he turned his attention to another officer. Another Arab rushed up full gallop and fired into my back, low down by my seat. He made a hole in my coat, that is all, and the bullet passed between my leg and saddle, not hurting me at all. The swine, when he saw he had missed, struck me in the back at the same time as he fired with his revolver. . . . The brute got away. One of our officers seized a lance from one of the men and stuck five of the enemy.

The five officers who were killed all died most gallantly. Poor ——, of this regiment, was killed trying to stem a rush on his Maxim. Both —— and —— were wounded, as far as we can ascertain, and were shot in cold blood on the ground. I did not see this, nor see them fall, being in another part of the field. Taking it all round, though, we took on about five times our numbers, we inflicted very severe loss on them, and eventually drove them completely off the field.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, April 24.

Issue of Notes.

The Ottoman Government have issued notes to the value of £T6,583,094, which, they say, is guaranteed by 150,000,000 francs in gold deposited with the Administration of the Public Debt. Whether this deposit really exists at the Public Debt, and how far the Government is justified in appropriating those funds for this purpose, is matter for speculation. The notes, the denomination of which is not mentioned, are declared legal currency, and anyone refusing to accept them will be subject to a fine of from one to fifteen liras and to one month's imprisonment. The notes will be redeemed six months after the conclusion of peace, and those not presented within five years from that date will be forfeited. Commenting upon this decision of the Government, the Turkish Press prides itself upon the ease with which the Ottoman Minister of Finance is able to raise funds!

Police and Spies Active.

The feeling of uneasiness has rather increased in Constantinople, the police and spies being more active and the censorship stricter than ever, and relief from this tension is anxiously awaited. An English lady in Kadikeui and an Englishman in Bebek, besides several others, have been summoned before the police in connection with letters received or sent, in which appeared vague phrases with the intention of conveying information that would not pass the censor.

Correspondents writing to Constantinople should be careful what they say, as the recipients of suspicious letters are subject to much annoyance and discomfort, to say the least, and even to the risk of being exiled. In view of these incidents, many residents have ceased writing to their friends and relatives rather than expose themselves to the risk of spending some time in a Turkish gaol. In these circumstances, the writer of this article will, in case of necessity, be pleased to reply, to the best of his ability, to any inquiries from friends or relatives in England in respect to members of the English community who have remained in Constantinople.*

The Turkish Government has abrogated the law passed a short time ago exempting American products from the payment of Customs duty.

At Smyrna.

The shortage of coal is being felt in the Smyrna district, and the railway companies have been obliged to curtail their services. The stock of petroleum there is almost exhausted.

It is confirmed that the two Ellerman liners, the "Assiout" and the "City of Khios," which were in Smyrna when the war broke out, have been sunk in the bay by the Turkish authorities.

The Dardanelles Operations.

With regard to the operations at the Dardanelles, bombardments of different positions appear to take place daily, and numerous transports carrying troops are reported to have been seen in the vicinity of the Dardanelles and in the Gulf of Saros, but the reported occupation of the town of Enos by the Allies is not correct.

Hakki Pasha has at last returned to Constantinople, and has had an audience of the Sultan.

The subscriptions towards the new Dreadnought to be built for the Turkish Navy are making good progress (says the *Tanin*), the population of Jerusalem having contributed £1,000. It is to be hoped that contributions will continue to pour in, as this would be quite a convenient fund for meeting some of Turkey's liabilities, say, for instance, for indemnifying those whose private residences have been requisitioned by the military authorities.

(From Our Correspondent lately at Beyrout.)

Cairo, April 24.

After completly cutting off Syria from the outside world, and prohibiting the departure and landing even of old men and women, the military authorities suddenly allowed about 300 passengers to leave from various Syrian ports for Egypt by the last Italian steamer. The majority of these passengers are subjects of neutral Powers, such as Italians, Greeks, and Americans, with a large percentage of Jews; but the existence of a sprinkling of native Syrians among the crowd has led to the suspicion that the Turkish authorities had a covert design in this sudden relaxation of the rules. The arrest of three passengers by the authorities at Alexandria on the charge of spying is thought to confirm this suspicion. The recent dastardly attempt on the life of Sultan Hussein Kamel may have been taken by the Turks to be the sign of smouldering disaffection, and considered by them as indicating a propitious moment for the diligent application of their now well-known method of underhand intrigue improved upon by their German masters. If it were at all possible for Jemal Pasha to be allowed into Egypt, if he could see the state of absolute calm that reigns here, and could note at the same time the military preparedness and organization, he would surely then counsel his colleagues to waste no more time, no more of the little money and men they have left, but to give the Egyptian question up as a forlorn cause.

The "Invasion of Egypt."

It seems to be practically certain now that the losses of the expeditionary force through hunger, thirst, and exhaustion have been appalling, and that very few have been able to return from the Sinaitic Desert. It is amusing to note the naiveté that the Turks are displaying in connection with the bogey of an attack on the Canal. A British subject, who has at last been allowed to leave Palestine, and has just arrived in Egypt, reports that before he left Jerusalem a Turkish officer called on him, ostensibly as a friend, and after asking whether he was leaving for Egypt, added that he himself had been there, and would be returning thither shortly. When he was asked whether he visited Cairo he said "No," but added significantly that he had been in Egypt a couple of months ago. The Englishman, taking the hint, inquired whether the Turks meant to repeat the attack on the Canal, and when; and the officer replied: "In four months at the outside, when we shall have completed our preparations." Then followed the visits of several other officers, who discussed the same subject and held the same silly language, the obvious intention being that the traveller should repeat all he had heard to the British authorities here, and thus "frighten" them into immobilizing a large force in Egypt. The idea of crossing the Sinaitic Desert in the burning month of August beats even the wild imaginings of a Don Quixote.

Another report has it that the Turkish authorities announce their intention of attacking Egypt in force next winter. One wonders whether they mean to divert public attention from the impending disaster and to pooh-pooh the attack of the Allied forces on the Dardanelles, in connection with which an incessant shower of announcements of Turkish victories and Allied disasters is rained on the public. Unfortunately for the Turks, the same game had been played by them in connection with the Tripolitan and Balkan Wars; and it is hard for them now to get the disillusioned public to believe them, even when they happen to tell the truth.

Oppression in Palestine.

As regards Palestine, the new arrivals tell the same tale of oppression, extortion, and misery in that ill-fated land. The vital necessaries of life cannot be lacking, since Syria, including Palestine, is an agricultural country that exports a fair surplus of its cereal production; but the complete stoppage of the economic machine has thrown thousands out of employment; hence a daily increasing army of beggars in the land. The special maltreatment to which the Jews have lately been subjected may be taken to indicate the complete passing of power into the hands of the Germans; for when the Donmeh Djavid and his clique were able to influence the whole Committee of Union and Progress, the Jews in the Empire generally received special support and marks of attention.

The Lebanon.

The position in the Lebanon has not materially changed. The Lebanese have not as yet been subjected to military service, as had been apprehended, and it is said that the Mutessarif is trying to carry on the civil administration of the province with every possible safeguard of its privileges. Of course, the Turks are in supreme military command.

THE DARDANELLES OPERATIONS.

Lord Charles Beresford's View.

Speaking last Saturday at a great recruiting demonstration at Portsmouth, Lord Charles Beresford said that the Dardanelles operations looked at present rather like a piece of amateur strategy. It was undertaken when the weather was known to be unfavourable, before the Army was ready and before the nets were got out to guard the ships against floating mines. This was a great mistake the Government had made, and at some future time an inquiry would have to be made as to its cause. At present we must all do our best to help the Government to get out of the consequences of this mistake. Now that we had entered upon the Dardanelles campaign, for every man and for every shell we had before we should want three in the future.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, April 18.

King Peter's Movements.

King Peter, who has been spending some considerable time at various Serbian watering places, left Vranska Bad on the 14th and the following day arrived at Nish, where he was met at the railway station by the Cabinet Ministers, the members of Parliament, and the principal Government officials. His Majesty's health appeared to be greatly improved. From Nish he went on by train to Kragujevatz, and from there proceeded by motor-car to Topola, where, it appears, he intends to remain for a long time. In the meantime Prince Alexander continues to represent him.

Only once did King Peter break his cure, and that was when the country was in danger from the Austrian invasion, but when, through the King's energetic action, ill as he was, and through the bravery of the Serbian troops, defeat was turned into victory.

Precautions on the Frontier.

Bulgarian Komitajis are preparing for attacks on the Serbian frontier, and this being known to the Serbian authorities, the frontier guards have been strengthened and other military precautions have been taken to give the marauders and plunderers a warm reception. At the same time, according to the *Tribuna*, the Serbian Minister Plenipotentiary at Sofia has handed a note to the Bulgarian Government, requesting that any fresh attempts at incursions by bands into Serbian territory should be prevented.

It is known that the Bulgarian central Komitajis Committee, which directs its affairs from Sofia, wields considerable influence; and it is supposed to be in close touch with Austria-Hungary and Germany, and also with Turkey.

The State of Valievo.

The town of Valievo, from which all its inhabitants fled in December last, at the time of the Austrian invasion was almost entirely wrecked, and requires reconstruction. For this purpose the Government has voted a first credit of 250,000 frs. to aid the town in defraying the cost of the work which most urgently requires to be done.

Amongst the measures taken to combat the spread of the epidemic that has already deprived this country of many lives is the closing of all cafés and restaurants from 9 to 11 a.m., from 2 to 6 p.m, and at 9 p.m. for the night. This order has already been in force in Nish for several days, and it is also now in force at Belgrade, where there are comparatively few inhabitants at present.

Red Cross Workers.

There are now a great many Red Cross missions working in Servia, and besides these there are 130 British and French military doctors distributed over the country and inspecting the various hospitals and depôts, etc. Of the Red Cross missions there are:—

British: Lady Paget's, with 48 members at Uskub; another at Venjatchka Banja, Dr. Berry and 25 members; another at Uskub, under Mrs. Winbourn, with 46 members; and another at Uskub, under Dr. Barry, with 18 members. The British Red Cross, under Captain Bennet, with 40 members, and the Scottish Women's Hospital (40 members), at Kragujevatz. Another British mission is on the way, the first party of 19 members having landed at Salonika, and 30 more having sailed from Marseilles.

The Greek Red Cross, of King Constantine, consists of eight doctors, who have been sent to different towns.

Of the Russian Red Cross, the Princess Trubetskoi's party of 40 members is at Nish, and Madame Hartwig's, of 12 members, is at the same town. The Russian Benevolent, of 18 members, is at Kragujevatz.

Of American missions there are: Mrs. Thackara's, at Krustievatz, 2 doctors; Dr. Ryan's, at Belgrade, with 13 members; Dr. Butler, at Belgrade, with 18 members, and the Bohemian-American, at Uskub, under Dr. Frothingham.

SERBIA AND THE ADRIATIC.

We have received from the Serbian Press Bureau at Nish a telegram reporting a speech made by M. Pashitch, the Prime Minister, in the course of which he said:—

I believe that if Italy takes part in the war she will show her devotion to the principle of nationality, and will arrange her interests in the Adriatic in such a way as not to involve difficulties for us and for herself, and that her action will produce no discord between the Slavs and Italians. Only an accord between these two peoples can give satisfactory guarantees against the success of the German attempted thrust towards the Mediterranean. . . .

I believe that Italian statesmen will not fix their aim on the acquisition of a town more or less or any particular island, because they know that the strength of Italy will lie, not in any such town or island, but in harmonious relations with the Serbo-Croatian and Slovene peoples.

Commenting on this speech, the *Journal des Débats*, reviewing the reported claims of Italy to Adriatic regions in which 90 per cent. of the population is Slav, says:—

We cannot believe that Italy, founded on the principle of nationalities, desires to have on her hands populations unalterably hostile to annexation. It would be a political mistake of incalculable importance. Let people remember the peace of Campo Formio and Bonaparte's improvements.

British Farmers' Red Cross Fund.

Subscriptions are still urgently wanted to complete the second Serbian Hospital, which is being sent out, and should be sent to Room 5, Tower Bridge Flour Mills, Bermondsey, S.E. The funds now total £18,896 9s. 5d. The sum required from farmers is £100,000, so that it is still a "long, long way." We ask farmers throughout the country to respond to this charitable appeal.

Wounded Allies' Relief Committee.

The Northern Polytechnic Amateur Operatic Society is organising a concert in aid of the Wounded Allies Relief Committee (Sardinia House, Kingsway, W.C.), a body which has done exceedingly good work for our French and Belgian Allies, and is now extending its scope to Serbia and Montenegro. The date is fixed for the evening of May 15.

Agricultural Relief.

Lord Middleton presided last week over a well-attended meeting in York for the purpose of forming a Committee to make the necessary arrangements for securing the support of the agriculturists of the county for the fund being raised to assist our Allies in the restoration of agriculture in the devastated areas of their countries. It was announced that at the present time Serbia was the only country in which the Committee could give practical assistance. In that connection the Allies Committee had sent out a special representative whose mission is to superintend the distribution of seeds, etc., and also to investigate as far as possible the agricultural districts of Serbia and to report upon their needs. The meeting was unanimous in its desire to assist in this work, and several delegates reported that their societies had decided to contribute to the Fund. The address of the Fund is 16, Bedford Square.

Red Cross Nurses.

The Khedivial Mail steamship Saidieh (Captain J. R. Ryall) has arrived at Alexandria from Salonika, having taken out to that port from Liverpool eighty Red Cross nurses and fifty surgeons and doctors, units of different societies formed in England to aid the Serbian wounded and also to fight against that dreaded disease, typhus.

Lady Bathurst on Serbian Needs.

Lady Bathurst, opening a sale of goods in aid of the Serbian Red Cross work at Culkerton, Glos., on Wednesday, said she had helped in the nursing of wounded British soldiers, who had suffered horribly despite the excellent care and attention provided at the front. If British soldiers suffered so much, what must it be out in Serbia, where they had not only wounds, but fevers? In addition to a lack of materials and a dearth of nurses, they had typhus, spotted fever, and every horror to contend with. It was a good thing, therefore, for people to help the Serbian Red Cross Fund.

Lady Bathurst was in Red Cross uniform, having motored direct from her duties of nursing wounded soldiers at Cirencester.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, April 20.

A Frontier Precaution.

In consequence of recent events in Macedonia large numbers of fugitives are collecting in the Rila district, and with the object of strengthening the forces entrusted with keeping order there, a class of reservists, nearly 2,000 men, has been called to the colours to reinforce the troops of the Seventh (the Rila) Division. This is purely a "policing" measure, and in well-informed circles it is received with approval.

King Ferdinand and the Students.

Last Saturday, after the students of the upper classes of the gymnasia had completed their rifle drill, they marched through the principal streets of the capital, carrying their rifles. As they were passing the Palace King Ferdinand, the Queen and the Crown Prince appeared at the entrance, and the King saluted the students, who responded with loud cheers. This little incident appears to have created an excellent impresson upon the citizens of Sofia.

Serbia and Bulgaria.

Although the Valandova incident is officially closed its memory still rankles, and the comments of the Serbian Press—which would surely be well advised to co-operate in endeavouring to eliminate all causes of friction—are regarded here as aggravating the trouble and making a Serbo-Bulgarian understanding impossible. It is noted, too, that the Serbian Minister in Paris, M. Vesnitch, has expressed the opinion that Bulgarian intervention in the war is not desirable. It is pointed out that this diplomatist is aware that Bulgarian participation would have hastened the coming of peace, and saved much loss of life; yet because Bulgaria ought to receive her rights from Serbia, the Serbians prefer that blood should flow while they wait for their own salvation. The Serbians (say Bulgarians) see that in the general confusion nobody remembers that they too have trampled on the principle of the sanctity of treaties—the principle for which the Entente Powers are fighting against Germany. The Serbians seem resolved to wait for the Entente to present them with Bosnia and Herzegovina without returning Macedonia to its rightful owner; and to obtain this result they are daily spreading false reports about attacks by Bulgarian *Komitajis*.

In this connection a Balkan diplomatist has, through the Russian journal *Retch*, pointed out that a Press campaign against Bulgaria is very undesirable, and even dangerous. The attacks in the Russian, French, and even the British Press, upon the Bulgarian Government and the Bulgarian people are, naturally, producing an extremely bad effect here. In the interests of the peace of the Balkans and of a good understanding between this country and the Triple Entente it is very desirable, says this diplomatist, that all these attacks against Bulgaria should promptly cease so that this country may join the Triple Entente Powers.

Holland's Late Charge d'Affaires.

The funeral took place last Saturday of M. V. D. Royards, Holland's Chargé d'Affaires here. It was attended by most of the diplomatic body, Cabinet Ministers, and representatives of the Palace; and a military band and two companies of infantry rendered military honours. A Serbian journal having intimated that M. Royards' death was not due to natural causes, but had been brought about by Russian agents, because he was a Germanophil, the (Serbian) ministerial *Samouprava* published the following statement:—

The Serbian Royal Legation at Sofia requests us to state that the reports spread by a Belgrade journal regarding the mysterious death of the Chargé d'Affaires of the Dutch Legation at Sofia, M. Royards, are pure inventions. M. Royards died a natural death.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, April 18.

Control of Foreigners.

The application of the Law for the Control of Foreigners, to which I have alluded in previous letters, seems likely to produce some astonishing results. Already in the town of Craiova, which has 50,000 inhabitants, it turns out that 10,000 of them are foreigners. The majority of these aliens are included in the list of those entitled to exercise the franchise, and have, in fact, exercised that right for some years!

In this connection it may be of interest to note that the provisional figures regarding the population of this country show that it increased by 150,000 in 1914, that number being the balance of births over deaths. This represents an increase of 2 per cent. per annum, the highest figure yet reached by any European country.

A Roumanian Volunteer.

M. Victor Jonescu, nephew of M. Take Jonescu, is serving as a volunteer lieutenant in the 12th French Hussars. In a letter which he lately wrote to his uncle he says:—"My one trouble is to know what Roumania will do. Are there some fools who would hinder the realisation of her national ideals? We have arrived at a fateful moment, when we ought to regain Transylvania. Only cowards and those whose opinions have been bought can maintain the contrary."

The Poisonous Pruth.

There is a popular Roumanian ditty anent the River Pruth, which refers to it as "the river of ill-repute." No doubt this allusion is due to historical associations; but the title would seem to be applicable to-day, if the Russian military medical authorities are to be believed. For they have declared the river's waters to be infested by cholera microbes. The Roumanian sanitary authorities have, in fact, after careful tests, confirmed this report; and measures have been taken to prevent the riverside dwellers from drawing the waters for their use, as they have been accustomed to doing.

A Distinguished General.

The death has just taken place, at the age of seventy-five, of General Georges Anghelescu, one of Roumania's most distinguished soldiers. He took part in the war of Roumanian Independence and the war that secured Italian unity. During the campaign of 1877-78 he commanded—though only then a Colonel—the Third Division before Plevna; and after the reduction of the famous fortress he was promoted to Brigadier-General, thus becoming the youngest general in the Roumanian Army; for he was only thirty-eight years old at the time. After the war he was appointed Military Commander of the Dobruja; and in 1882 he accepted the portfolio of Minister of War in the Government formed by M. J. Bratiano. He fulfilled several missions of importance abroad at various times, and was more than once elected a senator. But of late years he had led a life of retirement, though he retained the presidency of the Society of Veteran Officers.

MESHED LETTER.

(From Our Own Correspondent.)

Meshed, April 10.

Persians and the War.

On March 26 the Russians celebrated the fall of Przemysl by holding a religious service in the public square, followed by a parade of the First Semerechie (General Kolkopof's) Cossack Regiment, which is the regiment stationed in Khorasan. The celebration undoubtedly had a good effect on the ignorant native population, a large crowd of whom were present. They are strongly pro-German, and in their ignorance believe the many distorted reports and manufactured lies about the war which are printed by the Persian newspapers anywhere in Persia. As usual, wild reports are current in the bazaars, and one of the latest is that Germany has purchased the wheat of Persia for the coming three years (sometimes the report says for fifty years!) to be paid for in munitions of war, so that Persia can take a hand in the war.

But the vital interest of the Persians in the Great War is well illustrated by the following incident, which occurred a short time ago in a town of this province. About a hundred zealous followers of the Prophet sent a telegram to Teheran saying that they had seen the declaration of *jehad* (religious war) by the *mujtahids* (high ecclesiastics) of Nejef and Kerbelah, and were ready with their lives and property in the holy cause. One of them was asked why they sent the telegram, and he replied: "We heard that Hamadan had sent a telegram, and we were afraid that people would call us unbelievers unless we followed suit." He was then asked: "What about your lives and property?" and answered: "Nobody is likely to want our lives, and as for our property, why, each of us contributed two *shahies* (about one and a-half farthings) to the telegram, and that is all we shall do." I learned later on that they refused to pay the two *shahies* each, as they thought it was too much, and the "telegram" was sent by mail.

Austrian Prisoners' Views.

Six Austrians who were prisoners of war in Russia recently escaped and came to Meshed, and I understand that they have been interned by the Persian Government. The formality of internment was hardly necessary, so far as preventing them from getting back to the Austrian Army is concerned. They would hardly leave Persia during the war unless forced to do so. I am told by Persians that they tell of the great and unjust hardships they have endured at the front, and say they are sure that the Allies must win.

Hun Influence?

Murders occur frequently among the Persians. One of the most recent murders was that of a Babi mullah, who was shot in broad daylight in the bazaar. The criminals are not often brought to justice. About the time of this murder a photograph of about fifty men and boys appeared in secret circulation. From the placards some of them are holding, it purports to be a group of Babis or Bahais. Among them are an Austrian and a German who were in Meshed for some months in the summer of 1913 making scientific research in geology and archæology. In the photograph these two men are holding Babi placards. Was this an instance of Hun influence attempting to ingratiate itself with the Persians?

Internal Revenue Administration.

For some years the Belgians, who originally came to Persia to take charge of the Customs, have also had charge of the Internal Revenue. The Persian Government has now decided to return all the Belgians to the Department of Customs, and the Government itself intends to take charge of the Internal Revenue.

Europeans' Interests.

Easter has come and gone. It was celebrated by the usual services and festivities following. The Russians have a neat little church that holds about two hundred in connection with the club house of the Russian Military Club. They recently brought from Russia, and erected at the church, a chime of bells, which was rung for the first time on Easter Sunday.

Immediately following Easter Week polo was started by Captain H. Hay Thorburn, I.M.S., Assistant to the British Consul-General. The polo ground is a good one, situated about two miles outside of the Arc gate of the city. English, Russians, and members of the Indian escort attached to the British Consulate-General take part in the game. It is greatly enjoyed by the large company of ladies and gentlemen who gather at Captain Thorburn's "At Home" on the polo ground every Wednesday, as well as by a good many Persians.

A Question of Currency.

Sheep owners on the northern borders of Afghanistan are accustomed to market their flocks across the border in Russian Turkestan along the line of the Trans-Caspian Railway, and receive their pay in Persian krans, which they much prefer to any other form of money. But recently the use of Persian krans has been forbidden in Turkestan; so this year the sheep owners took their pay in Russian paper roubles, being told by the dealers that they could change them in Meshed and would receive six krans to the rouble. Some of these Afghans arrived in Meshed a few days ago with about a hundred thousand roubles, and were greatly disappointed to find that the price of the rouble had fallen and they could get only five krans or less to the rouble.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

British Prisoners in Turkey. April 29.

Replying to Sir J. D. Rees, who asked whether he had obtained any information regarding the treatment of prisoners taken by the Turks or interned in the Turkish Empire, Sir E. Grey said: "His Majesty's Government have no information as to the treatment of the crew of submarine E 15, and on April 23 requested the United States Ambassador to make inquiries as to the names of those taken prisoners, but have not yet received a reply. A certain number of merchant seamen are interned at Magnesia, near Smyrna. The United States Consul-General and the British Chaplain at that port are in touch with them, and the latter visits the prisoners once a week, who have received assistance from the American Red Cross Society."

Slatin Pasha. May 4.

Mr. Tennant informed Sir W. Bull that, according to the information in the possession of the War Office, Slatin Pasha was not serving in or with the Austrian Army. He could not say what his technical status as regarded the Sudan Army might be at the moment, but he was not, so far as he (Mr. Tennant) was aware, drawing any emoluments from Sudanese funds.

British Consuls in the Levant.

Answering Mr. James Mason with regard to the salaries paid to British Consuls, Sir Edward Grey (Foreign Secretary) stated that Consular service salaries in the Levant varied from £900 with house to £1,200, no account being taken of local allowances, which were only given to meet the extra cost of living at particular places, and which were not pensionable.

The Khalifate. May 5.

In reply to Colonel Yate, Mr. Primrose said his Majesty's Government were well aware of the feeling for the Khalifate entertained by Moslem communities. His Majesty's Government intended to respect this feeling in every way, and regarded the question of the Khalifate as one that solely concerned Moslems, and that must, therefore, be decided by Moslems themselves without interference.

British Prisoners in Turkey.

Mr. Peto asked the Secretary for Foreign Affairs whether his attention had been called to a report by the British chaplain at Smyrna relative to the treatment of officers and men of the s.s. City of Khios and Assiout, interned at Magnesia, which showed that these seamen were treated in a manner that compared favourably with the treatment of officers and men of the merchant service interned in the German camp at Ruhleben; and whether he would consider the advisability of intimating to the Turkish Government in advance through the good offices of the United States Ambassador that his Majesty's Government was prepared to reciprocate to the full any humanity shown to British military, naval, and civilian prisoners by similar or more considerate treatment of any Turkish prisoners that may fall into their hands.

Mr. Primrose: The answer to the first part of the question is in the affirmative. We have every right to expect that British prisoners in the hands of the Ottoman Government will be treated with humanity and consideration, as we have already informed the Ottoman Government through the United States Ambassador that his Majesty's Government treat Turkish prisoners of war in the same humane way as they treat those of other nationalities.

ITALIAN INTERVENTION—NOW OR NEVER

To the Editor of THE NEAR EAST.

Sir,—Your correspondent, Signor Arundel del Rê, is justified in asserting that Italian neutrality has, on the whole, proved of greater benefit to the Triple Entente than to its foes. Italy has compelled the hated Tedeschi to concentrate on her northern frontier large forces which would otherwise have been employed against Russia or Serbia; and the pressure of her fleet in the Adriatic has paralyzed the naval forces of Austria-Hungary. Although we Britons are duly grateful to Italy for the measure of indirect support she has accorded us, we are inclined, like Oliver Twist, to ask for "more." Remembering that Cavour secured the help of the Western Powers for his deep-laid schemes by joining forces with them in the Crimea, we feel convinced that if that great statesman were now in office his country would long since have thrown her sword into the scale against the enemies of our common civilization. Nor can we forget the heart-whole support given by the people of Great Britain to Garibaldi and his noble comrades during the *Risorgimento*. We hoped for much from a people bound to us by ties of ancient friendship.

St. Paul quoted a verse from Menander implying that evil communications corrupt good manners: we have an uneasy suspicion that Italy is infected with a measure of the selfishness displayed by the predominant partner in the defunct Triplice; that she has lost the idealism which is the most precious heritage of Latin races, and follows the bad example of Germany in severing herself from the European nexus. Hence, perhaps, the bargaining with both sides for material advantages which distresses her friends and seems unworthy of a great people. Italian statesmen may rest assured that the Germanic Powers will never satisfy her longings for expansion. Prince Bülow has affirmed that Trieste is "a lung which allows Germany to breathe," and its cession would indeed be the deathblow of the Hapsburg dynasty; nor is there the slightest probability that Austria-Hungary will cede an inch of the Adriatic coast. The negotiations which have dragged on for so many weary weeks are simply calculated to gain time, for the Wilhelmstrasse knows that a day's delay is of priceless value at this crisis. *Per contra*, the Triple Entente is willing, and will soon be able to satisfy all Italy's legitimate demands. She may annex the Trentino, Trieste, and Istria; may secure a footing in the Balkan Peninsula; perhaps obtain a rectification of her African frontiers. But all such concessions are conditional on speedy intervention. The Triple Entente has decided that Powers which have linked arms against the Germanic Empires shall alone have a voice in the resettlement of Europe which must follow the return of peace. For Italy it is a case of "now or never."—I am, Sir, your most obedient servant,

F. H. S.

May 3.

SERBIA AND BULGARIA.

To the Editor of THE NEAR EAST.

Sir,—I hope you will allow me to point out some inaccuracies in the letter of The O'Mahony in your issue of April 30. We both owe that to your readers who are interested to know the truth.

I am afraid it is getting somewhat tiring for your readers to hear the repetition of the Bulgarian and of the Serbian view concerning the Treaty of 1912. They must be already in a position to form their own judgment, comparing my own exposition of that view in your issue of April 9 with that of The O'Mahony in your last issue. But, really, the most important fact is this: The Treaty of 1912 does not exist any longer. Having attacked Serbia with all her forces, without formally declaring war, and having been defeated, Bulgaria herself had torn that treaty into shreds in June, 1913. If the treaties between two countries are not to be annulled by the wars between the two countries I do not see by what other means they can be annulled; and if the treaties, once concluded, could not be annulled even by war, then the treaties concluded many centuries ago would be legally valid to-day. But where should we be led by such a conception of the indestructibility of treaties? The present boundaries of the European States would have to revert to the conditions of original treaties of some centuries ago! It would be simply impossible, absurd, and ridiculous.

Probably perceiving himself that it is impossible to defend the Bulgarian thesis by the hypothesis of the indestructibility of the Treaty of 1912, The O'Mahony tries to transfer the discussion on quite a new platform, asserting, namely, that the Macedonians are by their sentiment Bulgars. The same assertion used to be made concerning the inhabitants of Nish and Pirot, before the Berlin Treaty incorporated those towns and their districts with Serbia. But nobody asserts it to-day (except The O'Mahony). From the scientific point of view that entire question stands differently. Between the Serbian and Bulgarian people exist—in regard to language and ethnography—certain transition territories or zones. One such zone is well known, as that of the so-called Shops, who live on the territory between the river Timok in Serbia and the river Iskra in Bulgaria. The other such zone is Macedonia. Concerning the first zone it is scientifically proved that the inhabitants of Western Bulgaria up to Iskra show in their language and other ethnographical features decidedly Serbian qualities and very little of the Bulgarian influence. That those inhabitants are really Serbs could be proved practically. The moment, in 1878, Nish and Pirot become incorporated with Serbia, their inhabitants showed themselves as good and as patriotic Serbs as the inhabitants of Shumadia, the centre of Serbia. It is a fact that the inhabitants of several districts of Western Bulgaria addressed petitions, with numerous signatures, to the Congress of Berlin, declaring that they were Serbs and wished to be united with Serbia. Especially was this the case with the inhabitants of Vidin, Bresnik, and Trn. We could have a good case if we chose to claim all the Western Bulgarians as Serbians.

Similar to the situation between Timok and Iskra is the situation in Macedonia. In the northern part of that country, up to Prilip, the ancient capital of the Serbian national hero, the Royal Prince Marko, the Serbian features in the language and ethnography are predominant. To the south of Prilip the Serbian and Bulgarian influences are so mixed that the best Slavist, Professor Yagich, declared (in the "Archives for the Slavonic Philology," Vol. XVII.) that that country forms the transition zone from the Serbian to the Bulgarian languages. Many learned Slavists—as, for instance, Professor Barbulescu, of the University of Jassy—assert that the Serbs, from the linguistical point of view, have at least as much right to claim Macedonia as their own as the Bulgars pretend to have. I do not know any English scientist acknowledged as an authority concerning the Slav languages and ethnography who asserts that the Macedonians are Bulgars. On the contrary, I know some of the English scientists who do not think so. Let me only mention the names of Sir Arthur Evans, Sir Charles Elliot, and Mr. Hogarth. Sir Charles Elliot, for instance, thinks that the Macedonian dialect is as much Serbian as Bulgarian, that those dialects are very fluctuating, and, as a rule, the establishment of the Serbian or Bulgarian school is sufficient to decide whether a village will speak Serbian or Bulgarian. I mentioned here only the non-Serbian scientists. The Serbian authorities on philology and ethnography assert that the Macedonian dialect is a Serbian dialect; that the Codex of Tsar Dushan and all the charters and State documents of the Middle Ages were written in that same language.

The O'Mahony mentions the numbers of churches, schools, teachers, and priests whom the Bulgars had in Macedonia before the war of 1912. I do not say that the Bulgars had not had more of those institutions and professionals than we Serbs had in Macedonia, only I say The O'Mahony's numbers are not exact, and that they are rather exaggerated. Anyhow, in no case could the nationality of the people be proved by such numbers. Up to 1870 the Serbs had many more churches and schools in Macedonia than the Bulgars, but when, in 1876, Serbia declared war on Turkey, the Turks closed all the Serbian churches and schools in Macedonia, and sent away or imprisoned the Serbian teachers. And besides that, by the efforts and insistence of Russian diplomacy, the Bulgars obtained their own ecclesiastical autonomy by the creation of the Bulgarian Exarchate in 1879. The immediate object of the Exarchate was to wrest away from the Greeks and Serbs as many churches as possible, to create Bulgarian dioceses in Macedonia, to introduce Bulgarian priests and teachers and establish Bulgarian schools. Through an untiring ecclesiastical and scholastical propaganda through some thirty-five years, supported in the last time by the bloody propaganda of the Bulgarian Komitajis, who were murdering Serbian priests and teachers and terrorising Serbian villages, an artificial Bulgarism has been created in Macedonia, more especially in the towns.

Of course, it is quite natural that Serbia could not keep up and support this artificially created Bulgarism in Macedonia after she conquered that province. Macedonians are to-day as rapidly and as cheerfully rejoining the Serbians as the inhabitants of Nish and Pirot did, having really never been Bulgars, but Serbs. This is very well known in Bulgaria, and hence the Bulgarian irritability and nervousness, the frequent incursions of Komitajis into Serbian Macedonia, and the forcible transportation of the Macedonian villagers into Bulgaria. That is an intentionally prepared bluff, destined for the uninformed

Englishmen, but not for the Serbs, who know well why the Bulgarians are doing all that.

As a proof that the Macedonians are Bulgars, The O'Mahony brings forward the statement that there are now so many refugees from Macedonia in Bulgaria. No doubt there are to be found in Bulgaria refugees from Macedonia. They are of three different categories: one is composed of the Bulgarian propagandists and Komitajis, who naturally left Macedonia after the Serbians conquered that country; but many of the priests and teachers have remained, having expressed themselves willing to be the loyal subjects of Serbia. The second category of so-called refugees is composed of Macedonians, whom the Komitajis have by force carried away to Bulgaria. And last, there is a category composed of military deserters, because Macedonians, while under the Turkish rule, were not called up to serve in the army, and now they are required by law to do so. Not only are there military deserters from Macedonia to be found in Bulgaria, but also in Greece, and deserters from Greek Macedonia in Serbia, too. The so-called "Macedonian refugees" in Bulgaria have gone over, not from motives and reasons of nationality, but from reasons which I have just stated.

At the end of this letter I wish you to let me express my following convictions: probably no one does such a harm to the true interests of the Balkan nations as one-sided friends, because they look on every question only from one side; are acquainted with the interests and arguments of only one side, and, as the partisans of that one side, forget that for the sake of an impartial judgment the other side also ought to be heard. Especially with the Bulgars, their one-sided friends succeed only in inflaming the passions and developing impossible desires. They are really only exciting and sustaining the discords between the Balkan nations. They prevent the Balkan nations from coming to a reasonable understanding amongst themseves, although clearly such an understanding is required by their own great and vital interests. Fortunately, the real scientists, who know well the languages and the ethnography of the Balkan nations, do not do so.—I am, sir, etc.,

D. JANITSCH.

London, W., May 4.

THE KHALIFATE.

To the Editor of THE NEAR EAST.

Sir,—I regret to find that the writer of your leader on the Khalifate in last week's issue of THE NEAR EAST was misled by Lord Cromer's statement that the Khalif's existence and independence were a religious necessity for the validity of Moslems' prayer. I do not know who misled Lord Cromer into making such a statement, which is entirely without foundation, because no learned Moslem would truthfully tell him such an absurd thing, historically and dogmatically wrong!

Allow me to say for the benefit of your readers that neither the existence nor the independence of the Khalif is sacred to Mohammedans, and much less are they necessary for dogmatic Islam. My letter on this subject in your issue of November 20 last deals fully with the foolish claim of the Sultan to this dignity, which is not his, nor anyone else's, unless bestowed by a regular council of chosen Moslems, and then it can never be hereditary, nor possess any religious virtue, this latter aspect being done away with after the death of the Fourth Khalif Ali, first cousin (not nephew, as your leader says) to the Prophet, and the last of the Moslems' bright beacons.

On the whole, I feel that a subject like this, requiring special knowledge, cannot be profitably discussed in the Press, especially for giving advice to his Majesty's Government, and the Aga Khan, the one of all Moslems I know whom I should like to hear on the controversy, will not, I am sure, speak his mind in public.—I am, etc.,

ALEXANDER SEFI.

Cricklewood, May 5, 1915.

THE BRITISH HOSPITAL, PORT SAID.

To the Editor of THE NEAR EAST.

Sir,—At a time when so many soldiers from various parts of the Empire are in Egypt and war operations are in progress in the Dardanelles and the Bosphorus, it is more than ever necessary and fitting that the good work being done at the British Hospital at Port Said should receive a share of public consideration and support. In this belief I ask you kindly to read the following statement.

In 1886 a hospital was established at Port Said, largely by the efforts of the late Lady Strangford, and with the help of the shipping companies it has done a great work, having treated thousands of cases of illness in sailors and passengers going to and from the East. But it is now quite inadequate to meet the growing needs; and, further, a number of cases from the transports and the Fleet have already been treated, and it is anticipated that many more will follow.

Long before the war broke out Lord Kitchener paid a visit to the hospital, and in a letter dated February, 1912, he wrote:—

> The structure, which accommodates forty patients, is of wood, roofed with iron, and was designed merely as a temporary hospital. It has now stood for over twenty-five years, and at the present time shows such signs of decay that the Committee is taking steps towards building a hospital of a permanent character, and one better suited to the growing needs of Port Said.
>
> My visit to the hospital convinced me that such action on the part of the Committee was imperative, and I am fully prepared to support in every way the efforts now being made to raise the necessary funds.

After much serious deliberation the Committee decided, in the spring of 1914, to erect a durable building of the most approved type. The Egyptian Government gave £1,000 and granted a free site in a most suitable position facing the sea; the Suez Canal Company gave £1,000; and with donations from various sources the fund has now reached a total of £11,000.

The shell of the main building and the out-buildings are quite completed, and with an additional £10,000 the hospital could soon be finished and thoroughly equipped. In asking for this amount the Committee wish to urge the strong claims which the hospital has on the generosity of the public:—(1) The immediate necessity to provide further accommodation for those soldiers and sailors wounded in fighting the Empire's battles near by; and (2) the advantages of a permanent British hospital at Port Said, which will always be available for sailors, soldiers, and passengers going to and coming from Australasia and the East.

The general argument is strengthened when we consider that Egypt is now a Protectorate under the British Government.

Although there are other appeals before the public, the Committee feel strongly that every possible effort should be made to complete this hospital without delay, and I beg most earnestly to commend this appeal to your generosity.—Yours, etc.,

ARTHUR STANLEY, Chairman.

April 30, 1915.

[The Hon. Treasurer and Secretary of the fund being raised is Mr. H. Favarger, F.S.A., F.R.I.B.A., 2, Balfour Place, Park Lane, London, W.]

EXCAVATIONS IN CYPRUS.

At the Royal Society's rooms on Tuesday last (Dr. Walter Leaf presiding), Professor J. Linton Myres read a paper before the Society for the Promotion of Hellenic Studies on "Excavations in Cyprus, made in 1913, in behalf of the Cyprus Museum." He began by paying a warm tribute to the Island Government for having provided funds for the purposes of research. The excavations were undertaken by himself in the autumn of 1913, with the assistance of Mr. Menelaos Markides, the keeper of the Cyprus Museum, and Mr. L. H. D. Buxton, B.A., of Exeter College, Oxford. It was expected they would come upon human remains, and Mr. Buxton's object was to study them, making comparative measurements with their workmen and the people in the villages. Measurements of two thousand persons had in fact been taken and recorded, thus commencing the scientific study of the population of a very interesting corner of the ancient and modern world. Two widely different human types, both non-Mediterranean, had been found among the remains, and both types were represented in the island to-day.

The first site excavated was near the village of Levkoniko, in the Famagusta district, where some large statues had recently been found by the villagers. A small rural sanctuary was cleared, containing a remarkable deposit of stone sculptures, representing all periods of workmanship from the seventh century B.C. to the Græco-Roman period, and almost unique for the brilliant preservation of its painted surfaces. At Enkomi, near Salamis, tombs were opened in the necropolis, whence the British Museum obtained a fine series of late Minoan antiquities. But this site is now nearly exhausted; only two tombs were found intact, and the results of the operations here were mainly topographical. At Lampousa, near Papethos, on the north coast, where important Byzantine treasures have been found at various times, a small area of the site was completely cleared and found to have been deeply quarried and quite rebuilt in the Roman period. Objects, however, were found in the débris of Hellenic and even of late Bronze Age styles.

Between Lapethos and the sea an unusually rich series of tombs of early and middle Bronze Age, quite undisturbed, yielded many bronze implements, a large quantity of typical pottery, and a remarkable type of conventionalised figurines. It was possible, for the first time, to determine the mode of interment, and the physical characters of the population, which was already a mixture of "Mediterranean" and "Alpine" types. At Larnaca a complete section of the Bamboula Hill provided the first stratified series of Cypriote pottery, and important guidance for the topography and history of ancient Kition.

The objects found in these excavations are in the Cyprus Museum; a full report will be published shortly.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions recently will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

BOOKS ON THE NEAR EAST.

A list of recent books on the Near East will be found on the inside front cover of each issue of "The Near East." Readers can obtain these or any other publication, either new or second-hand copies, from the Book Department, 16-17, Devonshire Square, London, E.C.

11	28	Tuesday	26	27
12	29	Wednesday	27	28
13	30	Thursday	28	29

Lord Kitchener was received by Queen Alexandra at Marlborough House last week.

Field-Marshal Sir Evelyn Wood, V.C., was present at the private view of the Royal Academy last week.

Messrs. E. and H. Alban, sons of H. B. M.'s Consul in Cairo, have both received commissions in the Artillery, and are shortly leaving for France.

Prince Paul Kara-Georgevitch of Serbia arrived in London on Wednesday from the Continent.

Amongst the latest gifts received by the Church Army for its gift parcels to British military and civilian prisoners of war interned in Germany is a parcel of shirts made by English ladies in Constantinople.

Our Belgrade Correspondent informs us that Prince Arsène, brother of King Peter of Serbia, has been awarded the Order of St. Vladimir by the Tsar of Russia. Prince Arsène is serving in the Russian Army, in which he holds the rank of Major-General and Commander of the Second Cavalry Division.

General Sir Reginald and Lady Wingate have recently been staying at Erkowit, to which station the offices of the Governor-General are transferred from time to time owing to the hot season in the Sudan. His Excellency was accompanied by Miralai Symes Bey, Miralai Rees-Mogg Bey, and other members of his staff.

A telegram of Wednesday's date from Marseilles to the *Petit Journal*, says: "Prince George Karageorgevitch, who came to France for the sake of his health, has left for Serbia."

Sir J. Roper Parkington, Consul-General for Montenegro, has been confined to his room at Claridge's Hotel for several days owing to a severe attack of influenza.

The Rt. Hon. Lord Reay, K.T., P.C., will preside at the anniversary meeting of the Royal Asiatic Society, to be held at 22, Albemarle Street next Tuesday afternoon, at 4 o'clock.

The Roumanian Minister called on Sir Edward Grey at the Foreign Office on Monday afternoon and spent some time with him.

The second Serbian unit of the Scottish Women's Hospitals, which was on its way to Kragujevatz, by way of Salonika, has been stopped at Malta, the Governor having requisitioned it for immediate service to nurse our own British troops.

Dr. Alice Hutchison, who left Cardiff for Salonika on April 20 in charge of 42 other members of the unit and a fully-equipped laboratory, has telegraphed from Malta to the headquarters in Great Britain of the Scottish Women's Hospitals:—"Consequent upon urgent necessity, Governor of Malta desires services of our unit one week or more. Writing details."

The Greek Minister and Mme. Gennadius left the Legation on Saturday for Folkestone.

Next Friday (May 14), at 8 p.m., a concert will be given at the Town Hall, Wandsworth, in aid of the Serbian Relief Fund. The concert is under the patronage of the Bishop of London, the Mayor of Wandsworth, and Sir Henry Kimber, and Mr. Charles Coborn is among the artists who will appear.

Our Sofia Correspondent writes, under date of April 20:—The First Secretary of the British Legation here, Mr. G. H. Fitzmaurice, C.B., and the Military Attaché, Colonel Napier, went last week to Dedeagatch, and visited vessels of the British Fleet operating against the Dardanelles. They returned here on Sunday, accompanying Lady Bax-Ironside, wife of the British Minister, who returned from England.

The Russian Minister, M. Savinsky, left yesterday on a motor journey to Samakov, Dobritza, and the new territories on the Serbo-Bulgarian frontier.

Baron de Giers passed through Sofia on Wednesday on his way to take up his new post as Russian Ambassador at Rome. He was greeted at the station by a representative of the Bulgarian Government.

Our Bucharest Correspondent writes (April 18):—Queen Elizabeth has lost a true friend, and one of many years' standing, in Mme. Olga Mavrogheni, who has passed away at Curtea del Argesh, near the gracious lady whom she had served faithfully for forty years as Grand Mistress of the Court. Born sixty years ago, Mme. Mavrogheni was the daughter of M. Coslin Cabargi and the great aunt of King Milan of Serbia. Her husband, M. Pierre Mavrogheni, was a statesman of reputation and the first Roumanian Minister of Finance. She herself was a woman of great artistic taste, deeply read, and of a most lively intelligence.

Reuter's correspondent in Amsterdam reports that "a telegram from Constantinople announces the death of Prince Sabah ed-Din (? Salah ed-Din), son of the Sultan Murad." Apparently this telegram refers to Prince Mehmed Salah ed-Din, eldest son of Sultan Murad V., who was born in Constantinople on February 2, 1861.

The marriage arranged between the Hon. Geoffrey Howard, M.P., and the Hon. Christian Methuen will take place quietly to-morrow, the 15th inst., in Henry VII.'s Chapel, Westminster.

Miss Ethel Wemyss Gore, daughter of Colonel and Mrs. W. S. Muir, of De Vere Gardens, London, who was married to Mr. N. W. Smith-Carrington at the Brompton Oratory last week, is a cousin of Sir Reginald Wingate.

In a letter dated April 23 a Cyprus correspondent writes:—"Mr C. B. Wodehouse, Commissioner of Larnaca, and Mrs. Wodehouse and Miss Armine Wodehouse are leaving this week for England."

Miss McInnes left Egypt for England by the P. and O. s.s. "Mongolia."

Captain Guy B. Pears, Royal Engineers, who was recently wounded somewhat severely near Neuve Chapelle, is a son of Sir Edwin Pears, and is well known to many of our readers both in Constantinople and in Egypt. He had, in fact, been serving in Egypt for two years when, at the end of last October, he was sent on to France. He holds the army qualifications for Turkish interpreter and the preliminary certificate for Arabic. He was wounded on April 16 by a sniper while on night work, after going safely through the thick of the fight at Neuve Chapelle, and he is now at Millbank Hospital, where, we are glad to learn, he is making satisfactory progress.

We are pleased to learn that the wound received by Mr. G. Goschen, while serving with the 3rd Grenadier Guards, in which regiment he holds a commission, is not so serious as was at first feared. Mr. Goschen, who was assistant private secretary to the Financial Adviser in Cairo, left Egypt to join the British forces in October last, but had the misfortune to be wounded and captured in his first engagement. The danger of partial paralysis, which was once feared, is now over, and although not yet completely cured, the patient is making good progress towards recovery in Hanover.

According to private information received in Athens from Constantinople, the British Vice-Consul, Mr. C. E. S. Palmer, who is one of the prisoners from the British submarine, is being detained in a separate prison, and will be tried by court-martial on the charge that he had no business on board the submarine and was therefore a spy. This is doubtless a pin-prick due to German advisers. Mr. Palmer is a lieutenant in the Royal Naval Reserve.

Mr. Harry Vere has received a temporary commission as a Lieut.-Commander in the Navy, and left last week to join one of the principal battleships now engaged off the Dardanelles.

Major A. G. Cowan, to whom the bronze medal of the Royal Humane Society was voted in recognition of his gallantry in going to the assistance of a Subadar of his regiment at great risk to his own life during a bathing parade at Hong Kong last year, was presented with the medal at a parade of troops at the Suez Canal last month.

The Rev. and Mrs. P. Smith and Miss Bradford and Miss Dight, of the American Mission in the Sudan, left Khartoum on April 16 for Egypt, whence they will proceed to the United States on furlough.

The Bucharest correspondent of the *Morning Post* reports that representatives in the Senate and Chamber of the Conservative Party have signed a memorial to M. Marghiloman asking him to resign the leadership of the party on the ground that his attitude—which is Austrophil—is not in harmony with national politics.

Lieut.-Colonel H. L. Reed, V.C., who is reported wounded in the fighting round Ypres, served during the Balkan war as military attaché with the Turks.

Lieut.-Colonel Hubert Carington Smith, 2nd Hampshire Regiment, who is reported killed in action during the fighting at the Dardanelles (under date of April 29), had seen service in the Sudan and took part in the battle of Omdurman. He also served in the Aden hinterland campaign, in South Africa, and in Mauritius. He was twice mentioned in despatches for his services in the Nile Expedition, and received the Order of the Mejidia and the Egyptian medal with clasp.

Lieut.-Colonel Richard A. Rooth, 1st Royal Dublin Fusiliers, who has also been killed in action while serving with the Mediterranean Expeditionary Force, had also seen service in the Aden hinterland in 1903.

Yet another officer who served in the Aden operations in 1903, and is now reported killed in action in the Dardanelles landing, is Major C. T. W. Grimshaw, of the Royal Dublin Fusiliers.

Major-General A. E. Sandbach, C.B., D.S.O., reported wounded with the Expeditionary Force, has seen much service in the Nile Valley. He served in the Egyptian War of 1882, and was present at the battle of Tel el-Kebir; in the Sudan campaign of 1885; and with the Nile Expedition of 1898. He has served altogether in nine campaigns, has been mentioned in despatches on several occasions, and holds very many medals and decorations.

Major Harry D. Palmer, who is reported wounded at the Dardanelles, is on the Reserve List of the Royal Marine Light Infantry. In February, 1900, he was seconded for service with the Egyptian Army, afterwards serving as assistant adjutant-general. In 1905 he became Financial Secretary to the Headquarters Staff of the Egyptian Army. Two years later he received from the then Khedive the Imperial Ottoman Order of the Mejidia. He retired in February, 1910, when he was permitted to accept a civil appointment in Egypt.

Digitized by Google

The death took place on April 29, at Waverley, Ashburton, Devon, of Mr. Claude Delaval Cobham, C.M.G., a former Commissioner of Larnaca, Cyprus. He was born in June, 1842, and was educated at Rugby and University College, Oxford. In 1878 he was appointed Assistant Commissioner at Larnaca, and became Commissioner the following year, retaining the post till 1907. He edited a valuable bibliography of Cyprus, and translated several Turkish and Italian works.

The death is reported, on April 30, at St. Jacques, Guernsey, of Mr. Wilfrid Hocart Bishop, A.M.I.C.E., late of the Sudan Government Service. Mr. Bishop, who was the younger son of Mr. Julius Bishop, was thirty-four years old.

General R. B. Kirchhoffer, late of the Royal Marine Light Infantry, who died in a nursing home in London last week, served with the Egyptian expedition, 1882, and took part in the operations in the Suez Canal, the occupation of Ismailia, and the bombardment of Nefiche, and was with the naval brigade at the action of Tel-el-Mahuta. He held the medal and the bronze star of this campaign.

The death occurred suddenly, in London, last week of Surgeon-General Aylmer Martin Crofts, C.I.E., at the age of sixty-one. He was with the Egyptian expedition in 1882 at the battle of Tel-el-Kebir and the action at Kassasin, and was awarded the medal with clasp and the Khedive's Star.

Under date of April 10, our Meshed Correspondent writes:—On March 25 M. Jean Bijoff, Controller of the Banque des Comptes, died, and two days later was buried in the Russian Cemetery, just outside the Arc Gate of the city. A large concourse of people attended the funeral. M. Bijoff had arrived in Meshed only a few days before his death.

Captain George Gordon Hilton, 2nd Battalion King's Own Scottish Borderers, who was recently wounded in France, won his commission in 1900, after eight years' service as a non-commissioned officer. He served in the Nile expedition of 1898, and was wounded at Atbara. He was also in action at Khartoum, where his gallantry won for him the medal for distinguished conduct in the field.

Captain A. H. P. Cruickshank, 34th Sikh Pioneers, who is reported to have died of wounds received in action near Ypres on April 27, will be remembered by some of our readers as having made a journey from Bunder Abbas to Shiraz, of which an account appeared in the *Geographical Journal* of February, 1908.

Mr. B. F. E. Keeling, Director of the Physical Service in the Ministry of Public Works, Egypt, and Mr. Amell, of the same service, have both obtained commissions in the Royal Engineers.

Commandant Charles Boniteau, whose death is announced from the front in France, was one of our best known Franco-Egyptians. The Commandant had only received his promotion from the rank of captain a few weeks ago, and he had also been mentioned in dispatches for gallantry in the field. His Commanding General was present at his death-bed, and in his last moments decorated him with the Cross of the Legion of Honour.

Another Anglo-Frenchman whose name appears in the recent casualty lists is Mr. Jean Neuville, who was killed in the trenches of the Argonne. He was a son of M. and Madame Neuville, of the Société des Sucreries d'Egypte, and is the second of their sons to have fallen in the present war.

Mr. P. W. Gardner, formerly of the Anglo-Egyptian Bank, Cairo, has received a commission in a Highland regiment.

Mr. A. T. Cull, who was formerly agent of the Imperial Ottoman Bank at Minia, Egypt, has been granted a commission as Second Lieutenant in the 3rd Seaforth Highlanders.

Mr. Percy Stout, the Rugby International footballer, and his brother, Mr. F. M. Stout, who have been in Egypt for some years past, are shortly leaving for the front in France.

Mr. John Ward, M.P., who has been gazetted Lieutenant-Colonel of the 19th Battalion (2nd Public Works Pioneers) of the Middlesex Regiment, which he founded, served as a private through the last Sudan campaign.

The engagement is announced between Norman Bentwich, of Lincoln's Inn and the Ministry of Justice, Cairo, elder son of Mr. and Mrs. Herbert Bentwich, of 21, Cavendish Road West, N.W., and Carmelcourt, Birchington, and Helen Caroline (Mamie), younger daughter of Mr. and Mrs. Arthur E. Franklin, of 35, Porchester Terrace, W., and Chartridge, Chesham.

At a meeting held recently of the members of the Khedivial Club, Alexandria, it was decided to change the name of the club from "Cercle Khédivial" to "Sultan Hussein Club."

The Hon. B. Sackville West is now acting as interpreter, attached to the staff of Admiral Wemyss, with the rank of 2nd Lieutenant R.N.V.R., and is serving at the Dardanelles.

Kaimakam R. A. M. Russell Bey, of the Sudan Government, has retired from the Government service.

Mr. Wickham Steed lectured in Paris on Monday on "England: Diplomacy Before the War."

The Cyprus *Gazette* of April 9 contains a list of subbscriptions to the Red Cross Funds received from Larnaca, amounting to £131 2s. 6d. The total received to date is £593 7s. 5d.

A lady correspondent writes from Cairo, April 25:—The visit of M. Venizelos to Cairo was fittingly brought to a close last evening by a brilliant reception given in his honour by Mr. D. Casdagli at his villa in Kasr-el-Doubara. A few of the principal British, Allied, and Greek residents, and of the Egyptian notables had been invited to meet and bid farewell to the celebrated statesman, who was to leave on the following day for Alexandria, en route for Cyprus. The guests were received by the host, assisted by M. Verenekis, the Greek Consul-General, and by M. Ambroise Sinadino, who introduced them to M. Venizelos.

By about eleven o'clock most of the guests had arrived. Those present included H.E. Said Pasha Zulfikar and Khairy Bey, representing H.H. the Sultan, Prince Fuad, Rushdi Pasha, Adli Pasha Yeghen, Midhat Pasha, Nubar Pasha, the French Agent and Mme. and Mlle. Defrance, the Russian Agent, the Belgian Minister, the Greek Minister and Mme. Xydakis, Count de Serionne; while the English residents present were Lady Maxwell, Prince Alexander of Battenberg—who has just taken up his post as extra A.D.C. to General Maxwell—the Marquis of Anglesea, Lady Cheetham, Col. and Mrs. Herbert, Capt. and Mrs. Kenny, Mr. and Mrs. F. T. Rowlatt, and Mr. and Mrs. Sydney Merton. Later in the evening came Sir Milne Cheetham, who conveyed the regrets of Sir Henry McMahon, who was detained at the British Chamber of Commerce banquet, Sir Ronald Graham, Lieut.-General Sir John Maxwell, Lord Edward Cecil, Mr. P. Storrs, Harvey Pasha, Mr. Walford, and the Hon. John Cecil.

The evening started with a slight *contretemps* in that the electric light suddenly went out. Fortunately there was forthcoming a plentiful supply of candles, and in point of fact the incident rather than spoiling greatly enhanced the scene, for the subdued light added somewhat to the pleasant effect produced by the pretty gowns of the women. In the Byzantine room especially, where the orchestra was stationed, the *coup d'œil* was particularly artistic, and if the organiser of the evening had cudgelled his brains to produce a pleasing effect he could not have succeeded better. However, when the current was switched on again we were able to wander through the various rooms and admire their handsome decorations; and it was not till past one o'clock that we took our leave of our host and of his honoured guest, who by that time had captivated everyone. When we looked on that kindly face and noticed the quiet simplicity of his speech and manner, we found it hard to realise that here before us stood "the only great statesman that modern Greece has produced," the man who is said to be endowed with an iron will and who can sway multitudes by his eloquence. Yet one felt the fascination of his personality and realized how it is that this simple, quiet-spoken man has such influence over his fellow-countrymen. And having met the ex-Premier it is easy to enter into the feelings of our Greek fellow residents and to sympathise with them in the positive worship with which they regard him.

A correspondent writes:—

A large and fashionable audience greeted Mr. Oliver Bainbridge at the Guildhall, Bath, on Saturday last, when he gave an illustrated lecture on "Bulgaria and the Czar Ferdinand." The Mayor of Bath presided. Mr. Bainbridge gave a highly interesting account of the origin of the Bulgars and the history of the ancient Bulgarian Empires as well as Bulgaria of to-day and her able ruler. The proceeds of the lecture were handed to H.S.H. Prince Riedelski, President of the Polish Committee, by Mr. Bainbridge, as a token of his sympathy with the Poles, whose sufferings, he said, "were terrible beyond the possibilities of language."

APPOINTMENTS, PROMOTIONS, etc.

The Cyprus *Gazette* of April 23 announces that Mr. W. A. Bowring, Treasurer, is granted three months' vacation leave and four months' and one day half-pay leave from April 10.

The same *Gazette* contains the notifications that the High Commissioner has been pleased to appoint Mr. John Cyril Douglas Fenn, Acting Treasurer, and to be a member of the Executive Council of the Island from April 10.

El Kaimakam R. E. M. Russell Bey, Sudan Government, and El Bimbashi H. W. K. Bruce, 11th Sudanese, have been struck off the strength of the Egyptian Army.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

BINNS.—On May 5, at 20, South Hill Park Gardens, Hampstead, N.W., to Mr. and Mrs. W. Hylton Binns—a daughter.

MARRIAGE.

WRIGHT—HOGARTH.—At Wallace Green Church, Berwick-on-Tweed, on 30th ult., by Rev. Geo. M. Fairweather, M.A., Alexander M. Wright, of Baghdad, Arabia, to Maggie Swan, only daughter of George Hogarth, Edrington Castle, Berwick-on-Tweed.

DEATH.

PARKER.—On April 20, at Heliopolis Hospital, Egypt, from pneumonia, Kenneth Alexander (2nd Australian Light Horse), the elder dearly-beloved son of the Rev. and Mrs. H. Bradbery Parker, of Carshalton, aged 29. Australian papers, please copy.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from

Miss Thomson, The Hall, Bexhill-on-Sea.

OBITUARY.

LIEUT.-COLONEL C. H. M. DOUGHTY-WYLIE, C.B., C.M.G.

On the long list of casualties in the Mediterranean Expeditionary Force reported under date of April 29 the name of Lieut.-Colonel Charles Hosham Montagu Doughty-Wylie, C.B., C.M.G., will at once strike the eye of any one who has followed events in the Near East in recent years. His acquaintance with that part of the world was a long and intimate one, and at the time he met his death he was serving on the staff of General Sir Ian Hamilton.

The elder son of Mr. H. M. Doughty, of Theberton Hall, he was educated at Winchester and Sandhurst, and on receiving his commission he joined the Royal Welch Fusiliers. He first saw service in India with the Black Mountain Expedition of 1891, and went through the Chitral campaign in 1895. Next he served in Malta and in Crete, and then joined the Egyptian Army, with which he served during 1898 and 1899. As brigade major he took part in the battles of Omdurman and El Gedid, and he was twice mentioned in despatches, and received the Sudan medal, the Egyptian medal with three clasps, and the Order of the Medjidia. After service in South Africa, and raising a corps of mounted infantry at Tientsin, he was next employed as special service officer in Somaliland, under Sir Charles Egerton, for which he received the medal.

In 1906 he was appointed Military Consul at Konia and later at Messina. Prior to this, however, in what may be described as one of the quiet times in his singularly full and active life, he had (1904) married, his bride being a daughter of the late Mr. John Wylie, of Westcliff Hall, Hants, and the widow of Lieutenant Adams, I.M.S., and at this time he added the name of Wylie to his surname.

His services in Turkey were great, and performed at a time when much attention was drawn to that country by the massacre of Armenians at Adana. During that terrible time Major Doughty-Wylie by his courageous conduct, especially by his readiness to accept responsibility, undoubtedly saved thousands of lives; while his wife also earned the gratitude of the people by her heroic conduct and example and her care for the sufferers. The Consul practically took charge of the city at this time, and his services were recognised by the bestowal upon him of the C.M.G.

At the end of 1909 he was appointed Consul at Adis Abeba, where once more he rendered his country good service, and more than once acted as Chargé d'Affaires for considerable periods. Having obtained an extension of leave from Abyssinia in 1912, he was, with the consent of the Government, appointed Director-in-Chief of the Red Cross units working in Turkey during the Balkan War. He remained at Constantinople till May, 1913, and on leaving was presented by the Sultan with the second class of the Order of the Medjidieh. Mrs. Doughty-Wylie, who had been superintending the nursing staff, also received a high Turkish decoration. In 1913 Colonel Doughty-Wylie served as British representative on the International Commission appointed to delimit the Southern Frontier of Albania, of which Commission he was elected president. His services were rewarded by a Companionship of the Bath. He was quite recently appointed to the General Staff.

*** *The Directory of the present addresses of residents in Turkey who have left the country in consequence of the War will be published in our issue of next week.*

"ST. GEORGE OF MERRY ENGLAND," by Canon Parfit. This interesting account of our Patron Saint is an inspiration to patriotism. Price 2½d., post free. J. and E. M., Church House, Westminster, S.W.

The partnership formerly existing between Messrs. Joseph Cohen, Jacques Eskenazi, and N. Babani having been dissolved, the Han Halil shop of JOSEPH COHEN is now in the same road, near the Arch Way, Cairo, entrance from the Mousky. Friends and customers are respectfully requested to visit the new shop when visiting the Bazaar, where they will find a rich assortment of carpets, embroideries, etc., etc.—Advt.

ROLL OF HONOUR.

British Subjects from Turkey in H.M.'s Forces.

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A. Colchester.
ATKINSON, Gunner T., "A" Co. Royal Field Artillery.
BAKER, Lieut. A. Warden, 7th Royal Scots Fusiliers.
BARRON, Lance-Corporal J. B., First Canadian Contingent (formerly of the St. George's Boys' School, Jerusalem).
BINNS, Rifleman Edward, 8th Service Batt. Rifle Brigade.

FRIDAY, MAY 7, 1915.

ISLAM'S FALSE FRIEND.

"May His Majesty the Sultan and the three hundred million Mohammedans who revere him as their Khalif rest assured that the German Emperor is their friend for all time." If the words of the famous toast given by the Emperor William II. at Damascus on November 8, 1898, are still recalled in the Ottoman Empire, they must sound strangely to-day in Turkish ears. To the first-named recipient of perpetual Imperial favours a decade sufficed to prove the value of German friendship. But Abdul Hamid had little cause for complaint. At a time when Europe was incensed by the Armenian massacres and the interminable troubles of Macedonia the German Emperor stepped out of the concert of the Powers and gave his support to the "Assassin of Europe." For the next ten years the Sultan was safe from the inconvenient pressure that a united front on the part of the Powers entailed for him. It mattered little to him that in the meantime the German Emperor was exacting the price of his friendship at the expense of Turkey. Security abroad had the additional advantage of leaving him free to work his own will at home, so that the arrangement with his German friend worked doubly well. What Abdul Hamid overlooked was that, as the concessions which he gave so freely came to maturity, they must inevitably prove of more importance to Germany than the donor. The Young Turks resolved to regard the Sultan as neither a friend nor their ruler, and he was left in the seclusion of his prison residence, while the German Emperor transferred his friendship to those who were able to forward Germany's designs in Abdul Hamid's stead. For a moment, it is true, Germany seemed to have been so closely identified with the Hamidian régime that she shared in Turkey much of the odium attaching to it. In the first ecstacy of constitutional liberty the Turks turned instinctively to the nation of liberal traditions, and there can be little doubt that, if our diplomatic cards had been well played, Great Britain might have done much to steer Young Turkey through troublous seas to a harbour of safety and prosperity. But, as if from fear that any such action on our part would give rise to misunderstandings, we stood deliberately on one side and left the Turks to work out their own salvation. The task was beyond their unaided strength. Help was needed, and Germany saw her opportunity, not, as the event proved, to give the wise counsel that would have welded the Ottoman nation into a prosperous whole, but to point the way by which in Germany's interests the whips of Abdul Hamid could be replaced by the scorpions of the Committee of Union and Progress. The effect of that advice was early shown when the policy adopted by the Turkish Government, under German prompting or connivance, led to a coalition of the Balkan States and the loss of Turkey's Macedonian provinces.

The suddenness with which the echo of the Damascus toast had died away in Abdul Hamid's case and the bankruptcy of German advice in regard to Macedonian affairs must have dissipated Germany's influence in Turkey, if it had not been for the personal hold obtained over the Ottoman Government. At first neither the plea of friendship nor the pretence of furthering her own interests availed to drag a free Turkey into the war on Germany's side. The Turks, in common with Italy and other nations, proclaimed their neutrality, and in the three months that elapsed before the unprovoked attack on Russia was made nothing had happened to hold out to them the prospect of any advantage to be derived from pitting themselves against the Triple Entente. It was left to German gold in Constantinople to effect what reason and sentiment rebelled against. This, then, was the meaning for Turkey of the German Emperor's friendship. With a cynical and brutal disregard of the interests of the Ottoman Empire, he contrived through the venality of a Constantinople clique to plunge the country into a war from which in the most favourable circumstances it stands to gain nothing. While the German Army was marching on Paris there was no question of Turkish participation in the war. Only when the Germans were denied their swift and easy victory was it necessary to look around for others to pull the chestnuts out of the fire for them. In spite of blandishments and threats every other neutral nation has had the sense to refuse to come to Germany's rescue. Turkey alone has taken the fatal step. There can be little in the course of a six-months' campaign to make her feel satisfied with her decision. In three corners of her wide dominions she is reduced to inactivity, while she has to watch those whom she deliberately made her enemies advancing slowly but steadily against Constantinople, and she turns in vain for further assistance to her German ally. The end is not yet; but in spite of the great strength of the Dardanelles there can be few of those in authority in Turkey who do not see clearly to-day that German friendship has brought disaster upon their country.

When Turkey was drawn into the German net the Emperor, as we have seen, hoped to make subservient to his purpose not merely the twenty million subjects of the Sultan, but also the remainder of the three hundred millions who recognised in him the spiritual head of the Moslem world. However fanciful the idea, there was method in the Emperor's intentions. Turkey was to provide the means of German expansion in peace time; in war she was to sacrifice herself for her ally's interests. For the attainment of this plan it was all to the good if others could be persuaded to sacrifice themselves in the same cause with Turkey. Between Abdul Hamid and the Emperor William II. there was at least an exchange of services rendered, although the former must have a shrewd idea to-day as to the side on which the credit balance rests. In appealing to Islam the German Emperor, possessing not a single Moslem subject, merely sought to flatter it into his service. German friendship had nothing to offer Islam; but great store was set upon what Islam might do for Germany. It was in keeping with this cynical attitude that the German Emperor and his agents set about their task. With the lowest estimate of Moslem intelligence they have schemed to embroil the world of Islam in a war with which it has nothing to do, and the methods employed have invariably displayed supreme contempt for the Moslem faith. The report that the Emperor William has become a convert to Islam has been assiduously circulated, and, there is reason to suppose, has found wide credence among uneducated Moslems. Moreover, the statement has been improved upon by references to the destruction of cathedrals and churches in France as proof positive of the convert's zeal against Christianity. The alleged conversion to Islam is by no means confined to the Emperor, but plays a regular part in German intrigues in all Mohammedan countries. A recent instance is reported from Ispahan. In this case the *soi-disant* convert had sought recognition from the Persian Government as German Consul, and it was only when he was confronted with the mosque ceremony that his self-confidence failed him and the fraud was exposed. When Germans do not hesitate to treat the faith of Islam in this way, they have selected a strange means of showing their friendship to Mohammedans. We know that to the Moslem world the war between Great Britain and Turkey is in the nature of a stumbling block; but it will do well to suspend judgment, until it is better able to weigh all the facts, and not be led away by the pretence of friendship on the part of those who have schemed to bring Islam into contempt and the Ottoman Empire to ruin.

TERRITORIALS IN CYPRUS.

By Margaret Bovill.

The Manchester Territorials came to Cyprus in October, some 500 of them. The island was then a portion of the Ottoman Empire. England had not yet declared war on Turkey. From Constantinople still came specious protestations of friendship that mingled strangely with the angry murmur of the war mob.

The detachment sent to Nicosia passed through the bazaar on its way to camp, and crossed the Konak square, watched intently by big, long-bearded Turks, by eager, loquacious Greeks, by groups of silent English men and women. At the head of the company marched a tall subaltern, whose set face betrayed the strain of self-consciousness. Behind him came file after file of little men, with here and there the stalwart figure of a countryman, mechanics, tailors, 'bus-conductors, navvies—men of varied occupations from the manufacturing centres of the North, bred in murky towns where the struggle of industrial life presses hardly and the siren's scream deafens. Yet their ears had been swift to hear the call to arms; they volunteered for Imperial service. Quickly they marched by, and the bazaar resumed its normal aspect—bargaining, smoking, wrangling. In the cafés, Greek and Turk alike agreed that the new English soldiers were small. For the rest—God knows. They shrugged their shoulders.

The camp lay on a broad plateau overlooking the capital and surrounding country. Zinc-roofed huts stood there—huts which had sheltered Indian troops when at the Treaty of Berlin thirty-six years ago England undertook to administer Cyprus. For weeks the Manchesters had lived under canvas, not knowing the morrow's destiny. At home they had lived under canvas that dripped; then there came a brief interregnum of rough tossings, of anxious moments, at sea; in Egypt there was more canvas, scorched, bone-dry with heat; all day from the desert sand blew, gritting food, clouding the drinking water, and treacherously creeping into hair and eyes. These bare huts set on a hill-top were by comparison sheer luxury. Presently from chimneys long cold issued a friendly smoke; stir and bustle, hoarse words of command, the sound of laughter, disturbed lizards grown hoary in solitude.

In the times of peace Cyprus is garrisoned by a company of Regulars quartered at the seaport of Limassol. Atkins does not come often to Nicosia, and the natives besieged the camp, drawn there by curiosity, attracted, also, by a dim sense that here was an echo of the European Inferno. Dumbly they stared at the "little men," who stared back at them, or attempted a few words of Arabic picked up during their brief stay in Egypt.

"Imshi!" cried one quick-witted youngster, a jockey by profession, but the stolid Cypriote looked blank.

"'E thinks yer talkin' English, sonny; tell the 'blimy 'eathen some more!"

The jockey did.

Vendors of oranges, Turkish delight, charms against the Evil Eyes, shyly produced their wares. Good-humoured bargains were concluded, but the strange coinage was a stumbling-block, "for as soon as a've learned what tha' English shillun cooms to in won country, a've to unlearn it in tha' next."

"Thee'll never find a mon as con teech thee maake it goo further," said a fellow Lancastrian.

The Cypriotes smiled in sympathy at the merriment that greeted the witticism, and, squatting on their haunches, waited patiently to observe fresh ways of the strange soldiers.

But the Manchesters had not come to idle, and when the Nicosia pack of hounds streamed across country, the riders saw khaki uniforms hidden in gullies, in mimic ambush. At the rifle-range day after day the men shot at a vanishing target. Their health improved; dry, invigorating air, wind, and sunshine tanned their faces. It was a new and a better life. Some contemptuous pity was given to "old Bill," who had scoffed at "Terriers" and foreign parts. He was now trudging daily to the works what time grim dawn suffused each dreary street. One of the results of the war may be that men who have been content to stay at home will be content no longer, while their listening children will hear of unexploited spaces, the gorgeous beckonings of a veiled and scented East, learning that the Empire is wider than a tenement.

On the fifth of November proclamations were issued that a state of war existed between Great Britain and Turkey; an official *Gazette* announced that His Most Gracious Britannic Majesty ruled over Cyprus. The island stirred slightly, and regained its poise when the Chief Cadi headed a deputation to Government House that pledged the loyalty of the Cypriote Turk.

Marching orders came suddenly.

The ordered trimness of the camp was disturbed with baggage. Dogs sniffed mournfully at their adopted masters' kit-bags, or stretched themselves unreproved across cherished seedlings of cypress and pine which the men had planted in their leisure hours. There were gardens, too, scratched in the sandy soil, and outlined by white-washed stones. *Kultur* might learn something from them.

A smoking concert was given by the company on the night before it sailed. Beneath a faded Union Jack sat in a semi-circle men in khaki with one more adventurous spirit in sailor dress, who, turning, displayed his trousers' patched and airy seat. A lad in breeches and striped shirt with a flamboyant red tie, winked at the audience as he sang:

I'll never work, you bet yer life;
It gives me too much pain.
She says to me, my luvin' wife:
"You'd better get out in the rain."

The piano jingled into a rattling hornpipe, and the sailor danced until the boards creaked. Heel and toe, toe and heel, cross-legged and bent, then with a spring from right to left, his white teeth flashed. The applause deafened when a melancholy corporal sang dejectedly of "the home where mother dwells," and an intermittent fire of wit in broadest Lancashire was tossed from man to man. But there were ladies in the front seats, civilians in evening dress, of whose sensibilities the censor was aware, with the result that gaps occurred in the repartee, most delicately obvious conclusions to many verses.

"We will now 'ave a quarter of an hour's interval for refreshment—*and* beer," the master of the ceremonies concluded, and the curtain went slowly down, but stuck halfway, revealing a tangle of legs dancing a wild can-can..

The room was thick with smoke when it rolled up, and empty beer-glasses stood by each chair. The contents of one overturned glass trickled across the stage, as the owner wept with loud sobs into a handkerchief. Cat-calls shrilled from the back. A note of dare-devil merriment sounded. In "Tipperary" the singers rocked from side to side, and their comrades rocked also as they shouted the chorus. The movement penetrated into those chairs where the black coats sat. They rocked, too, but stopped abruptly when "Are we down-hearted?" was drawled to the tune of "Sun of my soul!" Officials are not used to sudden shocks. Shouts and cheers followed, cheers for those who had been good to them, for the donors of the beer, for the Commissioner's farewell speech. In the riot of joviality and amid the curling tobacco-wreaths, they sang "God Save the King."

The Manchesters marched out of Nicosia with their band playing and the drummer beating a double tattoo. Minarets glinted in the sunshine; a Muezzin called the faithful to worship from the Gothic pile of St. Sophia, once a Latin cathedral. Past gardens burgeoning into spring, past great-bellied daturas hanging in perfumed whiteness, on through the crumbling ramparts into the bazaar that is for ever restless, splashed with crude colour of crimson and orange and pink, on they marched.

Round the station a crowd stirred impatiently. A special ran in, bringing the Malta Regiment of Militia, the relieving force. The natives pressed against the barrier as the train stopped, and dark, lithe men with soldierly swiftness lined up on the platform; an officer wheeled them smartly round, and they fell back and stood at ease. "The sweetest girl I know" sounded faintly, then clearer and clearer as zaptiehs on half-broken horses dashed ahead. "Varda! Varda!" (make room) they cried, until a way was cleared, and the 8th Ardwick Battalion of Manchesters marched down the centre and halted outside the station entrance. English-women and children mingled in the confusion, and pretty girls came to wave farewell and speed them on their way. A minute boy watched a group of men playing with a card-

board demon that had been a prominent feature of the smoking concert. He stepped forward.

"Are you downhearted?" he asked them. They roared with amusement, and the demon was placed in his hands.

Meanwhile, the Maltese looked curiously at the Manchesters, and each detachment wondered what the other was like. At a word of command the latter bundled into the train. "Good-bye, old chap!" one shouted to a reverend Turk watching them imperturbably from the barrier, "you've got something to *be* sorry for now"; and "Go-o-d-by-e Nic-o-sia," they chanted as the train curved round a bend, and the carriages hummed with laughter. That night a big sea ran, beneath a full moon, and the Territorials were swept to the side of the ship in boats that rose on the waves' crests, or dived into the hollows between.

In the misty dawn like a huge ghost the transport vanished.

NEAR EAST BOOKSHELF.

THE PITH OF THE BAHAI MOVEMENT.*

Hope springs eternal in the human breast; throughout the ages mankind has eagerly anticipated the advent of a Being who shall redress social injustices and bring peace to a distracted world. Christians await their Master's second coming; Jews look for the Messiah; Moslems, for the Mahdi; Buddhists predict a re-incarnation of Siddharta; Hindus that of Krishna. The Messianic dream materialised at Adrianople about sixty-five years ago, when a Persian exile named Baha'u'llah stood forth as "He whom God will make manifest"; and invited the monarchs of Europe to join him in establishing a universal religion and world-wide peace. His mission did not commend itself to the Sultan, who banished him to Acca, in Palestine. There he dwelt for twenty-four years, the recognised head of Bahais in three continents. The aim of his numerous devotional treatises is to fuse the vital elements of every creed into a body of belief which shall fulfil and complete them. On Baha'u'llah's death, which occurred in 1892, his mantle fell on a son, Abdul Baha by name, who continued his task of linking Bahais in bonds of affection. He suffered long imprisonment at the hands of Sultan Abdul Hamid; but regained liberty during the Young Turks' revolution. Four years later he visited Western Europe, and was received with attention everywhere, although he spoke no language but Persian. His discourses, as delivered in London and Paris, are recorded in "Talks by Abdul Baha," and it is rather surprising that a work whose burden is universal peace should appear in a second edition while the world re-echoes the din of arms.

Abdul Baha does not pose as the founder of a new religion, nor will his followers swell the number of jarring sects, whose mutual hatred is, perhaps, the greatest obstacle in the path of human progress. His delightful "Talks" took place in Parisian studios, in Pastor Wagner's "Foyer de l'âme" and at the meeting-place of the French Theosophical Society. Londoners flocked to hear him at private residences; several clergymen lent him their pulpits; and he was even allowed to hold forth at the Friends' headquarters in St. Martin's Lane. This unpretending record of his teachings may be searched in vain for ἔπεα πτερόεντα—winged words which open up a vista of novel and startling speculation. But all who yearn for closer union with things of the spirit will find solace in his discourses. At no epoch in the world-history was there greater need of self-renunciation, self-sacrifice, and brotherly love. F. H. S.

NEAR EAST BOOK NOTES.

One of the Oxford Pamphlets, issued by Milford, is "Rumania: Her History and Politics," by D. Mitrany. The price is fourpence.

Mr. Heinemann has published lately "Pictures in the Land of Temples," a volume of lithographs made by Mr. Joseph Pennell in Greece in 1913. It includes also Mr. Pennell's notes, and its price is 5s. net.

A quite recent publication of the British Museum is "Bronze Reliefs from the Gates of Shalmanezer, King of Assyria, B.C. 860-25." Edited by Dr. L. W. King, it contains some eighty plates in collotype, showing the bronze bands that ornamented the gates of Shalmanezer's palace.

The April "Bulletin" of the Boston Museum of Fine Arts contains the first part of Dr. Reisner's description of his excavating work in Egypt.

Readers who are acquainted with Italian will find in "Origine ed Evoluzione Storica delle Nazioni Balcaniche," by Angelo Pernice (Milan, Hoepli, 6.50 lire). Professor Pernice deals at some length with the diplomatic side of the late Balkan wars, and is of opinion that, so long as the Balkan Question remains unanswered, there can be no settled peace in Europe. He takes a quite hopeful view of Albania, which he would like to see placed under Italian protection.

Messrs. George Allen and Unwin have published "The War and the Balkans," by Mr. Noel Buxton, M.P., and Mr. Charles Roden Buxton. The price of the book is 2s. 6d. net.

*"Talks by Abdul Baha." Second Edition, with additions. (London: Bell and Sons. 1915. Price 2s. net.)

BOOKS RECEIVED.

The Great War: Some Deeper Issues. By W. Tudor-Pole; with a Foreword by Stephen Graham. (G. Bell and Sons. 2s. net.)

THE TURKS IN ASIA MINOR.

On Monday last Sir Edwin Pears lectured at University College on the Turks in Asia Minor. The Acting Vice-Chancellor of the University, Sir Alfred Pearce Gould, presided, and introduced the lecturer as a distinguished graduate of the University.

Sir Edwin Pears said that Central Asia was anciently occupied by great numbers of people of various races who were all spoken of as Turks. They were all nomads, and, even so, were a remarkably fluid population; for they were not associated into tribes or clans, but a man could pass almost at will out of one social group and into another. As to their religion in those early days, whatever it was it sat lightly upon them. Having accepted it, they believed it without ever taking the slightest trouble to investigate. From the fifth or sixth century onwards to the tenth or eleventh, they were probably mostly Buddhists, while a great Christian Church that has now almost disappeared, the Nestorian, had its missions amongst them. At various times a period of exceptional drought or some other cause would set this fluid human mass moving, sometimes towards China, but more often towards the West. In the eighth, ninth, and tenth centuries the Turks made their appearance in Asia Minor, and in the eleventh the Seljukian Turks established themselves in Iconium, now called Konia. These were men of a kindly disposition and artistic perception, who mixed freely with the Greek-speaking population around them, and who had left behind them works of art of great beauty. The Ottoman Turks, who came later, were on an altogether lower plane of civilization, and under their rule the roads of Justinian, the cities and the commerce of Asia Minor had decayed. Streams of Turks had continued to trickle in until the fifteenth, sixteenth, and seventeenth centuries, after which they dwindled more and more, and finally ceased altogether about 1860.

The nomadic Turks were all good fighting men, and in the early days every Turk was a soldier, as was, indeed, the case to-day. But one of the early Sultans, influenced by a fanatical Mullah, had exercised his rights as a conqueror over the subject Christian population by taking the sons of Christian parents to be forcibly converted to Islam and brought up as his soldiers. Thus was established the famous Corps of Janissaries, which for centuries exerted much the same influence within the Turkish Empire as the Prætorian Guards had done within that of ancient Rome. They had deposed Sultans pretty much at their pleasure, until at length, in the early part of the last century, Mahmud the Second had had them all massacred.

SERBIAN FRATERNITY AND CONSTANCY.

On Friday last Miss A. Christitch delivered an address on "Serbian Ideals" at University College, London, Dr. Gregory Foster (Provost of the University) presiding.

The Chairman, in introducing the lecturer, said that she was the only native of Serbia who was a graduate of London University.

Miss Christitch said that the Serbian ideal above all was fraternity. Serbian valour was largely an outcome of this fraternal instinct, for it united and compacted the Serbian army. A Serb never deserted his comrade in the hour of need. The language reflected this fraternal sentiment, for a relationship which in English would be designated a more or less distant cousinship was in Serbian called "being brother by the aunt," or whatever the intervening relative might be. Etiquette required that a woman inquiring at a hospital about her wounded husband and brother must ask about the brother first. If a Serb had a brother dangerously ill he was not supposed to be seen in public and if death followed he was supposed to pay daily visits to the grave for ten days. To the Serb imagination the most beautiful picture was that of the nine brothers who had gone forth to die together at the battle of Kossovo. At that battle, fought in 1389, the Serbian army had challenged a much larger army of Turks; it had been destroyed, but the spirit of the people had lived on during five centuries of fighting until the opportunity came to re-establish an independent Serbian kingdom. One result of the fraternal spirit was that if the men liable to military service of a district were called up the other men also offered themselves. Thus Valievo, which in the recent wars was only required to provide the 13th Regiment, had also provided Regiments 13a, 13b, and 13c.

Another Serbian ideal was constancy. Every clause of the treaty made with the Turks after Kossovo was fulfilled. When the Turks were attacked by Tamerlane in Asia Minor they called on the Serbs, in accordance with this treaty, to come to their assistance, and the Serbs went, not for the sake of the Turks, but for the sake of their plighted word.

TANGIER TO TEHERAN.

I wonder if Hajji Mohammed Wilhelm, as the Constantinople Press informs us the German Emperor is in future to be known, ever realizes that he is contravening all the generally accepted usages of Moslem warfare by his ruthless destruction of churches and clergy in France and Belgium? Christian churches may have been destroyed and their priests done to death at the hands of a fanatical mob from time to time, but no great Mohammedan war lord of the past flouted the injunction of the Khalif Omar as Hajji Mohammed Wilhelm has done. Respect was shown to all places of worship, and their priests were safe at least from death when the Moslem hordes flocked in. Even the Mahdi and his Khalifa spared the priests and sisters at Khartoum. But Wilhelm is made of sterner stuff, and has no room for such paltry distinctions in his code of war.

***

In a letter I have received this week from a Persian Gulf correspondent there is a quaint story about the ex-Vali of Busreh. Some little time before war broke out between ourselves and the Turks H.M.S. Odin was, as you doubtless remember, lying in the Karun, and her presence there afforded considerable satisfaction to our fellow-countrymen at Busreh and Mohammerah. But that satisfaction was nowise shared by the Turkish authorities at Busreh, and the Vali presently wrote to the acting British Consul politely requesting him to have this objectionable vessel removed. The Consul replied that the disposition of his Majesty's ships was rather outside his province, or words to that effect, and begged to remain the Vali's most obedient servant. But before this reply reached his Excellency, it chanced that the Odin departed suddenly; and the Vali, flattering himself that her move was really made in deference to his wishes, promptly sent off another note conveying his best thanks to the Consul. His feelings the next day, when he discovered that the Odin had been replaced by the Espiegle, a similar vessel, but more heavily armed, may perhaps be more readily imagined than described.

***

I have never heard the Montenegrin National Anthem, but I have heard the story of how it was first played in this country, when King (then Prince) Nicholas visited Queen Victoria. The Queen, it will be recalled, met Prince Nicholas in the south of France, and, taking a sincere liking to him, promptly invited him to pay her a visit at Windsor Castle. The Prince accepted, and in due course set out on his journey. Then, at the last minute, when the final touches were being given to the programme for his reception, it was suddenly discovered that not a single copy of the Montenegrin National Anthem was to be obtained in this country for love or money. Consternation! Telegraphic instructions to the British representative to procure copies instanter and to see that they reached England ahead of the Prince, whom he was accompanying. These instructions reached the harassed diplomat just as the Prince and he were starting on their journey. More consternation! More telegrams—this time to Vienna and Paris. Fortunately, success attended enterprise, and copies of the much-sought-after music were procured at last. Fortunately, too, Prince Nicholas broke his journey for twenty-four hours—and the Queen's Messenger who had been despatched with the precious score did not. Result: on his landing on British soil the ears of the Prince were greeted by his own National Anthem; on arrival in London he heard it again; and on reaching Windsor it greeted him a third time. He was frankly and unaffectedly delighted; so was his gracious hostess. And I fancy that the special representative who had been at such pains to secure the score was not a little relieved when he heard the martial strains and was assured that the music had arrived safely and been mastered by the bandsmen in time!

***

I hear from a friend who has recently returned from Egypt that although the hotels lament the fact of war—I am writing of the subject from a mercenary point of view—the dragomans and general dealers have thriven exceedingly during the past season The Australian and New Zealand contingents arrived with unexpectedly large sums of money to spend, and apparently they spent it without stint. At first, too, the street trader found the members of these forces particularly easy to swindle; they had not been forewarned as are the majority of tourists. But, as usually happens in such cases, the swindling confraternity overdid itself, and for the last few weeks it has found it more easy to overcharge a Scotsman than either an Australian or a New Zealander. It appears that the limit was reached when some enterprising merchants filled beer bottles with sea water and rushed to sell them at the stations on the Port Said line, being always careful to deliver the goods only as the train swung into motion. I had a similar experience in the Sudan once myself, but there at least the vendor had the decency to supply me with cold tea that was quite drinkable.

I see that there is a German spy at large in Egypt, and that he has been honoured by the placing of a reward of £40 upon his head. This is a large sum to pay for a German in the present flooded state of the market, but he happens to be rather a valuable specimen and is a Baron to boot—Baron Otto von Gunponburgh, a lieutenant in the German Army, and a man who numbers Sheikh Shawish among his friends. Truly, he is heavily burthened. He changed his name, however, during the Tripolitan War and became "Abdul Karim Bey," of the Turkish Army, and now, a master of many languages, he has returned to Egypt to renew old acquaintanceships and to spy out the secrets of our new Protectorate. Sooner or later he is certain to be caught, and when he is shot the few natives who have befriended him will shrug their shoulders, and, placing all responsibility for his untimely end with the Deity, will refer to the dead man as *magnoon*, or wanting in sanity.

***

But at least it must be said that he is a brave man. The work of a spy is always hazardous, and especially is this the case in Egypt. There is, to the spy, always the danger of hidden thoughts and sympathies lying concealed beneath the impenetrable mask of Oriental courtesy which characterises the persons with whom he has to deal. It is impossible for him to be sure of his man unless he has publicly committed himself, and then he usually ceases to be of any value. The love of intrigue is the heart of the Orient. What might be considered black treachery in Europe may very possibly be regarded merely as evidence of high diplomatic skill in the East; and so I do not imagine that this German gentleman will have a particularly tranquil time in Egypt. Even now he may be expounding his plans to some seeming sympathizer whom he has marked down as a useful tool. And, listening with suave attention, it is quite possible that the said tool is merely biding his time, waiting for the most convenient and effective moment to hand his companion over to the authorities.

CORSAIR.

"THE RIGHT TO KILL."

(FROM A CORRESPONDENT.)

All old residents of Constantinople, and especially those who are familiar with "L'homme qui assassina," will enjoy seeing "The Right to Kill," which was successfully produced at His Majesty's Theatre on Tuesday night. Those expecting much local colour will be disappointed, the scenes being confined to garden scenes, at night, and interiors, whilst only two Turks, Mehmed Pasha and Atik Ali, appear in the cast. Mehmed Pasha especially, admirably interpreted by Mr. Bourchier, is a charming gentleman of the old school, now rather rare in Turkey, and is perhaps the most convincing character of the play—a very life-like touch is introduced by his sitting cross-legged on the sofa the moment the formal guests leave the room. Mr. Bourchier, however, is a little uncertain in making his "temenna," which is sometimes a graceful motion of both his hands and sometimes indeed with his left hand only! The tassel of his fez has a tendency to become more Egyptian than Turkish by slipping to the side, and our old landmarks, the "Sweet Waters," become the "waters of sweetness" for no appreciable reason. Perhaps this is supposed to have a more Oriental flavour. The Marquis de Sevigné begs the Pasha to smoke his "hookah," which seems to be the stage equivalent for narghileh. The interiors, the windows of which allow us no view of the Bosphorus or Constantinople, unfortunately have a dash of the Moorish about them, and one cannot help feeling that the gallant French military attaché and the wife of the Director of the Public Debt had been inspired by some rooms at the Pera Palace Hotel or the "Musée Oriental" of M. Pardo. Sir Archibald Falkland has apparently introduced pig-sticking into Asia Minor in place of the less exciting form of destroying boars, namely, by shooting them, which is, or was till quite recently, in vogue in the environs of Constantinople. All this is, however, by the way, and does not in the least detract from the interest of the play, which is well acted in all its characters, but only serves to show how difficult it is to get true local colour, especially in a play the scene of which is laid in a place which to the great majority of stage-managers must be a *terra incognita*.

Sir Herbert Tree is to be congratulated on his production, and no doubt many readers of THE NEAR EAST will enjoy returning for a few hours to the place which is, or has been, a happy home to many of us.

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore where subscriptions are also received.

THE PRESS ON THE NEAR EAST.

The Greek Crisis.

In the *Contemporary Review* (May), Prof. R. M. Burrows has an interesting article on "Venizelos and the Greek Crisis." He considers it not unfair that popular opinion throughout Europe should go to Mr. Venizelos' credit for the Greek Renaissance. He thinks also that the Greek nation will see eye to eye with him regarding the prizes which may yet fall to her lot as the result of her timely intervention on the side of the Allies. We quote from a paragraph which follows a general explanation of the territories which might be expected to fall to Greece in such a case:—

It is not improbable, therefore, that the present Greek Government will, before the coming election, declare for intervention, and that it will dissociate its policy from that of Venizèlos only on the grounds that it has tried to make better terms for Greece. This view is based, not only on the exasperating negotiations about Lemnos, but on the tenour of a Government communiqué which was published on March 27. In it the Government argued that the right moment for intervention had not yet come, and that it differed from its predecessor only in so far as it was more careful to avoid certain dangers that immediate action threatened.

The commercial advantages which Greece is reaping as the fruit of her present neutrality, Mr. Burrows regards as a factor of considerable weight against precipitate intervention; on the other hand, the possibilities of an expanded and powerful empire as the result of war are too attractive to be disregarded. After dealing with the incidents which led up to the rupture between King Constantine and Mr. Venizelos, the writer adds:—

It is early to talk of reconciliation, and it may be necessary that much should happen before such a thing becomes practical politics. In the meantime, it is improbable that the new Government will succeed in getting better terms from the Allies than Venizèlos would have done. It is doubtful whether it will even persuade the electorate that it has done so.

The Bulgarian Manifesto.

In commenting upon the manifesto of the "so-called Nationalist Party of Bulgaria," *Truth* uses very emphatic language in the paragraph from which we quote:—

The gentleman who penned this ingenious document had better understand that Great Britain and her Allies are not out to bargain with any small State that comes along, but to accomplish the purpose for which they took up arms, and which they intend to accomplish with or without the help of Bulgaria, or any other neutral State.

The writer considers it to be waste of time to talk about the *post bellum* distribution of territory, but adds that "the principle of nationality, not of force, will be the guiding star which will lead to settlement," when the war is over.

Balkan Territorial Ambition.

The success of Germany's carefully laid plans to foment and take advantage of jealousies and dissensions among the Balkan States is regarded by Sir Alfred Sharpe, who contributes an article on "Problems in the Near East" to the *Nineteenth Century* (April), as being one of the most striking points in connection with the present war. He considers that Turkey has already served the German purpose in diverting both British and Russian troops from the central theatre of war. Proceeding to deal with the territorial ambitions of the Balkan States, Sir Alfred regards the Bulgarian demand that Serbia should hand over the territory agreed upon in the treaty of 1912 as unreasonable, although he anticipates that the expansion of the latter country after the present war will be on a scale that will enable her to act with generosity towards her neighbour in regard to at least a part of these lands. He also considers that Bulgaria, "provided that her action is such as in the opinion of the Entente Powers entitles her to consideration," may also acquire Adrianople and Turkish territory down to the Enos-Midia line.

In any case it is clear that Bulgaria, provided she does not make another *faux pas*, will, after the war, on one side and the other become a larger State than she now is.

The writer considers it possible that Serbia and Montenegro may amalgamate after the death of King Nicholas, and will profit by a slice of Dalmatia, which will give them a seaboard with excellent harbours. The fulfilment of Roumanian aspirations, which include the incorporation of Transylvania in her dominions, is, in Sir Alfred's opinion, almost entirely dependent upon her future attitude in the war. Greece he places upon a different footing from the other Balkan States because "she has no prospect of increasing her dominions in Europe [except by the occupation of the southernmost strip of Albania (Epirus)]."

By acting, however, in harmony with the Entente, and in view of territorial additions to the other States, she thinks that in a general rearrangement of Balkan questions she has a right to consideration. . . . .

Of all the Balkan States Serbia is the one which deserves first consideration. In the face of enormous difficulties she has not only held out single-handed against the attacks of Austria, but has actually on two occasions inflicted crushing defeats on the armies of that Power. She has afforded great assistance to the Triple Entente, has kept some portion of the armies of Austria occupied on her borders, and by holding out against them has prevented Germany and Austria from obtaining possession of the line of railway from Vienna to Constantinople.

An Empire Sold to the Germans.

The Dedeagatch correspondent of *La Petit Marseilles* recently contributed to his paper an article under the above heading. According to the writer of this article nearly all the higher commands and appointments in Constantinople are in the hands of the Germans, who are openly arrogant in dealing with their Turkish subordinates. Almost complete dominion is held over these unfortunate people by an elaborate and ceaseless campaign of lying:—

The war and its vicissitudes are presented as an uninterrupted series of German and Turkish victories. The people do not believe in the latter. . . . On the other hand, they are firmly convinced of the triumph of the Germans in Europe. They rely on this success to repair and compensate them for their own defeats when the final reckoning comes. And this hope contributes not a little, together with their incurable apathy, to their tolerating the presence of the Germans.

The writer expresses his belief that the real sympathies of the Turkish people are by no means with their allies, but with the French and English. Numerous French merchants still remain in Constantinople and prosecute their business much as usual.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

There is little news from Turkey this week, but the *Morning Post's* Berne correspondent, wiring on Wednesday to his paper, gave the following rather interesting information, which I reproduce, without, however, vouching for its accuracy:—"Dr. Helfferich, the German Financial Secretary, is endeavouring to tide Turkey over her financial difficulties. He has arranged that the Turkish Government shall pay £6,000,000 in gold into the reserve lodged with the management of the Ottoman Debt, and shall issue paper money amounting to £T6,583,094, which will have the force of legal currency for all payments. These notes will be honoured on presentation in Constantinople six months after the conclusion of peace. I am informed that the gold reserve is largely fictitious."

***

Commenting on Mr. J. G. Peel's letter on "Egyptian Cotton Exports," reproduced in last week's issue of THE NEAR EAST, I urged the necessity for the immediate prohibition of cotton exports to countries likely to re-export them to enemy countries. I am pleased to see that the Egyptian Government has lost no time in doing so, news having come through from Alexandria on Friday that the Government had stopped all exports of cotton to Italy and Switzerland.

***

A further danger resulting from exports from Egypt concerns onions, and I quote in this connection from a letter published recently in the *Egyptian Gazette*. There is good reason to believe (says the writer) that "since direct shipment of Egyptian onions to Italy and thence to Switzerland has been stopped, the demand of enemy countries for Egyptian onions is being satisfied by shipping these products to Holland from Alexandria. There is no guarantee required at Amsterdam or Rotterdam, and, moreover, it is understood that quantities of onions are being shipped from Alexandria to Marseilles to be transhipped to Italy or by rail to Switzerland with the purpose of disposing of them in Germany and Austria. Recently a letter was received at Alexandria from Trieste to the effect that a firm, exporting onions from Egypt to Italy, had sent 600 bags to Trieste by way of Italy. The onions fetched very high prices in Austria." The only remedy for this, suggests the writer (and I am inclined to agree) is that the authorities in Egypt must "exact a guarantee for all exports of onions to any other country except England, since it is not known whether France exacts a guarantee for exports going to Switzerland."

***

The *Egyptian Gazette* announces that a delegation representing members of the British Chamber of Commerce of Egypt engaged in the import trade has been received by the President of the Mixed Court of Appeal on the subject of the deposit of £E12 required by the Courts from a creditor instituting bankruptcy proceedings. Replying to the matter recently, I pointed out that the trade's complaint against the deposit was that it deterred creditors from having recourse to justice, and, on the other hand, encouraged small debtors in the evasion of their liabilities, thus constituting an obstacle to trade. I understand that the President of the Mixed Tribunals has courteously promised to take the views of the Chamber into consideration and place them before his colleagues.

***

I have previously referred to the activities shown by Russian business men to increase their country's trade with Egypt. The latest step, I read, is a request from the Export Chamber of Petrograd, which has been instituted by Imperial Decree, to the Cairo "Committee for the Development of Russian Commerce" for the arrangement of a programme of mutual collaboration in the extension of commercial relations between Russia and Egypt, as both the Cairo and Petrograd bodies work on very similar lines. To further this object the Petrograd Export Chamber has forwarded to the Cairo committee lists of all the banks and produce exporters of Russia. Those desiring further information on the matter can address the secretary of the Cairo committee, whose offices are at No. 30, Maison Parvis, Sharia Doubbreh.

***

It will be remembered that on February 5 we reproduced the invitation for tenders issued by the Government of Cyprus for the transport of mails by mail-coaches between the towns of Nicosia and Larnaca. The tenders were not to reach the President of Tender Board later than March 8. The latest copy of the *Cyprus Gazette* to hand (April 9) repeats the invitation, the closing date having been put off to April 28. At the time I was rather pessimistic about the scheme as a commercial undertaking, but urged the necessity, even if at a pecuniary loss to the Exchequer, of the mail service with a view to the rapid development of our new island. I am not surprised, therefore, to see that the first invitation did not receive satisfactory attention from possible tenderers. On the other hand, the new tender has been issued in a modified form—that is to say, the tenderer can no longer offer for "a rate per mile in accordance with the number of miles run," but must restrict his offer to "a fixed sum per mensem or annum." This, certainly, does not improve matters. Incidentally, I again hope that the Cyprus Motor Transport and Development Company will come to a satisfactory understanding with the Government with a view to the maintenance and improvement of the service already established.

***

We have always taken up a strong attitude on the question concerning the improvement of our Consular service, and I shall therefore reproduce this week some extracts from a strong article on the subject contained in the current number of *Electrical Industries*. The writer, after the usual grumble against the apathy and indifference of British Consuls and commercial attachés, says: "A conversation which I enjoyed the other day threw light on a phase of the Consular service which is not familiar. Ineffective British Consuls have more than a negative effect on British trade; they have a positive effect on the trade of rival countries. My informant is a man who has visited almost every civilised country in connection with a leading British industry. He always, as a matter of patriotic duty, called upon the British Consul first and sought from him the information needed to help him on his way. He never got it. Then he went to the American Consul or the German Consul and was always received with open arms. He found these men thoroughly posted on all the facts relating to the business world, and he also found them perfectly ready to talk to him about the opportunities for doing trade. At the same time they were very energetic in making him talk about his trade, and we may be sure that they got from him the equivalent of their courtesy and their assistance. It is distinctly humiliating that, in regions as remote from each other in every way as Italy and Mexico, a British trader should be obliged to resort to foreign Consuls for the help that our officials are paid to give him. But most striking of all is the difference in type between the ordinary British Consul and the men selected by other Governments to represent them abroad. British Consuls seem to exist in a refrigerator; foreign Consuls were hospitable to the extent of inviting him to their clubs and introducing him to the leading men of business in the town. It is quite evident that the whole question of the British Consular service will have to be approached from a novel point of view."

***

Messrs. Raphael Tuck and Sons, whose name is a household word throughout the Near East, and who have been able, in spite of the most active competition on the part of German manufacturers to build up and maintain a market in the Balkans and Turkey (exactly a year ago I met their travelling representative in Belgrade, and he spoke most hopefully of the business outlook), have now had their branch business in Germany sequestered by the Huns. This is on a par with the sequestration in Turkey of the Constantinople Telephone Company, and we can now see where the Turks acquired their kultural methods. It appears that soon after the outbreak of the war the Berlin branch of Messrs. Raphael Tuck and Sons, which was in a most flourishing state—important sums being due to the house at the time for customers throughout Germany and Austria—was taken over by the German Government, and an official administrator placed in charge. Shortly afterwards violent attacks directed against the firm appeared in a leading Berlin journal, calling upon the German public to boycott the art productions of this well-known British house, and similar articles were published in some 200 journals throughout the German Empire, these attacks finally culminating in the sequestration of the business by the authorities.

Germany in Asia Minor.

Concessions and Intrigues.

More than a year ago the *Frankfürter Zeitung* pointed out how necessary it was for Germany to keep open her land trade routes to Asia Minor, not merely because of the food supplies coming from the wheatfields there and in the Balkans, but on account of the immense supplies of raw material which Germany was destined to secure when the Baghdad Railway was in proper working order. The hint does not appear to have been properly appreciated by the other European Governments, who did not recognise that the moneys derived by the German bankers from Asia Minor investments were actually paid in the form of commodities, and that the interruption of trade routes meant the stoppage of interest. Although France, England, Germany, and Russia have made large financial investments in Asia Minor, it remains true that the greatest interests there are German. Whether they will still be German after the war is another matter, but an examination of the present position may well throw some light on what we should prepare to expect. When the Franco-German war had led to the new unity of the German Empire it was towards Asia Minor that German capitalists and diplomatists directed their attention. The campaign for the economic absorption of Turkey-in-Asia and Persia was not carried on at haphazard. The Government was interested in the matter, and when has the German Government acted without a plan? The Baghdad Railway scheme was the first great concession secured from Abdul Hamid, for without railways, as everybody concerned realized, other concessions were useless; but the results of the traditional German "ohne Hast, ohne Rast" policy were wonderful. The first concession was for power to exploit the line from Haidar Pasha (opposite Constantinople, on the Asiatic side) to Ismid, granted to a group of German financiers in 1888.

Baghdad Concession.

This railway was hardly sixty miles long, and it covered an important tract of country. It had its uses, for there was no other railway in the district. But the Germans were determined to make the most of it, so they formed the Anatolian Railway Company, and obtained the financial support of the Deutsche Bank. This enabled them to call upon the advice of its director, Herr Arthur von Gwinner, whose financial astuteness is almost proverbial. Instead of advancing the money the bank acted the part of a broker, got the money from the public, and charged the usual commission for its trouble. Five years later, in 1893, the Anatolian Railway Company secured a further authorization to extend the line from Ismid to Konia. This was completed in 1896, and formed the first long stretch of the Baghdad Railway. The railway did not pay, but it was not expected to pay. And the German financiers believed, with every justification, that they could induce the Turkish Government to make good the deficiencies of the railway in this respect. In 1898, two years after the completion of the first section of railway, the Kaiser visited Constantinople and various parts of Syria. He announced himself grandiloquently as the Protector of Islam, insinuated himself into the good graces of Abdul Hamid, and with due delicacy proposed the extension of the railway to the Persian Gulf.

Convention of 1903.

Not many official records exist regarding these interviews, but it was soon evident that the Kaiser had not spoken in vain. Various plans were submitted to the Deutsche Bank. Some men whose names are more prominent now than they were then put forward their different points of view, which were subsequently embodied in the Baghdad Railway Convention of 1903—there are so many of these Conventions, important and otherwise, that they have to be distinguished by dates. Emil von Rathenau, of the General Electric Company, had something to say on the question of traction and water power. Arthur Ballin was interested in steamship services. Arthur von Gwinner, on behalf of syndicates in which his bank had an interest, gave careful consideration to mines, as did also the multi-millionaire ironmaster, the Carnegie of Germany, August von Thyssen. Surveys were carried out in Asia Minor in 1899, a preliminary Convention was signed in January, 1902, and the revised Convention was signed on March 5, 1903. This document registered the Imperial Ottoman Baghdad Railway Company. In consideration of the granting of the concession the Deutsche Bank had arranged for a new Turkish loan, and on the same day as the Convention was signed the German bankers signed their contract for the first series of the Ottoman 4 per cent. loan. Second and third series were issued in June, 1908, jointly with the signing of a further Convention. Three additional Conventions were signed in March, 1911, and a yet further Convention was under discussion in Berlin when the war broke out.

Kilometric Guarantees.

Let us see what the German concessionaires received in return for their loans. First and foremost, they effectively guaranteed themselves against financial loss resulting from the mere working of the railways. The Turkish Government had to agree to the "kilometric guarantee"—i.e., the Porte made itself responsible for the payment of working expenses on the basis of 4,500 frs. per kilometre. If the receipts fell short of that amount the balance was made up by the Turkish Treasury. Secondly, the original concession developed into a huge network of lines. The main Baghdad line was, of course, from Konia to the Persian Gulf, although its beginning was the original line from Haidar Pasha to Ismid. It had attached to it a number of branch lines, which absorbed practically every district of importance in Upper Syria, Mesopotamia, and areas even further west. There was a branch from Aleppo to Orfa; from Baghdad to Khanikin, on the Persian frontier, bordering on the Russian sphere of influence; a branch from Marach, another to Aintab, another to Erbil; a line from El Badj to Hit; and several lines connecting the main systems with the Mediterranean at Tripoli-in-Syria. But the suggestions of shipowners and others had not been forgotten.

In order that these suggestions might be carried into effect, the Baghdad Railway Company was empowered to dig harbours at Baghdad, Busreh, and Alexandria; and these harbours it was to provide "with all the installations necessary for the landing of ships at the quays, and for the embarking, disembarking, and storage of goods." It was to establish steamship services on the Tigris and the Euphrates; it was to exploit the mines within a radius of twenty kilometers from the railway line; it was to exploit the forests; it was to build warehouses which the public might use—for a consideration; it was to build electric power-houses and to utilise the water-power; it was to have the monopoly of brick and tile works in the whole region. Is it to be wondered at that Marshal von der Goltz said in a public speech in the spring of 1911 that "up to the end of his reign Abdul Hamid wished to see the Germans colonizing Asia Minor"?

Intrigues.

It is not necessary to enter into the financial intrigues connected with all these concessions, though their history would make agreeable reading. There were bewildering issues of bonds. At the beginning the Anatolian Railway Company preferred risking other people's money (did not even Dumas say, "Les affaires, c'est bien simple, c'est l'argent d'autrui"?) to risking its own. This policy was given up after 1902, and it was sought to calm the growing anxiety of English, French, and Russian financiers by offering them representation on the board of the company, in accordance with a few of their political interests. No satisfactory scheme was evolved, however, for the company always arranged the basis of representation by making German interests predominant—as was only natural.

Russia strove to protect herself, and hardly succeeded, by the Potsdam Agreement (1910). France and England, to use the euphemistic language of diplomacy, consolidated their interests—that is to say, they had one or two small railway concessions in the south of Smyrna and in Palestine, and they secured joint renewals of the leases. A French group, represented by the Perrier Bank, secured a concession for a railway from Smyrna to the Dardanelles in 1913; this was the only effective counterblast to the German designs on the Levant. In February, 1914, the Deutsche Bank, representing German interests, and the Banque Impériale Ottomane, representing French interests, reached an informal agreement with respect to railway and other financial questions in Asia Minor; but the formal Governmental ratifications which were to follow do not appear to have been exchanged. England, in the following month, entered into the agreement relative to the petroleum fields in Mesopotamia. Italy, much to the disgust of the senior partner in the Triple Alliance, had already secured (September, 1913) an important railway concession from the Porte. This was for a line from the coast town of Adalia to Buldur, through the Taurus district, the Lake of Taurus, so to speak, being thrown in. The German Government made its views on this matter known through the Berlin financial organ which it frequently uses, the *Boersen-Courier*. An article in the issue of September 21, 1913, coldly welcomed Italy's participation in Asia Minor railways, with the underlying threat that she had better work hand in glove with Berlin. It was not regarded as politically advantageous to Germany that so important a Mediterranean Power as Italy should be represented in Asia Minor by a railway, and the Anglo-Turkish negotiations, of which we heard in June and July last, were intended, in Berlin, to merge subsequently into parallel negotiations between Turkey and Germany on the one hand and Italy on the other. The events of the last week in July put a stop to that; but one cannot help speculating as to what might have been the fate of the Baghdad Railway and of international relationships, if representatives of the Powers interested had discussed its financial plans at leisure.

Jaffa Orange Trade.

Shippers and Brokers.

In connection with the article published last week on the above subject, the following further particulars have been received from a correspondent who is in touch with merchants directly interested in the question:—

"Among the economic losses resulting from the war to British shipping and trade interests in Syria, that represented by the Jaffa orange business is no doubt, as a single item, the largest. The total production this year is estimated at about one and three-quarter million boxes of the average size, viz., about 60 kilos. About half of this considerable total used to be shipped in normal times to foreign markets, such as Trieste, Marseilles, Egypt, and some North Continental ports, but principally to Odessa and Constantinople; while the other half used to be shipped to the U.K., with Liverpool as the chief distributing centre.

"If Jaffa had been a less exposed roadstead, the landing of a British force, sufficient to hold its own, might have been possibly contemplated at the beginning of the orange campaign, say some time in November; because, apart from military and political advantages, the economic advantage might have been a factor sufficiently important to have determined such an action. For, the protection of the crop would have led to the shipment of practically the whole of it to England; and, considering the high freights ruling, the amount of British shipping, insurance, and trade interests therein involved might have been represented by no less than about a quarter of a million pounds. A further economic advantage might have been derived from the consolidation of the position of the British shipping lines at Jaffa, and indirectly in the whole of Syria. These lines have, through outside competition (where German hands could be traced), been sustaining considerable losses, and have seen their former strong grip on this trade perceptibly relaxing. By saving a crop worth over half-a-million sterling, the British shipping combine might have been able to conclude with the grateful shippers mutually profitable freight arrangements, excluding outside competition for several years to come. But military considerations, determined perhaps in a way by the peculiar position of the Jaffa port, militated against such an otherwise eminently desirable consummation, and the Jaffa shippers have had to make the best of a bad case.

Shipping Difficulties.

"It must be owned that, so far as the political attitude of the belligerent countries involved is concerned, the orange shippers have been specially favoured. For, not only have the British authorities licensed the importation of Jaffa oranges (of course, on the condition that the proceeds of the sales would be retained till the termination of the war), but the Turkish authorities have also taken an equally indulgent attitude, and actually connived at the shipment of the fruit to enemy countries, by not requiring the usual deposit which is reimbursable only on the production of a certificate proving the goods to have been landed at a neutral port. Unfortunately, however, the want of shipping facilities has not allowed of full advantage being taken of such official leniency.

"The only means of sea communication since the war began have been two Italian postal lines, one running weekly and the other fortnightly. By the steamers of these two lines—they have a limited cargo capacity—odd shipments of oranges have been made to Ottoman ports and some neutral Black Sea ports through Dedeagatch. Important shipments might have been made to England, via Alexandria, had it not been for the rather intransigeant attitude of both the fruit brokers and shipowners. The latter, in view of the increased cost of shipping and the boom in freights, quoted prohibitive rates payable in advance; while the former would not grant the usual advance. This deadlock was responsible for the loss of a great part of the crop, especially as the fruit of the younger trees has to be plucked early in the season.

"Finally, however, the small consignments that reached the British market fetched record prices, with the result that both shipowners and fruit-brokers modified their attitude. The former reduced their rates, while the latter conceded an advance sufficient to cover both freight and expenses. Simultaneously, the military authorities in Egypt conceded certain licenses for the importation of Jaffa oranges on the same condition as that imposed by the Home Government, viz., the retention of the proceeds till the war is over.

"It is estimated that about half of the crop is still available, and as the bulk of the fruit lies on old trees which may not suffer from late plucking, the campaign, which, in normal times, used to close about the middle of April, may now be extended till the beginning of May."

WHEN WRITING TO ADVERTISERS
Readers are Requested
kindly to mention
"The Near East."

CONSTANTINOPLE AND THE DARDANELLES.

To the Editor of the NEAR EAST.

Sir,—Dardanelles! Constantinople! Two words which for many months past have appeared daily in almost every newspaper throughout the civilized world—a fact which not only emphasizes the importance of the gigantic operation which the Allied Fleets have in hand, but likewise demonstrates the almost breathless anxiety with which everyone awaits the successful result of the grand expedition, and upon which (one might almost say) depends the final issue of this terrible war.

Many have already written with regard to Constantinople and its ultimate fate. Is it to be Russianised or internationalised? Will it lose its importance as a commercial centre? etc., etc. In fact, some writers have long since decided these questions from their own particular point of view.

In February last, Sir Edward Grey, in reply to a question respecting Russia's aspiration permanently to occupy Constantinople, said:—"The precise form in which it (the fate of Constantinople) will be realized will, no doubt, be settled in the terms of peace."

The *Financial Times* of March 4 said:—"The ultimate ownership of Constantinople—in which Russia and Bulgaria are also vitally interested—can safely be left for settlement after the war." Many similar references might be quoted, but to do so would be to take up too much of your valuable space. I will therefore limit myself to reminding all those interested in this question that our leading statesmen have repeatedly said: England is fighting for right and liberty, to crush militarism, and to obtain a peace which will be everlasting. Such being the case, the question of the disposal of Constantinople, upon which greatly depends the *continuation of peace*, must be very carefully considered and the opinions and feelings of the interested parties be consulted—viz., the Turks, the Bulgars, and the two and a-half million inhabitants of the city, divided as they are into Turks, Europeans, Jews, Armenians, etc. So also must the opinions of the inhabitants of the villages on the shores of the Marmora be considered. They are all interested, and would, to a man, vote for the internationalisation of the city. How often, for many years passed, has one not heard the cry:—"If Constantinople were only an international port and the Bosphorus and Dardanelles free and open, how happy should we be, free from all political cares, troubles, and intrigues"? How often has not this same remark been repeated since the war broke out? All this should be borne in mind by our statesmen. Otherwise, supposing Constantinople to be placed in the hands of any single power—the object we are to-day sacrificing so much for—"an everlasting peace" will be defeated and the City of Minarets will remain a bone of contention.

In conclusion, if I may venture to say so, I consider our statesmen must not leave the question of the permanent occupation or future of Constantinople for discussion "in terms of peace" or for "settlement after the war." No, their minds must be made up beforehand (perhaps they have already done so). The whole matter must be carefully studied before any conference takes place, and when the time comes the victorious Allies must have a cut and dried scheme ready to put forward, which, besides Constantinople, should include Salonica, Cavalla, Macedonia, the Ægean Islands, etc., etc. The scheme selected must be approved by all, and we must be prepared, in case of opposition, to impose its acceptance on all the interested parties. In this way only can we be assured of peace in the Near East. In other words, a free Bosphorus, Dardanelles, and Constantinople under international control is what is required.—I am, yours, etc.,

PROGNOSIS.

Bulgaria, April 21, 1915.

BRITISH SEAMEN IN TURKEY.

The Board of Trade have forwarded to the Imperial Merchant Service Guild a report from the American Ambassador, with a list of British seamen from the ships "City of Khios" and "Assiout," now interned at Magnesia, in Asia Minor. The report is as follows:—

With regard to the third British ship detained at Smyrna, the "Billiter," of Malta, Mr. Page is informed by the American Embassy in Constantinople that she had a crew exclusively composed of Greek subjects who were paid off and sent to Greece after the seizure of the vessel.

The American Ambassador in Constantinople has also informed Mr. Page that all three ships, the "City of Khios," the "Assiout," and the "Billiter" have recently been sunk by the Turkish authorities in the channel leading to Smyrna Harbour. The Ambassador in Constantinople further states that he has not so far learnt of any merchant seamen or fishermen from British ships being detained in Turkey other than those mentioned in the list of merchant seamen and fishermen so detained which his Majesty's Government transmitted to Mr. Morgenthau in January last.

The list of seventy-two interned seamen is appended:—

"City of Khios."—V. E. Lazzolo, Captain; C. Roberts, Chief Mate; H. M. Blake, First Mate; H. Litton, Second Mate; C. Short, Carpenter; H. R. Moody, Boatswain; H. Murray, A.B.; T. Maloney, A.B.; J. Sheridan, A.B.; J. Berry, A.B.; H. Jones, O.S.; H. Foyne, O.S.; A. Ross, Chief Eng.; J. A. Dargie, 2nd Eng.; H. F. Pieling, 3rd Eng.; A. Bradshaw, 4th Eng.; A. Gates, Fireman; T. Gallagher, Fireman; G. Simpson, Fireman; H. Leonard, Fireman; E. Purdy, Fireman; E. Leahey, Trimmer; D. Douras, Trimmer; J. McKenna, Trimmer; A. E. Jones, Ch. Steward; J. Lloyd, 2nd Steward; J. Beale, Asst. Steward; T. Rowson, Asst. Steward; E. Bentley, Asst. Steward; H. Milligan, Asst. Steward; D. Lasker, Asst. Steward; H. Bird, Mess Steward; J. Mills, Ch. Ship's Cook; H. Dawn, 2nd Ship's Cook and Baker; J. Shere, A.B.; F. Brend, A.B.; A. Brown, Sailor; B. Bakiyekewitz, Fireman and Trimmer; C. Graham, Fireman and Trimmer; F. Foord, Fireman and Trimmer; J. Cousins, A.B.; M. Walsh, Fireman and Trimmer; F. Pizzotti, Scullion; James Kelly, A.B.

"Assiout."—E. Allen, Captain; R. Marshall, Chief Mate; W. P. Sykes, First Mate; T. S. Mason, Second Mate; W. Craner, Carpenter; J. Gregory, Boatswain; C. Cawsey, Lamptrimmer; J. Dalziel, A.B.; A. McKinnon, A.B.; R. McNeil, A.B.; D. McVicar, A.B.; T. O'Callaghan, Sailor; E. Cosidine, Sailor; T. Thomson, Chief Engineer; G. Brownlees, Second Engineer; R. D. Drysdale, Third Engineer; W. Blair, Donkeyman; John Kelly, Storekeeper; John Boyd, Fireman; J. Meechan, Fireman; G. Morrison, Steward; A. Lamb, Asst. Steward; W. H. Hutton, Ship's Cook; A. Hutton, Asst. Cook; F. Sutherland, Mess Room Steward; A. Gentles, Fireman; F. Gallocher, Fireman; D. Degiorgis, Fireman.

Other British subjects detained as prisoners of war at Magnesia, Turkey, are: G. Reade, in charge of motor-boat belonging to S. Lafontaine, Smyrna; and A. Youtman, in charge of sailing-boat belonging to H. Girand, Smyrna.

Trade Notes.

Egypt.

The Egyptian *Journal Officiel* for April 1 contains certain tariff valuations for hides, skins, sesame, flax, wool, ivory, wax, onions, eggs, cotton seed oil, caustic soda, and various other products exported from Egypt, which are to remain in operation from April 1 to June 30, 1915. The same issue also contains an export valuation tariff for the month of April for cotton, cotton seed, lentils, maize, barley, and other articles. The list of valuations may be seen by British traders interested on application at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The *Journal Officiel* for April 6 contains the following valuation tariff for use in assessing import duties on rough white marble of all kinds, which came into force on April 7, 1915, and is to remain in operation until July 6, 1915, or until denunciation:—

Description.	Valuation per 1,000 kilogs. £E.
Marble, rough white—	
Slabs and pieces	4·000
Squares	3·350

The Board of Trade have received a revised valuation tariff for use in assessing duties on certain metals imported into Egypt, which came into force on April 1, and is to remain in operation until May 31, 1915, or until denunciation. The tariff is published in the current issue of the *Board of Trade Journal* (April 29, page 303).

Malta.

The Commercial Intelligence Branch of the Board of Trade has received a collection of samples from Malta, which includes cheap cutlery and sash tools (both of the cheapest variety), hanging and table lamps, and a triple-wick oil-stove of a somewhat unusual pattern. The last-mentioned article should be of interest to United Kingdom firms manufacturing this class of goods. All the samples mentioned are on view at the Foreign Samples Section of the Commercial Intelligence Branch, 32, Cheapside, London, E.C.

Roumania.

H.M. Consul-General at Galatz reports that at the beginning of 1914 there was every promise of a record season of commercial activity on the Danube. The outbreak of the war, however, in conjunction with the inimical attitude of the Ottoman Government, produced an immediate effect on navigation, while the subsequent closing of the Dardanelles resulted in the complete cessation of all but local trade.

The total tonnage of vessels clearing from the Danube during 1914 amounted to 1,356,090 tons, as compared with 1,742,907 tons for 1913, and with 1,974,465 tons, the average for the last five years, a decrease of 386,817 and 618,375 tons, respectively. British tonnage amounted to 461,810 tons, and was responsible for 34 per cent. of the total tonnage. The percentage of vessels which made use of Sulina for loading operations in preference to up-river ports again showed a slight increase.

The quantity of cereals exported through Sulina during 1914 amounted to 1,750,195 tons, as compared with 2,326,468 tons in 1913.

Morocco.

The following are extracts from the annual report of H.M. Consul-General at Tangier, shortly to be published:—

The construction of military railways has been pushed on, and orders were recently given that the line from Casablanca to Fez, by Rabat, Kenitra and Mequinez, should be thrown open to the public under certain restrictions, the transport of goods being also permitted (see page 837 of the *Board of Trade Journal* of March 25). This will tend to divert the import trade of Fez and Mequinez from Tangier and Laraiche to Kenitra, as goods sent by that route will reach their destination very much quicker and at a fraction of the cost of transport by camel or mule. Work is also proceeding on the Casablanca-Marrakesh line, which, however, will not be completed for some time.

The line from Oudja to Taza and Fez will be pushed forward as soon as the pacification of the neighbouring tribes has been accomplished. The construction of roads has been actively proceeded with in the French zone, and also between Laraiche and Alcazar. At first existing tracks were improved so as to be made possible for wheeled traffic in dry weather, but regular macadamised roads are now being constructed connecting the ports with each other, and with Fez, Mequinez, and Marrakesh. Some 250 miles of such roads have already been completed.

The Board of Trade are in receipt, through the Foreign Office, of an Order of the Resident-General of the French zone, dated March 19 and published in the *Bulletin Officiel* on March 22, containing a list of the articles, the exportation and re-exportation (in process of transit, trans-shipment, or under the "temporary exportation" *régime*) of which is prohibited. The list is published in the current issue of the *Board of Trade Journal* (April 29, page 322).

Bulgaria.

The Board of Trade are in receipt, through the Foreign Office, of a complete list of the articles the exportation of which is prohibited. The full list is published in the *Board of Trade Journal* of the 29th ult., page 321.

EGYPTIAN TRADE DURING MARCH.

(From Our Own Correspondent.)

Cairo, April 20.

The Egyptian Customs returns for the month of March have just been published and show a continuation in the decline of imports already noticeable during the preceding months. Exports, which in February showed a welcome increase, as compared with a regular monthly decrease since the outbreak of the war, have reverted to their former tendency, but happily the drop is only a small one.

The figures are: Imports £E1,332,390 against £E2,414,627, and exports £E2,703,708 against £E2,878,106 during March last year. The decrease in the former is £E1,082,237, and in the latter £E174,398, whilst the diminution since the beginning of the year has been £E3,470,770 and £E1,038,892, respectively.

Imports from the British Empire fell from £E988,940 to £E816,689, and those from France dropped by 65 per cent. to £E64,140, whilst Italy showed a diminution of £E45,304, and Russia one of £E55,774. Germany and her Allies figure for only the amounts withdrawn from bond into which the goods had been placed before the war or for the consignments shipped from neutral ports. It is interesting to note that the United States, Brazil and Greece all have increased their sales to Egypt by amounts varying from 100 per cent. to 150 per cent., and that the last-named country now stands second in importance among the importing nations.

Under exports, whilst Germany, Austria, Turkey (excepting a small amount shipped to Busreh), Belgium, Montenegro, and Roumania do not figure, the share of France has fallen during the month by £E79,547 and that of Russia by £E108,085. On the other hand, the Empire purchased £E129,177 more, whilst Spain increased by £E26,266, Greece by £E71,347 (last March £E6,753), Italy by £E104,416, and last but by no means least Switzerland by £E230,590 (last March that country took only £E67,329). It is noteworthy that practically the whole of the purchases in this country made by the United States, Spain, Japan, and Switzerland was cotton.

The effect of the fall in cotton prices can be seen from the fact that although during the month 66,824 cantars more were exported the value of cotton exports fell by £E575,187. Since the beginning of the year cotton seed exports have increased by 243,588 ardebs, and those of cotton by 569,169 cantars, but the total decrease in value has been £E1,892,061. To compensate, the price of eggs and onions has risen, as has also the export of both these products, whilst an almost phenomenal impetus has been given to the sugar industry by the good prices that this article commands abroad at the present moment.

During March exports of eggs increased by £E61,395, of onions by £E66,271, of cereals by £E95,411, of sugar by £E75,899, and of gold and silver bars, etc., by £E84,357. It may be interesting to note that of the sugar exports £E31,679 went to Morocco, £E21,737 to India, and £E4,977 to British Possessions in the East.

The following variations in the imports took place. Frozen meat increased by £E78,977—practically all from Australia—coffee by £E38,226—mostly from Brazil—and coal by £E15,600. Skins and leather goods decreased by £E38,974, cereals by £E223,513, spirits by £E29,144, construction wood by £E51,696, cotton tissues by £E335,330, and worked iron and steel by £E277,854. It should be noted that the rise in value of the coal imports is entirely due to the increase in freights, as the quantity brought in last month was 67,761 tons less than that imported in March, 1914.

Specie imports amounted to £E71 against £E69,963 last March, and exports to £E12,874 as against £E825,990. Again, Turkey appears for a large amount, but there is no explanatory note to indicate why this export has been allowed. Cigarettes continue to show a falling off, due for the most part to the closing of the German and Austrian markets. The decrease since January 1 has been 38 tons, value £E30,581.

The new table of trade between Egypt and the Sudan shows imports from the latter amounting to £E39,724, and exports from Egypt of £E71,077. Imports include gum £E2,657 (mostly in transit), cereals £E10,517, and cattle £E5,221; exports comprise refined sugar £E15,591, common soap £E1,909, and cotton tissues £E18,597. Owing to the difficulty in securing freightage from Port Sudan and the high rates ruling when space is even available, it is being found more convenient, as well as cheaper, to send Sudan produce in transit viâ either Halfa or Suez for shipment to the foreign markets from Egyptian ports.

PALESTINE AND THE WAR.

On April 20 an Italian steamer arrived in Alexandria from Jaffa, Haiffa and Beyrout with about 300 passengers, of whom seventy were Jews, mostly coming from Jerusalem. These people are fugitives from Palestine and are flying to America and Australia, having decided to abandon Palestine for ever, although they have been in many cases settled there for many years. A representative of the *Egyptian Gazette* interviewed a number of these people. They stated that the financial and economical situation of Palestine was terrible. Flour of the worst description cost 80 frs. the sack. Sugar and petroleum are unprocurable. But sometimes on the rare occasions when a tin of petroleum can be got it costs 50 frs. Potatoes are at 3 frs. a rotl, whereas in ordinary times a rotl costs half a franc (eight Metallics). All money has disappeared from ordinary transactions. Even with the money transmitted from Constantinople owing to American charity food costs so much that it cannot be procured.

The fugitives said that there had been cases of death from starvation at Jerusalem. The city is very tranquil. There are some soldiers quartered at Jerusalem, and about twelve hundred soldiers are at the Jewish colony of Richon-le-Zion, where they have to be fed at the expense of the colony. The awful state of ruin has been accentuated by the devastations of the locusts, which have arrived in huge swarms in southern Palestine. The Government has ordered all males, from fourteen years of age and upwards to be enrolled in order to kill and collect the locusts.

Cotton Prices Since the War.

American v. Egyptian.

By Professor Todd.

In the crisis through which the cotton trade has recently been passing it is interesting to notice how the relative prices of different kinds of cotton have been affected. A detailed examination of the prices quoted in the Liverpool Cotton Association's Weekly circular brings out the fact that the most important varieties may be classified roughly into three groups. (1) There is first of all a group of four, namely, West African, Pernam (Brazilian), Peru Smooth, and East African, the prices of which follow that of American Middling with remarkable regularity. These five may, therefore, be called the American group. (2) Indian cotton follows American fairly closely on the whole, but with occasional tendencies to take a more or less independent course. So it is with Egyptian, taking Fully Good Fair Upper and Brown and Fine Jannovich as typical of the lower and higher grades of that group. (3) Sea Island and Florida seem to be very largely independent of the movements of American, and their prices change much less frequently, the quotations often remaining unchanged for weeks or even months on end. The same applies to Rough Peruvian in a still more marked degree. These tendencies may be very clearly shown by calculating the prices of the different varieties as percentages of the price of American Middling, and the following table shows the result of such a calculation on the first Friday of each month since the beginning of the season 1913-14 :—

PRICES ON FIRST FRIDAY OF EACH MONTH.

Date.	Actual Price.	Percentages on American Middling.										
	American	Indian.	West African	Pernam	East African	Peru Smooth	Peru Rough.	Egyptian. Upper.	Egyptian. Brown.	Egyptian. Jannovich.	Florida	Sea Island.

In the case of Egyptian, it is possible to compare the figures given in the table, with the previous records over a long period. Thus, the average of the seasons' prices of F.G.F. Brown, for the last twenty-five years has been almost 40 per cent. above that of American Middling; so that the price during 1913-14 was very much below the average, especially from March to July. The premium of only 21 per cent. on July 3, for example, is lower than the season's average premium in any year since 1893-94. This was probably due to the unexpectedly large Egyptian crop of 1913, which, unlike so many of its recent predecessors, promised badly and turned out well.

Coming now to the effect of the war, the position may be summed up in this way, that when in the last week of July the price of American began its furious descent, it took with it the other four varieties of the American group, but the second and third groups displayed their characteristic reluctance to follow American to extremes. Thus, Indian fell much more slowly than American, but when American turned in December, Indian was again slow to follow, so that it did not quite maintain the relative level it had reached.

Egyptian since the war has fluctuated in a rather striking way. Following American slowly, it widened out the distance between, until in the end of November the premium of F.G.F. Brown stood at nearly 60 per cent.; but when American turned, Egyptian continued to fall and then remained steady at bottom prices for five weeks, while American was climbing rapidly, with the result that the Egyptian premium fell below 30 per cent. in January. How far this movement was due to the extreme restrictive measures adopted by the Egyptian Government, and the subsequent collapse of these measures, it is not easy to say; but the recent rise of Egyptian again in comparison with American is easily accounted for by the expectation of a relatively small Egyptian crop, due to the depredations of the pink boll worm, as compared with the record figures of the American crop.

Upper Egyptian for a time showed a tendency to keep closer to the American group than its own. Thus on November 6 its premium over American, which during the season of 1913-14 had only been from five to nine points behind that of Brown, fell to twenty-eight points behind. This difference, however, soon disappeared when the extraordinary premium of Brown began to tail off, and now there are again only eight points of difference between the premiums. It is noticeable, however, that on February 5, 1915, the price of F.G.F. Upper Egyptian was actually below that of G.F. East African.

Jannovich, on the other hand, actually outpaced Brown in the rise of its premium over American, showing even greater resisting power to the downward drag, with the result that from October to January, its quotation was more than double the basis price of American. Abbassi and Sakel followed a similar course, but Abbassi, which during 1913-14 was distinctly below Jannovich, has gradually closed up on the latter, till now the prices quoted are the same.

To complete the examination of the fine cottons, it may be noted that Florida and Sea Island maintained their usual independence of the detailed movements of American prices, though they could not withstand the general tendency to lower levels; but they recovered more quickly than the lower grades, and in February got right back to the prices at which they stood before the war. But the most striking movement, or rather lack of movement, is shown by Rough Peruvian. It maintained an absolutely steady quotation from the third week of July to the end of February, and now stands actually a little higher than it did before the war. This, of course, resulted in a tremendous premium over American, and the extraordinary change in the relative positions of Rough Peruvian and Brown Egyptian, there being during December a difference of more than 2d. per pound in favour of the former. This high value is probably due to the suitability of Rough Peruvian for mixing with wool.

These movements of relative values suggest one comment which is of special interest in view of the pessimistic tone of the Egyptian Financial Adviser's recent Budget Note. The value of good cotton has shown a very remarkable power of resistance to an overwhelming combination of depressing conditions, including a world war and the largest American crop on record. It is, of course, easy to be wise after the event, but the truth is that the Egyptian Government were rather precipitate in their cotton measures; and they will be making the same mistake again if they rush into proposals for new taxation or reduction of productive expenditure under the impression that Egyptian cotton is no longer a profitable crop – and the most profitable crop that Egypt can grow.

WHEAT FROM EGYPT.

The current *Bulletin of the Imperial Institute* contains an article on "Wheat from Egypt," which is interesting reading at the present moment, in view of the discussion anent cereal cultivation within the Empire. The article states that a considerable amount of wheat is grown as a winter crop in Egypt for home consumption, but only small quantities are at present exported. In 1912-13 the total area under wheat amounted to 1,305,600 feddans, or about 17 per cent. of the total land under cultivation. This area is about equally divided between Upper and Lower Egypt, and now that the cotton area has been limited to 1,000,000 acres as a war measure, a large amount of land in both sections of the country is available for cereal cultivation. It is hoped that this extension of activities in wheat growing will be successful in rendering the country itself practically independent of outside supplies and in providing a surplus which can be profitably exported.

The Imperial Institute has conducted an analysis of four samples of Egyptian wheat with a view to ascertaining their suitability for export to this country. The first three wheats, which were stated to be of Indian origin, were described as follows:—1. Hindi wheat, similar to Muzaffarnaggar Indian wheat. 2. Hindi wheat "Saidi." 3. Hindi wheat "Beheri." The three samples were submitted to commercial experts in London, who were asked for an opinion as to whether similar wheats would be suitable for the British market, and if so what their probable value would be. They furnished the following report on the samples:—No. 1. This is somewhat similar to the "Delhi" wheat which is shipped from Karachi, and would be worth about 51s. per quarter of 492 lbs. No. 2. A wheat of good colour, but rough, thick-skinned, starchy and lacking strength; weaker than No. 1, and worth about 49s. 6d. per 492 lbs. No 3. A large berried, but very rough, wheat, thick-skinned, starchy and lacking strength. It would be worth about 48s. per 492 lbs.

It was stated that the "Saidi" and "Beheri" wheats are not unknown to London corn factors and millers, having been exported from Egypt some twenty-five to thirty years ago in considerable quantities under the names of "Saidi" and "Beira" wheats. All three wheats would be quite suitable for the English market, and consignments of similar character would be saleable at prices dependent upon the current market values. The fourth sample represented a type known as "Gawi," which is in much favour in parts of Upper Egypt, owing to its power of resisting the hot "Khamseen" winds of March and April. It is believed in London to be of Algerian origin. The experts in London stated that this wheat would not be suitable for the British markets. It resembled in character the hard Bombay wheats which are used for the manufacture of marcaroni, and it would find much better markets at Mediterranean or Adriatic ports than in the United Kingdom.

Egyptian Railways and the War.

Under the above title the current issue of the *Railway Gazette* publishes the following interesting article:—

The Egyptian State Railways have been playing a very prominent part in connection with recent events in Egypt. The British Government decided that as, in accordance with the Suez Canal Convention, the canal ports of Suez and Port Said were neutral, no more troops should be landed at them than were necessary to secure the safety of these places. All other troops brought into Egypt —British Territorials, Australians, Tasmanians, New Zealanders, men from Ceylon, etc.—have been landed at the Mediterranean port of Alexandria, which has also been used for the reception of wounded Indians from France. On the Egyptian State Railways has fallen the work of the transporting of these troops, consisting of many thousands in number, and their baggage to their various destinations, either up to the Suez Canal or to the various garrison towns of Cairo, Zagazig, etc. In addition to the men, of course, have been the thousand and one items of traffic which accompany an army—artillery, wireless telegraphy installations, field and base hospitals, fodder, stores and munitions of war generally. The strain has undoubtedly been great, but the work has been carried out from start to finish without a hitch, under the continuous personal supervision of Colonel Sir George Macauley, K.C.M.G., R.E., the general manager; Major Blakeney, R.E., deputy manager; and Captain Hall, R.E., traffic manager.

The Defence of the Canal.

It is, however, in connection with the defence of the Suez Canal against the Ottoman-cum-German attack that the State Railways of Egypt have played the most important part. The line in this area takes a T-shaped form, the extremities being based at each end of the canal, upon Port Said on the Mediterranean side and Suez on the Red Sea side. The total length of this cross of the T is 172 km. Situated almost centrally is Ismailia (which is 77 km. from Port Said, 91 km. from Suez, and 95 km. from Port Tewfik or Suez Docks), the junction where the line forming the tail of the T takes off, and, running viâ the celebrated battlefield of Tel-El-Kebir, and Zagazig and Benha, gives communication with the chief city of Egypt—viz., Cairo, which is 161 km. from Ismailia, 238 km. from Port Said, and 256 km. from Suez Docks. From Cairo to Zagazig—82 km. —the line is double; thence to Ismailia—79 km.—it is single, and also all along the canal bank. Along this single line of railway, served by another single line from the base established at Zagazig to Ismailia, the successful British defence of Egypt was based. Until within recent years the line from Port Said to Ismailia was a narrow-gauge (75 cm.) one, the property of, and operated by, the Suez Canal Company. Subsequently it was purchased by the Government of Egypt and converted to the standard Egyptian gauge—4 ft. 8½ ins. Even when the present great war started, however, the crossing places in the single line all along the canal were few and far between. This was speedily remedied, however, and some loops, each capable of accommodating a train of maximum length, were put in by the State railway engineers in almost record time. The result of this was that not only was the administration able to handle all military traffic expeditiously and without congestion, but the ordinary passenger time-table has been worked to without a hitch, and even public goods traffic has only been stopped once for one day—that upon which the Turkish attack (and débâcle) actually took place.

The Railway Workshops.

For weeks before the fight the workshops of the State railways at Boulac, Cairo, had been working day and night on military requirements. Hundreds of iron bedsteads for the use of the troops were turned out, and three or four completely equipped hospital trains form a portion of the work these shops have been responsible for under the direction of Mr. R. G. Peckitt, the chief mechanical engineer.

Throughout the period preceding the attack, and for some days afterwards, the more important stations were directly in charge of European railway officers specially deputed from other parts of Egypt for the purpose. Luckily, the Turkish bombardment was so ineffectual that the railway escaped practically without injury.

Engineering Notes.

A Small Pumping Plant.

The time is approaching when Oriental agriculturists and gardeners become anxious about water and the available means for irrigation during the hot season. All kinds of mechanical pumps are used, and all the worn-out and disabled horses, donkeys, and oxen become valuable assets for the time being, as long as they can turn round the water-lifting mill. Having this in mind, one could not help wondering what would have been the feelings of such agriculturists and gardeners if they had been present at a recent test of a little pumping plant which, for private estate work, farm, and general use, is most serviceable. The plant consists of a 1½ b.h.p. oil engine and a simple form of plunger pump, driven by machine-cut gearing, the whole being mounted on a cast-iron bed-plate. The drive is so arranged that, should the pump not be required in action, the gear shaft may be thrown out of operation, when the engine can be used for other purposes. The engine is of an enlarged open-top water jacket type, without the usual separate water tank, and means are provided by a small screw-down valve and piping for automatically adding water to the engine cylinder jacket, when necessary on long and heavy loads. Capable of delivering 1,100 gallons of water per hour to a height of over 100 ft., the engine consumes about 1¼ pints of petrol in that time; thus the cost of fuel for such duty may be roughly estimated at about twopence per hour. In the event of the plant being requisitioned for fire extinguishing purposes, it will throw 1,100 gallons through a suitable fire nozzle to a height of 30 ft. With the pumping gear out of action, this plant is very serviceable for driving barn machinery, a small flour mill, or thrashing machine, as well as for electric lighting purposes. Thus this little plant can be profitably employed all the year round.

A Semi-Bituminous Suction Gas Plant.

The suction gas plant, as a power producer, is very much in favour throughout the East, and its use is particularly noticeable in places where anthracite, coke, or charcoal are easily procured at a reasonable price. Many plants of Continental or American construction for burning wood, as well as anthracite or charcoal, have been introduced, but, as in most places even the wood is expensive, there are still many and extensive regions in the East where this simple and useful power-producer has not yet been introduced for that reason. A semi-bituminous suction gas plant, therefore, of quite a recent design will be of interest to those who are prevented from using the ordinary suction gas plant owing to the cost of the fuel. This new plant is designed for the purpose of gasifying any fuel of a semi-bituminous nature, such as wood blocks, chippings, sawdust, and wood refuse generally, peat, lignite, waste vegetable products, and spent tan. Working on reasonably dry wood the consumption has, it is said, been as low as 2 lbs. per b.h.p. per hour, whilst with sawdust as fuel the consumption averaged 3.5 lbs. per b.h.p. per hour. It is significant that spent tan containing as much as 50 per cent. of moisture can be utilised without previous treatment in this generator. No leakage of gas is possible whilst the plant is at work, neither is smoke observable, and its simplicity of working and reliability are features that have been highly commended by those for whom such plants have recently been installed. The producer, operating on the suction principle, delivers clean gas regulated to suit the demand, no gasholder being required, for the production of gas automatically responds to the requirements of the engine, and ceases when the demand stops. Should it at any time be necessary to employ anthracite, coke, or charcoal owing to a shortage of waste products, such fuels may be at once employed without any modification or stoppage of the plant. The cleaning arrangements are such as to ensure undisturbed running of the engine; the water consumption is quite moderate, the space occupied is limited, and, assuming that the fire is alight from the previous day's run, the producer can be in operation within ten minutes of the arrival of the attendant. Considering that lignite is cheap and easily procured in almost all places in the Near East, and that waste vegetable products and spent tan are thrown away, this new plant will be found a most suitable and economical power-producer for that region.

A New P. and O. Steamer.

The new steamship "Kalyan" has been completed for the Peninsula and Oriental Company at the yard of Messrs. Cammell, Laird and Company, Birkenhead; and is programmed to begin her maiden voyage on June 5, when she will leave London for Bombay with the Indian mail. This vessel is the last to be delivered of the new class of 9,000-ton passenger steamers, known as the "K" class, designed more especially to reinforce the P. and O. Company's services to Calcutta and to the Straits, China, and Japan. Notable features of these steamers are the great breadth and length of their sheltered promenade decks and the comfort and simple elegance of their public rooms. The main dining saloon which is fitted with restaurant tables is situated forward on the spar deck and extends through the width of the ship, being lighted from the sides and forward end by sixteen large windows or port-holes. On the hurricane deck above are the first-class music and smoking saloons; the "Marconi room," and a limited number of first-class deck-cabins. Accommodation is provided on the hurricane and spar decks for seventy-nine first and sixty-eight second-class passengers in cabins, the majority of which are outside or port-hole cabins for one or two persons only. Most of the cabins are furnished with wardrobes, writing-tables, etc.; and the free provision in each cabin of an electric ventilating fan and the attachment to every bed of a movable reading lamp are conveniences which will be appreciated.

ROUMANIAN RAILWAY NEWS.

(From Our Own Correspondent.)

Bucharest, April 18.

The work on the Toulcea-Constantza railway which had been abandoned for the time being is to be taken up actively again. Thirty kilometres of the line are already completed, and the rest is to be finished in the shortest possible period.

M. Al. Perietzeanu, director of traffic on the Roumanian State Railways, has returned from Salonica and Sofia, after having completed the arrangements with the Greek and Bulgarian Governments for the regular transport of merchandise destined for Roumania and discharged in the port of Salonica. Both Governments have accorded every possible facility for the passage of all goods for Roumania.

One hundred and fifty trucks and ten locomotives of the Roumanian State Railways have been sent to Salonica to aid in the transport. Daily ten Roumanian trucks at least will leave Salonica.

The intended route viâ Serbia to Prahovo has been abandoned, the difficulties of transporting by the narrow gauge line between Nish and that port presenting far too many difficulties. The route now decided on is Salonica-Sofia-Sistor, where the goods will be transported across the Danube by lighter and reloaded on Roumanian trucks at Zimnitza, the Roumanian railhead opposite Sistor.

SULZER BROTHERS, WINTERTHUR, SWITZERLAND
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (Linde system)

"THE TIMES" ENGINEERING SUPPLEMENT.

We publish this week further extracts from *The Times* Engineering Supplement dealing with the reports for 1914 of some leading British engineering firms who are well-known in the Near East:—

J. Tylor and Sons.

Messrs. J. Tylor and Sons report that business increased considerably during last year. Since the outbreak of war their accommodation has been taxed to the utmost, and although the size of the works was greatly increased in 1914 further extensions are contemplated to meet the increased demands for their manufactures. The capacity of the engine department manufacturing petrol and paraffin engines has been more than doubled, and plant of the most modern type installed. They have just completed a 200 h.p. four-cycle, single acting, high speed "V" type engine, having eight cylinders each 7 ins. in bore by 8 ins. in stroke, for the Thomas Transmission Company for use in a petrol electric rail coach on the New Zealand State Railways; and the mechanical portion of the transmission gear was also manufactured by them.

N.P. Pump Bucket Company

This firm state that on the whole the war has not affected their business; in fact, the last three months of the old year were by far the best they have had in the matter of sales. During the year they received many orders for home, colonial, and foreign use for their pump buckets in all makes of pumps from 2 to 25 ins. diameter. They are conducting experiments at present with leather and composition rings suitable for hydraulic work and for dealing with acids, oils, etc., as although the rings now used will stand any temperature they are affected by the above-named agents.

ROUMANIA'S OIL EXPORTS.

A correspondent writes to the *Daily Express* to call attention to the fact that Roumania, which recently borrowed £5,000,000 from Great Britain is exporting large quantities of oil into Germany and Austria. "With the exception of 594 tons divided between Serbia and Switzerland," he points out, "the whole of Roumania's exports of refined oil in the month ending March 13 (the latest returns to hand) were destined for the enemies of the Allies, thus:—

Austria-Hungary	.....	14,813 tons
Germany	.....	9,587 ,,
Bulgaria	.....	2,114 ,,
Turkey	.....	1,761 ,,

"These figures are not only up to the average before the war, but are unusually heavy.

GRANT & CHINN,
The British Sanitary Engineers of Egypt and the Sudan.
CAIRO and ALEXANDRIA.
Telegraphic Address: "TUBULAR."
Agents for SHANKS, OF BARRHEAD; and THE BERKEFELD FILTER CO.

WATER TURBINES, PIPE-LINES "VICTORIA" TURBO-PUMPS.,
BOVING & CO., Ltd., 9½, Union Court, London, E.C.
Telegrams: "Jenorten, London."
Telephone: No. 4306 London Wall (3 lines).
Semi-Diesel Crude Oil Engines, and Paper and Pulp-Making Machinery.
Agents in Cairo: Messrs. SAYER & COLLEY, Savoy Chambers.

THE CAIRO MOTOR CO., Ltd.
The Largest Motor Depot in the Near East.
SUPPLIERS OF
Motor Cars, Cycles, Launches, Marine Sets, Evinrude Motor Attachments, Dunlop Tyres & all Motor Accessories.
Head Office: RUE SOLIMAN PASHA, CAIRO, EGYPT.
Also at ALEXANDRIA and LONDON.

Near East Markets.

COTTON MARKET.

(From Our Own Correspondent.)

Liverpool, Thursday Night.

Messrs. Reynolds and Gibson report:—

Egyptian Spot.—The demand continues very limited, and the business reported is only moderate, prices being weak throughout and quotations reduced 50 points for good and below Nubari, and 40 points for other growths, while above good in all descriptions are reduced 30 points. Sales are estimated at 2,300 bales, against 2,000 bales last week.

Manchester Trade.—During the past week the tone of the market is not improved, and notwithstanding steady decline in price of cotton, little confidence in present level prices is displayed as yet. There is also at the moment considerable unrest apparent amongst workers. A demand for war bonus is already causing trouble in spinning sections. Cloth.—Impossible to find any particular outlet that can be described as satisfactory. Manufacturers, as a body, report a poor week's turnover, and prices have declined in sympathy with cotton. Attention of the Near East is centred on progress of war in the Dardanelles.

ZEIDAB COTTON.

The latest cotton figures from Zeidab, says the *Egyptian Gazette* of the 23rd ult., are 8,540 kantars from the company's land and 1,215 from native land. Of the samples sent by the company for valuation the American fetched practically the same price as the Ashmuni. It is not known whether this is due to the demand or to deterioration of the Ashmuni seed which had already been reported.

Three "Kholis" have arrived from Egypt, and preparations are being made for extensive ploughing and distribution of cotton seed, all Zeidabi American. It is estimated that about 1,700 sakias will grow cotton this year. In this connection it is much to be hoped that an agricultural inspector will be available shortly to replace Mr. MacDonald.

SUDAN GRASS OR GARAWA.

Mr. R. Hewison, Assistant Director of Agriculture, Khartoum, publishes a letter in the *Field* on the above fodder plant, in connection with its increased cultivation in the United States and the possibilities of its cultivation in England. The following are some extracts:—

The grass in question is a native of the Anglo-Egyptian Sudan, and in the catalogue of Sudan flowering plants compiled by Mr. Broun, late Director of Woods and Forests, Sudan Government, the following description of it is given: "Andropogon halepensis Brot; Arabic name Addar or Arda (wild variety), Garawa (cultivated variety). Tall grass cultivated for fodder. The seeds are eaten in times of scarcity. When wild it grows to a height of 12ft., and is found in damp localities along the river banks or edges of pools." The American authorities have given it another botanical name, Holcus sorghum, since its introduction into the United States, but it is not known on what grounds this change in nomenclature has been made. As a fodder crop it is grown to a limited extent and always under irrigation in Egypt and the Sudan, and it would have undoubtedly attained greater importance in these countries but for the existence of other crops particularly suited to the agricultural and climatic conditions prevailing there. In Egypt, no forage crop can really compete with "bersim," the Egyptian clover, Trifolium Alexandrinum. In the Sudan the growing of crops specially for forage is practically confined to Government farms and those others which contract for the supply of green forage to the army. For the latter purpose "garawa" is a favourite crop. The native cultivator in the Sudan depends for his fodder to a certain extent upon the natural grasses of the country, but chiefly upon the stalks and leaves of "dura" (Sorghum vulgare), the staple grain crop of the country, and the haulms of "lubia (Dolichos lablab), a valuable leguminous crop grown on irrigated land, and also on banks and islands flooded by the annual rise of the Nile. But for these reasons the merits of garawa would be more widely known, as it is undoubtedly a forage crop of great value.

Although the cultivated variety does not attain to the height given above as that reached by the wild grass, it is a quick grower and a prolific yielder under favourable conditions. On good land and with sufficient moisture a crop of 10 to 12 tons per acre of green forage can be produced in about one hundred days, while a second cutting of from a half to two-thirds of this amount will be obtained some two and a half months later. The crop appears to have had a great initial success in the United States, and although it is not possible to say whether it would similarly succeed in England, it would appear to be well worth a trial in that country.

The following notes regarding the cultivation of this grass on irrigated land may be of interest. When a good seed bed has been secured by the thorough cultivation of the soil, the land is divided off into small plots in chequer board fashion for convenience of irrigation. Each plot is thus surrounded by small banks, which check the flow of water over the surface of the soil and ensure an equal distribution all over the field. The size and shape of these plots, known as "hods," vary to a certain extent according to the levels of the surface of the land, but on well levelled fields they run about 25 to 35 square yards in area. The seed is usually sown by hand. Shallow holes some 6 ins. apart each way are made with the heavy hoe which is such a feature of Egyptian agricultural practice, and a few seeds dropped into each and lightly covered with fine soil. After sowing, water is admitted into each of these plots until the soil has received a thorough soaking without being over-flooded. Care is necessary in giving this first irrigation, for if water is allowed to flow into the plot too quickly the seed may be washed out of the surface soil and left stranded on the surrounding banks or crowded to one side of the plot. As the crop is a quick grower and soon provides a dense shade, no after cultivation is required, all that is necessary being the supply of irrigation water at suitable intervals. The frequency of watering required varies with the soil and the climate. In the Sudan a watering every twelve days is usually required. Cutting is generally done with a small sickle knife; the scythe is practically unknown in the Sudan, although it is used to a certain extent in Egypt for cutting bersim, while mowing machines are curiosities confined to a few large estates under European management or influence.

PRODUCE REPORT.

London, May 6.

Currants.

The market continues strong for all qualities and ordinary medium and good parcels must be quoted dearer. No arrivals have taken place this past week; and only one steamer is afloat due this or early next week. No further shipment is likely to take place until the middle of this month.

In Liverpool the demand has continued active, and the stocks are much reduced. Medium grades at 27s. 6d. to 29s. were mostly inquired for, and the selection remaining is very restricted. Provincial is scarce, and the last sales made showed an advance in price of 6d. per cwt. The supply available is insufficient for requirements, without prospects of further arrivals for at least three weeks.

Sultanas.

Another cargo of Smyrna is close at hand. With a good assortment of all qualities the demand has greatly improved, and nearly all qualities are now selling freely, the only exception being the finest. Cretan sultanas are difficult of sale, but, nevertheless, worth attention on account of price.

In the Liverpool market what remains of the 15,000 boxes ex "Roma" is moving at 1s. per cwt. advance, and after these are disposed of there will be practically nothing available. Small consignments of Afghanistan fruit have come to hand and sold at 53s. to 54s., which is an improvement on previous sales. There is very little prospect of any further important supplies of this origin.

Figs.

Naturals are steady, without much demand. A few skeletons are selling at full prices. In Liverpool market bags of naturals are wanted.

Dates.

There is a good demand at firm prices, but Khadrawies are very short.

Seeds.

Linseed is rather firmer; London-Calcutta, spot and April-May, 55s. 3d. Rapeseed remains firm; Cawnpore, brown, April-May, 51s. 6d.; Guzerat pure, ditto, 55s. Cottonseed is very firm and sparingly offered. London Egyptian spot, April £8 5s., May £8 12s. 6d. per ton. Rangoon beans are steady at the recent advance, 72s. landed being now asked, with quotations for forward shipments firmer.

Oils.

Linseed oil: The market continues weak, and prices show a further market decline. On the spot pipes £31 10s.; barrels £32, month £31 10s., May, £31 5s. Rape oil is quiet but firm. Ordinary brown on the spot, naked £38 15s. to £39 nominal. Cotton oil has further improved in value. Crude, on the spot, pipes, £31 5s. to £31 10s., May-June £32; refined, on the spot, pale, pipes £33 10s.; sweet, barrels £36 to £38.

Egyptian Cotton Cake.

Only a very limited quantity is available in store, for which there are free buyers at £6 5s., but for April shipment holders would be willing to accept £6 2s. 6d. ex ship, at which there is a fair amount of business passing, whilst English are without alteration at £6 5s. to £6 7s. 6d. and Bombay £5 15s. per ton.

Locust Beans.

The market is firm and dearer owing to scarcity. Whole is quoted £7 10s., and kibbled £8 5s.

Egyptian Onions.

Egyptian supplies continue satisfactory, and sound bright parcels meet with a good inquiry at full rates; damaged, however, are moving at low figures.

Gums.

The market is rather quiet, with very little doing. Arabic, Turkey sorts are quoted 40s. to 50s. East India, common to fine, 32s. 6d. to 37s. 6d. Camboge, 31s. to 260s.; mastic, 4s. 6d. to 5s.; myrrh, good to fine, 96s. to 100s. cwt. Tragacanth, first 560s. to 910s.; low to good sorts, 90s. to 130s.

NEWS FROM ALL SOURCES.

In the House of Commons on Tuesday, Sir J. D. Rees asked the Under-Secretary for India whether during recent events in South-Western Persia any injury had been done to the Anglo-Persian Oil Company's pipeline or to its refinery at Abadan. Mr. Roberts replied that the company's pipe-line has been cut, but no damage has been done to the refinery or works.

A Constantinople telegram received in Amsterdam announces the opening of the great bridge over the Euphrates on the Baghdad line.

A further consignment of 100 bags of Egyptian onions has been sent from Alexdria to the Vegetable Products Committee in England as "a gift from Egypt for the British Fleet in the North Sea."

A wire from Bucharest states that a fire has broken out in the refining works of the Romana, causing damage to the extent of about £40,000.

Messrs. the Vacuum Oil Company, Cairo, were the successful tenderers recently to the Egyptian War Office for the supply of petroleum.

Engineering Prospects in Turkey.

The Engineer published on April 16 and April 23 two well-informed articles on "Engineering Prospects in Turkey," from which we reproduce the following extracts:—

While the demand for new constructional work of practically every description will assert itself immediately after the war—destined to replace the terrible wastage that has occurred and which is bound yet to occur—there is no part of the world likely to open up greater opportunities for the engineer than the Near East.

Released from the necessity of supplying the Government with endless supplies of munitions of war, with their machinery again devoted to the output of constructive instead of destructive material, the factories of Great Britain will hum and vibrate with activity to the benefit of all alike—to the profit of the master and to the rich reward of the industrious operator. Pray that no deadlock may occur to mar or diminish the mutual benefits which here await but the reaping; that England may become again the workshop of the world and her workers its industrial saviours.

In considering this unique industrial situation I propose to examine here but one section of a widespread—an almost limitless—sphere of operations—the Near East, and more particularly that portion of it known as the Ottoman Empire.

British Enterprise.

The only important British enterprises in Turkey at the commencement of the war consisted of the National Bank of Turkey, even then upon its trial; British capital invested in the Quay Company; the Telephone Company; the construction of ports entrusted to British capital; the irrigation of Mesopotamia; and the convention for the reorganisation of the Ottoman Dockyards and the construction of a dock at Ismid by the Vickers-Armstrong group, in addition to the rebuilding of the repair yards of the Chirket-i-Hairié S.S. Company and the supply of entirely British machinery throughout. It was almost decided that British co-operation should likewise be invited in the rearrangement and re-equipment of the repair yards of the Mahsoossé Company. Additionally, orders had been given out to several prominent British firms of shipbuilders, such as R. and W. Hawthorn, Leslie and Co., of Newcastle-on-Tyne, for two steamers; and to the Fairfield Shipbuilding and Engineering Company, Limited, of Glasgow, for one steamer; the price in each case being fixed at £22,000. These undertakings seemed to complete the share of British firms in the great industrial development that was then taking place, but in which Germany claimed the greater share.

Here it would almost appear as if Providence, marvellously and mercifully watching over British interests and condoning British supineness, had interposed on her behalf. Just at the time that Germany had practically ousted British engineering from Turkey, when one by one both British-held and French-held concessions were falling into Teutonic hands, by fair means or foul, came the imminent collapse of Turkey, and the consequent confusion of all the many well-laid schemes of her Teutonic ally and mentor. If the dénouement favours us more than we deserve it is none the less welcome upon that account.

It is not at all improbable that, as one result of the seizure of Constantinople by the Allied Fleet, an event which no one doubts will happen, the straits of the Dardanelles with the seas of Marmora and Bosphorus will be thrown open to the commerce of the whole world, and Constantinople become a great free open port for all nations. Such an arrangement would not only put an end to all chance of arousing jealousy upon the part of any one among the Allies but would prove an advantage to all countries; it would likewise stimulate the commercial development of the territory occupied by the neighbouring States of Bulgaria, Serbia, Roumania, and Montenegro. The Dardanelles would be as free to the world's commerce as is the Suez Canal. Constantinople forms almost the geographical centre of three Continents—Europe, Africa and Asia, and were a progressive government but established there, it might become the clearing house for the great commerce continually taking place between these three Continents.

The total amount of trade carried on annually between Great Britain and Turkey has hitherto represented something considerably over £14,000,000 or £15,000,000; of this £9,000,000 have been in exports from this country, and £5,000,000 in imports from Turkey. There has been, on balance, a substantial decline since 1910, with various fluctuations of both imports and exports; this can be readily understood when the almost continuous state of unrest prevailing throughout the Ottoman Empire is taken into consideration. British trade with Turkey suffered a heavy blow when, in the month of March, 1913, the combined Liverpool liners, as well as the Hull (Wilson) steamers, suspended their regular services to the Levant. At the same time some of the railway companies in England refused to carry to Liverpool cargo marked "Constantinople." These facts, in conjunction with the stolid indifference shown by the British Government about our Ottoman trade relations, had a remarkably bad effect upon matters of commercial importance in Turkey, and our industrial position there was becoming steadily worse.

Chamber of Commerce in Turkey.

It is but two years ago that the British Chamber of Commerce in Turkey passed the following resolution: "That in view of the tremendous and successful efforts of our commercial rivals (meaning Germany), owing to their up-to-date and well-organised and diplomatic and consular system to protect and promote the interests of their trades and their enterprises in Eastern countries, such as Turkey, it is incumbent upon his Majesty's Government to take into serious consideration a change in its present diplomatic and consular system in its relation to British trade, and to improve and adapt it to modern exigencies." And having delivered itself of this wise pronouncement, the Constantinople Chamber calmly sat down and awaited the result. It proved a purely negative one, as anybody knowing the British Government might very well have expected. Meanwhile, British traders themselves did nothing towards effecting "a change" or "to improve and adapt themselves to modern exigencies." Impartial critics and observers are perfectly cognisant of the fact that British manufacturers have done nothing, whereas German and other manufacturers have done everything to secure for themselves the markets of the Balkans and Asia Minor, their systematic efforts to win having succeeded, while the incredible ineptitude of their British "competitors" quite naturally assisted them.

An enterprise for which contracts will be awarded in due course is that of lighting by electricity the Princes' Islands, near Constantinople. The Princes' Islands are four in number—Prinkipo, Halki, Antigoni and Proti. Had not the Germans induced Turkey to enter into the *mêlée*, this enterprise would have been begun last year, and the contract would doubtless have been secured by some German firm. Specifications had already been prepared, and applications for particulars had actually been invited *pro forma* by the Prefecture of Constantinople. One of the clauses insisted upon by the Turkish Minister of Public Works was that the successful contractor should furnish all benevolent institutions with a full service of light and power free of charge, while a fixed annuity was to be paid to the Prefecture. The concessionaire, on the other hand, was to be permitted to charge consumers—compelled by a special law to become so—whatever he pleased, a typical example of Ottoman governmental morality!

Constantinople Telephone Co.

It may not be out of place to detail here some of the many drawbacks and difficulties which foreign engineering concerns have had to meet and surmount in connection with past concessions held under the Turkish Government. It will be remembered that about the end of 1911 a company known as the Constantinople Telephone Company (Société Anonyme Ottomane des Téléphones de Constantinople) was formed in London, and invited subscriptions to the amount of some £300,000 from the British public. The money, or the greater part of it, was subscribed, but almost from the beginning trouble and disappointment were met with by the management in Turkey. Notwithstanding the able advice and valuable assistance available—the board possessed some three or four directors, who were serving upon the boards of other concerns of a similar character, namely Mr. Stanley J. Goddard, Superintendent of the National Telephone Company, Limited; Mr. D. Sinclaire, general manager of the British Insulated and Helsby Cables, Limited; Mr. David Smith, of the United River Plate Telephonic Company, Limited; and M. E. Thurnauer, Administrator of the French Thomson-Houston Company—little could be done for a long time to overcome the numerous obstacles thrown in the company's path. Messrs. Frank Gill and W. W. Cook, two distinguished engineers who were in charge of the engineering department of the National Telephone Company, had estimated that when 10,000 stations had been connected up at Constantinople, which they believed could have been accomplished within four years from the inauguration of the service, the profits should be substantial and sufficient "to pay a dividend of at least 7½ per cent." By the month of April, 1913, however, the company had only 26 kiloms. of cable in position, but practically the whole of the underground piping had been laid. It had encountered serious inconvenience by delay in securing material which, unfortunately, had been placed upon the list of contraband of war. While the Ottoman authorities did little to help the company, the British Government actually refused to interfere. It might, however, easily have done so, since at that time the relations between Great Britain and Turkey were normal, and thus some of the company's constructional material might have been released from embargo. Early in March of last year, however, the company, in spite of the adverse conditions referred to, succeeded in putting Constantinople and its numerous and distant suburbs into telephonic communication. It had laid its submarine cables across the Golden Horn, thus connecting the two continents, Europe and Asia, by telephone for the first time, while another cable had been laid from Constantinople to Princes' Islands, in the Sea of Marmora. Altogether, over 46,200 kiloms. of submarine, underground, or overhead lines were laid. Three large exchanges were established—at Pera, Stamboul and Kadikeni, an important suburb while about a dozen minor stations were distributed along either bank of the Bosphorus and Marmora, along the Asiatic coast, from Pasha Baghtsche to the Gulf of Ismid, and along the European coast from Büyükderé to San Stefano. Only 10 per cent. of the staff employed were Europeans, and these, by a decree of April 5 last, were dismissed and replaced by Hungarians. Counsellor Eugen Redl, an Austrian, has assumed control of the English-owned telephone company, while another Hungarian engineer, named Alexander Ledecki, is in charge of the telegraphs.

Sir John Jackson.

Among the most heavy sufferers from the war with Turkey is the firm of Sir John Jackson (Turkey), Limited; for some years it has been carrying on vast irrigation works in Mesopotamia, more particularly at the Hindieh Barrage, where things had been prospering quite satisfactorily. A smaller subsidiary company had been formed to handle this last-named enterprise the more effectively; the first undertaking was to construct a jetty at the port of Salif, on the Red Sea, for the Administration of the Ottoman Public Debt. This jetty was intended to be of reinforced concrete. Other projects included harbour construction at Somsoun and Trebizond, on the Black Sea, as mentioned briefly in the *Engineer* of March 26.

Already concessions have been granted for the installation of electric light and power, a railway electric system, and the water canalisation of the important city of Somsoun. Likewise tenders will be invited for the construction of the port of Heracles.

It was decided, as far back as 1913, to construct waterworks at Trebizond, and tenders

Digitized by Google

are invited to this end by the Municipality. The date first mentioned for the reception of such tenders was June 14, but was subsequently altered to October 13. The length of the canalisation to the town is some 22 kiloms.

Harbours.

In connection with the important port of Alexandretta, it had long been determined to improve the harbour, so that the branch line of railway linking up that port might have every opportunity of justifying its construction. The contracting firm is French—La Société du Port de Haidar Pacha. The survey was completed as far back as 1912. The wall, of which only a portion has been finished, will be 3,000 metres long, the enclosed harbour having a length of 1,800 m., with a maximum depth of 10 m., while the entrance will be 180 m. wide. The design, however, embraces a much wider scope; in fact, it allows for a second and larger quay on the outside, which would have a length of 4 kiloms. In addition to the dock and wharf structures, there are to be eight coal warehouses, each measuring 40 by 10 m., with a total capacity of 120,000 tons, built upon the outer quay; and seven warehouses on the shore dock for the storage of merchandise, each to measure 20 by 35 m. A new custom house and an administration building for the port company and several other edifices are also called for. An immense output of dredging will be necessary; part of this has already been carried out by means of a German dredger which was purchased in September of 1913—it should have been delivered in the preceding June, but the Teutonic manufacturers were unable to comply with the terms of their contract, and escaped without the imposition of any kind of penalty.

A harbour at Cozlan—a place of some importance situated at a distance of three kilometres from, and to the west of, Zongouldak—is an enterprise in French hands, but it is questionable whether it will now see completion. The original concession was granted by the Ottoman Government as long ago as March 5, 1912. the concessionaire being given the option, under equal conditions, to construct a railway connecting the Kilimli mines with the sea.

It is possible that one of the earliest enterprises undertaken by foreign capital in the "New Turkey," will be the construction of the dock at Ismid, to which reference has already been made, by the Vickers, Armstrong and Co. group. Another equally distinguished firm, Schneider and Co., was about to undertake a number of harbour improvements on behalf of the Ottoman Government It was, however, violently and successfully opposed by German interests, and nothing came of the negotiations, notwithstanding the fact that elaborate plans had been prepared at considerable expense.

At the time that the Vickers, Armstrong group obtained from the Turkish Government the concession for the reorganisation and working of all the Turkish dockyards and arsenals for a period of thirty years, it was supposed that an excellent piece of enterprise had been secured. And, indeed, so it would have proved but for the prevailing condition of things. The British group represented by the Vickers, Armstrong interests seemed to be on the high road to prosperity when the collapse came, and this notwithstanding the long-withstood and persistent opposition from Teutonic quarters. In future this will be eliminated, and it is possible that the British firms concerned will be able to pursue the even tenour of their way without further trouble or interruption.

Had political events in Turkey taken a different and less sinister form there would have been by now under construction, and carried a long way towards completion, a line of railway leading from the Dardanelles to Smyrna—two places very much in the public eye at present. This railway would have to be provided with a branch to Kara Bigha, which also has figured in recent military dispatches. The line starting from the Dardanelles would have touched at Aivodjik, Edremid, Bourhanié, Aüvalik, Dikili, and Ali-aghe, with a terminus at Karchi-Yaka (Smyrna). The concession, which was granted to the French company, La Société des Entreprises l'Omnium, authorised the entire undertaking, including the erection of quays at the Dardanelles. The railway line would have been between 450 and 500 kiloms. in length. but was to enjoy no kilometric guarantee.

Railways.

One of the most important concessions obtained by the German interests from the Turkish authorities was that for constructing the Bayazid-Chichli electric railway—an underground scheme having great possibilities. Originally this enterprise was to have been French, the idea having arisen with an important group of Paris financiers, who were quite prepared and able to carry it through. But with the fall of the ministry which had favoured it, and the entrance into power of a new pro-German Public Works Minister, French interests were overthrown, and the German group—represented by Herr Huguénin, director of the Anatolian and Baghdad railways—gained the victory. This railway, which may now be de-Germanised and become a conjoint Franco-British enterprise, would run from Sultan Bayazid on to the heights of Stamboul, to Pancaldi, above Pera, crossing the Golden Horn on a bridge to be built not far from the new Galata Bridge. From Pancaldi the main line would be continued to Chichli. A secondary line would extend from Bayazid to Yeni-Capon, on the Sea of Marmora, while other branches would follow the shore of the Golden Horn to Eycoub and the shore of the Bosphorus to Dolmabagtché.

Company Notes.

Deutsche Orientbank.

A writer in the *Egyptian Gazette*, referring to the appointment of a controller to the Deutsche Orientbank, says:—"Obviously his first duty was to see that all available funds of the establishment were put forward to meet the demands of the depositors. This, I understand, has been done. It would appear to me, however, that a further duty which devolved upon the controller was to see that this institution, long regarded by the natives of this country as the standard-bearer of German propaganda in Egypt, was no longer allowed to carry on for political motives an apparently ordinary banking business, but should be restricted to the liquidation of affairs actually in existence at the outbreak of war. Such is not, however, the view apparently taken by the controller, for I am given to understand that the institution is undertaking new business, receiving deposits and loaning money, and this at a time when all the other banking establishments in the country are acting with extreme caution. At first sight it would appear incompatible with British ideas of fair-play to interfere with the Deutsche Orientbank, so long as it apparently conformed to the laws and ordinances, and especially as it has paid off the depositors to whom it was indebted at the outbreak of war. But, sir, under the cloak of ordinary banking business, political propaganda, inimical to Great Britain and her allies, is assuredly being carried on."

Oilfields Finance Corporation.

In the Court of Appeal, on Tuesday, Lords Justices Pickford and Warrington heard an appeal by the Consolidated Electrical Company, Limited, from an order of Mr. Justice Astbury, directing that a petition to wind up the Oilfields Finance Corporation, Limited, should stand over until the termination of the war or until further order. Mr. Gore-Browne, K.C., and Mr. Harold Simmonds appeared for the appellant company; Mr. Tomlin, K.C., and Mr. D. M. Hogg for the Oilfields Finance Corporation.

Mr. Gore-Browne said the petition of the Consolidated Electrical Company was supported by the Bibi-Eybat Oil Company, Limited, to each of which companies the Oilfields Finance Corporation owed £25,000. There were substantially only two other creditors—viz., the Roumanian Consolidated Oilfields, Limited, which was a creditor for £25,000, and the Bank, which was a creditor for £6,000, but took no part in the petition. The Oilfields Finance Corporation promoted the Roumanian Consolidated Oilfields and received £240,000 in fully paid shares. For the purposes of its business the Oilfields Finance Corporation borrowed £25,000 from the Consolidated Electrical Company, and a like sum from the Bibi-Eybat Oil Company. The connection between the Oilfields Finance Corporation and the Roumanian Consolidated Oilfields was very intimate. Not only did the Oilfields Finance Corporation hold 240,000 shares in the Roumanian company, but four of its directors were directors of the Roumanian company, which did practically whatever was asked of it by the other.

Lord Justice Pickford, in giving judgment, said it had been decided that the emergency legislation with regard to non-enforcement of judgments did not apply to winding-up proceedings. Therefore the Court was not hampered by that legislation in this case. The Roumanian Consolidated Oilfields had opposed this petition, probably in a great measure because it thought that winding-up might have the effect of putting its shares on the market. Mr. Justice Astbury thought the petition should stand over, in great measure apparently because he thought the debtor company had made a fair offer. The Consolidated Electrical Company argued that Mr. Justice Astbury had no right to attend to the wish of a minority of creditors. Section 145 of the Companies Act governed this. In that section he saw nothing which limited the attention of the Court to the wishes of the majority, but he thought it clear that the reasons given by a minority for not making a winding-up order should only be acted on in exceptional circumstances. It was a matter of discretion, no doubt, but it was important to notice that in their case the discretion had been exercised in a way in which, so far as the Court knew, it had never been exercised before. In this case also it seemed to him that, so far from there being an overwhelming case and giving effect to the wishes of the minority of the creditors, there was only a weak case. He did not say that the Roumanian Consolidated Oilfields was a creature of the Oilfields Finance Corporation or that the respondent company could do what it liked with it. He did not say that, and he saw no reason for believing it, but the Roumanian Consolidated Oilfields was not in an entirely independent position. The respondent company had considerable influence in its councils, and the two were closely related. That weakened its position as opponents to the order, and he thought that its opposition ought not to deprive the petitioning creditor of the right he would otherwise have as against the company. A winding-up order ought to be made. The liquidator would have ample powers to see that no injustice was done to any creditor.

Lord Justice Warrington concurred.

The appeal was accordingly allowed and the usual order made.

National Bank of Egypt.

The *Financial Times*, commenting on the report for the year 1914, says that it is of particular interest as revealing the extent to which the arrangement for financing the cotton crop by means of notes in place of gold was taken advantage of. "At December 31 the outstanding notes of the National Bank amounted to £8,250,000, as compared with £2,700,000 at the corresponding date of 1913. Against this was held £4,331,800 in gold and £3,918,100 in securities. Included among the securities were £2,410,200 Treasury bonds of the Egyptian Government and £585,000 in British Exchequer bonds, and of the gold £650,000 is deposited at the Bank of England. It will thus be gathered that the means adopted for avoiding the usual autumn shipment of gold to Egypt have proved successful."

Anglo-Egyptian Vallora.

Under the above title a company was registered on April 21 with a capital of £25,000 in £1 shares (10,000 six per cent. preference). The object of the company is to take over the cigarette manufacturing businesses lately carried on as the Anglo-Egyptian Tobacco Syndicate and Vallora, at 58, Pall Mall, S.W., and 13, Ganton Street, Regent Street, W., respectively. The minimum subscription is 500 shares. The offices are at 16-17, Pall Mall, S.W.

Aboukir Company.

The report of the Aboukir Company, Ltd., for 1914 states that the unsatisfactory result of the year's working was due entirely to the war and to the unprecedented low Nile of 1913, the effect of which was not fully felt until 1914. There were no sales during the year. Reclamation was retarded owing to scarcity of water. The rent roll for three Aboukir divisions and Bourlos Estate for 1914 totalled £E31,677. This shows a considerable reduction on the figures of the previous year, partly due to the reduction in area let, but chiefly to the reduction in rents owing to the land having been re-let on a one-third rotation. The cotton crop was below the average in yield. The damage done by insect pests was less severe, but the scarcity of summer water caused considerable damage.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN.

Digitized by Google

The price obtained was £2 18s. per kantar, as against £4 12s. 4d. last year. Arrears of instalments due by purchasers on December 31 last amounted to £11,693, of which £1,184 has since been paid. The profit and loss account shows a credit balance of £631, which, added to £3,513 brought forward, makes £4,144, of which £4,000 has been transferred to a reserve fund and the balance of £144 is carried forward.

Mr. Arthur W. Ballance, presiding at the annual general meeting of the Aboukir Company on April 30, said the unsatisfactory result of the year's working was due to the entirely unprecedented state of the Nile in 1913, the effect of which was not fully felt until 1914. The Nile had not been in such a condition for 150 years, and agriculture had been much affected. The war, too, paralysed business in town and country. Further, they experienced great difficulty in the disposal of their cotton crop, most of which went to the Continent. Ultimately they secured £2 15s. per cantar against £4 12s. 4d. last year. As to the future, they had to meet one drawback, but this, he thought, might prove an advantage to the land. The Government proposed a new method of cultivation, to reduce the area devoted to cotton to one-third, whilst the remaining two-thirds would be utilised for wheat, oats, and barley. The report was adopted.

THE FINANCES OF EGYPT.

(From Our Own Correspondent.)

Cairo, April 1.

The State accounts up to the end of February, that have just been published, show that the estimate made in my note on the January statement as to the final figures will not be far from the actual mark. The revenue for the eleven months amounts to £E14,223,717, as against £E16,427,977 for the same period in the previous year, and the expenditure to £E15,452,952, compared with £E16,593,673 on February 28, 1914. That is to say that there is a total diminution of £E2,204,260 in revenue and a total reduction of £E1,140,727 in expenditure. As compared with the previous corresponding eleven months the deficit is £E1,229,235 and £E1,063,533 more than it was at this date last year.

February, nevertheless, has been an excellent month, and the falling off in revenue, although still apparent, has this month been the lowest since the war, as the following table shows :—

	£E.
Diminution of revenue in August	261,857
" " September	347,399
" " October	837,112
" " November	438,173
" " December	315,509
" " January	104,178
" " February	39,119

Thus the revenue has come appreciably nearer to normal, and those who pinned their faith on the recuperative power of the country and on its hidden resources are seeing their confidence justified.

The chief factor in the recovery of the revenues during February was the land tax, of which £E116,142 more was collected than in February, 1914, and which is but £E219,573 below the budgetary estimate, and but £E81,513 below the amount collected at the end of the previous February.

On the other hand, all the remaining heads of revenue show decreases on the month's collections. Customs receipts are down a further £E67,716; tobacco dues, £E22,956; port dues, £E73,853; legal fees, £E31,900; and railway receipts, £E31,651.

COMPANY RESULTS, &c

Anglo-Egyptian Oilfields.—Gemsah production for week, nil (last week, 107 tons). Hurgada production for week, 163 tons (last week, 318 tons).

Bank of Roumania.—The directors recommend a dividend of 6s. per share, free of English income-tax, for the year ended December 31 last.

Bulgarian Four and a-Half per Cent. Gold Loan, 1907.—The list is published of 665 bonds drawn in Sofia on December 31, 1914, for repayment at par.

Bulgarian Five per Cent. Gold Loan, 1902.—The list is published of 865 bonds drawn in Sofia on February 13 for repayment at par.

Egyptian Delta Light Railways.—Receipts for the ten days ended April 10 amount to £E3,940, as against £E2,205 for the corresponding period of last year.

Imperial Government of Persia Five per Cent. Sterling Loan of 1911.—The coupons due May 15 will be paid on and after that date at the Imperial Bank of Persia.

Khedivial Mail Steamship and Graving Dock Company.—Notice is given that on the 31st inst. a dividend at the rate of 5½ per cent. per annum on the cumulative preference shares, less income-tax, for the six months to June 30, 1914, will be paid at the bank of Glyn, Mills, Currie and Co., London, and at the Imperial Ottoman Bank, Alexandria.

Land and Mortgage Company of Egypt.—The debenture interest coupons and the debenture bonds (drawn for redemption), due on the 15th inst., will be paid by Messrs. Barclay and Co., Ltd., 54, Lombard Street, E.C., on and after that date.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to 31, 1915 (New Style: January 14 to February 13, 1915) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Jan.,	1915	4,413,745·71	2,151,537·50
Do. do. do	1914	4,441,964·21	2,366,075·66
Estimated Receipts for 1 month (Law of Control)		2,408,333·33	891,666·67
Difference between estimated and actual receipts for 1 month	1915	+ 2,005,412·38	+1,259,870·83
	1914	+ 2,033,630·88	+1,474,408·99

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

Detailed accounts of the splendid feat of arms which enabled our troops to establish themselves on the Gallipoli Peninsula have now been published, and the story has sent a thrill of pride through the British Empire. The fact that more than a fortnight has elapsed since a British line was drawn across the southern end of the Peninsula without any further information of its progress being given only serves to enhance the significance of that feat. Throughout this period the troops have been subjected to a series of fierce attacks. The enemy had decided that a landing could never take place, and when he was confronted with the achievement of the impossible he set himself to recover at any cost the ground he had lost. In the face of these attacks we have been able to do little more than hold our own. The Turks and their German task-masters must be allowed to exhaust themselves as much as possible in the first frenzy of their disappointment. We shall do well to look for no rapid advance, but to hope that our position will be consolidated to the utmost and the ground for an advance so carefully prepared that, when it comes, it will be carried out with the minimum sacrifice of life.

While tributes are being paid to the gallantry of the British troops—Australians, New Zealanders, and the men of the 29th and Naval Divisions, together with the Fleet that showed no less heroism in its invaluable co-operation—we must not overlook the part played by our French Allies. In accepting the task of landing at Kum Kale they knew that they would be missing much of, if not all, the limelight. But this fact does not diminish the value of their operations, nor was it allowed to affect the courage and thoroughness with which the difficult operation was carried out. The French landing was a signal success. We know now that the movement was in the nature of a feint, and was not intended to herald an advance along the Asiatic coast of the Dardanelles. It achieved its object completely, while a large number of Turkish prisoners were taken to boot. The French troops have since been recalled, and are now in line with the British forces at the southern end of the Gallipoli Peninsula.

Owing to the ill-health of General d'Amade, there has been a change in the command of the French Expeditionary Force. General Gouraud, known as the "Lion of the Argonne" for his audacious and successful conduct of the war in that region, succeeds to the post. The fact that the French command is now in the hands of the youngest officer of his rank in the French Army and one who has earned distinction in this war shows the importance which the Allies attach to the successful conclusion of the operations at the Dardanelles. When the Germans were trying to persuade the Turks that they had nothing to fear from any attempt to force the Straits, they laid stress on the point that the French at least were not likely to spare much in the way of numbers or the personnel of the higher commands for the enterprise. The appointment of Sir Ian Hamilton and that of General Gouraud, backed as they have been by the magnificent valour of the troops under their command, must constitute yet another of those German miscalculations for which the Turks will one day demand a reckoning.

The loss of the Australian submarine AE2, which the Turks claim to have sunk while the vessel was trying to enter the Sea of Marmora, is evidence that the Allied Fleets have not allowed the landing forces to monopolise the whole of the initiative in the joint operations against the Dardanelles. According to a report from Constantinople, the town had been alarmed by the news that a British submarine had entered the Sea of Marmora. The reference is to E14, which is credited with having sunk two Turkish gunboats and a transport. Against these successes, however, we have to deplore the loss of H.M.S. "Goliath," torpedoed during the night of May 12. The nature of the operations on land and sea ought to be such that it will be impossible for the official reports to deal with the different phases until each is completed. Every effort will have to be made to avoid the condition of stalemate that opposing lines of trenches are apt to produce. The struggle should, therefore, resolve itself largely into one of wits between the higher commands on both sides. In this we can have every confidence that the Allies, reinforced as they have been by General Gouraud, will not be at a disadvantage.

The "Quadruple Attente" is still intact, but even Germany would seem to have despaired of holding Italy any longer to her neutrality. Direct threats have now succeeded to the campaign of cajolery and misrepresentation. The Emperor William himself leads the way, and while he is seeking to influence King Victor Emmanuel, Germans in less exalted walks of life have been trying to put the fear of the Hun into the rank and file of the Italians. The spectacle is most instructive, for the policy of intimidation practised in Italy explains the part intended to be played in the conduct of the war by the outrages actually perpetrated in the theatre of operations. Incidentally such a policy simplifies for the Italians their transition from the position of allies to enemies. Germany's attitude towards Italy from the day when the latter insisted upon observing neutrality has called for far more of President Wilson's detachment from the affairs of this mundane world than is associated with the Italian character. The Italian Government's sense of responsibility has enabled it to maintain a correct attitude, while its preparations for war were being matured; but the extension of Germany's bullying methods from the secret channels of diplomacy to the street and to Italian private life has completed the breach begun by the policy for which Germany stands execrated by the opinion of the whole world.

It is commonly supposed that the delay from day to day in Italy's declaration of war is due to her desire to discover a suitable *casus belli*. We are more inclined to believe that other considerations are at work, for the failure of the negotiations with Austria-Hungary must offer a more satisfactory reason for fighting on behalf of the Italian population across her borders than the presence of Turkish officers among the Arabs in Tripoli. If the Italian Government finds it necessary to delay much longer, the danger of the Germanic Powers striking the first blow may arise. Feeling runs high both in Germany and Austria-Hungary against the Italians, and *Punch* is not far wrong in his analysis of the situation, when he depicts the German Emperor substituting "Italien" for "England" in the notorious phrase "Gott strafe England."

In a letter in this issue our Serbian Correspondent refers to the feeling of disappointment, akin to dismay, that the news of an understanding between Italy and the Triple Entente with regard to the Italian claims on the east coast of the Adriatic has aroused in Serbia. The intelligence need cause no surprise. If the dismay is shared in official circles, we are merely experiencing a trait in the Balkan character which found expression in the second Balkan War. No Balkan State is likely to display any readiness to surrender voluntarily any of the territory it holds or to abate its claims in any particular out of consideration for its own interests or those of the Balkans as a whole. This feature of the Balkan situation emphasizes the necessity for enforcing a cut-and-dried settlement of the entire Balkan question over the heads of the individual States. So long as territorial adjustments are left to be made on the initiative of the Governments which may have to surrender ground, there will always be reasons for discovering that the territory concerned is absolutely vital to the well-being of the nation. On the other hand, if Serbia were reminded that it owes its continued existence even within its present boundaries to Russia's action in drawing the sword on her behalf, she may make a virtue of necessity and acquiesce with relatively good grace in the decisions of the Triple Entente.

We have no wish to prejudice the case against Serbia in regard to Dalmatia. Both the Serbian and the Italian claims are assured of powerful support, and the task of the Powers of the Triple Entente will be to arrive at an equitable decision after careful consideration of all the circumstances. When that decision is communicated to the rival claimants, it may well be that the fears of possible injustice now shared by both will be shown equally to lack foundation. In this connection we may quote without further comment two expressions of opinion on this subject. At a recent meeting of the Balkan Committee the following resolution was passed:—"That the Balkan Committee, while welcoming the possible adhesion of Italy to the Allied cause on the basis of the completion of Italian national unity, and in virtue of the principle of nationality, to which the British Government is definitely pledged, urgently hopes that in any agreement between the Entente Powers and Italy due regard will be shown for the vital interests of our Serbian Ally, and, above all, of the Serbo-Croat population, to whom the Dalmatian coast belongs by right of race, language, geography, and economic interests; and, convinced that no antagonism of interests, whether military, linguistic, or economic, exists between the Adriatic peoples, the Committee earnestly desires that the Governments of the Triple Entente will use their endeavours to promote a lasting agreement between the kingdom of Italy and the Southern Slavs."

On behalf of the Italian claims a lance has been couched in an altogether unexpected quarter. The *Bourse Gazette* of Petrograd publishes an article, to which the correspondent of the *Morning Post* calls attention, from the pen of Count Perovsky-Petrovo-Solovovo, who, on the strength of other writings, must be acquitted of uncritical bias towards Italy. In the *Bourse Gazette* Count Perovsky-Petrovo-Solovovo admits that it is regrettable that the Slavs should be called upon to pay Italy's price with territory occupied by Slavs, and insists that the utmost care must be taken that nothing is surrendered without absolute necessity; but he finds several reasons why an abstract principle should not be allowed to stand in the way of the practical settlement of any political problem. He treats the question from an essentially matter-of-fact standpoint. "Let us certainly save Dalmatia from Italian rule, if possible; but if we cannot otherwise secure the adherence of Italy, and thereby the more speedily end the war, let us not hesitate to sacrifice the Dalmatians, Slavs though they be. To the Serbians let us say frankly, as to friends, 'We acknowledge to the full all that your most gallant armies have accomplished in the common cause. . . . But, after all, this great war . . . was entered upon for your sake. . . . Do not, then, throw any obstacles in the way of your Allies, who are seeking to quench the world-conflagration started for your sakes. . . . Remember that life is made up of compromises. Do not create for your friends of to-day another series of questions on the analogy of the Macedonian trouble.'"

Such troubles as Greece is encountering at the present moment are of her own making. We hear of frequent Cabinet Councils, and the Government Press is encouraged to familiarise the public with the possibility of ultimate intervention. But it is safe to suppose that the Gounaris Cabinet has not yet been able to make up its mind on the subject of intervention or continued neutrality. From what is known of the policy of the Triple Entente, there will be little chance of obstacles being placed in Greece's way, if she cares to perform her share in ridding Europe of the incubus of German militarism. A more virile diplomacy would have told the Hellenic Government that, as it refused to give its help when that help was needed, the occasion for its co-operation had passed. But, thanks to the friendliness of Great Britain, Greece will escape this rebuff. There remains King Constantine's attitude, which is not likely to have adjusted itself the more to public opinion after the discovery that both a military and political clique can be made subservient to the Court's German sympathies. That Greece's decision is still to be regarded as being in the balance may be inferred from the fact that the German Emperor has felt impelled to send a telegram to his sister, Queen Sophie. The contents of this have been communicated to a Greek newspaper. "Our final victory is certain. Woe to those who still dare to draw the sword against me," is the significant message which prefaces the Imperial "compliments to Tino." Geographical considerations prevent the enumeration to Greece of the specific Hunnish outrages that the German Emperor's enemies in neighbouring countries have to expect, but the same policy of intimidation is there. It proves that confidence in high places in Germany is on the wane.

ATHENS LETTER.

ATHENS, May 2.

Negotiations with the Entente Powers.

A fortnight ago I reported that the negotiations entered upon by the Greek Government with the Entente Powers had little chance of success, chiefly because of the excessive guarantees demanded by Greece against any attack from Bulgaria.

The Ministerial Press has been busy explaining what these guarantees should be, and in demonstrating that they were quite indispensable to Greece. Thus the *Nea Himera* declared that the Government would be quite willing to participate in the war if the Entente Powers would adopt the following plan—which doubtless was dictated by the General Staff:—The Greek troops in conjunction with the Allies, instead of landing on the Gallipoli Peninsula, to make Salonika their starting point, and to proceed through Thrace, thus obliging Bulgaria either to join in their march upon Constantinople, or to declare herself definitely in favour of Turkey. This, said the *Nea Himera*, would be the only way to assure Greece against an attack from Bulgaria. Needless to say this absurd plan could never be accepted by the Entente Powers, involving as it does a virtual attack upon Bulgaria. Besides, the landing of the Allied troops on the Gallipoli Peninsula was already arranged for. Then the Gounaris Cabinet insisted upon another *sine qua non*, that the alliance of Greece with the Entente Powers should be as for a period of at least ten years after the war, so as to give Greece time to reorganise her forces. According to the Ministerialist papers this condition was the more important to Greece, as Serbia informed the Allies that if Bulgaria attacked Greece after the war was over, she (Serbia) would not be in a position to fulfil her obligations as an ally of Greece, her resources being completely exhausted, and she, therefore, put in a plea for a similar guarantee of protection after the war. It is clear that such a condition as that proposed by Greece is by no means easy to accept, and the Powers have so far not made any reply. It is said that they have been using further efforts to induce Bulgaria to define her position, and that they may possibly be awaiting the result of these before replying to Greece.

In these circumstances, the Gounaris Cabinet, knowing that the negotiations are likely to take some time, has decided to proceed with the elections—the first duty indeed of a Cabinet formed from a minority in the Chamber, succeeding a Cabinet which was supported by the majority.

The Dissolution of the Chamber.

The Royal Decree dissolving the Chamber was published yesterday. The day fixed for the elections is June 13, and for the convocation of the new Chamber July 20. Thus the people will have an opportunity of expressing their opinion on the foreign policy of M. Venizelos and of the Gounaris Cabinet. According to the Ministerialist journals another consideration which determined the dissolution was the opinion expressed in competent circles that the operations against the Dardanelles would probably be prolonged, and that there might still be time for Greece to intervene at a moment when her assistance was more needed than ever, in which case her conditions would be the more readily accepted. For, even if these operations were completely successful, the Allies might still want the help of Greece to subjugate the Turkish troops which, fleeing from Thrace and Constantinople, would take refuge in Asia Minor. "Greece greatly regrets," says the Ministerialist Press, "that she is unable to take part in the struggle, but until the problem of her own security has been solved, she is not in a position to move." "We know," writes the *Nea Himera*, "that the Entente Powers would like to see the reconstitution of the Balkan Alliance, so that they might make use of it not only during the war, but afterwards; and, as Greek Macedonia is the only inducement which Bulgaria would accept, it is clear that the Powers will not in the meantime give any guarantee to Greece for the possession of that territory. On the other hand, if Bulgaria were to seize this region while Greece was engaged in fighting with the Allies, or afterwards, when she was too much weakened to resist, the Entente Powers would not interfere. Thus Macedonia would be lost to Greece without any compensating accession of territory in Asia Minor; for it is clear that the Entente Powers cannot guarantee to Greece the possession of territory which they are not yet sure of conquering."

Following this line of argument the *Nea Himera* goes so far as to express the absurd conviction that if M. Venizelos were returned to power at the coming elections he would no longer dare to take part in the Dardanelles operations, as he suggested when he thought that the forcing of the Straits would be quickly achieved.

Another Ministerialist journal with an Anglophobe tendency, which has always maintained that Great Britain would never consent to give Crete to Greece because she wanted it herself, now writes that the Entente Powers, and, above all, Great Britain, thinking only of their own interests, are trying to force Greece into the war, regardless of the dangers that she would run. "But," it says, "Greece does not intend to run the risk of sharing the fate of Belgium."

Such is the language of the Ministerialist newspapers. I should add, however, that they are only in a small minority, and the Athens daily Press with the largest circulation is almost exclusively Venizelist. The Venizelist organs deplore the attitude of the Government, which, they say, is forfeiting the confidence of the Powers that are her natural protectors. It condemns as monstrous the conditions imposed by the Gounaris Cabinet to guard against an imaginary danger, and declares that the Government's action has brought Greece under the suspicion of being Germanophil. "There was no point," says the *Patris*, "in opening negotiations when it had already been decided to observe a neutrality favourable to Germany."

The Coming Elections.

The dissolution of the Chamber was accompanied by the following semi-official declarations made in the *Nea Himera* of to-day:—

"The foreign affairs of the country will not be neglected on account of the elections. If, in the interval before the elections take place, the foreign situation should so change as to force Greece to abandon her neutrality, the elections would be regarded as a minor consideration, which should have no influence whatever upon the decisions or the measures taken to meet the situation. The dissolution must not, therefore, be taken as an indication that the Government persists in a neutral policy, nor would the fact of there being no Chamber prevent the participation of Greece in the war, should the occasion arise. War could be declared and the meeting of the new Chamber awaited in order to proclaim the state of siege as demanded by the Constitution. Those who believe that the Government's programme is one of inaction are in error. On the contrary, Greece would have no reason to avoid a war against Turkey under certain conditions. But until her position is secured Greece is obliged to remain neutral, even if Italy and Roumania both take action. The negotiations between Greece and the Entente still continue, and it remains to be seen whether a basis of agreement satisfactory to both sides can be found."

The electoral campaign promises to be a keen and bitter one. The President of the Council and almost all the other Ministers are to make tours of the provinces, especially in Macedonia. So far as one can judge at present, the Venizelist party is likely to have a large majority.

M. Venizelos in Egypt.

The splendid reception accorded to M. Venizelos in Egypt and the many manifestations of sympathy shown to him, not only by the Greeks, but also by the Sultan and by the Egyptians themselves, have made a great impression upon people here, and have done much to extend his popularity and the confidence felt in him. A wealthy Greek citizen has placed a sum of 500,000 frs. at his disposal for the foundation of a faculty of political science at Athens.

Census of the New Provinces.

The recent census taken in the new provinces of Greece shows the following figures:—Macedonia, 1,194,902 inhabitants; Epirus, 245,618; Crete, 336,151; Ægean Islands, 324,343, making a total of 2,101,014 inhabitants added to the population of Greece, thanks to the policy of M. Venizelos. This raises the total number of the inhabitants of Greece to almost five millions.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, May 2.

The Situation in Constantinople.

No authentic news has come through from Constantinople yet as to what effect the recent operations at the Dardanelles have had on the people and on the authorities. As usual, the Turkish official *communiqués* conceal the truth by making absolutely false statements, and, according to them, the Expeditionary Force has been entirely driven into the sea.

A wholesale arrest of about 3,000 of the better-class Armenians has taken place, and they are being exiled to Asia Minor, but no particulars have been received as to the reasons for the arrests beyond the statement that they were conspiring against the Committee of Union and Progress. Amongst those arrested is the Editor of the *Sabah*.

It is reported that the German Embassy were making preparations to proceed to Konia. With the exception of the German s.s. General, which is alongside the Galata Quay, all steamers have been taken inside the Golden Horn.

The Turkish Fleet.

The Turgud Reis has apparently reappeared on the scene, and was inside the Bosphorus, ineffectively firing on the Russian fleet, when the latter was attacking the forts. The Goeben is still at Stenia Bay, trying to stop the leak which she sprang during her last trip to the Black Sea. An accident took place in the workshops at Stenia through the explosion of a motor, and many Germans were killed. The Russian fleet appears to be keeping the Turkish warships inside the Bosphorus, and it is reported they have sunk one torpedo boat, damaged two others, and also sunk a steamer inside Buyukdere Bay.

The Dardanelles Operations.

The crew of Submarine E15, which was wrecked in the Dardanelles, arrived in Constantinople on the 22nd and were taken to the War Office.

Reliable information, save that given in the official *communiqués*, as to what is going on at the Dardanelles is almost unobtainable here, and it is useless to reproduce the fictitious news which is published daily in the Greek Press. Numerous Turkish prisoners have, however, arrived at Mudros, including some German officers. The latter were sent on to Malta, and the Turks are being kept on the island. Amongst the wounded Turks are some soldiers who had been shot by German officers.

Last Thursday six transports arrived in Constantinople conveying wounded soldiers from the Dardanelles, the estimated number being about eight thousand.

The inhabitants of the Gallipoli Peninsula, who are largely Greeks, have flocked to Constantinople. Many Italian families are leaving the city.

(From a Correspondent.)

Humbugging Constantinople.

The latest news from Constantinople, dated April 24, and received from an absolutely trustworthy source, depicts the condition of the capital as outwardly quiet, and although there are no visible signs of the real feelings of the population, there is no doubt that the arrival of the Allies is being anxiously awaited not only by the Christians but by a large section of the Turkish inhabitants, and there seems to be every probability that a hearty welcome will be accorded to the relieving forces when they reach their destination.

Notwithstanding the lies with which the population is daily fed and the severe censorship exercised, news leaks through, and now little confidence is placed in the reported Turkish and German victories, and the people realize that they have been duped; but owing to the fact that Enver Pasha and his German partners still control the army, no concerted action against the present régime is possible. So extensive is the system of spying that one dare not express an adverse opinion of the powers that be for the moment, even to one's best friend. All must preserve a discreet silence, or simulate joy over the wonderful exploits of the Turkish Army in the Gallipoli Peninsula and elsewhere.

The town of Konia has been beflagged times without number since the attack on the Straits began. This city being a centre of Mohammedanism, the Government hoped by this means to arouse a spirit of fanaticism which would extend to the neighbouring districts, where the people are grossly ignorant. Constantinople has also been decked with flags, and the Christians compelled to display bunting on all their shops and dwelling-houses. The British officers and men captured when our submarine was lost at the Dardanelles, and Mr. Palmer, who was recently Consul at Chanak, have been paraded through the streets, wearing fezzes without tassels, and clothed in grey military cloaks such as are worn by the soldiers in the Turkish Army. Six of them were in carriages evidently suffering from wounds, and the rest marched behind. It is said that in other respects the prisoners are well treated.

Food is plentiful in the city, but other necessaries, such as clothing, are very scarce and expensive.

Recruiting is proceeding at a great pace, and few men are left in the city and surrounding villages. All the recruits are being employed on the roads, as it would be of little use to drill them at this late hour, and good roads are of more consequence than raw recruits, there being only one single line of railway from the capital to the point at which the troops would have to detrain, which would probably be Lule Burgas.

Helping the Huns.

The report that Germany was short of copper and other metals seems to be fully confirmed, as the Turks are collecting all the pots and pans upon which they can lay their hands, and are forwarding them to Germany. Perhaps it is well to state that every household in Turkey possesses numbers of copper cooking utensils. Wheat is also being sent to Germany, but the supply cannot be very great, owing to local requirements.

The Bosphorus Bombardment.

The Russians have been bombarding the forts at the entrance of the Bosphorus, and several of the beautiful summer residences and gardens at Boyoukdereh have been damaged. This town is situated at a distance of about ten miles from the entrance. Some shells are said to have reached even the village of Yenikeui, which is from two to three miles further down the Straits.

The general impression is that the days of the Ottoman Empire are numbered, and only Enver and his satellites profess to believe that they are able to defeat the Allies; but, judging from remarks made by some of the subjects of the Dual Alliance now in the Turkish capital, they have little faith in the ability of the Turks to cope with our forces by land and sea.

Shortage of Guns.

All the guns which had been placed on the island of Prinkipo and at San Stefano and other places have been removed, and it is presumed that they were sent to the Dardanelles to strengthen the position there. The inference to be drawn from this is that the Germans cannot supply any more. It is also reported that no mines exist either in the Lower Bosphorus or in the Sea of Marmora.

Many incidents in the East and in the West point to the gradual attenuation of the German and Austrian forces. The barefaced lies circulated regarding victories over the Russians in the Carpathians, and the infamous methods of warfare adopted in the West, tend to confirm the opinion that the Huns are desperate and at the end of their resources, notwithstanding the bombastic utterances of the Kaiser.

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore, where subscriptions are also received.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, April 27.

A New Greco-Serbian Convention.

As a result of the Valandova incident Serbia and Greece have come to an understanding for reciprocal defence of their frontiers against Bulgaria; but it is not regarded here as having any particular significance. Competent judges, indeed, consider it not as constituting a new fact in the relations of the two countries, but rather as a confirmation of that policy which they have observed towards Bulgaria since the Balkan War. After the Valandova incident they have, apparently, considered it necessary to accentuate this policy. It is not admitted here, however, that this new Greco-Serbian understanding may have for a basis the cession of Serbian territory to Greece, for both Greece and Serbia are well aware that such cession would not be suffered by this country. The Bulgarian Prime Minister has lately made it quite clear to the Serbian Minister here and to the Ministers of the Triple Entente that any arrangement between Serbia and Greece for ceding Serbian territory in Macedonia to Greece would be regarded as a *casus belli* by Bulgaria.

King Ferdinand and the Entente.

Although the present ruler of Bulgaria has since his accession to the throne given many proofs of his desire to consolidate good relations between this country and Russia, the Russian Government has persistently mistrusted him and ascribed to him the inspiration of all Russophobe tendencies in Bulgaria. Neither the personal sacrifice that he made upon the altar of reconciliation with Russia in allowing his first son, the Crown Prince Boris, to change his Catholic religion and pass into the Orthodox Church, nor his signing of the Serbo-Bulgarian Treaty of 1912, which provided for Bulgaria helping Serbia with 300,000 troops in case of war against Austria, was considered sufficient to gain for him the confidence and favour of Russian diplomacy. In order to show the care he takes to avoid doing anything that might be legitimately regarded as a cause of offence by Russia, I may mention a fact which I have lately learned from a most trustworthy source. In 1913, after the signing of the Treaty of London, owing to the very strained relations between Serbia and Bulgaria, the Tsar of Russia sent identical telegrams to King Peter and King Ferdinand, urging them to avoid a conflict and to settle their differences by resorting to Petrograd for his arbitration. King Ferdinand thereon summoned his Cabinet Ministers in Council to draw up a reply to this telegram. After a prolonged debate, Dr. Daneff, then Prime Minister, was instructed to draft the reply, and King Ferdinand made Dr. Daneff himself write this out and sign it. This done, his Majesty put the telegram in his pocket, and subsequently showed it to M. Malinoff, leader of the Democratic party, and asked his opinion on it. M. Malinoff finding it too sharp in its tone, the King requested him to modify it; which he did, signing the modification. Then King Ferdinand consulted M. Nekludoff, the Russian Minister at Sofia, showed him the copy of the telegram as modified, and, only after obtaining his approval, signed it and forwarded it to the Tsar.

During his twenty-five years' reign King Ferdinand has always sought to promote and foster in the nation the feeling of lasting gratitude towards Russia. Notwithstanding the wrong done to Bulgaria by the Treaty of Bucharest, he has not changed his feelings; and now, in this great European conflagration, when the right moment comes, it will be found that he will be at the head of the Bulgarian Army aiding Russia and her Allies to bring the great war to a speedy conclusion.

The Murder of Sandansky.

Last Friday, whilst travelling alone from the village of Perin to the town of Nevrokop, Jani Sandansky, the well-known Macedonian revolutionary leader, was ambushed and murdered. The murderers have not yet been caught; but it is generally supposed that the murder is an act of revenge for the assassination of the great Macedonian revolutionary leader Boris Saraveff (December 11, 1907). Sandansky was distinguished by the part he played in the revolution, planned at Salonika, in 1908, when, at the head of his forces, he marched to Constantinople with the troops of Mahmoud Skevket Pasha and dethroned Sultan Abdul Hamid. Before this he had captured the American missionary, Miss Stone, and only released her when the Turkish Government paid him a ransom of £T10,000.

Eye-witnesses relate how the famous band-leader caused panic in the rear of the Greek Army during the second Balkan War, when the Greeks had reached the Kresna Pass. With a band of 150 men he betook himself to the Greek Headquarters at Levunovo, and, in disguise, made his way amongst the troops. His plan was to capture King Constantine; and twice he sent off couriers to ask for military help, but this was not forthcoming.

BULGARIA AND THE ENTENTE.

We are indebted to a correspondent for permission to publish the following extracts from a letter recently received from Bulgaria, which, we are informed, may be regarded as representing the views of men highly placed and well fitted to estimate correctly Bulgarian public opinion:—

There is no change yet in the attitude of Bulgaria. If it is correct that the Enos-Media line has been offered to her, it is not likely that she would agree to this for the moment. What she wants, and this must be well known to the Entente Powers, is the actual surrender of Monastir and Kavalla, with the adjoining districts. If this cannot be done now, she demands some solid guarantee that it will be done after the war is over.

England is the only country that she trusts. The suspicions entertained regarding Russia, even by the strongest sympathisers with the Entente, are ineradicable. France is looked upon with more favour, but her support of Greece is disliked. Were it not that Russia gave Bulgaria her independence, there is little doubt that by this time she would have thrown in her lot with Germany.

It is to be hoped that some amicable arrangement will be made; but I would remark that, although what I have written represents the feelings of the majority to-day, the appearance of the Allied fleets at Constantinople may entirely change their attitude, and they may then be prepared to accept the best terms obtainable under the altered circumstances.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, April 24.

Relations with Bulgaria.

The accounts of the incident at Strumitza as given officially by the Serbian authorities and by the Bulgarian authorities are not in accord.

It must be admitted that the Mussulmans resident in Serbian Macedonia are discontented because they are put on the same footing as the Christian population of those districts, and since the outbreak of the war with Turkey have not enjoyed the privileges they expected, but to which they no longer have any right. On the other hand, there has been no revolt among the Serbian Macedonian population as represented by the Bulgarians, neither among the Mussulman nor the Christian inhabitants of those districts; but equally certain is it that Bulgarian agents have been endeavouring to raise a revolt in Macedonia by utilising the Mussulman discontent and by a lavish expenditure of money and by imposing on the credulity of the people. Some Mussulmans may have voluntarily left their homes with the invading bands of *Komitajis* when they recrossed the frontier to return to Bulgaria, but there can be little doubt that the majority of the Mussulmans going into Bulgaria with these bands were forced to do so against their will. It also seems certain that the Bulgarians tried to incite the Christians to revolt, but there was actually no revolt of any sort.

The Serbian *Tribuna* announces that the Russian Minister at Sofia is visiting the new Serbo-Bulgarian frontier; and that he went by order of his Government, and will especially examine those places where the Bulgarian bands made incursions into the newly annexed Serbian territory. "And," adds the paper, "the Bulgarians tried to put difficulties in his way, and the semi-official Press attacks the Russian Minister, saying he undertook this journey without asking permission from the Bulgarian Government."

The public in Serbia are at a loss to know what are Bulgaria's intentions, and some persons are not at all easy in their minds.

The *Tribuna* to-day publishes sensational news. It says:—

After the nomination of General Boyadjieff as Chief of the Bulgarian General Staff, news was received in Nish of military preparations having been commenced, and that two nights ago bonfires were noticed on all the heights on the Bulgaro-Serbian frontier. Cattle were seen being driven away, and at the same time firing of guns and ringing of bells was heard.

The Adriatic Question.

The Serbian and Russian Press have been writing very much concerning Italy's claims to compensation as the price of her neutrality.

The claims to Albania and Dalmatia make the Serbian people uneasy, lest, after all, Serbia may not obtain in either of these countries the increase of territory and the seaport that is considered so necessary for the development of her commerce and industry.

The polemic between the Russian and the Italian Press concerning Dalmatia seems now to have diminished, and it is said that Italy intends to take Serbia's requirements into consideration. But the Serbian Press refers frequently to the subject. The *Politika* makes lengthy remarks on Prof. Miliukoff's communications in the Russian *Retch* on the unofficial relations between Serbia and Italy, and accuses the writer of being a Russian partisan of Bulgaria, who finds it advisable to satisfy Russia's special interest in the reconciliation of Serbia and Bulgaria, and that Serbia should cede to Bulgaria the whole of Macedonia, as if Macedonia fell into Serbia's lap like a ripe pear.

Prof. Miliukoff considers that with the enlargement of the Serbo-Croat State the necessity of passing through a foreign land to Salonika vanishes, and that it was this necessity that made Serbia determined that this country should be in contact with Greece; but that the port of Salonika will no more have the same importance.

France and Serbia.

Demetrius, Archbishop of Belgrade and Metropolitan of the Kingdom of Serbia, head of the Serbian Church, has sent the following telegram to the Cardinal head of the Catholic Church in France:—

In these important days, when the name of the Serbian people is mentioned in French schools with sympathy—Serbians who defended Christendom in Europe for centuries against the Moslem invasion from the south, just as they prevented a similar invasion from the west—I hasten, as Chief of the Serbian Church, to express to your Eminence, and through you to the whole congregation, my feeling of joy and gratitude.

The Serbian Church, which, through the help of the Serbian schools, prepared the Serbian people for the defence of holy justice, and which in future, with still more power and with the help of their Catholic brothers, Serbs, Croats, and Slavs, will defend Christianity, prays your Eminence, as head of the French Catholic Church, to unite with us in thought and in prayer to the Almighty for the triumph of the Franco-Serbian ideal.

Australian Help for Serbia.

From the far distant British colonies kindness and generosity is shown to Serbia in her troubles and difficulties. The merchants of Sydney (Australia) have sent the following gifts to Serbia:—150 sacks flour, 50 cases biscuits, 50 cases tinned meat, 50 cases butter, 50 cases plum jam, 50 cases syrups, etc., etc.

In the beginning of May new modern hospitals will be built in Uskub, Monastir, and Pristina.

The Montenegrin General Mitar Martinovitch, sent on a special mission, recently arrived at Nish, and after interviews with the Prime Minister and Minister of War left for Russia.

THE LATE COL. DOUGHTY WYLIE.

An Appreciation.

The notice which appeared last week in The Near East was enough to show how great a loss his country has suffered in the death of Colonel Doughty Wylie, but there is no recognition of services, however generous it may be, which can lessen the sorrow of his friends. To them, deeds well and gallantly done, applauded and honoured, were characteristic manifestations of his fearlessness and wisdom; it was the man himself who claimed their love and honour; it is he whom they mourn. With all his eager participation in life, his vivid interest in his work—whether it were the work which he loved best, that of the soldier, or the work of the diplomatist, to which he brought a rare skill in handling and in reconciling rival jealousies—there was in him much more than vitality or the power that wins to the goal. One who knew him well said that he lived so much in the other world that death could bring no change to him. It was to that detachment from the mortal coil that he owed his finest qualities; it was that which gave him his keen insight into the heart of things. Not only men and women knew the worth of his sympathy; races and peoples had felt it. He understood the helpless nations of the East as few have understood them. He would never despair of them; it was part of his confidence in human striving towards the light, the serene light of well-doing and contentment, on which his eyes were fastened. The secret of his influence lay in his unshakable conviction that beauty must reign, good conquer. Through the horrors of massacre at Adana he preserved it. His letters at that time were like some eternal judgment, wherein pity took the place of condemnation. And when the Balkan War had sounded the knell of Turkey, it was still with hope as well as with compassion that he turned to the alleviation of suffering in Constantinople. His sole desire during the months in which he led the Southern Albanian Commission was to spare a peasantry whose untaught virtues eclipsed for him their native violence, and in Abyssinia it was his dream to guard and strengthen a feeble race against the rapacity of Western ambition. The work he leaves undone some other hand may finish, building upon the strong foundations which he laid. Such completion would satisfy him, for no man sought less than he his own renown. His untarnished reputation will shine in the memory of those who knew him. He lived to witness the splendid achievement at Gallipoli which he had helped to carry out; he died in the glory of battle, in the flush of a great adventure. His life could send

"a challenge to its end,
And when it came, say 'Welcome, friend.'"

ALBANIAN AFFAIRS.

(From Our Correspondent Formerly at Valona.)

Sofia, April 17.

The Future of Albania.

It seems certain that Essad Pasha must sooner or later leave Durazzo, or else must die fighting. What will happen then? It is said that the majority of the rebels will rally to the loyalists of Scutari, and that they will recognize a Central Provisional Government while waiting for the return of Prince William, or failing him, of some other ruler; though the return of the Prince would be preferred. Already the Club de Scutari has addressed a memorial to the consuls there of the six Great Powers, requesting them to break off relations with Essad and to lend their support to the Provisional Government (or rather, the Commission, as it is styled at present) of Scutari.

The *Independance Albanaise* published yesterday the text of this memorial, in which reference is made to the facilities granted by Italy to Essad, at whose disposition she has placed a torpedo boat. This refers to a torpedo boat in which Essad sends his creatures to San Giovanni di Medua and to Alessio, in order to stir up trouble in those regions and to isolate Scutari completely. Fortunately his attempts have been fruitless.

It is much to be desired that the Powers would take the trouble to come to an agreement regarding Albanian affairs after the departure of Essad; that they would sink their rivalries, and lend their support to a single Government, truly national and able to satisfy the desires of the people. It is worth recalling that these very rebels who to-day appear so well-disposed to the Austro-Hungarian Monarchy were formerly favoured by the three Entente Powers and Italy; that even Colonel Phillips, the British Governor of Scutari, was the friend of the reactionaries who did not wish for a European ruler, but hankered after an Ottoman prince. Thus we see how dangerous it is to toy with the fate of a primitive people, to rouse their religious fanaticism. Just now it is precisely the Entente Powers and Italy who are making the loudest outcry; and it would have been they who would have suffered from the reaction if the Nationalist and Loyalist party had not smothered their resentment and directed—though from a distance—a counter current.

Italy's Intentions.

However, nobody can say what Italy will be up to. At Valona, Captain Castoldi, the guiding spirit of Italian action, is preparing a company of Anti-Greek volunteers, nominally destined to march against Greece and regain possession of Epirus. As a measure of retaliation Greece has revived the comedy of its Holy Legions, which caused so much suffering in the early half of 1914. But if the Greek Holy Legions are a comedy, so are the Castoldi volunteers; and without a doubt Italy is seeking to make a diversion, in order to mask her intentions regarding Valona, and to fool the Albanians with hopes of recapturing Epirus with their own forces—when Epirus was occupied ("provisionally") by Greece, with the connivance of Italy!

"A State of Siege."

If Durazzo is a town besieged, Valona is even more so. The Italian authorities permit no one to leave or enter the place; all communication with the interior is cut off, so is that overseas; there is a state of siege, and a state of espionage and mistrust which recalls the blackest days of the ex-Sultan Abdul Hamid.

In my last letter I mentioned the case of Mr. Telford Erickson, the American missionary, and his Albanian colleague, M. G. Tsilka. After waiting more than a month at Bari, they were unable to obtain permission to embark for Valona or Durazzo, whence they wished to go into the interior to distribute help amongst the unhappy refugess from Epirus who had fled from the Greek atrocities.

The Agence Grecque has issued a denial of the report I sent you of the massacre of eighty Albanian families at Voskop, near Kortcha. As this report had also appeared in the *Independance Albanaise*, that journal published in its issue of the 15th inst. a reply, saying: "There is nothing surprising in this denial. To deny first, to boast afterwards, is the method of all cowards lacking in moral sense."

EGYPT PROMOTION ASSOCIATION.

A general meeting of the above association was held at the Continental Hotel, Cairo, last month. It was unanimously agreed that it would be advisable to suspend the putting into operation of various advertising and other schemes which had formerly been decided upon until there was more possibility of benefiting by them than there could be under the present conditions of warfare. The committee prepared a letter of condolence which will be sent to the widow and near relatives of the late Viscomte Bertrand de Gironde, who was formerly secretary of the Association, and was accidentally killed while on active service in France last November. A further meeting will be held at the conclusion of the war, when a plan of future activities will be decided upon.

ARMENIAN NEWS.

(From a Correspondent.)

The Situation in Erzeroum.

A private letter received from Constantinople describes the misery prevailing at present in Erzeroum, the great fortress in Turkish Armenia, where Turks have now re-formed their three Army Corps (9th, 10th, 11th) since the defeat they suffered at Sarikamish and Ardahan in January. The Russian Black Sea Fleet seems to have succeeded in cutting all communication by sea with the Turkish capital. At Erzeroum the Turks are reported to lack ammunition. They are also running short of the stores and foodstuffs which they so ruthlessly commandeered from the people without any payment whatever. The military authorities are now compelling householders in the town to entertain soldiers stationed there for a week in each month. Typhus and spotted fever have been making havoc among their ranks. A German doctor in Erzeroum has stated that at least forty to fifty soldiers die every day in the town alone.

The authorities have expelled the peasants of fifteen Armenian villages in the vicinity of the town in order to turn their dirty hovels into hospitals. The unfortunate peasants have been crowding the streets of Erzeroum, where they fall victims in great numbers to epidemics and exposure.

In Zeitun.

Some time in February British and French warships landed contingents of bluejackets at Alexandretta and Mersina and destroyed the railway lines in those parts and the German wireless station in the first-named place. Some Armenian and Greek peasants of the neighbourhood climbed the hills to watch these interesting operations, and amused themselves in a quite innocent manner. After the withdrawal of the landing parties, Turks arrived on the spot and ill-treated these unoffending Christians on the accusation that they had given information to the enemy by flashlights (*sic*) in daytime!

The Armenians in the highlands of Zeitun have been in open rebellion against the Turks almost from the beginning of the Turkish war. Entrenched in their inaccessible mountains and hills, they have refused to answer the Turkish call to arms. Now it seems that they are opening their doors as some sort of safe refuge for all Christian deserters from the Turkish Army. Thousands of Armenians from the plains, moreover, have gone to swells the ranks of the rebels in Zeitun. Two months ago their number was reckoned to be 20,000 by the *Novoye Vremya* of Petrograd, and there seems to be sufficient ground to suppose that they have since increased.

"Armenian Days" in Petrograd.

March 20, 21, 22 were Armenian days in Petrograd. A strong committee consisting of well-known persons in Petrograd, under the presidency of Count Tolstoy, the Mayor, published appeals in the papers inviting the people of the Russian capital to help the Armenian refugees from Turkey and Persia, who had been massacred and robbed for showing sympathy towards and helping the Russian Army during its recent invasion of Turkey. Large placards bearing stirring appeals were posted over the walls of the public buildings and in the main thoroughfares, asking for contributions on behalf of the Armenian sufferers from the war. Postcards, bearing in the middle a cross, the symbol of martyrdom, and an inscription of "Petrograd to the Armenians," were sold during the three days by Russian, Polish, and Armenian ladies on behalf of the funds. Meetings were held and many speeches were made by well-known members of the Duma to explain the past history and the culture of the Armenians. In spite of the inclemency of the weather in Petrograd during those three days, the result is reported to be satisfactory.

SERBIA AND ITALY.

(From Our Own Correspondent.)

Nish, April 29.

A short time ago Serbians were impatiently awaiting the hour when Italy, Roumania, and Greece would enter into action, but suddenly a change has come over them: the news circulated here that the Triple Entente has been negotiating with Italy, and that the latter claims North Dalmatia with Spalato, has produced a revulsion of feeling. One frequently hears such remarks as, "It would be better for us that Dalmatia should remain under Austria than that it should go to Italy, for if Italy obtains Dalmatia our hopes are irrevocably lost, but if it remained under Austria we could always count on getting it at some time annexed to Serbia."

Serbian aspirations apparently go farther than the Triple Entente reckoned on. On the west Serbia desires Dalmatia with free access to the Adriatic Sea, claims Bosnia and Herzegovina, and is disinclined to renounce Macedonia, or would only cede a part of Macedonia on receiving suitable compensation. The future grouping of the Eastern Countries, Serbians urge, is intended to be in accordance with the nationalities, and if the Triple Entente keeps its word, and carries out the declared plan, Serbia will be enlarged to the fullest extent, and receive all those territories it lays claim to.

It will be remembered that before the war between Serbia and Bulgaria broke out the Serbian Government was most desirous of coming to terms with Bulgaria, but there was a strong objection on the part of the Military party to any concessions being made, and to this must be added Bulgarian rashness and misjudgment, which ruined the proposed diplomatic action. To-day the power of the military party here is undiminished, and makes itself felt. From remarks heard, it would seem as if the Serbians think that their Government should have been consulted in some way before making large concessions to Italy for its active support or neutrality. It is difficult to conceive how this idea could be promulgated, unless it be thought here that the Powers were insufficiently acquainted with facts concerning nationalities, which information the Serbian Government conceives itself to be in the best position to furnish.

Those who are dissatisfied for the reasons set out above adopted the expedient of getting a member of Parliament, one of the supporters of the Government, to put a question in the House which would be answered by M. Pashitch, Prime Minister and Minister for Foreign Affairs. His reply was looked forward to with great interest by those who knew what would take place. The speech of the Prime Minister, however, does not give us any new information; it is simply a vehicle for making Serbia's voice heard, and shows the impatience, if not the uneasiness, of the country. The following is an account of what occurred. At the sitting of the Skupshtina on April 27, the deputy M. Draja Pavlovitch addressed the following question to the Minister of Foreign Affairs:—

In the foreign Press and in the Serbian Press it is persistently reported that an early intervention of Italy will take place. This intervention is connected with certain compensations. These compensations are of a nature that would be to the detriment of the Serbian-Croatian-Slav peoples. I ask the Minister of Foreign Affairs, who is also Prime Minister, to inform us how much truth there is in these rumours.

M. Pashitch replied:—

I can only at the moment reply as follows to M. Pavlovitch's question. It is true that from various sides rumours are circulated about the *pourparlers* between Italy and the Triple Entente Powers. Before this, rumours likewise circulated as to *pourparlers* between Italy and Germany and Austria as to the concessions that Italy should obtain if she remains neutral until the end and inclines towards Germany and Austria, and since then that Italy will take part with the Triple Entente Powers in solving the questions which are the order of the day.

These rumours, which come from different sides, are not confirmed up to the present moment, and therefore we cannot know how far they are true or not. It often happens that false rumours are sent forth with the simple object of giving rise to a discussion in order to be able to ascertain the dispositions and opinions in certain quarters.

For the moment I cannot give full credit to these reports, and I cannot believe that they are well-founded, because I think Italy does not desire to abandon the principle of nationality, a principle to which she is indebted for her unity. I do not think that she will abandon this principle at the precise moment when divers national questions are being elucidated. Italy, as I have said, has been united on the basis of the principle of nationality. Now I can also say that the Italian political social sciences established also the rule that a State which has founded its unity on the basis of a principle should preserve this principle to the last, because, if abandoned, it abandons also the basis on which it stands.

I think if Italy goes into action it will go on the side of the Triple Entente; that it will only inspire the principle that it will so arrange her Adriatic interests that no difficulties will ensue either for her or for us, and there will result no discord between the Slavs, Serbs, Croats, Slavonians, and the Italians. Only the accord of these two peoples can give sufficient guarantee to assure that the German pressure forward towards the Mediterranean shall not be successful.

Also, I cannot put any faith in these reports because I know that in Italy there are great and prudent statesmen who are able to esteem how friendship and accord between the nations, the Serbian-Croatian-Slavonian people and Italy can only be to the advantage of the one and the other State, of the one and the other people, can only create closer intercourse, a more developed commerce and greater friendship between the two peoples. For these reasons, gentlemen, I think the politicians and statesmen of Italy would not aim at obtaining one town more or less, one or other special island, because they would know beforehand that the strength of Italy does not repose in that town or that island, but in the accord of the Serbian-Croatian-Slavonian people and Italy.

This accord will assure a long peace not only between us, but in the whole of Europe, and will accomplish the object which this great war has in view. That is why I cannot as yet put any faith in the rumours which have reached us, and I beg of you to be patient and not to be uneasy until we know the true state of things, and then we shall have time to speak about it and to form our opinions about it.

It is now said that the Prime Minister intends to leave for Petrograd very shortly. It was, in fact, expected that he would start to-night, but his departure has been delayed. The object of the visit is not made public, but events speak for themselves.

M. Supoli, an Austrian subject and deputy, who is of Croat or Serbian nationality, is on a visit here. He has made a tour of the principal European capitals with a political object, and doubtless his revelations or statements are of interest, as he is fêted and is a lion of the day in official and political circles.

LETTERS TO THE EDITOR.

SERBIA AND BULGARIA.

To the Editor of The Near East.

Sir,—Perhaps you would allow me a few lines in reply to the letter of M. Janitsch in your issue of May 7.

He states that the Bulgarians, by their unprovoked attack on their allies, tore the treaty of 1912 into shreds. Might I remind him that as early as November, 1912, the Serbians themselves were making every effort to get the treaty abrogated, and were using every diplomatic lever at Petrograd to obtain not only the "zone contestée," but also lands beyond, which they had previously bound themselves not to claim? General Savoff's Order (June 15-29), "in order that our failure to reply to the attacks by the Serbians should not react upon the morals of our men," etc., *followed* the proclamation of King Peter bidding his Army move against the Bulgarians, as far as it is possible to judge now. After the first Bulgarian attack, Savoff sent three *parlementaires* to the Serbian camp to apologise for the incident, and these were detained as prisoners by Prince Alexander, a proof that the Serbs considered that they were at war.

In May, 1913, a meeting took place in a railway carriage on the Monastir line between the Greek and Serbian staffs. If the plan of campaign were here directed against *Turkey*, why were no *Bulgarian* envoys invited to be present? I consider this meeting as direct evidence that the two Allies were meditating at some future date an attack on the Bulgarians.

While the Bulgars were around Adrianople, the Serbs were busily engaged in setting up Serbian Governments in Veles, Istip, Bitolia, etc., just as if those towns were within the sphere assigned to them. Exarchist bishops were "molested," to put it mildly, and the invaders scarcely gave the impression of being loyal and disinterested allies.

General Savoff's order was a gross blunder, as he probably realises himself; and the Bulgarians are not masters in finesse. But it is scarcely fair to charge them with the sole responsibility for the second Balkan war.

In his letter of April 9, to The Near East, M. Janitsch makes the astounding statement that the main Turkish offensive was directed against the Serbians. The army of Zekki Pasha, which was defeated at Kumanovo, numbered at the most 90,000 men. The army under Hassan Taxim, defeated by the Greeks at Sarandoporon, numbered perhaps 45,000; and

Digitized by Google

the same number fought at Yenidje Bitolji and Janina. In Thrace, Abdulla and Nazim Pashas, admittedly the *best* Turkish generals, had over 200,000 opposed to the Bulgarians at Lule Burgas, while Cherif, in Adrianople, had at least 70,000 more. It is absurd to suppose that the Turks, who cared little for Macedonia, would have denuded their home provinces of troops to send them against the Serbs and Greeks, whose display in 1885 and 1897 did not make their friends very hopeful as to their success. All the world anticipated that the *Bulgarians* would cover themselves with glory; but the great surprise and pleasure of the Western Powers was the wonderful series of triumphs gained by the soldiers of Crown Princes Alexander and Constantine.

As to the nationality of Macedonia, let M. Janitsch consult M. Brancoff's "Macedonia" (1905), when even in *Kazas* so dear to Serbian sentiment as Kumanovo and Uskub, there was a "Bulgarophone" majority. Veles, Istip, Kotchana, Radovitza, Prilep, Palanka, Ochrida, and Bitolia may contain a *few* Serb villages, but the Bulgars had a majority of about nine to one. Except in predominantly Serb parts as Pristina and the Sanjak, those districts in Western Macedonia, which are not Greek or Bulgar, are Albanian. Prizrend, Ipek, Jacovo, Dibra are almost entirely Albanian, even if under Dushan they were Serb. See the maps attached to the Carnegie Report and Mr. Hogarth's work, "The Nearer East."

I can say nothing as to Widdin and the Timok valley being "Serbophone," but the treaty of San Stefano, while it neglected Greek interests, gave to Bulgaria, not only the whole of Macedonia, as far south as Kastoria, but the provinces of Pirot and Slivnitza in modern Serbia. In the Middle Ages Macedonia was in Bulgarian hands about three centuries; in Serbian possession only some thirty years in the fourteenth century.

There *may* have been more Serb schools than Bulgar in 1870, but M. Brancoff's work is most illuminating about these "schools." Some of the Greek and Serb schools had no pupils at all, and of what use are schools and churches when they are unattended? In some "Bulgarophone" villages there were, I believe, only Greek schools. And the villages had, *faute de mieux*, to attend them. Can M. Janitsch give any date when there were more Serb *school children* than Bulgarian in Macedonia?

Serbia lost ground in Macedonia from 1878 to 1908 from two reasons: first, a lack of prevision in her rulers, who set their faces against an understanding with Bulgaria; and, secondly, because she was employed in an irredentist campaign against Austria in the Bosnian provinces, a reasonable claim enough. M. Janitsch, however, speaks of Serb schools being closed down by the Turks. Is he not aware that in the reign of Sultan Achmet V. (I consider Abdul Hamid I. and II. as Achmet or Ahmed IV. and V., as there is no real difference between Hamid and Achmet; and Abdul is only a prefix), that wily potentate closed down Bulgarian bishoprics, and showered favours on their Serbian rivals (1902-1909)?

As a subject of an allied and friendly Government, and as a sincere admirer of Serbian genius and bravery, I will pass over briefly Serbia's methods in her new provinces. But even her friends cannot admit that she has added to her laurels in this direction. Valondova incidents do not spring from a loyal and contented population. *Komitajis* are, no doubt, wonderful folk, but they cannot cause a widespread revolt against a popular and enlightened government. There is, I believe, a Macedonian legion fighting for the Austrians. Is it devotion to the Hapsburg cause that inspires them??

If Serbia wishes to play the part of the Piedmont of the Balkans and achieve the unity of her race, let her honestly set her own house in order, and do her duty to the Macedonians. Let her remember that whereas she attacked Bulgaria in 1885 without any cause, Bulgaria magnanimously stayed *her* hand and forebore to attack her last December, when she would not have been able to resist. Yet the Nish Press continues to assail Bulgaria (not without response, it is true), when Serbia must know that such actions are not to her advantage, nor to that of her allies. We need, to shorten this war against the outlaws who sunk the Lusitania and have filled Europe with horror at their wickedness, the co-operation of Roumania, Greece and Bulgaria. Serbia holds the key to their intervention. Let her admit the justice of the Bulgarian claims to the lands as laid down in the treaty, keeping the "zone contestée" for herself, and the Serbian armies in the near future will enter Serajevo and Agram, as they entered Adrianople, in the company of their Bulgarian brethren. Every hour wasted in Macedonia means an hour added to the Austrian power in Bosnia. That Serbia may play the nobler part, and by timely concessions achieve her union is the earnest hope of

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions recently will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

THE WORLD'S DEBT TO CONSTANTINOPLE.

LECTURE BY SIR EDWIN PEARS.

Speaking on Monday last at University College, London, on "What Constantinople Has Done for the World," Sir Edwin Pears said that Constantine made the city strong, and for over a thousand years it was the bulwark of Europe against Asia. The military progress made by Islam in the century immediately following the death of the Prophet was unexampled in the history of the world. The whole of North Africa was conquered, the Straits of Gibraltar crossed, and the inhabitants of Spain subjugated or driven into the north-west corner of their country before the battle of Tours in 732 stayed the advance in the westerly direction; but in the east no such advance was made. The Arabs had from the first aspired to be the masters of New Rome, and Mohammed's standard bearer counted himself happy that in his old age he was able to lead an army to its gates. In 673 he sat down before the city and besieged it for five years—but failed. In 717 another army, this time of 380,000 men, assisted by a fleet of 1,800 ships, had commenced a siege which lasted seven years, but this failed also. This defeat of the Islamic army was of much greater importance that that which took place a few years later at Tours, for the victory of Charles Martel was won over a wing of an army operating at a great distance from its base; but at Constantinople the great bulk of the army was making its effort. Yenghis Khan and Tamerlane were among the other twenty-one assailants who had tried to take Constantinople, and failed, before at length the Ottoman Turks succeeded in 1453. This long continued resistance to invasion from Asia was a great service rendered to the world.

Another important service was in connection with Christian theology. The Nicene creed, after being drafted at Nicæa, and having some clauses added at Chalcedon, was at Constantinople put into the shape in which it still exists. It marked a phase in a long struggle between Europe, with its tendency to polytheism, and Asia Minor, which was always monotheistic. To have given to Christianity a creed which had lasted unchanged through so many centuries was another great achievement.

In respect to commerce also the city had played a great part. Previously to the voyage of Vasca da Gama, the merchandise of India had reached Europe across the Syrian desert. Justinian, completing the work of Constantine, had succeeded in directing this trade through Constantinople; and his bridges could be found and the main lines of his roads traced in Asia Minor to the present day.

In another direction Justinian was even more famous than as a road maker and bridge builder. When we spoke of the law of Rome we meant the new Rome of Constantine, not the older city by the Tiber. Roman Law had played an enormous part in the history of civilisation, for Napoleonic and other codes were adaptations, sometimes with very little change, of the laws of Justinian.

Another great service that Constantinople had rendered to the world was in giving it new principles of architecture. At the time of its foundation the country abounded in temples, but as a rule Christians would have nothing to do with these because of their pagan associations. The Byzantine style of architecture had been developed, a style the most characteristic feature of which was that it gave more attention to the interior than to the exterior of a building. The best known example, St. Mark's, at Venice, departed from this rule, for to improve its outside appearance the domes had been heightened, and it had been adorned with pinnacles, but to the Byzantine churches as they might yet be seen at Constantinople none of these external aids had been given, and they remained perfect in their engineering and in their symmetry.

Another great gift to the world was in connection with art A genuine renaissance in Byzantine art had commenced about 1220 at Nicæa, and had come into the full flower of its springtime in Constantinople somewhere about 1300 or 1320. Some of the pictures in mosaics that had remained from that period were so beautiful that a distinguished society in London about fifty years ago refused to reproduce them on the ground that they were far too beautiful to be Byzantine.

THE WAR AND THE BALKANS.*

The war is proving a supreme test of national character. Realization, late in the day, of what is before them, leads the Germans to throw off the mask of civilization, and to appear as savages revelling in every devilish contrivance that modern science has to offer. German methods of warfare have no attraction for the British race, even as reprisals. The story of the effects of poisonous gases on our heroic troops, the sinking of the "Lusitania," make the average Briton clench his teeth and vow that hereafter Germans shall, so far as he is concerned, be divided into two groups—the decent-minded, who will be too ashamed of their nation to look the world in the face, and those of a different character to whom no Briton will ever bring himself to speak. That, too, would be the attitude of the British race, if it were a single articulate entity. But it is not. It comprises financial and commercial interests, and these, it is to be feared, will, as soon as the war is over, act as "blacklegs" in the boycott, social, political, and economic, that ought to be enforced upon Germany for a generation.

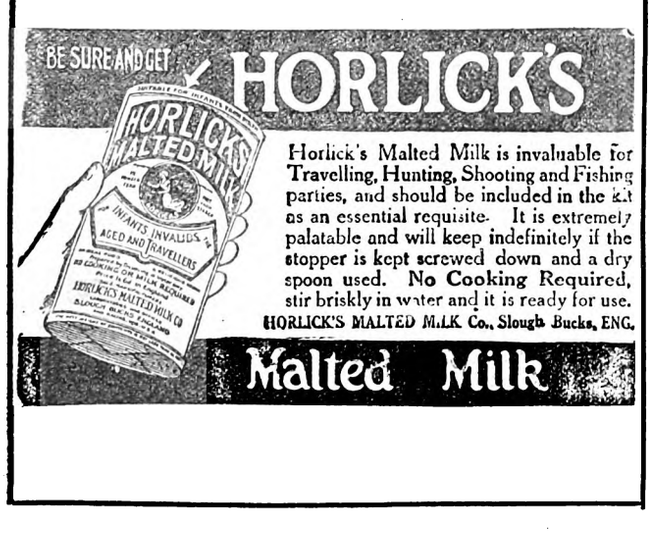
Instead of bringing about the adoption of German methods of warfare, the stress of war in Great Britain begets in a number of people who in normal times are expected to be opposed to all war a keen anxiety to rope in as many belligerents as possible in the present struggle. A fact which tends to prove that man—at least the Englishman—is a fighter at heart, and that the pacifist school was a pose on a par with the tonsorial fashions affected by our youth in pre-war days.

When the British Government, according to the revelations of M. Venizelos, offered Greece virtually as much of Asia Minor as she cared to ask for, the first instinct of the man in the street was that too great a bid was being made for Greek co-operation in the war. But the policy of obtaining assistance at any price seems to have come to stay. Mr. Noel Buxton, M.P., and Mr. C. R. Buxton support it wholeheartedly in this volume. Their main contention, indeed, is that the Government has not yet given the policy a sufficiently wide application. Our authors have wisely realized that Bulgaria is responsible for the paralysis of the Balkan armies at the present moment, and they have set themselves the task of pointing out how that paralysis can be cured. For them it is not enough that Bulgaria should adopt an attitude of honest and strict neutrality, in contradistinction to the suspect type hitherto adopted, but they wish to see her attacking the Turks on the side of the Allies.

The Allies are waging war in the cause of humanity. It is only natural, therefore, that they should wish to have the active support of every nation who stands to gain directly from their victory. To this end we ought to endeavour to remove any obstacle in the way of any country's co-operation. But there is a wide gulf fixed between such an endeavour and any steps which encourage the belief that the Allies are absolutely dependent on any given nation's support. The tour of orientation recently undertaken by Mr. N. Buxton and Mr. C. R. Buxton in the Balkans, we fear, was unjustly exploited as an effort on the part of Great Britain to sue for Bulgarian support. This small volume, in which they sum up succinctly the situation in the Near East, serves to place their attitude in a truer perspective. They contend, and very rightly, that the active support of the Balkans can be had by the Allies if they will only go the right way about to obtain it. The same contention has been urged repeatedly in the columns of THE NEAR EAST, and in this book the authors direct their arguments to the proper quarter—the British people and the British Government. There is no need to labour *chez* Bulgarians and Greeks our anxiety that they should come to our help. If the Government had chosen to adopt a policy in keeping with the interests of the Allies and of the Balkans as a whole, it would have drawn up a declaration stating explicitly the intentions of the Triple Entente in regard to two possible attitudes of the Balkan States—strict neutrality or active co-operation. The conditions could have been accepted or declined by the States concerned, and they would have known exactly the position in which they were likely to be placed at the end of the war.

Mr. Noel Buxton and Mr. C. R. Buxton point out what the Allies' terms ought to be and the dangers of a policy of drift. The brief sketches of conditions in the different countries which lead up to their conclusions give the reader a clear and dispassionate idea of some of the causes which have hitherto condemned to inactivity armies amounting to more than a million men.

* "The War and the Balkans." By Noel Buxton, M.P., and Charles Roden Buxton. (George Allen and Unwin, Ltd. Price 2s. 6d. net.).



BOOK RECEIVED.

The World's Cotton Crops. By John A. Todd, B.L., Professor of Economics, University College, Nottingham; formerly of the Khedivial School of Law, Cairo. Illustrations and Maps. (A. and C. Black. 10s. net.)

ITALY AND SERBIA.

At a meeting of the Balkan Committee, held at the House of Commons on May 6, with Sir Edward Boyle in the chair, after an address by Dr. Seton Watson on Slav interests in Dalmatia, the following resolution was proposed by Sir Arthur Evans and passed:—

"That the Balkan Committee, while welcoming the possible adhesion of Italy to the Allied cause on the basis of the completion of Italian national unity, and in virtue of the principle of nationality, to which the British Government is definitely pledged, urgently hopes that in any agreement between the Entente Powers and Italy due regard will be shown for the vital interests of our Serbian ally, and, above all, of the Serbo-Croat population, to whom the Dalmatian coast belongs by right of race, language, geography, and economic interests; and, convinced that no antagonism of interests, whether military, linguistic, or economic, exists between the Adriatic peoples, the Committee earnestly desires that the Governments of the Triple Entente will use their endeavours to promote a lasting agreement between the kingdom of Italy and the Southern Slavs."

THE VETERANS' CLUB.

All well-devised schemes which aim at providing comfort and help for the men who are fighting the battles of our Empire deserve very active support as well as sympathy. Many of those who are giving their services in so many parts of the world, including the Near East, have returned wounded and maimed, and many thousands more will be added to the lists. No institution now in existence deserves more hearty support than the Veterans' Club, founded a few years ago by Major Arthur Haggard. The club affords a meeting and a resting place for men leaving the Army and Navy, much as the Union Jack Club does for Service men. It has done, and is doing, excellent work in many directions. It has been thanked for its services by the War Office. Over 2,000 of its members have rejoined the Colours. It has furnished nearly 200 ex.-n.c. officers to act as instructors to our new armies. The roll of honour grows daily.

But the present premises, near Bedford Row, are no longer suitable, and Major Haggard and those who work with him consider that the time has come to interest the public throughout the Empire in the institution; that it should be established on a more permanent basis; and that a building worthy of the nation and Empire may be provided in a more suitable situation. We hope that some of our readers may be disposed to help this movement for the social welfare of our gallant soldiers and sailors. Subscription to the Veterans' Club Association has been fixed at a minimum of 2s. 6d. All donations will be thankfully received.

The movement has the strong support of the Duke of Bedford, Major E. Rhodes (brother of Cecil Rhodes), Lord Charles Beresford, Admiral Sir E. Fremantle, Lord Dundonald, Mr. Rudyard Kipling, Sir Rider Haggard, Mr. J. A. Malcolm, and many well-known persons. The offices are at 47, Bedford Row, and Mr. Geoffrey J. Leggett is the secretary, to whom contributions should be sent.

IMPORTANT NOTICE.

Any newsagent or bookstall in the United Kingdom can supply copies of "THE NEAR EAST," which are on sale early on Friday morning. Should any difficulty be experienced in obtaining the paper, the Manager would be glad to receive a post card giving particulars, and he will take steps to rectify the matter.

TANGIER TO TEHERAN.

A month ago I put forward a suggestion regarding the future of Constantinople which seemed to me to have much to commend it to favour: to wit, that America should be invited to hold the city—and, of course, both waterways giving access to it—in trust for the world. At the same time I expressed the opinion that the Americans themselves would probably be the only people who would raise any real difficulties over the adoption of such a scheme; and I still believe that if it were put forward as a serious proposition it would meet with hearty approval from far more countries than any other plan that has yet been proposed. But I gather from the *Independent* (New York) of May 3, a copy of which I have just received, that my hopes of seeing Uncle Sam step into the breach are not very likely to be fulfilled.

***

After giving the gist of my proposals, the *Independent* observes:—

> He is quite right in supposing that America will not be eager to proffer her aid in solving the problem that has involved the world in war. It is only a few years since we responded to a similar appeal from this quarter and sent Morgan Shuster to straighten out the finances of Persia. He was altogether too successful, and just when it seemed that he was about to restore financial and political independence to Persia he was removed by the joint action of Russia and Great Britain.

That sounds painfully definite; and I believe that the *Independent*, which is one of the most representative American journals, is voicing the opinion of the average American who takes any interest in the politics of the Old World. Nevertheless, I would point out that the case I put forward and the case of Persia's Financial Adviser are not quite on a par. If America consented to act as guardian of Constantinople she would do so with the authority, and at the urgent request, not of two Powers, but of a majority of them at any rate; and she could stipulate for terms and guarantees of the most binding description. Moreover, she would show herself a friend of Peace, ready to make substantial sacrifices for the good of the world. So once more (with King Henry V.) I venture to cry:

"Unto the breach, dear friends!"

If my appeal leaves Uncle Sam—pardon the change of person: it is necessary!—cold, he will probably reply (but *not* with King Henry):

"Not in these breeches."

But I shall have done *my* best!

***

Tempus fugit—as we were frequently informed in our young days; but it is usually supposed that a prison is not the most suitable place to convince one of the truth of the saying. This, however, does not appear to be the opinion of some member of the staff of a certain ha'penny paper, which last Friday evening published an article with a double-column heading:—

18 Days in a Turkish Prison.

This article was continued on the back page, but under the heading:—

18 Months in a Turkish Prison.

Presumably, whoever was responsible for the second heading was convinced that the dreadful experiences of the writer of the article could not have been crowded into "18 days." Or was he indulging a taste for metaphor?

***

If all the refugees who have fled from Syria and Palestine into Egypt were as ingenious and enterprising as certain Jews of whom the *Jewish World* tells us, we should not hear of these poor people constituting a "problem" for their hosts. Quite the reverse! The immigrants referred to "are salting, according to Russian methods, the small fish of the Nile, with the result that excellent smoked sardines are now being sold at the rate of four for the piastre. These small fish have careered peacefully in the waters of the Nile for ages. Now—well the war has affected them, too!" That tickles me—as the trout remarked just before the Wykehamist flicked him out of the Itchen. But the *Jewish World* ought to be careful how it talks—or writes—about "smoked sardines," or it will be having one of the trade defence associations inquiring what it means by it.

***

A marriage broker of Cairo who sued a Moslem couple in the courts of Egypt for £25, as her fee for having united them in marriage, has received a shock which will be felt by every marriage broker in the land. Her claim was dismissed and she had, in addition, to listen to the recitation of a somewhat lengthy finding, in which the court detailed its reasons for having found against the plaintiff. Without recounting them here, I may say that their moral tone was excellent, and the whole matter, put into a nutshell, was that, while bringing persons together with the idea of an ultimate marriage was a good and proper thing to do, it lost all its virtue should it be done purely for the purpose of personal gain. I quite endorse the ethics of this finding, but feel rather sorry for the broker nevertheless. She had a contract after all, and a contract which had, one would have imagined, become legalized by many years of custom. This form of business is so very common in Egypt. On the other hand, I believe it is conducted principally when the contracting parties are Christians, and that perhaps accounts for the finding in this case.

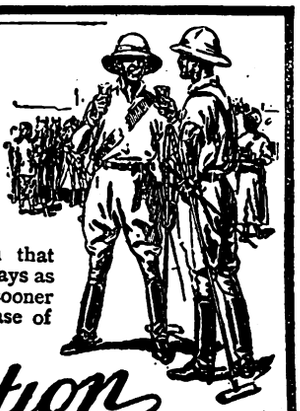
***

One man of my acquaintance is still regretting his precipitancy in refusing the mediations of a marriage broker when he was in Egypt. The broker in this case was a man, and he approached my friend, who was poor but of good family, on behalf of a young Levantine widow of great wealth but no family to speak of. His suggestions were repulsed with the greatest indignation. My friend would listen to no details when he once discovered what was in the wind. A few months later he was returning to England on leave, and travelled by the Messageries boat. On board he was at once attracted by the appearance of a remarkably beautiful girl of about twenty, who was travelling in state, accompanied by a retinue of servants. His chagrin may be better imagined than described when he found that this girl was the widow he had so indignantly refused, and that she was journeying to Marseilles to join a husband introduced by the same broker who had first approached him.

***

An Englishman who returned from Turkey on the outbreak of war tells the following story, illustrative of the differences between the Turks, the Greeks, and the Jews, who, he says, can never trust one another or live in harmony. The story is, he adds, very well-known in Turkey; but I have never heard it before, and it may amuse some of my readers. A Turk, a Greek, and a Jew, then, were crossing the Bosphorus one stormy day in a distinctly rotten wherry—emblematic, one supposes, of the Turkish "Ship of State"—and very soon they all began to have doubts whether they would ever reach the shore in safety. Alarm did not improve the tempers of the Turk and the Greek, who began to cast ferocious glances at the Jew, and to throw out hints about the wherry being overladen. The Jew, however, kept his wits about him. "See, gentlemen," said he, "it is no good becoming excited! Let us think of something pleasant. To amuse ourselves let us discuss what we should best like to see." "There is wisdom in that," agreed the Turk. "For my part, I should like nothing better than to see a really good row in Stambul, with all True Believers armed and making mincemeat of the *Roumis* and the *Yahudis!*" At once the Greek fired up. "I, too, should like to see a fight," said he. "But I should like to see the ignorant Turks driven back to their desert homes, and the city of Constantine once more in the hands of its lawful possessors, the Hellenes, as it assuredly will be one day, and that not far distant!" Thereupon followed a furious wrangle between Turk and Greek. But, presently, just as they were nearing shore after all, one of them remembered that the Jew had not been asked for his opinion. "Well, what do you say?" he asked. "Oh!" replied the Jew, suavely, "I say nothing. I've been too busy praying that you two may kill one another, and that this accursed boat may afterward reach the shore safely."

Corsair.



"Rattlin' good game, old man. What?"

"Yes! An' a rattlin' good wind-up with a 'burra' peg of Perfection."

"I thought you'd like it. It's the only whisky I've drunk since I've been out. Jove, man! It's the finest spirit ever bottled. Never reminds you that you've got a liver, and it's always as welcome as promotion. I'd sooner a peg o' Perfection than a case of any other."

PERSONAL & SOCIAL

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915.	1915.		1333. Jumada II.	5675.
May	May			Sivan.
14	1	Friday	29 Rejeb.	1
15	2	Saturday.....	1	2
16	3	Sunday	2	3
17	4	Monday	3	4
18	5	Tuesday	4	5
19	6	Wednesday	5	6
20	7	Thursday	6	7

Sunday, being May 3, Old Style, is the birthday of H.H. Prince Paul of Montenegro, second son of Prince Mirko, who was born at Podgoritza in 1910.

Monday is the birthday of H.R.H. Princess Arthur of Connaught.

Wednesday is the birthday of H.I.M. the Tsar of Russia.

An announcement in the *Gazette* notifies that, by the King's command, all celebrations of his Majesty's birthday, both at home and abroad, with the sole exception of the flying of flags, will be dispensed with this year, owing to the war.

It is officially announced that the Sultan of Egypt will proceed to Alexandria for the summer in the latter half of this month.

M. Misu, the Roumanian Minister, and Madame Misu have returned to London from Oxford.

Lady Howard de Walden, who has been in Egypt for some time, has returned to Seaford House, Belgrave Square.

Lady Ninian Crichton-Stuart left 43, Bryanston Square on Tuesday morning for House of Falkland, Fifeshire.

News has been received that Sub-Lieutenant Lord Loughborough, R.N.V.R., Armoured Car Division, is doing well in hospital at Cairo. He was wounded in the Dardanelles operations.

An engagement is announced between Lieutenant Arthur Cottrell, Royal Field Artillery, B.E.F., eldest son of Mr. and Mrs. Cottrell, of Athens, Greece, and Mary Barbara, eldest daughter of Mr. and Mrs. Donald Nicoll, of Burntwood House, near Winchester.

A marriage has been arranged, and will shortly take place, between Michael Palairet, Second Secretary in his Majesty's Diplomatic Service, younger son of the late Captain Palairet, 9th Lancers, and Mary de Vere, daughter of Major Herbert Studd, Coldstream Guards, and of Mrs. Herbert Studd, of Issercleran, County Galway.

The engagement is announced between Ernst Matthaei, Egyptian Civil Service, Cairo, son of the late Ernst Matthaei, of 22, The Boltons, South Kensington, and Louise Henriette Matthaei, of 113, Clifton Hill, N.W., and Edith, daughter of the late Mr. T. Lucas and Mrs. Lucas, of Woemleighton, Leamington.

HOME SCHOOL
for Boys whose Parents are abroad. :: Ages 7 to 14.
Entire Charge. Trained Nurse. Qualified Resident Master.
Boys prepared for Public Schools and Royal Navy.
Terms and Prospectus from
Miss Thomson, The Hall, Bexhill-on-Sea.

Last Friday, at St. George's Church, Newcastle-on-Tyne, the marriage was solemnized of Second Lieutenant Gavin Knox Walker, Northumbrian Division, R.E., only son of the late Mr. James Walker, of Constantinople and Enfield, and Miss Constance Mary Dickinson, youngest daughter of Mr. Charles Rougier, of Newcastle-on-Tyne. The Rev. Canon Gough, Vicar of Newcastle, officiated, assisted by the Rev. Canon Boot, Vicar of St. George's.

Among the list of first-class passengers rescued from the s.s. Lusitania we are glad to observe the name of Mr. James Baker, formerly of Constantinople, a director of the Oriental Carpet Manufacturers.

Mr. Pappadopouli, another director of the Oriental Carpet Manufacturers, and his wife, were also on the Lusitania, and the former was unfortunately among the victims of the German outrage. His wife, who was saved after being in the water three hours, is now in London.

Two other victims of the Lusitania disaster were Mrs. Bourke, of Winnipeg, and Miss Ella Wadds Lawrence, who were on their way from America to serve with the Serbian Red Cross.

Lord Methuen writes from the Palace, Malta, appealing for newspapers, books, games, and gramophones for the use of the large base hospital now being formed in Malta.

Mrs. Arthur Hoare, Trull House, near Tetbury, announces that the net result of the sale of plants and other articles opened at Trull House on Wednesday by Countess Bathurst was over £200, in aid of the Serbian Red Cross Fund.

Cambridge proposes to confer the degree of Doctor of Divinity *honoris causa* on the Rev. Claude H. W. Johns, Litt.D., Master of St. Catharine's College, *ex officio* Canon of Norwich, and a well-known Assyriologist.

Mr. Josiah Wedgwood, M.P., has been wounded in the fighting at the Dardanelles.

Miss Charters, late headmistress of the English High School for Girls in Constantinople, has become one of the partners in a large boarding school at Harrogate.

The Rev. Dr. and Mrs. Giffen, of the American Mission in the Sudan, have returned to Khartoum after a year's absence in America.

Mr. Norman Petrides, a son of the late Mr. D. N. Petrides, of West Hill, Sydenham, is, we learn, on his way from Cyprus to England with the intention of joining the Army. This, we believe, will make the third arrival from Cyprus for the purpose in question.

Our Special Correspondent in Athens informs us that Dr. Mizzi, having at last obtained permission to leave Constantinople, has arrived in Athens.

From the same source we learn that Mr. Albert Simmons had also left, and had proceeded to Marseilles.

General Gouraud, who succeeds General d'Amade in command of the French Expeditionary Corps at the Dardanelles, saw fighting in the Sudan in 1896.

Mrs. Parker, sister of Earl Kitchener, presided at an important conference on clubs for soldiers' and sailors' relatives at the Mansion House on Wednesday.

Mr. C. J. Moss, of the staff of the Imperial Ottoman Bank in Turkey, who has been at Sandhurst, has received his commission as 2nd Lieutenant in the Suffolk Regiment.

Mr. Noel Hayes, also of the I.O.B., has been gazetted 2nd lieutenant, Post Office Rifles.

Yet another member of the staff of the I.O.B., Mr. Alexander Park, of the Manchester office, has joined the army, his unit being the 6th Manchesters.

News was received in London on Tuesday that Mr. A. F. Wilding, the famous lawn tennis player, had been killed in action in the Dardanelles operations. He joined the Royal Marines last September, and had served at Dunkirk and at Antwerp. Quite recently it was announced that he had been promoted to captain. He was a keen motor-cyclist, and on one occasion rode from London to Constantinople.

Lieut.-Colonel Robert Seymour Vandeleur, C.M.G., commanding the 2nd Battalion Seaforth Highlanders, who is reported wounded, entered the army in 1889. He was promoted to the rank of captain in 1893, and in the same year was dangerously wounded at the battle of Atbara. He was mentioned in despatches on this occasion, and again for services in India, when he also received the brevet of lieut.-colonel, and attained full rank in September last. The Order of St. Michael and St. George was conferred upon him in February for services in the present campaign.

Major Kenneth Wyndham Arbuthnot, 2nd Seaforth Highlanders, who served in the Nile Expedition of '98, and was present at the Battle of Omdurman, was last week officially reported as "believed killed" while serving with the Expeditionary Force.

Captain Eric Seymour Stephenson, D.S.O., Gloucestershire Regiment, attached to the Egyptian Army, is reported as having died of wounds received while serving with the Mediterranean Expeditionary Force. He had been employed with the Egyptian Army since April, 1906, and he held the Egyptian medal with clasp for services in the Sudan in 1908.

Second Lieutenant Charles William Peel, 2nd Battalion Royal Dublin Fusiliers, who is reported killed in action near St. Julien between April 23 and May 1, was the youngest son of the late Mr. William Felton Peel, of Alexandria, Egypt, and of Mrs. Peel, the White House, Hartfield. He was appointed to a commission on August 15 last year.

The death was announced last week of Colonel Andrew Murray, D.S.O., at the age of seventy-seven. He served in the Egyptian War of 1882, and received the medal with clasp, the Fourth Class of the Osmania, and the Khedive's star. He entered the Army in 1858 and retired in 1894.

Major-General Cosmo George Gordon died on the 5th inst. at Culdrain, Gartley, Aberdeenshire, in his sixty-seventh year. He received his first commission in the Royal Marines in June, 1867, and reached the rank of colonel commandant in April, 1903. He retired in April, 1906, with the hon. rank of major-general. He was with the Sudan Expedition in 1884-5, taking part in the defence of Suakin, the actions of Haskeen and Tofrek, and at the burning of Tamai. He had the medal with two clasps and the bronze star.

Amongst the appointments officially notified as made by the Admiralty on Monday we notice the following:—"Royal Naval Volunteer Reserve: Mr. H. C. Lukach granted a temporary commission as lieutenant and appointed to the 'Egmont,' additional, to date February 25." This appears to be a somewhat belated announcement, as our Cyprus Correspondent reported several weeks ago that Mr. Lukach had returned to the island and resumed his duties.

The death is announced from Sofia of Professor Yaroslav Vesin, formerly Professor at the Fine Arts School in Sofia and military painter to the King and War Ministry. Vesin was of Czech origin, and had been a naturalised Bulgarian for fifteen years.

The following telegram from His Majesty King Nicholas of Montenegro was received last week by Lady Roper Parkington, Hon. Treasurer of the Montenegrin Red Cross and Relief Fund:—"The help which your honourable Committee has already dispatched, and the arrival of the urgently needed medical stores and clothing for the wounded sol-

Digitized by Google

diers and poverty-stricken families, is welcome evidence of the cordial response made to your appeal by the noble and generous British nation. The gratitude of my brave soldiers and their families, who at this trying moment are receiving your valued gifts, is offered to your nation, at once a friend and ally, and for which Montenegro has always felt the greatest sympathy and sincere admiration. I beg, Madam, that you and the very distinguished members of your Committee will accept my best thanks, and pray also express my acknowledgements to the generous donors to the Fund.—Nicholas."

Dr. Isabel Ormiston, Chief Medical Inspector of Schools to the Government of Tasmania, and Mrs. Patton Bethune, who were sent by the Wounded Allies Relief Committee as a Sanitary Commission to Montenegro, have arrived at Cettinje safely after an adventurous journey. They report that the Montenegrin Government sends an urgent request for a self-supporting hospital unit, accompanied by vaccin, disinfectants, and destructors, to combat the typhus epidemic in Ipek and the surrounding country. The Wounded Allies Relief Committee is proceeding to equip and despatch a suitable unit.

Among the many interesting items in an exhibition of regimental plate and trophies, opened on Monday afternoon by Princess Christian at the show-rooms of the Goldsmiths and Silversmiths' Company (112, Regent Street), is a silver model of a Nile boat belonging to the 1st Battalion of the Royal Irish Regiment. This trophy was purchased with a prize of £100 offered by Lord Wolseley during the Sudan campaign of 1885, to the first regiment coming up the Nile to Debbeh in boats. In forwarding the prize Lord Wolseley wrote:—"Being an Irishman myself, it is very gratifying to me to feel that my small prize has been carried off by my own countrymen."

Readers who desire to assist the central fund for the despatch of campaign comforts to the officers and men of the Mechanical Transport Columns of the Army Service Corps (which fund is now charged with supplying "extras" to a personnel in France and Turkey of some 20,000), should forward their subscriptions to the Hon. Treasurer, Mr. E. Shrapnell-Smith, 7, Rosebery Avenue, London.

Major Maclure, 26, Dennington Park Road, West Hampstead, appeals for subscriptions towards defraying the cost of supplying First Aid Instructions leaflets to troops at the front. They have already been sent free to over 200 regiments. These leaflets are being used by Indian troops in the Persian Gulf, having been translated into and printed in Hindustani by an officer in India. "Subscriptions," says Major Maclure, "are urgently wanted to carry on this work, as little or no instruction is given to the officers and men how to help themselves, and consequently great loss of life is incurred."

Mr. Charles Sims, R.W.S., A.R.A., has generously presented to the Wounded Allies' Relief Committee the gold medal for oil painting awarded to him by the Carnegie Art Institute at the International Exhibition, Pittsburg, U.S.A. (1912). Mr. Sims originally intended that the medal, of which the actual gold is worth some fifty pounds, should be melted down. The committee, however, is confident that some art collector will welcome the opportunity of acquiring the medal as it stands. Applications to see it should be addressed to Miss Lambert, Wounded Allies' Relief Committee, Sardinia House, Kingsway, W.C.

In response to the appeal made by the Women's Emergency Corps that odd lengths of wool should be knitted up into 12-in. squares to be made into blankets for Serbia, considerably over 10,000 such squares have been received, and already 500 blankets have been despatched. The blankets are warm, light, easily washed, and attractive in appearance. More squares are wanted, as the need of the Serbian hospitals is great. All parcels should be addressed to the Knitting Department, Women's Emergency Corps, 8, York Place, Baker Street, London.

Our Bulgarian Correspondent writes (April 27):—

Last Saturday the death took place of Colonel Stephen Nikoloff of the Bulgarian Army. A native of Prilep (Macedonia), he devoted all his service to the liberation of his country, first from the Turkish and latterly from the Greek and Serbian yoke. He was Vice-President of the Macedo-Adrianopolitan Societies and a member of the executive committee of the Macedonian charitable societies. He was universally loved and respected for his personal bravery and high integrity of character. In him the Macedonian Organisation loses its most worthy leader.

APPOINTMENTS, PROMOTIONS, etc.

It is officially announced that his Highness the Sultan has been pleased to approve of the following promotions and transfers in the Egyptian Army, from the dates stated:—

Kaimakam (temporary Miralai) C. E. Palmer Bey, D.S.O., Commandant of Artillery and Director of Ordnance, to be Miralai. April 11.

Kaimakam (temporary Miralai) F. U. Carr Bey, Principal Veterinary Officer, to be Miralai. March 15.

Kaimakam (temporary Miralai) F. Burges Bey, Sudan Government, to be Miralai. March 15.

Bimbashi (temporary Kaimakam) D. S. B. Thomson, Sudan Government, to be Kaimakam. February 21.

Bimbashi (temporary Kaimakam) E. H. Ross, Sudan Government, to be Kaimakam. February 22.

Bimbashi C. W. Spinks, Artillery, to be Kaimakam. March 10.

Bimbashi R. C. P. Blyth, Sudan Government, to be Kaimakam. February 21.

Bimbashi C. A Barker, 1st Battalion, to be Kaimakam. March 1.

The following officers are granted the temporary rank of Lewa, to date April 11:—

Miralai E. C. Midwinter Bey, C.B., C.M.G., D.S.O., Sudan Government.

Miralai M. R. Kennedy Bey, C.M.G., D.S.O., Sudan Government.

Miralai C. E. Palmer Bey, D.S.O., Commandant of Artillery and Director of Ordnance.

The following officers are granted temporary rank of Miralai, to date April 11:—

Kaimakam M. H. Logan Bey, Commandant Sobat-Pibor district.

Kaimakam N. W. Gardner Bey, Officer Commanding Arab Battalion.

The following transfers are approved, from dates stated:—

Bimbashi C. W. Spinks, Sudan Government, to Artillery. March 1.

Bimbashi C. A. Barker, Arab Battalion, to 1st Battalion.

The following appointments are approved from dates stated:—

Kaimakam T. G. Anderson Bey, Second in Command, Artillery, to be Assistant Adjutant-General. March 1.

Kaimakam C. W. Spinks Bey, Artillery, to be Second in Command, Artillery. March 1.

Kaimakam C. A. Barker Bey, 1st Battalion, to be Officer Commanding 1st Battalion.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

DOWSON.—On May 8, at 11, Sunderland Terrace, Bayswater, the wife of Ernest M. Dowson, Director-General of the Survey Department, Egypt, of a son.

DEATH.

COGHLAN.—On the 7th inst., at Water Lane House, Stroud, Elisabeth Anne Agathe, widow of E. W. Coghlan, late Judge in the International Courts, Cairo, Egypt.

The partnership formerly existing between Messrs. Joseph Cohen, Jacques Eskenazi, and N. Babani having been dissolved, the Han Halil shop of JOSEPH COHEN is now in the same road, near the Arch Way, Cairo, entrance from the Mousky. Friends and customers are respectfully requested to visit the new shop when visiting the Bazaar, where they will find a rich assortment of carpets, embroideries, etc., etc.—Advt.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

UPPER EGYPT.

Luxor.
The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.

THE BATTLE OF THE BEACHES.

Only when the war is over will it be possible to determine the actual military bearing of the forcing of the Dardanelles on the course of the great struggle. But whether these operations prove to be the turning-point in the long campaign or continue to be associated with a minor theatre of war, they have won for themselves from the heroic deeds connected with them a niche in the Temple of Fame, of which history is not likely to deprive them. The landing of British troops on the Gallipoli Peninsula was a magnificent feat of arms. It showed that in spite of the notable progress made in the destructiveness of engines of war, and in spite of the advantages which modern science gives to the defenders of a position, the human element is in the last resort the deciding factor. Nothing had been overlooked in the preparations for the defence. In the foreground a maze of trenches and a network of barbed wire; behind these skilfully concealed gun positions, some of them holes excavated in the side of the cliffs from which maxims rained their deadly hail of bullets on the beach below, others more elaborate emplacements inshore, and away on the other side of the Peninsula the frowning forts, from which the heaviest guns in their bomb-proof shelters were still formidable, in spite of the bombardment to which they had been subjected by the long-range fire from the Allied Fleets. But in the end it was the dash and the indomitable courage of the British troops that won the day. Advancing in boats into the storm of bullets and shrapnel, they gained the beach; here large numbers fell, but the survivors pressed on, until the moment came for the charge into the enemy's trenches. On the Turkish side everything had been provided for, save this irresistible attack. Now that the first lines of defence have been captured, it is realised that the Turks and their German masters made no idle boast when they claimed that Gallipoli Peninsula was impregnable. It was, as far as human ingenuity and the resources of science could make it; and these, let it be remembered, were backed by the traditional bravery of the Turks.

No brief summary can do justice to the operations of April 25 and succeeding days, during which the British troops established a firm hold on Gallipoli Peninsula. Landings were effected on six separate beaches, and at each point success was only achieved by the devoted heroism and self-sacrifice of officers and men. To the Australians and New Zealanders had been assigned the beach just north of Gaba Tepe, on the opposite side of the Peninsula to Maidos, at the head of the Narrows. The attempt to land the first boat-loads unobserved before daylight miscarried. A party of the enemy was entrenched on the beach, and as the boats approached, a terrible fusillade from rifles and from a maxim was poured into them. Without waiting for the boats to ground, the Australians waded ashore, and, forming a rough line, charged the Turks at the point of the bayonet. The trench captured, they found themselves confronted with an almost perpendicular cliff, covered with thick shrubbery. Half-way up this the enemy had another trench strongly held, from which they directed a terrible fire on the troops below and on the boats pulling back to the destroyers for the second landing party. On and up went our men, and this trench, too, was taken, the occupants being bayonetted or running away. Now the Australians had gained the high ground above, only to find it so broken that, in order to hold it, they must needs press on against the Turks, who had every advantage of cover, until they had driven them far enough back from the edge of the cliffs. Meanwhile the troops of the 29th Division were being landed at five points on the tongue of the Peninsula. In every case but one the Turks were found strongly entrenched to challenge the landing; and where the shore was reached without opposition the advance inland found the Turks in such a strong position that it became necessary to re-embark this landing-party. These joint operations depended for their complete success on the simultaneous advance on the part of each contingent. On one beach, however, the position of the enemy proved to be one of the most formidable which troops have ever attempted to take, even under normal conditions; for men landing from boats it might well have been regarded as impregnable. In order to provide the maximum cover until the last moment an armoured transport with two thousand men on board was run ashore. But the water was too deep to allow of men wading, and they had to make their way over a steam hopper and lighters and across planks before the shore could be gained. Under the hail of rifle, maxim and pom-pom fire to which these landing operations were subjected, no troops could live, and with the exception of two hundred, who made the first fatal attempt, the men remained throughout the day on the stranded transport. After nightfall the Turks allowed them to land without firing a shot. Thus they, too, gained a foothold on shore, and in the course of the next few days, in spite of the most fearless attacks on the part of the enemy, were able to join hands with the other landing parties and gradually advance the British line across the southern end of the Gallipoli Peninsula.

The task before our troops is still a heavy one, but they know, and the Turks know as well, that the difficulties can no longer be regarded as insuperable. Of the confidence that their own exploits will have inspired in them there can be no doubt. In ordinary circumstances we should hesitate to infer that the failure of the enemy to make good his boasts of the impregnability of his defences would result in any corresponding degree of despondency. But the circumstances are not ordinary. Unless the Turks choose to disgrace themselves in imitation of the Germans by violating all the canons of modern warfare, our quarrel is not with the Turkish nation, but with a small clique in Constantinople, which has sold itself and its country's welfare for German gold. The Turks, as a whole, too, we would fain believe, feel something of the unreality of the position in which they find themselves, and, when the promises made to them of an easy victory have been belied, will quickly lose heart in the business. Thus the despair of the defenders may be proportionate to the confidence of the invaders. The resolve to continue the defence, however, will be enforced by the Turco-German militarist group. If the latter could be honest with themselves they would have to admit that nothing has been more calculated to rouse their chagrin than the contemplation of the shipwreck of their fondest hopes in the composition of the British force which has earned for itself undying glory on the peninsula of Gallipoli. They had been taught to believe that the loosely-knit British Empire would never stand the strain of a severe war. They have lived to see the component parts more closely welded together by joint sacrifice than ever it has been before. If they stop to compare the deeds of the Australians and New Zealanders with the attitude of the subjects of the Ottoman Empire pressed unwillingly into service, in spite of the appeal to their religious fanaticism, they must feel that there is, after all, something in a system of government. The evils of the Turkish system have proved the undoing of the Ottoman Empire. In seeking to destroy that system we are fighting more on Turkey's behalf than against her. Least of all is the war between the Triple Entente and Turkey a crusade, as some publicists have thoughtlessly averred. The wrong-headedness of her Government has ranged Turkey against the Allies, but while the latter must fight the war to a finish, they would welcome any effort on Turkey's part to secure better terms of peace by detaching herself, before it is too late, from Germany and Austria-Hungary.

IMPRESSIONS OF EGYPT.

(By a Member of the Australian Imperial Force.)

We are in Egypt—in a land shrouded in mystery. Our impressions are at once numerous and confused. As representatives of the youngest of nations we have been transported over thousands of miles of ocean and set down amid the immortal ruins of the oldest of civilisations. As the mere babes of modern life, we have been left to moralise on the hoary wonders of a bygone age. The old and the new are thus strangely contrasted. In such circumstances it is easy to understand that impressions of Egypt formed by an Australian are quite likely to be very different from those formed by representatives of older countries. Denied all intermediate association, we are whirled into the vortex of th , old world like wondering spectators rather than old familiar friends.

There are lands whose antiquity probably rivals that of Egypt. Peru, China, Mexico, and India were all old in the arts and sciences of peace and war when the nations of Europe began to arise, but Egypt is of particular interest to us, if only for the reason that it is the land from which Moses led the Israelites into Canaan. The suburb of Heliopolis, known in Scripture as the City of On, was probably contemporaneous with Moses. The ancient city of Memphis, for 4,000 years the capital of Ancient Egypt, had long been depopulated and in ruins before the arrival of the Romans. Everywhere are evidences of an age at whose remoteness we can only guess.

Our First Contact with Egypt.

From Hell's Gate to the Suez we had seen of Egypt nothing but interminable tracts of sand, bounded sometimes by desolate rocky coasts. Sand, sand, sand, hills of it, mountains of it, seemed with ever-increasing height to stretch out into the interior. Would we ever see some place on which man might thrive and live in comfort? From Suez, again, to Port Said was ever the same unending wilderness; but, as foretastes of what might be expected, at frequent intervals along the Canal were dotted those fertile oases around which are clustered the stations of the Suez Canal Company. No one but must wonder at the gigantic feat of engineering of that genius of France, de Lesseps; yet when one had travelled a few miles in the Canal familiarity overcame wonder, and there was left to delight us these lovely stations, the lakes, and the town of Ismailia.

At Port Said our awakening really commenced. Here we were at one of the most cosmopolitan cities of the world. Here East suddenly seemed to meet West. It was a place of all nations, yet it was a place of no particular nation. It appeared as if all Europe had vied in sending of its peoples, and all the Near East competed in outnumbering them. Such a babel of tongues was an experience not previously encountered by many of those who formed part of the Australian Imperial Force. But Port Said, though perhaps in a greater degree, is only typical of the rest of Egypt. Some of its buildings were creditable; but it must be said that one was not sorry to get away from the smoky grime, the squalor and the reputed wickedness. Our run from Port Said to Alexandria did not contain much of interest.

The distant lights of Rosetta and Damietta among clusters of what appeared to be palms told us that we were in the precincts of a fertile land, but not till we came to Alexandria were we really at the beginning of our adventures. What memories Alexandria conjures up in our minds: the foundation of the city by Alexander the Great, marking the final overthrow of Phoenician influence and the supplanting of it by the Greek; the flight hither, after he had been defeated by Julius Cæsar at Pharsalia, of Caius Gnaeus Pompeius; his treacherous murder here while landing; the short Alexandrine War; the murder of Ptolemy and the intrigues of Cleopatra.

From Alexandria to Cairo.

The tract of territory between Alexandria and Cairo was a revelation in irrigation. We have our own Barren Jack and the reclaimed lands of the Murrumbidgee and the Murray, but they seem in comparison with this but puny works. Mile after mile of rich level country clothed in the native verdure and intertwined with interminable canal systems, tell how the mighty Nile has been held in subjection, harnessed and turned to the service of man by converting a barren desert into one of the most fertile plains in the world.

Here, again, is a strange mixture of East and West. The modern canal system is quite evidently the product of European brains, while the methods of agriculture are the same as those used in the East for thousands of years. The Persian water-wheel driven by an ox or camel, the oxen yoked to the crude old ploughs, the overburdened ass, are a strange contrast to the engineering feats that have made their use in these parts possible.

Cairo.

We are at last at Cairo, and are almost bewildered by the variety of our surroundings. At Port Said and Alexandria it was only given to us to observe from a distance; but at Cairo we had our first chance of going among the populace and judging of them at close quarters.

What a strange mixture of races Cairo contains! It would appear to be the common property of all Europe, and at the same time of the Arabs. Here for the first time we are brought face to face with extremes of luxury and of poverty, of extravagant splendour and of loathsome filth. In Australia we practically do not know what poverty means. We live under the care of an ever-vigilant Health Department, and the smells of Cairo would not be possible in Sydney or Melbourne. But here in Cairo all is different, and we are apt to regard with disgust the evidences of unwholesomeness that surround us. At the same time we cannot but admire the magnificent hotels and mansions of the city and some of the suburbs. We have nothing in Australia to compare with Shepheard's Hotel or some of the mansions of Heliopolis. The city contains a thousand architectural features all novel to us, and from observation of which we might reasonably profit.

Amongst the higher class Egyptians we cannot but notice traces of a dignity which remind us that they are the remote descendants of an ancient and cultured people; but of the lower class Arabs and the fellaheen of the fields we had better say little, lest we offend. They appear to us dirty and immoral, and we would sooner be out of their presence. But we have to remember that we are judging by our own standard of morality and religion a people living by another standard and according to the teachings of a different Prophet. It behoves us then to be tolerant, to observe quietly, to form our own inward opinions, and to make allowances.

TURKISH REPRISALS.

A correspondent writes:—

While the great war is progressing little has been known of the cruel reprisals of the Turks upon the hapless Christians in Persia. Although Persia was a neutral country, Turkish troops led by German officers invaded and took Tabriz and Urumiah. The former was speedily retaken by Russian troops, but the town and surrounding country of Urumiah are still in the hands of the Turks and Kurds. News comes from the American missionary, Dr. Shedd, whose college was attacked and himself wounded. He says that fifty Nestorian villages have been plundered and then burned. Among them Geogtapa, the home and orphanage of the late well-known Deacon Abraham, after a fierce defence of three days, has been completely destroyed and its inhabitants massacred. Gulpashon endeavoured by large bribes to propitiate the enemy, but when the money was secured 500 of its young men were seized and taken to Urumiah. Large numbers of Nestorians had taken refuge in the American Mission, but even the American flag was not respected. The Russian bishop and two other pastors who had sheltered there were taken, were exposed to every insult possible, and, after being dragged naked through the streets, were hanged. The Christian portion of Urumiah city has been destroyed. Thousands fled to Tiflis, a fourteen days' journey, on foot. A vast number of Nestorians are homeless and starving.

The Nestorian Mission has telegraphed £200 to be distributed to the sufferers, but more is needed to prevent the extermination of this noble people.

Contributions can be sent to Miss Barclay, 9, Tranton Road, Bermondsey, S.E., Honorary Secretary of the Nestorian Mission.

In connection with the above, the following extracts from a statement issued by Reuter's Agency this week is of much interest:—

A letter, dated Tabriz, April 8, says that the following despatch sent by special messenger had been received there from Dr. Shedd, chief of the American Mission at Urumiah: "All Christian villages plundered and burned. One thousand killed. Two thousand dead from disease. One hundred persons killed in last ten days. Our lives are in danger. Help is needed at once. Total Turks in Urumiah 200. They have no guns, and stay only to kill Christians. Help at once."

Extracts from a report sent by the Russian Vice-Consul at Salmas give a shocking account of cold-blooded murders, outrages on girls, destruction of villages and desecration of the Holy Scriptures both at Urumiah and at Salmas. . . . At Gulpashan, on the orders of the Turkish Consul, the town was plundered and burned.

THE PRESS ON THE NEAR EAST.

Roumania's Attitude.

For the moment speculation regarding the attitude of Roumania is overshadowed by the passage of events in Italy, but the question is nevertheless of vital interest, and nowhere have we seen it so plainly and exhaustively dealt with as in the article which "Politicus" contributes to the *Fortnightly Review* (May). In his opening sentences he shows that to the personal and traditional factors we must look for the reasons which for so long held Roumania beneath the influence of the central empires after the declaration of war. On the one hand, the King was bound to Germany by ties of birth and blood, on the other there was the carefully inoculated tradition of centuries, which taught the Roumanians that Russia was their most implacable and dangerous foe.

Considering Roumania a valuable ally against Russia, Germany and Austria-Hungary unceasingly strove to strengthen their hold over the country and to direct its foreign policy. Bucharest became one of the most important centres of German and Austrian diplomacy, and the ablest German and Austrian diplomats were sent to that important post.

So thorough had been the teaching of these diplomats that even the treachery of Austria-Hungary, who sided with Bulgaria against Roumania after the Balkan War, though it brought the secret treaty between the two countries to an end, was only just sufficient to restrain the country from following its king's desire and plunging into war against Russia when the present hostilities began. The tradition of Russian enmity was too strong to be quickly overthrown. But in the sentences we quote the writer shows how it came at last to be disproved:—

Recent events have completely changed Roumania's position. Apparently Russia, France and England are in full agreement as to the future of Constantinople. France and England, which in the past have prevented Russia reaching that coveted town, seem to be willing that Russia's historic aspirations should at last be fulfilled. It is obvious that as soon as Russia occupies Constantinople, with the consent of the leading European Powers, Roumania need no longer fear a Russian invasion made with the object of seizing Constantinople.

Roumania, too, sees her way to free access to the Mediterranean under the Russian occupation of Constantinople. Her wheat and other produce have been repeatedly held up by the closing of the waterways by Turkey. The problem which Roumania has to solve is the creation of a greater Roumania on the basis of nationality. At present the population of 14,000,000 is scattered—3,500,000 live in Austria-Hungary. The latter country has persistently oppressed her Roumanian subjects, and has thrown every possible obstacle in the path of their development. "Politicus" concludes in the following words:—

Roumania stands at the parting of the ways. The next few weeks will probably decide Roumania's future. No one helps those who refuse to help themselves.

Palestine and Egypt.

Writing in the *United Service Magazine* (May), Lieutenant-General F. H. Tyrrell contributes an interesting article under the heading of "Egypt Under the Khedivial Dynasty." The major part of the article is, of course, purely historical, but General Tyrrell in his concluding sentences makes the following observations regarding Syria and Palestine, countries about the destinies of which there is considerable speculation at the present time:—

So, after all his apparent failure, Muhammad Ali has become sixty years after his death, the founder of a royal dynasty. And perhaps his other project of adding the crowns of Syria and Palestine to that of Egypt may prove not so far from realisation. The two countries have often been politically united. . . . . Muhammad Ali once more united Syria with Egypt under one sceptre, only to have them again separated by the interference of European Powers acting under the spell of their old shibboleth, "the integrity of the Ottoman Empire." One of these Powers was Great Britain; it is possible that she may now see her way to a reversal of that policy.

FOR INSURANCES OF ALL KINDS.
F. W. CUMING & CO., LTD.,
THE GENERAL INSURANCE OFFICE OF EGYPT.
ALEXANDRIA: 5, RUE AVEROFF. CAIRO 23, SOLIMAN PACHA.

The Rev. Canon Hitchen, in the *Contemporary Review* (May), after dealing with the history and present condition of Palestine, also turns to the question of annexation:—

It is hard to know what will be the future of Palestine. If France, the traditional supporter abroad of the Latin Church, were to annex it the Russians might resent it. On the other hand, the Latins would not welcome a Russian annexation. On the whole, one supposes that Latin and Orthodox, Moslem and Jew, would prefer a British annexation rather than any other. But no nation would like to see Palestine annexed by someone else. One is forced to believe that there are only three alternatives, Palestine must be either annexed by us, governed by an international council, or handed over to the Jews.

He is very strongly in favour of the first alternative.

The Khalifate.

In an article on the above subject in the *New Age* (May 6) Mr. Syud Hossain welcomes the assertions made by Lord Crewe and other responsible Englishmen, that the future of the Khalifate was a matter for the Moslem world to decide. But he apparently considers that there is still a tendency to over-emphasise the fact that there has been a break in the direct line of holders of the title. It appears that in 1908, Mr. Syud Hossain had occasion to deal with the same subject in reply to an assertion then made by Sir George Birdwood. We quote from the text of his article written at that time, and which he reproduces now. It was published in the *Englishman*, Calcutta (September 8, 1908):—

Whether or not the Sultan of Turkey is the Caliph of Islam is a question which is not to be disposed by any *obiter dicta;* the party most interested in the matter are the Mohamedans themselves, and they have, all the world over, duly and formally recognised the Sultan of Turkey as their Caliph. In Morocco, Egypt, Afghanistan, India and China, he is universally venerated as the Caliph, and his name is mentioned in the public "Khutba" every Friday in every mosque in Islamdom.

Autonomy for Armenia.

In the *Asiatic Review* (May) Mr. F. R. Scatcherd has an interesting article on "Armenia's True Interests and Sympathies in the Great War." The writer does not consider that full recognition has been accorded to the past services of Armenia, and especially at the present moment, he complains of what he denotes a "conspiracy of silence" in her regard. According to Mr. Scatcherd there are now about 130,000 Armenian soldiers actually fighting on behalf of the Allies, the greater number of them included in the Russian armies. He complains that Armenian interests have almost invariably been sacrificed by Great Britain for those of Turkey, and claims that the time has now come when full justice may be done to a plucky and long-suffering people. The political considerations which in former times of peace have constituted the chief difficulties in the way of securing liberty for Armenia have disappeared with the entry of Turkey into the war. "What, then," asks the writer, "can England and her Allies do for Armenia? What does Armenia herself desire?"

An appeal to the leading Armenians in London has elicited this unanimous statement. They all agree in the belief that the only permanent solution of the Armenian question lies in the granting of some form of Home Rule, some form of autonomy to Armenia, either under the guarantee of the Powers, or of the Entente Powers, or of one of them.

According to statistics quoted by Mr. Scatcherd, the population of the six provinces of Turkish Armenia is shown to include 38.9 per cent. Armenians. The Turks come next with 25.4 per cent., while the Kurds are 16.3 per cent. of the total population. The remainder is made up of six other races, which are represented in neglible numbers. Supported by these figures the writer considers that we can now do no less than bestow upon Armenia some form of autonomy which will ensure her a free and prosperous future.

Articles to Note.

"Russia at War—and After," in the *World's Work* (May).

"Roumania, Land of Heroes and Poets," by Guio Bellincioni, in *Foreign Opinion* (May 5).

Stationery, Telegrams, and Postage		3	18	8
		£1,310	6	0

A further £250 was remitted to Constantinople by cable on Wednesday morning.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Gallipoli Operations.

May 6.

Replying to Mr. Bonar Law, who asked whether he could give the House any information about the Dardanelles, Mr. ASQUITH gave an account of the operations in the Gallipoli Peninsula since the landing of troops on April 25. He added but little to the official statemennt issued by the Admiralty and the War Office on the 1st inst., but he stated that by May 2 further advances had been made by the British and French troops at the southern end of the Peninsula and the Australian and New Zealand Corps, which had been reinforced by the Royal Naval Division, to the north of the Peninsula. The operations, he said, were being continued and pressed forward under highly satisfactory conditions.

Export of Egyptian Cotton Prohibited.

Mr. PETO asked whether the prohibition of the export of cotton contained in the Order in Council of April 27 applied to exports from Egypt of Egyptian cotton, and, if not, whether the Foreign Secretary intended to take any steps to prohibit the export of Egyptian cotton from Egypt to all ports other than those of France, Russia, Spain, and Portugal.

Sir EDWARD GREY: The Egyptian Government has been invited to prohibit the export of cotton in the manner suggested, and the measure is expected to become operative very shortly.

Germany Getting Egyptian Cotton.

Mr. PETO also asked whether, in the six months October 1 to March 31, Germany and Austria imported 99,272 bales of cotton from Egypt in 1913-14, and in 1914-15 none during the same period; whether the imports of cotton from Egypt to Italy and Switzerland together in the six months from October 1 to March 31, 1914-15, increased by 99,524 bales; whether he had any information as to the ultimate destination of the Egyptian cotton represented by this increase in imports; and if he would state the names of the firms who were the principal shippers of Egyptian cotton and the principal consignees in Italy and Switzerland respectively.

Sir EDWARD GREY: The figures given are substantially correct. I would remind him that it has only been the policy of the Government to prevent all imports reaching Germany since March 11, so that the statistics quoted do not cover more than a very short period during which the present policy has been in operation. Since the initiation of that policy everything has been done to prevent all imports reaching Germany.

Income Tax of Officers in Egypt.

May 11.

Sir JOHN JARDINE asked the Chancellor of the Exchequer whether any special arrangements had been made in favour of naval and military officers and men engaged in the Dardanelles or Egypt to extend the period allowed for making claims for refund of income-tax deducted at the source from dividends and similar payments?

Mr. LLOYD GEORGE: Claims of the nature referred to by my hon. friend may, under the existing law, be preferred at any time within three years of the end of the income-tax year to which they relate. In these circumstances it does not appear that any special arrangements for extension of time are called for.

Sir J. JARDINE: May I ask whether in the case of officers killed or wounded, a further extension of time at the end of the war will be considered?

Mr. LLOYD GEORGE: The extension at the present time is a very liberal one—three years—but I am quite prepared to consider the point.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The circular issued by the directors of the Ottoman Railway from Smyrna to Aidin to the holders of the Four per Cent. First Debentures and the Five per Cent. Second Debentures will not have come as a surprise to anyone. Consequently, it will not arouse gloomy forebodings. Of course, it is unfortunate for the holders, who will, however, realize that *force majeur* and not negligence has been the cause of the company's temporary inability to meet the interest payments which have now fallen due. Moreover, there are brighter days in store for the company. For, as frequently urged in these columns, Smyrna is essentially a British sphere of "commercial" influence, and the British railway which runs from the port into the interior is bound to identify itself with the future expansion of our interests in the vilayet.

***

These remarks bring to my mind an article which appeared in the *Financial Times* some days ago (reproduced elsewhere) on the Russian attitude regarding the Baghdad Railway. That the future of this railway will be different from that proposed by the German-cum-Turk combine, which, sitting at Constantinople, is playing to ruin the Ottoman Empire, goes without saying. Its military and aggressive characteristics will be lost, as well as its savour of devilish Pan-Germanism. It will become an agent for commercial and economic expansion, and will link up Baghdad with the Black Sea, the Ægean, and the Eastern Mediterranean. In this scheme the Smyrna line (Ottoman Railway) will play an important part. I disagree with the author of the article as regards Constantinople, which will lose, rather than gain, in commercial significance.

***

With reference to a note on tobacco culture in Cyprus in THE NEAR EAST of April 2 last, Mr. Nejim Houri, on whose enterprise comment was made, writes to say that the Circassian colony which was settled at the Cherkess Chiftlik did not suffer so much from climatic conditions as from an epidemic which broke out among them. I imagine that the medical authorities, both military and civil, have made inquiry into the health conditions of this region, and have probably recorded their opinions. On the other hand, I am glad to infer from our correspondent that there has been an improvement. If the advice given recently by Sir Ronald Ross is carried out as far as possible in Cyprus, there will no doubt be a great change for the better in many areas, including the spot referred to, which borders on miles of mosquito-breeding swamps and marshes.

***

Elsewhere we publish an article from a correspondent giving some interesting details concerning the Cyprus Motor Transport and Development Company. I have since been given to understand that the result of the second invitation for tenders is as sterile as the first, and that the inhabitants, having learnt that the Government intends abolishing the service, are signing petitions for its continuance. In view of this attitude of the public, I gather that the Government is considering the advisability of making the Transport Company a more advantageous offer, but that this latter offer is still far below the rock-bed minimum asked by the company. I sincerely hope that a compromise will be arrived at between both parties; but the Government must realise two things; first, that a transport company cannot philanthropically work continually at a loss with no prospects ahead of it; and, secondly, that to abolish the service in this, the first year of our possession of the Island, would be highly inadvisable.

***

Inconsiderate attacks have again appeared in the papers on the Government's oil policy, "Vanoc," in the *Referee*, being, perhaps, the most prominent antagonist of the whole scheme. I hold no brief either for the Government or for the Anglo-Persian Oil Company, but I do think that criticism levelled against either or both at the present time is utterly inopportune, childish, and futile. Mr. Rudyard Kipling's "What do they know of England," etc., applies, moreover, to the majority of the Government's myopic critics and the short-sightedness of those who persist in condemning a gigantic scheme before it has not been fairly—I say fairly advisedly—tried, is contemptible. Those who cried out against the Government's policy last year are now ready to plume themselves on the accuracy of their predictions and shout "I told you so!" If they knew everything, why did they not warn the Government that war was to break out in August? There are, to my mind, bigger things brewing than have been brewed, and any temporary dislocation of the oil supply from the Persian fields will be—well, temporary. In the meantime, considering that the Admiralty, to the best of my belief, is not suffering from a shortage of oil, the less said about the present situation or future arrangements, the better.

***

The letter from the secretary of the British Chamber of Commerce of Turkey and the Balkan States, published in the current issue of the *Engineer*, and reproduced on another page, vindicates the good name and utility of the Chamber. I do not think that the writer of the article wished to impugn its usefulness, and he will, therefore, be among the first to recognise the justice of the secretary's remarks. That part of the latter's letter, however, which refers to the methods to be employed by us if we wish to increase the volume of our trade is of vital interest to us. I quote: "If immediately before the present war our commercial and industrial interests were only a fraction of what they might have been, the fault should not be laid at the door of the Chamber. Even after the war is ended different methods will have to obtain if we as a nation are to take a share in the future development of the country." Here we have the old, old story over again—the story of antiquated versus modern methods. Until we learn the meaning of the latter and learn how, honestly, to profit thereby, we shall continue to be outclassed in the field of commercial competition.

***

Writing on May 2, our Special Correspondent in Athens, whose information from Constantinople is rarely at fault, says: "Arrivals (in Constantinople) of coal have stopped, and the shortage is causing anxiety to the authorities, who are now pushing on the construction of a railway from Zunguldak to Ismidt." I believe that THE NEAR EAST was the first journal in this country to urge the destruction of the port of Zunguldak, and in a recent issue I pointed out that the hurried construction of the Zunguldak-Ismidt line could only have one object—namely, the transport by land of coal to Constantinople. The above message fully bears out my previous contention, and I now urge the Russian authorities to do their utmost from the Black Sea to prevent, by all means in their power, the transport, by land as well as by sea, of coal from Zunguldak. A coal-less Constantinople is a vital factor in the success of the Allies' operations in the Dardanelles and in the Bosphorus.

***

The same correspondent alluded to above states that the *Turquie* publishes a list of 117 insurance companies and other societies which have declined to conform to the new Turkish Companies' law. "These companies must not transact new business in Turkey, but are allowed to liquidate their affairs." I have already pointed out the gross injustice of the new Turkish law, and stated at the time that it would inevitably result in the winding-up of numerous foreign companies. Insurance companies have, it would appear, been hit harder than any others, the 117 mentioned above representing, I should think, practically 100 per cent. of those operating in the Turkish Empire. Unfortunately, the full list, as published in the *Turquie*, has not reached us at the time of writing. In any case, it is to be hoped that, in the case of British and Allied companies, the liquidating of their affairs will only prove a temporary measure.

***

Mr. A. S. E. Ackermann read a paper before the members of the Royal Society of Arts some time ago on "The Utilisation of Solar Energy." He dwelt on the numerous inventions for turning to practical use the concentration of solar energy, and gave an interesting account of his experiments with the Shuman-Boys sun-power plant in Egypt, illustrating it by a number of lantern slides. He urged that the problem of the utilisation of solar energy is well worthy of the attention of engineers, pointing out that where coal is dear sunshine is commonly plentiful, and it must be remembered that coal will gradually get dearer, while the cost of manufacture of sun-power plant—at present a stumbling-block in the way of a lure to capitalists—decreases, owing to their enormous supply of sunshine. Both Egypt and the Sudan are admirably situate and must benefit directly from any progress made in man's new attempt to harness the sun.

Smyrna and the Dardanelles.

To the Editor of THE NEAR EAST.

Sir,—No one desires to dispute the fact that Russia has waged war against the Turks from the middle of the seventeenth century until the present time, but, with the exception of the campaign in 1877, these were wars of conquest, and were not undertaken for the liberation of the Christian races, nor is there any intention of disputing her right to a free passage through the Straits, but the question is whether the control of these Straits is to be vested in one Power, and that Power Russia, or an International Commission be appointed to safeguard the interests of all the nations concerned in this all-important matter.

Some writers seem to have overlooked the fact that Roumania and Bulgaria are interested, in a lesser degree perhaps, in the free navigation of the Bosphorus and the Dardanelles. Roumania especially has to be taken into consideration, for she has no other outlet, and in that respect she is as much concerned in the matter as Russia.

Then as regards British interests, are we to contemplate with indifference the possible loss of our trade with the Black Sea ports? There was a time when between 4,000 and 5,000, and possibly more, British vessels passed through the Straits annually. Is this important factor to be ignored?

France, Italy, and, in fact, all the nations of the world have their interests in that part of the globe, and unless the safeguards mentioned in "Elverir's" letter can be assured, with some others to be added, notably absolute protection for all industrial enterprises already established in Turkey, it would be highly impolitic to hand over the administration of Constantinople and the territory to be included to a single Power.

Constantinople is certainly not a manufacturing town, but is there any reason why it should not become one in the future? With raw material of every description close at hand, and a large and intelligent Christian population capable of acquiring in a very short time all the knowledge necessary to enable them to work in factories, there is every probability of the capital becoming a great manufacturing centre. With a proper Government, capital would flow into the country, which to-day is practically undeveloped.

The trade of Constantinople has never depended upon its manufactures, but upon its imports and exports, which are very considerable, and Great Britain has had the lion's share. That this trade will be considerably extended when a stable Government has been established there is not a shadow of a doubt. Branch lines of the Baghdad Railway are sure to be constructed, bringing many important trading centres into communication with the capital, which will certainly benefit to a very considerable extent, and if the vast expenditure upon the Turkish Army and Navy and upon the host of useless officials ceases, surely there will be so much more money available for the development of the country. The influx of foreigners, as well as natives, from the interior will also tend to increase the importance of the place.

After the declaration of the Constitution in 1908 the population increased from about 1,000,000 to 1,200,000, and if it had not been for the Balkan war the growth would have continued. The number of travellers to the East during the past few years has been very noticeable, and at the close of the war we may look for a very large increase. Not only will they come to visit the city, but many will take up their residence on the shores of the Bosphorus during the summer months.

The industrial works undertaken in recent years, such as the telephone, electric lighting, trams, railways, and docks, brought hundreds (if not thousands) of foreigners to the capital, many of whom became permanent residents. Money flowed into the country, and it was evident that all classes were benefiting, and whereas before the population was living from hand to mouth, the change in their material condition was very marked.

With a proper Government Constantinople and its suburbs would become a paradise, and we need not fear any falling off in importance, either as a centre of trade or as a resort for Europeans.

The establishment of an International Commission, and not the Russification of the capital, is the best solution.—Yours, etc.,

ISHIMIZEH ELVERMEZ.

London, May 5.

RUSSIANS AND THE BAGHDAD RAILWAY

Now that the Allied Army is firmly established in the Dardanelles, while our Indian forces may be regarded as holding Mesopotamia (writes a correspondent in the *Financial Times*), consideration is being given to various important questions relating to the Baghdad Railway. The matter was first taken up in Russia, in connection with a general review of the situation in Turkey now that the Sultan is a declared enemy of the Allies. Originally the route of the Baghdad Railway was mapped out very much in accordance with German wishes and ideas, but with the outbreak of the war it was recognised that these arrangements would be eventually abrogated. This anticipation has now taken concrete shape with the formulation of certain definite alterations, involving far-reaching changes in the course traversed by the railway which is destined to open up some of the most fertile portions of Asia. The terminals of the line will remain as originally contemplated, but the intermediate points to be touched at will leave out of consideration all German commercial or political predilections, and will give effect to Russia's aims, together with those of ourselves and France. On this basis the line will probably be a greater financial success than under the original scheme, for the sole object striven at will be the bringing into communication of the principal markets between Baghdad and Constantinople, while incidentally the commercial importance of the last-mentioned place will be greatly increased. This, of course, is no time for carrying out the revised project, but it will encourage merchants and others with interests in the East to know that this matter is being taken up energetically and in a very broad-minded spirit.

Engineering Prospects in Turkey.

We reproduced last week lengthy extracts from an article under the above title which appeared in the *Engineer*. The following are further extracts from the same source :—

A German-held concession, which will have to be abandoned or transferred, is that of the electric railway from Galata to Roumeli-Fener. This was secured by the Ganz (German-French-Austrian) group, and work was to have been commenced in March, 1913, but, owing to the Balkan war calling away most of the available labour, permission was sought, and obtained, to postpone the beginning of the work until March, 1914.

Docks.

The French had a strong hold upon Turkey as a field for engineering enterprise, many millions of francs having been invested in works of one kind or another in the Ottoman Empire. La Société des Docks et Ateliers du Haut Bosphore (Stenia), for instance, had immense interests, its original concession dating from 1911. This concern owned three floating docks and several large marine repair shops, and it had undertaken a number of important engineering contracts for the Turkish Government. Just before the war broke out important orders were about to be placed for lighting machinery, pneumatic tools and quantities of lathes and drilling machines. All of these things will still be required, for both the Société des Docks et Ateliers and the affiliated company, the Société Dyle et Bacalan, are purchasers of this kind of equipment. British manufacturers of such specialities would therefore do well to get into communications with these firms.

Konia Irrigation.

It will come as a great disappointment to the Germans that the Ottoman Government should have determined not to make its new capital at Konia when it is finally compelled to leave Constantinople. The Teutons have expended immense sums of money upon irrigation schemes there, the whole plain having been recovered by a German company—the Konia Plain Irrigation Company of Frankfort-on-the-Main, which began work as long ago as 1908, by constructing a dam and weir at the south-eastern extremity of the Beyshehir Lake; it was upon the point of transferring its holdings to the Turkish Government when the European war broke out. The cost of the whole undertaking has exceeded £1,000,000.

Smyrna.

Smyrna, a city of locks, will offer special inducements to foreign contractors when once it is relieved from the yoke of Ottoman rule. The town has already derived considerable benefit from the British-owned railway known as the Ottoman, which runs to Aidin, while in January of 1913 the British firm of Warren Brothers and Co., of Middlesbrough, secured the contract to provide the electric lighting of the largely populated suburb of Bouje. The British railway officials in Smyrna, connected with the Ottoman Railway to Aidin, have equally helped to popularise British-made railway plant, machinery and appliances; their own admirably arranged workshops contain little else than British-made equipment, and this serves by its completeness and efficiency to stimulate the enthusiasm of native buyers. There is always a number of local engineering firms stocking certain English goods, but they would seem to have received little encouragement from home manufacturers to push their various specialities. None the less they are open and willing to act as the agents of British houses, which would do well to look into this matter as soon as circumstances prove propitious, for there is undoubtedly valuable trade to be done here, in almost every class of agricultural machinery, light railways, mining tools, implements and small electric plants. Flour machinery is also likely to be in request later on, several mills having already been erected, while others are in contemplation in the Dara-Gatch industrial district, a very flourishing part of the country.

Some years ago an Englishman secured a concession for an extensive electrical tramway installation at Smyrna, but . . . sold out his interests to a Belgian company. The concession is granted for a period of forty-five years, but its life thereafter can be extended. There already exists one Smyrna tramway system, that belonging to the Belgian company established in 1903 by Messieurs Tissot et Guiffray and known as Le Société des Tramways des Quais de Smyrne.

There will be required for Smyrna several bonded warehouses of steel construction, and it is understood that the Smyrna Quai Company will be ready to place contracts as soon as political conditions allow. It is proposed that the system of the Egyptian bonded warehouses, which have given very good results, shall be adopted. The construction of these warehouses may all be undertaken by British firms if they care to interest themselves. Even the concession to build and work the warehouses will be thrown on the market, for it is not actually certain that the Quai Company, which holds the concession, will be disposed or able to work it. The Company is believed to be open to deal with any responsible British concern which may desire to acquire a transfer of the concession.

The above article, the first part of which was extensively quoted in last week's issue of THE NEAR EAST, has drawn a letter from the secretary of the British Chamber of Commerce of Turkey and the Balkan States. The letter was published by the *Engineer*, in its current issue, and, in fairness to the writer's objection to a certain passage in the article anent the Chamber of Commerce (inadvertently reproduced by us), we quote it in full, commenting on it in our editorial notes on page 51.

"My attention has been called to an article appearing in your issue of April 16, entitled "Engineering Prospects in Turkey," in which your correspondent quoted freely from publications of this Chamber. I would, however, take exception to the interpretation placed upon a passage from the speech of the President of the Chamber, Sir Adam Block, at the annual meeting of March 12, 1914, referring to the commercial war to be waged in Turkey. I feel certain that the speaker's intention was not to touch upon political questions, nor to convey the idea that after the Balkan War, no other war or wars would intervene, even although it may have been the wish of everyone who realised what were Turkey's own interests. I believe that the intention was rather to record the fact that the country had to be developed commercially and industrially, and this fact equally holds good whatever Power may occupy the territory hitherto known as Turkey. From your article I take this to be your correspondent's view also.

"I understand the object of that article to have been to call attention to the opportunities and openings for British enterterprise and industry in Turkey (*sic*), and this the Chamber has been doing for years past, through the medium of its *Journal* and annual reports. I do not purpose in this letter to enter into the reasons why the Chamber's labours may not have achieved the desired results, nor can I, writing without any minutes before me, refer to the resolution quoted in your article calling attention to the tremendous and successful efforts of our commercial rivals in that territory, but I venture to take exception to the statement that "having delivered itself of this wise pronouncement, the Chamber calmly sat down and waited results." During its existence of more than a quarter of a century, the Chamber has lost no opportunity of giving publicity to facts relating to the activity of our rivals and their steady encroachment upon our trade in a country where our interests were once supreme. If immediately before the present war our commercial and industrial interests were only a fraction of what they might have been, the fault should not be laid at the door of the Chamber. Even after the war is ended different methods will have to obtain if we as a nation are to take our share in the future development of the country, as outlined in your article."

CYPRUS MOTOR TRANSPORT AND DEVELOPMENT CO.

(FROM A CORRESPONDENT.)

The reference made in last week's issue of THE NEAR EAST to the Cyprus Government's second invitation for tenders for running a motor service between Nicosia and Larnaca, and "Commentator's" mention of the Cyprus Motor Transport and Development Company, seem to me to offer an excellent opportunity for reviewing the whole question of motor transport in our new island. The facts of the case are, roughly, as follows:—

At the end of 1910 Messrs. Robinson and Thorp, who had been for a long time interested in affairs in Cyprus, suggested the promotion of, and did promote, a company, the object of which was to undertake a service of motor transport in Cyprus. The company was to receive an annual Government subsidy for the Nicosia-Larnaca route of £400 a year for carrying the mails. Incidentally, I may mention that, to the best of my belief, the Imperial Ottoman Bank took a financial interest in the undertaking. It must be admitted that inquiries made in expert circles in the island at the time elicited the almost universal opinion that the undertaking under the above conditions would hardly prove a paying concern, but that the service *would be of great advantage to the island*. The forecast has proved accurate in every way.

The first few years of the company's working developed into costly experiments as to the type of car, etc., and tyres best suited to the somewhat rough roads to be traversed. The mail subsidy, in view of the impossibility for the company to progress under existing conditions, was increased to £720 a year, but, notwithstanding this and the smoother working resulting from the experience gained in the earlier years, there was a net loss for the year ending April 30, 1914, of £1,258, which brought the total loss of the company up to nearly £5,000.

There could be only one conclusion, and that was that, given a Government subvention of only £720 a year, the service could not be maintained. The directors, therefore, after going carefully into all accounts, decided that on a subsidy of less than £2,000 per annum the company could not continue, *except at a loss*.

The concession having expired, and the company being unable to renew it on the old terms, the Cyprus Government invited tenders for the continuance of the service, the conditions thereof being published at the time in THE NEAR EAST. I gather from information which has been placed at my disposal that only one offer was received in reply, and that came from the Cyprus Motor Transport and Development Company. The directors, hoping that increased passenger traffic might enable the company to avoid further loss, tendered for a new period of three years at £1,450 a year.

This tender has been refused, and the Government counter-offered £750 for a period of one year, which the company could not possibly accept. Thereupon the Government invited new tenders, as announced in last week's issue of THE NEAR EAST.

The result of the new Government invitation is not definitely known, but I am under the impression that it will be a failure. There is no commercial concern, working on business lines, which will undertake the service with the knowledge of the Transport Company's unfortunate experience to guide it. Therefore, I can safely deduce that either the service must be abandoned (*in the first year of our possession of the island!*) or the Government must be prepared to make a more remunerative offer. Which is it to be?

"Commentator" refers to the same question on page 51.

Trade Notes.

Egypt.

Tenders are invited for the supply and erection of a swing bridge, required in connection with the Central Gharbia drainage scheme. Copies of the drawings, specifications, etc., may be consulted at the offices of the Inspector, Central Gharbia Drainage Projects, Ministry of Public Works, Cairo, where also tenders will be received up to noon on June 19.

Tenders are invited for the supply of balances and weights required by the Egyptian Postal Administration. Copies of the specification and conditions of contract may be obtained on application to the Director, Physical Service, Dawawine Post Office, Cairo, by whom also tenders will be received up to noon on June 15.

The *Journal Officiel* for April 12 contains a Ministerial decision, dated April 6, whereby the exportation from Egypt of molasses from cane sugar for use in distillation (other than liquid sugar known as "dark honey") is permitted without limit or restriction.

The *Journal Officiel* for April 19 contains a revised Tariff Valuations (No. 27) for use in assessing duties on iron and steel manufactures imported into Egypt—with effect from April 16 to June 15, 1915, or until denunciation. (Vide *Board of Trade Journal*, May 6.)

Gibraltar.

With reference to the list of articles the exportation of which has been prohibited and which was published in these columns, an amended list has now been published and has been reproduced in the current issue (May 6) of the *Board of Trade Journal*.

Bulgaria.

The Board of Trade are in receipt, through the Foreign Office, of telegraphic information to the effect that the exportation of haricots, millet, bran, crushed cereals, salted and preserved meats, and cattle of all kinds from Bulgaria has been prohibited.

Morocco.

The Board of Trade are in receipt, through the Foreign Office, of telegraphic information to the effect that an edict has been issued prohibiting the importation into the French Zone in Morocco of all goods of enemy origin without regard to the port from which shipped or the nationality of the shipper or of the consignee of the goods. Goods of enemy origin, if belonging to subjects of neutral States and shipped to Morocco before May 1, will, however, be admitted to importation.

The *Bulletin Officiel* of April 12 contains the copy of a decree prohibiting the importation into, and the sale, exposure for sale, or possession for sale in the French Zone of Morocco of the following beans or peas: (1) Beans or peas called "de Java"; (2) beans or peas called "de Birmanie," containing more than 0.02 per cent. of hydrocyanic acid.

Roumania.

The Board of Trade are in receipt, through the Foreign Office, of telegraphic information from H.M. Minister at Bucharest to the effect that the exportation of the under-mentioned articles from Roumania has been prohibited: —Cattle and pigs, ink, old iron, metal ores (whether containing sulphur or not), raw cotton and cotton yarns, cotton and woollen cloth, raw or manufactured hemp, tinplates and tins made therefrom (whether full or empty), hats (headwear) of all descriptions, stearine, paraffin, glycerine, walnut wood, ashwood and elmwood, graphite, mercury, acids of all kinds, ammonia and salts of ammonia, sulphate of soda and sulphate of copper, tanning materials, olive oil, and string, cords and cables of any kind. The exportation of Portland cement by water is also prohibited.

Greece.

With reference to the call last August for tenders by the Greek Ministries of the Interior, of Finances, and of Communications, for the construction, maintenance and working of the undertakings necessary for (1) the supply of water to Athens, Piræus, and their suburbs by using the springs at Stymphalie or Medas, and (2) the laying of a distributing system in Athens, Piræus, and North Phaleron for water supply and sanitation, H.M. Minister at Athens reports that the date for the receipt of tenders has been postponed until September 13. The estimated value of the contract is £2,240,000. The plans, cahiers des charges, etc., may be seen at the "Bureau du service spécial pour l'alimentation d'eau et des égouts," Athens, where they may be copied at the tenderer's expense. Sealed tenders will be received by the Ministry of Communications, Athens, up to 11 a.m. on the above-mentioned date. A receipt for the payment of a provisional deposit, £20,000, to the "Caisse centrale d'Etat" or the National Bank of Greece must accompany each tender. A copy of the Gazette (in French) may be seen by United Kingdom contractors at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Macedonia.

The U.S. Consul at Salonika states that the new régime instituted by Greece has produced free competition in the tobacco industry, as a result of which about sixty private firms are now engaged in the business. Many of these, however, are possessed of very small capital. Up to the present eleven tobacco-cutting machines are in operation, these machines varying in capacity from 650 pounds to 1,500 pounds per working day of ten hours. Ten of the cutters are of English origin and cost £90 to £170 each. More cutting machines are required. As cigarettes are now made entirely by hand, there would appear to be an opening for the introduction of cigarette-manufacturing machinery. The U.S. Consulate has an inquiry from a local firm for catalogues, prices, etc., of machinery for the manufacture and printing of cardboard cigarette boxes; the company has an antiquated machine of German origin and is contemplating the refitting of its plant. All kinds of machinery entering into the manufacture of tobacco may find consideration by many of the firms alluded to above.

SUDAN CHAMBER OF COMMERCE.

The following are extracts from the President's report read at the sixth annual meeting of the Sudan Chamber of Commerce held in Khartoum last month:—

"During the past year our expenses exceeded our income by £E30.467; this is chiefly due to our having increased the size of our *Monthly Journal* in the hope of attracting new members. We closed our year on February 28 with a balance in hand of £135.288. The number of members in the Sudan at the end of our year was forty-five compared with thirty-five last year; this is a satisfactory increase, but I must again urge upon our members the necessity of encouraging new subscribers to join. We are anxious to improve our *Monthly Journal*, and to increase the scope of the Chamber in other ways. This can only be done by an increase in our income. I am pleased to inform you that I have received from Mr. Contomichalos a list of applications for membership containing the names of no less than twenty-three members of the Greek community. This addition to our members will be of very great assistance to us at the present time.

"Since the outbreak of war your Committee has been in correspondence with a number of Chambers of Commerce in various parts of the world with a view to finding new openings for the trade of the country. A considerable correspondence has resulted with the Chambers communicated with and their members, with reference to all sections of the Sudan trade. Members are earnestly invited to avail themselves of the information contained in this correspondence, which is at their disposal.

"The Chamber has received a cordial letter of thanks from the Government for the assistance it was able to give in supplying samples of merchandise, as exported from the Sudan, for the International Rubber and Allied Industries Exhibition held in London in July. The samples were supplied by our members and selected by a sub-committee. The Government kindly undertook, at its own expense, to transport and mount the samples and to include them in the Sudan Section of the Exhibition. The Sudan Exhibit contained samples of all the commercial products of the Sudan, prominence being given to cotton and gum. The exhibit was very skilfully arranged and attracted considerable attention; it has now been mounted in the Sudan Court at the Imperial Institute."

The members elected the Committee for the ensuing year. Fourteen members were elected, who will later meet and elect from their own number the officers for the year, namely, the president, vice-president, and honorary secretary and treasurer.

A vote of thanks was proposed by Mr. Contomichalos, seconded by Mr. McGillivray, to Mr. Job, Manager of the National Bank, for offering the use of the Bank offices for the meetings of the Chamber, and also for the deep and active interest which Mr. Job has taken in the work of the Chamber. The vote was adopted unanimously, and Mr. Job responded, expressing his best wishes for the success of the Chamber.

NEW TRADE ROUTE.

With reference to the proposed new trade route, recently referred to in THE NEAR EAST, between the United Kingdom on the one hand, and Roumania (and Russia) on the other, without passing through Bulgaria or Turkey, the British Consul-General at Salonika has forwarded the following information:—

"From Salonika to Nish and Paratchin the railway is of ordinary gauge, but from the last-named place to Zaitchar a length of narrow-gauge line intervenes. Goods would therefore have to be unloaded from trucks and reloaded both at Paratchin and Zaitchar, and at neither of these places are there any storage facilities. Goods would thus be exposed to the weather while waiting for trucks. The same would probably be the case at Prahovo, though there is said to be an ample supply of boats there for the journey to Turn Severin and the delay would not be so long. There is moreover, at the present time a very great shortage of trucks on the Salonica-Nish line, as the requirements of the Serbian Government are such as to leave few, if any, for the requirements of trade."

In connection with the above, it is as well to mention that our Bucharest Correspondent pointed out last week that the route referred to by our Consul-General had been definitely abandoned as impracticable, and that in its stead another route, through Bulgaria, had been chosen. In other words, and owing to the inconvenience of the narrow gauge section between Paratchin and Zaitchar, the Nish-Turn Severin route seems to have given way to a Nish-Sofia-Sistova route. Why Sistova should have been chosen instead of Rustchuk it is difficult to understand, the line between Rustchuk (Giurgevo) and Bucharest-Russia being by far the shortest and most direct.

HOT MEALS IN THE TRENCHES.

A hot dish of curried fowl or a hot beefsteak and kidney pudding, are luxuries not usually found on the battlefield, but these and a host of other appetising dishes may now be enjoyed by the aid of a new invention just put on the market by Messrs. Crosse and Blackwell. This unique and valuable adjunct to the soldier's kit is known as the "Joffrette" Heater, and costs but 1s. 6d. complete. Its construction is so simple and yet so effectual that a tin or bottle of preserved food can be thoroughly heated in a few minutes by simply lighting the cake of solidified alcohol supplied with the Heater (additional cakes costing but 3d. each). It is without doubt one of the cheapest yet one of the greatest boons which can possibly be suggested for use in the trenches.

The Heater cannot explode or get out of order, the flame is invisible and impervious to wind, and while it is of peculiar utility at the present time, it is equally serviceable for boating parties, picnics and household use where a hot meal or a cup of tea or coffee is quickly required. The "Joffrette" Heater is stocked by all the principal grocers.

British Chamber of Commerce of Egypt.

Important Speeches at a Banquet.

On April 24 Sir Henry McMahon, the High Commissioner for Egypt, was the guest of honour at a dinner given by the Cairo branch of the British Chamber of Commerce of Egypt at Shepheard's Hotel. The following are extracts from the various speeches:—

The Chairman (Mr. H. K. Baynes), in proposing the health of the High Commissioner, compared the commercial importance of Alexandria with that of Cairo, and referred to the latter as the seat of Government, of the great "spending departments," which are, in themselves, "important commercial concerns." It was only natural, therefore, that men whose business is mainly with the Government "should have their headquarters on the spot, where they are in closer relation with the various departments than would otherwise be possible. Indeed," continued the Chairman, "I think that most of the Cairo members will agree with me that a considerable portion of our time is occupied in seeing, or perhaps I ought to say waiting to see, Government officials. I trust we may take Sir Henry's presence as an augury that those cordial relations which have always subsisted between the Government and the Chamber will not only be maintained, but increased and more closely cemented. I further hope that this banquet will become a recognised annual event. Such gatherings should be productive of an immense amount of good by bringing the official and commercial communities into closer touch than would otherwise be possible.

"This is not the time, nor is it the place, to enter on a discussion as to what is to happen when this terrible war is over and the administration of the country is modified to suit the altered conditions of a Protectorate. That will all come later, but it may not be an inopportune moment for me to mention that on the initiative of our Vice-President, Mr. Kingsford, who is one of the original, and certainly one of the most active, of our committee, sub-committees were appointed some months ago, both in Alexandria and here, to study the steps to be taken when the proper time arrives for the further development of British commercial interests in Egypt under the new *régime*. These sub-committees have completed their work, and their combined report is now in the press, and will be circulated in due course. I feel sure that it will receive both careful and sympathetic consideration at the hands of the authorities, and that it will be in many ways useful to them. Finally, gentlemen, when all the many complicated and intricate questions which must arise in connection with this alteration in the administration do come up for settlement, I am confident that the High Commissioner and his advisers will not forget that they have in this Chamber a body of men able, willing, and, I think, competent to advise them on all commercial matters."

Sir Henry MacMahon, on rising, said that when he received the invitation to the dinner he was told that there would be no oratory at all, and that speeches were not contemplated. It was, therefore, with some trepidation that he saw a formidable list of speeches. He noted with pleasure, however, that in the excellent speech made by the chairman there was no hint or suggestion that the new *régime* should treat British commerce in a spirit of partiality or favour. That was the correct spirit of the new *régime*. The British Protectorate would not be used to push unduly British interests at the expense of those of other nations. It would benefit all interests by assuring a greater security and other advantages hitherto lacking. This would attract British capital and so give a fresh impulse to British trade in the country. Egypt had now the advantage of an able and enlightened ruler, who was anxious to promote all industrial interests. He, the speaker, considered that British prospects here were very bright, and, speaking in his official capacity, he could assure the British Chamber of Commerce in Egypt that he was ready to render them every reasonable assistance and support. The commerce and industry of the country would provide openings for employment for an ever-increasing number of the educated classes. His Excellency pointed to the value of the work which the commercial and industrial schools of the country could perform in equipping the youth of Egypt to take its part in future developments and enterprises.

Mr. R. L. Devonshire proposed "The Naval and Military Forces of the Empire," remarking that none who had followed the successive phases of the great struggle now shaking the world could fail to appreciate the debt which British commerce owed to the Great Navy whose fleet and ships now dominated the seas, while it was well-nigh impossible to calculate the magnitude of the obligation incurred by the whole British Empire to the Army. He coupled with the toast the names of General Maxwell and of Admiral Robinson.

General Maxwell, replying for the Army, made an interesting reference to the big and important part that commerce was playing in the war. There were many people who thought that the growing armed forces of the Empire were sufficient for our needs in the struggle now in progress. Of course, they were wrong. The output of munitions—a matter of such vital concern—depended enormously upon the security of the commerce of the world, for, as they all knew, munitions of war depended upon the products of other countries than our own. General Maxwell paid a graceful tribute to the splendid work being done by the mercantile marine, and, turning again to the armed land forces of the Empire, concluded by saying that he was perfectly certain that, although we might have three millions of men under arms, there were many more who would come forward.

Admiral Robinson followed with a breezy speech, in which he, too, paid a tribute to the splendid way in which the mercantile marine was doing its duty.

Lord Edward Cecil, in proposing the toast of the British Chamber of Commerce, in a brief and entertaining speech, remarked that, while no one would deny the terrible times through which commerce was now passing, there were probably many who would echo the sentiments of a commercial magnate of London who some time ago said to him, in alluding to the war, "Thank God it has come." Lord E. Cecil went on to refer to the profound changes that the war would bring about in connection with the markets of the world, and, in conclusion, expressed his firm conviction that here in Egypt, at all events, British commercial interests would be easily the first.

Mr. Kingsford, in reply, said that the Protectorate was bringing with it a new era. He hoped that the law court difficulty might soon be done away with. He added that it was the duty of the British Chamber of Commerce in Egypt to concert with other British Chambers elsewhere and the Board of Trade to promote British business interests. In conclusion, he said that the Chamber would be glad to aid the Government with regard to contracts and to investigate any complaints, adding that in India British Chambers of Commerce were bodies of great weight, and that there was no reason why those in Egypt should not be so as well.

BRITISH SEAMEN IN TURKEY.

In connection with the list of British seamen prisoners in Turkey, published in last week's issue of THE NEAR EAST, we understand from the Imperial Merchant Service Guild that the captains, officers, and crews of the steamers "City of Khios" and "Assiout" interned in Turkey are faring much better than might have been expected, and their conditions appear to be at least superior to those prevailing in Ruhleben Camp in Germany, where there are 180 merchant captains and officers.

ROUMANIAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, April 21.

The stock of wheat in the country being still considered insufficient, the Council of Ministers has decided to purchase a further supply of 1,300 waggons of wheat in Russia—apart from the 2,000 waggons already purchased. The two lots have been acquired at 2,000 frs. per waggon, which is less than the price fixed for wheat by the Ministry of Commerce. The price of sugar has increased, and the Government has, therefore, purchased a large quantity abroad. One hundred and twenty waggonloads (1,200 tons) will shortly arrive in this country. It is true that the output of the sugar factories is not wholly sufficient for the wants of the country, but the real cause of the rise is that retailers, profiting by the situation, are asking fancy prices. The decision of the Government to introduce sugar from abroad will, however, prevent such speculations. The supply of another lot of 1,000 tons is being negotiated in Russia.

GREECE AND THE HUNS.

The *Engineer* writes:—

"Little surprise, but some slight satisfaction, is likely to be felt by the several British firms of contractors who were invited some years ago by the Greek Government to tender for the construction of a new battleship and certain torpedo craft, at the results which have attended the final entrustment of the contract to German yards. It may be remembered that in February of 1912 no fewer than ten eminent British contracting firms, in addition to four French, three North American, two Italian, one Austrian, and three German, tendered and submitted elaborate plans for the construction of one cruiser, four destroyers, and six torpedo boats, intended for the Hellenic Government. Among the first-named were to be found the firms of Messrs. Armstrong, Whitworth and Co., Ltd., Newcastle-on-Tyne; Beardmore and Co., Ltd., Glasgow; Cammell, Laird and Co., Ltd., Birkenhead; the Fairfield Shipbuilding Co., Ltd., Glasgow; Vickers, Ltd., Barrow-on-Furness, and others. Many of these took infinite pains to assist the Greeks in their efforts to improve the effectiveness of their navy. Notwithstanding the almost certain prospects which, at one time, existed of the contract going to a British yard, the powerful influence of the Prussian Crown Princess—now Queen—Sofia, a sister of the German Emperor, proved too strong, and the work was given to the German Vulcan Works, of Stettin. When questioned subsequently as to the reason for discarding the British bids at the last moment, M. Nicholas Stratos, the Minister of Marine, declared that the Government had been actuated entirely by the promise made by the Vulcan Works that the battleship, at least, should be delivered 'in record time,' while British yards could not promise delivery in less 'than eighteen months or two years.' The result is now seen in the German yards having the contract for the battleship—the 'Salamis'—cancelled. As a fact, no great effort was made by the Teutonic firm to carry out its obligation, the one desire to defeat British contractors having alone been kept in view. This once effected, the execution of the order to time was deemed of little consequence."

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continues to receive a very large number of inquiries for the names of sellers or buyers of articles.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and lists are prepared and circulated of articles which inquirers desire (a) to purchase, and (b) to sell. List 20 is now ready, and may be obtained by United Kingdom manufacturers and traders.

Engineering Notes.

Fire-resisting Wired Glass.

A very interesting report has been issued by the British Fire Prevention Committee on recent investigations with wired glass as applied to window openings and to skylights. It is the result of a series of tests with wired glazing, and shows to what an extent the fire resistance of glazing of this type has been developed. Ample evidence of the fact is afforded that wired-glazing, when vertically used in windows has withstood the heavy strain of the British Fire Prevention Committee's tests for a period of ninety minutes at temperatures gradually increasing to 1,500 degrees F., the fire tests being immediately followed by the application at close range of water from a steam fire-engine. Further, when horizontally used, this glazing has withstood a fire test of an hour's duration at similar temperatures, followed by a similar application of water. The maximum size of any piece of glazing under test in a vertical position was 4 ft. by 1 ft., and the maximum temperature attained in the skylight test was 1,600 degrees F. Both tests are records of wire glazing, and claim considerable attention, as they put modern wired glazing, when suitably fixed, in the same fire-resistive rank as fire-resisting partitions and doors.

Fire Engine Pumps.

With reference to our notes on the above subject (see issue of THE NEAR EAST, April 23) we are informed by Messrs. Merryweather and Sons, of Greenwich Road, London, S.E., that the reciprocating pumps in use by the Calcutta Fire Brigade, to which allusion was made, were supplied by their firm, and referring to our statement that it cannot be accepted by experts that the turbine pump has any advantage over the reciprocating pump when dealing with gritty or dirty water, Messrs. Merryweather state that this point of view is confirmed by the experience of the Rand Water Board and the South African Mines, as reported in a recent issue of the *Colliery Guardian*, in which it is stated, on the authority of Mr. W. Ingham, that two of the principal factors which militated against the adoption of centrifugal pumps for mine work are (1) silt and sand; (2) acidity of water. An interesting statement is made by Messrs. Merryweather that some few months ago, on the occasion of a fire at Workington, a reciprocating fire pump, of the same type as in use in Calcutta, employed ammoniacal liquor for fire extinguishing work, and pumped no less than 6½ tons of the liquor without any harm resulting to the valves and working parts of the pump.

Refrigerating Machinery.

The introduction of refrigerating machinery in the Near East has been comparatively very slow. The importance, however, of cold storage, which has been abundantly demonstrated in recent years in connection with the development of many industries and agricultural resources in various parts of the world, is now being realised, and there is every probability that refrigeration will soon be an important factor in the development of some new industries in the Near East. Unfortunately, little is known there of British refrigerating machinery, as most of the existing small or large plants have been imported from Germany. A brief description, therefore, here of one or two of the principal British refrigerating systems may be of some advantage.

Ammonia Compression.

The principle of refrigeration on the ammonia compression system is as follows:—The ammonia in gaseous form is compressed in the ammonia compressor to a pressure varying according to the temperature of the condensing water from 100 lbs. to 150 lbs. per square inch. It is then conveyed through an oil separator to the condenser, where the heat developed in the above operation is withdrawn by means of cold water, and the gas, assuming a liquid condition, runs down some pipes into the receiver. From the receiver the liquified gas is allowed to expand into the refrigerator through coils of pipes, and in doing so extracts from the substance surrounding the pipes (either water, brine, or air) practically the same quantity of heat that was previously given up by the gas to the water used for condensing. The gas having performed this last operation (its refrigerating work), is now ready to repeat the cycle again.

Cold Storage.

There are three systems or methods by which the compressed liquified ammonia may be applied for cold-storage purposes: (1) The direct expansion system, in which the ammonia is expanded direct through coils placed in cold chambers. This system is recommended for small plants, where it is desired that everything should be as simple as possible. (2) The brine circulation system, in which ammonia is used to cool brine, which is in turn circulated through coils placed in cold chambers. The advantage of this system over the direct expansion system is that, in the event of a slight leakage, there is little risk of the goods in the chambers being damaged. (3) The air circulation system, in which air is drawn from the cold chamber by a fan, passed over coils through which ammonia is expanded, and returned to the chamber at the desired temperature. The advantage of this system is that the air in the chamber, being kept in constant circulation, is maintained in a perfectly pure condition.

New Refuse Destructor.

Municipal authorities in the Near East, who find it expensive to establish the ordinary large refuse destructors, of which details have been given in previous Notes, and who appeal to the public to burn house refuse now that the hot season is approaching, will be interested to hear that there is a new destructor, simple and of a moderate price. This destructor is started by lighting a small wood, coal, or gas-coke fire, which will quickly burn up, or a fire may be obtained by a set of gas burners of special construction, which can be supplied with the destructor. When the refuse is well alight the gas can be turned off. The body is made of wrought-iron plates, and is surrounded by a wrought-iron jacket, which is open at the bottom on the outside and on the top in the inside, thus creating a forced draught. A cast-iron baffle is provided where the jacket enters the destructor, and deflects the warm air into the rising smoke of burning rubbish to assist combustion. The fire basket is made of wrought-iron tubes placed slightly apart all round the cast-iron furnace bars; air is drawn up these tubes and around them, thus enabling combustion to take place around the fire instead of just at the bottom. The destructor consumes its own smoke, and is made in six different sizes, with hoppers ranging in size from 10 ins. by 6 ins. up to 20 ins. by 12 ins.

EGYPTIAN COTTON MARKET.

(FROM OUR OWN CORRESPONDENT.)

ALEXANDRIA, April 27.

In sympathy with American quotations, prices have shown a steady rise. The demand from abroad for Egyptian varieties has decreased, however, so that the upward tendency of prices is purely speculative. Futures are doing well in view of the strength of the American market, but should there be a drop abroad, quotations will tumble down surprisingly. Arrivals up to date amount to 6,100,000 cantars. Apparently about 450,000 cantars are still unsold.

News regarding the coming crop are favourable. In spite of the recent locust invasion, little damage has been done, and the young plants are progressing satisfactorily. Water is abundant. Sakellarides have been largely planted to the detriment of other varieties. Likewise Nubari is ousting Afifi, which tends to disappear entirely. Speculations in futures are already taking place, the trade quoting PT 60-70 for delivery in November.

EGYPTIAN COTTON CROP.

The Alexandria General Produce Association in their monthly crop report dated May 5, 1915, state:—Lower Egypt: Sowing was completed at the usual time, even earlier in several localities, and is now finished everywhere. The young plants are in good condition, but development has been set back by the cool and irregular weather experienced this month. Re-sowing has been partial. The acreage planted is less than that of 1914, in accordance with the decree of October 30, 1914. Estimates vary between 15 and 30 per cent., according to different districts. The cultivation of Sakellaridis has increased considerably this year, lessening the cultivation of other varieties. Water irrigation is abundant. Locusts appear in all provinces, but have only caused insignificant damage up to the present. The Government continues to take very energetic measures for the destruction of eggs. Some isolated cases of cutworm are reported in certain districts. Upper Egypt and Fayoum: Sowing finished in normal time. The appearance of the young plants is satisfactory, although there have been strong winds. For the same reason as above the cotton acreage planted is less than 1914; estimates vary from 10 to 20 per cent. As usual Ashmouni has been sown almost entirely. As regards water, locusts, and cutworm, information of Lower Egypt applies to Upper Egypt.

COTTON IN PERSIA.

The U.S. Vice-Consul at Teheran, writing on February 20 on the cultivation of cotton in Persia, says that the plant is cultivated north-west of Kerman and in the Province of Khorassan, and also around Kashan, Ispahan, Yezd, and Urumiah. The quality is not especially good, and the shortness of the fibre makes it unsuitable for many purposes. Persian growers have tried American seed, but have not obtained good results, although the quality is said to be better than that grown from native seed. English, American, and German hand gins and presses are used. Although there is not a cotton factory in all Persia, a considerable amount of raw cotton is used in the making of mattresses and bedding. Some cotton cloth is woven with hand looms at Yezd, Kerman, Meshed, and Kashan, but the output is small. The yarn used by these looms was formerly made locally, but the native article has of late almost been driven from the market by foreign competition.

Statistics showing the amount of cotton grown in Persia are not available. The following table shows the value (in U.S. dollars, roughly five dollars to the £ sterling) of the exports to the principal countries of destination during the year ended March 20, 1913:—

Countries.	Cleaned.	Uncleaned.	Total.
United Kingdom..	—	8,898	8,898
India	27,185	44,520	71,705
Russia.....	7,086,870	318,368	7,405,238
Turkey.....	4,863	6,873	11,736
Oman	4,802	3,980	8,782
Other	781	348	1,129

Near East Markets.

SPECIAL REPORTS.

(From Our Own Correspondent.)

Roumania. April 23.

The *Curierul Financiar* (Bucharest) of April 11 states that, according to figures issued by the Ministry of Agriculture, the area which had been sown in Roumania up to the beginning of December, 1914, was less than that sown at the corresponding date of the previous year, owing principally to adverse climatic conditions. Sowing was, however, continued in December in several regions, with the result that a total area of over 2,000,000 hectares was sown with wheat. The area under rye is 68,366 hectares, or 21,461 hectares less than in 1913. Autumn barley was only sown over an area of 48,656 hectares, or 20,096 hectares less than in 1913; probably, however, the spring sowings will be sufficient to bring the total up to the average. The area sown with rape was very small on account of the dry weather in August, and only amounted to 60,879 hectares, or 25 per cent. less than in 1913.

Alexandria. April 27.

The price of sugar has doubled since the beginning of the war, but it must not be supposed that it has reached its highest point. On the contrary, M. Naus, director of the Société des Sucreries, announces a further rise. In an interview granted recently to a local journalist, he deplored the Government's act in fixing a maximum price as injurious to the industry. I fail to see why this should be so.

H.M. Minister at Bucharest telegraphs that the moratorium in respect of debts due abroad has been extended for four months.

PRODUCE REPORT.

London, May 13.

Currants.

The market continues strong and advancing. The advance is not rapid, but it is, nevertheless, necessary to pay a little more in every case to replace previous purchases. No arrivals have taken place, but the s.s. "Teano," with 1,000 tons, is daily expected. The stock of currants in London on April 30 was 4,491 tons, against 5,881 tons last year the same period. The tons shown, however, in the stock return is non-existent on the market, having all passed into the hands of consumers and distributors. Duty-paid clearances since January 1 show an advance of some 30 per cent. on previous years.

In Liverpool the market has been quiet during the week, owing, as it was expected, to the large business done prior to the introduction of the Budget, so that buyers are sufficiently supplied for the moment, but the stocks available are very restricted, and consist mostly of unattractive qualities. The market is, as in London, decidedly strong, and holders are demanding full values. Prices are reported higher in Greece, and next arrivals are due in a week or ten days.

Sultanas.

There is a good demand for nearly all qualities, the principal inquiry being for the cheapest fruit. The s.s. "Leonidas" has brought 800 tons, and some further arrivals are expected.

In the Liverpool market only a small quantity is on offer, and the parcels still on show are of inferior quality. Dealers here have been forced to operate in other markets. The chances are all in favour of a higher range of prices all round in the near future.

Figs.

Naturals are in fair demand at steady prices, while skeleton cases sell slowly.

From Liverpool there is nothing to report.

Dates.

A good business doing, and prices are little firmer. Persians quoted 14s. 6d. to 20s.

Seeds.

Egyptian cottonseed is steady at recent rates. London, spot quoted £8 10s., afloat £8 12s. 6d., May £9, and June £9 3s. 9d. per ton. Linseed is quiet and tendency easier. Indian, London, spot quoted 56s. 6d., April-May and May-June 56s. 3d., June-July 57s. Rapeseed is upheld. Brown Cawnpore May-June 51s. 6d., Guzerat pure ditto 55s. 6d. Rangoon beans on the spot are selling 72s., for May-June and June-July shipment £15 to £16 per ton c.i.f. terms is now asked.

Oils.

Linseed oil shows a further decline on the spot, but for arrivals is dearer. On the spot, pipes £31, barrels £31 15s., month £31 15s., May-August £32 paid. Rape oil is firm:—Ordinary brown on the spot, naked £38 15s. to £39, nominal. Cotton oil is also firmer. Crude on the spot, pipes £31 7s. 6d., May-June £31 15s., refined, on spot, pale, pipes £33 10s., sweet barrels £36 10s. to £38 10s.

Egyptian Onions.

The demand continues excellent for Egyptian, and last week's quotations have been fully maintained for ordinary, while finest may be quoted firmer. Some of the latter, heavy weights, are sold at 14s.

Locust Beans.

This article continues scarce and dear at £8 for whole and £8 10s. for kibbled.

ALEXANDRIA NOTES.

(From Our Own Correspondent.)

Alexandria, April 27.

The Bourse.

There is no movement in the market. The official reopening of the Stock Exchange is shortly to take place, but it is feared that it will cause a further depreciation in values, especially if the banks are allowed to unload. In the meantime the securities dealt in are the Crédit Foncier Egyptien lottery bonds, Levant Steamship Company shares, and those of the Salt and Soda Company. In some instances actual quotations have been higher than those prevailing before the war. Small deals in Agriculturals, Nationals, and Cassa di Sconto take place from time to time.

Credit Foncier Egyptien.

As a result of the war, the bank has had to acquire several thousand feddans of land to the north of the Delta from impoverished debtors. Expropriation measures against the Daira Khassa have been interrupted. On the other hand, the Crédit Foncier is selling 6,000 feddans of land at Cherbine, which came into its possession as a result of the Zervudachi failure. I understand that after the war the bank will form an auxiliary company, with 20,000 feddans of land, which will be cultivated and then sold. The capital will naturally be subscribed by shareholders of the Crédit Foncier.

SHARAKI LANDS.

The *Journal Officiel* publishes a ministerial order enacting that from May 15, 1915, until a date to be fixed later by ministerial order irrigation is prohibited in Middle and Lower Egypt on the lands generally known as sharaki lands, and comprising those lands devoted to the cultivation of maize or of other crops cultivated in the same manner as maize.

This prohibition will not, however, affect lands devoted to the cultivation of rice in zones where such cultivation may be permitted, nor lands devoted to the cultivation of vegetables, cucurbitaceous plants, sesame, or ground-nuts, nor lands devoted to the cultivation of crops to be irrigated by means of wells having no connection whatever with any canal, but deriving their water from the subsoil, nor islands surrounded by water on every side, nor the sahels of the Nile.

THE HANNA FAILURE.

A meeting of the creditors of the firm Bushra and Suiot Bey Hanna took place in the Cairo Mixed Court on April 20 (Judge Houriet presiding) to vote on whether the debtors should be allowed to apply for a *concordat préventif*. The firm offered to pay its creditors 100 per cent. The proposal was naturally accepted by the creditors by a large majority, and the case was then postponed till May 1, when the *concordat* was to have been put through the Commercial Court.

CUSTOMS ORDINANCE.

A new ordinance, entitled the Customs Ordinance, 1915, has recently been issued by the Sudan Government in the *Gazette*. The object of this ordinance is to amend the Customs Ordinance, 1913. The latter ordinance, as amended by the new ordinance, will shortly be published by the Customs Department in book form.

EGYPTIAN TRADE DURING MARCH.

(From Our Own Correspondent.)

Cairo, April 20.

The Egyptian Customs returns for the month of March have just been published, and show a continuation in the decline of imports already noticeable during the preceding months. Exports, which in February showed a welcome increase, as compared with a regular monthly decrease since the outbreak of the war, have reverted to their former tendency, but, happily, the drop is only a small one.

The figures are: Imports, £E1,332,390 against £E2,414,627, and exports, £E2,703,708 against £E2,878,106 during March last year. The decrease in the former is £E1,082,237, and in the latter £E174,398, whilst the diminution since the beginning of the year has been £E3,470,770 and £E1,038,892, respectively.

Imports from the British Empire fell from £E938,940 to £E816,699, and those from France dropped by 65 per cent. to £E64,140, whilst Italy showed a diminution of £E45,304, and Russia one of £E55,774. Germany and her Allies figure for only the amounts withdrawn from bond into which the goods had been placed before the war or for the consignments shipped from neutral ports. It is interesting to note that the United States, Brazil and Greece all have increased their sales to Egypt by amounts varying from 100 per cent to 150 per cent., and that the last named country now stands second in importance among the importing nations.

Under exports, whilst Germany, Austria, Turkey (excepting a small amount shipped to Busreh), Belgium, Montenegro, and Roumania, do not figure, the share of France has fallen during the month by £E79,547, and that of Russia by £E108,085. On the other hand, the Empire purchased £E129,177 more, whilst Spain increased by £E26,258, Greece by £E71,347 (last March £E6,753), Italy by £E104,416, and last, but by no means least, Switzerland by £E230,590 (last March that country took only £E57,329). It is noteworthy that practically the whole of the purchases in this country made by the United States, Spain, Japan, and Switzerland, were cotton.

The effect of the fall in cotton prices can be seen from the fact that although during the month 66,824 cantars more were exported, the value of cotton exports fell by £E575,187. Since the beginning of the year cottonseed exports have increased by 243,588 ardebs, and those of cotton by 569,169 cantars, but the total decrease in value has been £E1,892,061. To compensate the price of eggs and onions has risen, as has also the export of both these products, whilst an almost phenomenal impetus has been given to the sugar industry by the good prices that this article commands abroad at the present moment.

During March, exports of eggs increased by £E61,395, of onions by £E66,271, of cereals by £E95,411, of sugar by £E75,899, and of gold and silver bars, etc., by £E84,357. It may be interesting to note that of the sugar exports £E31,679 went to Morocco, £E21,737 to India, and £E4,977 to British Possessions in the East.

The following variations in the imports took place: Frozen meat increased by £E78,977 (practically all from Australia); coffee by £E38,226 (mostly from Brazil); and coal by £E15,600. Skins and leather goods decreased by £E38,974, cereals by £E223,513, spirits by £E29,144, construction wood by £E51,696, cotton tissues by £E335,330, and worked iron and steel by £E277,854. It should be noted that the rise in value of the coal imports is entirely due to the increase in freights, as the quantity brought in last month was 67,761 tons less than that imported in March, 1914.

Specie imports amounted to £E71, against £E69,963 last March, and exports to £E12,874, as against £E825,990. Again Turkey appears for a large amount, but there is no explanatory note to indicate why this export has been allowed. Cigarettes continue to show a falling off, due for the most part to the closing of the German and Austrian markets. The decrease since January 1 has been thirty-eight tons, valued £E30,581.

The new table of trade between Egypt and the Sudan shows imports from the latter amounting to £E39,724, and exports from Egypt of £E71,077. Imports include: Gum £E2,657 (mostly in transit), cereals £E10,517, and cattle £E5,221; exports comprise, refined sugar £E15,591, common soap £E1,909, and cotton tissues £E18,597. Owing to the difficulty in securing freightage from Port Sudan, and the high rates ruling when space is even available, it is being found more convenient, as well as cheaper, to send Sudan produce in transit via either Halfa or Suez for shipment to the foreign markets from Egyptian ports.

COMPANY NOTES.

Credit Foncier Egyptien.

The *Egyptian Mail* states that following the appointment of M. Claude Janet, manager of the Crédit Foncier Egyptien, as sequestrator of the ex-Khedive's Khassa (recently referred to by The Near East), comes the information that the French banking establishment has decided not to take legal proceedings for the recovery of the sum, amounting to half a million pounds, advanced to the Khassa on 20,000 feddans of land.

Egyptian Markets.

It will be announced at the general meeting that since the close of the year 1914, this company has been appointed sole agent in Egypt for the sale of the phosphate products of the Egyptian Phosphate Co., Limited.

Egyptian Hotels.

That familiar problem whether a company registered here is liable for income-tax in respect of profit earned abroad came before the House of Lords on the 7th inst. in a new guise, says the *Scotsman*. Down to August, 1908, the business of the Egyptian Hotels, Limited, which was the carrying on of two hotels in Cairo, was managed by the Board of Directors in London, but at that date the articles of association were altered, and the Egyptian business was entirely transferred to an Egyptian Board of Directors, which was made independent of any other directors and of any general meeting of the company not held in Egypt. The Crown contended that the respondents were a company resident in the United Kingdom, carrying on their trade wholly or in part in England, and that the head seat and directing power were situated in England. Lord Loreburn, in De Beers Consolidated Mines, Limited, *v.* Howe, and Lord Haldane, in the American Thread Company *v.* Joyce, said that a company resided where its real business was carried on, and it was contended for the Crown that that being so, the admission that the Egyptian Hotels Company resided here necessarily imported that its business was in part at least carried on here. The ultimate control of this company resided in its general meetings, and that ultimate control was at all times exercised in Great Britain. The respondents argued that from 1908 their trade was a foreign trade and a foreign possession, and that the profits and gains which were the subject of assessment were exclusively derived from trade wholly carried on in Egypt. The Court of Appeal held that there was no carrying on or exercising of the trade in the United Kingdom—a judgment which, the respondents argued, was in accordance with the decision of the House of Lords in Colquhoun *v.* Brooks.

Constantinople Telephone Co.

Mr. M. Webster Jenkinson, the representative in the United Kingdom of the Constantinople Telephone Co., in a circular to the shareholders, states that the Turkish Government have forcibly taken possession of the company's system in Constantinople. The general manager (Mr. Douglas Watson) and the British staff were expelled from the company's buildings, and on the advice of the American Ambassador left Constantinople, arriving in England last week. A letter has been received from Mr. Salem, the company's chief legal adviser in Constantinople, enclosing minutes describing the confiscation of the plant and property by the Turkish authorities and a copy of the protest addressed by the Constantinople directors to the Turkish Government. It is hoped that it will soon

Digitized by Google

be possible for the British staff to return and for the company to resume possession of its plant, and, of course, endeavour will be made to obtain reparation for the loss inflicted by the action of the Turkish Government. The Turkish authorities have based their action on Article 23 of the Convention, which reads as follows:—"The State have full power to inspect and supervise the service, and the concessionnaire shall do whatever is necessary to facilitate this inspection. The Government also reserves the right to assume control of the service on all or any part of the system when necessary for the public safety. The company shall have no right to demand compensation on this score." The company has never interpreted this clause as giving the Turkish Government power to take physical possession of the company's plant and to expel the staff as they have done. The matter is receiving the most careful consideration of the European directors, and every possible step has been, and will be, taken to protect the interests of the shareholders and bondholders.

Piræus-Athens-Peloponnesus Railway.

At the annual general meeting of the Piræus-Athens-Peloponnesus Railway, held in Athens on Saturday last, the payment of a dividend at the rate of drachmas 5.50 per share was sanctioned. The date on which the dividend distribution should be made was left to the discretion of the Board.

Ottoman Railway.

As a direct result of the war, the directors of the Ottoman Railway from Smyrna to Aidin are unable to meet the debenture interest, and they propose to fund it by the issue of debentures.

In the course of a circular issued to the Four per Cent. First Debenture and Five per Cent. Second Debenture stockholders, signed by Lord Rathmore, President of the Council of Administration, it is recalled that the company's railway was seized by a Turkish force on November 27 last, and the Ottoman Government formally assumed possession of the railway on December 6. For some time before the seizure, it is added, the company's revenue had been seriously interfered with by the arbitrary methods of the Turkish authorities, including the commandeering of rolling stock and coal for use on other railways and the transmission of munitions of war and soldiers over the railway on a large scale, the company's charges being merely added to the rapidly accumulating debt due from the Government. Upon the seizure of the railway the staff was dismissed, and from that time the railway and its earnings passed from the control of the company. The last fifteen years, continues Lord Rathmore, had been a period of substantial and steadily increasing prosperity for the railway, and not only had the average net earnings for the past three years been the highest for any similar period in the history of the company, but also the net earnings for the year ended June 30 last exceeded those of any previous year.

Figures are given showing that the net earnings for the three years ended June 30, 1904, averaged £195.412, while those for the three years ended June 30, 1914, averaged £255,459 per annum. The total sum required annually for the service of the company's debenture debt is £148.833. The circular goes on to state that there was every reason to expect that these earnings would be maintained or even exceeded during the current year, but the outbreak of war and its consequences have necessitated seeking the debenture-holders' approval to a scheme for safeguarding their interests. Provision was made for the payment of interest on the first and second debenture stocks on January 1 last with the assistance of an advance from the company's bankers secured upon certain investments and the reserve fund for the debenture stocks. It will not, however, be possible for the company to make cash payment either of the half-yearly interest on these debenture stocks, which will fall due on July 1 next or on subsequent half-years so long as the war with Turkey lasts. In view of these circumstances, the directors ask the debenture holders to accept a proposal that, should it prove necessary, all cash payments of interest falling due on both debenture issues be deferred for twelve months after the signing of peace between the British and Turkish Governments or for the period of three years from June 30, 1915, whichever period shall be the shorter. The deferred payments of interest will carry interest in the case of both issues at the rate of 5 per cent., and will be payable at the termination of the period mentioned. First debenture stock interest will be paid in that stock ranking *pari passu* with the existing first stock at the rate of £120 stock for every £100 of interest so satisfied. The interest on the second debenture stock will be paid in similar fashion, except that it will be at the rate of £100 stock for every £100 of interest so satisfied. The company will retain the right to pay off in cash at any time any portion of any interest deferred under the scheme, but it will not be permitted to pay off in cash any interest on the second debentures unless all interest accrued on the first debentures has been paid.

It is further proposed to suspend the debenture stock reserve fund for the period the scheme is in force and the application of the fund in repaying the loan raised for paying debenture interest last January. The directors, in conclusion, express the hope that the company will in due course be able to pay at least some portion of the first debenture deferred interest in cash, and, bearing in mind the rapid increase of the company's prosperity in recent years, state that there is some reason to believe that, given a fair chance after the war, it should be possible to do this. The scheme will be submitted at meetings to be held on 11th prox.

COMPANY RESULTS, &c

ANGLO-EGYPTIAN OILFIELDS.—Production for the week, Hurghada, 77 tons (last 153 tons).

ROUMANIAN CONSOLIDATED.—Production for the week ended May 8, 1915, 2,436 tons.

SUEZ CANAL.—Traffic receipts for the 7th, 8th, and 9th inst. amounted to 460,000 francs, against 1,400,000 francs for the corresponding days last year.

THE ALEXANDRIA WATER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that the THIRTY-SEVENTH ORDINARY GENERAL MEETING of the Shareholders will be held at the Company's Office in Alexandria on Friday, the 4th June, 1915, at four o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to the Act of Parliament.

The Transfer Books of the Company will be closed for 14 days immediately preceding the Meeting.

By order of the Board,
J. E. CORNISH,
Assistant Manager.

Dated, Alexandria, 24th April, 1915.

BANK OF ABYSSINIA.

Notice is Hereby Given that in conformity with Article 30 of the Statutes an ORDINARY GENERAL MEETING of the Shareholders of the Bank of Abyssinia will be held on Friday, the 28th May, 1915, at 4 p.m., at the Offices of the National Bank of Egypt, Cairo, Egypt, for the purpose of:—

Submitting the Accounts to the 31st December, 1914.
Presenting the Directors' Report.
Presenting the Auditors' Report.
Electing the Auditors for the year 1915, and fixing their remuneration.

Any Shareholder holding a minimum of five shares is entitled to take part in this Meeting, provided the Shares be deposited at one of the following places, where a Card of Admission or Form of Proxy will be given:—

In Egypt (at Cairo and Alexandria), at least five days before the date of the Meeting:—
At the National Bank of Egypt, Anglo-Egyptian Bank, Ltd., Banque d'Athenes, Banque Belge pour l'Etranger, Imperial Ottoman Bank, Banque d'Orient, Banco di Roma, Cassa di Sconto e di Risparmio, Comptoir National d'Escompte de Paris, Crédit Lyonnais, and Deutsche Orient Bank.
In Abyssinia, at least 15 days before the date of the Meeting:—
At the Bank of Abyssinia, Adis-Abeba, Dire-Dawa, and Harrar.
In New York, at least 15 days before the date of the Meeting:—
At Messrs. Kidder, Peabody, and Co., Bankers.
In Europe, at least 15 days before the date of the Meeting:—
In Paris: at the Société Générale de Crédit Industriel et Commercial, 66, Rue de la Victoire.
In Rome: at the Banca d'Italia.
In London: at the National Bank of Egypt, 3 and 4, Lothbury, E.C.

F. T. ROWLATT, President.

Cairo, 6th May, 1915.

NOTES OF THE WEEK.

The Italian Government is now nearing the moment at which it can give effect to the decision taken, as readers of these columns know, some time ago. To overcome the obstacles placed in the way of Italian co-operation with the Triple Entente by Signor Giolitti, whose followers form the majority of the Chamber, the Prime Minister found it necessary to hand in the resignation of the whole Cabinet. King Victor Emmanuel refused to accept the resignation, and the Salandra-Sonnino Ministry remains in office. The step taken by Signor Salandra enabled the country to indicate in an unmistakable manner its complete confidence in his policy. Signor Giolitti, from being in the position of virtual dictator in Italian politics, found himself suddenly shorn of all his power. On two occasions since the outbreak of the war he has given his support in the Chamber to the Ministry; but during the last few weeks, while Italian opinion has become more and more convinced that war with Austria-Hungary was inevitable, the Giolittian party has chosen to agitate for peace on Austrian terms. The temper of the country has overborne these intrigues, and Signor Giolitti has found it politic to leave Rome before the meeting of the Chamber.

An isolated warning in the German Press against too much emphasis being laid on Signor Giolitti's championship of the German cause supplies, perhaps, the chief explanation of his downfall. The personal hostility shown to him in Rome and other towns was rendered possible by the belief that he was actuated by no honest difference of opinion, but was consciously lending himself to Germany's game. Thus Prince von Bülow in Italy has brought about a similar feeling of resentment, only a hundredfold intensified, to that produced in the United States by Herr Dernburg and the German Ambassador, Count Bernstorff, whom the former's activities temporarily eclipsed as the accredited representative of the German Empire. The German campaign in Italy was faithfully carried out in the Giolittian Press. Threats of the fate awaiting Italy in the event of her breaking with Germany and Austria-Hungary bulked large in the arguments against intervention in the war, until the country has become almost as much incensed against Germany for her bullying methods as it is against Austria for definite acts of injustice and oppression.

A declaration in the Reichstag by the Imperial Chancellor on the subject of the negotiations between Italy and Austria-Hungary may be taken as a sign that Germany recognizes that the game is up, that Italy has now to be reckoned among the countries pledged to rid Europe of the German incubus. Dr. von Bethmann-Hollweg enumerated the concessions which Austria was prepared to make to Italy. They make a good showing, but the amount of territory which the Vienna Government offered fell far short of Italy's aspirations. Even if Italy had been promised all that she hopes to obtain from the dismemberment of Austria, the crux of the position would have been the guarantee she could have that the concessions would be real and permanent. We hope there is truth in the story which states that this very question was put by King Victor Emmanuel to Prince von Bülow. When the latter replied, "The word of Germany," the King's answer is said to have been: "It is too late in the day for such a guarantee to be acceptable." Although the sentiment attributed to the King may not have been uttered, it must have been present to the Italian mind throughout the protracted negotiations.

If report be correct, the concessions offered to Italy entailed on her part acceptance of the annexation of Belgium by Germany, while in general, by coming to terms with the Germanic Powers, she would tacitly have to condone all the outrages that can be laid to their charge in their conduct of the war. The German Imperial Chancellor made no mention of this fact when he announced to the Reichstag that Germany "undertook to give a full guarantee for the loyal fulfilment of these offers." In other words, Germany was prepared to pledge her word to Italy, if Italy would acquiesce in her violation of her pledged word to Belgium. The Germans, and with them, it is to be feared, those in other countries whose minds are set upon patching up an early peace, have some way to travel before they realize that in future reliance will only be placed on their pledged word, when they have

Digitized by Google

been deprived of the capacity and opportunity to break it.

The concessions offered to Italy by Austria-Hungary are of sufficient interest to be recapitulated here. They were as follow:—(1) That part of the Tyrol inhabited by Italians to be ceded to Italy; (2) likewise the western bank of the Isonzo, in so far as the population is purely Italian, and the town of Gradisca; (3) Trieste to be made an Imperial free city, receiving an administration ensuring an Italian character to the city, and to have an Italian University; (4) the recognition of Italian sovereignty over Valona and the sphere of interests belonging thereto; (5) Austria-Hungary declares her political disinterestedness regarding Albania; (6) the national interests of Italian nationals in Austria-Hungary to be particularly respected; (7) Austria-Hungary grants an amnesty for political or military criminals who are natives of the ceded territories; (8) the further wishes of Italy regarding general questions to be assured of every consideration; (9) Austria-Hungary, after the conclusion of the agreement, to give a solemn declaration concerning the concessions; (10) mixed committees for the regulation of details of the concessions to be appointed; (11) after the conclusion of the agreement Austro-Hungarian soldiers natives of the occupied territories shall not further participate in the war. This enumeration of the concessions as given by the German Imperial Chancellor throws an interesting light on one or two points—the lot of alien nationalities in Austria-Hungary which requires Italians to be singled out for "particular respect," and the value attaching to Germanic promises in general, calling for "a solemn declaration" that these particular promises really will be honoured.

Apart from the fact that no reliance could be placed on any pledge given by the treaty-breaking Central Powers, we see how little in the way of territorial concessions Austria-Hungary was prepared to offer Italy. These concessions, it is true, indicate how much store the Germanic Powers place on Italian neutrality; but they do not reveal that Austria-Hungary contemplated ultimate defeat and dismemberment. If the Vienna Government felt that Italian neutrality meant all the difference between victory and defeat, it would hardly have hesitated to give Italy all she wanted with the object of preventing the Slavs from obtaining the territory that they have in view. Austria-Hungary, however, was only prepared to humour Italy up to a certain point. If that was not sufficient to prevent the Italians from throwing in their lot with the Triple Entente, the Germanic Powers were still ready to face the consequences, and, in the words of the German Imperial Chancellor, would "know how to meet the new dangers with dauntless and confident courage." This point will, perhaps, help the Allies to realize the formidable nature of the opposition they have still to meet.

From the concessions offered to Italy by the Austro-Hungarian Government we may turn to those which she hopes to obtain by throwing in her lot with the Triple Entente. In a lengthy letter to the *Manchester Guardian* Sir Arthur Evans claims to set forth the terms which Italy has secured from the Allied Powers as the price of her co-operation. "The central feature of the agreement as now drawn up," he writes, "is the handing over to Italy of Northern Dalmatia, including the cities of Zara and Sebenico, with the hinterland and islands." In addition to this, although it is not stated in the letter, we may infer that Italian claims to the west coast of Istria, including Pola, have also been accepted. As the surrender of any portion of Dalmatia is known to be in direct conflict with Slav aspirations, it is of interest to note what Sir Arthur Evans says with regard to the methods by which the agreement was reached. "The complaisance of France in this matter seems to be largely due to sheer official ignorance of political geography. . . . Russian opposition, though genuine, was, unfortunately, undermined by the influence of the Holy Synod, which would fain see the future Serbia a purely Orthodox State, free from contamination with the Roman Catholic element so strongly represented in Croatia and Northern Dalmatia. Russian Government action was, in fact, enlisted last November to enforce these views on the Serbian Government, which, however, nailed its colours to the mast of free national union without respect of creed. Since then, however, the Russian Government had adopted a more sympathetic attitude toward South Slav liberation, and its yielding on the Dalmatian question was only made under protest from the most exalted quarters, and under extreme pressure exerted in an extraordinary manner on the part of its Western Allies. And let it be well understood that though Russian diplomatists may waver, the High Command has not ceased to take a lofty view of the cause for which the Empire is fighting."

These are pregnant words, and it may be taken for granted that Sir Arthur Evans would not allow himself to write them, unless he had good authority for his statements. The agreement, as he says, involves "grave matters of far-reaching import," and he raises the question whether the accession of over a million bayonets is a real equivalent for the material interests bartered away." It is admitted that there could be no adequate settlement after the war unless provision were made for Italian aspirations. But there can be no reason why Italy any more than Austria-Hungary should be encouraged to offend against the principle of nationality, for which the Allies are fighting. Her peculiar position in regard to the Adriatic is recognized. Sir Arthur Evans writes: "It is important to the Allied cause that a large tract of Lombardy and Venetia should no longer be perpetually threatened by the overwhelming strategic position of the German Powers on the side of the Alps. The danger of German maritime aggression on the Eastern Adriatic coast and islands is shared in common with ourselves. For the Italian national claims in the Trentino, in the Valley of the Isonzo, at Trieste, at Pola, and throughout Western Istria we have the greatest sympathy. It is fair to realize that the peculiar maritime advantages of the Dalmatian coast and islands, taken in connection with the open character of the eastern coast of Italy, make it quite reasonable that she should exact valid guarantees for her security on that side. Thus the neutralization of Dalmatia, as far as maritime armament is concerned, together with the dismantlement of existing fortifications such as those of Cattaro and Sebenico might legitimately be demanded. . . . As a supreme concession, indeed, . . . the annexation to Italy of the island of Lissa might itself be considered. . . . In Italian hands it would be a valuable guarantee for the open coast from Ancona to Pesaro, while the Italian occupation of Valona—which is not contested—places in the hands of the Power which already holds Brindisi and Taranto the remaining key of the Gulf."

If Russia has acquiesced in the terms on which Italy is said to be participating in the war, it may be urged that there is nothing more to be said on the subject. Sir Arthur Evans, however, indicates that Russian opinion may yet be divided on this question. He also says that the agreement was the result of secret negotiations carried out behind Serbia's back. "What is even less creditable," he adds, "various inquiries made on the subject of these underhand dealings by those interested elicited from more than one diplomat concerned the assurance that Serbia was being kept informed of the proposals, while at intervals, even to within the last few days, official statements were actually put out at Rome and Paris, repeated in London, that the Italian and Serbian Governments had come to an agreement on the Adriatic question. In all this there was, and is, not a single word of truth." We have seen that the Serbian Prime Minister had to disclaim any official knowledge of these negotiations, but the tenour of his reply showed some anxiety on the subject. If it be true that Italian claims represent a deliberate effort to drive a hostile wedge between Serbs and Croats, and that Italy also intends to stretch out her hands towards the Croatian port of Fiume, there may well be trouble in store, should she not be deterred from her purpose. That trouble would not be confined to the Allied States.

Digitized by Google

but would in due course affect Italy herself, when she had to face the fierce opposition of her unwilling Serbo-Croat subjects.

A map which appears on another page in this issue will illustrate the national and geographical issues involved in the alleged agreement with Italy. There is a strong feeling abroad that the Italian Government takes its stand in regard to the Dalmatian question not on the existence of any real national feeling on the subject in Italy, but in deference to the views of a powerful organization in Dalmatia itself, which has succeeded in throwing dust into Italian eyes. Clearly, the deciding factor ought to be the principle of nationality. If throughout North Dalmatia 96 per cent. of the population consists of Serbo-Croats, while in Zara itself, to which the Italians have most claim, only a third of the inhabitants is in any real sense "Italian," then other safeguards than the incorporation of this territory within the kingdom must be found for Italy's position in the Adriatic. An agreement to which the British Government has given its assent at this stage can, we may hope, entail little more than an undertaking to urge such and such a course at the conference which shall determine the map of Europe at the end of the war. Compromises will then have to be made, and it will be a matter for surprise if the Italian nation, after having passed through the fiery ordeal of war side by side with her Slav allies, without whose help she could never hope to realize any of her national aspirations, does not view the Adriatic question in a more chastened spirit.

The fierce and carefully prepared offensive of the Austro-German forces in Western Galicia is the most momentous issue of the week. Our Russian Allies have proved their capacity before of rising superior to these terrific attacks, but clearly they have never been so hard pressed as at the present moment. The enemy has reached the San, and his plan must be to drive a wedge right through the Russian line. A few days, it would appear, must decide whether he is likely to be successful, or whether the Russian offensive towards Bukovina will have the effect of checking the Austro-German advance. The situation on this front makes prompt action on the part of Italy the more urgent. At the same time Roumania now has it in her power to duplicate the value of her intervention by giving her help quickly.

In a review of the general military situation which he gave to the House of Lords on Tuesday, Lord Kitchener summarized the position on the Gallipoli Peninsula in these words:—"The progress of our troops is necessarily slow, since the country is most difficult. But the Turks are gradually being forced to retire from positions of great strength, and, though the enemy is being constantly reinforced, the news from this front is thoroughly satisfactory." From the detailed reports published we know that the fighting on the Peninsula has been as fierce as, if not fiercer than, anything else in this terrific war. The Turks are displaying the splendid courage and capacity for defence for which they are noted, and their efforts are well supported by German thoroughness in regard to everything that is necessary to add to the natural advantages of the strong positions they hold. The fight for Achi Baba, the height commanding the lower portion of the Peninsula below the Narrows, still continues. It was the scene of a desperate encounter on May 6 and two following days, but it is not yet in the Allies' hands. In the meantime the casualty list grows, and we regret to learn that Lieut.-General Sir W. R. Birdwood, commanding the Australasian forces, is among the wounded.

We draw attention elsewhere to the satisfactory step taken by the British Government in notifying the Porte that its members will be held personally responsible for the life and well-being of any British subject or French citizen who may be sent to the zone of military operations in Gallipoli Peninsula. A similar intimation was conveyed to certain provincial officials in Syria at an earlier stage in the war, and at once had the result of securing better treatment for the British subjects within their jurisdiction. In these circumstances it seems unfortunate that we should not have tried to extend the principle of responsibility in high quarters to other theatres of the war. Any feeling of incongruity that might have been experienced at first in putting the Germans on a level with the Boxer hordes of China will now have passed, and the opinion is gaining ground that some means must ultimately be found of bringing home to the Germans, collectively and individually, a sense of the enormity of the crimes committed by their army. Meanwhile, harrowing accounts are being received of the horrors being perpetrated in Armenia and Persia by the Kurdish irregulars whom Germany and the Turks have let loose in Eastern Asia Minor. A telegram from the Russian Consul at Urumiah, dated May 15, announced that six thousand Armenians had been massacred at Van. It was added that the people were defending themselves as well as they could against the Turks and Kurds, but that help was urgently needed. There will be some difficulty in making sure that any message from the British Government will reach as far as Van; but it would be as well to notify the Porte that we shall extend the principle of personal responsibility wherever it can be shown that Turkish officers have held high commands in any districts that have been the scene of organised massacre.

Reports of unrest in Constantinople are becoming more insistent. Their significance has to be discounted, however, owing to the fact that in the face of a mobilized army no civilian movement has any chance of success. The Turkish Government is hardly likely to allow any section of the populace to gain the upper hand, unless it is supported by a considerable part of the army. In the meantime, the anxiety of Ministers for their own personal safety is known to be on the increase. Early in May an order was issued requiring all weapons in the hands of private people to be surrendered within five days. If any person at the end of that period was found in the possession of any weapon without authorisation, he was liable to be court-martialled and sentenced to death.

Writing to the *Economist*, a correspondent at Ispahan, where a Russian Vice-Consul has recently been assassinated, gives a depressing account of the situation in Persia. It was to be expected that trade would be bad, and that the Teheran Government would be, as usual, in grave financial straits. But we were hardly prepared to find that Persia had been left so entirely to her own resources, without help or guidance from the Protecting Powers, as the writer represents. The result has been that German intrigue has enjoyed a free field, and there will be still more ground to make up, if ever the Persian problem is tackled seriously. If only from the Moslem point of view, it would be worth the while of the British Government to take the Persian Government in hand at this stage, in order to save the country from its own incompetence. When the new British Minister to Teheran has had time to settle down, we shall hope to find that, with the help of M. de Etter, the new Russian Minister, who won golden opinions in London, a new era has begun to dawn for Persia.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 2.

The High Commissioner.

The High Commissioner on Wednesday inaugurated the series of provincial visits that lie before him by proceeding by special train to Tanta, the senior Mudiria town. He was received on arrival by the Mudir, Fathi Pasha, and the members of the Municipality and Provincial Council, and held a reception of the local officials and notables. Subsequently he visited the Ahmedi Mosque and the various educational institutions of the town, at each of which an address was presented. Fathi Pasha afterwards entertained Sir Henry McMahon and his party at luncheon, and later in the afternoon they left by motor-car for Shebin-el-Kom en route for Cairo. The speech made by the High Commissioner at the banquet given by the Cairo branch of the British Chamber of Commerce of Egypt appears to have given general satisfaction—and with reason, for it afforded evidence on the part of the authorities of a feeling of goodwill towards the commercial community, and breathed a spirit of confidence in the future of the country that is decidedly comforting, and with which most people are in hearty agreement.

The Skirmish on the Canal.

No undue importance should be attached to the skirmish just reported on the Canal or to the failure of our men to round up the Turkish force. It appears that the latter had no offensive object, but was one of the patrols which are daily sent out by the Turks for reconnaissance purposes, and of which we only hear when, as in this case, contact happens to be made with one of our own patrols. Moreover, once such contact is made, it is an extremely difficult matter to round up the enemy, unless the latter wants a fight or our own patrol is sufficiently strong to be able to force on an action on the spot. Usually, as in this instance, neither of these conditions is forthcoming, and light cavalry reinforcements have to be sent for, our patrol meanwhile keeping the enemy under observation at a safe distance. By the time these reinforcements can come up the enemy has started to retreat, and although the aeroplanes continue to follow him up, his main body is usually able to get away altogether, as light cavalry cannot cover more than four miles per hour in the heavy sand.

News from Syria seems to indicate that the Turkish forces in that province and on the Egyptian frontier have been so reduced by the requirements in other directions that any serious attack on the Canal is now out of the question; but, as I have stated in previous letters, we must expect to receive periodical reminders from the force in the Sinai of its presence there, which reminders will be intended to act as pin-pricks, nothing else.

Preparing for Dardanelles' Wounded.

Details of the progress of events in and around the Dardanelles are eagerly awaited by all classes. What news does come here, even from London, is at times so vague and confusing—as a result, no doubt, of the various censorships to which it is subjected—that it looks as if we shall have to wait for the arrival of the English and French papers to obtain really reliable information of what is happening so near to us. We may, however, be able to get some early and interesting details from the wounded, who are now beginning to arrive in large numbers. Most elaborate preparations have been made to deal with them, and soon all the available halls and hotels will have been requisitioned as hospitals. Some of the latter are gigantic in size, that at Victoria College, Ramleh, consisting of no less than 1,000 beds. From what one can gather, these men are not seriously wounded, the majority suffering from gun-shot wounds, or injuries to their feet due to the wire entanglements and the spiked pits set up on the shore.

The Trial of the Sultan's Assailant.

There is general agreement with the sentence passed on Mohammed Khalil, the man who attempted to shoot the Sultan. Perhaps, under the present system of censorship, one could scarcely expect any adverse criticism to make its appearance in the local Press; still, judging from the general trend of conversation in native circles, it would appear that the feeling is unanimous that the world in general and Egyptian society in particular are well rid of a man of the calibre of Mohammed Khalil. One fact, however, is perfectly clear: the trial has made a profound impression on the native mind. I do not refer to the effect produced by the presence in and around the court-house of British soldiers with fixed bayonets, or to the severity of the sentence, or to the celerity with which it was carried out. Those are all features that, as they were calculated to do, were bound to impress the ordinary native, and to overawe any element that might incline to unruliness. The factor, however, which has caused such astonishment to and has made such an impression on all thinking Egyptians, is the manner in which the trial was conducted. It came quite as a surprise to them that the court should ask the accused whether he objected to any of its members, and that other marks of impartiality and consideration should have been shown him; but, as many Egyptians stated to me afterwards, the greatest cause of their wonderment was the latitude allowed to counsel for the defence—an Englishman—who, in the conscientious execution of the duty he had assumed, first contested the competence of the court and then tried by all means in his power to mitigate the punishment to be meted out to a man of whose guilt neither he nor anyone else had any doubts. That a military court should entertain the plea submitted by counsel for the defence, instead of brushing it aside in virtue of the power that its constitution under martial law conferred on it, and that it should gravely and seriously consider the point as to whether in such a case it really had jurisdiction, are still the subject of favourable comment in Egyptian circles. There is, indeed, no doubt whatever that the conduct of the trial, under the presidency of Brigadier-General Frith, and the defence set up by Mr. Perrott have, by revealing the limits to which the conception of fair-play can go, raised the Egyptian, and indeed foreign, opinion of the British sense of justice and of duty to an even higher level than that at which it stood prior to the trial of this case. To this the files of the vernacular Press, since the passing of sentence on Mohammed Khalil, bear eloquent witness.

M. Venizelos.

M. Venizelos has continued in Alexandria the same triumphal progress that characterized his visit to Cairo. The ex-Premier was to have left this week for Cyprus viâ Port Said, but he has now postponed his departure for another week. Various rumours have been prevalent these past few days as to his having been recalled by the King, but it has been impossible to obtain conformation or otherwise. Whilst it is known that the relations between him and his sovereign have improved, and it is in some Hellenic circles thought quite possible that he might at any moment return to Athens, the general opinion is that he will first await the result of the elections. It is an undisputed fact that M. Venizelos came away from Athens because he did not want to be the direct cause of a conflict between the King and his subjects, and that he had advised his party to choose M. Ralli as their leader in the event of their being successful at the elections. The prominent Hellenes who have accompanied the ex-Premier are delighted at the reception he has had, and are of opinion that it will greatly add to his chances at the elections, which take place this month. They say that even if his party is successful he will not return to public affairs until after the war, but will content himself with directing its policy from behind the scenes. However, as one of those friends of his remarked to me, he is too great a patriot to hold back when his country needs him, and if, as it expects to do, his party gains a working

majority there is no doubt that the King will give way, and that M. Venizelos will respond to the call that will then be made on him.

Death of a Popular Court Functionary.

It came as a great shock to society, foreign as well as Egyptian, when it became known that Ahmed Khairy Bey, First Chamberlain to H.H. the Sultan, had succumbed to an attack of appendicitis. Khairy Bey, who was only taken ill ten days before he died, was a most popular and capable man, and his appointment to the suite of the Sultan was considered to be one of the best made by his Highness. That the late First Chamberlain was a man of unusual character was proved by the fact that he held the same post under the old régime, but gave it up, as he did not agree with the ex-Khedive. In Khairy Bey the Sultan loses a valued friend and servant, and Egypt one of the few men of character whom she possesses and can ill spare.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Fighting in the Near East. May 18.

Earl KITCHENER, in the course of a review of military operations in the various theatres of war, referred to the landing in and operations at the Gallipoli Peninsula. The landing itself, he said, effected in the teeth of great natural difficulties, skilfully prepared obstacles, and armed opposition, was a masterpiece of organisation, ingenuity, and courage, which will long be remembered. The progress of our troops is necessarily slow, since the country is most difficult. But the Turks are gradually being forced to retire from positions of great strength, and, though the enemy is being constantly reinforced, the news from this front is thoroughly satisfactory.

As to Mesopotamia, Lord Kitchener said: In Mesopotamia our Indian soldiers have shown their value and bravery by attacking and utterly routing the Turkish forces sent against them. Sir John Nixon is following up the results of his victory, and the whole country is gradually being cleared of all hostile forces.

Treatment of Ottoman Subjects.

The Earl of CROMER, referring to the treatment of Ottoman subjects now in this country, said he feared that the judges of the new tribunal having to deal with the loyalty and general character of Turks, Armenians, or Syrians, would find themselves in a very difficult position. There were a good many members of the Diplomatic and Consular Service who spoke Turkish and Arabic. If some of these gentlemen were added to the Courts as assessors they would be of considerable assistance to the judges.

Viscount ALLENDALE said that the composition of the proposed tribunal was still under consideration, and in settling it the suggestions of the Earl of Cromer would no doubt be considered.

HOUSE OF COMMONS.

British in Constantinople. May 13.

Sir EDWARD GREY, replying to Sir RICHARD COOPER, said that he had no information to show that all British subjects in Constantinople were being interned in Turkey. Inquiries were being made.

Future of Constantinople.

Replying to Mr. OUTHWAITE, who asked whether the Roumanian Government had been influenced by the view that a change in the possession of Constantinople might be to the detriment of that country; whether any agreement had been arrived at between the Allies regarding the future of Constantinople in the event of its fall; and, in such case, what commitment was entered into by his Majesty's Government, Sir EDWARD GREY said: It would not be in the public interest, and might gravely prejudice the progress and prospects of the war, if I were to make a statement at this moment on important questions of policy.

Persian Gulf Medals.

Colonel YATE asked the Under-Secretary for India whether a reply had yet been received from the Lords Commissioners of the Admiralty sanctioning the grant of the naval medal to the officers and men of the Royal Indian Marine for services in the Persian Gulf during the years 1909-14, and if the medal rolls had yet been prepared; and what further steps had been taken regarding the distribution of prize money to the officers and men of the Royal Indian Marine who were entitled to it for the same services, with special reference to the operations prior to the outbreak of war?

Mr. CHARLES ROBERTS: The Secretary of State is not yet in possession of the decision of the Board of Admiralty on the question of the grant of the naval medal to officers and men of the Royal Indian Marine. The Government of India have informed the Secretary of State that no officers and men of the Royal Indian Marine have performed services in the Persian Gulf of a kind for which prize money can be awarded, though there may be grounds for a small monetary reward in the case of the "Minto."

NEWS FROM TURKEY.

(FROM OUR SPECIAL CORRESPONDENT.)

ATHENS, May 10.

Allied Residents in Constantinople.

On Thursday last information reached Dedeagatch that the principal English and French residents in Constantinople had been notified by the Turkish authorities to assemble on the Galata Quay that morning with a view to their exile or their internment somewhere. Later news, however, came to hand to the effect that all the English and French in Constantinople had been given three days to leave the Turkish Empire; but whether this expulsion will be carried into effect remains to be seen. Up to the time of writing there is no news of any arrivals at Dedeagatch, so there are hopes that the American Ambassador may have succeeded in inducing the Turkish Government to reconsider its decision.

There is no information of a similar measure having been taken in Smyrna. In fact, the latest arrivals report all well there.

The Turkish "Victories."

During the first week after the renewal of the operations at the Dardanelles the official *communiqués* stated daily that the Allies had been repulsed everywhere, and had been driven into the sea. The Turkish papers were jubilant at these imaginary victories, and the culminating point of Oriental imbecility was the conferring of the title of Ghazi (conqueror) on the Sultan.

To keep up the farce, the Selamlik on the last two Fridays has taken place at San Sofia, and the Accession anniversary was celebrated with a great deal of fuss. Of course, all this is done with the view to concealing the real state of affairs from the public.

With the arrival of thousands of wounded in Constantinople, the delusion of the public becomes practically impossible, and a change of tone is visible in the Press. In fact, there is now much uneasiness in official circles in Constantinople, and reinforcements are being hurried to the Dardanelles. It is stated that the Peninsula of Gallipoli is strewn with dead Turks, and many deserters are crossing into Bulgarian territory in a half-starved condition.

Russian Operations.

The presence of the Russian Fleet at the mouth of the Bosphorus has practically closed the Black Sea to the Turks, and few, if any, vessels now leave the Bosphorus. There is no confirmation of the recent rumours that Russian troops had been landed on Turkish territory. The lights of the lighthouses in the Bosphorus and in the Sea of Marmora have been extinguished.

The sound of the Russian guns at the mouth of the Bosphorus and the dropping of shells near Buyukdere have naturally increased the general feeling of alarm, and the whole European population is anxiously awaiting the appearance of the Allied Fleet off Seraglio Point.

German-made Lies.

The Turkish Press is particularly vehement against England, and all the papers publish long articles containing scurrilous falsehoods about the state of the British Empire and the progress of the different campaigns. They say that England has been beaten everywhere, that she has lost all her colonies, that India and Egypt are in a state of revolt and after the war will be severed from the British Empire, and that the English will have to curl up in their own little isles. These outbursts, which are, of course, inspired by the Germans, are a sign of the times, and are like the yelping of a dog limping away after a good licking.

The papers are now filling their columns with fantastic narratives from wounded soldiers who have come from the Dardanelles, and who seem to vie with one another in exaggerating their own valour and the terrible chastisement which the brave Turks have inflicted on the Allies.

The Turks have made great efforts to salve the English and French submarines which were wrecked in the Dardanelles, but have not been successful.

Armenians and Greeks Arrested.

In Constantinople the arrest of Armenians continues, but it has not been possible to ascertain so far what is the real cause of these wholesale arrests. Hundreds of Greek *Rayahs* also have been arrested and forced to serve in the army.

The so-called requisitioning of goods by the military authorities has developed into barefaced robbery; for military officers enter any shop and take whatever they require, without any ceremony.

Hundreds of refugees from the Gallipoli Peninsula have arrived in Constantinople. Many of them have been sent to Anatolia.

Mr. Mumford's residence at Candilli, which had been commandeered by the police, has been destroyed by fire. A short time ago Mr. Mumford was the victim of Turkish unscrupulous methods in having his furniture sold to pay exorbitant taxes.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, May 4.

Bulgaria and the Entente.

The articles hostile to Bulgaria that appeared in the Press of the Entente countries regarding the Valandova affair encouraged the enemies of this country to prepare a fresh affair with the object of hopelessly compromising Bulgaria in the eyes of the Entente. But one of the Entente Powers discovered this plan, and sent warning to those responsible for it that its execution would not be countenanced; and this fact coming to the knowledge of the Bulgarian Government has helped greatly in winning Bulgaria over to the side of the Entente. Bulgaria has been led to make a statement regarding her demands, and if the Entente could guarantee their fulfilment she would engage to declare herself as their ally.

I learn from an authoritative source that the Bulgarian demands are as follows:—(1) The unconditional restoration to her of: (a) the Uncontested Zone of Macedonia as specified in the Serbo-Bulgarian Treaty of 1912, and (b) of the Dobruja, with the exception of Silistria, according to the St. Petersburg Conference; (2) the Enos-Midea frontier, according to the Treaty of London of 1913; (3) the possession of Kavalla, Drama, Seres, Vodena, Florina, Yenidje Vardar, and Kastoria; and (4) the necessary financial support. I understand that the Bulgarian Government has declared that if the fulfilment of these demands is guaranteed, without any conditions attached regarding Serbia receiving an outlet to the Adriatic, and if the Entente Powers will guarantee her against attack by Greece or Roumania while her army is engaged against Turkey, Bulgaria will at once mobilize her army and use it against Turkey as the ally of the Entente.

Bulgaria, it is explained, has no objection whatever to Serbia's obtaining a port on the Adriatic if she can do so, but this must not be made a condition of Bulgaria receiving Serbian Macedonia (the uncontested zone). It is generally believed here that if the Bulgarian demands are satisfied, and she takes part in the fighting, the end of the great European war will be very near.

"The Serbian Provocations."

Under the above heading the Ministerial journal, the *Narodni Prava*, writes:—

The Serbian Press Bureau continues, even now, when every detail regarding the Valandova incident is known, to invent all kinds of falsehoods in order to demonstrate that the Bulgarian Government was at least aware of the attack that was being prepared. We need not deny the Serbian intentions or point out that the Valandova incident was a direct result of the oppressive Serbian rule over the Bulgarian and Turkish population in Macedonia; for this is best shown by the thousands of fugitives arriving daily in Bulgaria. But we will just point out that the campaign engineered by the Serbian Government through the Serbian and certain foreign newspapers will certainly increase the feeling of bitterness which has existed amongst the Bulgarian community since the treachery of Serbia and the Treaty of Bucharest.

But as if all this were not enough, on April 24, at 11.30 p.m., an aeroplane coming from Serbia, in the direction of Radovishte, made a circuit over Strumitza. On its return journey, it passed over the village of Suchevo, on the edge of the Ograjda Mountain, and disappeared behind the mountain into Serbia. We cannot understand how it is that the Serbian Government and the Serbian military authorities decline to consider their conduct towards Bulgaria. To all our efforts in the past to preserve the peace of the Balkans the reply from Nish is continual provocations, which can hardly be tolerated any longer.

The Armenians in Constantinople.

Travellers lately arrived from Constantinople state that the news of the discovery of a great Armenian plot is a piece of pure invention on the part of the Turks. The arrests were made without any cause. Several days earlier the rumour had spread through the city and elsewhere in Turkey that the authorities intended to make wholesale arrests of Armenians without distinction of position, profession, or party. The lists had been prepared several weeks before, and on the morning of May 2 some scattered arrests were made, and at midnight wholesale arrests took place. All the known members of the Dashtnaktzutiun organisation, many bishops, clergy, doctors, merchants, State officials, and even a former Minister of Posts and Telegraphs fell victims. Questioned as to the reason for these arrests, Talaat Bey replied that the Van Dashtnaktzutiun party had stirred up the inhabitants of Van and occupied the town.

Railway Communications with Turkey.

The Turkish Government intended to stop for an indefinite period all railway communication between Turkey and this country, also with Dedeagatch. But in view of a protest by the Bulgarian Government, and fearing that the action threatened might serve as a pretext for Bulgaria to occupy the railway Karaagatch-Dedeagatch, the stoppage was not enforced. The timetable has, however, been radically changed, and the trains now pass through Turkish territory by night, and are subjected to great delay.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, April 30.

Italy and Roumania.

It is announced this morning that Italy has definitely thrown in her lot with the Allies. This comes somewhat as a surprise after the repeated assurances of the German and Austrian Press that the negotiations between their governments and that of Italy were proceeding favourably; but there can now be very little doubt that Roumania will follow the lead given her, and it is generally thought here that Bulgaria will be forced to follow suit, though with reluctance, perhaps.

No one will be more disappointed by the turn events have taken than the members of the Legations of the Dual Alliance here, who have worked feverishly, and have stuck at nothing to win over this country. The enormous sums they have spent seem to have been thrown away, and to have had no result except to excite ridicule in the pro-Ententist Press. One of the means adopted by these gentry to "educate" the Roumanians was the publication of an illustrated weekly paper, *Septamania Resboiului* ("The Week's War"). In an evil moment invitations were issued to vote for or against joining Germany and Austria. The results two days after the appearance of the number containing the voting papers were: 19 for Germany and Austria; 54 for continued neutrality; and 415 for joining the Allies.

Control of Aliens.

In connection with the new law for the control of aliens, the Prefecture of Police has issued a notice that all new arrivals in the country must register themselves within eight days. Failure to do this entails liability to a fine of 100 francs.

Munitions for Serbia.

It is reported from Danubian ports that a further convoy of eleven lighters from Russia, laden with munitions and stores for Serbia, and accompanied by five armed vessels, has passed up the river.

General Savoff arrived in Bucharest on the 27th inst., on his way to Russia.

Boy Scouts in Roumania.

The Boy Scout movement is gaining ground steadily in this country, and is now being taken very seriously. Prince Carol, who is Chief Scout, has been reviewing the scouts of various towns; and a few days ago the curious sight was witnessed at Silistria and Dobritch of Mohammedan Boy Scouts marching past him, all wearing the fez, though good Romans.

A Debarred Portia.

Some time ago I referred to the efforts of Mlle. Ella Negruzzi, who had successfully passed all the qualifying examinations for the law, to obtain leave to practise. The High Court has now finally decided that women may not act as lawyers in this country.

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore, where subscriptions are also received.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, May 7.

The Question of the Adriatic.

There is still great excitement in Serbia over the negotiations between the Triple Entente and Italy, and this afternoon a great meeting of protest is to be held. Serbia is crying out over the loss of Dalmatia. It will be remembered that there was a hue and cry when Austria annexed Bosnia and Herzegovina, and the same state of things exists to-day in Serbia with respect to the expected Italian annexations.

M. de Giers, the newly appointed Russian Minister Plenipotentiary to the Court of Rome, stopped here on his way to Italy, and the Prime Minister had long conferences with him. It is said that he gave assurances that the negotiations between the Powers of the Triple Entente had not yet been concluded, and that he himself had a special mission in connection with this subject.

The interpellation in the Skupshtina and the frequent articles in the Serbian Press are no doubt intended to call the attention of the Powers to Serbia's claims, but how far Serbia will be able to influence the Great Powers is another question, and one ill-effect of this agitation is that the public is stirred up to a great pitch of irritation.

The Situation at Belgrade.

There is almost daily interchange of shots between the Serbian artillery at Belgrade and the Austrian artillery on the opposite side of the river. Last Sunday there was very heavy firing on both sides, and some Austrian detachments attempted to cross into Serbian territory near Belgrade, but were prevented. On the same day the Austrians bombarded the town of Belgrade, and—if it was not intentional—there were a remarkable number of stray shots.

This state of things would not indicate the present as being a propitious moment for the return of the public to Belgrade, yet only three days ago drummers went through the streets of Nish notifying that the Belgrade inhabitants should return to their homes, and that there is a free railway service for the poorer classes. The destitute refugees were informed that their return to Belgrade was in a manner compulsory, as if they remained here they would no longer receive pecuniary support from the Nish Municipality.

If the Austrian artillery were dislodged from their positions near Semlin and driven off there would be safety, but until that is done there can be no dependence on a cessation of the bombardment of Belgrade.

The incursions of Bulgarian *Komitajis* have not ceased. In small numbers they continue their annoyances, and the Albanians also are not quiet. Provisions are dear and so are groceries and general imported merchandise, but that is partly to be attributed to the high rate of agio on gold.

However, on the whole one ought not to complain, as Nish must be a paradise compared with Budapest, according to the reports of the Serbian interned who have returned from Hungary. They state that the bread sold in Budapest is hardly eatable, a mixture of ingredients quite indigestible, worse than ever it was at Belgrade in the severest days of deprivation caused by the alternate evacuation and occupation of the town by the opposing armies and the breaking of the railway communications.

Typhus Diminishing.

The typhus epidemic is lessening in force. There are still a great many cases, but now the majority recover, whereas formerly the greater part died. There is no need now to complain of the lack of doctors, very many having been sent not only from England and America but also from other friendly States. The task that now confronts the sanitary authorities is to thoroughly cleanse certain outlying districts and to get rid of all possible breeding grounds for the microbe.

New buildings have been erected outside of Nish for the reception of patients in the event of the hot weather bringing with it any other epidemic. These are only necessary precautions.

CYPRUS NOTES

(From a Correspondent.)

Cyprus, April 30.

Mr. Venezelos, the ex-Prime Minister of Greece, is at present in Egypt, and, according to the Press here, an invitation has been addressed to him by the Metropolitan of Kitium to visit this island. Were he to do so he would certainly be very well received, especially by the Greek-speaking portion of the community, as they regard him, rightly or wrongly, as favourable to their desire for union with "Mother Greece." Since the annexation this desire has been raised into hope, as the so-called Greek inhabitants are determined to believe that the annexation is merely a step towards its realisation. Their emancipation from Turkish suzerainty seems to bring them by so much nearer to Greece.

The session of the Legislative Council has beaten all records for shortness, having closed within a fortnight of its having opened. It confined its attention to three matters only: Reply to the opening speech, the passing of the Estimates *en bloc*, and petitioning once again for union with Greece. It is understood, however, that it will have to meet again in order to consider the votes included under surplus balances, which are outside the actual annual Estimates.

The Limassol race meeting on the 15th and 17th instant was well attended, but there were few entries from Nicosia. Athletic sports were held in the same week by the men of the Malta Regiment.

FOR OUR SERBIAN ALLIES.

Serbia's troubles and misfortunes, of which she has assuredly had her share during recent years, have at least served to make many friends for her, and it is satisfactory to know, on the authority of our Belgrade Correspondent, that help is pouring into the country in the hour of its sore need. There need, however, be little fear that the help will be in excess of the requirements of the case. That is made clear in the booklet, "The Terrible Truth About Serbia," written by Sir Thomas Lipton, and issued recently by the Red Cross Society at the price of one penny. Lack of space forbids us quoting from the pamphlet, but we earnestly commend it to the attention of our readers. The picture drawn by Sir Thomas is an appalling one indeed; but it has its bright side in the account it gives of the splendid work being achieved by the devoted men and women who are labouring amongst the wounded and the sick, and the cheerful courage of the Serbian sufferers themselves. Those who desire to help this work are invited to send hospital comforts, blankets, drugs, etc., and, especially, money for the purchase of stores to the British Red Cross Society, 83, Pall Mall, marking their gifts "For Serbia."

The Farmers' Fund.

The British Farmers' Red Cross Fund, which is endeavouring to raise £100,000, has already (May 17) received over £20,000 towards that amount, and is sending out a second hospital to Serbia at an early date. This will cost £5,000; and further subscriptions are urgently needed. In the sixteenth list of subscriptions, to May 14, we note that Essex gives all the other counties a good lead, its subscriptions to that date totalling £2,776 9s. 3d. Other counties over £1,000 are: Sussex, £1,524 13s.; Lincolnshire, £1,395 8s. 5d.; Surrey, £1,331 15s. 7d.; Yorkshire, £1,260 6s. 3d.; Kent, £1,216 16s. 3d.; and Hertford, £1,088 3s. 3d. Subscriptions to and communications regarding the fund should be addressed to Herbert Brown, Esq., Room 5, Tower Bridge Flour Mills, Bermondsey, S.E.

Wounded Allies Relief Committee.

This Committee, whose typhoid hospital is being established at Kragujevatz, has received a satisfactory report from the doctor at present in charge. Dr. Lauwens reports that the building provided by the Serbian Government is spacious, clean, and in all ways suitable; that the unit has received the utmost attention from the Serbian Government; and that the typhus epidemic is already declining, a total of 20,000 cases in March having dropped in April to 12,000. He further relates the safe arrival of the Committee's motor ambulance, which is to be used at first for the transport of cases of infectious disease. Dr. Lauwens reports a most urgent need of all surgical instruments, dressing materials, and bandages, disinfectants, iodine, etc. Gifts in kind will be welcomed if addressed to the Committee at Sardinia House, Kingsway; while money should be sent to the Hon. Treasurer, Mr. T. O. Roberts, manager, London County and Westminster Bank, 217, Strand.

"TO THE BRITISH NATION."

JUGOSLAV MANIFESTO.

We have received for publication the following document, signed by the President, Dr. Ante Trumbic, and members of the Jugoslav Committee:—

Austria-Hungary and Germany have imposed upon the Southern Slav nation a fratricidal civil war. Eight million Southern Slavs (Jugoslavs) are condemned to fight against their own brothers and liberators. Large numbers have been expelled from their native soil, or put to death, while the prisons are crowded with political victims.

To-day the Jugoslav people cannot give expression to its wishes; its representative assemblies are closed, many of its deputies are in prison or subjected to a rigorous surveillance.

Those of our young men who succeeded in escaping are fighting in the ranks of the Serbian and Montenegrin armies. We, who at the outbreak of war happened to be abroad, feel it to be our bounden duty to acquaint the civilised world, and above all the British nation, with the true sentiments and aspirations of our people. Our Jugoslav brothers in America, meeting last March at Chicago in a congress of 563 delegates, have unanimously adopted our programme.

The Serbs, Croats and Slovenes pray for the victory of the Triple Entente, and confidently await from it the salvation of the Jugoslav nation. The conviction that the Triple Entente is fighting for the triumph of the principle of nationality inspired the moral energy and superhuman efforts of Serbia and Montenegro, and prevented their kinsmen across the frontier from utterly losing heart.

For Serbia and Montenegro this war is one of self-defence and liberation, not of conquest; they are fighting to emancipate our people from a foreign yoke and to unite them as a single free nation. The military and political overthrow of Austria-Hungary will for ever put an end to that system of "Divide et Impera," by which our people has for centuries been governed.

The Jugoslavs form a single nation, alike by identity of language, by the unanswerable laws of geography and by national consciousness. Only if united will they possess the resources necessary for an independent existence.

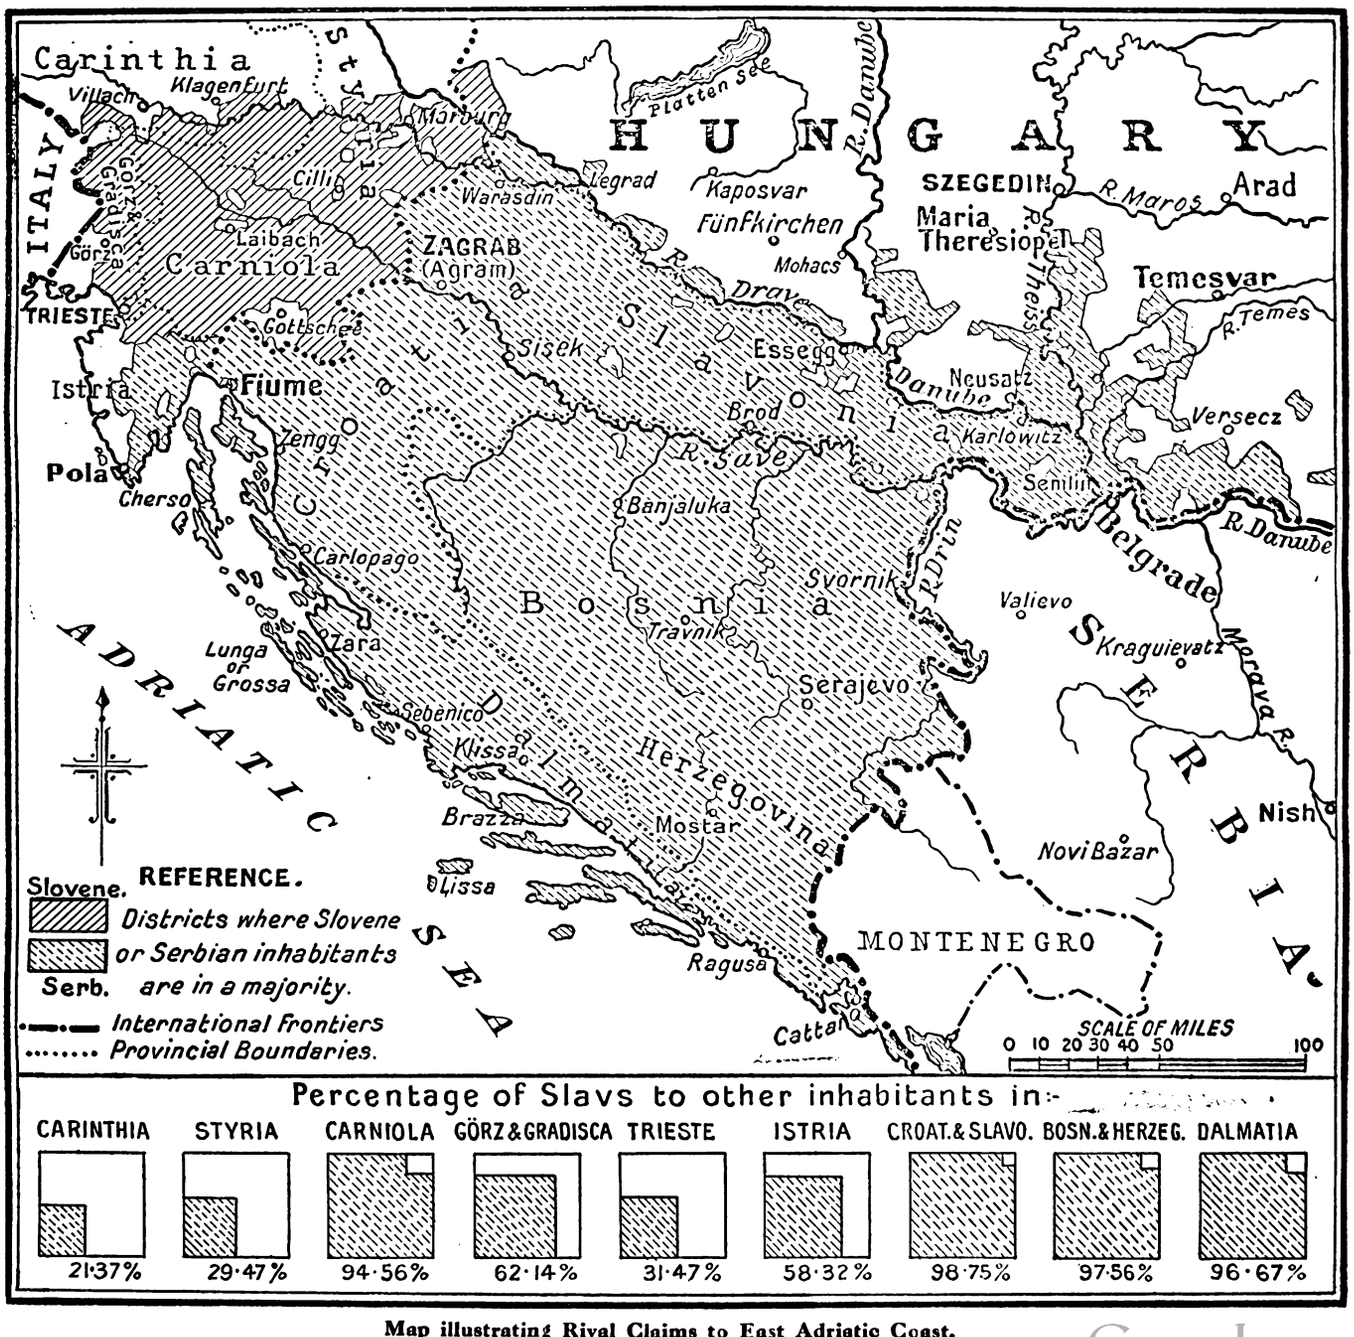
The Jugoslavs (Serbs, Croats and Slovenes) inhabit the following countries:—The Kingdoms of Serbia and Montenegro; the Triune Kingdom of Croatia-Slavonia-Dalmatia (with the Fiume and district); the provinces of Bosnia-Herzegovina and Carniola; considerable portions of the provinces of Istria, Trieste, Gorizia-Gradisca, Carinthia and Styria; and finally the Jugoslav zone of Hungary proper.

To perpetuate the disunion of these territories by leaving so many under Austro-Hungarian rule, or to transfer even portions of them to another alien rule, would be a flagrant violation of our ethnographical, geographical and economic unity, and to this our people would unquestionably oppose an energetic and justifiable resistance.

The Southern Slav people aspires to unite its territories in a single independent State. The internal arrangements of the new State will be determined by the nation itself, in accordance with its own wishes and needs.

The Southern Slav State (Jugoslavia) will be an element of order and of peace. While devoting its whole energies to the cause of progress, it will also develop those well-known virtues of its seafaring population, which the British nation will be the first to appreciate. Its ports will be open to trade in a manner hitherto unknown, and through them a commercial outlet will be assured to all the nations of their hinterland, especially to the Czechs and the Magyars.

Our people, which professes several religions, and whose tolerant spirit is well known, will crown its national unity by guarantees of religious equality and complete freedom of worship. Sure of the goodwill of our Russian brothers, we appeal also to the sympathies of their western Allies in our struggle for liberty. And in thus appealing, as representatives of a democratic people, to the British nation and Parliament, we look for such support as shall enable the Jugoslav nation, after centuries of martyrdom, to achieve at length its unity and independence.



Map illustrating Rival Claims to East Adriatic Coast.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

SERBIA AND THE ALLIES.

To the Editor of THE NEAR EAST.

Sir,—Heaven forbid that I should unkindly criticise our gallant Serbian Allies, but why on earth cannot they "cut the loss," and instead of wasting men and money on holding *all* Serbian Macedonia, in parts of which they are uncommonly unpopular, hand over Ishtib and Kotchana to the Bulgars in return for the promise of the latter to co-operate with us against Turkey?

Roumania has already agreed in principle to surrender part of her "new territory" to the Bulgars, from whom she took it in 1913. Cannot Serbia do the same, and even go further and surrender a slice of her cake to the doubtless annoying but necessary Bulgarian?

The Serbs have fought well, and held up a force of from 150,000 to 200,000 Austrians. But by refusing to concede anything to Bulgaria they have kept both Greeks, Roumans—and Bulgars from joining the Triple Entente. It may, indeed, be said that their diplomatic disservices to us have almost outweighed their military services. Do they not realise that if we lose they lose all, and that if we win they will gain really useful territorial acquisitions—Bosnia, Croatia, etc.? Cannot they agree to sacrifice something for those who have kept them in shells, cartridges, and medical aid since the war began?

We are losing, and shall lose, more men at the Dardanelles than we should have lost had the Serbian soldiers who surround Prince Alexander left diplomacy to diplomatists, instead of vetoing every suggestion of concession.—I remain, sir, etc.,

SERBOBORED MUCHLI.

Athens, April 4, 1915.

SERBIA AND BULGARIA.

To the Editor of THE NEAR EAST.

Sir,—I must, for the sake of right against wrong, ask once more for a space in your hospitable paper.

In your issue of the 9th last, only just received, Mr. Janitsch has come again to the attack. In my last, in your issue of April 9, I gave a definite refutation to every one of his assertions. He remains obdurate, and is apparently incapable of understanding that no further floundering in the bog can possibly secure to him a surer footing.

He knows as well as I do that the Serbians *at present* are held in England *en odeur de sainteté*, and that on the other hand the Bulgarians, because of the conditions of the present war, are looked upon as black sheep. Of this situation he takes, I think, unseemly advantage. Twice he calls the attention of your readers to the fact that in the present calamitous war Bulgaria is in the enemy's camp. Is he aware that the English are lovers, above all things, of a stand-up square fight, that they would qualify such an argument as hitting below the belt?

Mr. Janitsch, I am sorry to see, has introduced malice in the discussion. He insists that the Bulgarians are of a Mongol race, that they have nothing in common with the Slav. At present there is in England great sympathy for the Slavs, because of the hopes in the Russian armies, and antipathy for the Turks, of Mongol race, because they are fighting under the orders of their task-masters the Germans. Mr. Janitsch's object is, with a stroke of his pen, to place the Bulgarians in the Turkish camp, to alienate from them any possible sympathy, to deprive them of a fair hearing, and to obtain a cheap credence for his glaring, defamatory statements. This saw is very much used up, it cannot alter established facts. Mr. Janitsch might, with more authority and on the same grounds, object to the name of English or British. The Normans conquered England, introduced a great part of their language and many of their institutions, *but lost their name*. The original Bulgarians left the Slavs they conquered absolutely *nothing beyond their name*. The Bulgarians have been and are Slavs; it was in their language, more than a thousand years ago, that the first Slavic book was written. Ancient Slav is simply old Bulgarian. The ancient rich Slavic literature originated with the Bulgarians, and was in their old Bulgarian language.

With the question of treachery, as between the Bulgarians and the Serbians, I dealt fully in my letter in your issue of January 22. There Mr. Janitsch will find my answer.

Mr. Janitsch has the audacity to assert that the main battle against the Turks was fought by the Serbians at Koumanovo and Monastir (Bitolia). I could refer him to competent military writers in England and other countries. I will, however, limit myself to giving some very eloquent figures. The Bulgarian forces against the Turks amounted to 370,000 men, including 25,000 who operated in Macedonia and protected the Serbian left flank when the battle of Koumanovo was fought. There were not less than 520,000 Bulgarians doing military service or on the Quartermaster's list. The Turkish forces operating against the Bulgarians amounted to 330,000 men plus nearly 100,000 in Adrianople, and some 20,000 operating on the lower Maritza (Yaver Pasha's army). The forces of Serbia in the field never surpassed the number of 200,000 men; those of the Greeks 120,000. The Turkish forces which opposed Serbian and Greeks consisted of three army corps *incompletely mobilised*. I may put them down at 60,000 men at the utmost. The Serbian contingent at the siege of Adrianople was 31,000, and not 50,000, men, as Mr. Janitsch states. At Chatalja the Turks had concentrated not less than 400,000 men, and 80,000 at Bulair.

Some more figures:—The losses of the Bulgarians against the Turks were: 1,228 officers and 82,261 men, those of the Serbians 23,000. The Greeks refused to supply the information. The above figures are official, they deserve Mr. Janitsch's cogitation.

Mr. Janitsch vaunts the Serbian arms, and audaciously affirms that the Roumanian invasion had nothing to do with Bulgaria's collapse. Can he not appreciate the position of a soldier fighting two enemies in front, while aware that at the same time a third enemy was stealing behind him, already in possession of his unprotected home, with a raised sword at his back; and more besides, a fourth enemy treacherously invading Thrace, to conquer which he had shed the best of his life's blood?

Mr. Janitsch has never wished to know that towards the end of the war the Serbians were *figés* (congealed), as a Frenchman in authority described it, at Kalimantzi, and were incapable of further efforts; that about the same time the Greek army was placed in the greatest predicament in the Kresna Pass, that because of this inextricable position of the Greek army Bulgaria accepted the armistice in Bucharest, under the menace of an immediate occupation of Sofia by the Roumanian army, encamped within sight of the capital.

Mr. Janitsch quotes the Bulgaro-Serbian Treaty. I am much obliged to him. The strength of Bulgaria is in treaties, and in this one in particular. I had the pleasure of sending you, Sir, the English version of this Treaty, with annex and map, with my letter published in your issue of January 22, for publication. Had you, Sir, found it convenient to publish the Treaty Mr. Janitsch might have been spared falling into his own pit. Here again Mr. Janitsch is utterly wrong. He quotes Art. 2, paragraphs 2 and 3. I trust that these have been passed over to him, and that he knows nothing further of the Treaty: otherwise I am bound to charge him with unscrupulous dealing with documents. His quotation concerns territories which Serbia and Bulgaria engaged to place beyond the limits of discussion. They are territories over which neither Serbians, on the one hand, nor Bulgarians on the other, ever aspired to; they are beyond the Shar Mountains and east of the Rhodopes and the river Strouma. The question to settle concerned the territory between the above-mentioned frontier lines, the Ægean Sea, and the Lake of Ochrida. The following paragraph, which Mr. Janitsch has honestly quoted, says: "As regards the territories lying between the Shar Mountain, the Rhodopes, the Ægean Sea and the Lake of Ochrida. . . . Serbia binds herself not to put forward any claim in regard to the territories lying beyond the line marked on the annexed map, and which runs starting from the commencement of the Turkish-Bulgarian frontier at Mountain Golem (i.e., Kriva Palanka) in the general direction towards south-west up to the Lake of Ochrida." (Follows a detailed description of the frontier line).

Between this line and Shar Mountain is a territory of about 6,500 kilometres square, with the towns of Koumanovo, Skoplje (Uskub), Kalkandelen, Kitchevo, Struga, and Dibra included. This is the territory termed the Contested Zone, upon which the Russian Emperor was to arbitrate. I hope I have made myself clear.

Mr. Janitsch harps again upon a very exhausted subject, but he must have his second hit below the belt, and insists that the Macedonians being pure Slavs have nothing in common with the Mongol Bulgarians; that the Bulgarians had converted them to their views by the propaganda of priests, the fire and swords of the terrible *komitajis*—this during the last 40 years, that is to say, during the bloody rule of Sultan Hamid, the greatest persecutor of the Bulgarians!

The Macedonians have been Bulgarian ever since Macedonia was conquered by King Boris, baptized in the name of Mihail (837-852 A.D.). They remained Bulgarian during 168 years under the Byzantine rule (1018-1186). Their conqueror, Basil II., the Bulgarian Killer, confirmed the autonomy of the Bulgarian Church, which at the time exercised authority over Bulgaria, Thrace, Macedonia, Albania, Serbia and Bosnia. They remained Bulgarians under the short Serbian rule, some 50 years in the fourteenth century. During this period the Bulgarian Patriarchs of Tirnovo as well as of Ochrida continued in their functions, the latter by the authority of the Serbian king, and they have remained Bulgarians ever since.

The folklore of the Macedonians is in the Bulgarian, not in the Serbian, language.—I am, etc.,

P. M. MATTHEEFF.

Sofia, May 3.

To the Editor of THE NEAR EAST.

Sir,—Will you allow me to make a very short reply to the letter of Mr. Kenneth H. Ledward in your issue of the 14th instant? On my own part this shall be my last word in the short controversy started by the letters of The O'Mahony and Mr. Mattheeff.

Mr. Ledward asserts that it was the Serbians who provoked the Bulgarian attack on the Allies, because "as early as November, 1912, they were making every effort to get the treaty abrogated, and were using every diplomatic lever in Petrograd to obtain not only the *zone contestée*, but also lands beyond which they had previously bound themselves not to claim!" Is it possible not to make any distinction between the loyal diplomatic efforts to obtain honourably, by mutual consent, a formal modification of a treaty *which had ceased to be just and was already modified by practical events* and an unexpected, treacherously executed attack by all the military force on the Allies? All the world knows well that the actual circumstances were already in November, 1912, fundamentally changed, that

Digitized by Google

the Serbians carried out their engagements beyond the stipulations of the treaty, and that the Bulgarians carried out theirs below those stipulations. In proof of this let me mention only the well-known fact that the Serbians sent their troops to assist the Bulgarians to conquer Adrianople, although such assistance was not stipulated for in the treaty, and the Bulgarians did not send their troops to assist the Serbian operations in Macedonia, although they were engaged by the treaty to do so. For their services rendered to the Bulgarians outside and above the treaty stipulations the Serbians had clearly the right to demand from the Bulgarians adequate compensations, and such compensations would be given to them by anyone else but the Bulgarians. The Serbians were asking for compensations in a legal, loyal manner and a conciliatory spirit. They were willing and ready to submit their entire case to the arbitration of the Tsar, *as it is officially established and proved*. It is absolutely impossible to put the methods which the Bulgarians used in the same category with the methods which the Serbians used. The responsibility for the war between the Serbians and Bulgarians lies clearly and undoubtedly with the Bulgarians. That has been acknowledged by every impartial outsider.

It seems to me that the second argument of Mr. Ledward is of the same nature. He says: "General Savoff's order *followed* the proclamation of King Peter bidding his army move against the Bulgarians." It may be that the order of General Savoff was issued *after* the proclamation of King Peter (Mr. Ledward is not quite sure of it himself, saying: "as far as we can judge now"). But in any case the proclamation of King Peter was issued *after the Bulgarian army's attack* on Serbia.

That the meeting between the Greek and Serbian staffs in May, 1913, is "a direct evidence that the two Allies were meditating at some future date an attack on the Bulgarians" is nothing but a wanton supposition. The suspicious conduct of the Government and the menacing tone of the Press of Bulgaria imposed on Greece and Serbia the duty to consider how to defend themselves against an eventual attack with which Bulgaria openly menaced them. Besides, against Mr. Ledward's supposition we have the great and glaring fact that the Bulgarians *actually attacked* Greece and Serbia.

The argument that the Serbians, by establishing their own administration in the Macedonian towns which they conquered from the Turks, gave proof of their intention to tear up the treaty I cannot understand. Surely it was a plain duty of Serbia to establish her own authorities in the towns which her army had just conquered from the Turks. The preservation of order required the immediate organisation of such authorities, without prejudice to the question to whom those towns should later on definitively belong. There is no example in history that a conqueror ever did otherwise.

Was the main Turkish offensive directed against the Serbians or not? That is a question of secondary importance, and I have mentioned it only as such. However, it is a fact that Zekki Pasha and Djavid Pasha were as well known as able generals as Abdullah and Nazim, and that the very best Turkish troops were entrusted with the defence of Macedonia. When the Turks received reinforcements of the Anatolian troops, the Bulgarians were beaten at Chatalja. I do not mean to insinuate that the Bulgarians are not brave and excellent soldiers. Nobody could question that. But I must say I am astonished by the assertion that the Turks "cared little for Macedonia." At any rate, they offered stubborn resistance, and fought bloody battles in defence of Macedonia—a fact which is well known.

I cannot enter now into the question of the nationality of Macedonia and of the number of schools in that country. Those questions are complicated, and could be solved only on the basis of trustworthy statistics and by a scientific method, and not by space-limited polemics. It is sufficient here to mention that all well-known and well-informed foreign scientists have established that Macedonia forms a *transition* zone, and that accordingly, and in the best case for the Bulgarians, Macedonia is as much Bulgarian as she is Serbian also.

The Treaty of San Stefano, which neglected the Serbian and Greek interests, and unjustifiably favoured exclusively Bulgarian interests, was a mistake of Russian diplomacy. Russia is suffering to-day for that mistake, and with her also her allies, France and England. I will only give expression to the hope that similar mistakes shall not be committed in the future.

As we are touching here the chapter of errors, it will not be difficult for me to confess that Serbia, for some time, was losing ground in Macedonia, partly by her own fault. Her unfortunate history during the last thirty years, the difficult position in which she found herself, the many and big tasks which she had, did not allow her to keep what was her own on all sides. But it seems to me very unjust that impartial and disinterested men should now hinder Serbia from preserving that which is her own and for which she has paid so dearly again.

The Valandova incident had its causes not *at home*, but *abroad*. It is an invention and a fiction that it was the result of the oppression of the Serbian Government against the people of that district. In reality it was prepared and organised on Bulgarian territory, with at least the connivance of the Bulgarian Government, because, clearly, preparations of such proportions, with artillery and machine guns, cannot be carried on without the knowledge of the authorities of the district. I do not wish to embitter these polemics, and therefore I leave aside the question: Could such conduct of the Bulgarian Government be in the interest of the Entente Powers, and how could it be harmonised with the friendly assurances from Bulgarian sources, of which one was published in the same number in which Mr. Ledward's letter appeared? But I must say that it is paradoxical, to put it mildly, to adduce the Valandova incident as an argument in favour of the Bulgarians.

I am sincerely grateful to Mr. Ledward for his flattering words concerning the Serbian people. I am sure they are sincere, and they do not surprise me coming from him; for Englishmen love to be just and impartial, and their precious friendship fills us with pride. Still, I fear that Mr. Ledward, taking so bravely the brief for Bulgaria, had not unintentionally increased the Serbian mistakes and reduced the Bulgarian ones. For instance, he says that Serbia had in 1885 attacked Bulgaria without any cause. "Without any cause" is unjustifiable. It may have been a mistake of the then existing Government, when King Milan also committed a gross *blunder* by declaring war without sufficient ammunition and mobilising only 30,000 troops against 100,000 Bulgarians. Expressing such a severe judgment on Serbia, Mr. Ledward declares for the other side, and even after the Valandova incident and the attack on the main line Skoplje-Salonika—that Bulgaria "magnanimously forbore to attack Serbia last December," and that the attack of General Savoff on Serbia in 1913 was only a blunder! A treacherous and criminal attack on the Allies, by which the Bulgarians killed and wounded between five and six thousand Serbians while they were, so to speak, asleep—to be called simply a blunder! In that case the Germans might declare that their sinking of the "Lusitania" was not an intentional murderous attack, but simply a blunder!

We Serbians desire as much as Mr. Ledward to see the end of this disastrous war. We are ready, and have given abundant proofs of such a disposition, to make every reasonable concession for that object. But on no account to an extent where the interest and the national life of Serbia could be injured. I again appeal most sincerely to the British patriots and friends of the Balkan nations not to be one-sided friends. The one-sided friends, especially those of the Bulgarians, succeed only in inflaming the passions and developing impossible and unjust desires. Exactly such one-sided friends of the Bulgarians are responsible for the present conduct of Bulgaria. It ought not to be lost to view that not only has Bulgaria not yet joined the Allies, who fight for the liberation and regeneration of Europe, but during the first eight months of the war she was preventing Roumania and Greece from intervening on the side of the Allies. It is well known that both those Balkan kingdoms were explaining—I believe quite sincerely and truthfully—their hesitation to join the Allies by their distrust of Bulgaria's intentions, who might attack them while they were at war elsewhere. I especially have to draw attention to that fact. It is impossible to obtain from Bulgaria even an unequivocal neutrality. Her declarations are only empty words, when her *deeds* are showing that she is in truth hostile to the Entente Powers. And while such is the conduct of Bulgaria towards them, Serbia has readily and joyfully given to the common cause of justice and liberty, and therefore also to the allied Powers of the Triple Entente, all she had in her modest power to give. It seems to us very strange, and, indeed, it is painful to us, that even under such circumstances it is expected that only Serbia should make concessions! It is possible that those demands are asked from her, according to the general law of "weaker resistance," because she always has been giving way. But it is well to remember that justice and every true success are only to be attained by the way of "stronger resistance!" In this instance this way is the more clearly indicated because, with some nations, as well as with some individuals, yielding awakens only fresh demands. It is only firm and decided conduct that can keep them within the bounds of justice and equity.

I am, Sir, with grateful thanks for your impartiality and courtesy, your obedient servant,

D. JANITSCH.

London, W., May 19, 1915.

BISHOPS AT THE FRONT.

To the Editor of THE NEAR EAST.

Sir,—We have all read with deep interest the many accounts of the Bishop of London's visit to the front. Doubtless many a humble brother-parson has envied his Lordship such an opportunity as he had and wisely took. It was in every sense right that the Bishop should go to the front, and we are all assured that his visit was greatly appreciated by our splendid men.

It may be that not many people are aware that one of the finest of our bishops has been at the front since August doing chaplain's work. I refer to Bishop Gwynne of Khartoum, whose work amongst men, though so quiet and unassuming, is both far-reaching and deep in its effect.—I am, sir, etc.

JAMES WHITAKER.

NEAR EAST BOOKSHELF.

THE BAZAARS OF STAMBOUL.*

There was once upon a time, to use a term dear to our childhood, a lover of beautiful Oriental objects, and he went to Constantinople in the heyday of revolutions and counter revolutions to see if he (or his companions) could pick up some bargains which would later be put on board a boat sailing from the Mediterranean to the great river Thames. The plan was a good one—the campaign promised well—the more so considering that no less a person than a Turkish Prince had promised many things. The Yildiz Kiosk, that supposedly wonderful jewel possessed by Sultan Abdul Hamid the Wise, on the wooded shores of the Bosphorus, was the ultimate goal of the expedition. For, it was rumoured on the boulevards of the City of Light, the rare treasures of the Kiosk—rich carpets that had been hand-woven in the hills of Turkestan, priceless pearls that had come from the pools of the Persian Gulf, exquisite perfumes from the vales of Araby, and choice embroideries tear-stained by captives of the harem—were to be disposed of, and the first on the spot would have the first pick. Hearing which, the British expedition, with a voluble Turkish prince to back it, sped in haste across the dull plains of Hungary, through the hills of Serbia, and along the Maritza to Constantinople, to the Golden Horn, to Stamboul of many weird shops and bazaars, and finally to the Yildiz Kiosk. There comedy was staged for them, eunuchs with scimitars, guards, Armenian interpreters, paltry escorts, and so forth, *but no treasures!*

The story of the expedition and its failures is told by Sir Arthur Liberty in a pretty little volume entitled "The Treasure Hunt." Now and again the chatty, gossipy style, masking disappointment 'neath a veil of irony, is broken by descriptive passages of real merit. Take, for instance, the description of the Mosque of Ahmed:—

"The Mosque of Ahmed is more and more fascinating the more one sees of it. In dignity and grace its exterior is even more impressive than its near neighbour, Santa Sophia. . . . If the exterior is beautiful, the interior staggers one with its dignity and vastness, and yet its lines are as simple as the effect is stupendous. Just a dome on four columns, with aisles running round. But such a mighty dome, and such mighty columns, . . . of a thickness beyond belief, and faced with translucent tiles in infinite variety of designs and colourings! Tiles of like bewitching hues rise in a gigantic dado round the aisles, and fill the dome. One stands as 'twere beneath a heaven inset with gems."

In passages like the above one forgets the treasure hunt, and dreams of that other hunt, the hunt for things beautiful, and, truly, Constantinople is the mistress city of wonderful sights, of beautiful objects that linger in one's mind like a fairy dream. Be it the silhouettes of minarets at night or the same minarets resplendent in the sunshine; be it the multi-coloured crowds which surge ceaselessly backwards and forwards, on land and on water, at the Golden Horn; be it the striking contrasts on the Bosphorus, the clear waters of the Gulf of Ismidt, with its pine-clad islands, or the quaint picturesqueness of old nooks and crannies in the bazaars—these and a thousand and one other kaleidoscopic scenes make Constantinople what she is, and always must be, the artist's favourite among the favoured cities of the world.

But, to return to the Treasure Hunt. The particular hunt described by Sir Arthur Liberty fell as flat as an anti-climax, which is to be deplored. If, however, the scribblers, alias correspondents, of the British Press abroad are to be believed, there are excellent prospects for future campaigns. Thus, for instance, the neutral writer in *The Times* on "Turkey from Within," asserts that never "have the bazaars been so rich in the best things that the Orient has produced. In the arcade where carpets are sold the little dark shops are crammed with the most beautiful Persian and Indian rugs. In the arcade where the dealers in carved stones are found, in that where wrought and engraved brasswork is shown, the same conditions prevail. Elsewhere are exhibited wonderful gold and silver tissues and embroideries, the art of Bokhara and of Brusa." In other words, there is a glut of good things in the bazaars, and, unconsciously, when reading the book under review, I could not but help remembering that fact—why, I do not know.

In conclusion, I must congratulate the publishers of "The Treasure Hunt" on the admirable way in which they have produced the book in two colours, with quaint and attractive woodcuts, and old-fashioned lettering. If only more books were printed in this commendable way!

C. R.

* "The Treasure Hunt: The Conspirators in Constantinople." By Arthur Lazenby Liberty. Printed by Liberty and Co.

BEYOND THE VEIL.†

The quotation from the work of Abu Saïd, the Persian poet, with which Mr. Tudor-Pole closes his own book seems to embody the whole teaching that he is so anxious to emphasise:—

The veil between God and His servant is neither earth nor heaven, nor the throne, nor the footstool. Thy selfhood and illusions are the veil, and when thou removest these thou hast attained unto God!

It is the thought that has been aimed at by the visionaries of all ages, the dream of earthly perfection wrought by a full recognition of the Divine presence in each aspect of our every-day life. Death is not regarded as a barrier between earthly and spiritual existence; it is a door through which the spirit passes from one plane of existence to another. We imagine that the present war will be responsible for the production of many books on this subject. It is impossible not to think of death; it is equally impossible to regard it with indifference. Already we hear of battle-field visions which have come to the support of some of our least imaginative soldiers in the time of their greatest stress in Flanders and elsewhere.

Mr. Tudor-Pole feels the moving of vaster powers than our own above the chaos of the battle-field, and he urges us to think, and to enquire, and to pray. We neither accept nor reject his arguments, but although his book is lamentably lacking in cohesion it is still well worth reading. The author, however, has to a certain extent undermined the possible usefulness of his book by a tendency to looseness in his moralisings, as for instance, when he recounts a harmless tale against England given him in parable by a sheikh in Egypt, and concludes by remarking that: "This is the Oriental idea of the way in which Great Britain has become possessed of her colonies and dependencies." He might have said with truth that this is *an* Oriental idea; to use the word *the* as though the sheikh's opinion was held by Orientals generally is preposterous.

BOOK RECEIVED.

Fate and Free-Will. By Ardaser Sobrabjee N. Wadia, M.A. (J. M. Dent and Sons. 2s. 6d. net.)

MASSACRE AT VAN.

A telegram received in London from the Russian Consul at Urumiah, dated May 15, announces that 6,000 Armenians have been massacred at Van. It is added that the people are defending themselves as well as they can against the Turks and Kurds, but that help is urgently needed.

A telegram from Cettinje, received by Sir J. Roper Parkington, Consul-General for Montenegro, states that Austrian soldiers are driving Bosnian villagers over the frontier into Montenegro. Fighting has taken place in the Gorazda district between Austrian and Montenegrin troops, the latter maintaining their positions.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915.	1915.		1333.	5675.
May	May		Rejeb.	Sivan.
21	8	Friday	7	8
22	9	Saturday.....	8	9
23	10	Sunday	9	10
24	11	Monday	10	11
25	12	Tuesday	11	12
26	13	Wednesday	12	13
27	14	Thursday	13	14

Monday is the birthday of H.R.H. Princess Elisabeth of Greece, second daughter of Prince Nicholas, and niece of King Constantine.

Wednesday is the birthday of H.M. the Queen.

On Thursday of last week the Hellenic Minister received a telegram from Athens announcing that King Constantine was suffering from pleurisy. Happily the latest bulletins report that his Majesty's condition is, upon the whole, satisfactory.

Our Sofia Correspondent writes (May 4):—Last Wednesday Prince Mehmed Burhan-ed-Din, the youngest son of the ex-Sultan Abdul Hamid, accompanied by his aide-de-camp, Hassan Ali Bey, and an old woman, arrived at Sofia at 1.30 p.m., coming from Constantinople. He left the same evening for Bucharest, travelling by way of Rustchuk.

Lord Kitchener had an audience of the King last Friday.

Prince S. Cantacuzene, a member of the Roumanian Parliament, after spending several weeks in London, left town on Tuesday for Bucharest.

The Greek Minister and Mme. Gennadius returned to the Legation on Tuesday from the country.

M. de Giers, the new Russian Ambassador to the Court of Rome, was received by King Victor Emmanuel on Tuesday, and presented his credentials.

A Reuter's message reports that General Gouraud, the new Commander-in-Chief of the French forces in the Dardanelles, has arrived at the front.

Sir William Willcocks is reported to have arrived in Roumania from Egypt in connection with some important irrigation schemes which the Roumanian Government is considering.

Mr. Wedgwood Benn, M.P., arrived at Alexandria on April 23, and is staying for a short time in the desert at Sidi Bishr.

Our Special Correspondent in Athens reports, under date of May 10: Mr. Keyser and daughters have arrived from Smyrna. Mr. Keyser has proceeded to France and England, and his two daughters are staying at the Ilion Palace Hotel.

Mr. Edward Barff has also left Smyrna and has gone on to England.

Sir Thomas Lipton, with a number of nurses, arrived at Malta on Saturday in his yacht "Erin," en route for Serbia.

STOBART'S MOVABLE HOSPITAL in SERBIA.—Additional FUNDS are URGENTLY REQUIRED to purchase Horse Ambulance for above Unit.—Mrs. Bargrave Deane, 52, Eaton Place, S.W.

The Malta correspondent of the *Morning Post* reports that with the approval of Field-Marshal Lord Methuen, the Admiralty, and the War Office, Lieutenant-Colonel Sir Courtauld Thomson has been appointed Chief Commissioner of the Order of St. John and the British Red Cross Society of Malta and the Near East. Sir Courtauld will be responsible for the organisation and co-ordination of the Red Cross in the Island. Colonel Sir Frederick Treves, who accompanies Sir Courtauld, has, with Lord Methuen, visited most of the hospitals with a view to ascertaining how the two societies can best assist.

Under date of May 17, the same correspondent reports that Sir Frederick Treves and Sir Courtauld Thomson, of the British Red Cross Society, have left Malta for Egypt. Sir Thomas Lipton's yacht "Erin" left on Saturday for Salonika with Red Cross units for Serbia.

On Wednesday afternoon, at Queen's Hall, M. Miyatovitch, former Serbian Minister to the Court of St. James, gave an address to members of the Conservative and Unionist Women's Franchise Association and their friends on "Social Conditions in Serbia."

In Henry VII.'s Chapel, Westminster Abbey, the marriage was solemnised last Saturday morning of the Hon. Geoffrey Howard, M.P., son of the Earl of Carlisle, to the Hon. Ethel Christian Methuen, eldest daughter of Field-Marshal Lord Methuen, Governor of Malta. In the unavoidable absence of Lord Methuen the bride was given away by her brother, the Hon. Paul Methuen. She was attended by one maid, her sister, the Hon. Ellen Seymour Methuen, and the Hon. Edwin Montagu, M.P. (Chancellor of the Duchy of Lancaster), acted as best man. Among those present were Lady Methuen, the Prime Minister and Mrs. Asquith, the Duke and Duchess of Somerset, Viscount Gladstone, Lord Sydenham, Lady Murray, Sir John Fuller, and Mrs. Winston Churchill.

Mr. A. S. Delany, who recently arrived in Ireland from the Sudan, has been given a commission in the Dublin Fusiliers.

A telegram from Cettinje, received in London last Friday, states that the death of Mr. Charles Tapp, one of the ambulance officers of the British Medical Mission despatched to Montenegro from England last January, has aroused the deepest sympathy there. The Montenegrin Government and the Committee of the Montenegrin Red Cross have sent expressions of regret to the British Minister.

News was received in London yesterday that Lieutenant-General Sir W. R. Birdwood, K.C.S.I., C.B., D.S.O., in command of the Australasian Force on the Gallipoli Peninsula, has been wounded. We are glad to learn, however, that the wound is a slight one. At the time he was selected to lead the Commonwealth troops and the New Zealanders, Sir William Birdwood was Secretary of the Army Department at Delhi, and he had previously held several important posts in India, amongst others those of Assistant Military Secretary and Persian Interpreter under Lord Kitchener.

Lieutenant-Colonel John Campbell, D.S.O., 2nd Cameron Highlanders, who is reported wounded with the Expeditionary Force, served under Lord Kitchener in the Sudan, where the Camerons led the charge at the Atbara, and took part in the Battle of Omdurman. He also served in the South African War.

Lieutenant-Colonel R. J. Bridgford, D.S.O., 2nd Shropshire Light Infantry, who is reported wounded while serving with the Expeditionary Force, at one time commanded the Egyptian Mounted Infantry.

Lieutenant-Colonel G. Swinton Tulloh, commanding the 2nd Battalion Gloucestershire Regiment, who is reported killed in action, had seen service in Egypt, South Africa, Malta, India, and Ceylon.

Major John Harington, 4th Rifle Brigade, who is reported wounded at the Front, served with Lord Kitchener in the advance on Khartoum, and took part in the operations against the Mad Mullah in 1903. He has also seen service in Central Africa and in the South African War.

Major A. H. Festing, C.M.G., D.S.O., 1st Royal Irish Rifles, reported killed in action while serving with the Expeditionary Force, had done much useful work on the Nile, being extra-regimentally employed.

Fleet Paymaster Arthur R. G. Beal, H.M.S. "Goliath," who is reported missing, was clerk of H.M.S. "Minotaur" during the Egyptian War of 1882, and was awarded the Egyptian Medal and the Khedive's Bronze Star.

Captain G. C. S. MacLeod, 2nd Battalion Black Watch, who is reported to have died at Bethune on May 13 of wounds received in action on the 9th inst., served with the Egyptian Army from 1906 to 1908.

Captain Francis S. Brodigan, 1st Battalion Gloucestershire Regiment, who was killed in action recently, was the only son of the late Colonel Brodigan, of Pilltown House, Drogheda, Co. Meath, who, in the same regiment, served with much distinction throughout the Crimean War.

Lieutenant Brian T. R. Mellard, who was killed in action at the Dardanelles, was a nephew of the Prime Minister.

Lieutenant James Arthur Chetwynd Inglis, 4th Battalion Highland Light Infantry, attached 1st Batt. Seaforth Highlanders, who is reported killed in action in Flanders on the 9th inst., was the only son of Major J. A. S. Inglis, who was at one time Commissioner of Nicosia, Cyprus.

We regret to learn that Mr. Arthur T. Upson, superintendent of the Nile Mission Press, Cairo, has been medically advised to leave Egypt for several months in order to avoid a breakdown due to nerve strain. Mr. and Mrs. Upson are due to arrive in England this week, travelling via France, and the following address will always find them: Care of Nile Mission Press, 16, Southfield Road, Tunbridge Wells.

The death is announced from Southampton of Mr. James Herbert, who served with the 1st Battalion 25th Regiment at the Siege of Sebastopol. He had recently celebrated his golden wedding.

At His Majesty's Theatre "The Right to Kill" has been somewhat curtailed, and modifications have been introduced, which put the heroine in a more sympathetic light.

Our Cairo "season" contemporary, the *Sphinx*, has suspended publication, as usual, for the summer months. This weekly publication, intended to chronicle the doings of society visitors to the Nile Valley, has had to contend, naturally, with adverse circumstances owing to the war, but, under the able editorship of Miss Griffiths, it has worthily maintained the traditions of former seasons. We can only hope that conditions will have sufficiently improved by next winter to ensure the successful continuance of the paper, which fills a decided want in the capital of Egypt.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.
Entire Charge. Trained Nurse. Qualified Resident Master.
Boys prepared for Public Schools and Royal Navy.

APPOINTMENTS, PROMOTIONS, etc.

Our Cyprus Correspondent informs us that Mr. Thomas Greenwood, Local Commandant of Police, has been appointed to act as District Commissioner, Larnaca, during the absence on leave of Mr. C. B. Wodehouse.

Mr. Charles E. Hamson, lately Vice-Consul at Constantinople, and more recently employed in the Passport Department of the Foreign Office, was appointed H.M. Vice-Consul at Dunkirk, and left for his post on April 28. His family has remained in London, and continues to reside at 139, Ladbroke Road, Holland Park, W.

The following Egyptian Government officials passed the elementary examination in Arabic for non-Egyptians held on April 10 and following days:—William Butler Bently, Ministry of Finance; Alexander Evelyn Cardew, Ministry of Finance; Charles Docker, Instructor, Intermediate School of Accountancy and Commerce; Elliot FitzGibbon, Ministry of the Interior; Georges Ligonniére, Instructor, Intermediate School of Accountancy and Commerce; Reginald George Randall, Ministry of Education; Arthur Walton, Instructor, Intermediate School of Accountancy and Commerce; Charles Anthony Williams, Ministry of Agriculture.

WARREN, Act.-Corporal R. M., 7th (S.) Batt. Rifle Brigade, Guadeloupe Barracks, Bordon Camp, Hants.
WHEATLEY, Miss, Sister Q.A.I.M.N.S.R., No. 3 Casualty Clearing Station, British Expeditionary Force.
WHEELER, Lieut. P. F. C. d'Erf, 1st Dorset Regiment.
WHITTALL, Captain G., 1st Oxford and Bucks Light Infantry.
WHITTALL, 2nd Lieut. Arthur, 7th (Res.) City of London Regiment.
WHITTALL, Lieut. Hugh, Royal Marines. (Serving abroad.)
WHITTALL, Private Kenneth, 10th Batt. Royal Fusiliers, Colchester.
WHITTALL, Private Roland, 10th Batt. Royal Fusiliers, Colchester.
WHITTALL, Rifleman Walter, 8th Service Batt. Rifle Brigade.

NEAR EAST DIRECTORY.

The Directory of the present addresses of residents in Turkey who have left that country in consequence of the war does not appear in this issue. The complete Directory will appear as often as space permits. It was last published in our issue of May 14. The following is a list of additions and changes of address received since that date:—

EADY, Griffin, Hotel Grande Bretagne, Athens.
GANDON, J., Hotel Grand Bretagne, Athens.
MUMFORD, Newman, Hotel Alexander le Grand, Athens.
VERE, Harry, Hotel Grande Bretagne, Athens.
WHITTALL, Charlton, Hotel d'Angleterre, Athens.
WHITTALL, Edwin, Hotel Grand Bretagne, Athens.
WHITTALL, W. J. W., Hotel Minerva, Athens.

For the benefit of their friends we hope our readers will assist us in keeping the Directory as up to date as possible by notifying us of any changes of address, etc., at the earliest opportunity.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 1s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

FERGUSON.—May 16, at 9, South Square, Boston, Lincs., the wife of Frank Ferguson, of a son.

HUTT.—On the 14th inst., at Aspenden, Hertfordshire, the wife of Lieutenant John Hutt, R.N.V.R. (on active service), of a son. Malta papers, please copy.

DEATH.

BRIAN.—Killed in action, in France, on May 9, Lieutenant Herbert Cecil Brian, R.G.A., eldest and dearly loved son of Mr. and Mrs. H. E. Brian, of Cairo, Egypt, and of Holmburg, Berkhamsted. Aged twenty-three years.

The partnership formerly existing between Messrs. Joseph Cohen, Jacques Eskenazi, and N. Babani having been dissolved, the Han Halil shop of JOSEPH COHEN is now in the same road, near the Arch Way, Cairo, entrance from the Mousky. Friends and customers are respectfully requested to visit the new shop when visiting the Bazaar, where they will find a rich assortment of carpets, embroideries, etc., etc.—Advt.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

UPPER EGYPT.

Luxor.
The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.
The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.
Are the Finest on the Nile.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Alexandria.
WINDSOR HOTEL (*Facing the Sea on the New Quay*).
Most delightful and healthy situation of any Hotel in Alexandria. Electric Light throughout. Daily Concerts on Verandah. Meals served *al fresco*. French Cuisine and English Management.
Inclusive Terms from P.T. 60 (10s.) per day.
Special Terms to Government Officials, Commercial Travellers, and for long stays.
Proprietor and Manager—AUG. van MILLINGEN.

Alexandria.
CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. **Full Pension P.T. 50 per day.**
C. AQUILINA, *Proprietor.*
(Late of Messrs. Thos. Cook & Son.)

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

BRITISH DIPLOMACY IN THE NEAR EAST.

A new and welcome departure in British diplomacy in the Near East has to be recorded. In the first week in May Sir Edward Grey received, through the kind offices of the American Ambassador in Constantinople, an intimation to the effect that in view of the bombardment of Gallipoli and other places Enver Pasha had decided to send to the danger zone in Gallipoli Peninsula a number of British subjects and French citizens in order to expose them to the same perils as Turkish non-combatants in this zone. The step would not be taken, however, if by May 6 Great Britain gave the Porte an assurance that the bombardment of Gallipoli and other "unfortified" places would be discontinued. Sir Edward Grey's reply to this communication was brief. He asked the American Ambassador to be good enough to inform the Ottoman Government that, if British or French non-combatants were transported to those places which, owing to the presence of the Ottoman army, fall within the zone of present military operations, his Majesty's Government would hold Enver Pasha, the Grand Vizier, the members of the present Ottoman Ministry, as well as the military authorities commanding the Turkish troops, personally responsible for the life of any British subject or French citizen so transported, and for any hurt, damage, or wounds which such nationals might receive. Meanwhile, on May 6 the Turkish Government had selected twenty-six British subjects and twenty-four French citizens and shipped them on a transport to Gallipoli. In reply to the American Ambassador's request that no action should be taken until an answer had been received from the British and French Governments, Enver Pasha stated that, having given the order and issued it to the military authorities, he could not countermand it without serious injury to army discipline. The fifty hostages, however, do not appear to have been landed, and on receiving the Allies' reply the Turkish Government recalled the transport to Constantinople.

The significance of this incident, we may hope, will not be overlooked. In the first place it will be a matter of genuine regret to many to learn that the Turks are abandoning the correct attitude which they appeared to have adopted for the conduct of this war. The appalling excesses of their Kurdish irregulars against the unarmed population of the territory on both sides of the Persian frontier have been in a category by themselves, unless we have to credit reports just received of terrible outrages on wounded and prisoners committed by the enemy on Gallipoli Peninsula. But where circumstances placed citizens of the Allied States in the power of the Turkish authorities in Baghdad, Busreh, and elsewhere no complaint of actually inhumane treatment has had to be raised. It has been left to the authorities in Constantinople, under the instigation, no doubt, of their German taskmasters, to sink to the level of German barbarity. The proposal to place British and French hostages within the zone of military operations has had its counterpart in the employment by the Germans in Belgium of women and children as a screen for their own troops in the presence of the Allied forces. It is a piece of villainy which would have been denounced throughout the civilized world, if the sum total of German atrocities had not forestalled indignation over any one particular outrage. For the moment, however, we are more concerned with the chain of events which thwarted the Turkish Government of its purpose. It announced its intention of resorting to a barbarous practice in the hope of prejudicing the Allies' military and naval operations at the Dardanelles. Sir Edward Grey's reply was prompt and emphatic. He made no attempt to strike a bargain with the Turks or to parley with them in the hope of persuading them of the error of their ways. For the lives and well-being of any British subject or French citizen the lives of the members of the Turkish Government and of the military authorities countenancing the outrage would be held forfeit. Enver Pasha and his colleagues appreciated the directness of the reply, and the transport sent to Gallipoli was ordered to return to Constantinople. The episode, we trust, will bear fruit for the rest of the war, so that Turkey at least may be spared, when peace is signed, the additional humility of making reparation for criminal outrages. We cannot tell to what extent the kind offices of the American Ambassador, who has done so much for the Allies since the outbreak of war with Turkey, were a factor in the result, but we feel confident that the straightforward and unequivocal tone of Sir Edward Grey's communication was the keynote of its success.

But Sir Edward Grey's reply ought to have far more significance for British diplomacy. It implies, we may hope, a complete break with the procedure of recent years, during which the British Government has allowed its influence in the Near East to be almost entirely eliminated. From the vigorous diplomacy of Sir William White's days we have relapsed into a condition in which our representatives are merely content to wait on the turn of events and consider the Empire well served if they merely ask for and pass on instructions from the Foreign Office. Personal influence and strength of character are the only qualities that Orientals really understand. They contributed mainly to the success of Baron Marschall von Bieberstein with the Porte. The mere fact that for a number of years no ambassador of commanding personality has represented us at Constantinople has been regarded by the Turks as evidence that the star of the British Empire was setting. That we should be satisfied to see Germany making the Near East the special feature of her diplomatic service, while we continued to treat it as a backwater of our own service, could only mean to the Turkish mind that we had definitively abandoned any claim to a leading position in Europe. That policy has borne, and is still bearing, bitter fruit for Great Britain. Orientals do not understand what our politicians call generosity or liberality. They mistake it for weakness. Whatever may be the territorial changes introduced as a result of this war, the Near East will continue to play an important part in the destinies of Europe. The individual States may be relatively small, but their capacity for shaping the trend of European politics is considerable. We can only hope to exercise a salutary influence in these territories, if we select hereafter as our representatives men of strong character—not necessarily tactless ones. Among the causes that will have led to Turkey's undoing there is no doubt she can fairly include want of guidance from our diplomatic representatives, more particularly as she had always had reason to regard our country as her best friend. She had a right to expect a measure of protection from the ever-increasing incubus of German intrigue. We gave her none; on the contrary, we ignored the danger as long as we conveniently could, and when it was thrust upon our attention we would make some protest, but usually contrived to step still farther into the background, leaving yet a wider field open to the Germans. Chance seems to have guided the British Government once more into the wisest way of dealing with the Turks, and we will hope that the attendant success will serve to commend it. At the end of the war they will need our disinterested friendship as much as ever; but to be effective it must be given incisively and without wavering.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions recently will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

JUSTICE IN EGYPT.

JUDICIAL ADVISER'S REPORT FOR 1913-14.

(By Our Cairo Correspondent.)

In view of the fact that H.B.M.'s Representative in Egypt will not issue his reports this year, an unusual interest attaches to those published by the different administrations, as they constitute, in the circumstances, the sole means at the disposal of the public for judging of the progress made during the past year. Recently I had occasion to review the Note on the Budget by the Financial Adviser. To-day I am able, similarly, to deal with the report on the judicial administration of the country, presented by Sir Malcolm McIlwraith, Judicial Adviser to the Egyptian Government.

The report opens by pointing out that whilst the outbreak of war must have affected the judicial administration, just as it has affected most other things in the counry, it is as yet too early to gauge the nature and extent of the effects thus produced. The judicial year ends on October 31, which means that the one under review covered three months of the war. Those three months showed a marked diminution in crime and litigation, there being a decrease of 78 crimes, 5,000 civil cases in the Summary Courts, and 8,000 in the Cantonal Courts. But the check given to the criminal and litigious proclivities of the people appears to have been merely a momentary one, for since November there has been a very large increase in both classes of work, the number of cases in the Cantonal Courts alone amounting in January to no less than 45,000, the monthly average for the previous year having been 22,000. The Adviser concludes that as regards crime and litigation "it seems likely that the figures for 1914-1915 will be largely in excess of those for the year under review." In so far as legislation is concerned, this from the point of view of the Ministry of Justice almost entirely ceased with the proclamation of Martial Law in November last, since when legislation has been usually effected by Military Proclamation.

Native Civil Jurisdiction.

With the exception of the Courts of First Instance in Appeal and of the Cantonal Courts, the number of new cases brought before the various Civil Courts of the Native Tribunals decreased during the year. The total number was 376,027, as against 482,347; the most important decrease was in the Summary Courts, where, despite the extension of their competence to £E150, the number of new cases dropped from 206,892 to 98,199. This decrease is due to the institution of the Cantonal Courts, and as the fall has been continuous and steady throughout the twelve months, "the outbreak of war and the consequent moratorium do not appear to have had any appreciable influence on the number of cases." It is satisfactory to note that the number of cases awaiting trial at the end of the year in all the Civil Courts, except the Central Tribunals in Appeal, has decreased.

The Cantonal Courts.

The new cases before the Cantonal Courts increased last year by 14,713, or 5.8 per cent. Of these 43,229 were Summary Court cases brought before the aforementioned courts with a view to first effecting a compromise, according to the law—7.3 per cent. of these cases were eventually settled by agreement; 1,139, being outside their jurisdiction, were, nevertheless, brought before them by agreement between the parties. Appeals appear to be beginning to pile up, for whilst the 265,949 new cases make an average per tribunal of 1,131, as against 1,070 the previous year, the numbers awaiting trial and in suspense at the end of the twelvemonth averaged respectively 78 and 13 per tribunal, compared with 62 and 8 at the close of the judicial year 1912-1913.

The Judicial Adviser is of opinion that these courts, which are now in their third year, "have certainly proved a great success" from the point of view of the volume of work laid upon them. As a proof of the fellahs' appreciation of their institution, he points to the fact that of the 376,027 civil cases entered for trial last year 70.7 per cent. were brought before the Cantonal Courts. About half these cases are for sums under £E1, and so are heard without fees, which prompts Sir Malcolm to remark, "that it is open to question whether it is desirable to render litigation so cheap as to encourage people to come forward with vast numbers of petty claims without making any contribution to the general expenses of judicial administration. The Judicial Adviser has doubts as to whether the phenomenal volume of business that has flowed into these courts shows that they supply a long-felt want, or whether the provision of this popular system of justice has not stimulated, if it has not largely created, the production of claims. At the same time he is of opinion that "there is probably no intention of interfering now with the policy to which they owe their existence." The justice they administer may be defective in individual cases, but there appears to be no evidence "that in the vast mass of business the people are dissatisfied with the decisions of the notables." This fact is certainly borne out by the manner in which the decisions in penal cases were received. In only thirteen cases was an appeal made, and as proof of the fairness of the notables' judgment, in eight of these the sentences were confirmed, whilst in the 888 appeals made in civil cases 78 per cent. of the judgments were confirmed.

Native Criminal Jurisdiction.

Crime during 1913-1914 showed a gratifying reduction of 327 cases, or 8 per cent., reverting for all practical purposes to the figure recorded in 1911-1912. With the exception of arson, which increased by 13.2 per cent., there has been a decrease in almost every category. Murder, continuing its previous year's tendency, and attempted murder have both fallen off appreciably, especially in Assiut, which has ever enjoyed an unsavoury criminal reputation. An interesting table inserted in this year's report shows that there is possibly some connection between the number of arms seized by the Mudirias and the reduction in serious crime. In 1913 300,000 and in 1914 25,000 firearms were thus seized. "A continuation of this activity should have excellent effects in diminishing crime."

Criminal inquiries rose by 1.9 per cent. to 235,842, of which 196,138 were classed as real cases. The decrease of 16.1 per cent. in the arrears shows that the Parquet was able fully to cope with the work. On the other hand, it is unsatisfactory to note that the percentage of cases filed temporarily for want of evidence has risen. Misdemeanours once again show an unfortunate upward tendency, jumping to 98,548 cases from 92,938 in the previous year. The principal heads of increase are destruction of crops, cattle-poisoning, misappropriation, common assault, resistance to the authorities, and cotton worm. The last-named is, if anything, welcome, as it indicates that the law for the extermination of that pest is being put into effect, but, generally speaking, it is difficult to find a reason for this rise in misdemeanours. "The economic condition of Egypt may account for an increase in the number of thefts and vagrancy, but there is no apparent reason why common assault and resistance to the authorities should have increased."

On the other hand, contraventions as a whole decreased slightly, though in certain categories there are marked increases, due to activity in certain directions by the authorities, or to the creation of a new service, such, for instance, as that of weights and measures. It is surprising to note that practically all the cases made out under the "Protection of Useful Birds Law" were at Alexandria and Damietta. The only conclusion to be drawn therefrom is that the provincial authorities are slack in this respect. One would do wrong to assume that the absence of cases in the other parts of the country indicates obedience to this particular law, since the mere fact of the latter's great utility to the country would serve to render such obedience quite contrary to native habit. Considering the havoc that is wrought by the cotton pests and, at the moment, by the locusts, and the great assistance that these birds give in the work of extermination, it is to be hoped that steps will be taken to force the local authorities vigorously to apply this useful law.

In view of the campaign against drink that is being waged at home, it is interesting to study the statistics of prosecutions for drunkenness in this country. Cairo comes easily first with 2,405 such cases—of which 59 were against foreign subjects; Alexandria comes next with 481 cases (28 foreign subjects), Port Said third with 436 cases (13 foreign subjects), and Suez fourth with 259 (7 foreign subjects). It is curious to note that the proportion per 10,000 inhabitants at Port Said and Suez is extraordinarily high—87 and 143 respectively, whilst that at Alexandria for some inexplicable reason is markedly low. The report points out that drunkenness amongst natives is prevalent at Tanta, Minia, Luxor, Assiut, Beni-Suef, and Sohag, and adds: "It will be noticed that all these places have a European population of some size." Seeing that alcoholic drink is forbidden by the Koran, it would be interesting to have statistics showing the religions of the persons prosecuted.

Work of the Courts.

The number of persons who applied to the Cassation Court on points of law against sentences for crime or for misdemeanour was 2,046; of these only 55 were admitted. There has been a slight increase in the number of cases judged by the Assize Court—2,504, against 2,442 in 1912-1913. The percentage of acquittals in both cases and persons has fallen off, and in both categories compares favourably with foreign statistics. But while the decrease in acquittals on murder and attempted murder charges is, in the opinion of the Judicial Adviser, very satisfactory, the increase in those on charges of arson and forgery seems to indicate that the *Juge de renvoi* has not been sufficiently careful in his preliminary work. The Assize Courts set the same number of days per month, and decided the same number of cases per day, as in 1912-1913, but Sir Malcolm adds: "I regret to state that the average number of days between the commission of a crime and its final judgment has again increased from 103 to 107."

The Summary Courts tried 101,738 cases of misdemeanours, contraventions, etc., as against 81,112 in 1912-1913. The proportion of persons tried for misdemeanour per 100,000

Digitized by Google

inhabitants was 1,041, as compared with 611 in France, and the percentage of men to women was 6.7 per cent., as against 13.5 per cent. in France. Fewer paid their fines and more elected for labour instead of fine than in the previous year, clearly a sign of the economic stringency. The Cantonal Courts tried 6,661 cases, as against 6,065 the previous year. The percentage of acquittals was high, 56.4 per cent., but this was "probably on account of the disputants becoming reconciled in court."

There has been a slight decrease in the periods of preventive arrest, except before the Assize Courts. Indeed, in the latter the condition of affairs is far from satisfactory, for of 536 persons subsequently convicted, 108 were kept under arrest for five months and over, and of 216 persons subsequently acquitted, 76 were confined for similar periods.

Under Law No. 12 of 1912, persons sentenced to simple imprisonment not exceeding three months could be employed on extramural labour. Of the 14,051 persons thus sentenced, 10,360, of 73.7 per cent., elected for labour in lieu, and taking into consideration those who elected for labour instead of fines and costs, 37,458 persons actually worked without pay for the Government, benefiting the latter to the extent of £E1,800. Juvenile offenders, after showing a decrease in the previous year, are again on the upward grade, having increased by 6.3 per cent. to 5,129. The Judicial Adviser again draws attention to the fact that "there is still no proper method in this country of dealing with the hordes of juveniles who infest the large centres," but as a very large number of boys gain their livelihood by selling papers, he hopes that the new *arrêté* compelling newsvendors to be licensed will enable the police to control them better.

Commenting on the situation as regards crime in general, Sir Malcolm McIlwraith is of opinion that "the headings under which the chief decreases fall are a matter for satisfaction." He draws particular attention to the reduction of crime in Assiut, which "is most marked and, indeed, quite remarkable." But against this decrease in crime has to be set the rise in misdemeanours, which include considerable increases in cases of destruction of crops, cattle poisoning, misappropriation, and common theft. "Poverty," says he, "produced by the economic situation resulting from the war may be responsible for a certain proportion of these increases, but the lawless state of mind of large portions of the population, as exemplified by these figures, is most unsatisfactory." He adds that compulsory education, by improving the position of women in the country, might in time raise the standard of morality among the children, but until the ingrained habits of these classes of the population have been radically changed, some better means of repressing crime must be found. And here the Adviser proceeds to place his finger on the weak joint in the machinery. He declares that no system of repressing crime can succeed unless the Parquet and the Police work in harmony. Co-operation between these two administrations oft-times shines by its absence, and its lack often enables a criminal to escape. Whilst these two mutually necessary administrations continue to exist under present conditions, no improvement in the work of repressing crime may be expected, and Sir Malcolm very practically expresses the opinion that "the time has come to reconsider the whole question."

IVAN MEŠTROVIĆ: SCULPTOR.

By Ernest H. R. Collings.

There has recently been exhibited at the Victoria and Albert Museum, South Kensington, a group of works by Rodin, and the fact that in the same hall are the colossal bronze figure of a Buddha (sixteenth-century Japanese) and the two marble Corean mandarins (Chinese Ming period) reminds us of the gulf between the art of the East and that of the West, which has existed for so long, but which through the ubiquitous searchings of the modern mind may tend to become bridged.

Already we may see the early growth of such a link in the sculpture of Mestrovic, a southern Slav who, racially, stands mid-way between Eastern and Western civilisations.

Ivan Mestrovic was born in 1883 at Urpolje, in Croatia-Slavonia. He spent his boyhood and early youth minding his father's flock until a patron's generosity enabled him to commence a training in the art of sculpture, to which his thoughts were set from early years, and which first showed itself in the carving of wood.

He studied at the Vienna Academy of Fine Arts, and his work shows how thoroughly he took to heart the maxim which is recorded in an official publication of the Ministry for Public Works, Vienna:—"In modelling and drawing from the nude the chief weight is to be placed on the total appearance and the study of movement, and then only are the details to be studied." Further, his student years coincided with those which saw the revival of Austrian art, and his receptive mind must have been alert to all the eager aspirations of that time.

From Vienna he went to Paris, and then to Rome, paying a visit in the meantime to London with the sole object of seeing the Elgin Marbles in the British Museum. His name appears in the catalogue of the Dalmatian Artists' Exhibition in "Elysia," at the Austrian Exhibition, Earl's Court, London, in 1906, "Item 19—Sculptures," but I have no record of the nature of the exhibits. The only example of his work now in England is, I believe, the cast in bronze which belongs to Mr. John Lavery, A.R.A. (lent by him to the International Society's Exhibition at the Grosvenor Gallery in the autumn of 1913), and was taken from the head (modelled from the sculptor's wife) of one of the mourning women intended for the after-mentioned "Temple of Kossovo." Mestrovic's most important work has been shown at Venice (1907), Paris (1909), Vienna (1910), at Rome and Zagreb in 1911, and at Venice last year, when he exhibited in the Salone Centrale of the International Art Exhibition, in addition to several pieces of sculpture, his model for "The Temple of Kossovo," figures and groups for which were the outstanding features of "The Pavilion of the Kingdom of Serbia," at Rome in 1911, a building which may be regarded as a draft model of the temple itself. To the realisation of this project all the sculptor's efforts have been directed. His whole inspiration springs from his deep sense of the brotherhood of the Southern Slavs, their past greatness and their destiny, and "The Temple of Kossovo" is designed as a monument to the national heroes, particularly Marko Kralyevitch and his *pobratim* (brother-in-God), Milos Obilitch, and to those who fell in 1389 on the battlefield of Kossovo when the Serbs entered on their long subjection to the Turks; but the building is more than this, it is a shrine of national ideals, kept down but never dead, and during the last few years awaking in deeds that are leading to the freedom of Serbs, Croats, and their kindred peoples: a temple in which the flame of an unconquered spirit is kept burning. It is necessary when considering his art to remember the powerful stimulus which all his country's joys and sorrows gave this lonely shepherd boy, who never ceased to dream that he would one day give form to those heroic figures which his people's songs kept ever before him. In addition to the sculptures (which include "Sphinx," the huge mounted "Marko Kralyevitch," "Milos Obilitch" (a symbol of the spirit animating the sculptor himself), the series of Caryatides, the groups of widows, and the haunting relief "The Maiden of Kossovo") intended for the temple, Mestrovic has produced various others of great interest, among them, "My Mother" (upon which children would place fresh flowers each morning when it was shown at Zagreb); the perfect "Innocence," a carven stone in which he has enshrined that moment when Nature seems to halt in awed joy before she leads onward the maid to womanhood; and that silent-song in marble, "Remembrance," bought for the Modern Gallery, Vienna.

A writer in the *Manchester Guardian* of October 31, 1912, says: "It is a safe prophecy that in Mestrovic we see the most organic force as well as one of the most subtle craftsmen according in modern sculpture," and if we attempt to compare his art with that of other moderns, we see that he stands apart in singleness of purpose, control of and respect for his material, and in the spiritual fury of his thought, the fusion of which qualities has produced work that rooted in good gross earth flowers naturally to the skies.

We are compelled to judge him in the divine company of the Egyptians, the Greeks, and Michelangelo, and if we apply the most stringent tests can we name another who has a better right to the next place in the *direct* line of true sculptors?

[NOTE.—Since the above was written, Ivan Mestrovic has arrived in London, as also has a representative collection of his work for exhibition at South Kensington Museum.]

TANGIER TO TEHERAN.

On the occasion of my visits to Constantinople I have always found it a rather pleasant city, but I must admit that I have no great desire to return to it again just now. That view, however, is not shared by a good many Englishmen who were until lately resident in the place. I have talked with several of them and received letters from others, and most of them appear to be quite impatient to get back to their old haunts. For instance, one of them, writing from Dedeagatch on May 6, says: "I may say that ever since daylight on Sunday morning, April 25, the bombardment in the Gulf of Saros and the Straits of the Dardanelles has been incessant day and night. From here we have 'assisted' by listening and seeing the flashes occasionally, and with every boom we have felt that we were one step nearer home (Constantinople)."

***

Letters written by officers and men taking part in the operations at the head of the Persian Gulf make frequent mention of the mirage, which on one occasion at least appears to have saved our enemy from severe punishment. This, I take it, is not what is known as the true mirage, in which an image of objects, frequently beyond the horizon, is seen reflected in the air; but rather a kind of heat haze, a quivering of the air close to the earth's surface, such as you may see in this country occasionally in the hot weather, especially above a fence or wall, or when lying on the ground. But in Mesopotamia and in other parts of the East this quivering of the air is very much more marked than ever it is in England, and I can readily believe that it must prove a great trial to our troops when they are engaged in shooting, or trying to shoot, the Turks or Arabs. For viewed through its medium, any object at a distance appears blurred and faint, when you can see it at all, and, moreover, it often seems to be jumping up and down when it is in fact perfectly still. Under such conditions it is, for instance, practically impossible for an engineer or surveyor to read a ten-foot rod at a distance of five hundred feet; and for this reason, I am told, surveying work in certain parts of India is invariably suspended during the hot weather.

***

But even so, I was surprised to read in the letter from an officer in the Indian cavalry, which was published in THE NEAR EAST of May 7, that the Bedouin "are perfect adepts at attacking from behind mirages." For I had always understood that if, of two people facing one another but widely separated, one observed a mirage in any particular place or direction, it would be either invisible to the other, or would appear in a totally different direction. Under those conditions it would seem that the Bedawi's only chance of carrying out the strategem referred to would lie in a knowledge of optics with which one is hardly inclined to credit him; but it is possible that his wonderfully developed instinct may serve him in lieu of such scientific equipment. At any rate, he knows his native desert as well as, if not better than, the old Londoner knows his own city, and it is obvious that he is quick to take advantage of his knowledge, and as ready as ever to turn his hand "against every man."

***

For my own part, I have seen at sea one very perfect mirage—or as sailors call it, I believe, a "looming"—in which a steamer and a sailing vessel, both below the horizon, appeared for a short time suspended in the air; and, very curiously, there were two images of both, one erect and one inverted. I very well remember my surprise when both faded away; for I had never suspected that the erect images were mere phantom ships. On land, too, I have seen the mirage in various forms, the most perfect example being in the Euphrates valley, where I saw a long-drawn-out caravan of camels apparently stalking through the sky. But the commonest form of illusion I am acquainted with in those parts is the appearance of shallow pools of blue water, which, when you reach the spot where you hav marked them down, prove to be absolutely non-existent. Fortunately, this experience has never befallen me at a time when I was suffering from thirst; but I have known caravan animals, which were suffering from want of water, deceived by these appearances, and grievously disappointed when disillusionment fell upon them.

***

A trustworthy and well-informed correspondent in Bulgaria informs me that deserters from the Turkish army who escape across the frontier complain bitterly of the shortness of food. It does not necessarily follow from this that the Turkish troops really are on short rations; for, of course, a deserter is always ready to put forward excuses for his desertion, and somehow it seems less damaging to a man's self-respect to say that he took leave because he was underfed rather than because he was afraid. But, for all that, I should not be surprised if there were something in these deserters' tales. Enver and his German masters may try to feed their troops well, but they have to rely to a large extent on Turkish assistants, and—well, the days of peculation are not yet quite over in Turkey!

This is made very clear by a story told to a representative of the *Egyptian Gazette* by refugees who recently arrived in Alexandria from Jaffa. The American relief ship "Vulcan," it seems, arrived at the Syrian port with a thousand tons of food sent by the Jews of the United States for distribution amongst the long-suffering people of Syria and Palestine. She was welcomed with enthusiasm by the Turkish authorities, who insisted that *they* should receive 75 per cent. of the provisions themselves as "bakshish," although "the Ottoman Government had given assurances to the United States Government that every assistance would be given to the 'Vulcan.'" Happily the American Consul and the representative on board the "Vulcan" of the United States Government succeeded in nipping the authorities' hopes in the bud. But if such things can be attempted in the case of an American consignment of this kind, what may not be expected with regard to the Turkish Government's own stores when they pass through the hands of their own people—and of the Germans?

***

The *Vossische Zeitung* has been good enough to produce a long article detailing the many and wonderful benefits which are to be bestowed upon Egypt when (and if) her administration falls into German hands. It appears that for many years past England has, all unbeknown to the world, been occupied in putting spokes in the wheel of Egypt's intellectual development. This is very shocking, and our esteemed contemporary has some difficulty in finding fitting phrases in which to express its scorn. We are told, however, that the hour of deliverance is at hand, the day for setting things right is drawing near, and with German Kultur as the directing force in Egypt, the "world will be astonished at the course which events will take." If the Egyptian results of German Kultur are to be anything like the samples supplied elsewhere, perhaps the world would rather not be astonished—but this is by the way. Not only do the Germans propose to reorganize all the Government departments of State and introduce their own system of education into the country, they intend also to bestow upon the long-suffering fellaheen the ineffable gift of the German language. His cup of bliss is indeed to be full! Incidentally, and apparently as an afterthought, the paper refers to the benefits which Germany will herself obtain. It must be extremely satisfactory for her to know that the thousands and thousands of pounds which she poured into the country for purposes of—well, for political purposes, in time of peace, are not to be lost after all. Capital and interest will be every penny repaid when—and if—the Germans arrive an active force in Egypt to claim it.

CORSAIR.

Sir J. Roper Parkington, Consul-General for Montenegro, has received the following official telegram from Cettinje:—

The Commander of the Montenegrin Army operating near the banks of the Drina on the Bosnian frontier states that there is considerable activity on the enemy's flank. The Austrian soldiers are driving the villagers from their homes, and the women, children, and old men are compelled to take refuge behind our troops. It is evidently the intention of the enemy to force the entire frontier population into the interior of our country. Yesterday a stubborn artillery and infantry fight took place on the Herzegovinian frontier in the Gorazda district between our troops and the Austrians; the fighting lasted the whole afternoon, but we fully maintained our original positions.

"Try a chota peg o' Perfection.
"Notice how mellow and silky it is?—not a touch of 'bite' or harshness. That's the effect of maturing in sherry casks. Makes it a little darker in colour, too.
"You'll order a case of Perfection?
"Well, everyone of 'ours' is doing the same. They all like it. Here's a toast, old man. Drink up—To Perfection, the best whisky in India, from the everlasting hills to the plains."

THE PRESS ON THE NEAR EAST.

Constantinople, Islam, and Russia.

Lieutenant-Colonel A. C. Yates, contributing an article to the *United Service Magazine* (May), is inclined to the opinion that Russia has a very good claim to Constantinople, although he is entirely opposed to the tendency evinced in some quarters of "booming" Russia as the rightful "Heir of Byzantium." A great part of his article is devoted to showing "what a comparatively poor case Mr. J. W. Mackail . . . has made out for his Imperial *protégée*." Mr. Mackail, with the *Spectator*, appears to form the principal objective of Colonel Yates' article. We quote from one of his references to the paper in question:—

The *Spectator's* latest move is to urge that not only Constantinople, but Adrianople also be handed over to Russia. On this point I can only express a very earnest hope that nothing of the sort may come to pass. Bulgaria may have erred, but she has also suffered deeply and fought gallantly. Bulgaria has a right to Adrianople.

In a further reference to a remark of Mr. Mackail's concerning the regeneration of Germany, Colonel Yates produces an epigram which is singularly to the point, and which should live. "To-day," he writes, "the regeneration of Germany is the degradation of the world." In the latter portion of his article he deals with the question of whether Russia should be accorded territorial connection with Constantinople; the following quotation is from his remarks in this regard—

We can hardly wonder that Greece, Bulgaria, and Roumania do remain sitting on the fence. Their propects, as Allies of the Triple Entente, are not encouraging. Two years ago Bulgaria had captured Adrianople and fought her way to the lines of Chatalja. Then fortune hit her hard, and she lost much that had been won at heavy cost. Can Bulgaria and Roumania contemplate with equanimity the loss of their frontage on the Black Sea coast?

The Dardanelles.

The vital issues attaching to our attack upon the Dardanelles are admirably dealt with by Captain E. N. Bennett in the *Daily Chronicle* (May 14). Captain Bennett has only recently returned to England after a three months' sojourn in the Balkans, and he has been considerably astonished at the attitude of a section of the British public towards the question of the Dardanelles. For weeks past, he writes, the Gallipoli Peninsula has become a "veritable cynosure to the military and naval eyes of the Nearer East." He emphasises the ferocity of the struggle in which England is engaged, and points out that even our own resources are not limitless, while France is subjected to a strain which we can only dimly realize in England.

What, then, is the best means for ending the war with satisfaction to the Allies? If we are to avoid the prolonged agony and terrible exhaustion of a two or three years' war, our best hopes lie in two directions—free access to Russia and fresh Allies.

Life in Constantinople.

A correspondent who is contributing to *The Times* a series of articles dealing with life in Constantinople gives, in his last article (May 15) an interesting and pathetic impression of the Sultan in these days of stress.

The Sultan, who was helped out of his carriage by Enver Pasha and one of the footmen, looked very tired and out of health and older than his seventy-one years. His face was very pale and the skin hung loose as though he had suddenly got much thinner. He traversed very slowly and with evident effort the few steps from the carriage to the door of the mosque, helped by the footman, while acknowledging with a sad smile the bows of the spectators. On his breast was one decoration only—the Iron Cross.

According to this writer, Enver Pasha is growing stout, and wears a perpetual smile of a sardonic nature.

Roumania and Italy.

The following extract from a recent article communicated by Dr. E. J. Dillon to the *Daily Telegraph* contains the most emphatic declaration concerning the future attitude of Roumania that has yet appeared in any of the great London dailies:—"The question has been asked whether Roumania will join hands with the Italian people and stand by them when they march against the common enemy. The reply is contained in a message I sent on May 8, announcing that Russia and Roumania had come to an understanding on the points which alone had caused divergence between them."

I will now add—and I vouch for the fact—that Roumania is bound by a specific engagement to co-operate with the Allies in the second phase of the war which is now impending, and that that nation has been dealt with by these Powers in the amicable spirit which this engagement involves.

Dr. Dillon anticipates the active intervention of Roumania before the end of the present month.

Bulgaria and Entente Diplomacy.

The article contributed to the *Fortnightly Review* (May) by Dr. E. J. Dillon was written at the time when Bulgarian intervention on the side of the Central Empires was regarded as an unquestionable and even imminent possibility. But although circumstances in this direction are now actively different, Dr. Dillon's analysis of the situation makes very interesting reading. The following quotation from the early part of his article may be taken as indicative of his opinion regarding the dilemma in which Bulgaria had been placed by the fact of war:—

As a matter of fact the ordeal through which Europe is now passing cannot fairly be described as a mere political crisis, and still less as a "golden opportunity" for Bulgaria to expand to the dimensions of an Empire or for Ferdinand of Coburg to don the crown of Byzance. It is the clashing of the destructive forces of Teutonism against the social forces of Christian civilisation, and in the wild maëlstrom of currents that whirl and seethe little ethnical islets like Bulgaria may easily be submerged.

The writer deals with the question of Bulgaria's financial difficulties consequent upon the recent Balkan wars, and points to the fact that she had applied in vain to the Entente Powers for assistance. He considers the diplomacy of the Entente Powers to have been questionable at this juncture, and holds the opinion that Russia from the first offered so high a price for the neutrality of Bulgaria "that little room was left for further inducements for her active co-operation."

He regards the chances of the reconstruction of the Balkan League as being somewhat remote, as he considers it possible that Bulgaria may remain a formidable and unchanging obstacle:—

The attitude of the Sofia Government throughout the present world struggle has done injustice to the brave and estimable nation it represents. Against the Bulgarian people whose rare spirit of thrift, sobriety, and self-abnegation connotes a moral as well as a political force, the somewhat dubious tactics of the Cabinet constitute no indictment. The Bulgarian people is sound at core . . . and will end by imposing its own higher standard of duty upon those who are authorised to act temporarily in its name.

THE EGYPTIANS' FOREBEARS.

On Tuesday afternoon, Mr. James Cotton presided at a meeting of the Egypt Exploration Fund held at the Royal Society's rooms, when Dr. C. G. Seligman, Professor of Ethnology in the University of London, lectured on "The Earliest Egyptians and their Modern Representatives." The lecturer said that it was in the Sudan, south of Suakin, that he came across the tribes in whom he recognised the modern representatives of the earliest Egyptians, the people, without suspicion of Negroid elements, whom we have sure knowledge of only from their graves, although French Egyptologists claim to have discovered traces of them in other sites. The lecture, which was illustrated by lantern views, compared in anthropological tests these earliest pre-Dynastic inhabitants of the Delta with the Beni-Amer, Bisharin and Hadendoa, the modern tribes in question, and in a very interesting way discovered various parallels between the two in the way of head-dress, implements, and ceremonial customs. Where similarities exist between Negroids and these earliest Egyptians it is open to explain them by borrowings one from the other or by a common stock, the latter theory being that which Dr. Seligman adopted.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The British Industries Fair being held at the Agricultural Hall is a success in so far as it proves our ability to manufacture articles which, for superiority of workmanship and design, can easily hold their own in any world market. We can make toys to amuse children every bit as well as the Germans, and though in the past we have not done so because we preferred to leave this important market in the hands of our enemies, necessity has nurtured our mechanics with surprising results. The inventive genius of the British artisan has now been proven; it only remains to apply that genius to toys of cheap material (four-fifths of this world's children are born to parents of straitened means) and glaring colours in order to control the world market. The renaissance of this particular trade during the past few months has been extraordinary, and, developed on the lines suggested, will progress still further and go far.

***

In fancy goods of solid workmanship we have always been on the top rung of the ladder, be it in wood workmanship or leather wares. The great Industries Fair only helps to accentuate our superiority. If in the toy line the British Metal and Toy Manufacturers of London, Isaacs and Co., of Birmingham, and the Irish Toy Industry of Belfast are producing articles of real merit, in the fancy line such firms as H. J. Tidy and W. H. Mann, of London—to cite one instance only—are producing tidy nicknacks unsurpassed in Vienna, and the same can be said of fancy leather goods such as those exhibited by Worrall and Co. and Rendall, Underwood and Co., both of Birmingham. These firms, and their kin, have an unprecedented opportunity now of snatching, throughout the Near East and from Vienna, that capital's pre-eminence in the fancy line trade. I can honestly say that I was surprised—nay, delighted—at the superior quality, designs, and ingenuity of the exhibits in the above-mentioned lines. The same remarks apply to pottery, electro-plate, Sheffield ware, art printing, and a hundred other lines and—this is the point I wish to emphasise—the sooner Near Eastern countries are made to realise this truth, the greater will be our exports to that part of the world.

***

One of the exihibits that caused me special pleasure was that of the Imperial Typewriter Company. I have had some experience with the machine, and, acting on the strength of my suggestions, several firms in the Near East have stocked it; but, at the same time, they pointed out that the semi-circular keyboard, adopted by the company, could not compete with the German Adler machine, which, while simple and cheap, had the advantage of the straight keyboard. The Imperial's genial engineer has now elaborated a provisional Imperial with a straight keyboard that combines the marvellous simplicity of the old Imperial with the straight keyboard of the conventional type. My congratulations to the company! They are one of the very few all-British makers of typewriters independent of the questionable American typewriter trust, and deserve all the success they get.

***

I quote extracts from a letter, signed by Mr. R. B. Kerr, which appeared in the *New Age* of May 6:—"The only thing of any importance in recent Turkish history is the development of the Baghdad Railway scheme. There can be no mistake about the stupendous importance of that scheme. What is proposed is the building of a railway running right through from Hamburg to the Persian Gulf, about 3,500 miles long, over which trains could run the whole distance in five days. In face of such a railway where would Britain be, with her long and tedious sea route to the East? A Berlin commercial traveller would be at Bombay about the same time as an English one was laboriously steaming past the shores of Crete. All kinds of light goods from Germany could be distributed throughout the shops of Benares, Calcutta, and Madras, while the anxious British competitor was sweating and panting round the enormous angle of Arabia."

***

I admit the "stupendous importance" of the Baghdad scheme, but I deny its staggering influence on British trade. The construction of the line will not interfere with our big merchandise trade with the Middle East. Big shipments from Europe to Asia will never be sent viâ the Baghdad Railway on account of excessive expenditure, and the British commercial traveller would not be "laboriously steaming past the shores of Crete" while his German rival was doing business in Bombay, for the very simple reason that the "stupid" Britisher would also travel viâ the Baghdad (no longer Berlin-Baghdad) Railway, and thus take the wind out of his rival's sails. The whole argument, from the above point of view, is wrong, and is hardly complimentary to the British tradesman, who is not such an arrant fool as some would fain paint him. On the other hand, the political, and *not* the commercial significance of the Baghdad Railway must be considered dangerous to the Empire; but, as regards this aspect, I think we can trust the Home and Indian Governments to look after our interests and our future sphere of influence.

***

The following paragraph from a letter by the Cairo correspondent of the *Railway Gazette* is not lacking in humour. I reproduce it without comment:—"With regard to the new combined road and railway bridge at Embaba, a rather curious fact is reported. The contract was placed with a firm who in turn placed the order for construction with a firm in Northern France. The bridge was constructed in the works, one span was shipped to, and has since been delivered in Egypt, then the Germans invaded France and captured the remainder of the spans. As they are not likely to give them up, work on the bridge is temporarily abandoned." The correspondent then continues (and I heartily approve of the moral of his story):—"This is one of several lessons the Egyptian State Railways have had of the wisdom of placing orders in Great Britain and the unwisdom of placing them on the Continent."

***

Champions of the metric system—and they are numerous—will be pleased to learn that the National Wholesale Grocers' Association of the United States is on their side. As far as the home market is concerned, it does not matter whether or not we buy peat in bushels or litres or whether we weigh ourselves in kilos or in "stones" of fourteen pounds which are smaller than the metric pounds. As soon, however, as we emerge from the home market and try to do business in Near Eastern countries we are handicapped. Take paint, for instance: a German firm exports paint to Roumania, etc., in 500-gramme tins, the exact weight of which the local buyer can readily grasp. The English exporter, on the other hand, sends the same goods in 1 lb. or 2 lb. tins, which are neither 500 nor 1,000 grammes. The local buyer naturally scoffs at measures about which he knows nothing, and the result is that the German article sells and the British does not. It is absurd. This war, which is doing away with so many "precedents" that are nothing if not shackles on our limbs, ought to do away with our multiple system of weights and measures and induce us to adopt the metric system, if only with a view to facilitate our export trade.

***

The reported purchase of the whole stock of benzine in Roumania by a company provided with French capital appears to have been confirmed. The company has secured the large reservoirs constructed by the Government for the Constanza pipe-line. The exportation of benzine, it will be remembered, has been prohibited since the beginning of the year.

***

On another page we reproduce a description of the bazaars at Stamboul from the pen of a neutral writer in *The Times*. I now read the following paragraph in the current issue of the *Indiaman*:—"It was reported last year that grapes were cheap throughout the vine areas of Europe, owing to the collapse of the usual means of transport to the world's markets. Now we learn of the falling price of another luxury—Persian carpets. It appears that many carpets find their way to the Constantinople market, which is now closed to them, with the usual consequence of an excess of supply in the other markets, and a resultant drop in price. There could not perhaps be a better illustration of the world-wide effects of this war than that it has upset the trade of the Persian weavers, a body which, it might be imagined, had long since written off disturbance of communications as a permanent feature of the situation."

COMMENTATOR.

G. R.

By Order of the Admiral Superintendent, H.M. Dockyard, Malta.

Tenders are invited for the purchase, for a period of six months from July 1st, 1915, of Mill Offal, viz.:—Pollard, Bran, Screenings and Sweepings in such quantities as may become available from time to time.

Full particulars can be obtained on application to the undersigned.

Wm. HOGARTH,
Superintendent.
H.M. Naval Victualling Yard,
VITTORIOSA.

Sudan Trade in 1914.

War and Water Problems.

(From Our Own Correspondent.)

Cairo, April 29.

The last quarterly statement of the Sudan Customs, which has just reached here, is of particular interest, as it enables one to see what progress has been made by Sudan trade during 1914. Imports during the past year amounted to £E1,570,532, and exports to £E1,020,260, as against £E2,075,293 and £E1,185,186 in 1913; that is to say, there has been a decrease of £E204,765 and of £E164,925 respectively as a result of the year's working.

Practically all the decrease in imports is accounted for by the textile category, which fell off by £E199,273. On the other hand, imports of cereals increased by £E190,160, the total value of this category being £E422,448, of which two-thirds came from India and Aden, and one-third from Egypt. Under Exports we find that the falling off is due to the diminution of £E28,631 in ivory, of £E56,609 in gum, of £E53,555 in ginned cotton, and of £E52,040 in sesame. Exports of livestock increased by £E12,465, of gold by £E24,344, of hides and leather goods by £E36,645.

It is interesting to note that Egypt is the Sudan's best customer, for she sold the latter goods to the value of £E810,752, and purchased in all £E404,709. Her sales consisted mainly of cereals, refined sugar, and cotton fabrics, whilst her purchases were devoted to livestock, of which she took about 95 per cent. of the total; to cereals, of which she absorbed over 80 per cent. of the total; and to gold and cotton, which she and Great Britain divided between them.

Germany and Austria.

Turning to the analysis of the participation of the various countries in the foreign trade of the Sudan, we find that under imports out of the total of £E1.870.532, Great Britain sent £E450,945 (£E138,282 less than in 1913), India and Aden £E333,053 (£E101,034 more than last year), Austria £E44,846 (£E9.650 more than in 1913), Germany £E23,855 (£E3,689 more than last year), and Abyssinia £E52,003 (£E13,690 less than in 1913). The share falling to Belgium, France, and Italy remained, practically speaking, unchanged. Under exports Great Britain comes next after Egypt with the slightly increased figure of £E269,543; the United States has a small decrease to £E84.795; India and Aden increase by £E7,834 to £E12,820; and all other countries show more or less slight decreases. Austria and Germany standing for £E12.385 and £E60,227—a decrease of £E10,353 and £E19.670 respectively. It is interesting to note that of these two last-named decreases, £E4.645 and £E14,442 respectively, were registered during the first half of the year, and that the increase in German imports at the end of the year was £E7.577 less than what it stood at at the end of June. It is to be noted, however, that Austrian imports, which had increased by £E6,633 at the end of June, had further increased by an amount of £E2,967 at the end of December. Owing to the fact that the Customs returns are prepared by quarters, it is difficult to ascertain where this latter increase took place, but it is to be presumed that it occurred before the beginning of hostilities, or that, if after that date, the goods represented by it, as also those recorded as imported from the other enemy countries during the third and fourth quarters of the year, were consignments already en route or in bond at the time war was declared. It is curious that, contrary to the practice of the Egyptian Customs, no mention to this effect is made in the Sudan returns.

Effect of the War.

There is little doubt that the war has had an unfortunate effect on the trade of the Sudan. This can be seen by the falling off in imports, which on June 30 had increased by £E31,993, as compared with the first half of 1913. In addition, the dearth of shipping has certainly affected the exports, though it is to be feared that climatic conditions have also had a contributory share in the decrease in this part of the country's external trade. Thus, the export of gum fell from 336,700 cantars in 1913 to 275,300 cantars last year, due to the poor rains of 1913 and to the cold weather, which together affected the productivity of the forests. Cotton fell off by £E53.683, which is due to the poorness of the Khor Baraka flood, which reduced the cultivable area at Tokar by about 60 per cent. On the other hand, the new trade in Dom palm nuts has made marked progress, increasing from £E7,982 in 1913 to £E15,282, whilst gold has risen from £E35,468 in 1912 to £E63,146.

Water Problem.

It is to be noted that the rate of decrease in exports recorded on June 30, when the diminution amounted to £E108,464, did not continue in the second half of the year, when the decrease was only £E53.462, due to the fact that the last quarter an increase of 10 per cent. was actually registered. All things considered, the net decreases of 10 per cent. in imports and 14 per cent. in exports are not as bad as one might reasonably have expected, considering the position of the Sudan, and we may take comfort in the thought that, firstly, the climatic conditions have improved, and, secondly, the increase in exports during the last quarter shows that success is crowning the efforts of the Central Economic Board to find suitable markets for Sudan produce. Whilst we may look forward with confidence to the export trade of the country improving very much during the current year, we must not overlook one point, viz., that the setback recorded during the last two years is mainly due to the fact that climatic conditions play an important part in the economic progress of the country. It is, therefore, imperative that public works to ensure the water supply in the producing districts should be carried out at the earliest possible moment, and until a serious start is made in this direction we must be prepared for ups and downs, and must not expect to see the fulfilment of the promise of economic development that the progress made by the country previous to the intervention of the recent unfavourable climatic conditions and of the present war held out.

ALEXANDRIA PRIZE COURT.

We have been favoured with a full report of Judgment No. 2 (for Judgment No. 1 see The Near East of February 5), in re s.s. "Gutenfels," delivered by Judge J. P. Cator, presiding over the Alexandria Prize Court on March 5. The following is the text of the judgment:—

The "Gutenfels" is a German ship which took refuge in Port Said on the afternoon of August 5, 1914. Her case was brought before the Prize Court last November, and on January 6, 1915, we delivered judgment, finding that she could claim no protection from the Suez Canal Convention, but we reserved the question as to whether she was entitled to any benefit under the Hague Convention. This general question was subsequently determined by the judgment which we delivered in the case of the "Barenfels" on January 22 last, but there remained a further point specially relating to the "Gutenfels" which must now be dealt with.

As the "Gutenfels" is fitted with wireless telegraphic apparatus and did not reach Port Said until about seventeen hours after the outbreak of war between Germany and the United Kingdom, it is reasonable to conjecture that she must have entered Port Said with knowledge of the war. The question is vital, for if she entered Port Said in ignorance that hostilities had broken out she can claim the benefit of the Hague Convention. Otherwise she is liable to confiscation. In view of the great development of wireless telegraphy that has taken place in recent years, and the extended use to which it has been put for the dissemination of news at sea, I have come to the conclusion that the only safe rule upon which a Prize Court can act is to assume that every ship fitted with wireless apparatus receives from its Government, either directly, or by transmission from other ships, prompt news of the outbreak of hostilities between its own and any other country. At one time I was almost disposed to declare that it would not be open to any ship to rebut this presumption, but I have come to the conclusion that such a rule would be unduly harsh, and we admitted evidence to prove that in fact the "Gutenfels" did not get news about the war until she reached Port Said. I need hardly say that the evidence in cases like this must be scrutinised most carefully, and as the onus of proof lies with the ship, she will suffer confiscation unless she removes all doubt from the mind of the Court. It is in this spirit that I have considered the evidence, and I have come to the conclusion that the "Gutenfels" has discharged the burden cast on her.

She left Hamburg on July 16, reached Antwerp on the 17th, left that port on the 24th, and touched nowhere else before her arrival in Port Said on August 5. That is to say, she quitted her German port at a time when the peace of Europe was not yet threatened. Even when she left Antwerp no crisis had occurred. So that we may eliminate from our minds any suspicion that the "Gutenfels" started on her voyage with any expectation that a European war was imminent.

The master tells us that his wireless operator gave him no news on the voyage and complained that the apparatus was out of order, and I believe that this is the truth. It is a strange coincidence that the apparatus of the only ship which reached Port Said after the outbreak of war should not have been in working order, but I think that an impartial consideration of the wireless log book leads to that conclusion. The operator himself is not within the jurisdiction, but I see no reason to question the truth of his entries. On July 15 he records that he took over the station, and says "Cannot hear anything." On the 17th he records that he was in communication with two land stations. On the 26th he enters "Communication with 'Kendenfels'—nothing." On the 27th, "Called C. Q.; heard nothing." C. Q., as we know from another source, is a general German call. On the 28th, "Communication with 'Knight Bachelor'—nothing." On the 29th, "Called C. Q.—no answer." On the 30th, "Do not hear anything on long waves; cause unknown." On July 31, "Switched 'Nordeich' and 'Eiffel Tower'; heard nothing." August 1, "No communication." August 2, "Called C. Q.; no answer." August 3, "Heard nothing." August 4, "Called S.U.B.; heard nothing." S.U.B., we are told, represents the Port Said station. August 5, "Called S.U.B. at a distance of thirty miles; no answer."

The master corroborates this, but says the operator told him he was once in touch with Port Said on the morning of the 5th.

In view of these entries, and bearing in mind that the existence of a pre-arranged plan to pretend that the apparatus was out of order so as to give an excuse for not recording news of the outbreak of war, is almost inconceivable, I think we are bound to accept the sworn declaration of the master that he reached Port Said in ignorance of war.

The order of the Court will be similar to that made in the "Barenfels" case, namely, detention during the war and delivery to the owners at its conclusion.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continues to receive a very large number of inquiries for the names of sellers or buyers of articles.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and lists are prepared and circulated of articles which inquirers desire (a) to purchase, and (b) to sell. List 21 is now ready, and may be obtained by United Kingdom manufacturers and traders.

Trade Notes.

Egypt.

Tenders will be received by the Department of Public Health, Cairo, for the supply of three double cylindrical watering carts, necessary to the Scavenging and Watering Service, Bulâq, in accordance with the specification and conditions of tender. Intending tenderers may apply for all information to the Director of Stores every day, Fridays and holidays excepted, from 9 a.m. to 1 p.m., when conditions of contract may be seen and signed. Tenders should be made on the special form, supplied free of charge by the Administration, and should be addressed to the Director-General, Department of Public Health, Cairo, in sealed envelopes bearing the inscription: "Tender for the supply of double watering carts." Tenders must reach the above address on July 5, 1915, at noon at latest.

Tenders will be received by the Department of Public Health, Cairo, for the supply of Newcastle, Cardiff, and anthracite coal and coke, necessary to the branches of the Department, during a period of nine months, commencing on July 1, 1915, and ending on March 31, 1916, in accordance with the specification and conditions of tender. Intending tenderers may apply for all information to the Director of Stores, every day, from 9 a.m. to 1 p.m., Fridays and holidays excepted, when conditions of contract may be seen and signed. Tenders should be made on the special form, supplied free of charge by the Administration, and should be addressed to the Director-General, Department of Public Health, Cairo, in sealed envelopes, bearing the inscription: "Tender for the supply of coal." Tenders should reach the above address not later than noon on June 15, 1915.

Tenders will be received by the Mechanical Department, Ministry of Public Works, Cairo, up to noon on May 26, 1915, for the general supply of timber for the Government Workshops during the year April 1, 1915, to March 31, 1916. Persons wishing to tender for this supply can consult the specification and conditions on all days on which public offices are open, from 10 a.m. to 1 p.m., at the offices of the Mechanical Department, Ministry of Public Works, from April 19, 1915. Tenders must be submitted on the form to be supplied by the Mechanical Department, and should be addressed to the Director-General, Mechanical Department, Ministry of Public Works, Cairo, in a sealed envelope bearing the inscription: "Tender for the general supply of timber for Government Workshops, 1915."

Tenders will be received by the Director, Physical Service, Dawawine Post Office, Cairo, up to noon on June 15, for the supply of balances and weights required by the Postal Administration. Copies of specification and conditions of contract may be obtained free of charge on application to the said Service. Tenders should be addressed to the Director, Physical Service, in sealed envelopes bearing the inscription: "Tender for the supply of balances and weights for the Postal Administration."

Cyprus.

A Cyprus correspondent writes:—Efforts are being made, we understand, in certain mercantile quarters at Limassol for the purchase of a small steamer to perform a coastal service. It is felt by many competent to judge that such a service would be a great advantage in developing inter-trade between outlying parts of the island.

Cyprus (says *Kelly's Monthly Trade Review*) reports a great shortage in Madapollams, drills, shirtings for underwear, Oxfords, muslins, handkerchiefs, etc. Traders in Cyprus require six months' credit.

Roumania.

The *Moniteur du Commerce Roumain* (Bucharest) states that the provisional statistics of Roumanian exports in 1914 show a considerable diminution as compared with the previous year, partly due to the poor wheat harvest. The effect of the war is clearly shown by the fact that the exports of cereals and their products, petroleum and timber together amounted to 2,370,248 tons during January to August, 1914, whereas from the outbreak of war until December only 420,952 tons were exported. The provisional statistics give the following figures of exports for 1914:—Cereals, 1,954,894 tons (2,718,933 tons in 1913); cereal products, 110,318 tons (195,234 tons in 1913); timber, 70,195 tons (133,805 tons in 1913); and petroleum, 655,993 tons (980,426 tons in 1913). All the grain crops show a decreased export, with the exception of maize, which increased from 930,286 tons in 1913 to 1,061,730 tons in 1914.

The need for drilling and other plant necessary to the development of the Roumanian oil industry is becoming more and more marked, says *Petroleum World*. Tools and apparatus, especially machinery, are wanted which cannot be made in Roumania, and have always been imported from other countries. Especially is this the case with the larger and heavier types of drilling outfits, both percussion and rotary, which have come into fashion with modern operations in the fields, wells of considerable depth and great force of flow having to be provided for. Just now there is a positive famine in casing and tubing, much of which used to come from Germany. The export of goods of this sort is, however, prohibited from Germany, as it is from most European countries, and supplies are not obtainable. The sea route via the Dardanelles is, of course, closed. In one respect the lack of oil-well supplies is good. It checks drilling, and checked drilling means a smaller production, which again means a smaller addition to stocks that will have to be shifted when the Allies clear the Dardanelles, and if and when there are sufficient tank steamships available. Other smaller lines, such as steel and copper wire, machinery belts, manilla and wire ropes, are also short, and stocks of these have been exhausted. On the whole, the country is hoping for speedy deliverance from an impossible position.

Abyssinia.

The following are extracts from an article which appeared in the current issue (May) of *Kelly's Monthly Trade Review*:—

Abyssinia's present external trade is not one of much importance. Our own share is quite small, for we import from that country for home consumption goods worth on an average about £9,000 yearly, and for re-export something over £50,000, while our exports scarcely reach an average of £5,000. These figures have little real bearing on the future, for although the empire is an old one, the whole country is only just emerging out of chaos. Its possibilities are more than respectable, and have assumed new interest for us since our acceptance of greater responsibilities in Egypt and the Sudan, with which the future of Abyssinia is so closely linked up.

Abyssinia is a region of rugged surfaces, of high plateaux with extensive valleys, surrounded on the north, west, and east by a fringe of dreary, partly scrub-covered stony lowlands, partly inhospitable sandy deserts. Consequently it is a difficult and expensive country to penetrate. But in the interior, in spite of the deplorable practice of deforestation, which was pursued by its rulers for many generations, there are vast fertile tracts and many sheltered valleys where fine crops of wheat, barley, maize, millet, linseed, peppers, and other produce are raised notwithstanding the extremely primitive methods prevailing.

In this belt of cereal and general vegetable cultivation the climate is somewhat trying, the year being divided into a dry and wet season, the drawbacks of this being accentuated by the scarcity of trees. Drainage and irrigation works have been attempted tentatively, and will no doubt prove remunerative when taken in hand, but the Government is precluded by treaty from carrying out any works which would interfere with the flow of the Nile. Nothing must be done to retard or diminish the supply of water to Egypt. But, with a policy of water conservation and irrigation will come an era of more intensive, more scientific cultivation, and then will be the opportunity for the energetic introduction of British agricultural machinery and implements. There should also be room for timber-dressing appliances. Another demand which will be created by the spread of irrigation and other public works will be for good hydraulic cements, suitable for a hot, dry climate.

The Americans supply most of the coarse cotton piece goods, known locally as "abugedid." These are made up into 30-yard lengths by one yard wide, weighing between 6½ and 8½ lbs., and are put up in bales of from 20 to 25 pieces. Finer cotton white goods are mainly English. For the Harrar district red cotton is required. The demand for woollens is small, the supply coming mostly from England, the goods being dyed red, yellow, and green. Cotton velvet is bought by the wealthier and official classes, being made up into their gala cloaks. In the south and the lowlands the subject races are still largely unclothed, so there is plenty of room for pushing the sale of cheap, hard-wearing textiles, put up in suitable lengths and widths. In Abyssinia itself white is the rule, but the nearer one gets to the Sudan the more are vivid reds and greens appreciated. Parasols, which sell readily, come chiefly from India, and their distribution is favoured by the large number of energetic Hindoo traders. Hardware is finding a ready outlet among the people. The imports come from Austria and Germany, with a small amount from Italy and Belgium. We ought to be able to step in here, and also to inaugurate a trade in cutlery and tools.

In conclusion the article states that Abyssinia is an undeveloped, rich country, which will pay to develop. For many years past the Germans and Austrians have been making strenuous efforts to gain pre-eminence in the business world of Abyssinia. The diplomatists were ably backed up by traders and financiers, who were devoting attention not merely to imports but to agriculture, forestry, and mining. They are not much liked, but their determination made some impression. We should see to it that this side-door to the Sudan passes under British control, the country being financed and tutored by ourselves, both on its own intrinsic merits and for what lies behind it.

Bulgaria.

The Board of Trade are in receipt, through the Foreign Office, of telegraphic information to the effect that the exportation of cement from Bulgaria has been prohibited.

Morocco.

H.M. Consul at Casablanca writes that the French official sequestrator has refused to allow claims to be put forward by Consular officers, and insists on all creditors of Germans and Austrians lately trading in Morocco being represented either in person or by a commercial or a legal agent.

THE TURKISH BAZAARS.

The writer in *The Times* on "Turkey from Within," describes the state of the bazaars at the present time in the following graphic way:—

Even the bazaars have been greatly changed by the war. The whole Turkish population, panic-stricken, has been seized with a fever to realize as much money as possible and to be ready to leave for Asia at any moment. The richest families are calling Jew merchants, Persian curiosity dealers, and Levantine antiquaries to their private residences and selling the entire contents of the house at ruinous prices. The less wealthy part of the population flows down to the bazaars. Outside the tiny shops the merchants sit apparently supremely indifferent to the chance of a good bargain. They have become *blasé*, besieged as they are by a crowd of women laden with large parcels of carpets, woven fabrics, and embroideries, or carrying Persian vases and pieces of inlaid furniture, going from one shop to the other and getting finally very small sums for their often wonderful possessions. There is no money in Constantinople; there are no foreigners to buy the treasures that Turkish families have been collecting for generations and generations. Never have the prices demanded been so low, and never, I believe, have the bazaars been so rich in

Digitized by Google

the best things that the Orient has produced. In the arcade where carpets are sold the little dark shops are crammed with the most beautiful Persian and Indian rugs. In the arcade where the dealers in carved stones are found, in that where wrought and engraved brasswork is shown, the same conditions prevail. Elsewhere are exhibited wonderful gold and silver tissues and embroideries, the art of Bokhara and of Brusa. But the bazaars are full of sellers and empty of buyers.

In connection with Mr. Pease's announcement in the House of Commons last week of the formation of a Government Advisory Committee to afford scientific assistance to British industries, the present operations of the Imperial Institute are of great importance. As is now generally known, the Institute has rendered, through its expert establishments at South Kensington, valuable assistance to British manufacturers, especially in connection with the supply and utilisation of raw materials from India and the colonies (including the Sudan). The Institute possesses extensive laboratories and workshops, in which colonial (Sudanese) and Indian raw materials of all kinds are constantly under investigation, and the results of this work are published freely for the use of British manufacturers and merchants.

NEWS FROM ALL SOURCES.

At the meeting of the British Cotton Growing Association, held in Manchester on the 4th inst., it was stated that the reports as to the cotton crops at Zeidab, Tayiba, and Barakat are quite good, and there will be a considerable increase in the quantity of cotton produced at these stations.

Major Baldwin has forwarded a copy of the annual shipping and commercial statistics compiled by the Danube Commission for the year 1914. This paper, which is in French, may be consulted by the United Kingdom firms interested at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The steamer "Niggem," with a cargo of cotton, which left Alexandria for England early in December, had not since been heard of. Captain Macintyre has now wired from Sollum, Gulf of Tripoli: "Steamer foundered on December 27. Myself and seven of crew safe. Proceeding to Alexandria."

The *Egyptian Gazette* states that the estates of the ex-Khedive, especially his large property at Edfina, are at present in a miserable condition and, according to a correspondent who has lately visited that part of the Delta, three-quarters of the Edfina estates are uncultivated and have reverted to marshland.

Work in linking up the Bulgarian and Roumanian railway systems on the Dobritch-Varna line is terminated, and the inauguration of the route is to take place (writes our Bucharest Correspondent) as soon as the railway agreement between both countries has been signed.

The cotton crop at Tokar is estimated at 9,000,000 kilos.

About 1,100,000 tons of oil and products are now held up in Rumania awaiting the forcing of the Dardanelles by the Allies' sea and land forces. The value of these is considerably over £5,000,000. It was put at that figure last month, but since then at least 100,000 tons have been added (says *Petroleum World*), so that the value is now considerably more.

The imports of coal into Egypt during the first quarter of this year were valued at £203,000, as against £272,000 in the corresponding period of 1914. The imports of iron and steel show a much greater drop, having decreased from £141,000 in the first three months of 1914 to £41,000 this year.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
LAL-IMLI WOOLWEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT.

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis Hosiery, Puttees, Uniforms, Liveries, &c., &c.
CONTRACTORS TO GOVERNMENT.

Near East Markets.

CONSULAR REPORTS.

Crete.

April 21.

H.M. Vice-Consul at Canea has furnished the following account of the olive oil market in Canea:—

Owing to the large demand from Venice and Genoa, prices have reached 1 fr. 22 centimes per oke. This means a f.o.b. Canea price of £47 per ton of 1,000 kilogs., including the new export tax of 1 fr. 30 centimes per 100 okes. These prices are the cost prices of olive oil purchased on the spot, and do not include the commission of the export merchant. In order to obtain a c.i.f. United Kingdom quotation, British importers must add the cost of freight and insurance to the f.o.b. price. Freight rates to the United Kingdom are unsteady, but the present rate stands at 55s. per ton. Marine and war risks insurance should be calculated in the United Kingdom, as it is better for British importers to do this themselves upon receipt of telegraphic information from shippers at Canea of the shipment of the goods. The acidity of the oil is high, running from 8 per cent. upwards, and Cretan exporters are unwilling to make offers on a fixed rate of acidity.

There has been a large decrease of shipments to the United Kingdom owing to high prices and undue percentage of acidity of the oil. On the other hand, shipments to Italy have increased greatly, and this oil is largely re-exported from Italy to Austria and Germany by Italian merchants and agents of Cretan shippers in Venice. It is said that enormous prices for olive oil are being paid in Trieste, and several Greek steamship companies have established new lines running from Piræus to Venice, whence the cargo is deflected off to Trieste.

Stocks of oil at Canea are small, not exceeding 600 to 650 tons in the town of Canea, though in the Canea district there are probably some 1,000 to 1,200 tons.

The 1915 crop is expected to reach to about half of what is called a good crop. In many parts of the island the prospects of the crop are bad.

Salonika.

The U.S. Consul reports as follows:—

There is no congestion of either freight or vessels. Steamers are able to discharge more rapidly than heretofore owing to a decrease in tonnage arriving. There is, however, a great shortage of cars operating between Salonika and Roumania. Freight intended for Russia is transhipped at Ploeshti, Roumania. On March 6 the Serbian Government issued notice that for a period of three weeks merchandise in transit would not be accepted over its lines, and that after that period only seven cars per day would be despatched from Salonika to points in Bulgaria and Roumania. Bulky pieces are difficult to ship owing to limited car space. The shipping period from Salonika to Ploeshti varies from fifteen to twenty-five days.

Local steamship agents report a congestion of vessels at Dedeagatch, due to the absence of sufficient lighters and other discharging facilities. Railway communication with Roumania, whence shipments to Russia are made, is said to be fair. Freight for Bulgaria or Roumania must necessarily pass through Ottoman territory (Dedeagatch to Adrianople, thence to Sofia); to avoid delay, bills of lading are made out to a Bulgarian or Roumanian point. It is not advisable to ship very heavy pieces, owing to the great difficulty in discharging. There are no piers at Dedeagatch; vessels discharge their cargo into lighters about half a mile from shore.

The U.S. Consulate has secured permission from the Bulgarian Government for the Archipelago-American Steamship Co. to operate its own lighters at Dedeagatch. These lighters and stevedores will be placed at the disposal of vessels carrying American merchandise, thereby guaranteeing reasonably prompt discharging.

PRODUCE REPORT.

London, May 20.

Currants.

There is a strong demand for all qualities, and many buyers being unable to fill their requirements on the spot are now making purchases for shipment. With the exception of smalls, all qualities are about 1s. per cwt. dearer on the week. The s.s. "Teano" arrived last week, with about 1,000 tons, but no samples are at present available.

In Liverpool the market is now almost cleared of fruit in first hands, so that the trade this past week has been of very little importance. A few sales were made on overland samples afloat, per s.s. "Britannia," at very full prices. Until the arrival of this steamer, which is due this week-end, business will be of a retail character, but afterwards a good demand is anticipated.

Sultanas.

There is one arrival this past week, the s.s. "Elpiniki," with about 24,000 boxes, but samples are not yet on the market. The lower prices have stimulated the demand, and a very large business has taken place, principally in the lower qualities. Owing to this increase in the demand, and also to reports that the coming crop is likely to be an exceptionally small one, prices during the last few days have advanced about 3s. per cwt. Smyrnas are quoted 42s. to 62s. and Greek 48s. to 62s.

In Liverpool the last few sales cleared up the remnants of the late, leaving the market absolutely bare. Next arrivals are due this week-end per s.s. "Pontiac" and s.s. "Britannia," which bring together about 20,000 boxes—not much considering the present position.

Figs.

There is a steady demand for bags of naturals, but this is a very scarce article at present.

Dates.

There is only moderate business at recent rates.

Seeds.

The market for linseed has been dull and values rather weak. London-Calcutta, spot, is quoted 54s. 9d. Ditto for afloat and April-May. Rapeseed is also dull, Cawnpore, brown, May-June is quoted 51s. 6d., Guzerat, ditto, 55s. 3d. Cotton-seed remains inactive with values weak; London-Egyptian on passage is quoted £8 7s. 6d., spot £8 10s., May £9, and June £9.

Oils.

A dull tone is prevailing in the market. Linseed oil is quiet and values declined sharply, spot pipes landed £28, barrels ditto £28 15s. June-August, £29. Rapeseed oil also quiet, and prices are nominal; ordinary brown on the spot naked £38 15s. Cotton oil continues firm; crude on the spot, pipes, £31 10s.; refined spot pale, pipes, £33; sweet barrels, £37 to £39.

Oil Cakes.

Egyptian cotton cake: There is a continued upward tendency in the tone of the market, and stocks of Egyptian are practically exhausted. There are free buyers of April shipment at £6 7s. 6d., ex ship; May, £6 8s. 9d. Linseed cakes are quiet; Greek in bags are held at £10 2s. 6d. to £10 5s. per ton.

Egyptian Onions.

The extraordinary home and export demand for all grades of Egyptian onions continues. Prices for finest are again 6d. to 1s. per bag dearer.

Gum.

Arabic, "Turkey" sorts, 40s. to 50s. cwt.; East India, common to fine, 32s. 6d. to 37s. 6d.; myrrh, good to fine, 96s. to 100s.; sandrac, 30s. to 85s.; tragacanth, first, 560s. to 900s.; low to good sorts, 90s. to 130s.

Egyptian Eggs.

Egyptian eggs have been making 7s. 9d. to 8s. 9d. per 120, according to grading and quality.

CAIRO EXPRESS AGENCY
An English Firm with an English Staff
Best Agency for booking Steamer Passages by any Line.
Forwarding Baggage and Packages of every description.
English Newspapers, Illustrations, Periodicals, etc.
Depot for sale of The Near East.

Persian Telegraph Systems.

The following are extracts from the United States Consular report from Teheran (February 7) on the Persian telegraph and telephone systems:—

Persia has a system of telegraphs consisting of 5,231 miles of line, with 9,993 miles of wire and 143 stations, which is owned by the Persian Government, the Indo-European Telegraph Department (a department of the British Government), and the Indo-European Telegraph Company. The Indo-European Telegraph Company's line extends from London, through Emden, Berlin, and Odessa, to Julfa, on the Russo-Persian frontier. The company's 431 miles of three-wire line in Persia extends from Julfa, through Tabriz, Mianeh, Zendjan, and Kasvin, to Teheran, and is worked by an English staff according to its concession of 1868.

Indo-European Telegraph Department.

The Indo-European Telegraph Department forms the connecting link between the line of the Indo-European Telegraph Company, which terminates at Teheran, and the Indian Telegraph Department at Karachi. The head office of the department is the India Office, London, where the director in chief has immediate executive control under the Secretary of State for India. The departmental lines consist of two sections—the Persian and the Persian Gulf. Each is administered by a director—the former at Teheran, the latter at Karachi. In Persia the lines consist of a three-wire line, 681 miles long, on iron supports, from Teheran, through Ispahan and Shiraz, to Bushire, where a connection is made with the Gulf section, and a three-wire line, 710 miles long, from Teheran, through Yedz and Kerman, to the Perso-Baluchistan frontier at Kuh-i-Malek Siah, where they join the Persian Gulf lines.

The departmental lines in Persia aggregate about 1,800 miles and 5,400 miles of wire, with five main stations and fourteen minor stations. The Persian Gulf lines consist of two submarine cables from Bushire to Jask, thence one submarine cable and a two-wire line along the Mekran coast to Karachi, and an iron standard line of two wires from the Perso-Baluchistan frontier at Kuh-i-Malek Siah through Panjgur and Las Bela to Karachi.

The departmental lines in Persia are worked under a convention between the British and Persian Governments made during the sixties, and repeatedly renewed since. The latest renewal is effective to 1945. The staff in Persia consists of about 200 Europeans and natives. British gazetted officers, who are under the immediate orders of the director, are in charge of the sub-divisions, such as Teheran, Ispahan, Shiraz, Yedz, and Kerman, and departmental accounts.

The bulk of the traffic is between England and India, Australia and the Far East, and passes Teheran in what is known as translation—that is, it is automatically transmitted, as London and Karachi work direct Wheatstone auto. Between London and Karachi—about 5,800 miles—are twelve translating stations. There is considerable local traffic in Roman characters, which the department deals with, but the receipts from all local traffic go to the Persian Government. Messages in the vernacular are dealt with by the Persian Telegraph Administration.

The Persian telegraph is owned and worked by the Persian Government. It consists of 3,000 miles of line, with 3,300 miles of wire, as follows:—A single-wire line of 431 miles, extending from Julfa through Tabriz, Mianeh, Zendjan, Kasvin to Teheran, one of the three wires on the supports of the Indo-European Telegraph Company from Julfa to Teheran; a single-wire line of 256 miles, extending from Teheran to Charoud, on the supports of the Indo-European Telegraph Department, by whom this line is maintained; a single-wire line of 544 miles, extending from Teheran to Meshed, and maintained by the Indo-European Telegraph Department; a single-wire line of 681 miles, extending from Teheran through Ispahan and Shiraz to Bushire, on the iron supports of the Indo-European Telegraph Department, and maintained by the department; a single-wire line of 710 miles, extending from Teheran to Bam (Kerman), and maintained by the Indo-European Telegraph Department; a single-wire line of 553 miles, extending from Meshed to Seistan, and maintained by the Russian Government; a single-wire line of 31 miles, extending from Astrabad to Tchikichlar (Turkestan), and maintained by the Russian Government.

The staff of the Persian Telegraph is composed entirely of Persians, except that the manager, who is an Englishman, is lent to the Persian Government by the Indo-European Telegraph Department. The stations number 118, all of which are open for traffic in the vernacular, and 53 in Latin character.

The rates throughout Persia on the three lines are nearly identical.

Telephones.

In Ghilan and Mazanderan the telephone lines belong to the Hadji Mehdi Agha Company, whereas in the remaining provinces they are the property of the Société Anonyme des Telephones Persans. There is telephone service in Teheran, Tabriz, Meshed, Urumia, Maragha, Hamadan, Kermanshah, Kasvin, Ispahan, Shiraz, Resht, and Bushire.

The company holding the road concessions from Julfa to Tabriz and from Enzeli to Teheran has built a telephone along these roads for its exclusive use. The Société des Pêcheries Lyanazoff has installed a telephone line for the length of the shore between

Bender-Gez and Gomouch-Téé, on the Caspian Sea. The Anglo-Persian Oil Company has built a private line from the oil wells at Madji Soleiman, Abaden, to the company's refineries on the banks of the Chat-el-Arab. A private line, joining Urumia with the lake of that name, has been recently built, and has been placed at the disposition of the public.

EGYPTIAN RAILWAY NOTES.

The Cairo correspondent of the *Railway Gazette* (May 7) gives the following details concerning Egyptian traffic receipts:—

Egyptian Delta.

The final, but as yet unaudited, traffic reports of the Egyptian Delta Light Railways show the earnings of the light lines of the system, as apart from the broad gauge Helouan Railway, during the year ended March 31, 1915, to have been £E190,000, as against £E250,000 during the year previous, a drop of £E60,000. The receipts of the Helouan Railway are down about £E15,000. Whereas the percentage of drop on the Egyptian State Railways has been about 29 per cent., it has only been about 25 per cent. on the Delta Light Railways.

Ramleh Railway.

The earnings of the Ramleh Railway Company from October 1, 1914, to April 10, 1915, are £E35,937, as against £E39,834 during the same period of the previous year. Of this drop, £E3,488 comes under the head of ordinary coaching traffic. The abnormal times are affecting tramway traffic in Egypt equally badly. The total receipts of the Alexandria Tramways Company from October 1, 1914, to April 10, 1915, have been £E36,867, as against £E47,855 for the same period the year before, a drop of £E10,988. Here, as with the railways, ordinary passenger traffic (as distinct from season ticket traffic and traffic by means of the purchase of books of tickets) is mainly accountable, having dropped £E10,112 during the period. It is curious that the only head of account under which both the Ramleh Railway and the Alexandria Tramways show an increase in receipts is under "season tickets." During the period of 1914-15 under review season ticket revenue on the former line increased by £E148, and on the tramways by £E73, as compared with the same period of 1913-14.

EGYPTIAN OILFIELDS IN 1914.

The following information is from a report by Mr. Fox-Strangways, the Acting British Vice-Consul at Suez, on the trade of that district in 1914, which is being issued:—The development of the oilfields progressed very satisfactorily during the year. Several old wells were abandoned, thus confining the work more to the drilling of new wells. Two good gushers were struck, which gave prolific production to begin with, but unfortunately one of them (at Gemsah) was eventually flooded by water, this being the great difficulty to be contended with in this field. The other well, however, is still producing. There are also in operation wells yielding smaller quantities. The total production of oil from the fields during 1914 considerably exceeded the output for the previous year; moreover, it is anticipated, in view of the fact that oil is now being obtained from the concessions south of Gemsah, that a far larger output will be obtained during 1915. The crude oil is transferred from Gemsah or Hurgada to the refinery at Suez, where it is converted into benzine, kerosene, and liquid fuel. In 1914 the quantity of crude oil imported into Suez for refining was 119,349 metric tons, valued at £E179,023, and of heavy benzine distillate 11,893 metric tons, valued at £E83,251. The output and value of the refined products in metric tons and at £E, equal to £1 0s. 6¼d., were as follows:—Used in Egypt—Liquid fuel, 6,923, £17,307; kerosene, 8,638, £43,190; refined benzine, 1,186, £11,860; unrefined benzine, 2, £14; total, 16,749, £72,371. Exported to the East, France, and the Mediterranean—Liquid fuel, 47,248, £118,120; kerosene, 22,154, £110,770; refined benzine, 8,227, £82,270; unrefined benzine, 16,921, £16,921; total, 94,550, £328,081.

Mr. E. W. P. Foster, C.M.G., a director of the National Bank of Egypt, has been added to the London Committee of that bank.

Engineering Notes.

Refrigerating Plants.

The present war has interrupted the completion of an important scheme for the exportation of fresh meat, fruit, etc., from the Near East to the United Kingdom and the Continent. Cold storages were being planned on land, and a certain number of steamers plying between England and the Ægean and Black Seas were to be fitted with refrigerating installations for frozen meat. So far as known, a German firm was likely to supply the necessary refrigerating plants—a firm which had already been doing considerable business with the East. The preference given to the German system must be attributed to the fact that the latest British refrigerating systems are not sufficiently known, though they are superior to the German, and, in some instances, cheaper.

Dry Air Refrigeration.

In our notes last week we referred to refrigeration by the ammonia compression systems as adapted for cold storages, etc. We will now refer to another British system as employed for the importation of meat, fish, fruit, dairy produce, etc. It is the Dry Air Carbonic Refrigeration in which carbonic anhydride is used. This material is a most powerful refrigerant, and is applicable to commercial purposes; incidentally, it may be mentioned that it is the gas which is used for making all aërated waters, and constitutes the sparkle of wines and bottled beers. The refrigerating machine consists of (1) the compressor in which the gas drawn from the evaporator is compressed; (2) the condenser, consisting of coils, in which the compressed warm gas is cooled and liquefied by the action of cooling water; and (3) the evaporator, consisting of coils, in which the liquid carbonic anhydride evaporates, producing any degree of temperature that may be required down to 80 degrees below freezing point. The required quantity of carbonic anhydride originally put into the machine is used over and over again, going progressively through the process of compression, condensation, and evaporation. Thus a small quantity only is required to be added to from time to time in order to replace any small losses, and for this purpose carbonic anhydride is sent in steel cylinders to any part of the world. The cost of the material is only a few pence per pound, and the quantity required for a complete charge is very small.

Marine Installations.

For preserving provisions on passenger steamers, steam yachts, making ice, etc., a small type of machine is generally used, consisting of a single vertical steam cylinder and a compressor, both secured to a casting containingthe condenser coils. Behind this casting is another secured containing the evaporation coils, the whole making a very compact and accessible design. This type of machine is very simple, and can easily be worked by a person of ordinary intelligence. Brine services are fitted for producing the temperatures required in the meat, vegetable, butter, and fruit rooms, as well as for the making of ice and for water cooling. These are controlled from the refrigerating machine, which may be placed in any available corner in the main engine-room, where it comes under the eye of the engineer on watch.

Frozen and Chilled Meat.

For the importation of frozen and chilled meat the size and type of the refrigerating machines depend on the quantity of meat to be carried, dimensions of holds of ship, length of voyage, etc. For maintaining the holds at 15 degrees F. for frozen meat, or 30 degrees for chilled meat, the brine system has proved the most advantageous. The brine, cooled by the machine in the engine-room, is circulated by a small pump through iron pipes which are fixed on the under side of the deck over the hold or insulated space. The presence of the cold brine pipes at the top of each hold sets up a constant circulation of air; for as the air in contact with the pipes becomes colder, and consequently heavier, it descends, and is replaced by less cold air, which is cooled in turn. The pipes also have the effect of producing very dry cold air, any moisture in the air being condensed upon them, but not to such an extent as to impair their cooling efficiency. The large quantity of cold brine in the holds acts as a storage of "cold," thus maintaining the holds at a low temperature for a considerable period after the machine is stopped. In most cases it is, therefore, necessary to run the machine for only a few hours daily. For the importation of butter, some kinds of fruits, etc., where the goods require to be rapidly chilled when placed in the insulated holds of the ship, air-coolers and fans are substituted, by which the moisture abstracted from the goods during the process of chilling is rapidly drawn off. The air coolers consist of coils of pipes through which the carbonic anhydride is circulated, the air passing over these pipes being thus cooled and passing around the goods in the insulated holds.

Mining Machinery.

The war is exercising an adverse effect upon the demand for British mining machinery (says *Engineering*), the value of the exports to March 31 this year having fallen to £130,900, as compared with £271,888 in the first quarter of 1914, and £249,802 in the first quarter of 1913. The value of the exports to British India declined to £12,064, as compared with £25,775 and £18,107.

Riverworks at Khartoum.

From the *Sudan Times* we learn that work has been begun on the erection of a stone wall on the river front for the protection of the roadway and trees against the encroachments of the river. The wall, which will extend from the north-west corner of the Post Office to a short distance beyond Malik Avenue, will be of a perfectly simple construction, built of undressed stone and laid with a sloping face. It is regarded as a temporary structure, for, while the authorities have just now to consider economy most carefully, it is hoped that in the not distant future the whole embankment will be protected by a river wall as solid and handsome as that which already fronts the Governor-General's Palace.

Company Notes.

Societe des Immeubles d'Egypte.

The annual meeting of shareholders has been held. Net profits for 1914 amount to P.T.1,837,135.16, which, with the sum brought forward from 1913, gives a total of P.T.2,742,140. The following dividends will be paid:—(1) P.T.20 per ordinary share, or P.T.1,118,500, and (2) P.T.2.20/40 per "action de jouissance." P.T.450,000 has been placed to the "extraordinary reserve." The company's reserve amounts to P.T.7,174.166. Compared with 1913, the past year shows a decrease in revenue of about £2,500, of which £1,625 is due to a fall in rentals. Various works were undertaken during the past year. These involved an extraordinary expenditure of P.T.118,357, which has been deducted from the profits. The reserve of £E4,500 is destined for the payment in full of newly installed lifts and of eventual depreciation on the Ghizeh Estate.

Ottoman Railway.

In connection with the circular reproduced in last week's issue of THE NEAR EAST, anent the debenture stockholders, the following letter which appeared in the *Financial Times* from Mr. W. M. Smith, of 2, Castle Street, Salisbury, is of interest:—

"I have received notice from the directors of the Ottoman Railway from Smyrna to Aidin, in which they propose that in funding the interest the first debenture stockholders should receive at the rate of £120 for interest on every £100 of stock, while the second debenture holders are to receive at rate of £100 only for every £100 of stock. This I consider grossly unfair to the second debenture holders, and I trust same will protest and not give away their protest by signing the proxies. In the case of other special war-time fundings I can find no such similar arbitrary treatment."

The *Financial Times* yesterday analysed the funding scheme and said:—

"There is, of course, no doubt as to the necessity for the directors proposing a funding scheme, because the railway was seized by the Turkish authorities in November, and the interest on the debenture stocks due on January 1 last was only paid in cash by the aid of a loan obtained from the company's bankers on the security of the reserve fund investments, a process which cannot be repeated. As regards the funding terms, the second debenture holders must in the first place remember that the first debenture holders have a prior charge on the property, and in the case of default, if no new arrangement were made and the rights were enforced, it would be necessary to pay off the whole of the first debenture stock, amounting to £1,960,700, and to meet all arrears of interest before the second debenture holders could receive a penny of capital or interest. It is therefore essential that the consent of the first debenture holders should be obtained to any scheme, and that consent cannot be obtained unless the terms are fair to those holders.

"Another point which the second debenture holders must not overlook is that the stock they hold and the stock they are to receive in lieu of cash bears 5 per cent. interest, whereas the first debenture holders receive only 4 per cent. interest, and the stock to be issued to them for funding purposes will also be 4 per cent. Assuming that it had been decided to give both classes of debenture holders £100 of stock for each £100 interest, a holder of, say, £2,000 second debentures would receive £100 of 5 per cent. stock, while the owner of a similar amount of first debentures would get only £80 of 4 per cent. stock.

"Then there is the question of the market value of the two stocks which are to be issued to the respective debenture holders. This must be taken into consideration, because the payment in stock is to take the place of cash. In normal times—it must be on this basis that a valuation is made—the 5 per cent. second debenture stock has regularly stood at from 9 to 15 points higher than the 4 per cent. first debenture stock.

"It will be seen that while the first debentures have averaged rather under 90 in the four years, the second debentures have averaged 101. It would appear that the directors, in considering the terms for funding, have taken all the rights and the points in the positions of the two classes of debenture holders into account, and that the scheme is a fair one. Should the first debenture holders prefer to wait for cash payments of their interest instead of accepting stock without enforcing their other rights, then the second debenture holders would have the resumption of cash payments on their stock delayed until all arrears had been paid off, and it is therefore to their interest that a funding scheme should be accepted by the first debenture holders."

Ottoman Docks.

The following official notice has been published:—

IMPERIAL OTTOMAN DOCKS ARSENALS AND NAVAL CONSTRUCTIONS COMPANY.

ISSUE OF 5½ PER CENT. BONDS.

This Company being incorporated in Turkey, a position has arisen consequent upon the war which no one contemplated when the issue was made. As we originally brought the investment to your notice, we are ready to purchase any scrip at the amount paid up upon it plus interest at the rate of 5½ per cent. per annum from the date of payment of the respective instalments up to the 25th day of May instant, less income-tax, and upon the following footing:—

The scrip to be sent to the undermentioned brokers for verification. On the scrip being found correct, the Bank of England will be requested to transmit to the holders the amount of principal and interest due to them.

This offer remains open for scrip handed to the brokers up to the 20th day of June, 1915; it does not apply to alien enemy holders.

For Sir W. G. Armstrong Whitworth and Co., Ltd.,
CHARLES L. OTTLEY, Director.

For Vickers, Ltd.,
V. CAILLARD, Director.

London, 20th May, 1915.

Brokers to whom scrip should be sent:—
Messrs. Cohen Laming Goschen and Co.,
14, Austin Friars, E.C.,
or
Messrs. Wise Speke and Co.,
23, Collingwood St., Newcastle-on-Tyne.

The *Financial Times* reviews the situation as created by the war as follows:—The issue, which was made in July last, consisted of £600,000 5½ per cent. bonds guaranteed by the Imperial Ottoman Government, and Messrs. Armstrong and Vickers, who were the contractors entrusted with the work of constructing the new docks contemplated under the scheme, themselves took up £100,000. The outbreak of war prevented any substantial progress being made, and when, after Turkey had joined the belligerents, the position of the bondholders was discussed, Messrs. Armstrong and Vickers stated that, with the exception of a relatively small sum, the amounts paid up by subscribers were still safely held in this country. A meeting of subscribers was held on December 30 last on the initiative of the Trustees Executors and Securities Insurance Corporation, who are the trustees for the bondholders. As a result negotiations were entered into with the contractors, and legal proceedings were also instituted. In March a statement of the position, detailing what had been done, was issued, and the outlook then did not appear to be particularly encouraging. At the meeting of Vickers, Ltd., last month, however, the Chairman, Sir Vincent Caillard, stated that they hoped shortly to be in a position to make a favourable offer to the bondholders. This has now been done, on what appears to be fair terms, and the cost of expensive and needless litigation will thus, we hope, be avoided.

NATIONAL BANK OF BULGARIA.

State Bank of Emission. *Established 1879.*

COMPANY MEETING.

EGYPTIAN MARKETS.

The ordinary general meeting of the Egyptian Markets, Limited, was held on May 17 at Winchester House, Old Broad Street, E.C., Major W. I. le Breton (chairman of the company) presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The following are extracts from the chairman's speech: Gentlemen,—Before I proceed to the business of this meeting I have to refer, with deep regret, to the loss sustained by this company in the lamented death of Mr. Allan F. Joseph, C.E. I will, with your permission, take as read the directors' report and the accounts circulated therewith. It will, I am sure, have been no surprise to you that the continuity of our 10 per cent. dividends has been interfered with by present conditions, and I feel sure that the proposed dividend of 8 per cent. is, under the circumstances, no disappointment to you. Unfortunately the effect of the war upon our company is not wholly measured by this difference in the dividend to the ordinary shareholders. Our deferred shareholders on this occasion only get £191, or 12s. 9d. per share, as compared with £1,787, or £5 19s. 2d. per share, a year ago, and the Government participation in our profits is £1,750 less. In all our profits are diminished by £6,923 as compared with the preceding year. Our expenses proper only increased by £170, but, for reasons to which I will refer later, we have had to charge off no less than £1,335, and the balance of £5,418 is revenue lost to us. Although this sum of £5,418 is our actual comparative loss of revenue, events are responsible for a yet larger figure. We ought to have gained from having our markets opened to horned cattle for over 600 business days more than in 1913, and also from the unrestricted admission of buffaloes. I must remind you here that in the year we are considering our operations were interfered with by the war for five months only. This interference took the form of a very serious curtailment of the means of making purchases on the part of our customers and of a serious shortage in camels, in particular, offering at our markets for sale.

As regards the first of these, you know that our business is conducted entirely in the districts of Egypt, and that their population is directly dependent upon the conversion of their cotton crops into cash. Their position, though bad, would have been worse if the Government of Egypt, with the assistance of the British Government, had not come to the rescue, as ready to make purchases of, or advances upon, considerable quantities of cotton, but the crop was inferior to recent years, the ruling prices were worse, and worst of all, the demand fell far short of the production. As regards the second point, you are probably also aware that an important part of the earnings of our cattle markets is derived from the business done therein in camels. In Egypt these are not only employed as beasts of burden, but the less useful and softer kind are used in large numbers for butchers' meat. They are brought to our markets mainly from Syria, and also come to us from the direction of Tripoli. These animals from both directions have evidently been annexed by the Turks to aid them in their attempted attacks upon Egypt, and, although they must have derived so little satisfaction from such use or abuse of their services, this action of the Turks has deprived our company of a considerable amount of revenue, as it also deprived the owners, probably, of the proceeds to which they were entitled. The receipts for the year from our cattle markets fell from £34,735 in 1913 to £31,334 in the year under review, and I am quite inclined to attribute this decrease of £3,400 to the dearth of camels at our markets for five months. It means to us that camels were absent from or in short supply at our markets on more than 2,000 market days, and, thus viewed, I do not feel that I am exaggerating the effect at an average loss of £1½ per day. The remainder of our loss of revenue is due to the following causes. Firstly, the sale of cotton seed to be taken over by the Government, as pointed out to you last year had been decided upon—from this we have suffered to the extent of £1,000—and, secondly, to decreases in the earnings of our general markets and slaughterhouses.

I will now turn to a brief consideration of miscellaneous matters, with which you have been made acquainted on former occasions. I will commence with our old enemy, the cattle plague. I told you a year ago, with somewhat mixed feelings, that owing to the heavy cost the Government had been compelled to curtail its operations for the eradication of cattle plague, and that, as a result, we should in all probability suffer less acutely then, while those measures were in full force, but for a longer time than if they had not been interrupted. We have suffered less acutely, for we enjoyed, as I have told you, 626 more market days open to horned cattle than in 1913. Indeed, for the last one and a-half months of 1914 we only had one market thus partially closed, and, according to latest advices, have only eleven so closed to horned cattle, against thirty-five at the same time in 1914. I think this goes to establist the fact that if the preventive measures adopted by the Government had been continued on the same scale we should soon have seen the last of cattle plague, while, on the other hand, the increase from one at the end of 1914 to eleven at May 6,1915, shows that there has been some recrudescence, and I may say that my mingled feelings of a year ago now give place to one of unqualified regret that, even at the heavy cost to ourselves, the successful efforts of the Government were prevented from being carried to that completion which, apparently, was so nearly reached. At the same time, we have every reason to hope that the measures taken, and still being taken, by the Government are sufficient to protect us from any return of this disease comparable to what we suffered from it in past years, and will, moreover, eventually stamp it out. A matter of considerable importance to us is our business in chemical manures, and the principal of these is nitrate of soda. In this we did not lose anything appreciable last year, but we should have done better if a lot of 250 tons shipped in an enemy's boat from Antwerp had not been seized and taken to Malta. By the prompt aid afforded to us by the Admiralty this cargo was soon released, but we did suffer, both from the delay and from the extra expense involved in then getting it to Egypt. This year we have had great difficulty in procuring nitrates, and greater still in getting freight. We have so far been unable to do more towards complying with our general manager's urgent requests for increased quantities than to send him enough to keep our business together, and we realise and share his disappointment that he has been prevented from effecting some considerable sales at profitable prices. Lately, however, we have been able to secure a cargo direct from the coast of Chile at a favourable price. This should reach Alexandria about this time; we must hope that it will do so safely, and we feel that it will be sufficient for present purposes and will be turned to good account by our able and energetic manager. Another of these fertilisers now coming into increased use in Egypt is phosphoric acid, at present obtained and sold by us in the form of superphosphates. This substance commands only a low price. It sweats and destroys its bags, and as a consequence little profit attaches to the business. For some time we have had in view, and have now completed, what we believe to be a more favourable arrangement for dealing with this matter.

The Egyptian Phosphate Co., Limited, secured from the Government of Egypt a concession of important phosphate beds at Sofaga, on the Red Sea, and have succeeded now in producing therefrom a basic phosphate much richer than superphosphates and, in the form of a dry powder, unobjectionable to handle. The company has agreed, for a period of five years, to give to our company the sole rights for the sale of their basic phosphate in Egypt, on a commission basis, and payment by us by way of advances of one-half only of the price to us delivered at Suez, while we, on the other hand, have undertaken to use our best efforts to further this business. We realise that we have to face the difficulties attendant upon the introduction of a new article to a very conservative people, but for this we claim to possess unrivalled facilities.

I will now offer a few remarks upon our prospects. In the first three and a-half months of the current year we have lost about two-thirds of 1 per cent. The next three and a-half months are not so important, and I should doubt our losing anything appreciable in that time. We then reach the date at which the war affected us in the past year, and, consequently, at the worst, I do not see that the current year can fall far short of that we have been considering, even if existing circumstances continue throughout the whole of it. (Applause.) I say, at the worst, because, in order to prevent a recurrence of the difficulties of cultivators in disposing of their cotton crops, the Government of Egypt has restricted the areas to be so cultivated, and, as a consequence, a great deal more land will be devoted to other crops. Of these, wheat and rice are likely to be the principal. It is not to be expected that these will yield the same profit as cotton, but they will, at any rate, be marketable, and in all probability at good prices. Cash, therefore, is not likely to be so scarce. We may, possibly, secure business in these crops while we have had no share in cotton dealings, and our manager believes that our chemical manure business will be larger. If existing circumstances do not continue throughout the year an improvement on this forecast may be looked for, while in regard to future years I have no doubt that you share the generally expressed belief that Egyptian business, so sound as ours, is likely to benefit from that country having been declared a British Protectorate. (Hear, hear.) On this occasion I desire to make somewhat special reference to this company's staff. It has been my painful duty to remark upon the shortcomings of some who were in our employ last year, but this must not, I feel, prevent my commending the staff to your notice as a whole, more particularly so as, in the absence of my usual visit to Egypt, and under the circumstances with which we are contending, this is the only encourage-

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Digitized by Google

ment I can offer to them. On the outbreak of war Mr. Duffield, our general manager, and all members of our staff on leave, returned to their posts without a murmur. Any of us who have served abroad, and have saved up our leave and our money for a trip home can realise the disappointment thus caused to them and their friends. Two of our inspecting staff were recalled to military duty, while a third enlisted and obtained his commission in the short space of three months. (Hear, hear.) Those remaining have had harder and more trying times than usual. At this end I hope I may be permitted to refer to what, I am sure, are most valuable services being performed, at great sacrifice to himself, by my distinguished colleague, Captain St. John Cooke, D.S.O. (Applause.) My other colleague, Mr. Home, C.I.E., is, I know, serving with one corps, and our secretary, Mr. Horne, with another, while in the office the one gentleman left (Mr. Hassett) was, for some reason, pronounced unfit for military service, though he has proved himself so fit for ours. If any shareholder has any questions to ask I shall be happy to reply. (Applause.) I beg to move: "That the report of the directors dated April 27, 1915, together with the audited statement of accounts and balance-sheet for the year ended December 31, 1914, be and they are hereby approved and adopted."

Captain A. St. John Cooke, D.S.O., seconded the motion, which was carried unanimously.

The Chairman proposed, "That a dividend of 8 per cent., less income-tax at 1s. 6½d. in the £, on the ordinary share capital of the company for the year ended December 31, 1914, be and it is hereby declared to be paid to the holders of ordinary shares, recorded on the register of the company on May 4, 1915, and to the holders of ordinary share warrants to bearer."

Mr. W. Home, C.I.E., seconded the resolution, which was carried.

The Chairman moved, "That the sum of £191 8s 2d. (equal to 12s. 9d. per share), plus or minus one-third of such additional amount (if any) as may be found due from or to the Egyptian Government, as the case may be, beyond the £950 (the amount estimated as due to Government), less income-tax at 1s. 6½d. in the £, be declared as dividend on the deferred share capital of the company, payable to holders of the deferred shares on the company's registers on May 4, 1915; that of such figure 10s. per share, less income-tax at 1s. 6½d. in the £, be paid on May 19, 1915, and the balance (if any) immediately after ascertainment thereof."

The motion was seconded by Captain A. St. John Cooke and carried.

On the motion of the Chairman, seconded by Mr. Home, the retiring director (Mr. W. O. Joseph) was re-elected.

Mr. W. G. Morrison proposed, and Mr. J. F. Hall seconded, the reappointment of the auditors (Messrs. Price Waterhouse and Co.), and the motion was carried.

Mr. G. H. Redwood then moved, "That the company do refund to Major W. I. le Breton the sum of £175; to the estate of Mr. Allan F. Joseph, deceased, the sum of £175; to Mr. William Octavius Joseph the sum of £175; to the estate of Mr. F. E. Robertson, C.I.E., deceased, the sum of £290; and to Mr. F. J. Horne the sum of £100, being respectively the sums paid by the above-mentioned gentlemen to the company out of their own pockets in respect of the financial year ended 31st December, 1908."

The resolution was seconded by Mr. Morrison and agreed to unanimously.

THE ALEXANDRIA WATER COMPANY LIMITED.

NOTICE IS HEREBY GIVEN that the THIRTY-SEVENTH ORDINARY GENERAL MEETING of the Shareholders will be held at the Company's Office in Alexandria on Friday, the 4th June, 1915, at four o'clock in the afternoon, for the transaction of the ordinary business of the Company, pursuant to the Act of Parliament.

The Transfer Books of the Company will be closed for 14 days immediately preceding the Meeting.

By order of the Board,
J. E. CORNISH,
Assistant Manager.

Dated, Alexandria, 24th April, 1915.

COMPANY RESULTS, &c

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 386 tons (last week, 392 tons); Hurgada production for week, 315 tons (last week, 358 tons).

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended April 20 amount to £E4,018, as against £E5,831 for the same period last year.

GHARBIEH LAND COMPANY.—The annual meeting of shareholders will be held on May 31 in Cairo.

UNION FONCIÈRE D'EGYPTE.—The annual meeting of shareholders was held in Alexandria on May 15.

NILE COLD STORAGE COMPANY.—The ten per cent. share bonus dividend already declared in respect of the last financial year, together with an interim dividend of £1 per share for the current year, is now payable in exchange for Coupon No. 7. Coupons may be deposited for examination at the offices of the company, Maison Green, 19, Sharia Boulac, Cairo, 10 and 12 a.m.

OTTOMAN GAS.—The directors recommend a dividend at the rate of 2 per cent. per annum, free of income-tax, on the ordinary shares for the half-year, making 6 per cent. for the year.

ANGLO-EGYPTIAN.—Gemsah production for week, 234 tons (last week nil). Hugada production for week, 43 tons (last week 77 tons).

ABOUKIR COMPANY.—Interest on Five per Cent. First Debentures, due June 1, will be paid on and after that date on production of Coupon No. 32 at the offices of the company, 134, Palmerston House, London, E.C.

SUEZ CANAL RECEIPTS.—The traffic receipts of the Suez Canal of the 16th and 17th inst. amounted to 560,000 frs., against 570,000 frs. for the corresponding days last year.

THE GARBIEH LAND COMPANY.

Messieurs les Actionnaires sont convoqués en assemblée générale ordinaire pour le lundi 31 mai 1915, à 12 heures midi, au Siège social, au Caire, rue Gameh Charkass, No. 7.

ORDRE DU JOUR.

1. Rapport du conseil d'administration sur l'exercice écoulé.
2. Approbation du bilan au 28 février 1915.
3. Renouvellement partiel du conseil d'administration.
4. Nomination des commissaires pour l'exercice 1915-1916.

Les dépôts d'actions donnant droit à assister ou à se faire représenter à cette assemblée devront être effectués jusqu'au 16 mai 1915 au plus tard, soit au Siège social, au Caire, soit dans une des Banques ci-après désignées.

Banque Hollando-Américaine, 11, rue Pillet-Will, Paris.

Anglo-Egyptian Bank, Limited, au Caire.

Banque Belge pour l'Etranger, au Caire, et dans les principales banques belges pouvant recevoir des dépôts.

Banco di Roma, au Caire, et dans les principales Banques du Caire et d'Alexandrie.

NOTES OF THE WEEK.

Italy declared war on Austria-Hungary on May 23. Early the following morning Austrian aeroplanes attempted to attack the arsenal at Venice, while Austrian destroyers shelled various places on the Adriatic coast. The enemy's activities, however, were merely in the nature of demonstrations, as no effort was made to press home the attacks. Both the aircraft and the naval units were easily driven off before any serious damage was done. The Italians replied with a raid on Porto Buso, the Austrian island at the head of the Adriatic, where they sank some enemy ships and took a few score prisoners. Without further delay what must be regarded for the present as the main Italian offensive is being developed across the eastern frontier along a wide front extending from Monte Maggiore to the sea. The first successes of our new Allies point to an Austrian concentration on the Isonzo River, for it is too much to expect that the enemy will not have made the most of the warning given them of Italy's intentions.

The rapidity of the Italian movements, no less than the significant passage in the mobilization orders which stated that railway services, both for passengers and goods, would continue regularly, proves that the Italian mobilization had been well advanced before war was declared. A resolute offensive pressed home with all the dash associated with Italian troops can hardly fail to be of the maximum advantage to the Allies at this stage. The Austro-German attack in Western Galicia is not yet spent, but this new menace from the south-west will have to be met by more troops than the Austrians would have felt justified in keeping idle on the Italian frontier so long as there was a chance of Italian hostility being bought off by concessions. A lull has been reported in the operations on the San River, and it may be that already the enemy's attack in this quarter has had to be weakened to provide troops for the south-west frontier. In this case Italy has been opportune indeed in her declaration of war.

As a result of Italy's intervention in the war all eyes are naturally turned for the moment towards Roumania. We have heard for so many months that this country was on the point of abandoning its neutrality, that interest in the prospective event could not be sustained long enough. It died down, only to be revived when some date was mentioned in connection with Roumanian intervention. The last date to hold the field was the one to be chosen by Italy for her declaration of war. But Italy has been in the field for some days now, and Roumania makes no move. It is rumoured, indeed, that the Bucharest Government has been trying to profit by the delay in order to secure better terms for her support from the Allied Powers. No one will challenge its right to safeguard the national interests in the most favourable manner possible; but it would be a matter for regret to Roumania's best friends and, we do not doubt, to the nation as a whole, if the Government were to adopt such an unreasonable attitude that it was in danger of forfeiting the respect of the Triple Entente.

Throughout the war Roumania's attitude has appeared to be perfectly straightforward. Her sympathies and her difficulties were well known to the Allied Powers, and they have waited confidently for the moment when in her own good time she would be ready to join them. She was acquainted with what she stood to gain by remaining neutral and with the rewards that awaited her co-operation with the Allies. Even if no precise date for her participation in the war had been fixed, the spirit of the understanding was that she should not delay beyond the reasonable period required for the completion of her military preparations. That stage has been reached. If she still delays, it is obvious that her co-operation, when it does come, will be less valuable to the Allies than it would have been if it had been given at an earlier date. A bargain, if broken by one of the contracting parties, ceases to be binding. It would be well if the Roumanian Government were to take note of the public temper in the countries of the Triple Entente. The feeling is abroad that at one period of the war things were being made too easy for neutrals who wished to fix their own time for climbing down from the fence. That feeling may be ill-informed, but it may react ultimately on the attitude of the Allied Governments, which can hardly be in a mood for protracted bargaining. It is true that for the speedy termination of the war we still need Roumania's co-operation; but Italy's intervention bids fair to place a different complexion on the European situation, and the relative value of the help that Roumania can give will certainly depreciate as time passes.

An object-lesson of the straits to which a country can be reduced by a policy of wobble is provided by Greece. Our Athens Correspondent, in a letter published in this issue, describes graphically the attempts of the Gounaris Cabinet to persuade the country through its Press that the rejection of M. Venizelos' policy was the best course for Greece to adopt. What the Greeks realize, however, is that whereas in January the Allied Powers were ready to offer Greece a considerable part of Asia Minor as a reward for assisting Serbia, now they do not take the trouble even to answer Greece's overtures on the subject, still less to engage in the haggling which the tact and statesmanship of M. Venizelos prompted him to avoid. What the late Premier offered his country was a clear-cut policy. This was rejected, and the new Cabinet preferred to have no policy at all, but to wait upon events. The result is that it passes through agonies of uncertainty as each bulletin from the theatre of war reaches it, knowing that it must ultimately be forced into a decision, but lacking the courage that confidence in the honesty of its attitude would bring.

It would be too much to expect that the Bulgarian Government should modify its attitude at a moment when the issue on the Galician front is in the balance. If shells are to be the deciding factor in this war, and if the Allies refrain from manufacturing a sufficient quantity, while Germany's output shows hardly any signs of diminution, neutral countries which are compelled by their weakness to walk warily cannot be blamed for some uncertainty regarding the final issue of the war. But we believe that public opinion in Bulgaria is inclining more and more to the Triple Entente, and will be still further impressed by Italy's action. At the same time the Bulgarian attitude will be helped by the seizure by the Turks of a hundred Bulgarian railway trucks which were passing through Turkey laden with goods from Dedeagatch, consigned to Bulgarian merchants. The goods were discharged in Turkish stations, and the trucks were utilized for military purposes.

The news from the Dardanelles has recently become as fragmentary as some of Sir John French's despatches, and it is evident that the Allied troops are paying the penalty of meeting the Turks on their own ground. If the military strategists had been given a free hand they must have argued that, as the one thing which the Turks lack most is mobility, it was essential to engage them as far from their base as possible. With this object in view they ought to have been encouraged to expend all their strength in distant efforts against Egypt, in the Caucasus, and in Mesopotamia. But the forcing of the Dardanelles was considered a matter of extreme urgency—how far belief that it would prove an easy task influenced the degree of urgency attaching to it we do not know—and it was decided to tackle the Turk where mobility means nothing, but where everything is in his favour.

The last official statement of the operations on Gallipoli Peninsula covers the period from May 21 to May 24. Whitsuntide at the Dardanelles differed but little from Whitsuntide in Flanders and France. On the Friday, we read, the first French Division made considerable progress, and are now close to the Turkish trenches. The next day the enemy made a determined attack against the left of the Indian Brigade, and gained a temporary footing. A strong counter-attack, however, was at once organized, and the Turks were driven back with a loss of over five hundred men. In one particular a great difference between the conditions on Gallipoli and those in the western theatre has to be recorded. On Whit Sunday the Turks were granted at their request an armistice for the purpose of burying their dead lying in front of the Australian and New Zealand Army Corps. Over 3,000 Turks were buried, all killed between May 18 and 20. Where our troops have to deal with Germans no suspension of hostilities is agreed to now. So often has an armistice been violated by the enemy that our troops are not allowed to trust them any longer. The result is to be seen in several places where the German dead have been lying between the two lines of trenches for many months. By Whit Monday further advances had been made by the Allies on the peninsula and the new lines had been consolidated. Since then, however, we have suffered a fresh naval loss in the torpedoing by an enemy submarine of H.M.S. "Triumph." Fortunately the greater number of those on board were rescued.

An interesting disclosure is made by the Italian Green Book dealing with the events leading up to the declaration of war with Austria-Hungary. It appears that at the time when a fresh attack on Serbia was regarded as imminent, and the Press of the Central Powers was at pains to spread reports of the numbers of German troops to be sent to reinforce the Austrians, the Italian Government contrived to interpose a veto on any military action by Austria-Hungary in the Balkans. Article VII. of the Triple Alliance Treaty bound the contracting parties to consult one another previously to, and to arrange "compensations" for, even temporary occupations of new territory by any one of the partners. Austria-Hungary seems to have availed herself of this Article when Italy was at war with Turkey and was in a position to bombard Salonika and Kavalla. On February 12 last the Italian Foreign Minister notified the Austro-Hungarian Government that, in view of the Austrian delays in answering its proposals, the Italian Government withdrew them from discussion, and in virtue of Article VII. declared that any military action whatever on the part of Austria in the Balkans without previous agreement with Italy would lead to the gravest consequences. A few days later Baron Sonnino emphasised this communication by informing the Vienna Government that it had "the precise significance of a veto placed by Italy on any military action by Austria-Hungary in the Balkans until the conclusion of the agreement for compensation in accordance with Article VII."

Three or four months ago Germany and Austria-Hungary were as little anxious to have Italy ranged against them as they were last week. They appreciated apparently the significance of the Italian threat, and the threatened invasion of Serbia did not take place. In view of the preparations that were stated to have been made for it, we have no need to underrate the value to Serbia of the Italian action. No doubt Austria-Hungary was unable to spare many troops for any sustained offensive; but the disastrous nature of the rout she had suffered at the hands of the Serbians called for some revenge, if only to satisfy public opinion at home. We know, however, that the expedition against Serbia never started. The German troops which had been despatched to reinforce it were drafted elsewhere, and for several months now the Serbians have enjoyed immunity from attack. Serbia's knowledge of her indebtedness to the Italian Government can hardly fail to affect the relations between the two countries. With Italy's entry into the war, controversy over the details of the compensation she is to receive is of necessity in abeyance. The silence that has succeeded to a somewhat bitter discussion in the Press of the two countries implies, we may hope, that an agreement has been reached satisfactory to both States.

The Russian Foreign Secretary has had no scruples in declaring *urbi et orbi* his satisfaction over Italy's action. In the course of an interview he is reported to have dwelt on "the tremendous importance of Italy's decision," and to have expressed the hope that her adhesion to the Triple Entente would accelerate the end of the war. In this country we have not allowed ourselves to give vent to any enthusiasm over Italy's step, probably for the same reason that will prevent us from celebrating any single success achieved in the war with much outward manifestation of joy. Nevertheless, we do not disguise from ourselves, any more than M. Sazonoff, the tremendous importance of Italy's accession to the Allied ranks, and we eagerly await the concrete results of her military operations.

Digitized by Google

The Russian Foreign Secretary at the same interview was able to make a reassuring statement regarding Serbo-Italian relations. Russia, he said, would not have fulfilled her task if Serbia had not been afforded an extensive access to the Adriatic, and therefore the rumour that Russia intended to give Italy all the Dalmatian coast was unfounded. Serbia would receive good ports and her desire for access to the sea would be fully satisfied.

The absence of news from the Persian Gulf indicated that the punishment received by the Turkish forces at Shaiba and Ahwaz in the second week of April had not been without its effect. This reading of the situation is now confirmed in an official communication issued by the India Office. No further trouble seems to have been experienced in the Busreh district. But the Turkish forces on the Tigris and Karun remained, although they showed little inclination for active operations. With a view to checking the movements of the column whose presence in the district was a menace to Ahwaz and to secure the pipe-line of the Anglo-Persian Oil Company, a British force was sent to attack the Turkish camp which had been located at Illah on the Kharkheh. A rapid rise of the latter river and a series of severe sandstorms delayed our movements, and the Turks were able to retire on Amara before we could come up with them. The further operations of the force were accordingly confined to the infliction of punishment upon those local tribes which had been assisting the Turks. It is to be inferred that the problem with which the Turks are confronted in the Gallipoli Peninsula has had the effect of distracting their attention from their other theatres of war. Certainly the operations at the head of the Persian Gulf have not fulfilled the promise of early threats. Of the attack on Egypt nothing more is heard, although the railway from Nablus may still be stretching out its steel feelers across the desert. In Armenia the Russians are reported on the northern shore of Lake Van—a notable advance since last we heard news from the Caucasus. Their presence there justifies the supposition that the Turkish menace to the north-western corner of Azerbaijan has been removed.

The condition of the King of the Hellenes gives rise to grave anxiety throughout Greece. Complications have ensued upon a bad attack of pleurisy, and it is a question whether even the Royal patient's splendid constitution can stand the strain placed upon it by the severe illness. A whole nation watches in spirit at the King's bedside. King Constantine became a national hero after the successes to which he led the Greek army in the two Balkan wars. In regard to his difference of opinion with M. Venizelos, which brought about the resignation of the latter, there has scarcely been time for public opinion in Greece to apportion responsibility between the King, the Premier, and the General Staff. In any case, King Constantine's illness has checked all criticism, and the nation's hope is centred on his speedy recovery. Greece could have no more popular ruler to lead her to the goal of her national aspirations.

A strong wave of feeling that as a nation we have hitherto failed to take the right steps for putting forth our best effort to end the war is passing through Great Britain. Its first result has been the formation of a Coalition Government. The country now looks to its leaders to make up for the deficiencies of the past by losing no time in marshalling its resources in men and material to the best possible advantage. Under the influence of this critical discovery it is inevitable that our outlook on the general position of the war should be temporarily clouded. We see the complete dissipation of all the hopes formed during the winter that with the early summer a combined advance of all the Allies would be in progress. In the western theatre the situation shows little or no improvement. On the eastern front the Russians, instead of being established on the Hungarian plain, have been forced to yield a great part of Galicia, and are struggling to prevent the investment by the enemy of the fortress of Przemysl. In the Dardanelles our rate of progress is measured by yards instead of miles, and each yard advanced entails loss of life. On the other side of the picture, however, there is the intervention of Italy, and time will show how long the prodigious efforts of Germany can make good with this powerful accession to the Allies' strength.

"DOUGHTY-WYLIE HILL."

Details have been received in London this week of the manner in which Colonel Doughty-Wylie met his death. They show that the end was worthy of the man, and was such as he himself would surely have chosen: met in the fulfilment of duty, for which he had volunteered, and in the performance of an action which saved many other lives. It is told as follows by the *Daily Telegraph's* special correspondent at Mytilene:—

Colonel Doughty-Wylie, who was on the Staff, had previously been superintending the landing of the Australians. From a transport lying close to the point of disembarkation he was observing their valiant efforts to secure a very difficult position which they had attempted several times under a terrific fire and against the strong defence of the well-entrenched Turks. Many Australians were killed and the officers were dropping one by one. Colonel Doughty-Wylie eagerly asked permission to lead the charge, and this was given, reluctantly, in view of his position as Staff Officer. Colonel Doughty-Wylie sprang to the head of the Australians and called them to follow him, which they did with loud cheers.

Under his lead the Colonials, who had lost greatly in numbers, but nothing in spirit, stormed the ridges and trenches, advanced a considerable distance, and captured position after position, inflicting heavy losses on the Turks and enabling the disembarkation of more troops to be effected in comparative safety. The brave colonel's heroism thus prevented the loss of many lives, in addition to achieving a feat of arms which provided a splendid example and resulted in a substantial gain.

Having performed this glorious, self-imposed mission, Colonel Doughty-Wylie fell at the head of the victorious troops, with the satisfaction of knowing that they had reached the goal and consolidated the position.

Reuter's correspondent in Cairo, who also forwards an account of the incident, reports that "the men spoke of this brave man in most eulogistic terms," and that the moral effect of his action was great. He adds:—

The hill on which he met his death is now known as "Doughty-Wylie Hill." An officer speaking about the Major said that no braver man ever lived. He had no business to be there, as he was a Staff Officer, but the loss amongst officers in landing had been so great, and the necessity for making headway quickly was so essential, that Major Doughty-Wylie felt that his duty lay in leading the men, and so he went forth fearlessly to his death, and the hill will be a lasting monument to his self-sacrifice and great valour.

The *United Service Gazette* (May 20) in commenting upon the wonderful exploits of submarine A.E. 14, in the Narrows of Chanak, does well to call the attention of neutral nations to the difference in the manner in which naval warfare is conducted by the various belligerents. It says:—

Neutral nations will note the difference between such a military enterprise as this, by British seamen from our colonies, and the limp and lame work being performed by German submarines in sinking unarmed merchant ships and fishing vessels.

LETTERS FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 9.

The Wounded from the Dardanelles.

This week the war has been brought home to us more vividly than has been the case since hostilities started; for the first batches of wounded have begun to arrive from the Dardanelles. As I wrote in my last letter, very elaborate preparations had been made, but the number of casualties that the hospital ships and troop-ships brought over have taxed the capacity of those establishments which had been requisitioned. I am not permitted to give the number of wounded, but you can obtain some idea of what we have been called upon to cope with from the list of hospitals in Cairo alone. Besides the Citadel, which has a large capacity, Kasr-el-Aini has been taken over, as also the Ghezireh and Heliopolis Palace Hotels, whilst the Anglo-American Hospital has been largely given up to officers. Mena House is still retained, but it is understood that the Savoy and Semiramis Hotels are about to be taken over, and that the establishment at the Pyramids may be given up. In addition, Port Said has been called upon to accommodate a good number; and, as Alexandria has not sufficient room, the French hospital at Ismailia and the native ones at Damanhur, Zagazig, Shebin-el-Kom, and Benha have all been requisitioned. In fact, from being, so to speak, a garrison town, Egypt has become a vast hospital. The medical staff provided by the military authorities has, of course, had to be reinforced locally. All the civil doctors have been called upon for service to the wounded, whilst the nursing staff has had to be supplemented by the few lady residents who either had previous experience in Red Cross work or in anticipation of emergency had taken the precaution of attending lectures on the subject, and who are now greatly relieving the strain.

The worst cases have been retained at the ports, mostly in Alexandria, in order to save them the extra journey to Cairo. But even then a visit to the hospitals of the capital is quite sufficient to convey a very good idea of the havoc that modern warfare works. What strikes one at the very outset is the high *moral* evident everywhere. Thomas Atkins, whether he hails from Britain or Australasia, bears his lot with wonderful fortitude. His sole grumble is at his ill-luck at having been knocked out so soon. That man over there, really little more than a boy, who has been wounded in the spine by a shell, and who will probably never be able to walk; this one, who has lost his left eye and whose right one may be affected; this group, all with thighs and legs fractured and smashed by shrapnel; one and all are as cheerful as if they were simply having a day in bed. A chat with these heroes—for they are all that with a vengeance—reveals a remarkable keenness to be back in the firing line, despite the horrors they had experienced, and an interest in the progress of their comrades still at the front that are decidedly refreshing; but, above all, one finds them without exception possessed of a quiet, supreme confidence in the ultimate result that positively puts to shame those of us whom the telegrams from time to time incline to pessimism. If the spirit which I found dominant in every ward of every hospital in this city is that which animates the rest of the British forces—and I do not doubt that such is the case—then we need have no fears as to the future.

Some Details of the Landing Operations.

According to all accounts, our forces effected a landing on the Gallipoli Peninsula against almost overwhelming odds. Part of the coast had been protected by wire entanglements and pits with stakes driven in points upwards, and the difficulties were added to by the machine and other guns, which were so well concealed that for a long time the warships could not locate them. Many of the men never got on land at all, and were shot in the landing-boats, whilst the officers were picked off one by one by sharpshooters, who were eventually tracked down, but unfortunately not until they had levied a heavy toll. Thus it was that the Brigadier and every colonel but one of the Fusilier Brigade were placed *hors de combat*, and that the Dublins had only one officer left. Similarly, one of the Australian battalions was at the end led by a sergeant, and another was commanded by the padre, who was unfortunately killed.

The Australians seem to have done wonderfully well, and it is pleasing to note that all the other units were loud in their praise of the Colonials' work. The Naval Brigade also bore itself bravely, and the number of marines in hospital here shows what havoc was wrought in their ranks. As one of them said to me, Antwerp was child's play compared with what they had to endure after landing. The Turks, directed by the Germans, had taken most thorough precautions. All the ranges were accurately marked out, and they were able to sweep our lines with an endless curtain of shrapnel, whilst their snipers were so ingeniously concealed that they got to the rear of our men without being detected. Most of them were seated in dug-outs covered with shrubs, and so were able to pick off the officers after they had passed forward. Some of these snipers, when eventually discovered, were found to have a good supply of cartridges, at least a thousand, and food for a fortnight by them; a good number of these men were Germans. Some of the officers of the latter nationality, having obtained and donned British or Australian uniforms, contrived to get into our lines, where they tried to create confusion by issuing false orders or by shooting at our officers.

British Officers Called Up from Egypt.

As a result of the toll levied in officers in the Dardanelles Expedition and also on the Western Front, the number in the service of the Egyptian Government has had to be drawn upon, and several have proceeded to the front this week. These include Colonel E. A. Herbert, commanding Cairo District, and Captain E. B. Mackintosh, A.A.G., who have gone home; Captain A. A. C. Taylor, Assistant Director of Nizam; Captain Stirling, late Secretary of the Khedivial Sporting Club; Captain Kenny, A.D.C. to H.H. the Sultan; and Captain A. A. Butler, Assistant Director of Intelligence, who have gone to the Dardanelles. Captains Taylor and Stirling were both originally in the battalion of the Dublin Fusiliers that lost so many of its officers at Cape Helles, and the former will officiate as colonel and his companion as second in command.

Turkish Atrocities.

Most gruesome stories are circulating as to the brutality of the Turks, who are said to be retaining no prisoners and to be bayonetting the wounded, whilst they multilate those able-bodied men who fall into their hands. Even making allowance for ordinary exaggeration in the course of telling, there seems little doubt that the stories are fundamentally true, and that the Turks are systematically committing these atrocities, no doubt under the direction of the Kultur protagonists who are now in command of them. As it is understood that some of these unfortunate victims have struggled back to die in our lines, it would be as well if an inquiry were made into this matter, and an official statement issued. If, as one has reason to believe, the stories in circulation are true, no useful purpose can be served in hushing such matters up, although certain people seem to think that publicity is undesirable and inadvisable.

Cairo, May 16.

The Problem of the Dardanelles Wounded.

The influx of wounded, British and French, from the Dardanelles, which was recorded last week, has continued ever since, and appears likely to continue for some time to come in the same proportions. The officers and men have been distributed, as best could be, between the various regular and auxiliary hospitals, but the want of extra accommodation is being very much felt. From what one hears, the congestion is very great in Alexandria, where the more serious cases are being cared for, and where in consequence a longer

period must elapse before vacancies occur amongst the beds at present occupied. Here in Cairo, as the majority of the wounded are able to get about after a short rest and a few dressings, the tendency is more towards creating convalescent homes than making new hospitals. To meet the recent pressure Luna Park has, however, been entirely taken over; and in view of any unexpected emergency the local Red Cross Society, with which the Cairo branch of the St. John Ambulance Association has been amalgamated, has decided to establish a Red Cross hospital of about 300 beds, probably out at Giza. A movement has been started, and appears to be meeting with great success, for residents to take into their houses those of the wounded who do not require constant and skilled attention. So far only officers have been thus cared for; but some residents have expressed their willingness to take over certain of the rank and file. By this means the pressure on the hospitals will be much relieved, for these wounded will only go at stated hours to the military surgery to be dressed, and will remain in the care of these public-spirited residents until they are fit once more.

The Sultan and the Wounded.

H.H. the Sultan, who, as Prince Hussein Kamel Pasha, was always to the fore whenever any philanthropic work needed attention, or suffering had to be alleviated, has since hostilities started with Turkey and the first wounded were brought to Cairo shown the deepest solicitude for their lot. Especially has this been noticeable since our wounded commenced to arrive from the Dardanelles. In the first place his Highness has lent the Walda Palace at Helouan—one of the properties belonging to the Wakf of his father, the Khedive Ismail—as a convalescent hospital for sick and wounded soldiers. A fund has been opened for its administration, and the Sultan has subscribed £E200 and has given a large number of very necessary articles. The hospital, which is under the patronage of his Highness, will be managed by his English physician, Dr. Llewellyn Phillips. Further, at the weekly sitting of the Council of Ministers, the latter, on the initiative of the Sultan, who was presiding, decided that the Egyptian Government should subscribe £E2,000 towards the funds for the wounded. On Thursday, accompanied by the Prime Minister, his Highness visited the hospital at Heliopolis Palace, and afterwards sent General Maxwell 100,000 cigarettes for distribution amongst the wounded at all the British hospitals. The Sultan's sympathy and generosity have made a very great impression on all sides.

A Shortage of Doctors.

There would appear to be little doubt that the military authorities were taken by surprise by the number of casualties that the Expeditionary Force has suffered. Extensive preparations had been made in Egypt, but if it had not been for the assistance given by the voluntary helpers one does not know how the work could have been coped with. There seems, also, to have been a lamentable shortage of doctors with the expedition; otherwise there is no accounting for the fact that some of the hospital ships, conveying over 1,000 cases, carried but two doctors and but four nursing sisters, who, helped by orderlies though they were, could not, working night and day, give anything near the proper attention to their charges. Practically all the wounded brought up to Cairo had not had their wounds dressed since the first dressing; in many cases they had merely received first aid on the field. That exceedingly few of them became septic may be certainly attributed to the beneficent effect of iodine, of which every man carries a small phial.

Arrival of Turkish Prisoners.

Turkish prisoners from the Dardanelles have now begun to arrive. They have all been taken to the prisoners of war camp at Maadi. The last batch included six officers, two of whom were certainly Germans. It was understood that the British military authorities contemplated allowing the Turkish officers out on parole, but the British residents in the district where they were to be allowed to reside petitioned against this step, and it is believed that the idea has been dropped. No doubt this proposal was entertained by the military authorities before they realised how barbarously the Turks had behaved in Gallipoli towards our men. Further confirmation has now been received of what I wrote on this subject last week; and since officers are always supposed to be responsible for the conduct of their men, there is no reason why the officers in question should be accorded this consideration.

An Echo of the Canal Attack.

An interesting ceremony took place at Ismailia on Sunday last, when the French Agent, M. Albert Defrance, presented the Cross of the Legion of Honour to Lieutenant George Carew. Lieutenant Carew, it may be remembered, was pilot of H.M.S. Hardinge during the first Turkish attack on the Canal. Whilst on the bridge he was wounded by a shell, which shattered one of his legs and severely damaged one of his arms. In spite of this, he insisted on remaining at his post, and it was only on the intervention of the doctor that he could be got down below. The British and French Governments at the time suitably recognised Lieutenant Carew's heroism, and the Quai d'Orsay saw fit to instruct its representative formally to pin on the pilot's breast the decoration awarded to him. The ceremony, which was attended by the General Commanding the Canal Defences and representative detachments of British and Indian troops and French sailors, was rendered all the more touching by reason of the fact that Lieutenant Carew had to be wheeled on to the scene, as he has had to have one leg amputated, and, although completely out of all danger, is still somewhat weak.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, May 7.

It is understood that the Government may probably move into summer quarters on Mount Troodos earlier than usual, possibly about the beginning of June.

A number of Cypriot-Greeks have expressed a desire to be enrolled for service with the Allied forces now operating against Turkey. They are for the most part men who served through the late Balkan War. They have applied, it is reported, to the French Consul-General here, and are eager to be accepted in view of the opportunity they hope to get of striking a blow at their ancient enemy.

Cyprus, May 14.

We understand that the Malta Regiment will not proceed to Troodos, but remain in camp at Polymedia, Limassol, this being more convenient should a necessity arise for their sudden departure. Meanwhile it is probable that they may be at any moment replaced by some other regiment from Egypt.

The Boy Scouts movement has become established in Cyprus, and quite a number of lads are now enrolled, and may be seen in the well-known dress marching along with their familiar equipment, and bent on learning discipline and a good deal that is useful besides. It cannot be doubted that, if strictly worked on the approved lines, this movement is likely to have a most beneficial effect on the intelligence and morals of the youth of the island, and should tend to raise the whole standard of character, as it is well known it has done in every other country in which it has taken root.

In the Legislative Council, during the debate respecting a clause which the Greek members desired but failed to insert in the reply to the High Commissioner's address, lively passages occurred between the Greek and the Turkish representatives. The latter, who, of course, opposed the proposal (relating to union with Greece), were energetically led by Irfan Effendi, who is an active upholder of the Turkish views on the Council.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, May 16.

The Question of Neutrality.

The proposal made a few weeks ago by the Greek Government to the Powers of the Entente has not been acknowledged, probably because the conditions imposed were quite unacceptable. The negotiations, therefore, came to a standstill. When it became evident, however, that Italy had come to some agreement with the Entente and was about to join them against Germany, and that in all probability Roumania would soon follow her lead, the Government began to show some inclination to take part in the Dardanelles operations, fearing that Italy might otherwise get a share of the territorial concessions in Asia Minor and elsewhere for which Greece was hoping.

The New Conditions.

In those circumstances the Government decided to modify their original conditions, and, suppressing their demand for a guarantee of Greek territorial integrity for a period of several years after the close of the war, they confined themselves to requiring this guarantee up to the signing of peace. On the other hand, they now propose to limit the action of Greece to the co-operation of her fleet, and to keep her army intact in order to meet any possible attack from Bulgaria, unless the Bulgarian army will also join in action against the Turks.

It may be asked why Greece should demand any such guarantee from the Powers, if she keeps at her disposal her entire army, which should afford her sufficient protection from the Bulgarian danger.

There are two reasons. In the first place, if Greece ranged herself on the side of the Entente Powers, she would be exposed not only to the danger from Bulgaria but to a possible attack by Austrian and German troops, in the event of their penetrating through Serbia, as they threatened to do a short time ago. Greece would then find herself in an extremely difficult position. But the situation would be quite different, and no such danger would exist if Italy and Roumania both declared war upon Austria. Then Greece would be able to count upon the support of Serbia, who would be relieved from the pressure by Austria, and would be able, in case of need, to assist her ally against the Bulgarians.

The Guarantee of Territorial Integrity.

The second and the most important reason why Greece insists upon this guarantee was mentioned in my last letter. It is that she fears that the Powers in their desire to re-establish the Balkan Alliance will permit Bulgaria to annex that part of Macedonia which she claims (*i.e.*, Kavalla, Drama, etc.), and that Italy will get the northern part of Epirus now occupied by Greece. The Ministerialist Press makes much of this danger, in order to rouse the patriotism of the country, and daily publishes articles showing how the Powers would thus make use of Greece to serve their own interests, and the fact that they will not give the guarantee she requires is held up as a proof that the Government's fears are well founded. It is a pity that in adopting this attitude the Ministerialist Press appears to forget what Greece owes to the three Powers in question, who practically created and have always protected our little kingdom. The Triple Entente Powers, not being in a position to accede to the demands of Greece in respect to this territorial guarantee, put a proposal before the Greek Government, undertaking in a general sense to protect Greek interests. They further pointed out to the Government, what M. Venizelos so well understood, that Greece had nothing to fear in becoming their ally, for if Bulgaria then attacked her she would have them to deal with also.

Interruption of Negotiations.

The Greek Government could not decide to accept this proposal, nor to abandon the territorial guarantee, and, therefore, refused to make any further official suggestions. The negotiations were then broken off, and the Government fell back upon its neutral policy, which it seems disposed to adhere to, even if Italy takes part in the war.

In justifying this policy the President of the Council argues (through the Press) that if a great Power like Italy is so reluctant to expose herself to the dangers of war, how much more reason has Greece to hesitate, especially as there has so far been no public demonstration in Greece in favour of war. which might lead one to infer that the people desire it. To this one might reply that Greece and Italy are quite differently placed, for even if she remained neutral Italy would have the compensations she most desires, and would annex all the Italian provinces now under Austria-Hungary which she might acquire by fighting. Further, if Italy fights she will have to throw *all* her forces into the field, whereas it is only proposed that Greece should offer the Entente Powers the support of her fleet. On the other hand, if Greece refuses to fight for the liberation of her compatriots she runs the risk of seeing Greek provinces ceded to another Power.

And as regards his argument that there have been no public demonstrations, M. Gounaris seems to forget that he took rigorous measures for their suppression. Even the Ministerialist journals have been obliged to acknowledge the strong public feeling in favour of M. Venizelos, which surely means that the people believe in his policy of action.

M. Gounaris would find it much easier to justify his hesitating attitude if he confined himself to the argument which he has used on another occasion, that his Cabinet does not hold its power from the people, and is consequently reluctant to assume the responsibility of adopting and putting into execution the bold policy conceived by M. Venizelos, but prefers that the people should show at the elections which policy they wish to support. He might add, if he wished to be even more frank, that the recent turn of events on the Russian front, the slowness of the Dardanelles operations, the appearance of German submarines in the Mediterranean, and in general the pessimistic view taken by competent critics of the operations against Turkey, and of the war in general, have strongly influenced the Government's decision to fall back upon its neutral policy.

The Programme for the Elections.

The Ministerial line of argument, which is intended to make people feel that the Government is mainly concerned in safeguarding the territorial integrity of the country, will form the basis of its programme for the elections. According to one of the Government papers, the electors will be told that, if they vote for the Venizelist party, they will give the Powers to understand that the Greek people approve of the cession of the Macedonian lands to Bulgaria, and that they are in favour of war. The Ministerialist newspapers are also exploiting the King's illness, declaring that it has been brought on by worry over his disagreement with M. Venizelos on the question of his war policy.

The Venizelist Press.

The Venizelist Press is busy refuting all these arguments. It points out that the Powers of the Entente gave M. Venizelos the formal assurance that they would make no demands in favour of Bulgaria, but would only try to remove his objections to the cession of the territory in question. Thus, if the Government of M. Gounaris finds any great difficulties in its way they must be of its own making. The Entente Powers must indeed have been surprised to find the Government proclaiming loudly that M. Venizelos wished to make territorial concessions to Bulgaria, without even explaining that he was to obtain in exchange other lands of much greater extent. This unpardonable revelation of State secrets has revived Bulgaria's dead hopes, and placed the Powers in a most awkward position in regard to her.

Greece's Representative at Petrograd.

M. J. Dragoumis, Greek Minister at Petrograd, has resigned his post in order to stand at the approaching elections. It is stated that his successor will be M. Caclamanos, Departmental Head at the Foreign Office, one of the most distinguished of Greek diplomatists.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, May 17.

The French and British "Hostages."

An Englishman writing from Constantinople on May 3 said he had that day received notice from the police to leave the country within three days. He said this measure was to be applied to all the British residents in Constantinople, and he was preparing to leave the following Thursday. Subsequently information reached here that twenty-five British and twenty-five French subjects had been sent to the Gallipoli Peninsula accompanied by a representative from the American Consulate. Later news arrived to the effect that these Englishmen and Frenchmen, the names of whom it has not so far been possible to ascertain, had been transferred to Broussa, and yesterday it was learnt that they had returned to their homes. Sir Edward Grey's warning that he would hold Enver and Said Halim personally responsible if anything happened to the English and French, and the energetic intervention of the American Ambassador, has apparently had the desired effect.

The exodus of Italian families from Constantinople continues; in fact, life in the capital is particularly uncomfortable for Europeans just now. The Armenians are accused of a conspiracy against the Young Turks, and it is alleged that they had made preparations to kill Enver, Talaat and others as soon as the Allies had got through the Dardanelles. Any Armenian on whom there is the slightest suspicion is immediately arrested, and all Armenian houses are being searched for arms and ammunition.

Turkish Wounded from the Dardanelles.

It is estimated that thirty thousand Turkish wounded have arrived in Constantinople, being conveyed to the capital by transports and by Bosphorus ferry boats. The hospitals are full, and the wounded are now being sent to Smyrna and other places. The Turkish losses in killed, wounded, and prisoners must exceed fifty thousand men.

Turkish prisoners are now being sent to Egypt. The men would probably surrender in large numbers were it not that they are between two fires; for if they attempt to retreat or escape they are shot by their German officers. In fact, the Germans are simply leading these poor wretches to slaughter to suit their own purposes.

More troops are being sent from Constantinople to Gallipoli, and during the past two days no trains have arrived at Dedeagatch from Constantinople.

The Splendid Australasians.

From all accounts, the dash and bravery of the Australians and New Zealanders is perfectly marvellous. No troops in the world could face them. They take trench after trench with the bayonet, and their officers have difficulty in restraining their intrepidity. These hordes of untrained colonials, as they were satirically described in a Germanised newspaper in Athens, have proved, as the Empire expected, that they were the best adapted for this particular campaign; and although they have had to wait some time for their fighting they have at last had an opportunity of showing their prowess. The British Empire is proud of them, and they will be idolised in their native land.

The bombardment of the fortified positions has been particularly violent lately, and it was reported yesterday that the Fleet was well inside the Dardanelles, and that the forcing of the Straits was considered imminent.

About twenty-five prisoners were marched through Pera about ten days ago on their way to Tash Kishla Barracks, amongst whom were three or four Englishmen.

Some excitement was caused in Constantinople a short time ago by the removal of the German steamer "General" from the Galata Quay to the Arsenal inside the Golden Horn. She is apparently occupied by the Headquarters Staff.

Turkish News.

The Turkish official *communiqués* continue to be drawn up with the view to deceiving the public, and although they can no longer say that the Allied troops have been driven into the sea, they now say that the Allies are being continually repulsed, have not been able to make any progress, and are unable to leave their entrenched positions on the seashore under the protection of the guns of the warships. This is the sort of stuff Europeans in Constantinople have to read, no English, French, or Italian newspapers being allowed in the country. The censorship is very strict, and telegrams are held up unless they are absolutely clear and intelligible.

According to the latest news, the "Breslau" was again inside the Golden Horn, and the Russians report that the famous "Goeben," which again ventured into the Black Sea, has once more been badly damaged.

A telegram from Maan, in Syria, announces the arrival there of the survivors of the "Emden," who, it will be recollected, escaped in a sailing vessel. They made their way to the Red Sea, and having landed on Turkish territory have now got so far as Maan, evidently on their way to Constantinople. The telegram states that they were received with great manifestations of sympathy from the population, and the commander of the Turkish troops entertained them at a banquet.

The appearance of German submarines in the Mediterranean has produced some excitement here, and the publication of a notice from the British Embassy that a reward of £500 will be given for information which leads to the destruction of a German submarine has been favourably commented upon by many of the Greek newspapers. They say that even without this reward it is the duty of every conscientious man to denounce these assassins, as there is no place in the Mediterranean for these Huns of the sea.

Apart from the arrest of some Armenians, all appears well in Smyrna, but the Port of Vourla is now blockaded by the Allies, and only passenger traffic is allowed.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 8.

M. Marghiloman and his Party.

As I reported at the time, some little while ago, M. Marghiloman, the leader of the Conservatives, was called to account by the committee of the party regarding his attitude towards the Dual Alliance; and he then declared that his policy was one of national aspirations. Not long ago, it became known that he had stated to several persons that Great Britain had declared herself opposed to Roumania's aspirations in Transylvania—a report denied officially by the British Minister. M. Marghiloman then thought fit to deny that he had made the statements attributed to him; but this produced overwhelming proof of his having done so, statements proving it being published daily in the *Daminata*.

All this led the committee to call a meeting, at which a vote of want of confidence in M. Marghiloman was only lost by five votes. The actual numbers of votes were; twenty-seven for and thirty-two against; and, as three members who abstained from voting were known to be opposed to M. Marghiloman, he was practically only saved by two votes. It had been hoped to depose him, and to place M. Filipescu at the head of the party; the change may still be effected, for unless he be extraordinarily thick-skinned, M. Marghiloman's position would seem to be untenable. He has had to ask for the police guard at his house to be increased, and last Thursday a significant incident occurred on the racecourse, when a leading Transylvanian approached him and asked him why he was not doing something for his cousins of "diucolo," instead of amusing himself. The police did not dare to interfere, for it was known that any move on their part would instantly serve as the signal for a demonstration against the Conservative leader.

Students' Demonstration.

A party of students, exasperated by the tone lately adopted by the journals subsidized by the Austro-Hungarian and German Governments, yesterday held a demonstration before the "Terrace" Café, and then marched in procession to the offices of the *Ziua*, where they broke the windows. Next, the offices of the *Bukarester Tagblatt* were visited, and here the interior was wrecked, while not a single window was left whole. Then the students proceeded towards the *Minerva* offices; and though they were, in the Calea Victoria, confronted by a cordon of gendarmerie, a party of them managed to break through the cordon, and the windows of the *Minerva* paid penalty for that journal's views. A few of the students were arrested, but were set at liberty again immediately.

The Italian *stationnaire*, Archimede, which, since the closing of the Dardanelles, has had to remain at Galatz, is now being placed in charge of the Roumanian naval authorities. Her armament is to be stored in the Galatz arsenal, and her officers and crew are returning to Italy by rail. Much significance is naturally attached to these proceedings just now, when Italy is stated to have declared her intention of joining in the war on the side of the Allies.

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore, where subscriptions are also received.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, May 15.

Serbia and Dalmatia.

The possibility of the cession of Dalmatia to Italy still occupies public attention, but it is now spoken of in despairing tones, as if the matter were already a foregone conclusion. Serbia, which bases its claim on the principle of affinity of race, insists that the population of Dalmatia are Jugo-slavs—that is, Slavs of the South—comprising Croats, Serbs, Slovenes, and Bulgars.

In the case of Dalmatia, it is asserted that nearly the whole of the inhabitants are of Croatian or Serbian race, that it comprises territory where the ancient Croat kings reigned; and it is asked why Italy does not annex Austrian territory with an Italian population instead of desiring to annex an Austrian province with a Slav population. A new society has been formed here called the "Adriatic League."

The Pressure of War.

The war presses heavily on Serbia, as it does, of course, on all countries taking part in it, but Serbia is shut in on all sides, without any seaport of its own, and the great bulk of the male population is serving under the colours. Provisions are dear and scarce, and are likely to become dearer.

The Serbian Press announces that Roumania, at the request of the Serbian Government, has commenced negotiations with the Austrian Government for an exchange of war prisoners, and it is expected that the negotiations will have a favourable termination very shortly. It will certainly be a great boon to Serbia to get rid of this heavy burden imposed on her by the immense number of war prisoners which she, all unprepared for such an eventuality, has to support. Moreover, the return home of the Serbians now prisoners in Austria-Hungary will be a great relief to many families here.

Salonika Line Flooded.

Last night the train running to Salonika was brought to a standstill near Ristovatz. The water had flooded the line for a distance of fifty metres, and passengers were held up until the following morning, when at daylight luggage and goods could be transferred from one train to another and the passengers also were able to proceed by the same means.

German Officers for Turkey.

The *Politika* claims to have received information from Sofia to the effect that forty German officers dressed in civilian clothes passed through Bulgaria for Constantinople.

Komitaji Activities.

It appears that the rumour is confirmed that Bulgarian *komitajis* led by Austrians are preparing again to make raids into Serbian territory, and that the noted Panitza is getting a band together with the object of making an incursion into Greece.

News, which is considered trustworthy, has reached here and is confirmed by the Monastir Press which states: "The brother of the murdered Etem Bey is mustering a large band of Albanians to cross into Serbia. They are assembling in Golo-Brdo, Chemernitza, and Elbassan. The chief of the Albanians in Elbassan, Tchamil Bey, a Young Turk especially sent from Turkey, ordered that many of Essad Pasha's adherents should be hanged.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, May 11.

Macedonian Students' Manifesto.

The Macedonian students of the Sofia University have recently addressed to the disinterested nations of the civilized world a protest against the atrocities alleged to have been perpetrated by Serbians and Greeks upon the peaceful Bulgarian population in Macedonia. After giving a long list of the murders, massacres, and outrages which took place several weeks ago and provoked the Valandova incident, the students proceed to ask what the "inquisitors" hope to gain by this, and whether they think that the Bulgarian nation keeps no account of the murders, massacres, and disorders. "They deceive themselves," the manifesto continues, "if they believe that Bulgaria has forgotten the fatherland of her first teachers, or the blood shed for the freedom of Macedonia. She has not renounced the traditional ideal—the union of the Bulgarian race. This is the guiding thought that has been the basis of the renaissance, of the Church-School question, of the revolutionary movement that preceded the liberation of Bulgaria, of the Macedonian revolutionary movement, and of the two wars that Bulgaria waged. . . . The Bulgarian nation cannot but respond to the voice of her suffering brother-nation, which groans under a terrible yoke . . . and the Bulgarian Macedonians will not dishonour the Bulgarian name, the memory of the champions who have shed their blood for them."

Refugees in Bulgaria.

Since the Valandova affair about 22,000 fugitives from Serbian and Greek Macedonia have arrived in this country, 12,000 of them being Turks. The latter are especially fleeing from Greek Macedonia, where, they report, they are violently persecuted; but owing to the great number of refugees now in Bulgaria it is impossible for the Government to take care of the Turks. It has therefore addressed a note to the Ottoman Government, asking what shall be done with these Turkish refugees.

A Baseless Rumour.

A report, which apparently emanates from Bucharest, states that a delegation, consisting of the Macedonian *voivodes*, Paoli Christoff, Tchanleff, and Alexander Doreff, has left for Austria to raise money for the formation of bands to operate against Serbia. The object of this report is, of course, perfectly clear: to represent that the dissatisfaction in Macedonia is due to instigation by the Macedonian Organization. The ruse, however, is too transparent. The *voivodes* referred to have not stirred from Sofia for over a year.

Reservists Called Up.

Yesterday an order was issued by the Minister for War calling certain classes of the infantry reservists to the colours for three weeks' drill. The classes summoned are those of 1910, 1911, and 1912. A number of non-commissioned officers have also been called up for a month's training.

German Aeroplanes over Bulgaria.

On the morning of the 9th inst. an aeroplane, flying from the south, made several turns over Philippopolis, and then turned off in a south-easterly direction. Descending, it struck a telegraph post, and fell behind the artillery barracks, crushing an unfortunate woman, who ran to rescue her child, but fell a victim to her self-sacrifice. The aviator, who was a German, and carried a map of the Balkan regions, has been detained by the commandant of the town, and his aeroplane has been confiscated.

Some four days ago another aeroplane, flying towards Turkey, landed in a village near Stara Zagora. The two aviators who were on the machine were detained, and the aeroplane has been confiscated as contraband of war.

General Savoff visits Bucharest.

General Savoff, who, it will be remembered, was Commander-in-Chief of the Bulgarian army in the Balkan war, has been paying a visit of several days' duration to Bucharest. Last Saturday he returned here, and the following morning he had a long interview with the Prime Minister, Dr. Radoslavoff.

THE SUDAN BIG-GAME SEASON.

FROM A CORRESPONDENT.

It will scarcely come as a matter for surprise that the big-game shooting season in the Anglo-Egyptian Sudan should this year have proved a comparative failure, thus further tending to impoverish an already depleted Treasury, and occasioning additional depression in commercial circles. With the attention of British big-game hunters violently diverted in a different direction, that of French and Norse Americans similarly discouraged and for like reasons, and alien sportsmen forbidden to set foot within the Protectorate, there have been no guns to license and no "heads" to count. Broadly speaking, this will mean a drop in the gross revenue for the Sudan Government of about £E7,500, that being the amount anticipated for the current year, as against £E4,000 for that preceding it. When the amount of the upkeep of the Game Preservation Department is deducted—and this may be estimated at £E2,200 (in 1913 it amounted to but £E1,900), there would have remained a net profit to the Administration of nearly £E5,000, which may be deemed quite a considerable sum at a time like the present, when literally every additional pound raked in becomes a matter of some importance.

The Game Preservation Department has formed a branch of the Sudan Administration since 1901, that is to say, two years after the British Occupation became established. During the whole of these fourteen years it has been under the direction of the same Superintendent—Mr. A. L. Butler, familiarly known as "Beastie Butler"—who has rendered valuable services in organisation and especially in controlling—if he has not succeeded in completely suppressing—the necessary amount of wastage among the game annually killed.

It was Mr. Butler, by the bye, who—in 1906—during one of his annual tours of inspection for the purpose of seeing that the game was being properly preserved, discovered the hill station of Erkowit. Although not coming within his province as Superintendent of the Game Preservation Department, his recommendation to the effect that the station should be developed and made into a kind of sanatorium was adopted, and it has since proved of great value to the Sudan. Mr. Butler has written several useful handbooks concerning his department, in which much valuable advice is given to intending sportsmen, and an endeavour made to guard them from falling into one or other of the several official pitfalls awaiting the Nimrod who would venture upon a big-game expedition in the Sudan without having gained some previous experience.

Annually about 1,800 head of game are killed by about 200 licence-holders in the Anglo-Egyptian Sudan, a total which amounts to less than one-half shown by the French Sudan, where big game is recklessly slaughtered—especially elephants, whole herds of which are burned to death by the natives, who take the ivory tusks alone, leaving the carcases to rot. To some extent the same barbarous and wasteful methods are current in the Anglo-Egyptian Sudan, the Administration—notwithstanding their efforts to control the situation—being unable to do so effectually over so enormous an area. It is a serious offence, for instance, to shoot a female elephant; nevertheless several "sportsmen" have done so, one of the offenders, it is alleged, having been Mr. Theodore Roosevelt, the former President of the United States. For this offence a fine of £100 can be imposed; but it very seldom is, since the Administration hesitates to take severe measures against offenders unless the case be a particularly flagrant one. This mistaken leniency is sufficiently evidenced by the fact that during the whole of both 1913 and 1914 the total fines imposed amounted each year to only £100.

In the particular instance of female elephant sacrifice referred to, there was nothing said "officially," but a good deal of comment circulated in genuine sporting circles. As a rule, there are considerably fewer than a hundred visiting sportsmen to the Sudan during the brief five months big-game shooting season, the officials, the officers and residents making up the balance of the number. There are several "closed districts" maintained by the Government, elephants—particularly in view of what has been said above—being provided with "reserves and sanctuaries."

Up till last year the Sudan Game Preservation Department was greatly understaffed, a fact the less comprehensible in view of the considerable profits made annually by the Administration—profits which, it was considered, might well have served to bring up to and maintain the Department in a greater state of efficiency. Some disgruntled critics have even considered that the Department has hitherto been run rather too much for the benefit of certain officials and officers serving in the Sudan; on the other hand it may perhaps be pointed out that these favoured classes of sportsmen, even if benefited at the expense of others (which is open to question), find in big-game shooting their one and only relaxation from their usually heavy routine work and continual responsibility; while, in any case, they are nominally subject to much the same restrictions and penalties as the ordinary big-game hunter. The most considerable benefits which they can be said to derive are in the form of heavy reductions in the cost of their licences.

There is now an Assistant Superintendent as well as a Superintendent, the respective salaries paid being £E330 and £E780, while several other officers, such as a taxidermist, a head keeper, two under keepers, and two "farrashes" are employed. That the Department has a considerable amount of accounting to get through in the course of the season may be gathered from the fact that the annual sale of licences (good for one season only), reached last year a total of between £E3,000 and £E4,000; the fees for animals killed came to between £E850 and £E860, royalties to about £E30, and Export fees to £E60 or £E70. During the past year the total of animals killed was considerably smaller than usual; generally speaking, the game destroyed this year by other than officials on leave in the Sudan will be of an almost negligible quantity.

ITALY'S SERVICE TO SERBIA.

In a communication (published on Wednesday) the Rome correspondent of *The Times* emphasizes a point revealed by the publication of the Italian Green Book. "It would seem," he writes, "that the immunity from Austrian attack enjoyed by Serbia and Montenegro during the last three months was directly due to the action of Italy." And he continues:—

Austria may have been unable to take strong offensive, but the condition of Serbia in February was such that a further Austrian attack might have been disastrous to her heroic defenders.

On February 12 Baron Sonnino wrote that, in view of Austrian delays in answering their proposals, the Italian Government would withdraw these from discussion and rested themselves simply upon Article VII. of the Alliance declaring that any military action whatever on the part of Austria in the Balkans without previous agreement with Italy would lead to the gravest consequences.

On February 17 Baron Sonnino dotted the i's by saying that the previous communication had "the precise significance of a veto opposed by us on any military action by Austria-Hungary in the Balkans until the conclusion of the agreement for compensation in accordance with Article VII."

The temporary immunity of Serbia was, therefore, a condition imposed by Italy before definitely entering into negotiations with Austria.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

SERBIA AND BULGARIA.

To the Editor of THE NEAR EAST.

Sir,—Mr. Ledward's excellent letter in your issue of May 14 confirms my statement that from the time when the Powers refused to ratify the Treaty of San Stefano it has always been Bulgaria that has been forced to surrender territory hitherto acknowledged to be racially Bulgarian. In the year 1841 an insurrection took place in what was then European Turkey. It was confined mainly to the districts of Pirot and Nish, subsequently given to Serbia by the Treaty of Berlin. It was at the time regarded and described as a Bulgarian insurrection. M. Guizot, the then Foreign Minister of France, sent M. Blanqui, *membre de l'institut de France*, to European Turkey to report on the state of the Bulgarian population. The result was published in the form of: "Voyage en Bulgarie pendant l'année, 1841, par M. Blanqui, membre de l'institut de France," by W. Coquebert, Editeur, 48 Rue Jacob, Paris, 1843.

On his way to European Turkey M. Blanqui visited Belgrade, where he had an interview with that remarkable lady the Princess Lioubitza, the wife of the Prince Milosh, at that time in exile. Discussing the insurrection in the Pirot-Nish district, the Princess said: "Vous aller juger de ce que ces barbares (les Turques) ont fait en *Bulgarie*." The Treaty of Bucharest is admirably described in the May number of the *Quarterly Review* as follows:—

"The Treaty of Bucharest is founded on the ruins of violated contracts; it stands on the flimsy substructure of torn up 'scraps of paper.' It has not been recognised by any of the Powers, and cannot therefore be regarded as a legitimate substitute for previous arrangements which they have drawn up or sanctioned. It presents a series of grotesque frontiers, traced on vindictive lines in violation of the principle of nationalities, and in defiance of economic laws. It has condemned more than a million unhappy beings to conditions of existence which cause them to regret the rule of the Turks. It was completed during a period of eight days—a short time for the discussion of the most complicated question of modern times—and was imposed on the Bulgarian delegates almost literally at the point of the bayonet. Before the end of the negotiations M. Maioresco, the Roumanian Prime Minister, intimated to M. Toncheff that if he failed to sign the document within forty-eight hours Roumanian troops would occupy Sofia."

Your correspondent at Nish points out in your issue of May 14 that the military party in Serbia opposed all efforts to come to an amicable understanding with Bulgaria in 1913. He adds: "To-day the power of the military party here is undiminished and makes itself felt." Mr. Asquith has stated clearly and precisely that the new map of Europe is to be settled on national lines. The Powers of the Entente are fighting not only for themselves but for the freedom of small nationalities. They are fighting not only to save Serbia from extinction, but to free the Serbo-Croat race beyond the frontier of the present Serbia, to free the Greeks in Asia Minor, to free the Roumanians and the Poles in Austria-Hungary and Germany, to free Bohemia. To save an unnecessary expenditure of human life, to shorten this war, it is of supreme importance that the neutral nations whose very existence is threatened should come in and help. Bulgaria is said by many to block the way. If the description of the Treaty of Bucharest which I have quoted is correct, as I fully believe it to be, then it must be clear that Bulgaria cannot reasonably be asked to join in this war until she is satisfied that the victory of the Entente will mean the settlement of the Macedonian Question on national and economic lines. It is manifestly useless to expect the States concerned to come to an amicable agreement regarding "the most complicated question of modern times." Sooner or later a settlement will have to be imposed by the Powers of the Entente. It is not a question for military commanders, but for diplomats with a knowledge of the Balkans. There are many such, who can give no service in the field. Yet their services in drawing up a settlement now, to be imposed without alteration in the event of the victory of the Entente, would tend without doubt to shorten the war. The Balkan Peninsula has been the immediate cause of this war. For generations it has been the danger spot of Europe. At the end of this war, alas! still far ahead, there will be so many questions to settle that a very grave danger exists that the most complicated question of the Balkans may receive but scant attention if left till then. If this should unfortunately be so, the danger spot of Europe will still remain unchanged.—I am, etc.,

O'MAHONY.

Grange Con, Co. Wicklow, Ireland,
May 19, 1915.

ENEMY SUBJECTS IN EGYPT: WILL THEY GO TO MALTA?

To the Editor of THE NEAR EAST.

Sir,—"I wonder whether they will at least pass the winter in Malta?" remarked a friend in the course of conversation about the residue of enemy subjects now in Egypt. This set me musing, not about the pleasure that a winter season in Malta affords, but about the safety, happiness and luxury that some enemy subjects continue to enjoy in Egypt, despite the ill-treatment and brutality extended to every Briton in Germany. I also pondered over the bewildering methods of the Prussian espionage system. Is the possibility of the existence of undesirable enemy subjects in Egypt remote? We have already heard about the illustrious baron, the attempt to discover whom has evoked a considerable amount of over-zealousness on the part of minor officials. Doubtless Egypt is an attractive centre for espionage.

Enemy subjects still in Egypt are numerous. The uninterrupted continuance of their enjoyment of an unmolested life and the privileges of a safe country is accounted for by the fact that some have succeeded in changing their original nationality, while others have established their peaceful disposition and their sincere inclinations towards Britain. They may be honest in their utterances. It is believed, however, that the appointment of a special commission to make vigilant inquiries and a tour of inspection in the different parts of Egypt—especially the villages—might be productive of some not uninteresting revelations. A wireless installation, it is understood, is an easy matter.

I am, etc.,

EMILE BOUTAGY.

Egypt, May 9, 1915.

THE SEGREGATION OF FRIENDLY OTTOMAN SUBJECTS.

To the Editor of THE NEAR EAST.

Sir,—Allow me to convey through your columns my gratefulness to Lord Cromer for his advice in the Press to our authorities concerning the case of these unfortunate people, whose segregation is due, in my opinion, solely to the inability of subordinates to analyse the various circumstances of the individuals concerned, and to the too great pressure on the time of superior officers of the Crown for a due consideration of the proper working of his Majesty's Order in Council according friendly treatment to such aliens. Otherwise the Government has been told this, and much more besides, months ago!

I only wonder why it is necessary for a man in the position of Lord Cromer to write to the papers for the redress of any public grievance by the Government when, with his access to our Ministers, he could easily tell them what he thinks, and his advice should surely not fall on deaf ears. Can it be a fact that however well qualified may be the private citizen to advise haphazard collected Ministries (witness the shuffling and reshuffling alone of Ministers) he gets no thanks for his advice, and to get his voice heard, he must always resort to the Press?

Present-day public men have certainly many virtues due to our Christian British civilisation, but it would seem that the old Adam is not quite dead in them, and that he fears nothing more than public showing up of his vices. This is, however, a disagreeable task to perform in times like the present, and my advice to our public men is to be more candid. There are many such minor but vexatious blunders about, which call for expert handling forthwith.—I am, etc.,

ALEXANDER SEFI.

May 22, 1915.

THE SITUATION IN PERSIA.

Information has been received by Reuter's Agency that a telegram received in London on Monday from a diplomatic source in Teheran states that the situation in Persia has much improved, and that as a result of recent events German propaganda in Persia has suffered a set-back. Much importance is attached to the fact that Russian forces from Khoi, to the north of Lake Urumiah, which had been operating between Dilman and Urumiah, in the neighbourhood of the Turco-Persian frontier, had been despatched against Van with a view to rescuing the remaining Armenian population which had not been already massacred by Turks and Kurds. These forces have met with great success, and the towns of Sarai, Bashkaleh, and Van have all been occupied by the Russian forces, who have forced the Turks to retreat to the southward.

NEAR EAST BOOKSHELF.

THE WORLD'S COTTON.*

Many books are written which could well be spared, but this encyclopædic volume of Prof. Todd's is one which was really needed. Everyone who is interested in the growing or spinning of cotton has occasionally wished to gather some information about cotton in countries remote from his personal experience; such information has usually been obtainable, scattered through various publications, but difficult of access and often antiquated. Prof. Todd has obtained these publications, struggled through the desert of Consular Reports, balanced the probabilities of various statements, and on the foundation of his personal knowledge of Egypt, America, and Lancashire, has strung the whole together into an interesting book, on which the publishers also deserve congratulation.

The work is primarily a compilation, and the only justification for such a compilation is that it shall be done well. As Prof. Todd rightly points out in his preface, there must inevitably be deficiencies and even errors, which need for their removal the voluntary assistance and corrections of people who are scattered all over the world, and the publication of a second edition. Such alterations can only be in minor details, however, for the principal chapters have all been revised by first-hand authorities. But this in itself would not make the book a standard work, though it has eliminated the likelihood of any flagrant error; in the absence of accurate numerical data, even experts have been known to differ. Therefore, the statistical appendix presents not only one set of figures, but every available set of figures, all set out country by country for production, consumption, and price, so that the reader is able to judge for himself whether the author's temerity in sometimes disagreeing with the voice of authority is justified or not. This is, perhaps, the strongest claim which the book could make to a permanent place in the bibliography of cotton. For example:—The crop of China is more or less of an unknown quantity, since it does not come into sight as exports to any great extent, but it is so large that we cannot afford to be ignorant of it, seeing China's potentialities; if we would gauge the extent of our ignorance of the Chinese crop we need only look at p. 397, where four authorities estimate it for 1909-10 as being 4,000,000, 1,200,000, 2,675,000, and 4,181,000 bales respectively. By not merely striking his own average opinion in such cases, but by presenting the data on which that opinion is based, the author has put his work on a plane of his own. We have been told what we know about cotton by other writers—though not in such compact form—we now have a means of finding out how much we do not know.

The three chapters at the end of the book on the Uses of Cotton and of Cotton-seed, and on The Effects of the War—the last being of the nature of a postscript—are of general interest, for "of no industry is it more true that the one half of the world does not know how the other half lives." Space will not permit discussion of the extraordinary state of things revealed by Prof. Todd's co-ordination of the data; how the cotton supply of the world is not merely dominated by the American crop, but by the small American farmer, and how the price of one year affects the acreage of the next, and this again the price; so that the world's cotton crop wobbles excitedly between over- and under-production in alternate years, and never by any chance hits the demand! There is an appalling amount of economic waste going on in the cotton trade—using the term to cover both fields and factories—and the author's plea for a new Cotton-Growing Association, with a capital equal to the amount now being spent daily on the war, is a business proposition. The amount of room available for the activities of such a body may be judged from the fact that Northern Nigeria, on which the British Cotton-Growing Association has now concentrated its attention, has, "making every allowance" some 25,000,000 acres available for cotton, though so far only 16,300 bales have been raised in a season from the whole of British West Africa.

The chapters of direct interest to readers of THE NEAR EAST are VI., XIV., XV., dealing with Russia, Persia, Asia Minor, Greece, even Malta, and with Egypt and the Sudan.

Russia, as one of the big cotton countries of the world, may be a surprise to some people, but her crop is nearly as large as that of Egypt, amounting to 1,000,000 bales of 500 lbs. each—we might have mentioned before that the bale-weight is always given in this book—which is all consumed in Russian mills, with an additional half-million bales imported. There is every likelihood of a steady increase in the local production, assisted as it is by an import duty of *threepence* a pound on foreign cotton, the limiting factors being labour (in Russian Turkestan), and irrigation developments, in Trans-Caucasia.

Persia supplies Russia with about 140,000 bales of very miscellaneous cotton, the supply being limited by the political state of the country, by deficient water-supply, and by the cost and uncertainty of transport.

In Asia Minor the German Levantine Cotton Company has developed the Cilician Plain, and some cotton is grown round Aleppo and Aïdin, the total production being about the same as from Persia, but of better quality. One of the limiting factors of the development there is the tendency to massacres.

Greece has made substantial progress in the last decade, from six to twenty-five thousand bales of good cotton; Cyprus grows about a quarter of this amount, mostly native cotton, and Malta is a cotton-growing country to the extent of five hundred bales or so.

The chapter on Egypt is a permanent contribution to the history of the largest problem in agricultural science ever faced by investigators. The author apologises for the size of this chapter in his preface, and explains why it is so. Nobody who knows his Egypt will object. But the impression left on the reader's mind is rather anticipatory than historical; what might not the potentialities of Egypt be, when she is treated as what she really is—a giant factory for the manufacture of the most valuable plant-products from soil, water, and air, with natural advantages which no other country can quite rival, whose capacities for any given season could be calculated to several places of decimals?

It is noteworthy that Prof. Todd ends his Egyptian chapter by echoing Sir William Willcocks' note of warning with regard to the danger of a really big flood, simply as an economist scared by the economic disaster which it would entail, if it were to happen. In the Sudan he finds similar potentialities for more insidious trouble, in too rapid development of the demand for labour, though this danger happily seems to be a thing of the past.

We forsee a future for "The World's Cotton Crops." It shows the road by which scattered details may be marshalled into the "close formation" of generalisations, and it should cause everybody to be very careful about making off-hand assertions on the subject of cotton for some years to come.

*"The World's Cotton Crops." By John A. Todd, B.L. (Messrs. A. and C. Black. 10s.)

NEAR EAST BOOK NOTES.

Mr. W. M. Petrovitch, the author of "Hero Tales and Legends of the Serbians," is just completing a History of Serbia, which will be published by Messrs. Harrap. This book, compiled from authoritative sources of information, comes down to the decisive defeat of Austria in December last.

Messrs. George Allen and Unwin have just issued a popular edition of "In Russian Turkestan," by Annette M. B. Meakin. The price of the book, which is illustrated, is 3s. 6d. net.

The Religious Tract Society are the publishers of Mr. Percy R. Salmon's "The Wonderland of Egypt," the price of which is 2s. 6d.

We have received a copy of the first number of *La Nation Tchèque*, a new review, published in Paris (223, rue Boissonade), on the 1st and 15th of each month, and edited by Prof. Ernest Denis. It explains clearly the Czechs' programme, and contains much interesting and valuable information concerning the present state of affairs in Austria. The subscription (in this country) is 7 francs a year.

Mr. John Lane published yesterday "An Englishman's Recollections of Egypt, 1863 to 1887, by Baron de Kusel (Bey).) The work, which has numerous interesting illustrations and a map, is issued at half-a-guinea net.

BOOKS RECEIVED.

The Privateers, by H. B. Marriott Watson; *In the Wake of King James*, by Standish O'Grady; *Rosemary's Letter Book*, by W. L. Courtney; *The Black Watch*, by L. Cope Cornford and F. W. Walker; *Demos*, by George Gissing; *Her Son*, by H. A. Vachell; *The Black Douglas*, by S. R. Crockett. (Wayfarers' Library. Dent and Sons. One Shilling net each volume.)

An Englishman's Recollections of Egypt. By Baron de Kusel (Bey). (John Lane, 10s. 6d. net.)

FRENCH NATURAL SPARKLING TABLE WATER.

PERSONAL & SOCIAL

CALENDAR OF THE WEEK.

Shewing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915.	1915.		1333.	5675.
May	May		Rejeb.	Sivan.
28	15	Friday	14	15
29	16	Saturday.....	15	16
30	17	Sunday	16	17
31	18	Monday	17	18
June				
1	19	Tuesday	18	19
2	20	Wednesday	19	20
3	21	Thursday	20	21

To-day is the birthday of H.H. Prince Emmanuel of Montenegro, third son of Prince Mirko, who was born at Cettinje in 1912.

Sunday, being May 17, Old Style, is the birthday of H.R.H. Princess Theodora of Greece, third daughter of Prince Andrew, who was born at Athens in 1906.

Thursday is the birthday of his most gracious Majesty the King.

Sunday, the anniversary of the coronation of King Carol, was observed as a national festival in Roumania. King Ferdinand, the Queen, and the Royal family attended a Te Deum at the Cathedral in the capital.

It is officially announced that the King of the Belgians has been pleased to confer upon Field-Marshal Earl Kitchener the high distinction of the Grand Cordon of the Order of Leopold.

Our Serbian Correspondent writes, under date of May 15:—The Serbian Government has conferred the Order of St. Sava, 2nd Class, on Lady Paget for the great services she has rendered to the people of this country. A society of Serbian ladies, called the "Colo Srbskih Sestara" (Sisters), presented to Lady Paget a small evangelic picture blessed by the Metropolitan. This is regarded here as a great mark of esteem, as the Metropolitan only consecrates pictures of divine and religious subjects intended for use in the Orthodox churches. The semi-official *Samouprava* has a leading article stating that Lady Paget is held in such high esteem here that she may be regarded as a saint among Serbian people.

A Cyprus correspondent writes (May 10):—The High Commissioner and Chief Secretary's staff will move to Mount Troödos earlier than usual, probably early in June, any idea of remaining in the plains having been abandoned. Lady Clauson will only spend a few weeks in the hills, and will then pay a visit to England.

Writing on May 11, our Sofia Correspondent reports that on the previous Saturday a soiree was held at the British Legation. Amongst those present were Dr. Radoslavoff, the Prime Minister, the Head of King Ferdinand's private Cabinet, M. Dobrovitch, the Chamberlain of the Palace, General Savoff, the former Prime Ministers, MM. Malinoff and Gueshoff, and Mme. Karaveloff.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from

Miss Thomson, The Hall, Bexhill-on-Sea.

Writing on May 9, our Cairo Correspondent reports:—

M. Venizelos left Egypt this week for the Piræus *en route* for Mytilene, where he has probably arrived by now. His visit, short though it has been, has proved an unqualified success both from the political and a personal point of view. On his way back to Alexandria from a visit to Ismailia he was met at Benha by one of the Palace Chamberlains, who presented him with a signed photograph of H.H. the Sultan.

A Cyprus correspondent writes (May 7):—The Right Rev. Bishop MacInnes, Anglican Bishop in Jerusalem, and Mrs. MacInnes arrived in Cyprus on April 22, and leave this week. While in Nicosia they were the guests of Government House. They also paid short visits to Kyrenia, Larnaca, and Limassol. On Sunday, April 25, the Bishop held a confirmation in St. Paul's Church, Nicosia, and officiated at the early celebration and preached in the evening. On the 28th a reception was given at Government House, to which all members of the congregation were invited. These visitations are greatly appreciated by members of the Church, and tend to impart fresh life to the Church spirit, which, like most else, is apt at times to flag. The annual visit of the Archdeacon is similarly helpful, as affording a fillip to the spiritual ministrations in the various district towns.

Another Cyprus correspondent writes:—It is a great disappointment to the Greeks here that M. Venizelos has been unable to visit the island. He informed the correspondent of a French paper that he had proposed to pay it a brief visit on leaving Egypt. Some of the local papers there have compared him with Solon, who when absenting himself from Athens visited Egypt, and thence proceeded to Cyprus, where he was received with great distinction.

The Greek papers describe the enthusiastic reception given to the Greek statesman in Egypt by all ranks, from the Sultan downwards. Dinners, fêtes, balls, race meetings, reviews, and functions of all kinds were arranged in his honour. Bouquets and flowers were showered upon him, and Greek ladies kissed him on the cheeks. No king or autocrat ever had such ovations; the honours heaped upon him not being on account of rank or power, as is usual, but purely on account of the sterling qualities and lofty patriotism of the man.

Our Bucharest Correspondent informs us that when M. de Giers arrived in Bucharest, on his way to take up his post as Russian Ambassador at Rome, he was met at the station by M. Poklevski-Koziell, the Russian Minister at Bucharest. He visited the British and French Ministers and M. Take Jonescu; and he was received in audience by King Ferdinand and Queen Marie on the day before he resumed his journey by way of Rustchuk and Salonika.

Miss Violet Asquith, the Prime Minister's elder daughter, left London last week for Egypt to visit her brother, Mr. Arthur Asquith, who was wounded during the Dardanelles fighting.

A marriage is arranged, and will shortly take place in Egypt, between Captain William Byam, R.A.M.C., attached to the Egyptian Army, only son of the late Major-General William Byam, C.B. (late York and Lancaster Regiment), and of Mrs. William Byam, of Sidmouth, and Doris Mabert Stiven, second daughter of the late E. W. F. Stiven, M.D., and of Mrs. Stiven, the Manor Lodge, Harrow-on-the-Hill.

A marriage has been arranged, and will shortly take place, between Philip John Baker, youngest son of J. Allan Baker, Esq., M.P., and Irene Noel, only daughter of F. Noel, Esq., of Achmedaga, Greece.

An engagement is announced between Mr. F. W. Shirley, of Minia, Upper Egypt, and Miss Rye, eldest daughter of E. Rye Bey, of the Egyptian State Railways, and Mrs. Rye, Alexandria, Egypt.

Dr. Armand Ruffer, C.M.G., has been appointed Director of the British Red Cross Society in Alexandria.

Mr. Percy C. Barnard, formerly a partner in the Anglo-Egyptian stock and share-broking firm of Messrs. Reid, Barnard and Co., is serving with the naval forces as a Lieutenant in the Royal Naval Volunteer Reserve on H.M.S. "Cyclops."

The *London Gazette* announces that the King has been graciously pleased to approve of the grant of the Victoria Cross to Lieutenant-Commander Edward Courtney Boyle, Royal Navy: "For most conspicuous bravery, in command of Submarine E 14, when he dived his vessel under the enemy minefields and entered the Sea of Marmora on April 27, 1915. In spite of great navigational difficulties from strong currents, of the continual neighbourhood of hostile patrols, and of the hourly danger of attack from the enemy, he continued to operate in the narrow waters of the Straits and succeeded in sinking two Turkish gunboats and one large military transport."

The King has further been graciously pleased to approve of the award of the Distinguished Service Cross to Lieutenant Edward Geldard Stanley, Royal Navy, and Acting Lieutenant Reginald Wilfred Lawrence, Royal Naval Reserve, both of the E 14. Approval has also been given for the award of the Distinguished Service Medal to each member of the crew of E 14.

At the Royal Institution this evening at 9 o'clock, Sir John Jackson will read a paper on "Engineering Problems of Mesopotamia and the Euphrates Valley."

Under the auspices of the Eugenics Education Society, Professor Elliott Smith, M.D., F.R.S., will next Friday at 5.15 p.m., at the Grafton Galleries, read a paper on "The Influence of Racial Admixture in Egypt." Major Leonard Darwin will preside.

The death occurred last week, at Markyate, Herts, of Lieutenant-Colonel Charles William Ross Kitching, late of the Royal Marine Light Infantry, who served with the Sudan Expedition in 1884-5. He was present at the defence of Suakin, at the actions of Hasheen and Tofrek, and at the taking of Tamai. He had the medal with two clasps and the bronze star.

Lieut.-Colonel Wilfrid Robert Able Smith, C.M.G., commanding the 2nd Battalion Grenadier Guards, who has died of wounds received on the 18th inst., served in the Nile expedition, 1898. With the 1st Grenadier Guards he took part in the battle of Omdurman, and for his services he was mentioned in despatches, and received the Fourth Class of the Mejidia and the Egyptian medal with clasp. He also served in the South African War.

Lieutenant-Colonel Eustace Robert Ambrose Shearman, 10th Hussars, who died of wounds received in action on May 13, entered the Army in 1895, in his nineteenth year. He was a grandson of General John Shearman, who fought in the Crimea.

Major Percy M. Dove, 2nd Battalion Sherwood Foresters, who is reported killed in action, was attached to the Egyptian Army from 1906 to 1914, and for work in the Sudan in 1910 he received the medal with clasp.

Major William Otto Gibbs, 10th (Prince of Wales' Own Royal) Hussars, who is for the second time reported wounded, is the eldest son of Mr. Henry Martin Gibbs, of Baron Court, Somerset. He obtained his commission in 1902, and from 1912 until June last year he was employed with the Egyptian Army. He is thirty-one years of age.

M. Papadopoulos, the Keeper of the Archives in the Greek Patriarchate in Constantinople, has been arrested on a charge of being concerned in the alleged Armenian plot. The arrest has caused a profound impression in Greek circles.

Digitized by Google

M. George Picot, former French Consul in Beyrout, has left Cairo for Marseilles and Paris. It is understood that he has been recalled to France by his Government.

Boghos Pasha Nubar left Egypt on the 3rd inst. for Europe *via* Port Said. He was received in special audience by the Sultan at Abdin Palace prior to his departure.

A message from Teheran received in Petrograd last Friday states that the Persian Government has apologised to the Russian Minister for the murder of the Russian Vice-Consul, M. Kaver.

The Times correspondent in the Balkan Peninsula announces that M. Marghiloman has resigned the leadership of the Conservative Party, which has been offered to M. Titu Maiorescu, who was Premier and Foreign Minister at the time of the Bucharest Treaty.

The three brothers of Lieutenant Charles W. Peel, who (as already announced), was killed in action at Saint Julien, are all serving their country as officers at the present time. Mr. W. E. Peel is in the Camel Corps, Mr. E. T. Peel in the Wiltshire Regiment, and Mr. R. Peel in the Royal Artillery.

Miralai and Mrs. Burgess Bey, Captain and Mrs. Webb-Bowen, Colonel Stack, Major Worham, and Mr. and Mrs. Hickling are among the residents of Khartoum who have lately left for the North.

We regret to hear that Prince Ahmed Fouad, brother of the Sultan of Egypt, is seriously ill, and suffered a relapse after showing, for a day or so, a decided improvement.

We regret to learn, from Egyptian papers received this week, of the death of Mrs. Bliss, wife of the founder and first president of the Syrian Protestant College, Beyrout.

We regret to announce the death of Joseph Sakakini Bey, which occurred in Alexandria on the 14th inst. The deceased Bey was formerly in the service of the ex-Khedive, and was a prominent Freemason.

The King has sent the following message to General Sir John Nixon, commanding H.M. Forces at Busreh:—"I wish to express my admiration for the gallant manner in which the naval and military forces co-operating under your command have successfully overcome the repeated attacks of an enemy superior in numbers. Please convey to all ranks my appreciation of the spirit and endurance they have shown during the past month. At Home we all watch with pride and interest the work and progress of your columns."

Moulvi Syed Mohammed Roushan of Kumarkhali has received official intimation that permission has been granted him by his Majesty the King-Emperor to wear the Barbati-Si-Credentia medal bestowed by his Majesty the King of Roumania upon Mr. Roushan as a member of a sanitary mission which proceeded to Turkey in 1912 from India. Mr. Roushan holds many autograph letters and photographs presented to him by the King, Queen, and other members of the Roumanian Royal Family, in recognition of the services he was able to render to the Roumanian medical organisation during the Roumano-Bulgarian conflict.

During his recent Northern tour, Mr. Martin Harvey has been energetic in furthering the claims of the Wounded Allies' Relief Committee, which since the outbreak of war has given varied and valuable help to the wounded of Serbia and Montenegro. Mr. Harvey now further proposes to devote to the committee's funds the entire proceeds of the first night of Mr. Stephen Phillip's war play, "Armageddon," to be produced at the New Theatre next Tuesday. The committee is co-operating with Mr. Harvey by every means in its power, and the occasion promises to attract an exceptionally brilliant audience. Seats will be at the prices (7s. 6d to 1s.) which will be in vogue throughout Mr. Harvey's season, and they may be had from the usual agents, and from Miss May Lambert, Wounded Allies' Relief Committee, Sardinia House, Kingsway, W.C.

APPOINTMENTS, PROMOTIONS, etc.

A telegram from Cairo, received last Friday, states that Fethi Pasha has been appointed Minister of Wakfs, replacing Sidki Pasha, who has resigned. This change has no political significance.

Under date of May 14, our Cyprus Correspondent writes:—Captain A. E. Gallagher, D.S.O., has been appointed Chief Commandant of Police, Cyprus, in the place of Major W. W. Durham Hall, whose death in England was recently announced. Captain Gallagher has been for some years in the island, and has held the appointment of Local Commandant at Limassol and latterly at Nicosia.

Mr. W. G. Hayter, Counsel to the Legal Department of the Egyptian Ministry of Finance, has been appointed to the post of Commissioner of the Government on the Cairo Water Company's board of directors in place of Colonel Garner.

Kaimakam Pridham Bey, commanding the 2nd Egyptian Infantry, has been appointed to succeed Lewa Herbert Pasha as commandant of the Cairo garrison. Herbert Pasha has left for the front.

Bimbashi I. D'E. Roberts, Artillery, and Bimbashi H. D. Bentinck, 12th Sudanese, have been struck off the strength of the Egyptian Army.

Major Kenny Bey, A.D.C. to the Sultan of Egypt, and Major MacKintosh, Adjutant General of the Egyptian Army, have been appointed to the British Army.

The appointment of Mr. E. H. Lloyd as Director-General of the Cairo Drainage Department, in succession to Mr. Carkeet James, has been ratified.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

CROSSLAND.—On the 20th inst., at Oakfold, Windermere, to Catherine and Cyril Crossland (Sudan Civil Service)—a daughter.

MARRIAGE.

KINDER—BRAMALL.—On April 29, at All Saints', Cairo, Geoffrey Richard Kinder, of the Irrigation Department, to Winifred Ethel Flora, eldest daughter of Ernest E. P. Bramall and Mrs. Bramall, of Beni Souef, and Ticehurst, Sussex.

STOBART'S MOVABLE HOSPITAL in SERBIA.—Additional FUNDS are URGENTLY REQUIRED to purchase Horse Ambulance for above Unit.—Mrs. Bargrave Deane, 52, Eaton Place, S.W.

"ST. GEORGE OF MERRY ENGLAND," by Canon Parfit. This interesting account of our Patron Saint is an inspiration to patriotism. Price 2½d., post free. J. and E. M., Church House, Westminster, S.W.

The partnership formerly existing between Messrs. Joseph Cohen, Jacques Eskenazi, and N. Babani having been dissolved, the Han Halil shop of JOSEPH COHEN is now in the same road, near the Arch Way, Cairo, entrance from the Mousky. Friends and customers are respectfully requested to visit the new shop when visiting the Bazaar, where they will find a rich assortment of carpets, embroideries, etc., etc.—Advt.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

FRIDAY, MAY 28, 1915.

THE INTERVENTION OF ITALY.

For Italy the die is cast. She is now at war with Austria-Hungary and Germany, and is pledged, in common with the rest of the Allied Powers, not to conclude a separate peace. Thus the great historic factor of European politics for a whole generation—the Triple Alliance—is at an end. We know now the base purposes which that agreement served. To Italy's honour it has to be said that she has long chafed under the conditions of her pact. Dragooned into it at a time when she was labouring under a mistaken sense of fear, she has loyally kept her pledge even after the Alliance had become irksome. At any time she would have been welcomed as a partner of the Triple Entente, with whom she would have found herself in more congenial company; but her very friendliness with the latter provided a justification for the maintenance of the understanding with Germany and Austria-Hungary in the interests of the world's peace, which the balance of power in Europe seemed to guarantee. It was Italy's presence in the Triple Alliance, and the known honesty of her intentions, which gave it the moral standing which an agreement between Germany and Austria-Hungary alone would have lacked. The events of the last two years have proved that the two Central Powers were only prepared to tolerate the peaceful aspect of the Alliance so long as it suited their plans. Under the cloak of its defensive character they made ready to convert it into a powerful weapon of offence. In 1913 Italy was sounded tentatively on this point, but without hesitation she rejected the proposal. A year later Germany and Austria-Hungary decided that she should not be given a second chance of thwarting their plans. They threw down the gauntlet to Europe and trusted to browbeating Italy into supporting them, knowing that she was not in a position at that moment to oppose them by arms. Such a course was a deliberate breach of the spirit and letter of the Triple Alliance. Italy, conscious of her military weakness, reserved to herself complete liberty of action. She proclaimed her neutrality and, while perfecting her military organisation, watched the course of events. Although military operations were not productive of decisive results, the whole aspect of the political horizon rapidly underwent a change. The failure of the Germanic Powers to make good their claim to the hegemony of Europe and their moral unmasking made further co-operation with them impossible for Italy. When on the top of this came indications that the Southern Slavs were likely to come into their own as a result of the war, the Italian Government was forced to safeguard the interests of the country. Negotiations with Austria-Hungary followed; but in spite of Germany's active participation, they had to be abandoned owing to the impossibility of securing Austrian acceptance of Italy's claims.

It was left to Italy to secure by the sword what had been previously taken from her by the sword. On May 4, exactly nine months after the outbreak of the war, the Triple Alliance was formally denounced by Italy, and three weeks later war was declared. In the bitterness of the moment the people of Germany and Austria-Hungary are charging Italy with "a perfidy of which history knows not the like." The charge, as might be expected, takes no thought of what the Germanic Powers themselves did. Pledged to the maintenance of the peace of Europe, and having bound Italy to their side for that one object, they had not hesitated to go behind her back and plunge the Continent into a struggle of unprecedented violence. Not only had there been a technical breach of the Triple Alliance, but actual violence had been done to Italian interests. The fact was acknowledged by both Germany and Austria-Hungary when they showed a readiness to offer Italy compensations, which a year ago could not even have been hinted at within the Triple Alliance. The proffered reparation, however, was wholly inadequate to meet the new situation which the treachery of the Germanic Powers to Europe and their ally had brought about. Italy had to choose between becoming an accomplice in the treachery, and in the outrageous deeds with which that treachery had been crowned, and showing to the world in a way which could not be mistaken that she dissociated herself entirely from Austro-German policy and the methods of warfare employed by the Central Powers. The main significance of Italy's declaration of war lies in the fact that it denotes the condemnation passed by the world at large on all that Germany and Austria-Hungary stand for to-day. In it we may read at once a reference to the moral bankruptcy of Austria-Hungary as the trustee of subject nationalities, and an indictment of the German militarism and of the horrors into which it has plunged Europe.

While the justice of Italy's cause stands above challenge, the Powers of the Triple Entente have the additional satisfaction of knowing the value of the co-operation of her military and naval forces. She participates in the war primarily to settle her differences with Austria-Hungary, but at the same time she takes her stand on the broad basis of the principles for which the Allies are fighting. Hence the reason for the co-ordination of the Italian effort in the general scheme of the Allies' campaign. We may hope, therefore, that, if the step has not already been taken, at a very early stage in the Italian campaign an exchange of views between the Italian and Allied high military commands will prevent Italy's strength from being dissipated by political considerations. For the present the shortest route to Vienna lies through territory which figures in the Italian claims; but if the physical features of the country should be likely to offer too serious obstacles to be easily overcome by the Italian armies, we hope that Italian strategy will not be irrevocably committed to one route of advance and then shrink from abandoning it for fear of the enemy's reprisals on the inhabitants. The moral significance of Italy's intervention will not be complete until its influence has been felt in the Balkans. It is impossible to believe that any Balkan State can fail to be impressed by Italy's action or will any longer entertain doubts regarding the ultimate issue of the war. They are held back from participation in the struggle by both political and military considerations. The political aspect is of little or no concern to Italy; but her military operations can be brought into very close relationship with any advance against Austria-Hungary from the Balkans. If this were done in such a way as to give the Balkan States the fullest confidence that they would at no point be left to face single-handed any serious concentration on the part of the enemy, the military considerations that may be deterring them from action would be removed. The position created by the intervention of Italy and, before long, we may hope, Roumania, is that the Allies will be able to launch a formidable attack against the enemy from the south. Uncoordinated, that attack must be delivered from the south-west and south-eastern corners; co-ordinated, it might perhaps assume far more formidable proportions as a joint advance over the Hungarian plains between the Danube and Theiss Rivers. In the meantime political considerations have to be adjusted. But these in turn cannot fail to be affected by Italy's action, which tends to make Balkan co-operation less indispensable. For this reason the various States may find the Triple Entente unable to accept the high value which they themselves are inclined to place on their proffered assistance.

JUSTICE IN EGYPT.

THE JUDICIAL ADVISER'S REPORT.—II.

(By Our Cairo Correspondent.)

The Mehkemehs and Mejlis Hasbys.

An interesting section of the Judicial Adviser's Report is devoted to the Mehkemehs (Religious Courts) and Mejlis Hasbys (Courts of Chancery). With regard to the former, as was explained at the time in The Near East, the overthrowing of the Turkish suzerainty involved the termination of the mission of the Grand Cadi, who held his powers from the Porte, and permitted the immediate introduction of some necessary modifications into the Organic Law of the Mehkemehs. Thus, henceforward, instead of one President—under the old regime the Grand Cadi—presiding over both the Supreme and Cairo Mehkemehs, each of these courts will have its own President and Vice-President; all the Cadis will be appointed by decree of the Sultan, instead of those chosen to fill certain Cadiships being selected by the Grand Cadi; whilst no special prerogatives will attach to any posts in the Mehkemehs. Altogether, these changes ought to spell more efficiency and straight dealing in the operation of these courts.

Last year it was announced that a law was under elaboration providing for the suppression of the Mejlis Hasbys and the transfer of their functions to the Native Tribunals, which would administer a special code regulating the general status of persons under disability. Unfortunately, a combination of circumstances has prevented effect being given to these intentions; but the Judicial Adviser is of opinion that the matter "is one of such great and increasing urgency, owing to the constant complaints as to the working of these bodies," that he considers it desirable to explain somewhat fully "the reasons which render this reform so pressing."

In the first place, the interests of orphans and persons under disability have been entrusted in Egypt to boards, which, while they correspond to the French Conseil de Famille, presided over by the Juge de paix, differ from it in that the latter is composed of relations and is presided over by a judge, whereas the boards are composed of leading members of the community, usually strangers, presided over by an administrative official. As a result, the members of the boards, having no interest in the matters referred to them, are disinclined to waste much time over work for which they receive no remuneration; and for more reasons than one are inclined to agree to anything proposed by the President, who is usually the Mamur or Mudir and who, being a busy man, is compelled to shelve for a long period all the questions which have to be dealt with by the board. The jurisdiction enjoyed by the various Mejlis is quite irrational, and so they are "quite unable to go properly into the question of selection of guardians or to supervise effectively the administration of the numerous guardians." The Ministry of Justice is supposed to supervise the Mejlis Hasbys, but it has neither the staff nor the money, nor, indeed, owing to the composition of the Mejlis, the effective power so to do.

The worst feature is that, owing to the lack of effective supervision, opportunities arise for the enrichment of unscrupulous persons who are appointed guardians or curators. In a country like Egypt, where large fortunes suddenly become exposed to the depredations of outsiders owing to the owners' death and the inability of the womenfolk to intervene actively in the matter, the guardianship of a rich estate is apt to become a lucrative office. "Nowhere probably, except in Egypt and Turkey, is the selection of a guardian for minors frequently made, not in the interests of the minors, but in that of the guardian. In this country the guardianship of infants and lunatics is a profession, and one which has the great advantage of not apparently requiring the possession of any technical qualifications whatever. The proof of this is that such guardianships are not distributed haphazard among the community, but concentrated in the hands of a few professionals. Thus we find that one person administers eleven estates, another seven, three others six each, and so on."

Such, in short, is the state of affairs that the Mejlis Hasbys give rise to; the Ministry of Justice has long striven hard to provide some remedy. Four years ago a Superior Mejlis Hasby was created to deal with appeals from the lower Mejlis Hasbys, but it did not prove the success that it was expected to be. One of the chief obstacles in the way of reform has been "the disposition to regard the whole law of personal status as a religious matter, which could not be touched by the lay reformer." But this disposition has lately diminished, and the new project having been drawn up with the assistance of some of the most enlightened of the religious authorities, would, if only it were introduced, give general satisfaction. Sir Malcolm adds that complaints against guardians appointed by the various Patriarchates are more numerous proportionately than those against the Mejlis Hasbys, "and it would certainly be very desirable that the new law should also be applicable to the various non-Mussulman communities."

Mixed Tribunals.

There has been a general decrease in the business of the Mixed Courts. The number of new cases set down fell off by 3,316, to 23,560. Civil cases dropped by 231, commercial cases by 313, and summary cases by 2,214. In accounting for this state of things the Judicial Adviser is of opinion 'that the general business depression in the last three months of the judicial year . . . and the consequent establishment of a moratorium here have had considerable effect on the situation."

With the exception of the Cairo Court all the Tribunals managed to reduce their arrears, the Court of Appeal by 124 cases, the Alexandria First Instance Court by 114, and the Mansura Court by 22. The arrears in the Cairo Court, which have long been an unsatisfactory feature, increased by 225 cases. It is curious to note that the total number of cases disposed of has decreased in about the same proportion as the number of new cases, and that the stock of arrears has remained almost stationary. Considering that the Mixed Courts disposed of 3,371 more cases in 1912-1913, there would appear to be something wrong in the arrangements.

Judicial sales, which had decreased so notably in 1911-1912 and 1912-1913, last year showed an important rise to 1896, and the number of new distribution proceedings introduced also considerably increased—909 as against 754. The state of affairs in regard to the latter is still unsatisfactory, the arrears, in spite of an increase in the number of proceedings disposed of, having risen to 1,206, of which more than half are in the Cairo Court. As Sir Malcolm says, "it is to be hoped that something will be done to check the continued increase in arrears in this branch of business."

Bankruptcies, which had decreased in 1912-1913, continued to show the same tendency last year, only 216 being declared, as against 380 in 1912-1913 and 573 in 1911-1912. In his report, annexed to the Judicial Adviser's report, the Procureur-General again returns to the vexed question of the defects of the existing bankruptcy law and to the effect of the moratorium, to which I shall hope to refer at some later date.

(To be continued.)

THE SERBIAN NEED.

The two famous novelists, Claud and Alice Askew, draw a very vivid picture of Serbia and her people in an article contributed to the *Sunday Times* (May 16). They have been struck with the enormous vitality of the Serbian soldiers, who pick up wonderfully after a few days' treatment in field hospitals, even when, first brought in, they have appeared to be at the last gasp. The inherent cheerfulness of their race is a very valuable asset in the hospitals. But even so, the writers have seen the terrible prevailing suffering, and add their appeal for funds to those of other English men and women who have recently visited the country. Supplies are urgently needed on every side. The concluding paragraph of the Askews' article gives an admirable picture of Skoplje, from where they wrote.

This is the strangest town. The streets are crowded with Serbians, Arabs, and Turks, and the bazaar, with its little booths and dark mysterious-looking shops, breathes of the East. Men are to be seen hammering away at copper, making trays and jugs and bowls; the shoemakers and cobblers have a little street all to themselves; great bullocks pace slowly up the cobbled streets carrying huge wains of hay upon their backs. One seems to have strayed into a new world.

TANGIER TO TEHERAN.

Accustomed though one is to look for banalities in the Egyptian Press (and in the Press of other countries for the matter of that) during the slack summer season, it is rather surprising to find that any paper should find room for frivolous idiocy in these stern times of war. But so it is. Some time ago a vernacular paper published in Cairo gravely announced that "the directress of a native girls' school, while on a round of inspection in the refectory, found several of the students seated round a table eagerly discussing various subjects . . . and a bottle of whisky." At first sight the story naturally appeared to be too wildly improbable to need contradiction, but the credulity of the papers, which apparently accepted the story as fact and reproduced it, has at length forced the Press Bureau to issue an official statement that the story was false from beginning to end.

***

According to this statement, the tale had been issued with the deliberate purpose of throwing opprobrium on the laudable progress that is being realised in female education in Egypt. If this was the case, one is led to think that education is sorely lacking in some of the editorial rooms of Cairo, for anything more childish and futile than the form of such an attack it is hard to conceive. Unfortunately, however, Egypt has been rather singularly unlucky in those of her publicists who hold extreme views on any point, especially regarding the Government. It is an open secret that the first breach between the late Mustapha Pasha Kamel and a gifted and unsuspecting English journalist whom he had lured to Egypt in his service came about by an incident no less trivial than the present one.

***

The story goes that the Englishman, having accepted his appointment and signed his agreement while in England on the advice of a "friend," found himself in a peculiarly awkward position when he arrived in Cairo. The "patriot" whom he had admired at a distance appeared in quite a different light when seen at headquarters in Cairo. Each day brought complaints that articles penned were not sufficiently direct, which meant, in plain language, that they lacked the seditionary touch necessary to the desires of the Pasha. This, coupled with a childish ignorance which found expression in continual complaints on unimportant subjects, drove the Englishman nearly out of his mind. The climax was reached when one day, in reference to affairs in Egypt, he wrote, "There is something rotten in the State of Denmark." Mustapha was furious. He saw in the sentence an attempt of a perfidious Englishman to involve him in trouble with the Danes, and, in a moment of fury, he broke the agreement which existed between himself and his dupe. This was very satisfactory to the Englishman, but it was hardly a testimonial to the boasted learning of his employer.

***

I see that Mr. Ebbe Kornerup, the Danish journalist and painter, has gone to Australia, with the view of writing a descriptive and critical book. The last time I heard of him he was living as an Arab in the Sahara desert, and later, I understand, he went down into the Nile Valley, and lived for several months as a fellah. He holds to the opinion that the spirit of a nation can never find interpretation in the big towns, and that if you are searching for the soul of a people you must look for it in the open country, where the individual characteristics of men have room to expand. I think that he is right in this, but for some natures the Eastern mode of life is charged with many dangers. The Western mind that assimilates Eastern traits seldom regains its former strength without gaining the fresh virtues that the East has to offer, it seemingly halts half-way, losing its dominant Western characteristics, becoming weaker and uncertain. Almost the last time I lunched in Cairo, I had one of these men as my guest, and the impression left was not a pleasing one. This man had been living among the Bedouin, but I looked in vain for traces of their free and open bearing. Instead, I found my guest—an Englishman of good family—had become a man of unkempt appearance and furtive, restless glances. But, of course, there are notable exceptions to this rule, and among them is the brilliant young Dane, of whom I started writing.

***

It will be remembered that when negotiations regarding the southern portion of the so-called Baghdad Railway were in progress, the Germans, rather suddenly, gave way on the subject of the terminus for the line, agreeing not to construct beyond Busreh. At the time, this "gave rise to no little surprise," although, to be sure, there was a good deal of rather loose talk about our "giving our consent" to an "extension" to Koweit "or some other point on the Gulf" at some future time, and under some sort of scheme for controlling the extension. How childish it all sounds now, to be sure! It makes one think that the war, after all, may prove a blessing to us, if only it helps us to face facts squarely in the future, and not to allow "interested parties" to persuade us to suicidal courses for any reason whatsoever. Well, I have heard this week, and on very good authority, that the astute Germans' reason for yielding on this point was that they had reckoned on being able, eventually, to use up so much of the waters of the Euphrates and the Tigris for irrigation purposes that, during part of the year at least, there would be so little water in the river that Busreh would become impossible as a port!

***

I can see a good many obstacles in the way of carrying out this scheme. For one thing, the two rivers are not small, and even in the driest of dry seasons their waters would take a good deal of disposing of. To-day, much of the supply runs to waste, especially in the region between the hills and the junction of the rivers; but, even so, I imagine that a great deal of it finds its way back eventually into the Shatt-el-Arab, and would be likely to do so for many years to come, however hard the German philanthropists worked to prevent it. But it cannot be denied that the scheme was quite worthy of the German. And, of course, it would have been a comparatively easy matter to make navigation on the Tigris extremely difficult, if not quite impossible, during a considerable portion of the year. To that fact I called attention in these notes over a year ago. And as the navigation was expressly left to *us*, as our share of the bargain, we can imagine what energy the German would have put into his work of "revivifying ancient Babylonia," about which certain German politicians and professors were so fond of talking a few years ago. The whole "bargain" reminded one of the banquet of the owl and the panther in "Alice in Wonderland":—

> The Panther took pie-crust, and gravy, and meat,
> While the Owl had the dish as its share of the treat.

Verily, in the matter of the "Baghdad" Railway, Great Britain did play the part of an owl—*the* Owl, I mean, of course.

***

Many of his friends in this country will have read with regret the news, published in last week's NEAR EAST, of the destruction of Mr. Mumford's house at Candilli. The whole story of the treatment meted out to Mr. Mumford by the Turks does them little credit. The house in question was a comparatively new one—that is to say, it was under two years old, and there was some dispute between the owner and the Turkish authorities as to its value and the amount of taxes Mr. Mumford was to pay. As the taxes had been increased 200 per cent. this was hardly to be wondered at; but the Old Turk would at least have allowed time for the settlement of the dispute. The Young Turk, however, did nothing of the kind; he stepped in, seized the furniture, and sold it up. And now, apparently through his carelessness, the house has been burned down. I may add that during the Balkan War a good deal of the furniture referred to had actually been lent to the Turkish hospital; and Mr. and Mrs. Mumford—with many other of our countrymen, of course—had worked, often day and night, feeding and clothing the families of Turkish soldiers. Truly the Turk has deteriorated rapidly under the tutelage of his Teutonic taskmasters!

THE PRESS ON THE NEAR EAST.

The Balkan Neutrals.

Writing in the *New Statesman* (May 15) "Plinthos" attempts to remove the impression, which he alleges is commonly held in England, that German diplomacy is of a negligible quality and a thing which we can afford to despise. He shows that although there was apparent blundering at the beginning of, or prior to, the war, the efforts of German diplomats since that time have been entirely successful, at least in the Balkans:—

> Not only have they secured the Turks and Albanians as Allies, but they have managed to play off their natural enemies, the neutral Christian States, against each other and hold them in check with complete success. This is no small feat.

In the meantime our enemies have profited by the supply of munitions and supplies of all kinds that have passed through Roumania and Bulgaria. The writer considers the continued neutrality of the Balkan States to be at least partially due to the influence of the richer members of the trading classes, who are making large fortunes out of the war. On the other hand, he shows that no consideration would have been sufficient to maintain neutrality in parallel circumstances "had not Germany and Austria secured so strong a personal hold upon the occupants of the Balkan thrones." Added to this, the writer points out that "our policy for generations has been one of bolstering up Turkey against Russia, to which end we sacrificed with little hesitation the interests of the Balkan Christians." Our diplomacy in the Near East during the eighteen months preceding the war has, in his opinion, only had the effect of increasing the resentment of the Christian States against us, although he admits that it was conducted in the main effort to prevent a general conflagration. He concludes:—

> They saw Germany and Austria imperious, aggressive, and successful, and if they were not induced to love those countries, they certainly learned to fear them. That feeling of awe for Teutonism has been a powerful influence against us during recent months, and we must not be astonished if it cannot be quickly overcome by young nations whose friendship we did not a year ago think it worth our while to secure.

Italy and the Balkans.

The following are extracts from a leading article which appeared in *The Times* on Wednesday:—

> The entrance of Italy into the war is a sign, as we wrote yesterday, that the old order in Europe has definitely passed away. That, we may be sure, is a truth clearly discerned by all the Balkan States whose position will have to be settled in the new order that will succeed. They know that the Allies have determined to carry out Gladstone's old policy, and to remove the Turks for ever, "bag and baggage," from Europe. . . . No permanent peace can be securely established until some solution of the Balkan problems has been found, and the terms of the solution will in part depend upon the attitude which the States concerned may assume in the remaining stages of the conflict. Serbia has rendered invaluable services to the Alliance, and the Russian Foreign Minister is able to assure her that her aspirations for ready access to the sea will be fully satisfied. . . . An interesting confirmation of M. Sazonoff's statement is afforded by the Italian Green Book, which shows from Baron Sonnino's dispatches that, so far back as February, Italy imposed a positive veto upon all military action by Austria in the Balkans until that Power should have made an agreement with her under the subsisting Treaty between them. . . . Now the eyes of Roumania are turned eagerly to Rome. Our experienced Balkan Correspondent telegraphed from Bucharest on Sunday that the news of the Italian mobilization had caused great satisfaction, and that in the general belief "Roumania is now on the brink of a war for the fulfilment of the national ideal." That national ideal is the liberation of the millions of Rumanes across the mountains who live under the heavy yoke of Hungary, and their incorporation with the rest of the Roumanian people. In Bulgaria, it would seem, opinion is also ripening in favour of action. Ten days ago the same Correspondent sent us the significant news that all the reserve officers of the Bulgarian Army had joined the colours for a month's training. . . Though Bulgaria has her disappointments and her unredressed grievances, it is inconceivable, as M. Sazonoff says, that, whatever happens, her people should throw in their lot with Russia's enemies. The Greeks will be called upon within the next few weeks to declare the national will at a General Election. . . . The late Prime Minister not only advocated an immediate intervention on behalf of the Allies, but he had the sagacity to suggest the possibility of raising sacrifices to Bulgaria, in order to free this intervention from perils upon the frontier and to secure large gains elsewhere. He himself described the opportunity for Greece as unique. It is for his countrymen, whom he so lately and so effectively saved from revolution and from anarchy, to say whether, in this critical hour, they will again place the fortunes of Hellas in his tried hands. The differences between the Balkan States are serious, but we have never believed that they do not admit of composition. If, however, there is to be a settlement, it must be made under the auspices and supported by the guarantee of the Allies.

Turkey and Germany.

Mr. A. G. Hales, in a general survey of the war contributed to the *People's Journal* (May 21) introduces a note of warning against undue optimism regarding the probable duration of the war. He has no doubt that victory will ultimately fall to the Allies, but even if the best happens he does not consider it possible that peace will be concluded this year. He compares the actualities of the Dardanelles against the speculations indulged in by a portion of the British Press when the expedition started. "Blood has run like rain on the Gallipoli Peninsula, and much more will have to be shed." It is the same on other parts of the far-flung battle line. But, the operations before Constantinople over, Mr. Hales predicts a bad time for the Germans in Turkey at the hands of their present Allies. In his opinion, the deluded and outcast Turk is not going to pass from Europe without turning to rend the people of the country responsible for his fall. In writing of the moment when our forces march through Constantinople, he says:—

> . . Then, if I know the Turk, as I think I do, the Germans resident in that part of the world are going to find the climatic conditions about the most unhealthy in creation; for as soon as the Bosphorus and Dardanelles are cleared, and the capital has fallen, the Sultan's subjects will realise how they have been tricked into a war that from the outset had nothing of worth in it for them.

Mr. Hales thinks that the Turkish nation will cease to participate in the war as soon as they are beaten out of, and beyond, their capital.

Greece and Bulgaria.

The differences between King Constantine and M. Venizelos, according to *Truth*, is less remarkable than the extraordinary way in which the Greek people have "acquiesced in the ostracism of the greatest statesman who ever ruled them." Events are moving swiftly now, and, according to the paper from which we quote, the Greeks are by their apathy in danger of losing all their chances.

> Unless they look out, they will find the Bulgarians coming off the fence before they do, and what chance will the Greeks then have of realising those "national aspirations" upon which King Constantine says they set so high a value?

Articles to Note.

"Germany's Great Adventure," by Hector C. Bywater, in the *Naval and Military Record* (May 19).

"Ivan Meshtrovich, the Serbian Sculptor," by Count Miyatovich (illustrated), and "Reminiscences of Life in a Serbian School," by P. Kay, in the *Queen* (May 22).

"The Serbs and their Country," by Amy B. Barnard, in the *Lady* (May 20).

"A Place in the Sun," by Barrie Russell, in the *Car* (May 19).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

In connection with my remarks last week on the merits of a certain all-British typewriter, I should like to point out that the Egyptian War Office (see Trade Notes, page 114) is inviting tenders for the supply of typewriting material. I hope that the successful tenderer will be an all-British firm. Egypt and the Sudan are excellent markets for the typewriter, and a firm pushing their wares, *à l'américaine*, would be certain of success.

***

Salt and sugar (writes our Belgrade Correspondent) are important commodities, the supply of which sometimes runs short. The Government is giving its attention to the importation of these articles, and lately contracted for the supply of 4,000 tons salt and 1,200 railway waggons of sugar. Roumania is a great producer of salt, so that I hope the contract went thither. She is also, I believe, a producer of sugar, though not, perhaps, in sufficient quantities to export important shipments. Austria-Hungary is, of course, a great producer, and there is no reason, from a climatic point of view, why the Kingdom of the Lower Danube should not foster the cultivation of the beet on a larger scale than hitherto.

***

Our Belgrade Correspondent incidentally adds that the Serbian Government has fixed the selling price of sugar and other produce, thus preventing the sale at inflated prices. This notwithstanding, some sharpers have seen how to make money, even in these conditions. One dealer who had a considerable stock openly bought small quantities of sugar at Government prices, and re-sold large quantities at the same price, thereby hoping to escape police vigilance. Fates, happily, were against him and his stock has been discovered. But it would appear from the foregoing that clever manipulators of necessary commodities are not the pride of occidental countries only.

***

On April 30 we regretfully announced the death of Captain F. L. Dyer, of the 93rd Burma Infantry, whose services had been lent to the Persian Oil Company. He was shot by local Arabs at Darreh Khazine, on the Upper Karun River, on the 15th inst. It now transpires that he was appointed to the management of the company's transport arrangements on the pipe line. "He was," says the *Pioneer*, "a keen and valuable officer, and recently did excellent work in connection with the Turco-Persian Boundary Commission." I deplore the loss of a brave and capable officer, and regret that his services should have been lost, not only to his country, but to the Anglo-Persian Oil Company.

***

I wish to draw my readers' attention to a lecture to be given to-day by Sir John Jackson, the well-known contracting engineer, on "Engineering in Mesopotamia." The lecture will take place at 9 p.m. at the Royal Institute. A full report of the meeting will be published in next week's issue of THE NEAR EAST.

***

The interview with M. Sazonoff published in the Petrograd *Don* and reproduced in part by *The Times* is, in two respects, most interesting and important. M. Sazonoff, it is stated, "is convinced that no matter what happens, the Bulgarian people will never join Russia's foes." I have in these columns *always* maintained the same thing, in spite of what appeared to be adverse happenings.

***

Even more important is the great Russian statesman's reference to Serbia. He declared that "Serbo-Italian relations are most friendly, and that Serbia's former fears were wholly unfounded. Russia would not have fulfilled her task if Serbia had not been afforded an extensive access to the Adriatic, and therefore the rumour that Russia intended to give Italy all the Dalmatian coast was unfounded. *Serbia would receive good ports, and her desire for access to the sea would be fully satisfied.*"

***

Thus, has Serbia's "little window on the Adriatic" approached realisation! For, if M. Sazonoff asserts it, it has been decided in principle not only by Russia, but by her Allies, including ourselves. It is useless to speculate to-day which harbour will be chosen as Serbia's future port on the Adriatic, but it can be pointed out that, whichever it is, important harbour and railway works will be necessary (home contractors please note!), and that Serbia's future mercantile marine will need to be built and fitted out, or otherwise acquired. On the other hand, the possession of a port means direct waterway trade relations with other lands. Hitherto Serbia has been as badly off in this respect as Switzerland—or worse, because she was less known. This has been a great drawback for Anglo-Serbian trade, because we are not keen traders there where our ships cannot anchor. But all this will change after the war is over, and the two nations, the unweaned sea infant and the great Empress of the Seas, will get to know each other more thoroughly and learn to appreciate each other's qualities.

***

We publish this week two grievances from our island colony in the Mediterranean. With one of them my readers are already acquainted, namely, with the Cyprus motor transport service. The letters which we reproduce on the subject on the following page are an indication of the opinion prevailing on the island as regards the vital necessity for keeping up the service, and I again hope that, if it be not already too late, the Government will do its utmost to come to some arrangement whereby the service can be kept alive. Admittedly, it will cost something—more than it has cost hitherto, considering that the working of the concession has up to the present proved a dead loss—but whatever it is, it ought to be paid cheerfully.

***

The second grievance concerns the orange trade. If it is true that Cyprus dealers have been hampered in their exports owing to a glut of Jaffa oranges being shipped to Egypt under special Government permission, then most decidedly we have again been guilty of forgetting that charity begins at home. I see that steps have been taken by the Cyprus authorities in the matter, but are they not tardy? If damage has been done a remedy will be difficult to find; the danger should have been averted in the first instance. Now, it is too late until next season. Personally, I should much rather have seen our Cyprus traders profit this year at the expense of Jaffa, than vice-versa, because, after all, Jaffa is enemy territory, in spite of the many admirable and commendable people who live there.

***

A self-imposed moratorium seems to have been imposed by the Jew merchants of Meshed, if the evidence of our correspondent on the spot is to be trusted. According to him, Jewish merchants, who formerly had good credit, are "taking advantage of war conditions to postpone repaying their liabilities to an unjustifiable extent. They are men who carry on trade with Turkestan in opium, cotton, and wool, and with Constantinople in rugs. They could probably, even under present circumstances, meet their bills if they wished to. This," adds our correspondent, ingenuously, "is having a very bad effect on local trade, and is a hindrance to re-establishing normal conditions in the market." With which I entirely agree. I am only surprised to find that such enlightened traders as the Oriental Jews have always proved to be, should jeopardize their future—credit.

***

The grain movement in Egypt and the Sudan is on the ascendancy. According to a report which appeared in an Egyptian paper, the Government have given British Consular officers abroad particulars concerning Egyptian grain and bean crops, with a view to the placing of orders for either or both. The paper in question considers it surprising that the Government should have shown such an acute business acumen, and heralds this welcome change as one of the "most surprising war-babies to have been born." Though pretty in its way (writes a correspondent), the insinuation is hardly fair, and I must say this—that there are many governments who take less interest in their country's welfare than the Egyptian Government, which I have always found open to suggestions of a practical nature. I hope that this new venture on their part will prove successful.

***

Turning to the Sudan, I find that she is increasing her cattle exports to Malta considerably. More, still, can be done in this line. Malta is a great collecting and distributing centre of cattle—sheep, beeves, and swine—and will continually tend to increase her importance in this respect—that is to say, given favourable conditions. In this connection, it may be mentioned that the first commercial agent ever appointed by Serbia was sent to Malta to look after Serbian cattle—chiefly swine exports; the second, incidentally, was appointed to Alexandria.

***

However that may be, and, returning to the Sudan, I also notice with pleasure that our great possession in the Tropics is exporting more and more gum to England. This is an excellent sign. Months ago I pointed out in these columns that Germany, by means both fair and foul (as is her wont), had almost acquired the monopoly of the gum trade, Hamburg being the great distributing centre. Frequently gum from the Sudan was imported into Hamburg and re-exported into England! One of the lessons which I hope the war will teach us is that no foreign importing market should ever be allowed to control *any* of our colonial raw produce markets. Sudan gum is a case in point.

COMMENTATOR.

Cyprus, The Cinderella.

Communications and Crops.

In connection with the article published by us on May 14 on the "Cyprus Motor Transport and Development Company," and with our editorial notes on the same subject, we print below two letters which we have received from Cyprus correspondents. The first is dated May 8, and the second May 17 :—

"There is some apprehension that the motor service of the Cyprus Transport and Motor Company between Nicosia-Larnaca-Limassol is likely to cease in consequence of the Government grant not being increased. Petitions have been addressed to Government from the leading inhabitants of these three towns praying that steps may be taken to avert such a possibility. A motor service is felt to be a real benefit to the community at large, and it is hoped that its continuance on improved lines may be secured."

"The benefits introduced by the motor service which connected the principal towns of Nicosia, Larnaca, and Limassol, having been fully appreciated, the suspension of its operations has been much felt, and the people urgently desire a re-establishment of the traffic. The state of Cyprus roads and other local causes entail relatively large expenditure for maintenance of such service, and it is hoped that the Government will agree to the necessary and, indeed, moderate sacrifice required to keep it going."

We refer to the above matter again editorially on page 107, and likewise to the following grievance :—

Orange Trade.

We have received several letters from traders in Cyprus, protesting against the export of Jaffa oranges from Cyprus. We reproduce the following two complaints as voicing the general protest in the island :—

"Keen disappointment is felt by those interested in the orange trade. It was regarded as certain that the export from Syria to Egypt of Jaffa oranges would be stopped during the war. There has been in consequence great activity here, and high prices have been anticipated. These hopes have been dissipated, as the Egyptian Government allows large importations from Jaffa. Members of the Legislative Council, in a recent interview with the High Commissioner, begged that he would move in the matter, and his Excellency, recognizing the grievance, at once telegraphed to the authorities in Egypt. The reply indicated that the Jaffa exporters were not enemy traders, but Jews, to limited numbers only of whom facility was granted, so that it was hoped the Cyprus trade would not be much affected. To the traders referred to, however, the loss is estimated as considerable. It is seldom indeed that a wind, from whatever quarter, brings any good to the poor island. The Jaffa variety of orange, especially in the Famagusta district, where it is largely grown, is of excellent quality."

"The export of oranges from Cyprus into Egypt was active last month in consequence of the high prices then ruling. This appears to have been short-lived owing to large shipments having been made from Jaffa into Egypt. This may be due to the Jaffa trade being in the hands of Greek and Arab merchants, although it does not seem clear, if the facts are as alleged, why it should not be regarded as dealing with an enemy country."

CYPRUS TRADE RETURNS.

(From a Correspondent.)

An analysis of the import and export returns for the year ended December 31, 1914, as compared with those of the previous year, is interesting. The total imports (including specie, £72,472) amounted to £496,744, as against £619,338 (including specie, £55,807), showing decreases of £141,242 and increases (including specie, £16,665) of £35,313.

The exports totalled £550,239 (including specie, £53,463), as against £699,913 (including specie, £79,322), and the decreases amounted to £189,823 (including specie, £25,859), and the increases to £40,149.

The imports include the following decreases :—Bran and peas, £1,372 (while the export of these increased by £3,001); raw coffee, £5,161; vetches, £4,269; flour, £24,219; sugar, £6,277; machinery parts, £9,278; cotton yarn and thread, £4,549; cotton piece goods, £10,614; woollen manufactures, £6,656; leather manufactures and sole leather, together, £8,383; stationery, £1,634; and Government and military stores, £6,867. The increases in imported goods were trifling.

The exports showed decreases in most animals, except goats, which showed an increase of £1,638; wheat, £15,167; flour, £4,118; raisins, £31,583; spirits, £3,791; wines, £13,578, cotton, £13,083; silk cocoons, £22,656; hides and skins, £6,155; asbestos, £7,791; cotton manufactures, £4,819. The increases include barley, £10,377; oats, £3,611; potatoes, £4,738; onions, £2,475; beans and peas, £3,001; carrots, £3,427; wool, £2,883.

The diminutions in exports were mostly in those goods which are usually exported to enemy countries. It will be seen that the vine, the silk, and the cotton industries have been the most seriously affected.

A correspondent writes :—

Gold medals have been awarded at the exhibitions held this year in London and Paris of modern arts and industries to the following Cypriot exhibitors :—

Messrs. Haji Pavlo and Brothers, Limassol, spirits.

Messrs. Eug. Ph. Colakides, ready-made clothes.

Mr. Ch. Gavril, boots and shoes.

Some success seems to have been attained by the Artesian boring operations conducted by the Public Works Department at Prastion, near Morphou. It is reported that the boring has been carried to a depth of 950 ft., and that sweet water in fairly good quantity has been found. The water was raised to within 8 ft. of the surface of the ground.

EGYPTIAN SHIPPING IN 1914.

The annual shipping return issued by the Egyptian Ports and Lights Administration shows that during the year 1914 7,166 vessels, of a total net registered tonnage of 19,084,222 tons, entered Egyptian ports, landing 4,140,057 tons of cargo and 125,061 passengers. Similar figures for the year 1913 were 8,313 vessels of 21,857,296 tons net register, which landed 5,074,836 tons of cargo and 161,864 passengers.

The clearances from all Egyptian ports during 1914 were 7,169 vessels of 19,087,419 tons net register, which took away 1,230,225 tons of cargo and 125,734 passengers. The corresponding figures of clearances for the year 1913 were 8,288 vessels of 21,815,765 tons, with 1,412,893 tons of cargo and 150,095 passengers.

These figures relate to steamers only, says the *Egyptian Gazette*, and do not include foreign and coasting trade sailing vessels. Of these latter 2,878, of a net registered tonnage of 223,961, visited Egypt during 1914, as against 3,759 vessels (281,823 tons) during 1913. During 1914 2,885 sailing vessels, with a tonnage of 223,549, cleared from Egyptian ports, as against 3,747 of 274,445 tons during the previous year.

Last year 1,580 steamers with cargoes and 107 in ballast entered Alexandria, as against 763 and 19 respectively at Port Said. Of cargo landed, 2,172,257 tons came ashore at Alexandria and 1,738,058 tons at Port Said. Of passengers, 76,816 favoured Alexandria as a port of entry and 37,090 Port Said. Turning to clearances, 1,265 steamers with cargo and 434 in ballast left Alexandria, taking 944,004 tons of goods and 80,173 passengers, while 535 steamers with cargoes and 214 in ballast, taking 137,606 tons of goods and 36,142 passengers, preferred Port Said. Alexandria, also, showed a similar lead with regard to sailing craft.

The return shows how useful the Mahmoudieh Canal is to Alexandria. During the year 3,472 Nile sailing vessels, boats, and steamers entered the canal from the port, with a tonnage of 230,544, and bringing in 204,181 tons of goods. During the same period 3,627 vessels of similar type came into the port from the canal, tonnage being 222,910, with, however, only 265 tons of outward cargo.

Turning to the nationalities of the steamers using Egyptian ports, it is satisfactory to note that, as was, of course, to be expected, Great Britain still holds a long lead. Thus of the total number of steamers—2,920—which did not transit the canal, 1,249 with cargo and 162 in ballast flew the British flag, their tonnage being 2,305,744 out of a grand total of all nationalities of 5,137,448. In point of both number of vessels and tonnage, Italy comes second with 357 steamers of 650,096 tons burden, and Austria-Hungary third with 193 steamers of 423,967 tons. In point of tonnage, though not in number of vessels, France is fourth with 132 steamers of 417,161 tons, with Russia fifth with 161 steamers registering 400,935 tons burden.

Seven months of traffic, up to August, 1914, served to place Germany sixth with 135 vessels of 337,306 tons. Had it not been for the war, which has now, happily, ended German shipping activities, she would undoubtedly have stood second on the list.

Under the Greek flag 279 steamers of 270,064 tons came to Egypt, placing that country seventh on the list.

Sudan Notes.

The following are extracts from the most recent issue (March) of the *Monthly Report* of the Commercial Intelligence Branch of the Sudan :—

Gum.

718,994 kilos of gum, valued at £20,334, were exported via Port Sudan, and 2,050 kilos of gum, valued at £30, were exported via Halfa during March, 1915.

During the month gum arrivals improved in the Kordofan, but were below the average of previous years. 29,719 kantars of 120 rottles (54 kilos) were sold in the El Obeid market during the month, against an average for the last three years of 33,417 kantars in March. The price has been fluctuating with a tendency to fall. The highest price during the month was £T64, and the lowest £T48 per kantar. In the Sennar Province gum has been quiet, the monthly return showing that 684 kantars of hashab were sold at £T36 to £T40 per kantar of 100 rottles (45 kilos), and 325 kantars talh were sold at £T16 to £T17 per kantar.

Cotton.

Arrangements have been concluded for the sale at a satisfactory price of the whole of the Kassala cotton crop. In the Berber Province three khalis (foremen) arrived from Egypt, and preparations are being made for extensive ploughing and distribution of cottonseed, all Zeidab American. It is estimated that about 1,700 saklas will grow cotton this year. Tokar Cotton.—The prices continue to rise, greatly to the satisfaction of the cultivators. Owing to sunshine, the late cotton is maturing fast, and is of good quality. The payment of pickers at 1 millieme per rottle has been universally insisted on, and the demand for nickel has consequently been large. A crop of 9,000,000 kilos is estimated. There was a strike among the cameimen transporting the cotton from Tokar to Trinkitat, which was, however, settled after a couple of days, a slightly increased rate being now paid. Extra camels have been sent from Suakin, etc.

The Inspector of Agriculture at Tokar reports that the following quantities of cotton had been brought into Tokar cotton market up to the end of March. A comparison with the same period in 1914 is shown :—

	1914. Unginned. Kilos.		1915. Unginned. Kilos.
January	82,177	....	—
February	584,956	....	249,573
March	718,574	....	2,269,982
	1,385,707	....	2,519,555

This year's cotton was classified as follows :—

	Afifi. Kilos.		Assili. Kilos.
1st Class.....	1,233,693	....	60,377
2nd Class	986,433	....	50,404
3rd Class.....	168,559	....	9,928
4th Class.....	9,703	....	314

Grain.

There is every prospect now that grain will remain plentiful and cheap throughout the summer. Some 5,000 ardebs were exported from the northern districts of Sennar Inspectorate, but from Singe and South the export has been negligible, and the vast proportion of the crop is still in this province.

New Currency.

On March 26 the Inspector of Kosti, with a party of labourers, proceeded to Senetaia (White Nile Province) to start work on the causeway there. This trading station will serve the west bank in the same way that the station at Jebelein serves the east, and will tap the valuable country of the Seleim and Ahamda. The station has increased largely during the last year, even without a causeway, but it is difficult to approach it before January. The causeway as designed will provide dry access to the station under all conditions, and form an excellent mooring place for steamers.

Cattle.

A March report states the number of sheep and goats sold in Damer market, Berber Province, during the month totalled 3,146 and cattle 395, a falling-off in the former, but an increase in the latter. There has been a considerable export of cattle from Shendi.

White Nile Province can now be regarded as free of cattle plague; otherwise there has been no material change since the issue of last month's report. Cases of contagious pleuro-pneumonia continue to be met with, but this disease is confined chiefly to Kordofan and Nuba Mountains Provinces.

Sudan Customs Duties.

With reference to the regulations prescribed for the collection of Customs duties on merchandise imported into and exported out of the Sudan under "The Customs Ordinance, 1913," the Board of Trade have now received copy of a further Ordinance (No. 2 of 1915), which was made by the Governor-in-Council on March 23 last, and which amends the above-mentioned Ordinance of 1913. The present Ordinance provides, *inter alia*, that the "Customs (Duty on Alcoholic Beverages) Ordinance, 1914," shall apply to alcoholic beverages of whatever origin imported from Egypt into the Sudan, but in assessing, under the said Ordinance, the duties on alcoholic beverages imported into Egypt deductions shall be allowed in respect of the duties, if any, paid or accounted for on the import of the same into Egypt, and regulations may be prescribed as to the assessment of the duties, the calculation of the deductions and the mode of proof of the amount of duties paid or accounted for on import into Egypt. With regard to the fees on travellers' baggage, it is provided that "declaration and porterage fees and other fees to be charged on travellers' baggage, in addition to import and export duties, if any, may be prescribed, provided that porterage fees shall be chargeable only on packages carried by porters. The scale of fees shall be kept posted up in clear and legible characters in English and Arabic in the examination office."

The full text of the Ordinance, which amends various other regulations relating to the management of the Customs, may be seen by British traders interested on application at the Commercial Intelligence Branch of the Board of Trade.

NEWS FROM ALL SOURCES.

Owing to the efforts of the Veterinary Department considerable encouragement has been given to the export of Sudan cattle to Malta. Since the outbreak of war 1,573 head of cattle have been exported to Malta, with satisfactory results.

The adjudication held on May 4, 1915, for the supply to the War Office, Cairo, of Newcastle coke, to be delivered into the Abbassia and Tura supply stores, has been approved in favour of the Cairo Gas Co. at the total cost of £E760.

According to a telegram received in Paris from the Governor of French Somaliland, the railway connecting Djibuti with Adis-Abeba was completed on the 21st inst.

The *Messagero* (Rome, May 12) stated that the Italian Government has established a new law forbidding the re-exportation of cotton from Italy under any pretext. The text of this law is a guarantee to Great Britain that no cotton will go through Italy into Germany or Austria, has been communicated to the British Government.

All persons, says the *Cyprus Gazette* of May 13, having any interest in cargoes other than enemy cargoes laden on enemy ships captured as prizes and requiring a release of such cargoes or portion of cargoes should make inquiries in Nicosia at the offices of the King's Advocate, and at the ports of Cyprus, at the offices of the Collectors of Customs. The King's Advocate will require proof of ownership and particulars as to freight, whether paid or unpaid.

The Egyptian Government has decided to send samples of Egyptian corn to all the British consuls in Allied and neutral countries in order that they may be placed on the corn exchanges with the produce of other countries. It is said that the Egyptian crop is a particularly good one this year.

New Trans-Grecian Route.

Approaching Completion.

The railway line that is to connect Greece with the rest of Europe is now rapidly approaching completion, says the U.S. Consul-General at Athens, and from an authoritative source it is learned that it will be opened to traffic in August. The rails and locomotives for this line have been purchased in the United States. When this short link of about sixty miles is opened it will be possible for a traveller to go from Piræus to Paris in something less than sixty hours; for the Indian Mail Service the new line will be not less important, effecting a saving of about thirty hours each way.

In order to care for the anticipated passenger traffic the Ministers of Finance and Communications of the Greek Government have recently concluded contracts with La Compagnie Internationale des Wagons-Lits et des Grands Express Européens, providing for (1) the necessary sleeping and dining cars for the new route; (2) for the establishment of a tourist and ticket office of the company named at Athens; and (3) for appropriate advertisements of the new line and other railways in Greece by means of the company's offices and agencies, in its cars, etc.

For a day trip of twelve hours the holder of a first-class ticket will pay for his seat in the sleeping car twelve francs; the holder of a second-class ticket will be taxed 4.50 francs; for night trips, the first-class fare is unchanged, while the second-class fare is doubled. By paying 50 per cent. extra the holder of a first-class ticket may reserve for his exclusive use a compartment for two persons. The prices charged in the dining cars will first be approved by the Hellenic Government.

A copy in Greek and French of each of the three contracts referred to accompanies the report alluded to; from the first of these it will be seen that a daily dining and sleeping-car service from Piræus to the Serbian boundary, with extensions to Belgrade and Vienna, is provided, together with a daily service of sleeping-cars from Piræus to the Serbian boundary, and a dining-car service from Piræus to Salonika. Provision is made for extension of the service, as occasion requires. The contract for the dining and sleeping-car service is for thirty years, from July 14, 1915, subject to cancellation after fifteen years, on five years' notice, at the pleasure of either party.

GREEK CEREAL IMPORTS.

Mr. Eulambio, writing from Athens in the *Economist* on May 15, says:

One of the most important problems created by the war in Greece is the cereal question. For account and under the responsibility of the Government, the National Bank has undertaken the financing of the wheat and flour purchases made in America. This question has been handled entirely by the bank, through a committee consisting of the two present sub-governors, Messrs. D. Maximos and J. Drossopulo, and the three councillors of the bank, Messrs. G. Eliopulo, J. Damalas, and A. Moutzounis. Later the bank requested the Government to form a committee of officials of the State and the bank. To-day it comprises the Director of the Ministry of Finance, Mr. G. Coffinos; the Director of the Home Office, Mr. G. Chomatianos; the Chief of the Police, Mr. D. Palamaras; the Director of the Bank, Mr. S. Loverdo; and two high functionaries. The successful solution of this question is shown from the following:—(1) Thanks to the gold reserves of the bank, the rate of exchange remained unmoved at par. No gold shipments were necessary. (2) From the total bank purchases of 270,000 tons wheat and flour the two-thirds have been bought in the autumn at low quotations and at freight rates mostly under 30s. per ton

Near East Markets.

SPECIAL REPORT.

(From Our Own Correspondent.)

Cyprus. May 8.

Hail storms have caused damage in the north-west of the island to crops and fruit trees. A year seldom passes without some destruction from this cause to vines or other produce. Happily cereal crops are secure, and there is no longer anxiety regarding the bread supply for a year to come.

Later.

Harvest is now in full swing, and promises to be a good one. The olive crop should also be very satisfactory. The weather until the last day or two has been unusually cool, but a "khamseen" has been prevalent during the last forty-eight hours, and may do harm to the fruit blossoms if it continues.

EGYPTIAN CROP NEWS.

The following notes are from the *Monthly Journal* (May) of the British Chamber of Commerce of Egypt :—

Onions.

Harvesting is proceeding normally with favourable weather and sufficient water supply. Slight damage is reported in the Fayoum province from locusts.

The arrivals at Alexandria from March 1 to April 30 total 312,879 cantars compared with 345,839 cantars for the same period last year, the exports for the two months amounting respectively to 262,050 and 311,155 cantars.

Prices have reached a very low level, quotations at the end of April being P.T. 38-48, as compared with P.T. 120-140 a year ago. The market this season opened at P.T. 100-105, the subsequent slump being largely due to the prohibition of exports to Italy except where shippers are able to produce certificates from the British Consul at port of destination to the effect that shipments will not be re-exported.

The Locust Invasion.

From a report issued by the Ministry of Agriculture we are glad to note that the authorities in Upper Egypt have now got complete control of the locust invasion. The plague of locusts has been exceedingly severe this year—in fact, it is many years since Egypt has been troubled to such an extent with this pest. The Government is to be congratulated on the result of the energetic steps that have been taken to deal with the invasion; in spite of the vast masses of locusts met with, the damage done to crops in Upper Egypt has been negligible, while in Lower Egypt the swarms in most localities have been got well in hand. Up to April 23 about 6,780 tons of adult locusts and 146,980 okes of eggs have been destroyed. (An oke contains about 100,000 eggs.)

TRADE WITH ARABIA.

The total prohibition of trade between Egypt and Arabia has hit the Suakin merchants somewhat badly, but no difficulty is anticipated by them in getting the money owed them by Jeddah merchants when the veto is removed (says the *Egyptian Gazette*).

In spite of the strict orders issued by the Turkish authorities to the contrary, British, French and Turkish gold continues to be sent over from Jeddah to Suakin by sambuks for the purchase of foodstuffs.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

PRODUCE REPORT.

London, May 27.

The produce market, owing to the holidays, in some instances have been inactive.

Currants.

The spot market is again dearer from 6d. to 1s. per cwt. on the week, Pyrgos fruit having experienced the greatest advance. The s.s. "Teano's" cargo turned out satisfactory, and is mostly cleared. No further steamer is reported afloat, but large sales for shipment continue to be made. Present spot quotations are :—Provincial 25s. 6d. to 26s. 6d., Amalias 27s. 6d. to 29s., Patras 30s. to 31s., Gulf 29s. to 31s., Vostizza 32s. to 36s., Islands 29s. to 30s., smalls 27s. to 35s.

In Liverpool the few parcels of Vostizza remaining were sold at full prices, so that the market is now absolutely cleared of stock. The "Britannia," with 1,500 tons will relieve the market, but it is doubtful whether any samples will be available this week.

Sultanas.

No further arrival has taken place. There has been a large business during the week, resulting in a further rise of about 2s. per cwt. Duty paid clearances continue extremely large, and this in addition to considerable Government purchases. In Liverpool, the s.s. "Pontiac" and s.s. "Anastassios Koroneos" arrived, bringing together 9,000 boxes. The s.s. "Britannia" has brought 17,000 boxes.

Figs.

There is no business of importance in this market, whilst in Liverpool bags of Naturals are wanted.

Dates.

They are only in small demand at late rates.

Seeds.

Linseed is firmer; London-Calcutta spot quoted 56s., afloat, also April-May and May-June, 56s. Rapeseed is dull. Cottonseed is quiet, but steady: London-Egyptian spot, £8 10s.; May, £8 17s. 6d.; and June, £9 per ton.

Oils.

Linseed Oil.—The market shows a firmer tendency, and there is more business doing. On the spot, pipes, £28 15s.; barrels, £29 10s.; June-August, £29 15s.; Sept.-Dec., £31 5s. Rape oil is dull and easier, ordinary brown on the spot marked £38 15s.. Cotton Oil.—Crude is lower, but refined is unchanged. Crude on the spot, pipes, £31; refined on the spot, pale, pipes, £33; sweet, barrels, £37 to £39.

Egyptian Onions.

Arrivals show a falling off at the moment, all offerings meet with a ready outlet, rates being even higher than a week ago.

Egyptian Eggs.

Supplies still continue short from all sources, and higher prices are expected during next week. Egyptian are selling 8s. 9d. to 9s.

EGYPTIAN ONIONS.

Mr. Tickler asked the President of the Board of Trade whether he was aware that Egyptian onions were being bought up largely by Dutch agents on the London market, and were being shipped in large quantities to Rotterdam by the Batabier line of steamers and thence to Germany, in consequence of which the market to English consumers was considerably inflated, and our enemies were being supplied with a valuable source of food; and whether he would take prompt steps to stop the exportation of onions.

In a printed reply, published on Tuesday, Mr. Runciman stated: I am informed that the export of onions from this country to the Netherlands has recently shown a tendency to increase. The matter is being investigated, and the hon. member may be assured that such action will be taken as may prove to be necessary.

THE RESTRICTION OF COTTON EXPORTS.

(From Our Own Correspondent.)

Cairo, May 16.

Much heavy weather has been made in certain circles over the action of the Egyptian Government in prohibiting the export of cotton to Mediterranean ports excepting those of France, Russia, Spain, and Portugal. The agitation has died down somewhat, since it is now realised that this country is only following the policy of the British Government. There can be little doubt that Egyptian cotton has been going to Germany and Austria by indirect route, just as, until recently, produce was being sent into Turkey via Dedeagatch, where Turkish merchants and agents had been and still are particularly active. The indirect route for Egyptian cotton is via Italy and Switzerland, and the fact that it has been followed is abundantly clear from the statistics. Between August 1, 1913, and April 25, 1914, Germany took 79,704 bales, Austria 43,178 bales, Italy 29,946 bales, and Switzerland 31,116 bales; but whereas in the corresponding period of the present cotton campaign the two first-named took but 2,612 bales between them, Italy and Switzerland have jumped to 44,792 and 99,084 bales respectively. In fact, these two countries have in the period taken an extra quantity, a little more than equal to that of Germany during the preceding corresponding ten months. Switzerland is by far the greater purchaser of cotton, and since it is not possible that she can have suddenly trebled her output of manufactured articles, it is only natural to infer that she has merely acted as a transit house for Germany. Possibly neither Germany nor Austria is short of raw cotton at present, and they may have a sufficient stock for some little time to come. There is little doubt, however, that both countries may in the near future be handicapped if their supplies from abroad are cut off. Egypt's loss through the war is far more than is represented by her exports of cotton to the four countries mentioned in this paragraph, and the longer the war lasts the greater, proportionately, is bound to be her loss. Consequently she has every interest in assisting to curtail the duration of the war. The wisdom of the policy of the Egyptian Government, supported as it is by the action of the British Government, is incontestable, and those who, after a clear explanation of the motives, still continue to criticise the imposition of this prohibition, lay themselves seriously open to the suspicion that they have been trading by indirect route with the enemy, and are annoyed at the enforced stoppage of the profits they were thereby earning.

LIVERPOOL REPORT.

(From Our Own Correspondent.)

Liverpool, May 27.

Messrs. Reynolds and Gibson report :—

Egyptian Spot.—There has only been limited business done, of which Sakellarides forms a large proportion. Quotations for all descriptions are reduced ten points. The sales are estimated at 1,100 bales, against 2,600 bales last week.

Manchester Trade Report.—Owing to the intervention of the Whitsuntide holiday, and consequent closing of Exchange for practically the whole period under review, no trade review is published this week.

SWISS COTTON IMPORTS.

Egyptian cotton exports to Switzerland from September, 1914, to April, 1915, were as follows (in bales), as compared with the same period of 1913-1914 :—

	1913-14.		1914-15.
September	1,860	....	799
October	4,665	....	6,332
November	5,611	....	15,921
December	6,399	....	15,671
January	3,771	....	15,446
February	3,063	....	29,779
March	2,273	....	16,387
April	2,069	....	11,070

Djavid Bey, Turkish Minister of Finance, accompanied by the Director of the Anatolian Railway, has passed through Bulgaria on his way to Vienna and Berlin (says a Reuter message from Sofia, May 21).

Digitized by Google

Roumanian Petroleum Industry.

The *Petroleum World* publishes the following interesting details regarding the export and storage of oil in Roumania:—

At the end of 1914 the Roumanian State petroleum installation at Constantza consisted of forty reservoirs; thirty-nine large ones, each of a capacity of 5,000 cubic metres, and one of 1,250 cubic metres. The total capacity of these reservoirs amounts to 203,000 cubic metres. There were also opened for exploitation during the year two reservoirs of the Credit Petrolifer, one of the Roumanian Consolidated Oilfields, Limited, and one of the Aquila Franco-Romana. Another reservoir has now been erected by the Roumanian Consolidated Oilfields, Limited, of the capacity of 5,000 cubic metres. Among the above reservoirs twelve are for kerosene, one for distilled kerosene, fifteen, of the capacity of 71,250 cubic metres, for benzine, and twelve for lubricating oils.

The above reservoirs are in use by the following enterprises:—

	Reservoirs.		Capacity. Cubic Metres.
Steaua-Romana	13	....	65,000
Astra-Romana	8	....	40,00
Romano-Americana	5	....	25,000
Credit Petrolifer	7	....	35,000
Aquila Franco-Romana	4	....	16,050
Colombia	2	....	10,000
Roumanian Consolidated Oilfields	1	....	5.000
	40		196,050

The exportation of petroleum products from the port of Constantza during 1914, as against 1913, is shown in the following table:—

	1913. Tons.		1914. Tons.
Germany	63,634	....	31,994
England	214,624	....	77,536
Austria	38,472	....	19,585
Belgium	11,804	....	13,587
Denmark	8,483	....	9,831
Egypt	119,167	....	62,697
France	145,901	....	45,393
Greece	—	....	4,263
Italy	124,219	....	113,746
Holland	51,309	....	32,694
Norway	20,670	....	12,512
Turkey	28,196	....	15,802
Russia	4,284	....	6,489
Transit Prodeal	—	....	4,928
Total	846,968	....	451,057

The reduced exports during 1914 are, of course, entirely due to the war and owing to the closing of the Dardanelles, from which no exports whatever were made during the last five months of the year. In addition to the above installations, which are the property of the State, there are at Constantza four private installations, situated at Medea, as follows:—Steaua-Romana, twenty-seven reservoirs, of a total capacity of 38,000 cubic metres; Astra-Romana, nineteen reservoirs, of a total capacity of 52,000 tons; Romano-Americana, six reservoirs, of a total capacity of 25,000 tons; Aquila Franco-Romana, thirteen reservoirs, of a capacity of 32,000 cubic metres. All these installations are connected by means of pipelines with the State installations.

Besides the above installations, land has been acquired at Medea by the Credit Petrolifer and Roumanian Consolidated Oilfields, Limited, where they intend to erect installations, and after the completion of the pipeline Baicoi-Constantza, the principal enterprises will build their own refineries in the port of Constantza.

The bulk of petroleum production is exported viâ Constantza, but there are export installations in the ports on the Danube, namely, at Braila, Giurgevo, and Oltenitza, and at the first of which the Credit Petrolifer has an installation of ten reservoirs, of the total capacity of 22,500 tons, and at Giurgevo the Steaua-Romana has an installation of ten reservoirs, of the total capacity of 11,000 tons, and at Oltenitza the Romano-Americana has an installation of two reservoirs, of the capacity of 3,500 tons, and the Astra-Romana an installation of four reservoirs, of the capacity of 3,000 tons.

The Roumanian petroleum industry has at its service a total of 4,022 tank wagons, of which 252 belong to the State, and the remainder to private concerns. The principal owners of tank wagons are Steaua-Romana, who have 927 wagons, Astra-Romana 578, Credit Petrolifer 458, and Romano-Americana 414.

The storage accommodation for petroleum and products of the principal companies on the field and at the refineries was, at the end of the year, 919,000 tons, as the following table shows:—

	Tons.
Steaua-Romana	22,000
Astra-Romana	172,000
Romano-Americana	124.000
Vega	125,000
Orion	92,000
Roumanian Consolidated Oilfields, Ltd.	44,000
Auroa (Baicoi)	28,000
Auroa (Targovishte)	10,000
Aquila Franco-Romana	28,000
Creditul Petrolifer	24,000
Colombia	24,000
Standard	15,000
Soc. des Petrol Roumains, Plopeni	8,000
Total	919,000

The repartition of this storage accommodation between various companies, together with the storage accommodation owned by the smaller concerns, amounts to the total of 1,450,000 tons, and another 1,000 tons of storage accommodation is owned by the administration of the Roumanian Railways.

ROUMANIAN TRADE OUTLOOK.

In an article which appeared towards the beginning of the month in *Kelly's Monthly Trade Review* on Roumanian trade, the following summary of the situation and of the commercial outlook is continued and will be of interest to British exporters:—

The outlook, says the article, is distinctly favourable. When once the present crisis is over Roumania is likely to forge ahead, for side by side with the attention being paid to agriculture and forestry, there is a marked advance in industry, commerce, and the polite arts. The people have much of the Latin vivacity combined with the stubborn characteristics of the Balkan races, so that with the gradual spread of education energies are being directed to practical ends. In Bucharest and the other cities there is an intense social and intellectual activity, quite on a par with the more central countries of Europe. This makes for progress and expansion of commercial exchange. In rural districts there is much that is very primitive, but business and banking are organized on a sound footing, so that trading is facilitated. Some of the difficulties of transport will doubtless be smoothed away as soon as the Dardanelles and Bosphorus are opened, for this will give a spurt to the already busy ocean traffic in the three largest Roumanian ports.

Digitized by Google

In the main, the 7,000,000 of Roumanians to-day demand cheap goods, and this naturally applies specially to such lines as textiles and tools, and to some extent to agricultural machinery. Numerically and economically, the importance of the wealthy classes is steadily on the increase, which means that there is an all-round rise in the average price of imports, and the demand for the more expensive is bound to keep on growing. This does not apply alone to luxuries, but to industrial machinery, cycles and motor vehicles as well. Indeed, with the opening up of Roumania and the neighbouring States by means of good roads, there is a very bright future for the trade in horseless vehicles, including both automobiles and motor-cycles.

Publicity either in the public Press or by means of showrooms is certainly advisable in order to counteract some of the disadvantages of distance. One point in our favour is that we already possess a not inconsiderable re-export trade with the country, which testifies to the soundness of our business relations.

With the opening for free traffic of the Dardanelles, the importance of the Black Sea port of Braila is evident. This town has a large, highly industrial population, and the establishment of permanent British store and show rooms would bring a livelier intercourse in trade and commerce between Roumania and the United Kingdom.

ROUMANIAN TIMBER TRADE.

The timber trade is the third most important industry of Roumania. The forests are extensive, contain valuable timber, and are carefully exploited. Timber is exported in the rough, dressed, and in a manufactured state to the average value of over £1,200,000 annually. Some of the sawmills are large and well equipped. Their number is increasing and greater expense is being incurred in equipment. Timber-working appliances, lathes and tools are also wanted for the joinery and carpentry shops which are being established. While more woodwork is being exported, there is a flourishing import trade of certain timber products, especially the choicer kind of cabinet work and furniture, the value reaching about £400,000 a year. Part of this comes from England, but France and Austria were more favoured in these lines.

ENGINEERING PROSPECTS IN GREECE.

Greece's commercial importance has vastly increased as a result of the last Balkan war. While we take very nearly one-fourth of the exports of Greece proper, a little over one-fourth of their imports comes from Great Britain. This means over £2,500,000 to us in direct trade, and about £60,000 in re-exports. This is not taking into account the trade done with Macedonia, Crete, and other outlying parts, which has not hitherto been included in Hellenic returns. It is probable that with expansion will come better systems and a demand for agricultural machinery. Indeed, in the matter of iron and steel and machinery we are in an inferior position. At present our total sales of metal and machinery only amount to about £90,000 annually out of a total of over £350,000. Yet we are Greece's best customers for currants, figs, raisins, fruit juice, olive oil, wine, tobacco, and a few other products of the land. The metal trade is all the more peculiar as we are also considerable buyers of iron and zinc ores, as well as lead in pigs and sheets. As against this, we sell almost the whole of the large imports of coal.—*Kelly's Monthly Trade Review.*

THE CAIRO MOTOR CO., Ltd.
The Largest Motor Depot in the Near East.
SUPPLIERS OF
Motor Cars, Cycles, Launches, Marine Sets, Evinrude Motor Attachments, Dunlop Tyres &all Motor Accessories.
Head Office: RUE SOLIMAN PASHA, CAIRO, EGYPT.
Also at ALEXANDRIA and LONDON.

Engineering Notes.

Ice-making Installations.

In our notes last week we described a small type of machine which is generally used for cold storages for making ice, etc. For the latter purpose buyers in the East will find that the British ice-making plants are much simpler, easier to work, and comparatively cheaper than the German. There are several methods of making ice, but the two generally used are the can and the cell systems. In the can system, the ice box consists of a wrought or cast-iron tank, lagged with wood, and filled in with some insulating material. This tank is filled with brine. The brine is cooled down to a temperature of 5 degrees to 15 degrees F., according to the quality of the ice required, and the quantity to be turned out in a given time. In this brine tank are placed galvanised iron ice moulds, which are filled with water. When clear ice is required agitators are provided. These are usually made of wooden blades mounted in frames above the ice moulds and keep the water in continual motion until it is frozen. When the freezing is almost completed, the agitators are removed and the moulds frozen up solid. The ice moulds are then lifted out by means of a traveller and carried to the relieving tank, in which they are placed for a few minutes, afterwards being drawn out and reversed, when the blocks of ice fall out.

The Cell Ice System.

The cell ice system is usually recommended for making clear or crystal ice from ordinary water. The ice-box consists of a wood tank with a partition at one side containing the agitators. In this wood tank are placed iron hollow walls, from 6 ins. to 12 ins. apart, with hollow cross-pieces bolted on to same. Below these is a perforated iron false bottom. Cold brine is circulated through the hollow walls, and the water is kept in motion by means of agitators in the side partition. Ice gradually forms on the walls, and when the two sides meet and a solid block is formed the cold brine is shut off, and a supply of warm brine is passed through; this quickly relieves the ice from the walls, and it is then lifted out by the crane. The principal advantages of this system are that, owing to the method adopted for agitating the water, and thus removing the air, a perfectly clear and crystal ice is obtained, and, in addition, the blocks are all of an equal size and weight. These plants are usually made from 5 cwt. capacity upwards. The cost of production varies with the size of the plant; roughly, with, say, a 10-ton plant, it amounts to 3s. 6d. to 4s. per ton of ice.

Power from the Sun.

The idea of utilising the sun's energy as a source of power is not, by any means, new. Many attempts have been made in that direction during the last century, but all without any practical results. Hence the problem has not been very attractive to modern scientists and engineers. Last year, about this time, Mr. S. E. Ackermann, addressing the Society of Engineers, said that "the time will come when Europe must stop her mills for want of coal, and Upper Egypt then, with her never-ceasing sun-power, will invite the European manufacturer to remove his machinery and erect his mills on the firm ground along the sides of the alluvial plain of the Nile, where an amount of motive power may be obtained many times greater than that now employed by all the manufacturers of Europe." Engineers, however, were sceptical of the possibility of harnessing the sun's energy; and it must be admitted now that it was a triumph for Mr. Ackermann when, a few days ago, in giving an account, before the Royal Society of Arts, of the latest sun power plant established in Egypt, he proved that such a thing can be done, and those who heard him admitted that sun-power must be regarded now as quite within the range of practical engineering.

The Plant.

The plant consists of a series of rectangular boilers or absorbers placed on edge in a channel-shaped reflector of parabolic cross-section, so that the solar radiation is received on both their surfaces. Cast-iron boilers of this type have been erected at Meadi, on the Nile, seven miles south of Cairo. The reflectors, their axes placed north and south, are arranged automatically to heel over from an eastern aspect in the morning to a western one in the evening, so as to follow the sun. Thus the same number of solar rays are caught all day long, the small decrease in steam production in the morning and evening being due almost entirely to the greater thickness of the atmosphere through which the sun's rays have to pass.

Experiments lasting some weeks were made by Mr. Ackermann on this plant, the total area of sunshine collected being 13,269 square feet. The boilers were placed at the focus of the reflectors, and were covered with a single layer of glass enclosing an air space around the boilers. Each channel-shaped reflector and its boiler was 205 feet long, and there were five such sections placed side by side. The concentration was 4½ to 1. The maximum quantity of steam produced was 12 lb. per 100 square feet of sunshine, equivalent to 183 square feet per brake horse power, and the maximum thermal efficiency was 40.1 per cent. The best hour's run gave 1,442 lb. of steam under atmospheric pressure, hence (allowing 22lb. of steam per brake horse power hour for the low pressure engine used at Meadi), the maximum output for an hour was 55.5 b.h.p., a result about ten times as large as anything previously attained, and which was equal to 63 b.h.p. per acre of land occupied by the plant. A satisfactory result was that the output did not fall off much in the morning and evening. Thus on August 22, 1913, the average power for the five hours' run was no less than 59.4 b.h.p. per acre, while the maximum and minimum power on that day was 63 and 52.4 b.h.p. per acre respectively. Mr. Ackermann's opinion is that the problem of the utilisation of solar energy is well worthy of the attention of engineers, for even now it is very nearly a solved problem where there is plenty of sunshine and coal costs £3 10s. a ton. In Egypt this price has lately been almost reached owing to the quadrupled freightage charges. It is fortunate that where coal is dear, sunshine is often plentiful, and it is to be remembered that coal will gradually get dearer, while the cost of manufacture of sun-power plants should decrease.

Possible Purposes of the Plant.

Sun power plants are admirably suitable for pumping in connection with irrigation, for where there is a great amount of sunshine, a great amount of irrigation is necessary, and the slight variation in the quantity of water pumped throughout the day is of little consequence. Moreover, when there is a temporary shortage of sunshine (due to clouds), little or no irrigation is required.

Alexandria Harbour.

In spite of the war, and the necessity for retrenchment, necessary works are being pursued in Egypt as if nothing untoward was happening, says the *Egyptian Gazette.* One of the most important needs of Egypt is a large and safe harbour. The Government is fully aware of this necessity, and thus we are not surprised to see among the latest expenses authorised £E10.000 for the completion of Quay K, £E2,000 for that of Quay E, £E1,500 for a protecting mole for the timber quay, and £E7,000 for the work of strengthening the breakwater.

The Khedivial Steamship Company has been authorised by the Cyprus Government to increase its passenger and cargo freights by 25 per cent. until June 30 next.

Trade Notes.

Egypt.

Tenders will be received at the office of the Inspector, Central Gharbia Drainage Projects, Ministry of Public Works, Cairo, up to noon on June 19, 1915, for the supply and erection of a swing bridge on Salahib Lock, at Hamul Barari, in Kafr-el-Sheikh district. The approximate quantities are as follows:—

Steel work	tons	12
Concrete	cubic m.	70
Wood work	,,	16
Cast iron (including balance weights)	tons	18

Drawings and specification may be consulted at the office of the Central Gharbia Drainage Projects, Cairo, on all days on which Government offices are open, between 9 a.m. and 1 p.m. Tenders should be submitted in sealed envelopes, addressed to the Inspector, Central Gharbia Drainage Projects, Ministry of Public Works, Cairo, bearing the inscription: "Tender for swing bridge."

Tenders will be received by the Director, Physical Service, Dawawine Post Office, Cairo, up to noon on June 15, 1915, for the supply of balances and weights required by the Postal Administration. Copies of specification and conditions of contract may be obtained free of charge on application to the said service. Tenders should be addressed to the Director, Physical Service, in sealed envelopes, bearing the inscription: "Tender for the supply of balances and weights for the Postal Administration."

The following tenders will be received at the Financial Secretary's office, War Office, Cairo, before 11 a.m.:—June 9, 1915—Supply of 30,000 Indian grain bags at Suez Docks; June 15, 1915—Supply of typewriting requisites at the Citadel Stores, Cairo. Persons wishing to tender can see the conditions of contract at the above office any day from 9 a.m. to 1 p.m., except Fridays and general holidays.

The following tender was published in the *Journal Officiel* on May 13:—Tenders are invited for the supply of 120,000 one-ardeb sacks and of 80,000 half-ardeb sacks required by the Ministry of Agriculture for cotton-seed. Tenders must be in conformity with the general conditions for Government contracts, and with the special conditions and specification laid down for this adjudication, copies of which can be obtained on application at the Ministry of Agriculture in Cairo during ordinary office hours. (No date given.)

Tenders will be received by the Department of Public Health, Cairo, for the supply of three double cylindrical watering carts, necessary to the scavenging and watering service, Bulâq, in accordance with the specification and conditions of tender. Intending tenderers may apply for all information to the Director of Stores every day, Fridays and holidays excepted, from 9 a.m. to 1 p.m., when conditions of contract may be seen and signed. Tenders should be made on the special form, supplied free of charge by the Administration, and should be addressed to the Director-General, Department of Public Health, Cairo, in sealed envelopes bearing the inscription: "Tender for the supply of double watering carts." Tenders must reach the above address on July 5, 1915, at noon, at latest.

Tenders will be received by the Under-Secretary of State, Ministry of the Interior, Cairo, not later than noon on June 26, 1915, for the supply of petroleum for lighting required by the police for one year commencing on July 1, 1915, and ending on June 30, 1916. A copy of the conditions of tender can be obtained on application to the Personnel and Equipment Department, Ministry of the Interior, Cairo. Tenders will be submitted on the printed form provided for the purpose, in double sealed envelopes, each marked: "Tender for the supply of petroleum, 1915-1916," and should be addressed to the Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), Cairo.

Tenders will be received at the Ministry of Finance for the supply of 170 okes of silk "Shantung Chappa" and 300 okes of silk "Winche" or "Mayoung," required for the making of the Holy Carpet. Persons wishing to tender should apply to the "Economat Central" at the Ministry of Finance, in order to consult the conditions and specification of the supply. Tenders will be received at the Economat Central up to June 20, 1915, at noon.

The Ministry of Finance in Athens has published a report of the Greek Consul in Cairo dealing with the present needs of Egypt in relation to certain goods of which the country has run short owing to the war, particularly cotton goods, iron, engineering tools, oil, fats, leather, boots, ties, beer, glass, scents, shirts and clothes, supplies of all of which Egypt obtained before the war from Germany and Austria. The report states also, says the *Egyptian Gazette*, that Egypt is in need of cements, soap, and straw hats, which were formerly obtained from France and Belgium.

The Egyptian Delta Light Railways, Ltd., invite tenders for the purchase of the undermentioned material which may accumulate at the company's stores at Damanhour, Tantah, and Mit Ghamr during the year ending June 30, 1916:— Scrap cast iron, scrap wrought iron, old tyres, axles and steel, burnt iron castings, iron and steel turnings, steel files (second hand), empty oil barrels, empty paraffin wax barrels, empty oil drums, empty petroleum tins. Quotations should be given for each item separately, as the company reserves the right to divide the contract. Tenders should be submitted not later than June 20, 1915, to the Chief Storekeeper, No. 15, Rue de la Gare P.O. Box No. 261, Alexandria, from whom any further particulars may be obtained on application.

Salonika.

Local dealers in electrical appliances and accessories are now trying to induce American exporters to send samples and price lists. "With our knowledge of the Greek market" (says *Kelly's Monthly Trade Review*) "we advise that, unless British manufacturers see their way to invoice at 90 or 120 days, no business will ensue."

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continues to receive a very large number of inquiries for the names of sellers or buyers of articles.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and lists are prepared and circulated of articles which inquirers desire (a) to purchase, and (b) to sell. List 22 is now ready, and may be obtained by United Kingdom manufacturers and traders.

The U.S. Consul at Mersina, writing on March 20 on Adana cotton exports, states that exports greatly increased during the past month, and total over 30,000 bales. About 90,000 bales still remain from last year's crop, of which the greater portion will be available for export. The cotton-yarn mills in Adana have restricted their operations, but the cotton goods factory in Tarsus is working on a large scale. The two cottonseed-oil mills in Mersina are also being operated to their full capacity. The price of local cotton has doubled since the outbreak of the war.

NATIONAL BANK OF BULGARIA.

State Bank of Emission. *Established 1879.*

Head Office - - SOPHIA.

Branches at Sophia, Roustschouk, Varna, Philippopolis, Tirnovo, Burgas, Widin, Plevna, Sistov, Sliven, T.-Pazardjic, Shumla, Stara-Zagora, Gabrovo, Dede-Agatch, Xanthie, Gumuldjina, and 70 agencies.

Capital - 20,000,000 leva gold = £800,000. Reserve Funds - 10,500,000 leva gold = £420,000

EVERY KIND OF BANKING BUSINESS TRANSACTED.

Governor, CHR. TCHAKALOFF.

AGRICULTURAL BANK OF BULGARIA

(BANQUE AGRICOLE DE BULGARIE).

Greek Finances.

The following are extracts from a letter written by M. S. Eulambio, of Athens, to the *Economist* (May 15):—

To illustrate the monetary conditions of the country, the present state of the issue departments of the National Bank of Greece may be set out in comparison to the period preceding the war:—

	July 13, 1914. £ Stg.	April 13, 1915. £ Stg.
(*a*) Cash in gold	1,080,000 ..	1,704,000
(*b*) Balances abroad	6,840,000 ..	6,485,000
(*c*) Notes issued	11,240,000 ..	10,428,000
(*d*) Notes in circulation	8,412,000 ..	10,024,000
(*e*) Proportion of *a* + *b* to *d*	94%	81½%
(*f*) Rate of exchange	100⅛ ..	100⅛

These items may be analysed as follows:—

(*a*) Cash in Gold.—As a consequence of the Gold Export Prohibition Acts of last July-August, gold is still flowing into the vaults of the banks. No smaller fractions of notes have been issued.

(*b*) Balances Abroad.—The diminution of the bank's balances abroad is due to the large payments made by the bank during the last two months for cereals and other foods. Large stocks of wheat, flour, sugar, and coffee have been accumulated everywhere. For many months to come we are well provided for. The reserves of the bank are therefore expected to receive considerable increases by the export of the still remaining old stock of currants (about 20,000,000 Venetian pounds) and tobacco (about £200,000). Both articles are in brisk demand owing to the impossibility of any other exports from the neighbouring countries. Very great reinforcements are to be derived out of the profits of the merchant fleet. A large tonnage was engaged in the importing trade of the country, but now the greater portion of our merchantmen are available for international commerce.

(*c* and *d*) Notes issued and notes in circulation.—The bank's issue is threefold:—

I. Privileged Notes.—The old contingent amounts to £2,640,000 sterling. According, however, to a recent convention between the bank and the Government, the issue is increased to £5,840,000, and the privilege extended to the new provinces. One-eighth of the notes to be issued must be covered by gold, another one-eighth by Government securities. The National Bank is practically the only bank of issue. The Ionian Bank notes (about £400,000) are to be withdrawn at the expiry of this bank's privilege, while the Bank of Crete's notes (about £300,000) are only circulating in Crete. This bank is a foundation of the National Bank, and is to be incorporated very shortly.

II. Forced Currency Notes or Government Notes.—Their total amount comes to £2,440,000. £80,000 are yearly withdrawn.

III. Gold Notes.—On April 13 they amounted to £5,348,000 (£6,160,000 on July 13). They must be entirely covered.

The total bank's issue on April 13 came to £10,428,000 (£2,640,000, plus £2,440,000, plus £5,348,000), against £11,240,000 on July 13 (£2,640,000, plus £2,440,000. plus £6,160,000). While the note issue shows a decrease of £812,000, there is an increase of £1,612,000 in the notes in circulation. A portion of the increase is due to the inflow of gold (£624,000). The realisation of the wheat and flour stocks of the bank (about 100,000 tons) will contribute to the withdrawal of notes of the value of about £1,600,000.

(*e*) Proportion of the Gold Reserves to Circulation.—Besides the gold notes, the notes circulating on account of the bank are entirely covered. Of the forced currency notes £2,239,000 (out of £2,440,000) were uncovered on April 13. Thus the proportion of the total gold reserves (£8,189,000) to the notes circulating on April 13 (£10,024,000) came to 81½ per cent.

(*f*) Rate of Exchange.—In spite of the European perturbation, whereby the currency of nearly every European country has depreciated, the foreign exchanges here remained unmoved. The following table shows the fluctuations of the rates during the last ten years:—

Year.	Maximum.	Minimum.
1905.....	132·75	114·75
1906.....	116·75	107·00
1907.....	113·25	107·00
1908.....	113·00	103·75
1909.....	106·50	100·00
1910.....	100·56	99·50
1911.....	100·09	99·92
1912.....	100·00	99·94
1913.....	100·25	99·75
1914.....	100·25	100·00

By the Law ΓΧΜΒ of September, 1910, the bank obtained entire control of the market. According to this law our first institution has been empowered to issue notes for the exclusive purpose of buying gold and foreign bills at a rate not above par. The bank has been, on the other hand, obliged to sell the gold at a maximum rate of 1 per cent., and the foreign bills at ¼ per cent. to ½ per cent., until all notes issued to this purpose have been withdrawn.

GREEK LOAN TENDERS.

Messrs. C. J. Hambro and Son announce that tenders of Greek Four Per Cent. Loan of 1889 (Rentes) for the sinking fund at 47¾ per cent. were accepted to the extent of 33 per cent. of the amount tendered, and below that price in full. Tenders of Greek Five Per Cent. Loan of 1893 (Funding Loan) at 56 per cent. were accepted to the extent of 66 per cent. of the amount tendered, and below that price in full.

GERMANY'S LOAN TO BULGARIA.

Our Sofia Correspondent, writing on May 11, states that, according to a public utterance of one of the Cabinet Ministers, only six million francs have so far been received from Germany on account of the 1914 loan issued last June in Berlin.

NEW COMPANY.

A Roumanian syndicate of four members has been formed to develop a concession in the commune of Lopatari, department of Buzau, Roumania, acquired from Mr. Emile Costinesco, Mr. A. Darvari, and Mr. M. Blank by a deed registered at Buzau (No. 12, January 27, 1915). The syndicate has an initial capital of 100,000 frs., distributed as follows:—N. C. Oteleshano, of Bucharest, 25,000 frs.; Mica Ferero, of Bucharest, 12,500 frs.; A. Polizu-Micshunesti, of Bucharest, 12,500 frs.; M. Stambler, of Bucharest, 50,000 frs. The capital can be increased as found necessary (says *Petroleum World*).

COMPANY NOTES.

Agricultural Bank of Egypt.

Rather too much, perhaps, is being made of the fact that the Agricultural Bank has for the past two weeks been resuming its operations after their suspension since the outbreak of the war, says the *Egyptian Gazette*. While this no doubt represents a very welcome and hopeful development, it is hardly safe to assume that it reflects any particular improvement in the general financial position of the country. This is a question which, as far as the bank itself is concerned, has yet to be proved. From an official source we learn (continues the *Gazette*) that the bank is at present conducting its business on a very restricted scale. The amount of the loans being made are, in fact, limited to certain surplus funds which the directors found at their disposal for lending purposes when the annual accounts were completed.

The extent to which the bank will be able further to extend its credits must depend, for a time, very much upon the interest payment now due. The more money that flows into the bank in respect of those payments the more generously will the directors be able to accommodate their clients, while, as is quite obvious, their confidence in the actual financial position and outlook will be influenced accordingly. It will thus be seen that in some measure the borrowers have it in their own hands to determine what proportion of their further loan requirements are to be satisfied.

Land and Mortgage of Egypt.

The report of the Land and Mortgage Company of Egypt, Limited, states that the one bright feature as regards the company has been that the status of Egypt has been changed. Turkish suzerainty has ceased, the Khedive has been deposed, and the new Sultan of Egypt reigns under the ægis of Great Britain. Yet the company cannot hope to benefit by this change before the termination of the war and until the economic conditions of Egypt have once again become normal. While fully alive to the inconvenience entailed on shareholders by the suspension of dividends, the directors have no hesitation, taking into consideration the difficulties of encashments and all other circumstances, in recommending that the whole of the profits of the year be carried forward. The gross earnings for the year amount to £32,981; deducting total expenditure, including interest on Debenture bonds and Debenture stock, £27,518, the net earnings for the year are £5,462, to which add balance brought forward, £1,087; the balance to credit of profit and loss is £6,550.

Deutche Orientbank.

In the House of Commons on May 18, Mr. Pennefather asked the Secretary for Foreign Affairs if he would say whether the Deutsche Orientbank in Alexandria was confined to the liquidation of affairs actually in existence at the outbreak of war; and whether it was with the consent of the British controller undertaking new business, receiving deposits and loaning money.—Replying, Mr. Primrose said: I have no information respecting the conditions under which the Deutsche Orientbank in Alexandria is being permitted to carry on business, beyond the fact that the Egyptian Government have appointed a controller, whose principal duty is to safeguard the interests of the depositors in Egypt. I will make inquiries regarding the points raised by the hon. member and inform him of the result.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

Aegion, Agrinion, Almyros, Amalias, Amphissa, Arta, Atalante, Calamata, Calavryta, Céphalonia, Chalkis, Corfu, Corinth, Cythère, Dimitzana, Gythium, Ithaque, Janina, Karditza, Kyparissia, Lamia, Larissa, Lévadia, Mégalopoli, Messina, Missolonghi, Naupacta, Nauplia, Patras, Paxos, Piræus, Poros, Pylos, Pyrgos, St. Maure, Salonika, Santorin, Sparta, Syra, Thèbes, Trikkala, Tripoli, Volo, Zante.

Every kind of Banking Business Transacted.

Correspondents in all Parts of the World.
Codes Used—LIEBER'S; A.B.C. (5th Edition).

Digitized by Google

Burmah Oil Company.

The profit for the year, showing an increase of about £47,890, amounts to £1,411,279, out of which the directors have made the following allocations:—Depreciation, £464,013; fields reserve, £80,000; insurance reserve, £20,000; general reserve, £200,000; written off investments, £40,000. There have also been charged against the year's profit the following exceptional items:—"Emden" bombardment of Madras installation, £7,812; payment on account of plant ordered in Germany and not delivered, £7,549; donations to war relief funds, £14,666. The directors recommend a final dividend of 1s. 6d. and a bonus of 2s. 6d. per share, both free of tax, on the ordinary shares, making 27½ per cent. for the year, leaving £72,600 to be carried forward. This distribution is the same as last year.

Reuter's Telegram.

The report for the year ended December 31 last states that after payment of current charges, and deducting rebate on unexpired subscriptions to news services, the net profits amounted to £14,849, including £8,912 brought forward. The great falling off in revenue is largely due to the disturbing influence of the war on the company's business. The severe restrictions imposed by the military authorities upon news from the seats of war and the total prohibition of the company's code for private telegrams have greatly diminished the revenue from these sources.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN.—Gemsah production for the week, 302 tons (last week, 234 tons), and recovered from sediment, 203 tons; Hurgada production for week, 20 tons (last week, 37 tons).

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended April 30 amounted to £E3,724, as against £E6,332 for the corresponding period of 1914.

IMPERIAL BANK OF PERSIA.—The directors announce an interim dividend for the half-year to March 20 of 3s. per share, free of income tax.

SUEZ CANAL.—The annual meeting of shareholders will take place on June 14, in Paris, 8, Rue d'Athenès, at 2 p.m.

NATIONAL BANK OF ROUMANIA.

BALANCE-SHEET, MAY 25/8, 1915.

ASSETS.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to March 31, 1915 (New Style: January 14 to April 13, 1915):—

—	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Pirœus Customs.
	Drachmæ.	Drachmæ.
Gross Receipts, Mar., 1915	2,547,310	1,930,555
Do. do. do 1914	3,537,287	2,789,556
Estimated Receipts for 3 months (Law of Control)	7,225,000	2,675,000
Actual Receipts, 3 months, 1915	9,606.970	6,637,613
Do. do. do., 1914	10,815,031	6,593,844
Difference between estimated and actual receipts for 3 months 1915	+ 2,381,970	+ 3,962,613
Difference between estimated and actual receipts for 3 months 1914	+ 3,590,031	+ 4,918,840

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from bo h Naxos emery and the Pirœus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

To many people it will have been a matter for surprise to learn that at this stage the Bucharest Government and the Powers of the Triple Entente are still engaged in negotiations on the subject of Roumanian participation in the war. When it is remembered that no country in the Near East has its aspirations so clearly defined as Roumania, and that seemingly both Government and people made up their minds quite early in the struggle to strike a blow for the realization of the national ideals, the delay on Roumania's part to throw in her lot with the Allied Powers appears the more remarkable. The only explanation that has been given for the new turn of events is that at the last moment Roumania sought to improve upon the terms she had already obtained from the Triple Entente. If this be so, and there is no reason to doubt the explanation, we must suppose that she rests her justification on the offer made last January to Greece of a considerable section of Asia Minor as a reward for rendering aid to Serbia in accordance with the spirit of her treaty with that country.

The maintenance of relative values in the Near East is a matter of considerable moment to the Balkan peoples. At present Roumania enjoys a superiority over the other States in extent, population, and economic resources. Any readjustment of territory which would enable this superiority to be challenged must naturally cause the liveliest apprehension at Bucharest. Even if Greece with the addition of territory in Asia Minor could still not hope to rival a Greater Roumania, which would include Transylvania, the fact that the Greeks had been offered a very substantial reward for assistance in no way comparable with the military effort which Roumania hopes to make would prompt the Roumanians to reconsider their bargain with the Triple Entente. This they appear to have done, and neither their military readiness nor their anxiety to go to the rescue of their Transylvanian kinsmen has prevented them from exhausting the resources of diplomacy to secure the best terms possible before participating in the war.

The present negotiations, as we learn from our Bucharest Correspondent, turn on the somewhat extensive interpretation placed by Roumania on the term Transylvania. Now, the principle of nationality makes the proper basis for all settlements after the war, but it is certain that it cannot be carried out to the extreme limit of making provision for the last national among those who are under alien rule. Any rectification of the Roumanian frontier must almost inevitably offend against the principle, because in Transylvania, at no great distance from the present Hungaro-Roumanian boundary, are to be found Magyar and Saxon colonies, which could not well be excluded if the surrounding country became Roumanian. Accordingly, the territory to be incorporated in Greater Roumania cannot necessarily include the farthest dweller of Rouman descent in Hungary. Of the Banat itself, the western portion, adjoining the Theiss River, has to be reckoned as Slav. The whole question proves the necessity for careful investigation, with such attention to detail as cannot be expected from the already over-taxed Governments of the Triple Entente. When once the principle of nationality as the main basis of demarcation has been accepted, the actual alignment of each new frontier could be left for subsequent adjudication. Roumania, with the experience of her neighbours before her, can hardly be anxious to lay up a heritage of unrest for the new kingdom by the inclusion of large numbers of unwilling subjects of alien nationality. Already her failure to do justice to the Jews within her present borders has given rise to the demand for special guarantees for the Magyar and Saxon communities which she may have incorporated within her dominions. If still greater numbers of non-Roumanians were to be affected, the guarantees which would be demanded, and would have to be granted, might prove a greater source of weakness to the new Roumania than the total exclusion of the territories concerned.

One result of the delay in Roumania's decision is certain to be that Germany will redouble her efforts to prevent the Bucharest Government from abandoning its neutrality. We saw the use that was made of the Austro-German successes in Galicia in the vain hope of deterring Italy from allying herself with the Triple Entente. The manœuvre failed, but that will not prevent it from being repeated for Roumania's benefit. That sensitive barometer of German diplomacy, the Press, has already given a warning of the brow-beating methods which are likely to be used against the Roumanian Government and people. No disappointment

Digitized by Google

felt by the Triple Entente with Roumania, however natural, should prevent it from giving the Roumanian Government all the protection and encouragement of which the Allies' diplomacy is capable. Above all, the need for a full service of reliable news reaching Roumania at this juncture is paramount. The story of the Austro-German operations in Galicia will be sent to the Roumanian Press in a guise which will make it unrecognisable to those who draw their information from Russian official sources. It behoves the Western Powers, and particularly France, which has maintained such close touch with Roumania in the past, to see that the Roumanian public is able to check the intelligence it receives from German sources by more reliable news emanating from the countries of the Triple Entente.

The difficulties of forcing the Dardanelles have not been minimized by the transfer of the main operations to land. In spite of the heroism with which the landing of our troops on Gallipoli Peninsula was carried out, we have been forced to admit that the German claim of impregnability for the defences still holds good. Not only is the Turk proving a stubborn fighter on the defensive, but he is able to rely on numbers, which render the strong positions prepared under German instructions very formidable obstacles to any attacking force. It need not be supposed, however, that the British and French forces have yet exhausted all their available means of getting through to the Sea of Marmora. That the operation will not justify an unlimited sacrifice of life is apparent, for it remains, after all, a side issue, however important. We need, therefore, no longer look for any rapid solution of the problem, but must reconcile ourselves to seeing it solved gradually and possibly by indirect means.

In addition to the steady toll of officers and men exacted by the attempts to eject the Turks from their strongly fortified positions, we have suffered the loss of two more battleships, the "Triumph" and the "Majestic," which have fallen victims to German submarines. Fortunately, in each case the loss of life was small; but the weakening of the British fleet in these waters by two units within three days is no light matter. The arrival of one or more German submarines in the Ægean Sea had previously been reported, and it was to be feared that the nature of the operations in which our ships were engaged would render them a comparatively easy prey to submarine attack. But as in the North Sea our men-of-war have contrived to find immunity from submarines, so in the Mediterranean it should be possible to cope with the same menace, and, indeed, more easily. With the mouth of the Dardanelles in the hands of the Allies, it ought not to be difficult to prevent the entrance of these craft into the Straits. Their shelters in any other part of Turkish waters are exposed to attack, and it should be only a question of time before every submarine lent by the Germans to the Turks has been captured or destroyed. One such shelter was reported in the vicinity of Aivali, on the west coast of Asia Minor. On May 30 the place was bombarded by British men-of-war, and thus the first step has been taken towards making the continued presence of submarines in these waters impossible.

The success of the German submarines in Turkish waters has only been inadequately countered by the exploits of one of our own submarines, E.11, which entered the Sea of Marmora and sank a vessel carrying a 6-in. gun and a great quantity of ammunition. A second ship, carrying a cargo of stores, was chased, and finally torpedoed alongside the pier at Rodosto. E.11 then proceeded to Constantinople and discharged a torpedo at a transport alongside a quay. The moral effect of these exploits has probably been so far greater than the material achievement. At the same time, a few submarines in the Sea of Marmora ought to be able to interfere seriously with the reinforcing and provisioning of the Turkish troops on Gallipoli Peninsula, and so assist the efforts of our troops on land.

While the improvement in the relations between Bulgaria and Roumania is regarded as being likely soon to take the form of a definite *entente*, the Greeks are seizing the opportunity of emphasizing their inability to make territorial concessions to Bulgaria or any other Power. In view of the fact that the country is confronted with a general election the announcements need not be taken too seriously. The followers of M. Venizelos have resolved not to allow the retirement of their leader to interfere with the electoral activities of the party. As things stood, the supporters of the Government could be relied upon to exploit M. Venizelos' offer of territory to Bulgaria, in order to convince the public that Greek interests had only been saved in the nick of time by the appointment of M. Gounaris as Prime Minister, and by his repudiation of M. Venizelos' policy in regard to Bulgaria. No amount of explanation of the conditional nature of M. Venizelos' offer would have carried weight at election time, and the Venizelists have decided to cut the ground away from under their opponents' feet by announcing that their party is entirely at one with the anti-Venizelists in opposing territorial concessions to other States.

It would be impolitic for the Powers of the Triple Entente to pay any attention to electioneering devices in Greece at the present moment, or to take any step that might play into the hands of one or other of the political parties. The attitude of the Greek public, however, ought to confirm the Allied Governments in a resolve to settle the Balkan question over the heads of the States concerned. It is obvious that when both Government and Opposition emblazon "No Concessions" on their standards, even though it be for electioneering purposes, at a time when the whole of Europe is virtually committed to mutual concessions in the cause of a permanent peace, Greece is not in a position to throw any light on the problems of the day. With the retirement of M. Venizelos her statesmanship has ceased to be of an order calculated to be helpful to the Powers with whom she is on friendly terms. The loss is hers, and her well-wishers will hope that after the elections she will be able to revive the reputation for political wisdom and far-sightedness which the country has enjoyed for the last four or five years.

The latest reports confirm the improvement in King Constantine's condition, and general confidence is now felt that the illness will have a favourable issue. The German and Austrian specialists summoned to attend the Royal patient have been able to issue a satisfactory bulletin, endorsing the treatment already adopted by the Greek physicians. To Western minds the introduction into the King's bedroom of the miraculous ikon from the pilgrimage church of Hagia Evangelistria at Tenos will seem to offer a strange contrast to the other course of sending to Germany and Austria for two of the foremost men in the medical profession. In Greece, however, it would not be considered that all that could be done for the sick King had been tried, if recourse had not been had to the miraculous ikon, which, with the church in which it is kept, means perhaps more to the Greek world at large than Lourdes does to the French. The King's illness has been the means of emphasizing the devoted affection in which he is held by the Greek people; but there can be little doubt that his recovery after the employment of the ikon will still further endear him to a very large portion of his subjects.

Our Sofia Correspondent, in his letter this week, calls attention to a point which has been repeatedly insisted upon in these columns—the necessity of greater energy on the part of British diplomacy in Bulgaria. To energy might also be added sympathy and tactfulness. The Oriental capacity for bargaining is always trying to Western patience, and becomes almost exasperating when carried on to the obvious prejudice of the interests of the party concerned. In dealing with Bulgaria, however, Great Britain has laboured under additional disadvantages. The net result of our diplomacy in the Balkans after ten months of war is that not a single country—Serbia not excluded—has complete confidence in the diplomacy of the Triple Entente. If the Allies were indifferent to Balkan help, we should not need

Digitized by Google

to be troubled by this fact; but to maintain diplomatic negotiations along the old ruts of prejudice and indifference, while professing anxiety for the military co-operation of one or more of the neutral States of the Balkans, is no credit to a Great Power.

If it be true that Bulgaria is only waiting to be invited to attack the Turks—on conditions—it is very clear that the situation at the Dardanelles calls for a sympathetic investigation of her terms in the light of the Allied position as a whole. The improvement in the relations between Bulgaria and Roumania, to which reference has already been made, is an indication of a return to reasonableness on the part of some of the Balkan States. It should simplify the task of the Allies in imposing on them all the terms of a common agreement which is to lay the foundation of the future prosperity of the Near East. While a breach in the relations between Bulgaria and Turkey is always possible, and must have been near when the Turks commandeered Bulgarian rolling stock and left the goods consigned to Bulgarian merchants lying on Turkish railway stations, we could hardly have expected that Germany would take any step to facilitate the abandonment of Bulgaria's neutrality for hostility against the Central Powers. But a cargo of rifles bound for Bulgaria from Copenhagen is reported to have been seized by the Germans. No doubt Germany's action has been inspired by the feeling that, as all the world is against her, she has no need to be squeamish in her treatment of any single State. It will be easy, if Bulgaria should make representations in Berlin, to explain away the mistake and to arrange for the dispatch of the rifles overland. The time taken by the consignment would, perhaps, indicate the degree of reliance placed by Germany in Bulgaria's assurance of neutrality.

The fate of Przemysl still hangs in the balance at the moment when these pages are going to press. In other directions the long line of the vigorous Austro-German thrust in Galicia has been held, if not actually thrown back. But in spite of a Russian success a score of miles north of the fortress, where the enemy have been repulsed from the San River, the grip on Przemysl is maintained, and the capture of three forts is claimed by the Germans. The attempt to close the investment on the east has so far not succeeded. Our Allies still hold the railway line to Lvoff, and have been able to keep the enemy's forces at some distance from it, though not out of range for the latter's heavier guns. Another Austro-German report speaks of the storming of Stry, which lies due south of Lvoff. If this should prove to be correct, it would still further embarrass the Russian counter-offensive, which has not yet gathered sufficient momentum in any one part to affect the issues along other portions of the line.

So far, it is apparent that the Italian menace has not had the effect of detaching any of the troops massed by the enemy on his eastern front in the endeavour to inflict a crushing blow on Russia. The difficulties of the country over which the Italians are operating facilitate its defence, and the Austrians are probably still hopeful that a definite result may be achieved in the east before the Italian advance has assumed formidable proportions. Their expectations are hardly likely to be realized; but it is impossible to withhold admiration for the stupendous efforts now being made by the enemy to achieve their object. The thrust on Przemysl has been in progress for three weeks. It has been checked for the most part, but it still retains sufficient momentum to threaten the forts surrounding the town. Before the Russians can extricate themselves from this menace a vigorous attack is launched once more against Warsaw. Over a front of fifteen miles the Russian line on the Bzura was subjected to a fierce onslaught on May 31. The attack, says the Russian official report, was characterized by extraordinary tenacity, and it was heralded by the extensive use of poisonous gases. It was, however, repulsed, and the line, which has been described as one of enormous strength, remained intact. Confirmation of the complete failure of this particular movement is to be found in the omission of the German official reports to refer to it.

The fierce nature of the enemy's attacks in the East and the growing evidence of the weakness of his line in many parts in the West indicate that we are witnessing a supreme effort on the part of Germany and Austria-Hungary rather than the normal development of an offensive based on a superiority of strength. This fact renders the Russian capacity to hold these terrific assaults, while inflicting enormous losses on the enemy, almost as valuable as a successful offensive. In any case, it prevents the Allies from taking a very pessimistic view of the situation. The position in the West is far from being one of stalemate, thanks to the successful tactics of the French; in the East Germany continues to spend her resources in men and munitions at a prodigious rate, and all the while the Italian offensive is gathering momentum. If we can bring ourselves to think in yards and weeks instead of miles and hours, we shall obtain a truer perspective of the war.

During the week the Italians have made progress in the Trentino, where they are converging along three fronts on Trent. They are also established on the left or eastern bank of the Isonzo, while the Italian navy is paying attention to the Dalmatian coast and is supporting the advance of the army on Trieste. A blockade of the Albanian coast has been declared. The chief effect of this step should be to restrict the opportunities of the Austrians for creating diversions in their favour in Albania. At the same time, it should convince the Albanians that, as far as they are concerned, the power of Italy is a sterner reality than that of Austria-Hungary, when the two countries cease to see eye to eye with one another in regard to Albanian affairs.

Progress in the construction of the Baghdad Railway continues. A month ago we referred to a German statement regarding the piercing of the Taurus Mountains at Bilemedik and the approaching completion of the most important tunnel in that region. In February a section, forty miles in length, from the Euphrates Bridge to Tel-el-Abiad, was thrown open to traffic, and now this railhead has been advanced another forty miles eastwards to Tuan. Events at the Dardanelles have probably tempered the satisfaction felt in Constantinople over the progress of the work on the Baghdad Railway. At an earlier stage of the war such progress was hailed as a valuable asset in the prosecution of schemes of conquest in Egypt. At the best now it may afford a little help to the Turkish forces operating in southern Mesopotamia.

CYPRIOTS AND THE WAR.

A Cyprus correspondent writes:—

Cypriots, especially the Greeks, take the liveliest interest in the war, and look eagerly for news from the Dardanelles, the importance of events there being keenly realised. It is considered that these operations must inevitably bring Italy, as well as the Balkans, into active partnership with the Entente Powers. Greece, as a local paper states, is more particularly interested, as "the so-called Turkish question is in reality a Greek question, since it relates to lands and cities which belong to our sacred inheritance." It is hoped here that negotiations now pending will speedily bring Greece into the fray.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, May 22.

The State of Constantinople.

Constantinople is in a rather disturbed state just now. The movements of troops, the enormous influx of wounded, the arrests of Armenians, the persecution of the Greeks, the searching of houses for arms, the exodus of the Italians, the exile of some of the English and French residents, and the aggressiveness of the police and spies combine to create a veritable reign of terror. It is easy to understand that for European's life in the capital is extremely uncomfortable in these circumstances.

All the hospitals are full, and the schools and private residences are now being occupied by wounded soldiers from the Dardanelles. The Bosphorus passenger boats and many transports convey troops to Gallipoli and return with wounded. On the day of the famous ceremony at San Sophia when the Sultan was proclaimed Ghazi the authorities had spread the report that a transport laden with English and French prisoners was expected; but on returning from the ceremony the officials and high dignitaries in full uniform met trams, motor-cars, and other conveyances full of wounded soldiers and not prisoners as expected.

A short time ago two aeroplanes flew over Constantinople, and as they were taken for Russian, they were fired on and were successfully brought down, but to the consternation of the military, they found they were their own aeroplanes, and that they had killed two of their best aviators. The entry of a British submarine into the Marmora caused some excitement, and it is reported that boats of all descriptions are now cruising about the Marmora on the look-out for it.

According to latest advices, there is a report that the Government has decided to make no resistance when the Fleet arrives at Constantinople, in order to avoid the destruction of the city.

In spite of the blockade of the Bosphorus by the Russian Fleet, coal still finds its way into Constantinople, the old steamer "Sabah" having got through the other day with 4,000 tons, and it is reported that the light railway between Zoungouldak and Ada-Bazar, near Ismidt, is almost completed.

The police have been placing difficulties in the way of Italians who wanted to leave the country.

Mr. Weyl, the Director-General of the Tobacco Regie, has been relieved of his functions by the Government, who have replaced him by a certain Nouri Bey. Talaat has been made President of the Constantinople Club. This was evidently done by the German members of the club. Tokatlian's Hotel is full of Germans, who indulge in much merry-making and giving of dinners and entertainments.

The Glorious "Goeben."

A Turkish *communiqué* issued last week stated that a Russian fleet, consisting of five battleships, two cruisers, twelve destroyers, and some transports approached the Bosphorus, but was surprised by the Goeben, and fled in disorder towards Sevastopol, under the uninterrupted fire of the Goeben.

The *Tanin* has been publishing, under the title of "A Political Comedy," a long account of the doings of Sherif Pasha, Ismail and Sadik Beys, and the other opponents of the Union and Progress Committee. There is one amusing paragraph which describes a supposed interview between Sadik Bey and Lord Kitchener, on which occasion Lord Kitchener promised Sadik £20,000 to kill Talaat!

An announcement appears in the papers that two mitrailleuses and several other arms purporting to have been taken from the British at the Dardanelles are being exhibited at the Military Museum.

"Artistic Productions."

The *Tanin* announces that Djavid Bey has handed to the Minister of Finance the convention and other documents respecting the issue by the Administration of the Ottoman Public Debt (sic!) of the issue of notes as well as specimens of them. The notes will be of the value of one and five liras. On the face of the notes appear the words: "La contre-valeur a eté entièrement versée en or," and on the back the words: "La dette publique s'engage à payer en or au porteur ces billets à Constantinople six mois après la conclusion de la paix." The *Tanin* adds that the notes are highly artistic, and their superiority over the notes of the Ottoman Bank is very striking, the designs of the mosques and other monuments being extraordinary. "The artistic perfection of the designs of these notes," says the *Tanin*, "proves that Germany is not only superior to her enemies in power and grandeur, but also in her progress in all branches of science and civilisation." It is possible that the public will be deprived of the double pleasure of seeing and possessing some of these artistic productions of German *kultur*, as the notes are not expected to arrive in Constantinople before the end of July, (Old Style), by which time it is to be hoped that Constantinople will have been purged of the Huns.

Communications with Smyrna have been almost closed, as Vourlah is practically blockaded by the Allied Fleet. It is rumoured that the German submarine has succeeded in reaching Smyrna. The British Legation here has increased from £500 to £2,000 the reward for information which will lead to the destruction of this submarine.

A Postscript.

Since the above was written the writer has received the following letter from Constantinople, dated May 11:—

". . . . wrote you hurriedly in his last that he was probably leaving, but things turned out differently afterwards. Although he was told by the policeman who came to the office that he must leave the country, when the usual permit was asked for they refused to grant it; and he was told that he must be ready on Thursday morning to leave for an unknown destination and for an indefinite period. All this created much excitement, inasmuch as all Frenchmen were also advised to be likewise prepared. Finally, through the intervention of the Ambassador, only those under forty were to be sent away; then at the last only twenty-five Englishmen and the same number of Frenchmen were sent away, all being young men under thirty years of age. They were accompanied by an attaché from the Embassy, Mr. Hoffman Phillip, and the English chaplain, Mr. Wigram. The destination is Gallipoli, although rumour states that it may be Mudania. They are still there, but we all hope that they may be back soon. All this created a deal of emotion amongst all classes, and now many are trying to leave. I doubt if permits will be given by the Turkish authorities, but the Ambassador is trying to obtain same."

A valued correspondent at Dedeagatch writes under date of May 21:—

Mr. Judelson, Dragoman of the American Embassy at Constantinople, arrived here two days ago, in charge of the party who brought down the body of the late captain of the American *stationnaire* "Scorpion," who was recently drowned at Constantinople. The U.S. s.s. Vulcan, a vessel which has been coaling the units of the American fleet now in the Levant, arrived here yesterday and embarked the body. She also landed two or three American Red Cross doctors, some nurses, and, I believe, a newspaper correspondent. Mr. Judelson returns with all these in his charge, so I presume they will pass the frontier without any trouble. You can have no idea of the trouble the frontier officials give to travellers, both outgoing and incoming. As an example, I may say that Mr. Dickson, an American, director of the American Tobacco Co. at Kavalla, was detained six days at Kuleli Burgas, on the presumption that he was an Englishman. There is also great difficulty in sending and receiving letters or post cards.

Bosphorus Fortifications.

Travellers declare that everyone in Constantinople is very much depressed, and it is said that Enver and Co. intend resisting and defending the city to the last. (This is not my opinion.) They have dug trenches all round the city and are fortifying. The ground outside the Chatalja lines is mined. The villages from Anatoli Kavak and Rumeli Kavak, at the mouth of the Black Sea, as far as Therapia and Beicos, inclusive, have been evacuated and are being fortified.

Petroleum, wood and coal are practically not to be had, and no supplies are coming in; bread is now very dark in quality, and one has to send to the bakeries for it.

Police Pin-pricks.

I wonder if you heard of the farce which occurred on April 27, the anniversary of the Sultan's accession. Messrs. Baker's, Hayden's, Harty's, and the Economic Stores (all British), and the Bon Marché (French), not feeling inclined to display any bunting, decided as an alternative to close their establishments. The police promptly arrested one of Baker's men, one of Hayden's, Mr. Wills, of the Economic, Mr. John Harty, and Mr. Albert Wright (an Englishman) and his co-director Mr. Boccognagno (French), both of the Bon Marché, alleging that last year these establishments were not closed, and their closing this year constituted an offence! As soon as Mr. Morgenthau was informed of this fact he took steps, and orders were sent to Bedri Bey, the now well-known Chief of Police, to release the prisoners. But that wily individual managed, before

getting the order, to make out his report and have all the captives transferred to the Court Martial. They were consequently locked up in premises adjoining the War Office, where, however, they were all well treated, kept in a room, and allowed to see their wives every day. After six days' detention they were all acquitted!

The 50 Hostages.

You will, of course, have read all about the twenty-five British and twenty-five French who had been sent to the front at Gallipoli, and of their happy return to Constantinople, thanks to the energy and *savoir faire* of Mr. Morgenthau. Dr. Wigram, the *locum tenens* of the Crimean Memorial Church, is a brick—excuse the expression when speaking of a clerical! It appears that he insisted on accompanying the party, and that one of the party should be allowed to remain behind; and this was allowed.

Crowded Hospitals.

Constantinople is overcrowded with wounded, all hospitals, barracks, schools, etc., etc., being full. Up to the 18th it was estimated there were about 50,000—and fresh arrivals daily. Many of the poor fellows are dying daily from gangrene, for lack of doctors, nurses, bandages, gauze, etc., etc. The University of Galata Serai alone accommodates between five and six thousand, the Zappeion, Pallas, Saint Benoit, etc., are all full without exception; the slanting lids of the desks have been shored up with wood to serve as beds. I hear that there is only one British amongst the wounded, and he is at the Maltepe Hospital, and, curious to say, the Turk who bayoneted him is also wounded, and occupies the bed alongside.

The arrival of the first lot of wounded in six transports was a disappointment and an eye-opener for the Turks, it having been reported that British and French prisoners were expected. As the transports approached the quay the crowds, and particularly the Turkish women, raised their voices against the Government and the Germans, and went and demonstrated at the War Office and at the Sirkedji Railway Station, where many wounded were arriving overland.

We hear a good deal of the bombardment here. At night time we see the flash, or reflection of same, very distinctly, also the searchlights. The booming of the guns or explosives, even at this distance, is awful, and the firing is sometimes continuous and without interruption for hours. Whilst I am writing I can hear the booming.

THE TURKS' "HOSTAGES."

By the kindness of a correspondent we are enabled to publish extracts from two letters written by one of the Englishmen resident in Constantinople who was amongst those selected by the Turks for distribution amongst the "unfortified places" which the Allies were bombarding in connection with the Dardanelles operations. In the first letter, which is dated May 4, the writer says:—

After a long dreary spell I have good hopes of this letter getting through to you, and it will evidently be the first since January. . . It will also be unfortunately my last for some time; for to-morrow at nine I am leaving for Gallipoli as a hostage, together with the few Englishmen left here. It appears that the Allies have bombarded open towns, and in order to retaliate, we are to be quartered in these open towns. The Ambassadors are doing their best for us, but so far with no success, and the police are now waiting for me.

I have always done my best to get away, and my passport has been endorsed three times for departure, but the authorities would never let me leave. . . will give you full details about all that when he sees you. . .

. . . I am leaving with friends who are now very intimate ones, namely . . . and besides these are several clergymen and Englishmen who were in the interior.

From the time the war started until now, the Turks behaved splendidly towards us, and were perfect gentlemen. We had our full liberty of action and could not have been treated better. It is hard, therefore, for me to realise that they can take the extreme step they are taking, and I still hope that at the last minute we may be sent to the interior instead.

I feel sad on account of . . . and . . . but apart from that am quite cheerful, and we will without exception show that Englishmen know how to behave with dignity under all circumstances.

Happily, second thoughts—induced by the Ambassadors and by the vigorous action of Sir Edward Grey—led the Turks to return to a more correct attitude, as is now well known. But they appear to have run things rather close. In the second letter, dated May 9, the writer says:—

You will be very pleased to hear that at the last minute, when I was leaving the house with my bag for the boat which was to take us to Gallipoli, the Ambassadors were able to have the married men exempted, so that . . . and myself are still free.

The unfortunate single men, fifty-five in all, left, together with . . . from the Embassy, who volunteered to go with them.

NEWS FROM BEYROUT.

(From a Correspondent.)

Beyrout, April 22.

Economic Difficulties.

Syria has never experienced such an acute crisis as that through which it is now passing. Practically all people in the vilayets of Beyrout, Damascus, and Aleppo, and the privileged Mutasarrifiat of the Lebanon are involved in very serious difficulties, especially from an economic point of view. The country is becoming as dry as a desert owing to the spread of military sway throughout the land, paralysing the most vital communications in the provinces; and every day that passes accentuates the crisis. The country is already suffering from deficient resources, and since the outbreak of war money has ceased to come to its inhabitants from emigrants; yet the Turkish Government continues to strip people of their possessions in different ways.

Besides the extraordinary war taxes imposed, the military authorities, now vested with absolute powers, have adopted a peculiar method of extorting money from the public, especially travellers to and from Beyrout and other ports. Anyone who leaves Syria for a neutral country is bound not to carry more money with him than is considered enough to take him to his destination, with a slight amount for temporary expenses. A man leaving for the United States, for instance, is only allowed to have £50 in gold on him; and the returning emigrant can pass, under the same rule, with only one-tenth of his money. Those who possess small amounts are allowed to keep from £10 to £25, and the Government pockets all that exceeds the above limits. The harbour officials entrusted with the collection of money give the payee some sort of receipt entitling him to receive his own back from the Government Treasury after the end of the war. But nobody attaches much importance to such documents.

Cereals and other foodstuffs are now under the control of the military authorities, who supervise the exportation of corn from the Hauran and other regions in the interior to the seaport towns, and prohibit all transactions with outside countries.

In the Lebanon.

The inhabitants of the Lebanon are somewhat more fortunate than the people of the vilayet in this respect, for the privileged hill country is exempted from military service, but people are experiencing a rather greater economic difficulty owing to the complication of public transactions, the deficiency of the Lebanese resources, and the suspension of all communications with the outer world.

As stated above, communications have been paralysed even between the vilayets. Instead of the daily trains which used to run between Beyrout and Damascus passing through the Lebanon, there are now only one or two trains every week. The lines are in constant requisition for the transport of troops from place to place. The Turkish troops stationed in the Lebanon number about five thousand, and are distributed among the *kazas*, especially the districts inhabited by Maronites. The native communities in the province are fortunately living in complete harmony with each other, thanks to the wise attitude of the leading men. It has been noticed, however, that the Turks are conferring more favours on the Druses (traditional friends of England) than on the Maronites (friends of France), doubtless in order to create dissension between them; but the enlightened members of both communities have come to a good understanding as regards the policy that suits the country best.

The properties of the British missions in the towns of Shueifat, Shimlan, Ananoub, Baaklin, Ain Zhelta, Brummana, and other places in the Lebanon are all safe, and in some places are specially cared for; but in the vilayet, where German officers are exhibiting more authority, everything English is in danger. Indeed, the Germans express bitter animosity against the British, and care not at all if English property be damaged or sold in the street.

Stagnation in Beyrout.

The Beyrout Government is doing its utmost to maintain the harmony prevailing amongst the various communities, but the town is inactive owing to the absence of the ordinary trade movement in the harbour and the markets. All schools are closed, with the exception of the American Protestant College, which has overcome the present difficulties and continues to work peacefully, thanks to the neutrality of the United States and the able management of Dr. Bliss, President of the institution. Several days ago three professors of the medical school in the college—Dr. Graham, Dr. Webster, and Dr. Day—were summoned by the military authorities to Damascus, and it was thought that, as Canadian British subjects, they were going to be banished or kept as hostages, like many other enemy subjects; but Dr. Bliss intervened in their case, and succeeded, owing to his popularity and influence, in bringing them back to the college three days later.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, May 18.

Bulgaria and the Entente.

It is generally believed that a critical moment is approaching in the relations between Bulgaria and the Entente Powers.

It seems almost inconceivable that the importance of the aid which Bulgaria can render them at the present moment should not be recognised by the various Governments of the Allies, or that they should not take the right steps to secure it. With the entrance of the Bulgarian army into Eastern Thrace Turkish resistance at Gallipoli would soon collapse, even if the Turkish military authorities resolved not to oppose the re-occupation of Adrianople by the Bulgarian troops and their advance to Rodosto. In any case, communications between Constantinople and the Turkish troops concentrated at Keshan and the neighbourhood would be severed, and intercourse between the capital and Gallipoli could only be maintained by sea. This mode of communication, however, is already threatened by the presence of British submarines in the Sea of Marmora. The military situation is thus dominated by the Bulgarian army, and its co-operation with the Allies would probably decide the fate of Constantinople in some weeks.

The Preparedness of the Bulgarian Army.

According to the most competent military judges here, the Bulgarian army is now far better prepared for war than it was in 1912 for the Balkan War. Bulgaria has ready for immediate action a force of four divisions, or more than 120,000 men, and in a few days she could mobilize another ten divisions, or 300,000 men, ready for action in case of need. And if necessity arises for calling the whole nation to arms, as during the Balkan War, according to the new Military Act recently passed by the Chamber, the above force can be more than doubled.

The Bulgarian Terms.

In a previous letter, I have already described the nature of the Bulgarian demands, and they may be taken as the terms on which Bulgarian aid can be secured. It is important to notice that Bulgaria only wants the really Bulgarian portion of Macedonia and its natural outlets to the Ægean Sea—Kavalla, etc. She no longer demands Salonika. Her claims are small compared with those of the other Balkan nations, and are strictly in conformity with the principle of nationalities, which British statesmen have proclaimed as their watchword. If an understanding cannot be arrived at on this basis there will be a lamentable failure of diplomacy.

Bulgaria's hesitation to join the Entente is due partly to the paralysing effect of her former misfortunes, partly to suspicion of her neighbours, partly to fear of an Austro-German invasion through Serbia. But she would take all these risks if she were assured of the satisfaction of her reasonable claims in Macedonia, and would not wait for action by either Italy or Roumania. It is high time for Great Britain—who enjoys the confidence of this country, and possesses great influence here—to put more energy into her diplomacy at Sofia in order to secure Bulgaria's assistance.

Sofia Municipal Election.

Owing to irregularities, in which the majority of the City Council were stated to be implicated, the Law Courts decided on the dissolution of the former Council. The elections for the new Council were held last Sunday, and for the whole of the previous week the attention of politicians here was entirely absorbed by the business. All the old political parties and one new one took part in the campaign, and some of them employed the most up-to-date methods in their electioneering—dropping appeals and bulletins all over the city from aeroplanes, to the great amusement of the citizens. The result of the election was favourable to the Government, its coalition securing eighteen seats, as against twelve by the opposition parties. The capital thus marks its approval of the present Government's policy, and this will result in further strengthening the hands of Dr. Radoslavoff.

The newly-elected Council will probably be summoned to its first sitting about the 28th inst., when the Kmet (mayor) will be chosen. In all likelihood the choice will fall upon the former Vice-Kmet, M. Radi V. Radeff, a leading Radoslavist, while the two Vice-Kmets are likely to be Dr. Spirkoff (Radoslavist) and Dr. Petcoff, the son of the late Prime Minister, M. D. Petcoff (Stambolovist).

Policy of Dr. Gennadieff.

In certain political circles it is stated that the leader of the Stambolovist party, Dr. N. Gennadieff, will shortly address a letter to the King, giving his views upon Bulgaria's foreign policy. In this, it is understood, Dr. Gennadieff will point out in detail the arguments which lead him to maintain that the country should follow a policy of *rapprochement* with the Powers of the Triple Entente.

Queen Eleonora on Bulgarian Sympathies.

Recently, in the course of an audience which she granted to an English correspondent at Samakov, the Queen made the following statement:—

The question which we have to decide is: Whether the territory that we hope to obtain is worth the sacrifice in money and men that it must involve. Independent of this, the diplomatic questions involved are very complicated. We cannot be entirely sympathetic to Greece, Roumania, and Serbia after they have so unjustly deprived us of territory which our army won from Turkey.

I have many friends in Petrograd, and all Bulgaria cherishes deeply felt gratitude to Russia for what she has done for us in the past. How can we explain to Russia that if we join Austria against Serbia we should not also be acting against Russia? But, on the other hand, Bulgarians have much sympathy with the methods and the development of Germany; and consequently Bulgarian co-operation with Germany's enemies would be contrary to the national feeling.

It is possible that thoughts of our obligations towards Russia may outweigh our admiration of German ideals. But against these factors we must set the consideration of our own loss or gain.

First Bulgarian Horse Show.

Last Friday the first Horse Show ever held in Bulgaria was opened at Eski-Jumaya. The opening ceremony was performed by M. Dintcheff, Minister of Agriculture, and M. Bakaloff, Minister of Commerce and Industry, was also present. There were 450 exhibitors, and the show attracted a very large number of visitors.

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore, where subscriptions are also received.

"Try a chota peg o' Perfection.
"Notice how mellow and silky it is?—not a touch of 'bite' or harshness. That's the effect of maturing in sherry casks. Makes it a little darker in colour, too.
"You'll order a case of Perfection?
"Well, everyone of 'ours' is doing the same. They all like it. Here's a toast, old man. Drink up—To Perfection, the best whisky in India, from the everlasting hills to the plains."

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 16.

The Political Situation.

The political situation is somewhat clearer than it was a week ago. The sudden calm of the last fortnight is said to be due to the fact that the Entente Powers enquired when Roumania actually intended to make a move; to which Roumania replied that she desired written assurances regarding the reward she is to receive, at the same time formulating her desires, which include the Tiza (Theiss) as her western boundary and the Pruth for her northern boundary. To-day most papers say that the Russian reply to these suggestions is awaited, and that upon that reply will depend when Roumania will move—if ever!

According to the *Dimineatza*, Russia objects to a frontier so far north, being anxious to retain Czernowitz and the surrounding country. At the same time Serbia puts forward claims to the territory of the Banat, which is inhabited by Serbs, and is regarded as necessary to the proper defence of Belgrade. Russia's reply is awaited with some impatience, not to say apprehension, as fears are entertained that her proposals will fall far short of Roumania's requirements. In any case, some tough bargaining may be looked for.

The party opposed to action is making itself more prominent just now, if not increasing in numbers. The arguments it puts forward are: that in any case Transylvania must sooner or later come under the Roumanian flag, and that the rest must naturally follow; and that if any military action at all be needed, an occupation at the end of the war will suffice. For the rest, strict neutrality is the burden of their song. Whether their attitude is due to fear of German arms, or whether they were spoilt by the easy acquisition of Bulgarian territory in 1913 it is hard to say.

Relations with Bulgaria.

A much more friendly spirit seems to be perceptible of late in the relations between this country and Bulgaria. This is doubtless due in part to the satisfactory issue of the negotiations regarding the transit of goods over the railway systems of the two countries, and partly to steady diplomatic spade-work. It now appears that the assurances of her peaceful intentions that have been given repeatedly during the past nine months by Bulgaria were perfectly sincere; though little weight was given to them some months ago, when Roumania seemed to be on the verge of joining in the war, and was only deterred from doing so by fear of an attack in her rear on the part of Bulgaria. There is undoubtedly a feeling in the latter country that should Roumania find her national aspirations fulfilled in the general shuffle that must take place after the war, she ought to make some concession to Bulgaria in regard to part, at least, of the territory she took over in 1913. And this feeling, it may be stated, finds an echo in more than one quarter in this country.

Students' Anti-German Manifestation.

The students of Bucharest continue their anti-German agitation, and on the 5th inst. a party visited M. M. Mortzino, the Minister of the Interior, whom they begged to suspend the issue of the journals *Ziua* and *Minerva*, and to forbid the *Moldava* to pass the frontier. The Minister replied that the question could not be discussed; he judged it inadvisable to manifest one's opinions by acts of violence; and he assured the delegation that all measures would be taken to guard against the disturbance of public order. The students withdrew, after assuring the Minister that they should fulfil what they regarded as a national duty. A large meeting took place the next day at the students' club, the Central Studentesc, to discuss the situation.

*** When communicating with Advertisers, Readers will greatly oblige by mentioning

"THE NEAR EAST."

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, May 21.

The Tsar's Birthday.

The Emperor of Russia's birthday was celebrated here as usual, the fact of being at war not being allowed to interfere with the customary illuminations, etc. The shops were closed in the forenoon, services were held in all the churches, and the Austrian military band, the members of which were dressed in Serbian uniform, played in the park.

The Situation at Belgrade.

The lull in the fighting in this theatre of war has not been of the same advantage as if this country had been able to take the offensive, as the soldiers remain idle and always in a state of expectancy, unable to return home and unable to go forward; while provisions and produce of every sort and manufactured goods get daily more and more scarce and dear. The trains running to Belgrade cannot approach near the city, and this makes the traffic difficult and expensive. The town is also liable to be bombarded by the enemy at any moment, which alone prevents the better class of inhabitants from returning. Some days ago a large sugar factory in the environs of Belgrade was fired upon by the Austrian artillery, which hammered at it resolutely, and utterly destroyed it.

It is only in the event of an offensive movement on the part of Serbia clearing away the Austrian troops on the Serbian frontier that Belgrade will become habitable and safe as formerly.

King Peter and the Crown Prince.

Having completed his cure at the Serbian bathing resorts, King Peter continues to lead a quiet life of retirement at Topola, the birthplace of his grandfather, the Liberator of Serbia. Though away from the din and bustle of active political life, and desirous of recruiting his health in the enjoyment of peaceful solitude, he cannot entirely sever the links that bind him to the concerns of his country at this important epoch of its history; so that it is not surprising to learn that apart from the ordinary channels of political communications he has received a welcome visit from his son, Prince Alexander. The Heir-Apparent has been taking a most active interest in the government of the country, and to his visit must be attached an importance beyond that of simple filial duty and affection.

The Question of Dalmatia.

The mission of M. Vesnitch, Serbian Minister Plenipotentiary at Paris, who went to Rome to sign the *concordat* agreed on with the Holy See, as it was he who conducted the pourparlers at the Vatican, gave rise to false reports with reference to an understanding between Italy and Serbia concerning Dalmatia.

The excitement aroused by the rumours of the proposed annexation of Dalmatia still lingers, and the Serbian Press continues to publish leading articles on the subject with the object of justifying Serbian aspirations. Two days ago long arguments appeared in the *Odjek*, one of the semi-official organs.

FRENCH NATURAL SPARKLING TABLE WATER.

Perrier

"The Champagne of Table Waters."

KEEPS YOU FIT.

HOT CLIMATES.—Perrier, now famous all over the world, is the ideal drinking water for hot climates. Its delicacy and vigour stimulate the digestion and brace up the system.

SERBIAN CAMPAIGN.

According to an official *communiqué* from Nish, on May 25 Serbian artillery dispersed an enemy battalion which was entrenching itself north-east of Kupinavo, together with a cavalry detachment and some gun teams which were surprised there. On the same day, in the direction of Dobra, Serbian guns dispersed with a few shots a detachment of hostile infantry which had fired on the Serbian outposts. On the same day, moreover, the enemy attempted to land soldiers on the island of Tsokliana, but they were driven off.

Italy's Intervention Welcomed.

The *Times* special correspondent in Nish, cabling on May 25, stated that he was authorized to say that the Serbian Government cordially welcomes the intervention of Italy, being confident that it will shorten the war. The Government is also confident that Italy and the Allies, in the final adjustment, will be guided by the principle of respecting nationalities. Serbia meanwhile freely recognizes that Italy is not without her legitimate rights and interests on the Adriatic coast.

Italy's action will doubtless influence Serbian military plans in the immediate future. Renewed activity is generally expected very shortly. The Serbian army is thoroughly rested, and all deficiences in men and material have been fully repaired. There are abundant supplies of reserves, and all the troops are impatient to strike another blow at the enemy.

Lady Paget's Hospital.

A correspondent writes from Lady Paget's Hospital, Skoplje, Serbia, May 17:—

I am now quartermaster at the typhus hospital, one and a-half miles outside Skoplje. It is more like a health resort than a den of pestilence. We have a very capable set of nurses, and everything runs with the regularity of clockwork. Typhus never seriously affected the civil population of Serbia; but the army and its Austrian prisoners have been literally decimated. As regards this town and its immediate neighbourhood, the epidemic has spent its force; but there are still plenty of cases in outlying villages. But the typhus season (November to April) is past; we may expect cholera, typhoid, and dysentery, but are well prepared to meet them. On the other hand, if military operations take place in Albania, we shall probably be turned into a surgical unit; and should the Allies invade the southern districts of Austria-Hungary, our hospital may be shifted to Belgrade. So you see our future is uncertain. I suppose it is common knowledge that the Serbians will attack Albania, should Italy come into the war. . . . Lady Paget suffered severely from typhus, and has left Skoplje for London to recoup her health. She is a splendid organizer—just the sort of person to control a large hospital unit.

Misery and Pestilence.

The following extracts are from an account of relief work in Serbia, which has been compiled from official and semi-official reports, and is published, says the *Morning Post*, with the consent of the War Office:—

The great rally by which the gallant army of little Serbia drove the invader from its country has excited the admiration of all the world except its enemies, but less is known of the price which was paid for that victory. For weeks afterwards Serbia lay under the shadow of death, compelled by an iron necessity to conceal her wounds and her sufferings. The time has come when it is possible to lift the curtain on this period and to describe some of the measures taken and the results achieved. Early in February the Serbian Relief Fund was already hard at work. It had at its disposal two hospital units, Lady Paget's and Lady Wimborne's, each with about fifty doctors, nurses, and orderlies, as well as smaller contingents under Dr. Moon and Mrs. Hardy. There were, further, two Serbian units, provided by the Joint Committee of the Red Cross Serbian Relief Fund, under Colonel Barrie and Captain Bennett respectively, the latter proceeding in Sir Thomas Lipton's yacht "Erin." There was also a Wounded Allies' Relief Hospital and a Scottish Women's Hospital. All these were working at the highest pressure, and heroically doing their utmost to cope with the terrible conditions around them. But it soon became evident that further steps would be necessary to deal with the root of the mischief, and on February 17 the British Army Medical Service sent out a sanitary department under Colonel Hunter and Lieutenant-Colonel Stammers.

Colonel Hunter and his colleagues landed at Salonika early in March, and proceeded to Nish, where they put themselves at once into communication with the Serbian Government, which gave them the warmest welcome and put all information at their disposal. They quickly found that the reports which had come through to London were in no wise exaggerated. Apart from the wounded, there were 37,000 sick in the army, including 15,000 cases of fever, of whom more than 8,000 were suffering from typhus. There were also nearly 8,000 cases of relapsing fever and nearly 1,500 cases of enteric. By all indications typhus and relapsing fever were increasing rapidly; there were rumours of plague, and an obvious danger of cholera, unless effective measures could be taken before the warm weather set in. The Serbians had beaten the Austrians, but the latter had taken a grim revenge. For the infection of typhus and relapsing fever could be clearly traced to Valievo, which had been evacuated by the Serbians and temporarily occupied by the Austrians. When the Serbians retired from that place they left it free of disease; when they returned they found 3,000 Austrian wounded and sick, many of them suffering from typhus and relapsing fever.

AN ARCHIDIACONAL VISITATION IN CYPRUS.

Archdeacon Potter has just returned from his annual visitation in Cyprus, where, with Mrs. Potter, he spent six weeks, and had the great advantage of meeting Bishop and Mrs. MacInnes, and discussing many important questions with the Bishop on the spot.

We are indebted to him for permission to publish the following account of his visit:—

Cyprus was very quiet, and apparently less affected by the war than most places in the British Dominions. The presence of 500 Maltese Militia, an excellent body of men, was the chief indication of anything unusual. A rumour was current in March that a large number of refugees were coming from Smyrna, and provision was being made for their reception; but they did not come. Many individual refugees, however, from Syria, Asia Minor, and Constantinople were there, and on the whole they spoke well of their treatment by the Turks. It is satisfactory that several offers have been made by members of the Greek community to raise and maintain a corps for the front. They also volunteered to provide accommodation for the wounded, and if necessary to find and equip volunteers for home defence. The Turkish feeling was also as good as can be expected; and under the leadership of that thoroughly loyal, practical, and sensible man, Irfan Bey, the Turks have not been moved to disloyalty by the dragging of their nation by unscrupulous leaders into the war.

Church of England affairs are on the whole satisfactory, and the visit of the new Bishop will doubtless result in making them more so. It is to be hoped that means may be found in the near future to strengthen and enlarge the scope of Canon Newham's school. This is doing good work; but it could do much better if it were sufficiently financed to make possible the appointment of at least three masters of high university qualifications.

One great need in Cyprus is higher education, a need all the more pressing now that England has definitely taken over the country. The island may now well become a centre for higher education (based upon true and real principles of genuine religion) in the Near East. In Cyprus the Greek Gymnasium and Turkish Idadi school do good work; but the former is considerably marred by political sentimentalism, and the latter suffers under the disadvantages from which a Moslem school in the twentieth century must suffer. But a really higher education on sympathetic lines with national sentiment, and yet raised above political propagandism, would have the great effect of preparing the people for a greater share in what it is rightly the constant aim of British policy to grant, greater self-control in home affairs, and bringing as a result less disaffection and increasing loyalty.

The services in the Anglican district churches throughout the Island are well maintained by our staff of licensed laymen and three resident clergy. Limassol church is now being completed, making three small churches and two vicarage houses secured during the past twelve years.

The Society for the Prevention of Cruelty to Animals still prospers under the excellent secretaryship of Mrs. Nicolls. But the poor relief funds which since 1905 have combined English and Greek and English and Turkish aid on behalf of the native poor have collapsed for the present, largely owing to the adoption of a policy of doles, which was found to be dangerous. However, their place is being taken by other organisations, English and native. At Nicosia the Mayor has formed a large Greek Committee for this work, and Lady Clauson and other English ladies are organising English work of a similar kind. The Mayor at Nicosia has also in hand a scheme which he proposes to put in operation after the war for establishing a municipal tax for poor relief. This is a brave thing to try, as it means risking re-election. But if it is successful it will prove the wisdom of the action of the Government in giving independent powers to the municipalities. The Mayor proposes establishing a poorhouse for 100 people, and a workhouse with a work test for those out of work.

The journey to and from Cyprus, through France and the Mediterranean, was full of interest, very often of a sad kind. The number of wounded and maimed soldiers and of women in widows' weeds in France was simply appalling. The country is taking very quietly and soberly her great trial. Women take the place of men as omnibus conductors, etc., dressed in attractive uniforms. In Paris one hears of mothers telling their children that if they are not good they will not be allowed to see the Zeppelins; and people seem quite disappointed if these destructive machines do not show themselves. The Germans certainly have succeeded in bringing out the best qualities of the French nation.

At Marseilles were to be seen groups of German prisoners working on the quays, not altogether a pleasant-looking lot. In the Mediterranean there were rumours of the omnipresent submarine; and precautions were taken against possibilities. At Malta one had the great privilege of visiting the Australian wounded, just arrived from the Dardanelles, and keen to recover so as to return to help their brothers there. They are in a magnificent hospital built by the Knights.

THE SUDAN VETERINARY SERVICE.

(From A Correspondent.)

Of the several Sudan Government administrative branches none has been organised or conducted with greater care, nor, it may be added, met with a greater amount of success than that of the Veterinary Department. There has been cattle plague in the Sudan at all times—both before the British Occupation and afterwards—and it may be assumed that, notwithstanding all the care and prevision of the authorities, it always will exist to some extent. Within recent weeks the disorder has again broken out in the Nuba Mountain Province, especially in the Eliri and Talodi districts, where as many as 5,060 different inoculations have been made at one visit by the surgeons. This particular form of the malady is known locally as the "Abu Gineit" disease, and it is sufficiently serious to engage the closest amount of attention upon the part of the authorities. Not the least of their difficulties in dealing with it is the fractious opposition shown by the native cattle-owners to their interference. Instead of welcoming the assistance offered, and which is rendered almost entirely free of expense to them, the ignorant Arabs believe that the surgeons instil, instead of exterminating, the complaint, and nothing will ever convince them to the contrary. Even if a cure be effected, the ungrateful proprietor of the sick beast or beasts declares that it was "Kismet"; while if by chance the animal or animals should die, then it is the English devil-doctors who have killed them. The average Arab, indeed, often recalls the witty saying of Disraeli, who once declared that "Mr. Kremin himself was distinguished for ignorance, for he had only one idea, and that was wrong."

The Sudan Government Veterinary Department entails an annual outlay of something over £E27,000, while, as the receipts fall short of £E10,500, it will be recognised that the branch is carried on at a substantial loss. Nevertheless, it is one of the first importance, and could not be abandoned or even reduced in regard to its complement were the loss entailed to amount to double. The receipts earned are in the form of quarantine fees, which usually account for the greater part of the revenue, viz., between £E8,500 and £E10,000 forming the total receipts of £E10,500. The remaining payments include inspection fees (in 1913 these actually amounted to about £E1,250), charges for loading and unloading animals, and other small demands.

On the other hand, the department maintains a very considerable staff of competent and experienced veterinary surgeons, in addition to one director, whose annual "allowance" is £E450. The department is divided up into six sections: the veterinary, the quarantine, the veterinary survey, the breeding, the accounts, and the stores. Each of these sections has an assistant director or inspector, who is assisted by either a British or an Egyptian officer. The highest regular salary paid in this department is one of £E840, received by the two assistant directors of the veterinary and quarantine sections, while the lowest is one of £E150, received by the storekeeper, who usually is a British non-commissioned officer. Naturally the number of officials allotted to each province varies with the particular size of the province and the number of cattle to be found there. Thus Kordofan has the services of two veterinary inspectors, while all the rest have but one. Latterly there has been an increase in the cost of almost all the supplies and equipments of the department, due to the rise in the prices of practically everything required. For instance, the amount allocated in 1913 for forage stood at £E570, while for 1914 it had increased to as much as £E1,000; travelling allowances advanced over the same period from £E700 to £E925, drugs from £E150 to £E200, grooms' allowance from £E180 to £E256, and climate allowance from £E200 to £E260. The economies effected included a reduction in the purchase of serum from £E2,160 to £E1,698; extra pay for medical and veterinary officers for inspection of meat, cattle, etc., from £E400 to £E94; and special expenditure in connection with cattle plague from £E540 to £E400.

At the time of the second British Occupation the Sudan was found to be reeking with disease, both among cattle and human beings. By the end of 1906, however, an immense improvement had manifested itself in both, and particularly among the dumb brutes. Colonel Griffith, writing on the subject, declared that "at the present time cattle plague seems to be nearly eradicated from the Sudan." As has already been pointed out, however, the country can never be considered as free from danger of infection, as the disease is enzootic in Erythræa and Abyssinia. The only means of stopping infection is by having strict cattle plague supervision on the frontier. However vigilant this may be, it is practically impossible to detect cattle being passed at night across the border, especially in dense, bushy country; while an additional danger arises from infection through game and other wild animals. The posts established by the Government, and served by both mounted and unmounted police, for the purpose of watching what goes on undoubtedly have proved useful if—for the reasons explained—only partially successful.

Unquestionably the most effective step taken by the Administration was that in 1913, when there was established a clearer division of duties of the officials, then only made possible by an addition to the staff of six inspectors, while the service at the same time was sub-divided into the four main channels: general veterinary, veterinary survey, quarantine, and breeding—already referred to. Now each section inspector is made responsible for the interests with which his particular section is identified. The six additional inspectors who joined the Government service were Captains E. C. Webb (serum expert), who is established at Cairo; J. R. Bosley, at Gedaref, in the Province of Kassala; L. Danels, at Merowë, in the Dongola Province; A. C. Anderson, at Halfa, in the Halfa Province; F. Roche Kelly, at Wad Medani, in the Province of the Blue Nile; and W. F. L. Bright, who is stationed at Shendi, in the Berber Province. The director of the whole Veterinary Department is Major F. U. Carr, who has been in the Government service since September of 1908. The assistant director is Captain G. P. Knott, who boasts of but one year's service less to his credit, having joined in January of 1909. Five of the staff are stationed at Khartoum, and altogether the department has the advantage of seventeen British officers, several British non-commissioned officers, and two Egyptian officers, seconded from the Veterinary Department of the Egyptian Army, and who are now employed in the Red Sea Province.

The department was framed—as have been so many others of the Sudan Administration—with great vigilance for the future requirements of the fast-growing country. Thus, in regard to organisation, it was from the first looked upon as imperative that, as funds were forthcoming, a foundation in the shape of a British staff should first be established; this having been accomplished, there came the super-structure, a staff to satisfy requirements, selected and trained from among the inhabitants of the country. The object aimed at has been achieved with great trouble and much success; the progress hoped for has been attained to an altogether remarkable degree, and the excellent work undertaken and pursued—not unseldom in the face of the most tiresome and discouraging conditions—goes steadily forward.

THE BALKANS AND THE WAR.

On Wednesday of last week Dr. R. M. Burrows lectured at King's College on the "Balkan States and the War," the chair being occupied by Dr. Cheddo Miyatovich, formerly Serbian Minister at the Court of St. James's.

Dr. Burrows said that it had not been clear until about Christmas last that Turkey was in a state of complete decadence, nor was it very long before that date that it had become apparent that Serbia would probably come out of her troubles so triumphantly that she would without doubt become the centre of a great Jugoslav kingdom. Previously to the happening of these events it was not practical politics for Greece or Serbia even to consider the question of giving up to Bulgaria any part of the territory which had been ceded to them by the Treaty of Bucharest. When it became apparent, however, that there was a possibility of Greece acquiring in Asia Minor a tract of country more extensive than all her present area, while Serbia might reasonably hope to be united with the people of her own race now under Austrian rule, it was not only practicable, but it was desirable that Bulgaria should have an accession of territory also. The principle which should guide any re-arrangement of frontiers after the war should be mainly the national one. But partly the matter would have to be settled by economic and strategic considerations. If, for example, Adrianople and the adjoining district of what is still Turkey were to be added to Bulgaria, it would not be because the inhabitants were Bulgars. The inhabitants of the district in question were partly Greek and partly Turkish; but the country was too far from the Greek base to make it desirable that it should be added on to Greece. On the other hand, the hinterland of Salonika was undoubtedly Bulgarian, but it could not be expected that the Greeks would cede this territory. The best way to deal with the problem arising when, after the re-arrangement of frontiers, any considerable number of people of one nationality found themselves included in a state of another nationality, would be for the new Government of the acquired territory to purchase all their property, thus leaving them free to migrate to the country of their kindred. This might be rather a difficult plan to apply to a country so developed as Dalmatia, but even there it was along this line that there was the best hope of success.

The Chairman said, speaking, of course, quite unofficially but as one who knew the mind of the Serbian people, that they were willing to make reasonable concessions to Bulgaria. The Bulgars were their cousins, and the two peoples ought to be friends. He looked forward to the freeing of all the Balkan nationalities and to the formation of a powerful Balkan federation.

NEAR EAST BOOKSHELF.

THE HISTORY OF PERSIA.*

Persia is now fallen upon evil days, and it is well to be reminded that she has an ancient and glorious past. The present naturally assumes exaggerated proportions, and, looking at the catastrophes of recent rulers, one is apt to forget that Cyaxares, Achaemenes, Cyrus, Darius, Shapur, and Abbas the Great were also Shahs of Persia. Happily, the modern Persians do not forget. In the midst of revolutions, "reforms," and anarchy they are still proudly conscious of their ancestry, and if they dwell most lovingly on the heroes of the legendary age as they hear their deeds recited in the immortal verse of Firdausi, and delight to believe themselves the heirs of Jamshid and Feridun, of Zal and Rustam, they also keep a place in their Valhalla for Ardeshir, Shapur, and Nushirwan the Good. That they cherish this national heritage is the best augury for their future at a time when most of their omens are sinister; and if only their consciousness of a great place in the world's history lead them to new energy and a virility worthy of their Parthian conquerors, instead of wasting itself in foolish conceit and languid complacency, there may yet be a future for Persia.

We have had to wait long for such a comprehensive history as Colonel Sykes has now given us. Sir John Malcolm's famous work was published a hundred years ago, and during that century exploration and research have reconstructed our knowledge of the Middle East. The immense field embraced in the present survey of Persian history, ranging from the kingdom of Elam, thousands of years before our era, to the twentieth century, is, of course, far beyond the compass of one man, however accomplished and industrious; and an author who attempts to trace the development of the Persian empire in all its phases and in all its foreign relations, as Colonel Sykes does, must necessarily rely upon expert authorities for much of his narrative. The chief point is to choose the best authorities and to know how to use them. As to this, we can only express our admiration both of Colonel Sykes's skilful compilation and also of his critical judgment. As a rule, he follows the best modern authorities, but uses his own judgment. For example, whilst depending upon special scholars for the details of the invasions of Darius and Xerxes, he has his own view as to their object. He believes that, with armies that may even compare in numbers with the vast forces now engaged in conflict, theirs was a larger design than the mere conquest of little Hellas, and that Greek megalomania has exaggerated their importance in the eyes of the Great King. Again, in dealing very fully with Alexander's campaigns, he is able to identify certain points in the conqueror's march from his own local knowledge, though differing from another local expert, Sir T. Holdich.

This thorough knowledge of the country is of the utmost service to the historian. Many things in Persian history are inexplicable until one has a clear grasp of the geographical conditions. Colonel Sykes has lived in Persia for more than twenty years; he had travelled a thousand miles there before he published his great book thirteen years ago, and how many more he has since journeyed his reports to the Royal Geographical Society testify. Above all, he loves the country, and if his official position as Consul debarred him from relations with revolutionaries and Babis, except as protector of the persecuted, it gave him unrivalled facilities for exploration, and offered no serious obstacle to an intimate knowledge of Persian peasant life, as his charming description of a Persian village and its daily doings amply proves. We miss, it is true, that close touch with Persian intellectual life, with poetry and philosophy, which makes the latter part of Professor Browne's "A Year Among the Persians" the most vivid picture of Persian life and thought with which we are acquainted, but Colonel Sykes had enough to do to get his enormous subject into reasonable compass without indulging in modern impressions. His introductory chapters on Persian geography are of peculiar interest and value. When it is considered that the frontiers of Persia are ruggedly inaccessible, that the sea coasts, both on the Caspian and on the Persian Gulf, are climatically intolerable to the dwellers on the main plateau and forbid maritime enterprise, that there is only one navigable river in the land, and that if the great deserts are subtracted from the area, only a very small country remains, it is marvellous what Persia, in her great days, achieved in the face of natural obstacles. Even if the deserts have increased and the land become more arid since those days, the achievements were still amazing.

In many respects, as Colonel Sykes points out, she resembles another country which also has fallen from her high estate. The great treeless plateau of Spain, with its jagged sierras, though not so elevated or so arid as that of Persia, leads down to the "hot country" of Andalusia, like the Garmsir of Southern Persia.

> Again to the North, as if to complete the analogy, the provinces bordering on the Biscayan Sea differ as much from the Spain of the plateau as the Caspian provinces do from the rest of Persia. Moreover, although the Persians are termed the French of the East, it would be more apt to compare them with the Spaniards, whose customs and whole manner of life are akin to the Persians.

The author even sees in Xeres, or Jeréz de la Frontera, an echo of distant Shiraz, and thinks that there the descendants of Persians in the conquering Arab armies "made the wine which, as the familiar sherry, still preserves its Persian name." Here we venture to think that his warm imagination has misled him, for whether Jeréz be the Municipium Seriense or not, it was certainly spelt Sheres in Arabic, and the Persian invaders appear to be unknown to Dozy. But the general analogy holds, and the geographical conditions have governed many things correspondingly in Persia and Spain. The delight of the Persian poet in gardens which we should not think beautiful, with their ugly water channels and few varieties of flowers, is understood when we recall that many of the chief poets were men of Khorasan, used to barren rocks and treeless plains, to whom shade and running water, roses and jasmine, and the song of the bulbul were a delicious relief.

> On the other hand, they had the advantage of living in one of the finest and most delightful climates in the world, with abundance of brilliant sunshine and absence of extremes of heat and cold, and, above all, a most stimulating atmosphere, which has helped to endow the gifted sons of Iran with the marked personality that has been their heritage throughout the ages.

How much the world owes to Persia has never been fully admitted. Turning over Colonel Sykes's splendid volumes, with their beautiful illustrations—which only need detailed descriptions to be added to each to make them really illuminating—one is struck by the many-sided genius of the Iranian race. To take but one point, What do we owe to that eminently pure and lovely and reasonable religion of the Avesta? How much did the Jews learn from Persia, and how far was Mithraism, its arch-enemy, a disguised stimulus to Christianity? The complete subjection of Persia by Islam—for few indeed remained Zoroastrians—is counterbalanced by the thorough metamorphosis of Islam in the hands of the Persian Shi'a, when the mystical Aryan spirit revolted against Semitic formalism. Perhaps the Mohammedan part of Colonel Sykes's history is not quite equal to the standard set by the first volume, but the reason is that there is no good general authority for him to follow, and he has not, apparently, gone to the Arabic chroniclers, such as they are, or consulted the latest German, French, and Italian critics. The new "Encyclopædia of Islam" though only in progress, would have helped him. In a work of such wide range it was inevitable that some parts should be compressed, and the history of the various Persian dynasties during the Abbasid caliphate is not of general interest. Here, as elsewhere, we see the influence of geographical barriers in fostering the growth of independent States, and the wonder is that the Persians have ever been a united nation, and that such chapters as those on the great Sasanian kings—among the best in the book—could have been written.

On the other hand, if the earlier Moslem period is rather slurred over, and omissions occur which would call for criticism in a more detailed review, nothing could be better than the account of the Safavi Shahs, and especially Abbas the Great, the beginning of European influence, and the struggle for the Persian Gulf. The story of the many embassies to the Court of Teheran makes sad reading, in view

of the melancholy results; but Colonel Sykes tells it with full knowledge and with the literary skill which is evinced throughout his laborious but never laboured work. His chapters on Persian literature are written *con amore*. He has freely used Professor Browne's original and breezy volumes; but he might, in future editions, mention the names of the translators whose versions he quotes, correct a number of small slips, and append chronological tables. The maps are excellent, and owe much to Mr. Guy le Strange's invaluable "Lands of the Eastern Caliphate." In fine, we have now a general history of Persia, from the earliest times to what has been termed "the great bust," and the experimental Constitution of 1906, such as has never before been attempted. It bears the fruits of very hard work, and, what is quite as important, of very high and special qualifications. We congratulate Colonel Sykes warmly on a conspicuous success.

STANLEY LANE-POOLE.

FROM SMYRNA TO YPRES.

The following are extracts from a letter written by an Englishman now serving with the Essex Yeomanry, and refer to incidents that occurred in the fighting near Ypres on May 13. The writer is the son of a very well-known resident of Smyrna, who is now staying in London, and was himself born at Boudja. We are indebted to his father for permission to reproduce these extracts, which will be read with particular interest by those of our countrymen who find themselves exiled from Turkey as a result of the war, many of whom will doubtless be able to identify the writer.

The horses were left behind in the care of men told off for the purpose, and we were brought up in 'buses. At 6 a.m. on the 13th there was a deuce of an artillery duel with our guns just behind us, and before long two or three of the regulars from the front trenches rushed up with the information that the Germans had shelled them like hell and pushed through, etc. We at once fell in, fixed bayonets, and waited for the attack, which never came, as the front trenches were kept intact. Later on a bullet from a shrapnel or a piece of shrapnel went through my hat without touching me. At about 2 p.m. we were ordered to take off all our paraphernalia except our two bandoliers with 150 cartridges, rifles, and bayonets; and off we started through an open field in a perfect hail of bullets. Our losses were very heavy; but you should have seen the Germans run! We never had a chance with the bayonet.

About 3 p.m. some 30 of us were lying in an open field between two ruined houses, some 50 yards from the German trenches; it was raining, and we all crawled into holes, from where we could shoot a little more safely. We stuck our faces in the mud except when firing, and there we lay till dark when, our object, to repel the enemy, having been achieved, we retired. The Germans evidently had the range of these two ruined houses, as from 3 until dark we were shelled like mad. As I lay on the ground with my face and chest in a small hole I could hear the shells whizzing overhead and bursting a few yards one side or the other, throwing a cloud of dirt over us. Every now and then one would bury itself in the ground without bursting and would shake the ground just like a miniature earthquake. One "Jack Johnson" burst near seven of our fellows, leaving two unhurt, whilst it buried the other five in its hole, which was big enough to bury four or five horses. About 7 o'clock I crawled into this hole, where I waited until dark, and then, with the help of another man, dragged one of our wounded to the road nearly a quarter of a mile, throwing away rifle and bandoliers, as I was far too fagged to carry both. As it was, when we got the poor fellow to the road we went for help, as we could not carry him another inch. The fellow was wounded in the thigh and could not bear to hop along, so after pulling him out of the hole he lay on his back, whilst we two dragged him by degrees to a stretcher. We would pull a yard or two when up would go a star shell, making day of night, down we would flop in the mud, hoping not to be seen; at last we got back to safety. . . . The Brigadier sent his thanks and said it was the finest charge he had ever seen. . . . I believe an Englishman is worth two Germans, any day.

Captain B—— led us with a walking-stick (our major was away), and when we took up our last position, between the two houses, he picked up a rifle and used it with good effect. . . .

Our Sergeant ——'s "Come on, Chelmsford boys," carried us on as nothing else would. (The writer is in the Chelmsford troop.)

LETTER TO THE EDITOR

THE BALKAN PARALYSIS.

To the Editor of THE NEAR EAST.

Sir,—The irritating neutrality of the three outstanding Balkan States—Roumania, Bulgaria, and Greece—who have so much to gain by the success of the Allies, is largely due to the action or inaction of Bulgaria according to many people's views. That State, in their opinion, blocks the way. But, in reality, its claims are capable of easy and quick adjustment, and would be by this adjusted if M. Venizelos had only been allowed to have his way and his really statesmanlike policy not frustrated by German influence. Greece it is that not only keeps the other States out, but helps to prolong the war unduly. Prompted by Potsdam, Greece has thrown aside for the moment the truly great man who led her to victory and to greatness, and she to-day covertly sides with Germany. Family ties and Court claims are to prevail over racial ties—Greece is bidding fair to forfeit all claim to consideration from the Allies. By stupidly refusing to make the necessary and fair territorial concessions to Bulgaria which Bulgaria secured by the Treaty of London and lost by the Treaty of Bucharest, it keeps the new Balkan League which its late Premier recreated and reconstituted from being effective. That latter Treaty of Bucharest, and the trouble that led to it, were the fruit of German or Austrian diplomacy, and to that sinister influence the Balkan war was due. The setting up of the wretched State of Albania, under a German princeling, wrested from Serbia its share of its conquests and compelled it to seek compensation in Macedonia and to get from Bulgaria what it had fairly won by the sword and had acquired as its share in the conquest. Germany, it is clear, is again at work in stiffening Greece in its opposition to surrender any province or part of its recent acquired territory in Bulgaria, even though she should in the end get larger additions of territory in the islands and in Asia Minor. Greece is now playing the German game, but it should take warning by the fate of Turkey and Austria. These two now rapidly disintegrating Empires foolishly followed German advice, and they already bitterly regret their folly in so doing. Already Germany is prepared to sacrifice them, as the price of the patched-up peace which it is vainly trying to bring about, so that it may recover from its reverses at no loss to itself or any surrender of its present territory. German diplomacy would readily hand over Turkey and Austria to the Allies if it could thereby come scatheless itself out of the struggle it brought about and if thereby it might preserve Alsace-Lorraine. Germany knows and never knew any scruples, and is not troubled by any misgivings. It induced those two Empires who are its unwilling partners, and who now, day by day, are losing so heavily, to enter into a conflict which it alone engineered and which it alone directs. It is now getting Greece, through its Sovereign, to aid, and utilizing his intimate connection with the Kaiser as his brother-in-law, to throw over its one great statesman, M. Venizelos. He, with far-seeing wisdom, largely brought about the Balkan League some five years ago, and as a result he secured for his country large accessions of territory and the defeat of Turkey. Again, he saw to-day that Greece's interest lay in its support of the Allies, and he wisely proposed aiding them by active participation, having previously settled all outstanding differences with Bulgaria. This masterly policy was frustrated by German influence, and a grand opportunity for the moment lost to Greece. Had M. Venizelos succeeded, Constantinople would probably be in the Allies' hands to-day, and Adrianople would be Bulgaria's once again. The intervention of Greece would have brought in the other two Powers at present checkmated by its action. Surely the Machiavellian diplomacy of Germany is not to be allowed to succeed in its purpose and keep the Balkan States from actively helping the Slav cause which they have so much at heart, and which it is so obviously their interest to help. The intervention of Bulgaria can be readily secured, as M. Venizelos saw, and as he provided for by the proposed settlement of its territorial claims which all parties concerned had practically agreed to. Serbia, most affected in the matter, was willing to concede what was required of it to satisfy Bulgarian claims. Greece alone stands out. It is acting in this matter not in its own interest or guided by racial sympathies or inclinations, but it is being directed and influenced by Germany acting in this matter through Royalist intrigues. Greece is standing in the way of settlement against its own interest, against the wish of the majority of its people, against all Europe except the pro-German parts, and against the advice and policy of the one great statesman that led it to greatness. Surely the Allied Powers should make it plain to Greece that if she persists in this pro-German policy she will be regarded as hostile and as forfeiting all claims to future consideration and generous treatment at their hands. Greece cannot be allowed to be playing the German game under the guise of neutrality. The mask must be thrown aside, and Greece must not be allowed to be making false pretensions of friendship for a cause which she is doing her best to jeopardise if not imperil.

M. Venizelos—the only truly great statesman of Greece—should be therefore induced to remain in active politics, and so doing circumvent the already too successful efforts of Germany to keep the neutral Balkan States from helping the liberation of Slavdom from Turkish, Teuton, and Magyar domination.—I am, etc.,

R. J. KELLY.

Writing on May 18, our Sofia Correspondent informs us that on the previous Saturday, the name-day of the Crown Prince Boris, a Te Deum was sung in the Cathedral. This was attended by the Russian Minister, M. Savinsky, and the staff of the Legation, all the Cabinet Ministers, M. Dobrovitch, of the King's private Cabinet, General Savoff, and a large number of citizens.

In the Greek Church, Moscow Road, Bayswater, on Sunday an intercession service was held for the recovery of the King of the Hellenes. The Great Archimandrite, Dr. Constantine Pagonis, officiated. He was assisted by the Archimandrite, the Rev. Agathangelos Moschovakis.

Lady (Ralph) Paget, who has been laid up with typhoid fever in Serbia, is now recruiting on the Riviera, and is staying with her aunt, Miss Paget, at Garibondy, the villa which belonged to her grandmother, the late Lady Alfred Paget.

The King has been graciously pleased, on the occasion of his Majesty's birthday, to appoint Field-Marshal the Right Honourable Sir Horatio Herbert, Earl Kitchener of Khartoum, K.P., G.C.B., O.M., G.C.S.I., G.C.M.G., G.C.I.E., to be a Knight of the Most Noble Order of the Garter.

Amongst the other Birthday Honours announced the following will be of particular interest to our readers:—Lieutenant-Colonel Percy Molesworth Sykes, C.M.G., C.I.E., Indian Political Department, Consul-General, Kashgar, to be a Knight Commander of the Order of the Indian Empire.

Herbert George Chick, Esq., Commercial Adviser to the Resident in the Persian Gulf, to be a Companion of the Order of the Indian Empire.

Lieutenant-Colonel Charles Henry Dudley Ryder, D.S.O., Royal Engineers, Deputy-Superintendent of Survey of India, and lately in charge Turco-Persian Frontier Commission, Survey Detachment, to be a Companion of the Order of the Indian Empire.

His Excellency the Right Honourable Sir James Rennell Rodd, G.C.V.O., K.C.M.G., C.B., his Majesty's Ambassador Extraordinary and Plenipotentiary to his Majesty the King of Italy, to be an Ordinary Member of the First Class, or Knight Grand Cross, of the Order of Saint Michael and Saint George.

Charles Louis Des Graz, Esq., his Majesty's Envoy Extraordinary and Minister Plenipotentiary to his Majesty the King of Serbia, to be an Ordinary Member of the Second Class, or Knight Commander, of the Order of Saint Michael and Saint George.

Lieutenant-Colonel Oswald Arthur Gerald FitzGerald (Personal Military Secretary to the Secretary of State for War), to be a Companion of the Order of St. Michael and St. George.

John Mackinnon Robertson, M.P., to be sworn of his Majesty's most Honourable Privy Council.

Baron Uxkull, of the Russian Embassy in London, has been transferred to the Legation at Athens, where he will act as First Secretary. He will take up his duties on the 10th inst.

Prince Koribout Voronetsky has been appointed Secretary to the Russian Embassy in London. He left the Legation at Cairo on Monday for England, and is expected to arrive at the end of next week.

General d'Amade, who was till recently in command of the Expeditionary Force in the East, is, says the *Morning Post's* Paris correspondent, mentioned in Army Orders for his disembarkation of troops at Kum Kale and at Sedd-el-Bahr in the teeth of a strongly-entrenched enemy greatly superior in numbers and equipped with formidable artillery. He only succeeded, the order states, in solidly establishing his forces on the southern portion of Gallipoli as a result of repeated attacks, in which he personally took the most brilliant part. Such a result obtained with young troops, most of whom had never seen fire, was due to his lofty conception of duty and to his personal ascendancy over his men, to whom he communicated his tenacity and indomitable energy.

A correspondent informs us that Mr. E. D. Mackray, of Constantinople, left the Daira at Bordein, Egypt, about April 20 to join H.M. Forces. We understand that he is now serving in the Intelligence, at the Dardanelles.

Colonel W. R. B. Doran, C.B., D.S.O., who has been appointed an Inspector of Infantry, while continuing to hold the rank of brigadier-general, served in the Egyptian Expedition of 1882, being present at the actions of Kassassin and Tel-el-Kebir, and receiving the medal and clasp and the bronze star. In 1884-85 he took part in the Sudan Expedition, serving with native levies and being employed on special service at Berber, earning another clasp; and, after serving in India, he was in 1897 employed in the Nile Expedition, being engaged at the battles of the Atbara and Omdurman, being promoted major and brevet lieutenant-colonel and obtaining the British and Egyptian medals for the campaign.

The engagement is announced of the Rev. Henry Charles Robins, chaplain, Khartoum, son of Henry Lambley Robins, of Beccles, to Dorothy, daughter of the late S. Zachary Lloyd, of Areley Hall, Worcestershire.

A message from Cairo reports the sudden death in that city, from pneumonia, of Colonel Frederick Alexander Wilson, Indian Staff Corps, who was Consul-General at Bushire and British Political Resident, Persian Gulf, from May, 1894, to June, 1897. He was a son of the late Andrew Wilson, Inspector-General of Hospitals, India, and was born in 1842.

At the request of the commandant, 21st General Hospital, Alexandria, Lady Allenby and Lady Henry earnestly appeal for funds and comforts for the inmates of this hospital of 1,040 beds. Pyjamas (cotton and thin flannel), shirts, shirts for helpless cases, air cushions are especially asked for. Parcels and money may be sent to Lady Allenby or Lady Henry, 29, Campden House Court, Kensington, W.

The death is announced of Mr. Richard Frederick Birch, of Maes Elwy, St. Asaph, in his eighty-first year. He was the father of Mr. John Somerville Birch, who was a Pasha in Egypt and British Commissioner of the Egyptian State Domains, and who died two years ago.

The Earl of Jersey, who died on Monday, had travelled extensively in the East.

Under date of May 27, Reuter's correspondent at Nish reports that the King of Italy has sent the following telegram to King Peter:—"At the moment of entering the field against the common enemy, I send to your Majesty a friendly greeting, wishing renewed victory to the brave Serbian nation. —Victor Emmanuel." King Peter replied:—"In common with all Serbians, I have hailed the entry of Italy into the alliance against our ancient and common enemy with joy. Your Majesty's Army will cover itself with glory while fighting with its Allies for justice and right in Europe."

Captain Leslie Phillips, the Welsh Regiment, who is this week reported to have been killed in action, joined the Welsh Regiment in 1908, and served with it in Egypt before proceeding to India in 1908.

We regret to announce that news has been received in Liverpool that Captain F. S. Brown has been killed in action at the Dardanelles. Captain Brown was a partner in the firm of Messrs. Reynolds and Gibson, and a well-known and popular sportsman. He was an officer in the 5th Battalion of the Manchester Regiment, with which he had been connected for many years.

The Rev. John Hackett, formerly a chaplain to the Forces, died at Lyme Regis on Saturday. Amongst other places in which he had served as chaplain were Malta, Egypt, Cyprus, Tangier, and Gibraltar. He retired from the Army in 1913, and became rector of Orlingbury.

Yesterday evening Mr. H. C. Woods delivered a lecture, "The Near East and the War," to members of the Geographical Circle of the Lyceum Club.

An appeal has been made to the Armenian Red Cross and Refugee Fund by a Russian doctor, who has recently been caring for the wounded in the fighting line in Armenia, to send out a supply of drugs for the use of the Armenian volunteers there. Donations may be sent to Miss Emily J. Robinson, at 35a, Elsham Road, Kensington, or to the Hon. Treasurer, H. A. Godson Bohn, Esq., 17, Holland Villas Road, Kensington.

The Wounded Allies Relief Committee (Sardinia House, Kingsway) has appointed as head doctor of its typhus hospital unit, shortly to proceed to Montenegro, Dr. Gerard Carré, who has held the appointment of Medical Officer to the Uganda Relief Expedition, and senior Medical Officer to the Fashoda Expedition and to the Boer prisoners of war, Simons Town, South Africa. The medical staff will also include Dr. Isabel Ormiston, Chief Medical Inspector of Schools to the Government of Tasmania, sent to Montenegro by the committee some time ago, and Dr. Lillias Hamilton, head of Studley Horticultural College. The unit will consist of 200 beds with full equipment, and the nursing staff will number twenty.

Mr. Edward T. Agius, 3, Belsize Grove, N.W., will be glad to receive books and magazines for the use of wounded now in hospital at Malta.

The Joint Committee of the British Red Cross Society and the Order of St. John notify the public of the need which exists for helping the British wounded in Egypt and Malta due to the fighting in the Dardanelles. The mission of the Joint Committee is to supplement wherever required the work of the Royal Army Medical Corps, and to supply the added comforts and smaller luxuries which mean so much to wounded men. The committee invite contributions of money and stores, earmarked "For Malta and the Near East." In addition to garments (such as shirts, pyjamas, socks, vests, and pants for summer wear, and also blankets), tobacco, pipes, and cigarettes, and gifts of books and magazines, playing cards, puzzles, and games, will be very welcome if sent to Sir William Garstin, at the Stores, 83, Pall Mall, London. Gifts of money should be addressed to the Hon. Arthur Stanley, M.P., Chairman of the Joint Committee, in the same building. A weekly supply of stores will be despatched if the response to this appeal is as generous as the committee hope and expect it to be. A demand is also making itself felt for motor ambulances and motor-cars for Malta and

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Egypt. Offers of cars, or of money wherewith to purchase cars, should be made to Mr. A. F. P. Roger, at 83, Pall Mall.

The wedding of Miss Irene Noel and Mr. Philip Baker will take place quietly on Saturday, June 12, at St. Nicholas Church, Worth, Sussex.

Amongst recent appointments notified in the Cyprus *Gazette* are those of Mr. W. H. Giles and Mr. T. H. Wilson as probationary Assistant Surveyors in the Land Registration and Survey Department.

Owing to the splendid response to the appeal of the Women's Emergency Corps for wool, and knitted or crochet squares, 12 by 12 inches, to make into blankets for the Serbian hospitals, the corps has been able to forward over 1,000 blankets to date. The need is still urgent, and wool, or squares, will be gratefully received at the corps' headquarters, 8, York Place, Baker Street, London, W.

The typhus hospital unit which the Wounded Allies' Relief Committee is sending to Montenegro left England on Thursday. The hospital will consist of two hundred beds, and its initial work will be to assist in stemming the typhus in the Ipek and Djakova district. Later it is to be hoped that the decline in the epidemic may permit of the unit being adapted for surgical purposes, a transformation which is already contemplated in the case of the Committee's Serbian unit now stationed at Kragujevatz. The personnel of the unit consists of Dr. Gerard Carré (medical superintendent); Dr. Lillias Hamilton, Warden of Studley Horticultural College, who served as a doctor through the Afghan War, and has had exceptional experience of typhus in many parts of the world; Dr. Slater, a lady who has practised for many years in Lucknow; and fourteen nurses. With the party will also travel Colonel Joseph A'hearne, V.D., who has been appointed medical superintendent of the Committee's Serbian hospital. Other nurses will follow at the earliest opportunity. The party is accompanied by large quantities of stores and equipment, the unit being entirely self-supporting.

"General" Bramwell Booth, head of the Salvation Army, has dispatched "Colonel" Govaars to Serbia on a mission of relief. A sum of money has been placed at the service of the Army for the purpose, and will be distributed according to the necessities of the situation. "Colonel" Govaars, who is an experienced Salvation Army officer and an excellent linguist, has had a long acquaintance with Salvation Army work on the Continent and elsewhere, having originally joined in Holland. The enterprise of the Salvation Army in undertaking this relief for Serbia has been warmly welcomed by the authorities.

ROLL OF HONOUR.

British Subjects from Turkey in H.M.'s Forces.

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A. Colchester.

FRIDAY, JUNE 4, 1915.

TOWARDS A FINAL SETTLEMENT.

For more than a generation the Near East has been recognized as the powder magazine of Europe. It has justified its designation, for the explosion which has shaken the Continent to its foundations was fired in the Balkans, where the spark first applied four years ago ran its course along the well-laid fuse. Even now, when the six Great Powers of Europe are at death-grips, it is the Near East which forces itself upon the attention of the European Chancelleries, and one aspect or another of the Near Eastern Question that keeps the military strength of the Triple Entente below the maximum which the Allied cause ought to be able to command. If the war were to end to-morrow, with the total collapse of the Germanic Powers, the Near Eastern Question would still be unsolved, and it would remain a menace to the peace of Europe. If ultimately the three States which for the present are neutral throw in their lot with the Triple Entente and Italy, after arriving at an agreement on general lines in regard to the indemnification they may expect at the end of the war, a multiplicity of details would still await settlement, before such an agreement were ready for incorporation in the Treaty of Peace. No harm can be done by attempting at this stage to visualize the Peace Congress, however far off it may, unhappily, prove to be. If the cause of justice and good faith among the nations triumphs, we shall see the two Germanic Powers on one side of the Congress, with the unhappy figure of their Turkish vassal behind them, and on the other side seven or more States on whom as victors in the struggle will devolve the task of drafting the terms of settlement which offer the best guarantee for the lasting peace of Europe. We may suppose that in regard to the main terms of that settlement, in so far as they concern the protagonists in the war, agreement will have been reached among the Allies on the one side, and their terms will have to be accepted, *nolentes volentes*, by the vanquished. But a treaty which is to serve as the peace charter of Europe must incorporate every international readjustment resulting from the war, and in particular the special settlements arranged among the Allies as the bases of their co-operation. It would be the height of folly if these settlements were allowed to come up for discussion in any form in the presence of Germany, Austria-Hungary, and Turkey. The representatives of the Allied Powers must enter the council chamber in absolute and final agreement upon all matters affecting territorial, political, or economic adjustments amongst themselves. Failure to adopt this course would serve as an incitement to the Germanic Powers to strain every nerve to sow discord in the ranks of their late opponents.

The value of organisation for every task and in every sphere is accepted without challenge. Those countries which omitted to organize for war have had reason to rue their mistake. They will do well to profit from their lesson, and lose no time in organizing for peace. The Near Eastern Question is still the most complicated problem with which Europe is confronted. Even if various points of it are adjusted as each fresh Balkan State joins the Allied Powers, there will remain more than could be dealt with satisfactorily in the short time that might elapse between the firing of the last shot in the war and the first meeting of the Peace Congress. We would urge, therefore, the appointment without delay of an Advisory Commission in relation to the settlement of the Near Eastern Question. The Commission would consist of representatives of the Powers of the Triple Entente, who would be charged with the task of sifting all the available evidence bearing on the rival claims of the Balkan States. Experience has shown that there is no chance of these States arriving at an understanding among themselves. Of their own free will they will not consent to any territorial adjustment necessary to the establishment of permanent peace in this region. On the other hand, they profess devotion to the cause of peace, and there is reason to believe that they would accept any terms dictated to them by a higher authority in the interests of the Balkans as a whole. For this reason these States do not require to be represented on the Commission, which would be formed to advise the Powers of the Triple Entente on the terms that ought to be imposed on the Balkan States in their joint interests. It would be the duty of the Commission, after collating all the relevant information, and, if necessary, examining on the spot points at issue, to draw up an equitable scheme of agreement which would form the last word of Great Britain, France, and Russia on the Balkan Question.

The proposal, it may be urged, constitutes too violent a departure from the ordinary methods of diplomatic procedure. As the Balkan Question has resisted for forty years all the attempts of European diplomacy to settle it along established lines, there ought to be a prejudice in favour of innovations. For ten months, even under the pressure of the worst conflict the world has ever seen, the centrifugal forces in the Balkans have defied the admittedly potent factors for a common understanding, until there is no alternative to an agreement being forced from without upon the States concerned. The exclusion of Italy from the Commission would not reflect upon her character as a Great Power, for it would be due to the fact of her being a territorial claimant in this region. It must be supposed that on general lines an agreement has been reached between the Italian Government and the Powers of the Triple Entente regarding the terms on which Italy has thrown in her lot with the Allies. Any details that still remain to be decided might come within the proposed Commission's terms of reference, as the equity of any readjustment of Serbia's south-eastern frontier must depend to some extent on the amount of territory she receives on her north and western borders. But the question of Italo-Serbian relations stands in a different category from that of the relations between Roumania, Serbia, Greece, and Bulgaria. The points at issue between these States form the Balkan Question proper, which existed before the Great War, and which, unless settled now, will continue to trouble European diplomacy even after the defeat of German militarism. It has, therefore, unlike the Adriatic problem, an existence apart from territorial conquests which have yet to be made in this war. True, the prospect of such conquests is a strong incentive for a settlement; but the first link in the chain which must ultimately bind the four States together was forged when the Triple Entente made Serbia's cause its own and intervened to save her from Austro-Hungarian aggression. The importance of a final settlement of the Near Eastern Question justifies the application of special measures; the intricate nature of such a settlement calls for more elaborate investigation than can be made with the ordinary resources of the European Chancelleries. The appointment of a special commission, whose report would be available for the Balkan Governments, would satisfy each of the States concerned that its case had received adequate attention, while the enforcement of the Commission's findings by the authority of the Triple Entente would silence clamour in the different countries by removing it from the power of any political party to allege that the interests of the State had been sacrificed by unpatriotic concessions on the part of the Government in office. Finally, if the Commission could carry out its work promptly, it might be in time to influence the attitude of one or more States which remain neutral in action long after their sympathies have been given unreservedly to the Triple Entente.

JUSTICE IN EGYPT.

THE JUDICIAL ADVISER'S REPORT.—III.

(By Our Cairo Correspondent.)

Administration.

Under the section "Administration" Sir Malcolm McIlwraith deals with various matters of interest. He touches therein on the question of law reform, and states that the recent change in Egypt's political status must bring about far-reaching modifications in the judicial organisation of the country, and that "whenever it becomes possible to effect an amalgamation of the existing courts, some corresponding fusion of the existing Egyptian Codes, Mixed and Native, and considerable amendments in them, will evidently be also necessary." Under "Personnel" a well-merited tribute is paid to the two English judges, Mr. Sandars and Mr. Halton, who have replaced the two Germans as Presidents of the Court of Appeal and the Cairo Tribunal. The Adviser, in mentioning that the contracts of the German and Austrian judges have not been renewed, and that as a consequence the Mixed Courts are somewhat short-handed, states that measures are now under consideration for improving the situation in this respect. So far, however, only three of the six vacancies have been filled. And, in conclusion, Sir Malcolm records the serious loss which the Native Court of Appeal has sustained by the death of Mr. Wakeman Long, who "was one of the best judges who have sat in these courts, able, conscientious and hard-working, in spite of constant ill-health, and he was very much respected both by the public and his colleagues."

Legislation.

The various laws promulgated after submission to the Legislative Assembly, as also the decrees issued in connection with the situation created by the war, are all dealt with in some detail in the Judicial Adviser's report; but as they have at one time or another already been fully explained in these columns, there is no need to refer to them again. Sir Malcolm is of opinion that, "thanks to these prudent measures, a normal condition of affairs was restored without much difficulty," and that, despite the noisy declarations of traders keen on exploiting the facilities for payment accorded by the moratorium, "it will be seen from the statistics of bankruptcies and protests given by the Procureur-General of the Mixed Court . . . that if due allowance be made for the months preceding the resumption of normal business, the figures do not exceed the average of the last few years."

School of Law.

It is interesting to note that of the 262 students of the school who were examined in 1914, 235 passed, as against 218 out of 268 last year, and that whereas in previous years the larger percentage of failures in the fourth year has been on the English side, this year the tables were turned and the French side proved less successful. A sign of the times may also be seen in the fact that the two Scott prizes for the students obtaining the greatest number of marks in he Final Diploma examinations fell to two students on the English side. Sir Malcolm is inclined to think that the marked reduction in failures is due as much to diminished severity on the part of the examiners as to improvement in the quality of the candidates, and he warns the former against the tendency to excessive leniency.

The Judicial Adviser reverts to the unsatisfactory situation created by the external candidates at the annual examinations. As last year, the examiners of the three first years again complain of the bad state of preparation of these candidates. In view of the fact that a large number of external students do not intend to proceed to the Bar or the Bench, but desire to obtain the diploma so as to secure certain advantages in their administrative career, Sir Malcolm suggests that it would be preferable to organise at the Law School a course of studies intended to bestow the more advanced education that is sought, and at the same time a special knowledge of the subjects more directly bearing on the branch of the Administration in which entry is desired. He hopes "that before long it may be found possible to give effect to these recommendations."

As can be seen, the Judicial Adviser's report is as full of interest as it always has been; what makes its perusal particularly easy, and renders its statements all the more understandable in the sections that are not always an open book to the reader with the ordinary non-mathematical mind, is the remarkably clear and intelligent manner in which the divers statistics are set out. I referred to this feature last year, but in the report under review it is even more noticeable.

GORDON MEMORIAL COLLEGE.

The most recent report of the Gordon Memorial College at Khartoum which has just been issued brings the statement of affairs and accounts in connection with this institution up to the end of 1913. The report, unfortunately for the last time, is issued above the signature of Mr. James Currie, C.M.G., who for many years acted as Director of Education in the Sudan and as principal of the college. In his letter forwarding the report to the hon. secretary, Sir Reginald Wingate pays the following tribute to the retiring official, a tribute that will be endorsed by all who have been interested in the wonderful educational progress of the Sudan in the last fifteen years:—

"The number of schools established throughout this country which look for direction and inspiration to the institution, of which he has been for fifteen years the principal, testifies to the scope of his administrative genius. It is difficult to assess the value of his personal contribution to the notable results obtained, and the important influence that his wide knowledge, zeal, and enthusiasm exercised on all who were brought into contact with him. That the connection of Mr. Currie with the Gordon College has been preserved by his appointment to the governing body is a source of gratification to myself and to all those who have been witnesses of his energies and of his achievements."

Although signed and forwarded by Mr. Currie, the report was actually prepared by Mr. M. F. Simpson, who was acting Director pending the appointment of Mr. Crowfoot to the post. The record is in every way a satisfactory one. The general health of the students was good, and the examinations showed better results than in the previous year. The instructional workshops form one of the most important departments of the college, and we emphatically endorse Mr. Simpson's remarks in this connection:—

"It is desirable that these workshops should be more closely allied to the employing departments in Khartoum, who might take their 'improvers' mainly or only through the college, as this would in the end insure a higher level of craftmanship and improved general intelligence, besides making it easier for the college workshops to regulate their numbers according to probable demand."

Another point which seems to merit the immediate attention of the Government is that mentioned by Dr. Chalmers, director of the research laboratories, who urges the publication of a full report concerning this section. He points out that no full report has been issued since 1911, and that the "life of the laboratory depends upon its publication," and that without this "the position which Dr. Balfour made for the laboratory in the scientific world cannot possibly be maintained."

Research work is being carried steadily on, not only by actual members of the staff, but also by distinguished visitors from Europe, and several new discoveries have attended the investigations made in the bacteriological section regarding human diseases.

The Governor-General, in the letter to which we have alluded, makes the following reference to the loyalty of the Sudanese, loyalty that is due in no small measure to the influences of this educational body of which he writes:—

"Allusion is made to the frequent references in the native declarations of loyalty, received since the outbreak of the war, to the great benefit to the Sudanese of the college and the educational system connected therewith.

"I need hardly point out the value of this native recognition in its relation to the development, moral and material, of this country; and that such references, of the sincerity of which there can be no doubt, are a source of pride and gratification to all those who have been associated with the progress of education in the Sudan."

EIGHTEEN MONTHS AGO.

(December 30, 1913.)

A DIARY OF TRAVEL.

By Mary A. Poynter.

It is interesting to sail westward and southward again from Constantinople, with the Balkan War just over, and to note the changes that a few months have wrought to Turkish possessions. Events long threatening and slow in coming, came quickly at the last. Nor can one say that this period of rapid history-making is ended. Perhaps it has only just begun.

Constantinople, the recent storm-centre, we left with a peaceful sunset glow upon it, a glow that would transfigure even a city far less beautiful of outline, and one that will leave Constantinope warm in memory when the domes and minarets of other storied Eastern towns have long since lost their colour and faded into the sombre background of forgetfulness. There was a patriotic celebration in progress at the time, and flags afloat and processions of all sorts, even of little girls marching gravely through the streets accompanied by their veiled mothers and guardians. This celebration was in recognition of some anniversary connected with the founding of the Ottoman Empire.

Processions or large gatherings of any kind were not encouraged by Abdul Hamid, to say nothing of Moslem womenkind taking part in them, and this shows how far we (for are not we two a part of this Near East some nine years or more?) have journeyed toward freedom of movement since that Sultan was deposed.

The rather monotonous stretch of the sea of Marmora was sailed in the night, and in the early morning of December 31 our boat made its slow progress down the Dardanelles, through the narrow path among the mines left open for steamers to travel. Only just recently have the Turkish troops been withdrawn from Bulair on the northern side of these straits of the Hellespont. Once clear of the neighbourhood of mines our boat made quick passage down the coast, Mount Ida lifting mistily in the distance, and on the right Tenedos, of wooden horse renown, suggesting the proximity of old Troy somewhere in that misty mainland. On what was a few months ago the little undefended Turkish fort at Tenedos, the Greek flag now floats, and covetous eyes are turned to the broad lands across the narrow strip of water, as they may have looked from that same isle in the days when Helen first raised an acute Near Eastern Question. On all of Turkey's islands, bleak, rocky, and always unfilial, that face or are near the Dardanelles, the Navy of Greece has unfurled the Greek flag. Were Lucifer to fall from heaven to Lemnos isle at this moment I fancy he would find all the old landmarks unchanged in spite of strange flags and navies new and weird!

Mytilene (Lesbos), of all the isles of the Ægean, can be said to smile—that is, can smile after the green pleasant fashion of landscapes blessed with much verdure, with bright-roofed villages set amid olive groves, and with mountains hovering in the background protectingly, not threateningly. Sappho's birthplace is some distance from the town where the steamers cast anchor, but the magic of her name still seems to dominate the island.

> A slender maid to win the centuries,
> And keep them faithful to her memory.

The coins of her period, with the head of the poetess on one side and a lyre on the other, are still treasures to be picked up by collectors; and the poets and philosophers who were Sappho's contemporaries are read and revered by cultivated latter-day Greeks, who have the patriotism, at any rate, of the old Hellenes.

From the picturesque old Genoese fortifications at Mytilene, appropriated by the Turks some hundreds of years ago, the Greek flag floats at this moment, as it also floats from Chios, the neighbouring isle that claims the glory of being the birthplace of Homer. One knows that other places put forward this claim, but perhaps none with so good a chance of authenticity. Chios is a sterner, a less smiling isle than Mytilene from which to float a country's flag, but tradition makes it dear to the Greeks and worth the claiming and the holding.

Greece truly has been a great victor in the late struggle. She has won back what she claims was once hers. Will she be able to keep it? The last word has not been spoken, but what country is going to war with Greece in order to take these islands from her—islands largely Greek in population—simply to give them back to Turkey?

In the meantime the mainland of Asia Minor lies within an hour's distance, not dimly, but clearly outlined from Lesbos' isle. Mytilene commands strategically the entrance of the Gulf of Smyrna. Can Turkey return to the peaceful arts, resigning even nominal claim upon these islands, and live in amity with these uncomfortably near neighbours? The warships she is making such sacrifices to buy are certainly a threatening protest.

Smyrna's setting, its mountain amphitheatre background, can have changed little with the passing of the centuries, just as its name has come down together with those of Iconium and Damascus, with little change since the dawn of history. But there is little in the Smyrna of to-day, mostly a modern, bustling maritime town, to suggest the old city or cities that have occupied this site. Were one to go on to Ephesus, he must go inland and around a mountain in order to see the ruins of the once stately city of Diana. Once, we were told, one might have gone by sea, but the sea has long since receded, leaving the town to its loneliness far inland.

One thinks of railways as furnishing the most rapid means of transit, and yet it is possible to touch by boat, and not by swift boat either, three continents—Asia, Europe, and Africa—within a period of four days!

From Smyrna we steamed in a single night and part of a morning through the Ægean, passing many islands and Sunium point, with its lone, sightly temple, to the Piræus, the harbour of Athens. We took advantage of the several hours our boat was coaling to go up by electric train to Athens, stopping at the Theseum, one station short of the modern town. There, on leaving the station, the traveller is introduced at once to the "Glory that was Greece," and no matter how often one has made the pilgrimage (and we two were pilgrims of many visits standing) be it at dawn, at full mid-day, or at sunset time, summer or winter, one approaches always with a spirit of eagerness, of sure reward, that spot where the loftiest word in architecture was spoken so long ago. I wonder if anywhere the century plant grows more appropriately or blossoms more vigorously than along the winding road that leads up to the Acropolis.

Visiting that citadel, without passing through the town, one seems to be alone with old Athens. Violet-crowned that city was and still is. What if her mountains are bare, her valleys burned, her Parthenon a ruin—they still command the admiration of the world, and a world far larger, far more discerning and appreciative than the circumscribed area known as the world in the days of Pericles.

THE MONTENEGRIN RED CROSS AND RELIEF FUND.

The friendship between Great Britain and Montenegro is an old one, and the two peoples have long had a sincere regard for one another. The qualities of the Montenegrin character are just those which the average Briton heartily likes and admires, and King Nicholas has a warm place in British regard, which is due as much to the fact that his courage and strong common-sense are held to be typical of the people of the Black Mountain as to the force of character and warmness of heart that his worst enemies would not deny him. Thanks to the exertions of Sir Roper and Lady Parkington and the committee of influential ladies and gentlemen who work with them on the Montenegrin Red Cross and Relief Fund, the goodwill of the British people has been manifested in this hour of the little country's need in a very substantial form. That it is appreciated the following extract from the official Montenegrin journal, the *Glas Tzrnogortza*, serves to show:—

"We have received from the Montenegrin Red Cross and Relief Fund, London, large quantities of surgical and medical necessaries for our sick and wounded, and this has been followed by the hospital contingent above referred to. The Montenegrin Red Cross and Relief Fund has also sent us, through the intermediary of our Consul-General in London, 250,000 francs contributed by the large-hearted people of Great Britain, a welcome gift indeed in our trouble and distress. This amount is being carefully distributed as arranged between his Excellency the Count de Salis, the British Minister at Cettigne, and the Red Cross Society at Cettigne, amongst the many victims of the war, and the hapless refugees driven across our frontiers by the Austrians. The noble and charitable English nation has never ceased to testify her traditional sympathy for Montenegro, and at this moment their helping hand is doing much to dry the tears of our little ones and relieve the poverty stricken, the sick, and wounded. All honour and gratitude to the sons of Great Britain! Lady Roper Parkington (wife of our Consul-General at London), who is the founder of the Montenegrin Red Cross and Relief Fund, and who did so much for us during the Balkan War, has again been indefatigable in her efforts to assist, by collecting money, clothing, and medical necessaries, and we have already had splendid proof of her work on our behalf."

TANGIER TO TEHERAN.

A few days ago London was for a short time aflare with posters about the Italians landing at Rhodes—"Italians Capture an Island" was, I think, one of the most prominent. Most of the papers very quickly realised their *gaffe;* but not so the *Daily Chronicle.* The first paragraph of the column contributed by the gentleman who surveys life from "The Office Window" began with the statement:—

> "In landing on Rhodes the Italians are renewing a military acquaintance with the island which began in the thirteenth century, and under the sovereignty of Venice lasted for half a century."

And after touching lightly upon some of the salient features of the island's history, the writer concluded his note thus:—

> "Rhodes, as Great Britain is to-day, was at one time the greatest naval power in the world. It was Rome that shattered her power. Rome to-day is preparing to free her from the Turkish tyrant, who fixed himself upon the island in 1523, and has remained the master ever since."

Which almost tempts one to suggest that Rip van Winkle has taken to journalism.

***

I should hardly have thought that the Gallipoli Peninsula would appeal to anyone as a health resort just now. But, as a friend of mine remarked the other day, "we all have our weaknesses." I have just received a letter from a friend on one of the now famous "beaches," from which I quote a few sentences:—"This beach is highly unsafe, and I as nearly as possible qualified for an obituary notice this morning. Indeed, we have been under fire every day for three weeks—sometimes nearly all day. . . . In two days three shells burst within eight or nine feet of me. This morning shrapnel sang into my dug-out. But the *climate is nice and life is quite enjoyable.* . . . We get less news here than anywhere else—except perhaps in prison, so I can neither tell you anything important nor comment on what is happening." The italics are mine. But in spite of my correspondent's praise of the climate and the possibilities of enjoyment in that particular cove, I do not anticipate that the shipping companies will run excursions—for non-combatants, at least—thither, at any rate for the present.

***

I am glad to learn from a correspondent in Busreh that all the British in Baghdad are reported to be well, though it is bad news that there appears to be no immediate prospect of their being set at liberty just yet. My correspondent—who wrote on April 28—remarks:—"We had a fine fight a fortnight ago, ending, as all the world knows now (except probably 99 per cent. of the Turks and their allies) in the complete rout of the army that the Turks have been collecting for months past. Our men fought magnificently, and the final charge, which native Indian and British white troops made together, and which finished the whole business, was, I believe, as fine a thing as the British Army has ever done. We were greatly outnumbered and drove some of the finest troops in Turkey out of a strong position at the point of the bayonet. We had very heavy losses; but such a fine victory had to be paid for." My correspondent is level-headed and by no means given to "gush," and I take it that the charge he refers to was worthy of more notice than it has received. But for anything like a complete picture of the operations at the head of the Persian Gulf we shall, apparently, have to wait until the war is over. I only hope that when we get it full justice will be done to all the brave men who in that region have so splendidly upheld our best traditions.

***

I learn from a trustworthy source that there are—or were ten days ago—in Constantinople sixty nuns in prison or under trial by court-martial. Of these, twenty-eight are German subjects, eighteen are Austrian, and the remainder are Italian; and they are all charged with carrying on correspondence with sisters in France. One or two priests are also imprisoned on a similar charge. I cannot pretend to be surprised at this state of affairs; for the Turks are in a state of "nerves," and ready to imagine danger for themselves in everything. But since the Germans are now all-powerful in Constantinople, it is rather astonishing that their countrywomen should have fallen under suspicion. Perhaps the fact of their being nuns accounts for the unfortunate prisoners' plight.

***

That even this sorry business has its humorous side is shown by the following story, sent by the same correspondent who reports the imprisonment of the nuns:—"Some young ladies are arrested, and being shown some postcards, are asked if they recognised the handwriting. 'Yes.' Then, 'What does *this* mean?' referring to the two letters 'p.c.' The young ladies, terrified and confused for the moment, reply that they do not know; but the father comes to their assistance, and explains to the Chief of Police that the mystic symbols signify 'post card.' 'Oh, thank you!' says the Chief of Police, and discharges the young ladies, feeling much wiser, and—let us hope—relieved."

***

The report that the miraculous ikon of Tenos was brought to Athens in order to be placed in the sick-room of King Constantine reminds me of an instance of faith-healing connected with the pilgrimage church of that island, which came under my own notice some fifteen years or more ago. An English lady, resident at that time in Athens, was interested in the unhappy lot of a Greek youth subjected to what was known locally as demoniacal fits—I do not know whether the expression is allowed by the medical world. These fits were of repeated occurrence, and the youth had to be kept under constant supervision. Generally he was aware of their imminence, and his warning enabled his nurses to put him under physical restraint before the fit was actually upon him. If this were not done he became possessed of extraordinary strength, and broke everything within reach, even to iron bars. When visiting him one day my friend was warned by the nurses that he was suffering from hallucinations and was asked not to encourage him. The hallucinations turned out to be nothing more extravagant than a dream which the youth said he had had, telling him that he would be cured if he went to Tenos. Far from discouraging him, my friend made it possible for the poor youth to go to the island, where he went through the prescribed ritual, which, if my memory serves me, entailed little more than sleeping in the church, together, no doubt, with the payment of appropriate fees. He returned to all outward seeming cured, and certainly for the next two years was free from fits.

***

"Brat yé mio koïé viéré bio." I wonder how many of my readers know the meaning of that sentence. Translated it means: "A brother is always dear, whatever the religion may be." And that is a proverb of the Serbian people, to whom Europe owes such a large debt for their bravery and devotion during this present war. It is the wonderful unity of the Serbian race that has carried it all triumphantly through the horrors and anguish of these dark months of trial. "A brother is always dear," and while a brother remains to fight for, the Serbian man will fight. Perhaps the two extremes of the ambitions and purposes of war are best exemplified by Serbia and Germany; and there can be no question as to which is fighting on the side of light. The little Serbian nation struggled, and is struggling for the ideals that have come down to her in the songs of her bards, through the ages. Marko Kralyevitch, the deathless hero, was still sleeping in his mountain grotto, awaiting the hour of Serbian deliverance and unification. The people fight for his release; for the deliverance of their own people; for freedom and the right to live. Germany strikes because of the lust that is in her. Once, her people, too, cherished their dreams and their mysteries, but these have been crushed out blindly, leaving only a material ache for gain. No country can live when its ideals are either dead or transformed by greed. And so it is that when the people of Serbia return to their zadrougas, sad with loss, but victorious, the Prussian Empire may quite conceivably pass away, and its people divide to take up again the early lessons of their hills and rivers.

CORSAIR.

MONTENEGRO WELCOMES ITALY'S ACTION.

Sir J. Roper Parkinson, Consul-General for Montenegro, has received the following official telegram from Cettinje:—

The news of the declaration of war between Italy and Austria has been received throughout Montenegro with the greatest enthusiasm. The President of the Council of Ministers publicly read the following telegram addressed by H.M. the King of Italy to H.M. the King of Montenegro:—"At the supreme moment when the Italian Army commences its march with full confidence against our common enemy, I hasten to offer your Majesty and your brave people my most ardent wishes for our united victory."

A reply was immediately dispatched by His Majesty King Nicholas to H.M. the King of Italy as follows:—"At this solemn moment when your great country has drawn the sword against our common enemy, my heart and also my people's is filled with joy that henceforth we shall march shoulder to shoulder in the cause of liberty and justice."

Demonstrations were subsequently held outside the Legations of England, France, and Russia, the flags of our great Allies being enthusiastically cheered.

THE PRESS ON THE NEAR EAST.

Italy and the Balkans.

According to Mr. M. H. Donohoe, special correspondent of the *Daily Chronicle* in Rome, Bulgaria is contemplating an immediate change of policy in favour of one more in sympathy with the Quadruple Entente. The initiative taken by Italy is already causing the Turks to fear active intervention on the part of Bulgaria also:—

Turkey evidently fears Bulgarian intervention now that Italy has sided against Austria and Germany. For some days . . . the Turks, under the direction of German officers, have been reinforcing and strengthening their positions at Chatalja and Kirk Kilisse, in readiness for any sudden Bulgarian offensive movement.

The military correspondent of the same paper (June 1) considers Roumania's "partial mobilisation" is probably partial only in the sense that the full strength of the last line has not been called out. He continues:—

Altogether Roumania has approximately 600,000 men, trained or partially trained, at her disposal. Probably a striking force of at least 400,000 will have been concentrated by the moment that Roumania decides to enter the European arena. The date of that moment depends entirely upon the diplomatic success of the Allies at Sofia.

The *Daily Telegraph's* (June 1) own correspondent at Athens sends to his paper extracts from some of the vernacular Press, from which we quote. The *Nea Hemera* says that negotiations between Greece and the Entente Powers are suspended pending the anticipated return of Mr. Venizelos to power and also because of the King's illness. It considers that the co-operation of Greece is still desired in order to help in the operations at the Dardanelles:—

The journal comes to the conclusion that the question of Greece's withdrawal from neutrality will be decided by the Government as the result of the coming elections, but that no Greek Government can agree to concessions being given to Bulgaria, or to sending Greek troops to the Dardanelles before receiving certain indispensable guarantees.

The *Patris*, the organ of M. Venizelos, contradicts the idea that M. Venizelos would be disposed to agree to territorial concessions of any kind being given to Bulgaria.

The Dardanelles.

Colonel F. N. Maude, writing under the above heading in the *Contemporary Review*, shows himself to be a warm supporter of the policy that directed the Allies to a strong offensive against the Dardanelles. He does not minimise the difficulties which are to be surmounted before we reach Constantinople, but he considers the expedition to have been unavoidable, and one which will ultimately prove to be worth all the heavy sacrifices entailed. The gallantry and devotion of our over-seas forces he treats of in the following paragraph:—

In spite of the losses suffered, one welcomes them for the magnificent opportunity they afforded for the New Zealand and Australian troops to prove to the enemy and throughout the world that in superb dash and endurance they stand no whit behind the Canadians and their British comrades, who in Flanders wrung from a not too generous foe the warmest appreciation of their courage that I remember to have read in all military history.

The Balkan States and the War.

The sixth of the series of articles under the above heading, which appears in the *Quarterly Review* (May), deals for the most part with Bulgaria's position in relation to the other Balkan States. "The European conflict began in the Balkans," writes the author of this article, "it will probably end in the Balkans." He considers that, unless the distribution of territories in the Peninsula can be replaced by a "more reasonable and equitable arrangement in conformity with the principle of nationalities," a fresh war in the Balkans is inevitable. The writer finds the ultimate cause of all the trouble in the Treaty of Berlin, the proximate cause in the Treaty of Bucharest. Greece, Serbia, and Bulgaria especially, he regards as having suffered heavily at the close of the war of 1877-1878:—

The denial of Crete to Greece was a crime which entailed a heavy retribution. The appropriation of Bosnia and Herzegovina by Austria was a gross wrong to Serbia, which had twice taken up arms on Russia's side. But the treatment accorded to newly-born Bulgaria was the greatest crime of all. Scarcely two million Bulgarians received political independence under Turkish suzerainty; some 800,000 were given autonomy under a Turkish governor; while more than a million unhappy beings were handed back to Turkish tyranny with nothing to console them but the promise of reforms.

The seeds of future trouble were sown in Macedonia, and the writer dwells upon the doleful harvest that was reaped during the next three decades. But the disastrous consequences of the action of the Powers when they withdrew their officials from Macedonia at length drew the Christian races together, and the Balkan Alliance became a reality. In dealing with the various phases of Balkan diplomacy, the writer considers that the statesmanship of the victorious nations was unequal to the task before them when it became necessary to provide a reasonable division of the liberated regions. Bulgaria, hampered by a love of protracted bargaining, and meeting offers and demands with an astonishing lack of consideration, he regards as especially culpable. The following quotation shows, however, that the writer is at least impartial in his judgments:—

A nation must bear the consequences of the blunders of its rulers. But whether it should be condemned to permanent dismemberment as the penalty of a rash act is a question which may at least be argued. That question in the present case possesses more than an academic interest, inasmuch as the sentence passed upon Bulgaria by her enemies at the Conference of Bucharest will come up for revision before the reconstituted European Areopagus at the close of the great war.

The Neutral Balkan States.

In a leading article of exceptional interest the *Manchester Guardian* (May 31) turned again to the question of Balkan neutrality, and emphasised the importance of possible Balkan intervention at the present time. United intervention would complete a ring around the Germanic Empires, and mark the beginning of the end. The *Guardian* thinks that the Balkan States are holding back for three reasons. The first of these, uncertainty as to the final issue, is fast disappearing, and the action of Italy will serve to reassure the Balkans upon this point, but the second and the third reasons for hesitancy remain. The States are not yet certain what gains would accrue to them as the result of armed action on their part. Roumania has aspirations in Transylvania, she has also anxieties regarding access to the Mediterranean if Russia comes to Constantinople. The paper intimates the possibility of a commercial union in the Balkans which might satisfy Roumania regarding her outlet to the sea, and looks forward to the return of M. Venizelos when, it assumes, the Balkan league might be re-formed with Roumania as an added member. "The peculiar position of Bulgaria and her influence upon her immediate neighbours" is given as the third and more special reason for Balkan neutrality at the present moment.

Even if satisfied on every other point, Roumania would be very loath to enter the fight with Bulgaria on her flank as a possible enemy. . . . Now, what influences Bulgaria? The facts are well known. The Treaty of London gave her certain territory which was hers by the principle of nationality and in part also by the agreement of 1912 with Servia and Greece. The Treaty of Bucharest took away large portions of that territory, and, in addition, a slip of old Bulgarian land which passed to Roumania.

The *Guardian* goes on to admit that Bulgarian statesmen were responsible for her disappointment, but urges that even this fact cannot justify the unjust territorial transfer which followed the second Balkan war:—

Bulgaria ought to have that part of Macedonia which is inhabited by Bulgarians restored to her by Servia. She ought to have the slip south of the Dobrudscha restored to her by Roumania. On these terms amity and co-operation could be restored in the Balkans, and the European war would enter on a wholly new phase. Servia and Roumania can both afford to be just, for both stand to gain great accessions of territory and material strength.

Articles to Note.

"The Life and Poetry of Sheikh Haroun Abdullah; a Turkish Poet," by Henri M. Léon, M.A., Ph.D., etc., in the *Asiatic Review* (May).

"Austria-Hungary and Serbia," by G. M. Trevelyan; "The Operations at the Dardanelles," by H. Charles Woods; "The Future of Serbia," by "Politicus"; and "The Greek Testament," in the *Fortnightly Review* (June).

"The Growth of Mohammedan Doctrine," by John S. Banks, in the *London Quarterly Review* (April).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Sir John Jackson's lecture, the most salient points of which are reproduced on the following page, was a most interesting exposé of a somewhat intricate question. One or two points not mentioned elsewhere can be referred to here. Speaking as to the disposition of the natives of Mesopotamia to the English, the lecturer said that he had found the Arab sheikhs generally favourable to the English, while it was common knowledge that the Germans working in connection with the Baghdad railway were in anything but favour with the natives. For hundreds of years the country had been worse than misgoverned by the Turks, and to his personal knowledge not only people of Arab blood, but a large proportion of the more enlightened Ottoman subjects had expressed themselves as only anxious that the whole country should be brought under the influence and control of Great Britain. This brought Sir John to one of the most vital paragraphs in his lecture—so much so that I feel almost inclined to italicise it. He hoped, he said, "that the British Government and British public would not take a narrow view or be deterred by the prospect of larger responsibilities when dealing with the question." We shirked our responsibilities on one tragic occasion, and Gordon died a martyr's death at Khartoum. Let it never occur again.

***

As for the lecturer's reference to the Baghdad Railway, it would appear that he favours the German tracé through the Taurus to Constantinople, with an additional line linking up Mesopotamia with Syria, via Damascus and Beyrout. It seems to me that, with the line constructed from Baghdad to Aleppo, Alexandretta will become the natural port, and the Beyrout alternative will be superfluous. On the other hand, the suggestion that the line should be continued to the Persian Gulf, even as far south as Koweit, cannot be easily discussed. There are many, thoroughly acquainted with the region and far-sighted in their political views, who hold that in no case should the line reach the Gulf. As long as we are masters of the Gulf I do not think that it matters much from a strategic point of view whether the line stops at Baghdad or not, whereas, from a commercial standpoint, the railhead on the coast would be a distinct advantage. A much more dangerous proposition, to my thinking, is the trans-Persian project.

***

While on the subject of railways a few words anent the reported completion of the Jibuti-Adis Ababa line in Abyssinia will not be out of place, more particularly as its achievement is a signal victory of France over Germany. It is true that, at a given moment, we were opposed to the scheme for reasons which need not be gone into now. But the arch-intriguers against the French concession at the Court of the Emperor Menelik were the Germans, who strenuously endeavoured for years to create trouble in Abyssinia to their own advantage. Their Consuls in Adis Ababa were political agitators, neither more nor less, and one of them was such a notorious pan-German agitator that he had to be removed. I have forgotten his name, but that does not matter, because in a few years the very name of Germany will have been forgotten in Abyssinia.

***

I think it is significant that, as reported by *The Times* New York correspondent, the Rumanian Government has placed an urgent order for half a million pairs of boots with a factory at Binghampton, New York.

***

The Imperial Institute series of short public lectures on the British Empire is meeting with most gratifying success. The lectures are delivered by the Official Lecturer to the Imperial Institute, Dr. H. B. Gray, formerly headmaster of Bradfield College, and are chiefly explanatory of the resources of the British Dominions and Colonies and of India. They are delivered in the Exhibition Galleries of the Imperial Institute on Wednesdays at 3 p.m., and are illustrated by the exhibits of the resources of every country in the Empire which are to be seen there. On June 23 the lecture will include Cyprus and Malta.

***

The first annual meeting of the British Imperial Council of Commerce was held at the London Chamber of Commerce on Wednesday, Mr. Stanley Machin being in the chair. The attendance was a good one, but the aims and objects of the Imperial Council are better still. "Unity in Commerce and Unity in Defence" is the motto chosen as applicable to all the realms and dominions and dependencies owing allegiance to H.M. King George. In its essentials it strives at the organisation of all trade elements within the Empire and the sincere co-operation between all commercial factors therein. Only thus can we stand united and offer a bold front to the enemy.

***

The idea is a brilliant one, I was almost going to say a genial one. Its scope is tremendous, its possibilities vast, but: (1) it must be sympathetically viewed by any and all British Governments, including the Governments of the Dominions, must be consulted by them, given a more than platonic hearing whenever necessary, and its objects furthered whenever possible; (2) it must have the support of all British Chambers of Commerce within the Empire and in foreign lands; (3) it must have the backing of all business men, of financiers and big investors, of the Consular service abroad, and of legislation throughout the Empire; and (4) it must use the platform frequently. Legislation, in the sense of the protection of our vital commercial interests, will follow.

***

The above stipulations need some further explanatory remarks. As regards the first point, it has hitherto been noticeable how little those who rule us cared about the opinions of business men as opposed to those of barristers and sentimentalists. All this must be changed if, after the war is over, we are to continue to "capture" German trade, and the British Imperial Council of Commerce contains the germs of an organisation which can do more in this direction than any other institution I know of. An Imperial Parliament may still be somewhat Utopian, but an Imperial Commercial Parliament, under the auspices of the Council, seems to me to be a more immediate possibility. This brings me to the second point—namely, the backing required. The Chambers of Commerce must be the first to step into line, and I am astonished to see how few of the Chambers in foreign countries have responded to the call, and yet my experience in the past has been that the staunchest of Imperialists are Britons abroad, because they have more opportunities of viewing things with a broadmindedness rarely met with at home. I am even more than surprised to see that neither Egypt nor the Sudan, among our possessions beyond the seas, have become affiliated. Why not? Their aid is more essential now than ever, and I hope they will not linger.

***

The third point to which I wish to refer has to do with the financier and the big investor. He must toe the line just the same as the merchant and tradesman if complete success is to be achieved. Hitherto his aid has been lackadaisical; he has preferred high-sounding speculative investments, and has scorned industry, in which he differed from his German foe, with the results we know. It was mainly owing to the close co-operation between finance, trade, and industry in Germany, backed by a thoroughgoing Consular service, that German trade went up by leaps and bounds. The same policy must be adopted in the United Kingdom, and this is all the more necessary in view of the likelihood that, after the war, big speculative "booms" will be slow to mature. After the war I predict an era of intense quiet on the Stock Exchange, with, on the other hand, increased national investments in industries and trade. I pray that I may be right, because, if I am wrong, it will mean that our greatest assets and the backbone of our prosperity will again be starved, to the great benefit of our enemies.

***

However, the capitalization of industries and trade must not be restricted to the Empire. Admittedly finance must aid primarily in strengthening our Imperial situation by enabling us to throw the whole weight of our incalculable resources into the field. When that is done, the foreign markets must be wrenched from the enemy's grasp, but this, again, can only be achieved with the aid of capital. The industrialization of Serbia, alluded to elsewhere, is a case in point, and as such there are many others. The creation of commercial banks abroad (note the article on American finances on page 143), frequently urged in these columns, is another instance where capital can be of the greatest use to trade. These are all points which must be taken up by the Imperial Council if it is intended that Imperial trade, and not only British trade, is to be championed. Nevertheless, these are subjects for future deliberation, the home organization of our forces being the first step. But never let it be thought that the extension of the Council's sphere to foreign trade should only then begin, when the home organization is perfected. Both policies must be pursued simultaneously, the one conplementary to the other under the protection, let us hope, of an Imperial preferential tariff.

Engineering in Mesopotamia.

Sir John Jackson's Views.

On Friday last, at the Royal Institution (Mr. J. H. Balfour Browne presiding), Sir John Jackson, M.P., read a paper dealing with engineering problems of Mesopotamia and contiguous parts of the world. He said that first of all much needed to be done to improve the navigation of the Persian Gulf. This was most dangerous, particularly at its south-eastern end—where it was full of small islands only a little above the water level and sunken rocks in many cases only a few feet below the water level—but when he made his voyage from Bombay via Muskat to Mohammerah he had not seen a single lighthouse between Muskat and the head of the Gulf. Entering the Shatt-el-Arab the little steamer by which he travelled was impeded by a great sandbar, to cross which it had to go astern and practically ram its way through the sand for probably two or three feet in depth. Large steamers often had to lie exposed outside this bar and transfer their cargoes to small craft for delivery at Busreh; so that the removal of this obstruction to navigation was a first problem to be dealt with. He did not think dredging away of the bar would be sufficient without a proper system of training-walls to narrow the stream and increase its scour. An alternative and, he thought, a better plan would be to carry the Baghdad railway to Koweit and make the harbour there. Between Fao at the entrance of the Shatt-el-Arab and Gurnah at the junction of the Euphrates and Tigris the river could easily be made a good channel. At Mohammerah the river Karun branched off with a more or less good channel for river boats of not more than two or three feet draught up to Ahwaz, an old Persian town whence started the main caravan routes into Persia. The Anglo-Persian Oil Co., in which the British Government had acquired an interest of about £2,000,000, had to rely mainly on the Karun for its water transport. At Mohammerah ample provision should be made for the transfer to deep sea steamers of goods coming down stream in river boats; and at Busreh, unless a new harbour were made at Koweit, there should be proper port works—with ample warehouses and transit sheds for trans-shipment to ocean steamers, whether from the shallow draught craft coming down the river or for goods coming over the projected railway from Baghdad. From information at hand, the Euphrates was a much more awkward river to navigate than the Tigris. Although the very shallow paddle-wheel boat in which he had travelled to Baghdad had gone aground thirteen times on the voyage, he had no doubt that the river up to that point at any rate could be made quite easy for vessels of moderate draught. In view, however, of the very large quantity of water proposed to be taken from both rivers under the proposed irrigation schemes it was a question whether it would not be better more or less to neglect improving the navigation of the rivers and rely upon railways for transport. If the railways were constructed either before or simultaneously with the proposed irrigation works, they would afford a means of transport for materials, besides providing an immediate solution of the problem, which must arise as soon as the irrigation works were in operation, of how best to deal quickly and cheaply with the transport of cereals, fruits, and other products.

Baghdad Railway.

Referring to the construction by the Germans of the Ottoman Baghdad Railway to link the Anatolian Railway at Konia with Baghdad and the Persian Gulf, Sir John said: "Once we have peace and the Germans are out of control of Turkey this railway should be completed across the Taurus Mountains on to Baghdad and thence to Busreh at any rate, if not further on to Koweit. With the railway completed and a direct line of only some 450 miles in length from Baghdad through Damascus to Beyrout, huge trade would be opened for the whole of this Mesopotamia district and through Busreh to the Persian Gulf and the East.

Irrigation.

To have carried out in its entirety the great scheme got out by Sir William Willcocks for the Turkish Government would have involved an expenditure of some £18,000,000 or £20,000,000, and, as the financial position of Turkey would not permit of such large responsibilities being undertaken, it had been considered that the best plan would be to proceed bit by bit with the construction of the most urgent works. The first section of the scheme taken in hand was the erection of the great barrage across the Euphrates at Hindieh, and Sir John Jackson's firm had taken this work over in the month of February, 1911, and completed it by December 12, 1913. They also cleared out and deepened about 65 miles of the Hillah Canal and carried out other works at Felujah. At Habbania they had commenced the construction of the escape works, by which, through a canal cut from the Euphrates to a great depression in the ground, water could be held up and reserved until in the dry months it was passed into the river again.

Mesopotamia and India.

In the state of nature the country was almost desert, producing nothing but a scattered growth of brushwood, but wherever water could be supplied it was wonderfully fertile. On land easily irrigated that fringed the Shatt-el-Arab ten million palm trees grew, producing a crop of dates estimated as being worth £500,000 per annum. According to Sir William Willcocks's scheme the total area to be irrigated and put under cultivation would be not less than 3,500,000 acres; but there could be no doubt that any outlay upon these irrigation works would be most amply repaid, as had been the case with the great works of the Nile and of the Chenat Valley in India. According to the laws of Turkey, it was almost impossible for Christians or non-Turkish subjects to hold land; but under a new and more enlightened government, with reasonable inducements to capitalists with regard to the ownership of land and otherwise, this district, fitted as it was to be a granary of the world, would become as in ancient days one of the busiest and most productive parts of God's earth, with the further advantage of being able to give an outlet for the surplus population of India.

Hindieh Barrage.

The object of the Hindieh barrage was to restore the supply of water to the Hillah Canal, which passed near the ruins of Babylon and ran to Diwaniyeh, irrigating a district of immense agricultural value. The erection of the barrage had been completed in two and three-quarter years. No portion of it had been built in the original bed of the river. On account of the importance of careful examination of foundations it was decided to divert the river and have the dam wholly constructed in the dry. Only when it was entirely completed were the banks removed and the river allowed to flow in its new course. The barrage was built mainly of brickwork with a certain amount of cement concrete. The bricks were manufactured on the site, and on the whole were very good. The lime came down from the old quarries of Hit (some said the Hit of the Bible), in the neighbourhood from which no doubt the pitch came for the building of Noah's Ark. The barrage was 815 feet long and had 36 openings, each 16½ feet wide. There were two sluice gates in each opening, each gate being 8 feet high. At one side of the barrage a lock was built for the use of river craft: it was of a width of about 26 feet and a length of about 325 feet, divided by gates in the middle. The Hillah head regulator was very similar in construction to the main barrage, but had only six openings, each 9 feet 10 inches wide. The main barrage raised the ordinary summer level some 16 feet, allowing an ample supply of water to flow into the Hillah channel. The dam across the old river was constructed by a system learned from the Arabs. Brushwood was collected from many miles up stream and formed into what might be called great "sausages" hundreds of feet long. These were constructed on the river bank, rolled into the water, floated into position, and sunk by weights.

Among the special difficulties that were encountered was the absence of good fuel. There was, of course, the brushwood, but coal for the locomotives was brought from England. The Bedouin labourers, too, did not at first take kindly to European methods. They were accustomed to dig the earth with a kind of grocer's ladle, fill it into a bag, and then carry this bag to the bank, where the earth was tipped. If the ground happened to be wet this work gave the labourer rheumatism. It occurred to Sir John that it would be much better if wheelbarrows pushed along planks were used, in the manner of western Europe. Wheelbarrows and planks were accordingly obtained, but it was not easy to get the Bedouin to accept the innovation, one of them when advised upon the subject replied as follows: "You people from the west, why, a thousand years ago no one knew you; my people have been here since before the time of Moses. Are you going to teach me how to carry earth?" However, notwithstanding protests, the superiority of the new method caused it to be adopted.

BUYERS' GUIDE.

British Industries Fair.

In connection with our Editorial Notes on the above subject two weeks ago, the follow- extracts from the official summary published by the *Board of Trade Journal* will be of interest to Near Eastern buyers as showing how completely the British manufacturer can adapt himself to new conditions, and how able he is to produce fancy and other articles as good as, if not better than, those produced hitherto almost exclusively by the world's great "dumpers" of inferior goods, Austria and Germany. Moreover, and as regards more particularly the Near Eastern market, the exhibition proves conclusively that import merchants of the goods exhibited need no longer believe the statements made by German travellers that we are unable to compete with them. We can, and not only compete with them, but outdo them both as regards originality of design and thoroughness of workmanship.

The effort of the Board of Trade (in organising the exhibition) was frankly experimental. It was promoted at this juncture for the purpose of stimulating the imagination of British manufacturers, of arousing in them a live interest in the prevailing opportunities for broadening the basis of their manufactures and for modifying the form and design of their wares so as to appeal more sympathetically to the taste of people in remote parts who have not been cradled under the grey skies of Great Britain. How far this International Exhibition has broken down the traditional conservatism of British manufacturers cannot of course be accurately measured, but there is strong presumptive evidence that a great deal of good work has been accomplished in this direction. There were instances of a keen desire on the part of manufacturers to appoint agents abroad, to send out travellers to foreign countries, and to deliver goods at destination on terms satisfactory to buyers, whilst some firms displayed neat catalogues printed in various languages. In spite of the fact that manufacturers are naturally prevented at present from opening up foreign trade to any very large extent owing to the abnormal conditions prevailing, the experience gained in meeting a large number of bonâ fide buyers from practically every quarter of the globe has been invaluable to exhibitors, inasmuch as first-hand knowledge of colonial and foreign requirements has set them thinking about the almost unlimited opportunities which exist for developing colonial and foreign trade if they will only go to the trouble of studying local conditions and predilections in a broad and sympathetic spirit.

Toys.

It was evident from a cursory examination of the various stands in this section that British manufacturers are rapidly awakening to the immense opportunities for developing the manufacture of toys to take the place of the enormous trade in these articles which has previously been so well controlled by Germany. It was interesting to observe that a large quantity of toys, which during the last eight or nine months have formed the subject of enquiry at the office of the Commercial Intelligence Branch, were represented at the Fair. In the manufacture of the better class toys, British firms are, of course, well able to hold their own, but it is to be sincerely hoped that great efforts will be made to wrest from Germany the practical monopoly in the manufacture of the cheapest type of toys. It appeared as if some difficulty had been experienced in obtaining some of the materials required for dolls, such as heads, hair, eyes, stockings and shoes, and it may be presumed that there is a good trade to be done in such "properties," if only firms can be induced to assume the initiative.

Fancy Goods.

The better classes of British-made goods were fairly prominent in this Section, and whilst British makers have little to fear in the way of competition so far as high-priced goods are concerned, it is greatly to be hoped that attention will be directed by manufacturers to those cheaper forms of leather, metal and wood articles which have been so conspicuously exploited in the past by German firms. It is certain that a very large business indeed can be done in these articles, both in the United Kingdom and abroad. Ladies' handbags are especially in great demand, and a very good export trade can undoubtedly be done by enterprising firms who will take up the manufacture of cheap leather goods, etc. There was an excellent display of substitutes for the well-known casein products.

Glass.

Evidence of the enterprise of British manufacturers since the war broke out was clearly shown in this section. Amongst the most interesting exhibits were those of laboratory glass ware, miners' lamp-glasses, and electric light bulbs. The laboratory glass ware was of particular interest owing to the fact that practically all the glass ware of this type had previously been imported from Germany. Since the war broke out firms in this country have experimented with this class of ware and have produced an article which under the severest tests is said to surpass the German type. A representative selection of lighting glass was also exhibited. This trade has recently suffered severely from German competition in cheaper productions of British designs. In many cases manufacturers have supplemented their own lines since the war by the addition of articles similar to those produced in Germany and Austria.

Crystal Goods.

The majority of the exhibits in this section consisted of high-class crystal goods, both table and decorative. In this department of the industry British manufacturers do not fear competition, since British production of fine glassware is everywhere recognised as the best in the world. The cheaper lines of table ware, particularly pressed and moulded goods, were, however, represented. The abnormal conditions which exist in the glass trade at the present time, such as lack of material and labour, make it difficult for manufacturers to take orders for very large quantities of any kind of glass, and hamper their developing, as they are in many cases prepared to develop, the production of articles which would satisfy the demand previously supplied from Germany. If prices quoted were relatively high, this is due, in some measure at least, to the abnormal conditions now prevailing.

Cutlery, Silver, Electro-plate, etc.

The exhibits of these goods were thoroughly representative of what is being done by manufacturers in the United Kingdom to supply the markets both at home and abroad. While they were illustrative of the high quality and finish for which British goods of this class have always been famous, they also showed that our manufacturers are capable of turning out those articles which have generally been considered as German specialities. It is to this latter feature of the exhibits that particular attention is directed, as being of most interest in connection with the trade campaign.

With regard to knives, there is ample evidence that the requirements of all markets are being studied, and it is safe to say that there is no important market in the world into which British knives do not enter. One is forced to the conclusion that our manufacturers ought, in the immediate future, to secure more and more of the world's trade. Exhibits of special interest were the pocket knives with handles of iron in imitation of horn, such as are in demand for trade with the natives of Africa and other countries, for which there should be a large demand when it is generally known that they are to be obtained in this country at competitive prices. Articles which should win their way into all markets are the rustless table knives which are not even tarnished by vinegar. The solid-handled table knives, such as are used in hotels, cafés, etc., should also be in great demand. Mention must also be made of the combination knife, fork and spoon.

As for silver, electro-plate, and similar goods, it is hardly necessary to draw attention to the fact that the exhibits showed the excellent work which is being done now, as in the past, by British makers; but the fact that electro-plate with a dull finish, of the Würtemberg type, is now being successfully made in this country should be of interest to those who have orders from abroad for this kind of ware. Noteworthy, too, are the cheap cigarette cases of high finish which were exhibited.

There was one instance of a firm who formerly exported a certain class of knife through Hamburg to South America, but were unable to supply it after the outbreak of the war, as they were unaware of the market for which their goods were intended. As a result of the Fair, however, they succeeded in getting into touch with the actual buyers in South America.

China and Earthenware.

A very interesting exhibit in this section was one of laboratory porcelain of the type of Berlin porcelain, which has been evolved in London since the war broke out. This porcelain is of very high quality and can be sold at competitive prices. The general chinaware and earthenware exhibits at the British Industries Fair were remarkably good in the highest and most expensive class of tea, breakfast and dessert ware and ornamentals, and also in ware for hospitals, institutions, etc. The high-class ware exhibited at the Fair showed that the British manufacturer is still able to turn out the best china and earthenware in the world, and from the artistic point of view there is nothing lacking in the design of these goods.

The principles of manufacture as employed in Germany differ considerably from those employed in the United Kingdom. This is particularly to be noted in the production in Germany of hard paste porcelain, which has keenly competed with British earthenware.

That orders could have been taken in very much larger volume than firms are at present able to produce shows that British ware can still meet to a very large extent the existing demand. It remains to be seen how far they will be able to cope with the demand for the particular variety of article which Germany has supplied. In some cases goods were shown which sell at prices with which even German firms have been unable to compete, and it is gratifying at the same time to notice that the attempt to turn out cheap and artistic material is being made by many firms. The tiles shown at the Fair were excellent, and should apparently compete effectively in home and foreign markets with the German production.

Paper and Printing.

The few pure paper makers who exhibited were unanimous in stating that they had, rather to their surprise, derived great benefit from the Fair. They had discovered that many of their specialities were unknown to many of their customers. This peculiar fact has been noted in various industries, from time to time, by the Commercial Intelligence Branch of the Board of Trade, and, with regard to this point, it is desirable that British manufacturers should make sure that their specialities are known as widely as possible, by giving full particulars of them to the Branch.

The printing exhibits, viewed from the standpoint of competition with Germany and Austria-Hungary, were too good. Practically every stand showed really fine examples of high-class colour printing, and this part of the exhibition in general effectiveness disproved the theory prevailing several years ago that the climate of England would not permit this class of work to be done here, and that for high-class printing one had to resort to the German printer. High-class catalogues were also in evidence. The photogravure work shown was of high quality, and could not have been bettered by any German firms.

As an exhibition of printing for the British firms the Fair was indeed a success, but a greater attempt ought to be made by the British printer to compete with the German in the cheaper three-coloured catalogues. Probably most of the firms exhibiting who can, and do, turn out really high-class work would refuse to take up this particular line on account of the danger of thereby lowering their reputation for higher class work; but it seems as if there ought to be a good opening for some of the small letterpress firms if they would only take up this work.

Produce Report.

LONDON, June 3.

Currants.

There are no arrivals to report, but the s.s. "Princesse Clementine" and the s.s. "Salermo." are loading. The market is now practically cleared of all first-hands lots and business is, therefore, somewhat quiet. Further sales of Pyrgos have been made to arrive and prices are again higher. It is impossible to buy better qualities from Greece, as stocks there are now completely cleared.

In Liverpool, the s.s. "Britannia," which arrived with 1,500 tons for the market, has just started to discharge. In the meantime business is at a standstill, owing to lack of stock. The tendency is for higher prices all round.

Sultanas.

There is only one small arrival of about 9,000 boxes to record, and, so far as can be gathered, there is very little more to come. A large business has again taken place during the week both on account of trade and speculative buyers. A further rise of 1s. per cwt. has taken place, and with the exceptionally large consumptive demand it is generally expected that prices will go higher.

In Liverpool there has been no trade to report, but a brisk demand is expected.

Figs.

There is only a small business passing in London, while in Liverpool the market is now cleared of all stocks in first hands.

Seeds.

Linseed is quiet, but barely steady. London—Calcutta spot sold 56s. and afloat quoted also 56s. Rapeseed is firm and sparing offered. Pure Guzerat May-June is quoted 56s. 6d. Cottonseed is firm, but quiet. London-Egyptian spot is quoted £8 15s., June £9 3s. 9d. per ton. Rangoon beans command full rates, both for lots on the spot and to come forward.

Oils.

Linseed oil is dearer, but at the close the market is quiet. On the spot pipes £29 10s., barrels £30 15s., month and June-August £30 15s., September-December £31 15s. Rape-oil, brown and refined are unaltered, but Japan is lower. Cotton oil is firm. Crude, on the spot pipes £31; refined on the spot, pale, pipes £35 5s. to £33 10s. Sweet, barrels £37 to £39.

COTTON MARKET.

(FROM OUR OWN CORRESPONDENT.)

LIVERPOOL, June 3.

Messrs. Reynolds and Gibson report:—

Liverpool.

Egyptian Spot.—Since the last report the market has been quiet with a moderate general demand, but a fair business is reported. Prices have ruled in buyers' favour, and quotations of good and below in brown, brown upper, and Nubari, and fine and extra fine Joannovitch, Sakellarides and Abassi are reduced 10 points. The sales are estimated at 1,800 bales, as against 1,100 last week.

Manchester.

The market took full advantage of the Whitsuntide holiday, and during the past fortnight the exchange has only been open a few days. Interest has centred mainly upon progress of the war, on the efforts that are being made to prevent a general lock-out in the trade, and on the publication of the first instalment of the Washington Agricultural Bureau reports showing conditions of American crop up to May 26. From none of these important factors has the trade derived any encouragement. Egyptian Yarns.—The condition of this market is deplorable.

The Industrialisation of Serbia.

Belgrade the Chicago of the Balkans.

The following are extracts from an article which appears in the June number of *Kelly's Monthly Trade Review*:—

Serbia, our ally, is about to cast off German, Austro-Hungarian, and Turkish trade and financial influence, and an important field of industrial expansion may, with enterprise, evolve. Her natural resources and conditions should now attract capital and enterprise from without, and big businesses that carry money may profitably be developed. But business will have to be done with an intimate knowledge of local conditions, if it is to meet with success.

Physically, Serbia is a country of uplands and highlands save in the valleys of the important rivers. She is essentially an agricultural country with a pastoral people. Her leading industries, apart from agriculture, have been meat-packing, flour-milling, brewing, and weaving of hemp, flax, and wool. Iron foundries, potteries, sugar, tobacco, and celluloid factories exist, but the whole of the industrial establishments in Serbia do not number seventy. Yet in Rumania, Bulgaria, and Turkey—contiguous countries—there are tangible returns on manufactures and mining.

Small Holdings.

The conditions of Serbia are peculiar but not impossible. Of her population of 2,800,000, approximately 2,250,000 work on the soil. This latter figure includes 245,000 small owners of from 12 to 130 acres. There are nearly 180,000 Serbian farms of less than fifteen acres. In addition, there are big farming areas owned by the State and by the various communes. No country in the world is more closely sub-divided for agriculture; none so easily capable of State organization. These thousands of small farming areas are in great part inadequately and lethargically worked. Crops, excellent in quality, are raised—potatoes, tobacco, maize, oats, beetroot, wheat, hemp, and legumes; 500,000 bushels of maize and 400,000 bushels of wheat are normal harvests; 600,000 tons of plums were raised in a year from 375,000 acres. Serbia is a rich field for apples, pears, and nuts. The mulberry-tree flourishes, and the industry of silkworm-breeding is well established. Nearly a tenth of the country is forest land, of which the communes own 1,610,000 acres, the State 1,300,000 acres, individuals 743,000 acres, and religious establishments 40,000 acres. Austrian oak, beech, and resinous woods grow in abundance. Serbia in a year exported nearly 1,133,000 cubic feet of fuel wood and unsawn timber and 13,600 tons of sawn timber.

Live Stock.

As to live-stock, the Serbian Ministry of Agriculture has established a State breeding stud and an institution for training live-stock breeders. There is a permanent commission dealing with all questions of cattle-breeding. Flesh-meat is a growing export, chiefly to Austria-Hungary and the contiguous Balkan States. There is little dairy-farming, cattle being raised for draught and slaughter purposes. There is a permanent horse-breeding establishment at Dobricevo. Large flocks of sheep and goats are raised, of which less than one-third are exported. Serbia's stock of pigs, rarely below 1,000,000, include the pure white, the Macva and the Moravian black; but white Yorkshires and Berkshires have been introduced with success. Maize, the natural crop of Serbia and an excellent pig-food, is raised in sufficiently large quantities cheaply. Upwards of 35,000 live pigs and quantities of salted pork, ham, and bacon are exported annually. Poultry-breeding is an important industry, and the exports of poultry and poultry products, comparatively speaking, considerable.

Such being the natural conditions, Serbia has stood almost still in external trade during recent years, both as to imports and exports. The former include cotton and wool fabrics, leather, sugar, iron, and machinery chiefly; the latter, named in part already, are chiefly to Austria, Germany, and Turkey. These countries are "off the map" for Serbia, at any rate, for a considerable period. Whence will come the bulk of her imports and whither go her important exports?

Industry and Labour.

Serbia must be approached from the agricultural standpoint. Attempts to get Serbians to work in mines or factories hitherto have almost failed. Seventeen years ago the Serbian Government passed a law to grant concessions on favourable terms to foreign capitalists willing to promote mining and manufactures in the country. Political reasons had much to do with the failure of that invitation. To take advantage of a prospect of industrialisation labour as well as capital will have to be introduced. Once industralise agriculture in Serbia with British or other foreign capital under the direction of the State, and profit must accrue with enormous advantages to the Serbians themselves. While lethargic and pastoral the Serbians are not wholly asleep. In twenty years 900 co-operative credit banks have been formed in that country with 50,000 individual members. Agricultural exports have increased almost 100 per cent. in twenty years, although but little during the last four or five years. The Ministry of Agriculture supports by grants viticulture, fruit-growing, breeding of silk-worms, stock-breeding, cheese-making, and poultry-rearing.

It is recognized by the Serbian Government that the whole level of agricultural method and result needs raising and improving. Serbians require organisation. British or foreign capital is needed, directed from such important centres as Belgrade, Nish, Pozharevatz, Vranya, etc. The nature and habits of a whole nation cannot be ripped up and transplanted in a day, but they can be improved and developed on existing foundations. Serbia can be industrialised by capital through her agriculture. She can yield trading results of tangible importance through her present meagre manufactures and mining only if labour as well as capital are introduced.

Agricultural Machinery.

Industrialise her agriculture and, taking a wide view, Belgrade might become the Chicago of Central Europe, the gathering-ground of vast flocks, herds, and crops, not alone of Serbia, but of the Balkan States and Hungary. Industrialize her agriculture and her communications will automatically be improved and an enormous demand for rails, engines, bridges, and rolling-stock would follow. Cheap agricultural machinery of every kind, harness, stable and other furnishings, the equipment of pig and cattle abattoirs, sawmill and flour-mill machinery, and agricultural implements would be needed which Great Britain could well supply. With the introduction of better tools and quicker transit the whole level of agriculture as an industry in Serbia would be raised.

Scientific Improvements.

Raised from within, five bushels of maize, five of wheat, five of barley, five tons of vegetables, five beetroots, five fruit trees, five silk-cocoons, five pigs, five cattle, five horses, and five bottles of wine, where one of each of these is now produced, would solve Serbia's most pressing problem. She needs a decided extension of horse, cattle, sheep, and pig-breeding. She urgently requires the organisation and direction of similar industries—crop-producing, timber-sawing, cheese-making, and the like. She wants scientific treatment of exports and quicker and cheaper transit. In view of the splendid live material in the country the potted-meat industry and the manufacture of pork foods could easily be brought to perfection.

Belgrade as the Chicago of Europe, and Serbia as an industrialised country pouring forth with energy into the British and other foreign markets the best from her fruitful fields, is a business proposition. Active co-ordination and co-operation between British merchants, traders, and capitalists, and the Serbian Government will effect it to the lasting advantage of the Balkan kingdom.

TRADE OF PATRAS.

The following information is from the report by H.M. Consul at Piræus (Mr. W. J. Norcop) on the trade of that district in 1914, which will shortly be issued:—

The commission usually paid to agents in the Piræus district for the sale of goods, such as yarns and piece-goods (of cotton, wool, flax, etc.) is as follows:—Manchester and Bradford goods, 1 to 1½ per cent.; machinery motor-cars, 5 to 10 per cent. The commission is due only on goods actually paid for, and applies to all orders, whether placed through the agent or direct. A local agent has no responsibility unless he acts contrary to instructions. The credit usually given by foreign firms through agents is four to six months, and a discount of 2½ per cent. is usually allowed for cash payments. Prompt and punctual delivery of orders is very essential, as local merchants have the habit of waiting to the last moments to give orders, and should there be any delay in delivery, acceptance is often refused. Commission business is in the hands of persons who are energetic, but some do not present the necessary guarantees of solvency. For this reason H.M. Consul thinks that the following measures should be taken:—

(1) Agents should be entrusted with the collection of sums of money in special instances only, and when they can furnish sufficient guarantees.

(2) When orders are dispatched, the firm should ask that the orders be signed by the merchant who orders the goods, as otherwise it is easy for disputes to arise as to quality, etc.

(3) Bills of lading should be sent through a bank, to be delivered on payment of the goods, or in exchange for a draft signed by the merchant. In the latter instance, and in case of non-payment, proceedings could be taken, and also application could be made to the court to make the merchant bankrupt.

As a general rule, the above steps should be taken; there are, however, commission agents in whom full confidence can be placed.

Commercial travellers are not required to go through any formalities in order to be able legally to exercise their calling in Greece, nor are they required to take out a licence, provided they come and go merely as bearers and receivers of orders. Agents of British firms resident and trading in Greece are, however, required to take out trade licences. Certificates of origin are not required on the importation of British goods into Greece.

Import duties in Greece are levied on the net weight of merchandise, which is generally calculated by deducting from the gross weight a certain fixed percentage for tare, varying according to the nature of the packing and the kind of merchandise. If, however, the consignee is dissatisfied with the scheduled tare allowance, he may have the actual net weight ascertained by means of unpacking and weighing the goods, provided that he indicates his desire in the Customs declaration. In the case of delicate or fragile goods, or in cases where the process of separating goods from their wrappers and packings is inconvenient (*e.g.*, flowers, ornamental feathers, silk lace, fine trimmings, glassware), the net weight is ascertained by weighing a part only of the consignment and estimating the net weight of the whole consignment from the result. For this purpose the Customs officers select, empty, and weigh one or more packages of the same weight and size.

In the case of certain goods the dutiable weight includes the weight of the immediate receptacles and packing as follows:—Edible farinaceous products (sago, tapioca, etc.), in paper, glass, thin wood, or tinplate; mineral waters, medicaments, and ready-made clothes of linen for women and girls, in ordinary and common packing of all kinds; sewing thread, white or coloured, in paper receptacles or packages; steel sewing needles, in ordinary or common packages or cases; opera glasses, knives, forks, and razors, with handles (not of iron), in ordinary and common cases; medical syrups, in glass, stoneware, or china vessels; liquid perfumery, in glass, stoneware, or china vessels or in leather receptacles; non-liquid perfumery, in stuff sachets; goods of all kinds, in paper (except cardboard or fancy paper), with certain exceptions.

Trade Notes.

Egypt.

The *Journal Officiel* of April 29 contains the following revised Tariff valuations for use in assessing Customs duties on coal and coke imported into Egypt, with effect from May 1 to June 30, 1915:—

Category.	Valuation per ton of 1,000 kilogrammes (2,204 lbs.).*
	£E.
South Wales coal—Cardiff, Newport, Swansea, etc.	3·100
Newcastle, Sunderland, and other North Country coal, South African and Indian	2·800
Lancashire, Yorkshire, North Wales and Scotland	2·530
Gas coal (Newcastle) for use in gas factories	2·500
Briquettes (patent fuel), from Swansea and Scotland	2·950
Dust slack coal and small coal of any origin, also rubbly culm and duff (excluding nuts)	2·200
Foundry coke and Cannel coal	3·500
Gas coke of any origin, including chemical coke	3·150
American, Belgian, French, and German coal	3·100
Anthracite coal of any origin	2·950

* Duty is leviable on these valuations at the rate of 4 per cent.

It is also stated that, by reason of the present circumstances, the reduction of 25 millièmes per ton on coal imported via Port Said, or in transit to that port, is suspended.

Cyprus.

The Chief Collector of Customs at Larnaca reports that a firm of merchants and general agents in Larnaca and Nicosia, with a branch in Manchester, desires to secure the sole representation in the island of United Kingdom manufacturers of glassware, iron, paints, provisions, etc.; also to purchase drapery, etc., for own account. Contrary to the usual Cyprus custom, all the firm's business is carried out on a cash basis, and payments for all goods will be made, if desired, through the Manchester branch of the firm. United Kingdom manufacturers and exporters of the goods mentioned should apply, in the first instance, to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., for the name and address of the inquirer in Cyprus and in Manchester. Further communications regarding the inquiry should be addressed to the Chief Collector of Customs, Larnaca, Cyprus.

Morocco.

With reference to a call for tenders by the Moroccan Adjudications Commission for paving the Zokko-el-Arba de Sidi-Aïssa road, near Alcazar, H.M. Agent and Consul-General at Tangier reports that the contract has been awarded, at a reduction of ½ per cent. on the estimated cost, to a Spanish subject, whose name and address may be obtained by United Kingdom exporters of paving material on application to the Commercial Intelligence Branch of the Board of Trade.

Greece.

The Patras market for staves used in the manufacture of barrels for shipping currants is very depleted, Austria having hitherto been the supplier. Lately the Austrian Government has laid an embargo upon the exportation of lumber and woods.

Roumania.

The Board of Trade are in receipt, through the Foreign Office, of information from H.M. Minister at Bucharest to the effect that the exportation of the undermentioned articles from Roumania has been prohibited:—Horsehair, pigs' bristles, aeroplanes and accessories thereof, including screws and motors, and all materials used for water-proofing wings.

SUDAN GAME EXPORTS.

The Sudan *Government Gazette* for April 17, 1915, contains an Ordinance (No. 3 of 1915) made by the Governor-General in Council on March 30, which amends the "Preservation of Wild Animals Ordinances of 1908 and 1911" by enabling the Governor-General to prohibit the export from the Sudan of such wild animals or birds or any trophies, parts, or eggs of any wild animals and birds as may be thought desirable. The same issue contains an Order made under the provisions of the Preservation of Wild Animals Ordinances of 1911 and 1915 absolutely prohibiting the exportation from the Sudan of the hides and skins of all animals included in the 2nd Schedule, Part I., of the Order issued under the "Preservation of Wild Animals Ordinance, 1908," as amended by the Order published in the *Sudan Gazette*, No. 186, of October 11, 1910, viz.:—Wild ass; zebra; rhinoceros from the provinces of Kassala and Sennar; Miss Gray's water buck; white-eared cob and all other species of cob; kodu; Jackson's hartebeest; oryx leucoryx; ibex; water buck; roan antelope; tora hartebeest; oryx beisa; eland; giraffe; and, in addition, the following animals:—Buffalo, tiang, and ariel.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continues to receive a very large number of inquiries for the names of sellers or buyers of articles.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and lists are prepared and circulated of articles which inquirers desire (a) to purchase, and (b) to sell. List 23 is now ready, and may be obtained by United Kingdom manufacturers and traders.

Engineering Notes.

Farm Machinery in the Near East.

American engineering firms, during the last eight or nine months, have been doing very good business in the Near East in modern ploughing machinery, and agricultural implements generally, and according to recent reports many urgent orders are now being booked by the same for harvesters and threshing machines. It must be admitted, however, that these firms, apart from the opportunities which the war afforded them, deserved the success they achieved in those markets for, as we have stated at various times in these columns, they have systematically studied for years the natural, as well as the economic and agricultural conditions of the various localities, and the most suitable class of machinery. They have sent for that purpose not clerk-travellers to sell from the catalogue, but expert agricultural engineers to see what is wanted, to guide buyers in their choice, and to sell what in their technical experience they think is suitable.

Small Type of Machinery Needed.

Large ploughing tractors, or steam-engine-ploughing sets were introduced from England, and used in the Near East many years ago, but the sale of such expensive machinery is very limited. Only large landowners can afford them; but the majority of farmers—and in the Near East seven-tenths of land proprietors are small farmers—require a small type of machine. A small ploughing machine, for instance, with cultivating tools operated direct from the engine instead of being hauled by a tractor, is in demand, more particularly if it could be suited for use between trees in orchards and vineyards, and between rows of root and ground crops in market garden plantations, as well as in the stubble of the open field. Such a contrivance would appeal to every farmer, small or large, in the Near East. If we are not mistaken, something similar has already been successfully tried in England, but there is no record that it has been introduced to the farmer in the East. The light weight of these small machines is a great advantage, and made in America cost between £100 to £120 each, whereas the British made one, referred to above, cost under £100. As regards harvesters we have frequently stated in these notes what class and type of machine is required in the Near East. It is time now for British makers, *who can deliver promptly,* to secure orders which are so urgently required in those markets.

Wood-working Machinery.

With the total blockade of the Adriatic Sea by Italy, the permission recently given by the Austrian Government for the exportation of timber (box wood) to Greece is valueless, and the latter country is faced with a very difficult problem. The currant season is approaching, and millions of boxes are required for the exportation of the fruit. The boxes are made to contain 1 cwt., ½ cwt., and ¼ cwt. of currants, and hitherto the box wood was supplied by Austria from Fiume and other ports in the Adriatic. It was sent in lengths of 10 ft. to 12 ft., 7-16 ins. to ⅜ in. thick. At this time of year, and until August and September, the seaports of Patras, Pyrgos, and Vostizza have the appearance of a huge fair in which carpenters with their assistants can be seen in every available space of ground planing and cutting boards, nailing and piling up boxes with an astonishing speed that would scandalize trade unionists, while cart-loads of timber and huge piles of empty boxes are moved about in every direction. It is very probable that there will be no such "hustling" in carpentry this year, for the only remaining sources for obtaining wood, after the closing of the Adriatic and the Dardanelles, are the forests in Acarnania, Epirus and, perhaps, Macedonia, from where a considerable quantity of large square logs can be obtained and cut into planks and boards by hand-saws, or the few existing power-frame saws in Patras, Piraeus, and elsewhere. The wood is rather tough and not so white as the Austro-Hungarian or Roumanian, but it answers the purpose. However, unless a fair supply of timber has been secured from Austria before the blockade of the Adriatic it will be very difficult, with the available supply of native timber and the existing means of turning it into boxes, to cope with the demand unless more wood-working machinery is employed.

Frame Saws.

A modern high-speed frame saw is required for the above mentioned class of work; and one which was shown in a recent exhibition, appeared to us very suitable. A special feature of this log frame is the design with double cranks, which is the only way of preventing the crank-shaft from breaking at the high speeds which are now becoming more and more common. The fly-wheels are placed in the centre of the machine, which facilitates the perfect balancing of the revolving masses and makes the machine run exceedingly smoothly. The feed rollers raise themselves automatically without any treadle or lever motion, and the width of the front roller is not too great to permit the man to superintend the working of the saw blades.

Planing Machines.

For a handy, quick, and cheap box wood planing machine, we would recommend one with a new automatic feeder, which eliminates the dangerous element of hand feeding, and multiplies the output. It is very compact in design and easy, as well as safe to be worked by an ordinary workman, or even a boy.

Nailing Machines.

Nailing machines are, of course, indispensable for turning out large quantities of boxes, and those of British construction have the latest improvements.

RAILWAY NEWS.

Baghdad Railway.

Reuter reports from Amsterdam (June 2) that a Constantinople telegram states that 40 miles of the Baghdad Railway line from Tell-el-Abiad to Tuan, east of the river Euphrates, have been opened to traffic.

This section, says *The Times*, corresponds to what is known as the Tell-el-Abiad—Ras-el-Main section, which forms, roughly, the western half of the Harran—Nisibin section (between Aleppo and Mosul). Harran lies south of Urfa and Nisibin is further off to the east. The section from the Euphrates eastward to Tell-el-Abiad, about 40 miles, was completed last February. The total length of line open to traffic now amounts to just under 600 miles, out of a projected total of about 1,350 miles to Basra.

Greek Developments.

The following are extracts from the report by H.M. Consul at Piræus which is shortly to be published :—

"The construction of the railway linking up the Piræus-Athens-Larissa line with the Oriental Railway has made good progress, and according to a statement made by the Minister of Communications in the Greek Chamber of Deputies in Athens, the line will be ready in August next. The necessary material—sleepers, rails, etc.—is being urgently carried to the spot, while twenty locomotive engines and the rest of the rolling-stock have been ordered in America, and will be delivered shortly. Owing to the war, several iron bridges which had been ordered in France cannot be ready in time, and in such a case temporary wooden bridges will be constructed where needed.

"A convention has also been signed for the purchase by the State of the old railway line. The purchase price agreed upon being 13,000,000 dr. (£520,000) less the dividend for 1913, say, 600,000 dr. (£24,000), this difference amounts to 12,400,000 dr. (£496,000) as against 19,980,000 dr. (£799,200), the sum for which, according to the old convention, the Greek Government was to have the right to take over the railway in 1927.

"The Greek Government intends to reorganise the various railways, and especially to take steps to render the management more efficient. A general scheme of railway extension in the New Territory and also in Old Greece is being considered. The lines to be constructed are those from Salonica to Anghista, from Kalambaka to Koshani, from Kalambaka to Sorovitchevo, and from Kalambaka to Janina."

Jibuti-Adis Ababa.

We announced last week the completion of the Jibuti-Adis Ababa line in Abyssinia. *The Scotsman* (May 25) gives the following particulars concerning the railway :—

"The railway is again the subject of active interest in French colonial circles. The line is no less important politically than commercially, and in days gone by, before the *entente cordiale*, it was the occasion of some amount of friction between this country and France, owing to the employment of British capital to rescue the original French company out of the difficulties into which it had fallen. All that is a thing of the past, but when French control was re-established by the intervention of the French Government, there remained the objection of the late Emperor Menelik of Abyssinia to an arrangement which made one of the Great Powers a party to railway construction in Abyssinian territory. So long ago as 1902 the line was completed from the Jibuti end to Dire Dawa—a distance of nearly 200 miles—but that was as far as it got for many years. In 1909 a new company was formed by arrangement with the French Government for the purpose of taking over the section already constructed, and building the 300 miles required to extend the line to the Abyssinian capital. Since then, in spite of continued difficulties with the Abyssinian Government, the work has gone slowly forward, until now the connection by rail between Jibuti and Adis Ababa is established. Two Bills respecting the financial position of the concessionaire company have lately been before the French Budget Commission, and the French Minister for the Colonies, in giving evidence about the railway before the Commission, has stated some interesting facts, which have been communicated to the *Depêche Coloniale*. It is hoped that the line will be opened to traffic throughout its entire length in September next. The financial arrangements between the concessionaire company and the French Government require that the latter should inspect the line and determine, for the purpose of fixing the capital cost of the enterprise, what further expenditure is necessary before the line can be regarded as finally completed. Owing to the war, it was proposed that this task should be postponed; but the Budget Commission has taken a different view, and has recommended the dispatch of one of the Inspectors-General of Colonial Public Works to examine and report on the line."

TRADE OPENINGS.

The following trade openings, etc., are culled from the current issue of the *Chamber of Commerce Journal*. For further information, where address is not given, apply under the given number to the "Agency Department," the *Chamber of Commerce Journal*, Oxford Court, E.C.

Tunis.

Manufacturers' agent, with first-class connection, is open to represent makers and merchants in all kinds of pottery, hardware, ironmongery, iron tinned sheets, electric lamps and fittings, oil lamps, globes, sewing cottons, velvets, velveteens, fustian, corduroys, linens, fancy cottons, woollens, flannels, suitings, hosiery, produce, dried and tinned fruit, etc., Address, Joseph d'Is Bismut, 4, Avenue de France (Passage de Tunis), Tunis, North Africa.

Commission agent, with good business connections, desires to represent British firms in textiles and alimentary products of all kinds. Correspondence in English. Address, Nahum de M. Cohen, 16, Rue des Tanneurs, Tunis.

Agent in Tunis desires to represent, on commission, British manufacturers and exporters of hosiery of all kinds and cotton goods generally. Good references in England and France. Address, M. Bitan, 13, Rue St. Charles, Tunis.

Agent, established twelve years at Tunis, desires to represent British manufacturers and exporters of drapery, cloth, lace, haberdashery, ironmongery, paper and stationery, etc. Address, No. 272.

Well-introduced agents are desirous of representing British manufacturers and also exporters of colonial produce, such as wool, skins, honey, wax, oil, wheat, brewers' barley and grains. First-class references. Address, Rocco Licari and Co., 2, Rue St. Charles, Tunis.

Egypt.

Old-established commission agents in Alexandria desire agencies of British manufacturers and exporters, especially in hosiery, but also in any manufactured goods suitable for the Egyptian market. Address, Ben-Amozek Frères, Alexandria.

Company established in Cairo desires the agencies of manufacturers or exporters of any large line of goods suitable for the Egyptian and Sudanese markets. Address, N. V. Holland-Egypte Handel My. v/h. Th. F. van Vloten and Co., P.O. Box 461, Cairo.

A British company, established in 1908 as merchants and commission agents, having head office in Alexandria and branch office in Cairo, and agents in the principal towns of the Mediterranean, with English directors and manager, and trading throughout Egypt and in the Levant, is open to take up the sole agencies of first-class home firms for any article (machinery excepted) which does not clash with existing business, also insurance of all kinds, except accident and life. References will be given to important British firms now represented by the company. Address, The Commercial and Agency Company of Egypt, Limited, P.O. Box No. 691, Alexandria, Egypt.

Firm in Cairo desires to represent British manufacturers and exporters of all kinds of goods suitable for the Egyptian market, particularly of hats, boots and shoes, collars, shirts, stockings, flannels, neckties, etc. Address, Messrs. Cladakis Frères, 76, Bein-El-Harat, Cairo, Egypt.

Bulgaria.

Commission agent and merchant, established in 1898, desires to represent British firms in the following lines:—Cloth, cotton and woollen yarns, combed wool, boot leather, imitation astrakhan, and other English specialities. Special department for collection of debts and information of all kinds. Address, S. B. Nachmias, Roustchouk, Bulgaria.

Greece.

Well-established commission agent in Piræus wishes to represent British works or export firms for galvanised and black sheets, tin plates, ships and boiler plates, wire for nails, dry goods, Bradford and Belfast goods, woollen yarns, cloths, handkerchiefs, felt and straw hats, teas, biscuits, caramels, all sorts of textile goods, etc. Address, No. 155.

United States Finances.

A Plea for Banks Abroad.

In view of the very probable expansion of United States interests in the Near East, and the already considerable development given to her commerce, trade and finance in those regions, the following summary (as given by *The Times*) of a lecture delivered on May 27 at San Francisco to the California Bankers' Association, by Dr. E. E. Pratt, the official head of the American Government's Bureau of Foreign and Domestic Commerce, will prove interesting reading. More particularly is Dr. Pratt's plea for American banks abroad significant. It will be remembered that THE NEAR EAST has always taken up a firm attitude on the question of creating British banks abroad, and has insisted on the necessity for us to follow, in this respect, the German method. The American Government now officially advocates the same policy, and in view of the extraordinary development of American finance, as analysed below, it becomes imperative that we should lose no time in following the natural trend of events, and create British commercial banks in foreign lands. Otherwise, we shall again be ousted from the Empire's legitimate markets. We also refer to this banking question in our editorial notes on page 135.

Dr. Pratt pointed out that it had taken a great European war to show Americans their dependence on Europe. He estimated that the United States, for loans raised there, owed Europe, when war broke out, £1,400,000,000, of which 800 millions was represented by securities held in England, 200 millions in France, 250 millions in Germany, and 130 millions in Holland. Allowing for American holdings of European securities, probably the net indebtedness to Europe was not less than £1,200,000,000. If Europe required money, this showed the "tremendous break in the American security market" that might result. In addition, moreover, to American dependence on London as the clearing-house for international payments, both that and other European centres were the markets for certain staple products required by the United States, such as wool (1,100 million pounds of which were bought every year from Great Britain), rubber, tea, coffee, and even tobacco. The great European ports were also the markets in which American goods were purchased and transhipped throughout the world, Hamburg in particular taking more than £20,000,000 in value annually for re-export. Owing to the lack of a merchant marine, only 9.7 per cent. of American water-borne commerce was shipped in American bottoms. Finally, 62.86 per cent. of the total American exports went to Europe.

Dr. Pratt laid stress on the annual "invisible" American exports—£60,000,000 for interest on loans and floating debts, £50,000,000 for the expenditure of American tourists, £30,000,000 for remittances to European friends and relatives, and £10,000,000 for freights. Certain items here must now be considerably affected. But the great change from previous conditions is shown by his statement that, whereas on July 1, 1914, the United States had a balance of current indebtedness to Europe to defray, amounting to £11,000,000 over and above her exports of merchandise, in April, 1915, Europe owed the United States £90,500,000.

The new feature, as Dr. Pratt showed, in American foreign trade is that the United States is becoming a creditor nation, and must herself be prepared to loan capital abroad. This is seen in the low rate of sterling exchange, the imports of gold from Europe, and the actual development of "export capitalism" in the New York market. The low rate of sterling exhange, he insists, is not at all in the American interest; it is really equivalent to an extra tax on American commerce, and makes American commodities cost more to English buyers. Yet, unless some adequate means, other than the importing of gold, is found for settling the trade balances they must continue to "pile up" and keep the exchange low. The monthly sums which the American people need to send abroad for interest and other purposes are not much more than £8,000,000, but the actual monthly balances in their favour have lately been as follows:— September, £3,270,000; October, £11,326,000; November, £15,880,000; December, £26,200,000; January, £29,140,000; February, £35,000,000; March, £32,000,000. Dr. Pratt impressed on his audience of bankers that, as a creditor nation on current account to this extent, there was only one course now for the American people to take—namely, to finance the exchanges by lending capital abroad. This movement has, indeed, already begun, for since November foreign securities have been placed in the United States to the amount of over £40,000,000, apart from other credits exceeding £20,000,000. But Dr. Pratt's point is that it must go much further, and that American bankers must do their utmost to "popularize the issues of foreign securities."

As indicating the practical policy, Dr. Pratt went on to insist on the importance of the bankers taking advantage of the provision in the Federal Reserve Act of 1913, and establishing branch banks abroad for this purpose. Before that Act was passed, the American National banks were not allowed to extend their activities to foreign countries, but now Dr. Pratt emphasizes the importance of their doing so and backing these foreign branches with all "the prestige, influence, and resources of the home bank." One National bank, he said, had already established five foreign branches and was contemplating others.

Dr. Pratt's actual words, in his speech to the American bankers on this point, are worth quoting. He said:—

"A provision of the Federal Reserve Act of the greatest value to commercial interests is that which permits National banks to accept six months' bills drawn against actual shipments of merchandise in foreign countries, and which provides that these bills may be rediscounted, when within ninety days of maturity, with the Federal Reserve banks. The branch banks to be established must not, however, confine themselves to the foreign exchange business. To a considerable extent they must go in for local loans and discounts, and must take part in underwriting securities, and must occasionally render services in marketing products. In other words, the branch bank must be the outpost of American finance."

COMPANY MEETING.

LAND AND MORTGAGE COMPANY OF EGYPT.

The thirty-fifth annual general meeting of the Land and Mortgage Company of Egypt, Limited, was held on Friday, at the Cannon Street Hotel, E.C., Sir Walter Frederick Miéville, K.C.M.G. (chairman), presiding.

The Chairman said, *inter alia:* Since I had the honour of addressing the shareholders a year ago a world-wide financial upheaval has occurred, owing to the outbreak last August of the unprecedented war now convulsing Europe. The economic conditions of Egypt have been profoundly affected and the cotton trade badly crippled. The material prosperity of Egypt has inevitably declined, and, unfortunately, the principal cause of this decline—the sudden shrinkage in the world's demand for cotton and the consequent fall in the price of that commodity—has affected our company adversely. For the great proportion of the mortgagors, our clients, rely on the profits from their cotton crop to pay their yearly mortgage interest and annuities. The Nile flood of 1913 was the lowest on record, and the estimated crop this year is, consequently, considerably less than that of 1913-14. Added to that misfortune the price, owing to the war, is this year about 35s. less for 100 lb. weight, and this means a loss to Egypt on the whole crop of roughly from £14,000,000 to £17,000,000 sterling as compared with last year. Thus many of our clients have found it either difficult or impossible to meet the charges on their debts, and our "arrears" have greatly increased. Even judging from the loss incurred in farming our own estates, we can understand what a bad year many of

Digitized by Google

our tenants must have experienced. Yet, notwithstanding the small proportion encashed by the company of earned profits and interest accrued, and in spite of the strained financial conditions generally, the credit of your company is so good both in London and Egypt that we have been able, without undue difficulty, to meet all our obligations and to carry on the current affairs of the company. Having enumerated the chief drawbacks of the actual situation, allow me to point out a brighter side. The present crisis in Egypt is not of a nature which affects the great productive powers of Delta lands. Gratefully also we must bear in mind that the value of land in Egypt will eventually increase—and this consideration will benefit our company in respect of our two estates and in regard to any other lands we may acquire—for land in a country under the declared protection of Great Britain must be worth more, other conditions being the same, than that same land was when the country was under Turkish suzerainty. You will observe that during the year under review we have paid off debentures amounting to £19,300. It is noteworthy also that, though the balance to the credit of profit and loss only appears to be £5,463, the real profits, had we included back interest, would have amounted to £10,740, the difference of £5,277 being accounted for by provisions made for possible, but not probable, eventualities. Our loans on mortgage are less by £16,690 than on March 31, 1914; but we could not make fresh loans until bank advances had been paid off and the balance of debenture stock issued. The market value of the investments of reserve fund has again fallen; but, as our securities are all gilt-edged, we may look for good recovery after the war. The item interest due or accruing now stands at £80,190, instead of £52,871 last year; but our managing director (Mr. Huri) is sanguine that practically all these arrears will ultimately be encashed. Your directors have adopted what they consider the only prudent, business-like course, namely, to make provision for eventualities from the year's profits and to propose to you to carry forward the balance.

COMPANY NOTE.

Anglo-Egyptian Oilfields.

It is understood in the market (says the *Financial News* correspondent) that the Anglo-Egyptian Oilfields Co.'s Hurgada well has become clogged, and that this accounts for the further heavy reduction of output, which had already been seriously curtailed in order that the production should not exceed the refinery's capacity. However, it is believed that the Hurgada stoppage is merely temporary. Meanwhile the management are devoting themselves more particularly to geological work on new properties rather than to the Hurgada and Gemsah production. The report of this company is due shortly, and we should imagine that an interesting statement will be made at the meeting.

"Pixion," writing in the *Financial Times* on May 28, recalls the fact that Mr. Samuel, M.P. for Wandsworth, and brother of Sir Marcus Samuel, chairman of the company, in the course of a speech in the House of Commons on June 18, 1914, when the Anglo-Persian oil deal was being considered, said he believed the Persian oilfields were good, but the Admiralty were evidently unaware of the developments in Egypt, and that the Anglo-Egyptian Oil Company, in which the Egyptian Government were shareholders, a thoroughly British company, was in a position, had it been approached by the Admiralty, to have given them much larger supplies than they had got by their contract with the Anglo-Persian Company.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 291 tons (last week 302 tons); recovered from sediment, 12 tons (last week 203 tons). Hurgada production, 52 tons (last week 20 tons).

EUROPEAN OILFIELDS.—Production for the week ended May 30, 85,900 poods, or 1,385 tons. Price of crude oil at Blacktown, 40¾ kopeks.

GREEK FIVE PER CENT. LOAN OF 1890.—Coupons falling due on June 15, 1915, should be presented for payment between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, for payment of 76 per cent. in gold of their face value, being 32 per cent. ordinary interest and 22 per cent. per annum augmentation on account of surplus revenues of 1914, payable on the coupon of the first half of the year.

BLACK SEA GRAIN.

It is stated in a shipping contemporary (says the *Morning Post*) that another factor which may shortly have to be taken into consideration is the possibility of the capitulation of the Turks coupled with peace with Hungary. The practicability of such a situation arising has not, as a matter of fact, roused more than an academic interest on the part of the shipping community up to the present. Such a consummation is, of course, ardently to be hoped for, and it is to be feared that it is the only solution by which the Black Sea grain can be released for shipment during the present season. The writer has all along discounted those optimistic forecasts which told of these shipments being in full swing before May was out or early in June. It was only with a knowledge of the Dardanelles that the enormous difficulties to be overcome could be realised, and now that the preliminary *faux pas* of those responsible for the operations has enabled the Turks to prepare for a more strenuous defence than was anticipated it may very easily be that the Straits will not finally be forced until it is too late for the Russian Black Sea ports to be used on account of ice. It is hardly likely, however, that matters will be so bad as that, and in any case such a discussion does not come within the province of this column. A consideration of such an eventuality, however, makes one realise how very much both grain and freight markets would be affected. The success of the Government's operations in India, and those of the French Government in connection with American wheat, would almost lead to the belief that an arrangement with the Russian Government to put the shipment of this grain on a similar basis would be the best solution of the obvious difficulties in the way of securing the necessary amount of tonnage for its transport without disorganising the other freight markets of the world.

NOTES OF THE WEEK.

Mr. Winston Churchill did well to devote a considerable portion of his speech at Dundee last Saturday to the Dardanelles expedition. Not only is his name associated with the planning of the enterprise, but for the moment the subject is probably exercising the mind of the British public more than any other matter connected with the war. He spoke optimistically, as is his wont; if he had been less optimistic in the earlier stages of the attempt to force the Dardanelles there might have been less need for a vigorous apologia now. But, if we are not mistaken, the country is not at all anxious to brood over past mistakes; it only asks for some intimation as to how it stands to-day, and whether the views now put forward in Government circles may reasonably be regarded as more reliable than those so lightly advanced when the Allied Fleet first opened fire on the unimportant forts at the entrance to the Straits.

The value of Mr. Churchill's utterances consists in the fact that they enable the public to view from a truer perspective the operations in this theatre of the war. It is no longer a question of "expecting" losses by land and sea. Statements of such losses are following one another far too rapidly to allow time for expectation. The question asked is, rather, whether these losses are justified by the importance of the object for the attainment of which they are being incurred, and if they are justified, can they be made good without prejudice to operations in the major theatre of the war. To this question Mr. Churchill gave a satisfactory answer. In the first place, he reminded his audience, the Fleet employed is our surplus Fleet, "after all other needs have been provided for. Had it not been used in this great enterprise, it would have been lying idle in our southern ports. A large number of the old vessels of which it is composed have to be laid up, in any case, before the end of the year, because their crews are wanted for the enormous reinforcements of new ships which the industry of the workshops is hurrying into the war. Losses of ships, therefore, as long as the precious lives of the officers and men are saved, as in nearly every case they have been, may easily be exaggerated in the minds of friend and foe."

On the question of the object to be attained Mr. Churchill was still more eloquent, and it is well that the nation should steel itself to face the heavy toll of life that the operations are exacting by sharing his views. "The army of Sir Ian Hamilton, the Fleet of Admiral de Robeck," said the ex-First Lord of the Admiralty, "are separated only by a few miles from a victory such as this war has not yet seen. . . . I am speaking of victory in the sense of a brilliant and formidable fact, shaping the destinies of nations and shortening the duration of the war. Beyond those few miles of ridge and scrub on which our soldiers, our French comrades, our gallant Australians and our New Zealand fellow-subjects are now battling, lie the downfall of a hostile empire, the destruction of an enemy's fleet and army, the fall of a world-famous capital, and probably the accession of powerful allies. The struggle will be heavy, the risks numerous, the losses cruel; but victory when it comes will make amends for all. There never was a great subsidiary operation of war in which a more complete harmony of strategic, political, and economic advantages has combined, or which stood in truer relation to the main decision which is in the central theatre. Through the narrows of the Dardanelles and across the ridges of the Gallipoli Peninsula lie some of the shortest paths to a triumphant peace."

It is to hoped that Mr. Churchill's rousing message will not be restricted to the nation at home, but will be sent as well to the gallant troops at the Dardanelles, whose exploits have stirred to the quick the whole Empire. In our anxiety for the success of their operations we must not overlook the physical strain which they are called upon to bear from day to day. There is little need to explain to the men in Flanders the part that they are fulfilling in the defence of the British Empire; but even there it will be noted that the Commander-in-Chief, with the instinctive sympathy which has always endeared him to troops under his command, takes it upon himself to explain in person to different units the value of the individual work they may have performed in the general scheme of his operations. At the Dardanelles, however, and in places where reinforcements are waiting to be sent there, misgivings may well arise as to whether there should not be a limit to the sacrifices incurred for a prize which must ultimately fall to us. Mr. Churchill's words supply the answer. The

Digitized by Google

forcing of the Dardanelles must still be carried through for the attainment of a triumphant peace. We cannot look to other theatres of the war to simplify our task at the Dardanelles.

That the need for encouraging the men of the Dardanelles expedition is felt in certain quarters is proved by the "Special Order of the Day" issued by Sir Ian Hamilton on May 9, and published on June 9. After informing the troops that in all his experience he has never seen more devoted gallantry displayed than that which had characterized their own efforts, Sir Ian Hamilton stated that he had informed Lord Kitchener by cable of the bravery and endurance displayed by all ranks, and had asked that the necessary reinforcements be forthwith despatched. "Meanwhile, the remainder of the East Lancashire Division is disembarking, and will henceforth be available to help us to make good and improve upon the positions we have so hardly won." When it is remembered that a month has passed since this significant Order was issued, and that no appreciable improvement has been made in the military situation at the Dardanelles, it will be realized that the Mediterranean Expeditionary Force, no less than the nation at home, requires all the encouragement that can be derived from such utterances as Mr. Churchill's.

At the outset it was intended, no doubt, that the forcing of the Dardanelles should act as a stimulus to the Balkan States to throw in their lot with the Triple Entente. When it was realized that the operations were likely to prove of a protracted nature, it seemed only natural that the order should be reversed, and that the neutral States of the Balkans, whose co-operation with the Allies was only a matter of time, should be encouraged to assist in the attack on Turkey. Unfortunately Triple Entente diplomacy did not appreciate the necessity of supporting the naval and military operations, or, appreciating it, did not know how to set about its task in the best way. The very fact that Russia was more directly interested in the Balkans than either of her Allies ought to have been a sufficient reason for relieving her of the onus of carrying on negotiations with the neutral States. Instead of taking this view and shouldering her responsibilities as the most disinterested of the three Allied Powers, Great Britain left it to Russia to act as best she could. The results of that policy are to be seen in the situation in the Balkans to-day.

It will be remembered that great expectations were formed of the appointment of Prince Trubetzkoi as Russian Minister to Serbia. He was understood to be empowered to bring about an understanding between Bulgaria and Serbia, and it was confidently supposed that Russia's influence over the latter State would be able to dispose of any obstacles in the way of co-operation between the two Balkan countries. If Prince Trubetzkoi were able to publish a statement of his diplomatic activities we should probably find that he had been hard at work all this time; but the fact remains that nothing in the nature of a *rapprochement* between Bulgaria and Serbia can be recorded as a result of his labours. Indeed, there is reason to believe that up to two or three weeks ago Bulgaria had received no promise of any prospective realization of her national aspirations on her southern or south-western frontier. Negotiations, it is understood, have now been opened between Great Britain and Bulgaria, and we shall hope to hear that they are making some progress towards a satisfactory settlement. So far, however, nothing has occurred to modify the opinion so frequently expressed in these columns that the only possible solution of the Balkan question lies in the dictation of the terms of settlement by the Triple Entente over the heads of the States concerned.

The fate of Przemysl was in the balance when our issue of last week was going to press. News of its fall, however, reached this country the same day. After a short resistance on the part of the outer forts the Russians evacuated the town. It was no longer a fortress, merely the skeleton of one. The destruction carried out by the Austrians before they surrendered it on March 22 had been very thorough, and the Russians had had no time to repair the damage. It was, therefore, in no condition to withstand the enemy's massed attack, supported as it was by numbers of guns of heavy calibre. From a military point of view its recapture by the Austro-German forces was of far less importance than its original capture by the Russians, when the garrison of 126,000 men fell into their hands. But the second fall of Przemysl has a special significance for the enemy. It is a valuable landmark for measuring the extent of their eastern advance, and it brings once more under their control the important oilfields of Galicia. For the Russians it means the thrusting back of their line to Lvoff, on which the Germans and Austrians are now concentrating their attention. So far the main object of the enemy, the piercing of the Russian line, has completely failed. Our Allies have fallen back before an onset which they saw no prospect of resisting. Each mile they have covered represents for them a strengthening of their line, for the enemy additional difficulties of communications. It has not been possible for the Austro-German forces to maintain their original momentum all along the line of their advance, and we may await with confidence the news that the advance has been everywhere finally checked.

If military operations alone are to bring the war to an end, the effect of the Russians being driven back from the Carpathians must be to prolong the struggle by many months. The secret of the enemy's success has been their superiority in heavy artillery. Russia is now learning what has gradually been borne in upon her Allies in the West, that for some time to come the question of munitions resolves itself into one of the supply of 16-in. howitzers. In the present condition of the war a more mobile weapon has little chance against these formidable engines, and for the next phase in the struggle it would appear that we must wait patiently until the Allies are supplied with a sufficient number of large howitzers to give the British and French gunners something like a reasonable opportunity of showing once more their individual superiority over the enemy.

The improvement in King Constantine's condition, reported in our last issue, has, unhappily, not been maintained during the past week. Dangerous fluctuations in the course of the illness have manifested themselves, and the only consolation that an anxious Greece can allow herself is that the latest bulletins report a more favourable turn. A telegram to *The Times* states that although the country is within a few days of the General Election, little interest is taken either in domestic or foreign politics. The theatres, it is added, are closed and the sole topic is the King's illness. In such circumstances it was evident that M. Venizelos could not carry out his intention to retire into seclusion in a foreign country, and a telegram now states that he was expected back in Athens before the elections. The King's illness has fortunately obscured the difference of opinion which had arisen between the ex-Premier and the Crown. At the same time it will have reminded the Greeks that, if they allowed the services of M. Venizelos to be lost to the nation, they were in danger of being left absolutely leaderless at one of the most critical periods in their history.

The invasion of Albania by Serbia may be regarded as justified from a military point of view by the capacity of the Albanians, under Austrian instigation, to administer pin-pricks across the Serbian frontier. They were last reported to be two days' march from Skutari, while a second column was following a more southerly route in the direction of Durazzo. The question of Albania, which not very long ago was in the forefront of European politics, has almost entirely disappeared as a problem of any but local interest. For a period the Albanians were given an opportunity to substantiate their claim to recognition as a political entity. They quickly revealed the fact that they were entirely devoid of the least capacity for self-rule, and it did not please

Digitized by Google

the Powers of Europe to enable their nominee ruler to establish his authority over his subjects by force of arms. With the outbreak of the war the short-lived experiment came to an end, and the responsible seniors of Dame Europa's family washed their hands of this refractory younger member. There is no need at this stage to speculate on the ultimate fate of the territory known as Albania. Some is already in Greek hands; Italy possesses Valona, and the Serbians are marching on Skutari. The Italian blockade is said to have caused famine in the country, but the first thing to be starved out is clearly to be Austrian and Turkish influence.

The Turkish menace in Southern Mesopotamia has been very satisfactorily disposed of for the time being. In the second week of April the enemy delivered almost simultaneous attacks on Kurna, Shaiba (near Busreh), and Ahwaz on the Karun River. These attacks were repulsed, but the Turks remained established in Persian territory, and at no great distance from Kurna. About the middle of May a punitive expedition was despatched to deal with a number of hostile Arab tribes in the country between the Shatt-el-Arab and Karun Rivers. These operations were followed up by a combined naval and military attack on the early morning of May 31 against the remaining hostile force in position about a couple of miles north of Kurna. The position occupied by the Turks was seized by midday, and the enemy fled, leaving 16-pounder guns, complete with ammunition, and nearly 250 prisoners in our hands.

The complete collapse of the Turks encouraged our forces to press on. Continuing their advance up the Tigris on the following day, they found the camps at Barhan and Ratta evacuated, and the enemy were sighted retreating in steamers and native boats. The same evening a point a few miles north of Ezra's Tomb, some thirty-three miles north of Kurna, was reached by the main column, after further captures of guns and prisoners had been effected. But a small force under General Townshend, accompanied by Captain Nunn, R.N., and Sir Percy Cox, had already been despatched on board the "Comet" and a few small launches to follow up the Turks. When this force reached Amara, on June 3, the entire garrison of the town, numbering over a thousand, including the Civil Governor and the commandant of the Turkish forces, surrendered. In the meantime a second column, under General Gorringe, operating from the Karun River, had been driving the remnants of the Turks out of Persian territory. The advanced guard of the latter entered Amara shortly after its occupation, and were made prisoners; the remainder, estimated at about two thousand, fled, leaving a heavy gun in our hands.

The result of these operations is that Amara is now occupied by us in force, we have captured, in addition to a dozen guns, eighty Turkish officers and 2,000 of the rank and file, and the whole country south of Amara may be regarded as cleared of any hostile bodies capable of menacing our positions. No mention has been made so far in the official statements of the Sheikh Ghadban, whose headquarters have been in the past at Amara. The Turks have relied upon his hostility to the loyal Sheikh of Mohammerah to supplement such forces as they have been able to spare for Mesopotamia. If, as seems probable, he has shared in the discomfiture of the Turkish troops, it ought to be possible to win over to our side all the Arab tribes in this region. They will have witnessed the complete disorganization of the Turks, and will, perhaps, have been impressed by the rapid success of the British advance. Another satisfactory feature of the operations is that all but one of the Germans with the Turkish forces have been accounted for. Three are prisoners, and two were killed by marsh Arabs. The fate of the sixth is doubtful, says the official statement.

The collapse of the Turkish operations in Mesopotamia is a measure of the extent to which the Porte finds it necessary to concentrate the whole of its attention on the defence of the Dardanelles. We know also that the major part of the Turkish forces have been withdrawn from Sinai and Syria to assist in that defence. It is probable, therefore, that practically the whole of Turkey's armed forces will sooner or later be found in the neighbourhood of the Sea of Marmora. This circumstance will add to the difficulties of the Allies' task in forcing the Straits, but it will facilitate the elimination of Turkey as a belligerent when once the Narrows have been passed.

Prince Sabah-ed-Din has again telegraphed to the Sultan to urge that Turkey should cut her losses and make her peace with the Powers of the Triple Entente. The advice, it is to be feared, is addressed to the wrong quarter; for as long as Enver Pasha and his German masters control the situation Turkey will remain impervious to the wisest counsel. Even more eloquent of the disaster in store for her than Prince Sabah-ed-Din's prognostications is the assurance with which the partition of Turkey is now regarded as an inevitable result of the war. Speaking this week at the annual meeting of the British Syrian Mission, Viscount Bryce dealt with the future of Syria. He was sure, he said, that the old Turkish régime would never be re-established in that country. Its downfall, he believed, would be welcomed by many Mussulmans as well as by the Christians. What would come in its place, whether a Protectorate under some European Power or a mitigated form of Turkish rule under the control of some European Power or Powers, it was not possible to say, but in any case a new state of things would arise which would offer far greater opportunities for the development of the country than had existed at any time since the Arab conquest. While Lord Bryce was speaking in London the Italian Minister to Athens was making some outspoken remarks on the subject of Asia Minor. The future equilibrium of the Mediterranean, he said, might impel Italy to render her occupation of Dodecanesos permanent. In the event of a partition of Asia Minor, Italy could not remain impassive. But Asia Minor, he cheerfully assured his audience, was large enough for all appetites.

The reason for the change in the constitution of the Egyptian Cabinet, reported last week, is now given by our Cairo Correspondent. In view of what is vaguely referred to as an "affaire" with which his name was connected, Ismail Pasha Sidky, Minister of Wakfs, found it necessary to hand in his resignation to the Prime Minister. His post has been filled by the appointment of Ibrahim Pasha Fathy, a general in the Egyptian Army, who has done good work as Mudir of Assiut and Gharbia. Our correspondent speaks of it as a matter of great regret that circumstances should have arisen to render imperative the retirement from Government service of Ismail Pasha Sidky, whose talents marked him out for a career of special brilliance. The incident is not without parallel in other countries, and the Egyptians may derive what consolation they can from the reflection that their Government must claim from its members as high a standard of personal conduct as would be required in any other Cabinet.

LETTER FROM CAIRO.

(From Our Own Correspondent.)
Cairo, May 23.

The Sultan and Alexandria.

To-day H.H. the Sultan officially took up his residence for the summer in Alexandria. He was accompanied from Cairo by his household and the Ministers and the Financial Adviser, and will reside at Ras-el-Tin Palace, which has undergone considerable alterations internally and has been completely refurnished. Owing to the present situation in Europe the Sultan will remain in Egypt throughout the summer; but even if normal conditions were existent it is quite unlikely that he would have left the country for a summer holiday, as it is known that he strongly disapproves of the habit which Egyptians, led by the late sovereign, have of late years indulged in, of rushing off to Europe immediately the hot weather sets in. His Highness has on more than one occasion recommended his subjects to spend the summer season at the seaside in their own country, and he has determined to set them the example. In the case of the sovereign, an occasional visit—though not necessarily one of long duration—to Europe in order to pay his respects to his suzerain may be politically expedient, in the case of ailing Egyptians, an annual cure at an European watering-place may be imperative, but beyond that there is no more justification for the wholesale estival flight from Egypt that the natives of the country have in past years indulged in, than there is for the growing tendency to send Young Egypt to Europe to complete its education. Both practices are detrimental to the country in general, and to the persons concerned in particular, and the Sultan, who above all things has the interests and future of his people at heart, has very wisely given expression to his disapproval of these practices, and has shown them a lead that they perforce must follow.

The High Commissioner.

Continuing his series of visits to the provinces, Sir Henry McMahon proceeded to Upper Egypt at the end of last week. The High Commissioner first visited Assiut, where he was received by the Mudir and chief officials. He held a reception of the notables at the Mudiria, and afterwards inspected the Provincial Council's Girl School, the Ophthalmic Hospital, the Sporting Club (which he inaugurated), the Museum of Saied Bey Kheshaba, and the Industrial School. Sir Henry then continued his journey to Minia, where he inspected the various local institutions, and subsequently returned to Cairo. The High Commissioner is understood to have expressed himself as being highly satisfied with his tour. During his stay at Assiut he was not able to visit the American College owing to the preparations that were in progress for the celebration of its jubilee, but he inspected the students, and deputed Mr. Ronald Storrs, the Oriental Secretary to the Residency, to represent him at the festivities, which took place this week. On his return to Cairo the High Commissioner, accompanied by Lady McMahon, visited some of the military hospitals, including those at the Citadel and Gezira, and distributed cigarettes to the men, who much appreciated this kindly act.

The Hospital Question.

Since I last wrote there has been a marked lull in the arrival in Cairo of wounded from the Dardanelles, and the congestion in the local hospitals has been very much relieved owing to the despatch home of all those who will not be fit to return to their duties within two months, and to the discharge of many who are already cured. The hospital ships still continue to bring wounded to Alexandria and Port Said, but it is understood that the reduction in the numbers sent to this country is due, first, to the accommodation available at Malta, and, secondly, to the establishment of a field hospital on the Gallipoli Peninsula. Sir Courtauld Thomson, Chief Commissioner of the Red Cross Society in the Mediterranean, has now arrived, as also has Sir Frederick Treves, who will report on the hospital requirements of Egypt. The Military Hospitals Fund, which was started in order to assist the various hospitals, has issued a summary of what it has been able to do up to date. So far £E4,000 have been collected. Of this about £E3,000 have been earmarked, and assistance has in some form or another been given to every institution, including a grant of 5,000 francs to the hospitals where the French wounded are being cared for. The nursing problem, which at one time threatened to be serious, has been solved, thanks to the generosity of an anonymous donor, and it is announced that twenty-four trained nurses are now on their way out. Much, of course, depends on the number of wounded that may be sent to this country in the near future. It is to be expected, however, that Egypt will be used as a hospital centre for some time to come, and, as the hot weather is now setting in and will entail additional discomfort for our wounded and sick, it is to be hoped that the funds at the disposal of the committee will soon be substantially increased, so as to enable it to meet all the calls that are being made on it for assistance to render the lot of our men somewhat easier. As it is, the committee has done wonders with the little it has succeeded in collecting.

A Ministerial Change.

For the past fortnight there has been much talk in semi-official circles of a change in the constitution of the Cabinet, rendered necessary by the discovery of an "affaire," in which one of the Ministers was understood to be implicated. The mystery has now been solved in part by the resignation of Ismail Pasha Sidky, the Minister of Wakfs, and by the appointment of Ibrahim Pasha Fathy as his successor. Although in his letter of resignation Sidky Pasha refers to certain imputations made against him, nothing has been divulged officially, but it is understood that those imputations were of neither a political nor a financial nature. Sidky Pasha, who is but forty years of age, is one of the most intelligent and capable officials this country has produced of late years. A great career, culminating in the highest post in the gift of the Sultan, was prophesied for him, and it is a matter of great regret that circumstances should have arisen to render imperative his retirement from Government service. His successor, Ibrahim Pasha Fathy, who holds the rank of Ferik (General) in the Egyptian Army, has done excellent work as Mudir of Assiut, and lately as Mudir of Gharbia; he should fill with dignity and success the new post to which he has now been called. It is to be noted that, although the Wakfs portfolio was only created eighteen months ago, Fathy Pasha is the fourth holder thereof, his other predecessors having been Heshmet Pasha, who retired with Said Pasha, and Moheb Pasha, who went for a "rest" to Italy when the Khedive's defection took place. One curious coincidence about the two last Ministers of Wakfs is that both of them entered the Cabinet as Minister of Agriculture, and were translated thence to the Wakfs. I do not mean to infer that there is in this any question of cause and effect; I merely draw attention to the coincidence. It is sincerely to be hoped that Fathy Pasha will succeed in breaking the spell of ill-luck that seems to have dogged the footsteps of his predecessors.

"Rattlin' good game, old man. What?"
"Yes! An' a rattlin' good wind-up with a 'burra' peg of Perfection."
"I thought you'd like it. It's the only whisky I've drunk since I've been out. Jove, man! It's the finest spirit ever bottled. Never reminds you that you've got a liver, and it's always as welcome as promotion. I'd sooner a peg o' Perfection than a case of any other."

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, May 30.

The King's Illness.

The last few days have been most anxious ones for Greece. The grave development of the King's illness has filled the whole country with alarm, and has so absorbed the attention of the Government that the administrative machinery, as well as all political activities, have been almost entirely at a standstill. As there is no law nor constitutional disposition in Greece by which, in case of the King's illness, his power can be delegated to a Regent, or to the Heir Apparent, the Government was obliged, in the transaction of its most urgent business, to promulgate decrees in the name of the King without having his signature, which will have to be added later when his health is restored.

In consequence of his victories in the two recent Balkan wars, King Constantine has earned the gratitude and devotion of the people, who are firmly convinced that he is the one indispensable head of the army, and that, considering also the importance of his prestige as King, he is the only man to whom the leadership of the army could unhesitatingly and with full confidence be confided in time of war. This is one reason for the popular anxiety caused by his present illness.

The Alarming Phase.

People who are in the habit of seeing the King frequently affirm that he had had a bad cough for a long time. This seems to show that the prevalent pleurisy which ultimately developed was the result of a chill from which he had been suffering for some time. The doctors hoped that one incision would have been sufficient to give him full relief, but the mischief continued, and complications arose, with symptoms of a septicaemia necessitating a further incision. Even this was not successful, and the poison seemed to be spreading through the system. It was then decided to send for Professor Krauss, one of the leading doctors in Berlin, and Professor Eiselsberg, the renowned lung specialist of Vienna. In the meantime the King's condition became worse, and he lay in a comatose state.

The Miracle.

People were beginning to lose hope, and it was decided to send for the miraculous Ikon from the island of Tenos. This is a very ancient picture of the Annunciation of the Virgin, which was discovered about a century ago, and to which miraculous powers are attributed. Greek pilgrims in great numbers visit it twice a year, and many claim to have been cured of their maladies, paralysis, etc. The Metropolitan of Athens, therefore, sent for the Ikon, and last Wednesday he carried it at the head of a solemn procession to the Palace. Great crowds followed the procession, interceding with the Holy Virgin for the life of their King. The Ikon was received at the Palace door by the Queen, surrounded by all the Royal Princes and Princesses and by the Ministers of State. She carried it to the King's bedroom. As soon as the King saw the Ikon he raised himself with an effort, and, resting on his elbow, took it, made the sign of the Cross and kissed it with great emotion. At this moment the pocket of purulent matter which was causing all the mischief in his lung opened, and the discharge came away freely. This afforded great relief to his Majesty, who revived wonderfully, and asked for food, tobacco, and a barber. The fever then gradually abated until the temperature was normal again. Everyone realizes that this is a miracle performed by the Holy Virgin. It is said that the Queen has presented a diamond necklace of great value to the Church to which the Ikon belongs, and that as soon as the King has completely recovered, as it is hoped he will, he will attend the service in connection with the return of the Ikon to Tenos. The two foreign physicians arrived in Athens yesterday, and, after examining the patient, they approved of the diagnosis and treatment of the King's medical advisers, and agreed that no further surgical measures should be resorted to. In the bulletin which they published they consider the outlook favourable.

Participation of Italy in the War.

War having been declared between Italy and Austria, Serbia is now relieved from the danger of invasion by Austrian troops, and there is no longer that fear, expressed in certain military circles in Athens, that the Greek army might have to face German and Austrian troops on her northern borders if she decided to abandon her neutral position. In spite of this, the Government does not consider that Italy's entrance into the war will exercise any direct influence upon the attitude of Greece, and, even if it has some direct influence, this will not be the case immediately. On the other hand, the Ministerialist Press tries to reassure public opinion by affirming that the Powers of the Entente, and especially Great Britain, will not be disposed to accept the co-operation of Italy against Constantinople, because this would raise questions which both Great Britain and Russia are anxious to avoid. But even if this were not so, continue these Government organs, the compensations accorded to Italy in Asia Minor would in no way interfere with Greek aspirations in that quarter, for Great Britain would not tolerate any extensive Italian influence there. Besides, they add, it will be a question not simply of dismembering Turkey, but of dividing Asia Minor into different spheres of influence. In any case, the opportunity of Greece is not yet lost, and since the illness of the King makes any decision impossible at present, it will be the duty of the Government brought into power by the elections on June 13 to consider the situation, and decide whether it can accede to the request of the Entente Powers and send six divisions of troops to the Dardanelles.

The Venizelist Press is at pains to demonstrate the absurdity of the above assertions, especially in regard to the fate of Asia Minor, and to emphasise the fact that Italy's joining with the Entente Powers makes it very doubtful whether Greece will be able definitely to annex northern Epirus, and dashes to the ground her last hope of securing the Dodecanese. Finally, it argues, a rival Power will be establishing itself in the eastern basin of the Mediterranean, and Greece will lose her sovereignty over the Ægean Sea.

Blockade of the Albanian Coast.

Italy has to-day informed the Cabinet at Athens that the blockade does not extend beyond Aspri Rouga, on the border of Northern Epirus, occupied by Greece, except for a small contested area. Thus for a second time Italy has recognised the Greek occupation of North Epirus.

German Assurances.

As I mentioned in a former letter, since the beginning of the war both Germany and Austria have repeatedly assured the Greek Government that in return for Greek neutrality they would guarantee to Greece her territorial integrity, and that they would be favourably disposed towards her claims on the Dodecanese.

The *Patris* states that those advances have been renewed, and have been favourably received by the present Government. This paper then asks the Government whether Germany has reason to be fully assured of her own territorial integrity, that she should be so ready to guarantee that of others.

The Elections.

The forecasts of the results of the legislative elections, which are to take place on June 13, have assumed rather a different aspect within the last fortnight. The King's illness having been well exploited in favour of the Ministry, public opinion has certainly been influenced to some extent against the Venizelist party. Nevertheless, the situation may still undergo modifications before election day, according to the turn of events, especially at the Dardanelles, and it is generally believed that the Venizelist party will still have a majority.

The enthusiastic popular demonstrations in favour of M. Venizelos on the occasion of his resignation, and the hearty solicitude shown for the King during his illness, seem to show that the people would like to see them reunited and working together again.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, May 31.

Submarine E 11's Exploit.

The presence of British submarines in the Marmora has caused much perturbation in official circles, and when E 11 actually appeared in the port and torpedoed the German steamer Stamboul there was quite a panic in Constantinople, and shops were hurriedly closed. The Stamboul, which belongs to the Deutsche Levante Linie, was lying alongside the quay at Galata, and it is said she did not sink, but was beached off Leander's Tower, but that two lighters were sunk. The police appear to have arrested some of the proprietors of the shops that were closed, for having disturbed public confidence.

State of the City.

The state of the city appears to become more acute every week. No one is allowed now to travel on the Bosphorus steamers, or even go to Haidar Pasha or Kadikeui, unless provided with a police permit, and anyone wishing to leave Constantinople must likewise obtain special permission from the police.

According to latest reports, there is a great scarcity of bread, for, although there is plenty of wheat, the mills are unable to work owing to want of coal. What little coal remains is reserved for the navy and for running military trains.

Troops can no longer be sent to Gallipoli by sea owing to the danger of submarines, and are, therefore, now being conveyed part of the way by train and have to perform half of the journey on foot. The ordinary train services are consequently suspended.

The Goeben is in her usual berth in Stenia Bay. All the other warships have gone inside the Golden Horn to escape attacks by submarines.

The captains of the two Turkish torpedo boats who ventured down the Dardanelles and escaped the vigilance of the Allied Fleets have been decorated by the Sultan with the Order of Merit for their successful attack on the Goliath in Morto Bay at the entrance of the Straits.

Influx of Refugees.

In addition to the wounded soldiers who continue to be sent to Constantinople, in spite of absence of accommodation for them, shelter has now to be found for refugees, who are flocking into the capital from towns and villages in the Dardanelles. All empty houses are, therefore, being requisitioned without any ceremony, either for refugees or wounded, and bedding and linen are being seized. It is distressing to contemplate the state in which the British residents will find their houses on their return.

Numerous shops have been closed in Constantinople owing to the lack of business.

The feeling against Europeans is very bitter, and arrests are made on the slightest pretext.

An assault appears to have been made on the Italian Ambassador by a junior army officer, but the papers announce that the incident has been satisfactorily closed.

Smyrna and the Provinces.

The inhabitants of all Armenian and Greek towns and villages in Thrace and in Asia Minor are suffering great hardships, being persecuted and ill-treated by the Turks.

There is not much change in the situation at Smyrna, excepting that the practical stoppage of the train services makes it difficult to bring in grain from the interior. Coal is very scarce and is being exclusively reserved for the military trains. Petroleum in Smyrna, as well as in Constantinople, is very scarce and expensive.

A blockade of the coast from the Dardanelles as far as Samos has been declared.

FRENCH NATURAL SPARKLING TABLE WATER.

Perrier

"The Champagne of Table Waters."

KEEPS YOU FIT.

HOT CLIMATES.—Perrier, now famous all over the world, is the ideal drinking water for hot climates. Its delicacy and vigour stimulate the digestion and brace up the system.

P.C.B.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 22.

Russo-Roumanian Negotiations.

The development of events in Italy has been observed with close attention here, and it was generally thought that Roumania would follow the Italian lead. Yet to-day, after months of agitation on the part of what may be called the "action" party—consisting of the entire Parliamentary Opposition, a large part of the Government, and seven-eighths of the people—and tergiversation and procrastination on the part of the "passives"—consisting of M. Bratiano and his followers and one-eighth of the public—things are no more advanced than they were last September.

The *Universul* gives an account of the situation to-day and of the events that have led up to it, which is generally considered as particularly well-informed. According to this account, the negotiations between Roumania and the Triple Alliance have become more precise in tone. M. Diamandi, the Roumanian Minister at Petrograd, had some time ago acquainted M. Sassonof with the conditions on which Roumania would take action against the Central Powers, and these conditions stipulated where the frontiers should be drawn in case of victory. As far as can be ascertained, the Pruth was to be the frontier in the Bukovina region, and the Danube and the Theiss to the south and west respectively. These conditions were accompanied by a map, as requested by M. Sassonof. They did not appear to M. Sassonof to harmonise with a preliminary agreement that had been reached a few months earlier betwen Roumania and Russia; and the reply took the form of counter-proposals, which were considered so unacceptable that the Government refused to open discussions upon them.

Yesterday (the account goes on to say) M. Blondel, the French Minister, called upon M. Bratiano, and in the name of the Triple Alliance informed him that the Allies were disposed to make further proposals to Roumania. He indicated—without presenting any special map—what these proposals were, and from what can be ascertained it appears that the suggested frontier in the Bukovina is a line between the Pruth and the Sereth; while with regard to the Banat, the Allies are prepared to reserve a smaller portion for Serbia than was suggested in the Russian counter-proposals. The Government replied that it stood by the conditions formulated in the first instance. That is the situation to-day, and no one can foresee what the result of this new phase will be, for the Government stands firm, and it is impossible as yet to say if the Triple Alliance has said its last word.

M. Bratiano's Critics.

Yesterday evening, when it was more or less generally known what the Allies had proposed, and that M. Bratiano had categorically refused what were, after all, very fair and just offers, murmurs of dissent arose, and this morning the Opposition papers freely criticize the Prime Minister's action, some even saying that he has made a mistake by asking too much and refusing good offers. His conduct, they say, is likely to cost him his position. At mid-day handbills condemning his action were freely distributed in the streets. "To-morrow," these bills say, "our army, hitherto undefeated, must defile in shame before this traitor," and they conclude: "Let us assemble each evening, at seven, in front of the Palace, and call upon the King to do his duty by turning out the Bratiano Government, to give us power to make a big Roumania, and so to wash away the disgrace that has fallen on us." To-night, save for a few loiterers watching the placing of the decorations for to-morrow's holiday, there was no unusual gathering of the kind suggested; but it is rumoured that the anti-Bratiano demonstration is held in reserve for to-morrow's ceremony.

Independence Day Celebration.

The final orders regarding the review on the 23rd inst. in honour of Roumania's Independence Day do not allow of any participation by members of the *corps diplomatique*. It is feared that the presence of the representatives of the Dual Alliance might give rise to "unpleasant incidents."

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, May 29.

Negotiations in the Balkans.

From trustworthy sources I learn that the Serbian Government has no knowledge of the negotiations which, it is said, are now taking place between the Russian and Roumanian Governments, but that it is uneasy on account of the statements in the foreign Press that Roumania demands the whole of the Banat, or the greater part of it; and it is feared that this question may create a serious Cabinet crisis in Serbia, and would probably in such case paralyze the action of the Government.

As regards Bulgaria, the efforts on the part of the Powers of the Triple Entente, and latterly more especially on the part of Russia, to effect a renewed alliance between Bulgaria and Serbia are persisted in and more energetically pushed than before, but they meet with but slight response on the part of Serbia. Here the general complaint is that Bulgaria has not ceased intrigues by the employment of *Komitajis* and other means, and this keeps up irritation and ill-feeling. Further, the whole population, and more especially the military party, are strongly opposed to any important concessions in Macedonia, and it is believed that Bulgaria's demands embrace a wide field; and that, therefore, in present circumstances the chances of the two countries coming to an understanding are infinitely remote.

The Serbian Press continues in its unconciliatory tone, writing against Bulgaria, and now that this country is under the impression that in certain contingencies the whole or greater part of Dalmatia will be ceded to Italy, political, commercial, and military circles have become still more indisposed to listen to suggestions of any sort of concessions whatever from Serbia as compensation to Bulgaria. The peasants and the people in general, influenced by the tone of the Press and guided by the sentiments of the higher classes, also betray an aversion against the cession of any of the newly acquired territory.

Alleged Bulgarian Intrigues.

Concerning the accusations that Bulgaria continues to intrigue against Serbia, the following statement, taken from Serbian official documents, will serve as an example:—

Everyone knows of the chaos which reigns in Albania. Murders take place there daily. The Bulgarian Press, indefatigable in its attacks and its frequent insinuations against Serbia, goes so far as to accuse us of the assassination of the Kaïmakam of Podgradetz. The *Narodni Prava*, the Bulgarian Government organ, in its issue of May 21, categorically affirms, without any proofs, that the Kaïmakam, Etheme Bey, is a Serbian sacrifice. Nevertheless, all Podgradetz knows that between Etheme Bey and Mehmed Bey, commander of the gendarmerie at Podgradetz, there had existed for a long time mortal hatred. The former has sought to supplant the latter. On April 14 Etheme Bey, going the rounds of the frontier, arrived at the Albanian blockhouse of Tousseniclité, and there he was killed by a shot from the gun of an Albanian frontier guard, Mahmoud, the son of the brother of Mehmed Bey, commander of the gendarmerie at Podgradetz. The assassin escaped, and to this day is a fugitive. Thus it is a vulgar untruth to declare that Etheme Bey was lured to a rendezvous in Serbia.

In New Serbia.

Another Bulgarian intrigue, says my informant, is the statement that the inhabitants of the new Serbian territories are discontented with the Serbian Government, and he invokes the journey of M. Jovanovitch, Minister of the Interior, which, it is said, he undertook in order to convince himself of the falsehood of these questions. The official report states that M. L. Jovanovitch has returned from his trip into the interior of Serbia, that he traversed the districts of Tickvesch and of Bregalnitza, and that after full inquiries he was convinced that the situation in these parts was completely satisfactory. I make no comments on the subject.

Bulgaria and the Porte.

It appears from what I gather from high diplomatic quarters that Bulgaria and the Porte are negotiating on the question of compensation to the former, whereby she hopes to obtain without going to war the territories which the London Conference accorded her, but which Turkey wrested from her when in a powerless state fighting against Serbia, Greece, and Roumania. But, even if this report be correct, it is difficult to say how far an accord with Turkey will influence Bulgaria in her attitude in the present European war. Should it be part of a scheme promoted by Germany, then it would signify an intention on the part of Bulgaria not to go to war against Turkey, and consequently not to take any part in the war.

Serbian preparations to enable her to fulfil the part she may be called on to perform have been fully made, and the public are eagerly awaiting the hour that will make known the beginning of coming events in Serbia. The army has been reposing and preparing during the whole of this protracted period of tranquillity since the last fighting.

Serbian Successes.

A detachment of Serbian soldiers crossed the Sava near Koupinovo, and surprised a detachment of Austro-Hungarians, taking a sergeant, a corporal, and seven soldiers prisoners, and then recrossed into Serbia. Two days later the Serbian artillery dispersed a battalion of the enemy who attempted to fortify the north-east of Koupinovo. On the same day the enemy attempted to cross the river at the island Tsoklyana, and was repulsed.

SERBIA'S ACHIEVEMENT.

Dr. Seton Watson spoke on Wednesday on the military achievements of Serbia, at a meeting held, by permission of Lady Brassey, at 24, Park Lane, in connection with the London units of the Scottish Women's Hospitals for Foreign Service.

Serbia, he said, was the only one of the Allies who had expelled the enemy from her native soil. Her achievement was that she had struck a blow at the prestige of Austria, she had held tremendous forces at bay which might have been used on other frontiers against the Allies, she had accounted for the best part of half a million Austrians in killed, wounded and prisoners, she had blocked the way between Austria and Salonika and Germany and Constantinople and Asia Minor, she had prevented material and men reaching the Turks, and had prevented Bulgaria being driven willy-nilly into the arms of Germany. Serbia should be supported for political reasons, for humanitarian reasons, for her positive merit, and because she was fighting a war of liberation and for the union of the southern Slav race.

BULGARIAN LETTER.

(From Our Own Correspondent.)
Sofia, May 25.

Bulgaria and the Entente Powers.

Last week the British Minister here inquired of the Prime Minister, Dr. Radoslavoff, on what terms Bulgaria would be prepared to join the Entente. Dr. Radoslavoff replied quite frankly that the Bulgarian desiderata are: The purely Bulgarian portion of Macedonia, including both the "uncontested zone" and the "contested zone" of the Serbo-Bulgarian Treaty of 1912, and Kavalla, Drama, and Serres; the restitution of the New Dobruja by Roumania, who would retain only Silistria, according to the lines of the St. Petersburg Conference; and the Enos-Midea frontier. If all these were granted by the Entente Powers, said Dr. Radoslavoff, Bulgaria would declare at once for the Entente, and her troops would march immediately against Turkey, the hereditary foe. He added that the Bulgarian Minister in London had already been instructed to give Sir Edward Grey a similar assurance.

Now that the whole of Bulgaria's claims, or desires, have thus been tabled, and are understood to be under consideration by England and her Allies, it is hoped in well-informed circles here that the Entente Powers will shortly make concrete proposals to Bulgaria, and that negotiations will be begun thereon. In that case, their issue will, of course, depend largely upon the future attitude of this country.

The Intervention of Italy.

The news of Italy's declaration of war upon the Central Powers and Turkey created a profound impression here; and all political parties are agreed that the hour has come for Bulgaria to act in order to realise her ideal of national union. Feeling against Turkey is very bitter, as a result of recent provocation by the military authorities at Adrianople in stopping more than one hundred waggons of rice which were passing from Dedeagatch to Old Bulgaria. Most of the waggons contained rice sent from Italy, which the Turks wished to seize as contraband of war, under the pretext that it was destined for Roumania! The Bulgarian Government lodged at Constantinople a very energetic protest, which almost amounted to an ultimatum. Thereupon the Porte gave assurances to the Bulgarian Minister at Constantinople that what had taken place had been done without the knowledge of the Turkish Government; that immediate orders should be given for the free passage of the goods; that an indemnity should be paid for any losses sustained; and that the guilty officials should be dismissed and receive exemplary punishment. But the offence being repeated again, the other day the Prime Minister laid the matter before the Cabinet, and raised the question of eventually seizing the railway line between Kara-agatch (Adrianople) and Dedeagatch.

National Committee's Manifesto.

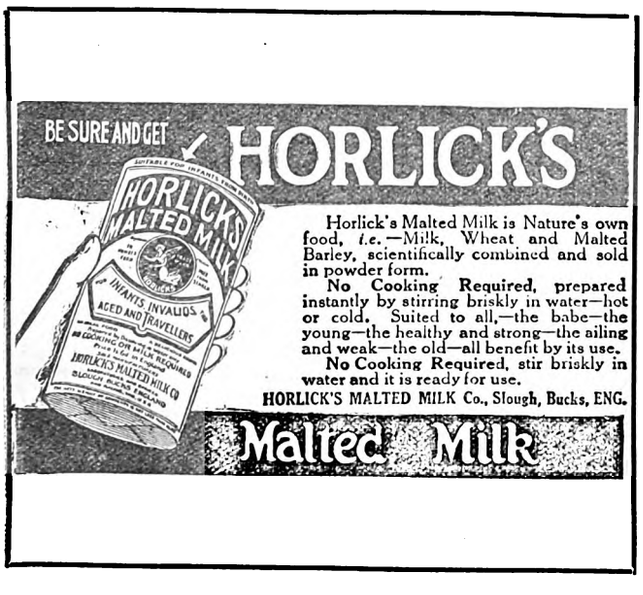
Yesterday the Bulgarian National Committee handed to the representatives here of the Great Powers a memorandum giving a historical sketch of the sanguinary struggles for the liberation of Macedonia from the Turkish yoke, and of the intolerable conditions existing under Serbian and Greek rule at present since the Treaty of Bucharest. The Committee asks the Great Powers to intercede on behalf of the reasonable claims of the Bulgarian nation—"granting freedom to Macedonia and to all Bulgarian lands, in order that they may unite under the sceptre of the common Bulgarian fatherland."

The Interview with Queen Eleanor.

Regarding the interview granted by Queen Eleanor to Miss Ernestine Thom, representing a Chicago journal, about which I sent you some details in my last letter, I have now to report that a disavowal of the political portions of the "interview" has been issued from the Palace.

Festival of St. Cyril and St. Methodisu.

The festival of the Slav Apostles, St. Cyril and St. Methodius (who were natives of Salonika, and to whom the Bulgarian nation owes the introduction of Christianity and the Cyrillic alphabet) was celebrated most solemnly yesterday, both in Sofia and throughout the kingdom. In the observance of this, the greatest of the national festivals and the fête day of national culture the young students took a prominent part. The students of both sexes from the gymnasia, the primary schools, and the University, and representatives of all the educational societies marched through the streets of the capital bearing their flags and banners—those of the Dobruja Society and of the Macedonian charitable societies were draped in black as a sign of mourning for the bereavement of their fatherland. In front of the Palace the processionists were greeted by the King, the Queen, and the Princes and Princesses, whom they cheered with great heartiness. The great feature of the celebrations, however, was a vocal concert given at the Military School in the afternoon by the cadets, with a choir of 200 boys. This was honoured by the presence of the Queen and the Royal children, the Cabinet Ministers and a great crowd of citizens being also present. The day being the name-day of Prince Cyril, all the Cabinet Ministers, members of the diplomatic body, and high officials signed the Palace reception books.



NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Dardanelles and Russian Wheat. June 7.

Replying to a question by Sir John Spear, who asked if the Government had taken any steps whereby, on the opening of the Dardanelles, Russian wheat would be secured for the direct use of consumers in this country, without the interference of any ring,

Mr. Acland said: The Government do not propose to acquire control of wheat from Russia, and they see no reason to anticipate the formation of a ring to deal with it.

Germany's Cotton Supply.

Replying to a series of questions put by Sir J. D. Rees regarding the steps taken to prevent cotton from reaching Germany,

Lord Robert Cecil said that it is hoped that the effect of the prohibition of cotton exports from Egypt will be to prevent Egyptian cotton reaching the enemy through neutral States.

Austria-Hungary and Roumania. June 8.

Lord R. Cecil, in reply to Mr. King, said that his Majesty's Government had no knowledge of any agreement now in force between Austria-Hungary and the Roumanian Government.

SPRING AT SKOPLJE.

A correspondent kindly authorizes us to publish the following extract from a letter which he has received from an Englishman who is now working with Lady Paget's Hospital in Serbia. The letter is dated May 23 and written from Skoplje:—

The weather is pleasant here; we all anticipated great heat in May, but, thank goodness, we are still in glorious spring. We receive little news; should fighting occur in Northern Serbia we may be shifted to Belgrade, a move which would entail on my poor self—storekeeper in Lady Paget's Hospital—an endless amount of trouble. Vast accumulations of stores would have to be sent somehow, and the railway line is in a state of hopeless congestion. First-class passengers have to spend twenty-four hours and more sitting in corridors between Salonika and Nish. Stores for various units are dumped down at Skoplje, and it falls to my lot to forward them. This is often impossible, because people in England are apt to send bales and packing-cases without sufficient address. Time and again I have seen bales of cotton wool lying for days together in pouring rain.

THE "BRITISH USED ABROAD" POSTAGE STAMPS OF THE NEAR EAST.

During the late 'fifties, at a time when no other reliable facilities for postal inter-communication existed, some 150 branches of the British Post Office were established in certain Colonial and foreign places for the transaction of ordinary post-office business.

Up to certain periods these offices issued the contemporary postage stamps of Great Britain, and the only method of detecting whether the stamps were franked through these offices is by means of the official post-marks upon them, each office having an obliteration device bearing either a distinctive letter of the alphabet, or a numeral, or both. Stamps bearing such post-marks are commonly termed by collectors "British Used Abroad," and as those emanating from the branch post offices established in the Near East are quite plentiful, a few particulars regarding them may be of interest to readers of THE NEAR EAST. And here let it be remarked that these stomps must not be confounded with the specially overprinted or designed stamps subsequently introduced and issued at these offices.

The places of issue and the respective post-marks of the offices usually included amongst those of the Near East are as follows:—

Malta..M (at first), A25 (at a later period).
Gibraltar..G (at first), A26 (at a later period).

Constantinople	C	Suez.....	B02
Alexandria.....	B01	Beyrout	G06
Smyrna	F87	Nicosia (Cyprus)	969
Larnaca (Cyprus).....	942	Famagusta (Cyprus)	975
Baffo (Cyprus)	974	Kyrenia (Cyprus).....	982
Limasol (Cyprus).....	981	Salonika.. A circular place and date stamp.	
Polymedia (Cyprus)	D47		
Stamboul	S		

British Army Corps, Cyprus, 1878-80..D48

Malta, Gibraltar, Constantinople, Stamboul, Alexandria, Suez, Smyrna, and Beyrout possessed in addition circular obliterators indicating date and place.

It may be observed in passing that Austria and Russia had branch post offices in Turkey as far back as the eighteenth century. France established hers in 1812. Then came Great Britain (1832), Greece (1834), Germany (1870), Egypt (1870), and Italy (1873), whilst Roumania during 1896 had a floating postal agency on board a vessel moored in the Bosphorus. Of these, like Great Britain, France, Greece, and Italy have their own types of "Used Abroad," these countries having also employed their respective contemporary stamps prior to the introduction of distinctive postal issues.

The vogue of the "British Used Abroad" began in 1857, and, as regards Turkey, entered upon its eclipse in 1885, when the first British stamps were issued there, which bore upon their faces imprints in Turkish currency of their values. This became necessary because, owing to the difference in the rate of the money exchange, some cute arbitrageurs had been profiting to the extent of 20 per cent. by purchasing stocks of British stamps in Turkey and selling them in England.

Generally speaking, despite efforts to popularise the cult, British collectors ignore all "British Used Abroad," for three principal reasons:—(a) Because to the average collector they are of no consequence, since the stamps neither bear overprints nor possess any inherent distinctiveness from the ordinary stamps in contemporary use; (b) because of the great number of forgeries in existence; and (c) because of the very heavy cancellation marks which invariably deface them. Obviously collectors prefer lightly-cancelled to heavily-cancelled specimens, and it is no infrequent occurrence for collectors willingly to exchange their heavily cancelled "Used Abroad" for others—not "Used Abroad"—more lightly cancelled, well knowing the augmented value attached to the "Used Abroad" by philatelists collecting them.

Almost daily fresh specimens are coming to light, and many more will, no doubt, be found in the musty deed-boxes of the early mid-Victorian era in possession of solicitors, bankers, merchants, and others. Quite recently a certain firm of solicitors were induced to tumble out their correspondence of fifty years ago. The reward was immense from a philatelic point of view and quite considerable from the utilitarian standpoint. To those who would do likewise a word of caution may be given. One postage-stamp which in appearance resembles another may, in reality, not be quite the same. There may be just one of those differences between the two to give them distinctive philatelic values. For example: There are, to begin with, 175 varieties of the common "penny red" of Queen Victoria's day, because of there being as many different numbered plates from which these stamps were printed. No less than ninety-four different plate-numbered varieties have been discovered so far with the Constantinople post-mark, forty-two with that of Smyrna, and fourteen of Beyrout. Apart from these there are also numberless variations owing to certain differences in the perforations, shades of colour, papers, water-marks, and gums. This principle holds good in regard to stamps other than the penny red, and it would therefore be unwise for the successful fossicker to jump to hasty conclusions.

It may perhaps be as well to admit that of all the "British Used Abroad" those of the Near East possess the least value because of their comparative profusion, whilst those of the West Indies are of greater value because of their relative scarcity.

L. LOEWENTHAL.

MIXTURE OF RACES IN EGYPT.

At the Grafton Galleries, on Friday last, the occasion being the June afternoon meeting of the Eugenics Education Society, Professor Elliott Smith, M.D., F.R.S., lectured on the influence of racial admixture in Egypt. Major Leonard Darwin presided.

The Professor said that the effect on civilization produced by migrations and admixture of populations had not been sufficiently recognized. Modern anthropologists generally tended to emphasize the originality of mankind, but originality was one of the rarest of attributes; the great majority of people received their arts, practices, customs, etc., from their ancestors, or learned them by contact with their fellow-men. The history of sixty centuries—the period from which large numbers of human remains had come down to us—was essentially one of the admixture of races and the development of culture consequent on the contact of people of different regions and antecedents; and one of the most striking results of modern anthropological research had been the proof by positive evidence that 6,000 years ago the modern races had already assumed their distinctive physical characteristics. In ancient Egypt there were three distinct races of people, none of them peculiar to the country. The first, the proto-Egyptians, were the aborigines; it was they who began the Egyptian civilization. They were part of a race spread through the countries round the eastern Mediterranean, south-eastern Arabia, and India, and differing but very little from the people around the western Mediterranean. This type of man had a long head, a rather small, flat nose, and a weak jaw. Another race that came into Egypt from the north were called by anthropologists Armenoid. These were men with broad or roundish skulls, flat at the back, a high and narrow nose, and a square and powerful jaw. In their faces and persons they were more inclined to plumpness than the proto-Egyptians. The Armenoids were a notably powerful and energetic race. Mingled with other races, they had spread over a large part of the earth's surface, going as far even as New Zealand. Almost every people that showed any aptitude for maritime adventure had an Armenoid admixture. The inhabitants of the highlands of central Europe were largely Armenoid.

In ancient Egypt people of this race intermarried with the Egyptian upper classes, and the evidence of the skulls was that some of the greatest kings were of a mixed or even purely Armenoid type. About 600 B.C. the distinction between the upper and lower classes in Egypt was wiped out, and from then until the present day there had been no line of separation between them. Skulls at different periods showed an intermingling of races ending in what might be called a reversion to type, but this was rather the result of the intermingling of a small alien element with a much more numerous aboriginal population. To-day, if skulls of modern Egyptians were examined from such regions as Upper Egypt or the Fayoum, they were found to conform more and more to those of the aboriginal Egyptians of 6,000 years ago.

The third element that had affected the Egyptian population was negroid. At a time even earlier than the coming of the Armenoids people of the black race began to be introduced into Egypt from the south, chiefly as women slaves, and about the same time as the Armenoid influence began to wane this negroid element began to exert a potent influence. Thus the fact was accounted for that the modern Egyptian showed but little of the originality or inventiveness of his ancestors. That inventiveness and originality had been largely due to the stimulating presence of a race that had now been absorbed, while such influence as it might continue to exercise was neutralized by the infiltration of black blood from the south.

An interesting discussion followed. Replying to one of the points raised, the lecturer said it was assumed by most modern ethnologists that it was a natural thing for man to build himself a stone house, weave cloth, and so on, but really it was an extremely unnatural thing for man to do any work that he was not compelled to do. A study of the habits of any primitive people showed their whole activity as taken up by the pursuit of food or other necessaries of existence. It was an altogether artificial thing to engage in the arts and crafts which we considered essential parts of our civilization, and wherever we found a people resorting to such practices we could find that those arts and crafts had been introduced from somewhere else, and that somewhere else was ultimately Egypt.

NEAR EAST BOOKSHELF.

SERBIA AND THE SERBS.*

"The story of Serbia," writes the author, "ill known as it is to the majority of English people, is a record that might well move a man to tears or to curses; it might send him to his sword or to his knees. Battered about as a buffer State between the hosts of the Ottoman Empire and Austria or Hungary, with constantly alternating dangers from Bulgaria and Greece, the land of Serbia has suffered and sinned through years of varying fortune. The pitiful tragedies of its royal houses and the hideous lists of political assassinations have brought the kingdom under the bitter condemnation of the more highly cultured European States. Reprehensible and criminal as some of these *coups d'état* have been, the treatment meted out to the Serbians by the Great Powers of Europe has not been beyond reproach. Treaties have, on more than one occasion, been framed with a diplomatic forgetfulness of Serbian claims, which fact has been exasperating to a brave people, who had paid the price of consideration with the blood of its sons."

Mr. Church proceeds to deal with the ethnographic problem frequently analysed in THE NEAR EAST, and then states the object of the book he has written. Its purpose is "to trace, if possible, the leading events in the history of the purest Slavonic race in the Balkans, and by so doing to elucidate the principles which have led to its present honourable position among the nations." The object, we think, has been well achieved. It is modest and yet, in spite of its modesty, or rather because of it, the volume will appeal to that large class of readers in the British Isles whose knowledge of Serbia and the Serbians is limited, and who nevertheless wish to acquaint themselves with a people who are among the bravest, most democratic, and independent of any in Europe. Their history is a stage of daring deeds and tragedies, of glowing legends and epics that have scarcely a rival in the West, of mighty heroes and fairer patriots forever combating invaders and traitors, of humble peasants singing their national songs of valour and instilling in the minds of the young the record of glorious triumphs over the encroaching foe. In the book under review the class of readers appealed to will be able to assuage their thirst for knowledge.

In simple words Mr. Church examines the origin of the Southern Slavs, and, basing himself on the theories of Dr. Peisker, shows how the Slavs in the north, following in the wake of the nomadic Goths, settled in the fields vacated by them, ever gradually approaching the warm waters of the Adriatic. Those were the pre-Christian days of folk-lore and hero-worship, of myths and superstitions that still linger in the memory of peasants and hillmen, and have done more to mould the peculiar characteristics of the nation than centuries of Western culture. John Vladimir, saint and ruler, emerges from the mists of time, just as a beech trunk grows out of the mist on a lonely hill, only to be swallowed up again in the wake of the wanderer. Similarly does Stephen Voislav appear and disappear, and we pass on to the growth of Serbia, with its more tangible figures, such as Stephen Nemanya and Proventchani, who lived long enough to see their kingdom acquire an international status in the political maelstrom of those days. Then came the more glorious period of the Urosh, during whose reign the Tartars first emerged out of the East into, or along, the valley of the Danube. But a still more glorious epoch was dawning for the Southern Slavs, and its symbol is to be found in the acts and deeds of the Great Tsar, Stephen Dushan, the "Throttler" (circa 1350).

The study of the character and deeds of Stephen Dushan leave the mere student with a series of vague impressions, in which there appears at one time a mighty warrior with the loftiest patriotic ideals, at another time an unscrupulous soldier of fortune, and yet again an almost mythical hero whose deeds have been sung by countless bards, and whose very name is his nation's most splendid battle-cry. Perhaps it is in this last rôle that he has best served his people. With King Arthur and Roland of Roncevalles, he takes his place as the paragon of heroic virtues to which each successive generation of his countrymen has looked for inspiration and for courage. The mere recital of such a man of deeds is a poor substitute for those mighty epics which have been heard round many a Serbian camp-fire on the eve of tremendous conflict. To the mind that is coldly analytical, however, it is satisfactory to learn that the wealth of panegyric has a solid substructure of facts. So unbroken was his series of victories that he conceived the ultimate idea of winning for himself the imperial throne at Constantinople, and so reigning in unhampered supremacy over a Serbia that should embrace the whole of Eastern Europe.

At the doors of Constantinople death overtook the Great Tsar, and with him departed the greatness of Old Serbia. Its glory waned with the irresistible oncoming of the Turk, until finally, on the plains of Kossovo, the "Field of Blackbirds," it was nigh strangled, and, in spite of the valiant attempts made to save her by men like Milosh Obilitch, the two Lazars, Stephen Tvrtko, and John Hunyadi, the Turkish bonds tightened about her throat.

The spirit of the people was not broken, however. It breathed freely in the mountains of Montenegro, and it smouldered in the valleys of the Drin and the Morava, kept alive ever by the singing of those tremendous epics which are the pride of Serbian literature. It was centuries before freedom from the Turkish yoke dawned, but it did so at last, after many vicissitudes and blood-stained pages of national tragedy. Even in our days the first Balkan War was nothing if not the completion of the Serbian ideal, namely, the liberation of all Southern Slavs from Ottoman rule. Another enemy had, however, arisen to the north; the struggle between the two—between the small country fighting for its freedom and the huge giant bent on destroying it—became imminent, and in its wake followed the great European War.

Mr. Church has followed the whole trend of Serbian history with commendable lucidity, and has narrated the principal happenings in an easy style that ought to do much to popularise in England our little but valorous ally in the Near East. Incidentally be it remarked that a skeleton map would have enhanced the value of the work.

* "The Story of Serbia." By Leslie F. Church, B.A. (Kelly. 1s. net.)

BOOKS FOR OUR SOLDIERS.

The Camps Library is doing a fine work in sending out books, magazines, and papers to our soldiers in camp, whether at home, in Egypt, up the Persian Gulf, in India, on the Continent—to all parts where our soldiers are to be found. From an eloquent appeal for still more books for distribution which has reached us, we give the following extracts:—

"All through the long winter the letters of acknowledgment and thanks for the books given by the public and sent out to the front were the same—'so much spare time in the billets when the men are resting and have nothing to do.' But these last days a new phase comes constantly into the flimsy paper letters, written in faint pencil (these letters which we all know so well, and which every woman's heart is aching to get from her own dear lad, all through these long, long days), and the phrase is this. It is reiterated in almost every letter just now; it varies very slightly: '. . . Send us more books. We want them more than ever now. They help us to forget the horrors of the battlefield and all that we have seen. . . .' Books to enable the men to spend a quiet hour without their thoughts dwelling always on the horrors and scenes through which they have passed.

"Need more be said? It is such a little thing to pack and send a few of the books that are lying unread about the house, but it is no little thing to help 'Them'—our dear 'Them'—out there, in any way we can. And sending books is assuredly one very real way, and a way that is open to everyone, for many folk who are in these days prevented by financial circumstances from giving in cash can give in kind, and nearly everyone has a few books put away on shelves, read by no one in the house. . . .

"With so many different units asking for books, the supply required is really vast, and this supply depends entirely on everybody's generosity and willingness to help.

"The books most needed are novels of every sort and kind, stories of sport and travel, detective stories, magazines . . . illustrated weeklies (as up to date as possible), old yellow backs, paper novels, and above all 'Sevenpennies,' those little books that hold between their scarlet covers the best of modern fiction."

The appeal, which is headed "Please!" concludes:—

"Hence the word 'Please.' Please, you who read this paper, whether in house or train or office, send all the books you can spare, be it two or three books, be it books by the hundredweight, send them carriage paid to "THE CAMPS LIBRARY, 22, EARL STREET, WESTMINSTER," and the sooner they are sent the sooner will the men who ask for something to take their thoughts just for a short time off the horrors of war get what they are asking for.

AN IMPORTANT NEW BOOK ABOUT EGYPT.

By BARON DE KUSEL (Bey),

Sometime English Controller-General of Egyptian Customs.

AN ENGLISHMAN'S RECOLLECTIONS OF EGYPT. 1863 to 1887.

With an Epilogue dealing with the present time, 1914.

With thirty-two illustrations and a map.

Demy Octavo. 10s. 6d. net.

"He writes freshly and agreeably of his life and its varied experience . . . and of the many well-known personages . . . with whom he was thrown."—*Times.*

JOHN LANE: THE BODLEY HEAD, W

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"UNION WITH GREECE."

To the Editor of THE NEAR EAST.

Sir,—For many years the question of the future of Cyprus has from time to time been discussed by all sorts and conditions of men. The Duke of Connaught landed, and union with Greece was shouted. Mr. Winston Churchill paid an official visit to the island, and the same cry was heard. The annexation of the island is publicly proclaimed, and a bishop, as the flag goes up, declares it is a stepping-stone to union with Greece. In the market place and in private houses the rights and the wrongs are perpetually discussed; arguments on both sides are brought forward and persisted in *ad nauseam*.

May I, with your permission, put the matter in a nutshell? Before the outbreak of the present war it was possible to admit that there was something to be said on either side. That position must now be altogether abandoned, and union with Greece be indubitably pronounced impossible.

On the conclusion of peace, France, Russia, and Great Britain will reconstruct the map of Europe and the map of a portion of Asia. Granted that the British Government were willing and anxious to cede Cyprus to Greece, France and, probably, Russia would decline to ratify the agreement. France, in possession of Syria, would not allow Famagusta Harbour to fall into the hands of a country whose Queen is a German and whose power to resist aggression was small. Famagusta in the hands of Germany would be a standing menace to Beyrout and Port Said. Hence union with Greece is impracticable.—I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus, May 20, 1915.

FOR OUR WOUNDED SOLDIERS.

To the Editor of THE NEAR EAST.

Sir,—I am most grateful to you for the parcel of books, which arrived safely yesterday and were at once distributed amongst the men. They were delighted to get something to pass the time, especially in the wards reserved for the less seriously wounded, where they find it very dull waiting about. It may interest the kind contributors of cigarettes to know that the last you sent me were rescued when our hospital was shelled out and brought safely away, also how grateful we were for them when we re-established ourselves in a new place and were filled with patients before our own stores could come up.

There is something else we want very badly, and that is some small iron bedsteads . . . and I am sure if you knew the difference it makes to the comfort of the men you would make a very earnest appeal to your readers for a gift of at least six. As a clearing station, we are not provided with beds, but as we keep the dying and any too ill to travel in safety, such as men wounded in the chest and abdomen, until they are fit to be moved, the gift of a few beds would be an inestimable boon. You can imagine the difference to a wounded man between lying for days on a narrow stretcher and on a bed. A bedstead would be the kindest present I know of, and the most appreciated; of course, they must be portable. . . . . If people only could see the suffering we see and are almost powerless to alleviate!

I have not received a copy of THE NEAR EAST for three weeks, and I do miss it so very much. With many thanks for your kind thoughts for the men.—I remain, etc.,

K. H. WHEATLEY.

No. 3 Casualty Clearing Station, British Expeditionary Force, June 1, 1915.

[The Editor of THE NEAR EAST will be pleased to receive donations for the purchase of bedsteads such as Nurse Wheatley asks for. All contributions will be acknowledged in these columns.]

THE DESTROYERS OF TURKEY.

To the Editor of THE NEAR EAST.

Sir,—When the Young Turks returned to power two years ago the doom of Turkey was sealed. I wrote a letter to this effect in Arabic to the late Mahmoud Shevket Pasha, telling him, concerning Turkey, that "Enver and Talaat Bey have killed her"; and when, looking for an omen, I reckoned the numerical value of the letters composing the Arabic sentence, "Enver ona Talaat Bey Katalaha," it gave me 1331, which was then the Mohammedan year, the present one being 1333.

None of the various subjects of this Power will regret its passing away, not excepting a large proportion of pure Turks, because at best it remained barbaric, dealing in torture, poison, or assassination whenever its rulers feared any dissatisfaction of the people with their acts. It is true that nations have the Governments they deserve; nevertheless the Turks deserved a better fate, especially in these times when they had only to will to became possessors of greater power and a brighter future than any their old barbaric state ever promised them, or any of their immediate neighbours, on personal merit, are entitled to. They represented the remnant of Islamic power, whose moral progress was, under the influence of a tolerant age, getting almost on a level with the highest moral institutions of the world, and they had the support of England and France, provided they administered their Empire justly and humanely. True it is that encroachments, now and then, were permitted to take place on their domain; but it is true also that they held more than they could manage, and common-sense required that they should make better use of what was left them. Unluckily for them the policy of Abdul-Hamid drew Germany to their side, actually as a counterpoise to Russia's influence in the Balkans, but the only result was to have a new master to propitiate.

Abdul-Hamid's misrule continuing under the supposed protection of the German Emperor, the Young Turks' revolution came, and Abdul-Hamid was deposed. England and France applauded the bloodless revolution which was to bring Turkey within the rank of European Powers for the good management and proper development of her enormous resources. Unfortunately again for Turkey, the Young Turks lacked moral power, and showed too much of the animal spirit let loose after being long chained by the ruthless hand of the previous ruler. The Balkan League was the unexpected consequence, and it further curtailed the Ottoman dominion. Constantinople itself was nearly falling before the victorious Bulgars, when England counselled reflection to the Turks, and they called in Kiamil Pasha to arrange peace terms. Dissension breaking out among the Balkan States forming the league against Turkey, peace was easily concluded, and the Turks were even then able to retake from the Bulgarians the town of Adrianople, ancient capital of the Peninsula of Gallipoli.

The struggle for Turkey had been exhausting, and her friends were looking for her for a long term of peace and recuperation, the only danger being from Greece's awakened appetite. But no sooner was Constantinople safe than the Young Turkish fools returned to power, through murder and strife, and because England did not prevent their territorial losses they plotted with disappointed Germany and Austria to bring on a European war, in which France and Russia, the Slavs' protector, would be crushed, and England be placed at the mercy of the Germanic coalition. In this they failed to see that whereas in the past they were masters of their destiny for good or ill, by their new dependence on Germany they lost all independence, and that, whichever way Germany's venture ended, their own fate would be no longer in their own hands, but in Germany's, or her enemies' hands, entirely, so clearly it was that they had nothing to gain and everything to lose by their association with that Power. This much was clear, that all reasonable Turks thought it and said it, telling us to the last that Turkey would not fight on Germany's side, and that her mobilization was a precautionary measure only against Greece. It was logic. But Enver and Talaat Bey had been bought by German gold, and Turkey was sold and delivered to her purchasers, bound hand and foot by a large number of German officers, assisted by the smuggling of the two German warships, the "Goeben" and "Breslau," through the Dardanelles.

To the last moment England, France, and Russia warned Turkey of the consequences of her joining in Germany's quarrel, which was not hers in any sense or way. Sundry friends and writers also advised Turkey to mind her own business and attend to the healing of her internal wounds and recuperation. But nothing availed, and since the army and the police were officered by Germans, the people, who saw the danger, were powerless to move against their oppressors. War being at last declared by Turkey, we now await the consequences. Cyprus and Egypt are meanwhile annexed by Great Britain, pending further developments in other quarters.

These developments can have only one result, which is the final disappearance of the House of Othman from the scene of its past activities. Not only in Europe, but in Asia too. The Italian accession to the Allies' cause and the increased importance of the Asiatic Continent in the hands of Europeans will have the effect of putting an everlasting bar to Greece's unwholesome ambition of becoming an imperial nation and a constant menace to the peace of the Levant. Greece will, in fact, tend to diminish, and be absorbed in the Continent, while Egypt will come to the fore as the new Sultanate of the Arabs and protector of Mecca.—I am, etc.,

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915.	1915.		1333.	5675.
June 11	May 29	Friday	Rejeb. 28	Sivan. 29
12	30	Saturday.....	29	30 Tamuz
13	31	Sunday	30 Shaaban	1
14	June 1	Monday	1	2
15	2	Tuesday	2	3
16	3	Wednesday	3	4
17	4	Thursday	4	5

To-day is the birthday of H.R.H. Princess Olga of Greece, eldest daughter of Prince Nicholas and niece of King Constantine, who was born at the castle at Tatoi in 1904.

Monday is the birthday of H.M. the Queen of Greece, who was born in 1870.

Tuesday is the birthday of H.M. King Oscar of Sweden, who was born at Drottningholm in 1858.

A Larnaca correspondent writes (May 22): "The news of King Constantine's serious illness has caused a great sensation in Cyprus. The people flocked to the churches to offer prayers for the restoration of his Majesty's health."

Writing on May 25, our Sofia Correspondent informs us that on the 31st, in honour of the anniversary of King Ferdinand's accession to the Bulgarian throne, several colonels in the Bulgarian Army were to be promoted to the rank of General.

The *Egyptian Gazette* of May 18 states: The condition of Prince Ahmed Fuad, the brother of the Sultan, is now somewhat improved.

Lord Kitchener had an audience of the King on Tuesday.

H.E. the Roumanian Minister visited the Foreign Office twice on Monday, and called again on Wednesday.

H.E. the Greek Minister visited the French Ambassador on Tuesday.

H.E. the Serbian Minister visited the Russian Ambassador on Tuesday afternoon.

Baron Uxkull, of the Russian Embassy, leaves London this week for the Legation at Athens, to which he has been transferred.

Madame Pashitch, the wife of the Serbian Premier, has arrived in London from the Continent. She is accompanied by Mlle. Pashitch.

Miss Monsie Scott has returned from Serbia. For the present, her address will be Holcombe, Henley-on-Thames.

Prince Troubetskoi, the Russian Minister to the Serbian Court, passed through Bucharest on May 19 on his way to Petrograd.

Writing on May 22, our Bucharest Correspondent reports that a Belgian mission, headed by General C. de Witte, passed through the Roumanian capital on May 18 on its way to Petrograd, bearing decorations that have been conferred upon the Russian Commander-in-Chief and other Russian generals by the King of the Belgians.

We regret to learn that Lieutenant H. Pirie-Gordon, R.N.V.R., who has been doing good work in various parts of the Near East for several months past, and recently took part in the landing on the Gallipoli Peninsula, has been wounded. Happily, the wound is reported to be only a slight one.

Dr. Beatrice McGregor, of Wimbledon, and formerly of Teignmouth, South Devon, is leaving for Serbia, to take charge of a typhus hospital. She is accompanied by Miss Pares, who has for many years assisted her in charitable works in Wimbledon. At a meeting of the Wimbledon Borough Council last week a resolution expressing the Council's high appreciation of Dr. McGregor's action was unanimously agreed to.

Mr. T. D. Cree, one of the best-known and most popular members of the British community in Baghdad, who was last year, with most of the British residents, expelled from that city, is now in Busreh, whither, it will be remembered, he went to endeavour to secure the release of the remaining British in Baghdad. That mission has not yet met with success, and meanwhile the authorities at Busreh, recognizing the value of Mr. Cree's experience of the ways of the country and its people—to say nothing of its former rulers—have appointed him Blockade Officer. The duties of the post are, we understand, various and onerous, but Mr. Cree's friends will have no doubt of his making a success of his new work while waiting the chance to resume more peaceful avocations in Baghdad.

Mr. Maurice Carton de Wiart arrived in Egypt from the Dardanelles in the middle of May, having been wounded in the arm.

Mr. Albert Simmons, whose name appears this week in our directory of English refugees from Turkey, was probably the last Englishman able to leave Constantinople.

Mr. Keith H. Marsham, late secretary of the Khedivial Sporting Club, Cairo, who has been employed in the remount department in England, has been gazetted temporary captain.

Mr. David Rees, the Chief Agent of Reuter's Agency in Egypt, who has been unwell for some time past, is now practically restored to his usual health.

Mr. A. T. Cull, who was formerly agent of the Imperial Ottoman Bank at Minia, Egypt, has been granted a commission as Second Lieutenant in the 3rd Seaforth Highlanders.

An engagement is announced between Captain and Brevet-Major J. B. Wells, who is now serving on the staff of the Mediterranean Expeditionary Force, and Arabella, eldest daughter of the late W. W. Wright and Mrs. Wright, of Albury, Surrey.

On the 5th inst., at St. Sepulchre's, Holborn, the marriage took place of Maurice Arthur Canney, M.A., Professor of Semitic Languages at the University of Manchester, with Miss Gladys Myddelton, elder daughter of Mr. and Mrs. Richard Frederick Myddelton, of Colne Mead, Rickmansworth, Herts. The Rev. W. A. Cunningham Craig officiated, assisted by the Rev. R. Galer.

Mr. Thomas Usborne, formerly member of Parliament for Mid-Essex, and chairman of the Anglo-Egyptian Bank, died on Tuesday at his residence, near Chelmsford, aged seventy-five years. He was the son of the late Mr. T. M. Usborne, of Blackrock, County Cork, and was educated at Harrow and Trinity College, Cambridge. He represented Mid-Essex from 1892 to 1902.

The death is announced of Major George Ramsay Elliot, late of the Seaforth Highlanders, who retired from the Army in December, 1901. He took part in the Egyptian Expedition in 1882, in the Hazara Expeditions of 1888 and 1891, and was present with the relief force in the Chitral Campaign in 1895.

Major A. G. Cowan, 74th Punjabis, attached 53rd Sikhs, Indian Expeditionary Force, who died on active service at Suez on the first of this month, was the officer upon whom the bronze medal of the Royal Humane Society was recently bestowed at a parade of troops at Suez. He was also gazetted major while serving at the same place.

Lieut.-Colonel Francis Alfred Earle, Royal Warwickshire Regiment, who has been wounded at the Dardanelles, is the only son of the Bishop of Marlborough. He obtained his commission in 1889, and saw service with the Nile Expedition of 1898. He was mentioned in despatches and received the brevet of major for conspicuous work at the battles of Atbara and Khartoum. He returned with the rank of major in 1905 and was gazetted to his present rank as a general staff officer of the second grade on the outbreak of war.

Captain Hugh Ince Webb-Bowen, Royal Welsh Fusiliers, who is reported as having died of wounds received while employed with the Mediterranean Expeditionary Force, was from 1911 to 1913 attached to the Egyptian Army. For some time he held the appointment of Deputy-Assistant-Adjutant-General. He had also seen service in the South African War.

Captain H. H. Bolton, who died on May 25 from wounds received at the Dardanelles on the previous day, was the eldest son of Mr. and Mrs. Bolton, of Newchurch-in-Rossendale.

Captain T. A. Abbott, R.F.A., who was killed in action in France recently, was the only son of Lieutenant-Colonel H. E. S. Abbott, D.S.O., R.E., of Park Hill, Bagshot, Surrey. He received his commission in the Field Artillery in 1902, and later served for some time in Egypt.

Mr. J. N. Williams, elder surviving son of Colonel Sir Robert Williams, M.P. for West Dorset, and of Lady Williams, who was killed recently, enlisted as a private in the New Zealand Expeditionary Force and had served in Egypt. He had been recommended for a commission in a home regiment. He was among the first seven of his force to reach the firing line.

Captain Archibald James Hepburn, who was killed in action at the Dardanelles, received his captaincy in the Territorial Forces two years ago. Volunteering for active service in August last, he was sent to Egypt. For some time he was Officer Commanding Troops at Nicosia in Cyprus. He was 33 years old.

Lieutenant-Commander J. C. Wedgwood, R.N.V.R., M.P. for Newcastle-under-Lyme, who was wounded at the Dardanelles, has returned to Borlaston, Staffs. He was in charge of a squadron of armoured motor-cars, but when the entrance to the Dardanelles was reached it was found that they could not be used owing to the difficulty of landing. Lieutenant-Commander Wedgwood and his men therefore mounted their Maxims aboard the "River Clyde" to cover the landing party. Afterwards, he took part in the advance on Krithia and was wounded a fortnight after landing. He was removed to Malta, and thence brought home.

At a meeting of the Royal Asiatic Society on Tuesday, Lord Reay, the president, announced that the Triennial Gold Medal of the Society, presented for special eminence in Oriental research, has been awarded jointly to Mrs. Agnes Smith Lewis and her sister and collaborator, Mrs. Margaret Dunlop Gibson. These ladies are distinguished Orientalists, and are known particularly for their "Studia Sinaitica" and "Horae Semiticae." Mrs. Lewis is the discoverer of the Sinaitic palimpsest containing the most ancient Syrian text of the Gospels; and in conjunction with her sister she has produced the standard edition of the Palestinian Syriac Lectionary (London, 1899) based on two MSS. discovered by herself supplementary to those previously available. Her latest discovery of "Leaves from three ancient Qurans" (Cambridge, 1914) is of importance for the history of Islam.

A Sofia correspondent informs us that on May 21 Mr. Thomas Whitmore delivered in the hall of the American School a lecture on excavations in Egypt, which attracted a large and distinguished audience. Queen Eleonore attended, and amongst others present were Lady Bax-Ironside, Mr. Rice, Secretary of the British Legation, M. Gueshoff, and Professor Kiroff.

Digitized by Google

Judge Cator and Mrs. Cator have arrived in England from Egypt, where Judge Cator has been presiding over the sittings of the Alexandria Prize Court.

Mr. W. H. Hill, who is now in England on a short visit, expects to return to Port Said in about a month.

The death occurred in Bucharest on May 15 of M. Alexandre Ghica, Director of the Museum of the Ministry of Commerce. He was a son of the late General J. A. Ghica, and grandson of Alexandre Ghica, reigning Hospodar of Moldavia from 1849 to 1856.

The death is announced of Mr. Charles Colson, late Deputy Civil Engineer-in-Chief to the Admiralty, and formerly Superintendent Engineer of Malta Dockyard Extension.

The annual meeting of the British Syrian Mission was held at the Holborn Restaurant on Wednesday. Lord Radstock presided, and Viscount Bryce was the principal speaker. Amongst others present were:—Dr. Zwemer, of Cairo, editor of the *Moslem World;* Miss Johnston, secretary in Syria; Miss Warburton, Principal of the Beyrout Training College; Miss Lord, from Tyre; and Mr. Charles Walker, the financial secretary. It was stated that two of the lady missionaries, Miss Kendall and Miss Oliver, are still in the Lebanon. Reference to the speech made by Viscount Bryce will be found in our Notes of the Week.

The British Relief Commission to Serbia has requested the Wounded Allies' Relief Committee to undertake the collection of 5,000 pairs of boots and 2,500 overcoats to be distributed among sick and wounded Serbian soldiers, especially among those recovering from typhus, whose original clothes have, of course, to be destroyed. These figures represent only the demands of the moment. So long as there is typhoid in Serbia a continuous supply will be needed. The Committee earnestly trusts that this work will commend itself to the British public, and asks that all money subscriptions should be sent to the Hon. Treasurer, T. O. Roberts, Esq. (manager), London, County and Westminster Bank, 217, Strand, and that boots and overcoats, which may be new or second-hand, should be addressed to the Wounded Allies' Relief Committee, Sardinia House, Kingsway, W.C.

Meetings are being held in various parts of the country in support of the British Farmers' Red Cross Fund. The total of the fund is now about £26,000. A large number of agricultural jumble sales are being organised on behalf of the fund, and offers of further assistance in this direction are being received daily. The next £20,000 received will be appropriated for Red Cross work, either in hospitals or some other form, for the wounded of our Expeditionary Force in the Dardanelles, and towards this amount appeals are made for further donations. The secretary's office is Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey.

On the afternoon of Tuesday, June 1, the annual general meeting of the Armenian Society was held at 7, The Boltons, S.W., owing to the kind hospitality of Mr. and Mrs. H. R. Reynolds. Among the distinguished guests were the Right Hon. Viscount Bryce and Lady Bryce, Rev. William E. Rosedale, D.D., Sir Edwin Pears and Miss Pears, Rev. Henry Westall, Lieut.-Colonel Gregory, V.D., and Mrs. Gregory. The Right Hon. G. W. E. Russell, President of the Society, presided on the occasion. Speeches by Viscount Bryce, Sir Edwin Pears, Lieut.-Colonel Gregory and the President were listened to with great interest by the large gathering. The President proposed that a message of deep sympathy with the Armenian people in their troubles and of good wishes for the future be sent from the meeting to His Holiness the Catholicos at Etchmiadzin. The resolution was carried enthusiastically. Tea and talk brought the proceedings to a close. Particulars about this Society of British and American men and women may be obtained from the Hon. Sec., Miss E. J. Robinson, 35a, Elsham Road, Kensington, if a stamped addressed envelope is sent.

Under date of June 7, the Athens correspondent of the *Morning Post* reports:—According to messages from Constantinople, Captain von Müller, the commander of the Goeben, has been recalled from the Turkish service to Berlin, owing to sharp differences with Admiral Suchon, who throws upon Captain von Müller the blame for the serious damage suffered by the Goeben in the recent naval engagement in the Black Sea.

The Egyptian Government has decided to pension off Professor Dinkler, a German subject, who was formerly chief of the stores of the Public Health Department.

A Larnaca correspondent writes: "Nearly 100,000 cigarettes were recently sent from Larnaca to the French and British troops operating in the Dardanelles. The Senior Naval Officer has telegraphed to the High Commissioner thanking the donors. Larnaca has been more generous than other towns in Cyprus, as besides handsome donations sent direct or through the Government to the Red Cross and the Prince of Wales' Fund, subscriptions have also been collected for the Serbians and Montenegrins, and a subscription list has just been opened for the Belgian Relief Fund.

Sir Charles Macara has submitted to the Prime Minister proposals for a scheme of national organisation on the lines suggested by him in a recent communication to the Press. He suggests that a simple form of registration should be delivered to every house and a badge given to all who are doing satisfactory work of any kind, and to others as they take up the work promised. Registration, if not done voluntarily, should be made compulsory within a given date.

Mr. Habib Basta, A.M.I.C.E., A.M.I.M.E., of Sohag, Egypt, has been elected an Associate of the Royal Institute of British Architects. Mr. Basta is the first Egyptian to obtain this distinction, and is now practising as engineer and architect at Gray's Inn, London.

APPOINTMENTS, PROMOTIONS, etc.

The appointment of Mr. James Morgan to be H.M. Consul at Dedeagatch is gazetted.

The appointment of Mr. C. E. Heathcote-Smith to be H.M. Vice-Consul at Salonika is gazetted.

Our Athens Correspondent, writing on May 30, says: M. A. Caclamano, who, after directing the affairs of the Hellenic Legation in Rome with marked success, distinguished himself highly here as Director of Political Affairs in the Foreign Office, has been sent on a special mission to Petrograd, replacing M. Dragoumis, who has resigned in order to offer himself as a candidate at the coming elections.

M. Caclamano's successor here is M. Georges Caratja, who has been Director of the Press Bureau. He has shown much ability and tact in carrying out the duties of that somewhat delicate position, and he carries with him to his new post the best wishes of all journalists, and especially of the foreign correspondents.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

BARR.—On June 7, at 1, Wellington Terrace, Berwick-on-Tweed, the wife of John Barr, of Kafr-el-Zayat, Lower Egypt—a daughter.

DEATH.

THOMSON.—On June 4, at Dartmouth, "Daisy" Gertrude Francis Thomson, widow of Arthur Victor Thomson, of Cairo, and third daughter of the late Richard Woodland, of Richmond, Surrey, and Mrs. Woodland, of Southbourne, Bournemouth.

WHERE TO STAY.

Cairo's Hotels de Luxe.

FRIDAY, JUNE 11, 1915.

GREECE AND NEUTRALITY.

A shadow falls upon the Greek elections fixed for next Sunday. Under the feeling of grave anxiety to which King Constantine's condition unhappily still gives rise, it seems inevitable that the edge must be taken off the keen controversy around which these elections will have to be fought. Yet few elections in Greece can have been fraught with so much significance for the country as those which are to take place on June 13, 1915. For this reason they call for a clear appreciation by the electorate of the issues at stake, and it is essential that not even the national anxiety should be allowed to obscure those issues. M. Venizelos, it will be remembered, went abroad in order that he might avoid any semblance of a controversy with the Crown after he had been denied the reparation which King Constantine alone could give him. His intention at the moment was, without doubt, to retire from politics; but as soon as his followers decided to maintain their organization as an active political party, and to contest the approaching elections, it was apparent that such an intention would be overruled. In view of the King's serious illness, which began almost at the same moment, both M. Venizelos and his followers must have been convinced that they were adopting the right course. His resolve to leave Greece and settle in a foreign country has not been carried out; after a brief visit to Egypt, he returned to Greece and went to Mytilene, but was expected back in Athens before the elections. Circumstances have been too strong for him. If Greece believes in the existence of a lucky star, she may be able to persuade herself that it has not yet been dimmed. The sad illness of King Constantine, for whose recovery Hellenes the world over are now praying, availed more than M. Venizelos' voluntary exile to give a normal constitutional character to the controversy between the ex-Premier and his opponents. It was possible to forget not only the origin of the controversy, but to some extent also the inwardness of it. Politics in Greece have for long turned on personalities rather than on policies, and perhaps for the first time it is well that they should. The country is called upon to range itself on the side of the Venizelists or on that of the anti-Venizelists. When asked for their policy the followers of M. Venizelos reply that they see no need to elaborate one. Their party has stood for the doubling of Greece since 1911, and it stands to-day for the quadrupling of it in the future. As to how and when, they could have given no answer four years ago, and they know no reason for attempting to give one now. In the face of this strong position, it is perhaps no matter for surprise that the anti-Venizelists try to take cover behind the Royal illness on the not very creditable ground that anyone who desires the King's restoration to health must feel obliged to vote against M. Venizelos.

There is little chance, however, of the manœuvre succeeding, for if the Greek political prophets are to be relied upon, the Venizelists can count upon being returned by a substantial majority. If this should be the case, the Allied Governments will do well to guard against the anticipation of any immediate abandonment by Greece of her attitude of neutrality. M. Gounaris' Cabinet, in any case, will probably elect to remain in office until the Chamber meets next month. Even when M. Venizelos, in accordance with the general expectation, is once more in power, he may find it necessary to choose his path carefully. In January he recommended King Constantine to agree to a cession of a small strip of territory to Bulgaria as a *quid pro quo* for Bulgarian support, in order that Greece might avail herself of the offer made by the Triple Entente of a large extent of territory in Asia Minor. Surrender of territory is an unpopular course in any country. M. Venizelos' statesmanship convinced him of the necessity for such a surrender in Greece's case, and he trusted to his personal influence for securing popular acceptance of the *fait accompli*. When the question was submitted through the medium of political opponents to the decision of an ill-informed public, its rejection followed as a matter of course. The popular voice has had time to ratify its objection to territorial concessions of any kind, and if M. Venizelos should be returned to power, his liberty of action must be curtailed to some extent by this veto. Moreover, he may find that the conditions which prompted him in January to recommend the cession of territory to Bulgaria do not hold good in July. It was essential to M. Venizelos' policy that the Powers of the Triple Entente should be prepared to hand over to Greece practically all that part of Asia Minor which lies west of a line from Brussa to Fineka Bay. Since that offer was made, however, there have been important changes in the standard of assistance of which neutral countries are capable. In January, with Serbia threatened with a formidable invasion of Austro-German forces, such help as might suffice to protect the Serbian frontier seemed all that could be asked for from Greece, and in the stress of the moment some excuse might have been urged on behalf of the Triple Entente for offering her a blank cheque to be filled in with the sum total of her national aspirations. To-day not only is Serbia free from the menace of invasion, but the whole armed strength of Italy has been mobilized on the side of the Triple Entente; Roumania, when her present hesitation has been overcome, stands ready to strike a far more powerful blow than Greece could ever strike; while, above all, the Allies have been bearing the heat and burden of the day at the Dardanelles, while Greece has deliberately stood out of a conflict from the issue of which she cannot fail to benefit.

It may well be, then, that M. Venizelos will have to adjust himself to new conditions. His policy, there can be no doubt, will remain the same—to promote the immediate interests of Greece and to assure her future prosperity by seeking for her the opportunity of peaceful development. An accession of territory for Greece which left still exposed one sore in the Balkans, and possibly laid bare another, would mean less than the accomplishment of only half the Venizelist policy. It would stultify the whole policy and impair the claim to statesmanship which M. Venizelos' past record has won for him. He has shown before that he is able to impose his will on his countrymen before they have been able to recognise the soundness of his views; it may be that he will yet be able to override the doctrine of "No territorial concessions," to which the Hellenic people have cynically committed themselves at a time when their one object should be to make any sacrifice for Balkan unity and the interests of the Balkans as a whole. The more difficult his position, the greater the support that he ought to be able to rely upon both from other Balkan States and from the Governments of the Allied Powers. To Bulgaria M. Venizelos has revealed the extent to which he was prepared to meet her wishes for the sake of a mutual understanding. When he returns to power, the Bulgarian Government will have an opportunity of requiting his goodwill. For the Triple Entente the ex-Premier of Greece has probably been an embarrassment, for to his revelations may be attributed the eagerness of Roumania to improve upon the terms she was prepared to accept as compensation for her military co-operation. Much, however, will be forgiven M. Venizelos when the direction of Greek affairs is once more within his grasp. The Powers in the interval have begun to realise how much their policy of aloofness has been responsible for the chaotic state of the Balkans. If they adopt a firm attitude now, they can rely ultimately upon the wholehearted support of M. Venizelos, who could wish for no better *deus ex machina* than the unchallengeable edict of the Triple Entente, or, it may be, Quadruple Entente, enjoining upon Greece a line of action which of her own accord she would never take, but in which she would readily acquiesce under a strong leader.

NOTES ON THE LEBANON.

By a Former Resident.

Ever since the massacre of the Maronites by the Druses, in 1860, the Lebanon, though still a part of the Turkish Empire, has had a separate government. By treaty the five European Powers (Great Britain, Russia, France, Italy, and Germany) agreed to protect it, and therefore appointed a Mutessarif, or governor. This year, as we know, has witnessed an utter disregard for this treaty on the part of one of the signatory Powers in the attempt to put the province under Turkish rule—which does not surprise us in view of what has befallen Belgium. Possibly this move was prepared for long in advance. In a former number of THE NEAR EAST it was stated: "Aley now dominates Beyrout;" a change, indeed, for Aley was formerly only a summer resort of Beyrout residents, and in no way a political centre. But, passing through the place last autumn, on my way to Beyrout, I noticed a new mosque and a number of Turkish soldiers in the neighbourhood, and possibly these things were an illustration of the saying about coming events casting their shadows before.

To return. The Mutessarif has always been a Christian: if a Syrian, a Maronite; if a European, a Roman Catholic. There have been seven governors in all, five of whom were Syrian and two European. The present Governor (to the best of my belief) is Ohannes Effendi Koyundjian, an Armenian. The appointment is for a period of five years, but the period can be extended, as was done in the case of Naoum Pasha, who held the position for ten years. It is not by any means a sinecure, for the differences of race and creed existing amongst the Lebanese call for the exercise of considerable tact and firmness, and occasionally present unique difficulties. But a strong man, having the welfare of the people at heart and not bent upon his own aggrandisement, could work wonders. Rustem Pasha, the first of the governors, appears to have been the wisest; and under his iron rule Lebanon prospered, and some of the older inhabitants still speak appreciatively of those palmy days, when justice was enforced. Since then, it appears, money has played a considerable part in the matter of the appointment, a rich man being counted "good," and bribery and corruption being the order of the day.

The jurisdiction of the Mutessarif of the Lebanon extends from the south of Tripolis (Tarabulus) to the north of Sidon, exclusive of Beyrout, and covers an area of some 25,000 square miles. The population is 400,000, distributed amongst 600 towns, villages, and hamlets; and Zahleh, the largest of the towns, has a population of 11,000. But, owing to emigration, many villages have been almost depopulated in recent years. The revenues of the province amount to £32,000, a sum which does not cover the expenses of administration. The seat of government is in winter at Ba'abda, six miles south-east of Beyrout, on the railway, and in summer at Bait-ed-Din. The latter place is reached from Beyrout in about nine hours' drive over a very good road. It may be noted that the roads in Lebanon are quite good, very different from those in Beyrout.

In normal times there is no regular military force in Lebanon, only the Gendarmerie, composed of Druses and Maronites, and numbering 100 mounted and 400 unmounted men. The larger towns are ruled by a mudir, the smaller villages by a sheikh. These officials try all minor cases, collect local taxes, and generally supervise all matters relating to the Government in their neighbourhood; but all capital cases are tried either at Ba'abda or Bait-ed-Din.

There is, in ordinary times, at least, no sympathy whatever between the Druses and the Maronites. As a rule they just tolerate one another, and sometimes hardly that, though I know of some rare instances in which Maronites and Druses have entertained respect for one another, and even been on terms of friendship. The Maronites are much more numerous than the Druses in the Lebanon, for, after the massacres, many of the Druses betook themselves to the Hauran. One of the most marked characteristics of the Maronites is their bigotry; another, their exclusiveness. The Druses, though exclusive in their religion, are not so in their social intercourse with others; and they are most hospitable and charming in their manners.

Politically, the Maronites are accustomed to look to France as their natural protector; while the Druses look to Great Britain. It was a great surprise to the Druses to find France was Great Britain's Ally when the present war began, and it is to be feared the surprise was not an entirely agreeable one. As one of them remarked: "The Maronites are too strong in the Lebanon," and they were afraid that in the event of a French occupation they would be compelled to leave the district. One of the reasons for their prejudice lies in the fact that their women are veiled and are not allowed to leave the country, and they fear that Frenchwomen would inculcate too many advanced ideas. They do not trust the Maronites, and therefore do not trust the French; while they do trust Great Britain and know that she would respect their customs. Their fears are, of course, due to sheer prejudice, and, given opportunity and time, they would be banished. With widening intercourse with other nations, they would discover that truth, honour, and uprightness are not the special prerogatives of any one nation.

Although the Maronites and the Druses form the largest and most important portion of the population, there are other sects strongly represented in the Lebanon. The Greek Orthodox Church has 150,000 members, and there are also Latins and Greek Catholics. The two last-named bodies, however, form a very small proportion of the population. The Greek Orthodox Syrians regard Russia as their natural protector, and they are usually on more friendly terms with the Druses than with the other bodies. Finally, it may be mentioned that there are some 2,000 Protestants, drawn from most of the Christian sects. They, sad to say, look askance at the Druses as a rule, but here and there one finds an exception. I remember when in a village inhabited by Druses, Protestants, and representatives of the other Christian sects, hearing the remark: "So-and-so"—naming a Druse—"is the best man in the village."

There is one very lovable trait in the Syrian character, common to all, Druse and Christian alike: the touch of nature that makes all akin in time of sorrow. At a funeral all the villagers are present, and I have seen a Protestant carried to the grave by Druses. In times of joy, too, all meet and mix, and creed is laid aside for the moment. Judging by the article from a Beyrout correspondent published in last week's NEAR EAST it would seem that the present time of stress and danger has served to unite the peoples of the province, and that in spite of the attempts "to create dissension between them," they are keeping their heads and the peace. Their friends will rejoice in the fact, and trust that they will continue to oppose a steady resistance to all insidious attempts to stir up strife between them.

BRITISH REFUGEES FROM TURKEY RELIEF FUND.

The following is a list of subscriptions to the above fund received since May 14:—

	£	s	d
Proprietors of "Daily Telegraph"	20	0	0
John Nowill and Sons, Sheffield	5	0	0
Neale and Wilkinson, Liverpool	1	1	0
William Crayford and Sons, Liverpool	10	10	0

TANGIER TO TEHERAN.

The German papers are naturally very jubilant at the exploits of their submarines in eastern waters. Two British battleships on two consecutive days was certainly a bag to boast about, but apparently the truth is never sufficient for Germany. The Berlin Press is now busily engaged in trying to make our flesh creep by intimating that these submarines did the full journey from Kiel by water. Really, the Hun can be very childish at times. Possibly, however, his efforts were only directed to impressing his unfortunate Turkish ally with a sense of his power by sea and to diverting attention from the "Goeben" and "Breslau," for a while at least.

***

It will be interesting to see what part these two ships will really be prepared to play when our battleships enter the sea of Marmora. The probabilities are that they will be sunk by their owners out of hand, in order to evade the greater evil of capture. There seems to be a fatality against the Turks ever possessing a reasonably efficient navy. Ever since the day of the immortal Turkish captain who, ordered to Malta for repairs, returned after a futile voyage of discovery with the information: "Malta *mafeesh*" (Malta is not) the Turkish navy has been the laughing-stock of her neighbours. The truth of the matter is that, while the Turks make brave and efficient soldiers, they have no stomach for the sea. Imagine a British sailor countenancing the connection of his gunboat with the shore by means of pipes to supply gas for cooking and lighting purposes. Yet the Turkish sailors thought this thing no shame, and the crew of a gunboat in Smyrna harbour lived in placid comfort for months in this manner. And now the two fugitive ships of the German navy seem to have fallen under the spell of inaction that is characteristic of the Turkish forces by sea. It may be that they are reserving their strength for a goodly fight before Constantinople, but I do not think so. I fancy that they have served their purpose, by intimidating the Turk in the days of his neutrality, and that their destruction will be wrought by German sailors rather than our own. At the first hint of active danger they will be sent to oblivion beneath the waters of the sea of Marmora—a fitting end, perhaps, to a career marked by only one heroic interlude, when, with band playing and colours flying, they took the open sea from Messina.

***

The naval correspondent of the *Evening Standard*—or one of the compositors who set his copy—does not seem to have a very high opinion of the fighting quality of the Turkish forces in the Gallipoli Peninsula. In reading his notes in Monday's issue of the *Evening Standard* I came across this sentence:—

> "Then there is the Franco-British squadron assisting the troops in the Dardanelles in pishing back the enemy," etc.

The enemy, I fear, will take a deal of "pishing" yet. The turkey may not be a very wise bird, but lack of courage is hardly amongst its faults.

***

Mr. H. W. Seton-Karr, who has been contributing a series of sporting articles to the *Field*, gives, in reply to a correspondent, some interesting particulars regarding his explorations in various parts of the world. One item interested me particularly. Mr. Seton-Karr visited the Issutugan River and was fortunate enough to discover a prehistoric factory of palæolithic implements, and was able to present series to more than 200 museums. But in the first place his generosity must have suffered a rude shock, for the customs authorities demanded, and, of course, received, export duty upon many of these implements, on the ground that they were "manufactured articles." These hard-headed officials of the State were evidently taking no risks in their interpretation of the law. Manufactured articles were manufactured articles, and a few hundred thousand years difference in the date of production mattered not at all. But I am glad to see that, thanks to the intervention of the Under-Secretary of State for India, Mr. Seton-Karr had his money refunded in the end. Perhaps he made a fuss about it. In dealing with the customs authorities of many countries it is usually safer to make a fuss at once whatever happens, just as one does with gas companies in England.

***

Turkey was at one time notorious for the mule-like obstinacy of her customs officials when they were dealing with British visitors who had a greater regard for justice than for time. A friend of mine once recounted to me the difficulties which beset him when he first made his way through the custom-house at Constantinople. He had been forewarned that the judicious, if unlawful, expenditure of a few piastres would work wonders, but he was a Scotsman and he disliked unlawful proceedings. So, with a heart light with the knowledge that his baggage contained no dutiable articles, he entered the custom-house, to leave it, some five hours later, a hungry but victorious man. He only had a dressing-case, and he made his first mistake when he insisted upon carrying this himself. He was an object of suspicion long before an official deigned to question him. Besides the various articles of toilet and clothing necessary to a couple of days' stay he had only two or three paper-covered novels and two clocks. One of these was a fixture in his dressing case, the other was accustomed to sit beside his bed at nightime. But the official who at length opened the bag eyed them with great disfavour. "One clock, yes," he could understand that, "but two——" He passed on to other duties, giving the frantic Scotsman time to meditate. When he had left his victim sufficient time to grasp the advantages of a system of backsheesh, the Turk advanced again, only to find the Britisher fuming but obdurate. The official lazily turned over the various objects in the bag and seized upon the books as an excuse for further delay. "One book, yes, to pass the time pleasantly, but *three*——" As I have said, my friend conquered at last, but he has lived many years in the Orient since that day and has learned many lessons, among them being the fact that time may often be money.

***

It is astonishing how seldom one can score off an Oriental in cases of this kind. No one can be more amazingly stupid than the Oriental official, when a rôle of stupidity is necessary to the furtherance of his aims. I remember scoring only once in all my travels, and that was at the Cairo post office. For some reason or another a postal clerk took a dislike to one of my servants. When I attempted to despatch parcels it invariably meant that the package was returned at least two or three times for some alleged non-compliance with the postal rules of packing. At length I got sick of it, and carefully mastering the regulations, prepared a parcel and sent it down to the office. It was returned as usual. Then I went down myself. The clerk complained of one of the seals. I altered it, sealing it with the crest on my ring. The man handed it back saying that he could not accept it, an initial was necessary. I said I was sorry; I had no initial seal, but I would take the parcel round to my friend the Postmaster-General and borrow one from him. Anything more abject than the discomfited clerk it would be hard to imagine. But it is only fair to say that his conduct was a marked exception to that of the usual Egyptian official, who is ordinarily the very soul of politeness.

THE BALKAN COMMITTEE.

The following resolution was passed at a meeting of the Balkan Committee held at the House of Commons on Wednesday:—

"That the Balkan Committee, whose solicitude for the welfare of all the Balkan peoples alike is enhanced by the critical position in which they are placed by the war, appeals earnestly to the Governments and peoples of the five Balkan States to recognise that their existence as independent States and the realisation of their national union demand friendly co-operation, mutual goodwill, and reasonable concessions."

A deputation of Jugo-Slavs was introduced by Dr. Seton Watson, and placed before the Committee the views they hope to see realised in the ultimate settlement after the war. The following were present:—Dr. Trumbic, President of the Jugoslav Committee member of the Dalmatian Diet; Dr. Hinkoric, member of the Croatian Parliament and delegate of the Hungarian Parliament; Dr. Gregorin, member of the Austrian Parliament; Monsieur Stojanovic, member of the Bosnian Diet; Monsieur de Giulli, Dr. Vosnjak, and Professor Cvijic.

THE PRESS ON THE NEAR EAST.

The Roumanian Attitude.

According to a correspondent of the *Morning Post* (June 4), who writes from Budapest on May 26, "everything shows that a neutrality campaign has started in Roumania with even more determination than was the case when Prince Bülow was sent to Rome." He quotes at length from a Bucharest paper which vehemently disavows any sort of agreement between Italy and Roumania regarding the intervention of the latter. On the other hand, the following quotation shows that the most powerful influences are apparently combining to bear the country along to the abandonment of her neutrality:—

The fact that the Austrian and German Press are not hiding their feelings as to the immediate danger of Roumanian intervention, the military preparations going on on both sides, the international situation as a whole, and the belief that Austria cannot undertake another winter campaign among the mountains on three fronts, as well as many other reasons, lead one to the conclusion that Roumania will be the next Power to join the enemies of unfortunate Austria-Hungary.

Dr. E. H. Dillon, writing in the *Daily Telegraph*, thinks that Roumania is still playing for time, and that her ultimate intervention is certain. After dealing with the possibilities of a separate peace being arranged with Hungary, he concludes:—

If Roumania is content to sit still and lose the unique chance of liberating her own sons from a foreign yoke, a chance which will never return, the Entente States will not refuse a demand for a separate peace on equitable terms coming from the Magyar nation, against which no feeling of undying hatred is entertained. And once Hungary's conditions have been proposed and accepted the time for Roumania's intervention will have gone.

Germany's Imperial Colony.

An article by Mr. Arnaldo Fraccaroli, which originally appeared in the *Corriere della Sera*, has been translated by Mr. H. H. Blacklock, and, reproduced in *Foreign Opinion* (June 2), gives an interesting account of German relations with Turkey in the early half of last month. The first portion of the article is devoted to an examination of the events which placed Turkey so entirely in the hands of Germany to begin with; the second deals with the actual relations of the two peoples which are in a state of war. The writer denies that there is any hostility between German and Turkish officers at the present time:—

Nevertheless, should any event happen to change the present situation . . . we shall see that there is still some fire smouldering beneath the ashes of this silent tranquillity. In Armenia, when the army of the Caucasus was cut to pieces in the disastrous defeats, there have been open episodes testifying to this insufferance on the part of the Turkish officers, and even of the soldiers, of being commanded by people who have come from another country, a country also Christian, according to the continual affirmations of the Emperor. But they remain silent at Constantinople for the present; they remain silent—waiting.

But through it all the writer sees a vague hint of nervousness on all sides, "life is as though suspended at a mark of interrogation."

The Fighting Turk.

The special correspondent of the *Daily Telegraph*, in a despatch regarding the operations at the Dardanelles (June 8), says that a fine spirit of optimism prevails among the Allied troops at this point, notwithstanding the heavy losses which they have incurred. We quote his concluding paragraph, which compares Turkish and German methods of warfare:—

Galvanized by the remarkably organized defence set up by the Germans, the Turk is putting up a good fight, and, to his credit let it be said, that he fights cleaner than his instructors do in their theatres of war. Instances have been quoted to me in which Turkish soldiers had shown consideration both to our wounded and to the few prisoners that fell into their hands. The atrocities reported as having been committed by them were committed by their auxiliaries, the Kurds, and not by their regular soldiers.

This bears out the views already expressed in THE NEAR EAST.

Hungary and Roumania.

In a leading article on "The War in the East," the *Morning Post* (June 5) deals principally with the question of Hungary's position in the field. "Hungary," says the writer, "like Turkey, is the ass in the fable which goes hunting with the lion. The lion may secure the spoils; the ass is secure of nothing but danger and hard knocks." Our quotations are taken from the latter portion of the article, which treats with Roumania in relation to ourselves and to the Hungarians:—

If Roumania, now that things seem to go against Russia, chooses to stand aside she may preserve such territory as she now possesses, but she can hope to gain no more. Germany is no friend of Roumania, and can offer her nothing. But if Roumania at this crisis in the fortunes of Europe decides that her fortunes are bound up with the fortunes of the free nations, and if Hungary remains obstinately the enemy of these nations, then the Allies will be compelled to recognise Roumania's claim to what is now, and has long been, a Hungarian province.

The writer goes on to say that it is no pleasant thing to threaten the dismemberment of Hungary, but points out that the quarrel was not of our seeking and the issues are not under our control:—

If Hungary persists in being our enemy and Roumania becomes our friend, then we are bound to act towards our friend as friends and towards our enemy as enemies. This is a rule of war which cannot be disobeyed. . . . If Roumania chooses to throw in her lot with the Allies, the Allies upon their side must help her to secure the objects for which she goes to war; if she chooses to remain neutral the Allies will have no object in assisting her to what she has not earned. . . . The fortunes of Hungary were never more desperate than in the hour of victory, and as for Roumania the defeat of Russia, her potential friend, is the opportunity of her lifetime, for the defeat is only temporary, and assistance will be rewarded in the measure of its timeliness.

The Invasion of Chaldea.

Under the above heading the *Western Daily Press* (June 5) deals with our operations in Mesopotamia in a leading article. Apart from the military aspect of the invasion of the Chaldean country, the paper considers our action in this region as highly important from a strategic and economic standpoint. After tracing the course of events which have transpired since the entrance of Turkey into the war, the article emphasizes the value of British diplomacy which arrested the extension of the Baghdad railway to Koweit, on the shores of the Persian Gulf:—

The terminus of the Baghdad Railway was, under pressure from the British Government, fixed at Basra. Under a treaty with a petty native chief, the British Government thus insisted upon controlling the access to the Baghdad Railway from the head waters of the Persian Gulf. Now a British-backed force is actually conquering the territory traversed by the railway which the Germans have financed. If the Turks are thoroughly beaten in Mesopotamia, as seems very likely to be the case, the whole German scheme for the exploitation of the region will collapse, and the British Government will have the option of turning this valuable line, when fully completed, to its own account.

The article next deals with the probable influence which the Turco-German agreement regarding this railway had upon the relations between the two countries after the declaration of war, and goes on to enumerate the advantages which will accrue to Britain should she hold the completed line. It concludes:—

The conquest of Mesopotamia by a British-backed force, or by the Allies, will exercise a profound and permanent influence on the economic and political situation in that part of Asia which most closely adjoins Europe; and though we do not hear much about the joint naval and military operations in that quarter, the latest despatch gives an assurance that events are steadily shaping themselves to the disadvantage of the Turks and the Germans, and the corresponding benefit of Great Britain.

Articles to Note.

"Roumania's Army," by Our Military Correspondent, in the *Outlook*, June 5.

"The Women of Serbia," by Helen Douglas Irvine, in the *Queen* (May 29).

"Serbia and the Serbians," by W. Ll. Williams (illustrated), in the *Sunday at Home* (June).

"A Visit to Roumania: I.—Life on a Country Estate," II. "A Great Wolf Hunt," by T. H. Grattan Esmonde, in the *Field* (May 29 and June 5).

"Serbia and Her History," by Victor Berard, in the *Suffragette* (June 4), being the first instalment of the history of Serbian wars, ideals, and aspirations, read at all French schools in Serbia by order of the Minister of Public Instruction.

"Servia: The Country and the People," by Leslie F. Church, B.A., etc., in the *Wesleyan Methodist Recorder* (June).

"Oriental Local Government," by Marmaduke Pickthall, in the *New Age* (June 3).

DIRECTORY

showing the present addresses of English residents in Turkey, who have left the country in consequence of the war, or have been prevented from returning there. Readers from Turkey whose names are not given below will oblige by forwarding to the Managing Editor their present addresses for inclusion (free of charge) in the Directory, which is intended to be of assistance in bringing friends together. Changes in addresses should be notified as early as possible. The "Near East' accept no responsibility for the correctness of the addresses given.

Alderson, W. J., 181, Links Road, Tooting, S.W.
Aldous, A. H., Banbury Road, Brockley, Northants.
Anderson, J. H., and family, 114, Botanic Road, Glasnevin, Dublin; or c.o. Gill and Cook, Winchester House, Old Broad Street, E.C.
Arland, J. A., C.S., 63, Guilford Street, W.C.
Atkinson, Bombardier G. M., 266th Battery, 85th Brigade. R.F.A., Colchester.
Baker, Arthur, and family, 80, Prince of Wales' Mansions, Battersea Park, S.W.
Barnham, Henry D., C.M.G., Leinster Court Hotel, Lancaster Gate, W.
Barwell, Mrs., 62, Hart Road, Erdington, Birmingham.
Beaumont, H. D., British Embassy, Rome.
Bell, Mrs. H. J., 71, Belsize Park Gardens, Hampstead, N.W., or care of Messrs. Grindlay and Co., Parliament St., S.W.
Bennett, A. A., 11, Basford Bank, Stoke-on-Trent.
Bennett, Mr. and Mrs. C. Taylor, 213, Seabank Road, New Brighton, Cheshire.
Binns, Mrs. C. E., and family, 22, Queensdale Road, Holland Park, W.
Binns, Miss Ada, 37, Lynedoch Street, Glasgow.
Binns, Mr. and Mrs. Douglas, 8, Incognitogaten, Christiania, Norway.
Binns, Miss Hilda, Sunny West, The Promenade, Cheshire.
Binns, Mr. and Mrs. Lawrence G., 12, Ramshill Road, Scarborough.
Binns, Mrs. Walter, 89, Fairhaven, Cranfield Road, Brockley.
Binns, Mr. and Mrs. W. Hylton, 20, South Hill Park Gardens, Hampstead, N.W.
Bird, Mr. and Mrs. A. E. C., c/o Dr. Mence, Worcester Lodge, Surbiton.
Blair, Charles, and family, Old Phaleron, Greece.
Bond, Miss, 16, Wilton Mansions, Kelvinside N., Glasgow.
Bond, Miss Norine, 8, Slatelands Road, Glossop.
Bond, A. W., 16, Wilton Mansions, Kelvinside N., Glasgow.
Bond, Miss E. G., 16, Wilton Mansions, Kelvinside N., Glasgow.
Bond, Miss H. V., 4, Oxford Terrace, Kingston Road, Wimbledon, S.W.
Bond, Miss I. A., 16, Wilton Mansions, Kelvinside N., Glasgow.
Bond, Mrs. R., 4, Oxford Terrace, Kingston Road, Wimbledon, S.W.
Bond, Mrs. S. J., and daughter, 4, Oxford Terrace, Kingston Road, Wimbledon, S.W.
Bond, Stephan J., 16, Wilton Mansions, Kelvinside N., Glasgow.
Bond, Mr. and Mrs. Valentine, and family, 26, Llanbleddian Gardens, Cathays, Cardiff.
Borough, Rev. Roland, Eaton Bank, near Duffield, Derby.
Bowman, Joseph, and family, 5, Crewdson Road, Brixton, S.W.
Boyd, W., 22, Charles Street, Wigan.
Brigstocke, Dr. P. W., C.M.S. Hospital, Old Cairo, Egypt.
Brooke, Mr. and Mrs. Arthur, 45, Savile Road, Dewsbury.
Brooks, W. W., Royal Naval Torpedo Factory, Greenock, N.B.
Brooks, Mrs. W. W., and daughter, Hotel Metropole, Athens.
Brown, Canon J. Carnegie, 16, Lincoln's Inn Fields.
Brownlow, Miss F. A., 8, Homefield Road, Wimbledon.
Burrough, Rev. Howard C., and family, 5, Rue des Protestants, Tunis, N. Africa.
Campbell, J. L. c/o Barnes, Lloyd's Register of Shipping, Piraeus, Greece.
Campbell, Mrs. J. L., and family, Old Phaleron, Greece.
Campbell, R. J., and family, Old Phaleron, Greece.
Campbell, W. Gordon, c/o the Standard Oil Co. of New York, Pireaus, Greece.
Cahan, Julian, 17, Via Ariosto, Milan.
Carpenter, Rev. F., Rushington, Braywich Road, Maidenhead.
Catoni, A., care of Lloyd's Agency, Larnaca, Cyprus.
Cervati, A. Edgar, care of British Insulated and Helsby Cables, Ltd., Prescot.
Chalmers, D., and family, Old Phaleron, Greece.
Chalmers, Mrs. D., jun., and family, Old Phaleron, Greece.
Charnaud, Mr. and Mrs. Charles B., and family, Bowmont House, 9, Willesden Lane, N.W. Telephone: Willesden 305.
Charters, Miss, Elmwood, Harrogate.
Chisnell, Mrs. Alice, Hotel Alexandre le Grand, Athens.
Chisnell, George A., Rue Nikis, No. 11, Athens.
Clarke, Miss Jeannette, Griffitt, The Hutch, Shepherd Road, Watford, Herts.
Clemow, F. G., M.D., C.M.G., British Red Cross Mission, Plevlić, Montenegro.
Coles, Donald A., M.D., c.o. Lloyd's Bank, 72, Lombard Street, E.C.
Comber, F. W., and family, Sea View House, Parkgate, Cheshire.
Cook, H., Tower Bungalow, Tankerville Drive, Leigh-on-Sea.
Cowe, Alexander W., 44, Upper Parliament Street, Prince's Park, Liverpool.
Crawford, Mr. and Mrs. Robert, 45, Freehold Street, Fairfield, Liverpool.
Crawford, Sir Richard, British Embassy, Washington, U.S.A.
Cumberbatch, Mr. and Mrs. A. H., Odessa.
Cumberbatch, H. A., C.M.G., St. James's Club, Piccadilly, W.
Cumberbatch, Miss Lilian, c/o Mrs. J. Gilbert, Manor Lodge, Egham, Surrey.
Cuming, Bombardier A. C., 262nd Battery R.F.A., 84th Brigade, Colchester.
Cuming, Mrs. J. B., "Fleet View," Fleet R.S.O., Hants.
Cuming, Miss M. Constance, "Fleet View," Fleet R.S.O., Hants.
Daston, John P., 158, Akerman Road, Brixton, S.W.
Davidson, Bombardier C. T., 266th Battery, 85th Brigade R.F.A., Colchester.
Dear, Mr. and Mrs. S. Gregory, 18, Alwyne Mansions, Wimbledon, S.W.
Drake, Albert, c/o Mr. Fox, Mohair merchant, Bradford.
Devey, G. P., 43, Redcliffe Gardens, S.W.
Edmonds, W. S., Grand Hotel, Athens, Greece.
Edwards, Mrs. C. R., 22, Queensdale Road, Holland Park, W.
Edwards, Miss Vivian, c/o Mrs. Whishaw, Steep, near Petersfield, Hants.
Edwards, Mr. and Mrs. W. G. Middleton, 4, Fellowes Road, South Hampstead, N.W.
Eldridge, E., Foreign Office, S.W.
Elliott, Mr. and Mrs. Clifford, and family, Fritton Lodge, Monkham's Drive, Woodford Green.
Ellis, Mr. and Mrs. F. T., "Homeleigh," 15, Aubert Park, Highbury, N.
Elwell, J., 5, Lancaster Park, Harrogate.
Farrell, Miss G. M., 31, Birkbeck Avenue, Acton, W.
Faulkner, Lieut. M., Admiralty House, Malta.
Firguson, F., Secretary's Office, G.P.O., London.
Forbes, Mr. and Mrs. D., Hyde Park Hotel, S.W.
Fuller, W. E., 12, Elmfield Mansions, Elmfield Road, Balham, S.W.
Gandon, Mrs. J., Derrybaum, Mayow Road, Sydenham.
Gater, E. A., Grosvenor Street, Cheltenham.
Geere, Miss Ada, Tolcarn, Frognal Lane, Hampstead.
Gerbault, Mr. and Mrs. Daniel, 13, Rue de la Grange, Batelière, Paris.
Gilchrist, Mr. and Mrs. Gavin, The Lodge, Budehaven, Bude, N. Cornwall.
Gingell, W. F., 5, Cathles Road, Balham Hill, S.W.
Goyard, Mrs., Ladies of Sion, Chepstow Villas, Kensington, W.
Goodwin, Mr. and Mrs. R. H., Hill Cottage, Seaford, Sussex.
Gordon, Mrs., and family, Hotel Continental, Athens.
Gout, Edgar, Foreign Office, S.W.
Gout, Lieut. Charles L., 4th (R) King's Own Yorkshire L.I., Drill Hall, Bank St., Wakefield.
Graham, Miss S. J., 43, Lythoe Road, Finchley Road, N.W.
Graves, Philip, c/o Ronald Storrs, Esq., British Residency, Cairo.
Graves, Mrs. Philip, 5, Killerton Road, Bude, Cornwall.
Greenwood, Mr. and Mrs. Harold P., 9, Upper Crescent, Malone Road, Belfast.
Guest, W., c.o. Etablissements Orosdi Back, Cairo.
Habakkuk, William, care of The Institution of Mining and Metallurgy, 1, Finsbury Circus, E.C.
Hack, Charles, St. James's Hotel, Valetta, Malta.
Hallifax, Commander G. W., R.N., Kingsland House, Shawford, Hants.
Hamson, Charles E., British Consulate, Dunkirk, France.
Hamson, Mrs. Charles E., and family, 139, Ladbroke Road, Holland Park, W., Tele., 2925 Park.
Hamson Mrs., and daughter, 139, Ladbroke Road, Holland Park, W.
Hannay, Mr. and Mrs. Charles J., 33, Dattenden Road, Catford, S.E.
Hardman, Mr. and Mrs. L. H., Tudor House, Newington Green, N.
Harty, H. J., and family, Old Phaleron, Greece.
Hartley, Henry J., 56, Wood View, Bradford.
Harvey, E., 46, South Quay, Great Yarmouth.
Hayden, A. J., Claremont Cottage, West End, Esher, Surrey.
Heathcote-Smith, C. E., H.B.M. Consul, Mytilene.
Heathcote-Smith, Mrs., 22, Trebovir Road, 4th Flat, Earl's Court, S.W.
Hensman, R., 12, Lodge Road, Sutton, Surrey.
Hensman, Mrs. E. G., 12, Lodge Road, Sutton, Surrey.
Highton, Mr and Mrs., Pension McTaggart, Athens.
Hill, A. A., and family, 32, Dawson Place, Pembridge Square, W.
Hogben, Miss E., Girls' High School, Camden Park, Tunbridge Wells.
Holmes, Mr. and Mrs. Chas., and family, 13, Stonor Road, West Kensington, W.
Hughes, Mr. and Mrs. Richard, Haulfryn, Bettws-y-Coed.
Ireland, D., and family, 91, South Side, Clapham Common, S.W.
Jamieson, J., and family, Old Phaleron, Greece.
Johnson, Dr., 24, Park Hill Road, Croydon.
Jones, E. Bird, and family, 2, Grove Road, Hoylake.
Jones, Mr. and Mrs. W. J., 19, Clifton Gardens, Maida Vale, W.
Kerney, Henry P., Ranelagh, Dublin.
Key, W. H. M., M.D., care of Messrs. Coutts and Co. London, W.C.
Keyser, Mrs., Kefissia, Greece.
Keyser, The Misses, Sion Palace Hotel, Athens.
La Fontaine, Miss Edith F., Elmfield, Esher, Surrey.
La Fontaine, Sub.-Lieut. J. S., Royal Naval Division, Crystal Palace, Sydenham, S.E.
La Fontaine, Miss Kathleen, Lammas Cottage, Esher.
La Fontaine, Richard, and family, Hotel Minerva, Athens.
La Fontaine, Mr. and Mrs Sydney J. W., 1, Carlingford Road, Hampstead, N.W.
La Fontaine, Wilfred, Hotel Minerva, Athens.
Lake, O., Bristol Terrace, Brynamman, near Swansea.
Le Page, Eng. Lieut. R.N., and Mrs. G. W., care of Dr. Morgan Rees, Benton House, Whitchurch, near Cardiff.
Lorimer, Mr. and Mrs. D., Grand Hotel, Larnaca, Cyprus.
Lyster, Alfred J., 69, Edith Road, West Kensington, W.
Lyster, Miss Edythe, 69, Edith Road, West Kensington, W.
Lyster, Fred. J., 69, Edith Road, West Kensington, W.
Macanaless, Pension Merlin, Athens.
Mackenzie, William, 6, Rue de l'Ancienne Bourse, Alexandria, Egypt.
Mackinnon, Dr. and Mrs., 14, Coates Crescent, Edinburgh, N.B.
Mackray, E. D., Dalra of H.H. Princess Emina, Bordein, Egypt.
Madge, Harold, and family, 63, Balls Rd., Oxton.
Maltass, Albert, and family, New Phaleron, Athens.
Maltass, Thomas, Hotel Minerva, Athens.
Maltass, W., 3, Cornwall Terrace, Regent's Park, W.
Marshall, M. B., 30, Saltwell Road, Gateshead-on-Tyne.
Martin, Mr. and Mrs. P. M., 7, St. Ives Gardens, Stranmillis Road, Belfast.
Martindale, Percy, 47, Gwydyr Mansions, Hove, Sussex.
Masham, c/o W. G. Masham, Esq., I.S.O., 68, Rosendale Road, Dulwich, S.E.
Masham, Mrs., Lower Eastwood, Ledbury, Hereford.
Masterman, E. W. G., M.D., Coventry and Warwickshire Hospital, Coventry.
Mayor-Metcalfe, Mr. and Mrs. A., 8, Slatelands Road, Glossop
Millingen, Prof. and Mrs. A. van, c/o Banco di Roma, Rome.
Mills, New House, Craneswater Park, Southsea.
Mitchell, E. A., Keyward House, Wells, Somerset.
Monck-Mason, A., Ottoman Bank, Alexandria.
Morrison, J., 8, Morton Terrace, Greenock, N.B.
Mountain, Henry E., care of R. Henderson, Esq., Lloyd's Agent, Xenophon Street, Athens.
Mountain, Mr. and Mrs. W. C., and family, 19, Royal Parade, Cheltenham.
Mumford, Newman, c/o Lloyd's Register, Piraeus.
Mumford, Mrs. N. c/o Mrs. La Fontaine, Lausanne, Switzerland.
Munro, 2nd Lieut. J. G., 4th Scottish Rifles, Fort Matilda, Greenock.
Newton, Miss F. E., International Women's Franchise Club, 9, Grafton Street, W.
Nias, Arthur, Conservative Club, St. James' Street, S.W.
Nias, M., care of Imperial Ottoman Bank, Throgmorton Street.
Nowell, Mr. and Mrs. Stephen, Sandygate House, Sheffield.
O'Neil, Miss, Hotel Grande Bretagne, Athens.
Palmer, S., and family, Old Phaleron, Greece.
Parfit, Rev. Canon J., M.A., St. Edward's, Victoria Road, Worthing.
Parfit, Harold, 176, Whitehouse Rd., Croydon.
Patterson, Mrs. Alexander, Allanshaw, Hamilton, Lanarkshire, N.B.
Patterson, Mr. and Mrs. H., Hotel d'Angleterre, Athens.
Pears, Sir Edwin, 24, Riverview Gardens, Barnes, S.W.; also Reform Club.
Pears, H. E., and family, 12, Willow Road, Hampstead, N.W.
Pears, Miss Lorna, Military Hospital, Gatcombe House, Newport, I.W.
Peddie, F., 109, Avenue de Villiers, Paris.
Pisani, Mr. and Mrs. Frederick, and son, Hotel Centrale, Rue du Stade, No. 22, Athens.
Pisani, Mr. and Mrs. Edward, Boulevard Constantin le Diadoque, No. 53, Piræus.
Poynter, Mr. and Mrs. Hugh E., 70, Addison Road, W.
Ramsay, G. McGregor, Hotel Lincoln Hall, Upper Bedford Place, W.C.
Ramsay, Miss, 18, Alwyne Mansions, Wimbledon, S.W.
Ramsay, Mrs. Alexander, and family, 18, Alwyne Mansions, Wimbledon, S.W.
Ramsay, Mrs. G., and family, Old Phaleron, Greece.
Rawe, Reuben, Old Phaleron, Greece.
Rees, T. Bowen, Pesmazoglu Corner, 46, Stadium Street, Athens.
Rizzo, Mr. and Mrs. Edgar V., and family, 48, Odos Hypocratis, Athens.
Robson, F., 142, Earlston Road, Liscaird, Cheshire.
Routh, R. A. C., 64, Torrington Square, W.C.
Rowell, Mr. and Mrs. Robert, and family, 124, King Henry's Road, South Hampstead, N.W.
Russell, J. MacDowall, British Postmaster, Shanghai, China.
Russell, Mrs. J. MacDowall, care of Mrs. J. Bruce, Bogs of Blevrie, by Forres, N.B.
Ryan, Mr. and Mrs. A., Mountside Lodge, Caterham, Surrey.
Sackville-West, Hon. B. G., 18, St. George's Road, Eccleston Square, S.W.
Samson, Major L. L. R., C.M.G., Junior Army and Navy Club.
Scrimgeour, Dr. and Mrs., Maadi, Egypt.
Seager, Basil, c/o H. S. Sellar, Esq., 22, Palace Road, Streatham Hill, S.W.
Seager, Edward J. P., c.o. British Consulate, Dedeagatch, Bulgaria; or c/o H. E. Mountain, Hotel Minerva, Athens.
Seager, Lieut. John Owen, Public Schools Battalion, 16th Middlesex Regiment, B. Co., Woldingham.
Seager, Mr. and Mrs. Walter, and family, 12, The Promenade, Hoylake, Cheshire.
Sellar, Miss, c/o F. B. Sellar, Esq., Underwood and Underwood, 104, High Holborn, E.C.
Silley, Alfred C., Agent, Khedivial Mail Line, Dedeagatch, Bulgaria.
Silley, Bernard, 37, Elliscombe Road, Charlton, S.E.
Silley, B. C., 37, Elliscombe Road, Charlton, S.E.
Silley, Mrs. Alfred C., Miss Alice, and Miss Beryl, Dedeagatch, Bulgaria.
Silley, Mr. and Mrs. C. C., 70, Kingsdown Avenue, Ealing, W.
Silley, Mr. and Mrs. Walter and family, care of Imperial Ottoman Bank, Limassol, Cyprus.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I am glad again to have received a copy of the *Monthly Journal* of the Sudan Chamber of Commerce, because I had feared that it was extinct. However, it has turned up, and covers the three months to and including May. In the published list of the Chamber's "Foreign Members" I see many German names, and among the "Hon. Foreign Members" the names of the Birmingham, Manchester and Glasgow Chambers of Commerce. Surely they are not foreign? The *Journal* contains much information of a statistical nature, but gives little or no particulars of trade openings, nor any advice which might be of use to the home exporter. I hope that this error of omission will be remedied in future issues.

***

I wish to draw the attention of my readers to the good work being done by the Royal Agricultural Society in its attempts to restore the fields in Allied countries devastated by the war. Both the general and executive committees appointed report favourable progress. Up to now, however, it has been possible only to begin practical operations in Serbia, where a representative of the Society was sent some six weeks ago bearing the first instalment of seeds and implements for the assistance of the peasant farmers. Although the devastated districts in the western war zone are still in the grasp of the enemy the executive committee are anxious to be in a position to proceed with the cultivation and seeding of the land and the restocking of the farms as soon as an opportunity offers, and they hope that intending subscribers will notify the nature and amount of their contributions without delay. The secretary for the time being is Mr. F. F. Euren, the National Horse Show (Limited), 12, Hanover Square, London, W., from whom all particulars can be obtained.

***

The many friends now in this country of Nurse Wheatley will be interested in her letter from the front, published elsewhere. The picture of our wounded longing for beds in lieu of stretchers is one that ought to appeal to us, and I am convinced that we will all be only too glad to contribute *something* towards the few beds asked for. The Editor of THE NEAR EAST has kindly undertaken to receive such contributions and to acknowledge them in these pages.

***

An American gentleman who is now in Egypt has, I fear, a rather poor opinion of our business methods, and I am bound to admit that if he does cherish a grievance against some of our Jacks-in-office he has good grounds for doing so. Briefly, he came to this country *last year*—either in the last week of November or the first week of December—on his way to Egypt; and on landing at Liverpool he was asked if he had any firearms, etc. Being an honest man, and a great admirer of this country, he at once declared an automatic pistol and a box of cartridges. They were at once taken away from him, and he was told that they should be returned to him when he left the country. But when he left, a fortnight or so later, he had to go without his property; and to cut a long story short he has not yet received the goods. Three weeks or so ago the friend whom he had asked to obtain the pistol and cartridges for him, and forward them on to Egypt, did succeed in getting the pistol, but the cartridges have not yet been liberated. What aggravates the folly of the whole red-tape business is the American is a well-known man, quite above suspicion, and that his fellow travellers who saw how he was treated at Liverpool, *and acted accordingly*, got their pistols through without any trouble whatsoever.

***

The report of the Mortgage Company of Egypt, reproduced elsewhere, shows that there was a further expansion in business during the past year, though there has been a small falling-off in profits. Profits last year amounted to £93,680, as against £41,319 this year; but, in this connection, it must be remembered that £50,000 has been set aside this year as a "special reserve for arrears"; without this extraordinary allotment, the profits would only have been about £2,000 lower than last year, which is certainly not a bad showing in view of recent events in Egypt. According to their report just issued, it appears that the United Egyptian Lands are debtors to the Mortgage Company to a considerable extent. On the other hand, it will come as a surprise to no one that the directors of the last-named company have decided to pay no dividend on the ordinary shares this year (last year an 8 per cent. dividend was paid), and to carry forward £7,203 to the next account. The creation of the "special reserve for arrears" is a precautionary measure which, I feel sure, the shareholders will be the first to approve.

***

The *Cologne Gazette* reports from Vienna that the Government oil wells at Drohobitz, in Galicia, have resumed operations. There are already large supplies of oil, and other refineries will shortly resume. Moreover, and with the object of alleviating the railway traffic, a new oil pipe is being constructed over the Carpathians.

***

From the above it would appear that the exploitation by the enemy of the reconquered oilfields is being feverishly pursued. At the time of the great Austro-German offensive against the Russians in Galicia I gave it as my opinion that the real objective was the oil district, because the running short of oil would have serious consequences for the enemy. This would seem to be borne out by facts, and hence the desperate efforts—unhappily successful—to re-occupy Galicia. The deduction to be made is that Galicia will continue to play an important part in the great war, and that the sooner we can drive the enemy, horse, foot and artillery, out of the province, the shorter will be the duration of the war.

***

But it is not only as regards the oil fuel supplies of Galicia that we turn to Russia hoping that she will spare no effort to prevent the enemy from tapping them. As I have frequently pointed out in these columns, Constantinople depends on Zunguldak for its coal supplies; therefore, it is imperative that these supplies should be *stopped without delay*. Some months ago the Russians did bombard and destroy the port and quays of Zunguldak, thus impeding the loading of vessels, and by a vigorous blockade of the Bosphorus put a stop to the shipping of coal in any appreciable quantities to Constantinople. Now, however, I read in the *Daily Chronicle* that "German engineers are building a light railway from Beikos to Zunguldak for the transport of coal." The alleged reasons are that "the activity of the Russian Fleet hinders supplies by sea," and that "the coal problem for the (Turkish) Navy is very serious, as only 2,000 tons of Welsh coals are left." Cannot even more serious attempts be made by our great Ally to *stop* coal running between Zunguldak and Constantinople? Surely it should be possible to interfere with the approach of rails to the former place, and thus to put a stop to the transport of fuel. The matter is one of immediate urgency and is vital to the success of our Dardanelles operations.

***

Speaking of railway constructions by the Ottoman-cum-German combine in Asia Minor it is interesting to note that the Cairo correspondent of the *Railway News* reports that "the Turks are endeavouring to build a railway into the Sinai Desert, as a branch of the Hedjaz Railway, from somewhere north of Akaba. The work is said to be under the direction of Meissner Pasha, a German engineer from the Baghdad Railway. There are said to be 154 locomotives fit for use on the Hedjaz Railway and about 8,000 passenger and goods vehicles." I do not know what truth there is in the report, but I am inclined to believe that our enemies are still pursuing a mirage. By all means let the railway be built; it will ultimately fall into the hands of the Allies, just like the Carpathian oil pipe now being constructed by the Austrians in Galicia.

***

The same correspondent gives some interesting details concerning the new Prussian Minister of Finance, Herr Helfferich. He is, as our readers are aware, well known in the Near East, chiefly in connection with the railway enterprises with which he has been associated. A director of the Anatolian Railway, he was Gwinner's right-hand man on the Baghdad Railway and his representative in all matters pertaining to that company's enormous interests. It now also transpires that "he was the moving spirit in the attempt made by the Deutsche Orient Bank (of which he was a director) some two years ago to acquire from the then Khedive, Abbas Hilmi, the Mariut Railway in Egypt—an attempt which Lord Kitchener very fortunately nipped in the bud." In this matter, it will be remembered, THE NEAR EAST took up a very strong attitude, opposing any and every attempt on the part of the Khedive to dispose of his Mariut property.

The Bankruptcy Laws of Egypt.

(By Our Cairo Correspondent.)

One of the most interesting sections of the Judicial Adviser's report is always the review in French of the work of the Mixed Tribunals, contributed by the Procureur Général of those courts. It usually deals with, amongst other matters, one of the questions that during the year under review may have assumed importance in the eyes of the commercial community. M. Eeman's latest contribution has proved no exception to the rule. As last year, he discusses the vexed question of the defects of the existing law of bankruptcy and composition (Concordat Preventif), which has exercised the public both here and in other lands. Since his last review sheaves have been written on the subject, and all manner of suggestions for the improvement of the situation have been made; but, as he says, "many of these articles have been written with more goodwill than ability, and have proposed remedies that, whilst they showed the excellence of the writers' intention, often proved to be wholly impracticable."

Concordat Preventif.

One of the recent works on the subject which M. Eeman considers worthy of notice is the memorandum submitted last June to the Ministry of Justice by the Import Trade Association of Alexandria, and he devotes his remarks on the bankruptcy laws to an analysis of the suggestions contained therein. The Procureur Général notes with pleasure that the Association is in agreement with the views previously expressed by him, "That even without a modification in the existing legislation a very considerable improvement could be effected in the situation by the ordinary but rigorous application of the means that the law places at the disposal of creditors and of the Courts." But whilst M. Eeman admits that the Courts can do a good deal to improve matters, he is still of the opinion that the real cause of the abuses whereof complaint is made lies in the attitude of the creditors themselves. "Imprudence in the transaction of business; a too tardy recourse to the assistance of the Courts; and a too ready acquiescence in proposals for an arrangement that ought by right never to have been entertained by them"—these are the true causes the seriousness of which the Association evidently does not realise, since it lays such little stress on that part of the question.

The Procureur Général then proceeds to deal with the suggestions made by the Association with regard to the improvements that could be made by the Courts. He and the Association appear to be in complete agreement of the necessity of full publicity being given through the Courts to protested bills and on the point that the Commercial Tribunals should have the power immediately a protested bill has been posted on the tableau to call up the debtor and inquire into his financial position. This is, in fact, what is done in Belgium, and what M. Eeman suggested last year. He is also in agreement with the Association on the necessity for the Courts to show more severity in dealing with applications for adjournment in cases of summonses for payment of bills regularly accepted and protested. As he says, nine times out of ten judgment could be given on the mere inspection of the bill and of the protest, and such judgment could even be given at once if the plaintifi had deposited his documents before the hearing. Also the Association is quite justified in its contention that it is most necessary that more ample information, more precise justification should be demanded from a debtor who applies for a preventive composition, for in many cases such applications are submitted under conditions that, in the face of the avowal of inability to meet objections contained in them, seem to render imperative the immediate pronouncement of bankruptcy.

The Procureur Général joins issue, however, with the Association on the question of the deposit required by the law when an application for a declaration in bankruptcy is made. The deposit required is £E12, but the Association wishes it reduced to £E5, on the grounds that "the necessity to make such a high deposit deprives commerce of a means, which is not contrary to the law, of pressing a debtor to pay his debt or at least to discuss or conclude an arrangement." M. Eeman, in the first place, does not see the utility of such a reduction, for if creditors have allowed their debtor to reach such a pass that they stand little chance of obtaining even an amount equalling their deposit, whether the latter be £E12 or £E5, then far better would it be to do nothing than to declare a bankruptcy which must be unproductive by reason of the absence of assets. He protests against the argument of the Association quoted above, and declares that such a comprehension of the meaning of a writ in bankruptcy is inadmissible. "It is precisely in order to prevent creditors from having recourse to such a means of pressing a debtor that this deposit is insisted upon."

The Procureur Général points out that the petition in bankruptcy affirms by the mere fact of its presentation that the debtor is unable to meet his obligations, that steps must be taken to prevent him from making any arrangements with other creditors, and that his assets must be taken in hand so as to be divided between those of his creditors whose security those assets constitute. As the Procureur asks, how can the creditor, who is the applicant, logically—nay, even honestly—contemplate the making of any special arrangement with the debtor by means of the very writ which has for the object of its issue the prohibition of the making of such agreements with all the creditors? He expresses astonishment that this point has escaped the attention of the Courts, and that one so often sees petitions, even after several postponements, removed from the cause list at the mere request of the petitioner, who gives as his reason that his claim has been settled. He is of opinion that such a statement should not be accepted for one instant unless the Court has assured itself that there are no other creditors.

Threatened Petitions.

Your correspondent, who, as it happens, has had considerable experience of business methods in Egypt, can absolutely endorse M. Eeman's remarks and, further, can affirm that it was, and is still, the practice even in financial circles of high standing, to use the bankruptcy petition as a threat and as a means to force debtors to pay up. At the same time it must be admitted in all fairness, that the commercial morality of the people itself has something to do with the too frequent use of the weapon that the petition constitutes, for when, as so often happens, a debtor absolutely declines to pay his debt even though he has ample means for so doing, a creditor must, after all, have some means at his disposal to force his debtor to meet his engagement. There would, however, appear, as the Procureur Général observes, to be no reason to reduce the amount of the deposit, as it has had very good results in effecting a reduction in the number of failures, especially in that of bad bankruptcies.

The next suggestion made by the Association is that the law with regard to the making of compositions before or after failure should be more rigorously enforced. As M. Eeman says, no one contests the excellence of this proposal, but let the creditors show the way, for it is on them that depends the acceptance of the compositions. Let them themselves refuse those that are not fitting, for how can they expect the Courts to be more severe than they are themselves and to reject proposals that have seemed fair to them, the principal parties interested? It is but natural that a Court should hesitate to reject under such conditions proposals that they have accepted, and to impose on them a judicial liquidation that they do not want.

Intervention of the Parquet.

The Association demands that the Parquet (Prosecutor's Office) should intervene without exception in every case of failure, and that its intervention in cases of bankruptcy should be more speedy. The Procureur Général asks: "Does the Association seriously think that any useful purpose would be served by such an arrangement? Is it not sufficient that public action is taken (as it is to-day) as soon as proofs of fraudulent bankruptcy are laid before the Parquet by the creditors or the liquidators?" Once again the Procureur Général points the finger at the former, and affirms that it is up to them to bring about this speedier intervention of the Parquet. "The creditors are normally the first to know of the criminal acts of their debtor, and it is for them to bring the facts at the earliest moment before the Parquet. I can guarantee that the latter will act without any delay in that event."

M. Eeman approves of the proposal that the liquidators should have a tabulated list of the points that they ought to look into, and on which they should report to the Parquet in view of the taking of penal proceedings. He states that such a list was in use in Belgium when, many years ago, he was periodically appointed trustee, and he thinks that its introduction in this country would obviate the somewhat vague nature of some of the liquidators' reports.

Repression of Proceedings.

But it is not sufficient to initiate proceedings, they must result in repression. It is all very well for the Association to demand that the repression should be severe; it must, however, not forget that the general interest of the community, which it no doubt had in view when it made this request, invariably recedes into the background when the moment comes for the application of that repressive punishment, and its place is taken by pity for the individual. Nor should the Association lose sight of the fact that the Courts, which it criticises, are composed not only of judges, but that there also sit on them commercial men who exercise a certain influence on the decision. And the Procureur Général adds that he knows from experience that the professional judges are not always responsible for the indulgence shown to the defendants.

M. Eeman mentions, however, that as a matter of fact, acting on a decision of the Court of Appeal, taken on his pleadings, he has given orders to the Parquets to intervene in every case of failure and to have this intervention recorded so that the Parquet will always be a party to a bankruptcy case.

The Question of Non-Traders.

In commenting on the questions raised by the Procureur-Général, the Judicial Adviser remarks that the whole matter of bankruptcy organization in general has been under discussion by the Procedure Commission in connection with certain questions relating to executive proceedings forming a necessary part of its labours, which consist in the study of the reforms to be introduced in the Codes of Procedure. He says that the issue raised is "whether bankruptcy procedure should not be applicable to non-traders as well as to traders, which is the case in England and Germany, or whether, at any rate, some special form of procedure for the settlement of the claims of competing creditors should not be organized as in Austria and in Spain." In Egypt, whilst the basis of settlement is that a debtor's property constitutes the security for his creditors in common, there are two distinct systems of settlement, according as the debtor is or is not technically a trader. In the first case the whole of his property is taken over for the benefit of his creditors generally and is distributed in proportion to their claims; in the second his property is merely the subject of individual seizures, which for all practical purposes benefit only the creditor who has made them.

There is, however, little doubt that some reform in the direction of removing this difference is absolutely necessary, as the facility offered to the non-trader is frequently taken advantage of by men who are technically traders. Here once again your correspon-

Digitized by Google

dent can speak from experience. Many cases has he known where creditors have been defrauded out of their rightful due simply because it has been impossible absolutely to prove that the debtor is a trader, and he has succeeded in transferring his property at the last moment to relatives before any seizure could be put on it by the creditors.

Execution Proceedings.

In the Judicial Adviser's opinion the organization of general execution proceedings for the benefit of all the creditors presents the following advantages:—Firstly, the dispossession of the debtor of all his assets prevents frauds and dissimulations of property which are otherwise committed with comparative ease and impunity, to the detriment of creditors, or some of them; secondly, official administration of a debtor's property puts an end to the possibility of separate proceedings by individual creditors, which often lead to inequitable situations between themselves; thirdly, the establishment of a period of time immediately preceding the official administration during which certain acts of the bankrupt are open to grave suspicion permits of the annulment of assignments and other disposals of property effected in fraud of the rights of creditors without having recourse to the Paulian action, which requires the proof of certain matters often very difficult to establish; and, fourthly, general proceedings always provide for the possibility of an arrangement binding upon all the creditors when a majority consent, with the corresponding advantage of liberation for the debtor as soon as he has paid a certain proportion of his debts.

The Adviser mentions that in countries like France, Belgium, and Italy, which have not hitherto adopted a system of bankruptcy for non-traders, the causes have been the fear that a system of official administration might involve a too summary expropriation of non-commercial debtors and the strong aversion to the stigma attaching to the name of bankruptcy for those who have not accepted the responsibilities of a trader. Sir Malcolm is of opinion that traders must always be subject to certain special obligations, and liable to certain special penalties, and that there can be no question of completely assimilating the trader and the non-trader, nor of the simple extension of the bankruptcy law to non-traders in all respects; nevertheless, "it would seem that some form of official administration, far from being disadvantageous to the non-commercial debtor, would, on the contrary, be of great benefit to him in protecting him from the ruinous expense of a multiplicity of lawsuits, and in enabling him to obtain his liberation from his liabilities by an arrangement with the majority of his creditors." As a matter of fact, this was the main object in view when the principle of bankruptcy was extended to non-traders in England and Spain. Before anything in this connection is done in this country, however, the views of all those interested and concerned in the question will have to be ascertained, and it is for this reason that a general expression of views is invited by the Judicial Adviser.

The Moratorium.

The subject of protests and failures quite naturally leads the Procureur-Général to deal with that of the moratorium and its effect on the financial and commercial situation of the country. He states that these exceptional measures gave rise to very much criticism. Some have been of opinion that the moratorium was not sufficiently extended; others that recourse should never have been had to it; or, at least, that its effect should have been restricted. One need only place oneself in the position of a creditor or of a debtor to arrive at fundamentally different opinions on the subject, and so to justify this apparently extraordinary confliction of views. He gives it as his considered opinion that, in view of the situation created in Egypt by the events outside, it was imperative that some provision should be made to cope with the serious and pressing danger which menaced the country; that the moratorium is, after all, nothing but a generalisation of the measures that the Courts are empowered by law to take under certain special individual circumstances; and that it violates none of the essential principles of law, the respect and maintenance of which are indispensable to the normal life of civilised society, nor any of the principles disregard of which nothing, not even a pretended necessity, can excuse.

He then proceeds to examine the situation to see, firstly, whether the results have justified the predictions that were made; secondly, whether the moratorium, either alone or because it was maintained too long or because the Government did not prolong it long enough, or again because its conclusion was not arranged in the manner that certain people considered preferable, has really brought about the ruin with which we were threatened; and, thirdly, in a more general manner, whether the European crisis has in reality had the fatal effects that were predicted of it.

Statistics.

A comparative table of the figures for the protests and failures for the last seven months of the past four years shows that whereas in 1912 there was a very great increase in both categories, the figures in 1913 fell far below those for 1911, and that during 1914 they decreased even still more. The Procureur-Général does not go so far as to deduce from this that the year 1914 was, despite the war, a fortunate one for the country, but he points out that, whilst the deposit of £E12 required may have been the main cause of the great reduction in failures in 1913 and in 1914, the almost parallel diminution in the number of protests is quite independent of that cause, and at the same time that the evil that was predicted has not yet fallen on the country. Whether it will fall upon it later on he cannot tell, but he is decidedly of the opinion that if and when it does come it will be purely the consequence of the troublous situation in Europe—and for matter of that in the entire world—and that the moratorium will have had naught to do with that event. And the Procureur-Général concludes by saying that if one wishes to insist on the moratorium having stood for something in the present state of the commerce of Egypt, then the figures cited above can give to those who introduced the moratorium and directed its application the right to congratulate themselves at having taken such a step, and at having applied it with moderation and with a just appreciation of the requirements of the moment and the permanent necessities of the commercial life of the country.

ITALY AND THE WAR.

The effect of Italy's intervention in the European War has not, so far, been productive of any such sensational results, from the commercial point of view, as some people were inclined to anticipate, says the *Financial Times*. It is true that the British Government has removed all restrictions relating to coal exports from these islands so far as they concern our Latin ally, but even this step has not led to any substantial advance in coal prices or freight rates, except between the Tyne and Genoa, where a slight stiffening in quotations is recorded. One may assume, therefore, that the policy to which the authorities at Rome have at last committed themselves was so generally looked upon as a foregone conclusion that the event itself has come as a sort of anti-climax. Nevertheless, before long trade conditions must respond to the new situation brought about by Italy's action.

So far as concerns this country, our commercial relations with the principal maritime nation of the Mediterranean relate mainly to coal and shipping. To the first-named reference has already been made, but as regards the second a great deal may be said. In the first place, Italy provides a centre of some importance for the interchange of passengers and freight on the Far Eastern route, but naval requirements must now for some time take precedence of all trans-maritime arrangements customary under normal conditions. There is no reason to suppose, however, that the direct shipping services maintained between some four Italian ports and India will be suspended, or, in fact, seriously interfered with, having regard to their importance. Should it be necessary to re-arrange the itinerary of these undertakings the English companies trading to the Orient will undoubtedly co-operate in overcoming any difficulties which may thereby be presented.

Exports.

Italy's exports to the East consist mainly of made up goods, together with certain minerals such as glassware, colouring earths and drugs. The volume of trade in these commodities is considerable, and must, of course, be preserved even in such times as the present, and special steps will undoubtedly be taken to ensure that this is done. From Central European countries Italy has obtained metals and manufactured goods in very large quantities, but these supplies are now cut off, at any rate, for the time being, and it will be necessary for the Government to look elsewhere in order to meet their requirements. Here, again, British ship owners will probably come to the rescue in providing transport facilities for the carriage of the articles in question either from this country or from America. Fortunately, a few of the largest English iron and steel manufacturers are already established at Italian ports, and some at least of them have organised their businesses on a basis designed to meet the state of affairs which has now arisen. This circumstance should undoubtedly tend to bring about an improvement in the trade relations between the two countries, which recently have seemed to tend, in some directions, at any rate, adversely to British interests. Unless one is very much mistaken, however, the commercial position of Great Britain in the Mediterranean is likely to be greatly improved as a result of the war, even though the full benefits of the changed conditions which now prevail do not make themselves felt to any great extent until some time after peace has been restored.

Trade Notes.

Egypt.

Tenders will be received by the Under-Secretary of State, Ministry of the Interior, Cairo, not later than noon on June 26, 1915, for the supply of petroleum for lighting required by the police for one year commencing on July 1, 1915, and ending on June 30, 1916. A copy of the conditions of tender can be obtained on application to the Personnel and Equipment Department, Ministry of the Interior, Cairo. Tenders will be submitted on the printed form provided for the purpose in double sealed envelopes, each marked "Tender for the supply of petroleum, 1915-1916," and should be addressed to the Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department).

Tenders will be received at the Administration of Sultania Yachts and Steamers, Tersana, Bulâq, Cairo, up till noon, on June 22, 1915, for the supply of various articles, such as paint, oil, rope, sails, coal, iron tools (gimlets, files, hammers, compasses, nails, etc.), towels, sheets, blankets, carpets, glasses, globes, etc., required during the year 1915 and 1916. All information, conditions of tender, and list of quantities may be obtained, and samples seen, at the above address on any day during office hours, holidays excepted. Tenders should be made in accordance with the general conditions, on the form of tender supplied free of charge by the Administration, enclosed in sealed envelopes addressed to the Chief Aide-de-Camp to H.H. the Sultan, Abdin Palace, or Ras el Tin Palace, Alexandria, as the case may be, and bearing the inscription: "Tender for the supply of various articles."

Tenders will be received by the Under Secretary of State, Ministry of the Interior, Cairo, not later than noon on July 7, 1915, for the supply of photographic material required by the Ministry for one year, commencing on July 15, 1915, and ending on July 14, 1916. A copy of the conditions of tender can be obtained on application to the Personnel and Equipment Department, Ministry of the Interior, Cairo. Tenders must be submitted on the printed form provided for the purpose in double sealed envelopes, each marked: "Tender for the supply of photographic material," and addressed to the Under Secretary of State, Ministry of the Interior (Personnel and Equipment Department), Cairo.

Tenders will be received at the Central Stores of the Ministry of Finance for the supply of olive oil necessary for the Hedjaz. Persons wishing to tender should apply to the Economat Central at the Ministry of Finance in order to consult the conditions and specification of the supply. Tenders will be received up to July 15, 1915, at noon.

Tenders wil be eceived at the officer of the Inspector, Central Gharbia Drainage Projects, Ministry of Public Works, Cairo, up to noon, on June 19, 1915, for the supply and erection of a swing bridge on Salahib Lock, at Hamûl Barari, in Kafr el Sheikh District. Full particulars of the bridge in question have already been published in these columns.

The public is notified that the request for tenders for 1,872 steel stamps, which formed part of Schedule 14, Index No. 370, of the specification for the supply of general stores, relative to which a notice appeared in *Journal Officiel* No. 33 of March 18, last, is hereby cancelled.

Messrs. Allen, Anderson and Co., Walter W. Davies, the Egyptian Carbide Company, Thos. Hinshelwood and Co., the Bulaq Model Workshops, Milner's Safe Company, Vacuum Oil Company, Whitehead, Morris and Co., and Pollard and Co., were recently among the successful tenderers to the Postal Administration for the supply of general stores.

Prominent Industries of India

Sudan.

The *Monthly Journal* of the London Chamber of Commerce draws the attention of members to a notice issued by the Sudan railways fixing special through rates from Port Sudan to stations on the White Nile and Bahr el Gebel between Renk and Mongala inclusive, and to Meshra el Rek, for holders of Government, agricultural, and commercial concessions, for cement, ironware, timber, machinery, and seeds. The following notice has been issued by the Director of Customs:—"The attention of the public is called to the necessity of correctly describing all goods upon which duty and royalty is paid. Frequent cases have occurred where the marks of packages declared on Form No. 80 do not comcide with the marks upon the packages when they arrive at Port Sudan. Merchants and clearers are requested to examine their royalty receipts Forms No. 80 before leaving the Customs offices, as no alterations can be made subsequently without a letter of indemnity. The responsibility for goods being detained or missing shipment owing to inaccuracy of description of marks rests with the owners or clearers of merchandise, as it is frequently impossible to identify goods with the papers accompanying them in time for Customs formalities to be completed before the vessel sails."

Greece.

With reference to the previous Ministerial Order prohibiting the export of certain articles from Greece, the Board of Trade are now in receipt of a list of further prohibited articles, including slaughtered animals (raw meat), mineral oil (lubricating oil), pulse in general, potatoes, cheese, olive oil (exclusive of Cretan exports), olives, salt cod and preserved goods, dressed (worked) and half-worked articles produced from and composed of raw material of which the exportation and transit is prohibited; ores of chrome and ferro-chrome; alloys of metals of which the exportation is prohibited; copper ore, and undressed hides of oxen, buffaloes, horses, calves, pigs, lambs, goats and deer, also such hides, dressed, suitable for making saddles, harness in general, and military boots. A further Ministerial Order has also been issued prohibiting the exportation of tin, chloride of tin, tin ores, and colours and colouring materials.

CYPRUS SHIPPING.

(From a Correspondent.)

Larnaca, May 22.

The Pantaleon Shipping Line has inaugurated a weekly service between Egypt and the three principal ports of Cyprus—Larnaca, Limassol, and Famagusta. The new service is welcome to shippers.

In consequence of the somewhat unjustifiable reluctance shown by English shipowners to send their steamers to load in Cyprus, the Greek flag has been very conspicuous in Cyprian waters. Large quantities of carobs and grain have been exported in Greek steamers.

GREEK MERCANTILE MARINE.

The *Board of Trade Journal* gives the following information from a report by H.M. Consul at Piræus on the trade of that district in 1914, which will shortly be issued. "According to statistics published by a local journal, eighty-five steamers of 219,450 gross tons were added to the Greek flag between July, 1913, and the end of December, 1914. The value of these steamers, reckoned at an average of £8 per ton gross, amounts to £1,755,600, and the total value of the Greek mercantile marine amounts to about £6,800,000. It is estimated that the earnings which the Greek mercantile marine will realise in 1915 as a result of the war will exceed £3,000,000."

A Cardiff contemporary says: "An inquiry of note is that of the Egyptian State Railways who are asking for tenders for 360,000 tons of Welsh or American coal. The period of delivery is from September to May next, and shippers are asked to send in prices on the f.o.b. basis for Welsh coals and the c.i.f. basis for American coals."

Near East Markets.

TOBACCO IN EGYPT.

(From a Cairo Correspondent.)

Attention has lately been centred in Egypt on the possibilities of utilising a part of the land which has hitherto been devoted to cotton for tobacco cultivation. The suggestion seems to have provoked the interest of several prominent men, among whom figures H.H. Prince Omar Pasha Toussun, who is reported to have formed a committee to study the prospects. Several writers, also, have repeatedly attempted to draw the attention of the public to the advisability of tobacco cultivation, inasmuch as it would do away with many of the difficulties besetting the fellah. The idea, however, has not yet converted itself into a reality, and nothing has been carried into execution—presumably in consequence of the absence of initiative and the existence of other hindrances.

It is interesting to note, however, that a certain resident of Zagazig is the signatory of an open letter in the native Press addressed to the Sultan, in which he respectfully solicits his kind attention to the project, which, he maintains, is capable of producing profitable results. The writer has volunteered to proceed to Greece or any other tobacco-growing centre, to study tobacco cultivation, and to bring back with him the necessary seeds, together with a few experts, in order to test the cultivation in a suitable tract of land assigned by the Ministry of Agriculture. The trial will enable the Government to form an opinion anent the project of introducing tobacco growing throughout Egypt, and to study the measures of taxation to be adopted with the view of safeguarding State revenue.

This interesting proposal could, doubtless, be tried, the more so because the proposer has expressed his readiness to defray all the expenses of the test. The suggestion can also be regarded as indicating that a small section of the public are alive to the interests of the country.

SPECIAL REPORTS.

(From Our Own Correspondents.)

Cyprus. May 18.

The new crop of barley is very good both in quantity and quality. It is hoped that, as was the case last season, large quantities will be shipped to the United Kingdom.

The Government has prohibited the exportation of cotton to Greece. The greater portion of the 1914 crop has already been exported, a few hundred bales having been detained in Egypt. It is a pity that freight rates prohibit the placing of Cyprus cotton on the English market.

Sofia. May 25.

The gathering of roses in the Valley of Roses begins this week. The harvest is an excellent one, but a great drop in prices is noticeable. Before the War 12-15 frs. per muscal was charged, and the flowers sold at 0.80-0.90 frs. per kilo. At present the muscal is worth 4 frs. and the flowers 0.20 frs. per kilo. The reason for the drop is, of course, the war, which has put a stop to the perfume industry.

The wheat harvest is an excellent one.

PRODUCE REPORT.

London, June 10.

Currants.

There are no arrivals, but the s.s. "Princesse Clementine" is now on the way. The demand keeps good for all grades of currants, but the small stocks restrict sales greatly. All kinds of currants are again dearer, both here and in Greece. In this market Provincials are quoted 26s. to 27s. 6d., Amalias 29s. to 30s., Patras 31s. to 33s., Gulf 31s. to 32s., Vostizza 36s. to 37s, Island 30s to 31s., Smalls 28s. to 35s.

In Liverpool, as anticipated, there was a brisk demand for all parcels that came to hand per s.s. "Britannia," and prices advanced 1s. 6d. to 2s. per cwt. against sales made, a few days ago, afloat by same steamer. Up to 28s. was paid for Provincial and 31s. for Zante. Of the latter grades there is nothing offering. The market closes very firm, and holders are inclined to ask for more money.

Sultanas.

No further arrivals have taken place. Buying continues on a large scale, and further rise of fully 1s. per cwt. has taken place. Duty paid clearances continue exceptionally heavy, and unless further arrivals take place, still higher prices must be expected in the near future. Greeks are quoted 58s. to 65s., and Smyrna 52s. to 65s.

In Liverpool, with the arrival of the s.s. "Britannia," there were about 15,000 boxes available for the market, and what have been landed sold rapidly at extreme prices, the increase of values since the beginning of May being 6s. to 7s. per cwt. Further supplies are very uncertain, and it seems that, owing to scarcity, prices will be advanced.

Dates.

The market keeps firm, with a moderate business.

Oils.

Linseed oil is inactive and prices have declined. On the spot, pipes, £29; barrels, £30; June-August, £30 5s.; September-December, £31. Rape oil is quiet, and brown and Japan are lower, but refined is unaltered. Cotton oil: Crude on the spot pipes, £30 5s.; refined on the spot pale pipes, £32 10s.; sweet barrels, £36 10s. to £38 10s.

COTTON REPORTS.

(From Our Own Correspondent.)

Liverpool, June 10.

Messrs. Reynolds and Gibson report:—

Egyptian Spot.—There has been a good demand for cotton this week, especially for Sakellarides, and a large business has been done. Quotations of good and below in Brown, Upper, and Nubari are advanced 15 points, in other descriptions 10 points, while quotations over good in all descriptions are reduced five points. Sales are estimated at 4,100 bales, against 1,800 last week.

Manchester.

During the past week the tone of the market has improved considerably, and although the volume of business passing can hardly be described as normal there has been a fair increase in the turnover. The situation in the labour dispute, notwithstanding the intervention of the Board of Trade, has unfortunately not improved. The position is rapidly becoming serious, as notices are being posted this week, and unless some agreement is arrived at during the next few days a general stoppage is inevitable. The Board of Trade, however, continue to follow the dispute closely.

EGYPTIAN COTTON SHIPMENTS.

The *Egyptian Gazette* publishes the following table showing the amount of cotton shipments from Egypt to the various countries abroad from the commencement of September last to the end of April, with comparisons with the corresponding period of the preceding year:—

	cantars.		Increase or decrease. cantars.
America	1,004,121	..	+483,792
France	113,708	..	−453,723
Greece	11,536	..	+ 8,586

The decrease in the shipments to Austria and Hungary was 297,376 cantars; to Belgium 18,981 cantars; Germany 577,576 cantars; Holland 26,792 cantars; Roumania 771 and Turkey 4,182.

These figures give a net decrease in the shipments abroad of 819,378 cantars, the total exports for the eight months to the end of April last being 5,233,286 cantars, as against 6,052,664 cantars in the corresponding period of last year.

Egyptian Trade in April.

(From Our Own Correspondent.)

Cairo, May 22.

The Egyptian Customs returns for the past month have just been published. Imports continue to show a falling off, though less than in any of the three preceding months, whilst exports once again are on the upward grade. The figures are :—Imports, £E1,476,767, and exports, £E2,287,723, against £E2,269,597 and £E2,175,947 respectively in April, 1914. The falling off in the former is £E792,830, and the increase in the latter £E111,776, making the diminution since the beginning of the year £E4,263,600 and £E927,116 respectively.

Under imports the only noticeable increases are frozen meat by £E70,469, and chemical manures by £E70,051. The chief decreases are in flour, £E107,436; construction wood, £E52,511; textiles, £E311,455; and worked iron and steel, £E103,679.

Exports show a further increase in eggs, £E42,047; in sugar, £E68,012; and in gold and silver bar, £E53,127; whilst onions have fallen off by £E110,703. On the other hand, cotton-seed has increased by £E30,220, maize by £E47,313. Cotton, it may be noted, has to all intents and purposes got back to the normal, for after comparatively large decreases during the previous months this article shows only a drop of £E50,679, as compared with April last year.

Cigarettes show a further falling off of 15 tons, or £E12,000. It is to be noted that the only countries that have increased their purchases during April are Holland and Switzerland. Special imports increased by £E20,775, due to the arrival of new silver to the value of £E77,400 for the Ministry of Finance from England. On the other hand, exports amounted to only £E19,388, and once again Turkey figures for a large amount, viz., £E17,550. This time, however, a footnote explains that this money was sent to Jaffa for the American Jewish Relief Society.

Turning to the share taken by the various countries in the trade of the past month, we find under imports that America has increased her sales by £E80,207, or over 300 per cent. Chili reappears with £E81,152—the entire import of chemical manure for the month. Brazil has increased by £E11,131 to £E37,712—practically the whole of the coffee trade. Greece has doubled her share as compared with the preceding year, whilst France has fallen off by £E143,965, or 180 per cent., Italy by £E17,268, Russia by £E50,727. The British Empire fell off by £E110,489 to £E804,531, but it supplied all the frozen meat, wheat, rice, and all but 5 per cent. of the coal. Under exports some curious results are obtained. Thus, the United States increased by £E110,251, Spain by £E23,898, Italy by £E123,088, and Switzerland by £E185,774, but practically the whole of the purchases of the States (£E416,058), Spain (£E59,790), Italy (£E221,499), and of Switzerland (£E238,467) represented cotton. There seems little doubt that the Egyptian Government were quite justified in prohibiting the export of that product to the two last-named countries; it is to be presumed, however, that the embargo will now be removed in so far as Italy is concerned. Whilst France bought £E39,287 more and Greece £E9,244 more, Russia fell off by £E96,378 to £E78,895. The British Empire, however, made good headway, for it increased its share by more than 25 per cent. to £E1,013,296, of which £E40,277 was sugar, and £E488,500 cotton.

The table of trade between the Sudan and Egypt shows that the latter purchased goods to the value of £E46,625 from the former and that the traffic in the contrary direction amounted to £E67,043. The principal items in the sales of the Sudan to this country were :—Livestock, £E6,600; ivory, £E3,115; cereals, £E11,573; gum, £E3,378; cotton, £E14,760. The chief articles purchased by the Sudan were :—Refined sugar, £E16,628; cotton tissues, £E19,454; tobacco, £E10,872; and flour, £E1,492.

FRENCH CHAMBER OF COMMERCE IN EGYPT.

On May 15 the annual general meeting of the French Chamber of Commerce in Egypt was held in Cairo. In the report in the year (says the *Egyptian Gazette*) it was pointed out that French imports had diminished by £E849,019 in comparison with 1913. Most of the decline is due to the prohibition in France of the exportation of certain foodstuffs, such as flour. There has also been a drop in the importation into Egypt of *articles de luxe* owing to the straitened circumstances of the population. Egypt's exports to France during the period under review have diminished by £E7,570,269, the greatest drop being that of cotton, which figures at £E6,834,248. The export of cotton seeds only dropped £1,000.

"When," says the report, "we consider that Germany's exports to Egypt represented 40,200,000 frs. and those of Austria 48,500,000, one can see what an important succession will fall to us as soon as business becomes more normal.

"The whole of the industrial and commercial population of France is now showing its powers of will and energy at the front; they will be ready sharpened for the new struggle as soon as the war is over. The French Chamber of Commerce will continue to aid by all means in our power French merchants and producers,

W. H. ALLEN, SON & CO., LTD.,
BEDFORD, "CONQUEROR" PUMPING MACHINERY. ENGLAND

Suitable for Heads up to 2,500 feet.

Engineering Notes.

A New Box Nailing Machine.

In our notes last week we stated that owing to the war and the scarcity of imported timber in the Near East there will probably be an urgent demand for a certain class of wood-working machinery to prepare native timber for making boxes, which are annually required in millions for the exportation of currants, sultanas, figs, dates, etc. When alluding to the necessity of using nailing machines we omitted to mention a very suitable British-made machine which will interest box makers as well as fruit exporters. The system of nailing by this machine is a new, simple, cheap, and secure method of nailing up many classes of materials for boxes and packing-cases. A saving of timber, combined with increased strength and security, is thereby effected; fewer machines and less floor space are required, and a great reduction in labour is obtained. The nails are preferably driven angularly across the intersection of the boards, instead of through the outer face of the box side or end, and are then turned back into the timber in hook form, making it practically impossible to withdraw the nails without destroying the timber or box. This is effected by any standard type of nailing machine having as an adjunct the vice attachment of the machine alluded to. This vice automatically grips the under or vertical board while the nails are being driven, whilst its back jaw carries a series of nail turning dies, so shaped as to turn the nails back into the timber in hook form. The advantage of this system may be summarised as follows:—Two years' use in a large box factory in this country has proved the output of two of these machines in small boxes to be equal to that of four ordinary plain nailers, and as the vice prevents the nails running outside the timber the usual repairing tables are rendered unnecessary. These two features alone reduce the cost of labour for nailing to about half its present rate. Boards from 1-16th in. to 1 in. thick can be nailed up in the commonest classes of either soft or hard timbers, warped boards are automatically straightened out by the vice pressure before the nails are driven, and this ensures level, accurate, and flush work on every face. Theft of contents is obviated by the hooked nails, and thereby covers the risk of pilferage attached to straight-nailed boxes. It is claimed, moreover, that 25 per cent. saving in timber is effected on most small boxes, and 50 per cent. in wood on the ends of small boxes.

Bituminous Gas Producers.

The ever-increasing employment of the suction gas plant as a power producer in the East gives frequent occasion to make allusion to this class of machinery in these notes. Quite recently we alluded to a new semi-bituminous gas plant, and a correspondent from the East informs us now that certain bituminous gas producers have not proved quite satisfactory there, owing, he says, to the tar which is produced from the bituminous fuel, and which becomes very troublesome in the operation of the plant. Our correspondent gives no particulars as to the type and origin of the plants he refers to, but we presume that they are plants purporting to be suitable for gasifying semi-bituminous or bituminous fuel, and very probably not of British construction. Of course, the great problem in bituminous producers is the elimination of tar from the gas. This is done more or less successfully in many producers by the provision of a rotary tar extractor, driven by an electric motor or small engine. But this has been considered undesirable, and in the latest designs of producers the object aimed at is the complete elimination of tar from the gas before it leaves the generator. When gas is made from a bituminous fuel a considerable quantity of tar is given off; this, however, can be cracked by passing the gas through a very hot zone in the fire. A down draught producer has therefore been decided on, so that the gas which is first formed in the upper part of the producer is drawn down through the fire, and the tar in the gas is cracked and converted into fixed gases. The down draught producer is, of course, no new invention, but most of the producers of this type which have been made in the past have failed because they did not fulfil certain primary conditions.

A New Type of Bituminous Product.

A suitable plant for the East is one of the newest types of bituminous gas producers, which has proved very successful in the British colonies. It is as simple to operate as the ordinary suction gas producer, and with lignite or brown coal as fuel gives excellent results. This kind of fuel is cheap and easily obtained in the East, while a special feature of the plant is the provision made on the above-described principle, for the complete elimination of tar resulting from the use of bituminous fuel. The generator of the plant is rectangular in shape, and is provided with an air-jacket, and fitted with auxiliary air ports. When the plant is working, warm air is drawn from the jacket to the top of the producer. The fuel in the upper part of the producer is distilled at a low temperature, giving off its volatile constituents; this part of the producer acts almost like a cooking oven. The gases which are given off, and which contain tar, are drawn down through the fuel bed. The auxiliary air ports can be opened or closed at will, and also draw warm air from the air jacket; they are placed at various distances down the generator. The air entering at these points creates a secondary combustion zone, having a very high temperature, and the tarry vapours in the gas given off in the distilling zone are drawn through an intensely hot zone, cracked and converted into fixed gases which go to enrich the gas given off by the producer. The fuel below the auxiliary air ports is in the form of coke or charcoal, as the case may be, and the reactions which take place are exactly the same as those which take place in the ordinary suction producer. That is, the carbon is first burnt to carbonic anhydride, or carbonic acid gas, and this gas, in contact with an excess of incandescent carbon, is reduced to carbonic oxide. The greater percentage of inflammable gas passed to the engine is carbonic oxide, but this is enriched by hydrogen and marsh gas, obtained from the volatile constituents of the fuel. The reason for making the generator rectangular is that the fire must not exceed a certain thickness, which will allow the air from the auxiliary ports to create a hot zone right across the fire without leaving a dead core in the middle through which tarry distillates could pass without being reduced. An increase of power from the producer is obtained by increasing the length of the generator, leaving the breadth approximately the same. A central air pipe is fitted in order to make it perfectly certain that the centre of the fire is incandescent, but these pipes could not be multiplied indefinitely, as they would interfere with the stoking of the plant. The generator base is a substantial casting, carrying the fire-grate, which has rotating firebars of special design to crush any clinker which may be formed. It is waterluted, which allows for long continuous work with inferior fuels. The cooler placed between the generator and the scrubbers is designed to supply the necessary steam which is admitted with the air; it is fitted with baffle plates, over which the water from the scrubber runs, and a great part of the dust in the gas is extracted by this means. The gas then passes on to the coke scrubber, where it is further washed and cooled, and finally passes on to the sawdust scrubber, where it is dried before going on to the engine. This type of plant has been designed to use almost any class of bituminous fuel which is non-caking in character.

Ginning Mills in Egypt.

According to recent statistics, there are 143 ginning mills in Egypt, possessing 168 hydraulic presses, eight steam presses, and 2,448 other machines. Most of the mills are in Gharbieh and Behera, where there are 43 and 25 respectively. Assiout has only three mills. This year, however, says the *Egyptian Gazette*, 27 mills have had to close down, twenty in Lower and seven in Upper Egypt.

Roumanian Consolidated Oilfields.

Referring to the prospects of Roumania entering the war, the *Financial Times* states that if Roumania joins the Allies it is fair to assume that it would be a bull point for the Roumanian Consolidated.

"The issued capital of the Roumanian Consolidated Oilfields is £1,177,840, in shares of £1 each, and £48,600 6 per cent. convertible debentures. The making-up price of the ordinary shares on July 27, 1914, was 23s. 9d., but owing to a large block of shares overhanging the market, the price fell to 15s. The shares, however, have now passed into strong hands, and in common with other leading oil issues the price is showing a tendency to recover, and it would not be surprising, in view of the greatly increased production, if the making-up price were reached before long.

"For the 13¼ months to June 30, 1913, the company produced 64,327 tons, and realised a profit of £91,264, while for the year to June 30, 1914, the production was 64,680 tons, and profits £135,195. After providing fully for reserves and further developments £93,866 was carried forward to the current year. The output of oil for the first nine months of the current year was 87,787 tons, against 53,120 tons for same period last year, showing some 60 per cent .increase. The company's properties, which now aggregate over 5,000 acres, are situated at Bana Baicoi, Chicuira Bustenari, Campina, Tintea and other localities in proximity to the properties of the Astra Romana (Royal Dutch-Shell group) and the Romano Americana (Standard Oil group). The company possesses refineries at Targoviste and Ploesti, which entitle it to a larger allotment of the Government monopoly's purchases for the internal consumption of the country, owing to the Government's policy of encouraging individual companies as opposed to the large combines. The company, therefore, not only benefits from the addition of the refinery profits, but receives a higher price for that portion taken by the Government than can be obtained from the exporters.

"It may be noted that the lands owned by the company on the Moreni, Filipesti, and Chicuira fields were originally selected by the general manager in Roumania before the fields had been proved, and in consequence were acquired for a tithe of their present value. The Chicuira property, for instance, which represents a capital expenditure of some £175,000, has recently become productive, giving 760 tons for February, and 1,178 tons for March. These results were obtained from only three wells. Four more are in process of drilling, and when conditions become more normal in Roumania a largely increased programme will be carried out on this section of the company's properties. The fields, refineries and distributing centres are connected by 100 miles of pipe line, with the proper equipment and pumping stations and storage tanks for crude and refined oils, while a tank farm for the export trade is in course of completion at the port of Constantza."

NEWS FROM ALL SOURCES.

The Postmaster-General announces that the overland transmission of the mails for India and Australia, containing correspondence for Egypt by British packet, Aden, Somaliland, British East Africa, and Zanzibar, India, Ceylon, Straits Settlements, etc., China, Australia, and New Zealand viâ Suez, was resumed with the mail leaving London on the morning of June 11.

The exportation of Angora mohair from the Ottoman Empire is (says the Turkish *chargé d'affaires* at Washington) again permitted.

At last week's meeting of the Port of London Authority it was reported that the elected members had co-opted Mr. Frederick Charles Allen, of the Peninsular and Oriental Steam Navigation Company, to fill the vacancy caused by the resignation through ill-health of Mr. Charles Wood Gordon.

At a recent meeting of the British Cotton Growing Association it was stated that the association have arranged to finance a portion of the Sudan crop, and there is reason to believe that a large quantity of Sudan cotton will be sent direct to the association this year for sale.

The Spring Session of the European Commission of the Danube opened on May 15, says our Bucharest correspondent, under the presidency of M. Guillemin, the French delegate. This year the session is being held at Galatz instead of at Sulina, as in former years.

EXPROPRIATIONS IN EGYPT

(From A Cairo Correspondent.)

Numerous protests have lately appeared in the local Press against the action of the Government in forcibly disposing of properties in the event of the debtors being unable to meet their financial engagements. This procedure on the part of the Government, it has been pointed out, is not only injudicious, but ruinous to the interests of the landowners who had been thrust into an unforeseen position of insolvency occasioned by the war. By forcible selling, the Government will be depriving the fellah of his lands at a lamentably low price; while in case the Government initiates a suitable arrangement to ensure the recovery of debts without recourse to force, creditors would be able to recover the whole of their moneys and it would also give the fellah a chance to retain his property.

In a leading article on the subject, the *Ahram* strongly supports the petition submitted to the Government by the Egyptian Chamber of Commerce, and emphasises the necessity of postponing, if not abandoning, compulsory sales. "It is only just and judicious," remarks our contemporary, "to safeguard the interests of the indebted fellah by deferring the sale of property until the situation resumes its normal course and confidence is restored, thus encouraging the people to make investments by the purchase of lands. Alarming reports have reached us regarding the enormously low prices that costly lands have fetched. In a certain instance, a factory worth £E7,000 was sold for £E600; while in most cases lands have been sold for the amount for which they had been pawned. In the circumstances the public is justified in protesting, and the Government should give the matter its immediate attention in order to prevent the ruin which stares the people in the face.

"We draw the attention of the Government to the baneful consequences of divesting small landowners of their lands to be acquired by rich proprietors or companies.

"If the Government considers it its duty to safeguard the interests of the creditors and banks, it is likewise its duty to safeguard the interests of landowners from destruction."

BALKAN MORATORIA.

The *Handelsmuseum* of Vienna summarises the Balkan moratoria as follows:—

"Montenegro decreed a moratorium on the outbreak of the war. The measure was to terminate six months after the completion of the mobilisation.

"In Serbia the general moratorium decreed on July 25, 1914, covers not only debts contracted prior to that date, but also liabilities arising later. It is to continue in force until two months shall have elapsed after the publication of a decree of demobilisation.

"The moratorium in Bulgaria applies to liabilities incurred before August 7, 1914. It is to continue in force until abrogated by law or royal decree. The moratorium covers all money obligations of a civil or commercial character, and suspends all time limits with the exception of those relating to criminal matters.

"In Greece a number of extraordinary measures enacted during the Balkan War were still in force when the present war broke out. These moratoria, relating to the suspension of levies, proceedings in bankruptcy, and for dispossession of tenants, have been extended until July 13, 1915. No writs for the attachment of the debtor's person may be issued before the end of 1915."

SUDAN INDUSTRIES.

A new enterprise, which will be known as The Sudan Industries Company, has recently been established in Khartoum, says the *Sudan Times*. The new concern, which will be under the able directorship of Mr. Ernesto Dello Strologo, will run a flour-mill and an ice factory. The latter part of the business will no doubt be interesting to the public, who will thereby have the hope of getting cheaper ice. We understand that it is the intention of the new firm to actually sell ice at much lower prices than the public now have to pay.

Company Notes and Reports.

Bank of Roumania.

The report of the directors to be presented to the shareholders at the ordinary meeting to be held at the offices of the bank, 7, Great Winchester Street, London, E.C., on June 23, at 1 p.m., states that the result of the year's working up to December 31 has been satisfactory. However, owing to the unprecedented level of exchange, there has been deducted from the profits shown in Bucharest, after making provision for bad debts, a sum of Lei 370,400 to meet possible losses in exchange on unmatured operations, and after having written £6,661 8s. 3d. off investments there remains a sum of £17,171 8s. 10d. A distribution at the rate of 6s. per share, free of English income tax, is recommended. The figures in the balance-sheet are calculated at the rate of Lei 25 to the £1 sterling. With regard to the capital employed in Roumania, the difference between this rate and the abnormal exchange ruling at the end of December is covered many times over by the old reserve account. The retiring member of the board is the Viscount Goschen, who, being eligible, offers himself for re-election.

Mortgage Company of Egypt.

The report of the Mortgage Company of Egypt, Ltd., to be submitted to the meeting on the 17th inst. covers the year ended March 31, 1915, and states that after providing for interest on the 4½ per cent. first charge debentures and on other loans, and setting aside £50,000 as a special reserve for arrears, the accounts show a profit for the year of £41,319 15s. 7d. Deducting the amount of the dividend paid on the 5 per cent. preferred shares to December 31, 1914, viz., £37,500, there remains a balance of £3,819 15s. 7d. Adding the amount brought forward from the previous account (£6,184 3s. 1d.) there remains available £10,003 18s 8d. Out of this sum the directors propose to devote £2,800, the same as in previous years, to writing down the discount and expenses of the debenture issues, and to carry forward to the next account the balance of £7,203 18s 8d. The great falling off in the realised profits of the company in the past year is due entirely to the War and to the economic depression in Egypt arising out of it. Owing to the decreased demand for and the lower price of cotton, an unusual number of the company's mortgagors are in arrears with their annual instalments, and it may not be possible to collect the whole of the sum due until, with the return of peace, normal conditions are restored. The following figures illustrate the growth of the company's business since it began operations in December, 1908:—Amount invested in first mortgages at March 31, 1910, £1,183,611; at March 31, 1911, £2,064,178; at March 31, 1912, £2,597,473; at March 31, 1913, £3,037,991; at March 31, 1914, £3,276,225; at March 31, 1915, £3,481,545. The area of agricultural land mortgaged to the company is 89,819 feddans, well spread over the different provinces of Egypt. This land has been valued by the company's experts at £6,535,000. The house property mortgaged to the company has been similarly valued at £1,640,000, making a total of about £8,175,000. Viscount Milner, Hon. A. H. Mills, and Captain R. G. Westropp, directors of the company, retire by rotation, and being eligible, offer themselves for re-election.

United Egyptian Lands.

The report of the United Egyptian Lands, Ltd., for the year ended March 31 states that the company encountered great financial difficulties in consequence of the bad results of the cotton crop, principally due to the virulent attack of the boll worm, to the lack of water during the rotations, and finally to the low sale price of the cotton of P.T. 328 per cantar, as against P.T. 452 in 1913. Looking at the results of the crops during the three previous years, the directors had every reason to expect that the amount of the cotton obtainable from the company's estates, including cotton belonging to purchasers of land at Kom El Akhdar, the cotton grown by tenants of the estate, as well as that grown for the company's own account, should reach to 3,000 cantars. Unfortunately, however, the actual result has only been a production of 1,580 cantars, and at the prices which ruled, the proceeds (of this) were barely sufficient to meet the amount which, as in former years, had been obtained as an advance on the crops at the beginning of the year. The consequence has been a loss on the cotton cultivated on the company's own account; the tenants have been unable to pay their rent in full, and the arrears due by purchasers of the Kom El Akhdar estate have appreciably increased. The directors have, therefore, considered it advisable, in agreement with the auditors, to devote the balance of the profit and loss suspense account, amounting to L.Eg. 3895.413 m., to form a special reserve against arrears due by purchasers and tenants. No fresh sales of land at Kom El Akhdar have taken place this year, and at Rodan the directors have only been able to sell two small plots amounting altogether to 398 square metres. Under these circumstances it is not surprising that the company has been unable to meet its engagements, the principal of which are the amount due to the Mortgage Company of Egypt, Ltd., about £9,000, the amount due on current account to the bank, about £3,000, and a sum of about £3,000 due to various merchants for goods supplied for the estate of Kom El Akhdar. The Mortgage Company of Egypt has given every assistance and support and has agreed to advance the necessary funds for the development of the company's estates in order to prevent their depreciation. By arrangement with the Mortgage Company of Egypt the managing director has been appointed judicial receiver of the company, responsible to all parties. Owing to the restrictions imposed by the Government the area devoted to the cultivation of cotton during 1915 has had to be reduced from previous years, and even if the crop is normal, the production will not exceed more than 1,800 to 2,000 cantars. All work of reclamation had to be suspended at the end of July, 1914, after only about 150 feddans had been reclaimed. In the case of these lands and other lands previously reclaimed in preceding years the company were unable to complete their development, with the result that the value of the reclamation will be, to a certain extent, lost.

New Egyptian Company.

The report to be submitted at the annual meeting of the shareholders states that the accounts show a profit of £17,776 13s. 4d. The directors have created reserves against the realisation of the 1913-1914 rentals owing, and the interest due by purchasers, to the amount of £7,511 18s. 11d. Deducting this sum, together with the loss of £728 4s. 1d. on realization of cotton referred to below, and £5,707 9s. 9d. required for the service of the debentures, the profit for the year is reduced to £3,829 0s. 7d. Adding £1,328 9s. 11d. brought forward from last year, the balance at the credit of the account amounts to £5,157 10s. 6d., which the directors propose to carry forward. Pending the decision of the Egyptian Government to grant financial help to the agricultural interests in the unprecedented situation, the board have decided, on the advice of the managing director, to render assistance to their tenants and purchasers by taking over their cotton crops at an agreed price. This cotton has now been sold, but, in consequence of the low prices ruling, a small loss has been incurred, which has been provided for in the accounts. At the date of the last meeting of shareholders there was every indication that the year under review would be a record one as regards sales, but for obvious reasons a very small number of new sales has since been effected. Furthermore in several cases where sales had been made previous to the War, for which definite contracts had not been completed, the sales have either been cancelled or modified: consequently we are only able to report the sale during the year under review of 321 feddans, at an average price of £110 13s. 1d. per feddan. The total sales up to December 31, 1914, amount to 2,910 feddans at an average price of £95 0s. 10d. per feddan.

Good progress has been made with the improvements on all the Lower Egypt estates.

Digitized by Google

The capital expenditure during the year was £32,266 8s. 11d., bringing the total cost at December 31 last to £321,760 9s. 6d., or £50 8s. per feddan. A hundred and twenty-two feddans have been sold at an average price of £120 per feddan, showing a profit of £5,723. The estimated receipts of the Lower Egypt estates for the year 1914-1915 are approximately £18,693. Improvements have been continued satisfactorily on the Upper Egypt estates. During the year 199 feddans have been sold (166 feddans at an average price of £121 per feddan, and 33 feddans, representing the balance of one of our estates, at an average of £26 10s.), showing a profit of £7,625. The capital expenditure during this period amounts to £9,268 18s. 2d., and the total cost of these estates at December 31 last is £108,867 12s. 1d., or £44 3s. 8d. per feddan. The estimated rentals for 1914-1915 are £9,928. Since the closing of the company's accounts, contracts have been signed for the sale of an additional 129 feddans—61½ at an average price of £118 10s., and 67½ at an average price of £54 10s. There is no change to report on the company's holding of town sites. The sum of £41,535 7s. 1d. has been expended on the various estates during the year, which has materially enhanced the value of the lands. The valuation made by experts at the end of the year showed a considerable appreciation over cost.

Deutsche Orient Bank.

In connection with the dubious status of the Deutsche Orient Bank in Egypt, the *Egyptian Gazette* is informed that the work of the bank in Egypt is governed simply by the terms of Lieutenant-General Sir John Maxwell's Proclamation of January 25, 1915. This proclamation actually allows the Egyptian branches of an enemy house to carry on business, but as a matter of fact it is impossible for the bank in its present circumstances to undertake new business; it is merely liquidating its position, and paying its creditors in Egypt and Allied countries.

Cairo Electric Railways and Heliopolis Oases.

The annual general meeting of the shareholders was held last month in Cairo, Sir John Rogers presiding. The balance-sheet and profit and loss accounts were unanimously approved. The carry forward is Frs. 485,306.11.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN.—Gemsah production for the week, 231 tons, previous week 291 tons; recovered from sediment, 14 tons, against 12 tons; Hurgada production, 149 tons, against 52 tons.

BANK OF ROUMANIA.—The annual meeting of shareholders will be held at the offices of the Bank, 7, Great Winchester Street, on June 23, at 1 p.m.

EGYPT AND LEVANT STEAMSHIP COMPANY.—The following final dividends in respect of the year to January 31, 1915, will be paid :—(1) Coupon No. 9 of the ordinary shares, at the rate of 4½ per cent. less income tax, making the total for the year 7 per cent.; (2) on Coupon No. 1 of the deferred shares, at the rate of two shillings and six point ninepence (2s. 6.9d.) per share less income tax. Payments in London at the offices of the company, 22, Leadenhall Street, E.C., and in Egypt at the offices of the Anglo-Egyptian Bank, Ltd., Cairo and Alexandria.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended May 10 amount to £E3,743, as against £E5,715 for the corresponding period of last year.

EGYPTIAN MARKETS.—First 5 per cent. debenture coupons No. 33 are payable at the Anglo-Egyptian Bank, Limited, 27 Clement's Lane, London, E.C., at the face value, and at the Anglo-Egyptian Bank, Limited's branch offices at Cairo and Alexandria, at the current rate of exchange.

MORTGAGE COMPANY OF EGYPT.—The ninth annual meeting of the shareholders will be held at Cannon Street Hotel, London, E. C., on June 17, at 2.30 p.m.

NATIONAL GINNING COMPANY OF EGYPT.—The annual meeting of the above company was held in Alexandria on May 31.

NEW EGYPTIAN.—Fourteenth ordinary general meeting will be held on June 17 at Winchester House, Old Broad Street, E.C. Transfer books will be closed from June 10 to 17, inclusive.

ROUMANIAN CONSOLIDATED.—May, including the Chiciura Oilfields, 9,004 tons.

UNITED EGYPTIAN LANDS, LTD.—The eighth annual meeting of shareholders was held in Alexandria on Monday.

NOTICE is hereby given that the ORDINARY ANNUAL GENERAL MEETING of the Shareholders of the BANK OF ROUMANIA, Limited, will be held on Wednesday, the 23rd day of June, 1915, at One p.m., at the Offices of the Bank, 7, Great Winchester Street, London, E.C.:—

To receive the report of the Directors, and the Balance Sheet to 31st December, 1914.
To authorise placing an amount to the credit of the Reserve Fund.
To declare a Dividend.
To elect a Director in the place of the one who retires.
To elect Auditors for the ensuing year, and to fix their remuneration.

Holders of Share Warrants to Bearer for at least five Shares desirous of being present or represented at the said Meeting must deposit their Share Warrants at the Offices of the Bank in London or Bucarest, seven days before the Meeting.

By Order,
H. W. A. KILGOUR, Secretary.

London, 8th June, 1915.

L'UNION FONCIERE D'EGYPTE.

L'ASSEMBLÉE GÉNÉRALE ORDINAIRE du 15 Mai, 1915, n'ayant pas atteint le querum prévu par l'article 26 des Statuts, Messieurs les Actionnaires sont convoqués, conformément aux prescriptions du même alinéa des Statuts, en Assemblée Générale Ordinaire, pour le Mardi, 15 Juin, 1915, à 4 heures de relevée, au Siège Social, 4 Rue Rosette, en vue de délibérer sur l'ordre du jour suivant:

1. Rapport du Conseil d'Administration.
2. Rapport du Censeur.
3. Approbation du bilan de l'Exercice 1914-1915.
4. Renouvellement partiel du Conseil d'Administration.
5. Election du Censeur et fixation de son indemnité.

Tout actionnaire possesseur de cinq actions au moins a droit de prendre part à l'Assemblée Générale, à condition d'effectuer le dépôt de ses titres, au plus tard trois jours avant la date de la réunion, dans un des établissements ci-après désignés:—

En Egypte, auprès des Banques établies à Alexandrie ou au Caire.
En France, auprès de la Société Marseillaise de Crédit Industriel et Commercial et de Dépôts.
En Angleterre, auprès de la Banque Belge pour l'Etranger.

NOTES OF THE WEEK.

The Greek elections have resulted, as we anticipated in these columns last week, in a substantial majority for the Venizelists. According to the latest returns, the Venizelists in the new Chamber will number at least 190 out of 316; there will be between ninety and a hundred followers of the present Government, while the remaining seats will be divided between Rhallists, Theotokists, and Independents. The strength of the party which now supports the policy of M. Gounaris lies in Macedonia, where we should expect to find that the most had been made of the cession of territory to Bulgaria proposed by M. Venizelos last January. Even if the ex-Premier's return to power meant that Greece stood pledged to exchange a strip of territory in the Kavalla district for a large portion of Western Asia Minor, M. Venizelos would command the support of the new Chamber. But, as has already been pointed out, the whole question of Greece's attitude in connection with the war has to be considered *de novo*. The offer made to M. Venizelos last January no longer holds good. It would still be open to Greece to purchase Bulgaria's goodwill by ceding her the territory in question; but M. Venizelos does not stand committed to this course, for the reason that the compensation he had counted on receiving in Asia Minor is no longer available. By the time, therefore, that M. Venizelos is called upon to declare the policy of his Government, it may be that many of those now classed as supporters of M. Gounaris will go to swell the ranks of the Venizelists.

The vote of confidence given to M. Venizelos at the elections does not imply that Greece will at once range herself as a belligerent on the side of the Triple Entente. The Greek Chamber need not meet until July 20, and it is expected that M. Gounaris will remain in office during the interval. He is the more likely to do so, as the state of King Constantine's health still casts a shadow over public affairs in Greece, and is an argument for the maintenance of the *status quo* as long as possible. Indeed, the Gounaris policy may ultimately win the day by sheer force of circumstances. The urgency for Greece's participation in the war that was felt to exist in January has entirely passed, and with it the opportunity for extensive territorial expansion in Asia Minor. Italy is now a recognised claimant for compensation in that part of the world, and by taking the field with the Triple Entente has established a right to prior consideration. The situation with which M. Venizelos will be confronted on resuming office will differ materially from that of six months ago. Greece, by participating in the war then, would have been striking a blow for international justice and the independence of small nations. She would have come to the rescue of her ally, Serbia, and would have earned any reward that might have been given her. Her entry a few months hence may expose her to the charge of wishing to be in at the death mainly for the sake of loot.

It happens that Greece is not fired by the same national aspirations which compel the rest of the Balkan States to side with the Triple Entente. There are many Hellenes on the coast of Asia Minor, but it is impossible that the Hellenes of Greece should feel towards them as the Roumanians do towards their kinsmen in Transylvania or the Bulgarians towards their Macedonian kinsfolk. If they did, it would have been difficult for the sacrifice of 1,500 square kilomètres in Macedonia to weigh more heavily with the Greek public than the prospect of a large accession of territory in Asia Minor. For this reason there is not likely to be in Greece the same enthusiasm for war as there is in the rest of the Balkans.

If the trend of Greek policy towards the war has lost much of its former interest for the Allied Powers, this fact is not likely to diminish the satisfaction with which M. Venizelos' return to power will be widely hailed. There remains, apart from Greece's attitude towards the war, the question of the future of the Near East. The *non possumus* policy which the Gounaris Cabinet adopted towards a Near Eastern federation argued neither strength nor statesmanship, and was as little helpful to the cause of the Balkans as are the references in the Greek Press to Bulgaria as the villain of the drama. M. Venizelos can be relied upon to approach the subject with breadth of view and in a manner more worthy of Greece's position in the Balkans. It would be to Greece's interests, if by the time he assumes office the suggestion of military co-operation, which has caused such anxiety in army circles, should be definitely withdrawn in favour of a scheme which Greece would accept at the request of the Triple Entente for the benefit of the Balkans as a whole.

Various explanations have been put forward from time to time of the delay in Roumania's participation in the war. From a long article contributed to a Continental journal by a professor of the University of Bucharest it has been inferred that the real difficulty lies in Roumanian misgivings over the future of the Dardanelles. The article points out that the freedom of the Straits is as essential to Roumania as it is to Russia, and that to place them under the sole control of the latter is equivalent to reducing Roumania to the position of a Russian vassal. There is no reason to suppose that the Roumanian Government shares these anxieties. If Constantinople and the Straits pass into the hands of Russia, the transfer will be made under such safeguards as will leave Roumanian interests unprejudiced. Other Powers are interested in the maintenance of an open waterway between the Mediterranean and Black Seas, and, although their interest is not so great as Roumania's relatively to the total bulk of their trade, it is sufficient to make them desirous of securing for the world's commerce all the advantages attaching to an internationalized channel.

The reasons for Roumania's delay are more likely to be found in the apparently inevitable dilatoriness of modern diplomacy. It has been stated repeatedly in these columns that there need be no doubt regarding Roumania's ultimate participation in the war. At one time it seemed probable that the only part which Roumania would be called upon to play would be to occupy provinces which would welcome the advent of her soldiery with open arms. The stage when such views held good quickly passed. Not only was it realised that Roumanian help could be of considerable value to the Allied cause, but in Roumania itself the feeling gained ground that it would be derogatory to the dignity of the nation to take over territory for which it had been unwilling to fight. The time, therefore, arrived when it became necessary to determine exactly the limits of the territory which Roumania would occupy after the conclusion of a successful war. A divergence of views at once manifested itself. The process of arriving at an agreement was still further protracted by the fact that Italy was also negotiating at the same time with the Powers of the Triple Entente. In Roumania the impression appears to have gained ground that acquiescence on the part of the Triple Entente in Italy's terms would entail acceptance of Roumania's claims. This view, however, was not shared either in Italy or by the three Allied Governments, with the result that Italy's participation in the war found Roumania still in the middle of her negotiations. In spite of the report that the German Emperor contemplates inviting the Roumanian and Bulgarian Premiers to pay him a visit with a view to influencing the attitude of their respective countries towards the war, we prefer to think that Roumania's participation in the war is now only a matter of weeks.

In the letter which we published last week from our Bucharest correspondent the details of the negotiations were set forth at some length. The difference between the terms which the Roumanians advance and those which the Allied Powers are prepared to give is not great. A tendency on the part of Russia to yield a point from time to time encourages the Roumanian Government to believe that it will ultimately obtain all it asks for. The proposal that a portion of the Banat should be reserved for Serbia as a protection for Belgrade is based probably more on sentimental than on military grounds. Belgrade is exposed to attack from the Semlin side of the Danube rather than from the marshy ground on the other side of the river. During the present war it has been attacked by Austrian monitors and by the forts around Semlin, but we doubt whether the Austrians have made much use of the ground now called in question between Roumania and the Triple Entente, for the good reason that the land is often under water for many square miles.

Various straws have of late given an indication of the way in which the political wind is blowing in Bulgaria. After denuding the Adrianople district of many of its troops to strengthen their forces at the Dardanelles, the Turks are now said to be paying particular attention to the fortifying of positions along the Bulgarian frontier. At the same time they are showing scant respect for Bulgarian rights over the portion of the Dedeagatch railway which runs through Turkish territory. The seizure by the Germans of a consignment of rifles in the Baltic Sea which was being conveyed on a Swedish steamer to Bulgaria was not in itself an important incident. A remonstrance from Bulgaria elicited an explanation from the German Government, and the rifles were allowed to be transported overland. More significant than the incident was the tenour of the statement issued on the subject by the Bulgarian Legation in London. This is not the first incident of the kind, the Bulgarian Minister states, for some time ago the Austrian Government confiscated a considerable amount of ammunition while on its way to Bulgaria. The steamer conveying the rifles from Denmark, he adds, was stopped and her cargo illegally confiscated by the Germans. "The news that the German Government is now allowing the transport of the rifles to Bulgaria shows that the protest of the Bulgarian Government has produced effect." As time passes Bulgarian neutrality must prove a somewhat difficult pose to maintain.

Our Sofia Correspondent confirms the report that the negotiations between the Triple Entente and Bulgaria have lately taken a more satisfactory turn. It would, perhaps, be more correct to say that a direct channel of communication has been opened between Sofia and the Governments of the Allied Powers, by means of which an exchange of views can take place with some prospect of a favourable issue. Surprise, which will be shared elsewhere, is expressed in Bulgaria over two points: that the Triple Entente should have delayed so long to place itself in sympathetic touch with the Bulgarian Government, and that Great Britain should not have seen the wisdom of keeping the negotiations in her own hands, instead of leaving them to others, who are of necessity suspect in the Balkans.

The official explanation of the Serbian advance into Albania corresponds with the views expressed in these columns last week. It is recalled that during the Serbo-Turkish War in 1912 Serbia conquered the whole of Northern Albania and reached the open sea. At the demand of Austria-Hungary, Serbia was compelled to evacuate Albania. Immediately after the Serbian retirement Austro-Hungarian agents overran Albania and succeeded in raising the inhabitants against Serbia. Large masses of Albanians raided Serbian territory, but Serbia was able to repel the aggressors and occupied a strategic line. At the bidding of Austria, Serbia was obliged to abandon these points. With the outbreak of the present war, the Austro-Hungarian Consulate at Scutari became a centre of operations against Serbia, and five Albanian raids of importance took place. It is with a view to putting a stop to these incursions that the Serbians are now invading Albania.

According to the latest reports, the Serbian forces have occupied Elbasan and Tirana, and are marching on Durazzo, in agreement with Essad Pasha, who met them at Tirana. The attempt on the part of an Albanian force to invest Durazzo has been abandoned, but it will probably be the object of the Serbians to cut off the retreat of these tribesmen. In the official statement already quoted the Serbian Government states that it realises that the Albanian question is one which must be settled by Europe as a whole, but it is equally confident that the measures now taken by Serbia are as much in the interests of the Allies as in her own. It was not to be supposed that Serbia would embark on any undertaking of this nature without assuring herself that she had the support of her Allies. Italy has now to be reckoned in the number of these Allies, and she is particularly interested in the future of Albania. If both countries approach the question in the spirit indicated in the Serbian statement, there can be no possibility of any misunderstanding during the period of the war.

Digitized by Google

Italy has obtained from the Triple Entente recognition of her interests in Albania, and there is no reason why there should not be a clearly defined line of demarcation between these and Serbian interests in the north. Already an Italian flotilla has been instrumental in bringing to book the Albanians who were detaining in San Giovanni di Medua a number of Montenegrin sailing ships and steamers laden with foodstuffs. The coast was bombarded, and the Albanians were made to restore the goods they had taken from the vessels.

There is a tendency in the Italian Press to affect concern over Serbia's action in Albania. For reasons which have already been set forth it would seem that this attitude arises from a misunderstanding, and is not to be regarded as being shared by the Italian Government. Serbia no less than Italy recognizes that the eventual fate of Albania is a matter for subsequent settlement, and cannot be decided by the results of a subsidiary campaign. The main purpose of the Italians and the Serbians is to defeat the Austro-German forces, and to this end all their efforts must be directed. There will be occasion later to adjust their respective interests in Albania. Meanwhile, it is to Italy's interests, no less than Serbia's, that the latter should be immune from predatory attacks from Albania when undertaking, in conjunction with her Allies, a forward movement against the common enemy. The situation in Albania is such that the enforcement of law and order by any means available is preferable to a continuance of the existing chaos. If the salvation of Albania lies in Essad Pasha's hands, he will be able to accomplish much more with the support of Serbian troops than if he were to be left beleaguered in Durazzo by a number of tribesmen, who only had in common distrust of his efforts to restore order in Albania.

Every fresh account of the operations at the Dardanelles emphasizes the difficult nature of the task before the Allies' troops on the narrow strip of land forming the Gallipoli Peninsula. There is no possibility of manœuvring; all the enemy's works have to be attacked and carried by frontal assaults, and the region, we learn from an official statement, "is honeycombed with deep entrenchments, flanked by machine guns and protected by barbed wire entanglements and other obstacles." Such works, it is added, cannot be rushed; they have gradually to be approached by working from point to point. The fact remains that the work is being accomplished, slowly, of course, and not without heavy casualties. The strength of the Turkish position is centred in the hill of Achi Baba, a little over 800 ft. high, rising from the centre of a line between Gaba Tepe and Kilid Bahr. Its outlying defences stretch across the peninsula, and constitute a very powerful defensive position. Some satisfaction has to be derived from the fact that, as the latest reports prove, any attacks on the allied positions are even more costly to our enemy than our own offensive is to us. On the night of the 15th inst. a determined attack by the Turks, led by a German officer, resulted in the enemy leaving fifty dead in front of our trenches. The German officer was among them. At another point where we were forced to vacate a trench the position was recaptured, and the trench was found to contain 200 dead Turks.

The object of the German submarines operating in these waters is as much to interfere with the supply of drinking water for the troops on shore as to reduce the naval strength of the Allies. As the submarines are dependent on their bases, it becomes necessary for the allied fleets or aircraft to discover these and destroy them, if possible. Last week two French destroyers bombarded Chesme, a port on the mainland opposite Chios, which had served the purpose of a base. All the sailing vessels in the harbour were sunk, and the petrol stores demolished. The German report that two submarines have now been sent to Constantinople and have restored confidence to the populace may mean that these vessels have sought refuge in the Sea of Marmora, owing to the impossibility of existing in the Ægean.

A long statement issued from Petrograd reviews the course of recent operations in the Caucasus, and it is of interest to read the results achieved by our Russian Allies in this remote theatre of war. By June 6, it is stated, "we had captured in the course of a few months the vast region of Van and a part of the sanjak of Mush; we had annihilated Khalil Bey's original corps, and we had cleared of Turkish troops the whole region between Lakes Van and Urmia. On the right wing we occupied Turkish territory between the old frontier and the line of the Rivers Chorokh and Tortum and the mountain range of Chakhir Baba. The offensive which the Turks undertook in the province of Azerbaijan, with the object of clearing us out of this region, ended finally in a definite *débâcle* for the Turkish regular troops, who delivered an offensive in the direction of Van and Urmia." These results, it is hardly necessary to add, have not been achieved without the most strenuous efforts on the part of the Russian troops. At one point the Turks retired to a mountain chain "covered with snow and almost inaccessible, between snow-covered passes from 10,000 to 10,800 ft. high." Here they put up a desperate resistance, often in caves, but were finally overthrown, and those who escaped were scattered in disorderly flight in various directions.

The situation in Galicia continues to be one of critical importance. Before the fierce Austro-German attack the Russians have still to give ground. They have evacuated Bukovina, and now hold a line less than thirty miles from Lvoff, which forms the chief objective of the enemy. Between this line, however, and the capital of Galicia the Russians have another strongly defended position, and the fate of the town is by no means settled yet. Before the Austro-German forces have covered the intervening distance it is possible that the action of Roumania may bring relief to the Russians. The farther the enemy advance into Galicia the more exposed become their lines of communication to a Roumanian attack. Armies, however, can advance but slowly under modern conditions of warfare, and the Russians are not likely to be relying upon anything but their own resources to extricate them from their present difficulties. The situation in the eastern theatre acts as a strong incentive, if one were needed, for the maximum effort on the part of the Allies at the Dardanelles and on the western front.

The *Sudan Government Gazette* publishes the text of the Ordinance establishing the High Court of Justice in the Sudan. The new Court consists of the Court of Appeal and Courts of Original Jurisdiction, the former being constituted by three or more members from among the Chief Justice and Judges of the High Court. Subordinate to the High Court of Justice there will be in each province a court styled the Province Court. The judges of a Province Court are to consist of (a) a Province judge, except in the Province of Khartoum, and in any other province where a branch of the High Court shall have been established; and (b) district judges, who may be of three grades.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, May 30.

The British Residency at Alexandria.

On Thursday the High Commissioner, Sir Henry McMahon, and his staff moved down to Alexandria for the summer. The Villa Zervudachi, belonging to M. and Mme. Emanuel Zervudachi, has been selected as the summer quarters of the British Residency, and by reason of its position and its size it is particularly suited for its new rôle. The building that was erected out at Bulkeley a few years ago as a summer residence for the British Representative is now quite unsuited for the purpose, and is certainly far too small for the accommodation of such a large staff as will in present circumstances remain in Egypt this year. Unless any special necessity arises for personal consultation with his chiefs, it is not likely that the High Commissioner will leave the country this year; nor will any of his staff go on furlough. In this connection it is interesting to note that the Egyptian Government, which at first announced that no leave would be granted to its officials this summer, is now credited with the intention of allowing them to take what is due to them, but only on condition that they spend it in the country. After all, there must be few men who, although they want leave, would care to spend the time at home under present conditions. Throughout the summer there will be more than enough work of one sort or another to occupy those still left in the Egyptian service. It is at times like the present that the want of a hill-station, such as exist in India and the Sudan, is so badly felt in Egypt. Of course there is Cyprus, but unless the area in which leave may be spent is extended to embrace that new possession, no one will be able to proceed there.

H.H. the Sultan.

H.H. the Sultan held his first reception at Ras el Tin Palace on Tuesday last, on the occasion of his officially taking up his residence in Alexandria, and the number of officials and residents who paid their respects to the Sovereign was far greater than has been recorded for many years. His Highness had already had a most cordial reception when he arrived in his second capital on the preceding Sunday.

In the course of the ceremony on Tuesday the Sultan, who has in all his public utterances preached the doctrine of union and concord to the dwellers in this country, was able to effect a reconciliation between certain of the municipal councillors who had violently disagreed at one of the recent meetings of the municipality. This reconciliation, which was made in a most dignified but at the same time typically Oriental manner, created an exceedingly favourable impression. His Highness is within the next few days to receive a deputation from the British community of Alexandria, when an address of welcome will be presented to him.

The Italian Intervention.

The declaration of war by Italy has aroused the greatest enthusiasm amongst the Italian colony in this country. As soon as the news was known in Cairo an enormous crowd of Italians, including the more prominent members of the colony, paraded through the streets to the Italian Agency, where they cheered the Agent and insisted on their national flag being hoisted over the building. During the latter operation they sang their anthem. Thence they proceeded to the British Residency, where they were received by Sir Henry McMahon and Lieut.-General Sir J. G. Maxwell amid the strains of "God Save the King" and enthusiastic cheers for England. Not content with this, the crowd continued its way to the Agencies of the four Allies, at each of which the Agents were accorded a very hearty ovation. The demonstration was exceedingly well-ordered, but from the enthusiasm of the crowd there was no mistaking where the Italians' sympathies lie and their relief at a definite step having been taken at last. Similar demonstrations took place at Alexandria and at Port Said. The first batch of reservists was accorded a very stirring send-off from the station here and from the quays at Alexandria, and further batches are leaving daily.

The Dardanelles Wounded.

More wounded arrived this week from the Dardanelles, some at Alexandria and some coming up to Cairo. The Red Cross Hospital out at the Saidia Government School at Giza had to be hurriedly got ready to receive one of the convoys. A veritable heat wave has been raging this week, and the wounded men must have suffered agonies on their journey up and in the hospitals. One cannot help feeling some surprise that it should have been decided to make Cairo a convalescent centre at such a time of year. It seems rather hard, on dysenteric cases for example, to send them up from Alexandria, where they would have much better chances of making a quick recovery, and where there should have been plenty of room for the creation of a Red Cross hospital. Certainly the opening of the latter here in Cairo so late in the operations looks as if sufficient thought had not been given to the matter in advance, and that a hustle had to be got on at the last moment, with the inevitable result that what appears to old residents to be the wrong town was chosen for the institution of this hospital.

Trading with the Enemy.

The first prosecutions under the decrees forbidding trading with the enemy took place this week before a British military Court, which sat in the Sirdar's room at the War Office. Mr. W. E. Brunyate acted as judge-advocate and Mr. G. E. Jeffs conducted the prosecution. There were three cases, the two first being similar in that both parties had tried to enter into new contracts with enemy subjects domiciled in Austria and Germany. Counsel for the defence raised the question of the competence of this Court to try an Italian subject in the circumstances. The Court overruled the objection in each case, and found the accused guilty of the offences with which they were charged. The third accused was charged with having entered into a contract with a firm in Rhodes for the benefit of a German firm carrying on business in Berlin. The Court acquitted him, as there was no evidence that he ever entered into the alleged contract.

The question of enemy subjects in this country is arousing attention, and a campaign is being carried on in the local English Press against the National Bank of Egypt for retaining on its board a German and two Austrian subjects. The attitude of the National Bank, which has British subjects at its head, would certainly appear to call for some explanation, as also does the action of the authorities in allowing such a state of affairs to continue. It is understood that the German director is in Germany and does not draw any fees, and that the other two are really Egyptian and are merely Austrian-protected subjects. But had the position been reversed, and had it been a question of an Englishman and two French-protected subjects on the board of a bank in Germany, there is little doubt as to what attitude the German authorities would have taken up. We have been far too lukewarm in this respect in the past, and the time has come when we must throw aside all our sentimental scruples and deal with the enemy and those who claimed his protection in times of peace as he is dealing with our kith and kin. The *Egyptian Mail* demanded no more than was reasonable last night when it wrote that "every enemy subject in Egypt, irrespective of sex, should be interned or deported without further delay."

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, May 28.

Limassol of To-day.

On two days last week slight earthquake shocks were felt at Limassol.

Anyone now re-visiting that town after an absence of only a couple of years would find that it has undergone great improvement in at least two directions. The long-talked-of promenade along the front has now been made; the shabby, albeit picturesque, old houses which formerly blocked access to the sea throughout the main central part of the sea side of the town have been demolished, and a sea wall and fine open space now take their place extending from the pier eastwards for some 200 to 300 yards. A row of old houses situated in rear of those that have been removed has thus been exposed to view. These, too, will doubtless be demolished in due course, and more fitting buildings erected in their place. Then Limassol will be possessed of that great desideratum, a presentable and attractive sea frontage. At the eastern end of the town is the public garden. This is also of comparatively modern growth; it was originally started by the Agricultural Department and subsequently taken over by the Municipality. Under the energetic rule of the late Mr. Chr. Sozos, as mayor, some four years ago, it was greatly developed and improved, and within the last year or two has become something of a "show" garden, in which Limassol takes a very proper pride. It also serves as a useful "lung," or pleasant breathing space, for the residents. The present Mayor, Mr. Spyro Araouzo, is worthily continuing the work of his predecessor, and is to be congratulated on the present state of that popular resort.

King Constantine's Illness.

The sudden indisposition of the King of the Hellenes has been causing anxiety to Cypriot Greeks. Seeing that the island is now a British possession, a stranger may well rub his eyes on reading in the local papers of the "Illness of Our King"!

"Progress Backwards."

I understand that the motor service between Nicosia-Larnaca-Limassol will cease at the end of the current month, and that it is to be replaced by the old-time method of carriage conveyance. No one, however, believes that this "progress backwards" can last for longer than may be absolutely necessary to make new and more satisfactory arrangements for a new motor service.

The Question of Racing.

Race meetings are contemplated for the autumn. This may be all very well for that part of the community which has only recently come into the British Empire, and has not yet risen to the full heights of its new nationality; but others will, no doubt, prefer to follow the lead now given in England and realize, in Lord Roberts's words, that while perfectly right and proper in the piping times of peace, race meetings are out of place when our country is at death grips as now.

THE WAR EXHIBITION, 1915.

In view of our indebtedness to the gallant Belgian nation, a War Exhibition has been organised to assist the funds of the Belgian Red Cross Anglo-Belgian Committee, whose patroness is H.M. the Queen of the Belgians.

The War Exhibition, 1915, is designed to give in an interesting and instructive manner an idea of the extent to which science and industry are being utilised in every branch of the present gigantic struggle. A striking feature is a magnificent 13,700 sq. ft. mural panoramic representation of Belgium; and the exhibition will comprise seven sections, the whole forming a comprehensive war display. The sections are (1) trophies of war, (2) armament and ammunition in the making, (3) Red Cross work, (4) science and industry as applied to war, (5) food and hygiene, (6) equipment, and (7) maritime and aerial inventions. The Prince's Skating Club, Knightsbridge, has been selected as the most suitable place in which to hold the exhibition.

SUDAN OFFICIALS' LEAVE.

WAR AND FURLOUGH.

(From a Correspondent.)

Neither the Governor-General of the Sudan nor Lady Wingate has taken any holiday this year. It was at first intended—or, at least, hoped, as mentioned in The Near East of March 12—that Lady Wingate should pay the customary visit to Knockenhair, Dunbar; but when it became apparent that Sir Reginald must remain at his post throughout the war, she determined to remain at his side. This act of self-sacrifice really means more than a mere record would suggest. The heat, even at Erkowit, is intense at this period of the year, while notwithstanding the many improvements and alterations that have been effected in the gubernatorial domicile, it still remains little more than a substantial but by no means luxurious bungalow.

The work of the Administration, while extremely heavy and anxious, is proceeding, on the whole, quite satisfactorily; but the Governor-General finds it quite impossible at present to leave the Sudan. His Excellency will spend most of the trying Sudan summer between Khartoum and Erkowit.

Mr. G. C. Macdonald, Inspector of Agriculture, who has been on short leave, returned to duty at Tokar on the 6th instant. Mr. P. Drummand, the Inspector and Assistant Conservator of Antiquities, whose post is at Gordon College, Khartoum, will return to his duties on the 24th of next month, and on the 27th Mr. G. E. Hunt, instructor in the same department, is due to return to the capital after a few months' leave.

Very few leaves have been granted this year in the Medical Department. Dr. O. Atkey, the Senior Medical Inspector, has been away for a short period, but he returns to Atbara on the 6th of next month. In the Public Works Department there has been the same disinclination to apply for leave of absence. One of the few officials who have been away—and who have since returned to duty—has been Mr. F. M. Cobb, the District Engineer stationed at Khartoum. In the railways section Mr. J. C. Walker, who has charge of a district, will be absent until August 11. Mr. H. B. Seabrook, District Engineer, and Mr. K. V. Gurney, district traffic manager, both returned from leave in April last. Scarcely any among the provincial officials are now absent from their posts, notwithstanding the extreme physical strain imposed upon some among them during the scorching heat of a Sudan summer and the ravages made upon their tempers and their constitutions occasioned by the periodical dust storms.

In some sections of the country special "climate allowances" are paid to the European officials, who, by force of circumstances, are condemned to live there at certain periods of the year. Thus, from July to December, officials throughout the whole province of Bahr-el-Ghazal, as well as those of Kassala and Mongalla, draw special allowances, while those in Sennar are entitled to extra pay between May and November; those in the Upper Nile Province between January and December (practically during the entire year); those in the Nuba Mountains between April and November; and those in Kordofan (Nahud, Abu Zabad, and El Odeiya) between July and November.

We have received copies of the first and second numbers of *Hole's Review*, an illustrated weekly, published at 170, Fleet Street. The price is only twopence, and the value given is remarkably good. To our readers it will be of interest to know that the editor has "informed the directors of the Serbian Relief Fund that all profits made by this Review until the end of the war are entirely at their disposal."

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, June 7.

The Situation Unchanged in Constantinople.

There does not appear to be any material change in the situation at Constantinople this week. Judging by their newspapers, the Turks are even more confident that the Allies will not get to the capital, and there is much gloating over the loss of the three British battleships, especially of the Goliath, which the *Tanin* describes as a conflict between David and Goliath, and a long account is given of the manner in which the now-famous torpedo boat Muaveneti Millie crept down the Straits in the middle of the night, and, evading the British destroyers, succeeded in launching three torpedoes at the battleship, and then returned safely to Constantinople. The Turkish Press continues to publish vehement attacks against England, but, strange to say, seldom refers to France or even Russia. They announce the loss of their gunboat Pelenk Deria, but state that the crew were saved.

The survivors of the Emden arrived in Constantinople on May 23, and were received with great honours, von der Goltz and Suchon and many others meeting them. They were conveyed in a destroyer from the Haidar Pasha Railway Station to Seraglio Point, where they had an official reception, attended by a large audience, and afterwards they marched through Stamboul and Galata to the Admiralty.

The official *communiqués* daily contain reports of the repulse of the Allies at the Dardanelles, but the Turkish losses on the Peninsula continue to be very heavy. It is announced that about 170 more German officers have arrived at Constantinople; but there are also reports to the effect that they are running short of ammunition, especially of shells for their heavy guns.

The Milli Agency publishes the Note which the Ottoman Government has addressed to its friendly Powers, protesting against the British and foreign Governments for having, contrary to the Convention of 1888, fortified the Suez Canal and for keeping warships there, which has necessitated the Ottoman Government taking military measures to defend Imperial territory of which Egypt forms part; and in consequence the English and French Governments will be held responsible for any damage to neutral property!

It was reported last week that the Italian Ambassador and his staff were preparing to leave, but no declaration of war has been made between Italy and Turkey, and it is said that Turkey will not declare war against Italy. In the meantime Italians are apparently not allowed to leave Constantinople. In fact, it is extremely difficult for anyone to leave the capital.

Shortage of Bread.

Trustworthy information has just come to hand that there is a shortage of bread, which would confirm last week's information that the mills are unable to work for want of coal. The absence of bread in a large city like Constantinople may have serious results. Petroleum is also very scarce, and costs about 80 piastres per tin. Mutton is 17 piastres the oke, and all other provisions are increasing in price.

Both the Anatolian Railway and the Oriental Railway have further curtailed their local services. There are now only five trains daily to and from Pendik and only ten to San Stefano.

The papers announce that the grain crops in Asia Minor promise an abundant harvest, and that there is still wheat in the interior; but transport is evidently not available. Moreover, the shortage of coal makes it impossible for the mills to work.

"Prizes of War."

An announcement appears in the papers to the effect that Mr. R. Grech's salvage boat, which was seized at the Dardanelles, and a motor-boat belonging to Mr. Nowill, and Mr. Gilchrist's boat, the Florican, have been declared, by default, prizes of war by the Prize Court.

Owing to the blockade it is now difficult to communicate with Smyrna, and practically no news has come through this week.

THE BATTLE OF SHAIBA.

"A STROKE OF GENIUS."

The following description of the battle fought at Shaiba on April 14 is extracted from a letter just received in this country and written by the same officer of Indian cavalry from whose letter we were allowed to publish extracts in our issue of May 7. It supports the view, expressed in The Near East of June 4, that when the history of the operations at the head of the Persian Gulf comes to be written in full, it will be found that they are amongst the most interesting, the most important, and the most brilliantly executed of the war.

We have had our big battle here, and are nicely recovering. Our badly wounded are still in hospital, or have been sent away by ship; our convalescent officers and men are getting over their troubles on a captured Austrian boat lying in the stream. All are "full of beans" and ready for further efforts.

The Turkish defeat at Shaiba was a magnificent affair and a far more crushing one than the accounts in the papers indicate. For two days some 28,000 Turks attacked the portion of our army situated in the defensive position. In regular German fashion, they pretty well completely enveloped our flanks, digging trenches nearer and nearer our works each night. In case we attacked, they also had a permanent line of works, in advance of which all their night approach trenches were. Well, our fellows, under General ——, endured a hot artillery and rifle fire for about two days and two nights at comparatively close range. During this time there were many exciting minor incidents, such as cavalry charges, good artillery work, etc. Our main effort took place on the third day; it was, so to say, a case of "Up Guards and at 'Em." During the hottest portion of the day our whole force formed line and went for the Turks. We drove them headlong from their advanced trenches until we came to their main position. This, after a most severe fight, in which the Turks showed themselves magnificent opponents, we carried at the point of the bayonet. During this last attack of ours, the Turkish maxims were served superbly. They did all the damage to us. We captured most of them, killing the working parties. We became masters of the formidable enemy's line by evening time. The enemy were routed—there is no other word for it. In the rear of his lines were his camps. These were all abandoned, and throughout the whole night the Turks retreated. By the morning the remnants of their force were twenty miles away, by the next day forty miles. We couldn't pursue, as we were too exhausted.

All the enemy's camps fell into our hands, nearly a thousand prisoners, maxims, guns, hundreds of rifles, tents, medical stores, and ammunition. This latter included several hundred boxes containing shells, and about 1,000,000 rounds of rifle ammunition. All their food stuffs were left behind, and, in truth, you can only call it an absolute victory. It was a stroke of genius—our General's sudden lightning attack. Turkish captured officers said, rather naïvely, that we didn't play the game. They expected to sap up to our position and have a regular kind of siege warfare, similar to what is going on in Belgium or France. None of them would believe the Dardanelles story. They said it was a fable—so rigorously is the truth kept from them. They lost a great many officers killed and wounded; and report—a very strong one, too—says that their Commander-in-Chief, ——, shot himself after the battle. Of course, he had lots of Germans with him—mostly advisers. Poor Turks: these Germans appear to be only their evil genius!

I am now off to —— again. I came on from there to take part in the big battle, but, unfortunately, was not actually in the thick of it, though I saw most of the interesting incidents through my glasses. My job was to work south of ——, and watch the enemy there. It was expected he would make an attack from that direction. Three regiments were told off for that job—annoying, but had to be done! The enemy's losses were 5,000, if not more; certainly, they had about 2,000 dead on the ground—so eye-witnesses tell me.

We are all merry and bright, and we cannot find the enemy these days. He is off, and no mistake! We shall see when he comes again!

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore, where subscriptions are also received.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, June 1.

Progress at Last!

Last week marked a real advance in the negotiations between this country and the Entente Powers—to which Italy has now been added. On Saturday the Ministers of Great Britain, France, Russia, and Italy handed to the Prime Minister collective concrete proposals on behalf of the Entente, in reply to Bulgaria's statement of her desiderata. The nature of the proposals is kept secret both by the Bulgarian Government and by the Legations of the Entente Powers; for this time the latter have wisely decided to deal direct with the Government, without communicating their proposals to the leaders of the Opposition. But so far as can be ascertained, it would appear that the Bulgarian demands are met only half way, and that nothing is substantially offered now, but that all is left until after the war is concluded. Notwithstanding this, it is generally believed that the proposals will be taken up by the Government here as a basis for serious negotiations, and it is hoped that in view of the reciprocal good will shown latterly by both parties the negotiations will at last be crowned with success.

The principal reason for this optimism is the moderation of the Bulgarian claims. The Roumanians ask new territory with about 7,000,000 inhabitants; the Serbians ask much more; Bulgaria asks only about one and a-half million—almost all Bulgars—and the necessary outlets to the sea. In return for the granting of these moderate demands Bulgaria can render great services to the Entente in dealing with Turkey. This is so obvious that competent political circles here are wondering why the diplomacy of the Entente allowed nine months to pass without coming to an arrangement, by satisfying Bulgaria's reasonable claims. Especially ought this to have been done when it was decided to attack the Dardanelles; for it is self-apparent that Bulgaria's geographical position would make her aid in these operations of enormous importance. The help Roumania could render is also considerable, and yet serious negotiations with her have only recently been begun.

I cannot conclude these observations without pointing out that Great Britain is trusted by Bulgaria. Her influence here is quite different from that exerted by Russia and France, with all parties, but especially with the Macedonians. And undoubtedly she would have been wise to have kept the negotiations regarding Balkan questions more in her own hands instead of leaving them so much to others. The negotiations with this country and with Roumania ought to be concluded as quickly as possible; for this is the season for military operations, and Constantinople would almost certainly fall in a fortnight if once Bulgaria took the field.

King Ferdinand's Name-Day.

Yesterday being the name-day of H.M. King Ferdinand, a Te Deum was sung at the Cathedral, at eleven o'clock, at which the Archbishop of Sofia officiated, assisted by all the clergy of the capital. The Crown Prince Boris and Prince Cyril were present, as were also Dr. Radislavoff, the Prime Minister, and all the Cabinet Ministers, the Diplomatic Body, M. Dobrovitch, Chief of the King's Private Cabinet, many generals and high military officers and officials, and a great number of leading citizens. After the service the Ministers, diplomatists, and others signed their names in the visitors' books at the Palace.

At one o'clock the members of the Cabinet were invited to luncheon at the King's summer residence, the Palace of Vrania, when they had the honour of meeting all the members of the Royal family. During the repast, Dr. Radoslavoff, on behalf of the Cabinet, proposed the health of King Ferdinand, who in his reply thanked the Prime Minister for his untiring activity during the recent critical times, and raised his glass to the triumph of the Bulgarian national cause.

On this occasion the *Narodni Prava*, the Ministerial organ, published an article, in which it remarked:—

To-day the Bulgarian nation celebrates the name-day of its King and supreme leader. Twenty-eight years have passed since, on this day, the Bulgarian people, celebrating on this date for the first time the name-day of the Head of the State, believed in bright days in its future. Many obstacles, many inconveniences have constantly confronted Bulgaria, but, led by her supreme chief, she has surmounted them all. To-day, in celebrating their King's name-day, the citizens of Bulgaria are firmly convinced that in the near future the country will achieve its national ideal, which has always been recalled and extolled on this anniversary.

In Memory of Christo Boteff.

Yesterday was the thirty-eighth anniversary of the death of the famous Bulgarian revolutionary and patriot, Christo Boteff. The students of Sofia University, headed by their professors, marched in procession through the principal streets, and patriotic speeches regarding the realisation of the national aspirations and ideals were delivered before the monuments of the Tsar Liberator and of Lensky.

Hurricane at Philippopolis.

On Sunday afternoon a terrible storm broke over Philippopolis. Hailstones as large as hens' eggs fell, and a great many windows were smashed, while the sowings over an area of about twelve kilometres were utterly destroyed. Just when the storm broke the train from Dedeagatch was approaching Philippopolis, and, getting the full force of the hurricane, had all its windows broken. The damage done is estimated at several hundred thousand francs.

Help for Poor Italians.

The wife of the Italian Minister here has taken the initiative in forming a committee to help the families of those Italian subjects who have joined the colours and left their dependents inadequately provided for. Since Italy joined in the hostilities every passenger train has carried Italian subjects liable for military service. The Italian reservists are travelling by way of Nish, Salonika, and Piræus to Brindisi.

FOR OUR INDIAN MOSLEMS' DEPENDANTS.

A dramatic and musical matinée is being arranged, under the auspices of the Islamic Society, by Mr. Duse Mahomed, to take place early in July at the New Theatre. It will be under the patronage of the Lord Mayor of London and the Lady Mayoress, and amongst numerous other ladies and gentlemen who have promised their patronage are the Archbishop of Canterbury, the Marquis and Marchioness of Crewe, Earl Cromer, Earl Curzon, Lord Reay, Lord Ronaldshay, Lord Lamington, Lord Headley, Mr. Balfour, Mr. Lloyd George, Mr. Austen Chamberlain, the Hon. Aubrey Herbert, and Mr. Mirza Ali Abbas Baig.

Already a large number of prominent artists have promised their assistance, including Messrs. Arthur Bourchier, Martin Harvey, George Grossmith, and Mesdames Yvonne Arnaud, Violet Vanbrugh, Irene Vanbrugh, Mary Moore, Shirley Kellogg, and N. de Silva.

This matinée is intended to benefit the widows and orphans of Indian Moslems who have fallen in the present European campaign, principally in France and Flanders, and the fact that the Archbishop of Canterbury has lent his name should prove that there is one bond of brotherhood which draws humanity together when suffering is to be alleviated. It is to be hoped that our readers will show their sympathy and support of an undertaking so worthy.

"Try a chota peg o' Perfection.
"Notice how mellow and silky it is?—not a touch of 'bite' or harshness. That's the effect of maturing in sherry casks. Makes it a little darker in colour, too.
"You'll order a case of Perfection?
"Well, everyone of 'ours' is doing the same. They all like it. Here's a toast, old man. Drink up—To Perfection, the best whisky in India, from the everlasting hills to the plains."

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, May 29.

"Independence Day."

Roumania's great day, May 10 (Old Style: our May 23), "Independence Day" as it is generally termed, was observed with unusual enthusiasm, partly because of the expectation of this country's taking action shortly, and partly because King Ferdinand publicly reviewed the Bucharest garrison for the first time since his accession. That a wave of patriotism is passing over the country, and especially over the capital, was indicated by the great number of national flags—blue, yellow, and red: blue and yellow being the Wallachian colours, red and yellow the Moldavian—which decorated not only the public buildings, but many private dwellings, shops, and office buildings. Hangings with patriotic mottoes were stretched across many streets and on the fronts of buildings and balconies; and handbills with political addresses and patriotic verses were distributed by the thousand amongst the crowd. The day opened somewhat inauspiciously as to the weather, but fortunately the Fates were kind, till mid-day at least, and the review took place in perfect weather, cool and agreeable both for the troops and the onlookers.

Soon after 5.30 a.m. twenty-one guns thundered out a greeting to the great day, and at 8.30 the clash of martial music showed that the troops were beginning to arrive. These were the battalions that were to line the streets from the Palace to the Metropolitan Church. It was noticed at once that officers and men were wearing their campaigning kit, of "mignonette green," though without haversacks, etc. Hitherto review order and full dress have been the rule on these occasions. The change was due to the King's thoughtfulness for the rank and file, who have suffered heavily on previous occasions from their heavy clothing. The late King, being a great stickler for military etiquette, would never sanction any change in this respect.

At a quarter to ten King Ferdinand and Queen Marie, with Prince Carol, the Princesses Elizabeth and Marie, and Prince Nicholas, took their places in two carriages, drawn by four horses with postilions, and preceded by a squadron of picturesque mounted gendarmerie. They were followed by numbers of the Staff of the 2nd Army Corps on horseback; and as the procession left the Palace the band played the impressive National Anthem, which, it may be observed in passing, amongst all those of Europe ranks second only to that of Russia. Simultaneously came the thunder of a hundred and one guns, fired from the Arsenal; and the assembled crowds gave vent to cheer upon cheer.

At the church there were assembled the members of the Cabinet, many Government officials, and various high officers, with their ladies; and before the doors were the escorts from the new regiments of the 2nd Frontier Guards, 8th Light Cavalry, 1st Siege Artillery, Heavy Howitzer Section, Light Howitzer Section, and Mountain Artillery Section, with their new colours, the "nailing on" ceremony of which had taken place the previous night. After the Te Deum had been sung, the King ordered in each escort in turn with its new colours, which were then blessed by the Archbishop.

On the return to the palace the King and Queen were even more warmly cheerd than they had been in the former journey. But enthusiasm reached its height when, a little later, the King left for the Chaussée Kisaleff to take the salute of his troops. It was then seen that he was accompanied by Queen Marie, who was riding, and who looked even more young and beautiful than usual in the uniform of colonel of her regiment, the Red Hussars. Their Majesties reached the pavilion that had been prepared for them at about half-past eleven. For reasons given in a former letter, the foreign Ministers were not present this year, and even the Military Attachés had not been invited.

The Review.

There were fewer troops present than is usual at these reviews, but they appeared to be a workmanlike lot as far as the men were concerned, hard and well clad. There were present two regiments of Venatori (rifles); five of infantry; one of frontier guards—the pick of the infantry; three of pioneers; a regiment of siege artillery, and one each of fortress and mountain artillery; three of horse artillery; heavy and light howitzer batteries; three of hussars; and the regiment of mounted gendarmerie. The Queen led her own regiment of Hussars. During the whole of the review a number of aeroplanes were circling overhead; and amongst minor features which aroused considerable interest were the dogs carrying packs of medical necessaries, which went past the saluting point with some of the regiments.

Certain critics in the crowd bewailed the lack of mountain guns, of which there were only two sections. Although the need of these was always realised, King Carol steadily opposed their being supplied, on the ground that such weapons could be intended only for use in the Carpathians, and that to increase their number would offend his friend, the Emperor Francis Joseph. Roumania may have cause to rue this superchivalry of the late monarch if she finally decides to join in the war. But will she, after all, do so? It seems impossible to doubt it, and yet it is reported that she has been promised so much by Russia for neutrality alone that some people believe she may rest satisfied with that.

The Present Situation.

Politically, things appear to have reached a deadlock. Russia, it seems, will not give way an inch on the question of the northern frontier, while Roumania, as represented by M. Bratiano, is equally firm. And the same position exists with regard to the Banat. Most of the newspapers support the Prime Minister, saying that '77 will come over again, and that in the end big Russia will have to go on her knees to beg for the help of little Roumania. On the other hand, the party in favour of immediate action has called a meeting for to-morrow, ostensibly to express sympathy with Italy, but in reality, no doubt, to urge that her example should be followed. Finally, it is reported that the Marghiloman party is endeavouring to get up an anti-war meeting in opposition to the other, also to be held to-morrow. Upon the whole, the indications are that we shall have a lively Sunday.

Diplomatist Smugglers.

That Roumania's benevolent neutrality is not without its value is shown by the many attempts made by Germany to pass munitions into Turkey through her territory by fair means or foul—but preferably, apparently, the latter!—and, by the way, these have been foiled by the vigilance of the Roumanian Customs authorities. Last Monday, for instance, a German courier presented himself at the frontier at Giurgevo-Rustchuk with no less than sixteen "diplomatic valises." These interesting valises, having attracted attention by their weight, were opened, and were then found to contain gun fuses, which, naturally, were confiscated. The same day an Austro-Hungarian messenger arrived at the Predeal frontier station with more "diplomatic" packages. These, being radio-photographed, proved to contain materials for making asphyxiating bombs, which, of course, were also seized.

If any munitions of war have actually been smuggled through Roumania, the quantities must have been very small indeed, in view of the precautions taken by the Roumanian authorities. Rumours to the contrary may be, I think, safely disregarded.

M. Marghiloman and the Conservatives.

At the time of writing the question regarding the leadership of the Conservative party remains unsolved. A few days ago members of the party committee waited on M. Marghiloman and explained the situation fully to him. He declared himself ready to resign, in the interests of the party, if M. Maiorescu, the former leader and one-time Prime Minister, would accept the post. The latter, on being asked, requested forty-eight hours to consider the matter; but a good many of the party are not anxious for his leadership, knowing that as a Germanophil he is even more pronounced than M. Marghiloman. They, therefore, wish to have M. Jean Lahovari, while others desire M. Nicu Filipesca. Meantime M. Marghiloman retains the nominal leadership, and doubtless laughs in his sleeve at those who would turn him out.

SERBIAN LETTER

(From Our Own Correspondent.)

Nish, June 5.

The Albanian Problem.

Since my last letter events in Albania have moved rapidly. Anarchy, followed by the occupation of Valona by the Italians—foreshadowing a possible further Italian extension in these regions—and the occupation of Epirus by the Greeks and gradual extension, would give sufficient cause for reflection on the part of Serbia; but when the Albanians make incursions on Serbian territory and, as is asserted, are led by Turkish and Austrian officers, the Serbian public become exasperated and exercise pressure on their Government, which now regards Albanian movements in the light of Austrian and Turkish aggression. The Serbian Government, therefore, considers the defence of the Serbo-Albanian frontier an extension of the defence against the combined enemy, Austria especially, and considers that military operations on that frontier are a natural part of the war in which Serbia and its Allies are engaged.

Serbia has once before—during the war against Turkey—fought her way through Albania to the Adriatic shores, where she hoped to acquire an outlet on the Adriatic. In that hope she was foiled by the action of Austria, and, at the joint request of the European Great Powers, had to retire.

To-day the Serbian Government not only considers that it is fighting the common enemy in prosecuting an advance into Albania, but it is more particularly influenced by the desire to put an end to the Albanian annoyance and the uncertain and dangerous state of affairs on the Albanian frontier by advancing into Albania and occupying strategic positions necessary for Serbia's security as long as the war lasts. It holds the firm conviction that the Albanian question will be justly and definitely settled at the forthcoming Peace Congress.

A few days ago the public were startled to learn that fighting had been going on for the last twenty-four hours between the aggressive Albanians and the Serbian frontier-guards near the blockhouse of St. Naum and Podgradatz, and that later the Serbian troops had occupied Podgradatz and all the surrounding heights in order to prevent a new attack by the brigands in the pay of Austria. The Serbian frontier-guard, reinforced by Serbian troops, pursued the enemy with great success, the Christian and Mussulman inhabitants laying down their arms. The Serbian troops entered Podgradatz, the aggressors fleeing in the direction of Mokra Gora. The offensive was then continued; the village of Prens was taken, and the route from Strouga to Debar occupied.

Pressure on the Government.

To give an idea of the pressure of public opinion brought to bear on the Serbian Government a reference to the chief points of an article in the *Politika* will suffice. The paper asks whether the Government is conscious of the country's sacrifices and the consequence of the incursions of Albanian bands; and it reproaches the Government for not having taken proper measures at the time when the incursions o nthe Serbo-Albanian territory first took place.

The Albanian question (says the *Politika*) is a European question, but more particularly concerns Serbia, because no one will deny her the right to defend herself when, being engaged to the fullest extent in this great European war, an attempt is made to stab her in the back.

For many years Serbia endeavoured to convince the Great Powers (who were not fully cognizant of the state of things in the Balkans) that the Albanians are nothing but a horde of savage tribes, incapable of living in social unity, and that the creation of an Albania is neither more nor less than the creation of a privileged plot against peace and order in the Balkans. To-day the allied Powers of the Triple Entente know as well as we do who directs the exploits of these bandits, and that Serbia's enemy is theirs also, seeing that Serbia has now to fight on a new frontier which extends from Ochrida to Prizrend.

Negotiations with Bulgaria.

The public mind is greatly occupied with the negotiations which are still being carried on with Bulgaria, the situation being critical, as Russia brings great pressure to bear on the Serbian Government, whilst the military party and public opinion are stoutly opposed to making any concessions to Bulgaria. Despite this opposition, one hears of the willingness of Serbia to make some slight concessions, though far from conceding all Bulgaria's demands; and in diplomatic circles there is a perceptible *rapprochement* between the Bulgarian, Russian, and Roumanian Ministers Plenipotentiary.

On this subject there is an article in to-day's *Tribuna* which I have reason to believe is inspired. The gist of the article is:—

On account of outside pressure in high quarters we must now be prepared to make sacrifices of our Macedonian territories, for which we have had to endure the loss of many lives and the expenditure of much money; but after the war is ended we shall again with the sword reacquire these territories; we shall never remain quiet until all South Slavs are united.

If a Great Serbia cannot now be called into existence, there is no guarantee that peace will be of long duration.

Austrian Inactivity.

As regards the renewal of an active conflict between Serbia and Austria-Hungary, it is hardly probable that either combatant could at the present moment take action, the high tides and overflowing of the rivers rendering any movement extremely difficult.

Storm and Flood.

The Serbian official organ yesterday informed us of a local storm. The River Brestovatz, which flows by the village of Metovnitza, and empties itself in the River Timok, overflooded, doing a considerable amount of damage. The municipal buildings and many houses and cattle were swept away. The fields and pastures were inundated. The railway bridges at Metovnitza and at Bratanitza were carried away by the current, as was a part of the railway line. There were also many lives lost.

The village of Zlor was half-destroyed and there were many deaths. At the village of Montcraigna twenty houses were overthrown, many cattle carried away, and ten human lives lost.

The railway communication between Parachin and Zaitchar and between Knejevatz and Zaitchar was interrupted.

LESSON TO ALBANIAN RAIDERS.

In a communication dated June 10 the Rome correspondent of the *Morning Post* writes:—"For some weeks past communication between Italy and Montenegro has been interrupted, as the Austrians controlled the Bay of Antivari, and the Albanians fired on caravans going from San Giovanni di Medua and boats going up the River Boyana to Scutari. The climax was reached when the Albanians detained and pillaged at Medua thirty-two sailing boats laden with grain and flour for the Montenegrins. Italian torpedo-boats, however, yesterday gave the Albanians a salutary lesson, bombarding Medua, ordering the restitution of the stolen corn within twelve hours, and escorting the sailing boats on their way up the Boyana."

Sir J. Roper Parkington, Consul-General for Montenegro, has received the following official telegram from Cettinje:—

"Public opinion in Montenegro is becoming more and more emphatic in denouncing the conduct of the Albanian soldiers, who continue to pillage our transports on the River Boyana, and thus deprive both our army and civil populace of very necessary supplies of food. Complaints made to the Consular Commission at Scutari as to the obstruction of the Boyana are fruitless. A force of over four thousand Albanians, led by their native chiefs, and under the direct command of Austrian officers, attacked the Montenegrin frontier near Djakovitza, but our troops repulsed the invaders, who retreated leaving a large number of dead and wounded."

NEAR EAST BOOKSHELF.

RAW COTTON.*

In introducing his proposal for an Advisory Council on Industrial Research in the House of Commons the other day the President of the Board of Education gave expression to certain pious opinions on the relations between science and industry, which we cannot refrain from quoting here:—

"It is essential," he said, "if we are going to maintain our position in the world, that we should make better use of our scientifically trained workers, that we must increase their number, and endeavour to secure that industry is closely associated with the scientific worker. The failure hitherto has been partly due to the Universities, who do not realise how important it is that pure science should be associated with applied science, and brought into close contact with the manufacturing interests. It is also partly due to the fact that the manufacturers themselves have undervalued the importance of science in connection with their particular industry."

If the Government are in earnest in their wish to encourage progress on these lines, they have an admirable case to begin on in this book. Cotton is one of our largest industries, not only on the manufacturing side in this country, but from the growers' point of view throughout the Empire. It is one of the industries which has suffered most from the war; for that has aggravated the critical position in which the supply of the raw material has stood since the beginning of the century. It is also an industry in which the connection between the scientific man and the manufacturer is specially necessary and has been lamentably neglected.

Mr. Balls's work on Egyptian cotton is already well known in scientific circles, and to a select few in Lancashire. In this volume he has now further collated and recorded some aspects of the results of his ten years' work in Egypt as economic botanist under the Khedivial Agricultural Society and latterly under the Government Department of Agriculture. Of the book as a piece of scientific botanical research the present writer is not qualified to speak. His interest—and in this respect he is probably like most of the readers of THE NEAR EAST—lies in the application of the scientific results to the economic problems of the cotton crop. The book is full of suggestions of this kind. Thus, in dealing with the methods of the untrained but custom-wise fellah, on such points as wide sowing and date of planting, Mr. Balls has brought out some striking results, which go to show that the fellah after all knew his own business best; for the final result of a long course of scientific experiments has been to show that the old-fashioned methods of the fellah paid him best on the whole. Again, by tracing out the life history of the plant and the effect of the growing conditions throughout the season upon it, Mr. Balls has indicated possibilities of forecasting the amount and the date of the crop a long way in advance, both in time and accuracy, of anything that has ever been done by existing agencies. On the question of the deterioration of Egyptian cotton he has not only shown how and why this deterioration has taken place, but also how it may be cured and avoided for the future by proper methods of scientific seed-breeding on a commercial scale. It is a matter of very great regret that his work on these lines in Egypt has been stopped. Spinners again will find much to interest them in the description of the way in which the fibre acquires the qualities of length and strength which they demand, and how these qualities may be favourably or adversely affected by growing conditions during the season, which are more or less controllable.

Mr. Balls' work is not "popular" in the worst sense of the word; but anyone who has the least acquaintance with science will have no difficulty in following it. The truth is that what our great industries need is not merely scientific men to do the research work, but business men with just enough semi-scientific training to appreciate the results and the application of the research work when it is offered them. The present writer's personal experience has always been that there is no lack of such men in the cotton trade, and this book ought to help them to carry out Mr. Pease's advice that "we must make better use of our workers."

JOHN LANE: THE BODLEY HEAD, W

NEAR EAST BOOK NOTES.

We understand that Mr. Andrew Melrose has just published a volume entitled "The Dardanelles: Their Story and Their Significance in the Great War," by the author of "The Real Kaiser."

Messrs. Hodder and Stoughton have published, for the *Daily Telegraph*, "The Slav Nations," by Srgjan Pl. Tucic, the price of which is one shilling.

Part IV. of the "Great World War," which is edited by Frank A. Mumby and published by the Gresham Publishing Company at 2s. 6d. net, includes a chapter on the Austro-Serbian campaign.

The S.P.C.K. has published, at the price of 1d., a paper, entitled "Raymond Lull and Six Centuries of Islam." It is written in commemoration of the six hundredth anniversary of the death of one of the earliest, if not the earliest, of missionaries to Moslems.

The latest issue of volumes in Messrs. Dent's popular—and deservedly popular—Wayfarer's Library includes the first of a new series, "The Story of the Regiments." This book, "The Black Watch," has been written by Messrs. L. Cope Cornford and F. W. Walker, and it gives the history of this famous regiment, and stories of the great deeds it has performed. Other volumes in the same series will be:—"The Seaforth Highlanders," "The Royal Irish Fusiliers," "The Coldstream Guards," "The Royal Berkshire Regiment," and "The Cameron Highlanders."

NEW C.M.S. HOSPITAL AT MENOUF.

The new C.M.S. dispensary and ankylostomiasis hospital in Menouf, Egypt, was opened recently by Bishop MacInnes, says the *Record*. A short dedication service was held first, and then a public ceremony took place. A large tent had been erected in the spacious hospital compound, and about 300 notables and others assembled from all parts of the province, and formed a very representative gathering.

Canon Gairdner, as secretary of the C.M.S. in Egypt, gave a detailed account of the aims and methods of the C.M.S. medical work. After referring to the successful work carried on in Old Cairo, which had for so long been associated with the name of Dr. Harpur, he explained how the development of this Old Cairo Medical Mission had led Dr. Harpur to go out into the provinces and to work among the fellaheen. This new branch had grown until the society had found it necessary to build the hospital, the opening of which they were met to share in that day. An important aspect of the work, he said, was the treatment of the ankylostoma patients. This disease was the most universal and deadly of all those that affected the fellah. The disease was easy of treatment if taken in time, and, further, its cure was almost certain and sent the sufferer back to his work as strong as ever. The society very soon became acquainted with these facts, and as early as 1894 Dr. Harpur began to treat the disease in Old Cairo. The success was so striking that ten years later they were compelled to construct special wards. How great a service these wards had rendered to the Egyptian nation might be judged by the fact that some 8,000 fellaheen were annually treated and sent back to their homes cured and strong.

Canon Gairdner was followed by Atallah Effendi, who has for many years been associated with the C.M.S. work in Cairo. Sheikh Mohammed Hassan, a well-known *khattab* in Menoufia, also spoke, and in Arabic verse expressed, as a Mohammedan, his appreciation of this Medical Mission to the fellah.

The Bishop then, in a short speech, declared the hospital open, and an opportunity was given to all to look round the compound and to inspect the various buildings and wards.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

GREECE AND THE WAR.

To the Editor of THE NEAR EAST.

Sir,—In the name of many Greeks who read and appreciate your valuable review, allow me to express our deep sorrow for the various libels directed against Greece that have found lately such a prominent place in THE NEAR EAST. We do not see how the interests of all the Balkan States will be best served if Greece should cede a portion of her territory, which was one of the strongholds of our race during the dark ages of our history, the prize of great sacrifice, to a ruthless and unscrupulous State. Why should Bulgaria be compensated for services that she has not rendered, whilst she is the real cause of Greece's non-participation in the war? Has she more rights than our country before the world's tribunal? You are ready to criticize Greece because she is not willing to abandon sacred territories, inhabited by Greeks through thousands of years, and you constantly criticize as childish the efforts of the Cypriotes to realize what is the first condition of a man's existence. We highly esteem your paper, despite its severe criticisms on Greek matters, but we expect equal treatment with our neighbours. We regret the mistakes of our governments, but, after all, you must know that Greece, if she did not participate in the struggle, has, during this war, rendered immense help to Great Britain and her Allies, especially Serbia, although she hears only blame and threats from them all. Sentences like "Greece's unwholesome ambition of becoming an imperial nation and a constant menace to the peace of the Levant," or "Greece will, in fact, tend to diminish, and be absorbed by the Continent, while Egypt," etc. . . . are very unjust and equally disheartening. The various articles written by sets of authors devoid of any philosophical spirit against the sentiments of the Cypriotes and other Greeks, whose only desire is national freedom, make ridiculous, allow me to say, some articles found in your columns and dealing with the principles with which the Entente Powers are fighting. We are forcibly convinced that the recent statement made by a very qualified person, Bryan, who said that the war blinded the belligerents in regard to the rights of the neutrals, is beyond any dispute; and, consequently, impartial observers are induced to think that when you write that the Allies are fighting for the highest ideals of humanity and the rights of the small nations you are only abbreviating the truth.—I am, etc.,

G. G. SARRIS.

Royal Agricultural College, Cirencester, June 11.

HEALTHY CENTRAL PERSIA.

In a paper, "The Diseases Most Met With in Persia and How They Affect Europeans," read before the Association of Medical Officers of Missionary Societies, Dr. Donald Carr, M.D. Camb. (whose remarks referred entirely to the Central Persian Highlands, and more particularly to that part in the Province of Ispahan, which has been his headquarters for the last twenty years, and not at all to the Persian Gulf littoral, which has a more tropical climate), speaks very favourably of the climate of that region. He says: "Possibly owing to the altitude, and also the atmospheric dryness, Persia has a reputation for making people 'nervy.' I have certainly known more than one man, for instance, once a bold rider, who has lost all his nerve for that sort of exercise. My own experience has been the contrary; for at the end of twenty years I am less nervous than I was, and I believe that others can say the same of themselves.

"With the exception of enteric fever, there is little to be said respecting the ordinary diseases of the temperate zone. Enjoying a first-class climate, we live a very open-air life, and are, on the whole, a healthy community.

"Diseases of the heart are not specially prevalent. Among the natives valvular affections are met with, though acute rheumatism is seldom seen. Diseases of the lungs among Europeans are almost unknown. As a young man I constantly suffered from bronchial attacks, but I have been entirely free from them in Persia. One of my fellow-missionaries, who used to be a martyr to asthma at home, has hardly ever had an attack since he came to this country.

"There are probably not a dozen days in the year in which we do not see the sun at all. Even in mid-winter the sun has a good deal of warmth in the middle of the day, but hard frost reigns supreme at night."

FOR OUR WOUNDED SOLDIERS.

APPEAL FROM NURSE WHEATLEY.

We published last week an appeal for bedsteads for use in No. 3 Casualty Clearing Station, British Expeditionary Force, to which, as our readers will remember, Nurse Wheatley is attached. We are glad to be able to announce that we have already received several contributions from readers who are acquainted with the splendid services rendered to the wounded in the Balkan War by Nurse Wheatley, as well as from others who wish to do something to help our own wounded in this war. Further contributions are, however, still wanted, and as we desire to send the bedsteads off with as little delay as possible we hope that any reader who wishes to help will forward his or her donation at once. We hope next week to publish the list of subscribers. Any surplus that may remain after the purchase of the bedsteads will be devoted to buying cigarettes for the use of the wounded, those already sent out having been most highly appreciated.

In her letter asking for the bedsteads Nurse Wheatley wrote:—It may interest the kind contributors of cigarettes to know that the last you sent me were rescued when our hospital was shelled out and brought safely away, also how grateful we were for them when we re-established ourselves in a new place and were filled with patients before our own stores could come up.

There is something else we want very badly, and that is some small iron bedsteads . . . and I am sure if you knew the difference it makes to the comfort of the men you would make a very earnest appeal to your readers for a gift of at least six. As a clearing station, we are not provided with beds, but as we keep the dying and any too ill to travel in safety, such as men wounded in the chest and abdomen, until they are fit to be moved, the gift of a few beds would be an inestimable boon. You can imagine the difference to a wounded man between lying for days on a narrow stretcher and on a bed. A bedstead would be the kindest present I know of, and the most appreciated; of course, they must be portable. . . . If people only could see the suffering we see and are almost powerless to alleviate!

SERBIA'S IDEALS.

Some interesting facts about Serbia were told in a lecture given at the Sheffield University on May 27 by Mr. V. R. Savitch. The Vice-Chancellor of the University was in the chair. Mr. Savitch said that the idea strongly ingrained in the Western mind was that Serbia was a warlike nation, but the Serbian peasant soldier was not warlike, and looked on war as a thing to be avoided at any price. All her wars had been defensive; the country was and still remained anxious for peace and development. There were at present 12,000,000 Serbians, but of these only 4½ millions were actually living within the Serbian boundaries; the rest, divided into five different groups, were under Austro-Hungarian rule on Austro-Hungarian soil. It always had been very necessary to Vienna that the Serbian people should be split up and kept apart as far as possible, but though divided the Serbians maintain their single aspiration.

They were the greatest menace to Hungary, but though Vienna and Buda-Pesth had tried everything to crush Serbia there remained something higher than Governments or politics. Serbia always knew during the last two years that the slightest provocation on her part would cause war with Austria-Hungary, which, thwarted in her desire during 1913, seized on the murder of the Archduke as legitimate excuse for war. It was a crime, declared the lecturer, with which Serbia had nothing whatever to do, and even now the truth of the murder was kept secret by Austria. Serbia had gone great lengths in order to meet Austria-Hungary, had made great sacrifices, but she could not sacrifice her independence, her natural inheritance. Austria-Hungary never was more than a tool in Germany's hands, since in the days of Bismarck she became Germany's agent for the realization of the German belief that she was the God-designed ruler of the world.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C

PERSONAL & SOCIAL

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915.	1915.		1333.	5675.
June	June		Shaaban	Tamuz
18	5	Friday	5	6
19	6	Saturday	6	7
20	7	Sunday		8
21	8	Monday	8	9
22	9	Tuesday	9	10
23	10	Wednesday	10	11
24	11	Thursday	11	12

Wednesday is the birthday of H.R.H. the Prince of Wales.

Wednesday is also the birthday of H.R.H. Princess Cecilie of Greece, third daughter of Prince Andrew, who was born at Athens in 1911.

The Serbian Minister visited the Foreign Office on Monday.

The Times correspondent in the Balkan Peninsula reports that King Ferdinand of Bulgaria has decorated M. Guranesco, the First Secretary of the Roumanian Legation in Sofia, with the Cross of Commander of the Order of Civil Merit.

Lady Boyle held a reunion in Queen's Gate on Sunday afternoon to meet Madame Pashitch, wife of the Serbian Prime Minister. Many members of the Diplomatic Corps were present.

Sir Frederick Treves, who has visited the various hospitals at Mardrof, Malta, and Egypt, has returned to London. Sir Courtauld Thomson, the Chief Commissioner of the British Red Cross Society and the Order of St. John, is remaining in Alexandria.

Lord Oranmore and Browne left Cavendish Square for Castle Macgarett, Claremoris, County Mayo, last week.

Sir William Garstin was one of the guests entertained at luncheon at the Mansion House on Wednesday by the Lord Mayor and Lady Mayoress.

M. Caclamano, the new Hellenic Minister to the Russian Court, is now in Bucharest (writes our Roumanian Correspondent on May 29), on his way to Petrograd.

M. A. de Giers, the Russian Minister at Cettinje, arrived in London last week, and left again for Petrograd on Friday.

Baron Uxkull, Secretary at the Russian Legation, has for the present deferred his departure to the Legation at Athens.

Signor Giuliano Cora, who has been appointed First Secretary to the Italian Embassy in London, was recently Secretary to the Italian Legation in Serbia. He replaces Signor Paolo de Parente, who is shortly leaving London.

Both the half-brothers of the Duke of Portland, Lord Henry and Lord Charles Cavendish-Bentinck, are serving in Egypt, the former being lieutenant-colonel of the Derbyshire Yeomanry.

BOARDING HOUSE,
51 & 53, EARL'S COURT SQUARE, S.W.
Facing Gardens. High-class Connection.
Home Comfort and Convenience.
Moderate Terms.
Highly recommended by Miss GEERE as suitable for Families from the East.

Mrs. Myles Kennedy is staying at the Berkeley Hotel.

Reuter's Amsterdam correspondent reports (June 15):—According to a telegram from Constantinople the Turkish *Official Gazette* announces that the Sultan was not able to attend the Selamlik on Friday last as he was suffering from a slight attack of catarrh.

A Reuter's special message from Zurich (June 14) states:—Immediately after Italy's declaration of war Slatin Pasha volunteered for active service. He has now joined the forces operating against Italy in the capacity of lieutenant, which rank he held during the occupation of Bosnia. Slatin offered his services at the beginning of the war, but the War Office declined them.

Mr. E. A. Harrison, managing director of Messrs. Thos. Cook and Son (Egypt), Ltd., has returned to London from Cairo.

Captain Kriezis has been appointed Naval Attaché to the Greek Legation in London. He is a distinguished naval officer, and the members of his family took an active part in the War of Independence.

Temporary Lieutenant Arthur Warden Baker, Royal Scots Fusiliers, has been gazetted (Temporary) Captain. Dated April 17.

A marriage has been arranged, and will shortly take place very quietly owing to the war, between the Hon. Paul A. Methuen, Second Lieutenant 3rd (Reserve Scots Guards, son of Field-Marshal Lord Methuen, Governor of Malta, and Lady Methuen, of Corsham Court, Wilts, and Eleanor Hennessy, daughter of W. J. Hennessy, artist, and Mrs. Hennessy, of Rudgwick, Sussex.

The report which we mentioned last week that Lieut. Pirie Gordon, R.N.V.R., who is acting as Intelligence Officer at the Dardanelles, had been wounded in action, is, we are glad to learn, unfounded. It probably arose out of the fact that, having developed symptoms of very acute appendicitis, he was sent on board ship for immediate operation. It seems, however, that it proved impossible to perform the operation on the spot, and he was transported to Alexandria. By the time he reached there the symptoms had fortunately abated very rapidly, and after a few days in hospital he had made so good a recovery that he was allowed to return at once to the front.

Our Bucharest Correspondent writes (May 29):—

M. Pierre Neicoff, First Secretary of the Bulgarian Legation here, has been granted two months' leave of absence. M. Mintcheff, formerly Secretary at Athens, will replace him during his absence.

The marriage of Major and Brevet-Lieutenant-Colonel Charles Wood, 5th Fusiliers, and Miss Olive Mary de Bathe, only daughter of Major and Mrs. Herbert Miles, of Bude, Cornwall, will take place very quietly in London on Saturday. The bridegroom is second son of Field Marshal Sir Evelyn Wood, V.C.

Our Roumanian Correspondent informs us that the Swedish savant, Baron Ackerheim, accompanied by his secretary, M. Varadin Eurich, has been travelling over Roumania in order to study the ancient monasteries in the country. The Baron has visited the convents, monasteries, and principal historical monuments of the districts of Neamtz, Suceava, Jassy, and Botoshain, and will visit similar buildings throughout the country, with the object of writing a book upon them.

Major Charles George Massie Blomfield, 1st Battalion Royal Warwickshire Regiment, who is reported killed in action in France on June 9, was the elder son of Rear-Admiral Sir R. and Lady Massie Blomfield. Born on June 19, 1878, he was educated at Cheltenham College and Sandhurst, and served through the South African War with the Mounted Infantry and won the medal and clasps. He became adjutant to the Special Reserve (4th Battalion of his regiment), a post which he held for 3½ years, and prepared drafts for the two battalions on active service. He got his majority at the end of January, and went to the front on May 4. He leaves a widow and a son.

We regret to learn that Captain Reginald Crommelin Popham Blyth, 1st Gloucestershire Regiment, attached Egyptian Army, was killed in action in the Dardanelles operations on June 4. He was the only son of the late Bishop in Jerusalem and the East, and was educated at St. Edward's School, Oxford, and Brasenose College. He had fifteen years' service to his credit, and had taken part in the South African War, serving both in Natal and in the Orange River Colony. When with his regiment in India he acted as a Divisional Staff Signalling Officer. In 1908 he was attached to the Egyptian Army for work in the Sudan, and was recently granted the rank of Bey. He was a keen cricketer, footballer, and polo player, and also a well known big-game shooter. He leaves a widow and one son.

Captain O. Carver, East Lancashire Royal Engineers, who has been killed in action at the Dardanelles, was the eldest son of Mr. O. Carver, J.P., of Craage Hall, Cheshire. He joined the Army in 1909, and was for several years in Egypt. He leaves a widow and three children. Quite recently his sister was married to the Rev. H. Sheppard, son of Canon Edgar Sheppard, Sub-Dean of the Chapels Royal.

Our Special Correspondent in Athens, in forwarding us news of Turkey, writes:—

Many readers of THE NEAR EAST will be sorry to hear of the death of Bucknam Pasha, which took place in the German hospital in Pera on the 27th ult. The funeral took place the following day at the Haidar Pasha cemetery.

The death is also announced of the wife of the Grand Vizier, Princess Eminé Indji Hanum, daughter of Prince Toussoun.

The death has taken place at her residence, St. Mary's, York, of the Hon. Mrs. Machell, widow of Canon Machell, vicar of St. Martin, Coney Street, York. Mrs. Machell, who was a sister of the eighth Lord Middleton, was ninety-two years of age. One of her sons, Mr. Percy Wilfrid Machell, formerly commanded the 12th Sudanese Battalion of the Egyptian Army, and was Inspector-General of the Egyptian Coastguard. He was subsequently Adviser to the Ministry of the Interior. He married in 1905 Countess Victoria Gleichen, daughter of the late Prince Victor of Hohenlohe-Langenburg.

Lord Henry Cavendish-Bentinck, M.P., was the chief speaker at a meeting of the local branch of the Patriotic League of Britons Overseas, held at Alexandria recently, and presided over by Lord Edward Cecil. Rear-Admiral Robinson and Mr. R. C. Abdy also spoke.

Admiral Sir Algernon Heneage, G.C.B., who died last week at 22, South Eaton Place, took part in the operations in the Black Sea during the Crimean War.

An exhibition of the works of Ivan Mestrovic, the Southern Slav sculptor, to which reference has already been made in these pages, will shortly be opened at the Victoria and Albert Museum, the private view taking place next Thursday. The exhibition has been arranged by a committee, of which Earl Curzon is the president, and it will afford the public an opportunity of learning something of the unconquerable spirit which inspires our Serbian Allies, and which in the heroic art of Ivan Mestrovic appears to have found a worthy exponent. Information regarding the exhibition may be obtained from Mr. Ernest H. R. Collings, at 11, Smith Square, S.W.

We have to acknowledge receipt of £1 on behalf of the British Refugees from Turkey Relief Fund from Second Lieutenant H. A. D. Hoyland, General Headquarters, Mediterranean Expeditionary force.

"BRITISH REFUGEES FROM TURKEY FUND."—The Hon. Secretary, Mr. C. B. Charnaud, has changed his address to 18, The Avenue, Brondesbury, N.W. Telephone, Willesden 845.

OBITUARY.

MAITRE CARTON DE WIART.

One of the best known personalities in Egypt has passed away in the person of Maître Léon Constant Carton de Wiart, whose death has just taken place in Cairo. Born in Belgium in 1854, and educated at Stonyhurst and Brussels University, Maître Carton, as he was familiarly known, commenced to practise in Egypt in 1883. He had been called to the Bar in Brussels in 1876, and subsequently joined the Society of Gray's Inn and was called to the English Bar. He very soon acquired a very considerable practice in Egypt, and there were few important lawsuits in which he was not engaged, his services being frequently retained by members of the Khedivial family. He had a wonderful grasp of the intricacies of Egyptian law, and while his services were in great request among the native population, he was equally popular with the European community. A firm upholder of the British Occupation and a perfect English scholar, Maître Carton de Wiart was *persona grata* at the British Agency, his opinion on legal matters being frequently sought by Lord Cromer. During the famous land boom in Egypt Maître Carton was probably interested, financially and otherwise, in more companies than any other man in Egypt. Many of the public financial arrangements since 1895—notably the winding-up of the Daira Sanieh and the drafting of contracts for the Assuan Dam—were concluded with his assistance.

For some years past Maître Carton de Wiart had been in very indifferent health, suffering a great deal from heart trouble, which a rather strenuous life tended to aggravate. He is survived by a widow (née James) and two sons, both of whom are officers in the British Army. Only last week we announced that the younger, Second Lieutenant M. Carton de Wiart, 6th Battalion Lancashire Fusiliers, had arrived in Egypt, wounded, from the Dardanelles. The elder son, Captain Adrian Carton de Wiart, 4th Dragoon Guards, was wounded and earned the D.S.O. in Somaliland, being again wounded in France. The brother of the late Maître Carton de Wiart is the Belgian Minister of Justice. As *The Times* puts it, his death "will leave Cairo poorer for a great pleader and an attractive and most interesting personality."

ROLL OF HONOUR.

British Subjects from Turkey in H.M.'s Forces.

Ashe, Lance-Corp. R., R.E.
Atkinson, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A. Colchester.
Atkinson, Gunner T., "A" Co. Royal Field Artillery.
Baker, Lieut. A. Warden, 7th Royal Scots Fusiliers.
Barron, Lance-Corporal J. B., First Canadian Contingent (formerly of the St. George's Boys' School, Jerusalem).
Binns, Rifleman Edward, 8th Service Batt. Rifle Brigade.

FRIDAY, JUNE 18, 1915.

THE ITALIAN ADVANCE.

The Italians have clearly stolen a march upon their enemies. Their declaration of war coincided with a supreme effort of the Austro-German forces against Russia, a movement which must have taken to the eastern frontier every man who could be spared from any other actual or potential theatre of war. If troops were not available to rehabilitate the prestige of the Dual Monarchy after its Serbian reverses, we may be sure that no very large force was kept immobile on the Italian frontier to guard against a hypothetical danger in that quarter. Neither Germany nor Austria-Hungary appears to have believed that Italy would really turn her arms one day against her former allies. Latterly the German Government began to appreciate the advisability of placating the Italians by the offer of concessions at Austria-Hungary's expense; but it trusted to German diplomacy and possibly to the glamour of German successes in the war to deter Italy from abandoning her neutrality, at least until the Central Powers should be in a position to deal with the Italian army. At the moment when Italy declared war against Austria-Hungary the latter was committed too far to the great movement in Galicia to be able to transfer any large body of troops to the Italian frontier. She was probably persuaded by the German military authorities that the natural obstacles in the way of an Italian advance were sufficient, with the troops actually on the spot, to prevent the Italians from making much headway before the work of the Austro-Hungarian forces in the east was accomplished. The future will decide how far this view was justified. For the present it can be said that the Italians have succeeded beyond their expectations. The unpreparedness of the Austrians or their lack of men has allowed our new Allies to establish themselves in favourable positions all along the frontier. In the Trentino they are converging from three sides upon Trent, and are threatening in two places the only railway line which connects that fortress with the rest of Austria; in Carnia they hold the summit of the range and have opened fire from their heavy artillery on the fortress of Malborghetto. The distances covered from the frontier may not be great; military operations in the Alps are necessarily slow. But the net result is that at every point the Austrians have lost the advantage of position which they had before the war. Many of the heights which they occupied and which seemed to offer formidable obstacles to any Italian attack are now in Italian hands, and adequately held will render an Austrian counter-offensive a very different matter from what the original plans of the Austrian General Staff must have intended it to be in the event of war with Italy.

Both in the Trentino and along the Carnic Alps the intention of the Italians must be to gain possession of the territory to which they lay claim as being Italian in character and by tradition or necessary for purposes of military defence. It is on the eastern frontier between the Carnic Alps and the sea that we must look for the development of the main offensive. Here the advance has so far also met with success. Three weeks have sufficed to find the Italians in strong positions on the Isonzo River; they occupy Monfalcone and Gradisca, and must shortly be able to press home the attack on Gorizia. From Monfalcone the distance to Trieste is only twenty miles, but there is no indication that the Italian higher command will be tempted to advance at this stage beyond the point required for the proper manipulation of its main forces. While the Austrians have not yet been encountered in any strength, it is also true that the Italian troops engaged represent only the vanguard of the Italian army. Their purpose will have been to profit by the preoccupations of the enemy elsewhere in order to seize the most favourable positions for the deployment of the superior numbers which Italy ought to be able to oppose to any troops that Austria-Hungary will have at her disposal for the new front. The Allies will do well, however, not to base any extravagant hopes on Italy's ability to affect the course of the war by decisive victories. The physical features of the greater part of the country over which she has to operate will cause her successes to be measured by yards rather than by leagues, and will invest each success with only local significance. Even where the terrain is more favourable for military operations, her first concern seems likely to be to establish herself in the territory which she has marked for her own rather than to attempt single-handed any great strategical movement against Austria-Hungary. But this circumstance need not cause us to under-estimate either the moral or the material value of her co-operation. The Italian menace is a factor which the Austro-German military authorities can no longer afford to ignore. It may not be as dangerous as would be the advance of a new belligerent over easier country; but it has to be countered or held as far as possible in check by large numbers of troops who would otherwise be available for other theatres of the war. In its earlier stages, it is true, Italy's appearance as a belligerent has not had the effect of staying the Austro-German advance in Galicia; but it would be premature to infer that Austro-German strategy in this instance is not running risks which it may subsequently regret. There remain, also, the indirect results of Italy's action—the incentive it may prove to other countries to abandon neutrality and the tightening of the economic grip on the Central Powers.

At first sight the incentive provided by Italy would seem to have broken down in the case of Roumania. It would, however, be a mistake to hold the Italian Government entirely responsible for this failure. Natural ties and the similarity of their respective attitudes towards the march of events in Europe threw Italy and Roumania closely together during the early stages of the war. With both ultimate participation in the struggle was inevitable, if they were to realise their national aspirations; any agreements they might make with the Powers of the Triple Entente would run on similar lines; and, finally, there was the possibility of correlating their respective military operations against Austria-Hungary. It seemed, therefore, a normal policy for both to "pool" their negotiations. Up to a certain point this was possible; but it need not be a matter of surprise that as the *pourparlers* progressed one country should reach its goal before the other. When an understanding was reached between Italy and the Triple Entente, it found Roumania with her negotiations still incomplete. It may be that the Roumanian Government imagined that Italy, having tacitly accepted the principle of joint negotiations, would wait to see them concluded in their entirety before bringing her own share in them to an end. This, however, the Italian Government did not do. The time for military action was pressing, both from the point of view of the Italian army and if Italian intervention was to secure the maximum advantage for the Russians, who were being driven back in Galicia. Roumania's negotiations with the Allied Governments, though on all fours with those conducted by Italy, turned on many points of detail which could only be settled separately. These negotiations are still in progress; but there can be little doubt that Italy's resolute action will have made the Roumanians the more eager to participate in the war. They also stood to gain much by the mere maintenance of neutrality; but with the Italians they have accepted the principle that a country does not deserve to become great, unless it is ready to draw its sword for its own rights. Italy has been the first of the neutral countries to act upon this principle. Before very long Roumania will be following her example, and it will prove a strange phenomenon if the lead thus given is not followed by other States.

IN STRICKEN SERBIA.

Being extracts from letters written by Dr. Lauwens, of the Wounded Allies' Relief Hospital in Serbia.

KRAGUJEVATZ, April 28.

We have been in Kragujevatz since last Saturday evening. . . . The danger (of infection) is now reduced to zero, so to speak. The epidemic of exanthematic typhus is rapidly dying away, and the precautionary measures taken are so thorough that one runs very little risk. I have already visited a number of typhus hospitals here and in Nish without any feeling of anxiety and with the certainty of not becoming infected. You must not confound the typhus fever, which you know, with exanthematic typhus, which is so prevalent here. Certainly, this latter is a terrible scourge, the percentage of fatal cases being 30 per cent.; but the sources of infection are well known, and it is easy to guard against it. It is established that the disease is spread by body lice, which, having been upon a sick person, become infectious, and therefore dangerous, in about eight days. Probably the microbe, hitherto unknown, undergoes a process of evolution in the body of the insect. The first thing to be done, therefore, is to destroy the vermin, and to prevent those that have not been killed from invading one's person. To attain the first of these objects, the clothing is disinfected by means of heated air, by washing in lysol and creolin; the walls are whitewashed three or four times, and particular care is taken to cleanse everything with petrol, so that the odour of petrol pervades the whole of Serbia—in hospitals, shops, restaurants, railway stations, etc., etc. For the attainment of the second object the most minute precautions are taken. The wearing of high boots is compulsory, and often the boots are smeared with lysol-vaseline, so that any insect that attempts to crawl up one's leg is caught and soon dies. The clothing worn in the hospitals is hermetic—ours are of black satin, which shows up the insects, the latter being grey, very quickly; one's hands are gloved, or well rubbed over with petrol or naphthaline, as is one's face; and one's head is protected by a cap completely covering the hair. All the nurses are dressed in male attire, which is less risky. On entering and on leaving the hospital one is sprayed from head to foot with a solution of carbolic acid or lysol. So, you see, the greatest precautions are taken; and for two months there has not been a death amongst the doctors or the nursing staff. I would give you much more information in the form of statistics, but the censor would not allow it to pass. . . .

We left Salonika on the morning of April 20, and had a pleasant journey by way of Gumendje, Kiuprilu, Uskub, along the Vardar, amidst magnificent scenery, very wild in parts. The way was guarded by Serbian soldiers of the 3rd Ban, ragged and grimed, but armed and martial-looking. . . . . We arrived at Uskub at nightfall, and at Nish in the morning. Our wagon of material had gone astray en route; telegrams sent off in all directions. . . . Called at the Ministry of War, at the Bureau of the Inspector of Health (Colonel Karanovitch and Lieutenant Todorovitch), and met with a most friendly reception. Decided to remain at Nish until our nursing stores should arrive, we put up at Reserve Hospital No. II., for the hotels of Nish are not of the best and have undesirable features; there are notices in the rooms requesting visitors to remove their boots before going to bed. At the hospital, which is an old Engineers' barracks, we were given a large room for the four of us, in which we set up our camp-beds that we had bought at Salonika. Nish is a dirty place of 40,000 inhabitants, without drains, without water. The place overflows with Austrian prisoners (there are 60,000 Austrian prisoners). All the subordinate members of the hospital staff, the public services, etc., are Austrians, and we have the curious spectacle of an enormous camp of Austrian officers near the hospital. . . . . At the hospital there were about twenty-five of us at dinner; at the head, a Serbian, Colonel Grouitch, who was extremely friendly, doctors of both sexes—Russian, Greek, Serbian, Belgian, English—and even a Hungarian and two Bohemians, prisoners of war, but working, with perfect freedom, in the hospital. In the evening one of the Bohemians, who was an accomplished violinist, played to us. A remarkable situation surely.

On Friday, April 23, our missing wagon turned up, and the next morning we set out for Kragujevatz. . . . As for our mission, the Serbian Government has given us good quarters, but there is no word yet from the Committee; and, what is worse, there is a rumour that our ship, the "Newlyn," has been sunk.

KRAGUJEVATZ, May 3.

As I wrote in my last letter, we are all well, but we find it somewhat hard to accustom ourselves to the Serbian cuisine. However, that is to be changed; already we prepare ourselves a substantial English breakfast, with eggs, excellent tinned meats, and Danish butter, also tinned, for it is impossible to procure butter anywhere in Serbia. As soon as the rest of our party arrive we shall undertake our own cooking entirely, which will be a distinct advantage.

I must tell you that I am not able to write you anything of real importance . . . the censorship is very strict, and we have been warned in advance by the authorities. So all that must await my return to England.

As I have already told you, we made a stay of three days in Nish, which is only a large village, without drains and without water. We have electric light, it is true, and in the centre of the town there is a large square, of which a considerable portion is transformed into a veritable midden. The roads are indescribable. When it rains, as was the case when we arrived, they are a mass of ruts and mud, into which the carriages sink up to the axle. These carriages, old and not over-clean, are drawn by small horses, and jolt all over the road in such fashion that it is advisable to hold on tightly if you do not wish to be thrown out. Most of the more comfortable houses have been converted into hospitals and ambulance stations; these are the so-called "Reserve Hospitals," which are numbered. It must be said that the best use has been made of these buildings. The material is of a primitive character, for most things are lacking here; but what could be done has been done, and the Serbian Medical Service, helped by the foreign missions, has worked wonders. And now it can be said with truth that there are neither sick nor wounded who do not receive every possible care. There are great numbers of soldiers and officers wounded and convalescent at Nish, but what seems most remarkable is the number of Austrian prisoners who move about freely. All these appear quite satisfied with their lot, and those of them with whom I spoke said that they had nothing but praise for the treatment they have received. At first both accommodation and food were lacking, but now all who are left—many have been carried off by typhus—are well cared for. Of course, they have to work. They act as hospital attendants, carpenters, orderlies (we have five to keep our quarters in order), etc., etc.

The Serbian authorities have been very obliging and friendly towards us, as I have already told you. Colonel Karanovitch, in taking a touching farewell of us, said that he was happy indeed to see Belgians coming to the aid of his sorely tried country, and the major, who was in charge of the hospital at which we put up at Nish made a little speech on the last night of our stay, declaring that it was the ambition of the Serbians to be like the Belgians; to which I replied that our ambitions and our aims were identical.

On April 24, in the morning, we left Nish. We had been told that we should find Kragujevatz much more pleasant than Nish, and we had not been misled. When we arrived here, at six o'clock, we were met at the railway station, our baggage and belongings were loaded on a motor lorry, and we entered three carriages and drove off through the town. On the outskirts the English Stobart Mission* had established a field hospital, consisting of innumerable tents, which looked extremely picturesque. At about 7.30 we were taken to our quarters. The Serbian Government has set aside for our use a whole floor of one of the best houses in the place, a kitchen, a dining-room, an office, and three large halls, which are to serve as dormitories for the sixteen of us when the staff is complete.

After we had made ourselves presentable we took supper at the officers' casino, the "Menaga," as it is called in Serbian. It is an old building, picturesquely placed in the midst of a garden, and was the *Konak* of the Prince when Kragujevatz was the Royal residence of Serbia. There were present many Serbian officers, and the French, English, and Russian military attachés; for Kragujevatz is the General Headquarters of the Serbian Army. The Crown Prince is here, but I have not yet seen him.

The following morning we were taken to different places to select one for our hospital, and we chose a large cavalry stable. It will certainly be the fittest and most cheerful hospital in the town; it is now ready, and we are waiting for our material. The s.s. "Newlyn" has arrived at Salonika after all—but eight days late! I have received a telegram from Salonika saying that three nurses have arrived for our ambulance. . . . The epidemic is dying out rapidly in Serbia, so I expect we shall have chiefly surgical cases to deal with.

SERBIAN ASPIRATIONS.

The following telegram, signed by twenty-four deputies in the Skupshtina, has been received by the Balkan Committee through M. Boshkovitch, the representative of Serbia in England:—

Monsieur l'envoye,—We beg you to be good enough to express to Sir Edward Boyle, Sir Arthur Evans, Dr. Seton Watson, as well as to the whole Balkan Committee, our sincere and profound gratitude for their declaration in favour of truth and their humane sentiments in questions involving the rights and interests of the Serb, Croat and Slovene peoples as yet unliberated. Kindly inform them that we confidently believe that the great Statesmen of the noble English nation, which is shedding its precious blood and spending millions of its national wealth to do honour to its signature and to defend the right of small, but heroic Belgium, will no less lend the powerful authority of its voice to the defence of the rights of the Serbs, Croats and Slovenes who are still in bondage. Our nation will be sincerely obliged and grateful to them for so doing. The absolute trust which we place in the declarations hitherto made by English Statesmen renders us full of hope that this bloody and terrible war will end in a peace which will protect our national rights, safeguard our vital interests, and assure the pacific development of Balkan nationalities, so that we, too, may contribute our own share, side by side with other European nations, in the work of civilization and in labour for the common good of humanity.

* Mrs. St. Clair Stobart's Field Hospital.

TANGIER TO TEHERAN.

All's well with the Suez Canal. A few months ago we were reading of what was going to happen there, a few weeks ago we read of what was happening, and to-day we read of Suez Canal shares being about the steadiest thing on the market just now. From sea to sea her banks are now clear of the enemy, and not even that touchy and incomprehensible thing The Market appears to have suffered from the Kaiser's threats. This, while it is eminently satisfactory to ourselves, must be rather annoying to the Imperial Promiser whose forces were to have entered Cairo long before this.

***

A few days ago a small gypsy boy informed me in simple language that the Kaiser was destined for the lower regions because he was a liar and a thief, and because he "stuck babies at the ends of spears." The remark shows the opinion that the illiterate classes of Britain have of Kaiser Wilhelm II. He is ranked as one quite beyond the pale of civilized warriors and finds his place in their minds among the savages who use spears. And the lad's remark brought before me the vision of rolling desert country where so many of our wars have been waged. Not a battle, I venture to think, has carried with it a deeper current of tragedy than that which was fought on the banks of the Suez Canal some little time ago. The Turk is an alien enemy, and as such he must be cast to his knees, but it is impossible to think of his sufferings without a quiver of pity. He staked all in his trust of Germany; Germany promised him Egypt, and sent him forth to die. I fancy that the gypsy boy was right.

***

By the gallant deeds they have performed and the fine, solid work they have done in the Persian Gulf region and on the Gallipoli Peninsula, as well as nearer home, our Territorials have won unstinted praise from all who have watched them. And it is pleasant to know that our Regulars are the first to acknowledge what splendid stuff they are made of and how utterly they have falsified those gloomy prophets who predicted that they would "never be of any real value," and so forth. One of the handsomest compliments I have heard of was paid to them a short time ago by a very highly-placed officer indeed. An officer who was speaking to his superior, a Brigadier-General, remarked: "These Territorials are splendid, Sir—simply splendid! They ought to be allowed to take that T. off their collars." "Take it off!" exclaimed the Brigadier. "Good Lord, man, I wish I could have T. on *my* collar!"

***

A day or two ago I was walking with a friend along a not-too-nice London street, when we passed a coster's barrow laden with strawberries. My companion, who has a well-developed sense of smell and had been expressing his opinion of the state of the roadway a minute before, paused and sniffed. "Does that remind you of anything?" he asked. Knowing his habit of associating all kinds of smells with past experiences and places that he would probably do well to forget now that he is, like myself, a respectable member of society, I merely shook my head. "Ah!" he said, "it makes me think of Cairo on a hot day. Just for a second it called up a picture of a little Arab boy I saw there selling strawberries. He had retired down a side street to freshen up his wares, which had got a bit wilted and dusty—and he was doing it by licking them well over." Upon the whole, I am rather glad that I never ate strawberries in Egypt. And I am quite sure that nothing would ever induce me to eat strawberries off a barrow hereafter. Yet, when travelling in the East I have quite frequently made a lunch off dates that had been wrapped in an Arab's *Kefiyeh* and cheese that had been carried in the bosom of his shirt. But then rough travel gives one a wonderful appetite and leaves little room for squeamishness. Some of the water I have drunk in the desert would, I feel sure, put me on the sick list at once if I but sipped it now.

***

If I were a betting man I should be prepared to wager that Mr. Charles F. Brissel, the United States Consul at Baghdad, possesses a large fund of dry humour; and I fancy he was giving his humour play when he penned a note on the trade in *antikas*, real or forged, that goes on in Mesopotamia. "An American inquiry," it seems, was made "concerning relics and antiques" of the region mentioned; and the Consul, after gravely referring to the "law in the Turkish Empire prohibiting the exportation of relics and antiques more than 100 years old," goes on to remark: "It is said that there are a number of dealers who sell relics said to be genuine and very old, but I am reliably informed that many of these are spurious." The fine restraint shown in this guarded official statement is delicious, and marks its writer out as one who should do great things in his profession. It will be best appreciated by those who know how the trade in—and manufacture of—*antikas* flourishes still in Baghdad, in spite of the rather futile efforts made lately by the Turkish Government to suppress it. When the Consul admits, a little later, that "it may be that at times real relics are surreptitiously taken from this country," he is certainly well within the mark. Not very long ago I was allowed to examine a large consignment of Babylonian antiquities that had been smuggled out of Baghdad, and that were pronounced by really competent judges to be undoubtedly genuine for the greater part. I understand that quite a number of such consignments used to arrive in this country every year before the war broke out; and London, it must be remembered, is not such a good market for these goods as the States or certain Continental countries.

***

Two other points in Mr. Brissel's note interested me greatly. "Apparently," he writes, "the inquirer desires stones or pieces of clay from the sites of the ancient ruins, or bricks with inscriptions. The former could probably be obtained, but they are practically valueless, as one piece of clay from Babylon would be quite like another from Mussol. Bricks from either of these places that are known to be genuine are quite unobtainable." Here, I think, he is mistaken. Unless the chemists who have been pressed into service by the Assyriologists are not to be relied on, the clay used at one site can be distinguished with comparative ease from that used at another, by chemical analysis. And surely inscribed bricks from Babylon are common enough, though particular types are rare. Quite a number of modern villages—Qweriyish, for example—contain many buildings in which hundreds of inscribed burnt bricks from one part or another of old Babylon have been re-used, and the genuineness of these, at least, is beyond question. As to their value to the private collector, that is quite another question.

***

Finally, the note refers to a case in which "a recent attempt to send some cases of relics from this city, the boxes being said to contain papers for cigarettes, was frustrated. The shipment was intercepted in the local Custom-house, the goods confiscated, and the shipper fined 500 Turkish liras." That is the great risk in attempting to smuggle antiquities out of Turkey; the natives nearly always set an absolutely absurd value on any genuine *antika*, and the people one has to *backsheesh* are apt to be too greedy, and to "cut up rough" if offered what may be a perfectly "fair" tip to look the other way—if there can be any question of "fairness" in what is, after all, not quite a noble game. But the idea of *exporting* "papers for cigarettes" from Baghdad (presumably to some European or American port, too!) was mad enough to put the least suspicious Customs official on the alert. For has not Baghdad been known to clamour for "more Bibles" merely because the price at which they were supplied made it worth while securing them for the sake of the paper, which was wanted to make into those filters which are placed in the mouthpieces of the locally manufactured cigarettes?

***

The extraordinary adventures of the captain and crew of the ill-fated steamer "Niggem," which left Alexandria for Barcelona, via Malta, in December, and was supposed lost, makes reading that throws many of our most lurid novels of the sea into the limbo of the ordinary. The Senussi, into whose hands the shipwrecked mariners fell, remains, I think, one of the most romantic sects in all the known world. Many reasons combine to make this the case. In the first place, that actual position of the Senussi headquarters is debatable. Again, the sect is accredited with the possession of a vast and well-ordered secret service, members of which have been reported to exist in every capital of the world. Quite recently a member of the sect rode into the village of Kharga, in the Kharga oasis, and almost under the shadow of the Egyptian flag which flew from the Government quarters, demanded, and received, toll in the name of the great Senussi. Then he rode away again, whither no one knew. The truth of it is that no one really seems to know many facts regarding the sect. So in the shadow of mystery it thrives exceedingly, and the name of the Senussi carries weight in every province of Northern Africa. But the thing about them that concerns us most nearly is apparently certain beyond doubt. The vast majority of the Senussi are entirely friendly to England, and are anxious to retain her friendship. Hence the fez presented to the "Niggem's" captain when his nationality became known. Too late to save or recover his clothing, he was at least given a brand new headdress in which to approach his countrymen on his return.

THE PRESS ON THE NEAR EAST

Greek Elections.

The *Daily Telegraph* (June 14) devoted a leading article to the above subject on the day following the elections in Greece, and before any results had been cabled to England. It is shown that the supreme moment, when Greek intervention would have been of the greatest value to the Entente, has passed, but that the present situation is nevertheless one of extreme importance to Greece herself:—

The Hellenic Kingdom will have to make up its mind either to assist the Entente Powers in such a fashion as to earn their gratitude, or to persist in sitting upon the fence in the hope—which probably will turn out to be a vain one—that good luck and careful calculation may ultimately give it some valuable prizes in the Near Eastern scramble. It is for the Hellenes to settle their own destiny in whatever fashion they choose.

After a careful survey of all the issues involved the article concludes:—

We have no right and no intention to interfere, for we must realize that her decision is by no means so vitally important to the Entente Powers as it is to her own future.

In a leading article on the crisis the *Morning Post* (June 16) points out that the Greek Government will now be compelled to consider the situation from two points of view—that of a German triumph on the one hand, or victory to the Allies on the other. Our first quotation relates to the first of these standpoints:—

Arguing upon that assumption Greece must recognise that to Germany will belong the hegemony of Europe, and that Germany, occupying that position, will manifest scant sympathy with neutral nations, nor will the fact that they have maintained neutrality throughout the war necessarily enlist German gratitude. . . . The point which Greece will consider is exactly what, under existing conditions, she desires to gain. . . . . In common with the rest of the inhabitants of the Balkan Peninsula the people of Greek origin suffer a good deal from their neighbours. In Macedonia, in Asia Minor, and elsewhere in the Balkans, it is the intermixture of races which is the constant cause of trouble, a trouble which Greece naturally desires to see removed. She will therefore inquire what prospect, in the event of Germany defeating the Allied Powers, there may be that Germany will serve the Greek interest. . . . . It is for the Greek nation to form its own judgment.

In considering the situation which would result if victory falls to the Allied forces, the *Post* says:—

In any readjustment of national forces Greece would be involved; and it is for her to decide whether, in that process, she will give herself the title to play an active part or will content herself with what may be assigned to her. . . . . That some alteration of frontiers would be required is clear, but if at the same time an exchange of populations were effected the territorial adjustment should present no serious difficulty. The interest of Greece in such a regrouping would be of the highest importance to her future welfare and security. It is hardly necessary to observe that it is in the last degree improbable that either Austria-Hungary or Germany would entertain the idea for a moment.

Roumania and the War.

In the *British Review* (June) "R. T. C." continues his article under the above heading. He shows that the suddenness with which war came left Roumania no other course than to declare neutrality, despite the party that, from the first, saw a unique chance of realizing national ambition, and, "by the acquisition of Transylvania, becoming a central European and not a Balkan Power." In commenting upon the Roumanian demand for an Entente guarantee regarding the future of Transylvania which followed the Muscovite irruption into the Bukovina, the writer says:—

No guarantee, it was answered, could be given, and the agreement not to conclude a separate peace was skilfully used to refer all such questions to a future congress. After 1878 Roumania can have no illusions as to congresses. She saw herself now faced with the prospect of a long and costly war, with the possibility of ultimate failure to realize her national ambitions.

He regards the ultimate participation of Roumania in the war as certain, but deals at some length with her reasons for hesitation, without, however, showing very plainly how they are to be removed. He seems to consider the abrogation of Russia's claim to the paternal suzerainty of the East necessary before Roumania can act. Has Russia abrogated this right? he asks. We quote the following extracts from his concluding passage:—

What would have saved the whole situation long ago would have been a clear affirmation by France and Britain of their policy of settlement in the East in as much detail as possible, even if it were only to let the States know the worst. In any case we may affirm as an axiom that any peace not based on a rigid application to the Eastern question (originally the cause of the war) of the principle of nationality can only be productive of Armageddon the second.

Such an application, he points out, involves the stopping of Austria at the Danube and Russia at least at the Pruth. He continues:—

What we, as individuals, shall probably see is a fine effort of Roumania to realize her national dreams with or without guarantees by flinging her cause on the justice of Europe and her armies across the Carpathians. What we, as a nation, must see is that the foul wrong of 1878 is in no way repeated, nor the madness of the congress of Berlin.

Notes on the War.

In his War Notes in the *United Service Magazine* (June) Captain H. M. Johnstone concludes his observations on the operations in the Persian Gulf with the following remarks regarding the devout Arabs:—

Now will be the time for negotiations with the Arabs far and near. We shall in no way depend on them, nor combine operations with them, but if a chief here and there harasses the fleeing Turks—well, he will not suffer. This enemy may have some more bolts yet to shoot, but he has probably shot his best one. There is no need to follow him up to Baghdad; an army of the kind we are facing on the Tigris and Euphrates will melt away, though it may still have enough go in it to seek more trouble.

Captain Johnstone thinks that the fickleness which these Arabs have shown may be due to their religious feelings having been worked upon, but, he adds, "one is inclined to put a higher value on the German with a bag of silver marks than on the same Christian quoting the Koran."

Austria-Hungary and Serbia.

Mr. G. M. Trevelyan starts his article on Austria-Hungary and Serbia in the *Fortnightly Review* (June) by a comment upon the general ignorance of the English people regarding Serbia and her relations with Austria-Hungary prior to the outbreak of war. "Even now," he adds, "the world does not sufficiently realize that the war against Austria-Hungary is a war of liberation. . . ." He considers, however, that the fraud whereby the South Slavs of Bosnia, Dalmatia, Crotia, and Slavonia were to be kept subject to Austrians and Magyars on the ground of inferior civilization has at last been exposed. In the following passage he strikes the same note as most writers on the subject:—

Until the various races of Austria-Hungary obtain political self-government and cultural liberty for their languages and schools, there will never be peace in Europe. There will always be assassinations, revolts, and finally wars. . . . All the nationalist movements inside Austria-Hungary have been growing with great rapidity during the last half-dozen years, especially the movement drawing the Croats towards the Serbs. . . . . The reign of terror that has existed in these provinces ever since the war began has made it utterly impossible that the Austro-Hungarian rule can continue in the Slav and Roumanian provinces, except as the rule of the sword.

In dealing with the causes of the present war he writes:—

Even German love of domination would not alone have sufficed to set the whole world on fire, had not German Culture been in alliance with a force equally regardless of the rights of others, the determination of the Magyars of Hungary to "Magyarise" the Roumanians, Slovaks, and Croats who dwelt within the borders of their State.

His article contains a very interesting character sketch of the Serbian people, written from personal knowledge gained by visits to their country both before and during the war. As a democracy where there are practically no class distinctions and all are yeomen, the country's chief need is of an adequate class of men to lead the people. Their politics are confined to patriotism, and Mr. Trevelyan says that "it is due to the independent manliness of the free yeoman, and to the absence of all class division, that the Serbian Army has won redoubtable victories in the field over the larger forces that Austria-Hungary send into Serbia on their errand of murder, pillage, and destruction."

Articles to Note.

"Italy and the Second Phase of the War," by Dr. E. J. Dillon, in the *Contemporary Review* (June).

"Foreign Affairs," by S. Verdad, in the *New Age* (June 10).

"The Resurrection of Serbia.—II.," by Lieutenant-General F. H. Tyrrell, in the *United Service Magazine* (June).

"The Serbian Victories," by Victor Berard, in the *Suffragette* (June 11).

THE NEAR EAST AND THE WAR.

(From a Correspondent.)

As announced in The Near East of the 4th inst., on June 3, at the Lyceum Club, Mr. H. Charles Woods, F.R.G.S., lectured on "The Near East and the War." The real cause of the present war, he said, must be sought in the unsatisfactory settlement of the two Balkan wars. The settlement of the year 1913 left Serbia without that outlet to the sea for which she had gone to war: Bulgaria, deprived of the legitimate fruits of victory, continued to remain on unfriendly terms with Serbia; the Ægean Islands problem, supposed by the Great Powers to have been settled, tended to maintain antagonistic relations between Greece and Turkey.

The speaker went on to say that had the justifiable claims of Bulgaria received favourable treatment from her former Allies after the second war, and had there been the semblance of any friendly understanding between the Balkan States, Austria would not have dared to attack Serbia—notwithstanding the murder of the Archduke Ferdinand and his consort. At the outbreak of hostilities last summer the Austrian forces entering Serbia through the north-west corner endeavoured to take Belgrade; it was, however, not taken then. The Austrians were defeated at the battle of Jadar in August, after which their armies either withdrew or were forced back into Bosnia and Herzegovina. In September Serbia was invaded a second time, but the opposing armies, although reinforced, were almost everywhere defeated.

After the entry of Turkey into the war they were more successful, and shelled the Serbians out of their trenches, forcing them to retire from their frontiers and to evacuate Belgrade, which was occupied by the Austrians on December 2. They were not long in possession, for the brave Serbians, after a desperate battle in the heart of their country, regained it on December 14. Meanwhile gallant little Montenegro was engaging the forces of Austria on the frontiers.

The great value of these operations to the Allies, the lecturer emphasized, is the fact that the Serbians and Montenegrins have with the utmost bravery contained and occupied very considerable enemy forces which would otherwise have been utilised against Russia or France. It was demonstrated that whether Greece joins Turkey, mobilizing an arm of some 250,000 men, will largely depend upon:—(1) The policies adopted by Roumania and Bulgaria; (2) the successes achieved by the Allies in the eastern and south-eastern theatres of war; and (3) the result of the elections in Greece.

Bulgaria, from geographical, political, and military reasons, holds the key to the situation in the Near East, and Mr. Woods is of opinion that unless suitable compensation is promised her for the way in which her rights were treated at the signing of the treaty of Bucharest, and unless her future security is safeguarded, she will remain neutral. This policy is partly due to the fact that Bulgaria's only access to the sea is by way of her Black Sea ports, now useless owing to the closing of the Dardanelles, and by the railway to Dedeagatch, which runs for some miles through Ottoman territory. If Serbia and Roumania agree to give to Bulgaria certain areas, the inhabitants of which by right of nationality are hers; if Greece agrees to cede certain localities to her, and the Great Powers will guarantee her the possession of districts, now Ottoman territory, which during the negotiations of 1913 *were actually allotted to her*, Bulgaria will join the Entente and advance into Turkey to the assistance of the Allied armies operating in the Dardanelles. If these concessions are not offered she will in all probability remain neutral to the end.

The entry of Bulgaria into the war would mean an augmentation of the Allied forces by 1,200,000 men who would be in a position to act where their presence would be invaluable. By the immediate adoption of a firm, far-seeing, friendly policy towards the Balkan States, the lecturer declared, this result would be obtained.

The advance into Turkey of 400,000 men would practically paralyse the Ottoman resistance at the Dardanelles, which would free a great part of the Allied Expeditionary Forces to undertake operations elsewhere. Three hundred thousand Greeks and half a million Roumanians would come into the war, the latter crossing the Austrian frontier. By occupying the Bukovina and Transylvania they would not only assist the cause of Russia in Galicia, but they would form a helpful link between the Muscovite and Serbian armies.

THE PUBLISHER
would be obliged if Readers would inform him if they experience any difficulty in obtaining copies of the paper.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Foreign-Born Consuls. June 10.

Colonel Yate asked the Secretary for Foreign Affairs whether all persons holding the rank of Consul-General and Consul would in future be British-born subjects, and whether foreign-born Consular officials would in future be restricted in number as far as possible and strictly confined to unpaid officers of the rank of Vice-Consul and Consular Agent.

Lord R. Cecil: The foreign-born Consular officers are already restricted in number as far as possible. The other suggestion requires careful consideration, and it will be borne in mind.

The Dardanelles. June 15.

Sir H. Dalziel asked whether the Prime Minister could inform the House whether there was any truth in the continual rumours that we had gone through the Dardanelles?

Mr. Asquith: None whatever.

Sir H. Dalziel: I am very much indebted to the right hon. gentleman. At Dundee Mr. Churchill spoke lightly of the Dardanelles. It was, the speaker continued, a very serious matter, and he thought that our troops might have been killing Germans rather than Turks. The Chancellor of the Duchy had raised the hopes of the country in regard to this matter. He said that we were within a few miles of triumphant success. Did the Prime Minister take as rosy a view of the future as the Chancellor of the Duchy? He did not want the right hon. gentleman to answer unless he felt he could. This was a bigger undertaking than the country had any idea of. He very much doubted whether Mr. Churchill's forecast would be realised as soon as he thought.

Mr. Crooks: Cheer up!

Sir H. Dalziel: My hon. friend is an optimist. We need optimists just now, but there is such a thing as dangerous optimism.

Mr. Asquith said it was not in the public interest that he should enter into an explanation of the past history of the Dardanelles operations, or into a forecast of the immediate future. He would ask the House to relieve him of the duty of doing so, not because he would be in the least indisposed in due course to explain and justify what has been done or is being done, but because he did not think it in the best interests of the country to enter into such discussion at the present moment. One thing, and one thing only, he would say: that in his opinion—an opinion that had not been lightly formed—it is an operation of the highest importance, and so far as he could form a judgment it is an operation which we can push through to a successful conclusion.

EXPLORATION IN KARAKORUM AND CENTRAL ASIA.

On Monday last Dr. Filippo de Filippi read a paper before the Royal Geographical Society describing the experiences of a scientific expedition which in the years 1913 and 1914 explored the region of Central Asia lying immediately north of India and west of Tibet. The whole region lies among mountains at such a level that even at the lower altitudes the Indus was found frozen from bank to bank. Much of the track was desert. At one point the explorer described the road as literally strewn with the remains of animals which had died from exhaustion, mountain sickness, and starvation. Carcasses of horses, asses, and camels were to be seen there in every stage of decomposition, from bodies surrounded by birds of prey to skeletons bleached white from long exposure. Important geographical discoveries were made by the expedition. One of these was that the source of the Yarkand was found to be about twenty miles away from the small lake near the Karakorum Pass, where almost every map now shows it as originating. Another discovery was that the Shyok rises in the same glacier as the Yarkand. The expedition was still in progress when news that the war had broken out caused several of its members to at once return by the shortest route—namely, through India—but the others continued their journey through Chinese Turkestan, explored part of the valley of the Oprang River, and finally made their way to the Trans-Caspian Railway at Andijan.

Sir Francis Younghusband said that he agreed with Dr. de Filippi as to the utter desolation of the Depsang plains. It was not merely the absence of vegetation, for that was to be experienced in the Gobi desert and other parts of the world; but travelling at a height of 18,000 ft. one was always in a state of terrible exhaustion. That fact and the other fact stated, that the whole region was strewn with the bodies of animals that had succumbed, might account for the greater dreariness of Depsang. It was a remarkably interesting point that the Yarkand and Shyok should be found to rise in the same glacier, for the Shyok was a tributary of the Indus, while the Yarkand was the great river of Chinese Turkestan, and, after a course of a thousand miles, buried itself in the desert of Gobi.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I am pleased to see that the share and debenture holders of the Ottoman Railway from Smyrna to Aidin have approved of the scheme submitted to them last week by the board of directors, whereby payment of the debenture interest could be deferred "for twelve months from the signing of peace between the British and Turkish Governments, or for a period of three years from July 1, 1915, whichever was the shorter." The interest so deferred will carry, in the case of both First and Second Debentures, interest at the rate of 5 per cent., payable at the termination of the specified period, and the company will be entitled, in lieu of paying such interest in cash, to issue First and Second Debentures wherewith to cover it. The only question which now arises is: What in the meantime will the damage done to the line by the Turks amount to, and who will make it good? It is a question, however, which will have to be decided later on. Incidentally, reference may here be made to a telegram from Constantinople, forwarded from Amsterdam by Reuter's Agency, to the effect that it is reported "in competent circles" that the Porte has decided to abolish the Turco-French financial agreement drafted last year, the execution of which would have impeded the future development of the Hejaz Railway. The Government has decided to buy back all railway property in Syria and in the Lebanon district which is the property of alien enemies."

***

As regards the above, it may be mentioned: firstly, that the reported impropriation measures refer only to Syria and the Lebanon, and consequently do not apply to the Ottoman Railway; and secondly, that the proposed French line in Syria, running parallel to the Hejaz line, would certainly have impeded the natural development of the latter (as exposed in these columns more than eighteen months ago). It is, therefore, not at all surprising that the project should now be condemned. As for the constructed French lines, they will doubtless be administered by the Turkish Government on the same lines as the Ottoman Railway, and no amount of empty threats or temporarily enforced measures will avail anything when the settling day comes. The Allies, in this as in other matters, will stand together; but, as regards engineering projects throughout the Ottoman Empire, they will all have to be re-moulded and re-distributed, and doubtless then the proposed rival line to the Hejaz through Palestine will be abandoned.

***

According to our Bucharest Correspondent, Roumania is suffering from a shortage of coal and sugar, and both commodities are being imported from Austria-Hungary. Certain deductions may be made therefrom, the first being that, if Roumania is dependent on the enemy for two such important commodities as coal and sugar, it will be difficult for her to join the Allies until either the Dardanelles have been forced or Bulgaria has come in on our side. On the other hand, Roumania, as an exporter of cattle, grain, and petroleum and its derivatives, is greatly hampered by the war, and finds practically all markets closed to her. However, I understand that Austria and Germany are both buying cattle and grain in Roumania, and that Roumanian petroleum, according to a Reuter message from Amsterdam, is now on the market in Germany, and is sold at 70 pf. per litre, whereas the price previously was 20 pf. Admittedly, the rise is a stiff one, but it shows, nevertheless, that Roumanian oil is leaving the country. Another Reuter message, from Sofia, states that Turkey is offering any terms for wagons of petrol and benzine because she is without coal. I sincerely hope that there will be no leakage from the Danube oilfields in the direction of Constantinople. The attitude of Roumania is, frankly, a perplexing one and her position extremely difficult, both politically and from an economic point of view. I trust, however, that the Government will keep the would-be exporters of contraband of war well in hand.

***

To what an extent the Germans were able to intrigue, thanks to their financiers, in foreign countries, has only recently been illustrated by the Banca Commerciale Italiana. Nominally, this institution was a powerful Italian bank controlled by one Commendatore Joel, a German, naturalised in Italy. Behind him stood no less an establishment than the Deutsche Bank (likewise of Constantinople fame), which swayed the Banca Commerciale hither and thither to suit its own good pleasure. The latter seems to have been Germany's political and commercial agent in Italy, and to have intrigued lustily in favour of the Fatherland and against Italy's interests. The whole story reads like a tale from Pera—or from Alexandria, where, it will be remembered, the Deutsche Orient Bank was unearthed in the pursuit of similar despicable and disgusting intrigues. Not only must Prussian militarism be wiped out, but also that low, Prussian financial creed which includes blatant treachery among the cardinal virtues.

***

The rapid development of the Greek mercantile marine has often been alluded to in these columns, and last week a Larnaca correspondent pointed out that the Greek flag had been very conspicuous in Cyprian waters, owing, he said, "to the somewhat unjustifiable reluctance shown by English shipowners to send their steamers to load in Cyprus." The imputation, I think, is hardly a fair one, considering the enormous marine service to be upheld by us in present circumstances with a greatly reduced number of vessels. The opportunity is, of course, an excellent one for Greece, and she is making the most of it, so much so, that she is starting a Cyprus-Egypt line in opposition to the Khedivial. Perhaps this will make the latter company wake up. As it is, a Cyprus correspondent now informs me that the British company has already lowered its freight charges. It will be of some interest to watch the struggle between the two lines.

***

With reference to the expansion of Greek mercantile interests in the Near East, it may be pointed out that I have frequently insisted on the necessity for the creation of a British Mediterranean line. To the best of my belief, the idea has never found favour with British steamship companies, principally because, I have been given to understand, their profits from other sources were sufficiently high to enable them to disregard such a small trade as that of the Mediterranean. For more reasons than one—and they are political as well as commercial—it is to be regretted that some big line did not step in and specialise, with a small class of vessel, in the Mediterranean coastal trade. The Khedivial Mail is in a position even to-day to do this in Near Eastern waters, and I hope that some efforts will be made in this direction. Apropos, I may state that it has come to my knowledge that a Belgian shipping firm who have temporarily established themselves in London intend starting a line which will ply exclusively between a French port and the Mediterranean, both eastern and western. The idea seems to be to link up eventually with an English port. I wish the new venture every success, however much I regret that the initiative was not seized by a British shipping concern.

***

A "smack in the eye" for Pan-Germans who consider themselves little tin gods in the Ottoman Empire is contained in the following telegram from Buenos Aires, reproduced by the *Morning Post*: "It appears that a deputation of Turkish residents and journalists has interviewed the Argentine Minister for Foreign Affairs and expressed their dissatisfaction at Turkey's being represented by a German Consul." If it were not for the tragedy underlying Turkey's thraldom, the above incident would be decidedly humorous.

***

The Suez Canal report, referred to at length elsewhere, is a revelation of what can be done even in war time. That, in spite of attacks on the Canal, in spite of the great reduction in the mercantile shipping passing to and from the Red Sea, and in spite of extraordinary expenses incurred by way of safeguarding that Canal, the directors should see fit to declare a dividend—however small—and carry forward a significant surplus, perhaps one of the largest that has ever been carried forward, speaks volumes for the success of our policy in the past and for the sufficiency of the measures adopted by us to insure the safety of the Canal. The proprietors—and they include both the British and the French Governments—are to be congratulated on their success, the more so considering that the huge carry-forward will practically ensure the payment next year of a dividend equal if not superior to that now to be paid.

***

Another point to be mentioned in connection with the report is the decision taken by the company to expel their one German director, the notorious head of the N.D.L., Herr Heineken, who is, with Ballin of the Hamburg-Amerika, and Gwinner of the Deutsche Bank, the most prominent of Germany's unscrupulous financial magnates.

***

Much information in a condensed form is packed into the new edition of "Rubber Facts and Figures" (F. C. Mathieson and Sons, 16, Copthall Avenue, E.C. 1s.). The book contains the main details of capital, acreage, dividends, outputs, and highest and lowest prices for a series of years.

Suez Canal Report.

Reduced Dividends.

The annual general meeting of the shareholders of the Suez Canal Company was held in Paris on June 14. The following summary of the report was cabled over by Reuter's Agency :—

The Report.

The report presented by the Council of Administration states that up to the time of the outbreak of war the normal prosperity of the company was maintained. The war, however, completely changed this state of affairs, and the increase which the receipts had presented was quickly transformed into a shortage. From August 1 to December 31 the commercial traffic fell off to the extent of nearly 40 per cent. Nevertheless, the loss of revenue from the tolls was far from reaching this proportion, the exceptional activity of military transport constituting an important set-off to it. The loss sustained by the company during the first five months of war amounted to about 6½ million francs (£260,000), and, in view of the surplus which existed before the opening of hostilities, the final falling off did not exceed 4½ millions (£180,000).

With regard to the current financial year, the falling off in receipts represents nearly 35 per cent. as against those of the corresponding period of 1914. The report goes on to say :—" We could not fail to take into consideration the prospects which this state of things involves in the fixing of the dividend for the financial year which has expired. To deal with that period according to the results properly pertaining to it, and isolating it from the current period would mean that there must be a comparatively heavy fall in the dividend payable upon the latter. It appeared to us that we should be ill-serving your interests if we acted in such a way. We propose to you, after careful consideration of the question, to fix the total dividend of 1914 at 120 francs net. We shall thus reserve upwards of 18 millions which will be carried forward to the financial year 1915, and if the receipts continue as they have been during the first months we shall be in a position, so far as at the present moment any forecast is possible, to avoid a fresh decrease in your dividend next year. This carrying forward will at the same time have the very appreciable advantage of maintaining the ease and solidity of our treasury despite the very unfavourable circumstances which we are now experiencing."

The total receipts for 1914 amounted to 125,121,237 francs (£5.004,849), showing a falling off of 4,804,711 francs (£192,188), as against the total receipts of 1913. The excess of revenue over expenditure, including the amount brought forward from the year 1913, amounts to 80,359,898 francs (£3,214,395). It is proposed :—

1. To distribute of this the sum of 61,656,338 francs, and

2. To carry forward the balance—namely, 18,703,560 francs.

The distribution of the sum named will have the effect of bringing the dividend upon each share to 109.44 francs. This dividend increased by interest of 25 francs represents a gross return of 134.44 francs and a net return of 120 francs.

In some general comments upon the situation created by the war, the Council of Administration points out that new duties were imposed on the company when Turkey, who had become the ally of Germany, prepared to carry out operations against Egypt across the Canal and directly against the Canal itself. The company could no longer remain spectators of the conflict. "We," say the Board, "had to join without hesitation in the defence to facilitate its organisation, and to that end to place at the disposal of the proper authority all the resources of our material and all the assistance which the experience of our staff could provide. This is what we did, and the efforts which our staff made to carry this new task into good effect have been duly acknowledged. We can state on our part that the exigencies of military operations have always been reconciled as far as possible with the interests of navigation and the necessities of transit. You know with what success these operations have been carried out. If fresh attacks should be made by the Turkish Army it may be predicted with certainty that they will suffer the same defeat as the first attack.

Referring to the effects of the war, the President, M. Jonnart, said that the company, more favoured than many other concerns, had suffered relatively little. Its vital forces had not been affected. They could look for a prosperous future. All Turco-German attacks on the Canal had been repulsed, and they could rest assured that any future attempts on the part of the enemy were likewise doomed to failure. M. Jonnart paid a hearty tribute to the devotion and zeal of the company's staff, who had actively co-operated with the authorities in the defence of the Canal. The report was unanimously adopted, as was also a motion withdrawing the mandate of the German director, Herr Heineken, who is thus removed from a post where, as the President explained "he was compelled to betray either his own country or the company's interests."

The *Daily Telegraph* Paris correspondent gives the following further particulars :—

"The summarised statistics are as follows : In 1914 4,802 ships, of a total net tonnage of 19,409,495 tons passed the canal, showing a reduction upon 1913 of 624,389 tons. The commercial shipping showed a decrease of nearly 3,000,000 tons. On the other hand, warships and transports showed an increase of 501 transits and 2,250,000 tons. The decrease in commercial shipping is to a great extent accounted for by the reduction of Austrian and German ships, amounting to 1,460,000 tons.

"The number of passengers travelling through the canal reached the record figure of 391,772, including military. Owing to the passage of transports and warships the transit through the canal has often been more active than had ever been known. Thus on certain days the number of vessels passing was more than double the daily average. Transit was always effected without incident or delay and with perfect regularity."

Press Comments.

Commenting on the report, the *Financier* says :—

"In common with other important enterprises the Suez Canal Company experienced a contraction in business in the last five months of 1914. But the loss of traffic it sustained in that period was remarkably small. The falling off in receipts during the first five months of the war amounted to approximately 6,500,000 fr., but, in consequence of the improvement shown prior to the outbreak of hostilities, the net shrinkage for the whole of the year was limited to 4,804,700 fr. Not only was the decline in gross revenue relatively slight, but it was accompanied by a saving in expenses, with the result that the decrease in net profits was only 3,644,000 fr., or a little over 4 per cent. The dividend, however, is reduced by over 27 per cent., being 120 fr. net per 500 fr. share, as compared with 165 fr. net for 1913. This comparatively heavy decrease, however, is due to the directors' wise refusal to deal with 1914 according to the results properly pertaining to it, and to isolate it from the current year, a policy which obviates a comparatively heavy reduction in the distribution for 1915. From the shareholders' point of view it is better that the decrease in the dividend should be gradual rather than sudden and substantial, and it is not surprising, therefore, that the prudent course adopted has been generally approved."

The following table gives a concise comparison for the years 1913 and 1914 :—

	1914. Francs.		1913. Francs.
Net profits.....	80,299.895	..	83,944,869
Brought in	60,008	..	477,729
From reserve	—	..	3,500,000
Available	80,359,898	..	87,922,598
Dividend	61,656,338	..	87,862,535
Per Share. { Gross.....	134.44	..	180 956
Per Share. { Net	120.00	..	165.000
Forward.....	18,703,560	..	60,063

"The reduction in the distribution will, of course, affect the income of the British Government (continues the *Financier*) from its holding of 176,602 shares, the net amount accruing to it being 7,947,090 frs., or over £317,000, less than in 1913. Thanks however, to the wise policy of carrying forward a substantial balance, it is possible that public and private shareholders alike will suffer no further curtailment of their dividend for the current year. That, at all events, is the view of the directors, who in their report state that, if the receipts continue to come in at the same rate as they have come in during the first few months of the current year, they will be in a position, so far as at the present moment any forecast is possible, to avoid a fresh decrease in dividend next year."

The *Financial Times*, on the other hand, thinks that "quite a remarkable showing is made by the report under review," and that "the proprietors must experience much satisfaction on learning that, on the whole, fortune has treated them very favourably.

"The excess dividend per share—the dividend above the fixed interest of 25 frs. per share—is cut down from 155.956 frs. to 109.440 frs., this being the lowest rate paid since 1902, when the figure was 109.158 frs. The average excess return for the decade ended 1913 was 137.176 frs. per annum. The reduction in the dividend is dictated by reasons of prudence and the desire of the directors to average the effects of the smaller earnings as much as possible to the shareholders. The decrease now resolved on means that no less than 18,703,600 frs. goes forward, as compared with only 60,100 twelve months ago, and with this large sum in hand the board hope, in spite of diminished receipts this year, to be able to maintain the rate of dividend payable in respect of 1914."

The Indiaman, referring to the report, opines that, so far as the future is concerned, "there need be no uneasiness in the minds of the proprietors. The vital forces of the undertaking remain unimpaired, and the Company will be free to take full advantage of the trade revival whenever it occurs. The Company lowered its dues some little time ago in anticipation of the appearance upon the scene of its Panama rival, and these concessions should serve to keep for it trade which might otherwise have been diverted to the newer route. Should further reductions in charges be deemed desirable, they can be made with ease, since the Company possesses such large reserves that it can afford to suffer temporary losses in order to insure future prosperity."

NEWS FROM ALL SOURCES.

A number of cereal merchants in Egypt have petitioned the Egyptian Foodstuffs Committee to prohibit the exportation of lentils, because the imports from India have ceased and because the crop in Egypt is smaller than usual this year.

Communications between Egypt and Syria are completely cut, because an Italian company (the last to ply between the two countries) has received orders not to allow its steamers to call at enemy ports.

A Reuter message from Port Said says that on June 10 a collision occurred in the harbour between a British steamer and a local Italian stone carrier coming from Suez. The latter sank, but there was no casualties. Although the wreckage has not been cleared, navigation through the canal has been resumed.

According to the *Moniteur du Pétrole Roumain* (June 5), the general situation in the Roumanian petroleum market has grown somewhat worse, no exportation having taken place since April 21. The management of the Hungarian State railways has announced its inability to furnish any new cars for the exportation of petroleum, the railways being occupied with the transportation of troops. The stocks have increased considerably in consequence. The *Moniteur du Pétrole Roumain* estimates the stocks of petroleum in Roumania at very little less than a million metric tons, and says that notwithstanding the production has been limited the stocks are still increasing. The price of raw petroleum fluctuates between 3.50 and 4 francs per 100 kilograms.

The death occurred on Monday of Mr. F. M. Bridgewater, the chairman and managing director of the *Financial Times*.

Trade Notes.

Egypt.

Messrs. Walter W. Davies, Thomas Hinshelwood and Co., Sayer and Colley, and the Model Workshops, Bulâq, were among the successful tenderers recently for the supply of general stores required by the Giza and Gezira Water Works.

Messrs. J. Wells and Sons were the successful tenderers recently to the Egyptian Government for the supply of firework displays.

Tenders will be received by the Department of Public Health, Cairo, for the supply of three double cylindrical watering-carts, necessary to the scavenging and watering service, Bulâq, in accordance with the specification and conditions of tender. Intending tenderers may apply for all information to the Director of Stores, every day (Fridays and holidays excepted) from 9 a.m. to 1 p.m., when conditions of contract may be seen and signed. Tenders should be made on the special form supplied free of charge by the Administration, and should be addressed to the Director-General, Department of Public Health, Cairo, in sealed envelopes bearing the inscription: "Tender for the supply of double watering-carts." Tenders must reach the above address on July 5, 1915, at noon at latest.

Tenders will be received by the Under-Secretary of State, Ministry of the Interior, Cairo, not later than noon on June 26, 1915, for the supply of petroleum for lighting required by the police for one year commencing on July 1, 1915, and ending on June 30, 1916. A copy of the conditions of tender can be obtained on application to the Personnel and Equipment Department, Ministry of the Interior, Cairo. Tenders will be submitted on the printed form provided for the purpose in double sealed envelopes, each marked: "Tender for the supply of petroleum, 1915-1916," and should be addressed to the Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), Cairo.

Tenders will be received by the Under-Secretary of State, Ministry of the Interior, Cairo, not later than noon on July 7, 1915, for the supply of photographic material required by the Ministry for one year, commencing on July 15, 1915, and ending on July 14, 1916. A copy of the conditions of tender can be obtained on application to the Personnel and Equipment Department, Ministry of the Interior, Cairo. Tenders must be submitted on the printed form provided for the purpose in double sealed envelopes, each marked: "Tender for the supply of photographic material," and addressed to the Under-Secretary of State, Ministry of the Interior (Personnel and Equipment Department), Cairo.

H.M. Consul at Cairo reports that tenders are invited by the Egyptian State Railways and Telegraphs Administration for the supply of 360,000 metric tons of Welsh steam coal. Sealed tenders, on the proper form, will be received up to 10 a.m. on July 22 by the General Manager, Egyptian State Railways and Telegraphs, Cairo. Copies of the specification and form of tender may be obtained from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W., on payment of 2s. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender.

Greece.

The Board of Trade are in receipt (through the Foreign Office) of telegraphic information from H.M. Minister at Athens to the effect that a Ministerial Order has been issued prohibiting the exportation and re-exportation from, and the transit through, Greece of all articles which may be regarded as absolute or conditional contraband of war.

The following information is from the report by H.M. Consul at Piræus (Mr. W. J. Norcop) on the trade of that district in 1914, which will shortly be issued:—

The present is a propitious moment to push trade which has been in the hands of foreign competitors of United Kingdom firms—namely, in textile machinery, aerated water machinery and accessories, agricultural machinery and ploughs, steam, gas, or oil engines, pumping and irrigating machinery, machinery for flour mills, oil mill plant and olive oil presses, water wheels, turbines, steam and oil tractors, brick and tile machinery, and other machinery for industrial and other purposes. Centrifugal pumps are used in Greece for purposes of irrigation. Germany and Austria-Hungary have also done very good business in cast-iron water pipes, iron bars, black and galvanised sheets, wire, iron joists and girders, iron bars, angles, tees, roller shutters, corrugated iron, etc. As compared with imports from the United Kingdom, Austria-Hungary has imported into Greece more than twice the amount in value of the following goods:—Electro-technical appliances, electric conduction apparatus in boxes, electric motors, dynamos, transformers, switch and contact devices, mounted fuses, etc., and also electrical fittings, electric lamps, high-pressure cable and transmission lines, and electrolytic copper.

Serbia.

The Board of Trade are in receipt (through the Foreign Office) of information to the effect that the Serbian Government have issued a decree, dated March 31, April 13, in virtue of which the importation of the following articles into Serbia is for the present prohibited:—Wadding of cotton waste and other materials, textile waste, playing cards, apparatus and accessories for electric signals, etc., and wireless telegraphy apparatus, except such as is imported by the State.

The importation of the following articles into Serbia has been authorised until further notice:—Wheat, rye, barley, oats, maize, beans, all kinds of flour except that of rice, and of kitchen garden plants, eggs, ordinary bread, onions, potatoes, and kitchen garden plants.

Morocco.

The Board of Trade are in receipt, through the Foreign Office, of copy of a Dahir, dated October 18, 1914, which provides that, during the war, a duty of 200 pesetas Hassani shall be levied on each litre of pure alcohol brought into the towns of Fez, Meknes, Moulay, Idriss du Zehroun, Casablanca, Ber Rechid, Settat, Azemmour, Kenitra, Rabat, Salê, Fédalah, Mazagan, Safi, Mogador, and Marrakesh. This duty is to be levied on pure alcohol exceeding 14 centesimal degrees contained in wines, ciders, perries, meads, beers, vermouths, liqueur or imitation liqueur wines, and on the total quantity of pure alcohol contained in liquids obtained by the fermentation of figs, carob-beans, and dates, in spirits, liqueurs, and fruits in spirits, in medicaments and perfumes and all other unspecified alcoholic liquids. Methyl or other alcohols capable of being used for the same purposes as ethyl alcohol are also to be subject to the tax. The Dahir totally prohibits the admixture of methyl alcohol and ethyl alcohol in spirits destined for consumption as beverages. Bottles are to be reckoned as containing one litre, and half-bottles as containing ½ litre, and duty shall be levied on the contents on this basis, in so far as the real capacity of the receptacle is not greater. The tax shall be reduced to 2 pesetas Hassani per hectolitre in respect of alcohols denatured (by methods authorised by the Grand Vizier) for use in industry. All carriers of dutiable liquids are required to declare the nature, kind, volume, and degree of the liquids before bringing them into the towns specified. Should such carriers be able, on entering into any of the towns, to produce a receipt showing that duty has already been paid on the liquids in another town, they will be allowed to bring in the liquids without further payment of duty. The Dahir, which also contains further provisions prohibiting the distillation of alcoholic liquors, etc., and respecting penalties for infraction, has, by King's Regulation No. 2 of 1915, been made binding upon all persons to whom "The Morocco Order in Council, 1889," applies. The text (in French) of the Dahir may be seen by persons interested, on application, at the Commercial Intelligence Branch of the Board of Trade.

With reference to a call for tenders by the Moroccan Special Committee of Public Works for the construction of a shed at the Custom House, Laraiche, H.M. Agent and Consul-General at Tangier reports that the contract has been awarded, at a reduction of 18 per cent. on the estimated cost, to a Spanish firm, whose name and address may be obtained by United Kingdom exporters of material for shed construction on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

EGYPTIAN RAILWAY NEWS.

The Cairo correspondent of the *Railway News*, writing on May 15, gives the following interesting information:—

Delta Light Railway Staff.

The traffic staff of the Gharbieh district of the Egyptian Delta Light Railways are paying the whole cost of the maintenance of two beds for wounded in the Derbyshire Hut of the British Red Cross Hospital at Netley. These beds are numbered 10 and 14 respectively, and since their endowment have been exclusively occupied by members of the Indian Expeditionary Force, both sick and wounded.

Technical Education.

His Highness Sultan Hussein is taking a great interest in education in general, and technical education in particular. In the latter connection he recently paid a long visit to the State Railway workshops at Boulac, Cairo, noting in particular the openings for the employment of Egyptians there, and the methods of training apprentice craftsmen.

Season Ticket Regulations.

Certain new regulations for the issue of season tickets on the Egyptian State Railways came into force with effect from May 1, 1915. One curiosity of these is that all applications for season tickets must be accompanied by two copies of a recent photograph of the applicant, carte-de-visite size.

ROUMANIAN OIL POSITION.

There has been a further restriction of the Roumanian mineral oil production, which is now estimated at 480 to 500 waggons a day. Owing to the obstacles in their way, producing companies are seriously affected by having to store surplus output. The March statistics show that the refineries handled about 113,000 tons, while the total output of raw oil amounted to 162,000 tons. Old stocks of the latter have thus been increased by about 50,000 tons. These stocks now total 350,000 tons, while those of the refined product are estimated at about 600,000 tons. Storage plant is being enlarged to cope with the growing surplus, and to avoid operations being brought to a standstill. Exports were recently interrupted for ten days, but have been lately resumed by the railways, though they are still much too small to give satisfaction in trade circles. The oil traffic to Constanza is limited to one train daily. Export prices are quite satisfactory to producers (says the *Morning Post*), although it is reported that the price of illuminants has declined considerably in Austria-Hungary.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continues to receive a very large number of inquiries for the names of sellers or buyers of articles.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and lists are prepared and circulated of articles which inquirers desire (a) to purchase, and (b) to sell. List 25 is now ready, and may be obtained by United Kingdom manufacturers and traders.

Turkish Cement Market.

Writing on April 8, the U.S. Consul at Constantinople analyses the Turkish market for cement, and comes to the conclusion that there will be an opening later for a factory erected on the spot. Though the Consul's remarks are addressed to American exporters, they are likewise applicable to British producers and capitalists. The Consul says:—

"Forty piastres per sack is being offered to-day in Constantinople for Portland cement, but there is none on hand. If a limited supply were available, it would probably command a price even higher than that named. Unfortunately, means of bringing cement here are lacking, because of the existing state of war.

"The greater part of the cement available in this consular district is furnished by two factories, located in the suburbs of Constantinople, whose combined yearly output is 450,000 to 500,000 sacks, all of which is at present being taken by the military authorities. The quality of this product varies, but is always poor, there being no uniformity as to either hardness or colour. This native cement commands, in normal times, approximately 50 cents per sack. The introduction of well-known German and Belgian brands of cement has been attempted from time to time, but has not been very successful. Their use has been limited to the very best class of work, due chiefly to their cost, which in normal times is about 75 cents per sack.

"The point, with reference to cement, that should be of particular interest to the (American) exporter is that with the close of war building construction is certain to be begun on a large scale in this part of the world. It needs no engineer or business man to detect the trend in this direction. A mere glance at the dilapidated, out-of-plumb wooden and brick houses, of which a considerable section of Constantinople is composed, is sufficient to convince that they must shortly be replaced by something. As a matter of fact, I am assured by local persons prominent in the building trade that they are to be replaced by something substantial, requiring a quantity and a quality of cement that the present local factories cannot supply.

"From the foregoing facts there result two opportunities for the cement manufacturer. He may enter the market and sell his share of the cement that is going to be bought abroad. In that case he will be at a disadvantage in competing with his European rivals because of freight rates, which, in the case of heavy articles like cement, have been found to be in the past practically equal to the cost of the goods delivered on the docks at New York. The matter is, nevertheless, worth investigation by firms in a position to charter ships and send cement here in large quantities.

"On the other hand, there is an opportunity for the investment of (American) capital in the construction of a cement factory. I am assured that all the materials that go into the manufacture of cement are available and there is necessary only a modern factory, properly managed, to turn out cement equal to any that is manufactured elsewhere.

"In following up these opportunities nothing can be accomplished by sending catalogues or form letters. Firms interested should send a personal representative to Constantinople to look over the situation."

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

Near East Markets.

SPECIAL REPORT.

Cairo. May 25.

According to news from Upper Egypt the grain crop, which it was expected would be especially good this year, is likely to be below the normal in consequence of the ravages of a pest known as the Sadda. Indian corn appears to be the greatest sufferer.

SUDAN REPORT.

(From the *Sudan Times*.)

We learn (May 22) from a private source that the daily arrivals of Heskub gum at El Obeid market are between 1,000 and 1,500 kantars. The merchants are buying well, and the price has risen from £T50 to £T63 per kantar. This rise is chiefly ascribed to the expected departure of the s.s. "Sebek" which is taking off a large quantity of goods from the Sudan. Another reason given is the apprehension that arrivals in future will be small. If this is true, no fall in prices may be expected.

Prices of dura have fallen at Wad Medani from £T65 to £T50 per ardeb. This is due to the very large crop this year and to the prohibition of export. "Zennari" dura, which is by far the best kind of dura, and which is exclusively grown in Kordofan, has fallen from £T75 to £T60 per ardeb of 420 rotls.

The dukhn market is very dull. Price £T30 per ardeb, which formerly sold at £T65.

The red simsim market has improved since the first of the month. The ardeb of 330 rotls has risen in price from £T135 to £T140.

Owing to a decrease in the demand the quantity of gum brought into El Obeid shows a considerable falling off, the arrivals to the end of March this year amounted to approximately 48,000 cantars compared with 84,000 cantars last year. Prices at El Obeid are in the neighbourhood of P.T. 50 per 120 rottles.

The value of the exports of gum in 1914 was £314,919 compared with £371,528 in the previous year. It is satisfactory to note that the export of gum to Great Britain is increasing. To the end of February this year the quantity exported was valued at £6,097 in comparison with £3,209 in 1914, at the same date.—*Egyptian Gazette.*

TRIPOLITAN HARVESTS.

Writing on March 31, the U.S. Consul at Tripoli says:—"The late rains needed to insure maturing of grain have fallen. Abundant precipitation was reported from the interior about the middle of March, and toward the end of the month copious, gentle downpours descended at Tripoli, along the coast generally, and inland toward the hills.

"In this oasis, at Zanzur, at Gargaresh, and other points visited, both barley and wheat are taller and stronger than last year, and the ears of the former seemingly well filled. All talk is of a good harvest, and it has been predicted that the yield will be at least one-third more than for 1913-14, when barley amounted to 1,564,750 bushels and wheat to 108,812 bushels; this would fall below, but not compare unfavourably with, the 2,279,673 bushels of barley and 251,697 bushels of wheat for the normal season of 1909-10.

"Barley will be harvested toward the end of April and wheat about one month later; the total should be more than sufficient for local consumption. Export, however, will depend upon Government regulation. At present no breadstuffs are permitted to leave the province; and should any relaxation be authorised, it would doubtless be in favour of Cirenica and Italy only."

EGYPTIAN MAIZE IN ENGLAND.

The Egyptian Ministry of Agriculture publishes the following on the subject of Egyptian maize, and its sale in England. "The following prices have been realized for samples of Egyptian maize on the British market according to a letter dated May 5. Nab el Gamal thirty-six shillings for four hundred and eighty pounds, making £8 17s. 4d. per ton c.a.f. Bristol, forty shillings for four hundred and eighty pounds, making £9 6s. 8d. per ton c.a.f. Liverpool."

EGYPTIAN WHEAT SURPLUS.

In a communication from the Egyptian Ministry of Agriculture attention is directed to the fact that there will be a large quantity of wheat available for export from that country. Of late years, owing to the cultivation of cotton proving more remunerative, only sufficient wheat has been grown to satisfy the local consumption, and in ordinary circumstances no surplus has been available for export.

This year, however, owing to the reduction of the area under cotton and a corresponding increase in the production of food-grains, a considerable quantity of wheat will be available, and attention is again being directed in Egypt to the importance of creating and meeting a permanent demand for Egyptian wheat abroad.

The Bureau of Commercial Intelligence of the Ministry of Agriculture in Cairo has lately submitted samples of the different kinds of wheat grown in Egypt for valuation at English ports and elsewhere, and very favourable reports have been received upon the samples sent.

In Liverpool an offer has lately been made to sell Egyptian Saidi (new crop) futures at a fair price, and this despite the fact that the Egyptian Government has not yet sanctioned the export of wheat from Egypt. It is, however, generally anticipated that this permission will be accorded.

The new crop is now being harvested, and the Egyptian Government has already authorised one of the largest Alexandria shipping firms to make a small trial shipment of the new season's wheat to Liverpool and another to London, with a view of testing the English markets. Should the prices obtained be sufficiently attractive to encourage an export business, regular supplies of Egyptian wheat may be looked for once the restrictions on its export be removed.

PRODUCE REPORT.

London, June 17.

Currants.

No arrivals have taken place this past week, and no cargo is afloat, but the s.s. "Salermo" is reported to be loading. Stocks become more and more restricted, and with a good demand for all qualities a general rise of about 1s. per cwt. on the week must be recorded. Provincial has, in consequence of the scarcity, attained a price of 29s., which must be considered a record for many years past. According to news from Greece, the new crop is progressing favourably.

In Liverpool, the s.s. "Bulgarian" arrived with about 1,600 tons for the market. During this past week the demand continued with more activity and very full prices were realised, up to 32s. being paid for medium quality. Gulf smalls were in request, buyers being willing to pay more money for any good parcels that offered. Advices from Greece report an excited market, with a further advance of 2s. to 3s. per cwt.

Sultanas.

Prices remain steady, but a little dearer. No further arrivals have taken place, and there is a good deal of speculative inquiry, with little business going.

In Liverpool the market is again practically cleared, the later sales being at an advance of 1s. per cwt. since last week's report. The s.s. "Pontiac" and s.s. "Bulgarian" have brought twelve to 13,000 boxes, and a brisk demand with higher prices is anticipated.

Seeds.

Linseed has been dull and weaker, Indian spot being quoted 55s., and afloat 54s. 9d. Rapeseed is steady, but trade restricted; brown Cawnpore May-June is quoted 52s. and pure Guzerat, ditto, 56s. Cottonseed is dull and inactive. Egyptian afloat, also June, is quoted £8 12s. 6d. Rangoon beans are firmly held at £16 10s. per ton.

Oils.

Linseed oil.—The market continues quiet and prices show a further reduction. On the spot, pipes, £28 5s., barrels £29. Rape oil.—Only Japan is lower, otherwise there is no change to report, ordinary brown on the spot, naked, £38. Cotton oil has declined, crude, on the spot, pipes, £29 15s. to £30, refined spot, pale, pipes, £31 15s. to £32; sweet, barrels, £36 10s. to £38 10s.

Oil Cakes.

Cottoncake.—In the absence of any fresh arrivals of Egyptian, spot parcels command full prices of £6 12s. 6d. to £6 13s. 9d. and Bombays at £6 7s. 6d. per ton. Linseedcake.—The trade continues to rule extremely quiet, with only a small retail business passing. Best London made maintain their prices of £10 5s. in consequence of the limited production. Greek in bags, both on spot and to arrive, offer at the relatively low figure of £10 7s. 6d. to £10 10s. per ton.

Locust Beans.

This kind is extremely scarce, and needy buyers are compelled to pay full prices of £8 5s. for whole and £8 10s. for kibbled.

Gums.

The market is quiet, with little business passing. Arabic "Turkey sorts" are quoted 40s. to 50s. cwt., East Indian common to fine 32s. to 37s. Mastic 3s. 9d. to 4s. Myrrh, good to fine, 96s. to 100s. cwt.; Tragacanth, first 560s. to 900s., low to good sorts 90s. to 130s.

COTTON REPORT.

(From Our Own Correspondent.)

Liverpool, June 17.

Messrs. Reynolds and Gibson report as follows:—

Egyptian Spot.—The market has been quiet, with a moderate inquiry, but a fair amount of business has been reported. With the exception of an advance of ten points in fully good, fair, and good, and twenty points in fine Sakellarides, quotations show no material alterations for the week. The sales are estimated at 2,700 bales, as against 4,100 last week.

Manchester Report.

The improvement in the tone of the market, which was reported last week, has, unfortunately, not been maintained. Manufacturers have not been entirely without inquiry, but the difference between buyer and seller is now so wide that great difficulty is met in arranging business. Our foreign outlets seem disposed to use up their stock rather than pay the extra prices manufacturers are compelled to demand, owing to continued and rapid advance in cost of production. Prospects of a peaceful settlement between masters and men are more favourable.

EGYPTIAN COTTON SEED.

The High Commissioner for Egypt reports to the Foreign Office that the Egyptian Ministry of Agriculture is anxious to call the attention of all purchasers of Egyptian cottonseed to the desirability of insisting on its fumigation at the port of shipment, with the object of destroying the pink-boll-worm which it may contain. It is almost certain that this parasite first reached Egypt in bales of imperfectly ginned cotton from India, and it is very probable that it will be introduced into other countries where Egyptian cottonseed is sown unless the seed is previously fumigated. With a view to eradicating the boll-worm in Egypt, measures are being taken to introduce a law requiring the fumigation of all cottonseed in Egypt. It will be some time before these measures can be universally adopted, owing to the absence of adequate machinery, but in the meantime the Ministry of Agriculture is ready to fumigate small amounts of seed, supplying a certificate of fumigation with the consignment.

PROPERTY IN ENEMY COUNTRIES.

It has been arranged that the Public Trustee shall keep a record of:—(*a*) Debts (including bank balances) due to British subjects from persons residing in enemy countries; (*b*) other property in enemy countries (including securities) belonging to British subjects.

Any person desiring to record such claims or property can obtain the necessary form for that purpose (Form G in the first case and Form H in the second) from the Public Trustee. Applications should be made to the Public Trustee (Trading with the Enemy Department), No. 2, Clement's Inn, Strand, W.C.

Shipping Intelligence.

LIBYAN COAST LIGHTING.

The U.S. Consul at Tripoli says that a plan for the better lighting of the Libyan coast has been agreed upon by the Italian Ministers of Marine and the Colonies. According to a local journal, it is as follows:—

(1) To mark the most important cape in each zone of 250 to 300 marine miles with a light of great power, and to establish in these same zones at the most salient points (preferably near the important ports) distinguishing beacons with various characteristics in order to eliminate all possibility of mistake.

(2) To mark the ports with secondary lights and beacons.

(3) To mark with lighted buoys rocky bottoms that render certain points peculiarly dangerous.

With this general plan in view, a programme for the first works has been drawn up which will utilise nearly all existing lights. New installations will include—

(1) A secondary lighthouse of fourth order at Zuara with intermittent white light, mounted on a tower of sufficient elevation to bring the focal plane to a height of 15 metres (49.21 ft.).

(2) The transfer of the small light now at Zuara to Ras (Cape) Macabees.

(3) Four flash lighthouses with refractory lenses of third order, having the focal plane 50 metres (164 ft.) above the level of the sea and a radius of 20 marine miles. These will be placed at Ras Tocra, Ras el Helil, Ras el Tin, and Ras el Mir (Tobruk).

Considerable study has already been made and data gathered concerning the points of location, their elevations, nature of foundations, etc., and it is planned to put the work forward as soon as practicable. Manufacturers of such apparatus, who are interested, should have their representatives in Italy take immediate steps to bring their products to the notice of the Ministry of Marine at Rome.

It is interesting to note that at present light signals exist for the Bay of Zuara, the port of Tripoli, the Bay of Homs, Cape Misurata, the port of Benghasi, the Bay of Derna, and the port of Tobruk. Zuara has only a small light, but at Tripoli there is a lighthouse of "Ottawa" type 9½, located on the Spanish fort. It has a white intermittent light, with a radius for average atmospheric transparency of nearly sixteen miles. Situated on the Castello and on the site of the dismantled Hamidieh fort are smaller signals—"Ottawa" type 4—with an intermittent red light and a radius of nearly eight miles. The night signalling of the port is completed by four "Ottawa" channel beacons, two with red and two with green intermittent lights.

At Homs is a signal with fixed white light having a radius of fifteen miles, and Cape Misurata is marked by a revolving port light, "Chance" type, with a radius of fifteen miles, placed on a hill overlooking the shore and nearly one-fifth of a mile from Cape Zurug. Situated on Cape Kreibiesch, at the extremity of the city of Benghasi, is a white light with a radius of sixteen miles, and the port of Derna is also marked by a white light of fifteen miles radius, situated on Cape Boahsh. The last lights along the Libyan coast are at the port of Tobruk—one green, with a radius of twelve miles, located at Point Tobruk, and the other with a scintillating red ray of four miles radius, at the head of the pier.

THE ALBANIAN BLOCKADE.

Reuter announces from Rome that the blockade of the Albanian coast, which, by the declaration of May 26, had been established from the Montenegrin border in the north to Cape Kephale in the south, is reduced as follows:—The southern limit to the blockade will now be Aspriruga. The limits of the blockade of Albanian territory are now, therefore, in the north 41 deg. 52 min. north latitude, 19 deg. 22 min. 40 sec. longitude east of Greenwich, and in the south 40 deg. 9 min. 36 sec. longitude east of Greenwich. The new barrier line established between Cape Otranto and Aspriruga forms a blockading line in all respects similar to that established by the declaration of May 26.

CYPRUS AND EGYPT.

Khedivial Mail Service.

The contract summer time-table (June 15 to October 14) of the Khedivial Mail Steamship Service between Cyprus and Egypt is as follows:—

Steamer leaving Alexandria on June 15 and on alternate Tuesdays subsequently.

Alexandria	Dep.	Tuesday	2 p.m.
Port Said	Dep.	Wednesday	11 a.m. (a)
Limassol	Arr.	Thursday	within 19 hrs. of departure from Port Said.
Limassol	Dep.	Thursday	2 p.m.
Larnaca	Dep.	Friday	2 p.m.
Famagusta	Dep.	Saturday	noon.
Port Said	Arr.	Sunday	11 a.m.
Alexandria	Arr.	Monday	at daylight.

Steamer leaving Alexandria June 22 and on alternate Tuesday subsequently.

Alexandria	Dep.	Tuesday	2 p.m.
Port Said	Dep.	Wednesday	11 a.m. (a)
Famagusta	Arr.		Within 23 hours of departure from Port Said.
Larnaca	Dep.	Friday	2 p.m.
Limassol	Dep.	Saturday	6 a.m.
Paphos	Dep.	Saturday	4 p.m.
Port Said	Arr.	Sunday	11 a.m.
Alexandria	Arr.	Monday	at daylight.

(a) Mail steamer to leave Port Said not later than 11 a.m. if the mails are on board; if not, immediately they are.

TURKISH CUSTOMS DUTIES.

According to a Berlin telegram, quoted by Reuter's Amsterdam correspondent, the Turkish Official Gazette publishes a decree raising import duties to 30 per cent. for the duration of the war. Half the duties on goods will be paid in kind when the military administration deems it necessary.

Engineering Notes.

An Automobile Work Recorder.

There are several devices recording the mileage and speed of an automobile, but there are many other particulars concerning a car which the owner wants to know, especially when his vehicle is out of his sight, and in charge of somebody else. A recently introduced automobile accessory, therefore, will interest many owners of pleasure as well as commercial vehicles, for it consists of an instrument which chronologically records the work performed by the machine. The device consists of an eight-day clock movement carrying a chart-dial and a recording finger that is operated by the vibration of the vehicle. When the automobile on which it is installed is standing still, with the motor running, a fine curved line is traced on the chart dial. When the automobile is travelling, a broad band is marked on the chart-dial, which is printed with figures and lines to indicate the hours of the day and night as well as the days of the week. The recording finger automatically shifts each day to make a new circle, so that a complete record of a week's work is made on one chart. All the parts of the instrument are enclosed in a pressed steel case, about eight inches in diameter and three inches deep. A glass front enables the driver of the automobile to see the dial record as well as the time of the day at a glance. The instrument may be employed on either commercial or pleasure vehicles. When used on the former, it furnishes the owner with an accurate report as to the work done with the vehicle. It records when the engine has been running and when the automobile is travelling; in fact, it accounts for every move made by the machine during the entire day, night, or week. The instrument informs the owner as to the time consumed in loading and unloading the vehicle, as well as the length of all delays. The owner can determine when the driver has wasted oil and fuel, or taken roundabout trips. On the other hand, the driver of the vehicle is prompted to better work, knowing that each move of the machine is being recorded. For pleasure vehicles, the instrument is also very useful, although its most advantageous employment is confined to motor trucks and other commercial cars. When installed on a pleasure car, it safeguards the automobile against unauthorised use in the absence of the owner, since those having access to the machine know that a record is being made of every movement. The instrument also renders good service when touring, by keeping a perpetual diary of the trip. With a few pencil notations on the charts, the owner has a permanent and accurate record of his travels.

The Telewriter.

In spite of the "blockade" of German trade and the "war" to capture it by "fairs" and exhibitions at home, it is well known that German goods are still exported in great quantities from Germany to other countries by an organised "smuggling" through channels the geographical position of which helps the masking of the origin of the goods. Apart from other goods, German machinery and electrical appliances are still sent to the markets in the Near East, and buyers are, apparently, glad to have them, since no attempt has been made by other manufacturers to approach them. We mentioned recently that in the construction of new telephone lines most, if not all, of the material for the installation, etc., was of German origin, although "officially" it was not recognised as such. It has also been suggested that a certain German system of telewriters should be introduced in these lines. It is very probable that the existence of a British telewriter is not known out in the Near East—it is not even well known in England. Nevertheless it is a very ingenious instrument, constantly growing in popularity, and is used in the General Post Office, and, it is said, in three or four German battleships. This means that it is considered superior to that of German construction.

What is a Telewriter.

A telewriter will transmit in writing everything that is capable of being written, and will faithfully reproduce signs in any variety of combination. The telewriter may be attached to the ordinary telephone wire without any interference with the telephone service, and enables the user to speak or write as desired. There is no switchboard, and the telewriter and telephone cannot possibly clash in their use. The mere action of lifting the receiver to speak places you in connection with the telephone, or lifting the pencil to write with the telewriter, the writing of the sender being instantaneously reproduced at the receiving station. As an adjunct to the telephone in business where frequent communications are passing between office and warehouse, or office and factory, and where written instructions would prove an advantage, the telewriter is invaluable. The telewriter does not supplant the telephone, to which, as we said, it forms an adjunct, for as long as two people want to talk to one another the telephone will always be needed; but there are messages requiring accuracy in transmission that call for no personal conversation, and their value is immeasurably added to by a written record despatched through the telewriter and duly signed by the sender. Where numbers and prices are constantly involved mistakes must occur, and with them disputes. The telewriter produces a commercial document removing all doubt as to accuracy or responsibility. Orders or descriptions can be sent through the telewriter with sketches, signs, numbers, etc, by anyone who can write or sketch, and the receiver being automatic, one operator, the sender, can transmit the message in the absence of the addressee, who, on his return, finds it written in ink and in the handwriting of the sender. The mechanism is very simple. The arms of a pantograph connected with the transmitting pencil regulate the electrical currents, which are sent over the connecting wires and which place the receiver pen in synchronous movement with the transmitting pencil.

Shortage of Timber.

One of the immediate results of the war being a shortage of timber from the sources hitherto available, the use of colonial timber and the possible use of timber substitutes are engaging the attention of colliery managers. In this connection the staff of the mining department of Leeds University, in conjunction with members of the industry, are making experiments for which exceptional facilities, including the use of a specially designed 500-ton press, have been rendered available. The result of the experiments is awaited with interest, although in some quarters it is considered doubtful that a substitute for timber could cost less than the cost of timber brought from the Colonies. It is a question to which Indian timber merchants might with advantage give attention. It is asserted that one quarter of the total importation of plants and timber in Baghdad comes from India. It is evident, therefore, that Indian timber can be brought to the Persian Gulf for shipment to England at cheaper rates, especially if the wood is sent in the native sailing vessels which come from India to fetch dates. With regard to the quality of the Indian wood, it is an interesting fact that the wood found in the ruined palaces of the Sassanian kings at Ctesiphon (550-637 A.D.) and the Arab Khalifahs at Samarra (860-900 A.D.) is Indian teak.

The Astra Romana produced 466,604 tons in 1914 (as against 444,025 tons in 1913). The export had to be stopped entirely through the Dardanelles; this and the prohibition of export of liquid fuel made it necessary to limit the production to a certain extent, as the storage capacity was not adequate. The Government was, however, willing to let to the oil companies all the storage tanks belonging to the pipeline Baicoi-Constantza which will be built. The Astra Romana obtained on lease a part of these tanks. A new field, Ochiuri, was obtained on very liberal conditions; a well here already produces ninety tons a day. As the plot has an area of 1,262 acres and the well has been stuck some 200 metres from its boundary, a well-paying exploitation may be expected. The Astro Romana has built up considerable reserves to meet any possible damage.

COMPANY MEETINGS.

MORTGAGE COMPANY OF EGYPT.

The seventh ordinary general meeting of the Mortgage Company of Egypt, Limited, was held yesterday, at Cannon Street Hotel, London, E.C., the Right Hon. Viscount Milner, G.C.B., G.C.M.G. (chairman of the company) presiding.

The acting secretary (Mr. S. Alers Hankey) having read the notice convening the meeting and the auditors' report,

The Chairman said: The next business is to propose the adoption of the report. I have no doubt, gentlemen, you will allow the report which has been circulated to be taken as read. A perusal of the report will have prepared you to hear that the fortunes of the company in the twelve months under review have not been so good as in the preceding five years of its existence. A check has come in a career which has hitherto been one of steady prosperity. And it is a serious check. I will be quite frank about that. But, on the other hand, you must remember that this set-back is not peculiar to ourselves, but is due exclusively to the complete though temporary derangement of the trade of Egypt resulting from the war, and that every company, large or small, and indeed every individual, interested in Egyptian land, is equally affected. The main trouble is that the market for the great staple product on which Egyptian agriculture so largely depends—I mean cotton—was utterly upset at the outbreak of the war, and cannot be expected to recover completely, though it may recover to some extent, while the war continues. Broadly speaking, the Egyptian cultivator maintains himself and his family by his other crops. He pays his taxes, discharges his obligations—his rent or his mortgage interest, as the case may be—and provides for his own wants, over and above bare subsistence, by the sale of his cotton. In the year which we are considering the value of the cotton crop to the cultivator has been enormously reduced. It is impossible to make an exact estimate, but he has certainly received between one-half and one-third less for it than in an average year. The crop, to begin with, was not a good one. But even the reduced crop has not found a ready market, and the price has been very low. From the latest figures in my possession it appears that the cotton exports to May 31, 1915, were 5,617,000 cantars, against 6,615,000 last year, and that the average price per cantar was 12¾ dollars, against 17¾ last year. No one who knows Egyptian conditions can fail to realize what such a reduction of annual income means to all parties interested in Egyptian land. The way in which it affects this company is by causing a very great increase in our arrears. As you know, our mortgages are all redeemable by a series of annual payments, mostly extending over a period of from fifteen to thirty years, each payment including not only interest, but the return of a certain portion of the capital. The amount of arrears at the close of any financial year is always considerable. This is the universal experience of all Egyptian land and mortgage companies. The Egyptian is never a regular payer. He has not that reverence for a due date which is the corner-stone of our European system of business. In ordinary times the fact that a number of their debtors are in arrear does not cause much uneasiness to Egyptian mortgage companies. Experience has taught their managers that with patience and a certain amount of pressure the great bulk of these arrears can be got in all right. They are even a source of profit in some cases, as an instalment in arrear carries a higher rate of interest than the original loan. But the matter is different when the proportion of instalments in arrear shows a sudden and abnormal rise. That has happened during the past year with every one of the companies deriving a revenue from Egyptian land, whether as owners or mortgagees. Our own company is no exception. We entered the year with arrears of £187,000. Half of that amount was recovered during 1914-15, but the new arrears were so heavy that by the end of the twelvemonth the total had risen to £355,000, and although there has since March 31 been a reduction of £30,000, the figure is still very large. These are the circumstances which led the directors to the conclusion that it was necessary in the present instance to make some special provision for arrears, over and above the normal allowance for bad debts. This precaution has been criticised in some quarters, because it necessitates the postponement of the half-yearly dividend on the preferred shares due July 1. I may say that the directors only decided to postpone that payment with the greatest reluctance. We fully realise that, especially at a time like the present, when incomes all round are so severely reduced, it is incumbent on us to distribute to shareholders the maximum that can reasonably be parted with. And if the end of the war had been in sight, I should personally have felt that it was justifiable to stretch a point and pay the dividend on the first of next month. But with the possibility, I will not say the probability, of the war continuing throughout another cotton season, it really did not seem consistent with prudence to assume that the whole of these large sums would be realised at any early date, and not to set aside any exceptional reserve to meet circumstances which are extremely exceptional. distressed condition of Egyptian agriculture, which shows itself in the growth of arrears, is also reflected in the increase of properties acquired by foreclosure, which now stand in our balance-sheet at £120,899 against £39,641 last year. This increase is, however, mainly due to a single large property, now in the hands of the company, which is being well looked after. Of course, it is only with the greatest reluctance that we go the length of expropriating our debtors. It is not our desire to become a land-holding company. And in an exceptional pinch like the present it would be both harsh to the mortgagors and unwise in our own interest to sell up a number of men who are in temporary difficulties, but who, with a turn of the tide, are likely in time to discharge all their obligations. On the other hand, where a mortgagor is heavily in arrear and the property, which is our ultimate security, is threatened with deterioration, we have no option but to have recourse to foreclosure. At a time like the present the proportion of such cases is greater than at ordinary times, hence the number of properties thrown upon our hands increases, and this is evidently not the moment for reselling them. Considering all these circumstances, I do not think that the item in our balance-sheet, "Properties acquired by foreclosure," is unreasonably large. That, I think, is all that I need say about the details of the account. The general position is clear. We are passing through a trying time. How long or how severe the period of depression may be it is impossible to foretell. That depends entirely on the duration of the war. It is reasonable to hope that, even if the war continues, the economic position of Egypt will get better rather than worse. But we cannot look for any satisfactory or complete recovery till the return of peace. That being the case, I am not able to foretell just when we shall be in a position to resume the regular payment of dividends on the preferred stock.

These dividends are cumulative, and we naturally will do all in our power to prevent their piling up to the detriment of the ordinary shares. Meanwhile, the debenture interest is well protected, and I see no reason to fear any interruption in its regular payment. For the rest, there are just two reflections, which may afford us some comfort in the present and good hope for the future. In the first place, the adverse conditions of the present time are due entirely to external causes, to a world-calamity, affecting us along with any number of others, which it was impossible to foresee, and would have been impossible for us, even if we could have foreseen it, to guard against. There is nothing wrong with our business in itself. Take away the external disturbing factor and the position will soon right itself. And secondly, I may venture to express the opinion that, as Egypt was one of the first countries, not actually the scene of war (for you cannot call Egypt the scene of war because of that trifling attack upon the canal), to suffer very severely from its outbreak, so she will also be one of the very first to recover when peace is restored. It is always dangerous to dogmatise about the economic future, but this seems to me a reasonable forecast. When the war is over the civilized world will be bound to make an unprecedented effort to repair wastage, and to replenish its depleted stocks of all those articles the production of which is now stopped or greatly reduced by the concentration of capital and energy upon the war itself. But it will take time to make good all the deficiencies, and necessaries will come before luxuries. The first and greatest demand of a world returning to its normal life will be for those great staples of prime necessity, which are absolutely essential to civilized mankind. But what is Egypt but a producer of some of the chief of these? It is upon the unrivalled fertility of the soil, upon its capacity to go on producing in rich abundance such crops as cereals, sugar, above all cotton, that the economic strength of Egypt rests. Take only the case of cotton. For some time before the war there was widespread anxiety lest the production of raw cotton should not keep pace with the increasing demand for cotton goods, and great efforts were being made to increase the cotton-growing area. That movement has been checked by the outbreak of war, and, on the other hand, as soon as peace is restored, the demand for cotton goods will be greater than ever, and so will be the need of raw cotton on the part of the makers of these goods. Given security and good government, blessings the permanence of which the final elimination of Turkish authority should go a long way to ensure—and there is no reason to doubt that Egypt will very soon play as great and perhaps even a greater part in the supply of some of the most indispensable products of the earth's surface than she has done in the past. With so many uncertainties in the immediate future of the world, it is impossible not to feel some anxiety just now about our business, as about every other. But there is no ground for despondency. Meanwhile, it is on the members of the local board in Cairo and on our staff there that the brunt of the present trouble falls. The management of our business in Egypt, at all times requiring great care, calls under present circumstances for the exercise of an exceptional degree of judgment and discrimination. It is satisfactory to feel that whatever local knowledge and great business experience can do to cope with the present difficulties and to safeguard the interests of the company has been and will continue to be done. Speaking for the other British directors as well as for myself, I am glad to take this opportunity of expressing our continued confidence in the way in which our affairs in Egypt are conducted, as well as our sympathy with our Cairo colleagues in the discharge of their anxious and responsible duties. In conclusion, I have only to express my regret that the London directors are not able to meet you here in full numbers to-day. Besides Mr. Mills and Mr. Thors—unavoidably prevented from attending—two other valued colleagues of ours, Colonel Sidney Peel—who is at the front in command of his regiment—and Colonel Everard Baring—likewise engaged in military duties—are absent. You will join with me in wishing them success in their patriotic endeavours and a safe return to our midst. I have now to move that the report of the directors and the balance-sheet for the year ended March 31, 1915, be and are hereby approved and adopted.

Mr. E. W. P. Foster seconded the resolution.

Mr. T. Lighton: I hesitate very much in getting up. I wish there was somebody here whose interest in the concern was larger than my own, and whose knowledge of Egyptian business problems was very much larger. I have always attended the meetings, and I have generally spoken a few words of congratulation. I am sorry I cannot do so to-day. When I was here last year I did not know what was coming on, but I made a feeble, and, I hope, polite, remonstrance against the payment of the 8 per cent. on the ordinary shares. I did not know any more than anybody else what was coming, but I was not very far wrong as events have turned out. I said then that I was a shareholder, though not a very large one, and that is equally true to-day. I said that I did not think you should increase the dividend on the ordinary shares, having regard to the very slender resources that we had. I also said that I hoped we should not have any bother with foreclosures. I had a dim and intangible idea that as we had had foreclosures we might have some more—and we have had some more. My demurrer to the 8 per cent. on the ordinary shares was, I think, a very right demurrer; as the events have turned out we had better have had that £2,500 in our pockets than frittered away among the shareholders. I know that Mr. Gladstone used to talk about taxes that were fructifying in the pockets of the people, but I do not hold with that; it would be better for us to have a reserve. But there is no use crying over spilt milk—if the milk is spilt; we must wait and see, as Mr. Asquith said, hoping for better times; but I hope the next time we are called here we shall be able to meet you with more smiling faces, and that you also will bear a more smiling countenance than you do to-day.

The resolution was then put to the meeting and carried.

The Chairman moved that the Hon. A. H. Mills, a retiring director, be re-elected.

Sir William E. Garstin, G.C.M.G., seconded this and it was carried.

The Chairman said he had next to move that one of their Cairo colleagues, Captain R. G. Westropp, be re-elected a director.

This also was seconded by Sir William Garstin and carried.

Sir William Garstin moved that the Right Hon. Viscount Milner, also retiring, be re-elected.

Mr. E. W. P. Foster seconded the resolution and it was carried.

The Chairman: Gentlemen, on behalf of myself and my re-elected colleagues I beg to thank you for your continued confidence. I am sure we shall always do our best. The circumstances of the time, as you know, are difficult; but I have good hope for the future. With regard to the remarks made by the only gentleman who addressed us—whom we are always glad to hear—for I prefer a meeting at which there is some sort of discussion myself—I should only like to say this, that I am in great sympathy with him, because I am myself a preference and not an ordinary shareholder. But I cannot help feeling that even if we had kept the £2,500 in our pockets the position to-day would not be materially altered thereby. If you gave me another £10,000 I should still feel it was not the moment to make that distribution on the preference shares. I do not think there is any other criticism except that about the foreclosures, and there will always be a certain number of them. It is inevitable in a business of this kind, where you have hundreds of properties pledged to you, and are lending sums of between £3,000,000 and £4,000,000 on those hundreds of landed properties—it is inevitable, and would be so in any country, that a certain number of your debtors will fail to meet their obligations. You nurse them as long as you can; in some cases you can get through satisfactorily by patience and consideration, but in others you cannot. They are evidently broken men. You must step in and take their places and get the properties which are your ultimate security. I do not think, considering the great stress of the present time, that the number of properties expropriated is large. The figure is large, but, as I explained, that is mainly due to a single large property. I do not much mind taking over a single big property. It is much easier to deal with, and you are much less liable to make a loss upon it than with a lot of little properties. I hope we shall not have many small properties. I think there is nothing more I have to say but to thank you again for the re-election of myself and colleagues.

Mr. T. Lighton moved the reappointment of the auditors (Messrs. W. B. Peat and Co.).

Mr. E. A. Greathed seconded this, and it was carried.

Mr. Lighton then moved a vote of thanks to the Chairman and his co-directors on the board.

This was seconded by Mr. Greathed, unanimously accorded, and this ended the meeting.

NEW EGYPTIAN COMPANY.

The annual meeting of the New Egyptian Company, Limited, was held at Winchester House, London, E.C., yesterday, Mr. Arthur A. Baumann (Chairman of the Company), presiding.

The Secretary (Mr. Thomas Day), having read the notice convening the meeting, and the auditors' report,

The Chairman said: Gentlemen, I do not suppose that the most sanguine shareholder expected a dividend or even a cheerful report to-day. Egypt has suffered more by the war than perhaps any other part of the world outside the war zone, by her geographical position, by the political conditions of the country and by the accumulation of agricultural misfortunes, beginning with a bad Nile in 1913, and ending with the boll worm in the cotton plant which appeared after the declaration of war. It is therefore not surprising if our revenue shows a decline as compared with the year 1913. The gross revenue of the company is £28,569, which is made up of £11,785 revenue from the Company's lands, £14,504 profits on the sales of land, £1,247 odd interest in London and instalments of land sales less interest on instalments for lands purchased, and two other small items. This gross revenue of £28,569 is reduced to a net revenue of £17,776 by the deduction of our expenses in Egypt and in London and the directors' fees. The items you will see given you on the left hand side of the profit and loss account. We have reduced our administration expenses considerably—by a sum of £1,800 in round figures. This net disposable revenue of £17,776 we propose with your

Digitized by Google

approbation to dispose of in the following manner: to debenture interest and trustees' fees, £5,707; to reserve against loss on 1913-14 rentals, £3,320; to reserve against interest due by debtors for lands sold, £4,191; to loss on realisation of cotton, £728; leaving a final balance of £3,829, which we propose to carry forward to next year. The gross revenue of £28,000 compares with the gross revenue for the preceding year of £38,000, and the decline of that £10,000 is due to arrears of instalments and interest on those instalments; these arrears being due to the inability of the tenants to pay in full owing, of course, to the war, to the failure of the cotton crop, and to the diminution, or rather, I might say, to the demoralisation for a certain time of the cotton market in Manchester and in other parts of the world. But I would call your special attention to the ample reserves which we have made against those arrears, amounting in round figures to £7,400, and we think that by means of those adequate reserves against arrears we have, as far as possible, strengthened our financial position. With regard to the future, I think I may say that if Egypt has suffered more than other parts of the world she has a great prospect of recuperation in the near future. She has, in the first place, every chance of an agricultural recovery. The Government, as you know, has restricted the area of cotton planting, and has practically compelled the cultivator and the tenant to sow other crops —cereal crops—wheat, and barley, and maize, and a kind of clover used for feeding cattle. To my mind this regulation on the part of the Government will be of great benefit to Egypt, even in the immediate future and during the continuance of the war. It is a great danger for an agricultural country to depend too exclusively on one crop, as Egypt in the past has depended almost exclusively—at any rate, in the Delta—on the cotton crop. The West Indies, for instance, depended almost exclusively on sugar, and the West Indies were ruined for a time by the exclusive dependence on one crop. Ceylon depended for a time exclusively on coffee, and Ceylon was absolutely ruined for several years by the appearance of the coffee blight. She has recovered, after many years of trial, by planting tea and rubber, and I think that from an agricultural point of view nothing better could have happened to Egypt than her planting cereals; because I take it that it is practically certain that whether the war finishes this year or next, or the year after, the price of wheat and all foodstuffs is bound to rise. I am not a speculator, but I believe that the best speculation that a man could go in for now would be to buy future wheat for 1916 and 1917. If I am right in that conjecture, our estates and our tenants are going to benefit very largely by this planting of cereals. Apart from the agricultural prospects, which, I think, are extremely good, Egypt has every chance of political improvement. We have at last in Egypt got rid of the Turks and the Germans, two plagues which I venture to say were far worse than the locusts or the boll worm. We have placed upon the throne a new Sovereign who is thoroughly loyal to the British connection, and who is a man of distinguished intelligence as I think is proved by the fact that he was formerly a director of the New Egyptian Company. (Laughter.) Egypt is now practically under the protection of Great Britain and we shall witness the interesting experiment of creating an Egyptian nationality, because, as I suppose you all of you realise, there is no such thing as an Egyptian nation and no such thing as an Egyptian subject. All the native races who inhabit Egypt were until the other day the subjects of the Sultan of Turkey, and all the white inhabitants were subjects of various nations, European and American.

THE ALEXANDRIA WATER COMPANY, LIMITED.

PAYMENT OF DIVIDEND.

Notice is hereby given that a DIVIDEND of SEVEN SHILLINGS and NINEPENCE per £5 SHARE on COUPON No. 53 is PAYABLE on and after June 15, 1915, at Messrs. Barclay and Company, Limited, 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Limited, Alexandria, Egypt, upon the making of a declaration as to ownership in the form required by the above Banks, forms of which will be supplied upon application.

By Order of the Board,
H. R. C. BLAGDEN, Manager.
xandria, Egypt, May 20, 1915.

Concluding, the Chairman said that their prospects of recovering arrears which had accrued depended on the restoration of confidence, which in its turn depended on the duration of the war. Since the closing of the accounts on December 31 they had sold 129 feddans for a sum of £10,956. The thanks of the shareholders were due to Mr. Suares and other members of the staff in Egypt for the way they had met the very trying crisis of the past ten months. He moved the adoption of the report and accounts.

Mr. T. L. Gilmour seconded the resolution and after a little discussion the report was adopted.

OTTOMAN RAILWAY.

A special general meeting of the shareholders of the Ottoman Railway from Smyrna to Aidin was held on Friday at Winchester House, Old Broad Street, E.C., to consider a scheme for the creation and issue of further First and Second Debenture stock in connection with the proposed funding of the interest. Lord Rathmore presided.

The Chairman said that at the general meeting of the company in March he laid before the shareholders particulars of the oppressive and violent acts on the part of the Turkish Government which culminated, in the closing days of last November and the early days of December, when their general manager's house at Smyrna was surrounded by soldiers and the manager himself was made a prisoner of war. The Turkish authorities took over the working of the line, and since then all regular postal and telegraphic communication had been interrupted. At that time he was unable to give any authentic information of what had been happening along the line, but he added that it was reasonable to suppose that, in their own interests, the Turks would not wilfully damage the railway. So far as the council could now say, judging from such reports, or rather, such rumours, as had reached them, there were no grounds for thinking that any wanton injury had been done by the local authorities. It was possible to make provision for the payment of the First and Second Debenture interest which became due on January 1 last, with the assistance of an advance from their bankers secured upon certain of the reserve fund investments set aside for the Debenture holders, but that was an expedient to which recourse could not be had again, and the company would not be able to make the cash payment either of the half-yearly interest upon the Debenture stocks falling due on July 1 next, or in any subsequent half-year so long as the war with Turkey lasted.

The scheme was intended to cover, if necessary, all payments of Debenture interest on both issues for twelve months from the signing of peace between the British and Turkish Governments, or for a period of three years from July 1, 1915, whichever was the shorter. During that period the company might defer payment of the Debenture interest. The interest so deferred would carry, in the case of both issues, interest at the rate of 5 per cent., payable at the termination of the specified period, and the company would be entitled, in lieu of paying such interest in cash, to issue First and Second Debenture stock—in the case of the Four per Cent. First Debenture stock (as part of and ranking pari passu with the existing First Debenture stock) at the rate of £120 of stock for every £100 of interest so satisfied; and in the same way, in the case of the Five per Cent. Debenture stock, the company would have the right, in lieu of paying such interest in cash, to issue in respect thereof a Five per Cent. Debenture Stock which would be in all respects part of, and would rank pari passu with, the existing Second Debenture stock, at the rate of £100 of stock for every £100 of interest. The company would from time to time issue certificates in respect of all deferred interest, and would retain the right to pay off in cash at any time any portion of any interest, the payment of which was deferred under the scheme. The scheme further provided for the suspension of the Debenture stock reserve fund for the period of the scheme and for the application of that fund in repaying the loan raised for meeting the interest on the Debenture stocks in January last and now secured on part of the fund, and also for the suspension of all dividends while any deferred interest was outstanding. The Council of Administration were also authorised to create such additional First and Second Debenture stock as might be necessary to enable the company to carry out the scheme. He mentioned that meetings would be held of both classes of Debenture stockholders, who had responded so willingly and promptly to the appeal of the council for their support as enabled him to say that already there had been received an overwhelming majority of proxies in favour of the scheme. Speaking as a shareholder himself, he heartily recommended the scheme. He concluded by moving a resolution sanctioning the arrangement.

Mr. J. H. Trewby seconded the resolution, which was carried without discussion.

At a general meeting of the holders of the Debenture stocks, Lord Rathmore explained the arrangement, remarking that it had the approval of the three trustees of the trust deed, and concluded by moving its adoption. Mr. J. H. Trewby seconded the resolution, which was unanimously carried without discussion. Separate class meetings of the First and Second Debenture stockholders were afterwards held, at which the scheme was also agreed to.

COMPANY NOTE.

Gresham Fire and Accident Insurance.

The report of the Gresham Fire and Accident Insurance Society, Ltd., for the seventeen months from August 1, 1913, to December 31, 1914, states that the premium income, after deduction of re-insurances, amounted to 134,085. The income from investments, less income-tax, was £7,818. The total claims under policies chargeable to the period amounted to £69,165, being 51.58 per cent. of the premium income. Expenses of management, including commission and other outgo, amounted to £79,342. For the first time the entire expenditure has been charged against the premium income. The expansion of the business has called for the addition of £3,442 to the reserve for unexpired risks in order to maintain this reserve at the ratio of 33 1-3 per cent. to the premiums attributable to the year 1914. Securities realised and exchanged have resulted in a loss of £537. The sum of £1,884 has been added to investment reserve account to cover depreciation. The sum of £2,000 has been set aside as a reserve for contingencies which may arise from the state of war. The excess of outgo over income was £7,124, but by reason of the reserves for depreciation, war and unexpired risks the balance to debit of profit and loss account has been increased by £14,450, and now stands at £35,793.

COMPANY RESULTS, &c.

GEORGE NUNGOVICH EGYPTIAN HOTELS.—The annual meeting of shareholders was held at the Grand Continental Hotel, Cairo, on June 10.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for the week, 142 tons (last week 255 tons); Hurgada production for the week, 212 tons (last week 149 tons).

PIRÆUS, ATHENS, AND PELOPONNESUS RAILWAY.—Messrs. R. Raphael and Sons, Austin Friars House, E.C., announce the number of bonds drawn for repayment at par on July 15.

PIRÆUS, ATHENS, AND PELOPONNESUS RAILWAY.—The directors announce that a final dividend (coupon No. 53) at the rate of 3.50 drachmæ per share for the year 1914 has been declared on the Ordinary shares, and is now payable at the current rate of exchange at the Bank of Athens, 22, Fenchurch Street, E.C.

ALEXANDRIA WATER COMPANY.—A dividend of Seven Shillings and Nine Pence per £5 share on Coupon No. 53 is being paid at Messrs. Barclay and Company, Ltd., 1, Pall Mall East, London, S.W., and 54, Lombard Street, London, E.C., or at the Anglo-Egyptian Bank, Ltd., Alexandria, Egypt.

NOTES OF THE WEEK.

The recapture of Lemberg by Austro-German forces is the melancholy feature of the week's news. The fact that it has no military significance beyond registering the extent of the Russian retreat in Galicia need not blind us to the seriousness of the turn of events in the eastern theatre of the war. At the same time the need for a long view of things is emphasized, and we shall, perhaps, be better advised, in the face of the vast superiority of the Central Powers in men and munitions at this stage, to dwell upon the surprising results achieved on this front during the first nine months of the war. Lemberg was occupied by our Russian Allies on September 3. Its capture implied the failure of the first Austro-Hungarian thrust into Russia. From that point the Russian advance continued to make steady headway; but it is now apparent that it was not sufficiently supported by reserve resources. The enemy has reversed his original plan of delivering a swift and decisive blow in the West and then turning to meet the Russian menace. The stubbornness of the defence in Belgium and France and the rapidity with which the earlier stages of Russian mobilization were carried through upset his calculations, and it has taken the Central Powers nine months to recover the strategical offensive. Russia now has to bear the brunt of the enemy's main attack; but both she and her Allies are in a stronger position actually and relatively than when the war began.

The fortunes of the Russians in Galicia of necessity monopolize the chief interest in the military operations. It is clear that the German plan was to force a decisive engagement or so to break the Russian line that the work of reforming would prevent our Allies from being a serious factor in the war for some months to come. In that time the enemy would have had opportunity to transfer a large portion of his Eastern forces to the western front, and to try the sledge-hammer tactics that proved successful on the Dunajecz and San Rivers in a gigantic thrust on Calais. So long as the Russian line avoids being broken, and the Germans have perforce to press on after it in the hope of inflicting a crushing defeat upon it, the German plan is frustrated, and the number of men that might be spared for Flanders is inadequate for the task before the Germans in that theatre of the war. If this analysis of the situation can be accepted, it is evident that the loss of Przemysl and even the fall of Lemberg are events of minor importance from the military point of view.

On sentimental grounds the withdrawal of the Russians from Galicia is a misfortune, and if the end of the war is not to be until Germany is overrun by the Allies, then the retreat of the Russians seems to leave all that has been accomplished in the first ten months of the war to be done over again. But the process of attrition, on which the Allies have to rely to a considerable extent, continues, and, indeed, has been greatly accelerated, since the slow advance of the Russians over the Carpathians gave place to the frantic attacks of the enemy in massed formations against our Allies' imperturbable infantry. When the time comes, therefore, for the Russians to advance again, it is difficult to suppose that the enemy's powers of resistance will be as formidable as they have proved during the earlier stages of the war. The Germans have wonderful feats to their credit in this war, but they will enhance their reputation if they are able in the course of a few weeks or months to make Przemysl as strong as it was before, while their military genius would stand convicted if they allowed for a second time a large Austrian garrison to shut itself up in the fortress to face inevitable surrender. The rate of the next Russian advance, therefore, does not have to be reckoned by that of the first, and the Allies may derive consolation from the reflection that with their line unbroken, however far they have to fall back, the Russians may find themselves any day in a favourable position for resuming the offensive.

The farther the Austro-German forces advance in Galicia, the more vulnerable do their lines of communication become to an attack from Roumania. This aspect of the situation is not lost upon the Governments of the Central Powers. Although they could not persuade themselves to believe that Italy would take part in the war against them, they do not appear to have cherished similar illusions regarding Roumania. The temporary discomfiture of the Russians affords an opportunity, of which they have availed themselves to the full, of renewing their efforts to secure the maintenance of Roumanian neutrality. These efforts, we may feel confident, will include not only threats, but the most lavish promises, particularly in regard to Bessarabia, which has not been mentioned between

Digitized by Google

Roumania and the Triple Entente, but which will now be represented as entirely in the gift of the Central Powers. Although there is not the least reason to suppose that the confidence of the Allied Powers in Roumania will have been misplaced, it will be well to recognise the difficulties of the Bratiano Government and to conclude without further delay the negotiations now in progress at Bucharest.

Bulgaria will also have come in for the special attentions of Austro-German diplomacy as a result of the successful advance in Galicia. For some time the Central Powers had good reason to suppose that her antagonism to the rest of the Balkans and her pique against the Triple Entente would at least keep her neutral, if she did not actually make common cause with Austria-Hungary against Serbia. More recently, however, the attitude of the Bulgarian Government must have caused uneasiness in Berlin and Vienna, and this feeling will have been intensified by the reports of negotiations with the Powers of the Triple Entente. It will not have been overlooked that the mobilization of the Roumanian Army seemed to leave Bulgaria quite unconcerned, whereas at an earlier period of the war such a step would have caused the Bulgarians at least to affect considerable agitation. Austro-German successes in Galicia will have found the negotiations between Bulgaria and the Triple Entente well advanced. The Central Powers, however, will know how to make the most of their opportunity, and we must hope that gratification at finding themselves courted by both parties in the great war will not warp the judgment of the Bulgarians.

On May 29 the four Entente Powers addressed a Note to the Bulgarian Government on the subject of its attitude towards the war. The Bulgarian reply was handed to the representatives of the Powers in Sofia on June 15, and although its contents have not been divulged, it is understood that they offer a basis for further discussion with some prospect of an arrangement being ultimately reached. In the meantime Germany, with a disinterestedness which is becoming characteristic, is making a fresh bid for the maintenance of Bulgarian neutrality by trying to persuade Turkey to surrender the Dedeagatch railway to Bulgaria. On this point Bulgarian diplomacy has only to follow the line of argument adopted with telling effect by Italy. In the event of the defeat of Turkey, the railway in question would no longer be hers to give; while if the Central Powers are victorious in the war, what guarantee, which will be proof against the fate of Belgium's scrap of paper, will Bulgaria have that the promise now given will be observed? No neutral country can ignore the force of this line of argument. It is surely not without significance that the only State which has thrown in its lot with the Central Powers since the war began has been Turkey, whose decision was influenced not by national interest but solely by the bribery of her governing clique.

The Turkish Government appears to have little faith in Germany's efforts to make Bulgaria keep the peace. According to the well-informed correspondent of *The Times* in the Balkans, the troops concentrated at Midia in anticipation of a landing by a Russian force are being withdrawn. Some 50,000 of them are marching to Kirk Kilisse, where they are to entrain for Adrianople. The hasty measures now being taken to increase the garrison in that town and to strengthen the fortifications follow at no great interval upon the removal of heavy artillery from this region for service on Gallipoli Peninsula or the coast of the Sea of Marmora.

The real attitude of practically every Turk at present in arms against us was expressed by a Turkish officer who, during an armistice on Gallipoli Peninsula, was asked why his country was fighting against the British. The Turk, says a Reuter's telegram, replied: "I do not know. We have no ill-feeling towards you British, but we are military men and must obey commands." This answer may be commended to the notice of the Mohammedan world. It would never have been uttered, if the proclamation of the *jehad* had been taken seriously in the Turkish Empire. The Turks were told that they had to fight because their religion and independence were threatened. But the presence of German officers among them at once disposed of this untruth, and they have probably fallen into the fatalist attitude that they fight because they have to, and the reason why does not matter much. Only now, when the fierceness of the struggle on the Gallipoli Peninsula is telling on them, do they begin to have misgivings, and they are finding out that the only reason for fighting the British is that a single Turk—Enver Pasha—willed it. The discovery, if reports be true, is proving uncomfortable for the Turkish Minister for War.

Meanwhile the Turks "obey commands," and are giving a splendid exhibition of their fighting powers at the Dardanelles. The narrow limits of the peninsula favour them, as our troops are restricted to frontal attacks, and have room neither to deploy their full strength nor to accumulate munitions out of range of the enemy's positions. Turkish counter-attacks, however, fare no better than our own. The present week has seen a renewal of the desperate fighting which has characterized the operations throughout in this theatre of the war. Preparations for an attack were made by the Turks on June 19, but after the expenditure of a large number of high explosive shells their initiative failed them. They had discovered that the bombardment had not had the anticipated effect of annihilating our forces in the trenches. The Allied troops launched an attack in reply, but only to lose a trench themselves as the result of a counter-attack, until reinforcements enabled them to retake it. A few days later an attempt was made to straighten out the Allied line by advancing the wings which had been successfully held by the enemy at the time of the great attack on June 4. The struggle fluctuated in many parts of the line, but when the day ended our French allies had taken possession of six hundred yards of the enemy's first-line trenches, and were able to hold them during the night in spite of determined counter-attacks. Everything, says the official account, confirms the extremely heavy losses of the enemy.

The suggestion made in these columns last week that Serbia was not likely to embark upon any forward policy in Albania without an understanding with the Powers of the Quadruple Entente finds confirmation in the announcement that the campaign in Albania is at an end. Elbassan and Tirana remain for the present in the possession of the Serbians; but it does not appear whether the column that was said to be advancing upon Durazzo has reached that port. The report from Athens that the Serbians have occupied Durazzo and that Essad Pasha has fled to Italy in consequence cannot be relied upon, as the last news from Albania showed that the Serbians were operating in concert with Essad Pasha. It is possible that the presence of the column was sufficient to cause the dispersal of the tribesmen beleaguering Durazzo, with the result that Essad Pasha would once more be able to reassert his authority. Serbian troops will continue to hold, in addition to Elbassan and Tirana, certain strategical points which are regarded as necessary for the purpose of checking the activities of the Albanian bands; but the main business of the army will now be to complete its preparations for co-operating in Austro-Hungarian territory with the Italian advance and, we may hope, with the Roumanian Army.

The interval between the General Election in Greece and the meeting of the Chamber fixed for July 20 is likely to be filled by an active campaign on the part of the Government and its supporters to influence as many as possible of the delegates who have not ranged themselves on M. Venizelos' side against the ex-Premier. Some even of the elected Venizelists may become the objects of special attention. In this campaign the Government, according to the Venizelist Press, is enjoying the active support of Baron von Schenk, who combines the functions of a Krupp's agent with the miscellaneous duties of a Dernburg. As there is no reason to expect that M. Venizelos will have any difficulty in

Digitized by Google

keeping his substantial majority together, he may be only too glad to see the Government soil its fingers in such proceedings. If there be truth in the charges brought against the existing Cabinet, which for the present we prefer not to credit, Greece will have additional cause to welcome the return to power of a clean-handed statesman.

In the interest of Greece herself it is to be hoped that the period before the meeting of the Chamber will be shortened. Bad temper prevails in political circles, and it threatens to have unedifying results. M. Venizelos is bringing an action against M. Ralli, a former Premier, who is stated to have ascribed to M. Venizelos projects tending to overthrow the order of succession to the Throne. Even the report received by one of the Legations of the Entente Powers that Turks are violating Greek neutrality by recruiting Mussulmans in Macedonia is being made to serve party politics. It was alleged in some quarters that the Greek local authorities were privy to these reported proceedings. M. Gounaris, the Premier, has ordered an immediate inquiry into the subject, but seizes the opportunity of fastening the allegation upon his political opponents. The state of the King's health is the ostensible obstacle to an early session of the Chamber; but public opinion in Greece must see the advisability of curtailing the present unsatisfactory situation.

The hope, which seemed to be justified by former reports, that German activity in Persia had received a setback has not been realized. We hear once more of the egregious Herr Pugin, whose efforts to obtain the appointment of German Consul-General at Ispahan met with failure a little while ago, and whose pose as a Moslem convert was somewhat rudely unmasked in that town. He is now reported in a Reuter's message to have paid a visit to Teheran in May. Returning thence to Ispahan, he started a fortnight ago for Birjand in Khorasan, accompanied by a number of German officers with quantities of arms and ammunition, and is credited with the intention of proceeding to Meshed. The doings of Herr Pugin may not amount to much in the sum total of German activities which have to be checkmated at the present time. But for Persia they have considerable significance, and it may well be worth the while of the British and Russian Governments to devise means for having Herr Pugin and all other German emissaries in Persia laid by the heels for the overt breaches of Persian neutrality for which the Turks and Germans are jointly responsible.

A report, which if true is of no little significance, has reached Petrograd that sanguinary collisions have taken place in Nejef (Meshed Ali) between the local inhabitants and Turkish troops. Nejef is one of the sacred cities of the Shiah Mohammedans; it contains the shrine of Ali, Mohammed's son-in-law, whose memory is venerated by that sect almost as much as Mohammed's. The troubles are supposed to have arisen over the desecration of the shrine by the Turkish troops. In view of the fact that the Turks belong to a rival Mohammedan sect, which is generally at daggers drawn with the Shiahs, the offence might possibly have been committed, although it would argue gross culpability on the part of those in command of the troops to allow such a thing to happen. It was a matter for some surprise that the Arab tribes in Mesopotamia should have so readily made common cause with the Turks. If anything approaching the wilful desecration of Ali's shrine has actually occurred it would rouse the whole country against the Turkish Army and materially assist the work of the British expedition.

WAR HONOURS.

It is announced in a special supplement to the *London Gazette* that the King has approved of the grant of the Victoria Cross to, among others, the late Lieut.-Col. Charles Hotham Montagu Doughty-Wylie, C.B., C.M.G., Headquarters Staff, Mediterranean Expeditionary Force, "for most conspicuous bravery and devotion to duty." Along with another similar posthumous honour conferred on the late Captain Garth Neville Walford, Brigade Major, Royal Artillery, Mediterranean Expeditionary Force, this is the first V.C. to be conferred for land operations in the Dardanelles, though last December Lieutenant Holbrook, R.N., in command of Submarine B 11, received the decoration for torpedoing the Turkish battleship Messudiyeh.

It is scarcely necessary to recall to our readers the circumstances under which the late Col. Doughty-Wylie gained the much-coveted honour. On April 26, 1915, subsequent to a landing having been effected on the beach at a point on the Gallipoli Peninsula, during which both Brigadier-General and Brigade Major had been killed, Lieutenant-Colonel Doughty-Wylie and Captain Walford organised and led an attack through and on both sides of the village of Sedd-el-Bahr on the Old Castle at the top of the hill inland. The enemy's position was very strongly held and entrenched, and defended with concealed machine guns and pom-poms. It was mainly due to the initiative, skill, and great gallantry of these two officers that the attack was a complete success. Both were killed in the moment of victory.

Among other War Honours that are announced are included the following:—

To be Additional Member of the First Class, or Knight Grand Commander of the Order of St. Michael and St. George:—

Lieut.-Gen. Sir J. Willcocks, K.C.B., K.C.S.I., K.C.M.G., D.S.O., Commanding Indian Army Corps, British Expeditionary Force.

To be Additional Members of the Second Class, or Knights Commanders:—

Lt.-Gen. Sir J. G. Maxwell, K.C.B., C.V.O., C.M.G., D.S.O., Colonel, the Black Watch (Royal Highlanders), General Officer Commanding the Force in Egypt.

Maj.-Gen. (tempy. Lt.-Gen.) William Riddell Birdwood, K.C.S.I., C.B., C.I.E., D.S.O., Indian Army, Mediterranean Expeditionary Force

To be Additional Member of the Third Class, or Companion:—

Colonel H. B. H. Wright, Chief Engineer, Egypt.

Capt. G. P. L. Cosens, 1st (Royal) Dragoons, attached to the Egyptian Army, has been promoted to the rank of Brevet-Major, in recognition of distinguished service in the field.

THE I.O.B. AND THE WAR.

The following promotions of members of the staff of the Imperial Ottoman Bank now serving with H.M. forces have been gazetted:—

2nd Lieut. F. Fisher, of the 13th Batt. King's Royal Rifles, to be Lieutenant.

Pte. H. W. Lyster, of the 3rd Royal Fusiliers, to be 2nd Lieut.

H. H. Duncan, formerly of the Inns of Court O.T.C., to be 2nd Lieut. in the Norfolk Yeomanry.

Pte. F. A. Booth, of the Artists, has taken a commission in the East Kent Regiment (The Buffs).

Noel Hayes has been given a commission in the 2nd 8th Batt. City of London.

E. W. Martin has been given a commission in the 2nd 4th Batt. York and Lancaster.

The following further members of the staff have recently enlisted: London office—Messrs. P. L. Smith (10th Batt. Royal Fusiliers), L. Perkins (21st Batt. Royal Fusiliers), and H. Ward (Hon. Artillery Company—Infantry). Manchester office: Messrs. S. W. Jones (R.A.M.C.) and J. G. Rains-Bath (5th Devonshire Territorials).

Pte. C. Hughes-Roberts, of the 12th County of London (The Rangers) has been reported missing since May 8. Up to the time of going to press no news has been received from or about him.

LETTERS FROM CAIRO.

(From Our Own Correspondent.)

Cairo, June 7.

The Dardanelles and Syria.

Beyond the official *communiqués* little news reaches us here from the Dardanelles or from Syria. As reported recently, the drain of troops from the latter portion of the Ottoman Empire has been very great, and very few regular soldiers appear to have been left there. Enver Pasha's threat to extend the scope of Turkish operations on the Suez Canal may, therefore, be regarded as an empty one and as pure bravado; for the incident reported at Kantara on June 2-3 has no significance. Refugees from Syria state that Djemal Pasha, who had obediently conformed to orders from Stamboul to send more and more troops northwards, and who was only left with 8,000 regulars, demurred when that remnant of his "invasion of Egypt" army was also requisitioned. He refused point-blank to let them go, on the plea that they were absolutely essential to his safety, and these 8,000 men have now been dubbed by the Syrians "Djemal's bodyguard"!

The absence of news of any definite advance in the Gallipoli Peninsula is not altogether unexpected by many of the officers who are recovering from their wounds here. They state that the Turkish position at Aji-Baba (or Aji-Tepe, as it is called on some maps) is an exceedingly strong one, and as our artillery has not been able to land any large quantity of ammunition our infantry has, of course, been considerably handicapped in all its operations. The only means of capturing the position is by mining; our men have been hard at it sapping their way into the hill, so they say, and until they accomplish their task we are told we must not expect any decisive news, unless, of course, the Turks are forced to retire on account of lack of ammunition, in the use of which they have been very extravagant, and which, according to report, is beginning to run short.

The Wounded.

Since his arrival in Alexandria H.H. the Sultan has made a tour of inspection of all the hospitals there, including those in which the French are being looked after. Hospitals and troopships continue to arrive with wounded, and albeit a great number have been sent home, the congestion is still apparent, though more so in the convalescent homes and camps than in the hospitals proper. Sir Reginald Wingate has lent the Sirdaria at Gezira, and next week it will be opened up as a convalescent home for officers. The example given by Cairo residents has now been followed by Alexandrines, many of whom have placed empty houses at the disposal of convalescent officers and men or have taken one or more of them into their own homes as guests.

Anglo-Egypt and the Australasians.

An unfortunate correspondence has been in progress in a section of the local British Press on the subject of Anglo-Egypt's duty to the wounded, in the course of which the community in Cairo is accused of lack of sympathy and the British matron is somewhat severely taken to task for not doing more to extend hospitality to the wounded, especially to the Australasians. No more groundless and unfair accusations could be made than these; for since the outset of the war the Anglo-Egyptian community has valiantly done its duty by the Empire in general and by those of its defenders who happened to be stationed in its midst in particular. The writers of these letters, who are Australian soldiers and officers, evidently fail to grasp the situation. They overlook the fact that the English population of Cairo is barely 5,000 souls, a large proportion of whom are not in a position to entertain, nor to do more than subscribe a small sum every month or so to one of the Imperial or local funds. There are nigh as many wounded in Cairo as there are British residents, and the British matron forms but a small fraction of the latter. She is doing her duty nobly by assisting in the numerous hospitals, either by nursing or by otherwise assisting and entertaining the men. Most of the English women are doing the former; and it is no idle boast to say that without the help of the voluntary workers the hospitals would have been in a very sorry state. The men, too, are doing their share; there are monthly contributions to Imperial funds—the lists tell their town tale—whilst there is not a man who does not send cigarettes, papers, and other comforts to the wounded, and who does not spend part of his free afternoons chatting with them. After all, you cannot have your cake and eat your cake. The women folk cannot nurse the best part of the day and provide home-made comforts for the wounded, entertain strangers, albeit fellow-Britishers, at their homes; the men, most of whose incomes are limited, cannot spend beyond a certain portion thereof in subscriptions to war funds or in gifts to the wounded; nor can they devote very much more time to visiting hospitals, seeing that most of them in this period of stress have to work in the afternoons as well as the mornings. Ever since the Expeditionary Forces first came to Egypt the Anglo-Egyptian colony has striven hard to do them honour; that it has not been able to pay them more individual attention is due to no lack of sympathy or want of will—in the circumstances it is as impossible for the colony to care for or put up each of the many thousand wounded who are now here as it was for it to entertain to afternoon tea or supper each of the 40,000 Australasians who were sent here last autumn. All things in this world are relative, after all, and in so far as its size and means are concerned the Anglo-Egyptian colony has more than lived up to its time-old reputation for generosity and patriotism. It is in these circumstances all the more regrettable that this attack should have been made on the Cairo colony.

The Italian Mobilization.

The Italian mobilization has been proceeding apace, and the reservists have displayed the greatest eagerness to rejoin the colours. Each departure has been the scene of wild enthusiasm, in which the French and Belgians still living in this country have freely joined. All the commercial establishments in which Italian reservists have been employed have agreed to pay them half- or whole-salary whilst they are away, and have undertaken to keep their posts open for them until after the war.

In contrast with the feeling of rejoicing in the Italian colony, the Greeks are displaying marked despondency. They freely admit that Italy has now acquired the position *vis-à-vis* the Entente that their country should have had if it had followed the lead given it by M. Venizelos; and, loyal as they may be to the Monarchy, they cannot forgive their King for his interference. Greek conscripts on leave in Egypt and semi-trained reservists have been warned to return at once, which may be regarded as a significant sign. But Greek intervention is, the local colony declares, too late to-day to benefit the nation and enable it to realise its aspirations.

Enemy Subjects and Institutions.

More stringent measures are being taken with regard to the German and Austrian subjects, protected and natural-born, who are still in Egypt, and most of them are, I understand, about to be interned. The latest action on the part of the military authorities is the appointment of a controller to the Egyptian branches of Mayer and Co. and of Stein and Co. The former is an Austrian firm, with head office in Vienna. So was the latter until a year or so ago, when it was turned into an English liability company in London, under the style of Stein's Oriental Stores, Limited. As a controller has been appointed to it, it is to be presumed that the military authorities have obtained evidence of what everyone suspected, viz., that the conversion into an English company was merely a blind, and that at bottom it was still an Austrian, and hence an enemy establishment.

Curious Petitions to Legislative Assembly.

The spirit moved me last evening to read through the list of petitions presented to the Legislative Assembly during its last session. My labours were well rewarded, for I came across the following two treasures:—(1) A competent head should be appointed to the secret police, and he should be a German. (2) The assistants to this official should be German. These petitions, which came before the Assembly at one of its sittings in the early part of June, must have been submitted to it at the latest in May. Unfortunately, the name of the petitioner is not given, but no doubt the Ministry of the Interior, to which they were referred, made its inquiries on the outbreak of war, and took the necessary action. Nevertheless, one would dearly like to know the genesis of those petitions, who the petitioner was, and why he was so impressed with the superiority of German secret service methods. In view of the subsequent German attempts to stir up trouble in Egypt, these petitions are decidedly interesting. Even though they are no direct proof, they certainly afford an additional indirect indication that already, several months before war was declared, the Wilhelmstrasse was preparing the way for it by causing a pro-German propaganda to be preached in Egpyt.

CAIRO, June 14.

Care of the Dardanelles Wounded.

Things are very quiet out here at present. The summer is on us, and the seat of Government is now at Alexandria; but even at the latter port, where I spent a few days last week, there is absolutely nothing doing. The sole excitement seems to be the arrival of hospital ships, the delivery of the convoys of wounded at the hospitals, an occasional official opening of some new establishment or the periodical inspection of the hospitals and homes of some high personage. The fact is, that everyone's attention is taken up either by official work or attendance on the wounded and sick. Social amenities, even such as usually prevail in the summer, have gone by the board; there is far too much serious work on hand, and undoubtedly everyone is the better for having such work to occupy his or her mind.

Apropos of the question of accommodation for the wounded and sick, it is a pleasure to have to record that immediately the need of convalescent homes was notified, the Syrian community of Alexandria came forward with a request to be allowed to fit one of these homes up at its own expense. Its request was granted, a substantial sum was forthwith subscribed, and this week the home—an enemy house at Ramleh—was officially opened by Sir Henry McMahon. It is to be devoted exclusively to British officers, but other similar homes are being fitted up for the use of the rank and file, and will very soon be ready.

The Perquet and the Police.

In his report on the work of the Ministry of Justice, which I recently reviewed, Sir Malcolm McIlwraith referred to the lack of co-operation existing between the Parquet (Public Prosecutor's Office) and the police, and attributed thereto the great difficulty that has been experienced in repressing crime in this country. This lack of co-operation is undoubtedly due to the fact that whilst the Parquet is under the Ministry of Justice, the police work under the Ministry of the Interior; as a consequence, questions of jealousy and prestige arise to interfere with the smooth working of the crime repression system. I gather, however, that this matter, which has been the subject of much public and inter-departmental controversy in the past, is at present receiving very close attention, and that it will not be long before some scheme is devised for the amalgamation of these two mutually dependent departments under one supreme head. Very probably a special service will be created at the Ministry of the Interior, where the Department of Public Security is situated, and where, after all, the direction of all the services connected with crime detection and crime repression should logically be concentrated.

The Mails.

It is announced that henceforward mails will be regularly sent home and received viâ France. This is welcome news, but as a matter of fact we have been receiving our mails with comparative regularity ever since the war broke out, and except that we no longer get correspondence viâ Austria, there has been little in this respect to indicate that a war is on, and that the "Great Blockade of the British Isles" is in progress. It is perhaps not inopportune to draw attention to this fact. Those who, like ourselves, dwell at the outposts of the Empire are far better able than our fellow-countrymen at home to appreciate the value of a Navy, and in this connection the little change that has in reality taken place in our postal communications with the Mother Country is an indisputable tribute to the great work that has been and is still being so silently done by our fleets.

But while the comparative regularity with which the mails have been kept up is a matter of satisfaction, it is not so with the delivery of individual correspondence. Complaints are continually being made that ordinary letters from or to Egypt simply do not arrive at their destination. Whether this is due to the Censor or to shortness of staff in the post offices at home it is not possible to say, but the fact remains that unless one registers one's letters nowadays, it is not possible to make sure that they will ever reach their destination, even though the address be fully and clearly written and the contents be most carefully compiled, so as not to offend the eye of any censorial individual.

Death of the Doyen of the Egyptian Bar.

One by one the links with the old historic days are being severed; one by one the figures of interest are disappearing. The latest to go the way of all flesh is Mr. Carton de Wiart, who, after a long period of ill-health, died on Wednesday at his residence here. Léon Carton de Wiart, or "Carton," as he was affectionately called by his colleagues and friends, was one of the best-known, as he was one of the most respected, of the small band of men whose names have been associated with Egypt since the start of the British Occupation. He came here in 1883 to fill a position on the Bench, but changed his mind and joined the Egyptian Bar, at which he remained up to the last, being for many years its *bâtonnier* in Cairo. Sound in judgment, keen and versatile in debate, brilliant in eloquence, and above all endowed with consummate tact and a fascinating personality, he very soon attained prominence amongst his colleagues and popularity amongst the general public, Egyptian as well as European. Not a *cause célèbre*, political, financial, or social, but he was briefed by one of the parties; and the day when it was known that Me. Carton would speak invariably found the Court as packed with all that Egypt could boast of rank and intelligence, as the day previous it had been deserted by the public. He was rightly regarded as one of the greatest lawyers this country has seen, and his "plaidoiries" and "conclusions" constitute the most cherished legacy of his colleagues, many of whom were indebted to him in their early years for advice and encouragement, and were, in fact, fledgelings of the "Cabinet Carton."

But Me. Carton was not only remarkable for his unique position as a lawyer; in addition he became, as an inevitable result of his personal character, the guide, philosopher and friend of every man of note in or connected with Egypt, from the Sovereign downwards. He was made the repository of the confidences of every statesman. In this respect he might be called the "Sir George Lewis" of Egypt. A proof of the unbounded trust that was reposed in him, and of the general regard for his ability, is to be found in the fact that although he was the intimate friend and adviser of Lord Cromer, yet even when tension between Abbas Hilmi and the great pro-Consul was greatest, he still remained *persona grata* at the Palace. Amid all his preoccupations, however, Me. Carton managed to find time to attend to social duties, nor did he ever refuse, on the plea of pressure of work, to receive those the object of whose visit was not in the nature of obtaining professional advice, or to assist by his knowledge and experience those who appealed to him for information. Egypt, in every way, suffers a great loss by the death of Me. Leon Carton de Wiart, and the composition of the great crowd of mourners that attended his funeral on Thursday was eloquent of the position he had attained in the affection and regard of all elements of the population.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, June 4.

Mt. Troodos as a Sanaterium.

The troops, a detachment of the Malta Regiment, will not move to Mount Troödos, the summer quarters since 1879. Wounded soldiers and invalids will, as anticipated, be sent there. According to present arrangements 500 are expected, and should arrive at the rate of 100 a week. Mount Troödos is an ideal resting place for convalescents, as has been proved on former occasions, during the Egyptian campaigns. The possession of this splendid sanatorium is one of the advantages which Cyprus possesses.

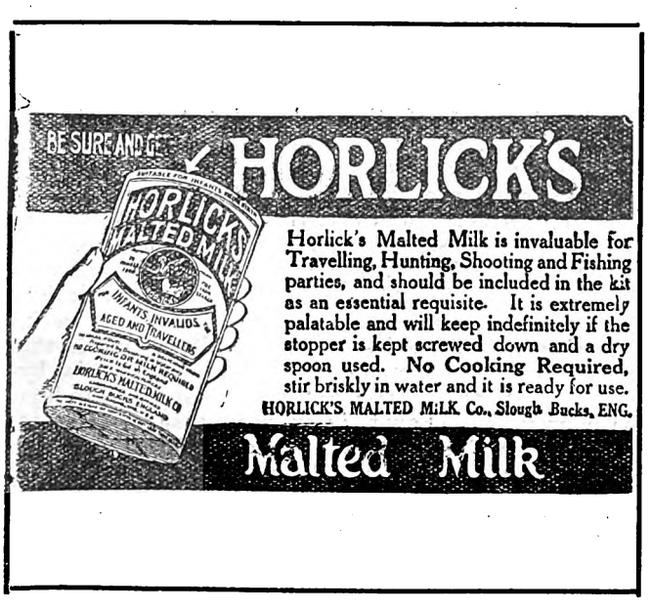
The number of buildings and of iron huts is, however, very limited, and in view of the demands of this year, many civilians will probably be unable to go to these pleasant quarters. Camping under canvas is an agreeable alternative for those who possess, or can hire, tents. The season lasts up to the end of September. All that is necessary is to avoid the risk of chills towards evening particularly. Towards the end of September the weather is liable to break, and to bring rain and mists. But all who can remain in the hills up to the middle of October should do so. A really ideal climate can be obtained in Cyprus all the year round by spending time at various altitudes, but for this it is advisable to camp out in the intermediate stages. The troops generally march up, and also down, in three days. In the winter camp at Polemidia, about three miles from Limassol, they enjoy again an excellent climate.

Visitors from Egypt.

It was expected that a large number of visitors from Egypt would spend their summer holidays in Cyprus, being practically cut off from many European resorts; and some have already arrived. Many of the visitors seek the hospitality of Platres, a picturesque village, which was till lately the terminus of the carriage road to Troödos, about five miles short of the camp. Here a great many houses and a few hotels have sprung up for the accommodation of the summer tourists. Weather has been favourable, but the foretaste of coming heat has been already felt.

The Legislative Council was summoned for a brief sitting, under the presidency of the High Commissioner, on May 28, principally in order to pass estimates chargeable to surplus balances. As Sir John Clauson stated in his opening speech to the Council, there are few, if any, legislative measures which it is necessary or desirable to submit at the present time.

The Greek papers are largely filled with news relating to Greece and the King's health.



SUDAN CIVIL SERVICE.

OFFICIALS' MOVEMENTS.

(From a Correspondent.)

Three members of the Gordon College Higher School—Mr. G. E. Hunt, Mr. S. Hillelson, lecturers, and Mr. N. Field, tutor—have gone on leave owing to poor health. Messrs. Hillelson and Field return to duty some time this month, but Mr. Hunt is not expected at Khartoum before the last days of July. Mr. G. E. Hunt, Assoc.M.Inst.C.E., has contributed many useful papers upon problems connected with the tropics, and he is considered a sound authority upon such subjects as water supply, sanitation, irrigation, town buildings, and drainage. Mr. Hunt is now the Senior Lecturer at the Gordon College, and under his able management and advice a considerable amount of work has been done at the Khartoum North Central Research Farm for extensions of the irrigation system and provision of additional laboratories and housing accommodation.

In the Education Department, Mr. N. R. Udel, Inspector, has been compelled to seek a change of scene and climate, but will report for duty at the end of this month (June).

Another valued Government official who, on account of ill-health, has been released from further work for several months is Dr. William Beam, the skilled and indefatigable Research Chemist attached to the Wellcome Tropical Research Laboratories at the Gordon College. Dr. Beam has given his services to the Government since the month of September, 1904, and is considered both in the Sudan and far beyond it as one of the greatest living authorities upon poisonous plants and tropical diseases. Among other valuable discoveries that he has succeeded in bringing to light has been a colour test for the detection of hashish—a most useful discovery, the value of which has been confirmed by Professor Schmidt and Mr. Lucas in Cairo. Dr. Beam, moreover, has been concerned in all kinds of analytical and advisory work, the outcome of questions brought before the Central Economic Board. Those who have come across some of the interesting reports of the Wellcome Tropical Research Laboratories may remember the extremely able papers contributed from time to time by Dr. Beam, especially those in reference to the Khartoum water supply, the Sobat River waters, mechanical analysis of arid soils, the soils of the Gezira Desert, gypsum as a fertilizer of Sudan soils, and upon practically all phases of the question affecting gum cultivation. Dr. Beam is expected to return to Khartoum about the end of September next.

The Finance Department is working rather short-handed at present, the Financial Secretary, Colonel E. E. Barnard, C.M.G., having left Khartoum for Egypt, and both Mr. J. Morris and Mr. A. J. Forster, inspectors, being absent upon medical grounds. The first of the two last-named officials is expected to return to duty at the end of this month (June), and Mr. Forster's leave expires towards the middle of July. Both are old and valued members of the Malisudan, Mr. Morris having been in the Government service since the end of 1905, while Mr. Forster reckons his entrance since 1908.

Mr. H. St. G. Peacock, one of the judges of the High Court, and now one of the members of the new Court of Appeal, has been granted leave of absence until the end of July owing to slight indisposition. Mr. Peacock has seen nearly twelve years' service in the Sudan, and has earned for himself the reputation of a patient and painstaking judge, whose chief experience has been in connection with land registration. It was Mr. Peacock who was entrusted, several years ago (1906) with the settlement of the land question in the Blue Nile Province, while his brother judges were distributed—Mr. Sterry, Mr. Fleming, and Mr. Williamson in Khartoum, and Mr. Morgan (now dead) at Suakin.

The Railways Department, which, owing to the falling-off in the general transportation business of the country—especially between Atbara and Port Sudan—has latterly experienced a comparatively slack time, has four of its staff on leave at present, the two district engineers, Messrs. J. C. Walker and H. V. Hawkins; Mr. G. E. Mason, assistant (indoor) mechanical engineer; and Mr. S. B. Cooper, Superintendent of Stores.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, June 8.

Strained Relations with Turkey.

Relations between this country and Turkey are becoming very strained. In spite of the Porte's promise to allow free passage of Bulgarian railway traffic with Dedeagatch and not to molest Bulgarian passengers on this line, the military authorities at Adrianople continue to stop and search Bulgarian goods waggons en route to and from Dedeagatch. Last week, again, several waggons laden with goods coming from Dedeagatch, and bound for Old Bulgaria, were stopped at the frontier station at Chermen. The military authorities from Adrianople detained the train forcibly, opened the goods waggons, tore off coverings, and took out goods—of which a great part were stolen—and arrested some of the Bulgarian passengers. Owing to this latest outrage, the Prime Minister and Minister for Foreign Affairs, Dr. Radoslavoff, despatched a strong Note to the Turkish Government, protesting energetically against the outrage, and demanding the surrender of the Kara-Agatch-Dedeagatch line. If the Turks do not voluntarily yield up the line, Dr. Radoslavoff is, I understand, resolved to take possession of it by force of arms.

In view of this situation, the Bulgarian Chargé d'Affaires at Constantinople has been instructed to advise the Bulgarian students at Robert College and the American College for Girls to leave for Bulgaria without waiting for the end of the collegiate year—*i.e*, the beginning of July; and many of them, if not all, actually arrived here last Sunday.

Meanwhile much unrest prevails amongst the Turkish population at Gumuljina. There is quite an army of Young Turk emissaries in both the town and the district, inciting the Moslem population to revolt in case Bulgaria declares for the Entente. The Government here has taken the necessary measures in the district of Kirdjali for the suppression of any revolt that may break out.

Last Sunday the election of a Chief Mufti for Bulgaria took place. The Young Turks' agents distributed a great deal of money in order to secure the return of the Young Turkish candidate, Mastanli Effendi; and even the Turkish deputies of the Bulgarian Parliament agitated openly for his return. One of them, speaking at a great meeting of Turks of the district, said: "Dear fellow-citizens, if you wish in two months to be under the rule of the Sultan, vote for Mastanli Effendi." And, in fact, the latter was elected by a large majority.

Bulgaria and the Powers.

Although more than a week has elapsed since the representatives of the four Entente Powers handed to the Bulgarian Prime Minister a Note specifying the compensation they were prepared to guarantee to Bulgaria if she would join the Entente and co-operate with her army for the capture of Constantinople, Bulgaria has not yet given her reply to their proposals. She has merely asked for explanations regarding certain points in the proposals, and in the meantime Dr. Radoslavoff has opened up consultation with the Opposition parties. Thus far he has heard only the views of the leaders of the Agrarian Parliamentary group. They are in favour of summoning the Sobranje in special session, and recommend a reconstruction of the Cabinet on the basis of a Coalition, and that the new Cabinet should negotiate with the Entente Powers and reply to their proposals. The Government and Opposition are unanimous in holding that the proposals of the Entente should not be rejected, and that they should serve as a basis for negotiations and a final settlement.

It should be noted that the harvest began last week. In the new lands and in Thrace the barley is being reaped, and the fields are immediately sown with maize. By the end of July the whole harvesting operations will be over, and there will then be nothing more to hinder Bulgaria from taking action, if favourable terms are offered to her.

Sofia Municipality.

The newly elected municipal council of Sofia assembled yesterday and proceeded to the election of a Kmet (mayor) and three vice-kmets. M. Radi V. Radeff, a prominent Radoslavist, was chosen as Mayor, and M. Spiroff (Radoslavist), Dr. Petcoff (Stambolovist), and M. Jelezkoff (a Radical) as vice-kmets. The election was submitted to the Ministry of the Interior for sanction, which was granted, and a ukase of its legalisation has been submitted to the King for his signature.

First Bulgarian Motor-boat.

Last Sunday afternoon, in the presence of an immense crowd, the first motor-boat of Bulgarian design and construction was launched at Widin. This boat will maintain a regular passenger service between Widin and Lom.

MONTENEGRO AND ALBANIA.

Sir J. Roper Parkington, Consul-General for Montenegro, has received (June 19) the following official telegram from Cettinje:—

According to information received from Scutari, the people resident in that town, and also in the immediate neighbourhood, have cordially received the news that Montenegrin troops have occupied certain positions on the Albanian frontier. The adherents of all three religions, Catholic, Greek Church, and Moslem, have united in welcoming our troops as a guarantee of order and protection against marauding bands. The authorities of the leading Balkan States have expressed their great regret that our transports have so frequently been pillaged at the direct instigation of Austro-Hungarian agents and the Young Turks faction. The better class Albanians are well aware of the sacrifices we have made, and manifest most friendly sentiments towards our Sovereign and his army, and are in complete sympathy with our cause and aspirations.

HELP MONTENEGRO!

THE SMALLEST AND POOREST OF OUR ALLIES.

THE MONTENEGRIN RED CROSS AND RELIEF FUND

Donations can be sent to her Grace the Duchess of Rutland, 16, Arlington Street, S.W.; or to the Hon. Treasurer, Lady Roper Parkington, 58, Green Street, Park Lane, W.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, June 12.

Serbia and Italy.

The Serbo-Italian question has entered upon a new phase. A short time ago there was great agitation in the Serbian Press, and public meetings were held throughout the country with the object of drawing the attention of the Triple Entente Powers to Serbian claims on Dalmatia and Serbia's needs on the Adriatic coast, and of appealing to Italy's sense of justice in dealing with Serbian interests. The long Italian negotiations with that country's former allies and with the Triple Entente inspired a dread here lest all would not end well for Serbian interests both in Dalmatia and in Albania.

It seems, however, according to M. Sazonoff's declarations, that Serbia's fears with respect to Dalmatia were somewhat unfounded, and it is now said that Italy is desirous of dealing generously with Serbia, and will agree to the important port Spalato coming into the possession of this country.

The possession of this port for the purposes of trade with Bosnia, independent of facilities for trade beyond the seas with Serbia proper, is very great, one might almost say of incalculable importance.

The Albanian Problem.

As regards Albania, the anarchy in that country, the incursions of certain Albanian bands into Serbian territory, the threatened complications caused by Turkish and Austrian agitators, and the appeals for help from those in distress in Albania, roused fears and misgivings in this country; and it became evident to her statesmen that some action was needed to ensure peace and security. Essad Pasha, in whom Serbian statesmen place great confidence, appeared to be unable to cope with the revolutions fomented by Austrian agitators. Italy, too, had taken the bull by the horns and landed troops at Valona. The Greek occupation in Epirus was being steadily extended. Serbia, who at one time had fought her way to the Adriatic shores, had, at the bidding of the Great Powers (who acted on the instigation of Austria) withdrawn her troops from Albania; and now Austria seeks to create complications in Albania to the detriment of that country's and Serbia's interests!

What is Serbia to do? Should she remain quiet, with folded arms, deaf to all cries, and await threatened evils arising out of Austrian and Turkish machinations, or should she risk rousing the susceptibilities of the friendly Allies who might misconstrue her action?

It is said that possession is nine points of the law; but Serbian authorities declare that their action has but a temporary aim, and that the destiny of Albania will be finally and definitely settled at the great European Congress which will take place at the conclusion of this war. It is, they assert, acting on this conviction, and in order to ensure the security of Serbia's frontiers and obtain tranquility and peace, that the Serbian Army has advanced into Albania with the intention of occupying certain positions during the duration of the war and thereafter confidently awaiting Europe's decision.

A Serbian Proclamation.

The Serbian expedition has been hitherto rapid and successful, the Albanian tribes favourable to Serbia, and also the people of Serbian nationality dwelling in Albania, joining the Serbian standard. The military commanders of this expedition into Albania issued a proclamation to the Albanian nation informing them that the Serbian Army had come as friends, not as foes. The chief parts of the text translated into English are as follows:—

Albanians, hear our advice! We Serbians and Albanians are neighbours having intercourse with each other for more than 130 years. More than 800 years you lived under our Monarchy, under our reign, and then came the Turks, who conquered your country and ours. Many Albanians and Serbians subsequently changed their religion, but we will not speak of that; let bygones be bygones. Now, the time is come when the Turks will be driven back to where they came from five hundred years ago.

Against injustice and brutal force Great Britain, France, Russia, and Italy have taken up arms, and with them Serbia and Belgium, and shortly other States also will join. You cannot rescue Turkey, nor can Austria, because the whole of Europe is against both these States.

Let your care be for your home and your country! Unite together and with us, and let our aim be to effect a lasting peace on our frontiers!

We are not opposed to Albania, we are not fighting against your interests, we are opposing only those strangers who are agitating in Turkish and Austrian interests. Your destiny does not lie in our hands, it lies in the hands of Europe.

You drove away the Prince of Wied because he was no Albanian and because he did not understand your people. Now you are revolting against true Albanians, against Essad Pasha, who knows your people, because he is an Albanian, and who desires to keep Albania for you all.

When we have caught and punished all insurgents opposed to Essad Pasha we intend to retire from Albania, and will leave the control and government of the country in the hands of Albania's son, Essad Pasha, who desires to live in peace and tranquillity with your neighbouring countries.

We bring peace and love to all who are with us, and against those who are opposed to us we draw the sword!

Be wise and devoted to your country and people, and do not listen to agitators deputed from Constantinople and Vienna.

Austrian Aeroplanes.

As yet the only action taken by the enemy has been an attack by means of aeroplanes. The principal movement was directed against Kragujevatz, where stands the Government arsenal and arms and ammunition factory. The day before yesterday, at six in the morning, an Austrian aeroplane flew over the town and threw out several bombs, but, so far as is known, without doing any damage to Government property. Nor does it appear that any private property suffered, but two persons were killed and four were wounded.

On the previous day between 5 and 6 a.m. an Austrian aeroplane flew over Pozharevatz. The aviators threw nine bombs, of which three fell on the penitentiary establishment and one on a flour mill, several men and women being wounded. The damage done is estimated at 20,000 frs.

On the same day a German aeroplane was observed near Egri Palanka (Kriva Palanka), and was brought down by the shots of the frontier guards. A lieutenant and a sergeant-major were made prisoners and sent on to Uskub. Certain documents were found on them.

SERBIAN ART AND CULTURE.

M. Chedomille Miyatovich, speaking at a drawing-room meeting of the Scottish Women's Hospitals Committee, held, by the courtesy of Lord and Lady Glenconner, at 34, Queen Anne's Gate, on Monday last, said that the Serbs belonged to the great family of Slav nations, but in their case the Slavonic blood had been mixed with that of Latins, Greeks, Albanians, and Celtic invaders of the Balkan Peninsula, whom the Serbs had found on their arrival in the country in the beginning of the seventh century. They were a very brave people. From the middle of the fourteenth to the middle of the fifteenth century they had kept the Turks at bay, and so for a hundred years had prevented them spreading over Europe. To-day Serbia was the barrier against the endeavour to spread the Austro-German power as far as the Ægean Sea, thus threatening Egypt, the Suez Canal, and India. But the Serbs were not only brave—they were a musical, poetical, and artistic people, capable of the highest culture. They were ambitious to be admitted into the comity of civilized nations, and to contibute something on their own part to the general progress of the world. So long as Serbia was a Turkish province there were no schools except those attached to a few monasteries, and consequently little opportunity for intellectual development; but in Dalmatia people of the Serb race had been early brought into contact with Italian culture, and had eagerly absorbed it. Some great artists of the Middle Ages generally counted as Italian were really Serbian. Bramante, the builder of St. Peter's, was a pupil of Julius Lovranic (otherwise Giulio Lovrano), a Serbian, born in Sibenico, in Dalmatia. Schiavone, the intimate friend of Titian, was also a Serb, born in Dalmatia; his real name was Andrea Medulich. Ivan Drinkovich, another Serb from Dalmatia, had contributed some of the finest sculpture and statuary to Dalmatia; he had been known by the name of Giovanni Dalmata. There was, in fact, a long list of Serbs who had obtained fame as painters and sculptors in Italy and France. In the field of science Roger Boshkovich, a famous mathematician, astronomer, and philosopher, was born in Ragusa, his parents being from Trebinje, in the Herzegovina; and in our own days we had Nicola Tesla, one of the world's greatest electrical engineers, perhaps second only to Edison. Tesla was a Serb from Hungary; his uncle was Archbishop of Bosnia. Finally, there was Ivan Meshtrovich, a great sculptor and artist, now exhibiting at South Kensington.

NEWS OF SYRIA.

(From a Correspondent.)

Cairo, June 14.

The State of Beyrout.

Now that the initial acute phase of the war, with its attendant evils of conscription, requisition, and commandeering, has passed away, Syria may be said to have relapsed into a comparatively tranquil state. The determination of the Allies to strike at the heart of the capital may be in great measure responsible for the easing off of the situation in Syria, which, in common with other distant provinces, has, for the moment, been thrust into the background. The forces in Syria have been hurried back to save the heart of the Empire, and only a garrison of from six to eight thousand is said to be left. Already the attack on the Canal seems to have been given up as a bad job. The German officers who served to inflame the worst instincts of the Turk have left—perhaps because Djemal Pasha is said to have strong Teutonic antipathies. It has even been rumoured that Enver and his Germanophile clique have ordered Djemal to proceed with his army to Constantinople, but that he has refused to do so, and has kept around him the pick of his troops. Sami Bekir Bey, Vali of Beyrout, is said to be equally anti-German, although he is *persona grata* with the Committee clique in power at Constantinople.

Both Djemal and Sami Bekir are men of large hearts, if not of impeccable judgment, and this is fortunate for the Syrians in general and the Beyroutines in particular. Sami Bekir Bey is the son of the Prince of the Circassians, and he has all the virtues and faults of the Circassian feudal lord. He is generous to the degree of extravagance, but, while capable of noble impulses, is, at the same time, liable to outbursts of anger which commit him to unexpected inconsistencies. His liberalism and modern social tastes have brought him into close intercourse with the Christians of Beyrout. His secretary and right-hand man, Habib Lutfallah Bey, a Syrian millionaire of Cairo, is reported to have been instrumental in alleviating considerably the sufferings of the Christians. It is said that, thanks to his tact, the French Convent of the Sœurs de Charité, now presided over by a Syrian lady, has escaped the persecution to which the other institutions of the Allies have been subjected. Lutfallah Bey's presidency of the Committee of National Defence has opened a still wider field for his humanitarian activities. The Vali himself is doubtless deserving of public gratitude for the able manner in which he is administering the affairs of his vilayet, and of its seaport especially.

Persons who have been allowed to leave Beyrout by special permission, and have recently arrived here by a circuitous route, go so far as to state that, apart from economic difficulties, Beyrout has never enjoyed such a measure of tranquillity and concord among the different elements comprising its population. A sort of kursaal, patronized by the Vali, imparts even a note of gaiety to the town. Then, thanks to American philanthropic munificence, an army of labourers, thrown out of employment by the war, is constantly at work repairing the roads, once famous for their dilapidated condition; and now that the Beyrout Water Company, which has always been at loggerheads with the Municipality, has passed under Government control, and the head of this Government wishes it, the roads are freely watered and regularly swept. Moreover, the transfer of the law courts to Damascus and the substitution for them of summary courts, presided over by justices of peace, has robbed the corrupt functionaries of the former of the occasion to exploit the weakness of possible litigants; and this, coupled with the excellent police and gendarmerie surveillance, for which the Vali's vigilance is largely responsible, has produced a condition of affairs constituting a happy change for Beyrout. This change has been accentuated by the opening up and widening of a street in the most crowded part of the old city, which creates an important artery, connecting the square with the Custom House. The expropriated buildings of the poor have been paid for in cash, while the rich proprietors have been paid in Treasury Bonds.

The Locust Plague.

The ravages of locusts seem to have been general and severe, embracing even the Lebanon, and this in spite of the grant of £T2,000 made by the Central Government to the Vilayet of Beyrout, and of the measures taken by the local authorities. The organization seems to have been made *à la turque*. The Vali is said to have ordered the organization of bands recruited from men between 42 and 45 years of age to fight the pest. The call was a general one, as for military service, and could only be avoided by the payment of an exoneration tax of £T44. Those who are not inured to physical labour and could not respond to the order had to pay the tax.

Moutran Pasha's Death.

According to reports just to hand, Michel Pasha Moutran has died in exile at Urfa. It will be remembered that the French Consular archives were ransacked, and, among the voluminous foreign correspondence, which is said to have compromised seriously many unsuspecting persons, especially in the Lebanon, some letters were found wherein Moutran Pasha is said to have made proposals to the French Government for the retrocession of that part of the Bekaa included in the original boundaries. Moutran Pasha was condemned to death by court martial; but, on the intervention of high personages, the sentence was commuted to penal servitude—not, however, till after he had been subjected to the most inhuman treatment, having been made to ride a donkey with his face towards its tail and a placard fixed to his breast bearing the words: "This is the traitor to his country." Thus, clad in his night-gown, he was dragged about the streets of Damascus on a bitterly cold day, while the mob, under official encouragement, indulged its fury against him. The Pasha was so overwhelmed that his death was actually reported at the time. His transfer to Urfa, with its more rigorous climate, and far from any care that near relatives could have afforded, was naturally calculated to bring about the final collapse.

Yet, but a few years ago, the Pasha's sister and brother, who had almost daily at their table Talaat, Djavid, Enver, and Djahid, had, at the risk of their very lives, hidden some of those gentry in their house, when they were being hunted by Kiamil's party on its accession to power. With such people, it seems, patriotism is above gratitude, and their patriotism manifests itself in strange ways.

HOUSE OF COMMONS.

Cotton Exports. June 17

In a written reply to a question put by Mr. Rawlinson, regarding the steps taken to prevent the importation of cotton into Germany, Dr. Addison states:—His Majesty's Government are already taking the following steps to prevent the importation of cotton into Germany. Its export from this country is prohibited to all foreign ports in Europe and on the Mediterranean and Black Seas other than those of France, Russia (except Baltic ports), Belgium, Spain, and Portugal. No exports are, in fact, allowed to Belgium. All cotton from overseas suspected of possessing an enemy destination is brought in, and, where it is found that these suspicions are justified, the ship is required to discharge the cotton, and it is restored to the owner on such terms as the Prize Court may consider just.

Poison Gases in Gallipoli.

Mr. G. Greenwood asked the Under-Secretary of State for War whether all possible steps had been taken to provide the troops in the Gallipoli Peninsula with respirators and all other appliances to enable them successfully to resist attempts to poison them by means of noxious gases.

Mr. Tennant: Yes, sir.

Lieutenant-General Sir John Maxwell, Commander-in-Chief of the British Forces in Egypt, has (says Reuter's Cairo correspondent) proclaimed the prohibition of the sale of alcoholic liquors between ten o'clock at night and five in the morning in Cairo, Alexandria, in the Suez Canal region, or within five miles of any camp.

NEAR EAST BOOKSHELF.

THE RIGHT-HAND COUNTRY.*

Much of the fascination that the unknown exerts over nearly all of us still clings to Arabia and its people, and there are not wanting prophets to tell us that out of this land of mystery there may yet sweep a wave of conquest that will astonish the West. Those who have touched the fringe of "The Empty Quarter," who have seen a great camp of the Bedouin spring up in an hour or two where before nothing was, and a day later collapse and disappear, in a haze of heat and dust, into the spaciousness of the desert, who have mixed, if only for a short time, with the descendants of Ishmael or of Joctan, will probably be inclined to think that there may be something in such prophecies; while those who have met only the "town Arab" will be most ready to deride them. But anyone who has met the pure-blooded Arab must admit that he makes an interesting study. Mr. Bury, who knows him well, has studied him to good effect, as he showed us before in "The Land of Uz," and shows us again in this volume. It would be a valuable book at any time: just now, when we are all wondering what the future of the Turkish Empire is to be, and how the Turk and the Arab will regard one another at the end of the war, its value is enormously enhanced.

Some readers who now for the first time make acquaintance, so to say, with the Arabian Peninsula may be surprised to find that it is not all howling wilderness, one vast sandy plain, across which the Bedawi drives his flocks and herds in constant peril from sandstorms and his fellow-Bedouin. Naturally, the Yemen is extremely fertile, and its people, though not averse from indulging in "a certain liveliness" now and again, provided that there is a prospect of loot attaching to the fun, are chiefly agriculturists—and remarkably painstaking agriculturists to boot. Given a good government, that is to say, a strong government, and one that would afford the agriculturists assistance in making the most of it, especially by intelligent schemes of irrigation, the land would undoubtedly deserve once again its old title, Arabia Felix—even though, we may note, in passing, that title was originally bestowed upon it as the result of a misunderstanding of its Arabic name. As it is, one feels that Mr. Bury is not altogether unjustified in dubbing it Arabia Infelix.

Lack of space precludes us from following in detail the historical sketch contained in the first chapter, though it is full of interest; for here we are on debatable ground, and debate is impossible in the limits of this review. As to the early history, we may, however, note, in passing, that Mr. Bury identifies Eber, the father of Joctan, with Heber, the prophet, "or Hud, as the Arabs call him, who preached to the ancient Adites and warned them of divine vengeance," and that he also identifies Punt "with the Hadramaut valley, and not with any region on the western side of the Red Sea." The reasons for so specifically barring out the latter area might have been given. But at the present time we are, frankly, less interested in such questions than in what the author has to tell us regarding Turkish rule in the Yemen since the middle of the last century.

This rule is decidedly precarious. Such as it is, it has been maintained chiefly by a not unskilful playing-off of one ambitious local prince, or chief, against another, and a very deft handling of the locally recruited gendarmerie, which appears to have quite as bad a time as other similar bodies elsewhere in the Turkish Empire. But it is fair to add that Turkey has occasionally sent men of marked ability to assert its authority over the restless Arabs; and that the Turkish troops who have had the dangerous and much disliked task of upholding Ottoman prestige in this region have usually acquitted themselves with great gallantry. The situation to-day—or at the time Mr. Bury wrote; for what has gone on in the Yemen since then, who knows?—is a strange one. We find a Turkish Vali at Sanaa, but at Khamir, not far distant, there is the Imam (Yehya ibn Mohammed ibn Yehya ibn Hamid-ed-Din), who wields at least as much authority as the Vali, and enjoys far greater prestige than he; while further north is the Idrisi, who cares for neither Vali nor Imam, and has, as many readers of THE NEAR EAST will remember, proved a veritable thorn in the side of the Sublime Porte. The position of the Vali is not an enviable one. Stinted of funds by his government, he has to rely largely on tact in the administration of the province, and the difficulties of his position are further complicated by the fact that, as the result of an arrangement reached in 1913, "for the sake of peace between Moslems," civil and criminal law in the Yemen are "no longer based on the Turkish judicial code, or 'Kanun,' but on the old Islamic code, or 'Sheria,'" and that this code is "administered by nominees of the Imam, who draws a very substantial subsidy for himself and his vassal chiefs." In his turn, however, the Imam is not to be envied:—

> When Turkish neglect and contumely drove his father, Mohamed ibn Yehya, out of Sanaa, late last century, tribesmen rallied to him, as a persecuted leader of Islam, at Kafilet Adhar, on the eastern border of northern Yamen. . . .
>
> But now that the Turks, by a stroke of policy, have recognised him as Imam, and placed in his hands the supreme control and administration of the Islamic code, which is now the law throughout the Yamen, he is in a somewhat difficult position . . . he has now to play a double game, for he poses as an ascetic before the watchful eyes of his tribal *entourage*, and yet he must accept the support of Ottoman troops at Khamir.

The lot of the said Ottoman troops at Khamir, it may be added, is far from a happy one; and one can sympathise with the Turkish officer whose experiences are recorded on pages 156 and 157. Upon the whole, of "The Powers that Be" in the Yemen, Sheikh Idris—of whom, we are told, *inter alia*, that he is the "great-grandson of a Moor, a native of Fez," and that his "family seems to have travelled about a good deal and all went in for theology"—appears to be most worthy of respect. Having studied at Al Azhar, he returned to Asir in 1903, and though he "has had to use a good many stage tricks to hold the allegiance of the ignorant tribesmen on whom his power depends," he exerts real authority; "he is a man of affairs, and overland pilgrims declare that the roads in Asir are safer than in Turkish Yamen." Moreover, it is a significant fact that the Turks do not venture to interfere with Asiris, even in Hodeida, and that brigands treat them with marked respect.

Turkey, in Mr. Bury's opinion, would be well advised to abandon the attempt to hold, even nominally, the whole of the Yemen:—

> From a military point of view, a withdrawal to Menakha would be sound; that fortress town should then form the apex of a triangle, with its base on the coast, from Loheia to Mokha. Within that triangle the truculent tribes, at present out of hand, could be adequately dealt with. There is a strong Turkish position at Sheikh Said, and the country between there and Mokha could be easily safeguarded.
>
> A line from Mokha, through Taiz and Moawiya to Kataba, would not be difficult to hold, for all these points are already garrisoned and connected by feasible routes.
>
> The most fertile part of Yamen—the only part where taxes could be levied—would then be secured to Turkey. The rest of the vilayet could be left to stew in its own juice, thus freeing troops, at present frittered about in positions of doubtful strategical value, for the maintenance of order where such services are most required.

This advice is sound; but whether, at the end of this war, the Turks will be in a position to follow it, or whether they will not rather be compelled to abandon the Yemen entirely to the Yemenites, remains to be seen.

The difficulties of administering the province are complicated by the differences between Sunni and Shi'a. Central Yemen follows the Zeidi sect, but in the Tihama, or coastal region, the Sunni doctrine is paramount, and the Asiri, too, are Sunni. The tribesmen to the east, known collectively as Ahl-al-Mashrik, are also orthodox, but that fact has not always prevented their uniting with the Zeidis against the Sunnite Turk. The highlanders, it seems, are not, strictly speaking, fanatical, and take but little interest in politics as a rule—"but let the trend of politics touch their personal interests, and see how those working hives will swarm and sting."

The last chapter, "Current Events and a Forecast," is fascinating reading. Not being a German, the author did not foresee the war that is now upon us; but Arabian interests centre upon other matters than those over which the war is being fought, and though the fate of Turkey must certainly affect the fate of Yemen and of all Arabia, the politics of the peninsula will probably be changed less by it than by some lesser events at, shall we say, Nejd? What the author writes, therefore, retains its interest, and his views on the future of Arabia and the Arabs are worthy of careful consideration.

The book, however, is not given up to political questions. Far from it. It contains a remarkably vivid description of the country, its scenery, its people, and their way of living, and even of its birds and beasts. In fact, it was its birds that attracted Mr. Bury to the Yemen; for he is an ornithologist first and foremost, and his descriptions of his feathered friends—and, one must add, victims!—are amongst the best things in his book. The present reviewer was tempted to "skip" the chapter, "Birds and Beasts," but resisted the temptation, and was more than rewarded for his virtue. Here, for instance, is a delightful titbit from it referring to the hornbill:—

> A high-shouldered freak is he, with a huge black bill and sombre plumage; when he balances on his long tail, and opens that ungainly beak to sing, he looks like a dissipated undertaker.

And again, regarding lizards, we read:—

> They have the same uncanny gift [of changing colour] when stalking in the open or unwilling to court observation. It is very embarrassing to say, "Look at that bright blue lizard," and be asked, "What bright blue lizard?" You have never taken your eyes off the creature, and yet it has vanished. Such incidents require explaining.

The same sense of humour that flashes out in these

* "Arabia Infelix; or, The Turks in Yamen." By G. Wyman Bury (Macmillan and Co.)

Digitized by Google

passages marks many of the author's descriptions of the human beings he met in his travels. To him the Turk and the Arab are fellow-men, to be treated as such, and dealt with with sympathy and the desire to understand their point of view, rather than to impose one's own. The result is that he can find a good word to say for both, though not blind to the faults of either; and we get a sane and trustworthy picture, instead of one that is all high-lights or deep shadows.

The scenery must be magnificent, though calculated to produce vertigo in the observer occasionally. Here is a typical bit, describing the panorama visible from Wasil, a station about half-way between Hodeida and Sanaa.

From the coffee-house at Wasil one can throw a stone into the Wadi Hejjan, where caravan donkeys look the size of mice, and sheer from the Hejjan, blocking out the northern sky, rises the gigantic scarp of Safaan. Along its upper heights are terraced fields and guardian towers, with here and there a village perched on some salient crag. So abrupt is that studendous slope that it looks as if an incautious husbandman might fall off his field, to crash into the Hejjan thousands of feet below.

Close at hand are the precipitous heights of Masar, that seem ready to fall on Wasil. It gives one a crick in the neck to count the coffee gardens up those outrageous steeps, while wondering if they are garnered with a derrick. . . . The long crests of the Lahab range lie across the southern sky, beyond nightmare gorges that drain into the Howeib.

Many of the illustrations—which are numerous and remarkably good—quite bear out the author's descriptions of the precipitous character of most of the country. The tall, fortress-like houses that figure in many of these photographs, and appear to be placed usually in the most inaccessible spot to be found, tell their own tale of the life the Arab has led in the past, and still leads to-day. The Yemen is no place for weaklings or idlers. But clearly it has a great deal of charm of its own; and clearly, too, as indicated above, it could be made extremely productive if only it were well governed and its people could see a prospect of reaping the reward of their labours if they cultivated more than they actually require for their own use. But to-day, with transport unsafe and costly, they have no incentive to put forth their best efforts. For them, as for the handful of foreign merchants on the coast, life is a struggle, indeed. Yet one wonders whether, in spite of all its drawbacks, the Yemen does quite deserve the sobriquet bestowed upon it by Mr. Bury. Which shows, at least, what a very interesting book he has written.

NEAR EAST BOOK NOTES.

Messrs. Constable and Co. have just published "Roumania and the Great War," by Dr. R. W. Seton-Watson. The price of the book is 2s. net.

Messrs. Stanford have issued No. 12 of their Series of War Maps: The Theatre of War in Western Asia Minor. We have not seen a copy, but understand that the sheet contains maps of Western Asia Minor, the Sea of Marmora, the Bosphorus, the Dardanelles, etc. The price is 3s.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"THE FUTURE OF CYPRUS."

To the Editor of THE NEAR EAST.

Sir,—The remarks of Mr. George Houston in your issue of June 11 seem singularly misplaced at a moment when Greece is making her decision as to whether she will help the Entente Powers or remain neutral. Far from concurring in his opinion, I hold that now, more than ever, is the cession of Cyprus to Greece justifiable—and this on three grounds:—

(1) We are fighting this war in defence of the principle of nationality. If we retain possession of an island, the population of which is five-sixth Greek, we vitiate that principle and appear hypocrites in the sight of our enemies. The Mussulmans of Cyprus are but a small minority, and if they were dissatisfied with the change of ownership they could be expatriated, like the Mussulmans of Crete.

(2) Cyprus has never been a paying concern of ours. It has always cost more than it was financially worth. We have only built one railway, the Famagusta-Nicosia-Morphou line, and famines are frequent there. Its possession is not, like Malta, Gibraltar or Suez, a strategic necessity, and thus neither the interests of the Admiralty nor of the Exchequer would be affected by its loss.

(3) We are anxious for a reconstruction of the Balkan League against Germany, Austria, and Turkey. If Greece were to receive a disinterested compensation in the shape of Cyprus, she would be less loath to part with Kavalla to Bulgaria; and such a timely and generous gift would strengthen the hands of M. Venizelos and reduce the pro-German elements in Greece to silence.

Mr. Houston's suggestion that Russia and France should be allowed to dictate to us, as to whether we should give Cyprus to Greece or not, is, to my mind, without weight. Greece will never prove a dangerous rival either to France, Russia or ourselves. The character of her people is more prone to adventures of a commercial than of a chauvinistic nature. Mr. Houston's remarks about Queen Sophia, whose relations with her Imperial brother have never been very cordial, are out of place and quite unjustifiable. Besides, the gift of Cyprus might incline the Italians to behave in a similarly generous manner about the Dodekanese.

Such a suggestion, needless to say, would only be conditional on the simultaneous entry of Greece and Bulgaria into the war as our Allies.—I am, etc.,

KENNETH H. LEDWARD.

37, Clifton Hill, St. John's Wood, N.W.
June 22, 1915.

THE SOUTHERN, OR JUGO-SLAVS.

To the Editor of THE NEAR EAST.

Sir,—On Wednesday week a large number of Southern Slavs met informally at the Hotel Cecil to discuss the future of their unhappy country. Readers of THE NEAR EAST are aware that this outlying fragment of the great Slavonic race owns very different allegiance. It includes 5,000,000 Serbians, 500,000 Montenegrins, and 6,500,000 unwilling subjects of Austria-Hungary. Two questions relating to the forthcoming resettlement of Europe were eagerly debated on June 16:—(1) Shall Southern Slavs form a Confederacy or a single State? and (2) What claims has Italy on the Adriatic littoral? As to the first point, there was virtually a consensus of opinion that Confederacy would spell weakness and liability to Austro-Hungarian intrigues. It seems far preferable to weld the Hapsburgs' southern possessions, Serbia, and Montenegro into a State numbering 12,000,000 citizens, with complete local autonomy for each unit. Thus, and thus only, will that new political organism be strong enough to preserve its independence. By reason of their brilliant endowments and past history, the Serbians are clearly entitled to hegemony. Such a State would, in fact, be a German Empire in miniature linked by racial ties, and inspired by a far nobler civilisation. The second question must also be solved on a racial basis. No Southern Slav would deprive Italy of the western half of Istria and Pola; but all are agreed that, access to the sea being the life-blood of a modern State, the remainder of the Adriatic coast must fall to the new creation. It should be remembered that while the culture of the population inhabiting this long strip of territory is Italian, they are racially Slavs.

Some apprehension was expressed on Wednesday week regarding an alleged secret convention between the Entente Powers and Italy, as a preliminary to her entering the fray on their side. How have Southern Slavs fared in negotiations to which they were not a party? It seems to me that a frank disclosure of policy is essential at this crisis. If, as we all hope, full justice has been done to Southern Slav aspirations, Serbia and Montenegro will fight with tenfold ardour, while subjects of Austria-Hungary will be encouraged to throw off a hated yoke. Lastly, a strong Southern Slav State in alliance with Italy would help her to preserve Trieste from falling once more into the clutches of the Central Powers.—I am, etc.,

June 22, 1915. F. H. S.

"Rattlin' good game, old man. What?"

"Yes! An' a rattlin' good wind-up with a 'burra' peg of Perfection."

"I thought you'd like it. It's the only whisky I've drunk since I've been out. Jove, man! It's the finest spirit ever bottled. Never reminds you that you've got a liver, and it's always as welcome as promotion. I'd sooner a peg o' Perfection than a case of any other."

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915. June	1915. June		1338. Shaaban	5675. Tamuz
25	12	Friday	12	13
26	13	Saturday.....	13	14
27	14	Sunday	14	15
28	15	Monday	15	16
29	16	Tuesday	16	17
30	17	Wednesday	17	18
July 1	18	Thursday	18	19

To-day is the birthday of H.R.H. Prince George of Greece, who was born at Corfu in 1869.

To-morrow is the birthday of Princess Sophia, the fourth daughter of Prince Andrew of Greece, who was born in 1914.

Wednesday is the birthday of H.R.H. Prince Danilo-Alexander, Crown Prince of Montenegro, who was born at Cettinje in 1871.

Yesterday was Lord Kitchener's birthday.

Prince S. Cantacuzene has arrived in London from Roumania.

The Earl and Countess of Meath have received a telegram of sympathy from the King and Queen on the death of their son, the Hon. Ernest Brabazon.

On Monday Sir Walter Townley, H.M. Ambassador at Teheran, who is now in England, had audience of the King at Buckingham Palace.

Baron Uxkull, Secretary to the Russian Embassy, was expected to leave London yesterday for the Legation in Athens, whither he has been transferred.

M. Vesnitch, Serbian Minister in Paris, arrived in London on Wednesday evening.

M. Kriezis, the newly appointed Naval Attaché to the Greek Legation in London, has arrived and entered upon his duties.

Lieutenant Herbert Asquith, who is home from the Dardanelles wounded, is not seriously hurt. He was hit in the face by a fragment of shell. Lieutenant Arthur Asquith, who was wounded in the leg some weeks ago, is doing well, and will shortly be on active service again.

Mrs. Webb-Bowen returns thanks for the many kind letters of sympathy sent to her, but she regrets that she will not be able to answer them all individually for some time.

Dr. Purves Stewart, having been appointed Consulting Physician to his Majesty's Forces in the Mediterranean, has gone abroad on active service.

Major and Brevet Lieutenant-Colonel Charles Wood, 5th Fusiliers, second son of Field Marshal Sir Evelyn Wood, V.C., G.C.B., was married on Saturday to Miss Olive Mary de Bathe Miles, at the Church of the Assumption, Warwick Street, Regent Street. Owing to the war no invitations were issued and no reception was held.

BOARDING HOUSE,
51 & 53, EARL'S COURT SQUARE, S.W.
Facing Gardens. High-class Connection.
Home Comfort and Convenience.
Moderate Terms.
Highly recommended by Miss GEERE as suitable for Families from the East.

The engagement is announced between Hubert Constantine Smith, Second Lieutenant, the Manchester Regiment, younger son of Sir Frederick H. Smith, Bt., J.P., and Lady Smith, of Queen's Lodge, Colwyn Bay, and Dorothy Edith Penelope, only daughter of Brigadier-General F. J. Kempster, D.S.O., and Mrs. Kempster, of 1, Sheen Gate Gardens, East Sheen, S.W.

A marriage has been arranged, and will take place very quietly the first week in July, between Oliver Francis Haynes Atkey, Sudan Medical Department, and Dulcibella, daughter of the late Philip H. Clifford and Mrs. Clifford, of 2, Lurgan Mansions, Sloane Square, and granddaughter of the late Captain Herbert Wodehouse.

The health of Dr. Granville, Director-General of the Alexandria Municipality, who has been undergoing a course of treatment at Harrogate, is now satisfactory.

Madame Pashitch, wife of the Serbian Prime Minister, who came to England accompanied by her daughter, in order to acquaint herself more fully with the organizations for meeting emergencies that have arisen or may arise through the war, prolonged her stay in order to be present at the opening of the exhibition of the works of Ivan Mestrovitch, the Serbian sculptor, at South Kensington Museum.

Lord Ranksborough, whose appointment as lord-in-waiting was recently announced, saw service in the Egyptian War, 1882, and Nile Expedition, 1884-5. For his services on the former occasion he was awarded the medal with clasp, and on the latter occasion, when he was mentioned in despatches, he was breveted major. He was created a baron last year, and his family name is Brocklehurst.

Dr. Cyril H. Goodman has been appointed Assistant Director-General of the Public Health Department, Egyptian Government.

General Sir George W. A. Higginson, who entered on his ninetieth year on Monday, took part in the Crimean war. He served for thirty years in the Grenadier Guards, and afterwards commanded the Brigade of Guards.

Colonel George Philips has died at Clevedon, in his eighty-second year. He entered the Royal Engineers in 1850, and served in the Crimean campaign of 1854-5, taking part in the battle of Inkerman and siege of Sebastopol. He was mentioned in despatches, and received the medal with two clasps, the Turkish medal, and the 5th class of the Medjidia. He reached the rank of colonel in 1885, and retired in 1891.

Another Crimean veteran has passed away, Lieutenant-Colonel William Henry Moffatt having died on Monday at the age of eighty-one. He was gazetted sixty years ago in the 19th Yorkshire Regiment (now the Alexandra Princess of Wales's Own), with which he served in the latter part of the Crimean campaign, being awarded the Crimean and Turkish medals. Colonel Moffatt afterwards saw much service in India.

Brigadier-General Harold Bridgwood Walker, D.S.O., who is reported wounded from the Dardanelles, was born in 1862 and entered the Regular Army from the Militia in 1884. In the same year and the year following he served with the Sudan Expedition, and later was attached to the Mounted Infantry Frontier Field Force, and for his services on the Nile he received the medal and clasp and the bronze star. General Walker has also seen service in the Tirah and South Africa. He was general staff officer of the first grade in India when war broke out.

Major Ivon D'Esterre Roberts, Royal Field Artillery, who was employed with the Egyptian Army in 1913, is reported killed in action.

Major Richard Percy Lewis, Devonshire Regiment, who is reported wounded at the Dardanelles, entered the Regular Army after serving with the City Imperial Volunteers in the Boer War. Subsequently he was attached to the Egyptian Army.

Captain R. C. P. Blyth, 1st Gloucestershire Regiment, who, as announced in these columns last week, was killed in action at the Dardanelles, was attached to the Royal Fusiliers at the time he met his death. It is interesting to recall that his great-grandfather served in the 28th Regiment, now the 1st Gloucestershires, under Sir Ralph Abercrombie in Egypt and in the Peninsula campaign.

Mr. Charles Baehler has arrived at the Château Neu Habsburg, Switzerland, from Cairo.

A memorial service for Major C. G. Massie Blomfield, 1st Battalion Royal Warwickshire Regiment, will be held at St. Mary Abbot's Church, Kensington, on Tuesday afternoon next, the 29th inst., at three o'clock.

The death is announced to have taken place at Alexandria, on the 20th inst., of Lieutenant Eric Alfred Wright, R.A.M.C., the only son of Dr. and Mrs. Wright, of Mountsorrel, Romford. Lieutenant Wright joined the London Scottish Battalion of the Territorial Force, and, with the rank of sergeant, was in the action at Messines. On the death of Dr. MacNab (killed in action), he was appointed surgeon to the battalion. Invalided home, he received a commission in the R.A.M.C., and was sent to Alexandria in March. He died of septic poisoning, contracted in operating on a septic case. He leaves a widow and one daughter.

Next Monday evening at 8.30 the Royal Geographical Society will hold its last meeting of the session, at Burlington Gardens, when Mr. Arthur Hinks, Secretary to the Society, will read a paper on "The Map of Europe and the Near East compiled by the Society for the General Staff."

At the annual meeting of the Palestine Exploration Fund, at Burlington House, on Tuesday, the Archbishop of Canterbury, who presided, referred to Lord Kitchener as one of the officers who had helped in the work done by the Fund, and proceeded to relate how they first met. "I remember on one of my visits to Palestine," he said, "meeting at the bottom of a shaft a rather tall, rather gaunt figure, grimed from head to foot, and being introduced to Lieutenant Kitchener, who was one of a party sent out by the Fund on a survey in Western Palestine. That was in the year 1875 or 1876, and I have a very vivid recollection of it now."

Yesterday afternoon, at a meeting of the Egypt Exploration Fund, held at the Royal Society's Rooms, Mr. T. Eric Peet read a paper on "The Shepherd Kings of Egypt."

We understand that the Hon. H. A. Lawrence, Staff Brigade-Major in the East, has been promoted to Brigadier-General.

Captain C. Mackenzie, who temporarily replaced Mr. Ashmead Bartlett as special correspondent with the forces at the Dardanelles, is a son of the famous comedian, Edward Compton. He was educated at St. Paul's and at Oxford, is the author of "Sinister Street," and has dabbled in poetry, journalism, acting, and play-writing.

Under date of June 12 the special correspondent of *The Times* at Salonika reported:—Sir Thomas Lipton's yacht, Erin, with ten nurses on board, is sailing from Salonika for England on Sunday. Lord Dunraven's yacht, Grianaig, left yesterday for Lemnos. Colonel Hunter and thirty Army surgeons are leaving immediately for Malta, the work of inoculating the Serbian Army having been finished. Twenty-five American doctors sent by the Rockefeller Foundation for general sanitary work are expected to arrive at Salonika to-morrow.

Under date of June 17, Reuter's correspondent at Salonika reports:—The British medical expedition to combat typhus in Montenegro, in charge of Dr. Carre and two lady doctors, has arrived here safely.

The *Hestia* (Athens) announces that M. Venizelos is entering a suit against M. Rhallys for defamation because in a recent Press interview the latter said that M. Venizelos and his party were plotting against the State and the Constitutional succession of the Crown Prince to the Throne in the event of King Constantine's death.

The Rev. Philip Blakeway, Chaplain to the Forces, died on service in Egypt with the Territorial troops to which he was attached. He was chaplain to one of the London Mounted Brigades, and for some time was chaplain at the depot of the Royal Sussex Regiment and to the Middlesex Hussars. He was a chaplain of the first class, and had the Territorial Decoration and the rank of colonel. He graduated at Magdalen College, Oxford, and had held curacies in Camberwell, Lambeth, and Battersea, became rector of All Saints, Hastings, and then vicar of Walberton. He was chaplain of the Middlesex Hussars when mobilisation took place, and dated his commission from 1894.

We have to announce the death of Mrs. Safia Ahmed Faris, which took place, after a short illness, at 5, Ashburn Place, S.W., the residence of her granddaughter, Mrs. Reginald Legge. She was the wife of the late Ahmed Faris, an Arabic scholar, who translated the Bible into Arabic, and was also the author of several works in that language and editor of the "El-Djevaïb." He received tokens of appreciation and regard from Sovereigns of Turkey, as well as Khedives of Egypt and Rajas of India. His widow, who had lived a life of complete retirement since his death in 1887, was one of the few English ladies who embraced the Mahommedan faith. She was engaged in writing a book entitled "The Soul of Islamism," which remains unfinished.

The Arbitration Board appointed by the General Officer Commanding-in-Chief, Egypt, to consider all questions of rents and compensation for house properties, etc., requisitioned by the military authorities, is composed of the following members :—President : Sir Alexander Baird, Bart. ; members : J. Langley, Esq., Director-General, State Domains Administration, A. C. McBarnet, Esq., Ministry of Justice, Henry Naus, Esq., Gezira, B. H. Richardson, Esq., Local Auditor, F. P. Watson, Esq., Davies Bryan's Buildings. Secretary : Mr. F. E. Curtis.

THE LATE CAPTAIN R. C. P. BLYTH.

AN APPRECIATION.

A correspondent who knew Captain Blyth intimately, writes :—

It is not easy to pick out any special traits in a life that was so full of vigour, energy, and purpose; he lived his life to the full, and enjoyed it. He loved his work in the Sudan, and the people loved and trusted him completely. His understanding of Eastern natures was acute and unerring; he knew how to use what was best in them, but no one could take him in. In every relation of life he was absolutely straight and honourable and upright. Not much can be said here of his work in the Sudan, at Roseires, and Renk, but its worth is understood by those who know it. It may be said that his was almost a record of having worked for seven years south of the twelfth parallel without having once taken sick leave. A gracious message of sympathy and regret has been received by telegram from their Majesties; and also from Lord Kitchener and the Sirdar and officers of the Egyptian Army.

Captain Blyth received orders in May to go to Alexandria, and he left there on May 27 for the Dardanelles, saying that he was "very happy" to get to the front at last. He was attached to the Royal Fusiliers. It was only a few days before the end came—"the only death he envied," to quote his own words. Eager, joyous, in the full strength and splendour of a beautiful life, he answered the call, giving his life, as he had spent it, for England in the East, one of England's "gentlemen unafraid."

THE LATE BUCKNAM PASHA.

A correspondent writes :—

With Bucknam Pasha has passed away a type of man that is fast disappearing in these prosaic days. His life was full of adventure. Born in Maine, he early took to the sea, and was one of the first, if not the first man, to run a steamer down the Lachine Rapids. His love of adventure took him to Panama in the troubled days before America took up the building of the canal. There he nearly succumbed to "Yellow Jack." A treasure-hunting expedition in the West Indies was another field of adventure, and after the comparatively mild life as captain of transatlantic and transpacific steamers he entered Cramp's Shipbuilding Works at Philadelphia, and was trial commander of the cruiser "Medjidieh," which he took out to Turkey. At Constantinople he was presented to the Sultan Abdul Hamid, who, struck by his genial and straightforward manner, invited him to enter the Ottoman Navy, with the rank of Captain. He was shortly afterwards promoted Admiral and made a Pasha. As was the case with most of the foreign naval and military officers attached to the Turkish Navy or Army during the later years of Abdul Hamid's reign, he had not much scope for his activities. He went to Kiel, however, to bring back the cruiser "Asari-Tewfik." With the fall of Abdul Hamid, Bucknam was for a short time without occupation, but his restless energy soon found fresh outlets, and it is an open secret that he was largely instrumental in getting arms and ammunition into Tripoli for the Turks during the late Italo-Turkish War.

He was a bluff, good-natured, easy-going, open-handed man, a sailor of fortune if you like, but a man whose absence will be felt by many.

THE LATE MR. C. D. COBHAM.

A correspondent in Larnaca writes :—"The news of the death of Mr. C. Delaval Cobham, C.M.G., was received at Larnaca with sincere regret, for the deceased gentleman was much respected by all classes of the community. Mr. Cobham resided at Larnaca for over a quarter of a century as senior executive officer of the district. He was an excellent Greek and Turkish scholar, and knew eight or nine other languages; and he did more for the island from a literary point of view than anyone else. He was a genial host and a most courteous and amiable friend. His palatial residence, the Villa Claudia, is now used as a seminary for training Greek priests, the establishment of which he advocated warmly at all times. Mr. Cobham edited a bibliography on Cyprus, and translated several works in almost every language he was master of. His magnificent and unique collection of books on Cyprus he bequeathed two years ago to the Royal Colonial Institute. During Mr. Cobham's residence at Larnaca he entertained many notable people, including King George, when Prince of Wales, the late Duke of Edinburgh, and the Khedive Abbas.

FOR OUR WOUNDED SOLDIERS.

In response to the appeal for funds to purchase portable bedsteads for use in No. 3 Casualty Clearing Station, British Expeditionary Force, to which Nurse Wheatley, formerly of Constantinople, is attached, we have received the following donations :—

The Hon. Mrs. Sackville West, £1 1s. ; Andrew Ryan, Esq., 10s. ; F. E. Roe, Esq., 5s. ; J. Bec, Esq., 2s. 6d. ; J. L., 5s. ; J. P., 10s. ; D. S., 5s. ; "Gippie," 5s. ; and "Baghdadi," 5s.

We shall be glad to receive and acknowledge any further contributions.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

MARRIAGE.

HOOPER—MALYON.—On June 15, at St. Mary's, Witney, by the Rector, the Rev. P. P. Goldingham, George Horace Valentine Hooper, of Busreh, Persian Gulf, eldest son of Mr. and Mrs. G. W. Hooper, to Constance, elder daughter of Mrs. C. F. Malyon, of Witney, Oxon.

DEATH.

BLYTH.—Reported killed in action in the Dardanelles on June 4, Captain Reginald Crommelin Popham Blyth, 1st Gloucestershire Regiment, attached Egyptian Army, beloved only son of the late Bishop in Jerusalem and the East, and dearly-loved husband of Norah Blyth, 18, St. Leonards Road, Bexhill-on-Sea.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

UPPER EGYPT.

Luxor.
The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.
The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.
Are the Finest on the Nile.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Alexandria.
WINDSOR HOTEL (*Facing the Sea on the New Quay*).
Most delightful and healthy situation of any Hotel in Alexandria. Electric Light throughout. Daily Concerts on Verandah. Meals served *al fresco*. French Cuisine and English Management.
Inclusive Terms from P.T. 50 (10s.) per day.
Special Terms to Government Officials, Commercial Travellers, and for long stays.
Proprietor and Manager—AUG. van HILLEGEM.

Alexandria.
CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. **Full Pension P.T. 50 per day.**
C. AQUILINA, *Proprietor.*
(Late of Messrs. Thos. Cook & Son.)

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

FRIDAY, JUNE 25, 1915.

EGYPT AND THE WAR.

Although the tide of invasion has been rolled back, the war remains a very present reality for Egypt. It will be well if the unceasing drafts of wounded arriving from the Dardanelles serve to remind the Egyptians that their borders are being as effectively defended from the horrors of war in the trenches on Gallipoli Peninsula as when the preliminary attack of the Turkish forces was beaten back from the Suez Canal. We have the assurance of the enemy that the main expedition against Egypt was meant to follow that attack. For some time Djemal Pasha kept his forces on the confines of the Sinai Desert; but to-day, if they still exist, they are nearer the Dardanelles than Damascus. More and more insistent orders have reached their commander-in-chief to despatch troops northwards for the defence of the capital, until he has nothing left of the Grand Army, which was to have marched in triumph through the streets of Cairo, but a "bodyguard" of a few thousand men. There can be little doubt that the invasion of Egypt was regarded by the Turks at one time as a feasible proposition. Whether their German task-masters were equally naïve when they encouraged the Turks in that belief is not known. They at least will have recalled the dictum that no invasion of Egypt has any prospect of success, unless supported by control of the sea. It pleased the Germans to ignore this fact, but the Turks, who may never have heard of it, will have had the significance of the saying brought home to them when they realized that a few days sufficed to transfer the defenders of Egypt from the banks of the Canal to the Dardanelles, there to meet in due course some of their former assailants, who would have taken weeks to reach the same goal by land from the Sinai Desert. But the fighting on Gallipoli Peninsula is not only saving Egypt from invasion. That task, thanks to the existence of the Suez Canal, was comparatively an easy one. The deadly struggle in which Turkish and British troops are now engaged represent in part the birth-pangs of Egyptian nationality. *Tantae molis erat Romanam condere gentem.* Of recent years the great hindrances to the progress of Egypt have been placed in the country's way by the intrigues of Germany and Turkey. The proclamation of a Protectorate heralded the end of the old order; but it was necessary that the evil influences should be completely overthrown in the eyes of the world. When that work has finally been accomplished by the operations on Turkish soil, the main obstacles interposed from without to the peaceful development of Egypt under British control will have been removed.

In the meantime the country has an opportunity of comparing its present position with the conditions which would most certainly have prevailed, if this world-crisis had not found British influence paramount in Egypt. Regarding the value of the maintenance of law and order, the Egyptians may have two opinions. The incidence of martial law often proves irksome, and it may be difficult to convince an ardent Nationalist that the elements of disorder would not necessarily mend their ways, if they had a Government of their own people. But from the economic point of view there cannot be any doubt even in Nationalist circles that Great Britain is now essential to the further development of Egypt, just as Egypt has become essential from a strategical point of view to the British Empire. Apart from the outbreak of war, Egypt has experienced a series of agricultural misfortunes, which included a low Nile and the boll-worm in the cotton plant. When the war came, the market for the great staple product on which Egyptian agriculture so largely depends was completely thrown out of gear. The cotton crop itself was not good, and even the reduced crop did not find a ready market. In view of the effects that such conditions have had in the past in Egypt, it is not difficult to realize that the position in the country would be very much worse to-day, if the people had not had the steadying influence of the Anglicized Administration to fall back upon. The Government restricted the area of cotton-planting, and has brought pressure to bear upon the cultivator to sow other crops, wheat, barley, maize, and bersim for cattle feeding. Thanks in part to these measures, it may be confidently anticipated that Egypt has weathered the worst of her present trials. From now onwards her economic position should show a gradual improvement, although it is not to be expected that there can be any complete recovery before the world at large is once again at peace with itself. The contemplation of these matters, which are within the purview of every individual Egyptian, ought to modify any sentimental regrets he may have at the passing of old shadows. The substance remains his, and it is now within his grasp to develop that substance for his own and his country's benefit in a way which was never before possible.

For Egypt, therefore, both from the Egyptian and the British point of view, the war bids fair to prove a blessing in disguise. The proclamation of a Protectorate, however, is merely the formal heralding of a number of reforms which can only be carried out after the most careful attention has been given to matters of detail. For the moment a large amount of control is vested in the military authorities. The civil authorities remain at their posts, and the duty of harmonious co-operation with the military probably counterbalances any relief afforded in the matter of administrative routine. But as all Government departments must be alive to the necessity for preparing the ground for reforms, we may expect to find that the opportunity for overhauling the machinery of the Administration is being used to the full. In no direction is there more room for improvement than in regard to the judicial systems of Egypt. It is not necessary to labour the point in these columns, for attention has frequently been drawn to the subject. Some of the chief obstacles that have hitherto defeated reforming efforts have been removed by the proclamation of the Protectorate and by the elimination of the powers of obstruction wielded with such success in the past by Germany and Turkey. The question of judicial reform includes not only a re-organization of existing courts, together with a fusion of existing Egyptian Codes, Mixed and Native, and considerable amendment of them, but also the complete revision of the present system of repressing crime. In the last Annual Report of the Judicial Adviser to the Egyptian Government it was pointed out that no system of repressing crime could succeed unless the Public Prosecutor's Office and the Police work in harmony. Under present conditions co-operation between these two administrations is often lacking, and, as we learn from our Cairo Correspondent this week, the Government is now engaged upon a scheme for their amalgamation under one supreme head. A Commission, as is known, has been at work for some time on the contemplated reforms in the Mixed Courts. The appointment of Mr. W. E. Brunyate as Legal Adviser to the High Commissioner is a further earnest of the importance attached by the Government to the preparation of the new judicial machinery that should be ready for smooth working after the war. When time has been given for the cumulative effects of these and other improvements in the administration of Egypt to be appreciated in the country, a clearer conception may have been gained by the Egyptians of the advantages of re-creating their nationality under the British ægis.

Any newsagent or bookstall in the United Kingdom can supply copies of "THE NEAR EAST," which are on sale early on Friday morning. Should any difficulty be experienced in obtaining the paper, the Manager would be glad to receive a post card giving particulars, and he will take steps to rectify the matter.

EIGHTEEN MONTHS AGO.

A DIARY OF TRAVEL.—II.

By Mary A. Poynter.

Not quite so many-islanded, not quite so full of recorded legend, romance, and tragedy, is the sea that lies between Greece and Egypt as the Ægean Sea, further eastward. When once the shores of Greece and its near-by islands are lost to sight, there is a full night's stretch of sea before Crete, the island of unrest in recent times, is sighted. Another half-day this island, with its remote high mountains and its also remote history, holds one's thought and vision, claiming as it does, and as recent excavations there show it to have been, an early abode of art and civilisation, a spot that received, developed, and passed on these benefits that were struggling to reach out beyond the confines of Egypt and Western Asia. If Crete has "gone back," as we say of a land or a people that have fallen from a better estate, it at least did a great work in the world in its time, and was no mean stepping stone for enlightenment on its way to Europe.

Crete once passed, a day and a night of often troubled seas must be crossed before the low-lying, palm-tree-outlined coast of Egypt offers sunshiny refuge, and the traveller can disembark at Alexandria. The present lighthouse here is not architecturally one of the Seven Wonders of the world, though I fancy it fulfils its mission, sending out even more effective guiding light than did that Pharos of old whose renown will persist down the ages. It is interesting to note that the foundations of the classic lighthouse still stand as firm on the little island just off Alexandria's shore as when they were laid. A mosque rises upon these foundations—this mosque also a ruin—but it is easy to trace the extent and also the stability of the old work, in spite of superimposed buildings of later times whose architects at least had no scorn of ready-made sites, and who very likely had also a respect for tradition.

There's magic in a name, and the stations "Cæsar's Camp" and "Cleopatra," on the road leading out to pleasant Ramleh from Alexandria, though they make no appeal to the eye, certainly suggest a whole gallery of old-time pictures to the imagination. Where Hypatia gave her learned discourses, and where the wonderful library—never to be replaced—once stood, must be left largely for the imagination and the antiquarian to locate. In her Greek and Roman days Alexandria was a city of much splendour, architecturally, so if the first glimpse of the modern (I suppose I must also say bustling) commercial town is disappointing, it is because that greater and far more picturesque city of the past rises up to invite comparison.

Out in the country one feels that it is still old Egypt—the Egypt of his dreams—though whether it be old Egypt or modern does not matter; for the life in the fields, by the canals, and on the great branching river is so satisfying in its picturesqueness that it needs no glamour of the past to lend it enchantment. If, as was said in ancient times, Egypt be the gift of the Nile, what a gift it was, what a gift it continues to be! And the great Nile, as if conscious that the land has no life save that within its gift, rises, flows from far, divides, turns aside into canals, sends little trickling streams among the thirsty fields, and reaches the Mediterranean at last, its bounty mostly expended, but leaving paths behind luxuriant with green beneath a rainless sky.

As one travels down by rail from Alexandria to Cairo, through the rich district of the Delta, the homely life of the land lies outspread for all to see. Sometimes the boats moving lazily up and down the low-lying canals are hidden from view, and their great white upstanding sails outspread to the breeze suggest boats sailing across a landscape rather than upon water.

The little native villages are always most satisfyingly set in the picture—a palm tree or two, perhaps a mosque with a dome and a single minaret, and a few flat-roofed buildings of Nile mud is all, but it would be exacting to ask for more under the circumstances.

In the fields man and beast work side by side with that close fellowship and understanding that they must have had when the world was young, and before man chose to live apart and to put great mud and brick and stone partitions between himself and the animals over which he was given dominion. The camel, the ox, the donkey and the dog wait upon their master as they were wont to in the original plan, and men, these blue-robed fellaheen, walk upright and are not bent by their labours in the fields.

The farming implements and the carts that go laden with corn, with cotton, or with vegetables and fresh dates to the market do not seem to have changed their pattern much since the days when the Egyptians liked to cover the walls of their hidden-away tombs with pictures of their every-day life, as well as with the symbols of their religion.

But the great moment is when one catches on the right, against the sunset, and while still many leagues from Cairo, that first glimpse of the Pyramids, looming up over an outstanding shelf of the desert—no, not looming up obtrusively, but abiding naturally, composedly there—a part of the past that has no share in the life of the present, and yet will outlast most of what seems so permanent to-day.

Now Cairo itself is "up-to-date," or it is redolent of the haunting, mysterious past, as the traveller may be inclined. Great, splendid modern caravanserais offer every comfort, every luxury of modern living, while the great Museum near the Nile takes one back so far into the past that he is astonished that the present has not found man further on in matters of taste, and perhaps in artistic feeling.

From the lovely garden of the British Agency on the banks of the Nile, with a palm-tree foreground and the Pyramids and the yellow desert beyond, we watched a hydroplane—latest of inventions—pant with impatience, then beat the waters and rise from the oldest of rivers, soon to become a faint speck in the skies on its way Khartoum-ward. Then, turning from this garden into the streets once more, there was the camel almost "rubbing shoulders" with the motor-car, and it seemed singular that there should be so little incongruity in this association. So Cairo holds the old and the new, and neither seems consciously to disparage the other.

If the town of Helouan, out and up in the desert, is of recent growth, the views it commands of the sites where once stood Memphis and Thebes, of all the Pyramids, and those silent wastes beyond, is an old one, and must always have thrilled the watcher's imagination. It did not need even the at first delicate promise of colour, and then the deeply glowing orange sunset spread across the whole western sky, to accentuate and make that view from a house-top in Helouan one of the most suggestive and impressive remembrances we could have of the Egypt that was and is.

Our visit to Cairo on this occasion was but a brief one, and there is only one more experience I would at this moment record—an experience that might be called almost an adventure. We were asked out to see the moon rise and to dine with friends who have pitched their picturesque working camp in the desert, just behind and above the great Pyramids. We went by daylight, that we might pass the forbidding guard and see our host's latest excavations; for an archæologist he is, and his labours there in recent years have been as fruitful in great "finds" as even his own ardent spirit could desire. His favourite hunting ground has been in the close vicinity of the Pyramids, and the Sphinx has yielded its secret to him—the secret of who built it, and what king its now maimed and distorted features were once meant to represent. Our host's discoveries point to the fact that in all probability the Sphinx is a colossal statue of Kephren, the builder of the second Pyramid, being that king's head on a lion's body. There is no longer a riddle of the Sphinx; it is almost sad to accept it, for where shall we turn to find another so time-honoured and so picturesque?

Almost immediately under the shadow of the great Pyramid was our professor's work of excavation going on when we saw it first—old streets of tombs were being opened up by the pick and shovel of the white-turbaned, black-skinned Arabs, brought from far up the Nile for their trustworthy qualities, and trained to dig with sensitive, careful touch, that no treasure, no statue, no tomb containing delicate tracery by brush or chisel should suffer at their hands. By good chance a tomb had just been opened that day, and down a rickety ladder our host led us, through an underground room almost chokingly filled with dust to where five wonderful statues—evidently those of a man, his wife, and three children—were being rescued from the débris. Ever so remote was the dynasty to which they belonged, but the workmanship was worthy almost of any age, though distinctly Egyptian, as it should be in that environment. We considered ourselves fortunate indeed to

Digitized by Google

be able to look on at such a "find." And we wandered on to other tomb chambers whose walls, many of them, still showed traces of delicate designs in colour—on to a chamber where at the door of the dead sat a little statue with hands outspread as if asking for offerings, a pathetic little figure sitting there through all these four thousand years and more for its time, shall we say, of awakening! A curio or a statue in a museum is a thing to ponder over—but that little curio in the place it was found, that statue in the niche in which it originally stood, is surrounded by a halo of interest that can never, it would seem, be attached to it elsewhere.

These old Egyptians left many hieroglyphic records that their deeds might live after them, but in dying how they sought to hide themselves away, wrapping the cast-off body in cerements, setting a value upon it that makes some of the living now feel that it is almost an intrusion to wrest those mummy sleepers from their tombs. And to find these tombs how many "false leads" does the excavator have to follow up before discovering the true burial chamber!

The moon rose almost before we had scrambled our uncertain and oft-crumbling way among the excavations and had waded through the desert sands to the camp of our friends. What a glamour that half-light threw upon the surrounding wastes, over the great Pyramids that we were high enough up to look down upon, and that some way, unexpectedly, seemed to shrink in size and to become one with the desert, not the great memorials of the past that they seem by day!

The dinner that evening was a good one, but the feast in reality consisted of the stories that were told of laborious undertakings that might go on for weeks with disappointing results; and then would come a day when some treasure of a past great period would be unearthed, and the Arab workman with the spade would be almost as overcome with joy as the scholar with the deeper understanding who stood over him.

Such stories as we listened to that evening seldom find their way into popular print; yet what is true of this particular camp and of the work of this especially fortunate archæologist must hold true in a measure of many another spot in Egypt, and throughout the classic world wherever men are searching in the earth to learn the secrets of the past.

The moon was riding high in the skies that night when we followed our white-robed, silent, never-looking-backward Bedouin guide down from the camp, past the mounds and broken walls that marked the site of the excavations, half falling sometimes in the knee-deep sands, past and so near the great Pyramid that its shadow sent a chill—was it of fear?—through the heart, down to the road where the Desert leaves off and the Sown begins, and where the last electric tram for the night was waiting to take us back to Cairo.

THE PRESS ON THE NEAR EAST.

The Future of Serbia.

The greater part of an article by "Politicus," in the *Fortnightly Review* (June), on the future of Serbia, is devoted to correcting the erroneous ideas still unfortunately held by many Englishmen that the Serbians are "a nation of barbarians; a nation of soldiers and swineherds." He points out that Serbia has been unfortunate in her rulers, her neighbours, and her geographical position. The Serbs have been constantly oppressed—first by Turkey, and more recently by Austria-Hungary.

Instead of attracting Serbia towards the Dual Monarchy by generous treatment, by offering her solid advantages if she should join in some way or other, Austria began to strangle and to bully the little country. Every attempt on Serbia's part to follow a policy not approved of by the Government of Vienna immediately led to the infliction of cruel punishment by her mighty neighbour.

In reference to the claims of both Serbia and Italy to the Adriatic, the writer says:—

. . . To thoughtful Italians it must be clear that it would be the height of unwisdom to cut a greater Serbia off from the sea. . . . It is clear to all far-seeing Italians that Nature has meant Italy and Serbia to go hand-in-hand, that the political and economic interests of both are identical, that each can best supply the other's needs.

Germany and Turkey.

Mr. G. K. Chesterton, writing in the *Illustrated London News* (June 19), has a good many things to say regarding Turkey and the Turks, and we quote from only one or two sentences in a really convincing article. The first quotation refers to the assertion of a German journalist, who says that Christianity will, after the war, differ in England and Germany. As to the latter country, it will be "a manly Christianity and permeated with the new German spirit. This," he adds, "will make it particularly attractive to Mohammedans and heathens." Mr. Chesterton writes:—

It might be suggested that though "manly Christianity" may be very suitable to Mohammedans, it may not be so suitable to Mohammedans as Mohammedanism. It also might be suggested that if Christianity needs to be "new," it does not need to be Christian. In justice to the Turks, it should also be said that, if they are as rude as the Germans in war, they are much more polite in peace.

Referring to the contention recently hinted at by a prominent authority on Balkan affairs that while the breaking of Turkey is a possible and desirable thing, the breaking of Prussia is neither wholly possible nor even to be desired, the writer says:—

There cannot be the smallest moral excuse for restricting the Turks to little more than Constantinople which is not also a moral excuse for restricting Prussianism to little more than Berlin. That it is much more difficult to do makes it much more necessary to do it. And if we do not do it, if we do not disarm Prussia as we have disarmed Turkey, then, indeed, in the very wise words of a French Socialist uttered the other day, "the greatest effort ever made by the human race will have been made in vain."

Balkan Negotiations.

The *Morning Post* (June 22) published a most interesting dispatch concerning the Balkan negotiations from its own correspondent at Budapest. We quote from his information regarding the opinion of the local Press:—

The *Mir* says that the Roumanian Press is discussing negotiations for a Balkan League in favour of the Entente, and adds that the negotiations are proceeding with much hope for success. At the same time, the *Narodni Prava*, a semi-official journal of the Sofia Government, repudiates the suggestion that any such negotiations are going on, and declares that the news circulated in Roumania that Bulgaria is on the eve of mobilization is also without foundation.

The correspondent adds that the fact that Bulgaria does not mobilize is the disquieting feature from the Austro-German point of view, as it proves that Roumania, in mobilizing, has acted in accordance with the sentiments of Bulgaria. In reference to the attitude of Roumania, he writes:—

The Roumanian Government does not for a moment hide its intentions and policy, and, as I said in one of my recent articles, there are only details to be settled before the final decision is made.

The Balkans Again.

The *Outlook* (June 19), in an article under the above heading, thinks that "It is now safe to say that Balkan neutrality has now entered upon its penultimate stage." Regarding the claim of Roumania that her new territories should be bounded by the Pruth in the north, by the Theiss in the west, and by the Danube in the south, the *Outlook* suggests that although it is a great deal to ask, there is, nevertheless, much to be said in support of it. The article points out that the acceptance of Roumanian terms would involve the dismemberment of the ancient Magyar kingdom, and after dealing with the position of Hungary to-day, continues:—

Moreover, if the Theiss frontier is refused, what alternative strategic frontier can be offered? Once Roumanian territory extends beyond the crest of the Carpathians, by which it is at present bounded, there is no natural obstacle east of the river. . . . It remains the case that if Roumania moves westward at all her natural limit is the Theiss; and now that she has once set out a claim to the whole region, she is not likely to abandon it, but will rather remain an element of disturbance to the world's peace until she has made it good. . . .

The writer regards Bulgaria's claims as just, and sees no likelihood of opposition to their realization. But he shows that with the accession of Italy to the side of the Allies the situation has shifted to the disadvantage of Greece, whose intervention would be now of less value than at the time of the Venizelos crisis, and Bulgaria will consequently increase her demands

TANGIER TO TEHERAN.

The situation in Lower Mesopotamia appears to be now extremely satisfactory; the Turks and their Teutonic taskmasters seem to be demoralized and fairly on the run; and the Arabs, having had their eyes opened to the fact that they are likely to get more licking than loot if they listen to further German-made lies, are losing any enthusiasm they ever had for the German-Young Turk combine. At least, that is the impression I gather from private letters received from the scene of action. And I am glad to learn that competent judges consider that we have the situation well in hand as far as that theatre of war is concerned. My satisfaction is heightened by observing an entire absence of any symptoms of over-confidence in the communications referred to.

***

By the way, these operations in Mesopotamia have played the deuce with the geography of a good many of us. The position of Shaiba was a puzzle to several men who thought they knew that part of the world fairly well. This was not really surprising, however, for the fact seems to be that nobody but a few Arabs had ever heard the name until the brilliant success gained there by our forces called attention to it. But I must admit that I was surprised the other day to find a writer in a reputable weekly announcing that we had actually advanced as far as "the site of ancient Babylon," and scarcely less surprised to read in a leading article of one of the best-informed provincial dailies that Kurna "is on the right bank of the Euphrates." As a matter of fact, owing to the way in which the Euphrates is cutting itself a new bed towards the west, Kurna can hardly be said to be on the Euphrates at all, though many people persist in talking and writing of it as situated at the junction of the two great rivers of Mesopotamia.

***

A correspondent sends me a cutting from a newspaper—he omits to give the name or date—which has puzzled him and puzzles me. It reads:—

> A first list of French and British officers and men captured by the Turks in the Dardanelles has been prepared by the Red Crescent Society of Constantinople. Following the Oriental custom, each man is designated not only by his own surname but by the surname of his father.

I had always thought that surnames were practically unknown in Turkey; but even supposing this were not so, how could a man have a surname different from his father's—unless Feminism has advanced with giant strides in Turkey since we had regular news thence?

***

A correspondent who has been reading the *Corriere della Sera* tells me of a delightful item of "news" which that journal reprints from a Viennese paper. According to the latter, "the most important event of the day is that Serbia, having penetrated into Albania within two days' march of Scutari, is sure to find herself in conflict with Italy, and, consequently, with the Quadruple Entente, which she mistrusts, as favouring Italy in the Adriatic, to the exclusion of herself. This fact having cooled the relations between Belgrade and Petrograd, must have as a result a *rapprochement* between Austria and Serbia." If ever the wish was father to the thought, here is a case. No wonder my correspondent refers to this journalistic effort as one of the funniest he has come across! But it is rather flattering to poor little Serbia that big, powerful Austria should so obviously be ready to welcome a *rapprochement*. What of that "punitive expedition"?

***

So Berlin is to have a Turkish newspaper! And the *Pall Mall Gazette* is unkind enough to ask: "Can it be that already the papers of Constantinople are establishing themselves elsewhere, as those of Brussels have been compelled to?" It may be so. Certainly, I can see no other reason for such an innovation—unless it be a subtle form of flattery on the part of Germany. If so, what more does she want of the poor Turks?

***

Another journalistic enterprise to which my attention has been drawn this week is more easy of explanation. The *Busra Times* of May 21 contains the announcement that a Persian edition is to be published, besides the English and Arabic editions, and that Messrs. Lynch Brothers, of Mohammerah, have secured the selling rights. This is a healthy sign, and I am glad to think that Southern Persia is likely to support the new venture. Meantime, I note with pleasure that the "B.T." is "going strong," if one may judge by the advertisements on its front page. In addition to the announcements of "general stores," oil and engineering works, there are, I see, "ads." of two photographic studios, a soda-water factory, and a dentist. Verily, business at Busreh would seem to be booming under the beneficent British occupation.

According to newspaper reports, the four wonderful, much-travelled bronze horses that have stood for many years past over the main portal of St. Mark's, at Venice, have gone on another journey—probably this time only across to the mainland, and not far distant from that city builded on the sea. Authorities differ as to what period these horses date from, some declaring them to be of Greek origin and of the school of Lysippus, while others assign them to the Roman school at the time of Nero. One authority goes so far as to state that Augustus brought them to Rome from Alexandria at the time of his defeat of Antony. At any rate, it is safe to say that they adorned a triumphal arch, or arches, at Rome for long years before Constantine transferred them to Constantinople, his new Rome on the Bosphorus. Here for many centuries they stood before and were a part of the decoration of the glorious, and still-unrivalled-in-architecture, Church of Santa Sophia. In 1204, at the time of the Fourth Crusade, the Doge Dandolo had them brought from Constantinople to Venice. Here they remained until 1797, when Napoleon bore them off—and a considerable bearing they needed, as the weight of each hores is nearly two thousand pounds—to Paris. Their stay in Paris was but a brief one, as the Emperor Francis had them returned to Venice in 1815—just a hundred years ago. And now, at this troublous and dramatic moment of the world's history, it seems Venice herself has taken them down and has hidden them away lest the threatening Huns should get possession of them or should destroy them with their bombs.

***

By the time that these lines are in print His Royal Highness the Prince of Wales will, by the grace of God, have celebrated his twenty-first birthday, and passed definitely into man's estate. The event is not to be marked by any State celebration, for the Royal Family has been consistently the foremost in subordinating its personal affairs to the exigencies of the common weal. But in the hearts of his people the young Prince will be especially remembered on this one day, which, in the lives of all men, is usually given over to family rejoicing. When last I was in Egypt the people were full of a rumour that His Royal Highness was shortly to visit the country. How this rumour originated no one could tell—but had it proved to be well founded it is certain that the Prince would have been accorded a welcome entirely worthy of his high estate. But if the visit was ever contemplated, it will now perforce wait until decisive victory has put an end to the tumult of the nations. When, however, the war is over the claims of Empire will surely not be forgotten, and what more fitting than that the Prince of Wales should make a world tour, acknowledging, in the name of his kingly father, the loyalty of our Dominions overseas? In such an event Egypt should certainly be honoured equally with the Colonies that sprang to our aid at the first crash of war. We shall not forget the credit due to her because she manifested her loyalty unswervingly and without hesitation.

CORSAIR.

PALESTINE EXPLORATION FUND.

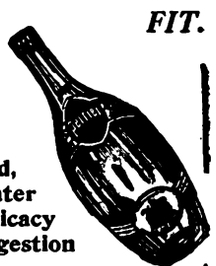
The fiftieth annual meeting of the Palestine Exploration Fund was held at the rooms of the Society of Antiquaries on Tuesday. The Archbishop of Canterbury presided, and, in submitting the report for adoption, dealt with the activities of the Society since its inauguration, and with the men who, as investigators or explorers, had contributed to the success of the undertaking. He was inclined to think that the interest which the world felt in the Fund was due to two men—Dean Stanley and Sir George Grove. As to the effect of the war on the work, he thought the Fund would gain in the long run. At the same time, they looked with some trepidation at the thought of damage being done to things of interest and to spots which they desired to treat with reverence.—Colonel Sir Charles M. Watson seconded the adoption of the report, which was agreed to.

FRENCH NATURAL SPARKLING TABLE WATER.

Perrier

"The Champagne of Table Waters."

KEEPS YOU FIT.



HOT CLIMATES.—Perrier, now famous all over the world, is the ideal drinking water for hot climates. Its delicacy and vigour stimulate the digestion and brace up the system.
