Baron de Kusel was a young man when he first went to Egypt as the protégé of a certain Dr. Mustapha, whom his father had met casually at the house of a mutual friend a week before. The book which he has now produced is a pleasantly written record of his experiences during the many years which elapsed before, honoured by the Khedive and occupying a high position in the Government service, he resigned and retired to England. The Baron received a characteristic initiation into the existing ways of Egyptian officialdom on his very first journey from Alexandria to Cairo. Accompanied by Dr. Mustapha, his wife, and two other Englishmen, the author travelled first-class, but the journey was comparatively inexpensive to them, for

> We travelled without paying, the ticket collector being far more pleased to feel a piece of gold in his hand than to see hundreds of tickets bought at the proper office. In those days most people "in the know" travelled in this way, although I personally never made a habit of it.

That first journey was full of excitement, as the following paragraph, descriptive of an incident witnessed at Benha station in the early hours of a sleepless night, will show:

> It was during one of these breaks in my slumber, and just before dawn, that a goods train from Alexandria to Cairo puffed into view, and with a great deal of noise came to a standstill; on one of the open trucks I saw a number of figures, and walked towards it, and to my delight, boy that I was, saw a sight that filled me with amazement. Some half a dozen women clad in white, and wearing the yashmak or veil, were sitting or lolling upon bales of what I believed to be merchandise, while evidently guarding them were three most villainous-looking ruffians, each with a long scimitar by his side, and a brace of great pistols tucked into his sash.

Subsequent inquiries revealed the fact that the party was composed of Turkish and Circassian slaves and dealers *en route* for the slave market at Cairo. In the light of existing conditions, such incidents as these, occurring in Egypt but a comparatively short time ago, are fairly substantial evidence of the benefits which have accrued to the country in later days; but still more forcibly is the contrast felt when we read of the terrible ravages of cholera in the latter years of the nineteenth century. There appear to have been very few doctors outside Cairo; medical knowledge was not profound even where it existed at all. Baron de Kusel himself, with the aid of Providence and hot cakes laid upon the patient's stomach, succeeded in effecting a certain number of cures, but it was not until some considerable time later that cholera ceased to remain a fiendish danger in Egypt.

After having had commercial experience of the country extending over ten years, during which he acquired an intimate acquaintance with the Arabic language and became fairly proficient in French and Italian, the Baron received his first Government appointment, entering as head of the European Department of the Customs in 1877, the present Sultan being then Minister of Finance, and therefore his responsible chief. Considering that the term of his service was marked by events of the utmost importance to Egypt, it is natural that the author should have many personal narratives of extreme interest regarding British and other celebrities who, from time to time, appeared on the Egyptian stage, and with whom he came into close contact. Baron de Kusel has blended these with his own experiences in a manner that will make his book easy reading even to those who have no first-hand knowledge of Egypt or of the Egyptians. To those who can look back on pleasant years spent in the Nile Valley the many amusing anecdotes of Anglo-Egyptians and others of the old school will provide interesting reading. Among the many personalities whom the Baron met were the explorer Stanley and General Gordon, a remark of whose is worth quoting at the present time: "In a nation of liars, the *truth* will often deceive far better than a falsehood."

Baron de Kusel, being stationed in Alexandria, of course, saw a good deal of the historic happenings of '82, and he recalls with what pride he and other Englishmen watched the arrival of the British Fleet in the harbour. These vessels, however, heralded anxious times, and the author gives a vivid account of the stirring events which preceded the bombardment. In view of the part that mines and torpedoes have been playing in the present war, it may be interesting to recall a fact which Baron de Kusel does not believe to be generally known—viz., that the British men-o'-war were "in danger of being seriously, if not fatally, damaged by mines or torpedoes, while anchored inside the harbour of Alexandria shortly before the bombardment." It seems that the idea of laying mines or torpedoes in the harbour was a conception of General Stone Pasha, Chief of the Egyptian Army Staff, who had some little time previously ordered secretly from America a specially-made submarine explosive machine. That this machine never had an opportunity of doing its deadly work would appear to be due to the fact that the author, who was at the time Acting Director-General of Customs, had his suspicions aroused by anxious enquiries on behalf of Arabi Pasha for a certain case that had been discharged from a tramp steamer and bore no evidence as to either its origin or destination. This case, which was discovered concealed in a corner of the Custom-House, was found on inspection to contain a "terrible weapon of destruction," which ultimately found its way (after being rendered innocuous, *bien entendu*) on board H.M.S. Invincible.

Baron de Kusel makes no attempt to probe deeply into politics, though he comments interestingly, with a sense of inside knowledge, on the chief events of his time. He animadverts on the action of Her Majesty's Government in refusing to accede to Gordon's request that Zobehr, "the one man capable of dealing with the situation" should be sent to the Sudan as Deputy Governor-General. Later on, when Khartoum was surrounded and Gordon's life was in danger, Zobehr himself volunteered to proceed to the Sudan, and said he would undertake to send Gordon back alive to Cairo. . . Confident that it was perfectly *bona-fide*, and that he would, and could, do what he claimed to be able to do, I offered to accompany Zobehr to Khartoum, whilst he himself agreed to leave his family with the Egyptian Government as hostages. Zobehr's offer was refused, and so was mine.

The author has a poor opinion of the ex-Khedive. In the epilogue, with which he brings his volume up to date, he says that the disappearance of Abbas Hilmi from Egyptian affairs will be regretted by none:—

> He cared little for the welfare of his people, who, in their turn, disliked him personally, though they have always respected the dynasty of Mohammed Ali. He was considered very avaricious, his one object in this world being to amass riches; and it is said that he never forgave Lord Kitchener for depriving him of his authority over the revenues of the Wakfs (Moslem Endowments), where he reigned supreme. He was the very antithesis of his famous grandfather, Ismail Pasha, one of the most generous rulers of his day, and who was every inch a sovereign.

Although this book does not pretend to be anything more than its title indicates, it is certainly one which should hold the attention of that large class of readers who seek their knowledge of men and places in the easily-told reminiscences of other travellers.

* "An Englishman's Recollections of Egypt." By Baron de Kusel (Bey). Illustrated. (London: The Bodley Head. 10s. 6d. net.)

NEAR EAST BOOK NOTES.

The next volume in Messrs. Pitman's "Countries and Peoples" series will be "Egypt of the Egyptians," by W. Lawrence Balls, who brings the story down to the present day.

Messrs. A. and C. Black have in preparation for the autumn "Ottoman Wonder Tales," translated and edited by Lucy M. Garnett and illustrated by Charles Folkard.

Mr. Frank Fox has an illustrated book on "The Balkan Peninsula" in preparation with Messrs. Black.

The current number of the *Journal of Egyptian Archæology* contains the second instalment of letters to Sir William Gell written in the 1820's by Early Egyptologists—Henry Salt, Sir J. G. Wilkinson, and Baron von Bunsen—with interesting sidelights on the labours of the early decipherers of hieroglyphics. These are followed by papers on "Royal Tombs in Mesopotamia and Egypt," by Professor L. W. King; on "The Great Tomb Robberies of the Ramesside Age," by Mr. T. E. Peet; and on "An Undescribed Type of Building in the Eastern Province of the Anglo-Egyptian Sudan," by Professor Seligman.

AN IMPORTANT NEW BOOK ABOUT EGYPT.

By BARON DE KUSEL (Bey),
Sometime English Controller-General of Egyptian Customs.

AN ENGLISHMAN'S RECOLLECTIONS OF EGYPT. 1863 to 1887.

With an Epilogue dealing with the present time, 1914.

With thirty-two illustrations and a map.
Demy Octavo. 10s. 6d. net.

"He writes freshly and agreeably of his life and its varied experience . . . and of the many well-known personages . . . with whom he was thrown."—*Times*.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915. August	1915. August		1333. Shawwal	5675. Ellul
20	7	Friday	9	10
21	8	Saturday.....	10	11
22	9	Sunday	11	12
23	10	Monday	12	13
24	11	Tuesday	13	14
25	12	Wednesday	14	15
26	13	Thursday	15	16

Sunday is the birthday of H.M. Queen Eleonore of Bulgaria, who was born in 1860.

Tuesday is the birthday of H.M. King Ferdinand of Roumania, who was born at Sigmaringen in 1865.

In a letter dated July 26, but only received this week, our Bucharest Correspondent writes: The Royal Family this year have not officially taken up residence at Sinaia, though some of the younger members are there. Queen Marie has paid flying visits, but only to remain single nights at most. On the 23rd inst. her Majesty motored to Tikir Johl, near Constantza, where Princess Elisabeth has been staying for some time in company with her companion, Miss Milne.

Sir Francis Elliot, the British Minister in Athens, had an audience of the King of Greece yesterday, and a subsequent conference with M. Venizélos, the Greek Premier.

In a letter written from Nish on July 31, but only received by us this week, our Serbian Correspondent writes:—"Lady Paget is indefatigable. Having recovered her health, she has revisited the scene of her former operations, accompanied by her husband, Sir Ralph Paget, who is Chief Inspector of Great Britain's Red Cross work in Serbia. Yesterday she arrived in Nish, coming from Uskub, and proceeds to Belgrade, whence she will return in a few days."

His friends in this country will learn with peculiar satisfaction that the services rendered to Montenegro in the present war by Dr. F. G. Clemow have been recognised by King Nicholas, who has bestowed on Dr. Clemow a high decoration. Special permission, we understand, has been accorded to Dr. Clemow to accept this decoration.

This reminds us that when he was at Podgoritza a short time ago Dr. Clemow had the experience of being "bombed" by an enemy aeroplane, but, fortunately, escaped without injury. One of the chief troubles of the British Red Cross in Montenegro appears to be the very irregular arrival of mails, which sometimes fail to put in an appearance for six or seven weeks together.

H.E. the Roumanian Minister saw Sir Edward Grey at the Foreign Office on Wednesday afternoon.

H.E. the Bulgarian Minister called at the Foreign Office last Friday afternoon and saw Sir Edward Grey. H.E. the Serbian Minister also called at the Foreign Office.

Earl Curzon of Kedleston and Sir Louis Mallet were the guests of the King, at Windsor Castle, over the week-end.

The *Petit Parisien* announces that Abdul Aziz, the ex-Sultan of Morocco, is now at Bordeaux.

In sending us news of Turkey, under date of August 2, our Special Correspondent at Athens reports that the wife of Baron Wangenheim—the German Ambassador, who left Constantinople on July 22—had not accompanied her husband, but had gone to the summer residence of the Embassy at Therapia.

In the same letter our Correspondent writes:—"Dr. B. Post, of Robert College, and his family have arrived in Athens from Constantinople. They are proceeding to America for the summer holidays. Many Americans have left Constantinople."

The Rev. R. Frew is, we learn, still in Constantinople.

Lieutenant R. C. Cumberbatch has been transferred from the 15th (S.) Battalion Rifle Brigade to the 7th Battalion, and is now at the front.

Dr. D. A. Davis, whose valuable work in connection with the Y.M.C.A. in Constantinople is doubtless well known to many of our readers, is now in France, where he is engaged in work on behalf of the Y.M.C.A.

Seaman George McKenzie Samson, R.N.R., who has won the V.C. for gallantry at the Dardanelles, where he was seriously wounded, was formerly employed by the Ottoman Railway Company. He left Smyrna for Malta at the outbreak of the war.

The *Hilal* announces that the Second Class of the Osmanieh has been conferred on Mr. W. E. Bemis, Vice-President of the Standard Oil Company, and the Third Class of the same Order on Mr. Oscar Gunkle and Mr. L. I. Thomas, directors of the company at Constantinople. These marks of distinction, it states, have been conferred by the Sultan in recognition of the numerous services of humanity rendered to the country.

Our Serbian Correspondent writes, under date of August 7:—

There is no epidemic now raging in Serbia, and very little sickness of any sort among the soldiers and prisoners of war. In many hospitals the doctors and nurses have nothing to do. Dr. Bedell, of the British Sanitary Mission in Belgrade, and several other members of the Mission are returning to England. They have already arrived in Nish en route for Salonika.

Our Bucharest Correspondent informs us that Madame Milovanovitch, widow of a former Prime Minister of Serbia, who is a Roumanian by birth, has arrived in Bucharest after having spent a year at Nish working amongst the hospitals there.

Lady Hamilton has heard from Sir Ian Hamilton that the comforts sent to her for the Dardanelles wounded have been received on the hospital ships and in the hospitals at Alexandria, Gallipoli, Mudros, and Malta, and are very much appreciated. They have helped to soothe the suffering of our men, who like to feel that those at home are thinking of them.

Last week, in referring to the work in Palestine of Dr. E. W. G. Masterman, we referred to him as the "head of the work carried on in Jerusalem by the London Society for Promoting Christianity Amongst the Jews." This description was not quite accurate. Dr. Masterman's position in Jerusalem is Medical Superintendent of the English Mission Hospital, which belongs to the society mentioned; and, though head of the medical and surgical work of the hospital, he is not head of the society's work. For the last year he has been senior resident medical officer of the Coventry and Warwickshire Hospital, with special charge of the wounded soldiers at that institution. The hospital has one hundred beds for civilians and eighty for soldiers, and since Dr. Masterman has been there some 500 sick and wounded soldiers and over 100 recruits needing surgical treatment have passed through his hands.

News has just reached England of the death of Second Lieutenant Roland Whittall, who was recently wounded at the Dardanelles. He was the third son of Mr. F. E. Whittall, of Constantinople, was educated at Rugby, and joined the firm of J. W. Whittall and Co. a few years ago. At the outbreak of war, it will be remembered, the British community in Constantinople held a meeting, at which it was decided to raise a subscription for the purpose of enabling volunteers to be sent to England and to contribute to the Prince of Wales' Fund. At this meeting forty young Englishmen stepped forward and volunteered. Many others subsequently offered themselves, and the total number now serving is over one hundred. Close on £2,000 was remitted to the Prince of Wales' Fund. Roland Whittall was placed in charge of the first squad which left Constantinople, and on reaching England joined the 10th Battalion Royal Fusiliers at Colchester, but later obtained his commission, and was sent to the Dardanelles as interpreter. He was twenty-two years of age.

Brigadier-General C. Godby, Royal Engineers, who is reported wounded while serving in the western theatre of operations, has seen service in the Sudan on two occasions, at Hasheen and Topek in 1885, and at Toski four years later.

Colonel Neville Manders, Royal Army Medical Corps, who has been killed while serving at the Dardanelles, was the youngest son of Major Thomas Manders, 6th Dragoon Guards, and was born at Marlborough, Wilts, in 1859. He was educated at Marlborough, and entered the Army Medical Service in 1884, after qualifying as F.R.P.S. and M.R.C.S. The Colonel served in the Suakin Campaign of 1885, receiving the medal with clasp and the Khedive's star, and later saw service in the Burmese Expedition of 1887-89. He was appointed Deputy-Director of the Medical Service in Egypt in December, 1913, and held this position until January of the present year, when he was, by special request, attached to the Headquarters Staff of the Australian and New Zealand Forces.

Colonel Arthur R. Cole-Hamilton, 6th Battalion East Lancashire Regiment, who has died of wounds received in action, was Deputy-Lieutenant of Tyrone, and was the eldest son of the late Captain William Claude Cole-Hamilton. He was related to the Earl of Castle Stewart and to the Earl of Enniskillen. Colonel Cole-Hamilton served in the Egyptian War of 1882, for which he held the medal and bronze star, and he also had the clasp for the Suakin Expedition, 1885-6. At the outbreak of war he was posted from the Reserve of Officers to the 6th (Service) Battalion East Lancashire Regiment.

Colonel Edward Thomas Browell, late of the Royal Artillery, has died at his residence, Merrow House, Merrow, near Guildford, at the age of seventy-three. He obtained a commission in the Royal Artillery in 1864, and took part in the Egyptian expedition of 1882, and in the expedition to Suakin in 1885.

Major H. R. W. M. Smith, R.A., who has been wounded in the Dardanelles operations, served with Lord Kitchener in the Sudan, and was present at the battle of Omdurman.

Major C. S. Venables, D.S.O., of the 7th Battalion Gloucestershire Regiment, who has been killed at the Dardanelles, was the eldest son of the Right Rev. A. R. P. Venables, Bishop of Nassau, Bahamas. He joined the Gloucestershire Regiment in 1885, after being educated at Charterhouse and the Royal Military College, Sandhurst. He was awarded the D.S.O. for service in the Siege of Ladysmith. He was a splendid horseman, and the rider of many winners. He was well known in Egypt and Malta.

Major Dudley S. Skelton, of the Medical Service, who is reported wounded, was in 1909 employed in Somaliland, when he saw active service. Later he was employed in Zanzibar.

Captain Eustace Hotham Burnaby, 7th Battalion Gloucestershire Regiment, who has been wounded with the Mediterranean force, is the only son of Lieutenant-Colonel E. B. Burnaby, who was formerly mace-bearer to the Lord Mayor of London, and is a cousin of the famous soldier Colonel Fred Burnaby, who rode to Khiva and was killed at the battle of Abu-Klea.

Digitized by Google

Captain John Cecil Morgan, 6th Battalion Yorkshire Regiment, who has been killed in action, was the only son of Mr. John H. Morgan, C.V.O., consulting surgeon to the Charing Cross Hospital. He had served in the Boer War, and also in Egypt, when he resigned six years ago. He joined the 6th Yorkshire Regiment last October. Captain Morgan, who was thirty-three years of age, was an M.A. of Oxford.

Captain Walter Lloyd, 8th Royal Welsh Fusiliers, whose death at the front is announced, joined the 2nd Battalion in 1896. He served in Malta, Egypt, India, and Hong Kong, and during the international occupation of Crete was attached to the International Commission as interpreter. For some time he held a Volunteer adjutancy at Carnarvon. In 1911 he retired from the active list, and was placed on the Reserve of Officers, from which on the outbreak of war he was appointed to the 8th Battalion of his former regiment. Captain Lloyd was 41 years of age, and was the second son of the late Thomas Lloyd, of Leghorn, Italy, and Minard, Argyllshire. He married, in 1899, Phyllis, second daughter of Admiral Sir Francis Powell, K.C.M.G., by whom, with two daughters, he is survived.

Lieutenant Gerald Ernest Berkeley Carter, R.N., who is reported to have died at sea, was the son of Brigadier-General F. C. Carter, C.B., and Mrs. Carter, of 157, Victoria Street, and was born in India in 1886. As a midshipman, he took part in landing operations in the Somaliland campaign.

Lieutenant William Arthur Bayford Kirwan Ward, who died of wounds at the Dardanelles on August 2, was the only child of the Rev. W. H. K. and Mrs. Ward, of Asthall Vicarage, Burford, Oxon. He was born in 1888, and was educated at Aberdeen Grammar School, Dover College, and King Edward's School, Stourbridge, where he won the championship for athletics. On leaving school he was apprenticed to the National Telephone Company, and while there gained the bronze medal for telephony in the Technological Examination of the City and Guilds of London Institute in 1910. Later he was with the Constantinople Telephone Company and the Betulander Company. A keen Territorial since 1907, he received his commission in the London Cable Signal Company, Royal Engineers, in June, 1914, and was transferred to the Regular Forces in December last. In January he went to Flanders, and was present throughout the second battle of Ypres. Thinking his local knowledge of Constantinople and district would render his services of more value to his country, he volunteered for service at the Dardanelles.

A group of Roumanian ladies has, our Bucharest Correspondent informs us, founded a society, to be known as "L'Union Culturale des Femmes Roumaines," for the encouragement of feminine activity in the domains of art, science, and literature.

The exhibition of sculpture by M. Ivan Mestrovic, now on view at the Victoria and Albert Museum, will be closed early in next week.

The *Cyprus Gazette* of July 30 contains the acknowledgment by the High Commissioner of the receipt of £35 forwarded by the manager of the Bank of Athens, Limassol, for Red Cross work.

The outlines of a romance of the war may be traced in the following marriage announcement which appeared on the first page of *The Times* on Thursday:—

On the 27th June, on the high seas, off Salonika, by the chaplain to bridegroom's unit (the Rev. A. J. Waldron, vicar of Brixton), Percy Wallice, M.R.C.S., L.R.C.P., of King's College, Cambridge (First British Field Hospital to Serbia), elder son of Mr. and Mrs. James G. W. Wallice, of Plymouth, to Dora Eunice (of the Wounded Allies' First Hospital Unit to Montenegro), eldest daughter of the late T. Cleave Woolcock, of Surbiton, Reigate, and Redhill, and of Mrs. E. C. Rundle Woolcock, of Rhodesia, and Southwick, Sussex.

Over 400 Moslems assembled at the Mosque at Woking last Friday to celebrate the festival of Eid-ul-Fitr, the termination of the month of Ramadan. Amongst the crowd were fifty soldiers, some of them back from the front wounded. The mosque being too small for the worshippers, an adjournment was made to the lawn, where the Imam, Moulvi Sadr-ud-din, led the prayers, at the conclusion of which he delivered two addresses, one in English, one in Hindustani. The usual Friday prayers followed the close of the discourse. The festival continued throughout Sunday, the time being mainly spent in calling upon friends, to give "Bairam greetings" and good wishes.

APPOINTMENTS, PROMOTIONS, etc.

The Bulgarian Government has formally notified assent to the appointment of Mr. H. J. O'Beirne (says Reuter's Sofia correspondent) as British Minister on a special mission to Bulgaria.

M. Korostovetz, the Russian Minister at Teheran, has been recalled from that post, and has been appointed a member of the Council of the Ministry for Foreign Affairs.

Our Bucharest Correspondent reports that M. Rado. Djuvara, First Secretary of the Roumanian Legation at Athens, has been transferred to the Ministry of Foreign Affairs, Bucharest.

"Germany," writes the same correspondent, "not to be outdone by Great Britain, has appointed a Naval Attaché at Bucharest. There will probably be keen competition for the post, as anything will be better than the enforced inactivity in the Kiel Canal."

THE BRITISH ASSOCIATION.

Several papers on what we may term "Near Eastern" subjects are to be read at the forthcoming meeting of the British Association. In the Anthropology Section Professor C. G. Seligman will consider future lines of research in the Anglo-Egyptian Sudan. Recent evidence suggests that the palæolithic period as well as the neolithic is represented in the district. The extent and duration of ancient Egyptian influence there will be considered and reference made to the legends of great Queens between the White and Blue Niles. The importance of closely examining all customs indicating contact with Egypt will be emphasised and the possibility of their originating in Hamitic culture considered. It will be shown that the negroes portrayed in the New Empire were not tall, long-headed negroids, such as the Dinka and Shilluk, now in the Northern Nile Valley, but representatives of round-headed races now living in Dar Nuba and between the White and Blue Niles. The joint Balkan discussion with the Geographical Section will be opened by Professor G. Elliot Smith, who will also initiate a discussion on "The Influence of Ancient Egyptian Civilisation on the World's Culture," referring especially to the diffusion of burial and other customs. Professor Flinders Petrie will be giving a lecture on "Egyptian Jewellery," and Miss Margaret Murray, in a paper on "Royal Marriage and Matrilineal Descent," will examine the social and religious custom of the ancient Egyptians and Semitic peoples. Mr. R. M. Dawkins will read a paper on "The Greek Element in Asia Minor." In the Botanical Section, Mr. W. Lawrence Balls will deliver a special lecture on "Cotton."

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

MAUDSLAY.—On August 13, at Cairo, the wife of Joseph Maudslay, of a son.

MCNEILE.—On August 14, at Gjerrild, Denmark, the wife of the Rev. R. Fergus McNeile, M.A., of Cairo, of a daughter.

DEATH.

SAVAGE.—On August 14, at the New Zealand Military Hospital, Pont Koubba, Egypt, Major Thomas Copeland Savage, M.B., B.S., F.R.C.S., F.U.L., second son of the late Warwick Savage and Mrs. Savage, of Wellington House, Burslem, and beloved husband of Madeline Savage, Princes Street, Auckland, aged 41.

WHERE TO STAY.

UPPER EGYPT.

Luxor.

The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.

The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.

Are the Finest on the Nile.

Cairo's Hotels de Luxe.

FRIDAY, AUGUST 20, 1915.

GERMANY AND THE BALKANS.

Germany has contrived to render a number of services to her enemies both before and since the outbreak of war, and now appears to be coming to the rescue of the Allies' diplomacy in the Near East. Nothing is more calculated to bring home to the neutral States of the Balkan Peninsula a realization of the danger to which their independence would be exposed by a victory of the Central Powers than the prospect of German armies marching through Serbia and Bulgaria in order to bolster up Turkey against the Allies. However acute may be the estrangement at any given moment between the Balkan Governments, they are well aware that Turkey under the existing régime remains the common enemy. If the Turks should be victorious with the help of Germany in this war, there would be no security in the future from Turkish aggression for either Greece or Bulgaria. For Roumania there would be the same uncertainty regarding the main outlet for her commerce, even if actual restrictions on the navigation of the Bosphorus and Dardanelles were not imposed as a penalty for her neutrality. But in massing troops on the Danube Germany has shown that she is prepared to stake much on a last throw in Turkey's behalf. Her intention would be to force her way through Serbia, and then to deal with Bulgaria as a second Luxemburg or Belgium, according to the exigencies of the Bulgarian attitude. The possibility of the Bulgarians making common cause with the Germans does not need to be discussed at this stage. Even if the Bulgarian Premier had not candidly expressed his dislike of a policy of neutrality for Germany's benefit, it would be unthinkable that Bulgaria at this period of the war should deliberately offer herself to be crushed by the German hammer on the Turkish anvil. Neutrality was for the Balkan States a rational course to adopt, at least for a time, until it was seen that there could be no issue out of the Titanic conflict which did not spell for the smaller countries of Europe complete subjugation on the one hand to German domination, or on the other national independence guaranteed by a group of Powers which were sacrificing everything for European liberty. Any doubts as to the principles at stake which survived the violation of Belgium will have been entirely removed by successive steps on Germany's part. In the first place, there was the wanton treatment of Turkey, by forcing upon her a quarrel which was not her own, and out of which she stood to gain nothing; secondly, there is the cynical betrayal by Germany of her allies, in offering to buy off Russia at the expense of Austria and Turkey. German aims have been explained in many quarters. Recent manifestoes have restated them in the light of a year's war. Belgium is to be held politically, militarily, and commercially in German hands; Austria-Hungary and Turkey are to "open up" to Germany the Balkans and Asia Minor, in a way, we must infer, which is not provided for by the present-day freedom of international trade.

A country or Government which could still regard Germany as capable of paying any attention to the interests of others, whether allies or neutrals, would indeed be past praying for. We refuse to believe that such a country exists in the Near East. Roumania, Bulgaria, and Greece, for different reasons, have felt obliged up to the present to keep out of the European war. Military considerations have largely determined their policy; but the deciding factor has been lack of statesmanship. The long struggle for existence which the Balkan peoples have survived has had the effect of restricting their range of vision to the needs and conditions of the moment. In many particulars the Governments of the day have advanced but little beyond the stage when the only opening for patriotic endeavour was held to be the withdrawal of a few men to the mountains, who, if they saved their own skins, could only do so at the expense of the hapless populace they left behind. There is the same insistence upon unessentials, which happen to be immediately under the eyes; the same indifference to the things that really matter, which may be more remote. In each country there have been individual exceptions to the rule. M. Pashitch has shown an appreciation of Serbia's true interests as a unit of the Balkan group; but at every turn he is liable to be checked or thwarted by a military clique, which, knowing nothing of wider considerations, rejects compromise from its vocabulary, and holds that there can be no other treatment for alien subjects than death or expulsion. M. Venizelos is head and shoulders above his generation in Greece and in the Balkans as a whole; but he, too, has had to give ground temporarily to a conspiracy of ignorance and prejudice. Roumania and Bulgaria are equally victims of a national paralysis, which is likely to yield to nothing so readily as to the menace of aggression from without. It is this menace which Germany's action is now supplying. She has delivered her ultimatum to Roumania to allow the transport of munitions to Turkey or to suffer the consequences; she has massed troops in a position which enables her to threaten both Serbia and Roumania. A common danger confronts all the Balkan States, and they know that their one chance of averting it lies in co-operation.

Thus, whereas the representations of the Entente Powers might otherwise have continued to fall on deaf ears in the Balkan capitals, they have suddenly been reinforced by an argument which cannot fail to carry conviction. We have no wish to impugn the efficacy of a course of action which has been urged in these columns for many months past. We have pointed out that an agreement among the Balkan States was an essential preliminary to military action on the part of one or more with the Allied Powers. It was impossible that the States of their own initiative should arrive at such an agreement, and for that reason it was incumbent upon the Triple or Quadruple Entente to take the necessary steps to bring about an understanding. At the most opportune moment for the exercise of diplomatic pressure upon the Balkan Governments, when the Russians were advancing over the Carpathians, British diplomacy held back, sheltering itself behind Russia or the fear of hurting the susceptibilities of an independent State. When at last the Allied Governments decided to act in the Balkans, the military situation had undergone a complete change, and German intrigue had succeeded in making considerable headway. The obstacles to be overcome were, therefore, much greater than they would have been at the beginning of the year. Each Balkan country had a strong inducement to adhere to a neutrality which had something to recommend it from the point of view of economy, if not from that of courage and political wisdom. Into this state of affairs the Germans blunder with threats and military movements. The Bulgarian Premier at once announces *urbi et orbi* that, if Bulgaria is given that part of Macedonia which she regards as her own, she will place her whole resources unreservedly at the disposal of the Allies. Serbia for the first time shows a more pliable demeanour, and Greece takes steps to terminate the process of marking time. In these circumstances it is difficult to suppose that the Balkan States will hesitate much longer to adopt the only line of action which promises them the realization of their national ideals. United, they not only stand firm, but go on from strength to strength; divided, they lapse inevitably into mediocre and antagonistic units, while running the risk of losing their national independence and being sacrificed to the Moloch of German *Weltpolitik*.

THE MAKING OF MODERN EGYPT.

MOHAMMED ALI, THE LION OF THE LEVANT.

By Professor Todd.

The fascination of history lies in noting how one thing led to another, and in the history of Modern Egypt it is of special interest to note how economic and political conditions have acted and reacted on each other. Almost without exception the outstanding features of the present conditions in Egypt, both economic and political, can be traced back to the time of Mohammed Ali, the founder of the present dynasty.

Three men have played the chief parts in the history of Modern Egypt: Mohammed Ali made it; his grandson, the Khedive Ismail, pawned it; and Lord Cromer redeemed it. The popular impression in this country, that Modern Egypt dates from the British Occupation of the country in 1882, is a complete misunderstanding. The political and economic problems of Egypt to-day may be grouped round three points: (1) The cotton crop and the irrigation system; (2) the Suez Canal; and (3) the Egyptian State Debt. All of these had their first beginnings in the reign of Mohammed Ali, as also had Egypt's dominion over the Sudan.

Mohammed Ali, the Lion of the Levant, will go down to posterity as one of the great men of the world's history, and it is a coincidence that he was born in the same year (1769) as Napoleon and Wellington, two of the greatest. To the first of these he owed the chance which raised him from a humble position to be in effect the absolute ruler of a great country, not his own. But the use which he made of that opportunity and the really great results which he achieved, almost entirely by his own merits, constitute his claim to greatness.

Born at Kavalla, which lies on the north shore of the Ægean Sea, about half-way between Salonika and Dedeagatch, in the territory ceded to Greece after the last Balkan War, his father was a small landowner and captain of the local watchmen; but his early death left Mohammed Ali to fend for himself as an almost penniless orphan, which, however, he soon proved himself able to do. His great chance came in 1798, when, on Napoleon's invasion of Egypt, the Sultan could do nothing but issue a proclamation calling upon loyal Moslems to unite and drive out the French invaders. A company of three hundred Bashi-Bozouks was raised in Kavalla, with Mohammed Ali as second in command, and in June, 1799, it joined the army which sailed for Egypt. But they had hardly landed at Aboukir when Napoleon, hurrying back from Cairo, literally drove them into the sea, and Mohammed Ali himself was pulled out of the water by a gig from the flagship of the British Fleet under Sir Sidney Smith, which was lying off the shore.

Two years later, however, Mohammed Ali returned with a second expedition, which, in co-operation with the British, at last secured the evacuation of the French in September, 1801. Then began the real rise of Mohammed Ali to power in Egypt. As commander of the Albanian contingent, he frequently found himself in a position to turn the balance of power between the Mamelukes and the Turkish Pasha. Proving himself master not only of intrigue but of military skill, he emerged at the end of four years as the only man capable of controlling the situation; and when in 1805 he was nominated by popular acclamation as Pasha of Egypt, the Porte had no alternative but to confirm the choice, which they did in April, 1806.

But there was no rest for him yet on his new throne. We are apt to forget that the first enemy against whom he had to defend it was a British Army, which he practically annihilated in 1807, decorating his triumphal march through Cairo with their heads. In 1808 he was ordered by the Porte to undertake a punitive expedition against the Wahhabis, a rebellious sect in Arabia, who had closed the approach to the Holy Cities; and the next three years were spent in preparations for this expedition, including the building of a fleet at Suez. But the preparations included more than military equipment. Mohammed Ali was too shrewd to imagine that, denuded of his army, he would have any chance against his old enemies the Mamelukes, who had misruled the country for centuries; and he decided to dispose of them with characteristic thoroughness and finality. On March 1, 1811, he invited all their chiefs to a great *fantasia* in the Citadel, when his son, Toussoun Pasha, was to be invested with a pelisse of honour on his departure for Arabia, and, penning them between closed gates in the rocky defile leading up to the Citadel, he had them shot down to a man. His methods may be condemned by modern standards, but there can be no question of the real gain to the country in removing once and for all a turbulent race of oppressors, under whom the development of Egypt had been absolutely strangled for centuries.

Once rid of them, and the Wahhabi expedition successfully concluded, Mohammed Ali set himself to work in earnest to develop the great economic possibilities of the country which he had made his own; and herein lies the really astonishing part of his career and character. Judging by his origin and upbringing, he might well have been no better a ruler than the Mamelukes; for he was more than half Oriental, and wholly illiterate and uneducated. It was only about this time, when over forty years of age, that he began to learn to read and write. But by some means he had acquired great ideas of the possibility of industrial development of his country, and had been imbued with the desire to follow Western methods. It is said that in his young days he had come under French influences in Kavalla. Whatever may have been the source, there can be no question of the result. He was half a century in advance of his age, and the faith and energy with which he took up great schemes for the development of the agriculture and industry of the country have seldom been equalled. His handling of the cotton crop may be taken as typical. In 1820 a French-Swiss engineer, named Jumel, discovered a plant growing, for decorative purposes, in the garden of one Maho Bey, in Cairo, which he recognised as cotton of a quality likely to be of commercial value. Inspired with the idea of developing cotton-growing in Egypt, he succeeded in gaining access to Mohammed Ali, who at once took the matter up. Soon the scheme developed into nothing less than a complete reconstruction of the whole irrigation system of Egypt, and this again resulted in the planning and commencement of the great Delta Barrage at Cairo, which was only completed by English engineers in 1885-90, and still forms the key of the whole irrigation system of Egypt.

But he was not content with agricultural wealth alone. Anticipating the theories of List, the German economic nationalist, he aimed at an all-round development of industry as well as agriculture; and great schemes were set on foot for factories to manufacture the cotton and other products of the country. Fully appreciating the need for education as a means to the development of his schemes, he set up a system of "compulsory" education in the truest sense of the word; for the children had to be driven to the schools at the point of the bayonet. There has, indeed, been a good deal of misunderstanding as to the compulsory character of most of Mohammed Ali's reforms. He did not waste time trying to *persuade* the people to do things as he wanted, and he was right, for they would never have done it except under compulsion. When he had made up his mind that they were to grow cotton, he ordered them to grow it, and if they demurred he annexed their land and grew it himself. When they said that they had no market for the crop, he took it from them at his own price and found a market himself. In the light of modern principles of the liberty of the subject, it is easy to condemn such methods; but those who have known Egypt in recent years can hardly suppress a feeling of envy. To expect Egypt after 500 years of Mameluke misrule to take any steps towards its own improvement would have been sheer waste of time, and Mohammed Ali's autocratic methods may be at least excused, if not justified, on the ground that they were benevolent—and successful. For, whatever may be said of the subsequent failure of some of his grandiose schemes, the fact cannot be denied that he set Egypt on the road to progress, that for many years the country flourished exceedingly under his rule, and that everything that has been done since has been on lines laid down by him.

His conquest of the Sudan may also be quoted as an example of his far-reaching ambition. Many things have been suggested as the motive of the great expedition which he sent out in 1820 under his sons, Ismail and Ibrahim. It was certain that the country possessed a considerable caravan trade which Mohammed Ali desired to get into his

own hands. It was also believed that the country contained gold. On the other hand, the reports of the anarchy and misrule which prevailed in the country, and the desire to introduce civilisation on the upper reaches of the Nile, may well have weighed with him; for he had broad views of the future of Egypt, and realised, probably as well as it has ever been realised since, the common interest of all the territories which lie in the valley of the Nile. It is probable that he had also in view the possibilities of the Sudan as a recruiting ground for his new armies.

The campaign, in spite of the horrible death of Ismail (who, with all his officers, was burned alive in his tent at a feast at Shendy by a local chief), was successful in its first object. Khartoum was begun in 1823, and the whole country came under the rule of Egypt. That rule, however, was little more than nominal, and the chief result of the opening up of the country was the development of the slave trade. This became so bad that in 1838 Mohammed Ali, moved by the reports of Bowring and others, paid a flying visit to the Sudan, but without any very practical results.

Again, his willingness to throw the country open to foreigners, and his determination to secure them safe passage and hospitable treatment, marked him out as something very different from his predecessors, and did much to bring the wonders of the country, and his own achievements, under the notice of Europe. And it was the opening of the overland route by Lieut. Waghorn, in 1845, bringing the Bombay mail to London in thirty days, viâ Suez and Alexandria, that first brought the idea of the Suez Canal into practical politics. Two years later French and English engineers, with Mohammed Ali's assistance, were making a survey of the Canal route, which incidentally had already been condemned by the French savants of Napoleon's expedition.

FIRST BRITISH FIELD HOSPITAL FOR SERBIA.

The Committee of the First British Field Hospital for Serbia has issued a special appeal for £5,000, addressed to subscribers and friends. The appeal, which is signed by the Chairman, Sir W. Arbuthnot Lane, and the Hon. Treasurers, Messrs. A. McConnell and Mr. H. S. Souttar, says:—

"We venture again to ask your support for our hospital, the financial position of which is to us a matter of some anxiety. During the last month we have had to meet expenses of a very heavy nature, many of which could not have been foreseen. In addition to the cost of replacing much of our rolling stock, damaged on the rough roads of Serbia, we have had to make good damage caused by an overwhelming flood, which swept away a portion of our hospital in the night. Such experiences are unavoidable in the work of a field hospital, constantly moving with the army and unable to choose the site of its work; it is this very mobility which makes the hospital of such incomparable value to the wounded soldier.

"Our hospital is the most important field hospital of the Second Serbian Army, and is established at Mladenovatz with the Headquarters Staff. The army has been completely refitted, we have been warned to be prepared for heavy fighting at an early date, and it appears indeed to be certain that Serbia is about to enter upon a campaign as strenuous as any in her history. We feel confident that the generosity which has enabled us to equip the hospital and to place it in so unique a position will support us in our effort to assist Serbia in the struggle upon which she is about to enter."

Subscriptions should be forwarded to the Hon. Treasurers, 61 and 62, Chancery Lane, W.C.

GALLANTRY AT THE DARDANELLES.

General Sir Beauchamp Duff, Commander-in-Chief, India, has received from Sir Ian Hamilton a stirring description of the valour of the 14th (Ferozepore) Sikh Infantry in the attack on the Turkish positions in Gallipoli on June 4 and 5. "In the highest sense of the word," Sir Ian wrote, "extreme gallantry has been shown by this fine battalion." It went into action with a strength of fifteen British officers, fourteen Indian officers, and 514 rank and file. The remnant of unwounded next morning was three British and three Indian officers, and 134 rank and file. In spite of these tremendous losses there had not been a sign of wavering. "Not an inch of ground was given up, and not a straggler came back." When the main attack on the enemy's trenches failed two companies would not retire, but held on to the edge of the ravine, losing all their British officers and 45 per cent. of their number. Sir Ian Hamilton says: "The defence of the point gained in the ravine, with an enemy entrenched on both sides above it, speaks for itself, and is a very fine example of the way the Sikh bears himself as the stubborn fighting man."

The Lancashire Fusiliers and the Worcesters, the General says, were full of admiration of the gallantry of their Indian comrades, and speaking for himself, he says in conclusion:—"The history of the Sikhs affords many instances of their value as soldiers, but it may safely be asserted that nothing finer than the grim valour and steady discipline displayed by them on June 4 has ever been done by soldiers of the Khalsa."

IN STRICKEN SERBIA.

Being further extracts from letters written by Dr. Lauwens, of the Wounded Allies Relief Hospital in Serbia.

KRAGUJEVATZ, July 19.

We have only sixteen patients. Something is happening at the Front, but nothing of much importance; so far only one wounded has arrived from the firing line, and he is in another hospital. Besides our hospital of 100 beds, we have been placed in charge of the 6th and 7th reserve hospitals, and this will constitute a divisional hospital when there are many wounded. Our surgical supplies, which arrived in Salonika on June 20, only reached here a week ago, and we are now busy getting them into order. We have also received three splendid motor-cars.

We have had to mourn the loss of another member of the nursing staff of the Stobart Mission—Mrs. Dearmer, wife of the chaplain to the mission, who died of typhoid fever on July 10. There are other nurses of the same staff ill, but they are now convalescent. I have given very strict orders regarding the food of our party, and have absolutely forbidden that anything should be eaten that is not freshly cooked—no salads, no freshly gathered fruit, no spring water. I thoroughly mistrust the local milk, even when boiled, and we use condensed milk, of which we have a large supply. No butter is to be procured here, but so much the better, for the local methods of preparation are not above suspicion.

The heat has been very great here for some weeks—generally 35° C. in the shade at 1 p.m. The nights are much cooler, and though there are a lot of midges, which are troublesome, there are few or no mosquitoes. We have made some mosquito nets to protect ourselves against the flies, for in the afternoon during the inspection of the patients they are intolerable. Yesterday afternoon there was a terrific storm—no rain, but clouds of dust, trees uprooted, the camp of the Stobart Mission beaten to the ground, tents blown away. If there had been any rain it would have spelled complete and irreparable disaster. This morning it was almost cold; at ten o'clock the rain began, and it will probably rain all day. I am anxious for the mission that suffered so much yesterday.

(Later.) It is now three o'clock. We lunched at the 6th Reserve Hospital (which is soon to be in our charge), by the invitation of Doctor Kapocka, a Serbian doctor, and head of the hospital. After lunch we were received by H.E. Dr. Georgevitch, who is under treatment in a private room. He is a physician and a Serbian statesman, well known for the part he has played in the development of Serbia during the past thirty years. He has been Minister in France, Greece, Turkey, etc., and was Prime Minister for several years; he has a very complete knowledge of the Balkans and of Austria; he was physician to King Milan, and to King Alexander and the celebrated Draga. He also reorganised the Serbian Military Academy and the Military Sanitary Service, and he has written several books on the Balkans, the Balkan wars, etc.

He received us in bed. Seventy-one years of age, he has a fine head, piercing eyes, a patriarchal grey beard. Though ill and tired, he talked with us for twenty minutes. He was, he said, very glad to meet some Belgians in Serbia, and added: "You have been brought here by chance, but wherever you may be you can do good work, and especially here in Serbia, where we need doctors. Do your duty, do what you can, and let what will come. That has been my motto through life." He speaks French perfectly. "Germany and Germanism will be beaten," he added, "but it will take a long time. The defeat of the Allies would be an irreparable disaster for the national aspirations of the European races." He is of opinion that Russia, after the marked check she has just suffered, is on the way to reorganise her resources, and that she will deliver a decisive blow to the German empires.

He knows Belgium well, and has a boundless admiration (which is shared by all Serbs) for our country, which in such a small space has built up such a mass of industry and of intelligence. He concluded by expressing his conviction that Belgium will overcome all its present trials and misfortunes, and will become more prosperous and more glorious than ever.

He also spoke of Austria and its fate—foreseen by him long ago, and now in process of realisation—and of Turkey, whose disappearance from Europe is inevitable, in spite of the Young Turk Revolution.

We were delighted by our reception, as friendly as it was flattering, and I hope that I shall see him again many times.

TANGIER TO TEHERAN.

The ladies and gentlemen who have been writing to *The Times* complaining about the non-delivery of parcels sent to members of our Forces at the Dardanelles may be interested in the following extract from a letter written as recently as August 9 by an officer out there, and delivered in London on Wednesday:—"I have just received your letter of July 1. . . . By the same post I also received letters of March 23, April 25, June 30, and July 27—so one need never despair." Nearly five months on the way seems a long time for a letter to take, even in these stressful days. But doubtless the Post Office is really doing its very best in extraordinarily difficult circumstances, and in view of the undaunted cheerfulness of our friends "out there," we, too, must take for our motto: *Nil desperandum.*

***

Curiously enough, after writing the above paragraph, I received a second letter (dated August 1) from the writer quoted, and this later epistle expressly refers to the question of parcels. "A tradition," he writes, "has grown up out here that people at home who do not pack their parcels in strong tins, or stout wooden boxes, mean the contents of the parcels for anybody who comes across them *en route*. The addressee, being the last, is also the least likely to get what is sent wrapped up in brown paper or packed in cardboard boxes!"

***

It is not only our own seaside resorts that can offer opportunities to holiday-makers of seeing something of the War. From a Roumanian correspondent I learn that a sentry on duty near the Casino at Constantza recently noticed a strange object floating on the sea. He promptly notified his superiors, who proceeded to investigate; with the result that the object proved to be a mine, presumably a Russian one, that had broken away from its moorings. It was towed out to sea, and there exploded. What might have been a very unpleasant accident was thus averted. For, as you may know, the Casino is built out over the sea, and might quite well have been blown up—which, as my correspondent remarks, "would, indeed, have been a case of *faire sauter la banque.*"

***

The same correspondent sends me another story, as follows:—"A few days ago there died at Buzeu, after a long illness, a veteran of the War of 1877, Colonel Jean Bogdanescu, a well-known member of the Conservative party. He was known as the possessor of fine powers of invective, of which, upon occasion, he made free use. Two years ago, having to undergo an operation in a hospital at Bucharest, he was placed under an anæsthetic, and he appeared to the doctors to have succumbed. His body was therefore removed to another room for the purposes of *post-mortem* examination. But hardly had it been laid down by the attendants when, without assistance, and to the huge astonishment of the doctors and attendants, it rose to a sitting position. One rapid glance sufficed to show the gallant old warrior where he was, and then—the medical men were treated to a linguistic display which very soon convinced them that their patient was *not* "past praying for." My correspondent does not mention if the Colonel was a golfer.

***

From the *Busra Times* of July 14 I cull the following advertisement, which appears under that pathetic heading, "Lost":—

> AT the Supply Wharf, a MONGREL DOG of eccentric appearance. Black with brown feet. 18 inches long between perpendiculars and about 2 feet 6 inches over all. Sometimes answers to the name of "Moses." Anyone returning the same to Mr. G. Hull, R.I.M. Workshop, will be suitably rewarded.

The "ad." appeals to my fancy, especially that cryptic expression "suitably rewarded." What would be a suitable reward for a dog whose character appears to be as eccentric as his appearance, since he sometimes condescends to answer to such a name as Moses? But, judging by the ominous intimation that he was lost in the neighbourhood of a wharf, I fear me greatly that his owner will never see him again. For there are sharks in the Shatt-el-Arab.

***

The war has turned many a man of peace into a "first-class fighting man," and I do not think I shall be giving away any secret when I say that quite a number of our younger archæologists are now using to the advantage of their King and country knowledge of the Near East which they acquired in happier times. In passing, I may add that at least one of our middle-aged archæologists also is, to my knowledge, doing likewise, though he is employing the arts of diplomacy rather than the ruder weapons of the sailor or the soldier. However, that is by the way. The little story I want to pass on concerns a younger man, and is told by a certain French professor resident in Athens, and well-known in the world of archæology. A short time ago this professor was making a voyage in the Ægean, on board a steamer of a certain nationality, which aroused the suspicions of an English cruiser that was on the look-out for contraband of war. Of course, the cruiser politely expressed her intention of searching the other vessel; of course, the other vessel protested and objected; and, of course, the search was duly made. While this process was going on, one of the British officers ran across the professor, and, learning by chance who he was, entered into conversation with him. The professor, who was in no wise vexed by the detention of his boat, found the officer an interesting young man, and, congratulating him on his acquaintance with certain facts which the average Naval Man might hardly be expected to trouble himself about, ventured to ask his name. The lieutenant blushed. "Oh," said he, "I am So-and-So," and added apologetically: "*un archéologue en peau de loup.*"

***

I have just received a grubby note from a boy at the Front in Flanders. The first part is admirably written; the latter shows signs of haste and disorder. It is also muddy. "Can't stop to write a new one, so please forgive this," wrote my correspondent. "Half a farm was blown into my trench as I was writing, and we've got to clear up." That was all—the average soldier does not play with words. He tells you what happens, but details of his experiences are left to the imagination. This, I suppose, is a characteristic of the real Englishman, the Englishman who has found himself anew during these comparatively few months of war. In a recent number of the *Daily Chronicle* I noticed an extract from the *Figaro*, in which a correspondent of the latter paper recounts an incident bearing upon this. It appears that M. Poulet, Director of Supplies to the French Forces, saw a shell burst beside two horsemen on the beach at Gallipoli, and bury them in the sand. A few minutes later, the English Director of Supplies was announced. He was dusty and stained, but this was put down to the violence of a sand-laden wind. The two directors finished their business, and it was only when the Englishman turned to lead his horse away that the other noticed that the animal had a deep wound in the back. "Then it was you," exclaimed the French officer, "that the shell burst near just now, and you said nothing about it." "Yes," replied the officer, with imperturbable phlegm, "it fell near us, but it wasn't a serious matter. It fell too near to harm me." The writer remarks: "The English character, brave to the pitch of utter indifference to danger, was summed up in the remark of the supply officer."

***

Now, this is good hearing, coming as it does from the member of a nation which is each day adding to deeds of heroism that will be deathless in history. And yet only a few months ago many people, especially those of us who have not travelled beyond the outposts of the Empire, imagined the French to be a nation governed largely by hysteria, and our own people to be moving quickly along the road of decadence. The confident ones were to be found principally among our administrators abroad, in India, Africa, and elsewhere, men who, year by year, had seen the young Englishmen fresh from school respond to the circumstances of duty, as they have responded since the call of Imperial expansion ran through England years ago. I remember that the Bishop of London laid stress upon the achievements of young men in the Sudan, when interviewed by the *Daily Graphic* in Khartoum. A country may not be judged by the fops of its pavements. And those who shout hardest fail most. Because our men marched into battle with a music-hall song on their lips, the enemy scoffed at our lack of Kultur, and, failing to crush us as, singing deeply patriotic songs by order, he advanced, he destroyed women and children and churches that his powder and steel should not be wasted. Berlin goes mad with joy over successes, not one of which bears comparison with the landing of the Allied armies in the Dardanelles. France and England wave no flags; they accept each advance soberly, as incidents leading on to the completeness of victory. The Turks, we are told, are tied to their guns, that they may not escape should their hearts fail them. German soldiers, on more than one occasion, have been shot down by their own guns while attempting to retreat. The great Austrian army has failed on almost every occasion that it has been greatly tried, while little Serbia remains serene and unconquered amid the ashes of war. If we look for decadence, we do not seem to find it in those nations that were built upon the bones of their fallen warriors, but rather when the easy trust of civilisation has given power unfought for. Turkey is the most notable exception to this argument, but then the Turk is no longer, if, indeed, in the course of this war he ever was, a willing fighter.

CORSAIR.

THE PRESS ON THE NEAR EAST.

The Indestructible Bulgarians.

In an article appearing under the above heading in the *Daily News* (August 10), Mr. H. M. Wallis, who was engaged in relief work in Bulgaria at the time of the Balkan war in the winter of 1912, seeks to place on record the characteristics which have lifted the Bulgarians supreme above the humiliation of August, 1913. At that time it seemed that these peoples would "be helpless for a generation," if, indeed, they ever held up their heads again. That was two years ago. Of Bulgaria to-day Mr. Wallis writes: "There she stands, her harvest out of danger, her manhood under arms, hand upon hilt, bargaining, and in no hurry to strike hands."

To the fact that Bulgaria is not an industrial but an agricultural country, and that her people are one and all trained to take their part in agricultural work independently of modern machinery, the writer attributes her extraordinary resurrection to-day:—

Bulgaria and the Bulgarians are exactly suited, the men to their land, the land to its men. Burn down their new, big corn-mills full of modern refinements, but grinding goes on. The "ruined" miller puts his scrapped plant of former years aboard a barge, moors her to the bank of the swift Maritza, lets the stream turn his paddlewheels, and restarts the stones forthwith. . . . The surplus of two average harvests has put him in funds, and your "ruined" Bulgarian is upon his feet again, alert, indefatigable, silent, tenacious as ever; his children at school beneath the wall of the gutted school-house, his lads drilling.

If his villages are razed to the ground it matters little; the Bulgar can erect a hut suitable for habitation in a few hours. And in his hardihood he is indestructible. Mr. Wallis compares the Bulgarian of to-day with the Englishman of the Middle Ages:—

There is the same simple thrift, handiness, alacrity, mutual helpfulness, and unboasting valour in him that carried our hard-bested forefather through his dark days.

He concludes a telling article with the following parable:—

An Englishman in the Balkans, when upon a lonely road, found a huge brindled dog persistently loping behind his carriage. Its size, grim silence, and uncompanionability aroused his curiosity. Whose was it? What did it want? "If such a thing were possible," said he to his driver, "that dog might be mistaken for a wolf." "It is a wolf," replied the man. Yes, for forty years we have treated the Bulgarian like a dog, but—— Is there yet time?

The Cross Roads in the Balkans.

"Plinthos," writing under the above heading in the *New Statesman* (August 14), says that "it is the misfortune rather than the fault of the Christian Balkan States to be inconvenient to the Great Powers of Europe." He shows that the complexity of the Balkan situation only increases, or at the least grows no more clear, with the progress of the war. To the eyes of the Balkan States the Austro-German menace has not greatly diminished in the last twelve months, and, after dealing with this side of the question, the writer continues:—

Neutrals, again, are sometimes in a position to make money out of a great war, and the Balkan traders have been and still are making a great deal of money out of the present war. This may be irritating to us, but they are no more to blame for it than are the respectable neutrals of the United States. Furthermore, the Balkan States have not been so uniformly well treated by the diplomatists of the Great Powers as to have acquired a habit of implicitly accepting everything that those gentlemen tell them. On the contrary, they are as suspicious of European politicians as English Trade Unionists are apt to be, and are as doggedly convinced that they are the best judges of their own interests. This may not always be the case, but it is something that has to be reckoned with.

Greece and the Balkans.

In a leading article the *Daily Telegraph* (August 18) deals with the progress of events in the Balkans, and particularly in Greece, where things have at last reached a climax. The following paragraph will show the opinion held by the paper regarding the attitude of the States generally at the present moment:—

In Roumania, in Bulgaria, in Serbia, and in Greece there are signs that the popular movement is on the side of the Allies, and that such public opinion as exists—and we are aware that it is not always so influential as it might be—tends more and more towards some kind of intervention on behalf of the Quadruple Entente.

The *Telegraph* expresses full confidence in the strength of M. Venizelos's statesmanship, and thinks that he will unreservedly refuse to commit himself to a policy of neutrality, such as it is rumoured the King will at first demand. The writer does not consider that it is seriously contemplated to call upon M. Zaimis in any case. "Things have gone too far for the success of such purely dilatory tactics":—

M. Venizelos is a great popular favourite in Athens; indeed, he has in the last two days enjoyed so conspicuous a triumph that enthusiasm speaks no longer of his victory, but of his "apotheosis." If the votes of the populace could carry the day, there would be no other name uttered in the Greek capital save that of the man who desires that the Hellenic kingdom should recognise its destiny and join with the Allies in the cause of independence and liberty.

The article concludes:—

So far as we can see at present, the wisest heads at Nish and Sofia and Bucharest, as well as at Athens, are becoming aware that the Quadruple Entente gives them the promise of a fairer future—a future in which, while the claims of each nationality are duly protected and secured, a powerful Balkan Confederation may arise, founded on eternal principles of justice and liberty.

The Lebanon Druses.

Hélène Flecker, writing in the *Sphere* (August 7), gives a very interesting sketch of the Lebanon Druses, who have always been under the special protection of England and put all their trust in her at the present day. Following upon a vivid picture of their village life in days prior to the war, the writer concludes with the appeal which we quote below:—

It is to be hoped that as soon as the difficult enterprise of the Dardanelles is brought to a successful end the Allies will have the opportunity of turning their attention to the liberation of Syria from the Turkish yoke. It will then be possible for them to restore to the Lebanese people that peace and prosperity which their protection had assured them during the last fifty years.

Bulgaria's Claims.

In commenting upon M. Radoslavoff's statement of Bulgaria's claims, which was published last week, the *Standard* (August 13) remarks that it is eminently reasonable. In reviewing the whole situation in the light of M. Radoslavoff's statements the papers incline to the belief that the common sense of the other Balkan States will ultimately prevail, and that the reasonable demands of Bulgaria may be met; although the situation is admittedly critical. In regard to the Serbian attitude the *Standard* says:—

By taking up an impracticable attitude Serbia may easily lose, as Bulgaria did two years ago, the just reward of her efforts and sacrifices. On the other hand, by stooping she may conquer a good deal more than she could possibly gain, given the best of luck, by stiff-necked refusal of all concession. A solid Balkan Peninsula—or, if Greece still hestitates to risk anything, a Balkan Triple Alliance—would win a secure and dignified future for each of the States participating.

The *Evening Standard* of the same date concludes a leading article on the subject in the paragraph which we quote below:—

We make no apology for returning again to the discussion of the Eastern question. It is vital, both in regard to the military position of the moment and in regard to the future peace of Europe. Moreover, we feel considerable sympathy with Bulgaria. She has made bad mistakes, but has paid heavily for them. Now that the time has come to set all wrongs right, we think it well to state that public opinion in this country would gladly see Britain make an effort to do Bulgaria justice.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

We publish on another page an optimistic review, by our Cairo Correspondent, of the Egyptian financial situation after twelve months of war. The balance of trade shows an improvement; there is an abundance of money (over £100,000 of Unified Debt have been bought in England for Egyptian investors), State finances "afford reassurance," and if Egyptian companies have not paid dividends, one of the causes is the "tendency which the uncertainty of the situation everywhere creates to postpone the meeting of obligations, and to hoard or place the money one holds in easily realisable securities." So that the "outlook is encouraging."

***

In connection with the question of shares, referred to in the last paragraph of the article refererd to, our Cairo Correspondent states that "one point requires adjustment at the earliest possible moment, and that point is this: Egypt, being within the British Empire, there should be freedom of Stock Exchange dealings between Egypt and London. For some considerable time London has been a seller and Egypt has gradually absorbed the shares offered. But once the shares are shipped to Egypt they are no longer allowed to be resold on the London market, and this naturally militates against Bourse transactions. In the interests of all concerned—buyers, middlemen, as well as sellers—it is advisable to have the law modified so that the 'physical possession within the United Kingdom' stipulated by the regulations and applicable to securities, shares, etc., offered on the London market should read, 'physical possession within the Empire'—Egypt being an integral part of that Empire. Besides, enemy countries having little or no stake in Egyptian securities, the free intercourse between the London and Egyptian markets could not lead to any abuses. On the other hand, if present conditions continue and if London should turn round and wish to buy Egyptian shares, it will, in the absence of further selling by English holders, be very difficult to deal, as all the shares held in Egypt will continue to be barred from the English market."

***

The following message from Reuter's correspondent in Amsterdam some days ago is of interest. It appears that according to a telegram received from Constantinople viâ Berlin, the *Official Gazette* publishes a law authorising the Government to buy back the following French railway and tram lines in Syria, the purchase-money to be provided by the Ministries of Finance and of Wakfs:—(1) The narrow-gauge railway from Beyrout to Zeirib; (2) the tramway from Beyrout to Hamslekin, in the Lebanon; (3) the line Rajak-Aleppo to the junction on the Baghdad Railway; (4) the line from Homs-Tripoli to the harbour of Muawene; and the line from Jaffa to Jerusalem, and all rolling stock, workshops, and other properties of the aforesaid lines.

***

On the other hand, our Special Correspondent in Athens writes that the Turkish *Official Gazette* publishes a provisional law authorising the Minister of War to appropriate for account of the Ottoman Steam Navigation Company the Stenia dock and repairing yard. As a matter of fact, these works, in which British capital is invested, have been in the hands of the Germans for the past eight months, and a good deal of work has been done there. As Stenia Bay is now a naval centre, the authorities have driven away from their houses all the Christian inhabitants of the neighbourhood.

***

I referred some weeks ago to a report to the effect that the Cyprus Government had come to an arrangement with the Cairo Motor Company for the running of a mail and passenger motor service between Nicosia, Larnaca, Famagusta, and Limassol, in place of the now defunct service which used to be run by the Cyprus Transport and Development Company. A correspondent in Cyprus writes to me to the effect that the new arrangement has given great satisfaction throughout the island, and hopes are expressed that the service will be extended to serve Papho and Kyrenia, the two other headquarters of districts, and perhaps some of the larger villages. The service is to begin on September 1. Headquarters are at Larnaca. Further details concerning the working arrangement between Government and company are not known, though they are believed to be practically identical with the Government offer published some months ago in THE NEAR EAST.

***

The unfortunate sinking of the s.s. Royal Edward in the Ægean removes a link with the boom days in Egypt—those good old days which are never to return, if we are to believe the inveterate pessimist. For the s.s. Royal Edward was none other than the s.s. Cairo, one of the two luxurious floating palaces owned by the Egyptian Mail Steamship Company, and intended for an express service between Marseilles and Alexandria. Had the boats been floated two years sooner—that is, in 1904 or thereabouts, they would more than have paid all running expenses, but, unfortunately, the service was only ready when the great financial crash came in Egypt, with disastrous results for the Egyptian Mail Steamship Company, which shortly afterwards went into liquidation—one of the many companies, similarly placed, which had to wind up their affairs. The two vessels, the s.s. Cairo and the s.s. Heliopolis, were bought by the Canadian Northern. The former, as the s.s. Royal Edward, has been torpedoed in the Ægean; the latter, as the s.s. Royal George, is in service. May her fate be better than her sister's!

***

The Bulgarian notice published elsewhere and inviting tenders for the construction of railways in that country will, I hope, attract the eye of some British firm of contractors. If not, a German firm is likely to be the successful, because the only, tenderer. This would be deplorable from all points of view, and more particularly so at the present time. For the sake of those who have never contracted for work in Bulgaria, it may be stated that that country is a regular and prompt payer, and that no one has ever had to repent having undertaken Government work in King Ferdinand's kingdom. The date for the closing of the tender is September 13.

***

I quoted last week from an able article by Mr. A. Ball in the *Quarterly Review* on German banking methods in Italy, and stated at the time that what applied to Italy was applicable likewise to other countries. Now we have Dr. Dillon analysing in the *Daily Telegraph*, in a series of able articles, Germany's ante-bellum methods in more countries than one. These methods were not merely based on the economic exploitation, under German auspices, of the victimised State, but extended to a campaign whereby the local Press was unduly influenced, bribed, and bought. We have proof of this, since the war began, in Roumania, and latterly in the United States and Switzerland. And so perfect is the organisation, and so unscrupulous its organisers, that not until Germany has been smashed will it cease to do incalculable harm in those countries where it operates. Strange to say, the most hopelessly bound victim of the Teuton, where the latter first applied and practised his Kultur methods, is none other than his ally Austria—a circumstance that is generally passed over in silence by commentators. Nevertheless, it is principally owing to Germany's hold over Austria that the present war broke out.

***

The necessity for the creation of British commercial banks in countries where, after the war, we intend to increase our trade returns, is beginning to be more generally recognised. I have insisted on the creation of an Anglo-Balkan Bank (commercial only, and not in the nature of an *agent-provocateur* as are German banks), and have quoted our Consular officers in Bulgaria as supporting the scheme, as far as Bulgaria is concerned. Our Consuls and Chambers of Commerce in Spain are now pleading the same cause for their district, and at the annual meeting in June of the British Chamber of Commerce for Italy, the President urged the "desirability, or, rather, supreme expediency, of the prompt establishment in Italy of a British bank, to foster and facilitate exchanges between the two countries." He added (and his words apply to the Near East likewise):—"Those of us who have lived in this country for many years and have seen the success in commerce of other countries whose trade here is backed up by powerful banking institutions, while Anglo-Italian trade has languished (except in the case of coal, which is indispensable to Italian industry), have the intimate conviction that such a bank is indispensable if things are to take an upward turn."

Egyptian Companies and the War.

Optimistic Review of the Year.

(From Our Own Correspondent.)

Cairo, July 31.

Since the last review of the financial and commercial situation of Egypt was published in these columns (*), six months have rolled by, and the moment is perhaps opportune to say a few words as to the effect that a year of war has had on the country, and the change, if any, that may have taken place in the general position as reported on in February last. It is all the easier to make some statement on this subject to-day, seeing that there are now various facts and figures available to enable one to obtain a clearer view of the position. In the first place, when the above-mentioned articles were penned Egypt was still threatened with the much-vaunted "Turkish invasion," which—albeit those who had inside information did not attach much importance to it—nevertheless was a factor that had to be reckoned with in any study of the general situation. That invasion has proved to be really nothing more than a nightmare. In addition, the war area has been shifted entirely away from the banks of the Nile by the attack on the Dardanelles, which, as our Gallic friends so aptly put it, is giving the Turks far too much "string to twist" to permit them to give any thought to any other enterprise. Politically, therefore, Egypt is at rest once again.

Troops and Economics.

From an economic standpoint, the position in Egypt has improved and is continuing to improve. The war, whilst it has undoubtedly ruined the "season," has by no means injured the country in respect of the profit it usually derives from the tourist element. Indeed, never before in its modern history has so much money been spent within its borders with such little necessity for corresponding outlay on the part of the inhabitants. Local produce has been purchased on a large scale by the military authorities, who have employed local labour to a very great extent, and who—more important still—have paid cash for everything they required. It is computed that on a low estimate no less than £E6,000,000 has been spent on and by the troops who have been and are still being quartered in the country When I add that in Lord Cromer's report for 1905 it is stated that the tourist element spends round about £E1,000,000 annually during its stay, it can readily be seen that the presence of the soldiers has had an exceedingly beneficial effect on the economic position of the people in general.

The Balance of Trade.

Of course, trade with the rest of the world is still somewhat disorganised, but then that is the case in every other country, be it engaged in war or be it neutral. There can, however, be no contesting that in this respect the country's position is healthier than it has been for years past. Since war broke out both imports and exports have, it is true, decreased considerably, but Egypt has in that period exported £E7,000,000 more than she imported. I know that it will be objected that without a careful analysis this cannot be taken as a true indication of the balance of trade, but as in the same period of the preceding commercial year the exports exceeded the imports by just over £E5,000,000, it is obvious that the position has undergone improvement. The decrease in imports is due not only to the reduction in markets open for purchase and the difficulty in obtaining freights, but also to the fact that the country, as a result of recent legislation restricting the cotton area, has produced more cereals and other products than it requires, and so has not needed to import them. Whilst this means that exports will naturally fall in a corresponding manner, this feature is in itself an excellent sign, for economically it is in the highest degree sounder for an agricultural country like Egypt to provide itself from its own soil with what it requires in the way of agricultural products than to rely in this respect upon other countries, and to produce correspondingly more of a commodity like cotton, which it cannot use in its raw state.

State Finances.

The returns of the State finances also afford reassurance. The land tax, which represents a little over one-third of the total revenue, and which is based on the cultivatability of the land, may by the course followed by its collections always be taken as a very fair indication of the country's financial condition. Despite the fact that such difficulty was experienced at the outset of the war in moving the cotton crop, and that cultivators undoubtedly disposed of their holdings at really ruinous prices, the collections for the financial year ending March 31 last fell short by only £E82,000 of the estimate, which, it should be noted, had been fixed at a time when there was little idea of the present war breaking out. Lest it be objected that the period of hostilities covered only eight months of the last financial year, I hasten to add that of this shortcoming £E70,000 fell within the period preceding the outbreak of war, and that, as further confirmation of the improvement during the first two months of the new financial year, the collections showed an increase of £E166,000 over the corresponding period of the preceding year. It may be a fact, as rumour has it, that great pressure had to be brought to bear on the people to get them to pay their taxes, but whilst the delay in payment may have been due to the difficulty in selling cotton at the time when the heaviest instalments of the land tax were due, there is every reason to believe that it was prompted by the absurd idea that got abroad that the Turks were coming, and that, once they had conquered the country, the taxes due to the old Government and the debts due to the foreign institutions would be wiped out. Whatever may have been the reason for the difficulty with which the taxes were collected in the early days of last autumn, the great recovery noticeable during the past five months—a recovery that is still showing itself—is in every respect a decidedly comforting feature.

Abundance of Money.

So much for the present position, which would certainly seem to show that the country is in reality in an excellent state, and that the fellaheen are by no means so badly off as might have been expected. The payment by the Bank of Egypt of another instalment to the shareholders affords further definite proof of that statement. It is a foregone conclusion that the liquidators hold far more than is represented by the dividend now paid, and, whilst it may be that part of the money in hand was collected prior to July, 1914, most of it must have come in since, otherwise the liquidators would surely have made the payment earlier. Further, it may come as a surprise to many to hear that over £100,000 of Unified Debt has been sent here from England, and has been absorbed by local investors during the past six months, whilst Crédit Foncier bonds are in constant demand, although at present prices they do not yield 3 per cent. All this shows still more clearly that there is an abundance of money in the country.

Company Dividends.

It may be asked how it is, if things are generally in such a satisfactory state in Egypt, that few of the various financial and industrial companies operating in the country have declared any dividend. The cause is the general depression that exists all the world over, and the tendency, which the uncertainty of the situation everywhere creates, to postpone the meeting of obligations and to hoard or place the money one holds only in easily realisable securities. While the war lasts it cannot be expected that people are going to tie their money up in land, and for the time being there is little demand for shares, except those mentioned above. All transactions previous to the war remain, for these reasons, pending, and the industrial and agricultural companies and mortgage concerns have had to carry over their outstandings, whilst the financial establishments have been unable to estimate the *dossiers* of their clients or advance money on securities owing to the continued closure of the Bourses. This has undoubtedly influenced the balance-sheets and the attitude of the companies concerned towards new business, which, in its turn, has had its reflection on all financial and commercial enterprise in general. The position of all the companies operating in Egypt is, therefore, due to peculiar causes created by the conditions obtaining all over the world, and I see no reason to-day to alter the views expressed in regard to each category in the series of articles which I contributed to your columns last February.

The Cotton Position.

With reference to the present outlook there is little cause to fear that the coming year will be as arduous as the one that has just passed. For one thing the cotton position is much sounder. In fact, there is no comparison with what it was ten months or less ago. The new crop should be disposed of with little difficulty—the old one has but slightly increased the stock at Alexandria—and it is certain that the prices will be very much better than they were when a large part of last year's crop was sold. Moreover, it is to be expected that, with the experience gained, the Government will, if the necessity arises, make an early attempt to regulate the cotton market on lines that will not fill the pockets of the dealers and spinners to the detriment of the cultivators as happened last winter. In addition, the agricultural position has itself improved, whilst the good Nile that is announced is bound to influence matters and may, it is hoped, be regarded as the precursor of a series of similar floods, since in this country these features go in cycles, and we have had a succession of bad Niles.

Favourable Outlook.

For other reasons the outlook is encouraging. Undoubtedly, as far as this country is concerned, the worst time is past. She has come through the crisis with such little economic hurt—I think that I have shown very clearly that she must, on the contrary, have benefited in many ways from the war that the prospects cannot help being hopeful. The favoured circumstances under which she has lived during the critical time are bound to have their effect as soon as the conditions that have acted as a restraint are removed and this country should be one of the first to respond to the revival that the close of this unfortunate war will bring into being. What makes the future appear under even rosier colours is the fact that Egypt stands in such close contiguity to just that portion of the Turkish Empire that will as the result of this war be wrested away from the yoke of Othman and be given its chance of development. This area itself is a veritable "land of promise," and Egypt's geographical position will force her to play an all-important part not only in that development, but also in the traffic which that development will in the future give rise. Also, Egypt has been brought by recent circumstances into far closer contact with people from all parts of the world than has been her lot hitherto, and there is no knowing to what extent this will not reflect itself on the country's commercial relations to the world's markets in the near future.

Investors and Egyptian Shares.

Since the present outlook is exceedingly favourable, especially as compared with other countries, and the near future holds out prospects that cannot be improved upon, those who are *bonâ fide* investors should interest themselves in the securities of this country, some of which stand at ridiculous prices. Many of them merit serious attention, and those investors who seize their opportunity will not be disappointed as to the manner in which their investments will turn out, as soon as the regular stock and share market is established by the reopening of the Bourses in Cairo and Alexandria.

Alexandria Prize Court.

In re S.S. "Rostock" (Cargo 4).

The following judgment was delivered by Judge Grain in the Alexandria Prize Court on June 18 in the above demand for the disposal of cargo on board the s.s. Rostock:—

The Procurator in this case asks for the condemnation of cargo—viz., copra, bristles, and other goods—shipped on board the s.s. Rostock, a German ship, at Colombo (Ceylon), by Karl Festin, and consigned by him to Karl Festin, of Hamburg. The goods were shipped on or about July 13 at Colombo, invoiced and consigned to Karl Festin, Esq., of Hamburg, by Karl Festin, of Colombo, the invoice having "Hamburg" printed on the left-hand of the billhead, "Colombo" on the right-hand. Bills of exchange drawn on the Anglo-Austrian Bank, London, and the Deutsche Bank, Berlin, were discounted with the National Bank of India, Colombo, but were never accepted owing to the outbreak of war. It is not contradicted that Karl Festin, of Colombo, is also the Karl Festin, of Hamburg, and that both trade houses belong to one and the same person—viz., Karl Festin. The Procurator argues that, on the facts placed before the court, the property has passed from the consignor, Karl Festin, of Colombo, to the Karl Festin, of Hamburg, and, even if it has not done so, that, nevertheless, it is enemy property, as the trade domicile of Karl Festin is Hamburg and not Colombo.

Mr. Booth, who appears an behalf of the National Bank of India, asks for the release of these goods to Karl Festin, of Colombo, in order that they may be handed over to the National Bank of India, who have discounted the bills of exchange. The direct claim of the bank itself he is debarred from urging on account of the Odessa case and the former cases which led to that decision. But he argues that the goods should be released to Karl Festin, of Colombo, on the ground that he, as consiginor, still retained the property in them, that a trade domicile had been established in Colombo by Karl Festin, and on that account he was entitled to the release.

With regard to the question of trade domicile, two affidavits by Mr. E. H. Lawrence, the manager at Colombo of the National Bank of India, are put in, in which it is stated that Karl Festin was "a resident carrying on business at Colombo for five years immediately preceding October 22, 1914, except for periods between December, 1910, and March, 1911, when he went to Australia, and December, 1912, and April, 1913, when he went to Germany for the benefit of his health." It is also stated that Karl Festin resided while at Colombo for some time at the Bristol Hotel, and latterly for three years resided at a house in Colombo, which "he had taken on rent and furnished himself." It appears from the affidavits in the case that he left Ceylon on October 22, 1914, "at the request of the Ceylon Government," and as far as could be ascertained he proceeded by Dutch steamer to Holland, I presume because at that time it was the only means of arriving at his native town of Hamburg. Mr. W. F. Ross, also in the employ of the National Bank of India, gives evidence, and states that in 1889, from documents passing through the bank in London, where he then was an official, he knew that Karl Festin was carrying on business as an exporter from Germany, and that about five years ago, to the best of his belief, Karl Festin went to Colombo, and from that time fresh business began, and continued between the bank at Colombo and Karl Festin.

A vast number of cases have been cited to me by the Procurator and Mr. Booth in support of their respective contentions with regard to the point of trade domiciles, "The Harmony" (1. E.P.C. 241), "The Jonge Klassina" (1. E.P.C. 485). Mitchell v. United States (Scott's Cases, 605), "The San José Indiano" (2. Gall. 208, 1814), "The Herman" (4. C. Rob. 228), "The Indian Chief" (3. C. Rob.), "The Venus" (1. E.P.C. 403), "The Vigilantia" (1. C. Rob. 14), "The Packet Bilboa" (1. E.P.C. 209), and "The Ospray," and no doubt these cases are of some assistance in arriving at the principles on which to base a decision. But on reading through them it becomes more and more clear that each case has to be decided on its own merits. And as Lord Stowell says in his judgment in "The Harmony," it "is in itself a question of considerable difficulty, depending on a great variety of circumstances, hardly capable of being defined by any general precise rules." But the judgment of Mr. Justice Swayne in Mitchell v. United States is of great assistance in arriving at the principles of the doctrine of trade domicile. In the course of his judgment he states that the approved definition of domicile is "a residence at a particular place, accompanied with positive or presumptive proof of an intention to remain there for an unlimited time"; and later he says: "There must be the intention to remain. Mere absence from the fixed home, however long continued, cannot work the change, and until the new domicile has been acquired the old one remains."

In the present case the goods are consigned by an individual of German nationality to himself at Hamburg and forwarded on a German ship, therefore the presumption is that they are enemy goods, and it is for the claimant to satisfy me that he has established a trade domicile in Colombo, and is, therefore, entitled to his goods. Here we are met with somewhat of a difficulty, as Karl Festin, on whose behalf the claim is based, apparently took no interest whatsoever in the matter, and I have consequently to rely entirely upon the affidavits of the manager of the National Bank as to what the intentions of Karl Festin were concerning his change of domicile. Facts such as a man giving up his old home in one place, taking his wife and children to his new residence, or evidence from the individual himself that he had no intention of returning to his old home, but had a fixed intention of establishing himself in the new country, which have been of such material assistance in some of the cases quoted, are entirely absent in this case. For instance, in the "Herman" case it was shown that the claimant had removed with his wife and family from London to Embden, and had established himself and his family there, become a burgher of Embden, and had remained there for six years. But such facts as these are absent in this case, which merely rests on broken periods of residence.

Pitt Cobbett, Vol. II., p. 25, states that "where a person is domiciled in a neutral country, but has a house of trade in the enemy country, he will also be deemed to have an enemy character," which is founded on Lord Stowell's judgment in "The Jonge Klassina," viz.:—"A man may have mercantile concerns in two countries, and if he acts as a merchant of both he must be liable to be considered as a subject of both with regard to transactions originating respectively in both."

Is there positive or presumptive proof before me that this man Karl Festin showed any intention of throwing off his enemy character and becoming a resident merchant of Ceylon? Apparently he is a man born and bred in Germany, for years carrying on his trade at Hamburg, and still doing so, and now doubtless residing there, having been requested by the authorities to leave Ceylon, it may be assumed because he was of German nationality. I am now asked to say that the affidavits of the National Bank's manager are sufficient to establish the fact that Karl Festin has thrown off his old German domicile and shown an intention to remain for an unlimited period at Ceylon. But what does the evidence before me amount to? Merely that Karl Festin came to Colombo sometime about October, 1909, and stayed at the Bristol Hotel there, and started to trade with his trade house in Hamburg; that he left Colombo for Australia in December, 1910, and did not return to Colombo till March, 1911; that he again left Colombo in December, 1912, for Germany, and did not return till April, 1913. It is suggested that his return to Germany was for the sake of his health, but if that were so it only goes to show that Ceylon was not the place for him to take up his permanent residence. It is true that he did rent a house at Colombo, but a merchant who knew that it might take some little time to establish his new branch of business might, for the sake of comfort, take a house rather than stay at an hotel, without any intention of remaining permanently, or for an unlimited period.

Can it be said that this evidence is sufficient to convince me that this born German, who has resided most of his life in Germany and carried on his trade at Hamburg, has now abandoned his country and native home at Hamburg and has changed from a German merchant into a Ceylon one? I am of opinion that I should be stretching the doctrine of trade domicile to a breaking point if I considered such evidence sufficient, and I must consequently decide in this case that there is not sufficient evidence before me to show that there was any intention on the part of Karl Festin to remain an unlimited time at Colombo, or that he had any intention of acquiring a new domicile, and that the old domicile—viz., that of Hamburg—remains, and that, in fact, he has not acquired a trade domicile in Colombo (Ceylon).

Having decided this point in the way I have, there is no need for me to decide the question of whether or not the property has passed technically from Karl Festin, carrying on business in Colombo, to himself as Karl Festin, of Hamburg. The release is, therefore, refused and the claim struck out, and an order made for confiscation and sale, with liberty to apply.

CONSTANTINOPLE FIRES.

(From Our Special Correspondent.)

Athens, August 2.

Another conflagration has occurred in Constantinople, in close proximity to the scene of the recent disaster. The fire broke out on the 26th and burnt for over twelve hours, and was apparently much more extensive than the other, 3,000 buildings, it is said, having been destroyed. This number is probably an exaggeration, as were the reports of the other fire, when it was stated that 1,500 to 2,000 houses had been burnt, and which now proves to be about 500. The fire apparently broke out at Foundoukli, a Turkish district consisting principally of old wooden houses, which has been entirely destroyed, and extended down to the sea at Sali Bazar. The German hospital was in danger—in fact, an annex was burnt—and many large residential flats have been gutted.

The losses of the insurance companies in this fire will probably be more important than in the former one, as the percentage of stone buildings is much larger.

The effect of these two conflagrations is to clear Constantinople of a mass of old Turkish wooden houses from one of the finest situations of the city, and opens up the prospect of rebuilding these districts with modern residences.

The origin of these fires is unknown, but they are in all probability the work of incendiaries, as these conflagrations always occur when the country is in a disturbed state. The majority of the burnt-out people are probably Turks, and they have been sent to the houses of Christians at the Upper Bosphorus, which had been evacuated some time ago by order of the military authorities.

Advices from Constantinople report that many insurance agents are paying their losses out of funds in hand, and when sufficient funds are not available drafts on the head office in England are given, which will, of course, not be payable until the war is over.

The Great Central Railway Company have just issued their new "A.B.C. Guide to Health and Holiday Resorts." Within an attractive cover is included a description of the various resorts, and interesting information is given regarding climatic advantages, bathing facilities, sports and entertainments, also a list of hotels, boarding houses and country lodgings, schools, etc. The book has been entirely rewritten, is well illustrated, and anyone contemplating a short or long holiday, either at the seaside or in the country, cannot do better than obtain a copy, which will be sent free on application to the Great Central Publicity Department, 216, Marylebone Road, London, N.W.

Trade Notes.

Egypt.

Slight modifications having been made in the general conditions for tenders and adjudication of Egyptian Government contracts, they are republished in their new form, as under.

1. Tenders must be submitted on the form supplied by the Administration, and in double-sealed envelopes, with the object of the tender indicated thereon.

2. The tenderer must be a person residing in Egypt, or must have a representative in Egypt, and will give in his offer an address at which notices may be served upon him. All notices shall be deemed to be validly served which are left at such address or are sent there by registered post, and every letter sent by registered post shall be deemed to have arrived in due course of post unless the contrary is shown.

3. The price of tenders should be written, without erasures, in figures and in words.

4. Every tender submitted in the name of an incorporated company must be accompanied by authenticated copies of the documents defining the constitution of the company. Every tender submitted in the name of a private firm or partnership must be accompanied by such extracts, duly authenticated, from the partnership deed as shall suffice to show what persons are authorised to enter into contracts on behalf of the firm or partnership, and what persons are responsible for the due execution of such contracts and can give valid receipts on behalf of the firm or partnership.

However, firms established in Egypt and having constant dealings with the Government may deposit with the Ministry of Finance authenticated copies of the above-mentioned documents. In submitting tenders, these firms should then simply state that the documents in question have been so deposited and that no subsequent changes in the constitution of the company, partnership, or firm have taken place.

5. Contractors must produce railway certificates in support of their invoices for transport expenses incurred on account of goods forwarded by them to Government Departments. Such certificates will be delivered gratis by the Railway Administration if applied for at the moment of despatching the goods, and in order to obtain the same forwarding agents should mention on the waybill the name of the Department concerned.

Claims for freight on goods shipped to Egypt must be supported by a copy of the bill of lading or other voucher showing the amount of the freight.

6. Each tender must be accompanied by a provisional deposit of 2 per cent. of the total value of the offer in money. Post Office Orders or cheques on local banks will be accepted, but not cheques on banks abroad.

The provisional deposit may be replaced by a letter of guarantee from an approved bank in Egypt to the effect that the bank will hold at the disposal of the Government a sum equivalent to 10 per cent. of the total value of the contract in the event of the tenderer obtaining the same.

Letters of guarantee from banks abroad may also be accepted, but in that case the Administration may require the endorsement of such letters of guarantee by an approved bank in Egypt.

7. Within ten days after the acceptance of the tender a sum equal to 10 per cent. of the total value of the contract will be deposited by the successful tenderer as security for the due execution thereof. This deposit must be either in cash (on which no interest will be allowed) or in Egyptian Government or other approved securities, calculated at market value with a margin of 5 per cent. Cash may be paid to the contracting Department or to the Ministry of Finance. Securities will be deposited with the Ministry of Finance, in Cairo, or with the National Bank of Egypt, in Alexandria, or in London, for the account of the Government. The coupons maturing on these securities may be detached by the contractor. The deposit will be retained until

CONTRACTORS TO GOVERNMENT.

Digitized by Google

the contract has been duly carried out to the satisfaction of the Government.

In the case of unsuccessful tenderers, their provisional deposit, made in cash, will be returned to them; letters of guarantee will be returned to the bank which issued them, simultaneous notice being sent to the tenderers that this has been done.

Contractors may effect a permanent deposit in cash or securities with the Ministry of Finance, in Cairo, on which certificates for provisional deposits may be granted to accompany their tenders, and also certificates for final deposit of 10 per cent. on value of contract accepted.

Should the successful tenderer not make the deposit as required by this article, the acceptance of his tender will be withdrawn and any deposit he may have made under Article 6 will be forfeited.

8. The Government is not bound to accept the lowest or any tender, and may divide the order.

9. Unless all the foregoing conditions are complied with by the tenderer, the tender will not be considered.

10. Tenderers are permitted to attend when tenders are being opened and to satisfy themselves that their own offers have been received; but they will not be given any information as to the offers made by other tenderers.

Tenders are invited by Economat Central, Cairo, for the supply of agendas for the coming year. Date September 16.

Messrs. Avery, Limited, were recently the successful tenderers to the Egyptian Government for the supply of weights and measures.

Messrs. the Imperial Dry Plate Company, the Société Anonyme des Drogueries d'Egypte, and the Kodak (Egypt) Co. were recently the successful tenderers to the Egyptian Government for the supply of photographic material.

Morocco.

H.M. Chargé d'Affaires at Tangier reports that hitherto one of the difficulties British shipping has had to contend with was that, while cargo could be found to bring out to Moroccan ports, the ships had to go back empty for want of any return cargo. It has, however, been suggested that British steamers should be used for the conveyance of wheat and barley from Casablanca, Mazagan, and Saffi to Bordeaux, Nantes, St. Nazaire, and Havre, and the French authorities have approved of this suggestion, at the same time indicating that they anticipated great difficulty in finding bottoms for the conveyance of the large quantities of grain to be shipped to France, and that it would be of great assistance to them if British ships could be so utilised.

Writing on the same subject H.M. Vice-Consul at Saffi (Mr. G. H. Selous) suggests that British shipping companies interested should inform the local officer of military supplies of the arrival dates of their steamers, the amount of space for cargo available, and the freight per ton. Freight should compare favourably with that quoted by French shipping lines. It would not be necessary for a steamer to proceed directly to the French port of consignment; a liberal delivery date would be given. Steamers would be liable to be held up at French ports owing to congestion, but would be entitled to demurrage. Barley would be consigned to any of the four ports mentioned; wheat to all except Bordeaux. These conditions would remain in force until November 1 next. The French authorities do not wish to charter, but it might not be inadvisable for brokers to keep in touch with an agent at Casablanca in case the authorities, for any reason such as lack of the requisite French tonnage, alter their decision on this point. It is estimated that the amount of wheat and barley available for export this year will not fall short of 150,000 tons.

Cyprus.

The Board of Trade are in receipt of copy of a Proclamation, dated July 19, notifying that in cases where the general public has subscribed for, or where individuals have made gifts to British troops on active service, such gifts shall be exempt from Customs duty on importation into Cyprus.

The *Cyprus Gazette* for July 27 contains a Proclamation, dated July 22, notifying that the exportation of all articles whatsoever to the Netherlands is prohibited, unless such articles are consigned to the Netherlands Oversea Trust (or, in the case of any prohibited or restricted goods which are authorised by licence to be exported, to the person named in the licence as consignee).

Persia.

Parcels for Northern Persia can now be sent by the direct route to Archangel. Parcels for this route must be clearly addressed "viâ Archangel" on the despatch notes and on the parcels themselves. The rates of postage are the same as for the route viâ Sweden and Russia, and the parcels may be insured up to a limit of £20.

TRADING WITH THE ENEMY.

At the Guildhall Police Court on Tuesday, Thomas Bertram Ledger, of Ledger, Sons, and Co., manufacturers, of St. Mary Axe, was summoned for having attempted to trade with the enemy. There were two summonses, and he pleaded "Guilty" to one, which charged him with attempting to obtain tin boxes from the firm of Nestor Gianaclis (Limited), of Cairo, who have a branch and factory at Frankfurt.

The second summons was heard, and Mr. Muir, prosecuting, said that in response to a telegram from the Nestor Company, at Cairo, which ran, "Please remit immediately by cheque on London to order of James Lorber at Geneva, for the Frankfurt works £400," the defendant took steps to send the money. He wrote to his correspondent in Cairo as follows:—

"Of course, the ultimate destination of this money is no concern of ours. The penalties in force in this country in regard to remitting sums of money to any person or business of an alien enemy are very severe indeed, and we therefore regret that you should have mentioned in your cable the ultimate destination of the money."

There were, Mr. Muir said, two further remittances to a bank at Athens amounting to £1,000 without Mr. Ledger inquiring whether these sums were going to Germany or not. Coming to the charge to which the defendant pleaded guilty, counsel said that on March 15 the defendant requested Mr. Lorber, a Swiss, to obtain from Frankfurt samples of tin boxes so that they might place an order for similar goods in England. Mr. Muir said the letter of the defendant showed an entire incapacity to realize his duty as a citizen of the Empire.

Mr. Hewart, K.C., M.P., for the defence, said that the Nestor Company was a neutral one, and the shareholders were all English. The Frankfurt factory was really a branch of that company. With regard to the second summons, the firm wished to obtain one sample tin from the German manufacturers in order that they could take it to English tin makers and give an order for a million tins like it.

The Magistrate imposed a penalty of £250, with 10 guineas costs.

GOVERNMENT OF CYPRUS.

NOTICE.

SALE OF VETCHES OF 1915.

The Government of Cyprus offers for sale the following vetches of this year's harvest.

It is estimated that all this grain will be placed in the stores between the month of June and October 31, 1915, and delivery must be taken within a period to be arranged with the Treasurer, but in no circumstances later than November 20, 1915.

Stores.	Vetches. kilés.*
Nicosia	3,800
Larnaca	1,600
Limassol	900
Pissouri	120
Famagusta	4,900
Boghaz	700
Chelones	300
Akanthou	70
Paphos	1,700
Latzi	1,000
Kyrenia	250
Total ...	15,340

*The kilé is equal to 1 English bushel.

1. Tenders for the purchase of any of the above quantities of grain will be received by the Treasurer, Cyprus, on or after August 7, 1915.

2. Combined tenders for the purchase of the grain of two or more stores will not be considered unless accompanied by a declaration that the price offered holds good for the whole or any part of the grain tendered for.

3. The Treasurer does not bind himself to accept the highest or any tender.

4. The foregoing figures represent an estimate of the gross amounts which are likely to be brought into the various Government stores, but no warrant or undertaking must be implied on the part of the Government that these amounts, or amounts approximating thereto, will be available for sale.

5. When any tender has been accepted, the tenderer will be required to execute an agreement on a form to be supplied by the Treasurer. Specimen form may be obtained on application to the Treasurer.

6. Samples of the grain at the various stores may be obtained from the Commissioners of the districts, *but no sale effected on the basis of this notice shall be deemed to be a sale by sample.*

7. All the stores, with the exception of the store of Nicosia which is connected with the Famagusta harbour by railway, are situated near the sea shore.

C. D. FENN,
Acting Treasurer.

Nicosia, July 3, 1915.

Sudan Notes.

TRADE OF THE SUDAN.

The Commercial Intelligence Branch of the Central Economic Board of the Sudan Government has just published its monthly report (June, 1915), from which the following information is extracted :—

One thousand six hundred and seventy-two tons of gum, valued at £41,000, were exported viâ Port Sudan, and 9,451 kilos, valued at £168, were exported viâ Halfa during June.

The gum sold in El Obeid Market during the month totalled 32,571 kantars of 120 rottles (54 kilos), of which 3,716 kantars came from Nahud. This constitutes a record for June sales. The amount sold in El Obeid Market during the current season to end of June is 156,945 kantars, as against 138,545 kantars sold during the same period last season.

As regards cotton, the total amount brought into the market (from the Red Sea Province?) was 64,760 kantars, which constitutes a record. On June 30 there were only 200 bales of cotton left to be exported to Trinkitat. On July 31 they had been sold.

Rainfall throughout the country in June proved most beneficial to the crops, but in some districts a greater fall was wished for.

Blue Nile Province is now reported clear of cattle plague, but further outbreaks have occurred in Senaar Province. There has been one fresh outbreak of contagious pleuro-pneumonia of cattle—reported from the southern part of the Kosti District in the White Nile Province.

The value of the principal exports viâ Port Sudan during the month of June were :—Raw hides, £E26,023; cotton seeds, £E10,724; ginned cotton, £E6,301.

The value of the principal imports viâ the same port were :—Sugar, £E15,212 and cotton goods, £E17,427. Further imports of cotton goods were :—Viâ Halfa, £E19,380, and viâ Suakim, £E15,954.

SUDAN GUM CONTROVERSY.

In connection with the gum controversy—*i.e*, the ruthless over-exploitation of the trees by the natives with possibly disastrous results in the near future, the *Sudan Times* publishes the following interesting particulars concerning Sudan gum :—

The best Heshab gum trees grow in the sandy soil of Kordofan. The tree is thorny, and varies in height from six to twenty feet.

In the rainy season its leaves, which are serrated, are green; but about November the leaves become dry and fall off. In December the gum collectors begin to tap the trees. This is done by peeling off a portion of the "skin" of the branches by an iron axe (Ferrar). The "skinned" portion exudes a mucous juice, which solidifies upon contact with the air and collects into crystallized lumps, which are the gum Arabic. These lumps are gathered once every twelve days. The period for collecting them is known as *Dema*. The collections are repeated until the month of June, when the rains begin and the trees commence to leaf. Then the secretion of the juice ceases, and the gum-collecting season is over.

Methods of Planting Gum Trees.

There are three methods in which the gum trees grow or are grown :—

1. The seeds are planted in the sesame fields in rows parallel to those of the sesame and alternating with them, with a space of about one metre between each row and the next. This method, however, is not popular among the natives and really is not a good one. The trees grown from seeds are usually very delicate, require much care, are easily subject to destruction at the least exposure, and do not begin to produce gum before they are five years old.

2. Natural growth. During the stormy season, the seeds of the Heshab tree are carried about and scattered. When the rain falls, they sprout, and if not choked by weeds, they grow into trees. This, however, is a precarious and uncertain method, and naturally can only succeed in regions far removed from human habitations.

3. The method most widely adopted among the natives is that of allowing the Heshab trees to grow in grain-cultivation land. When the Heshab tree is fifteen to seventeen years old, it becomes decrepit, and dried up, and the least storm blows it down. If the land in which the trees have fallen down is cleared properly and the stumps are burnt, the land becomes very fertile for the cultivation of grains such as dukhn and dura, and for three or four years in succession it gives good crops. After this period, however, the land loses its fertility for producing grains. But in the meantime, the roots of the old gum trees, which had remained buried in the ground, have sprouted and sent forth new strong shoots. If these are left uncut by the cultivators, in three or four years they begin to produce gum. So that this method furnishes an excellent system of rotation, which by judicious use can be turned to great advantage for development of both the gum and grain crops.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continue to receive a very large number of inquiries for the names of sellers or buyers of articles of which the sources of supply or markets have been interfered with by the war.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and the weekly list of articles (No. 34) which inquirers desire to purchase is ready, and may be obtained by United Kingdom manufacturers and exporters of British goods.

Engineering Notes.

Bulgarian Railway Construction.

We publish in another column an official notice by the Bulgarian Government inviting tenders for the construction of four railway lines:—(1) From Radomir, viâ Dupnitza, to Zumaja, with (2) a branch line from Dupnitza to Bobordol, together 90.1 kilometres; (3) from Plevna to Lovetch, 52.5 kilometres; and (4) from Gabrovo to Sevljievo, 29.75 kilometres. Caution money for (1) and (2), 741,000 frs.; for (3), 320,000 frs.; and for (4), 160,000 frs. Specifications, plans, etc., can be obtained at the Direction Générale des Construction, 4, Rue Preslav, Sofia, for the sum of 80 frs. Date, September 13 (N.S.). Tenders to be addressed, for each line separately, to the Direction Générale des Construction.

Trees and Wireless Telegraphy.

The German air raid on the Eastern Coast in a fully dark and misty atmosphere, as it was on Tuesday night, and which resulted in the senseless assassination of a few more innocent women and children, will, undoubtedly, sicken again the heart of all civilized people. But the question may now arise as to whether it is certain that such cowardly attacks in the darkest hours of the night are not guided by some means, as yet undetected, of communication from the land. It is believed that all suspected persons have already been removed from the Eastern Coast; that all private wireless telegraphic installations have been demolished, and no new ones are allowed; but is it certain that newer methods of wireless telegraphy are not adopted by unsuspected spies of the enemy? Lofty masts erected on wireless stations can, of course, be seen; also the modern portable outfits carried on specially fitted motor-cars, with articulated or telescopic sections of the antennæ masts; but a small outfit which can be placed in a bag and carried in the hands, and for which any convenient tree may be used as antennæ can easily avoid detection. Such an apparatus exists and has been used with success. It is the invention of an American officer, who, on the accepted theory that vegetable organisms possess a certain amount of electricity, experimented and discovered that a tree can be utilized for the reception and transmission of wireless messages.

No High Aerial Wire.

With this method there is no need of long aerial wires, generally suspended by a long pole or staff, which in the orthodox apparatus forms a very characteristic feature. Only a very short length of wire is used; and the method employed in effecting the electrical contact between tree and receiver is very simple. By driving an ordinary iron nail at a convenient point into the upper part of the trunk of the tree, and another similar nail into the same trunk at a point an inch or two above the surface of the earth, and by fastening the end of each wire to each of the nails, the electrical contact is secured between tree and receiver. The detector consists of a simple microphone, made by partially filling a small ebonite tube with the spherical carbon granules used in telephone transmitters; embedded therein are two small steel needles as electrodotes, so that they nearly touch each other in the central part of the tube. With the view of putting this system to a most vigorous and searching test, and to ascertain its practicability when applied to a variety of trees, prolonged experiments were made with one of these apparatus, the necessary electric power to excite the induction-coil being provided by two portable storage batteries. Among the trees selected were spruce, oak, pine, and willow; and a significant difference in efficiency was observed. The results achieved from a barren and generally unhealthy tree were indeed disappointing, while a dead tree acted as an insulator. Apart from this trial of trees, further experiments were carried out to ascertain to what extent the system might be employed, and it was found that the distance depended to a large extent upon the power of the emitter and the delicacy of the detector. Messages, however, have been received from a distance of over thirty miles, using as antennæ any convenient small tree in the vicinity. An objection to some of the field equipments at present used is the necessity of suspending an aerial wire by means of a high pole, kite, or balloon. These supports are apt to disclose the presence of the operator to an enemy, while, by using a tree, the possibility of disclosure is not only reduced to a minimum, but the short time necessary for installing both remitter and receiver is, in itself, a decisive advantage. The remitter can be made ready within ten minutes, while the receiver, capable of being carried in the hands—the whole being mounted on a small board about ten inches by twelve inches—requires even a shorter period. It is obvious, therefore, what could be done by a spy who possessed such an apparatus.

Diesel Boats for the Danube.

Three new motor boats have recently been completed by the Ruthof Yard, at Regensburg, on the Danube (says the *Motor Ship and Motor Boat*), each having a length of 64 metres (210 ft.) and a beam of 8.1 metres. Each of the vessels is fitted with two hot-bulb engines developing 120 h.p. The company for whom these were built (the South German S.S. Co., Limited) has now six such vessels in commission, with a total tonnage of 4,000. Two motor tank ships have also been completed for service on the Rhine for the Bavarian Lloyd Co., these being engaged in the transport of petroleum between Roumania and Germany. They were 66 metres in length (216 ft.), having a beam of 6.1 metres, and in these are installed two Benz-Diesel engines of the Polar type, of 200 h.p. each. The importance of these tank vessels in present circumstances will be readily understood. Besides these two vessels, two tugs, fitted with 2,270 h.p. and 345 h.p, Diesel engine respectively, were put into service in Roumanian waters, whilst three Dutch tugs were also sent to Bulgaria in which Diesel engines of 270 h.p. were fitted.

A New Grinding Paste.

A new grinding paste has recently been brought out which at the present time will be of great interest to munition manufacturers and others. It is a mixture of ingredients to combine the rough and finishing processes of grinding cocks, valves, eccentrics, etc., into one simple process. The paste has to be smeared evenly over the work to be ground, and it is said that jobs which with other preparations often take hours to complete, can be finished with this paste in a few minutes.

Cement from Beets' Scum.

The industrial chemist and the engineer of to-day continue to prove that there is use for, and wealth in, what but yesterday was thrown away as useless. An excellent cement is now being produced by a French firm from the scum formed by boiling beet for sugar manufacture. The scum consists chiefly of carbonate of lime and water. Out of 23,330 tons of beet 1,330 tons of lime is obtained; to this 370 tons of clay is added, the resulting product being 1,000 tons of excellent cement. The scum is pumped into large tanks, where it is allowed partially to dry; finely divided clay is then mixed with it; the mixture is thoroughly amalgamated by beaters for an hour, and then burned in a rotary kiln, much in the same way as Portland cement. The clinker is then removed and pulverised into cement.

Soapsuds for Gas.

This reminds one of another, but more curious discovery. One day a chemist was passing a yarn mill and saw hundreds and thousands of gallons of soapsuds going to waste. To this industrial chemist the sight of these soapsuds being thrown away was so painful that he devised a method by which he precipitated the soapsuds with lime, pressed them into briquettes, and from these produced a gas of three times the illuminating power of ordinary gas. With this gas he lighted the mill, and to-day yarn mills save their soapsuds for illuminating purposes.

AVIS.

No. 5565.

Le 31 Août / 13 Septembre, 1915, à 10 heures du matin, il sera procédé au Palais de l'Assemblée Nationale à l'adjudication, sous pli cacheté, de la construction par entreprise générale à forfait des chemins de fer: "Radomir - Doubnitza - Gorna Djoumaya" et de son embranchement "Doubnitza-Bobov-dol" d'une longueur totale de 90.1 kilomètres, "Pleven-Lovetch," d'une longueur de 52.5 klms., et "Gabrovo-Sevlievo," d'une longueur de 29.75 klms.

Les cautionnements qui devront être déposés pour être admis à l'adjudication sont fixés conformément à la Loi sur les entreprises publiques comme suit: leva or 741,000 pour la ligne Radomir-Doubnitza-Gorna Djoumaya et son embranchement Doubnitza-Bobov-dol; leva or 320,000 pour le tronçon Pleven-Lovetch et leva or 160,000 pour celui de Gabrovo-Sevlievo.

Le cahier des charges, les plans et la collection des types pour chacune des lignes susmentionnées, se vendent à la Direction Générale des Constructions, 4, Rue Preslav, au prix de frs. or 80.

Les offres devront être conformes au modèle de soumission et porteront sur chaque ligne séparément et non sur les trois ensemble.

Les plis contenant les offres devront être remis jusqu'au 31 Août, 1915, 10 heures du matin, au plus tard et porteront l'inscription: "Offre pour la construction du chemin de fer..... ....." Les offres faites ap ès cette heure ne seront pas prises en considération.

La Direction
Générale des Constructions.

Near East Markets.

CYPRUS RAINFALL.

(From a Correspondent.)

Cyprus, July 31.

In view of the fact that a season of drought was feared by many, it is interesting to note that the steady increase in the rainfall, which has been so marked a feature in late decades, has been maintained. The old consular reports before the Occupation gave an annual average of 13 to 14 ins. The fall from October 1, 1914, to April 30, 1915, shows, except for a portion of the Nicosia district, a satisfactory record, viz.:—Papho, 18.29; Limassol, 18.28; Famagusta, 17.63; Larnaca, 15.89; Nicosia, 9.19. The fall as gauged in parts of the forests exceeded 62 ins.; at Amiantos (Troödos), 30.28; at Rizo-Carpas, 25.03.

PERSIAN CROPS.

H.M. Consul-General at Ispahan reports, under date June 22, that the 1915 opium crop in that district is likely to prove considerably less than last year's harvest on account of hailstorms and a plague of black and white blight, the latter resulting from an exceptionally mild winter, with insufficient rains. Farmers, however, encouraged by last year's crop, had planted a much wider area with opium than usual. The quality of this year's opium is said to be up to the average and the colour somewhat darker.

The barley crop is less than last year's, and prices about 50 per cent. below normal, owing to plentiful supplies and imports from other parts of the country. The decrease in quantity is attributed to lack of timely rain, for although more fell than was wanted during the early autumn, damaging the young crops, too little fell subsequently. Prices are expected to advance shortly.

Wheat has not yet been harvested, but the crop is said to be inferior to last year's. Prices are much below those of 1914, but they are likely to rise as the crop is insufficient for local needs.

The bean crop is the poorest since 1909; fully two-thirds has been eaten by black blight.

THE ROUMANIAN HARVEST

The *Morning Post* correspondent in Bucharest, writing on August 15, states that the Government has definitely decided to remove the prohibition of the export of wheat and rye, whether in the form of grain or flour. On the other hand, barley and oats, seed or ground, peas, haricot beans, and other leguminous seeds, linseed, colza, and other oleaginous products, aniseed, nuts, millet, lentils, vetches, ryegrass, oil cake, colza, and linseed oil, etc., will pay an export tax ranging from £8 to £40 per wagon. There are 200,000 wagon loads of the previous harvest awaiting export, and the new harvest promises to yield 400,000 wagon loads. The railways under normal conditions of working are expected to take 15,000 wagons a month. The Government is about to authorize the credit banks to advance 60 per cent. upon the harvest provided the sanction of Parliament is obtained.

Our Bucharest correspondent writes:—

The grain export trade from Roumania during 1914 was greatly inferior to that of the two previous years. During the five last months export by sea was completely interrupted, so that the quantity of wheat exported during the year was only 1,260.000 tons, as compared with 2,290,000, or a falling off of 45 per cent.

The cessation of export had a signal effect on the economic situation of Roumania. In accordance with the new law of 1913, six grain exchanges were established in Roumania, viz., at Braila, Constantza, Galatz, Bucharest, Craiova and Jassy. The three first handled 70 per cent. of the total production of cereals. In following the course of trade on these exchanges one could not but remark the great influence of the European war on the trade.

During 1914, the total quantity of agricultural produce, handled at the three abovementioned exchanges was 852,165 tons, representing a value of 119,634,448 fr., as compared with 1,154,580 tons, valued at 179,342,732 fr. in 1913.

In spite of the fact that during the first six months of 1914 the activity of the Roumanian grain trade showed increased activity—the actual trade done being for 5,377,450 tons, of a value of 70,121,973 fr., as against 376,980 tons, value 62,478,072 fr. in the same period of 1913—the second six months felt a great diminution of trade, and complete stagnation followed. In fact, during this latter period, the entire quantity of grain negotiated was but 314,442 tons, of a value of 49,512,475 tons, as compared with 777,759 tons, valued at 116,864,661 fr. in this period of 1913. Comparing the two periods one sees a falling off of 463,170 tons.

The total business done by the entire number of exchanges during 1914 was as follows, compared with the quantities of 1913:—

	1914.			1913.
Wheat.....	268,940	as compared	with	550,840
Maize	272,160	,,	,,	204,630
Barley.....	181,940	,,	,,	205,880
Oat	65,600	,,	,,	90,060
Rye	27,420	,,	,,	39,950
Rapeseed ..	8,490	,,	,,	2,930
Beans	18,920	,,	,,	26,780
Peas.....	4,430	,,	,,	8,120

PRODUCE REPORT.

London, August 19.

Currants.

There has been more activity in the market this past week, and spot prices were dearer, whilst, owing to advices from Greece, quotations for new crop have also advanced.

In the Liverpool market there has been a better demand, and fair business was done in better grades at an advance.

Sultanas.

There is a good demand for all grades, and prices continue to advance. Nothing can be said yet with certainty as to the prospects of this fruit this season, but it is very doubtful that there will be any opportunities this year for Smyrnas reaching this market.

Dates.

The market is much firmer and prices have advanced, Persians being quoted 16s. 6d. to 23s.

Seeds.

Linseed continues steady, but there is very little business, the demand for oil showing no improvement. Calcutta to London, spot, on passage, and for shipment up to August-September is quoted 54s. 3d., and September-October 54s. 9d. Cottonseed is quiet, and inclined to lower for new crop positions; London-Egyptian spot £9 16s. 3d., September £9 18s. 9d., Fayumi £10; and ditto October £9 7s. 6d. per ton. Rapeseed remains firm, but quiet; Guzerat August-September 56s. 6d and brown Cawnpore, pure basis, ditto, 52s.

Oils.

Linseed oil is very quiet and 2s. 6d. lower in most positions. Spot pipes £23 15s., barrels and month £24 2s. 6d., September-December £24 5s., January-April £25 5s. Cotton oil is quiet but steady; Crude, spot, in pipes, £28 5s.; refined, pipes, pale £30 15s., and barrels sweet £35 to £36 as to make. Rape oil remains dull and weak; ordinary brown naked, spot, £34 to £35; English refined barrels £37 to £38.

EGYPTIAN COTTON.

Reuter's Agency reports from Cairo, under date August 3, that the monthly bulletin of the Ministry of Agriculture for July shows a decided improvement in the condition of the cotton crop in Lower Egypt over that of June, the cotton being now 2 per cent. above the average. The Upper Egypt crop, however, still remains at 3 per cent. below the average.

ADANA COTTON.

The United States Consul at Mersina reports that the cotton crop of 1915 in the Turkish Province of Adana will probably not exceed 50,000 bales, owing to decreased plantings and the ravages of locusts. Last year's crop totalled 120,000 bales, of which 60,000 bales have been exported. About 10,000 bales have also been required by the four spinning and weaving mills in Tarsus and Adana. During May of this year they used 1,600 bales, while in May, 1914, only 1,100 bales were needed. Thus about 50,000 bales of cotton remain in the country, most of which, however, is still unginned. The stock in May, 1914, did not exceed 15,000 bales. Italy's entry into the war has practically stopped all exports, as most of the local cotton was shipped to Austria and Germany viâ Italy on Italian steamers which have ceased calling here. The mills of Tarsus and Adana have a total of 42,000 spindles, of which only 19,000 were employed during May, 1914, an activity of 45¼ per cent.; in May, 1915, 33,000 spindles were operated, an activity of 78½ per cent. The value of unbleached cotton goods of local manufacture on hand in May, 1914, was £24,000, and in May, 1915, was £32,000. The two cottonseed-oil mills near Mersina are in operation, and produce about 150 tons of oil per month.

EMPLOYERS AND THE COTTON PROBLEM.

At the monthly meeting of the Central Executive Committee of the Employers' Parliamentary Association held in Manchester last week, the cotton problem was freely discussed.

The committee were strongly of opinion that as cotton was a practically irreplaceable constituent of modern propulsive explosives, it was manifestly imperative in the national interests that strong and decided action should be taken by the Government to ensure that supplies of this commodity should be completely cut off from enemy countries. It was realised that the promulgation of any scheme would, of necessity, have to provide for safeguarding the American cotton growers against grave financial loss consequent upon the stoppage of such supplies, and the Secretary was instructed to forward a suggested scheme to the Liverpool Cotton Association, for their consideration.

Reuter's Agency reported from Cairo last week that the Ministry of Agriculture is anxious to avoid the recurrence of overwatering this year, and has circularised the cultivators regarding the attendant dangers. The cotton worm, which a few weeks ago manifested itself throughout the country widely and profusely, did no damage to the crop, owing to the favourable weather conditions and the energetic steps taken by all to combat the pest. There is now little fear of any damage being done by the next generation. With regard to the boll worm, however, it is, of course, too early to make any statement, except that those cultivators who had planted their cotton early will be the smallest sufferers from attack.

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.
Only superior qualities of
Hallawees, Khudrawees, Sayers and Zehdi
are packed.
In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.
SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.
Sole Proprietor:
BAHJET S. FORAGE, BASRAH.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, August 2.

The *Hilal* announces that an Imperial Iradé has been issued sanctioning the transformation into an Ottoman society of the English company trading at Aidin under the style of "Compagnie Industrielle du Levant."

The Deutsche Bank, it is announced, has carried out the formalities required by the new Companies Law.

The Turkish Government have, however, decided to extend the delay accorded to insurance and other companies to conform to the provisions of the new law, but it is not said what the extension of time is.

A Commission is sitting at the Custom House for the purpose of drawing up a new Customs tariff.

Some of the new Treasury bonds of five liras are in circulation, but the one-lira notes have not yet arrived in Constantinople.

Reuter's Agency reported from Sofia, under date August 14 (delayed), that, according to latest advices from Constantinople, the Turkish authorities have compelled the American Embassy despatch boat Scorpion to take up her moorings in the inner part of the Golden Horn. Mr. Morgenthau, the American Ambassador, protested, but his efforts were unavailing.

With reference to the coal supply of Constantinople, it is ascertained that the activity of the Russian warships is beginning to be felt. All travellers from Constantinople passing through Bulgaria declare that there is a great shortage of coal in the Turkish capital, and it is expected that the electric lighting and the running of trams will be discontinued within the next few days. Such an event is bound to make a great impression on the population of the city.

RUSSIAN TORPEDO ACTIVITY

(From Our Own Correspondent.)

Bucharest, July 26.

The Ministry of Finance has prohibited the export of petroleum to Turkey. The reason for this is not quite clear, but it can hardly affect exports, as of late the Russian torpedo boats have been so vigilant. Hardly a vessel carrying petroleum or other articles declared contraband by Russia can get through. Several sailing vessels have been stopped, their crews put ashore, and the boats sunk. The Roumanian s.s. Craiova, which recently put out with a cargo of petroleum, had to return to Constantza, being chased by a Russian torpedo boat.

COMPANY RESULTS, &c.

Anglo-Egyptian Oilfields.—Production for week: Gemsah, 150 tons (last week 163 tons); Hurgada, 247 tons (last week 274 tons).

Anglo-Roumanian.—Production of crude oil for the week ended 7th inst., 214 tons.

Egyptian Guaranteed Three per Cent. Loan.—The dividend due September 1 will be paid by Messrs. N. M. Rothschild and Sons on that day and on each succeeding day (Saturdays excepted), between the hours of eleven and two.

European Oilfields Corporation.—The annual meeting of shareholders will be held in London on the 24th inst. Production for week ended 15th inst., 93,200 poods. Price of crude oil at Blacktown, 49 copecks per pood.

Nile Cold Storage Company.—An interim dividend of £1 per share has been declared. Coupon No. 8, payable at the offices of the National Bank of Egypt.

Roumanian Consolidated.—Production for week ended July 10, 989 tons; July 17, 951 tons; July 24, 722 tons; July 31, 930 tons; August 7, 1,444 tons. Moreni 49 struck oil on August 2, and has been flowing steadily since at the rate of 50 tons daily. Output curtailed pending completion of additional new storage tanks.

Suez Canal Receipts.—The traffic receipts of the Suez Canal for the 14th and 15th inst. amounted to 540,000 fr., against 270,000 fr. for the corresponding days last year.

MORATORIUM IN GREECE.

H.M. Minister at Athens reports, under date July 19, that although the Greek Moratorium is no longer in operation, the following exceptional measures of relief will remain in force until the end of the current year:—

(1) Imprisonment for debt is prohibited. Only administrative enforcements are allowed.

(2) The judicial authorities are empowered to grant delays to tenants in arrears exceeding one month, and also to suspend the execution of decisions concerning evictions of tenants. The suspension of compulsory executions and of bankruptcy is also permissible.

The privilege granted under a banking moratorium, which expired about the end of February, by virtue of which any bank might have the option of returning deposits in small portions, is not now in force.

COMPANY NOTES.

Russian Petroleum Company.

The report for the year ended December 31 (O.S.) states that the balance-sheet shows that considerable reductions have been effected during the year in the various liabilities of the company. In particular, the four years' arrears of interest on the debenture debt, amounting to £72,000, were paid in May, 1914. Subsequently, £21,925 of debentures were redeemed for cash, and the amount outstanding was thereby reduced to £277,048. By consent of the debenture-holders the redemption of debentures, which should have commenced on May 1 of this year, has been postponed till six months after the declaration of peace or expiry of the Courts (Emergency Powers) Act, whichever shall happen first. The balance of the Russian Government Loan of £51,000, amounting to £12,870, is in process of repayment from the resources of the Baku office. The gross profit on trading in Russia, taking the rouble at the rate of 2s. 1½d., amounted to £52,978, and, with sundry receipts in London, amounting to £270, gave a total of £53,248. After payment of administration charges, amounting to £6,487, contributions to war funds, £407, and payment of debenture interest, £17,073, there remains a balance to credit of profit and loss account of £29,279. Out of this sum taxes in London and Russia (at present unascertained) have to be paid, and the directors recommend that the balance should be added to reserve for depreciation, renewals, and general purposes. The gross production of crude oil from the properties was as follows:—Plot 19, Bibi Eibat, 3,327,912 poods; plot 4, Bibi Eibat, 434,940 poods; plot 53, Bibi Eibat, 196,017 poods; Plot Khirdalan, 309,596 poods; Plot Digiah, 26,088 poods; total, 4,294,553 poods. At the beginning of June last year the company, in common with other producers, was unexpectedly confronted with a general strike of its employees, the first result of which was the stoppage of production for a period of eight weeks. This long stoppage of work in the baling wells caused a rise in the water-level, in reducing which very great difficulty is still being experienced. It was found also, on resuming work, that the casings in many of the best wells had collapsed, and the necessary heavy repairs are still retarded by the scarcity of skilled labour and suitable material. For similar reasons the completion of the deep wells, Nos. 92, 89, 81, and 63—some of which had arrived at a very important stage, and upon which the future of the company so largely depends—is greatly retarded. Prices of crude oil have fluctuated during the year between 22 and 48 copecks

Digitized by Google

per pood. Opening the year at 37 copecks per pood, the price gradually rose to 48 copecks, but on the outbreak of war it dropped to 30 copecks. When Turkey joined in hostilities and the Dardanelles closed there was a further sudden drop to 22 copecks. Since then the price has steadily improved, and to-day is 50¼ copecks per pood. The company has benefited by the minimum price of 30 copecks per pood guaranteed under the contract which expired on August 1 (O.S.), 1915. The average price realised for oil sold and delivered during the year was 35.75 copecks per pood. A new contract has been concluded for the sale of the company's output for twelve months from August 1 (O.S.), 1915, at average monthly Bourse prices, plus ⅜ copeck per pood. The question of economy engages the constant attention of the board and the local management. The installation of electric motors in place of steam engines was completed in the early part of last year, but the electric power company have only recently commenced the supply of energy, and the full benefits of this change have yet to be reaped. By arrangement with the Baku Russian Petroleum Company, Limited, and the European Oilfields Corporation, Limited, a new well is to be drilled at once on the properties of the Romany-Zabrat Oilfields, Limited, in which this company holds a one-third interest.

European Oilfields Corporation.

The profit and loss account shows a gross income of £62,627, of which £57,439 was derived from profits on trading and £5,188 from miscellaneous receipts in London. General charges absorbed £4,153, donations to war funds £300, and debenture service £15,125, leaving a balance to credit of profit and loss account of £43,048. Of this sum £25,000 has been added to the reserve for depreciation, renewals, and general purposes (bringing the total up to £110,000), £3,609 is applicable to the redemption of profit sharing notes, and a balance of £14,439 remains to be carried forward. In view of the great rise in the Russian exchange—the sterling value of the rouble having fallen from 2s. 1½d. to 1s. 5½d.—and the difficulty of obtaining remittances from Russia during the continuance of the war, the directors feel that they should not deplete the resources of the company in London, and, therefore, do not recommend the payment of a dividend. The decrease of 547,679 poods in the production is largely accounted for by the strike of the workmen at Baku in May and June, 1914, and its consequential after-effects. Continued economies have been made in the quantity of oil used for fuel, the amounts during the last three years having been 877,085 poods, 516,385 poods, and 255,152 poods.

United Crude Oil Producers.

Under the compulsory winding-up order made against the United Crude Oil Producers and Refineries, Limited, the Official Receiver's statement of affairs discloses total liabilities of £244,444, of which £45,380 rank as unsecured creditors, and no available assets. The company, formed in 1911, purchased a number of oil-producing properties in Galicia and Roumania, the development of which had been carried on almost entirely upon borrowed money. No balance-sheets had been issued. The failure was attributed to lack of capital and to the outbreak of war, which prevented the completion of arrangements entered into for the sale of the properties. The Official Receiver is winding up the estate.

THE CAIRO BOURSE.

Some years ago the Société Civile de la Bourse du Caire, which has a capital of £E20,000, undertook the construction of premises for a Bourse in Cairo, says the *Egyptian Gazette*. These premises, which were to have cost £E20,000, finished by costing £E35,000. The balance was obtained by means of a loan from the Deutsche Orient Bank of £E9,000 at 7 per cent. interest, the rest being advanced by the Brokers Corporation of Cairo.

In consequence of the crisis the revenue from these premises does not suffice even to pay the interest on the loan. Threatened by a seizure and a forced sale by the Bank the Board decided to let the Bourse or to sell it. Most of the proposals that have reached the Board have been ridiculously low, the best offer being that of Messrs. Melachrino and Co., the well-known firm of cigarette manufacturers, of Cairo, who offer £E10,000 for a building and site which cost nearly four times as much. No decision has been made so far, but it is thought that the offer will be accepted in order to pay the Bank.

NOTES OF THE WEEK.

Italy has now declared war on Turkey—for the second time in less than four years. The immediate cause for this step was the refusal of the Turkish authorities to allow Italians in Turkey to embark and return to their native country, in spite of assurances given by the Porte that the embargo on their departure would be removed. The Italian Government, however, has other grounds for complaint against Turkey. In a particularly lucid memorandum it sets forth the various steps by which the Porte has contrived to infringe upon Italian rights, and summarises the course of events which led to a declaration of war. Immediately after signing the Treaty of Lausanne, it is stated, the Ottoman Government violated that agreement, and continued these violations uninterruptedly up to the present time. Turkish officials retained command of Turkish troops in Libya, and the Arabs have never been without Turkish officers to direct their operations against the Italians.

It was, however, the more recent action of the Turkish authorities in Asia Minor which constituted the most flagrant violation of Italian rights. The declaration of war against Austria-Hungary found a large number of Italian subjects liable to military service in the Ottoman Empire. Acting no doubt under the instructions of its allies, the Turkish Government placed obstacles in the way of these men leaving the country. In the face of the Porte's prevarications the Italian protests gradually assumed the form of an ultimatum. On August 3 a Note was presented to Turkey demanding that Italians at certain named towns on the coast should be allowed to leave freely, and that the local authorities of the interior should give up their opposition to the departure of Italian subjects going to the coast, and should, on the contrary, provide facilities for their journey. Before the ultimatum expired the Grand Vizier sent a note to the Italian Ambassador acceding to all Italy's demands. Four days later, however, the military authorities at Beyrout and at Mersina revoked the consent for the departure of Italian subjects. The Italian Government appears to have satisfied itself that further protests on its part were useless, and instructed its Ambassador to declare war upon Turkey. This was done, and the Ambassador left Constantinople on August 21.

Italy's declaration of war on Turkey leaves her free to co-operate more effectively with her Allies. There is a limit to the number of troops which the Italian military command can usefully deploy in the difficult country to which the operations against Austria are for the present confined. On the other hand, the forcing of the Dardanelles has become a matter of the utmost urgency, from which Italy stands to benefit in common with her Allies. With the approach of autumn in the Ægean Sea the freedom of the Allies' movements in those waters is liable to be curtailed by weather conditions. It becomes the more necessary, therefore, that every effort should be made to force the passage of the Dardanelles while the forces on land can be supported by the Allied fleets. In this work the Italians can play a useful part. There may be little room for them within the narrow confines of Gallipoli Peninsula; but there are other parts where they can try conclusions with the enemy. It is hardly to be supposed that the Italian Government would have declared war unless it intended to take an active part in punishing the Turks. We shall hope, therefore, to find that the Italians have been especially opportune in the time chosen for their declaration of war, and that in the course of the next few weeks their co-operation with the Allied forces on Turkish soil will lead to specific results.

Something more than a "certain liveliness" has to be recorded on Gallipoli Peninsula. If reasons had to be adduced to show why the two fresh landings at Suvla ought to have been made several months ago, they could be found in the results already achieved in this section of the British line. A far more considerable advance has been made on this left wing in a few days than was possible in as many months along the rest of the battle front. But we know from a remarkably candid statement issued by the Government yesterday that the Allies' objective has not yet been attained. Reading between the lines of this *communiqué* we infer that the landing at Suvla would have been more successful if the attack had been pressed home at once. The Allies may still be far from driving the Turks off the

Digitized by Google

Peninsula; but they have made a strong bid for the "elbow room" that they were denied before they had extended operations beyond the Salt Lake near Little Anafarta Bay. The series of vigorous attacks now taking place—how fierce the fighting has been the casualty lists testify—conveys the impression that both sides realise that they are fighting against time, the Turks to keep what they hold and the Allies to render the enemy's position on the Peninsula untenable before the gales of autumn and winter seriously handicap the operations of an attacking force. There remains the third landing recently effected on the north side of the Gulf of Saros. Nothing further has been reported of the fortunes of the landing party; but it can hardly be possible that the operations at this point, so far removed from the fighting at the southern end of Gallipoli Peninsula, would be abandoned at the first signs of opposition. It is here, it would be thought, that Italian co-operation would be most useful. But we have to remember that since the landing was effected a German submarine has revealed its presence in these waters. Until this fresh menace has been satisfactorily dealt with, the task of reinforcing our troops on shore at any point has been rendered much more difficult.

It may be that the issue on Gallipoli Peninsula is being decided at this moment even more effectually in the Balkan Chancelleries than in the trenches that stretch from Kizlar Dagh to Krithia. The Allied Powers have at last taken the steps which charity and self-interest alike imposed upon them as soon as Turkey threw in her lot with Germany and Austria-Hungary. They have acted as arbitrators of the differences between the Balkan States, which are preventing each country from realizing its national ideals and are hindering the Quadruple Entente in its work of ridding Europe of the incubus of Germanic militarism. Their decision on the merits of the controversy has been communicated to Bulgaria in the form of a statement setting forth the territorial readjustments which they consider necessary to enable justice to be rendered to the rival claimants. A Bulgarian newspaper, quoted by our Sofia Correspondent, claims to have an intimate knowledge of the contents of the Note delivered by the Entente Powers to the Bulgarian Government. Whether the terms are given accurately or not, there would seem to be little doubt that the Allies have undertaken to redress Bulgaria's grievances and to guarantee her an extension of her territory in the future. At Athens and Nish *démarches* have been made simultaneously notifying the respective Governments of the conclusions which the Entente Powers have arrived at, and inviting Greece and Serbia to fall in with their wishes in regard to the compensation to be given to Bulgaria.

Serbia holds the key to the decision of the Balkan States. Bulgaria may delay her answer from an excess of caution, reasoning with herself that, if Serbia and Greece refuse to carry out the Allies' recommendations, she will not be called upon to record any decision, and thus will not have impaired the advantages she expects to derive from an attitude of neutrality. But there can be little doubt that she is wholly in favour of the Quadruple Entente. Germany will bluster and threaten, but each fresh indiscretion on her part is likely to confirm the Bulgarians in their sympathy for the Allies' cause. Fortunately, every indication points to Serbia's giving a favourable reply and placing herself in the hands of her Allies, to whom she owes so much. If the Serbian Government adopts this course, Greece is almost bound to follow its example. It only remains for the Allies to persevere in the strong attitude they have at last adopted.

The situation created by the Allied Powers' *démarches* at the Balkan capitals is examined elsewhere in this issue. It is certain that if the Bulgarian Army is launched against Constantinople, the whole position on Gallipoli Peninsula will undergo a radical change. For this reason the negotiations now in progress at Sofia, Nish, and Athens are necessarily followed with almost as much attention as the terrible struggle on the Peninsula. At the moment of writing it can be said that the auguries are good. M. Venizelos has accepted King Constantine's invitation to form a Ministry, and the new Government is already in office. The Allies, it is understood, do not require Greece to take part in the operations at the Dardanelles. They ask her to make a small territorial concession to Bulgaria, and in return they offer her important compensation in Asia Minor. In spite of the manifestations of public feeling against the cession of any territory, particularly the rich lands around Kavalla, we may expect that M. Venizelos will be able to persuade the nation that the small sacrifice is wholly in the interests of Greece. It is stated that the people are now eager for war on the side of the Quadruple Entente. If this be their attitude, M. Venizelos' task should not prove difficult.

The new Greek Cabinet, which took the oath of office on Monday afternoon, is constituted as follows:—

M. Vénizelos.....	Prime Minister and Foreign Affairs.
General Danglis ...	Minister of War.
M. Miaculis	Minister of Marine.
M. Repaulis	Minister of Finance.
M. Cafandaris	Minister of the Interior.
M. Raktivan.....	Minister of Justice.
M. Diamantidis ...	Minister of Railways and Communications.
M. Teirimokis	Minister of Public Instruction.
M. Michalacopoulo	Minister of National Economy.

Most of the Ministers held office previously under M. Vénizelos. The solidarity of the party has withstood all efforts of its political opponents to undermine its loyalty to its leader, and this fact, coupled with the popularity of the new Government, is of good augury for a successful issue from the crisis through which the country is passing.

Meanwhile, it is certain that Germany is not looking on with folded hands while the Balkan States are passing over to the side of the Quadruple Entente. Her chief efforts have been put forth in Bulgaria. It was not difficult in the frame of mind in which the Bulgarians were found at the outbreak of the European War to flatter them with attentions and more practical indications of German goodwill. The shrewd exploitation of Bulgaria's financial needs tended to give the Germans a strong position in the country, and went far to make the people forget the part played by Germany in their humiliation at Bucharest. In case any misgivings lingered in the mind of the Government, the German Emperor appears to have gone to the length of a personal apology to King Ferdinand. In an autograph letter sent by the hand of Prince Hohenlohe the Emperor William is said, our Sofia Correspondent reports, to have expressed regret that Germany had latterly underestimated the importance of Bulgaria in the Near East, and had allowed her to be treated unjustly at the Bucharest Conference. He hoped that the bonds connecting Germany and Bulgaria would be strengthened, and promised Bulgaria the energetic support of the German Empire in the future. Since the delivery of that letter, however, Bulgaria has shown further signs of falling away from grace, and the Emperor's flattery and smooth words have given place to more forcible representations from the German Government.

Germany's last card in the Balkans appears to be the threat of an invasion of Serbia and Bulgaria. If report be true, almost the first notification of the concentration of Austro-German troops at Orsova was given by the German Minister in Sofia in representations to the Bulgarian Government. The objective of the force is said to be Turkey, and if Bulgaria opposes its advance she is threatened with the fate of Belgium. No more powerful incentive could be imagined to bring the Balkan States together in their common defence. The effect of the German protestations of friendliness towards the Balkans is marred by the simultaneous publication by influential bodies of clear *exposés* of what must be Germany's policy in the future. This scheme includes the "opening up" of the Balkans by the agency of Austria-Hungary and Turkey, a process

Digitized by Google

which is hardly calculated to have attractions for the proscribed victims. Germany's position in the Near East requires no elaborate commentary to explain it to the Balkan States. She has thrown in her lot unreservedly with Turkey, who in the event of the victory of the Central Powers would need and deserve very substantial compensation for all she has undergone at Germany's bidding. All compensation, other than monetary payments, would have to be at the expense of the Balkan States. Germany, therefore, will not be allowed to run with the hare while hunting with the hounds, and unless wisdom and statesmanship are to be banished for ever from the Balkans, it is impossible that the least credence should be placed in any promise or agreement made by Germany.

In Serbia the situation in the Balkans has been made the subject of a discussion *in camera* by the Skupshtina. A resolution was then passed in which the Chamber again placed on record "its decision to continue side by side with the Allied Powers the struggle for the liberation and the union of the Serbo-Croatian-Slovene people at the price of the indispensable sacrifices necessary for the protection of the vital interests of the country." This resolution should set at rest all misgivings entertained in nervous quarters lest Serbia should be tempted from sheer weariness to throw up the sponge. There is no room in the Skupshtina's dedication for any reinsurance treaty with Austria-Hungary. Rather, if words bear their accepted meaning, the resolution implies that M. Pasitch has secured the assent of the representatives of the nation to make such concessions to Bulgaria as the Entente Powers may decide to be essential in the joint interests of Serbia and of Europe as a whole.

Germany's methods of fighting her enemies lack nothing in thoroughness. She is as intent on the pin-pricks that can be administered by a native tribe in regions where she has no legitimate interest as she is on the sledge-hammer tactics of her magnificently equipped forces. No country laying claim to enlightened government has so far allowed itself to be embroiled in the war by German intrigues, but among the peoples whose attitude is regulated solely by monetary considerations it has to be admitted that German policy has achieved no little success. Bribes direct and indirect persuaded Turkey to throw in her lot with the Central Powers in a war in which she had no interest, and from which, while risking much, she had nothing to gain. The same means have been employed in stirring up the large number of tribes living on the confines of British territory or of spheres in which Great Britain is predominantly interested. From North Africa to the Indian frontier "unrest" in varying degrees has been fomented by German agents; but whether the results have in each case satisfied the German Government is a matter that must be left to that body to decide.

The efforts made to embroil Persia in the war have been particularly persistent. From time to time the more egregious of these attempts have achieved notoriety, as when a candidate for the post of German Vice-Consul tried to go through the ceremony of embracing Islam in order to further his objects. Other less conspicuous methods of German intrigue in Persia are doubtless known to the British and Persian authorities, but there is some reason for supposing that the Germans have succeeded to a greater extent than was at first realised in unsettling the tribes in Southern Persia and along the Afghan frontier. The incident reported a few weeks ago of the loss of an officer and Political Agent attached to a British reconnoitring party from Bushire was a sufficient indication that the neighbouring districts had been roused to a dangerous mood. For the British Government to have taken no further notice of the outrage would have been a serious blow to our prestige in the Gulf. The measures adopted to deal with the situation have not been made public; but from a telegram to the German Press, emanating from Constantinople, we may infer that the Germans are not altogether pleased with the inevitable result of their intrigues in Persia. "The British Consul at Bushire," it is stated on the authority of the German Ambassador at Constantinople, "has been appointed Governor-General of Southern Persia. The British flag has been hoisted at all places in Southern Persia where possible. The number of Indian troops that have been landed is said not to exceed 3,000 men. The excitement in Southern Persia is great. Preparations are being made for resistance on a large scale in the event of the British advancing from the coast region." Without accepting the accuracy of the above message, we may infer that, as suggested in our issue of August 6, the British Government has taken steps to ensure that, if reconnoitring parties are necessary, they can be of adequate strength without depleting the garrison at Bushire.

Reports of Turkish excesses in Armenia which have gradually been coming through to this country have received most unpleasant confirmation in the statements attributed to an Italian Consul from Asia Minor. According to his testimony, the treatment of the Armenians, whether by the Kurds or by the Turkish authorities, has surpassed in cold-blooded cruelty the worst occurrences of the Hamidian régime. It is unnecessary to recapitulate here the details of these atrocities. The evidence of a consul, however, is enough to justify a thorough investigation when the war is over. Then if even a tithe of the allegations can be proved, the Allied Powers must make up their minds to secure some compensation for the unhappy Armenians. It is essential that final peace should not be concluded with Turkey until provision has been made for a future for the Armenians which will free them for all time from the domination of officials of the Committee of Union and Progress. The German Press, it may be mentioned, with one eye on Belgium, has sought to exonerate the Turks from the charges brought against them by pleading military urgency and the "unsatisfactory" attitude of the Armenians.

THE HODJA'S TALE.

A Hodja, versed in Oriental lore,
Gave this one day from out his rounded store:

There was a banquet held in Paradise
(Where with the great may hope to dine the least),
And all the Virtues dwelling in the skies,
With those on earth, were summoned to the feast.

They came in number as the stars at night,
And greetings sweet as music filled the air—
Two only stood apart in raiment bright
And wondered at the other's presence there.

The Master and the Host of that High Place
Rebuked them gently: "Why art thou so rude?"
"We never met before, Lord, face to face!"—
They were Benevolence and Gratitude.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, August 9.

Egypt and the War.

The anniversary of the declaration of war has found Anglo-Egypt somewhat changed from what it was a year ago. Then the greatest excitement reigned on all sides, and the telegrams as they came in were scanned with an eagerness that betrayed the general anxiety felt by the British colony. That anxiety was, I may say, as to whether the British Government would fulfil its moral obligations as guarantor of the integrity of Belgium and champion of the rights of the smaller nations, and would take up the gauntlet thrown down to it by the War Lord of Central Europe. I can still remember the relief and enthusiasm which hailed the posting up of Reuter's cable announcing the British declaration of war, and which testified to the general approval of the Cabinet's decision. Egypt, in common with many other nations, did not think then that the conflict would be a protracted one, nor did most of us realise the enormity of the task before the Allies. But if time has shown us the vanity of our discussions and prophecies, the disappointment of our hopes has by no means dimmed our ardour or weakened our confidence. To-day the clubs are filled to overflowing with newcomers in khaki on their way to join the Mediterranean Expeditionary Force, and everywhere one misses familiar figures—some have already laid down their lives for their country, some are still gallantly playing their part in France or in Gallipoli. Those whom duty has forced to remain at their posts instead of following the example of their friends may, it is true, experience a keen sense of sorrow when they look around in vain for old comrades, and may chafe at their own enforced inactivity; but if to-day the cables are read with the same eagerness and interest as a year ago, there is now, in place of what may be called the boisterous spirit, a quiet, grim determination to keep the flag flying, and to assist in "seeing the thing through" to the only finish that is compatible with British history and tradition. And, above all, there is a supreme confidence in the power of the Allies to make good.

Anglo-French Unity.

On the occasion of the anniversary of the declaration of war intercession and thanksgiving services were held at All Saints', Cairo, and at St. Mark's in Alexandria. In each case there was a large congregation, General and Lady Maxwell, accompanied by the Headquarters Staff, attending in Cairo, and the High Commissioner, Lady McMahon, and the members of the Residency Staff being amongst those present in Alexandria. Similar services were held in the French churches. The French colony in Alexandria took the opportunity of testifying to the feeling of unity existing between the two nations by placing wreaths on the graves of the British soldiers of the Mediterranean Expeditionary Force. The deputation of the French community was headed by the Consul-General, M. Vershere de Reffye, and was received by the military authorities at the British military cemetery, where the leading British officials were present, Sir Milne Cheetham representing the High Commissioner. Amongst the graves on which wreaths were deposited was that of the late Major-General Sir W. Bridges, G.O.C. the Australian Division, who recently succumbed to wounds received in the Gallipoli Peninsula. The ceremony, which was a very touching one, concluded with a short but eloquent speech by the French Consul-General. In Cairo the leaders of the French colony called at the British Consulate, where assurances of amity and unity were exchanged between them and H.B.M.'s representative.

The Wounded from the Dardanelles.

There is increased activity in the hospital world here. Most of the new arrivals are sick men, but there is evidence that decisive action is expected very shortly at the Dardanelles, for two new hospitals have just been opened here—one, the old Austro-Hungarian hospital, has been taken by the Australians and the other, the Nasria school, has been commandeered by the British authorities. Although there are many more nursing sisters out here than was the case three months ago, the assistance of the civilian ladies will still be very much needed, as it is feared that the coming casualty list will be exceedingly heavy.

The Bomb Outrage.

There is nothing fresh to report in the bomb outrage inquiry. Belbani, the man in custody, under suspicion of being an accomplice, appears to be regarded now definitely as the bomb-thrower. As yet no other accomplices have been caught, although countless arrests have been made, including many prominent Nationalists.

The Wakfs Scandals.

A propos of the articles which you have published in regard to the Khedivial Wakfs and Seif-ed-dine Daira scandals, the principal persons implicated therein are being brought before the Saida Zenab Court to-day. The accused are Ahmed Khairy Pasha, Hussein Moharrem Pasha, Ahmed Saddik Bey, and Osman Moharrem Bey. There are four definite charges against Khairy Pasha—viz., of having, when Director of the Khedivial Wakfs, misapplied £E5,258.478 m/m of the funds, and £E748.667 m/m of the interest earned on the funds of the Wakfs deposited at the Deutsche Orient Bank; of having, when trustee of the Seif-ed-Dine Daira, misapplied £E1,551.587 m/m of the interest earned on the funds deposited at the same bank; and of having appropriated to his own use a sum of £E24 from the Private Wakfs funds by paying it to a lawyer, who had rendered him a personal service. Hussein Moharrem Pasha is accused of having misapplied three sums, amounting in all to £E52,000, in the course of the purchase of two Alexandria houses, and of having misapplied £E131.880 m/m of the interest on the funds of the Seif-ed-Dine Wakfs. The other two are accused of complicity in the misapplication of the above-mentioned £E52,000, Saddik Bey, by arranging for the purchase for £E160,000 of the houses, for which the vendor was only to receive £E135,000, and Osman Bey by reporting that the houses were worth £E160,000 and by assisting the vendor to obtain payment of an extra sum of £E12,000, included in the above-mentioned £E52,000.

Saddik Bey will be tried by default. When last heard of he was in Italy. He is believed to have left there since, but it is doubtful, even could he be located, whether he could be extradited. The charges against Khairy Pasha do not cover all his depredations. Most of the misappropriations are, unfortunately, ruled out by the Statute of Limitations, but in the course of the trial the whole of his misdeeds, as set forth in the articles published in The Near East, will be unfolded, and it is quite possible that even more details will be made public. Murad Bey Farag, the lawyer who drafted most of the deeds referred to in the inquiry, cannot be proceeded against by the Parquet, as he has successfully claimed Russian nationality. Action is, however, being taken against him in another and very effective direction.

SUDAN NOTES.

(From a Correspondent.)

Pension Law Revision.

Not the least attraction of service under the Sudan Government is the liberal amount of pension that can be depended upon after a couple of decades' service. When an official has passed some of the best years of his life in work in the Sudan, either as a soldier or as a civilian, he may retire with a certainty that his old age will be rendered comfortable, so far as a generous pension can help towards making it so. Far different, indeed, in this respect is the treatment adopted by the Sudan Administration from that pursued by the British Government.

At the present time the Sudan Administration is revising the whole of the Pension Law, and the new arrangement is expected to be promulgated very shortly. It is not anticipated that the new law will offer any treatment radically different from that in vogue at present, but the changes, where noted, are likely to prove of advantage to the destined recipients.

Pensions granted to Sudan officials, according to the prevailing scale, upon retirement, voluntary or compulsory, are regulated by Ordinance; they are in no way dependent upon the goodwill of any individual in the Administration. In order to render such pension as full as possible, a deduction of 5 per cent. is made from the pay of every pensionable official as a contribution towards his pension. Civil Service pensions considered as deferred pay, and granted on retirement, have, in certain instances, been objected to as an injustice to the man who without enjoying his pension can leave no equivalent to his respresentative at his death.

It is permissible to retire voluntarily, but there are few instances of this occurring in the Sudan Civil Service. The one great wish of nearly all the officials, military and civilian alike, has been, and is, to continue to serve as long as it is legally and physically possible to do so. Those, however, who choose to leave the service may retire upon pension after reaching the age of forty-five, and provided that they have attained twenty years' service. Their pensions are then calculated on the average of the salaries drawn during the last three years of service, at the rate of one-forty-eighth part of the salary for each year of service. In this connection one may recall the fact that the report of the Royal Commission, issued in 1903, suggested that all future pensions granted should be calculated upon one-eightieth part of the salary for each year's service. In the Sudan Civil Service no pension can in any case be drawn exceeding the sum of £E800, this being the maximum allowed by the Ordinance referred to. Should ill-health or annulment of the office cause retirement, a pension is obtainable after twelve years' service, while those possessing more than that number of years' service obtain a gratuity of one and a-half months' pay for each of the first seven years, and three months' pay for each of the years from seven to twelve. It will be observed that the age of retiring is put at forty-five, while that in the British Civil Service is sixty-five. The Sections 46-47 of the Pensions Ordinance deal with the medical procedure adopted in cases of death or accident to an official occurring while on duty.

Punishment of Fiki Ali Wad.

For causes no doubt sufficient but which have not been explained, the Governor-General of the Sudan has deprived Fiki Ali Wad El-Ma, ex-Mek of the Miri Jebels—in the Nuba Mountains Province—of the robe of honour of the third class which was conferred upon him in the month of December, 1911. All religious robes and robes of honour which have been granted for good service to Government may, at any time, be withdrawn by order of the Governor-General if he considers that the recipient has ceased to be worthy of the honour bestowed upon him. The Governor of the Nuba Mountains Province recommended that Fiki Ali Wad should be so punished, and the supreme Government has agreed.

Recent Appointments.

Mr. R. Wedd, the Deputy Assistant Director of the Sub-Department of Lands, a branch of the Sudan Legal Department (Kanuni), has just been made a magistrate of the first class under the Code of Criminal Procedure. Mr. Wedd has been in the service of the Government since the month of September, 1910, and is considered a very capable and conscientious official. Another recent appointment which has given much satisfaction is that of Dr. E. S. Crispin, hitherto Assistant-Director of the Medical Department (Dawa), to that of Acting-Director. Dr. Crispin, who has seen over fourteen years' service under the Sudan Government, is stationed at Khartoum.

CYPRUS NOTES.

(From a Correspondent.)

Agricultural Instruction.

On August 2 the summer course of lectures on agriculture to village schoolmasters was opened at Nicosia, when twenty-nine students assembled. They were addressed by Mr. W. Bevan, Director of Agriculture, who reviewed the progress already accomplished, which has been quite satisfactory. The object is that the teachers in rural schools should qualify themselves to give instruction in elementary agriculture, with special reference to the conditions in Cyprus. There are, moreover, now fifty village school gardens, in which the teachers are able to give some practical demonstration in connection with the instruction imparted. It is proposed to offer prizes, when district agricultural shows are held, to the pupils who can show the best collections of the produce of the gardens. The meeting was also addressed by the Inspector of Schools, Canon Newham. The Educational and Agricultural Departments meet, he said, on common ground. It is eminently desirable that Cypriot pupils should learn something of new methods, and their application in the island. Where, for example, would medical science and practice be now if they had stood still during the last fifty or sixty years?

The Chief Medical Officer, Dr. Cleveland, also spoke. He referred to the medical inspections which are now carried out in schools by the rural medical officers for the benefit of pupils and the community in general, and warmly congratulated the zeal of the schoolmasters who were devoting time to agricultural studies. Both measures, new to Cyprus, marked a good step in advance. On behalf of the schoolmasters M. Chrysostomos Lukaïdes addressed the meeting, and assured those present of the zeal with which these courses of lectures were being followed.

In the afternoon of the same day a course of instruction in gymnastics was inaugurated. Canon Newham was present, and spoke of the great value of the new movement to bring gymnastics into the curriculum of elementary schools.

Government is to be congratulated on having at last taken energetic steps, through the Agricultural Department, to provide elementary teaching in agriculture. It is one of the signs of real progress in education which should, if properly supported, have excellent results in the future.

Refugees from Asia Minor.

There has been some apprehension that infectious disease might have been introduced by Greek refugees from Konieh (Iconium) and neighbouring parts of the Asiatic continent. The police have been taking active measures in Nicosia, through the Mukhtars (headmen) of the different quarters, to investigate; but it is suggested that inspection might be more efficiently carried out by the Medical Department.

Riot at a Festival.

At the Festival of the Prophet Elias, which has been celebrated near the picturesque ruins of the Castle of St. Hilarion, a disturbance, rather characteristic of Cypriot meetings, took place. The origin of the rioting was a dispute as to which of two rival villages should furnish the leading dancers at the principal coffee house. Two young men from one village, who had been freely offering libations to Dionysus, assumed the lead, which was speedily challenged by their rivals. This soon led to blows and a division of the holiday-makers into two hostile parties, women as well as men taking a vigorous part. In addition to sticks and stones, knives were finally used and some serious wounds inflicted. The rioting continued from about 10 p.m. till midnight. This gives a picture of what not infrequently happens at Cypriot fairs and merrymakings, especially in the absence of a sufficient police patrol. The law which forbids the carrying of dagger knives cannot, of course, prevent the continuance to a great extent of the national habit.

Greeks and the Kaiser.

The Greek papers in spirited articles condemn in strong terms the Kaiser's late proclamation that God was with Germany as a shameless blasphemy, since God cannot be with those who have disgraced civilisation by atrocious vandalism, have dishonoured and murdered women and children, and have given fire and sword to Belgium, as well as wantonly attacking heroic Serbia. The war and the Balkan crisis are watched with the keenest interest.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, August 6.

The Demarche of the Entente.

The collective *démarche* made unexpectedly last Tuesday to the Greek Government by the Ministers of the Quadruple Entente has created a great sensation throughout the country. The communication having been made at a late hour, the President of the Council, M. Gounaris, went the same night to Tatoï and spent two hours conferring with the King.

The text of the Note has not yet been published, but according to information derived from official and diplomatic sources, the Ministers of the four allied Powers have handed to the Greek Government a copy of a communication made the same day to Bulgaria. According to this communication they would, in return for her co-operation against Turkey, grant to Bulgaria: (1) that part of Northern Macedonia which Serbia, by the Bulgaro-Serbian Treaty of 1912, agreed to cede to Bulgaria, save for a small portion of territory between Lakes Prespa and Ochrida, which would serve to keep up connection between Greece and Serbia, and (2) Kavalla, with a hinterland. They also assured Bulgaria that they would exercise pressure on Greece and Serbia in order to secure those territories for her. At the same time the four Ministers informed M. Gounaris that their Governments would be prepared to consider the question of granting Greece valuable compensation in Asia Minor, and that they would be disposed to guarantee the territorial integrity of Greece and her possession of Salonika. The immediate participation of Greece in the Dardanelles operations was not asked for. It appears that M. Gounaris was also informed that the hinterland to be given up to Bulgaria with Kavalla would depend upon the extent of the compensation to be granted to Greece in Asia Minor, and that the cession of these territories would not take place until after the war.

The Note concluded with an expression of the conviction that the peoples of the two countries would realize that such a settlement of the Balkan difficulties, while tending to assure victory to the Allies, was also the sole means of assuring permanent peace, and that otherwise a fresh war must inevitably break out ere long.

Ministerial Press Views.

The Ministerial Press alludes to the "grievous effect" produced in official circles and on public opinion by this communication, and speaks of it as an ultimatum notifying the Greek Government of the arbitrary and insolent decision of the Powers to dispose, without any right, of others' territory, acquired at the price of blood, and indirectly threatening Greece with force to compel her to yield. The same journals declare that the Government is going to address to the four Powers a strong protest against such injustice. The *Nea Himera* (ministerial) maintains that Greece has no need to make territorial sacrifices in order to gain, as "compensation," regions purely Greek, such as the coast of Asia Minor and its hinterland, which belong to her by every right, and which in case of the dismemberment of Turkey could not be given to anybody else. Apparently, in expressing this view, the writer loses sight of the fact that it is precisely in order to ensure the "dismemberment of Turkey," referred to, which would save the Greek element from the dangers that threaten them, that the Allies desire the co-operation of the Balkan States, and especially of Bulgaria, which cannot be obtained without some sacrifices on the part of Greece.

The Venizelist Press.

The Venizelist Press, while attributing this *démarche* of the Entente Powers to the desire to detach Bulgaria at the eleventh hour from the Central Powers, to which she tended to adhere definitely, and thus to prevent an inroad of Austro-German troops upon Constantinople by way of Serbia and Bulgaria, also criticize it very severely. They regard it as humiliating to an independent and friendly State, which the Powers have treated as they would an enemy, in order to satisfy the exaggerated and unjust demands of Bulgaria, without considering the signal services that Greece has rendered to the Allies since the beginning of the war, and especially since the beginning of the Dardanelles operations. The *Hestia* says that, in thus showing lack of consideration for independent States, in violation of those principles of which they have declared themselves the defenders, and in threatening forcible measures, they will only alienate Greek sympathies, to the profit of the Germans.

On the other hand, these journals recall that when M. Venizelos left office the situation was very different. The Entente Powers had then declared categorically that they had not demanded the cession of Greek territory, and Bulgaria had ceased to reckon on that possibility. It is the publication of the contents of the second confidential memorandum of M. Venizelos to the King, made so shamelessly by M. Gounaris, that—as I have explained in previous letters—has encouraged Bulgaria to claim Kavalla again; and this has forced the Entente Powers—without whose consent, moreover, Greece would never have been able to annex Kavalla—to agree to its cession to Bulgaria.

The Attitude of Serbia.

Immediately after the receipt of the Powers' notification the Greek Government got into communication with Nish, where, it seems, the Powers' *démarche* has caused intense irritation, especially amongst the military party, which is under the influence of the Crown Prince; and in official circles it is stated that protests will be addressed simultaneously to the Powers by the two Allies. It is understood here, however, that the Note addressed to Serbia made no mention of the exercise of any pressure, and that it was friendly in tone.

The Attitude of Bulgaria.

In political and diplomatic circles it is thought that Bulgaria will not accept the offers made to her for the following reasons: First, because she is convinced that Germany will be victorious, and will insist upon her being granted the territories promised to her; secondly, because the Entente Powers, not having demanded that Greece should abandon her neutrality and should co-operate actively with them, but only that Bulgaria should do so, the latter would fear that Greece, with her forces intact, might attack her at the moment she was weakened at the end of the war; finally, because she will not be eager to assist in installing Russia at Constantinople, for fear that, becoming the neighbour of that Power, she would next be absorbed by it.

The Turco-Bulgarian Accord.

The importance of the Turco-Bulgarian understanding was rather exaggerated here, having been regarded as indicating a definite turning towards the Central Powers on the part of Bulgaria. In these circumstances it was thought that Bulgaria must have secured at least a guarantee of obtaining Serbian Macedonia for herself. The Ministerial Press endeavoured to dispel these fears by the assurance that, come what may, the two Central Powers have guaranteed the territorial integrity of Greece, and that as long as she remains neutral she need fear nothing. The Venezelist journals, on the other hand, reached the conclusion that, Bulgaria having thus secured the promise of great rewards in the event of victory crowning the German arms, there was nothing else for Greece to do but to range herself definitely on the side of the Entente, so as not to be isolated, and to assure an extension of her territory to balance that of Bulgaria. They pointed out that the guarantee of her present territory would be worth nothing if Bulgaria should be aggrandized. Ministerial circles have endeavoured to turn to their own advantage the feeling of uneasiness lest Bulgaria should occupy Serbian Macedonia, thus compelling Greece to declare war on her. They urge, through their journals, that Germany will not allow Bulgaria to do this, in order to prevent Greece abandoning her neutrality, at least if M. Venizelos does not return to power, and that the King should therefore avoid letting this come to pass.

The Internal Situation.

The rumours of a fresh dissolution of the Chamber had ceased entirely for some days, especially since the King's recovery, and the Ministerial papers announced that the Chamber would reassemble without fail on the date fixed, August 16, and would proceed to the election of a President. According to the results of this election, it was added, the King would base his decisions

Digitized by Google

regarding the solution of the crisis. Now, after the *démarche* of the Powers, there is fresh talk of dissolution, brought about by Ministerial circles, since the Powers, in taking their step, did so in the belief that the people, having expressed their confidence in M. Venizelos, who had (formerly) hinted at the cession of Kavalla, their proposals would be favourably received. Therefore, it is agreed, the people must be called upon to give a clear expression of their views on this question, to prove to the Powers that they are mistaken.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, August 16.

Submarine Activities.

The activity of the Allies' submarines in the Sea of Marmora and at Constantinople is not only disconcerting to the military authorities, but, as was expected, is disturbing the equanimity of the Turkish populace. The moral effect of these raids is probably of greater importance than the material loss to the Turks, though they have inflicted considerable injury to the Turkish navy and mercantile marine. At the present time the Hamidieh is the only large vessel fit to go to sea, and there are not many small craft left. There does not seem to be any doubt that the Goeben is unfit to go to sea, and some of her guns have been taken out of her. The damage to the Breslau is reported to be very extensive, and it will take three to four months to repair her, while the Torgout Reis is said to be *hors de combat*.

Last week the Hamidieh escorted six German steamers to Eregli to load coal, but it is not known yet whether they succeeded in returning to the Bosphorus. Although the Turkish fleet may, therefore, be considered to have been wiped out, it seems to be fairly evident that there are about a dozen German submarines within and without the Dardanelles; and these will be a menace to the Allied Fleets when they enter the Marmora. One of these German submarines is reported to have gone into Sebastopool Harbour, but returned to Constantinople without doing any damage there.

The Russians have again bombarded Zunguldak, and have this time caused serious damage to the port.

In addition to the nets at the Dardanelles and at the entrance of the Bosphorus, the Turks have now placed nets in Constantinople Harbour.

Ammunition Factories.

Ammunition continues to be sent to the Dardanelles in lighters towed by tug-boats, but a good many of them have been sunk by the Allies' submarines. It is stated that the arsenal has been emptied of all its ammunition, but the daily production of munitions in Constantinople appears to be increasing, and another factory has recently been established at Chichli. Between the munition factories of Zeitoun Bournou, Top Hané, and the arsenal there are about fifteen thousand men employed, mostly Germans.

There is no truth whatever in the report that the Galata Bridge has been blown up. An aeroplane appears to have visited Constantinople a few days ago, and a bomb intended for a steamer at the quays is reported to have fallen on Camondo Han, in Galata, causing much damage and some deaths.

No arrivals of coal are reported this week, and the stock at Constantinople and at ports in the Marmora is now estimated to be between 25,000 and 30,000 tons. San Stefano is alive with aeroplanes, and a dirigible has also arrived from Germany.

The German Grip.

It appears that Liman von Sanders has insisted upon resigning, but his resignation has not been accepted; he has been accorded leave of absence, and has arrived at Constantinople from the Dardanelles. Large numbers of wounded are reported to be arriving in Constantinople these days, and it is hard to find accommodation for them. The Turkish casualties up to date are now put down at 300,000 in the Dardanelles campaign.

The Germans continue to secure new positions in the different branches of the civil administration, and it is now reported that a German has been attached to the Sheik-ul-Islamat, and that the privileges of the Patriarchate are being curtailed. A certain Herr Feit, an expert in forestry, has just returned to Constantinople after having made a tour of inspection in Asia Minor in connection with the forests.

The Lot of the European.

The latest arrivals from Constantinople report that life there for most Europeans is becoming intolerable, and that the feeling is one of exasperation. There are daily rumours of what is going to be done to the subjects of the Allies, and although they may be silly and groundless, their continued repetition produces a feeling of great tension in those of weak nerves, and the frequent intimation to attend the police station to answer some silly question does not contribute towards one's peace of mind. Women and children of the Allies are occasionally being allowed to leave in small numbers, and a few English families have been able to get away. Two Englishmen, Mr. Slade and Mr. Simmons, have recently come out of Constantinople, as well as Mr. Labussiere, the agent of the Messageries Maritimes, and several other Frenchmen. An Englishman last week wrote that he would probably have to leave Moda, but no reasons were given for his probable departure from there.

Travellers' Trials.

Travellers are not allowed to have more than £T3 of gold on them on leaving Turkish territory. Any gold above this amount is taken from them, and the new Turkish notes are given in exchange; but, as these notes cannot be cashed either at Dedeagatch or Salonika, travellers often find themselves in an awkward predicament.

Two Englishmen have been burnt out in the last fire—namely, Mr. Cyril Cumberbatch and Mr. Robert MacGill, who were occuping Mr. Crawford's flat.

According to the papers, one month's salary has been paid to Turkish officials, and from time to time payments of a half-month's salary have been announced, but there must be considerable sums in arrears.

The Sultan appears to be better, and attended last week's Selamlik.

Smyrna Isolated.

There is no news of any importance from Smyrna, where tranquillity prevails, though it is said the town is cut off from all railway communication, and many necessaries of life have practically ceased to exist.

BRITISH REFUGEES FROM TURKEY RELIEF FUND.

The statement of accounts issued by the committee of the British Refugees from Turkey Relief Fund shows that up to August 18 last the donations received amounted to £2,260 18s. 2d., to which is added the amount of loans returned (£105), making a total of £2,365 18s. 2d. This has been expended as follows:—Loans and grants in England, £392 7s. 4d.; grant to Athens committee, £750; grant to Constantinople committee, £620; grant to Dedeagatch committee, £30; postage and stationery, £12 10s.; cash in hand, £561, 0s. 10d.—total, £2,365 18s. 2d.

In connection with the Fund, which has done such excellent work on behalf of our unfortunate fellow-countrymen, it may be as well to point out that there are three committees, viz., the committee in London (which is composed of Sir Louis Malet, president; Lady Lowther, chairman; Lady Neave, Lady Barclay, Lady O'Conor, and Messrs. C. Charnaud, secretary; G. Lafontaine, A. Forbes, and A. Baker, treasurer); the Athens committee, under the presidency of the British Minister, Sir Francis Elliott (to whom moneys are remitted); and the Constantinople committee, which is presided over by the U.S. Ambassador, aided by Mr. Phillips, Dr. Frew, and Miss Whitaker.

The Athens committee still have a balance in hand of about £150, and the Constantinople committee had a balance of 224 liras on May 15, the date of their last statement. This has only just reached London, and makes painful reading. It shows that many more British subjects have had to be relieved than was anticipated by the London committee. It gives a list of twenty-one families, many of them well-known English people, who are mostly without work or have had their businesses confiscated and in some cases sequestered. Tug-owners, ship chandlers, shipping clerks, divers, and pilots form the majority.

The Constantinople committee were requested to husband their resources, and their statement shows that they have erred on the side of economy. At last week's meeting of the London committee it was therefore decided to cable a further grant of £200. This will reduce the balance in the hands of the London committee to £361 0s. 10d. The committee's calls in England now amounts to about £38 a month. Athens has so far needed an average of £60, and Constantinople another £60, but they are anxious to increase the amount to £160. The London and Athens committees have found employment for some of the refugees, but at Constantinople different conditions prevail, and those out of work are mainly dependent upon the fund. Two, three, and five liras a month to a family will only keep them from starvation. We would therefore make another earnest appeal to our readers, who have been so liberal in the past, to give some further consideration to the claims of the fund on their generosity. The Editor will be pleased to receive contributions to the fund, however small, and to acknowledge same in the columns of the Near East.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, July 31.

The Rumours of Smuggling.

Ever since Turkey joined in the war all sorts of accusations and insinuations about permitting the passage of ammunition and warlike stores for Turkey have been levelled against this country. The fact, however, is that if anything of the kind has actually been smuggled through, it has been only the smallest quantity, and no better proof of this could be required than the many German attempts at trickery which have been foiled by the vigilance of the Roumanian authorities. This week, desiring to put a stop, once and for all, to all the foolish rumours, a categorical denial of such reports has been issued by the Government through the agency of the official Press.

Quite recently fifty trucks, constituting a sanitary train, came through from Germany, the Roumanian Government having authorized their passage, as it has done in the case of all supplies for the treatment of the wounded and the alleviation of suffering. In accordance with orders these wagons were examined, first, at the frontier, then at Bucharest, and finally at Ramadan, the "port" of Giurgevo, on the Danube. Having chanced to see some of the wagons myself, I can understand how some of the wild reports I have referred to have arisen. For among the fittings of the sanitary train are some portable camp kitchens, and the chimneys of these, packed horizontally for convenience' sake, with their ends peeping from under the tarpaulin coverings of the trucks, may quite well have conveyed to an unskilled observer the impression of guns! Then, too, the Red Cross wagons, each with a spare wheel attached to the back, look—to the unmilitary eye—suspiciously like caissons and limbers, especially as they are all painted the same grey. But as a matter of fact the contents of each wagon were examined most minutely at the three places mentioned above, until the German doctors in charge were beside themselves.

The discovery of contraband of war in false bottoms, tops, and sides of "new trucks for the Turkish railways," and in many other places, has doubtless led the Germans to abandon attempts at smuggling as too costly and quite hopeless, and the idea that such contraband is passing through this country may be dismissed as utterly unfounded.

Echo of the Second Balkan War.

A party of Bulgarians, numbering about 200, who were made prisoners by the Greeks during the Greco-Bulgarian war, have just returned to their home in the New Dobruja. They had been interned on an island, it seems, and completely forgotten, and only lately was their existence remembered—or discovered. On arriving at their old homes they found themselves no longer Bulgarian, but Roumanian subjects. Touching scenes took place on their return; for their friends and relatives, having had no news of them, had given them up long ago as dead.

The Pro-German Press.

Under the title "Figures Speak," the *Tribuna* enumerates newspapers in the capital, and states that of twenty-four journals appearing daily in Bucharest and Jassy only six are devoted to the defence of Roumanian interests, the rest being more or less under Austro-German influence. Although two important pro-Entente papers are omitted from the *Tribuna's* list, it still serves to show how active are the German propagandists in this country.

Bulgarian Diplomatist's Adventure.

Every year at this—the tourist—season one hears of persons getting lost in the mountains of the Sinaia district. This year a diplomatist. M. Neikoff, First Secretary of the Bulgarian Legation, has had the experience. While on an excursion with a party of friends he became separated from them, and was lost during a hurricane. He passed the night on the mountains, exposed to the storm, but, happily, returned to his friends the next day with no bad effects from his experience, though he had suffered considerably from cold and hunger.

BULGARIAN LETTER.

(From Our Own Correspondent.)
Sofia, August 3.

The Balkan Situation.

The diplomatic situation in the Balkans has reached a state of dead-lock. Both in Bulgaria and in Roumania popular sentiment is unquestionably with the Entente, but the governments refrain from taking any decisive action, influenced in part by the effect of the Russian reverses, in part by mutual suspicions, in part by the fear that the war may last a long time, and bring the countries engaged in it to the brink of financial ruin. There is also a tendency to regard the great conflict of the nations from the narrow point of view of the military expert. Germany is known to be well prepared, her supply of munitions appears to be inexhaustible, and her strategy, in the eastern theatre of war at least, has so far been successful. Military circles in these countries have not been accustomed to study the wider problems that underlie a world-conflict of which the issues will be decided by the staying power of the combatants and not by the outcome of one or two campaigns in Europe.

Obstacles for Bulgaria.

In the case of Bulgaria there is a further obstacle to taking action. The nation is still suffering, morally and materially, from the disasters of 1913, and is not disposed to face the risks of another war without having some guarantee regarding the fate of the kindred population in Macedonia.

In order to provide a guarantee, the Powers are compelled to appeal to Serbia. In the past, their promise to Bulgaria would have sufficed; but Bulgaria has seen too many treaties broken, to her detriment, and she fears that even after waging a victorious war she might not receive her reward. Permission from Serbia for Bulgaria to occupy temporarily a portion of Macedonia, as far as the Vardar river, or at least a formal declaration by Serbia that, in accordance with the demand of the Powers, she will cede the regions she appropriated in 1913, would probably provide a solution of the difficulties, and enable Bulgaria to advance on Constantinople in alliance with the Entente Powers. Such action on the part of Bulgaria would undoubtedly decide the attitude of Roumania in favour of the Allies.

Serbia Bars the Way.

But Serbia so far remains obdurate. The military clique, with whom the supreme power really rests, refuses to listen to reason, even though Serbia's very existence depends upon the success of her allies. With Greece and Montenegro, Serbia has been engaged in the partitioning of Albania, and her army has been practically inactive for some months. And meantime the Entente Powers must forgo the aid of Bulgaria and Roumania. The situation may be summed up in the words of a Bulgarian, "Serbia blocks the way."

Another Letter from the Kaiser.

The *Duma* of yesterday's date reports that "according to information from a German source, Prince Hohenlohe brought to our King a very friendly letter from the Kaiser. His Majesty therein expressed his *present* sympathy for Bulgaria and the Bulgarian nation, whom he considers as foremost in the Balkans. He also expressed the hope that in the future the ties between Bulgaria and Germany would be strengthened, and that the Bulgarian nation would have the warm support of Germany. The letter also expressed regret that Germany had allowed Bulgaria to be so wronged at Bucharest." Bulgaria, says the *Duma's* informant, has succeeded in winning the Kaiser's confidence only by her strict and loyal neutrality, which was of inestimable value to Germany in the days of the violent agitation in Bucharest, when Roumania was on the point of hurling herself against Austria-Hungary.

Last Friday Colonel Gantcheff, a former Military Attaché at Berlin, left for that city, entrusted, it is said, with King Ferdinand's reply to the Kaiser's characteristic letter.

The Negotiations with Turkey.

The negotiations between Bulgaria and Turkey which have been in progress at Constantinople for some time past are now concluded as far as concerns the surrender of the Dedeagatch railway to Bulgaria. But Bulgaria now insists also on having territory west of the river Tunja, in order to enable her to construct a new railway connecting Slivno, Yamboli, Kizil-Agatch, and Lozengrad (Kirk Kilisse) with Kara-Agatch. Whatever may be the result of these negotiations, Bulgaria is resolved not to pledge herself to any political engagement with Turkey or the Central Powers.

According to information received from Constantinople, Halil Bey, President of the Turkish Chamber, who came to Sofia several times, and through whom, it is reported, the Turco-Bulgarian negotiations at Constantinople were conducted, has been taken ill, and it is on this account that the negotiations are not yet concluded.

The Turkish deputies in the Bulgarian Parliament have arrived here from Gumuljina, and have frequent confabulations with the Turkish Minister, Fethi Bey.

SOFIA, August 10.

The Reply of the Entente.

Last Tuesday evening (3rd inst.) the representatives of the Entente Powers called, one after the other, upon Dr. Radoslavoff and handed to him identical Notes containing the replies of their respective Governments to the Bulgarian Government's Note of June 15. It was agreed on both sides that absolute secrecy should be maintained as to the contents of the Note.

Though so long delayed, the reply of the Entente took political circles here by surprise. For it was generally considered that after the great Russian reverses the moment was an inopportune one for the Entente to resume negotiations, unless they were ready to comply with Bulgaria's demand for the immediate occupation of Macedonia.

The comments of the Press are very guarded. The *Duma*, an Anglophile journal, writes:—

We learn from a trustworthy source that the new proposals of the Quadruple Entente were exhaustive and contained the maximum concessions that a reasonable Bulgarian politician could have asked for. The main point of the rewards promised to Bulgaria is that they are not made conditional on the compensations that our neighbours expect to get. The Entente informs us that Anglo-French troops will occupy Salonika and the railway line to Ghevgheli in order to secure direct communication with Serbia, and this will guarantee us from any attack in the rear. In the third place, the Entente would undertake all responsibility of placing us in possession of the promised territories. In the fourth place, we should be allowed to occupy all the territory east of the river Vardar on the day we move against Turkey. Finally, the Entente Powers promised also that we should occupy Western Macedonia before the summoning of the Peace Congress. As soon as Constantinople falls the Anglo-French troops set free are to join up with the Serbians after passing through Macedonia, which will be handed over to our troops.

A strong impression has been caused by the fact that the Entente is making *démarches* simultaneously at Sofia, Athens, Nish, and even, it is reported, at Bucharest. In well-informed political circles it is thought that the Bulgarian Government will not give any reply to the Note of the Entente before seeing what replies are likely to be given by the Greek and Serbian Governments.

More German Threats.

Since the Entente's reply was delivered, the diplomatists of the Central Powers have been distinctly nervous, especially because both the King and the Prime Minister have been much away from Sofia, and only returned yesterday. Then the German Minister and his Austro-Hungarian colleague promptly called on the Prime Minister. It is stated that they even fixed the date on which the Austro-German offensive against Serbia is to begin, and warned the Premier that should the Bulgarian Government accept the offers of the Entente and decide to act against Turkey the Central Powers would treat Bulgaria as an enemy and invade and crush her.

In spite of all these Austro-German threats one thing is certain: that in no circumstances will Bulgaria attack Serbia. It is reported even that Dr. Radoslavoff declared before the representative of one of the neutral States that he would no longer be Prime Minister if Bulgaria should be forced to attack Serbia.

King Ferdinand Visits Greek Frontier.

On the 7th inst. King Ferdinand left Kustendil, by motor, for the Greek frontier. After visiting the Bulgarian frontier post on the river Bistritza, his Majesty drove back to the Rilo Monastery, where he spent two days.

The Late Exarch.

To-morrow morning, forty days having elapsed since the death of his Beatitude the Exarch Joseph I., a requiem service will be celebrated at the Cathedral Church, Sveta Nedelia, at which all the leading clergy in the kingdom will be present. After the service there will be a great meeting of the Holy Synod, at which the will of the late Exarch will be opened and publicly read.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"IN STRICKEN SERBIA."

To the Editor of THE NEAR EAST.

Monsieur,—Je vois dans le NEAR EAST du 20 août un petit article critiquant d'une façon un peu sarcastique une phrase de l'article "In Stricken Serbia." "Such a thing as a bath is unknown in Serbia" aurait été écrit dans cet article, d'après l'auteur de la critique. Or, voici ce qui a paru dans votre no. du 2 juillet: "We are still working like niggers *fixing up* baths, *etc.* (for they know nothing of such things in Serbia) and getting arrangements for laundry work ready." L'ensemble de la phrase a un sens très différent, me semble-t-il, à celui qui lui est attribué.

Je vous ferai aussi remarquer que ces lettres étaient privées: des impressions écrites rapidement, non destinées à la publication. J'ai mis ces lettres à votre disposition pour en extraire les passages qui vous intéressaient, mais la phrase textuelle dans cette lettre du 20 mai est celle-ci: "Nous continuons à travailler comme des nègres à l'installation de bain, de 'lavatoires convenables' (car ils ne connaissent pas cela en Serbie), etc." Vous voyez qu'il y a loin de la phrase originale à l'interpretation donnée dans l'article en question, de même qu'il y a loin des bains publics et bains de rivières aux installations de bains perfectionnées de nos hopitaux modernes! Il est cependant clair que c'est de "cela" dont il est question. "The fond physician who imagines he is introducing the custom of the bath to Serbia merits our tender solicitude." Avant d'écrire ceci, c'est bien dommage que l'auteur de l'article ne s'est pas donné la peine de prendre un peu plus d'informations sur le compte du "fond physician"; elle aurait appris que tout son temps est absorbé par un travail important et qu'il emploie ses facultés d'une façon plus utile qu'à "s'imaginer qu'il introduit des nouvelles coutumes en Serbie." Il est loin d'avoir cette prétention: il se contente simplement de mener à bien la tache qu'il s'est librement imposée: "tacher de faire le plus de bien possible à nos alliés de l'Orient," selon sa propre expression. Et quant à "meriter la tendre sollicitude" de l'auteur, il me semble que cette phrase "sonne bien faux," si l'on songe qu'elle s'applique à quelqu'un qui s'expose journellement, comptant pour rien fatigues et privations, et cela par simple dévouement pour venir en aide à nos alliés serbes. Plus ample information lui aurait appris aussi que les autorités civiles et militaires serbes ont une certaine considération pour le medecin; ils l'ont sans doute apprecié à sa juste valeur. Il a été nommé lieutenant en premier dans l'armé serbe, par arrété royal du 17 juin. En plus, lors du congrès de chirurgiens serbes tenu à Kragujevatz le 4 juillet, il a été choisi président du comité d'honneur.

Il faut croire aussi que l'hôpital de Kragujevatz était organisé avec succès, car, cette tache terminée et l'epidémie de typhus exanthematique presque éteinte, le medecin a été chargé d'organiser un nouvel hôpital de 200 lits à Podgoritza (Montenegro) dans des circonstances particulièrement difficiles.

Ceci dit, il me semble inutile de faire remarquer que l'article en question "s'est trompé d'adresse" et que le

Digitized by Google

medecin se passera très aisement de la "tendre sollicitude" qui lui est si genereusement offerte, mais je vous serais bien obligée, Monsieur le directeur, de vouloir remettre les choses au point. Agreez, etc.,

August 21, 1915. PAULINE LAUWENS.

RED TAPE—UNTIED.

To the Editor of THE NEAR EAST.

Sir,—I had the disagreeable duty last week of complaining of red tape, but have pleasure in stating to-day that the subject matter of my complaint was put right on the very day that THE NEAR EAST came out.

It is well to have capable Civil servants who know their business, but the next best thing is to find them attentive and willing to accept advice, as all generous minds do.—I am, etc., ALEXANDER SEFI.

London, August 24.

THE GREEKS IN TURKEY.

To the Editor of THE NEAR EAST.

Sir,—Formerly the Turks, in order to strengthen their hold upon the conquered countries, from time to time forced masses of Christians to become Mohammedans. The present Mohammedan Albanians, Bosnians, Cretans, and Bulgarian Pomaks are the result of that policy. In later times, after the Turks had come under the influence of the Western Powers and Russia, and permitted their occasional interference on behalf of the Christians, they adopted another system for the maintenance of their supremacy over their subjected races. Sir Edwin Pears, in his book, "Turkey and Its Peoples," says: "I doubt whether at any time since Mahomet captured Constantinople there has ever passed a quarter of a century without a big massacre. It has been the Turkish way of maintaining its supremacy."

More recently, in our days, Turkey has gone a step further, without, however, renouncing her previous methods. Turkey now expels *en masse* from its territories all unsatisfactory or undesirable elements of its population, which have hitherto constituted a right for the neighbouring States to interfere for their protection.

How did Turkey arrive at this new method?

The first systematic expulsion of such undesirables was executed by the Greek authorities when they occupied territories held by the Bulgarians during the second Balkan War. The same authorities compelled the population that had remained to abandon its homes and belongings when they evacuated these lands allowed to Bulgaria by the Bucharest Treaty. The Greeks had behaved savagely against the Bulgarians, and announced—shall I say, also believed?—that the returning Bulgarians were bound, *as a less cultured people*, to retaliate with even greater savagery; and the population fled, leaving the country a ruin and a desert.

During the eight months the Bulgarians occupied and ruled these countries both Turks and Greeks stayed at home. None were molested. Nobody protested against the Greek barbarities committed upon the Bulgarian population. The campaign of calumny against the Bulgarians, the heroes in the face of the world but of yesterday, so diabolically and so successfully carried out, took the heart out of all who for humanity's sake might desire to protest. The name of Bulgaria had come to mean reprobation. Even the Turks joined in this campaign of calumny, but they also took a leaf out of the Greek book, and learned new ways and means for the maintenance of their supremacy in their country.

On the first opportunity, after the signature of the Treaty of Bucharest, the Turks proceeded to expel all the Bulgarian population from the Bulgarian frontier down to the very gates of Constantinople. The Greeks were jubilant. The hated Bulgarians were homeless outcasts by the thousands, and the country which the Greeks dreamt would enter the boundaries of the renovated (by them) Byzantine Empire was cleared of the Bulgarians. So much gained. But the Turk had learned his lesson too well. Henceforward he would get rid of all elements alien to himself, as opportunity offered, by expulsion, and thus destroy the shadow of a right of the troublesome neighbouring States to interfere for the protection of their kith and kin under Turkish rule.

I said the Greeks were jubilant at the sufferings of the Bulgarians. Little did they think that their turn of similar and even worse suffering would come to them—and so soon. Already thousands upon thousands of Greeks have been cleared out, bag and baggage, from the country round Adrianople, the coasts of the Marmora, the neighbourhood of the Dardanelles, and Smyrna. But there is no stopping the Turk; he is bound to improve, even upon the Greeks. The Greeks in the interior of Asia Minor are now subjected to treatment which, I think, surpasses in horror all treatment hitherto meted out by the Turks to Christians.

A Frenchman, a man of the Entente, a long resident in Turkey, where he held a high position, widely known and greatly respected, just come away from Constantinople, wrote to me on his way through Bulgaria. This is what he says regarding the treatment of the Greeks: "J'espère qu'en France et en Angleterre on se guerira de la stupide amour du Grec si injustifiée, et qu'on laissera de côté ces bonhommes. *Dans l'Intérieur les Turcs les convertissent par la force à la religion Musulman, leur prenent leurs femmes et leurs filles et leur donnent des femmes Turques.*" My friend further adds: "C'est bien fait on du moins s'est merité."

It is cruel even to think so, but is it not falling into the pit you have dug for your enemy? The mere thought of the possibility of such an existence, forced upon a peaceable population, innocent of the faults or crimes for which it is made to suffer, with nobody to appeal to, is simply horrible. Those who provoked and then enjoyed the sufferings of the Bulgarians, and are responsible for the present persecution of the Greeks in Turkey, by raising false hopes in insatiable megalomania, are squabbling among themselves. Who is to lead to the attainment of the national political mirage? Should the Turks triumph in this war, the mass of the Greek population in Asiatic Turkey will be absorbed into the Mohammedan one. Should Turkey fail, generations will be required to restore this population to its former state. This present cruel existence of the Greeks in Asia Minor is the direct result of the excitement the Greeks of the kingdom went into at the possibility of their incorporating the Smyrna Vilayet in their territory.

The megalomania of the modern Greeks has ever been beyond the strength of their grasp or moral capabilities. The man who might open their eyes does not live. Venizelos gave a promise to that effect and he is being destroyed. That the Greeks of the kingdom—those in authority—are aware of the conditions of existence of their compatriots in Turkey there is no doubt. They are certainly deeply concerned, but are incapable of action, and, of course, *Bulgaria will be blamed.*—I am, etc.,

Sofia, July 30, 1915. P. M. MATTHEEFF.

NEAR EAST BOOK NOTES.

"War and Diplomacy in the Balkans" is a useful booklet by Mr. H. Charles Woods, which is published at the price of sixpence, by the *Field*. It contains a great deal of information about the military and naval forces of the Balkan States, based on the latest statistics available; and the sketches of recent history of each of the countries are, though necessarily very brief, sane and impartial.

Archdeacon Potter, of Cyprus, who is Hon. Secretary of the League of Honour, has written "An Open Letter to the Union of Democratic Control," which is a model of what such things should be. It avoids personalities, but as to facts it is pitiless, and its exposure of the illogical attitude of the U.D.C. is complete. The subject is not one that falls within the scope of THE NEAR EAST, so we must content ourselves with recommending a perusal of the pamphlet to anyone interested.

"The Royal Marriage Market of Europe," by Princess Catherine Radziwill, is announced for immediate publication by Messrs. Cassell. Princess Radziwill, whose "Memories of Forty Years" created so great an interest last autumn, is descended from the illustrious Lithuanian family of the Counts Rzewuski, and is a daughter of the Governor-General of the Caucasus. The Princess was received at all the Courts of Europe, and has acquired a familiarity with the family histories of reigning houses. Her new volume will deal with the marriages of the House of Habsburg, the Hohenzollerns, the Romanoffs, the Nassaus, the Belgian Royal Family, and those of Italy and Serbia. Included in the book are chapters upon the love idylls and tragedies of Roumania, Greece, and Bulgaria.

BOOKS RECEIVED.

The Balkans, Italy, and the Adriatic. By R. W. Seton-Watson. With two maps. (Nisbet and Co. 1s.)

The Poems of Mu'tamid, King of Seville. Rendered into English verse by Dulcie Lawrence Smith; with an introduction. (John Murray, 1s. net.)

The Meeting of the Kings. By Khrimean Hairik, the Katholikos of all Armenians. Armenian text, and English version by P. Tonapetean and Laurence Binyon; with a biographical sketch of the author. (P. Tonapetean, 53, Addison Gardens, W. 1s.)

AN IMPORTANT NEW BOOK ABOUT EGYPT.

By BARON DE KUSEL (Bey),
Sometime English Controller-General of Egyptian Customs.

AN ENGLISHMAN'S RECOLLECTIONS OF EGYPT. 1863 to 1887.

With an Epilogue dealing with the present time, 1914.

With thirty-two illustrations and a map.
Demy Octavo. 10s. 6d. net.

"He writes freshly and agreeably of his life and its varied experience . . . and of the many well-known personages . . . with whom he was thrown."—*Times.*

NEAR EAST BOOKSHELF.

DIPLOMACY AND THE BALKANS.*

On March 24, 1911, M. Gueshoff was asked by King Ferdinand of Bulgaria to form a Cabinet, which he succeeded in doing. On May 30, 1913, he resigned his post, "parce qu'il y avait désaccord entre la Couronne et moi." In September of 1911 war was declared between Italy and Turkey; in October of the following year the first Balkan War broke out; in June of the following year—that is to say, about a month after M. Gueshoff's resignation, the Second Balkan War, the "*Folie Criminelle*," hurled the Balkan States into fratricidal combat.

The above rough summary of events in the Near East during the time of M. Gueshoff's Premiership—he was, incidentally, in charge of the Ministry of Foreign Affairs as well—prove that the international situation was anything but normal. Now, it is an axiom that in abnormal times really great men have all the advantages on their side; for it is inherent in them to seize opportunities, turning them to profit, or, if there are no such opportunities, to create them to serve their own ends. Whether M. Gueshoff was such a man it is impossible to say. When there arose a divergence of opinion between King Ferdinand and himself as regards Serbia's claims to a greater participation in the spoils of the first Balkan War, M. Gueshoff resigned. Did he foresee what was coming—how the military element, gorged with its Thracian victories, would sweep all political considerations overboard, or was he politely made to resign by a power stronger than his own? The book under review does not tell us, which is a pity, as it prevents us from judging the man—whether or not he is to be reckoned among those few who can coerce as well as shape passing events. What we do know (the cause, however, being unknown to us) is that M. Gueshoff resigned when the relations between Bulgaria, on the one hand, and Serbia and Greece on the other were at their straining point. What Bulgaria then needed was a Cromwell; he was found missing. On the other hand, it is open to doubt whether M. Gueshoff, even if he had remained in power, or if he had resorted either to the pen or to the forum in those most critical days, would have averted what was to happen. For, considering that his successor was M. Daneff—much more intransigeant as regards his country's rights and pretensions—and that the celebrated order for the Bulgarian army to attack the Allies was issued by the higher military command, "à l'insu du cabinet" and in spite of the decision taken by the Government that "M. Daneff irait à Petrograd et que nos differends avec la Serbie et avec la Grèce seraient soumis à l'arbitrage"—one is inclined to believe that M. Gueshoff, had he been in power at the time, would have been similarly overriden. Besides, is it not a noteworthy coincidence that when M. Gueshoff's Government was on the point of submitting to arbitration by Russia it should resign, and that when M. Daneff's Cabinet had, after a month's delay, come to the same decision, its action should have been rendered nugatory by the hasty interposition of a *fait accompli?*

Years, doubtless, will pass before the whole truth about the *Folie Criminelle* becomes public property. Admittedly, M. Gueshoff, who was no longer in power at the time, cannot be held responsible for what happened. But, on the other hand, the negotiations which led up to the Balkan Alliance were largely of his making and shaping, and there is, therefore, just a possibility—admittedly a very faint one—that he might successfully have averted the culminating catastrophe. Either he did not seize this thread-like opportunity, or—he could not.

However, *L'Alliance Balkanique* is concerned mainly with the negotiations leading up to the alliance, and in these M. Gueshoff and his diplomats show themselves to have been keen bargainers—as is only right—beating down the demands of those with whom they were treating to the very minimum of acceptance. He develops the Bulgarian thesis with ability, and bears out his statements with documents that are, to all intents and purposes, irrefutable. I have no intention here, and more particularly at the present moment, when it is being fervently hoped that Serbs, Bulgars, and Greeks will make up their quarrel in the common cause, to delve into the differences which separated the Allies when the spoils wrested from the Turks had to be divided among them. The matter has been so frequently discussed and debated, and with such acrimony, that no good purpose would be attained by reopening the wound. Suffice it to say that there is no doubt whatsoever that Bulgarian rights and claims in Macedonia were sorely menaced by Serbia and Greece prior to the second Balkan War, and that the patience of the victorious troops of Thrace was tried to the breaking point. M. Gueshoff attempted to stem the chauvinistic tide, but failed. Then it was that the last act in the drama was enacted "sur une ordre du haut commandement bulgare." The author of the book under review insists that Bulgaria must not be held responsible for what was done unconstitutionally by a group of men, and I heartily agree with him; but, then, is a people ever guilty of what is done in its name by a minority acting unconstitutionally?

From M. Gueshoff's account of the negotiations which preceded the formation of the Balkan Alliance several facts stand forth prominently. The first of these is that the various States were not inspired merely by thoughts of self-preservation. Throughout the negotiations there breathes a spirit of aggression against Turkey. The author would have us believe, perhaps, that Bulgaria was the least aggressive, because she insisted in the first place on the autonomy of Macedonia and Thrace, to be followed only eventually, if autonomy did not work, by the partition of the two provinces. But this is hardly so, because, as M. Gueshoff himself admits:—

"Quand j'ai fait rémarquer, à M. Milovanovitch que si notre tentative d'affranchir la Macédoine et la Vieille-Serbie revêt la forme d'une annexion, notre tache sera beaucoup plus difficile, vu les susceptibilités de nos voisons, il a été d'accord avec moi qu'il vaudrait peut-etre mieux demander l'autonomie des provinces affranchies."

Regarding the relations between Turkey and Bulgaria shortly after M. Gueshoff's advent to power, we learn that he had negotiations with Assim Bey, at the time Ottoman Minister in Sofia, for an understanding between the two countries. There was, it must be admitted, some chance of these overtures leading to a successful conclusion. Assim Bey was recalled to Constantinople and became Minister of Foreign Affairs.

"A son départ de Sofia, Assim bey fit à M. Th. Théodoroff qu me remplacait provisoirement—j'étais alors à Vichy—les déclarations les plus catégoriques en faveur d'une entente bulgaro-turque. Malheureusement, à part certaine proposition mort-née (je l'appelle mort-née non seulement parce qu'elle était inacceptable pour nous à cause, surtout, de son deuxième point, mais aussi parce que ni Assim bey, ni son successeur à Sofia, Naby bey, n'en souffièrent plus un mot), à part cette proposition, dis-je, le ministrè turc des Affaires étrangères ne fit rien pour inaugurer une nouvelle politique à l'égard de la Bulgarie."

The proposition referred to is contained in the book under review, and though no claim can be made for it that it could have been acceptable, it might well have served as the basis for further negotiations. But Bulgaria by this time had already changed her *façon de voir*. The Italian War broke out when M. Gueshoff was in Vichy; he immediately returned to Sofia, stopping in Paris and Vienna; in the latter city he had, by previous appointment, an interview with M. Milovanovitch, the Serbian Prime Minister, in the course of which the foundations of the Balkan Alliance were laid in anything but a Turcophil spirit. It is hardly likely that in these circumstances negotiations between Turkey and Bulgaria could have borne any noteworthy fruit, even supposing, which is doubtful, that Assim Bey had no inkling of what was taking place.

Negotiations which failed are not, however, a characteristic of the volume under review. On the contrary, we follow diplomatic controversy after diplomatic controversy, the majority of which terminate in favour of King Ferdinand's kingdom. The Serbs have pretensions and the Greeks have pretensions, but when it comes definitely to conclude a treaty of alliance the Bulgarian point of view has been accepted. There are, I think, two reasons for this—namely, that Bulgarian statesmen had, as opposed to the Serbs and the Greeks, a definite policy in view from the very beginning, from which they did not retreat by so much as a single important concession; and, secondly, that their diplomats knew perfectly well how to take full advantage of the strength of their position, based as it was on a determined line of action. The *faillite* came when the political and military elements, the latter predominating, were torn asunder. That this rupture between the two was, in 1913, the object of Austrian diplomacy is too well known to need emphasis. People there are in Sofia even to-day who remember the smirk of pleasure and delight on the faces of the staffs of the Austrian and German Legations when it was known that Bulgaria had destroyed the Balkan Alliance by attacking the Serbs and the Turks. Unfortunately M. Gueshoff passes over this phase of diplomatic negotiations in the Balkans without so much as one word, or one letter, to show how Vienna pulled the strings in Sofia, brought about his downfall because he wished to submit to arbitration by Russia, and ruined M. Daneff because he also was going to Petrograd. Until this page in the history of the Balkan Alliance has been written, no definite judgment can be passed on the "éffondrement de l'alliance balkanique."

C. R.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915. August	1915. August		1333. Shawwal	5675. Ellul
27	14	Friday	16	17
28	15	Saturday.....	17	18
29	16	Sunday	18	19
30	17	Monday	19	20
31	18	Tuesday	20	21
Sept. 1	19	Wednesday	21	22
2	20	Thursday	22	23

Wednesday is the birthday of H.I.M. Sultan Mohammed Reshad Khan, Emperor of the Ottomans, who was born in 1260 A.H. (November 3, 1844).

Wednesday is also the birthday of H.H. Prince Michael, eldest son of H.R.H. Prince Mirko of Montenegro, who was born at Podgoritza in 1908.

On Tuesday, the birthday of H.M. King Ferdinand of Roumania, there were many callers at the Roumanian Legation. Mr. H. Montgomery, Master of the Ceremonies, called with a message of congratulation from King George, and was received by the Roumanian Minister, M. Misu, who had his Majesty's felicitations immediately telegraphed to Bucharest. Cards were left at the Legation on behalf of Mr. Asquith, Sir E. Grey, and many members of the Corps Diplomatique. Among the callers were the Lord Chamberlain and Colonel Sir Douglas Dawson.

Prince Paul of Serbia arrived last Friday at Langholm Lodge on a visit to the Duke of Buccleuch.

Prince Bibescu, Secretary to the Roumanian Legation, has taken a house at Sand Lee, Datchet, for the summer.

In a letter dated July 31, our Bucharest Correspondent writes:—It is announced that Queen Elizabeth will go to Sinaia on August 4, remaining there for about three weeks. She will not occupy the Palace at Pelesh, its memories being too sad for her; but will reside at the Villa Foieshor, which is situated higher up among the firs.

H.E. the Persian Minister had an interview with Sir Edward Grey at the Foreign Office on Wednesday afternoon.

H.E. the Roumanian Minister saw Sir Edward Grey at the Foreign Office on Monday afternoon.

H.E. the Serbian Minister was among the visitors at the Foreign Office on Monday.

M. Gennadius, the Hellenic Minister, returned to the Legation on Monday afternoon from Hampshire.

An official note issued in Paris on Thursday of last week gives a most interesting account of a visit to France paid by Lord Kitchener, who passed the previous Monday and Tuesday with the French Army, and spent the Wednesday in inspecting our own troops. M. Millerand accompanied him on his journey, and his lordship had meetings with General Joffre and Sir John French.

During the visit M. Millerand conferred the Cross of Commander of the Legion of Honour on Major-General Yarde-Buller, and the Cross of Officer of the same Order on Colonel FitzGerald, Aide-de-Camp to Lord Kitchener.

Admiral Mark Kerr left Athens on Tuesday afternoon on his return to England.

On the 8th inst., in Athens, the wife of the Rev. W. Alan Gardner, chaplain to the British Legation, gave birth to a daughter.

Last Saturday, at The Wilderness, Crowthorne, Berks, the wife of Mr. J. Douglas Craig, of the Sudan Civil Service, gave birth to a daughter.

On Wednesday afternoon, at St. Peter's Church, Eaton Square, the marriage took place of W. R. Fiddes Osmond, Royal Field Artillery, son of Mr. and Mrs. William Osmond, of 8, Wetherby Gardens, and Cynthia, only child of Colonel Percy Massy, late 6th Dragoon Guards, and Mrs. Percy Massy, 15, Cottesmore Gardens, and granddaughter of the late Sir Carey Knyvett, K.C.B., and Lady Knyvett.

On Wednesday of last week, at St. Peter's, Thorner, the marriage was solemnized of Flight-Commander Edmund Peirse, D.S.O., Royal Naval Air Service, only son of Vice-Admiral Sir Richard Peirse, K.C.B., and Lady Peirse, and Joyce, younger daughter of Mr. and Mrs. Armitage Ledgard, of the Manor House, Thorner, Yorkshire. Owing to the war, the marriage was a quiet one. The Rev. E. Wemyss-Whittaker, the bridegroom's grandfather, and the Rev. J. P. Whitworth, vicar of the parish, officiated.

A marriage has been arranged and will take place at an early date between Demetrius John Cassavetti, only son of Mr. and Mrs Alexander Cassavetti, of Shenley, Hertfordshire, honorary secretary of the Anglo-Hellenic League, and Lilian Oswald, daughter of Dr. and Mrs. Moir, of St. Andrew's, Fifeshire.

The marriage of Mr. Norman Bentwich to Miss Helen Caroline Franklin will take place on Tuesday, September 7, at 3 p.m., at the New West-End Synagogue, St. Petersburgh Place, W. No invitations will be issued, but all friends who are able to be present will be gladly welcomed.

We regret to learn that on the 20th inst., Mr. Thomas Pasil Etherington Smith, Sub-Director-General of Accounts in the Egyptian Ministry of Finance, died of diphtheria. His death took place at Gezireh. He was thirty-six years of age.

The Times understands that one of the three financial envoys to New York to put into operation the policy concerted on in London and agreed on by France and Russia for dealing with the American exchange problem will probably be Sir Henry Babington Smith, who, originally at the Treasury, was secretary to the Brussels monetary conference in 1892, and subsequently became Secretary to the Post Office (1903-9) and then President of the National Bank of Turkey from 1909 till the outbreak of war.

After spending several days in visiting the trenches and various points at the front, Mr. Rudyard Kipling arrived in Paris on Tuesday.

It is stated (says the *Egyptian Gazette* of August 12) that Dr. Howard Bliss, the rector of the American College at Beyrout, is still at Chios, as he has not been able to find a ship to take him to Mytilene, whither he intends to go *en route* to Constantinople. The commander of the American warship "Des Moines" asked permission to take Dr. Bliss to Smyrna.

The *Echo de Bulgarie* of August 8 reports that Mr. Fullerton L. Waldo, an American, who is charged with a mission to study the Red Cross organization of the Balkan States, has arrived in Sofia from Serbia.

Lady Gray Hill (of Jerusalem) is exhibiting some pictures of the Near East at Walker's Gallery, New Bond Street. The proceeds of the sale of these pictures will be given to the French Red Cross Fund, and some of our readers will doubtless be attracted by the opportunity of being charitable in such an agreeable way.

Bishop Stileman, who has been Bishop of the Church of England in Persia since 1912, has been compelled by ill health to place his resignation in the hands of the Archbishop of Canterbury. His diocese comprised the whole of Persia, and the bishopric was founded in 1912. Commenting upon his resignation, which, it says, will cause general regret, the *Record* remarks: It is twenty-six years since Bishop Stileman joined the C.M.S. Persia Mission. After working for seventeen years first at Baghdad and then at Julfa, the Armenian suburb of Ispahan, he was detained at home for several years, during part of which time he filled a gap in the secretariat at the C.M. House; he was then Organising Secretary in the Dioceses of Exeter and Bath and Wells, and from 1908-12 he was Secretary of the C.E.Z.M.S. In the latter year he was consecrated as Bishop of the Church of England in Persia. The *Church Missionary Review*, in referring to the Bishop's resignation, says the Mission owes very much to his wise guidance, and the C.M.S. Committee have expressed their sense of the loss which the Society sustains by the close of his connection with it and their sympathy with him and Mrs. Stileman.

A report has reached Egypt from Beyrout that Mr. Naville, director of the Ottoman Bank, who recently visited Egypt to endeavour to arrange for the exchange of British and Turkish prisoners of war, has been arrested and sent to the interior by the Turks, apparently for having failed in the mission referred to.

Mr. Lowe, of the Trams and Ferries Department of the Sudan Government, has lost his wife in particularly tragic circumstances. Mrs. Lowe was accustomed to sleep with a loaded revolver under her pillow, and accidentally shot herself dead with this weapon as she was carrying it to the garden to sleep in the open. The wound, which was in the region of the heart, proved almost immediately fatal.

Mr. Pavid, of Cairo, has accomplished the return journey from the capital to Alexandria on a motor-cycle, accompanied by his wife in a side car. This is the first occasion on which a lady has made the journey in this manner.

Rear-Admiral S. E. Erskine, who has been placed on the retired list in order to take up the appointment of Rear-Admiral, R.N. Barracks, Chatham, took part in the Nile Expedition of 1884-85, for the relief of General Gordon at Khartoum. In 1896 he was present on the occasion of the bombardment and capture of the Sultan of Zanzibar's palace by the squadron of Rear-Admiral H. H. Rawson, C.B., being mentioned in despatches, and the next year he took part in the naval operations against the King of Benin, being again mentioned in despatches. He was Aide-de-Camp to the King, 1911-13.

Major Arthur Gordon Bremner, R.E., who is reported wounded, served with the Dongola Expedition in 1896, and has the medal and the Egyptian medal.

Major Walter Hervey Besant, 3rd Battalion Norfolk Regiment, who was last week reported wounded, served with the Sudan Expedition in 1884-5, getting the medal with clasp and the bronze star. During the six following years he did a great deal of useful work in the same region, being mentioned in despatches and receiving a clasp to his medal, as well as the Third Class of the Medjidieh. In 1891 he took part in the capture of Tokar, and got a clasp to his bronze star, and the Third Class of the Osmanieh. He retired into the Reserve of Officers in 1901, with the rank of major, but on the outbreak of the present hostilities he rejoined his old regiment.

Captain Richard Raymond Willis, 1st Battalion Lancashire Fusiliers, who has been awarded the Victoria Cross for "conspicuous bravery and devotion to duty in the field," took part in the Nile Expedition of 1898. He was present at the battle of Omdurman, and was awarded the Egyptian medal with clasp.

Lieutenant William Charles Mayo, 9th Battalion Sherwood Foresters, who has been killed in action at the Dardanelles, was, we understand, formerly on the staff of the Imperial Ottoman Naval School, Constantinople. After the Balkan Wars, when the fate of the Ægean Islands was under discussion, he wrote to THE NEAR EAST several letters on the subject, which showed him as a friend and well-wisher of Turkey, and it is a melancholy coincidence that he should now have laid down his life in fighting against the Turks. He graduated from St. Catherine's College, Cambridge, taking a second class in the Classical Tripos in 1908. The eldest son of Dr. J. Mayo, of Warkworth Terrace, Cambridge, he did not live in College while at the University, but while he was, therefore, not so closely in touch with the social life of the University, at the same time he took the keenest interest in the general life of his College and was prominently identified with many of its activities. On the outbreak of war he obtained a commission in the Sherwood Foresters, and was gazetted to the rank of lieutenant on December 31 of last year.

Captain Thos. Porteous Black, 9th Sherwood Foresters, who was killed at the Dardanelles between August 7 and 11, was the eldest son of the late Mr. Geo. B. Black, District Traffic Superintendent, Caledonian Railway, Aberdeen. In 1898 he paid a visit to the Dardanelles, visiting Constantinople, Skutari, and the Crimea. He was for some time assistant in physics at the Durham College of Science, Newcastle-on-Tyne, and in 1907 he became assistant in physics at University College, Nottingham. He was appointed Registrar of the College in 1911.

Second Lieutenant B. B. Silcock, 7th Battalion Royal Welsh Fusiliers, who has been killed in action while serving in the Mediterranean, secured his commission in June of this year. He was educated at Blundell's School, Tiverton, and at University College Hospital. He served in the Balkan War as dresser with the British Red Cross unit with the Greek forces at Salonika, and was decorated by the King of the Hellenes. In the early stages of the present war he served as surgeon probationer on the hospital ships Rohilla and Owl, and later joined the Artists' Rifles, from which he was granted a commission. He was the younger son of the late Mr. A. Quarry Silcock, of Harley Street, and of Mrs. Silcock, of Maida Vale Mansions.

The King has been pleased to bestow the Victoria Cross upon Corporal William Cosgrove, 1st Battalion the Royal Munster Fusiliers, for most conspicuous bravery in the leading of his section with great dash during our attack from the beach to the east of Cape Helles, on the Turkish positions, on April 26, 1915. Corporal Cosgrove, on this occasion, pulled down the posts of the enemy's high wire entanglements single-handed, notwithstanding a terrific fire from both front and flanks, thereby greatly contributing to the successful clearing of the heights.

Lieutenant-Colonel Derrick Alfred Carden, Seaforth Highlanders (attached 7th (T.F.) Argyll and Sutherland Highlanders), of Westown, Straffan, County Kildare, who saw service in Egypt, the Sudan, and the North-West Frontier of India, and who was killed in action near Ypres on May 25 last, aged forty, younger son of the late Sir John Carden, fourth baronet, of Templemore Abbey, County Tipperary, left unsettled personal estate in the United Kingdom valued at £3,774.

The *Sussex Daily News* throws light upon the romantic wedding "on the high seas, off Salonika," to which we referred in these columns last week. The bridegroom was Dr. Percy Wallice, of the first British Field Hospital to Serbia, and the bride, Miss Dora Woolcock, of the Wounded Allies' First Hospital Unit to Montenegro.—"It was when they arrived at Salonika that Dr. Wallice and Miss Woolcock decided to marry. She was bound for Montenegro, he for Serbia. They found that the wedding could only be performed after a three weeks' residence unless the marriage could take place on a British ship outside the three mile limit. Accordingly a ship was chartered, and three miles from land the marriage service was read by the vicar of Brixton. Mr. Claude Askew, the novelist, gave the bride away."

A short time ago Sir Courtauld Thomson, Commissioner in the Near East of the Joint Committee of the British Red Cross Society and the Order of St. John, telegraphed for a picket boat to tow barges filled with wounded men from Gallipoli to Mudros, and also for two motor-launches to carry men and stores. The Stores Department of the Joint Committee was able to procure a twin-screw petrol boat for the picket and two motor launches, all of which are now ready. Mr. John Masefield, the well-known poet, one of the Joint Committee's latest recruits for service in the Near East, found the money for the picket and also for a barge. He himself has already left for Mudros, where he is to take charge of them as soon as they arrive. Mr. Masefield's barge has been also procured, and is being specially fitted with every comfort for the transport of wounded. It will be sent out in a few days. Two motor launches have also been found by the Joint Committee to serve the Persian Gulf Expedition at the request of Sir John Nixon, and the first of these was despatched last Saturday. The need for motor-boats for the Eastern Expedition will increase, and the Joint Committee begs for funds to cope efficiently with such needs as soon as they occur. Donations should in every case be addressed to 83, Pall Mall.

APPOINTMENTS, PROMOTIONS, etc.

M. Woislav M. Petrovitch has retired from the Serbian Diplomatic Service. He has been for some time Attaché at the Legation in London, and has many friends in this country.

Our Athens Correspondent writes (August 6):—M. Djouvara, First Secretary of the Roumanian Legation here, who has just been appointed Secretary to Queen Elizabeth, is leaving Athens in a day or two to take up his new position. He will take with him the best wishes of Athenian society, where he has made innumerable friends for himself.

Captain Nikola Christitch, who was recently decorated with the Serbian Star (the equivalent of the English D.S.O.), has been appointed Serbia's Military Attaché at Rome. Captain Christitch is the son of Colonel Christitch, Commander of the Royal Guard, First Aide-de-Camp and Military Attaché in Petrograd, under the late régime, and grandson of M. Nikola Christitch, formerly Prime Minister, who received the keys of Belgrade fortress from the last Turkish Pasha.

Field-Marshal von der Goltz Pasha is reported to have assumed command of the second Turkish army at the Dardanelles.

Hakki Pasha arrived in Sofia on August 6 on his way to Berlin, and spent a day in the Bulgarian capital.

Among the passengers for Egypt by the P. and O. steamer "Mongolia," leaving London for Port Said on September 18, are the Hon. Mr. Justice Amos, Mr. E. N. Corbyn, Mr. and Mrs. C. T. McKillop, Mrs. W. Peel, Mrs. Purvis, Mr. and Mrs. P. M. Tottenham.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

ALLEN.—On August 18, at Cockley Cley Hall, Swaffham, the wife of Francis Allen, of a son (Nigel Anthony Stafford).

MARRIAGE.

NELIGAN—SPENCER.—On August 18, at Clifford Church, Herefordshire, by the Rev. Preb. Prosser, Vicar of Twickenham, Anthony Richard Neligan, M.D., Physician to the British Legation, Teheran, Persia, eldest son of Dr. J. W. Neligan, of Kells, co. Kerry, Ireland, to Kate Mary Leigh, eldest daughter of the Rev. and Mrs. G. L. Spencer, of The Priory, Clifford.

WHERE TO STAY.

UPPER EGYPT.

Luxor.

The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.

The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.

Are the Finest on the Nile.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.

MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Cyprus.

THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,600 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

Bucharest, Roumania.

GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

Alexandria.

CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. Full Pension P.T. 80 per day.
C. AQUILINA, *Proprietor.*
(Late of Messrs. Thos. Cook & Son.)

Alexandria.

WINDSOR HOTEL (*Facing the Sea on the New Quay*).
Most delightful and healthy situation of any Hotel in Alexandria. Electric Light throughout. Daily Concerts on Verandah. Meals served *al fresco*. French Cuisine and English Management.
Inclusive Terms from P.T. 80 (10s.) per day.
Special Terms to Government Officials, Commercial Travellers, and for long stays.
Proprietor and Manager—AUG. van MILLINGEN.

PRESSURE ON THE BALKANS.

Our Athens Correspondent sends us this week a summary of what is understood to have been the contents of the Note presented by the Quadruple Entente to the Greek Government. If the information derived from "official and diplomatic sources" be correct, the Note specifies the offer made by the four Powers to the Bulgarian Government, and calls upon Greece to perform her share in securing an understanding in the Balkans. In return for her co-operation against Turkey, Bulgaria is said to have been promised, first, that portion of northern Macedonia which Serbia undertook by the Treaty of 1912 to cede to her, with the exception of a small strip of territory situated between the lakes Prespa and Ochrida, which will enable the frontiers of Greece and Serbia to march together for a short distance, and, secondly, Kavalla, with its hinterland. It is an open question whether there is to be any cession of territory until after the conclusion of the war; but the Allied Powers give Bulgaria the assurance that they will bring pressure to bear upon Greece and Serbia to secure their acceptance of the Allies' decision. The Note to Greece, it is reported, records the terms offered to Bulgaria, and is accompanied by a verbal undertaking on the part of the Allied Governments to grant Greece important compensation on the mainland of Asia Minor. At the same time the Powers are disposed to guarantee the territorial integrity of Greece and the possession of Salonika. Greece is not called upon to take any immediate part in the operations at the Dardanelles; her contribution towards the general regulation of the Balkan question is restricted to the cession of a small piece of territory at Kavalla, for which she is to receive ample compensation in Asia Minor, where a large Greek population is settled along the Ægean coast. As was to be expected, the disclosure of the alleged terms of the Allies' Note has been received in the Greek Press with every manifestation of resentment. The papers which support the Ministry of M. Gounaris have for so long declared that Greece could never surrender Kavalla, that they had no other course open to them. The Venizelist organs, which, it might have been thought, would be capable of more discernment, are for the moment overwhelmed by what they consider the peremptory nature of the communication. They have apparently forgotten that the Gounaris Ministry has been in office for some months, and has left the Entente Powers no alternative to a straightforward and final offer. When the first shock to the national *amour propre* has passed, Greece will realise that she is actually receiving better terms than the only statesman in the country was willing to accept at the beginning of the year. M. Venizelos was then prepared to see Greece co-operate with the Allied forces at the Dardanelles. Now she is not required to make any military or naval effort, but is merely asked, in the interests of the Balkans as a whole and her own future, to relinquish, in return for far greater possessions, a small strip of land which has only been in her hands for two or three years.

On the assumption that the tenour of their *démarche* at Athens is as reported, we must suppose that the Entente Powers are confident of carrying the Balkan States with them. The crux of the situation lies not in Greece, but in Serbia. It will be noticed that the Greek Government is stated to have put itself at once in communication with the Serbian Government. This step is an admission that Greece realises that at this crisis in Balkan history she finds herself occupying a subordinate position. In Great Britain it will be regretted that this should be so. While M. Venizelos remained in office the Entente Powers looked to him to take the lead in Balkan affairs, and he was not far wrong when he stated that the opportunity then lost by Greece would never recur. The offer has been repeated in the same terms, but the circumstances have changed. Greece no longer leads in the Balkans. Fortunately, Serbia, on whose attitude she will probably mould her own, shows signs of accepting the inevitable with good grace. If she does, it will be impossible to overrate the services which M. Pasitch has rendered his country at this crisis. It is well known that he has consistently been in favour of coming to an understanding with Bulgaria. He has been opposed, however, by a military clique, with whom the Crown Prince is understood to have associated himself. King Peter, whose constitutional position in the country has not been made clear abroad, must have desired to support M. Pasitch, but the recollection of the fate of his predecessor may have deterred him from throwing the whole weight of his influence against the military clique. Up to the eleventh hour the latter has successfully opposed all measures calculated to restore satisfactory relations between Bulgaria and Serbia. But with the menaces of an Austro-German invasion of the country, and possibly with a better appreciation of the position of the Allies in the war, M. Pasitch's opponents have withdrawn, it is believed, from an untenable position. The Serbian Premier will thus be able to accept unreservedly the proposals advanced by the Powers to whom Serbia owes her continued existence as an independent nation, and his action will, it is to be hoped, determine that of Greece.

The terms propounded by the Allied Powers for the removal of the *impasse* which has paralyzed Balkan action since the outbreak of the war are essentially those which have been consistently urged in these columns. They have also submitted those terms to the Governments concerned in the only way likely to win for them acceptance, that is as a friendly ultimatum, which enables the party in power in each State to plead the one argument that will be understood by its political opponents. It is not the case that the Quadruple Entente lacks sympathy for Greece and Serbia, or fails to appreciate their feelings in having to abandon territory which may be regarded as hallowed by the blood shed in its capture. The Powers are not blind to sentimental considerations of this nature, but they do well not to allow them to stand in the way of the major good of the whole Balkan Peninsula. For while the immediate purpose of a Balkan understanding is to enable the Allies to shorten the war, it has to be remembered that the proposed settlement stands for the enduring peace of the Peninsula after the war is over—a state of affairs which the Near East has not known for centuries. To gain this end is worth some sacrifices, and the countries in question would have readily made these sacrifices at the outset, if the national wisdom had not been stultified by the rancour of party politics. As far as Bulgaria is concerned, we may expect an early acceptance of the Powers' terms. There may be some murmuring if no immediate cession of territory is to be made to the Bulgarians; but it can be ignored. The point that the nation will keep in view is that it is now about to realise the ambitions which it has held before it from the day that the decision was taken to end Turkish misrule in Macedonia. The way of realisation has been stormy; but Bulgaria will be indebted entirely to the Allies that it has at last been trodden. Twelve months ago there seemed little chance of Bulgaria coming into her own for many a long year, and her spokesmen have admitted that she was not in a position to attain her ideals by her own armed strength. The return that she is called upon to make is a comparatively small one, and will appeal to the spirit of the nation. A fresh campaign against Turkey offers an opportunity of settling old scores once and for all, and will serve to consecrate in the popular mind the consummation of Bulgarian ideals.

A GARDEN ON THE BOSPHORUS.

By Mary A. Poynter.

Looked out upon in summer-time from a garden midway up the Bosphorus, there seems little in the quiet landscape that is warlike, little to suggest far-off or near-by unpeaceful scenes. To be sure, in the immediate foreground there are old grey towers and castellated walls—once forbidding fortifications, built by Mohammed the Conqueror—and it was hereabouts that the first Moslem blood was shed in the taking of Constantinople; but that history is so many years old that the sadness has gone out of it, only the picturesque setting remains.

Our garden does not exactly adjoin the old fortifications; we are just a fine breathing space away, yet high enough up on the hillside to look down upon these graceful structures of defence, now long undefended. In places the ivy climbs high and clings very closely to the bastions with the strong arms of age, and on the top of one of the towers at least quite sizable shrubs are growing, and a fig tree is so firmly and comfortably rooted there as to bear fruit in the proper season. But the arms of the ivy and the roots of the trees are not necessary to the support of the walls. There was, so a white-haired, turbaned Hodja testifies, an early understanding between the stones and the mortar. When the walls were being laid the stones said to the mortar: "Hold us for two years, and we will hold you forever!" Both stones and mortar seem to be by way of keeping their compact, though "forever" is a long time, and unsettling earthquakes are frequent.

There are records of prisoners of war having been confined in these towers, even records by the prisoners themselves may be deciphered on the jagged walls of the little stone chambers leading off from the winding stone stairways of one of the towers. But these prisoners have long since been freed from imprisonment of spirit as well as of body, and so their story is simply one of interest, not one of pain to dwellers in the overlooking gardens.

All are willing captives now in the neighbourhood. Even the big and the little owls, who think it wise not to go out by day, leave the old walls at night to sit upon our roof-tree, and give utterance at stated intervals to sentiments inspired by the moonlight. These sentiments are expressed usually by single lone calls; but the intervals are filled in with most pleasing reflections—whistles, trills, throbbing

> "Notes with many a winding bout
> Of linkéd sweetness long drawn out,"

by the nightingales, if it be May or early June; or, if it be late summer, the cricket punctuates the pauses in the Bird of Wisdom's call in his own peculiar, strident fashion of expressing content. I insist that there is no real sadness in the night or day.

There is plenty of motion about us, for the wind can blow steadily and strong down the path of the blue strait when once it gets started. But wind cannot always blow, and air in motion is not like the restlessness of man, or of things, in motion. The note of the shepherd's pipe as he comes down the hill heading his white flock is pitched in the minor key—again without sadness, but with much quiet feeling. Indeed the whole story of Bosphorus shepherd existence is expressed by the notes of this mellow, wooden reed thing of few stops and few changes. Perhaps the piper will halt to look into our garden—for he loves gardens, as do all true Eastern folk—and I see a rose behind his ear. Isn't this sign worth two roses in the hand to show true love of flowers? The piping shepherd is young—he always is—I don't believe he ever grows old, though such a long, long past seems to breathe through his crude, weird melodies!

It is wonderful how well gardens and gardeners harmonize in this part of the world. We each have treasures known to our own garden, and do not envy the rare plant across the low wall in our neighbour's enclosure. Of course, we have some plants, some time-honoured, poet-sung trees or blooms in common, or how could one answer the poet's inquiry:

> "Know ye the land where the cypress and myrtle
> Are emblems of deeds that are done in their clime?"

And how could maiden blush without the flower of the pomegranate to show her in what colour her cheeks do *not* bloom when she is moved with gentle excitement? For, Eastern poets to the contrary, not with maiden-red, nor rose-red, but with a bright brick-red blooms the fine, upstanding pomegranate tree in Bosphorus gardens. The oleander is another mutual garden possession, and the hauntingly fragrant jasmine, the lavender—whose sweet scent lingers on—and several of the mimosas. . . . But I must not give our secrets all away! Some of us were married from these gardens, and our secrets were respected by the flowers.

'Tis perhaps because we have such glorious, varied views in common that we have so little rivalry within our not-always-trim and sometimes delightfully half-wild borders. The muezzin, before calling to twilight prayer from the top of his white minaret on the hillside below, stops to look out upon the blue, winding strait, bordered with simple homes and homes of "high pretence," at the little sail-boats flitting here and there before the breeze, at the stately sea-going craft—bearing on independent of sail—then directly across the strait (at its narrowest point) into Asia, the land whence his people came. He sees the little fresh-water stream, the Sweet Waters of Asia, coming down from the far hills, a broad ribbon of green marking its path. It is almost too far for him to distinguish the contented forms of veiled women along its banks; but he knows they are there, sitting under the great plane trees, or just rising to go home, the men walking gravely apart, the children dancing on before them in happy unconcern. Yes, the muezzin knows his own land, his own people; but I doubt if he has ever heard of a certain great Darius, also of Asia, who came this way some twenty-four hundred years ago, and camped with his Persian hosts by these same Sweet Waters ere he crossed into Europe, the unknown. But why should one want to know this? Can it add to or take from a man's days? Isn't the world beautiful, even cruel enough, without history? "Kim bilir!"

The muezzin turns from contemplation of the view to the needs of the people in the little town at his feet—a little typically Turkish town, with its narrow, unevenly paved streets, its latticed windows, and the irregular architecture that somehow looks so perfectly in keeping in a picture; then, putting his hands to his face, he calls to the four winds—to the eastward first—that Allah is great, and the Faithful should come to prayer. The south wind brings up the peculiar vibrating cry to our garden, and carries it past us to the dervishes in the old tekkeh that crowns the hilltop. Here in the twilight the spirit of the East still dominates, the repose is unbroken, the note of mystery remains.

TANGIER TO TEHERAN.

I was rather surprised by the report that Prince Yussuf Izzeddin had actually accepted the Iron Cross which the Kaiser had been pleased to bestow on him. For, to say the least, the Prince has never shown himself a warm admirer of the Germans; and I decline to believe that their recent treatment of his country can have heightened his regard for them. Perhaps, however, he felt that he was entitled to some recompense for having to meet so many Huns every day, and, of course, an Iron Cross is still something of a curiosity—in Turkey.

***

This reminds me that the Germans in Constantinople, not content with revelling in the insults heaped upon the United States by the Wilhelmstrasse, are doing their best to make themselves as offensive as possible to Americans in the Turkish capital and in Turkey generally. It is credibly reported that the German "adviser" of the Turkish Ministry of Instruction is yearning to annex the numerous and well-equipped schools and colleges of the Americans, and that the late German Minister actually threatened that if the United States should declare war on Germany the Turks would at once confiscate all such American institutions, and others, such as hospitals. I should have thought that Mr. Morgenthau's truly admirable conduct since the outbreak of the war would have taught even a bullying Wangenheim that that kind of bluster was "not worth shucks." But apparently the Germans are too self-satisfied to learn little lessons of that kind.

***

The situation in Turkey is puzzling in more ways than one, and I am inclined to think that a good many of the accounts of the state of affairs in Constantinople that are served up for our edification are, to put it mildly, not half as accurate as they are pleasing—from our point of view. I am told, by one who ought to know, that far from being depressed or alarmed the Turks are extraordinarily confident. They seem to possess a capacity for swallowing German "fictions" that is shared by no other nation, and they look forward to a day, not far distant, when they will share with their Teuton "allies" the mastery of Europe. Fortunately for Europe, that rosy dream is not likely to be converted into reality; but nevertheless the Turks, I am told, are fondly indulging it, and a great many families are actually flocking into the capital from Asia Minor, with a view to taking part in the imminent division of the spoils! Their awakening is like to be a rude one. But it is to be wished that Athens would tell us of things as they *are*, not as it would like them to be, or thinks they ought to be.

***

Two incidents of peculiar interest to readers of THE NEAR EAST are recorded in the French official Note regarding "K. of K.'s" visit to France last week. The first is that which tells how his lordship, addressing a native officer of the Algerian spahis in Arabic, said that the "chiefs and native soldiers could be entirely confident in the final success of the Allies' cause," and how, "after a moment's astonishment, the native officer replied to the Field-Marshal that they all placed absolute faith on an ultimate victory." Now what accounted for that momentary astonishment of the Spahi officer? Not, I feel sure, the confident prediction of ultimate victory; for of that, under Providence, we none of us have any real doubt, least of all the brave men at the front. It seems to me that the use of Arabic must have been the reason of the Algerian's astonishment. Yet I should have thought that Lord Kitchener's acquaintance with the language would have been just one of the facts about him that our Ally's Arabic-speaking fighting-men would have learned long ago.

***

The second incident is told so delightfully in the French Note that I venture to reproduce it here, for, though you may have read it before, you will, I am sure, enjoy reading it again:—

> It was towards close of day, in the broad undulating plains of Champagne, when the motor-car in which the Field-Marshal was driving swung off the road and came suddenly face to face with a division of cavalry which was massed on the ground, and which was to march past the Secretary of State. Lord Kitchener left his car and went to meet the Divisional General, who, with a fine swing of his sword, saluted the illustrious guest of France. Then the British Minister, formerly the Sirdar, Sir Herbert Kitchener of Khartoum, recognised in General Baratier, the leader of the cavalry, a former member of the Marchand Mission. Lord Kitchener, pleasurably surprised at this meeting, shook hands with the General and recalled in a few words how their careers had touched on African soil. He then asked news of Colonel Marchand, now a General commanding a division on the front. The cavalry then galloped past the Field-Marshal.

The wording of that seems to me to be very happy. Old rivalries are not forgotten; they are forgiven. And we are not afraid—how annoyed the Huns must find it!—to mention them. Anyone who can recall the state of tension existing at the time of the "Marchand Mission" will realise the full significance of the meeting last week and the way in which it passed off.

***

Just after the Fashoda incident I was at Jibuti, when the French cruiser, "Bruix," was there and Major Marchand was expected to embark on her for France. And I can very clearly recall the state of excitement that port was in and the coolness with which the presence of Englishmen in the place was regarded. It was natural, of course. But what a change has come over the scene since those days! It has always seemed to me that the way in which the French and British "kissed and made it up" was vastly to the credit of both parties. And, as I have said before, the fact that we are not afraid to talk of our past differences is a sure sign that they *are* past. Our friendship, I hope and believe, is a lasting one—indeed, how can it be otherwise when we have been drawn so closely together as we have been in the last year? But I cannot picture any such incident as that which occurred on the plains of Champagne last week taking place between Briton and German for many a long day to come. Frenchman and Briton are chivalrous; but Germans—well, we have learned now what the Germans are.

***

I am sorry to hear that the disaster to the transport Royal Edward involved the loss of a large consignment of comforts that were destined for our sick and wounded at the Dardanelles and in Egypt. Even if these goods were insured—and one presumes that such an elementary precaution would certainly be taken by those responsible for their despatch—the loss is a bad business. For, not only will it take a long time to replace them, but it is to be feared that many of the men who might have benefited by them will now never do so at all.

***

A few days ago I was talking to a young Englishman who, far away in Asiatic Turkey when the war broke out, had heard the call of duty clearly and answered it promptly. He had been at the Front, had taken part in some of the hottest fighting—which he did *not* tell me himself, by the way—had been severely wounded, had been sent home, had had sundry pieces of shrapnel removed from various parts of his body, and was then able to get about—after a fashion—though he was still carrying round in him a shrapnel bullet that the surgeons could not extract. Looking at him, and hearing him talking quietly of his experiences, I found it hard to realise all this; for his appearance was very youthful and his manner as frank as any boy's; and, somehow, I felt more venerable and more of "a crock" than ever before. At the same time I was filled with pride at the thought that this youngster, and thousands of others like him, had been so prompt to respond to the call of England; had kept alive the love of their country, though cut off from it for so long, as this young man had been. It seemed to me, too, that in throwing together men from the small British communities that are scattered over the globe, men from our great colonies and men from the Mother Country, this war must surely do great things for the Empire. For which we may thank the Germans, even as we may thank them for teaching us to know and esteem our Allies.

***

But what I meant to write about when I began the preceding paragraph was this: The young man, in showing me some of his trophies, produced a couple of live cartridges which he had taken off a dead German, and in one of them the *bullet had been reversed*. I cannot tell you what the sight of that evil-looking, blunt-nosed cartridge made me feel, but I am sure that such things would prove very useful to the recruiting sergeants. I had heard of the thing being done, of course, often enough, but I had never had ocular proof of it before. Now I have. And it has made a difference! And as I looked on that bit of evidence of German *kultur*, I thought of the many, many cases of "dum-dums" that were being sent out to Busreh by the Germans, for the use of the Turks against our troops, some months ago, and were discovered and confiscated at Port Said. I have known of their existence a long time, but I have never mentioned them before, because it seemed too horrible a thing to write about, even of the Germans. But now—well, I have seen that cartridge, taken off a dead Hun by a young Englishman who came from Turkey.

THE PRESS ON THE NEAR EAST.

Italy and the Balkans.

The *Morning Post* (August 23) devoted a leading article to Italy's declaration of war upon Turkey, under the title of "Tests of Friendship." It is shown that although Italy had ample reason for a declaration of hostilities, the most significant point regarding her action is to be found in the proof which it carries that she has recognized that her future is bound up not only with the success of her armies against Austria, but with the success of the Entente Powers as a whole. Contrary to the general experience of successful armies, Germany is shown to be gaining new enemies with each advance.

All the little nations of the Balkans, for example, see in the approach of Germany the gravest possible threat to their independence. Germany openly boasts of the road she means to cut through to Constantinople. What would such a road mean for Roumania, Bulgaria and Greece? It would mean for them the loss of their freedom. If such a road were made they would then be at the mercy of German power. Therefore, the victory of Germany can only arouse in their hearts a stronger sympathy with the cause of the Entente.

Apart, therefore, from another point mentioned, that of Russian and British sympathy and interest in the Balkans, the paper considers that the Balkans will combine to crush the common foe, if only to preserve their own independence.

The retreat of Russia is a danger to the Balkans, since it means the advance of Germany. Russia has never threatened their independence: she has never been the friend of Turkey. We may therefore find reasons for good cheer in these recent events. The further Germany advances, the more formidable she becomes, the keener will be the realisation of the small nations of Europe that upon the victory of the Entente their liberties depend.

Germany and Armenia.

The *Manchester Guardian* (August 23) concludes a leading article upon the Armenian massacres with the paragraph which we quote below. The paper says that from one point only could any relief to the Armenians come, and from that point there has been absolute silence:—

Not a word has been said of the plight of the Armenians in the German press. The German officials in Turkey are said not only to approve of, but actually to encourage the Turks in their atrocities. The explanation is obvious. It is not only that they wish to gratify the Turks. For the Germans the Armenians are only a disintegrating factor in a country whose strength is necessary to them in the present struggle. Their traditional attitude has been one of callousness and scarcely disguised contempt towards the Armenians; and it is in the course of things that they should now look on unmoved while the race is gradually being exterminated. It will not be the least heavy of the counts against Germany in her trial before history.

Jerusalem in War Time.

The *Catholic Times* (August 13) publishes an interesting story of Jerusalem in war time, which it takes from an account which Father Legrange, O.P., has contributed to a French periodical. Father Legrange's story only goes to confirm the statements made by all other residents and travellers in the Holy Land at the beginning of the war, that the general Mahomedan population, left to itself, was all in favour of the Allies, and that the gradual transference of sympathy to the side of Germany was due to the clever and tireless propaganda spread by the German agents:—

The country was flooded with news-sheets, which retailed in French, German, and Arabic shameless horrors alleged to have been committed by Belgian women on German wounded, and cruelties said to have been practised by the English on their prisoners, and extolled the might and majesty of the Emperor William.

As a result of this lying large numbers of people flocked from the coast to Jerusalem as soon as war was declared, but in spite of it, and in spite also of the declaration of a Holy War, the Turks themselves seem to have remained universally considerate to the Christians. Father Legrange has no hesitation in saying that the first orders for the suppression of schools and convents were due to the Germans, whose aim was to eliminate French influence:—

They proceeded with their usual thoroughness. They expelled even the good Sisters, who had never raised a shadow of suspicion, and thereby cast on the streets numbers of children, of old and infirm. They had priests and monks deported to be detained in a dreary solitude as hostages, or perhaps to meet a worse fate. . . . Prussian officers rule supreme in Jerusalem. Mohammed William is the real Sultan. It will be surprising if duplicity and violence do not defeat their own ends, if those who have risen by the sword do not fall by the sword. We can look forward to the day, perhaps not so far off, when under a fairer and juster rule the religious Orders will return to their own.

The Deluded Turk.

The *Journal de Genève* (August 15) devoted a leading article to the inevitable rupture between Italy and Turkey. The writer recounts the various causes which were each good and sufficient to justify Italy in declaring war, and points out that the Tripolitan situation constitutes a grave danger for Italy. The article concludes:—

La Turquie évidemment joue le tout pour le tout. Ses alliés lui persuadent que les Dardanelles ne seront jamais conquises et que l'occasion est favorable pour le Grand-Turc de reprendre pied dans cette Afrique du nord où il fut le maître et où les Italiens lui ont arraché le dernier morceau de son empire exotique. Ce jeu aura pour résultat d'amener les troupes italiennes dans la presqu'île de Gallipoli. Rome enverra ses légions pour tenter de reprendre aux Turcs la ville où Constantin le Grand transporta il y a quinze cents ans la capitale de l'empire romain.

The Issues in the East.

Mr. Charles Roden Buxton prefaces an article under the above heading in *War and Peace* (August) by remarking that

It would be a great mistake to suppose that the Empire of the Hapsburgs no longer counts as a powerful force. With regard to the Turks, also, there is a danger lest we should underrate the magnitude of the work before us, or the extent of the achievement already accomplished in European Turkey by our sailors and soldiers.

In estimating the issues in the East the writer analyses the results which would follow the respective victories of Russia or Austria.

If Austria won it would be impossible to satisfy the desires of the Serbo-Croat and Roumanian races for unity and freedom, because it is only at the expense of Austria-Hungary that such unity and freedom can be obtained. The unity and freedom of the Greek and Armenian races would also be rendered impossible, because they could only be obtained at the expense of Turkey in Asia, and Turkey is Austria's ally. If neither Serbia nor Roumania nor Greece can secure their legitimate expansion, it would be difficult in the extreme to secure to Bulgaria the small pieces of territory which are needed to complete Bulgarian unity, but which are now held as the result of the second Balkan war by Serbia, Roumania and Greece respectively.

On the other hand, Mr. Buxton shows that the necessary concession to Bulgaria would be a matter of no difficulty if, by the victory of Russia, Serbia, Greece, and Roumania secured the fulfilment of their aspirations. Armenia, too, would profit, possibly to the degree of obtaining the autonomy which is the goal of their hopes, or at least of being freed from the danger of constant oppression and massacre. Regarding the anxiety of the Balkans concerning Russia's position in the Straits, the writer says that "in any case it would not infringe the strictly national rights of any State.

Articles to Note.

"The Ancient History of Persia," by Lieut.-Colonel P. M. Sykes; "The United Balkan States," by Oliver Bainbridge; "The Land Where East Meets West: From the Austro-Italian Border to Dalmatia," by Maude M. Holbach; and "More Quatrains of 'Omar Khayyam,'" by John Pollen, in the *Asiatic Review* (August 16).

"The Trembling Balance of the Balkans," in the *Graphic* (August 21).

"Some Serbian Experiences," in the *New Witness* (August 19).

"Notes on the Typhus Epidemic in Serbia, 1915," by T. Gwynne Maitland, in the *British Medical Journal* (August 21).

On Wednesday afternoon a private view of cinematograph pictures taken by Colonel Ahearne, V.D., R.A.M.C., during his recent visit to Serbia and Greece was given at Gaumont's private theatre in Denman Street. The films, about 3,000 feet in all, gave an excellent idea of medical work with the Serbian Army as well as some views of Serbian scenery and Serbian troops.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The article by Mr. J. M. Kennedy on German methods in the Near East is, primarily, of interest because it throws some light on a little-known function of the Anti-German Union. This function is: to strengthen our commercial and industrial position in order to enable us the better to develop our trade campaign in those countries where, owing to German machinations, we have steadily been losing ground. In order the better to achieve this worthy aim, the Union has, in the first place, organised a business section, or committee, the first object of which seems to be to collect all data and information concerning German business methods in various countries, also particulars concerning trade openings and the means which we can honestly employ in order to counteract German influence. Any information, therefore, which readers of THE NEAR EAST can place at the disposal of the Union will, I am sure, be welcomed because tending to strengthen the hands of the organising committee.

***

We are, admittedly, an apathetic people, and indifference as to our real interests has been our greatest enemy. The Anti-German Union, in bringing together a body of British manufacturers who will be enabled, by the application of co-operative methods, to meet the organised competition of alien firms, has begun its campaign against apathy in the right direction. The aid derived by trade as a whole from the Consular Service and from Chambers of Commerce is, in five cases out of six, academic and negative; the only real aid can come from the traders themselves, from a powerful grouping together of manufacturers who will be so strong as to be able to influence "*both the banks and the shipping companies.*" This, to readers of THE NEAR EAST, is familiar ground, as I have continually urged the same policy in these columns, more particularly as regards the countries covered by this journal, and it is, therefore, with keen pleasure that I commend the aims of the Union. If they succeed in breaking down the barrier of our national apathy; if they succeed in persuading manufacturers and financiers, shipping companies and industrial magnates, that organisation and co-operation are necessary to the expansion of our trade and vital if we are to combat Germany in commercial spheres; and, finally, if they succeed in forming an industrial group, so powerful as to *force* banks to co-operate with industry and trade instead of, as generally happens, ignoring them—then, the Anti-German Union will have deserved well of the Empire. Other reforms—consular, etc.—which some enthusiasts consider the first measures to be introduced, will follow as a matter of course, because, once the group is formed, it will be in a position to force the Government in trade matters as it will have been able to influence the banking world. In conclusion, I may state that the Secretary, 346, Strand, W.C., will be glad to supply further details of the work of the committee to any business houses or private individuals who care to communicate with him on the subject.

***

"There seems to be no prospect of starving Constantinople of coal," writes our Special Correspondent in Athens. This is to be regretted. I have continually urged the utter destruction of Zunguldak—its harbour, quays, and loading facilities—and at times reports have come through from Russian sources confirming that country's successful naval operations against the small Black Sea port. However, the damage done does not seem to have been very serious, because coal loading has continued, and coal-laden ships have sailed freely down the Bosphorus to Constantinople. Now and again we hear that some Turkish colliers have been sunk, but we do not hear of the many which successfully run the blockade. Until the source of the supply has been definitely interfered with, I am afraid that our Special Correspondent will have no cause to alter his opinion.

***

Since writing the above, a further despatch has been received from our Special Correspondent in Athens, dated August 16, in the course of which he says: "The Russians have again bombarded Zunguldak, and have this time caused serious damage to the port." *Inshallah!*

***

The second Constantinople fire within the past few months seems to have been the more disastrous of the two, about 1,000 buildings, including fifteen residential flats, having been destroyed. In both cases the fires seem to have been the work of incendiaries—a class of hooligans who thrive plentifully in Stamboul whenever the country is in the throes of turmoil or war. In old Byzantium fires were frequent, and they are no less so to-day. There was a disastrous fire during the Balkan War, and two have already occurred since Turkey began hostilities. What I greatly fear is that, on the occasion of our great advance on Constantinople, unless the greatest care and precaution is taken, incendiarism will be rampant, with terrible results to the great city on the Bosphorus. Let us hope that this danger will be averted, but it is only right that we should know what to expect.

***

Cabling on August 19 from Athens, Reuter's correspondent stated that the formation of a Cabinet by M. Venizelos depended mainly "upon the solution of the financial problem and the conditions of the Entente for a loan." On the following day the *Times*' Athens correspondent stated that "it appears that M. Venizelos has demanded, in the event of his agreeing to form a Cabinet, information from the Entente Powers regarding their attitude in general, and especially whether he could rely on their support for the conclusion of a loan in Paris and London without political restrictions." Since the above two reports were published M. Venizelos has formed his Cabinet, but nothing is known as to the nature of his negotiations with the Entente Ministers, nor of the likelihood of a loan. In any case, I think it is hardly likely that, in view of Mr. Asquith's reference some time ago to possible advances out of the War Loan to prospective Allies, any future financial operations with Greece (supposing such operations to become advisable) will take the shape of a loan in the open market. An eventual advance seems to me to be the more probable procedure.

***

On the other hand, the Salonika correspondent of the *Echo de Paris* telegraphs that "Great Britain has agreed to Greece's request for the reimbursement of the sums paid to British arsenals on account of the torpedo destroyers being built for her when the war broke out and subsequently requisitioned by Britain. At the request of the British Government the Banque Nationale de Grece will accordingly pay into the Greek Treasury the sum of 2½ million drachmae." There is, as yet, no confirmation of the above statement.

***

The shareholders of the European Oilfields met on Tuesday to adopt the directors' report for the year. In view of the existing state of affairs in Europe, the balance-sheet must be considered as satisfactory. The gross income was roughly £62,627, of which £57,439 was derived from profits on trading. Of this, £300 has been given to war funds, the debenture service took £15,125, and the balance was carried to the profit and loss account. £25,000 has been added to the reserve for depreciation, renewals, and general purposes, bringing the total up to £110,000. Mr. Herbert Allen, the chairman of the company, in his speech referred to elsewhere, explained the situation to the shareholders and must be complimented on his able exposé. Some dissatisfaction was expressed at the meeting that no dividend was being paid, but as the chairman subsequently explained, they had redeemed a lot of debenture stock. Besides, the great rise in the Russian Exchange and the difficulty of obtaining remittances from Russia obliged the directors to keep important liquid assets in hand, and the decision had only been arrived at after consultation with some of the largest shareholders who were strongly in favour of the non-payment of a dividend. The explanation was considered satisfactory by the shareholders, there being only a few dissentient votes.

***

"From the first three days of the war," writes a Neutral in the *Times*, "Americans leaving Berlin, Vienna, Budapest, Munich, Frankfurt, and elsewhere were provided with newspapers printed in English praising the German cause and denouncing that of Great Britain. In Athens I have found German newspapers printed in Greek; in Bucharest German papers printed in Roumanian; and in Sofia printed in Bulgarian. The Turks were deluged with German newspapers printed in Turkish, and a weird publication, the *Continental Times*, is printed in English and circulated for travelling Americans." What further proof is needed of the statement frequently made in these columns to the effect that Germany is a past master in the gentle art of suborning irreputable journals.

***

Those who have visited the Roumanian capital recently say that never was Bucharest more prosperous and more supplied with money than nowadays. "A journalist tells me" (says the Budapest correspondent of the *Morning Post*) "that the smallest newspaper shop proprietor could change a 1,000-fr. note, and although everything is very expensive, no one objects to paying 5 fr. for a ribbon or 30 fr. for a small room in a third-class hotel. Peasants bringing up their cattle, sheep, and pigs are getting magnificent prices for their stock from German and Austrian agents, and foodstuffs are paid for in gold and at three times as great a price as last year."

COMMENTATOR.

Britain and the Near East.

The Scope of the Anti-German Union.

Though but recently organised, the Anti-German Union is doing solid work in furthering the organisation of all home industrial forces with a view to preparing for the great commercial campaign against German trade which is bound to ensue as soon as the purely military and political war has come to an end. The objects of the Union, together with some appropriate particulars concerning German methods in the Near East, are outlined in the following article, expressly written for THE NEAR EAST by Mr. J. M. Kennedy, secretary of the Business Committee of the Union. Editorial comments on the work of the Union will be found on a preceding page.

British Manufacturing Interests.

The Business Committee of the Anti-German Union has been formed for the purpose of protecting the interests of British manufacturers at home and abroad from foreign competition and of aiding in the extension of British trade in the international markets, especially where such trade has previously been in the hands of German and Austrian manufacturers. It is realised by the members of the committee that, when the war is over, England herself will probably have to enter upon a severe struggle for the maintenance, and even in some cases the recovery, of her foreign trade. In doing this she will have to fight against the strenuous competition of German and, no doubt, American firms also; but, in view of the economic losses which German firms will have suffered in consequence of the war, it may be taken as certain that the German Government especially will make every effort to support its own subjects in the economic sphere.

Taking all these facts into consideration, the Committee is at present making arrangements to bring together a highly organised body of British manufacturing interests—a group of producers who will be enabled, by the scientific application of co-operative methods, to meet the organised competition of alien firms. It is particularly to be noted that this body of manufacturers will be so strong as to be able to influence for their mutual benefit both the banks and the shipping companies.

Reduced British Exports.

Readers of THE NEAR EAST do not need to be reminded that the Balkan States, Turkey, Roumania, Egypt, and Persia—in fact, the areas covered by the paper itself—are countries which form particularly suitable ground for financial and commercial development. It is hardly necessary to quote actual figures on this point, for since the beginning of the war the Board of Trade has issued several pamphlets indicating the extent of German and Austrian trade in the Near East, and pointing out in which branches of it it is possible for British firms to compete with advantage. It is, nevertheless, worth while reminding even the business community interested in these markets that during the last twenty or thirty years practically every branch of the English export trade has suffered from subsidised competition by German and Austrian firms in the Near Eastern markets. To take a few instances at haphazard: The Westphalian Coal Syndicate, one of the most important German trusts, has been exporting large quantities of fuel to Greece, Roumania, Bulgaria, Serbia, and Turkey. The exports for 1913 amounted to nearly 360,000 tons—a figure which does not include exports to Asia Minor. Again, to take a branch of business in Egypt, England's participation in the export of building materials has been dwindling in almost the same proportion as German and Austrian exports to Egypt have been increasing. The two enemy countries have been sending to Egypt building materials of every description—timber, cement, paints, varnishes, tiles, drain pipes, and iron, steel and metal goods of every kind. Of this trade Great Britain's share in 1912 was only 16 per cent., and in 1913 only 14.8 per cent. In machinery Germany has, of course, become predominant in a great many Near Eastern markets. Thanks to the preferential rates allowed them by their Governments, German and Austro-Hungarian firms can export their goods at the minimum cost of transport to all the Balkan States, and at proportionately low rates to Turkey and Egypt. Throughout the Balkans, in Turkey, in Roumania, and, indeed, in Egypt and Persia as well, the traveller will find at work steam, oil, and gas engines from Germany, and ploughs, waterwheels, oil-presses, and all kinds of textile and agricultural machinery from Austria-Hungary. Even now the Central Powers have almost a monopoly of the business transacted in the Balkans in such items as iron joists, iron bars and angles, wire, and electric and gas fittings.

Baghdad Railway.

It is not in manufactured goods alone, however, that we find the full effects of our rival's abilities. In finance Germany has made herself such a power in the Ottoman Empire that until the outbreak of war competition with German banks was in many quarters regarded as all but useless. Through the system of dummy directors—which is not unassociated with German firms in this country—it became possible for German financial groups to control undertakings in the Near East which were nominally French or Turkish, Russian or Greek, as the case might be. It is sufficient to consider one notorious instance of German development in Asia Minor—viz., the Baghdad Railway. Beginning in the closing years of the last century with a comparatively small concession, the German bankers and manufacturers interested in this scheme gradually tightened their economic and political grip on the Turkish Government until one favour after another was wrung willy-nilly out of the reluctant Porte. As the concession finally stood last summer, the Baghdad Railway was not merely a line running from Constantinople to Baghdad, but a whole network of tracks covering important towns on even the Levant coast. This gigantic scheme reached its fruition thanks to the organised efforts of German financiers and manufacturers and business men, who achieved their economic ends in spite of the rather ill-organised—and, it must be confessed, ill-informed—opposition of the French and British Governments. The story of the Baghdad Railway is the story of the scientific efforts of imaginative yet practical business men directed to a common end, and of the much less able counter-efforts of ill-instructed politicians.

A glance at its constitution will show the enormous powers which German manufacturers were able to secure from the Porte. The company was authorized:—

To dig harbours and provide them with the installations and apparatus necessary for the landing of ships at the quays.

To provide warehouses for the storage of goods.

To establish steamship services on the River Tigris and the River Euphrates.

To exploit the coal, copper, and such other mines as there might be, within a radius of twenty kilometres on either side of the railway line.

To carry on as much timber cutting as desired in the adjacent forests.

To establish railway stores and warehouses, which the public could use on payment.

To build electric power-houses.

To exercise a monopoly of all brick and tile works to be founded on the territory ceded to it.

To build aqueducts and to carry water from and to certain specified points.

Banking Facilities.

It need hardly be said that the German manufacturers could not have carried such a scheme through if they had not had the cordial support of their banking institutions; and this is the point on which the Business Committee lays great stress. As a result of the extended credit facilities which the banks enable German manufacturers to offer, and of the new Currency Law passed in the United States in 1913, it happens that the foreign trade of our two greatest competitors can be financed, generally speaking, on easier terms than our own. To mention the Deutsche Bank in this connection is sufficient to remind any English oversea trader of the manner in which German financiers have consistently aided German manufacturers.

With the inevitable reconstruction of the Turkish Empire at the end of the war, many serious problems relating to finance and trade will necessarily have to be considered; and, in view of the lack of judgment which so many of our political advisers have shown in dealing with these matters during the last two decades, the Business Committee of the Anti-German Union expects to be in a position to serve its members by directing the attention of Parliament, business men, and the public generally to questions affecting British interests in Turkey and the Near East. Among these questions the Baghdad Railway naturally finds the chief place; but other important trade questions, many of which hinge upon the German scheme, will naturally be considered also.

Trade Protection in Egypt.

The following are extracts from an article in the current issue of the *Monthly Journal* of the British Chamber of Commerce of Egypt:—

Piece Goods.

"Attention has been frequently drawn to the growing practice in this market of false folding of piece goods, and the marking of goods in general in such a manner as to deceive either the retailer or the consumer that the quantity of goods contained in the parcel or roll is greater than it actually is.

"The confusion arising from the diversity of the systems of weights and measures in use in Egypt and the opportunities offered thereby for fraud had the consideration of the Chamber in 1913, and a detailed report on this subject, more especially as regards the sale of piece goods was placed before Lord Kitchener. The Chamber expressed the opinion that if one system of weights and measures were adopted for the whole country, fraudulent practices of this description would become less easy, and suggested that the French metric system should be given the preference, firstly, because it was already used by some of the Government buying departments, and secondly, because the natives already knew something about it.

"In June, 1913, the draft of a new law providing for the use of the Egyptian weights and measures, as well as the metric system and the English weights and measures, was approved by the Legislative Assembly of the Mixed Tribunals, which represent the various European communities in Egypt, without any opportunity being offered for the expression of interested opinion, and this draft was subsequently sanctioned by the native Legislative Assembly and became law.

"We understand that the Alexandria Importers' Association have now recently called the attention of the Government anew to the prejudices arising out of the present confusion of weights and measures, and to the fraudulent misrepresentation of quantities which are so common in Egypt.

"Among instances cited by the Association is that of rolls of piece goods sold by the roll which are marked by the number 40, which is intended to convey the impression that the piece consists of forty yards, whereas in fact it contains considerably less. Again, a packet of straw paper marked 50, i.e., 50 kilograms, generally contains 48,47 or even 46 kilograms; boxes of starch marked 25 contain 23 or 22 kilograms; barrels of nails bearing the number 25 contain 23 or 22 kilograms; barrels of cement marked 200 contain not more than 180 kilograms, those marked 150 only 135-140 kilograms; sacks of flour supposed to contain 100 kilograms only weigh 95 kilograms, and so on.

"Even in retail trade, especially in dealings with natives, goods are weighed in a thick piece of paper approaching cardboard in texture. The Importers' Association suggest that legislation be introduced into Egypt whereby all sales should be made according to a recognised system of weights and measures and not by package, piece, sack, bale or case, and further that all merchandise imported into Egypt for the purpose of sale should bear either on the package or the article itself a clear indication of the weight, volume or length of the article. These suggestions will, we think, have the support of all respectable traders engaged in the import trade.

"Scotch" Whisky.

"But the misrepresentation of quantities forms only one part of the great and growing evil of unfair competition in Egypt. The counterfeiting of private marks is exceedingly common in Egypt, and also the use of descriptions calculated to deceive the public as to the country of origin. This is particularly the case in the liquor trade, where 'Scotch' whisky locally distilled, French and Italian wines and liquors which originate in Alexandria, are sold as the real article. In this case the authorities, for military reasons and not with a view to the protection of trade, have, under martial law, taken proceedings and have inflicted in a number of cases well deserved penalties.

Other Frauds.

"The bottles of a well-known British scent manufacturer have been for some years past refilled locally, with inferior perfume and peddled in the streets. A case in which an inferior olive oil has been bottled to imitate the product of a well-known London firm has been recently brought to our notice. Another typical fraud is that of, perhaps, the most used boot polish, which is manufactured locally, but bears prominently the word 'London.' These are a few examples amongst many, but enough has been said to show the extent of the evil.

"We are pleased to read in the report of the Judicial Adviser for 1914, which has recently been published, that modification in the laws of the country are now under consideration. We hope that now Egypt has been declared a British protectorate, the necessity of introducing legislation for the protection of trade, the prevention of unfair competition and fraudulent misrepresentation, will have the earnest attention of the authorities, and when the proper time comes the Chamber of Commerce, which is admittedly competent to give advice on this subject, will be consulted

"It would seem that the question of the preparation of legislation similar to that in force in India is deserving of the attention of the Government, subject to such modifications as local conditions require. We can assure the authorities that in this work they will have the fullest support of every respectable trader in this country. A very far-reaching and complete system of commerce protection laws exist in India under the denomination of the Indian Merchandise Marks Act. Under this act the Customs authorities have the power to stop the goods imported for sale coming under the following categories:—

(1) Goods having applied to them counterfeit trade marks or other indication that they are the manufacture or merchandise of a *person* whose manufacture or merchandise they are not.

(2) Goods having applied to them false trade descriptions or other indications in respect of the *country* in which they were made or produced.

(3) Goods having applied to them false trade descriptions that are false in other respects (this includes marks, numbers or description which are likely to deceive as to quality or quantity).

(4) Piece goods which have not the length properly stamped on each piece."

THE WORLD'S POTASH.

The potash hitherto used in this country has been chiefly derived from the enormous deposits of potash salts which occur near Stassfurt, in the north of Germany. These deposits have been systematically and economically worked and the trade so well organised that German potash, on account of its cheapness, became the almost exclusive source of the potash required throughout the world. The German source being no longer available it has become necessary to take stock of other sources of supply, and these are considered in "The World's Supply of Potash," a pamphlet just issued by the Imperial Institute.

In this pamphlet, which forms, in fact, a miniature encyclopædia of its subject, both the old and new sources of potash are described so far as details are available. Certain of these will probably only be utilised so long as the price of potash continues high, but others promise to become active competitors with the Stassfurt deposits, even when prices again fall to their usual level.

The chief use of potash, usually in the form of the chloride or sulphate, is as an artificial manure, for which purpose over 90 per cent. of the world's output is employed. But potash is also essential for numerous chemical industries carried on in this country, and for the manufacture of the finest kinds of glass, and the present scarcity is having considerable effects on these industries.

The price of "The World's Supply of Potash" is one shilling post free, and application for copies, enclosing remittance, should be made to the Imperial Institute, South Kensington, S.W.

ROUMANIAN COMMERCIAL NOTES.

(From a Correspondent.)

Bucharest, August 17.

Presuming that the operations of the Allies at the Dardanelles will soon be crowned with success and the Black Sea again open to navigation, the position of Roumania is well worth the attention of British exporters.

There is a scarcity in this country of all goods which require to be imported, and an over-abundance of those products—cereals, petroleum, and timber—which Roumania exports.

A certain amount of trade is being carried on with Austria and Germany by the land route, but the railways are quite unable to cope with the requirements of either importers or exporters, and it is fully recognised that not until the Black Sea is again open to navigation will Roumania be able to obtain the supplies of which she stands in need, and to export her products.

British trade here has been losing ground, except in a few special branches. Two amongst the many causes are the competition of lower class German goods and the long-payment terms which have been gradually introduced and extended. These causes will disappear for the time being at least. The German and Austro-Hungarian goods cannot come in except to a very small extent, and the better-class dealer is now quite resigned to the fact that he will have to pay for his goods within a reasonable time.

It would obviously be impossible for British exporters to take orders now for delivery after the opening of the Dardanelles, but what could be done would be for exporters to have arrangements made with agents on the spot, so that operations could be commenced immediately the sea route is free. These agents should be thoroughly and regularly posted as regards prices without having to wait for information from the other side. A return letter during the war from Bucharest to London and back takes from twenty-four to forty days or more, so that there is no time to post inquiries.

Practically all kinds of goods can be sold, but a few of the bulk articles in enormous demand are: cotton yarn and piece goods; all grades of woollen piece-goods; jute sacks and piece-goods; coal (steam, household and gas), foundry coke, pig-iron, construction iron, pig lead, pipes (C.I.W.D. and steel for gas and water mains, oil lines, and oil wells); tinplates for roofing and cans; rice, tea, coffee, drugs and chemicals.

Several of the articles mentioned above are provisionally on the prohibited list, but export licences might eventually be obtained.

Roumania holds products of which Britain stands in need, and judging by her present dealings with Austria-Hungary and Germany she will not allow those products to be exported except in return for the import of goods required.

Trade Notes.

Egypt.

The State Railways and Telegraphs Administration, Cairo Station, Cairo, calls for tenders for the supply of 970 metric tons of mineral oil. September 20, 1915.

The *Journal Officiel* for August 2 contains a notice giving the following revised tariff valuations for use in assessing duties on certain metals imported into Egypt, which came into force on August 1, and are to remain in operation until September 30, or until denunciation.

The same issue of the *Journal Officiel* contains tariff valuations for petroleum on importation into Egypt, which are to remain in force from August 1 to 31.

Tenders will be received at the Administration of the Egyptian State Railways and Telegraphs for the supply of 5,000 uniforms required for the year 1916, or 15,000 uniforms for the years 1916, 1917, and 1918. September 25.

The Economat Central, Ministry of Finance, Cairo, calls for tenders for the supply of agendas. September 16.

The War Office, Cairo, invites tenders for the supply of 1,200 okes of sole leather at the Citadel Stores, Cairo. September 1.

The War Office, Cairo, offers for sale a second-hand X-Ray apparatus complete, now at the Egyptian Army Hospital, Pont de Kubba. September 6.

The Director, Coast Guard Western Directorate, Alexandria, offers for sale a dahabia, with her gear, at the Coast Guard Brullos District (Borg el Brullos). Specification may be seen and all information obtained also at the Headquarters, Bab el Lûq, Cairo, as well as at the Brullos District Office. September 6.

Morocco.

H.M. Consul-General at Tangier reports that a French firm in that town wishes to represent in Morocco United Kingdom manufacturers of white shirtings; cotton and woollen tissues for men's and women's clothing; socks and stockings of cotton, wool and silk; various kinds of handkerchiefs; green tea; rice; confectionery; packing and commercial papers; preserved fish, fruit, etc.; glassware; constructional and corrugated galvanized iron; and cement. United Kingdom manufacturers and exporters of the goods mentioned should apply to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., for the name and address of the inquirer.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that an Order of the General Commander-in-Chief was published in a recent issue of the Official Bulletin of the French Zone in Morocco, prohibiting the exportation from the French Zone of French gold, silver, or nickel coins. Persons leaving the Zone by sea are allowed to take with them in cash a maximum sum of 250 fr., of which not more than 50 fr. may be in silver or 10 fr. in nickel.

The Board of Trade are in receipt, through the Foreign Office, of copy of an Order, dated July 12, which fixes as follows the quantity of certain cereals and pulse which may be allowed to be exported each month to Tangier, viz.:—Wheat, 4,000 quintals; barley, 3,000 quintals; maize, 1,000 quintals; flour, 1,200 quintals; semolina, 1,200 quintals; beans, 500 quintals; and chickpeas, 300 quintals.

The Board of Trade are in receipt, through the Foreign Office, of copy of a tariff showing the valuations of the principal articles of

merchandise imported into Morocco. These valuations form the basis on which duty is to be assessed by the Moorish Customs Administration during the second half of the year 1915.

Tunis.

The Board of Trade are in receipt, through the Foreign Office, of copies of two Beylical Decrees, dated July 13 and 16, extending the prohibition to include the articles which were prohibited to be exported from France by the Presidential Decrees of July 3, viz. :—Arsenic and its salts; hydrochloric acid; sulphide of carbon, and sulphide of sodium; phosphuretted products (produits phosphorés) of all kinds; and gold, unmanufactured, in lumps, ingots, bars, powder, scrap (broken articles), and gold coins.

Tripoli.

After nearly 2½ years' perpetual drilling, an artesian flow of water has been found at a depth of 1,493 ft. in a well at Sidi Messri, a few miles from Tripoli. As this drilling has been successfully carried out, it is certain that numerous wells will be now taken up, and therefore there ought to be a good opportunity (says a Consular report) of selling drill materials to the Italian Government. The harbour is now being improved, and a firm has recently been established for credit operations and storage of goods.

Greece.

H.M. Consul at Piræus reports that tenders are invited by the Greek Ministry of Finances for the supply and delivery, at that port, of quinine required for the needs of the Government. Copies of the conditions of tender may be obtained from the "Ministère des Finances," Athens, where also sealed tenders, accompanied by samples, will be received up to September 1/14. A certificate of the deposit of 2,000 fr. (£80) with the Greek Treasury or the Greek National Bank is required to qualify any tender. A copy of the Greek *Government Gazette* of July 13/26, containing the conditions of tender and particulars of the quantities required (in French), may be consulted by United Kingdom quinine manufacturers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Roumania.

Commercial circles in the United States are exercising great efforts in order to establish a market for American goods in the Balkans, especially in harvesting and other agricultural machinery. An American merchant in Bucharest is advising manufacturers to consign large stocks, to be kept in readiness should the war suddenly come to an end.

Bulgaria.

The Board of Trade are in receipt, through the Foreign Office, of telegraphic information to the effect that the prohibition of the exportation of bran from Bulgaria has been withdrawn, and that beans, lentils, peas and millet, the produce of the 1914 crop, will in future also be allowed to be exported from Bulgaria.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continue to receive a very large number of inquiries for the names of sellers or buyers of articles of which the sources of supply or markets have been interfered with by the war.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and the weekly list of articles (No. 35) which inquirers desire to purchase is ready, and may be obtained by United Kingdom manufacturers and exporters of British goods.

Mesopotamia Trade.

The following are extracts from a United States Consular report for 1914:—

Exports.

The principal raw articles exported from Baghdad are wools, gums, galls, sheep and goat skins, hides, licorice root, and dates (from Busreh). The wool is a strong cross-bred variety, particularly suited to the manufacture of carpets, horse cloths, blankets, and worsteds. America has been a large buyer in past years. The wool could be considerably improved by proper breeding and selection, and the quantity available for export will increase with the fertilization of the country. Gallnuts are received from Mosul and are exported in large quantities to London, Hamburg, and Marseille. Gum tragacanth is a valuable export and is an important item in the reciprocating trade with Persia. London is the principal buying market. Hides and skins of both Persian and Arabic origin are shipped to the Continent of Europe and to England. These are of good quality, but their value is reduced by defects in handling. Licorice, which grows wild in great abundance, is practically the monopoly of an American company. The growth of this article will probably be restricted as the agricultural development of the land proceeds.

Among the many agricultural products of the districts of Busreh, Baghdad, and Mosul are found considerable quantities of dates and various varieties of fruits. Exportations of dates have been made from Busreh to Europe and America for many years, but the fruits of Mesopotamia have never been exported to any considerable extent. During the winter oranges are very plentiful and very good. Around Baghdad there are many gardens full of orange trees, and these form the basis for a considerable income to local growers. It is not improbable that extensive gardens, properly managed, would develop this industry to such an extent that the exportation of oranges would be a paying business. During the summer there are large quantities of grapes placed on the market, and these also might form the basis for a considerable development in the fruit trade. Perhaps, however, were they to be grown very extensively, a wine industry of importance might be established in one of these districts.

Imports.

Cotton piece goods form the principal article of import into Baghdad. Manchester supplies the greatest proportion of this market's requirements, but in recent years India has competed successfully with gray goods. India has also captured from England extensive trade in cotton yarns and twist. The bulk of these importations are destined for the Persian markets of Kermanshah and Hamadan.

Other articles of bulk importation are: Loaf sugar, of French, Belgian and Austrian origin; crystal sugar, of French, Belgian, and Austrian origin; matches from Sweden; block tin from London and Bombay; copper sheets and bottoms from London and the Continent; candles, India and Belgium; cloth and woollens, Germany; silk piece goods and raw silk, Japan and China; window glass, Belgium; rod and bar iron, London; paints and oils, England and Germany; tea and coffee, India and England; indigo, India; grain and sacks, India.

There is also a growing trade in building materials, such as sawn wood of various kinds, iron girders, door and window fittings, and other household hardware.

Baghdad as a Distributing Centre.

Baghdad's large forwarding trade into Persia has been much hampered in past years by the lack of railways and the insecurity of caravan routes. Its position is still further threatened by the proposed Mohammerah-Khoremabad Railway, which will carry merchandise to within easy distance of Kermanshah without leaving Persian territory, and obviate the necessity for the present tedious up-river journey from Busreh to Baghdad, detention in Baghdad, and slow caravan transport with their attendant risks.

The German, or so-called "Baghdad Railway," is not likely to change traffic conditions in any way, as the working expenses of such a line will scarcely enable it to compete, so far as the southern section of the line is concerned, with cheaper, if slower, water-borne transportation of goods.

There is urgent necessity for short branch lines, to take the place of existing caravan routes by which the distribution of Baghdad's trade is effected. The main routes from Baghdad are as follows: Baghdad to Khanakin (on the Persian frontier); Baghdad to Hillah, Kerbela, and Nedjef; Baghdad to Samara (now served by rail); Baghdad to Mosul via Kerkouk and Erbil.

The first is the most important of Mesopotamian trade routes. Merchandise to the value of considerably more than £1,000,000 sterling passes over this road in the course of a year, and in addition it forms the main artery of the immense pilgrim traffic from Persia to the Mohammedan shrines of Kazimein, Kerbala, and Nedjef.

Baghdad-Mosul.

The export trade from Baghdad to Mosul is of very little importance because of the difficulty of road transport and the non-navigability of the river Tigris by steamers at certain points south of Mosul. The needs of that town are mainly supplied from the Aleppo market. Large shipments of produce, however, are made from Mosul to Baghdad by means of flat rafts formed of poles and reeds fastened to inflated sheepskins. These rafts are dismantled in Baghdad, the poles and reeds being sold and the skins being deflated and returned by road to Mosul for further use.

Owing to the swiftness of the current during the major part of the year, no mechanical impulse is needed to propel these rafts, and the two long sweeps with which each craft is furnished are merely used for steering safely through certain dangerous and rocky rapids, and past the numerous shoals in the river.

The produce which reaches Baghdad from Mosul by the means described consists chiefly of wheat, wool, galls, mohair, skins, and hides.

Oil.

There are undeveloped yet important oil wells at Gayara, in the neighbourhood of Mosul, and magnificent hot sulphur springs in the same vicinity. Further, Mosul is within reach of the rich agricultural districts of Kerkouk and Suleimania, which could be made enormously productive with improved methods. Western assistance will be required, if the vast resources of the land are to be fully utilized.

CAIRO EXPRESS AGENCY

ALEXANDRIA PRIZE COURT.

In re SS. "Gutenfels" (cargo ex).

The following judgment was delivered by Judge Grain in the Alexandria Prize Court on June 18 in the above demand for the disposal of cargo on board the s.s. "Gutenfels."

Judgment.

In this case the Badische Company, Limited, a limited liability company registered under the India Companies Act, licensed at the present time to carry on business under the control of a controller appointed by the "Hostile Trading Concerns" of Bombay, instruct their director at Ludvigshafen-on-Rhine in Germany to buy aniline dyes from the Badische Anilin and Soda Fabrik at the same town. The goods, 93 cases of aniline dyes, are bought for Messrs. Dadagee Dhackjee and Co., of Bombay. They are shipped by and invoiced from the German Aniline Fabrik at Ludwigshafen to Dadagee Dhackjee and Co. on the German s.s. "Gutenfels." The Badische Co., Ltd., draw bills of exchange on Dhackjee and Co. which at the present time have not been accepted. It is urged by Mr. Booth that the property in these goods is in the Badische Co., Ltd., of Bombay, and that they should be released.

I am of opinion that the property in these goods at the time of shipment was and still is in the German firm, the Badische Anilin and Soda Fabrik. The Badische Co., Ltd., of Bombay, appear to me to be merely buying agents. The goods were bought from the German firm of Ludwigshafen, and there is no evidence before me that they have as yet been paid for, certainly Dadagee Dhackjee and Co. have not paid for them as they have not yet accepted the drafts. I therefore hold that these goods are the property of the Badische Anilin and Soda Fabrik of Ludwigshafen-on-Rhine and are therefore enemy goods.

Order.

Condemnation and delivery under order of March 5 of s.s. "Gutenfels" (cargo ex); application for admission of appeal adjourned for one month; security for appeal £250. (If no deposit has been made before end of month, application for admission of appeal lapses); stay of execution granted for fourteen days.

SALONIKA'S FREE ZONE.

The commercial area of Salonika is almost unrestricted, says a writer in *Kelly's Monthly Trade Review*. As Hinterland there are the Greek Macedonia and Epirus territories, with nearly 1½ million inhabitants. Tobacco is the principal article of production and exported from Salonika, the annual value of same being about £4,000,000. For the time being the Salonika market seems to be in a depressed state, owing to the uncertainty of the nearest future of Greece. The importance of the place, however, cannot be over-rated, and undoubtedly commercial houses would do well to secure local agents, and, generally speaking, prepare matters so as to be ready to start when the war is over.

The Greek *Official Gazette* has recently published a law providing for the establishment of a free zone at the port of Salonika. A summary of the principal features is of interest: Merchandise stored in any part of the free zone shall not be liable to any Customs duty or to any other dues, except harbour and warehouse dues. All kinds of merchandise, except those to be specified by royal decree, may be stored in the warehouse of the free zone. Such storing and preservation and the handling of merchandise are to be executed without the intervention of Customs' officials. The Royal decree to be issued shall fix the conditions governing the Customs' supervision of certain goods brought into the free zone, and superintendence of loading and unloading. Only merchandise coming from countries entitled to the Greek "conventional" Customs tariff may be unloaded and stored in the free zone. Conditions and regulations governing the operations of the Government warehouses and the various storage fees to be charged are to be fixed by Royal decree. A Royal decree may be issued to gratify the convention respecting the concession to a company or to the municipality of Salonika, for a period not exceeding ten years, of a total or partial exploitation of the free-zone warehouse. We would remark, however, that so far no actual work has been commenced on this proposed free zone. As far as we are able to judge, this free zone—or, rather, free harbour—will be established on very much the same lines as the Copenhagen free harbour, and, if carried on on the same principles, it will no doubt turn out to be of considerable commercial importance. The present time is suitable for establishing connections in the Salonika district. It should not be overlooked that the Greek Macedonia and Epirus represent more than 70 per cent. of the territory recently added to the Greek kingdom as a result of the late war, and it can safely be said that this territory is of greater economic value to the kingdom than all of the Old Greece. Very soon the railway connection between Athens and Salonika will be repaired, and then the chance of Salonika will have come.

ADEN SHIPPING.

The merchants at Aden are complaining bitterly of the lack of shipping facilities between Aden and America (says the U.S. Consul). Many merchants have had to discontinue buying, as their warehouses are full, and they have no way of shipping the contents thereof to the United States. The Italian vessels are giving preference to shipments to Italy. As there is plenty of cargo for Italy there is, therefore, no space for cargo to be transhipped to the United States. The Italian lines have increased their freight rates 100 per cent. and their passenger rates 33⅓ per cent. over *ante bellum* prices.

Engineering Notes.

Modern Machine Tools.

With the apparent influx of American machinery and tools into British workshops at the present time, in order to cope with the urgent demand for munitions, there is also a hope that the proverbial disinclination of the average British manufacturer to the adoption of modern machine tools or devices of foreign construction will be relaxed. It is admitted that the time and labour saving capstan and turret lathes and other milling machines have revolutionised the productive capacity of factories in which such machines are used. But a considerable time passed before they were adopted in England. However, at present many British firms are making such machines, but as the demand for that class of machinery, as well as for all kinds of lathes, boring, milling, and other machines for munition work is enormous, a considerable number is being imported from America.

A New Lathe.

A lathe which has recently been placed on the market is worth mentioning, for it embodies a number of improvements that enable it to render much more efficient service than the ordinary machine of this description. By means of a gear arrangement in the head it is possible to select at once any speed desired; and as there is only a single-speed driving pulley running at a high belt velocity, the delivery of ample power to the cutting tool is assured. This feature of instantaneous speed selection enables a great saving of time to be effected when running on different classes of work, and is also a notable advantage when the diameter of the metal in the lathe is subject to sharp variations, as it saves wear on the tools and bearings and renders possible the production of extremely well-finished work. There are twelve speed changes in the head of this lathe, six of which are obtained in the gear-box. The entire speed-changing mechanism, except the back gears of the headstock proper, is contained in the gear-box, which is an independent unit, tongued and bolted to the back of the headstock. It can be removed at any time without affecting the other working parts. The six speeds obtained by the gear-box are controlled by two conveniently situated levers, and a plate on the front of the headstock gives a complete list of all speeds and shows the proper position for producing them. Quick-change gears for feeds and threads are located beneath the headstock and firmly supported in the walls of the bed. All changes of feed or thread can be easily and readily made while the lathe is in operation. Other equipments consisting of multiple stops for length and cross feeds, connected compound and plain rests, and other valuable appliances for repetition turning, etc., accompany this lathe, which, owing to the above-mentioned improvements, is easily handled by an ordinary turner.

Small Agricultural Motor.

The reason for recommending and importing American agricultural motors was once given to us by an engineer and machinery importer in the Near East, who said that the smallest British-made agricultural motor and cultivator was too large for the Oriental agriculturist and required two or three men to attend to it, while the American machine was small, light, and compact, and required only one man to operate it. It is probable that his personal interests were better served by feigning ignorance of facts which prove that such is not the case, and which, were they known to buyers, would make the latter insist on having a British-made machine. For instance, the other day we observed the wonderful work being done in English farms by a small agricultural motor. At the time it was driving some barn machinery, and was prepared to start soon after on field work. This machine allows a two-furrow plough, a cultivator, or other implement to be hinged behind in such a manner that it can be operated and lifted by the motor driver. Work with this motor, therefore, becomes a one-man proposition, and its suitability for employment on small farms cannot be gainsaid. Owing to its light weight it can be used for seeding or harrowing, and its power is fully equal to the rapid harvesting of grain with a 6 ft. binder. Its width is 4 ft., three speeds of 2, 3 and 5 miles per hour, and a reverse are provided; force pump lubrication with an indicator on the front dashboard is supplied, and a well-made magneto ensures regular ignition of the fuel. Cooling of the engine cylinder is effected by a thermo-syphon and tank with very large water pipes arranged on a new principle giving, it is claimed, unusual efficiency and ample facility for cleaning. The engine starts on petrol, but works on paraffin, one minute's run on the spirit being sufficient to obtain the heat necessary for vaporising the more ordinary fuel. It is mounted on steel travelling wheels, and is fitted with a belt pulley and friction clutch from which barn machinery requiring up to 10 h.p. can be driven. For transporting farm produce, it is said, this motor will do the work of at least four horses, hauling three tons at five miles per hour on roads with reasonable gradients. It is to be regretted that such machines have not been brought to the notice of buyers in the East.

Pumps in Mesopotamia.

The introduction of pumping machinery into Mesopotamia has shown the profitable possibilities of modern methods, and within the last ten years upward of 800 irrigation plants have been erected upon the banks of the Euphrates and Tigris, says the U.S. Consul at Baghdad. These plants consist of internal-combustion engines with a centrifugal pump as a separate unit. The engines vary from 5 to 40 brake horsepower, but the economy and efficiency of the higher powers is now recognized, and, the experimental stage having been passed, landowners do not hesitate to invest in a power which will develop the resources of their land to the utmost. The fuel consumed in the engines is ordinary kerosene, and the importation of this article has in the last few years increased in consequence from 3,000 cases to about 100,000 cases per year (a case contains two tins of four gallons each).

A Farmer's Engine.

There is no farmer, especially in the East, who does not desire the possession of an engine that could be employed in the farm for pumping water, driving barn machinery, a small flour mill, or a threshing machine, etc. But, as a rule, the fulfilment of such a desire is often barred by the purchase cost of the engine, which is sometimes beyond the means of the average farmer. A little engine which has recently been exhibited at work would just meet the requirements of the small farmer or the Oriental coffee-grinder, paint-mixer, cotton and silk spinner, etc., for it is small and easy to manage. The smallest 1½ h.p. four-cycle horizontal engine is listed at £10 (250 fr.), and another 2½ h.p., with throttle governor, is listed £15 (375 fr.). These little engines are reversible, and will work equally well with paraffin or petrol without change of equipment. It is said that they consume a little less than a pint of fuel for each horse-power per hour. They are practically noiseless in their action, free from vibration, and have only three moving parts and one adjustment for wear. An even power is obtainable from these engines, as they are fitted with a sensitive governor and two flywheels.

A Surgical Magnet.

The risks run by mechanics and others employed in engineering works from flying small pieces of metal are not known to the layman, but those who know them will be glad to hear that a device has been discovered by which prompt assistance can be offered to those who may meet with accidents from such pieces of metal. It consists, according to the *Royal Society of Arts Journal*, of a powerful magnet, and has already been successfully installed by the Westinghouse and Electric Manufacturing Company in the relief department of its East Pittsburg works. This magnet removes pieces of metal from flesh, and is a boon to iron and steel workers, who frequently get small pieces of metal in their eyes or hands. The portion of the body in which the metal is embedded is placed near the pole tip of the magnet, and the necessary electric current is switched on. The magnet does the rest. Some remarkably small pieces have been extracted in this way.

ROYAUME DE BULGARIE.

MINISTERE DES CHEMINS DE FER, POSTES et TELEGRAPHES

Direction Générale de la Construction des Chemins de fer et des Ports.

AVIS.

No. 5565.

Le 31 Août / 13 Septembre, 1915, à 10 heures du matin, il sera procédé au Palais de l'Assemblée Nationale à l'adjudication, sous pli cacheté, de la construction par entreprise générale à forfait des chemins de fer: "Radomir - Doubnitza - Gorna Djoumaya" et de son embranchement "Doubnitza-Bobov-dol" d'une longueur totale de 90.1 kilomètres, "Pleven-Lovetch," d'une longueur de 52.5 klms., et "Gabrovo-Sevlievo," d'une longueur de 29.75 klms.

Les cautionnements qui devront être déposés pour être admis à l'adjudication sont fixés conformément à la Loi sur les entreprises publiques comme suit: leva or 741,000 pour la ligne Radomir-Doubnitza-Gorna Djoumaya et son embranchement Doubnitza-Bobov-dol; leva or 320,000 pour le tronçon Pleven-Lovetch et leva or 160,000 pour celui de Gabrovo-Sevlievo.

Le cahier des charges, les plans et la collection des types pour chacune des lignes susmentionnées, se vendent à la Direction Générale des Constructions, 4, Rue Preslav, au prix de frs. or 80.

Les offres devront être conformes au modèle de soumission et porteront sur chaque ligne séparément et non sur les trois ensemble.

Les plis contenant les offres devront être remis jusqu'au 31 Août, 1915, 10 heures du matin, au plus tard et porteront l'inscription: "Offre pour la construction du chemin de fer..... ....." Les offres faites après cette heure ne seront pas prises en considération.

La Direction
Générale des Constructions.

Sofia, le 9/22 Juillet,
1915.

Near East Markets.

VITICULTURE IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, July 30.

The direction of the Credit Viticole has taken the excellent measure of distributing sulphate of copper among the peasant vine-growers. Under the supervision of M. Opran, the director, more than 30 tons of sulphate have been distributed among more than 500 peasants, the chemical being delivered to them gratis.

So far, the state of the wine harvest is very satisfactory, taking it all round, and this distribution of sulphate of copper, at a time when it was extremely scarce in the country, will be of great service to the small vine growers.

CROP PROSPECTS.

Sudan.

Arrivals from the Gezira inform us that the rains which fell there during the last few days were so copious and general that the natives declare that another such rain will be sufficient to ensure good crops for this year.—*Sudan Times.*

Egypt.

The Egyptian Public Works Ministry has issued the following notice :—

"The Ministry of Public Works announce that the Nile at Khartoum attained only 14.18 metres on the 13th inst., whereas in normal circumstances it should have reached 15.20 metres by that date. Low levels in the river during September can now be averted only by a sudden and well-sustained rise on the Blue Nile and the Atbara. There being little reason to anticipate such rise, the Ministry declare the coming to be a low flood, and cultivators are hereby warned that, despite all measures taken by the Irrigation Department, certain lands and islands in Upper Egypt are liable to remain unirrigated. The indications are that the flood will be not as low as that which passed in 1913, but will approximate in level to that of 1907."

Tripoli.

Under date of June 28, the U.S. Consul in Tripoli says that the harvest of both barley and wheat in Tripolitania is finished. The barley crop was the most abundant in many years. Unfortunately, native uprisings interfered greatly with gathering. At certain points whole areas were burned to prevent the ripened grain falling to the sickles of the rebels, who, on the other hand, more frequently gained possession and carried all away, thereby, it is said, gaining supplies sufficient for two years.

In consequence of all this, arrivals in the Tripoli market have failed to reach expectations. Wheat, the less important cereal, has been similarly affected.

EGYPTIAN WHEAT.

The Commercial Intelligence Bureau of the Egyptian Ministry of Agriculture sends the following :—

In view of the interest which has recently been shown with respect to the experimental shipments of Egyptian wheat made to the English markets, and the readiness with which these shipment have been sold, in spite of the temporary depression in wheat values at the time of their offer, it may be of some additional value to review a few other points in connection with the export trade in wheat from Egypt, to which it may, at some future time, be necessary to turn on the occasion of a surplus crop causing the local prices to fall sufficiently low to leave a margin of profit.

On looking through the price list for wheat in the June Bulletin of Agricultural and Commercial Statistics, published by the International Institute of Agriculture, Rome, one is struck by the fact that prices ruling in Italy are, just now, considerably higher than those in other countries. As far as Egypt is concerned, it must, however, be remembered that Italy as well as most of the Mediterranean regions, is in need of hard macaroni wheat, the Egyptian semi-hard wheats finding little favour. The Algerian type of wheat grown in Upper Egypt under the name of "Gawi," is suitable for the Mediterranean demand, and its cultivation might, with advantage, be extended if the wheat area produces at any time in excess of the actual requirements of the country. This type of wheat finds no favour in England, where, however, the ordinary Egyptian native wheats seem to be easily saleable.

The prices per quintal given in the Rome Bulletin above referred to show that while No. 2 Northern Manitoba and No. 2 Hard Winter were at 31.80 and 31.28 ft. respectively in Liverpool on June 11, No. 1 Manitoba was quoted in Genoa at 40.50 fr. On the same date, White Karachi (the wheat with which Egyptian Hindi wheat is classified), was selling at 32.09 fr. per quintal. From this it will be seen that the semi-hard Indian wheat sold at a higher figure than the hard wheats from North America in Liverpool, whereas a much higher price was paid for similar hard wheat in Italy, where, as has been ascertained by correspondence, Egyptian ordinary or Hindi wheat is not a desirable kind.

PRODUCE REPORT.

London, August 26.

Currants.

The market continues very strong, and a little dearer. Amalias was sold at 28s. 6d. to 31s., and Island from 28s. to 29s. 6d. Vostizzas are practically cleared from 37s. to 39s. New fruit is also dearer, with fair business passing in medium qualities. Shipments of new crop, "primaroli," begin this week, and first arrivals of same will be in about three weeks' time. What we predicted, months ago, with regard to the wood for boxes, has occurred. Owing to the war the usual supplies of boxwood from the Austrian Adriatic ports could not be obtained this year, and such is the scarcity that quarter cases which in normal times cost 8d. each cannot be obtained for less than 1s. 8d. to 1s. 10d. each; and so it is expected that most of the lower grades of fruit will come in bags this year. With regard to the new crop, according to official information recently received in the Ministry of Finance in Athens, it is calculated between 136 and 137 thousand tons. To this quantity must be added about 14,000 tons which remained undisposed during the year ending this month. The retention this year will be 35 per cent.

Sultanas.

Fair business has been done this past week at rather high prices. Some Smyrna fruit was sold from 64s. to 68s., while some common in bags was offered at 60s. There are no Greek sultanas in the market, and according to recent information from Greece the new crop is smaller than usual. Afghans are selling, in ½ cases, at 63s.

In Liverpool prices continue advancing. Smyrna fruit, common, has been quoted 61s. to 62s., colory 64s. to 65s., and fine grades from 70s. and upwards.

Figs.

There has been a good opportunity for Greek figs this year, and a fair demand was created, but the high prices asked for new crop to arrive, it is feared, will diminish the demand. Some good business, however, has been done in Calamata new crop this past week.

Dates.

There is a good demand for new crop, while old fruit is selling slowly at recent prices.

Seeds.

Linseed is quiet, and prices fairly steady. London-Calcutta spot is quoted 55s. 3d., afloat, and Sept.-Oct. ditto, while Aug.-Sept. was sold 55s. Rapeseed is firm, but inactive. Yellow Cawnpore, Sept.-Oct., is quoted 57s. 6d.; Guzerat 59s., and brown Cawnpore, Aug.-Sept., 53s. Cotton-seed remains quiet. London-Egyptian, spot, is quoted £9 15s.; Sept., £9 12s. 6d.; Oct., £9 7s. 6d. per ton.

COTTON MARKET.

Liverpool.

August 26.

Messrs. Reynolds and Gibson report :—

Egyptian Spot.—There has been a fair general inquiry, and good business has resulted. Sales include 550 bales of Sudan cotton. Quantities show an advance of 5 points for the week. Sales are estimated at 4,400 bales, as against 3,300 bales last week.

Manchester.

The general conditions of trade this week do not show any improvement on the previous few weeks. There continues to be a moderate miscellaneous business, and the prices, we understand, are being maintained.

EGYPTIAN COTTON.

A correspondent writes to the *Financial Times* :—

The latest news from Egypt relating to the cotton crop is of an encouraging nature, the month of June having witnessed a decided improvement in most districts, with the result that the statistical position of the crop in Lower Egypt is now above the average, while in Upper Egypt, although the ratio is still a little below the normal, the probability is that a recovery to the mean level of past years will be witnessed before very long. It will be recalled that in November, 1914, the Egyptian Government issued a decree limiting the area to be placed under cotton cultivation in respect of the 1915 season, in order to avoid any tendency towards overproduction, and the coming crop will, therefore, be of no more than moderate dimensions, although the yield per acre may, it is hoped, be a little higher than usual. The point to which importance is attached in Egyptian official circles is, however, that, at a time when the loyalty of the natives in the Nile Valley is being tested, they will have no cause for discontent in regard to the outcome of their agricultural operations. In order to obtain the best prices for the 1914 crop the Government last year created a series of Egyptian Treasury bills, which enabled the fellaheen to dispose of their output at leisure, instead of forcing it on the market at the earliest possible moment. This principle worked very well and could doubtless be adopted again if necessary. It will be time enough, however, to consider this matter when the crop is being gathered, and by then the effect of placing cotton on the contraband list, which step is believed to be imminent, will have made itself felt. The probability is that this policy would tend to reduce prices, and should this prove to be the case the Government will, it is to be hoped, once more come to the rescue of the native cultivators of the cotton-growing areas of Egypt.

COTTON THREAD IN EGYPT.

H.M. Consul at Cairo reports that ordinary cotton thread on reels is in normal years imported into Egypt to the value of some £75,000, about one-third of which formerly came from Austria. At present there is a considerable demand, and prices have shown a marked increase since the beginning of the war. A type of cotton used in tailoring for stitching clothes previous to finish, known as "No. 12 doubled" or "sewing," is imported to the value of about £4,000 to £5,000 annually.

YARN EXPORT RESTRICTIONS.

Early last month the Manchester Chamber of Commerce suggested to the Government Cotton Exports Committee that Declaration A should be modified. In recent regulations it was required that the consumer of cotton yarn, proposed to be shipped from this country, should state on Declaration A that the goods would be consumed in his own mill. The Chamber pointed out that this requirement was virtually impracticable in Near Eastern markets, where the yarn is generally sold to wholesale merchants, who in their turn either sell to the shopkeepers or retail it in establishments of their own.

A reply has now been received from the Committee to the effect that "they are unable at present to recommend the issue of any licences for exportation to Bulgaria and Roumania."

NEWS FROM ALL SOURCES

According to information received at the office of H.M. Trade Commissioner for South Africa from the Commissioner of Customs and Excise at Pretoria, the production of Turkish tobacco in the Western Province of the Union is an industry of comparatively recent growth, but it has developed with extraordinary rapidity, especially in the French Hoek Valley, where the soil and climate appear to approximate closely to the native conditions of the best varieties of Turkish tobacco. In several instances farmers have uprooted their vineyards in order to plant tobacco. The number of growers is about 70 and the area under cultivation 530 acres, with a yield of 250,000 lbs. annually. The average price for the 1913 crop was 1s. 8d. per lb.

By Proclamation of the High Commissioner of Cyprus dated August 2, the exportation of goods from Cyprus to Italian ports is allowed. Since March 15 exportation has been prohibited, except to countries of the Allied Powers (save Baltic ports), Spain, and Portugal.

The Royal Commercial Agent of Serbia, in Egypt, announces that the prune and plum crops have been excellent, both in quantity and quality. These fruits make delicious jams. For further particulars intending buyers in Egypt are requested to address themselves to 5, Shariah el Manakh, Cairo.

Mr. Thomas Usborne, of Writtle, Chelmsford, Conservative M.P. for Mid-Essex, 1892-1902, chairman of the Anglo-Egyptian Bank, Limited, who died on June 8 last, aged seventy-five, gave £5,000 in trust for each of his daughters Mary Elizabeth Collier and Margaret Ann; and £5,000 to his step-daughter Phyllis Treffry. His wife and other children being provided for by gifts and settlements, he left the residue of the property to his daughter Mabel Alexina Usborne, desiring her to make pecuniary payments to those in his employ as she knew he would desire. The value of the estate is £116,554, with net personalty £110,362.

The Postmaster-General wishes to call the attention of the public to the desirability of registering letters containing currency notes. Full particulars in regard to registration and compensation are given in the Post Office Guide.

The Egyptian Ministry of Finance has opened a credit of £E6,000 for work on the Aboukir railway. A new station will be built at Mamoura.

According to information received from the American Consul at Athens, dated July 10, 1915, magnesite ore, crude and calcined, has been added to the embargo list of Greece.

The *Busreh Times*, Arabic edition, of May 31, has reproduced one of the Arabic poems which recently appeared in THE NEAR EAST.

Two Roumanian subjects became naturalised in Great Britain in July last.

ROUMANIAN OIL SUPPLIES.

The editor of *Petroleum World* writes:—

"In justice to the Roumanian Government and to British oil companies operating in Roumania, it should be stated that our enemies are not being supplied from this source with oil. The export from Roumania of the petroleum products of principal use in warfare—namely, petrol and fuel oil—has been prohibited for many months past, and the only oil exports now permitted have little or no military importance. Roumania's action in this respect has practically paralysed her own petroleum industry, and considerable German pressure has been brought to bear to alter the position, but hitherto Roumania has stood firm.

"The production of crude oil, some figures of which are quoted by your correspondent, is a very different thing from the marketing of the refined products. On account of the prohibition above mentioned, all storage in Roumania is full, and excavations are being made in the earth to hold some of the surplus. I estimated some time ago that there was a stock of 1,000,000 tons of oil products in Roumania waiting for the embargo to be raised. The value of these products is probably £5,000,000, and stocks are constantly being added to."

COMPANY MEETING.

EUROPEAN OILFIELDS CORPORATION LIMITED.

Mr. Herbert Allen, presiding at the annual general meeting of this company on August 24, said that having regard to the fact that for six weeks the Baku properties were idle owing to a general strike of workmen throughout the district, and that for five months of the year they had been working under war conditions, he thought it would be generally conceded that the result of the year's working must be regarded as being very satisfactory. Notwithstanding the strike and other adverse factors the gross profits on trading, at £57,400, were only £10,300 short of those of the previous year, although the price realised for their oil was only 34.05 copecks per pood as against 36.06 copecks in the previous year. These unfavourable conditions had, however, been largely offset by a reduction in the cost of production, brought about largely by the further economies they had effected in the quantity of oil used as fuel. Miscellaneous receipts, consisting of interest and profits on investments, brought the entire gross profits for the year up to £62,600, and, after deducting £4,453 for London and other expenses and £15,125 for debenture interest and redemption, they were left with a balance of £43,048. Of this sum £25,000 had been added to reserve for depreciation, renewals, and general purposes (bringing the total of that fund up to the respectable figure of £110,000), and one-fifth of the remaining £18,048 (i.e., £3,609) had to be applied to the redemption of profit-sharing notes. The directors proposed to carry forward the remaining balance of £14,439. If all went well in the future they should have no difficulty in distributing the surplus profits, whereas,

AGRICULTURAL BANK OF BULGARIA

on the other hand, if they once parted with cash, it was difficult to see how they could replenish the coffers of the company except by bringing remittances from Russia, and as that operation would, at present rates of exchange, entail a loss of over 30 per cent., the directors did not feel justified in making the sacrifice. Meantime, the company had sufficient funds in London to meet the entire debenture service and other expenses for at least a year ahead. That was a strong and very satisfactory position to be in, and one that many companies must envy them. The feeling of the directors was that the reserve fund of £110,000 was well in excess of the actual depreciation, and left a generous margin for what might be called general purposes or contingencies. In association with the Russian Petroleum Co. and the Baku Russian Petroleum Co. they were experimenting with the American rotary system, which was practically new to the Baku district, and if the work finished up as well as it had started it would effect a great saving in the time and cost of drilling wells. Their interests in California and Roumania had felt the effects of the war. In proportion to their magnitude few oil concerns in Baku had got through the year 1914 better than this company, and, as regarded the current year, the net result of their operations for the first three months had been very satisfactory, the figures comparing well with those of the corresponding months last year.

Mr. A. G. Parker seconded the motion.

An amendment that the meeting be adjourned and a committee of inquiry be appointed was lost on a show of hands, and the motion for the adoption of the report and accounts was then put to the meeting and carried.

The retiring director (Mr. Herbert Allen) and the auditors (Messrs. Price Waterhouse and Co.) were re-elected, and the meeting terminated.

We are asked by the European Oilfields Corporation, Limited, to state that the aggregate holding of those who voted against the adoption of the report and accounts is 3,596 shares. The aggregate holding of the other shareholders present at the meeting is 238,402 shares. The proxies held by the directors represented a total of 306,439 shares, some of which formed part of the above 238,402.

COMPANY RESULTS, &c.

ANGLO-ROUMANIAN.—Production of crude oil for week ending 14th inst., 160 tons.

ANGLO-EGYPTIAN OILFIELDS. — Production for the week :—Gemsah, 344 tons (last week 150 tons); Hurgada, 247 tons (last week 247 tons).

European Oilfields.—Production for week ending 22nd inst., 89,000 poods. Price of crude oil at Blacktown, 42 copecks per pood.

Maikop Premier.—Production of crude oil for week ending 21st inst., 1,904 poods (31 tons).

ROUMANIAN CONSOLIDATED.—Production for the week ending August 14, 1,572 tons. Moreni wells Nos. 30 and 49 still flowing steadily.

RUSSIAN PETROLEUM.—Estimated production of crude oil for week ending August 21, 91,323 poods. Price of crude, 47 copecks per pood.

FINANCIAL MISSION TO NEW YORK.

The intention of the Government to send three financial envoys to New York (says *The Times*) to put into operation the policy concerted on in London and agreed on by France and Russia for dealing with the American exchange problem, has already been mooted. One of those envoys will be Sir Edward Holden, and Lord Reading is fully expected to be another.

We understand that the party will probably be completed by Sir Henry Babington Smith, who, originally at the Treasury, was secretary to the Brussels monetary conference in 1892, and subsequently became Secretary to the Post Office (1903-9) and then President of the National Bank of Turkey from 1909 till the outbreak of war.

EGYPTIAN TRIBUTE.

It will be interesting to see (says the *Financier*) what happens at the next Egyptian Tribute drawing, as one of the conditions pertaining thereto is that the Turkish Ambassador shall be present. Doubtless this contretemps accounts for the delay; as, although the bonds are not payable till October, the drawing has hitherto always taken place in July. I gather the Government has been approached with a view to removing the difficulty, but so far no decision has been arrived at.

NOTES OF THE WEEK.

The situation in the Near East remains indeterminate. During the past week it has undergone, outwardly at least, no change either from a military or from a political point of view, and it would seem as if we must reconcile ourselves to seeing the present state of affairs last for some little time yet. So long as the Russians continue to withdraw and the Turco-German forces are able to hold out at the Dardanelles, we need not expect to see either Bulgaria or Roumania abandon neutrality for intervention. M. Venizelos, too, will want to have ample time given him, in order that he may master the details of the international position as it presents itself to-day, and that he may establish himself more firmly in the saddle in his own country. The Allied Powers, having found Greece during the last few months somewhat *difficile* without M. Venizelos at the head of the Government, will want to meet his wishes as far as possible. It looks, therefore, as if the military position in Europe, as well as at the Dardanelles, will have to be subordinated to a tardy diplomacy.

In a message from Bucharest the correspondent of *The Times* in the Balkan Peninsula states that M. Venizelos is reported to favour the idea of an arrangement by negotiation between Greece, Serbia, and Bulgaria; but, he adds, the exigencies of the situation will hardly allow time for discussions, which, in any case, would seem to offer little prospect of success. "The ultimate settlement will inevitably be imposed by the Entente Powers, if not now, at the close of the war." This contention has been repeated in these columns times without number during the current year. The truth of it has been known to everyone in a position to form an accurate opinion of the condition of things in the Balkans; but at the eleventh hour the Allied Governments are still to be found wasting valuable time in the hope that the impossible will be achieved. The course of the negotiations, the domestic difficulties with which each of the Balkan Governments has to contend, ought to satisfy the Entente Powers that settlement by voluntary agreement is out of the question.

The correct attitude suddenly shown by Serbia, which found expression in the significant resolution passed by the Skupshtina, lent some colour to the belief that the Balkan States in their own interests would voluntarily adopt the only policy open to them. But as the Serbian decision was not taken until after a long sitting of the Chamber *in camera*, following upon the concentration of Austro-German troops on the Danube, there will not be much temptation in Serbia to labour the voluntary nature of the step taken. Opinions on the subject of the intentions of Germany in regard to Serbia may differ. There can, however, be no question that any movement of troops to the Serbian frontier constituted a distinct menace to the country in view of the Austro-German successes against the Russians. The Serbians have acted rightly in regarding the danger as possible, if not imminent, and in making their dispositions accordingly. In this matter the initiative lies with the enemy, and the best way of encouraging him to take the threatened step would have been to ignore its gravity and to adopt no precautionary measures. Serbia's military arrangements are probably the best that could be devised with the resources at her disposal; but she is in no position to withstand single-handed a serious Austro-German attack. She has, therefore, indicated her willingness to make the sacrifices required of her to ensure the support of her Balkan neighbours. It is for the Allied Governments to see that advantage is taken at once of this new attitude on Serbia's part.

An Austro-German invasion in force of the Balkans would be a serious thing, if it found the different countries still at cross-purposes with one another. We are confident, however, that it would be the signal for the immediate burying of the hatchet and an improvised federation for common action against the invaders. Only if the Central Powers were sure of Bulgarian co-operation could the expedition have the least chance of success. German intrigue and cajolery can achieve much, but we are inclined to believe that they have been superseded in the Balkans by blunt threats. That Bulgaria should be intimidated into supporting Germany in an irruption into Bulgarian territory is unthinkable at this stage. But so long as its terms for co-operation with the Quadruple Entente are not accepted instincts of self-preservation will prompt the Bulgarian Government to cling to neutrality. The despatch of troops to the Danube is the best step that the Central Powers can take in the circumstances. At any moment, if events

Digitized by Google

elsewhere are favourable, an actual expedition could be set in motion. While the force remains stationary, it will form a powerful argument for German agents in the Balkan Peninsula. The Bulgarian Government will again hesitate; the fears that seem to possess the higher military command in Greece lest the Greek army should have to fight will be redoubled. Above all the Turks at the Dardanelles will be heartened, and Germany will gain what is all-important for her in the Balkans, time.

As far as Bulgaria is concerned, there can be little doubt that her attitude has been affected by events in Russia. Considerable impetus was given to the policy of intervention by the prospect that the Allies might accomplish their purpose in Turkey and on the other fronts without any assistance from the Bulgarians. In the event of this happening, there was little chance of Bulgaria's obtaining any consideration when the terms of peace came to be arranged. The tide of battle has set against the Allies in the East, while in the Dardanelles there has been nothing to shake belief in the German assertions of the impregnability of the Turkish positions. In this country we may hear of the Turks being short of ammunition, of feeling against the Germans being strong in Constantinople and in the army, but we may be confident that such stories, if allowed to appear in Bulgaria, have been discounted beforehand by the Germans. It is not surprising, therefore, to learn that the interventionists in Bulgaria have lately lost ground. The best way of assisting them is to bring them news of successes on the part of the Allies, and there can be little doubt that if the control of the Allied operations were vested in a single command much would be hazarded at this moment to bring off a *coup* that would impress the Balkan States. In the absence of such a stroke, steps might be taken to give the Bulgarian interventionists what support is in our power. If their policy is checkmated to a large extent by Germany's control of Bulgarian news sources, it becomes the duty of the Allies, and particularly of the British and French Governments, however much they may affect to despise such methods, to see that German machinations in this direction are counteracted. It argues a profound ignorance of the Balkan peoples and their affairs to deal with them solely on lines which may suffice to bring about an understanding on any given point, say, between Great Britain and the United States.

If it should ever be possible to record accurately the diplomatic history of the last twelve months in the Balkans, we may expect to find that the situation has been dominated by ignorance of local conditions. The indifference shown at first to the Balkan States, and particularly to Bulgaria, arose from ignorance of their potentialities as a factor in the European war. When indifference gives way to a feverish anxiety to secure the co-operation of the Balkan States, we meet with similar ignorance of all the conditions which are necessary for such co-operation. In the first place, the diplomatic negotiations were left to Russia. When, finally, it was found more desirable that Great Britain should take a hand, the British Government appears to have set out to learn for the first time what ought to have been axioms to British diplomacy for the last twenty years. Even now we are handicapped by a reluctance to recognize that the leisurely and meticulous methods of procedure more or less justifiable in peace times are unsuitable to war conditions, when every twenty-four hours sees formidable additions to the toll of life taken at the Dardanelles.

The work of correcting the mistake made when the attacks on the Turkish positions after the fresh landings at Suvla Bay were not pressed home without interruption, is being continued. Sir Ian Hamilton reports that, as a result of further fighting on August 27 and 28, an important tactical feature, commanding the Biyuk Anafarta Valley to the east and north, has been captured. The advance represents an appreciable gain in the ground occupied by the Australasian Army Corps. The enemy's losses are stated to have been very heavy, and we cannot expect that our own troops have been let off lightly. As the strength of the Turkish defence and the configuration of the country do not lend themselves to any decisive action on the part of the Allies, the best alternative is that we should show our determination to win through at all costs by maintaining these resolute attacks on the enemy's positions. Each further success in the northern section extends our "elbow room" on the Peninsula, and reduces the advantages on the side of the Turks. At the same time, the thrust from Suvla threatens to flank the important height of Sari Bair, which has for so long defied the attempts of the Australasian troops to capture it. These operations, it will be noted, are taking place to the north of the narrow portion of the Peninsula between Gaba Tepe and the Narrows. The maximum strength of the Turkish position lies between Achi Baba and Sari Bair. If a force could be thrown across the Peninsula to the immediate north of this section, the Turkish defence would probably collapse at once.

That defence, as we know from experience elsewhere, depends in the long run more on the supply of munitions than on the heroism of the Turkish army. The output of the German factory near Constantinople, supplemented by the amount that has been steadily smuggled through to Turkey, has been sufficient hitherto to eke out the large stock accumulated before the outbreak of war between Turkey and the Allied Powers. But the contraband traffic may now be regarded as at an end, and it would be a marvellous performance if one or two factories in Turkey proved equal to the task of coping with the prodigious expenditure of munitions required by the exigencies of modern warfare. The Roumanian Government has been able to plead its friendship with Italy as an excuse for refusing to allow German munitions to be transported over its railways to Turkey. The existence of a state of war between Italy and Turkey, she pleads, renders it necessary that Roumania should maintain strict neutrality. Thus does diplomacy save its face, but the situation would seem to have required a more resolute reply to the threat contained in the German request.

So far Italy's declaration of war on Turkey, apart from providing the Roumanian Government with a reason for not submitting to German dictation, has only affected the Italian position in Tripoli. It has been necessary to recall all the garrisons from the interior to the coast in view of the possibility of the Arabs advancing in force upon the colony in obedience to instructions from Constantinople. Any attack by the Arabs will be awaited on the coast line, which the Italians are now confident has been rendered strong enough for all eventualities.

The Turks do not seem to have waited for the Italian declaration of war before attempting to stir up the Arabs against the Italians. It was probably a German idea that unrest in Libya might prove of use to weigh down the scale for Italy against intervention in the war. With this end in view bribes and blandishments, with possibly a few Turkish officers, have been sent to the Arabs to encourage them to occupy Italy's attention in Libya. The gem of all such efforts, however, is a letter in Arabic from the Emperor William to the chief of the Senussi, which is said to have been captured on a Greek sailing vessel near Tripoli. The letter is represented as being enclosed in an embossed casket, and was found on board with £4,000 in gold, a number of scimitars, and other Oriental gifts. After including among his titles the terms Allah's Envoy and Islam's Protector, the most Christian German Emperor states that it is his will that the Senussi's valorous warriors should expel infidels from territory that belongs to the true believers and their commander. There is no need to insist upon the verbal accuracy of the translation. There would seem to be little doubt that the Emperor William has taken a personal share in instigating the Moslems of all parts of the world against their Christian neighbours. His chief success so far has been achieved in Armenia and Persia, where thousands of defenceless people have been massacred, in accordance with the pious wish he expresses to his potential Allies that Allah should annihilate their common enemies to the last man, and, he will have added to himself, the last woman and child.

Germany is evidently determined that as many countries as possible shall be involved in her own débâcle. Nothing that her agents could achieve in Persia was likely to have any effect upon the military position in Asia or in Europe, but it was calculated to have injurious, if not fatal, results for the Persians. This consideration, however, would not deter the Germans from carrying out their settled policy. Readers of THE NEAR EAST are familiar with the course of German intrigue in Persia since the outbreak of war. The chief result, as far as Great Britain is concerned, has been to bring about an increase in British garrisons in the Persian Gulf; and it is obvious that if the situation in the country passes beyond the control of the Teheran Government the degree of intervention necessary to restore order will be enhanced. According to recent reports brigandage in Luristan has reached such proportions that it is now able to inflict losses on the gendarmerie. At Burujird, it is stated, the gendarmes suffered a severe defeat, losing two guns and munitions, and the Swedish officer barely succeeded in escaping with his life. If the gendarmerie is unequal to the task of keeping order in the districts where it is permanently established, other steps will have to be taken to enforce the authority of the Persian Government.

The latest exploit accredited to Germany's agents in Persia is a minor essay in brigandage. According to a Reuter message from Petrograd, while the British and Russian Consuls, with their military escorts, were withdrawing from Kenghever to Khamadas (? Hamadan) they were attacked by a band of armed men, under the leadership of Herr Schönemann, the German Consular Agent at Tabriz. The escorts of the British and Russian Consuls, it is stated, used their rifles in defence, but suffered some loss. It may be as well to wait for the official account of this incident before we accept its accuracy in every detail. But even if Herr Schönemann is able to exonerate himself personally, it will be difficult to believe that German influence had nothing to do with the attack on the two Consuls. By itself the incident has no more bearing on the course of events in Europe than the sinking of a fishing boat in the North Sea; but these German exploits in Persia are likely to exercise for some time a bad effect on the native mind, which is not critical enough to distinguish between different codes of honour accepted by different nations in Europe. If the real interests of Persia could be studied after the war, it would be found necessary to enact in the peace settlement that, for a certain period of years, no German should be allowed to set foot in the country.

We welcome the announcement in the *London Gazette* recording the grant of the Victoria Cross to the late Major G. G. M. Wheeler for most conspicuous bravery at Shaiba, near Busreh. On April 12 he had asked permission to take out his squadron and attempt to capture a flag which was the centre point of a group of the enemy, who were firing on one of our pickets. He advanced and attacked the enemy's infantry with the lance, doing considerable execution among them. Unfortunately this gallant officer met his death on the following day when leading his squadron in an attack on the "North Mound." The bestowal of this award will serve as a reminder to our Mesopotamian forces that they are not forgotten in the Mother Country. Details of the fighting in which Major Wheeler lost his life are now known, and it has been placed on record that the work done by the troops on that and other occasions at the head of the Persian Gulf was equal to the best traditions of the British Army. No body of troops looks for higher praise than that.

EGYPT AND THE DARDANELLES.

(FROM A CORRESPONDENT.)

CAIRO, August 19.

Events in Russia are followed with the keenest interest, and speculation is rife as to the ultimate aim of the Germans and Austrians. The chief point of interest to the observer here is the moral effect which the German success has had in this country. It is not unlikely that the enemy advance in Poland has encouraged a certain section in Egypt in their vain attempt to cause trouble.

But although the Russian campaign has left the deepest impression on all classes, yet everybody feels that the fighting at the Dardanelles is a much more important affair, and that it will have a far-reaching effect on the peoples of the Near East. In addition to the native Egyptians who manifest a deep interest in the subject, there are in Egypt large numbers of Syrians, Greeks, Armenians, and Ottoman Arabs who are keenly watching the development of operations at the gates of Constantinople, and anxiously waiting for good news from that quarter. Every day thousands upon thousands take up their morning papers in the hope of reading some official announcement of a definite success or defeat. The latest report of Sir Ian Hamilton, published here last Thursday, brought relief to many a heart, as it showed what Herculean efforts are being made to hack a way through to Constantinople, and that success is now in view. The final result of the Dardanelles operations will have a tremendous effect in this country.

SUDAN TAXATION.

(FROM A CORRESPONDENT.)

Notwithstanding the great necessity occasioned by the falling-off of most of the Sudan Government's usual sources of revenue, consequent on the outbreak of the war, and in spite of the excellent flood and the copious rains in the autumn of 1914, the Administration has studiously refrained from imposing a single new tax upon the people, if an exception is made in the case of fees for native liquor licences, which was fully justified by the cheapness of dura—at once the staple food of the native and the grain from which the native beer, "merissa," is made. Thus, the solemn pledge that was given by Lord Cromer as far back as 1898, and often reiterated by the Governor-General of the Sudan in his speeches to native chiefs, "not to overwhelm the country with taxation," has been redeemed.

It has been remembered that the people of the Sudan have for the last two years been passing through a period of great depression; not only are there at present considerable arrears of taxes unpaid, but the inhabitants are otherwise heavily indebted, and certainly in no condition to bear the burden of additional taxation. Then, again, the possible field for the increase of taxes is also restricted by the fact that the Animal Tax, royalties on both gum and ivory, and import duties on alcoholic beverages have been already raised, while the Traders' Tax has been put into force since the commencement of 1913. Still, again, there have been strong political reasons why there should be no extra taxation at present. Additionally, it is probable that trade may not immediately recover after the conclusion of the war, and that the revenue may, in consequence, be for the time reduced.

The only remedy left, therefore, has been to still further curtail the expenditure, and this—in the face of the almost impossible—has been done. Low as was the estimate made for the 1915 Budget as compared with that of 1914, a further reduction of £E143,000 has been managed. While the 1914 revenue and expenditure showed an even balance of £E1,644,000, the figures submitted for 1915 stood at £E1,501,000. The course pursued by the Administration in this matter is worthy of the highest commendation.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, August 22.

Opening of the Chamber.

The opening of the Chamber, after the aggrandizement of Greece, offered a most imposing spectacle. It was with great difficulty that the hall was able to hold all the representatives of the new and old provinces. The attention of all was attracted to the costumes of some of the deputies of Crete and to those wearing the *palikare;* and above all to the scarlet fezzes worn by the Turkish deputies of Salonika, among whom was to be distinguished the deputy for Epirus, an old Hodja, with his white turban.

The presence in the Greek Chamber of so many Turkish deputies, elected by the illegal methods of the Gounaris Cabinet, created a feeling of repugnance, which took the shape of a demonstration on the part of certain deputies during the initial prayer. From all parts were heard voices crying, "Bas les fez." However, in the end, their national costume was respected. Immediately afterwards the Turkish deputies had to swear on the Koran, and four Jewish deputies on the Old Testament. M. Venizelos' appearance in the hall was greeted by frantic acclamations of joy, both from the deputies and from the galleries.

Fall of the Gounaris Cabinet.

The election of a President resulted in a victory for the Venizelist candidate, M. Zavitzianos, who obtained 182 votes. The Government candidate having gained only 92 votes, M. Gounaris announced that he would submit his resignation to the King.

After this first meeting of the Cabinet, M. Venizelos was made the object of a great demonstration on the part of a huge crowd which had been assembled outside the building since the early hours of the day, and which accompanied him to his house.

The King, being still convalescent, was not able to be present at the opening of the Chamber.

The fourteen deputies of Upper Epirus, which has not yet been definitely annexed by Greece, and those of the two small islands ceded to Turkey, not having been elected according to the laws of the kingdom, were not able to take part in the official opening.

The Ministerial Crisis.

Until the very moment of the Government's fall in the Chamber, the Ministerial party attempted to make the readers of their papers believe that the King would not call M. Venizelos, or that he would, in any case, show himself to be entirely opposed to his policy, with the result that there would be a second dissolution of the Chamber. It was pointed out that this would be the best solution of the crisis. By this means it was intended to induce the King to violate the Constitution, with a view to enable the Gounaris Cabinet to manipulate the new elections. On the other hand, the Venizelist Press, in a series of articles published during the last few days, pointed out that such a course of action would constitute a *coup d'état*, in which case the people would have to defend their constitutional rights.

Immediately after having received the resignation of the Gounaris Cabinet the King sent one of his aides-de-camp to M. Venizelos, asking him to call on the following morning at the Tatoi Palace. The interview was a very short one of not more than a quarter of an hour. It now appears certain that both the Sovereign and M. Venizelos, without having discussed the situation in detail, because at that moment it would have been useless, maintained their different points of view concerning Greece's foreign policy. The reason is that the King still believes, without going so far as to say that he desires it, that Germany will emerge victorious from the present war, whereas M. Venizelos has still the firm conviction that the Entente Powers will win. It appears even, according to the *Hestia*, one of M. Venizelos' Press organs, that the latter, in expressing his views to his Sovereign, did not hesitate to tell him that, if Greece had abandoned her neutrality when he advised it last February, the situation to-day would have been quite different.

Nevertheless, as M. Venizelos is of the opinion that, in the present circumstances, Greece cannot abandon her neutrality, the King, in spite of his disagreement with the statesman on the general lines of Greece's foreign policy, declared that he was disposed to trust him with the formation of the Cabinet on the condition that he would continue to maintain a benevolent neutrality towards the Triple Entente and would refuse all territorial concessions. M. Venizelos demanded and obtained from the King a delay of five days in order to give him a definite reply.

The Balkan League.

The reconstitution of the Balkan League continues to form the principal objective of the Balkan policies of the Entente Powers. It is, however, generally believed here that the unreadiness shown by Bulgaria to accept the last proposals of the Entente and the resignation of the Ministers Fitcheff and Apostoloff, both of them fervent partisans of the Entente group, have contributed to make the four Powers more benevolent towards Greece, and obliged them to abandon the hopes they placed on Bulgaria, and to recognize the necessity of preserving the political bonds uniting Greece and Serbia. The last article in *The Times* on the exorbitant pretensions of Bulgaria at the expense of Serbia has been interpreted here as indicating the official tendency of Great Britain in the direction referred to above.

M. Venizelos in Power.

Finding there was no obstacle in the way of the formation of a Cabinet, M. Venizelos this morning definitely accepted the offer made him by the King, and has submitted the list of new Ministers, who are practically the same as those who were in his previous Cabinet. The Ministry of War has been entrusted to General Danglis, who was Chief of the General Staff during the first Balkan War, and the Ministry of Marine to M. Miaoulis. The Chamber will meet again on Wednesday.

It is recognized that the conditions upon which M. Venizelos consented to return to power are not very satisfactory in the present critical circumstances, and it must be admitted that in accepting the responsibility he gave proof of great political abnegation solely with a view to avoiding a new crisis for the country. But the situation cannot be regarded as having been definitely settled. It is, however, very possible that it will be modified and consolidated by the turn events will take. In this connection it must be remembered that the people, who are very intelligent, and not to be deceived by the German propaganda, have already openly shown dissatisfaction at the Germanophil policy followed by the Gounaris Cabinet.

Public Opinion and the Cabinet.

The return to power of M. Venizelos seems to have created an atmosphere of greater ease and general satisfaction. He is the only statesman in whom the people have complete faith. The Gounarist Press think that, given the conditions under which M. Venizelos returns to power, the Entente Powers can reap no benefit from the new political situation, considering that Greece must remain neutral and make no territorial concession, as otherwise the King will withdraw his confidence; the same Press organs foresee that it will be impossible for him to reconcile the conditions imposed on him with his pro-Entente policy for any length of time.

The Venizelist Press organs blame the Gounaris Cabinet for having issued, without any popular authorization, a violent protest, in the name of the people, against any territorial concessions, whereby they have created a position of difficulty for M. Venizelos. It is not by taking a hostile and insolent attitude *vis-à-vis* the Entente Powers—remarks the *Patris*—that the danger will be avoided, and that the Allies will change their decision. On the contrary, any such attitude will create new dangers. The Gounarist Press, replying to these accusations, pretends that the mere discussion of the question will induce Germany to consider herself in a position, in view of Greece's supposed tacit approval, to offer Kavalla to Bulgaria as compensation for her neutrality; in which case Bulgaria would be only too willing to accept the offer.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, August 25.

Tension at Constantinople.

Arrivals this week from Constantinople say the situation there is verging on the desperate, and the unnerved condition of travellers is sufficient indication that life in the capital is becoming unbearable. The continuous rumours of coming evil and the daily expectation of trouble cannot but produce a feeling of extreme tension. One can well understand the apparent desire of the American Ambassador to lessen his burden of responsibility by getting out of the country as many of the belligerents under his care as possible. All the English women and children are being advised to leave, and Mr. Morgenthau appears to be doing his utmost to get permission for them to do so. Mr. and Mrs. Alfred Sellar, Mrs. Rowell, and Master Seager have been able to get away, and have arrived in Athens.

There are rumours that all the Armenians are to be expelled from Constantinople, and the general feeling of alarm and uneasiness is greater than ever. In fact, the situation is acute, and many people are of opinion that there will be trouble in Constantinople when the Dardanelles are forced: there is the fear that the Turks, when they find the game is up, will, under the fiendish influence of the Germans, go in for rioting and looting.

The Cost of Living.

There is now very little gas, and the streets in town are in semi-darkness, while the country villages are practically without any lighting at night. Living has become extremely expensive. There is very little petroleum, and £1 a tin has been paid; but a Roumanian steamer arrived from Roumania last week with 50,000 tins. Sugar and rice are selling at 12 piastres the oke, and bread is only obtained with difficulty. Stocks of coal were almost exhausted last week; but six colliers, escorted by the Goeben, went to Zunguldak, and two returned with coal. Thus, contrary to general opinion, there is still some life in the Goeben, but it is said she cannot go at a high speed, or fire her big guns.

Turks Naval Losses.

The loss of the Barbarossa has upset the Turks very much. About 400 men were drowned and wounded, of which number many were Germans. The destroyer Berki Shefket was badly damaged, but was taken to Constantinople. The Hamidieh was hit off Zunguldak, but no serious damage was done; though she had a few men killed and wounded. It is reported that she has no more ammunition. More guns and men from the Breslau have been sent to the Dardanelles, and soldiers with their wounds still unhealed are being sent back to the front in their old clothing.

Over fifty transports have been lost in the Marmora and the Black Sea, and there are not now many available in Constantinople. The wounded are being conveyed to Constantinople by Bosphorus steamers and the old Channel steamer Cambridge, which are painted white with the Red Cross. Twelve thousand wounded are said to have arrived in Constantinople last week. Men and munitions are being regularly sent to the Dardanelles by steamers and lighters, in spite of the Allies' submarines; but it is reported that three or four transports with troops and munitions have recently been torpedoed.

Recruits from Anatolia continue to arrive, but there are neither uniforms nor rifles for them. In fact, the army appears to be in a most deplorable condition, and the continued resistance at the Dardanelles is extraordinary.

Our Submarines' Exploits.

The exploits of the British submarines in the Marmora and at Constantinople have, as was expected, done more to impress the Turks than anything else. They have not only considerably embarrassed the military and naval authorities in keeping up their communications with the Dardanelles, but they have made much impression on the populace. It is to be hoped that they will continue their skilful and plucky exploits, and that, in addition to these disconcerting incidents, the Allies' aeroplanes will meet with equal success.

In their *communiqué* of the 7th, the Turks say that they took 60 English prisoners, and the following day they said they took 110 prisoners at the Dardanelles.

Persecution of Armenians.

The Armenian atrocities in Asia Minor baffle description. It is doubtful whether in the whole history of the world any race has ever suffered persecution, atrocities, and savage extermination such as, under German dictates, are now taking place in Asia Minor. It is a terrible indictment, and will remain an indelible stain on the history of the German Empire. The Armenians are now being persecuted everywhere. They have been driven away from all the Black Sea ports and from Adabazar and the surrounding villages, and have been brutally treated. Those at Ismid and Bachdijik have also been told to go, and the Armenians in Constantinople are in an extremely nervous condition, fearing they will meet the same fate.

The papers publish a notice from the Court-Martial calling upon Boghos Nubar Pasha to attend the Court within ten days, to be tried for conspiring to create an independent Armenia and for providing funds to assist the Armenians in revolting against the Government, etc., etc. Failing his appearance, he will be tried in default, and his goods and property will be seized.

Minor Evils.

Much private property has been appropriated by the authorities without any notice. Houses have been seized, and their contents distributed amongst the poor; and in many houses occupied by the military the rooms in which the household goods had been stored have been broken open and the contents appropriated. Those who find their houses intact on their return from Constantinople will be extremely fortunate!

The censorship is stricter than ever, and all newspapers are now being opened, evidently to see if they contain letters.

It is said that £300,000 worth of Government notes have so far been put into circulation. Salaries and other payments are being made in this currency. Turkey's indebtedness to Germany is now said to be £27,000,000. These notes are printed entirely in Turkish, the only European characters about them being the number of the note and the name of the printers, a German establishment. Outside of Turkey the notes are not accepted.

Turkey and Bulgaria.

Whatever may be the terms of the Turco-Bulgarian agreement, the fact remains that the Bulgarians have not taken possession of the territory in question. At the time of writing Demotika is still in the occupation of the Turks, and travellers still undergo their examination there.

Smyrna is tranquil, but almost in darkness, and hungry.

Our Countrymen in Constantinople.

My attention has been called to certain erroneous statements which have appeared in the London Press in a telegram from Athens, dated August 15, respecting the English in Constantinople.

It was stated that there are only a few Englishmen remaining in Constantinople, whereas the number of English, men, women, and children, there now is about 150. It is hardly correct to say that a large number have been exiled to the provinces, for, as a matter of fact, very few have been sent there, with the exception of naval and military prisoners. Again, it is hardly accurate that those in the capital are restricted in their movements, and that wrongdoers have been flogged. Not one single case of really bad treatment of an Englishman has been reported from Constantinople; in fact, although several of them have been summoned by the police on trivial matters, on the whole the English who have remained in Constantinople have not been seriously inconvenienced or molested by the Turkish authorities.

SERBIAN LETTER.

(From Our Own Correspondent.)

Belgrade, August 18.

A Useless Bombardment.

Although in the war zone and more exposed to attack than any other town in Serbia, Belgrade had not been bombarded by the enemy since last March until last Thursday, the 12th inst. On that day, without any known cause, the Austro-Hungarian artillery began to bombard this city with a howitzer, or with several howitzers, of heavy calibre. The shells fell on our already half-ruined town at several points, increasing the ruin of property, but without causing loss of life. In the latter respect we were more fortunate than on the last occasion, and the duration of our bombardment was also much shorter. It was not much more than half an hour, and proceeded from Kota 109, west of Semlin, on the other side of the river Save.

The tactics the Serbians adopted on the last occasion were on this occasion again reverted to, and proved as before, most efficacious. Our artillery replied briskly, hammering Semlin from one side of Belgrade and Panchova from another, but only for a very short time. The aim from both sides of the city being very accurate, our short bombardment was effective, and had the desired effect: Belgrade was no longer disturbed by the enemy's wanton and useless firing.

The north and north-west parts of Semlin were fired on, where the enemy's reserves were concentrated, and thick smoke was seen to rise from those parts of the town. In Panchova there was a panic and the inhabitants fled from the town on foot and in vehicles.

Artillery Activities.

At other parts of the frontier along the Save and the Danube the enemy has been busy. On August 12 the fire of the Serbian artillery and infantry prevented the enemy in their attempts to fortify the left side of the Save and Danube at several points. Two days later the enemy tried to cross the Danube into our territory near Golubatz fortress. Our guards allowed their boats to approach to within 15 metres, and then fired on them, compelling them to return to their own side with heavy losses.

Again, on August 14, our artillery hindered the enemy in their attempts to fortify their frontier in the neighbourhood of Dobra, on the Danube On the same day there was an artillery duel between the Serbian and the enemy's batteries at Veliko Selo, near Belgrade. The enemy fired 60 rounds on the Serbian positions, whilst the Serbian silenced his battery with twelve rounds.

On August 15 our firing prevented the enemy fortifying the Danube front between Panchova and Starchevo, and on the same day prevented them fortifying the Save front by Hrtkovatz.

The State of Belgrade.

The state of Belgrade is to-day much the same as it was when I was last here, in February. Many of the shops still remain closed, many are ruined and uninhabitable, some are opened spasmodically, either in the forenoon or afternoon, and not on all days, and in the others very little business is done Stocks are daily reduced, and are not renewed, there is nowhere any assortment of manufactured goods, and most of those businesses which are regularly opened are almost sold out Many articles usually to be bought in provision shops and grocers' are now not to be bought there, and can only be obtained from the municipal stores by special permits. The markets are open, and vegetables are plentiful.

In walking through the town one observes the neglected ruins and the many hotels, restaurants, and cafés closed; theatres, concerts, and amusements there are none; but those of the people who have anything to do go about their vacations unconcernedly, and without fear, as if accustomed to this state of things.

The Skuptshina.

The sittings of the Skuptshina were reopened on Monday, August 16. On the following day there was a secret sitting, at which the Government laid before the deputies the proposal of the Quadruple Entente with reference to Serbia and the neutral Balkan States, and the views and intentions of the Serbian Government in connection therewith.

The Serbian Debt.

On January 1, 1913, the Serbian external debt amounted to £26,360,000. Up to that date the yearly Budget was comparatively small, and the external debt had grown to the extent mentioned principally on account of the yearly deficits through expenses considerably exceeding revenue; but this mismanagement was remedied, and since 1904 the Budgets have regularly yielded a slight surplus. The financial position of the country improved, permitting larger State loans to be contracted for State requirements and Public Works, but even under the improved circumstances a State loan of 100 million francs (£4,000,000) was regarded as a considerable amount. Now, however, what was lately considered a large loan sinks into insignificance. The war with Turkey necessitated the voting by Parliament of an immense credit, which was the first great jump, and now Parliament is granting a credit of 250 million francs (£10,000,000) which the country needs. The second reading of the Bill was passed yesterday

It must be borne in mind that Serbia, as an ally in the present war, is receiving much help from the Powers of the Triple Entente, financially and otherwise. This it appears enables her to do more for herself than she would otherwise have been able to do.

For Soldier's Orphans.

France and England propose establishing orphanages for Serbian children, but independently thereof it is proposed, in the Serbian Parliament, to establish a national orphanage for the children of soldiers who have been killed in the late and present wars.

Grant to Marshal Putnik.

On August 16 two members of Parliament gave notice of a proposal to make a parliamentary grant of 250,000 francs (£10,000) to Field Marshal Putnik, the Commander-in-Chief of the Serbian Army, as a token of gratitude for his services to the country This sum is to be paid him within one month from the date when the King signs the decree.

SERBIA'S SACRIFICE.

The following extracts from a leading article in the semi-official *Samouprava* are forwarded from Nish by Reuter's correspondent:—

In its sitting of August 23 the Skupshtina, by a crushing majority, voted an expression of confidence in the Government's policy. To realise the sacred ideals of civilised humanity still further sacrifices must be made. These sacrifices will be agreed to and supported by all the Allies, and consequently by Serbia too. By such sacrifices, as is shown by the pages of history, one regains the right to live a free existence.

When it is sought, by asking Serbia, Greece, and Roumania to sacrifice their previous gains in order to achieve the principal part of their national ideals by the extensive compensation which they will receive, it would be incompetence and lack of foresight not to agree to such sacrifices. The representatives of the people, by voting confidence in the Government, performed an act of sound sense, which places the fate of the people and the country in experienced and safe hands.

This action becomes of an historic importance—from this action will arise developments of the highest importance in the life of the Serbians and Serbia.

"AN INSOLUBLE PROBLEM"?

Reuter's correspondent at Sofia forwards (August 29) the following:—

The semi-official *Echo de Bulgarie*, discussing the return of M. Venizelos to power, draws attention to the outstanding differences of opinion which existed between the Premier and King Constantine on two essential points, namely, the restoration of the Balkan Alliance, to be achieved by means of territorial concession, and close co-operation with the Entente Powers. The journal concludes:—"Had the incompatibility of their political views continued to exist a solution of the Greek Ministerial crisis would have been impossible. Now, it is notorious that the King, while he agreed to the formation of a Venizelist Ministry because he had no alternative, did not accept M. Venizelos's programme. Therefore, M. Venizelos succeeds to the legacy left by M. Gounaris intact, and will, like his predecessor, seek a solution for an insoluble problem."

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, August 12.

The Export of Cereals.

During the past eight or nine days no less than four Cabinet Councils have taken place. The principal object of these meetings has been the discussion of measures that can be taken in order to facilitate the export of cereals. It has now been decided that the export of wheat—and of other kinds of grain the export of which is prohibited—cannot be permitted until at least the cereals already loaded on railway trucks have been passed over the frontier. Large quantities of maize and some small lots of prohibited articles which have been passed for export, in exchange for sugar and other much-needed goods, are standing in the sidings awaiting their turn to be conveyed to the frontier stations, and until this accumulation is cleared no fresh decision can be taken.

It is generally believed here that the reason for the Government's refusal to permit the exportation of wheat—the demands for which, it is well known, are being pressed forward by German agents here—is that the opening of the Dardanelles by the Allies will be obtained at no distant date. Everybody here—except, of course, the German agents above mentioned—sees that nothing but good for this country can arise from the opening of the Dardanelles; and this is in itself a proof of the incorrectness of the many rumours as to munitions being passed through to Turkey.

The Austro-German Demands.

A semi-official paper publishes the following:—In well-informed circles it is declared that during the four recent Cabinet Councils held by M. Jon Bratiano, President of the Council, the demand made with such vigour by the German Government for the permission to pass munitions destined for Turkey was discussed. M. Bratiano and all the other Ministers opposed themselves with great energy to this demand. The question is therefore settled once and for all.

The manner in which the question has been settled reflects honour on the Roumanian Government, which has resisted with dignity above all praise the menacing demands of the Austro-German Governments.

A German Failure.

One of the most dangerous of German agents lately arrived here is M. Spiess, a former director of the Steaua Romana Oil Company, which, although organized as a Roumanian concern, is known to be run entirely with German capital. This individual has been most active in endeavouring to obtain permission for the passage of munitions to Turkey, and has not made much effort to conceal his chagrin at his non-success.

Primary Education.

A very important problem for this country, primary education, is now being discussed at the Ministry of Public Instruction. It is desired to ascertain under what conditions the primary schools here can be increased in number, those actually existing being insufficient for the population of seven to fourteen years of age. There are in Bucharest only seventy primary schools for a population of 350,000 inhabitants—that is to say, only one school to every 5,000 inhabitants, which is woefully inadequate. More than 30,000 scholars attend these schools, which is, again, far too many, one school for 425 scholars, when, according to the generally accepted rules of education and hygiene, a school should be provided for every 200 scholars at most. Steps will be taken to bring up the number of schools to the required quantity.

Military Precautions.

All excursions into the Carpathians have been forbidden, much to the chagrin of the many visitors at Sinaia and the other summer resorts nearer the frontier. The reason for this prohibition is that a large number of artillery regiments, mountain batteries and others, are located there, and the military authorities naturally have no wish that the exact positions should be known and communicated to the Austro-Hungarian commanders. The order followed the mysterious case of losing his way by the former Bulgarian Secretary of Legation, doubt being thrown on the story of his companions, who returned without him without making much search, and the fact that, after being "lost" and wandering all night, the gentleman in question suddenly arrived home, little the worse for his adventure.

The 1st Regiment of siege artillery, raised some months ago, was lately inspected by a Commission consisting of General Iliescu and some other officers. The training of the regiment exceeded all expectations, and the Commission was more than satisfied with the manner in which it passed all tests.

A group of ladies have hit on the excellent plan of raising a fund for purchasing masks against asphyxiating gases for the Roumanian army. Up to the present 30,000 frs. have been collected, and subscriptions are coming in rapidly.

A Tribute to King Carol.

The respectful remembrance with which the Roumanian army regards its creator is shown by the following touching anecdote. Every Roumanian soldier in war time wears attached round his neck a little metal cross, on which is engraved the number of the wearer, so that if he be killed his identity may be established. One day a captain came and knelt before the grave of the late King Carol, remaining for more than an hour. When he left, in tears, one of these crosses attached to a small bouquet of flowers was found on the grave. On the cross was engraved: "To our brave captain, whom we shall never forget."

Queen Elisabeth was much moved when she heard of this incident, and gave orders that the identity of the officer should be discovered; this, however, has proved impossible. She has now given orders that the flowers with the cross shall remain always where the officer placed them.

AUSTRO-GERMAN INTRIGUES.

The *Morning Post* has received from M. Take Jonescu a cablegram in which the Roumanian statesman exposes some of "the extraordinary perversions of the truth contained in the speech to the Reichstag of Dr. von Bethmann Hollweg, the German Chancellor." The first part of the message refers to the question of naval armaments, and M. Jonescu states positively that in November, 1911, Herr von Kiderlen-Waechter, the then Secretary of State for Foreign Affairs, told him at Berlin that it had been his desire to arrive at an arrangement with Great Britain with regard to the limitation of naval armaments, but that he was opposed in this matter by Admiral von Tirpitz, whose attitude had the approval of the German Emperor, and that for this reason the policy of armaments *à outrance* must continue.

The following year, M. Jonescu goes on to relate, Count Berchtold explained to him at Vienna "that Austrian naval plans were directed against England," and that Germany and Austria-Hungary were looking forward to the day when, England finding herself short of bluejackets, they would be able to "take the lead." The Count apparently failed to specify which of the partners would actually lead and which would play second fiddle!

Finally, M. Jonescu says: "With regard to the Serbo-Bulgarian rupture of 1913, I was in a position, as a member of the Roumanian Government, to know what strenuous efforts Russia made to avoid a rupture. I also know that the quarrel was due to Austrian intrigues, and I remember how, the day after the rupture, or within a very few days after, Prince Fürstenberg, the Austro-Hungarian Minister at Bucharest, said to me, rubbing his hands with glee: 'We have done a good stroke of business.'"

"GALLIPOLISSON."

"Another must be added to the numerous trench publications," writes the Paris correspondent of the *Evening Standard*, "although because of lack of necessary equipment copies of his latest newspaper have as yet failed to appear in Paris, since they must be laboriously copied by hand. The editorial rooms are situated in the ruins of Sed-ul-Bahr, Gallipoli; but, despite the dismal surroundings, the publication is a humorous daily, as its title *Gallipolisson* clearly indicates, polisson being the French equivalent for 'fun-maker.'"

THE URMIA CRISIS.

(From a Correspondent.)

Urmia, July 26.

The Russian troops left Urmia on January 2 and returned on May 24; the Turkish troops arrived on January 4 and left on May 20. During that period more than 100 Christian villages were looted and destroyed, and the Christian population lost about 1,000 killed and 4,000 by death from disease. These figures, though given in round numbers, are not mere guesswork, but are based on careful investigations and records.

Of some 30,000 native Christians nearly 10,000 had fled to Russia; of the remainder nearly 18,000 took refuge in the American Mission, while the rest were either massacred or found sanctuary with their Moslem friends. The native Moslems, combining with the Turks and Kurds, were bent upon exterminating every Christian in Urmia; but the American flag, under which the destined victims took shelter, protected them through the five months' siege.

The Kurds arrived two days after the withdrawal of the Russian troops, and the Christians of Googtapa made a stout resistance; but later the Kurds were reinforced, and the inhabitants of the village gave up all hope of escaping. About 300 were killed. The women and children were crowded into the churches. At that critical moment Dr. H. P. Packard, of the American Mission, at the risk of his life, made a heroic dash through a hail of bullets, and pleaded with the Kurdish chief to spare the people. The Sheikh agreed to let them go after they had delivered up their weapons, and over 1,000 people were thus saved from death, and were taken to the Mission premises in the city.

A massacre took place in the village of Gulpashan, where fifty men, after being tied arm to arm by the Turkish soldiers, aided by the native Moslems, were taken out to the graveyards, and were there butchered like animals. In another case some forty-six men were taken out from the French Mission. After the Turkish authorities had given assurance that they were to be transported to Turkey they were tied together, and were shot at a place about two miles from the city. They were killed in cold blood, without any pretence at any kind of trial. One of them who escaped told the following story:—"We were tied together arm to arm, and made to kneel and await our doom. They fired at each one of us. Soon after the firing I began to feel around my body to see whether I was shot. I finally came to the conclusion I was not hit, but I fell with the rest, making pretence that I was dead. After we had all fallen they came near, and stabbed every one who seemed to be still breathing or showing the slightest sign of life in him. As they came near me they could not find any sign of life, for I made believe I was dead long ago, and, giving me a kick, they left us. After they had departed a long way from us I got up and made my way to the American Mission."

As stated before, most of the Christians died of disease. This was a natural result of so many thousands being crowded into the mission yards, with poor sanitation, and of famine and cold. The rooms, halls, and corridors were crowded. Two thousand were lodged in the church for weeks and months without room to lie down. One of the missionaries entered the school-room, that was crowded with people who for months had been sitting up day and night, and had not taken a bath or changed their clothes. There he saw a woman sitting in one of the seats holding the usual child in her arm, looking weary and sad. "How long have you been here?" he asked. "From the beginning," she replied (then about three months). "Have you been in this place all this time?" "Yes," she said; "this is my place." It was a narrow wooden seat. When he began to inquire if she was not tired of that place, she interrupted: "Oh, no, this is a good place. See, I have a place for my head." And she laid her head back against a pillar. Hers was a choice seat. There were others worse off than she.

It is no wonder that in such conditions disease should spread and kill so many people. At one time the death-rate in the Mission yards went up to forty per day. And the missionaries had a hard time in obtaining permission to take the dead out and bury them. The Turks would only grant such leave in return for payment. The numbers of dead were so large that they had to be buried in huge graves, about 20 yards by 10, which were filled in by degrees.

At one time during the siege nearly all the doctors and nurses were down with typhus or typhoid, and few were left to tend the sick. Hundreds died, for no one went near them to give them food or even water.

The problem of feeding so many thousands was a difficult one for the missionaries, for their funds were low; but they faced it and kept the poor people from starvation, even though each refugee could have only about one pound of bread each day. The heroic and self-sacrificing work of these American missionaries in contending with the Turks and Kurds for the saving of these Christians from massacre cannot be described here; but it could not be praised too highly, and they have earned for themselves the heartfelt gratitude of all their *protégés*. It is certain that but for the American Mission and the American flag every Christian in Urmia would have been massacred.

LETTERS TO THE EDITOR.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE FUTURE OF CYPRUS.

To the Editor of The Near East.

Sir,—I have read with interest the several letters recently published in The Near East regarding the future of Cyprus.

With reference to Mr. Kenneth Ledward, I can at once say that if all Britons had been inspired by the same sentiments we should not have seen the present world-wide British Empire. Mr. Ledward disqualifies himself in writing as he does on Cyprus—a place where he has evidently never been—when he persistently speaks of frequent famines in the island, thus manifesting his own complete ignorance and that of his informants. As a resident of Cyprus, I can assure Mr. Ledward, with due regard to his knowledge, that he is greatly mistaken and misled on this and on other points dealt with in his letter to The Near East.

In opposition to the opinions expressed by Mr. Houston, Mr. Ledward holds that, now more than ever, the cession of Cyprus to Greece is justifiable, basing his arguments on the principle of Nationality, which, I am afraid, is being much abused. As the true "Briton" points out, in his very able exposition of Cyprus affairs in his letter to The Near East of June 30, the map of the British Empire would undergo very considerable shrinkage if England were to follow that principle too closely.

Mr. Ledward seems to consider the Moslems of Cyprus a negligible quantity, and recklessly and unscrupulously suggests that the problem might be solved by the expatriation of the Moslem community. My answer to this ridiculous suggestion is that the Moslems of Cyprus are neither materially nor morally a negligible quantity, and I can hardly conceive that 60,000 loyal British subjects could be sacrificed to the whims of a few agitators by an Empire which is itself largely Moslem, and is justly proud of the strength it derives from the loyal co-operation of the British Mohammedans. Indeed, Mr. Ledward might have wisely suggested that if the small number of Greeks under the British flag are dissatisfied with the British rule they might be exchanged with Moslems under Greek rule in Crete, for example, who would be only too glad to exchange Greek rule for that of Great Britain.

Now, as regards Mr. Lanitis' letter of July 10 to The Near East. Mr. Lanitis argues:—

1. That Cyprus is a Greek island, and as such it should be ceded to Greece, which has become stronger.

2. Now that the Treaty obligations have been done away with, there is no obstacle in the way of ceding the island to Greece.

My reply to the first of these points is that Greece is not strong enough to hold and protect the island against an external foe, and that Cyprus is historically no more a Greek island than Egypt is a Greek country, as is proved by the investigations of an eminent archæologist. And to the second, I contend that by the annexation of the island to the British Empire England has undertaken a greater responsibility, which is the addition of 60,000 more loyal Mohammedans to its rule, the security and satisfaction of whom, I submit, vitally concerns the British Empire as a great Mohammedan Power.

As "Briton," in his letter of June 30, rightly maintains, I also submit that full regard is due to the Moslems of Cyprus for their consistent and genuine loyalty to the British Government, in marked contrast to the Greeks, as set out in the letter above referred to.

I shall be much obliged if you will kindly publish this letter in your esteemed paper.—I am, etc.,

M. Irfan,

Member of the Executive and Legislative Councils, Central Board of Education, etc., etc.

Nicosia, Cyprus, August 14, 1915.

MARTYRED ARMENIA AND ITS CAUSE.

To the Editor of The Near East.

Sir,—A gigantic struggle, unprecedented in the annals of civilisation, is raging furiously from the snow-clad, frozen heights of the Vosges to the burning sandy deserts of the Nile and the Euphrates. The great Allies, with their unlimited supply of material and moral force, the small Allies with their ravished hearths, but with fortitude and endurance that entitle them to eternal admiration, are all fighting with one solid purpose—to

Digitized by Google

give a crushing blow to the Teuton Dragon and its helpers. The lion of Britain, with tiny Belgium, and the eagle of Russia, with old Armenia, have declared that might does not make right; that the honour of a nation is the highest, the most sacred treasure its people possess, which treasure they should hand down to posterity unspotted and unblemished, cost what it may.

For over forty years the quiet, peace-loving Armenian population of Asia Minor, under the terror of the *yataghan*, has prayed for *safety of life and of honour;* and it has been denied them. Its humble supplications have been answered with blood and iron; its weak protests have been checked by martyrdom that surpassed the Inquisition of the Middle Ages. Poor and wretched country! How did she bleed in 1894-95-96, and again in 1904 and 1908. And the emperors of Central Europe encouraged the martyrdom of a whole nation! Cruel fortune, how is Armenia bleeding to-day in her loneliness!

The Christians of Turkey, cut off from the rest of the world by the great war, are left altogether at the mercy of their fanatical neighbours. No European ambassador can speak to the leaders of the tottering Ottoman Empire words of counsel or of threat.

Devastation and havoc have been haunting the plains of Mush and Bitlis; a reign of terror has extended from the gates of Stamboul to the walls of Diarbekir, the seat of the regular visitation of the Kurdish hordes. The blood of tens of thousands of starving peasants is constantly flowing; the intellectual class *en masse* is imprisoned; the flower of the new generation is being hung in daylight in the market places of Byzantine, Erzeroum, and Kaiserieh. Avenge, O Lord, the sufferings of thy innocent flock! Armenia is in grim anguish. Are there none to staunch her wounds?

Rich towns and villages are destroyed, monasteries with their singular architecture, historic manuscripts and holy relics are given to the flame, women and girls are violated. . . . My pen refuses to describe any further deeds of inhuman character.

If there is anything that is soothing to the hearts of the sorrow-stricken Armenians, it is the fact that over 50,000 of their gallant brothers, enlisted as regular soldiers under the Russian flag, are fighting gloriously in Poland and in the Caucasus. And about 20,000 volunteers, supported chiefly by the gifts of Russian Armenians, under the "Dashnagist" and "Huntchagist" leaders are marching side by side with Russian soldiers from victory to victory. The whole vilayet of Van, one-third of the vilayet of Bitlis, and one-fourth of the vilayet of Erzeroum are in our hands now. Antranik, the idol of the revolutionary Armenians, is marching on Mush. On the other hand, Boghos Nubar, Pasha of Egypt, well known to the Chancellors of the Allies, and enjoying their full confidence, at the head of an Armenian diplomatic delegation appointed by the Katholiks, is working in Europe to ensure the demands of four million Armenians.

These things give us hope that very soon, with the help of the Allies, we shall conquer the land of our forefathers that has been ours for four thousand years; the land, every inch of which has been dyed by the red blood of its heroes. Yes: we shall conquer, and an autonomous Armenia will no more be only a rosy dream.

When the war broke out, big and small States had long, back-and-forth communications as to future allotment of territories and arrangement of frontiers. But Armenians, the world over made no bargain, had no hesitation in joining the Allies, not because they could not speak by diplomatic mouths, but because their cause of action for universal peace was clear.

Will the mighty and noble Allies forsake us when the Angel of Peace gives them the laurel of victory? Will Russia and England, who unsheathed their swords for the rights of the weak and the honour of treaties, forget the 61st article of the Berlin Treaty and make it a "scrap of paper"? We Armenians can never believe it!—I am, etc.,

ARTI.

Nicosia, Cyprus,
August 7, 1915.

THE FUTURE OF SYRIA.

To the Editor of THE NEAR EAST.

Sir,—By Syrians, at least, much attention has long been bestowed on the question of Syria and Palestine, and amazement, not uncoupled with dissatisfaction and anxiety, has been expressed by the rank and file of the extensive Syrian communities in Egypt and the Sudan, as well as the numerous Syrian refugees at present in Egypt, at the delay in the anticipated occupation by the Allies. It may, therefore, be opportune to examine the causes of this dilatoriness, as doubtless some onlookers are distressed by the attitude of the Allies towards Syria. Will an occupation take place, and when? Those are the questions which are uppermost in one's mind.

Everybody recognises that the Allies were averse to a war with Turkey. They did not entertain any unfriendly intentions towards the Ottoman Empire; on the contrary, they volunteered to preserve its integrity. The Turks, however, refused. What is more, they sided with the Prussians and forced the Allies into war. Despite Turkey's action in following such a lamentable course, the Allies continued to pursue an attitude of friendship towards Turkey. They sought to establish that they possessed no ill feelings towards the unfortunate house of Osman, and consequently refrained from undertaking any hostile operations against Turkey in order to demonstrate this attitude. But at last the operations in the Dardanelles were embarked upon, as an indispensable necessity in order to open a free passage to Russia. Upon the opening of the Straits a vital issue of the war depends. It has not been undertaken for the sake of fighting against Turkey. Such an illusion should be dispelled.

The war against Turkey, therefore, is assuredly of minor importance. The future of the Ottoman Empire depends upon the final issue of the war. If the Allies are successful—as will undoubtedly be the case—the partition of Turkey may be effected without bloodshed. The occupation of Syria may thus be assumed to be a foregone conclusion. I will not deal with the subject of Turkey's partition. It may or may not take place; that depends entirely upon the attitude of the Turks—the real Turks. But punishment of some sort must be meted out to Turkey, and Syria may be involved in the penalty.

No likelihood, it is believed, exists to warrant the belief that an occupation of Syria is forthcoming in the immediate future. But once the capital falls, the rest follows suit.—I am, etc.,

SYRIAN.

Egypt, August 10, 1915.

"X.X.X."—Will the correspondent who sent us from Geneva, under date of August 18, a letter, signed "X.X.X.," on the subject of the evils inflicted upon the Armenians by the Turks, kindly forward his name and address? The Editor desires this information solely for his own guidance, and "X.X.X." may rest assured that it will on no account be published or divulged to any other person. But THE NEAR EAST cannot depart from its rule of not publishing any letter without knowing the identity of the writer.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C

TANGIER TO TEHERAN.

Though we are at war with Austria-Hungary and Turkey as well as with Germany, we have, I think, very little of the bitter and contemptuous feeling for the Turks or the Hungarians that we have for the Germans. They have shown themselves cleaner fighters than the Huns, and their treatment of enemy subjects is infinitely superior to that meted out by their allies. Now, I am glad to see, the Hungarian Minister of Public Instruction has taken a step which does him great credit. He has issued a circular calling upon all teachers to pay special attention to educating the children in their charge to give their enemies the respect and honour that are their due. Hate and contempt, he says, are not to be cultivated in the youthful mind, and the children should not learn to regard "the brave men with whom their fathers are in deadly combat" with such feelings. On the contrary, teachers should aim at dispelling the idea that enemies are not men and can hardly be considered as human beings, that they should be exterminated; for it is unworthy of any nation to foster such ideas. The circular, it is pleasant to read, has created a favourable impression. So that the Hungarians would seem to be worthy of their Minister of Public Instruction—whose ideas one would like to commend to a certain other (Most Exalted) person, who is fond of airing his views, which are far less worthy of being aired than those in this truly admirable circular.

***

Under the heading "Another Black Sea Collier Sunk," the *Egyptian Gazette* publishes the following:—

PETROGRAD, August 18.

We have sunk a collier in the Black Sea.

Havas.

I congratulate the Havas Agency on its naval enterprise.

***

A day or two ago I was shown a letter written by a young Artillery officer now serving on the Gallipoli Peninsula, and I found it so interesting that I asked for, and obtained, permission to reproduce two passages from it. Here is the first:—

> We came opposite this part of the world about a fortnight ago in an ordinary steamship in the middle of the night. Lighters came up out of the darkness and took us and our guns ashore. It is rather a job landing guns, especially at night. And the lighters didn't treat us very well either. One of the brutes sank in shallow water, and we simply could not get one gun off that night. So we covered it up with sacking, and hoped it would not be seen.

The writer does not mention whether it *was* seen or not. To the uninitiated the chance of a sacking-covered gun protruding from the water being overlooked, or mistaken for a seaweed-draped rock, hardly looks a good one. But I hope the Turko-Germs were duly duped; for the writer evidently loves his guns, as all good Gunners do. One of them, he admits elsewhere in the letter, they "used to despise rather," but it has proved "a beautiful machine for this kind of work," and he anticipates that it "will make the Turks thoughtful when we advance."

***

The second passage I am tempted to reproduce touches lightly on an incident that can hardly have proved as amusing as the writer's style of describing it:—

> I am writing from the ruins of my house. Once upon a time it was a fine place to live in—six feet deep, corrugated roofing, splendid sandstone soil, cold water laid on in very limited quantities; in fact, all the latest conveniences . . . . improvements were being added daily, such as a cupboard excavated in the wall with a door of sacking. . . . I should like to tell you that the havoc which has been wrought was the work of a single shell. But I am afraid it was only a digging party. They were very sorry, but they were terracing this gully, and they were afraid they would have to knock the walls in. So that is how it stands now. Most of the walls are gone. Spadefuls of earth are hurled in every now and then by energetic diggers, and sand is absorbed with our meals in very generous quantities. However, as soon as new territory is allowed to us we are going to dig out a new and even more luxurious place for ourselves.

I have suffered from sand in my food myself, and I am afraid I did not find it the least bit amusing. But then I was not taking my meals to the accompaniment of the music of the guns. Which possibly accounts for the difference. Up against such very real facts as is this officer—who writes cheerily of dodging the shells—one is not going to be greatly perturbed about a few pecks of sand more or less.

***

In reviewing a book ("An Introduction to the Study of African Languages," by Professor Meinhof), the *Athenæum* has a good deal to say—and it is very well worth saying—about "the urgent need to study language *before* proceeding to Africa, and its collateral, the imperative necessity of an Oriental School in London, if England is to occupy the foremost place in the development of her African colonies and protectorates." I read the review with deep interest, and it has set me wondering how soon our London School of Oriental Studies will be ready to get to work. At present the prospect does not look a hopeful one, judging by the state of the building in Finsbury Circus, which, I believe, is to house the School. But perhaps things are more advanced than they look. I hope so, for I agree with the *Athenæum's* reviewer as to the "crying need for an Oriental School in London." We are promised one, I know; but I fear the war may cause the scheme to drag. And it seems to me that that would be a great pity. We ought to make an extra effort now. We do not want "to ignore what Germany has done" in this field. We want—or ought to want—to excel it, and to be as independent as possible in the future of German scholarship, as of everything else German.

***

I see that, added to the ordinary horrors of war, the troops at the Dardanelles are now being assailed by new and scarcely less terrible enemies. Millions of flies, we are told, have arrived upon the scene of battle, and are rendering life well-nigh intolerable to our soldiers even during their hours of rest and leisure. I experienced a plague of flies myself on one occasion, and the memory of it is with me yet, although it was many years ago. On that occasion there was no battle, apparently there was nothing to attract the flies save for the water that was daily carted to the railhead of a new railway across the desert. And they came suddenly, as though they were born of the sand. One night when we went to bed the conditions were normal; the following morning when we woke it was to find everything black with the new plague. I recollect well the beastliness of trying to get through one's meals without swallowing some of the crawling, buzzing insects that attacked us. At first we kept boys busily at work whisking them off, but this was by no means efficacious. Eventually we had to dine under mosquito curtains, but even so it was quite impossible to get through the meal without some of the invaders obtaining an entrance. And if in times of peace, when everything was to one's hand and when servants were constantly in attendance, the plague could be so terrible as I knew it to be, then what must it be now when the few hours' rest from the trenches is disturbed, even when it is not utterly destroyed, by the attentions of these disease-carrying insects? The Turks are, of course, more or less used to them. It is considered unlucky to brush them from the eyes of infants, for instance, so their advent in increased numbers will not appear in the light of much more than an added inconvenience. With our own men it is different, but the greatest heat of summer is mercifully drawing to a close, and long before the New Year comes in I hope that the fighting in Gallipoli will be merely a memory placed among the records of our most glorious achievements.

***

Perhaps the Turk feared that he would be forced to adopt the language of the Teuton when he threw cold water upon the suggestion that the Germans should take over the administrative work in the Government offices of Constantinople the other day. Already his children are being given the inestimable advantage of hearing the German tongue in Turkish schools, but the thoroughness of German purpose is becoming a little disconcerting, and if reports from various sources are to be relied upon, the Turk is daily showing signs of increased restiveness.

***

On the other hand, our soldiers are, we are told in the provincial papers, eagerly picking up the scraps of new languages which fall from the lips of prisoners and others. Our men in the Sudan, in writing to their local papers, intersperse their English with words of Arabic, and some of these are singularly useful words, too. What an attractive word is "afsh," for instance, compared to our "luggage" or "baggage." "Maleesh," too, the word that means almost anything under the sun in the way of apology, sympathy, or resignation. A servant breaks your favourite pipe, and his apology is *maleesh*. You condole with a bereaved parent in the same word. It is a sort of universal "never mind," with its character altered according to the intonation of the speaker. "Baeed," which means "far," is another word which may mean anything from one mile to a hundred, according to the manner of its pronunciation. "Baeed," one mile; "Ba-eed," more than one mile; "Ba-*eed*," a very long way, and so on. I often wonder that we do not more frequently hear words and expressions of Arabic upon the lips of those who have spent many years in the Sudan or Egypt, where these words are common among Englishmen even when they converse among themselves.

NEAR EAST BOOKSHELF.

THE DARDANELLES IN 1740.

At a time when our thoughts turn so often to the Dardanelles it will, we think, interest many of our readers to have a description of the famous Straits as given by Dr. Richard Pococke, a traveller who visited them in 1740. It is taken, we understand, from a book of travel, entitled, quaintly, "Description of the East and Some Other Countries," written by Dr. Pococke, and published in 1745; and we are indebted for it to Mr. William Habakkuk, M.I.M.M., formerly of Constantinople:—

"On July 24 I embarked at Gallipoli and sailed to the Dardanels on the Asia side; it is called twelve leagues, but it is no more than twelve miles, being so far by land from Lamsac, near opposite to Gallipoli. The Hellespont was so called by the ancients because Helle, attempting to swim over here on the Ram with the Golden Fleece, was drowned. The Europeans call it the Dardanels, as well as the castles about the middle of it; the Turks give it the name of Bogas (the mouth or entrance). The entrance from the Dardanels is now to be computed from the Asia lighthouse, about a league without Lamsac, and from the Europe lighthouse, half a league to the north of Gallipoli; the whole length is about twenty-six miles, the broadest part is not computed to be above four miles over, though at Gallipoli it was judged by the ancients to be five miles, and from Sestus to Abydus only seven stadia. They also computed it a hundred and seventy stadia from Lamsacum to Abydus, seventy from that place to Dardanels, the distance from which to Rhaeteum is not mentioned, which may be twenty, but from Rhaeteum to Sigeum was thirty, in all thirty miles and a-half, excepting the distance between Dardanels and Rhaeteum, so that it is probable they measured round by the bays on the sea. The land on each side of the Hellespont is mostly hilly, especially to the west. About three leagues from Gallipoli the passage is wide and the land looking into the south, it appears like a large basin; then follows the narrow streight, which is about a league in length; at the south end of it are the Dardanel castles, near the middle of the Dardanels passage. They have been thought by many to be on the site of Sestus and Abydus, though some have conjectured that these places were at the north entrance of the narrow passage, where, on the Asia side, there is a long mound or rampart with a barrow at each end like the remains of a castle. On the Europe side there is a hill, and to the north of it a ruined castle, called Acbash, which is at present the habitation of a Dervise, and may be some remains of Sestus, though the passage over the streight might be to the south-east at some little distance from it. What induces me to think that those towns were here is the distance mentioned between Abydus and Dardanus, which is eight miles and three-quarters, for the promontory Dardanium, and the city Dardanus, must have been the cape called by the Franks Cap Barbiere or Barbieri, only a league from the present castle, which some suppose to have been Abydus. The river Rhodius also is said to have been between Abydus and Dardanus, which seems to be the river called Chaie, that falls into the sea at the castle, washing the walls of it when it overflows, so that if Abydus have been there it would have been said that the river, though south of the town, fell into the river at Abydus, and not between that place and Dardanus. Strabo also says that Abydus is at the mouth of the Hellespont and Propontis, from which one may argue that it was rather at the north end of the streight towards the Propontis. Wherever it was, it is remarkable on account of the bridge which Xerxes made there from Asia into Europe. The Rhodius, therefore, falling in at the old castle of the Dardanels on the Asia side, we are to conclude that Cynosema, the tomb of Hecuba, was at the opposite castle, being described to be over against the mouth of the Rhodius. Abydus was built by the Milesians with the permission of Gyges, King of Lydia, to whom it was then subject. The people of this place made a stout resistance against Philip the King of Macedon, and destroyed themselves when they could hold out no longer.

"The castles are sometimes called by the Turks Bogas Hissar (the castles of the entrance); but that to the east is called Natoli Eski hissar (the old Asia castle). It is a big square building, encompassed with an outer wall and turrets; there are fourteen large brass cannon* without carriages on the seashore. They are always loaded with stone-ball ready to sink any ship that would offer to pass without coming to anchor in order to be searched. They fire likewise with ball in answer to any ship that salutes the castles; as this does so much damage when they fall, so the lands directly opposite commonly pay no rent; there are eight other cannon towards the south. I saw among them two very fine ones, one is twenty-five feet long and adorned with flower-de-luces, which they say was a decoration anciently used by the emperors of the East before the French took those arms; and I have seen them in many parts. The other cannon is of brass, twenty feet long, but in two parts, after the old way of making cannon or iron of several pieces; the bore of this is about two feet, so that a man may very well sit in it; two quintals and a-half of powder are required to load it, and it carries a ball of stone of fourteen quintals. The town on the north side of the castle is a mile and a-half in circumference, and has in it twelve hundred houses, two hundred of which are Greeks, a hundred Armenians, and fifty of Jews. They have a great manufacture both here and on the other side of cotton and sailcloth, and they make here a sort of ware like Delft, which is exported to the value of fifteen thousand dollars a year; they also send out some wax, oil, wool, cotton, and cotton yarn, and build small ships. The town is situated in a plain, which begins about two miles to the north and extends to the promontory Dardanium, being about a league broad. I crossed it going near to the east by the river, and went in between the hills to Jaur-Kala, situate on a high hill. It is said to have been built in haste, and did not appear to be of any great antiquity. A French Consul resides at the Castle of the Dardanels, and a droggerman for the English and Dutch, who is a Jew. The other castle, called Rumeli-Eski-Hissar (the old castle of Rumelia), has in it twenty large brass cannon, one of which is of a great size, but not so large as that on the other side. The town is near a mile round in compass, stands on the side of the hill, and is inhabited only by Turks, who carry on a great manufacture of sailcloth."

*"Brass Cannon." These were undoubtedly "Bronze Cannon," and their composition would be somewhere about 9 parts "Copper" and 1 part "Tin."—W.H.

NEAR EAST BOOK NOTES.

The Bucharest correspondent of the *Secolo* announces that the Queen Dowager of Roumania, "Carmen Sylva," is now working on a new romance, which is entitled "Hilderic," and deals with an incident of the Crusades.

We have received from the *African World* a copy of a new marching song, entitled "When Botha Comes Marching Home." The words are by Mostyn Piggott, the music is arranged by C. D. Brownfield, and the covers are decorated with photographs of General Botha and some of his chief officers. At the published price—which is sixpence—the work is a marvel of cheapness; and as two-thirds of the gross profits are to be divided amongst three deserving funds (the National Relief, the Governor-General's Fund for South Africa, and the *African World* Red Cross work), we trust they will benefit substantially. Over 10,000 copies have been ordered for distribution amongst our forces in Flanders, France, and the Dardanelles, so the song has every chance of making its way to "the Front."

A LETTER FROM GENERAL GORDON.

A correspondent has sent to the *Morning Post* the following extract from a letter written by General Gordon in 1882 to Mr. James R. Purdy:—

Every Briton should think of the future of his country and cause each one to insist on the Government passing a measure for compulsory universal military training! So far as England is concerned, she need not, for the next quarter of a century, be under any apprehension of serious difficulties arising with any of her European neighbours, *but in 1910 or thereabouts* there will have arisen a naval Power which may prove mightier than she, and should she (Germany) gain the supremacy, England will become extinct both as a sea and a land Power, and all her dependencies, including India, will fall into Germany's clutches. You may live to see this. I shall not, but when that time comes, remember my words.

AN IMPORTANT NEW BOOK ABOUT EGYPT.

By BARON DE KUSEL (Bey),

Sometime English Controller-General of Egyptian Customs.

AN ENGLISHMAN'S RECOLLECTIONS OF EGYPT. 1863 to 1887.

With an Epilogue dealing with the present time, 1914.

With thirty-two illustrations and a map.

Demy Octavo. 10s. 6d. net.

"He writes freshly and agreeably of his life and its varied experience . . . and of the many well-known personages . . . with whom he was thrown."—*Times.*

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915. Sept.	1915. August		1333. Shawwal	5675. Ellul
3	21	Friday	23	24
4	22	Saturday.....	24	25
5	23	Sunday	25	26
6	24	Monday	26	27
7	25	Tuesday	27	28
8	26	Wednesday	28	29
				5676. Tisri.
9	27	Thursday	29	1

To-morrow is the birthday of H.M. Olga, Queen-Dowager of the Hellenes.

Thursday is the birthday of H.R.H. Prince George of Serbia, elder son of King Peter, who was born at Rieka, Montenegro, in 1887, and who renounced his rights as Crown Prince, in favour of Prince Alexander, in 1909.

The Crown Prince and Princess of Montenegro arrived in Athens, on their way to Italy, on Thursday of last week, meeting with a very cordial reception in the Greek capital.

H.E. the Greek Minister left London last Friday for Hampshire.

The Serbian and Roumanian Ministers were among the callers at the Foregn Office last Friday.

The Serbian Government has presented to the Victoria and Albert Museum and to the British public the marble torso of Strahinic Ban, by Ivan Mestrovic, in proof of their appreciation of the interest shown in the recent exhibition of his work. The torso is on view in the Central Hall of the Museum; the remainder of the exhibition is now closed.

The *Gazette* announces that the King has been graciously pleased to give directions for the following appointment to the Most Distinguished Order of Saint Michael and Saint George: To be an Honorary Member of the Third Class, or Companions, of the said Most Distinguished Order: General de Division Serdar Janko Voukotitch, Prime Minister of Montenegro, Commanding the Montenegrin Army in Herzegovina.

Sir Alexander Baird, who is home on his annual visit from Egypt, is making a short stay at Urie House, in Kincardineshire, of which county he is Lord-Lieutenant.

Squadron Commander F. H. K. Edmonds, R.N., D.S.O., who won the distinction in the Cuxhaven raid, and has more recently been making the Turks extremely unhappy by dropping bombs on their transports in the Dardanelles, is, we are informed, a brother of Mr. W. S. Edmonds, of the Levant Consular Service.

Mr. Charles A. M. van Millingen, Cadet Officer of the Uppingham O.T.C., eldest son of the Rev. Professor var Millingen, D.D., of Robert College, Constantinople, has received a commission as second lieutenant in the 14th Rifle Brigade (August 18).

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from

Miss Thomson, The Hall, Bexhill on-Sea.

Mr. Arthur Baker having been called away from London on business, Mr. Middleton Edwards has taken over the work of hon. treasurer to the British Refugees from Turkey Relief Fund.

Second Lieutenant F. C. N. Raymond, 1/8th Hampshire Regiment, T.F., who is officially reported missing, and is feared to have been killed in the Dardanelles fighting on August 12, is the second son of Mr. George Raymond, of Corfu, Greece.

A marriage will shortly take place, quietly, between George Bettesworth Piggott, formerly a Judge of his Majesty's Supreme Court for the Ottoman Dominions, son of Fraser Piggott, J.P., of Fitzhall, Midhurst, and Nadine, younger daughter of the late Sir Reginald Beauchamp, Bart., of Langley Park, Norwich.

Major the Hon. Alexander Hore Ruthven, V.C., who has been wounded at the Dardanelles, is the second son of the eighth Lord Ruthven, and was born in 1872. He served as a captain in the 1st Dragoon Guards in the Nile Expedition of 1898, and commanded the Camel Corps at the capture of Gedaref. For his services in this campaign he was mentioned in despatches, and received the 4th Class of the Osmanieh and the Egyptian medal with clasp. Major Hore Ruthven earned his Victoria Cross in 1899 when serving with the Nile Expedition. The decoration was awarded him for great gallantry in saving the life of a wounded soldier under heavy fire. During the present campaign he has served with the Welsh Guards.

Major E. H. Lewis, 8th Battalion Hampshire Regiment (Princess Beatrice's Isle of Wight Rifles), who is reported missing and is believed to have been killed, had seen much active service in cavalry regiments in the Sudan, Ashanti, and Nigeria. He was gazetted a second lieutenant in the 21st Hussars on December 17, 1892, lieutenant on August 12, 1896, and captain in the 21st Lancers on December 30, 1899. In the Sudan Campaign (1898) he was present at the battle of Omdurman, for which he received the medal and also the Khedive's medal and clasp. He joined the 8th Hants two years ago.

Major William Frederick Walter, Lancashire Fusiliers (killed in action), had retired from the Lancashire Fusiliers in 1903, but rejoined the Service for the war. He was born in February, 1863, and received his commission in 1882; his substantive rank of major was gazetted in July, 1900. He was gazetted to the Staff in August of last year. Major Walter, who was a graduate of the Staff College, had seen a great deal of active service. He was in the Expedition to Dongola in 1896, and was decorated with the Egyptian medal with two clasps. He won another clasp for work with the Nile Expedition of 1897. In the Nile Expedition of 1898 he fought in the battles of Atbara (where he was slightly wounded) and Khartoum. He was twice mentioned in despatches, and received the Khartoum medal as well as two clasps to the Egyptian medal. In the South African War (1899-1900) he was a Special Service officer. He was at the relief of Ladysmith, and in the action at Spion Kop, where he was severely wounded. He was again mentioned in despatches, and received the Queen's medal with clasp.

Some interesting particulars regarding the late Mr. T. B. Etherington Smith, Sub-Director-General of Accounts in the Egyptian Ministry of Finance, whose death was reported in these columns last week, are given in the *Daily Telegraph*. The writer says:—Mr. Etherington Smith, who was only thirty-six years of age, was in his day a fine oarsman, though he scarcely equalled his brother, the late Dr. R. B. Etherington Smith. T. B., who was an Oriel man, rowed No. 7 in the Oxford boat stroked by C. P. Rowley in 1900, R. B. being No. 5 in the successful Cambridge boat. The following year the Oxford crew, stroked by R. H. Culme-Seymour, were the winners, T. B. Etherington Smith again being at No. 7. In 1900, with F. W. Warre, of Balliol, as partner, he won the Oxford University pairs. It will be recalled that his elder brother died two years ago, at the same age, from blood-poisoning, which developed as the sequel to a surgical operation which he had performed. The brothers were the sons of Mr. J. H. Etherington Smith, Recorder of Derby.

The *Egyptian Gazette* reports that Mr. Sydney A. Moseley, who has been representing the Central News and the Exchange Telegraph Company on the Gallipoli Peninsula, is now at the Ras-el-Tin military hospital, having been obliged to return from the theatre of hostilities owing to an illness, which necessitates his return to England.

Dr. Herbert Adams Gibbons, who was formerly Assistant Professor of History at Robert College, Constantinople, is now resident in Paris. His latest book, "A New Map of Europe," has met with much success. It has been adopted as a text book in many of the leading American colleges and universities, and though only published two months ago is now in its second edition.

Our Bucharest Correspondent writes (August 12):—

M. J. Cruppi, the former French Minister, who has been sent on a special mission by the French Government to the Balkan States, arrived some days ago from Sofia. M. Cruppi, who is accompanied by Mme. Cruppi, has paid a number of visits to their many former acquaintances in the capital, and besides having had long interviews with M. Bratiano, and other Ministers, has had long audiences with the King and Queen. They left for Jassy and Petersburg yesterday.

Lieutenant-Colonel J. P. Finley, United States Army, who has written a monograph on the Mohammedan Moros of the Philippines, was formerly Governor of Zamboanga, Philippine Islands. In 1913 he visited Constantinople in order to obtain the appointment of some *hodjas*, or teachers, to instruct the Moros regarding the Moslem faith, which they professed, but did not honour. At first he encountered a good many difficulties in connection with this mission, the Turks being, apparently, nonplussed by the proposal; though the Sheikh-ul-Islam was enthusiastic in his support. Afterwards, Colonel Finley was able to enlist the sympathy of some of the leading Turks, including Riza Tewfik Bey, and having obtained interviews with the Grand Vizier, Mahmud Shevket Pasha, the Heir Apparent, Prince Yussuf Izzeddin, and the Sultan himself, he finally accomplished his purpose. Colonel Finley had at that time been nearly twelve years in the Philippines. He has now returned to the United States, and is stationed at Fort Crockett, Galveston, Texas.

Mrs. Winifred S. Monkhouse, The Cliffe, Seaton Carew, has heard from a friend fighting with the Mediterranean Expeditionary Force that there is great need in the hospitals for mosquito nets, fly swatters, etc., as the plague of flies is terrible. Mrs. Monkhouse has received donations for nets., etc., which she has purchased and sent out, but as so many more are needed she makes an appeal for further assistance.

The Rev. J. H. Little, Senior Chaplain to the Forces in Egypt, appeals in the Egyptian papers for illustrated magazines, books, etc., for the wounded in hospital in Egypt. Parcels and boxes, addressed to The Senior Chaplain, Headquarters Office, Abbassia, will be sorted and distributed thence to the hospitals.

Although the typhus epidemic in Serbia has been effectively mastered, the country is still suffering in a manner little realized by the British public. The doctor in charge of the Wounded Allies' Relief Committee's Unit at Kragujevatz states that, by reasons of war and pestilence, Serbia has lost half her doctors, while the remaining half is mobilised with the Army. In Kragujevatz, which has a population of 50,000, there is only one Serbian civil practitioner. The conditions among civilians are therefore terrible and the Wounded Allies' Unit has opened a dispensary in the town. The committee is still in need of funds for its work, and all contributions will be welcomed by the hon. treasurer, Mr. T. O. Roberts, manager of the London County and Westminster Bank, 217 Strand, W.C.

Digitized by Google

APPOINTMENTS, PROMOTIONS, etc.

Under date August 18, our Serbian Correspondent reports :—

Dr. Sondermeier, Colonel and Surgeon in the Serbian Army, has been sent on a special mission to Albania, as sanitary delegate, to inspect the hospitals there. He has already visited Tirana and Durazzo, and is now in Elbassan.

It is officially announced that his Highness the Sultan of Egypt has been pleased to approve the promotion of the following officers to the rank of Kaimakam in the Egyptian Army :—

Bimbashi (temp. Kaimakam) D. C. Percy-Smith, D.S.O., Officer Commanding Nuba Territorials, Bimbashi A. Craufurd, 13th Sudanese; Bimbashi H. V. V. Kyrke, Deputy Assistant Adjutant-General; Bimbashi G. R. Worthington-Wilmer, 9th Sudanese.

ROLL OF HONOUR.

British Subjects from Turkey in H.M.'s Forces.

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A., Colchester.
ATKINSON, Gunner T., "A" Co., Royal Field Artillery.
BAKER, Captain A. Warden, 7th Royal Scots Fusiliers.
BARRON, Sergeant J. B., First Canadian Contingent (formerly of the St. George's Boys' School, Jerusalem).
BINNS, Bombardier Harold H. (49,567), Battery Office, 34th Reserve Battery, R.F.A., 6b Reserve Brigade, Piershill Barracks, Edinburgh.
BINNS, Lieut. C. E., R.M. (Interpreter to Mediterranean Forces).
BOLTON, Alfred, Naval Brigade.
BOND, Private H. C., 7th (Reserve) City of London Regt.
BOND, Gladwyn J. T., Inns of Court O.T.C.
BOND, Trooper S. (1779), Royal Horse Guards.
BOND, Corporal R., Royal Field Artillery, Durlston House, Park Road, Swanage.
BORRELL, Rifleman Alfred, 7th Service Batt. Rifle Brigade.
BOWMAN, Private Henry J., R.A.M.C., Duke of York's Barracks, Chelsea.
BROOKS, Corporal G., Royal Field Artillery, Swanage.
BURN, E. R., 7th Service Batt. Rifle Brigade.
BURNS, Rifleman Edward, 7th Service Batt. Rifle Brigade. (*Accidentally Killed.*)
CASTELL, Rifleman Henry, 7th Service Batt. Rifle Brigade.
CAUCHI, Act. Corporal Henry (6113), 19th Service Battalion, C. Company, Royal Fusiliers, Epsom, Surrey.
CLIFTON, Capt. Ernest H., Durham Light Infantry.
COLES, Dr. D. A., R.A.M.C. (formerly of the English Hospital. Haifa).
COLLEY, Trooper Isaac E., Royal Horse Guards.
CRAWFORD, Private James, 7th (Reserve) City of London Regiment.
CUMBERBATCH, Lieut. A. Noël, 9th East Yorkshire Regiment, Fulford Barracks, York.
CUMBERBATCH, 2nd Lieut. H. D., 9th Batt. the Buffs.
CUMBERBATCH, Lieut. and Adjutant R. C., 7th Batt. Rifle Brigade.
CUMING, Bombardier A. C., 262nd Battery, R.F.A., 84th Brigade, Colchester.
DAVIDSON, Bombardier C. T., 266th Battery, 85th Brigade, R.F.A., Colchester.
ELLIOTT, Eric C., 2nd Lieut., Essex Regiment, 11th Battalion.
ELLIOTT, Flight Sub-Lieut. Clifford W., R.N.A.S.
EPPSTEIN, Lieut. W R., Durham Light Infantry.
FAULKNER, Lieut. M., Admiralty House, Malta.
FROMANT, Private F., Grenadier Guards.
GALLIA, Rifleman M., 7th (S) Batt. Rifle Brigade.
GOODACRE, Miss C., Red Cross, Shoreham.
GOUT, Lieut. Charles L., 4th (R) King's Own Yorkshire L.I., Drill Hall, Bank Street, Wakefield.
GOUT, Rifleman Evelyn, 7th Service Batt. Rifle Brigade.
GOUT, Rifleman Richard, 7th Service Batt. Rifle Brigade.
HADKINSON, Rifleman Vivian H., "A" Co., 7th Batt. Rifle Brigade, Queen's E1 Ward, Bed 40, Graylingwell War Hospital, Chichester. (*Wounded.*)
HIGGS, Private J., 6th Dragoon Guards.
HOLTON, Corporal Alfred, Royal Naval Division, Divisional Engineers.
HOLTON, Trooper John, B. Squadron, Essex Yeomanry.
HOYLAND, 2nd Lieut., H.A.D. (Interpreter to the Mediterranean Forces).
IRELAND, Private D. J. (3346), 15th County of London Regiment.
JACKSON, Rifleman Edward, 7th Service Batt. Rifle Brigade.
KERR, Miss E., Army Nursing Corps, France.
KEYSER, Lieut. A. G., 8th Batt. King's Own Yorkshire Light Infantry.
KEYSER, 2nd Lieut. R. N., 10th Batt. East Lancashire Regiment.
KEYSER, 2nd Lieut. Henry, 2/10th Batt. Middlesex Regiment.
KEYSER, 2nd Lieut. J. C., 2/9th Batt. (D.C.O.) Middlesex Regiment.
LA FONTAINE, Rifleman Fred., 7th Service Batt. Rifle Brigade.
LA FONTAINE, 1st Lieut. Hugh, 2/7th City of London Regiment.
LA FONTAINE, Sub-Lieut. J. S., R.N.V.R., Hawke Battalion. (*Wounded.*)

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

BOYCOTT.—At Burlingham Lodge, Norwich, to Evelyn Mary, the wife of A. G. Boycott, Private, R.A.M.C., and of the Ministry of Public Instruction, Cairo, Egypt—a son.

DEATHS.

CHOLMONDELEY-PENNELL.—On the 22nd ult., at Palace Mansions, W., Henry Cholmondeley-Pennell, late H.M. Inspector of Fisheries and Director of Egyptian Commerce, elder son of Sir Henry Pennell, of the Admiralty, in his eightieth

SAUNDERS.—On August 29, at Hythe, Frederick William Saunders, M.B., late of Donnington Hurst, Newbury, and Assouan, Egypt, youngest son of the late Deputy Inspector George Saunders, C.B., aged 52.

IN MEMORIAM.

WOOLLATT.—Percy Christopher Parkes Woollatt, the dearly beloved eldest son of Lilian and Percy Woollatt, who was accidentally drowned at Shiraz, Persia, on August 27, 1914, aged 6½ years.

Peace, Peace! He is not dead, he doth not sleep—
He hath awakened from the dream of life—
'Tis we who, lost in stormy visions, keep
With phantoms an unprofitable strife.

WHERE TO STAY.

UPPER EGYPT.

Luxor.
The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.
The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.

Are the Finest on the Nile.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-room attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,600 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel), 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

Alexandria.
CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. Full Pension P.T. 80 per day.
C. AQUILINA, *Proprietor.*
(Late of Messrs. Thos. Cook & Son.)

Alexandria.
WINDSOR HOTEL (*Facing the Sea on the New Quay*).
Most delightful and healthy situation of any Hotel in Alexandria. Electric Light throughout. Daily Concerts on Verandah. Meals served *al fresco*. French Cuisine and English Management.
Inclusive Terms from P.T. 50 (10s.) per day.
Special Terms to Government Officials, Commercial Travellers, and for long stays.
Proprietor and Manager—AUG. van MILLINGEN.

FRIDAY, SEPTEMBER 3, 1915.

EGYPT AND THE WAR.

Nowhere has the year of war that has just been completed had more far-reaching effects or made more radical changes than in Egypt. A year ago Egypt was still a vassal State of the Ottoman Empire, with certain autonomous privileges, but in the military occupation of Great Britain. Everyone was looking forward to Lord Kitchener's return in the autumn, when, it was understood, he would deal drastically with the Khedive, who, always a disturbing and uncertain factor, had been troublesome during the early part of the year. At that time the day seemed yet far distant when Egypt would be relieved from all the disadvantages which her anomalous political status bestowed upon her. Suddenly the situation changed. The dogs of war were let slip in Europe; Lord Kitchener was called in to take charge of the War Office; and Egypt was left in the hands of the General Commanding the Army of Occupation and of the Acting British Agent. Her sovereign remained at Stamboul, where he was recovering from the attempt made but a week or so before on his life. Abbas Hilmy Pasha's strong anti-British feelings caused him, however, quickly to forget that he owed this attempt to the machinations of the camarilla in power in Constantinople, which had its own reasons for wishing his undoing. Ever lacking in political prescience, the Khedive at once burned his boats by throwing in his lot wholeheartedly with the Young Turks and their Teuton friends, who within three months succeeded in dragging the Ottoman Empire into the fray on their side. By November events had developed so definitely that General Maxwell was ordered to assume military control of Egypt. The following month Great Britain cut the Gordian knot by declaring the rights over Egypt both of the Sultan and of the Khedive forfeit to his Majesty King George; she announced that she had taken the country under her protection, and that the ex-Khedive's uncle, Prince Hussein Pasha, had been appointed ruler in his stead, with the title of Sultan of Egypt. No more dramatic turn could have been given to events than that which the concluding months of 1914 witnessed. Not the least remarkable aspect of the course of events is the fact that this reversal of the old order of things has been achieved without any fuss and without arousing any untoward incidents of any real importance; for the two attempts on the life of the new Sultan cannot, and indeed must not, be regarded as symptomatic of the feeling of the people. There is little doubt that whilst the first was the act of a madman, the second was the outcome of a plot engineered by either the Young Turks or the ex-Khedive; in neither case can the country as an entity be held to account for such actions.

To convey a true impression of what has been achieved it is necessary briefly to restate the position when war broke out last August. It was obviously the game of the Teuton Powers to occupy our attention and our energies by the fomentation of trouble in the outlying parts of the Empire. While the Emden and her consorts endeavoured to harry our convoys local agents were used for the purpose of creating disturbances at important points. The world knows now what was attempted in other parts of Africa and in India, and how the danger was averted. Egypt was one of the points where the Empire was most vulnerable, for there was the doorway through which the reinforcements offered by loyal Australasia and India had to pass. The country had a large Teuton population, which had immigrated for apparently purely commercial motives, but which had been encouraged to settle on the banks of the Nile by Wilhelmstrasse solely in anticipation that the day might dawn when the Vaterland would be at war with the occupying Power, and they could by their presence very actively assist their country's cause in Egypt. When war broke out, it must be admitted, the British Government had no plan of campaign ready for dealing with the situation created in Egypt by the European crisis; and no attempt was made for some time to stop the departure of German and Austrian reservists or to restrict the liberty of those enemy subjects who remained. This unreadiness is, however, a point in favour of the sincerity of our efforts for peace. The position was rendered all the more delicate at the outset owing to the fact that Turkey, Egypt's suzerain, was still neutral. It was, however, not long before the authorities found that they could not allow things to continue as they had been doing, since the enemy subjects and their consular representatives were hard at work trying to make local trouble for us, and the country was overrun with Turkish agents, who made common cause with the Teutons. Few people realise—it is no indiscretion to speak about it to-day—how strenuously and systematically the Turkish and Khedivial agents and the German element worked. The Mors affair and other incidents, since revealed, convey but an inkling of what has really taken place. The most fantastic rumours, calculated to impress the credulous mind of the Egyptian, were put into circulation; no effort was spared to set in motion a wave of fanaticism and a spirit of dissatisfaction with the actual Government; plots were made for the wrecking of public property, and the consequent creation of a panic. Yet, although from time to time economic affairs have assumed an aspect that lent an air of accuracy to the rumours put about; despite the fact that the Turks actually invaded Egyptian territory with the avowed object of resetting the "Jewel" of the Turkish Empire in the casket of Othman, from which the unbelieving British had stolen it, and of granting the Egyptians the independence for which they had so long clamoured in vain; and notwithstanding that the declaration of a British Protectorate entailed the overthrow of the Turkish suzerainty, which, however much veiled politically, had in the eyes of many quite an important religious aspect, the country remained throughout perfectly calm. Indeed, far from the insinuations and provocations of the agitators receiving attention, there swept over the land, from Alexandria right down to the Bahr el-Ghazal, a wave of loyalty to and of sympathy with the British overlord, which was as spontaneous as it was satisfactory.

While this attitude is a tribute to the sound common sense of the Egyptians, of which Lord Kitchener has so often spoken, there is little doubt that the successful steering of the Egyptian barque through such troubled waters was due to the skill and tact with which the military and civil authorities handled a situation as delicate as it was unprecedented. Their task was complicated by the fact that the world-wide economic and financial problems which the war had created had had their repercussion in Egypt. The cotton position in particular caused much preoccupation and controversy; for Egypt depended entirely on the sale of this, her only crop, for the means to meet her obligations to Europe and to keep the administrative wheels oiled. The measures taken by the local financial authorities with the very generous assistance of the British Government helped somewhat to relieve matters, and, Egypt's proverbial luck coming to her rescue, she has managed with comparative ease to survive the crisis that lay before her. The revenue returns, to which we referred recently, show that the country is speedily recovering ground, whilst the Customs' statistics indicate that the balance of trade has made a substantial swing in the country's favour. Indeed, strange as it may sound, Egypt has actually benefited by the war. In the first place, while her political status has been settled for all time, the outbreak of war has also witnessed the disappearance, let us hope for good, of a political element that has ever sapped the nation's life blood, the while its activities unduly distracted the attention of the authorities. In the second place, at the end of a year of war conditions, we find her economic position on a

Digitized by Google

very much firmer basis; for the restriction of the cotton area and the enforced growing of an increased quantity of cereals required by the country for its own consumption will place it less at the mercy of climatic and economic conditions, which, influencing the fate of the cotton crop, have most certainly reacted to the country's detriment in the past. Egypt has come through her political and economic crises with a success that serves as an earnest of what we may expect in the future; and when peace once again reigns throughout the world, it is to be hoped that the Egyptians will realise what a benefit the change wrought in their political status has conferred upon them by bringing them within the precincts of the British Empire. Already Egypt has played a part in the destiny of that Empire, for it has been the arena where the first act in the most moving pageant of Empire ever conceived has been performed. The banks of the Nile have been the training ground for contingents from the overseas Dominions; and the Turkish invasion afforded the unique spectacle of British, Australasian, Indian, Imperial Service, and Egyptian troops taking the field side by side in defence of the Empire, to which one and all equally belonged. Surely that was an eventuality, cementing and consecrating in everyone's eyes the Imperial bond, that the Germans never for one instant foresaw. May this early association with the other members of the Empire into which they had so recently been admitted enable the Egyptians to find in that Empire both the security they need for their national development and the incentive to aspire to a higher destiny than has been theirs for many centuries past.

OLD SAYINGS FROM THE NEAR EAST.

Were it not for the fires of Constantinople, the threshold of its houses would be of gold.

Measure a thousand times and cut once.

Before you enter, think of your coming out.

That which is written comes on the head.

The end of a bad dream is good.

There is no bargaining for the fish that is in the sea.

In forty years he made one wise remark, and that by mistake.

Like the Imam's lantern, he turns in every direction.

My enemy who is far from me may live a thousand years.

There are many to put on the saddle if I become a donkey.

Let him who tells the truth have a swift horse that he may ride and escape.

Let him who would steal a minaret first prepare a hiding place for it.

It is better to be ashamed below the mountain than on its top.

Experience is like a valuable comb given us when our hair is all gone.

Said the crab: "Daughter, why do you walk crooked?" —"Mother," replied the daughter, "show me how to walk straight."

At Aya Sophia he begs, at Sultan Achmet he gives alms. (These two mosques in Constantinople are within a stone's throw of each other.)

Before you understand a thing, do not catch fire and flash like Albanian powder.

Fort Tchanak (one of the forts at the Dardanelles) is a pot (tchanak) from which the secret comes not forth.

SYRIAN REFUGEES IN CRETE.

Under date of August 31, Reuter's correspondent at Athens reports:—A telegram from Canea (Crete) states that the American cruiser Chester has arrived there from Beyrout with 470 refugees, French, British, Russian, and Italian. The cruiser is leaving again for Beyrout, where she will ship a further batch of refugees. Another American cruiser is expected at Canea with refugees from Alexandretta.

LIFE IN SYRIA.

(By a Former Resident.)

The Question of Language.

To the student of Oriental manners and customs Syria is, indeed, a land of glorious possibilities, for its people are responsive to friendly overtures, and once the difficulties of language have been mastered, an entrance is easily gained into every house. The best way to learn the language is undoubtedly to live amongst the people, for Arabic learned only from books is very unsatisfactory, a wrong pronunciation being often picked up in this way, which it is difficult afterwards to lose. A teacher who knows no English, or next to none, is the ideal, for thus Arabic can be, and, indeed, has to be, absorbed from the beginning. The great thing for the beginner to do is to make use of what he or she knows and not to fear being laughed at. The Syrians themselves are too polite to laugh at the efforts of a European to speak their language, though often enough it must be rather trying to them to hear their beautiful Arabic mauled by the tyro. Ludicrous mistakes are, of course, frequently made, as, for instance. that of the lady who, wishing to buy walnuts, asked for a husband; but the fear of making such mistakes must not be allowed to deter the learner from venturing.

There are some letters in the Arabic alphabet for which it is absolutely impossible to find an equivalent in English; and that is why Arabic words written in English are apt to mislead the reader as to their meaning.

As the learner will soon discover, there are many graceful sayings in Arabic, appropriate to special occasions. Syrians are noted for saying "the right thing at the right moment," and to be able to do likewise the European must not only know something of the language, but also be conversant with the etiquette of the country—knowledge which comes gradually from intercourse with the people. Thus it is usual when you have partaken of any hospitality to bow to your host or hostess, as the case may be, and use a word which being interpreted means, "May you always have——" whatever you have eaten at the time. But this only applies in the case of ordinary visits and joyful occasions. I well remember visiting a house of mourning with two young Syrians not long after I had arrived in the land, and the care one of them took to impress upon me that I must on no account make use of the expression just referred to. To have done so would have been a terrible mistake, for it would have been equivalent to saying: "May you always have sorrow!" Syrians are naturally very courteous and hospitable, and it is a great pleasure to them to entertain strangers, especially when these show that they are really friendly.

The Simple Life.

The Syrian peasant's life is a very healthy one. He is up with the sun, tilling his land, ploughing, sowing, or reaping, according to the season, and never eating his "morsel" until the sun is high in the sky. The said "morsel" commonly consists of bread and olives in the winter, and of bread and grapes, or whatever other fruit is easily procurable in his district, in the summer; his drink is pure water, ice-cold in the hottest weather, bubbling up out of the many springs that "run among the hills." The way to gain the heart of the peasants is to eat with them. If you come upon a group of them at their morning meal, the polite thing to do is to say, "May you be blessed!" to which they will reply "Take." You then answer with a word meaning "two healths." Naturally, with strangers this interchange of compliments is mere politeness, for if every one who was invited accepted the invitation the peasant would often have nothing for himself. But any one with a little tact will be able to judge when to accept and when to refuse such offers.

In the mountains the women work quite as hard as the men, if not harder. In the early spring they may be seen breaking their backs in weeding in the fields under the burning sun. They are rarely allowed the privilege of a ride: their lords and masters amble along lazily, while their poor women-folk trudge up and down the mountain passes, laden with faggots for firing, or any other loads of household necessaries. In regard to fuel, it may be noted, they are very thrifty, using even the olive stones; but they have always a plentiful supply of wood, mulberry, pine,

H.M. KING OF SPAIN.

Digitized by Google

fig, and vine branches, also the stunted evergreen oak, from which they make charcoal. The women are clever with their hands, making their own little fireplaces with clay, also trays and baskets of coloured straws and rushes, which are very pretty, and which they are only too glad to sell.

Most people in Syria have their own vine and fig tree—some have many. There does not appear to be much ready money amongst them; but many of them own a fair amount of land, which they turn into cash when they wish to emigrate, or to obtain exemption from conscription for their sons. As in many other parts of the East, the peasant's home frequently consists of only one room, which serves for eating and sleeping in, the beds being just mattresses, which are stored away in a recess in the day time, and brought out and spread on the floor when the household retires to rest at night. Sometimes these rooms have no window at all, the only means of ventilation being the doorway, and, as may be readily understood in these circumstances, when sitting round a fire burning on a clay hearth, the occupants are nearly blinded by smoke. A tiny lamp, burning either olive oil or paraffin, is commonly kept burning all night, to keep away evil spirits.

Western Influence.

The "one-roomed house" is, however, not so often seen in Syria nowadays, except in remote districts. Western civilisation has brought in its train many changes, including tiled roofs, tables, chairs, and iron bedsteads. These are, no doubt, distinct improvements; yet the things that are disappearing had a picturesqueness and charm of their own; and, sitting on a mat by the clay hearth, in a one-roomed house, one often seems to get more to the root of the native character, to be more closely in touch with the simple life, than is possible amidst the more elaborate arrangements imported from the West. The distinctive costume is also dying out in the towns, and in order to see the truly Eastern dress as it was worn throughout Syria not many years ago, it is necessary now to go into the remote districts.

Market days are full of interest for a European, for a traveller especially. But here again the influence of the West has made itself strongly felt, and in the coast towns you rarely find a real "market day." Farther inland, however, notably in the vilayet of Damascus, most villages have their own market days, on which you may see strings of camels, donkeys, mules, and "stock," in the shape of cows, sheep, and goats, wending their way to the market, accompanied by men and women in their picturesque dress, the women often carrying baskets of fruit and vegetables, that lend delightful touches of colour to the animated scene. In the market itself there is a recognized quarter for everything: here, fruit; there, vegetables; yonder, pottery, the browns and greens of which harmonize well with the indigo dresses and white veils of the Druse women. There is, of course, much bargaining, and even more talking and gossiping. The women make good use of the opportunity for gathering and passing on news, and the men are by no means above following their example in this respect at least.

The Season's Employments.

The people are hard-working and always busy. January and February are the slackest months of the year for them, but even then they are occupied in making charcoal and in replenishing their supply of wood—the charcoal for use in braziers, or on the open hearths, the wood cut up into logs for burning in stoves made on the American pattern.

The next business in the calendar is the rearing of silkworms, which begins early in March, as a rule, but varies according to temperature. This is an important industry, and in many houses a room, or if a larger crop is wanted, more than one room, is given up entirely to it. The eggs are often put in the churches "for luck," and much care is devoted to the preparation of the implements used. A scaffolding, or framework, of bamboo canes is erected, on which are placed trays made of basket-work or dried manure, and sacks of mulberry leaves are brought in and spread on these trays for the worms to feed upon. Except when they are fasting, it keeps the family busy bringing in supplies of leaves, for the silkworm is a most voracious feeder, and until the worms are reared the people hardly give themselves time to eat. This is, indeed, a very anxious time for them. The next stage is the spinning of the cocoons. Branches of shrubs—usually wild broom, which is found all over the mountains in the Lebanon—are fixed to the bamboos, and on these the worms spin their cocoons. The cocoons are sold to silk factories, and then the silk is wound off, the cocoon being first placed in boiling water. While the worms are being reared one is often asked to "pray for them" by the owners.

The next business of the Syrian is the harvesting. All the men, women, and children turn out for this, and booths are erected near the threshing floors, where the owners temporarily take up their abode, in order to prevent theft of their corn. Threshing is done by oxen, and "handfuls" of sheaves are left in the corners of the fields for the widow and the fatherless, just as in the days of the Old Testament. In similar fashion "gleanings" are left of fruit as well as of grain.

After the harvest, which usually takes place in June, the watchmen guard the vineyards until the grapes are ripe. In the high lands this is usually in late August or early September, but in warmer districts the grapes ripen in July. The scent of the blossom of the vines is very sweet, and in walking through the vineyards just after dawn, towards the end of July, one is sometimes surprised by the fragrant smell, for the flower is so microscopic that it is often overlooked.

Early in October raisin making begins in Lebanon. The process is a curious one, though simple. The grapes are spread out on patches of stone-laid pavement in the vineyards; a preparation of charcoal and olive oil is then brushed over them, and the sun does the rest. About the same time, also the "dibs" is prepared. This is made by boiling down the juice of the grape and leaving it to cool. It is a delicious sweetmeat, and is very often spread on one of the thin, flat native "loaves" for the children to take to school. When thus spread the loaf is often rolled up, in the style of the "cornucopia" dear to the heart of the Swiss and Italian pastrycook. It is then called "a bride"—it being customary in Syria to compare everything very nice to a bride. "Dibs" is also eaten with lettuce. The juice of the grape is also used, of course, in making the native wine, and from it is distilled the *arack* spirit, much used at feasts.

Sheep-fattening is another not unimportant occupation in the mountains. In the early autumn each householder who can afford it buys a sheep, and the process of stuffing—no other word will serve—the animal with mulberry leaves begins forthwith. When the poor animal can eat no more, it is killed by its owner himself, and then joints are to be seen hanging outside each house. The fat is boiled down and kept for cooking purposes, being used either in soup or for frying in the winter months. It is good eating, and much nicer than *semin*, a kind of coarse butter made from camel's milk.

Lace-making is now quite an industry in Syria, and much lace is sent both to England and to America. The making is a very simple process, no pillow or bobbins being employed. The Syrian girl provides herself with a needle and an ordinary reel of cotton—Coats's machine cotton being preferred—which can be procured in most of the village shops. Although the method employed is so simple—just threading the needle and "working"—the patterns produced are often complicated. Collars are made with a strip of ordinary tape, or "batista," into which the "needle lace," as it is called, is most deftly worked with the finger, and d'oyleys, borders for handkerchiefs, etc., are made, the patterns being sometimes most minute.

The Spread of Education.

Syrian children are very fascinating. They have wonderful memories, and do not easily forget what they have once learned. This remark applies to the girls as well as the boys; and whereas it was formerly only the boys who received any education, the parents are now beginning to see that their daughters ought to enjoy the same advantages as their sons, and they are in many instances willing to pay for them to do so. Even taking the lowest view of the case, they begin to see that a girl who has been educated will have a much better chance of marrying than one who has not, since an educated man naturally prefers an educated wife; and all Syrian parents most earnestly desire their daughters to marry. Schools are springing up all over the land, and all sects and creeds are to-day realizing the importance of education.

THE PRESS ON THE NEAR EAST.

The Leading of Turkey.

"A Neutral," contributing his eighth article to *The Times* (August 26), devoted considerable attention to the activities of Germany in neutral countries. By the use of an untiring propaganda Germany, it is shown, has gained since the declaration of war an advantage among neutral nations that has almost, if not quite, counterbalanced the effects of her faulty diplomacy prior to the outbreak of hostilities. She was not only prepared with the munitions of war:—

She had entrenched herself in the Press of every neutral country, and, according to statements made in Germany, she had greatly influenced a portion of the British Press. I believe investigation of the affairs of the Hamburg-Amerika Steamship Company and hospitality to British newspaper editors would yield fruitful, if distasteful, results.

The German inspired Press is shown to have been particularly active in relation to the British Fleet. It was at first thought by the "men in the streets" of the smaller neutral nations that the British Fleet would literally do what Mr. Winston Churchill hinted at, and that the German vessels would be dug out of their hiding-places; when it was found that nothing of this nature occurred, Germany saw her opportunity, and grasped it. Our Fleet was reported to be bottled up, the exploits of German raiders were "boomed." In regard to Turkey the writer says:—

It has been said that Turkey's support was lost to Great Britain owing to some negligence by which the Goeben and the Breslau eluded capture or destruction in the Mediterranean. That I do not for one moment believe. Turkey was lost to the Allies' cause owing to German pressure and propaganda. That propaganda was, to my knowledge, conducted by an extremely astute newspaper manipulator—formerly in London—Baron von Kühlmann. The arrival of the Goeben and Breslau, no doubt, assisted, but for weeks disgraceful lies were disseminated through Turkey about the Allies, accompanied by bribes and threats. The Turks, who had hitherto been admirers of the English, were told that the British Fleet was interned, that London was in a state of terror from Zeppelins, and even more fantastic lies—such as the statement that King George was begging for peace from the Emperor William. It is idle to pretend that such propaganda is beneath notice.

The German Road.

The *Morning Post* (August 27), in treating of the question of Germanic ambition in the Balkans, says that the little Balkan Powers are faced by the need of a great decision, and that if they allow either bribery or fear to influence them against their own interests, then they are traitors to their own cause. In emphasising the fact that national freedom is the cause best worth fighting for in the world, the *Post* points the moral with the sad case of Hungary, a country that has given of its best in a cause "whose victory means for Hungary only defeat." And in the German penetration of Eastern Europe lies the great danger to the Balkans. "If Germany should win one thing is certain: she will make for herself a road to the Levant: she will seize Salonika, and the freedom of the Balkan States will then be at an end."

In reference to the position of the neutral Balkan States, and of Bulgaria in particular, the article says that, as without Russia she never could have been, so without Russia she has no security for her future existence.

If she hopes to find that security in an alliance between Germany on the one side and Turkey on the other, she is like a measure of corn hoping for an alliance between the upper and the nether millstone. There can be no true friendship for Bulgaria either in Germany, which threatens her from the one side, or in Turkey, which will always seek her ruin from the other. Fair words and promises do not alter hard facts: the Turk and the German do not change in a day or a year, and if German gold is thrown in the balance it is only to betray. As for England, it must be her policy to stand by those who stand by her.

The Balkan Situation.

The *Daily Chronicle* (August 28) concludes a leading article on the Balkan neutrals by pointing out that Germany seeks to weaken the Balkan nations in order that Austria may gain the Vardar Valley and Salonika, and herself a high road to Constantinople, while, on the other hand, the Entente Powers have "no such ambitions hostile to the free development of the Balkans":—

Slowly as things have moved, we may yet hope that this basic and unalterable fact will determine the final attitude of the Balkan peoples; and that it may do so before it is too late for them to win the rewards of co-operating in their own salvation.

The *Spectator* (August 28), in referring to the reported threat of Germany towards Bulgaria, remarks:—

If Germany really means to treat Bulgaria as she treated Belgium, we can only say that she proposes to do for the cause of Britain, France, and Russia what their own diplomacy has hitherto failed to do for them. She would show Bulgaria where her true interests lie. Bulgaria, by submitting, would once for all lose her independence. Against that loss she would be able to count a promise—a German promise. . . . Is it probable that the alert, proud, and high-mettled Bulgarians will tamely sit down under the German threat? We do not believe it. We think better of them. What the Belgians did the Bulgarians are surely proud enough also to do.

The Bulgarian.

An article under the above head, contributed by "One Who Knows Him" to the *Westminster Gazette* (August 27), contains a very faithful picture of the Bulgarian of to-day:—

He is worthy of study, being one of Nature's dominants. There is nothing recessive about him. Hammered, trod down, maltreated for a millennium, he confronts you to-day the stubborn, resilient fellow who handsomely thrashed the Turk at his chosen game, and, when overwhelmed two years ago by a confederacy of five nations, kept himself intact, saved his honour, and has lived to be very much in request to-day.

Having dealt with the personal appearance of the Bulgar, the writer continues:—

Compared with ourselves, he is unemotional, or keeps himself better in hand. During the long strain and frightful losses of the First War one witnessed no scenes in the streets. Not even the women would give way in public, exhibiting extraordinary self-control. The crowd of the capital heard of victory with composure; the storming of Adrianople, for instance, was accepted with proud impassiveness. . . . I have attended sessions of Town Councils in times of dearth, once when crowds of foodless women besieged the doors, and the last coin in the municipal chest was gone, but neither within nor without was clamour or declamation; pallid, governed grief, if you will—no more. Nor was relief accepted with cheering; they reserve the *Hurrah* for the final charge with the bayonet (*na nodj*=the knife).

An interesting article concludes with the following paragraph:—

The Power which invades Bulgaria will find itself up against a tough proposition, for the Bulgar, though the freest man in Europe, and the most naturally democratic, is absolutely homogeneous. Four and a-half millions of educated people (95 per cent. literate), steadily pursuing the same ideal, form a formidable factor in any equation. And this ideal is the unification of their race.

The True Turk.

A recent issue of the *Edinburgh Evening Dispatch* contained a very interesting article concerning the Turks as fighters. The conclusions of that paper have been arrived at by a careful consideration of evidence advanced by credible witnesses, and in them we find absolute support of the view which we have consistently emphasized in the columns of this paper.

"The real true-born Turks have been fighting like gentlemen," says one witness, an officer. "They have not shelled our hospital ship, and have been most kind to our wounded." Another instance of the courtesy and chivalry of the Turk, as opposed to the savagery of the German, was related a few days ago, also from the Dardanelles. Some shells having fallen upon a hospital ship, the British signalled the enemy, and immediately the fire was diverted to a legitimate target; a lesson to the Turks' Christian Allies, who have committed every atrocity that could be conceived against helpless civilians and still more helpless wounded.

The *Dispatch* calls attention to the reservation made

by the officer in the statement. His eulogy is for the true-born Turk, not for the sweepings of the Turkish Empire—"the men who are mainly responsible for the evil odour that hangs round the name of the Sultan's soldiery." We quote from a further paragraph in reference to these men:—

Unbiassed persons at divers campaigns—British officers and war correspondents and others—have testified to the gallantry and soldierly courtesy of the Turks; but at the same time they have protested against the policy of the Turkish Government in making use of the services of irregular troops, Kurds and Circassians, who have earned in every field the reputation of being cruel and faithless ruffians. Even Turkish officers have condemned the use of these men. But official indolence and corruption will not be moved. No effort is made to control those bandits; and the latest stories from the region of the unhappy Armenians show that the Young Turk, the so-called Progressive, is as indifferent as the Old Turk to the excesses that may be committed in the name of the Turkish Government.

Turk and German.

The following quotations from a leaderette in the *Globe* (August 28) show that yet another British paper has recognized the true relative standards of Turkish and German soldiers:—

In the heat of battle the Turk remembers that he is a gentleman, while the German too often forgets that he is a man. The Christian German murders the wounded on the field; the Mohammedan Turk dresses their injuries and carries them into our lines. The Christian German bombards cathedrals and hospitals, and chuckles on his cleverness in deceiving the stupid British by the use of the Red Cross flag. The Mohammedan Turk, fighting in Gallipoli for the safety of his capital and the very existence of his nation, takes care to avoid hitting our dressing stations or hospital bases. We only regret that he is fighting on the wrong side. But, poor fellow, that is not his fault; it is the evil deed of an intriguer who is not even of his own race. We shall remember that he fought fairly when we enter Constantinople.

Germans and Armenia.

The *Manchester Guardian* (August 25), in the course of a leading article, reviewed the Armenian question from the year 1896, when the first of a series of massacres took place. It is shown that German apathy was responsible for the delay in carrying through the proposed scheme of ameliorating the Armenian cause which was voiced by Russia some time ago, and which was ultimately shelved on the outbreak of the present war. From the sentences which we quote below it will be seen that the *Guardian* is more generous in its tone towards Germany than most of our leading papers; more generous indeed than circumstances, or our newly bought experience of German methods, would appear to warrant:—

One of the most unhappy features of the present crime against the Armenians is the connivance of German officers and officials. Whether the German Government itself is responsible for this attitude of its servants is not yet established, but the German Government has the power if it has the will to persuade the Ottoman Government to better courses. If it does not use its power to that end, it becomes a partner in the guilt of the Turks.

The paper appears to imagine that the anxiety of German-Americans to vindicate their country in the eyes of the world will be sufficient to induce them to bring pressure upon Berlin in order to check the wild orgy of murder in Armenia. In referring to these sons of Germany, who have looked with equanimity upon their country's actions in Belgium and upon the high seas, the writer says:—

What more signal demonstration of their sincerity could they give than by urging the German Government to do all in its power to stop the Armenian massacres and persecutions? It is only public opinion which can effect such a result, and there is no opinion which would carry greater weight with the German Government than that of the German-Americans.

Italy and Turkey.

In an article upon Italy's declaration of war upon Turkey the *Journal de Geneve* (August 24) sums up the situation thus created in the following paragraph:—

On pourrait soutenir aussi que la nouvelle déclaration de guerre a plus de portée par son influence indirecte, influence politico-militaire, que par son action stratégique immédiate. Le partage des dépouilles se fera, nécessairement, entre ceux qui auront contribué à la victoire. On n'est pas à l'honneur si l'on n'a pas été à la peine. L'Italie sera partie prenante sûrement puisqu'elle s'est déclarée participante. La Grèce, par exemple, qui a beaucoup tergiversé, est, dans ce moment-ci en moins favorable posture. L'entrée en ligne de l'Italie contre la Turquie est de nature à le lui faire sentir. Les autres Etats balkaniques croiront aussi devoir précipiter leurs réflexions. C'est en ce sens que l'on est autorisé à dire les perspectives ouvertes par la déclaration de guerre indirectes et à échéance, plutôt que directes et immédiates

THE SULTAN AND THE BRIDGE.

(From a Correspondent.)

Shawky Bey, the Poet Laureate at the late Khedivial Court, whose writings have on several occasions been referred to in The Near East in connection with the present War, is not only a sonorous poet, but a fellow of infinite jest. He invariably accompanied the ex-Khedive Abbas on his annual visits to Constantinople, and had an excellent store of amusing stories to relate of the deposed Sultan, Abdul Hamid. I recollect one which he told with a shiver, and which I believe to be absolutely true.

Arriving one evening at the Sublime Porte on the Khedivial yacht, he wandered into the city, having in his possession the usual poetical tribute of homage to the Sultan, which was to be read to his Majesty two days later. Falling in with a number of officials of the *entourage* of the Sultan, he read to them his poetical effort, and as the evening wore on he, by request, improvised a second poem, which he put into writing, and which was a perfect gem of satire and parody on his original work.

Those who knew Constantinople in the old days will remember the decrepit bridge, which looked, and probably was, hundreds of years old. The structure wheezed and trembled ominously whenever a vehicle passed over it, but it had the merit of bringing into the Imperial coffers thousands of pounds annually, as every pedestrian or vehicle had to pay a toll for the privilege of crossing. This relic of old Stamboul was the subject of Shawky's satirical lines, and the officials, whilst they roared with laughter, warned the poet of the dire consequences of such an affront coming to the ears of the Sultan, as Abdul Hamid was singularly proud and childishly jealous of anything and everything appertaining to the Sublime Porte. The rest of the story shall be given as nearly as possible in the words employed by Shawky Bey himself in telling it to the writer, to whom he translated the epic on his return to Egypt:—

"On being admitted into the presence two days afterwards, I saw what I took to be my first poem of adulation lying in an envelope on a small gilt table in the Throne Room, and after the usual elaborate formula of presentation was graciously commanded to read it. As soon as I took the MS. from the envelope I trembled in every limb, for I knew instinctively that it was not the metrical tribute intended for the ears of his Majesty.

"It commenced in the same manner, favourably contrasting the Sultan with all contemporary rulers, extolling his every movement and thought from the moment of birth to the present all-glorious day. 'May,' it demanded, sonorously, 'the name of any mortal or sacred monument of present history, or even of the remote past, be mentioned in the same breath as that of the Kaliph, or compared in majesty, glory, magnificence, and power with Abdul Hamid, whose reign shall be everlasting, built on the sure foundations of the world, etc., etc.? And then came the terrible words: 'Yes! yes! *the* bridge, that mighty symbol of eternity' . . . and the poem transcended into poetic frenzy about the virtues of the old bridge, much on the same lines as those familiar to most school children in 'The Falls of Lodore,' interpolated with what looked like translations of extracts from the 'Pied Piper of Hamelin.'

"Once embarked on the reading, I infused into it all the poetic fervour I could summon, and I really believe the Sultan had tears in his eyes when I resoundingly concluded. His Majesty shook hands with me when the audience terminated. . . . But it was a narrow escape!"

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

We publish on another page some of the clauses of the contract signed between the Government of the Island of Cyprus and the Cairo Motor Company for the running of a service of motor mail cars between Larnaca, Limassol, Nicosia, and Famagusta. The Cyprus Government is to be unreservedly congratulated on having come to an agreement which will keep alive the much-wanted motor-car service in the island. For, as I have frequently pointed out in these columns, nothing would have been worse for the true interests of Cyprus than the abolition of motor traffic between the principal towns, principally owing to the fact that railway lines are scarce rather than numerous. There was, I am afraid, danger at a certain moment that the service, owing to difficulties in finding a concessionaire, was doomed to lapse, but I am glad to see that all difficulties have been overcome. I wish the new venture every success. Should the fates not be propitious to it, the Cairo Motor Company will doubtless have to renounce its concession, because no business concern can work continually at a loss, as the Cyprus Motor Transport and Development Company found out to its cost. Any such renunciation on the part of the Cairo Motor Company would have a disappointing effect on the economic development of the Island.

***

One point in connection with the new contract is worthy of a passing comment, namely, that the concessionaire is an Egyptian Company. It may have headquarters in London, as well as in Cairo and Alexandria, but its activities are essentially Egyptian, and the fact that it now extends its sphere to Cyprus is significant. It is to be hoped that the relations between the two new members of our Empire in the Eastern Mediterranean will become closer than ever as time goes on. We already have the Khedivial Mail Line's service between the two serving as a useful link, and now another has been forged. Tourism will, I think, be a third, and then—— But, who knows? What is really wanted is a big British steamship service with headquarters at Alexandria, covering the whole of the Eastern Mediterranean. The concern must, however, command a big fleet, and its policy must be a go-ahead one. Any such development, on rational business lines, will be a boon to our little island, coveted by so many foreigners, and a blessing likewise to British Imperial interests in the Near East. Incidentally, I refer my readers to a paragraph on "Shipping Facilities" contained in our Cyprus Notes on page 510.

***

During the past week news from Turkey has been contradictory, and what little there is of it, unreliable. Of interest only was a message in the *Morning Post* from its Athens correspondent to the effect that the shortage of coal, owing to the successful bombardment of Zunguldak, was beginning to make itself felt in the capital. So many times have similar reports been scattered through the Press that they must, until confirmed, continue to be regarded askance. According to the correspondent in question, the shortage is so great that the gasworks are reducing their supply of gas, with the result that Constantinople is a dark city at night. Is this not, perhaps, a military measure? Further, flour mills are reported to have closed down for lack of coal, a circumstance that will throw all the work on the rustic mills, the majority of which had been abandoned when steam became generally used, but which, given adequate labour, could be worked again, presumably satisfactorily. Where the shortage of coal is likely to be felt most keenly is in connection with military operations, but if the civil population is only just beginning to feel the pinch, it is likely that the military authorities are only now commencing to draw on their reserves, having up to the present drawn from the public stock. It is essential, therefore, that coal should continue to be prevented from going down the Bosphorus.

***

In this connection a correspondent points out that by the bombardment of Zunguldak (supposing it to have been successfully bombarded) the Turks have lost the only coaling port where it was possible for them to ship coal in good and bad weather. There remain, however, numerous open roadsteads along the coast in close proximity to the Heraclea mines, where ships can load in fine weather and succeed in reaching Constantinople. The mines themselves are, in the opinion of my correspondent, not likely to be damaged by the Russian guns. Therefore, if coal is not to reach the capital, the coast to the east and the west of the mining district must be continually patrolled by Russian destroyers and light cruisers. No half-measures will do.

***

Since writing the above, Our Special Correspondent in Athens gives further particulars concerning the last Constantinople conflagration (page 512), as well as particulars regarding the latest phase of coal-running (page 489) through the Bosphorus. Our Correspondent's remarks bear out the suggestion put forth by my correspondent in the previous paragraph.

***

The reported Turco-Bulgarian treaty concerning the cession of the Turkish section of the Dedeagatch-Sofia railway to Bulgaria continues in a state of coma—or of report. The protocol, we understand, has been signed; we are, on the other hand, informed that the Turks are already preparing for the evacuation of the territory ceded by them. The first report we believe to be true; the second is premature, not to say unreliable. As for the treaty itself, we do not believe that the Radoslavoff Cabinet has definitely sold its country's birthright for a mess of pottage.

***

Bulgaria, in which country I have always had, and continue to have, complete faith, has too much common sense to throw in its lot with a group of Powers which openly confess that their ambition is to carve a way through the Balkans to Constantinople (I pity the Balkan States if the Teutonic War Lord should succeed!). In view of which I do not believe that we should attach too much importance to the Turco-Bulgarian agreement. It is an economic arrangement which will facilitate our trade with Bulgaria and Roumania. On paper it seems easy of realisation—merely the transfer of a given stretch of rails from one Government to another. So it would be in ordinary cases, but in the case of Turkey it is very doubtful whether the authorities will comply with the clauses of their agreement—and then there will be trouble. This the Bulgarian statesmen must know. Besides—and this makes my case all the stronger—they likewise know that at the present stage of diplomatic negotiations they would not deserve well of their country if they came to a hasty decision, which would involve their joining our enemies without waiting for an amicable settlement of their Macedonian claims.

***

The liquidation of the Sudd Fuel Company, referred to elsewhere, is to be regretted, just as was the liquidation announced some weeks ago of the Corporation of Western Egypt. Both schemes were ventures on a gigantic scale which, if successful, would have increased the resources of the Sudan and Egypt respectively. The main idea of the Corporation of Western Egypt was to open up, by means of a light railway and irrigation works, the oases in the Western Desert. The plan failed for reasons foreign to these comments, but I maintain—and I am not alone in doing so—that if the company's interests had, in the first place, been better looked after, the venture might have proved profitable both to the shareholders and to Egypt. The financial crash of 1906 seriously affected the company's prospects as regards converting Khargeh into a touring centre, and the failure (so far) to locate the Wadi Maluk rendered sterile one of the clauses of their concession, but, in spite of this, there still remained the exploitation of the railway line and the agricultural development of the oases. Money was spent with largesse to boom the company's prospects in the early days, but when it was needed for settling down and exploiting the fields of Dakhla and Khargeh, funds were no longer forthcoming, and matters went from bad to worse, until——

***

The history of the Sudd Fuel Company is a different one. The company was formed for the exploitation of a concession (was it not originally granted to a German subject?) for cutting sudd in the upper reaches of the Nile and transforming it into fuel briquettes. The promoters and directors were very sanguine about the company's prospects, and reckoned deliveries of briquettes by hundreds of thousands of tons. If their hopes had been realised, the advantages to the Sudan of locally produced fuel would have been immense, the more so considering that the sudd supply is practically inexhaustible. However, it appears that for some reason or other (has it anything to do with the low calorific properties of sudd, which makes it a more expensive fuel than coal, even in a country like the Sudan, which has to import every ton from outside?), the venture has not proved a profitable one, with unfortunate results for the shareholders. Not for this, however, have I lost my faith in the ultimate utility of sudd, if not for fuel, then for some other purpose, such as paper-making, for instance. When the supply of wood-pulp, continually on the decrease, will have stopped entirely, then sudd is likely to come to the front as a valuable substitute. Its pulp has, I know, been satisfactorily bleached (without, I believe, destroying or burning the fibre), and if it has not been put on the market it is most likely due to economic reasons, or to the natural opposition of the great wood pulp trust.

COMMENTATOR.

Cyprus Motor Mail Service.

The New Contract.

The new Cyprus Motor Mail Service, previously referred to by THE NEAR EAST, was timed to begin on Wednesday.

The issue of the *Cyprus Gazette* to hand contains the contract signed between the Cairo Motor Company, Limited, of London, Cairo, and Alexandria, on the one hand, and the Cyprus Government on the other, for the carrying of certain mails and other services on behalf of the Government of the Island. The following are some of the more important clauses of the contract :—

1. The contractors hereby covenant that they will from the first day of September, 1915, and until August 31, 1916, convey or cause to be conveyed his Majesty's mails (which mails shall for the purpose of this contract be considered to include all letters, newspapers, bags and boxes of letters, newspapers, packets, parcels, and other things sent by the authority of the Postmaster) from and to the places and during the times and at the hours and rates of speed severally specified in the first schedule hereto annexed.

2. The contractors hereby covenant that on the sections specified in the said first schedule the mail shall be carried by effective motor-cars to be approved by the Postmaster.

3. The contractors hereby covenant that they will convey by such motor-cars on the sections specified in the said first schedule at a reduction of 25 per centum on the regular fares in force from time to time any duly accredited officer of the Cyprus Public Service when such officer is travelling on such sections in the discharge of his official duties.

4. The contractors hereby covenant that for the purpose of this contract they will at their own cost and charge provide an adequate number of effective motor-cars with a minimum number of five cars of standard touring design supplied with a sufficient number of spare tyres, duplicate parts, and other requisites, and competent, steady, and sober chauffeurs to be respectively approved by the Postmaster.

8. The contractors hereby covenant that the motor-cars shall start from and arrive at the post offices of the towns respectively specified in the first schedule hereto annexed.

9. The contractors hereby covenant that the motor-cars shall provide suitable accommodation for the licensed number of passengers (each passenger being allowed to take with him free personal luggage not exceeding 20 lbs.) at the tariffs not greater than those severally specified in the second schedule hereto annexed.

11. The contractors hereby covenant that in the case of any serious accident to any motor-car occurring during a journey they will forward the mails by the first available means of transport, and the Postmaster hereby covenants that no fine shall be inflicted for any such delay if such accident is not attributable to the neglect or negligence of the contractors or their chauffeurs or defective tyres or motors.

15. The Postmaster hereby covenants that he will during the continuance of this contract pay or cause to be paid to them on the first day of every month the amount due to them for the conveyance of the mails during the previous month according to the scale set forth in the third schedule hereto annexed. Provided that if through the negligence or carelessness of any chauffeur any mail is delivered at the post office to which it was addressed or despatched later than the time at which it should have been delivered the fines stipulated in the third schedule shall be imposed. And provided further that if a chauffeur or motor-car shall at any time carry letters or parcels of any kind other than a mail in the pursuance of this contract (save and except personal luggage under Clause 10 of these presents and matter not capable of being sent through the post), then and in each of such cases the sum which would otherwise be payable to the contractors in respect of such mail shall be forfeited.

It is hereby mutually declared and agreed between the parties :—

(*b*) That it shall be lawful for either of the parties hereto at any time to determine this indenture by giving six months' notice of such determination in writing to the other party hereto.

First Schedule.

SCHEDULE OF MAILS.

Sections.	Times of despatch.	Hours allowed.	Number of intermediate villages at which the motor cars shall call.
From to Limassol-Larnaca	Six mails per week in each direction with special mails as under—(*a*)	4½	4

(*a*) A special car shall be available for the conveyance of the Inward Mails when first landed at Limassol at such time as they are ready for despatch, also the ordinary motor from Larnaca for Nicosia shall leave as soon as possible after the arrival of the motor with Inward Mails from Limassol.

A special car shall be also available at Larnaca to convey the Outward Mails received from Nicosia fortnightly by the afternoon motor on to Limassol.

Larnaca-Nicosia	Twice a day in each direction	2¼	2
Famagusta-Larnaca-Limassol	When Inward Mails are first landed at Famagusta as under (*b*)	3½	2

(*b*) A special car shall be available at Famagusta for the conveyance of the Inward Mails to Larnaca and Limassol on the day they are first landed at Famagusta.

The special car will be allowed 1 hour's extra time if it performs the journey from Larnaca to Limassol at night time.

Second Schedule.

SCHEDULE OF CHARGES FOR EACH PASSENGER BY MAIL MOTOR-CARS TO BE LEVIED BY THE CONTRACTORS.

	Not exceeding
From Larnaca to Limassol or *vice versa* ..	15s.
From Larnaca to Nicosia or *vice versa*....	6s.
From Limassol to Nicosia or *vice versa* ..	16s.
From Famagusta to Larnaca or *vice versa*	8s.

Third Schedule.

RATES TO BE PAID BY THE POSTMASTER TO THE CONTRACTORS FOR THE CONVEYANCE OF MAILS BY MAIL MOTOR CARS AND FINES FOR THE LATE DELIVERY THEREOF:—

Rates.

Per annum. Payable monthly.

Fines.

For each journey actually traversed by any Mail under the provisions of this indenture.

	Fine.
(*a*) When such mail is delivered at the Post Office to which it was addressed within fifteen (15) minutes of the scheduled time	4s.
(*b*) When such mail is so delivered within more than fifteen (15) and not more than thirty (30) minutes of the scheduled time	8s.
(*c*) When such mail is so delivered within more than thirty (30) and not more than forty-five (45) minutes of the scheduled time	12s.
(*d*) When such mail is so delivered within more than forty-five (45) minutes and not more than one hour of the scheduled time	16s.
(*e*) When such mail is so delivered within more than one hour and not more than two hours	20s.

N.B.—In view of the large margin of time allowed on the journeys fines will be inflicted in all cases of minor accidents or delays on account of bad roads or weather, etc.

In the event of carriages being permitted at any time to be substituted for motors half the above rates of fines will be imposed for delays thereof.

It will be seen that Clause 15 relates to the monthly payment of a grant in aid by the Cyprus Government, "according to the scales set forth in the third schedule hereto annexed." The published schedule does not, however, contain any indication as to what these rates are.

On May 17, the NEAR EAST published an article from a Correspondent giving some particulars of the working of the previous concession, held and exploited by the Cyprus Motor Transport and Development Company. According to this information, the Government subvention, starting at £400 per annum, rose to £720, but in spite of this the company's losses in one year, May 1, 1913, to April 30, 1914, rose to £1,258. Unable to obtain a satisfactory rise in their subvention, the company renounced its concession.

In February, 1915, the Cyprus Government invited tenders for the running of the service, and tenderers should offer to exploit the concession either for "a fixed sum per annum for the whole service," or "a rate per mile in accordance with the number of miles run." The Cyprus Motor Transport Company tendered, to the best of our belief, for a fixed sum of £2,000 per annum, which would have left them a small margin of profit.

The tender having given no results (March 8 was the date fixed for receiving the tenders), a second was published in March, to close on April 28, but it was likewise fruitless. The Cyprus Motor Transport Company reduced its demand to £1,450 a year, "hoping that increased passanger traffic might enable them to avoid further loss," to which the Government responded by offering £750, or an increase of £30 on their previous grant. No formula of compromise having been found, negotiations were abandoned. Incidentally it may be remembered that in the second invitation for tenders tenderers could only offer for "a fixed sum per annum," the alternative of "a rate per mile" having been eliminated.

The new contract with the Cairo Motor Company shows that the fixed sum per annum mode of payment has in its turn been abandoned for a "scale of rates." As the scale has not been made public property, we must necessarily believe that the sum total thereof will not cost the Government, in subsidy, more than £1,450 a year, or, roughly, £120 per month. Nor is it likely to be less than £750 per annum or approximately £60 per month. If much higher than £60 per month it is regrettable that the services of the Cyprus Motor Transport Company—which, after all, has dropped about £5,000 in Cyprus (exclusive of what its assets in the way of rolling stock may realise) doing useful spadework and is now in liquidation—were not retained. On the other hand, if the subsidy is not higher than that offered to the company in question, we fail to see how the Cairo Motor Company can show profits at the end of the year, and if they do not, it is likely that further tenders will have to be invited by the Cyprus Government when the present contract (which is for a year's duration) terminates. This would be most regrettable, as an effective and lasting motor service is essential to the welfare of the island, lacking, as it does, a comprehensive railway system. It is to be hoped, therefore, that the present contract will be favourable to the mutual interests of both contracting parties, in which case the Cyprus Government is to be unreservedly congratulated.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continue to receive a very large numbers of inquiries for the names of sellers or buyers of articles.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and the weekly list of articles (No. 36) which inquirers desire to purchase is ready, and may be obtained by United Kingdom manufacturers and exporters of British goods.

Arabistan Trade.

The following are extracts from the report, just published, on the trade and commerce of the province of Arabistan (Persia) for the year ending March 20, 1914, by H.M. Consul for Arabistan:—

Imports.

Imports show an increase of £205,432 over those of 1912-13. Out of the total imports, amounting to £812,096, the share of the United Kingdom and India is £612,354, or 75 per cent. The imports shown in the tables include material to the value of over £200,000 imported by the Anglo-Persian Oil Company, Limited; of this £188,000 was from the United Kingdom and £22,000 from British India. The principal increases and decreases are:—

Wood (£20,627).—An increase of £5,172. This commodity shows an annual increase, and should continue to do so owing to increase in building in the province.

Sugar, Loaf (£127,183).—An increase of £63,245. Very large imports were made, and the market was flooded.

Sugar, Crystal (£84,774).—An increase of £22,881. Very large imports were made, and the market was flooded.

Rice (£46,076).—An increase of £32,925, due to a bad local crop.

Tea (£10,435).—A decrease of £191. The customs statistics only give a vague idea of the quantity of tea imported, as large quantities are smuggled. At Basrah the duty was only 11 per cent., while at Mohammerah the duty is 6 krans (about 2s. 2d.) per batman (6.54 lbs.)—that is, about 4d. per lb.—which is considerably over 50 per cent. on the value of the cheaper qualities. Further, only about fifteen miles below Basrah, the left bank of the Shatt-al-Arab is Persian territory. In the circumstances, therefore, it is very easy and profitable to import tea destined for Persia into Basrah and have it smuggled across the river.

Enamelled Iron.—This shows a small decrease, but the demand for enamelled ware seems likely to increase. Nearly all the enamelled ware came from Austria-Hungary, as in other Persian Gulf ports.

Manufactures (£58,255).—An increase of £8,859 over 1912-13, but still a good deal less than 1911-12.

Textile Products (£237,057).—An increase of £22,863.

Exports.

The principal exports are wheat, dates, and wool, which are exports from Arabistan itself; and opium, gum, and tobacco, which are sent down for export from the interior.

The grain harvest of 1913 was a bad one, and this has shown its effects on the exports, which have decreased by £17,541.

The principal increases and decreases are:—

Wheat (£24,530).—A decrease of £22,732, due to the bad harvest.

Barley (£703).—A decrease of £9,934, due to the bad harvest.

Gums (£13,005).—A decrease of £1,306, due to ordinary fluctuations of trade.

Wool, Raw (£22,562).—An increase of £9,089. The export of wool seems to be increasing steadily. It is chiefly sent to India.

Opium (£140,602).—A decrease of £15,557. The export last year was exceptionally large.

Tobacco (£17,549).—An increase of £5,432. This is sent down from Isfahan.

Openings for British Trade.

No considerable opening is apparent, unless British or Indian manufacturers can produce sugar of suitable quality at a cheap rate. At present British-made sugar is a little too expensive, while Indian cane sugar is not appreciated. The people like a very white sugar, whether loaf or crystal, and do not seem to mind if its sweetening quality is inferior. A great deal of the sugar imported came from Austria-Hungary and Germany. An Indian trader might be able to do profitable business in wood. Enamelled iron, glass, and cheap lamps were imported from Austria-Hungary and Germany; possibly British manufacturers could compete in the market for these commodities.

Hindrances to Trade.

The principal hindrance to British trade is the Customs tariff, which is so high on certain classes of goods that it puts a premium on smuggling. Traders who import by legitimate means cannot compete in the sale of tea, coffee, spirits, and various other commodities. The other well-known hindrance to trade in Persia—viz., the lack of proper communication with the interior—affects Mohammerah, as well as the rest of South Persia, but not quite so badly, as the Ahwaz-Isfahan road is safer than the other roads from the south.

Exchange.

The fluctuations in exchange are also an impediment to trade. The following remarks on the subject have been kindly communicated by Mr. A. L. Simpson, the manager of the Imperial Bank of Persia, at Mohammerah: "Demand bank sterling exchange fluctuated between 56.25 and 58.25 krans, the average being slightly below 57 krans. These rates are higher than those ruling in the north of Persia, and are to be accounted for by the fact of the failure of the grain crops, and the usual impossibility of moving excess coins from these parts into the interior of the country. Only in a good grain season is the kran, the legal currency of the place, in demand. The crops having failed, krans were not in demand, and the aforesaid impossibility of transporting the coin to other parts (due to the state of the roads) caused a large number of krans to remain in this district and thereby enhanced the rate of exchange. Rupees and Turkish lire are preferred, as a rule, to the kran, and in many instances operations go through without any bearing to the kran at all, although the kran is, strictly speaking, the legal tender of the place. This is doubtless due to the close proximity of this place to Busreh, and many of the merchants here being closely connected with agents or others in Busreh.

Customs Department.

The enclosing of the Customs yard was begun during the year and finished some time after the end of it. This gives some slight protection against pilfering to goods lying in the yard. The warehouse accommodation, however, is still deficient, and when trade is brisk nearly all the merchandise has to lie in the open, which results in a good deal of pilfering. The condition of affairs at Ahwaz is similar. During the year there was a Belgian official in charge at both Mohammerah and Ahwaz. On the whole, the relations between the Customs Department and the merchants were good, though sometimes the subordinate officials of the department are inclined to show their authority by petty annoyances.

Competition.

During the year the German Shipping and Trading Company made a strong effort to get a footing in the carrying trade on the Karun between Mohammerah and Ahwaz, and obtained considerable success, as, in order to do so, they offered the Persian merchants better terms than the British company could afford to do. A tug with barges made frequent trips up and down the river during the year. The firm has also done a good deal of grain exporting. An increased number of steamers of the Hamburg-Amerika Line came out to bring the plant for the Baghdad Railway, and the shipping company were glad to take grain at special low freights in order to get return cargo. The German firm were thus able to export wheat when the low rates prevailing in Europe did not permit British firms to do so after paying the normal freight charges.

Methods of Transport

From the United Kingdom by steamer—

Journey from London to Mohammerah, 27 to 35 days.

Average rate of freight on general cargo, £1 10s. per ton; grain, £1 2s. 6d. per ton.

Lines running from Europe—Bucknall Steamship Lines, Limited, Ellerman Lines, Limited, the Anglo-Algerian Steamship Company, Limited, the Hamburg-Amerika Line, and the Russian Steam Navigation and Trading Company, Odessa.

From Bombay to Mohammerah by steamer—

Journey by fast mail, 7 days; other ships, 10 to 15 days.

Average rate of freight on general cargo, 10s. per ton.

Lines running from Bombay under British flag—British India Steam Navigation Company, Limited, Bombay Persian Steam Navigation Company, Limited, and the Arab Steamship Company, Limited.

From Mohammerah to Ahwaz—

By Messrs. Lynch Brothers' river steamers.—Freight per ton about 14s. on general cargo for the upward journey; 13s. per ton on general cargo and 7s. per ton on grain for the downward journey.

By Messrs. Wonkhaus and Co.'s steamers and Nasiri Co.'s steamers.—Freight per ton 13s. on general cargo for the upward journey; 12s. per ton on general cargo and 6s. per ton on grain for the downward journey. Time taken about 30 hours upstream to Ahwaz and 14 hours return.

By native sailing boat.—Time taken 4 to 7 days; return journey 2 days; freight 9s. per ton on general cargo for the upward journey; 7s. per ton on general cargo and 5s. per ton on grain on the downward journey.

From Ahwaz to Shushtâr—

By Messrs. Lynch's steamer (under Persian flag).—Freight per ton 15s. on general cargo for the upward journey; 13s. per ton on general cargo and 6s. per ton on grain for the downward journey.

By Nasiri Co.'s steamers.—Freight per ton 14s. on general cargo for the upward journey; 12s. per ton on general cargo and 6s. per ton on grain for the downward journey. Journey 2 days up and 1 day down.

Native dhows from Karachi and Kutch—

A large number of dhows from India, averaging from 80 to 100 tons burthen, visit Mohammerah in the date season in September and October. Freight by these boats is cheap, but they are unreliable.

Busreh and Mohammerah—

There is a regular service of launches between these two places. Fares, 1 rupee and 8 a. (1s. 4d. and 8d.).

Internal Transport.

From Ahwaz to Isfahan—

By the Bakhtiari road by mule. Rate varies; £19 to £20 per ton. Packages must not exceed 3 by 2 by 1½ ft. in size, or cases 150 lbs. and bales 200 lbs. in weight, the lesser weight being the better. Goods must be strongly packed; otherwise charges will be made for re-packing.

Forwarding agents, Messrs. Lynch Brothers, Ahwaz. Road is sometimes closed for short periods in the winter owing to snow.

British Firms in Mohammerah.

The Imperial Bank of Persia.

Messrs. Lynch Brothers, merchants, exporters and importers, shipping agents. Agents for the Euphrates and Tigris Steam Navigation Company, running between Busreh and Baghdad on the Tigris, and between Mohammerah and Ahwaz on the Karun, also on behalf of the Persian Government between Ahwaz and Shuster on the Upper Karun. Head offices, 3, Salter's Hall Court, London, E.C.

Messrs. Gray, Mackenzie and Co., general agents, merchants and importers. Agents for the British India Steam Navigation Company; the Bucknall Steamship Lines, Limited; the Ellerman Lines, Limited. London firm, Messrs. Gray, Dawes and Co., 23, Great Winchester Street, London, E.C.

Messrs. Strick, Scott and Co., general agents, importers and merchants. Agents for the Anglo-Algerian Steamship Company and for the Anglo-Persian Oil Company (as below).

The Anglo-Persian Oil Company, Limited. Agents, Messrs. Strick, Scott and Co., Mohammerah Refinery and Works at Abadan, on Shatt-al-Arab River, 10½ miles below Mohammerah; oilfields at Masjid-es-Suleiman, 150 miles inland.

SETTLEMEN OF FOREIGN CLAIMS.

The Commercial Intelligence Branch of the Board of Trade is notified that a special office has been established for the purpose of dealing with all claims arising out of the war for the settlement of which no satisfactory machinery has existed hitherto, and which are foreign in the sense that they are claims by British subjects against a foreign Government, or by foreign nationals against H.M. Government.

The new office is entitled the "Foreign Claims Office," and all communications relative to claims such as those referred to in the preceding paragraph should be addressed by claimants direct to the Secretary, Foreign Claims Office, c/o Foreign Office, London, S.W.

Trade Notes.

Egypt.

The Army Finance Department, Cairo, invites tenders for the purchase of a second-hand X-ray apparatus complete, existing at the Egyptian Army Hospital, Pont de Kuleba, September 6.

The Army Finance Department, Cairo, invites tenders for the supply of 100 okes of soup Naboulsy, and 3,000 reels of black silk thread for buttons, to be delivered at the Citadel stores, Cairo, September 15.

The Army Finance Department, Cairo, invites tenders for the supply of cotton, hair, raw; crem vegatable; canvas sail, native; leather, Kusla; nails, wire, French; ropes; beeswax, etc., to the Citadel Stores, Cairo, September 15.

H.M. Consul at Cairo reports that a firm of commission agents in that city, claiming 18 years' experience in the Egyptian markets, during which time it has represented many German firms, wishes to secure the representation of United Kingdom manufacturers of the following articles :—Hardware, locks, tools and implements; enamelled holloware; china and porcelain, earthenware; novelties for suitings; shirts, cotton and woollen hoseiry, and underwear; cotton, linen and woollen web bings for all purposes; laces and trimmings; ladies', gentlemen's and boys' boots and shoes; glazed kid, leather and all articles relating to shoe manufacturing; biscuits; and Yorkshire hams.

United Kingdom manufacturers of the goods mentioned should apply to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., for the name and addresse of the enquirer.

The result of the adjudication of July 22, 1915, for the supply of coal to the Egyptian State Railways is as follows: Six offers were received for Welsh coal. Seven offers were received for American coal. Contracts, as under, have been placed for a total quantity of 150,000 metrical tons only, viz. :—

Messrs. Watts, Watts and Co., Ltd., 7, Whittington Avenue, Leadenhall Street, London, E.C., 60,000 metrical tons of Welsh Colliery screened steam coal derived from any of the collieries mentioned in the Administration's specification, at suppliers' option, at the price of 47s. per metrical ton of 1,000 kilogs. net weight, delivered c.i.f., Railway Quay, Gabbary, Alexandria. Export tax, if any, to be borne by the Administration.

Messrs. William Milburn and Co., 71-73, Merchants' Exchange, Cardiff, Wales, 30,000 metrical tons of Welsh Colliery screened steam coal, derived from any of the collieries mentioned in the Administration's specification, at suppliers' option, at the price of 25s. 10d. per metrical ton of 1,000 kilogs. net weight, delivered f.o.b. Welsh Port, at suppliers' option. Wharfage dues will be paid by the Administration.

Messrs. The Consolidation Coal Co., Billiter Square Buildings, London, E.C., 60,000 metrical tons "Fairmont" 1. 1/2 double-screened steam coal, derived from the Fairmont Region of West Virginia, at the price of 55s. per metrical ton of 1,000 kilogs. net weight, deliverd c.i.f., Railway Quay, Gabbary, Alexandria.

Sudan.

The *Sudan Government Gazette* of July 31, 1915, contains certain Regulations, dated July 14, 1915, which have been under the "Customs Ordinance, 1913," as subsequently amended, and which are applicable to the Sudan Customs shed at Gambella .

These Regulations, which came into force on August 1, 1915, specify the warehouse rents chargeable on goods received into the Customs shed at Gambella for import into and export from Abyssinia.

Malta.

The Crown Agents for the Colonies notify that tenders for the supply of from 3,000 to 4,000 tons of steam coal, to be delivered at Malta in one shipment not later than October 7, will be received at the Offices of the Crown Agents for the Colonies, Whitehall Gardens, London, S.W., up to 10 a.m. on September 2.

Gibraltar.

With reference to previous notices respecting the prohibition of the exportation of various articles to certain destinations from Gibraltar under a Proclamation of March 19 last, as subsequently amended, the Board of Trade have now received, through the Colonial Office, copy of a further Proclamation, dated July 23, 1915, which amends the above-mentioned Proclamation of March 19 last with the effect that certain articles which were previously prohibited from exportation to Italy under Schedule II. are now permitted to be exported to that country.

The amended heading for Schedule II. now reads :—

List of articles of which exportation or removal is forbidden to all foreign ports in Europe and on the Mediterranean and Black Seas, other than those of France, Russia (except Baltic ports), Italy, Spain, and Portugal.

Morocco.

The Board of Trade are in receipt, through the Foreign Office, of copy of an Order of the General Commander-in-Chief in the French Zone in Morocco, dated July 30, which provides that, as from August 1, the following articles shall, on importation through the ports of the French Zone in Morocco, be exempted from the Customs duty of 10 per cent. *ad valorem*. Such articles are, however, to continue to be subject to the special tax of 2½ per cent. *ad valorem* prescribed by Article 65 of the Act of Algeciras :—Seed sowing machines, manure distributors, ploughs, ridge ploughs, harrows, rollers, hoes, scarifiers and cultivators of all kinds, chaff-cutters, root-cutters, sickles and rakes, forage presses, reaping machines, threshing machines and motors to operate them (both being imported at the same time), winnowing machines, shellers, seed crushers and flatteners, sprayers and apparatus for treating with sulphur, irrigation pumps and windmills to operate them (both being imported at the same time), casks for watering, and ploughs without mould-boards (*défonceuses*) and motors to operate them (when the combined apparatus is imported at one and the same time).

The July issue of the *Boletin de las Camaras de Comercia* (Madrid) contains the following particulars regarding agriculture in the Spanish Zone of Morocco :—

In the Spanish Zone, as in the whole of the Rif country, arable land is more abundant than irrigated land. This fact and the natural aversion of the Riffian to preparing the land, owing more to lack of agricultural knowledge than to apathy, account for the fact that barley and wheat are the principal crops cultivated. The land is prepared for sowing at the end of October or the beginning of November, and then after the first rains have fallen the seed is sown.

At the end of May the harvest commences. It is impossible to give an estimate of the 1914-15 crops, although, on account of the drought, it is certain that the harvest will be less satisfactory than that of the previous season.

In the neighbourhood of Melilla there are plots of land, sown mostly with barley and wheat, which have yielded very satisfactorily, owing to the fact that they are cultivated by Spaniards. The production of cereals in the vast zone occupied by Spain in the "Kábilas" of Guelaia, Quebdana, Ulad Setut, and Beni bu Yahi will continue to increase the more the natives reform their methods of cultivation.

Bulgaria.

The British Vice-Consul at Sofia reports that a firm in that city, with an office in Manchester, and claiming to have been established in Bulgaria for nearly forty years, wishes to secure the representation there of United Kingdom manufacturers of cotton and other goods.

United Kingdom manufacturers and exporters of cotton goods, etc., should apply to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., for the name and address of the enquirer.

Greece.

The Times correspondent in Athens, cabling last Friday, said: "Negotiations between the Greek Government and Great Britain for the control of exports of contraband are making good progress, and are expected very shortly to result in an agreement which will relieve Greek shipping from the inconveniences to which it is exposed at present."

The Athens correspondent of the *Morning Post*, cabling on Sunday, said that the British Legation, in the Press of that date, had informed Greek importers that "from the present time onwards every order for British goods for Greece must be accompanied by a declaration, made by the importer and backed by a bank guarantee, that the goods are intended for local consumption, and that these declarations, if approved by the Legation, will be forwarded to London, where the authorities will come to a decision regarding them."

On Wednesday, Reuter's Agency reported that the Government had laid before the Chamber on Tuesday a Bill prohibiting trade in contraband of war, and inflicting very severe penalties on offenders. The object of the Bill is to remove the difficulties which are at present besetting the Greek mercantile marine.

A correspondent writes :—

An agreement is in course of preparation between the Ministers of the Entente Powers and the Greek Government with a view of controlling the imports and exports, thus suppressing the obstacles which, by embarrassing transactions, had an unhappy repercussion on public opinion.

Henceforth, it is said, imports will be made freely on the basis of statistics. Transits and consignments for Serbia and Bulgaria will be equally free. The Hellenic Government, taking all measures to prevent contraband with the enemy's country, will appoint special officers to control all Customs' operations, these officials acquainting the Government of any irregularities.

Dried raisins and tobacco (Greek) may be exported to enemy countries on condition that the discharge is effected at neutral ports.

Throughout all Hellenic centres favourable to the Entente, satisfaction is expressed with this arrangement, which will constitute the first act of the Venizelos Cabinet by re-establishing the cordial relations of Greece with the Entente Powers. This measure will be also (says a Marseilles contemporary) of a nature to facilitate other interesting accords in the future.

MOHAMMERAH SHIPPING.

The following steam vessels entered and cleared (according to our Consul in Arabistan) in the port of Mohammerah, Persian Gulf, during the year 1913-1914 (March 20) :—

British.

ENTERED (with Cargo).

NOTE.—Ships without cargo do not stop at Mohammerah, but proceed direct to and from Basrah.

H.M. Minister at Bucharest telegraphs that the Roumanian Moratorium in respect of debts due abroad has been further extended for a period of four months.

SUDAN TRADE.

(FROM A CORRESPONDENT.)

Just before the war broke out the trade of the Sudan, with at least two out of the three belligerent countries—viz., Germany and Austria (Turkey being the exception) had commenced to show a marked improvement, and under normal conditions might well have resulted in the largest volume of exports yet experienced. If the relative figures covering the period January 1 to September 30, 1913, be compared with those of 1914, this will become quite clear. For the first of the two periods mentioned the trade with Germany amounted to £18,519, or, say 1.1 per cent. of the whole; for 1914, the volume had increased to £29,891, or, say, a percentage of 1.9. In the case of Austria, the 1913 figures were £40,946, or a percentage of 2.6, while in 1914 the total showed an advance to £52,487, or a percentage of 3.3. In the matter of Turkey the trading figures had already commenced to mark a decline. While in 1913 they had amounted to the small total of £29,321, or, say, a percentage of but 1.8, by the end of September, 1914, they had dwindled to £19,717, or a percentage of 1.3.

Naturally the outbreak of war has played havoc with the Sudan's trade in other directions, but a falling-off had already commenced to assert itself with Great Britain notwithstanding the fact that the volume still remained far ahead of that shown by any other country. From the first of January, 1913, the total fell by as much as £220,000, the exact figures being for 1913, £690,195; for 1914, £469,228.

Those countries which showed the most marked improvement in their trading accounts with the Sudan were Italy, which scored an advance from £47,801 (a percentage of 3 per cent.) in 1913 to £58,184 (a percentage of 3.7 per cent. in 1914; Russia, from £19,864 (a percentage of 1.2 per cent.) to £24,596 (a percentage of 1.6); and Greece, from £11,010 to £21,510. The most noteworthy advance was chronicled by the British Possessions of India and Aden, whose combined trade showed a total of £345,105—or, say, a percentage of 21.8 per cent.—as against £205,168, or a percentage of 12.9 shown for the first nine months of the year 1913.

From the figures above quoted it would seem that the Sudan is practically independent of German and Austrian sources of supply; while, as regards exports, it must find markets for £102,641 worth of produce if it is to make good the loss of markets in Germany and Austria owing to the war. It is, perhaps, well to point out in this connection that out of the total mentioned as exports no less than £86,027 is represented by the export of gum.

During the first five months of the current year, Egypt imported to the value of £6,713,000, and exported to the value of £12,405,000. The corresponding figures for 1914 are £11,988,000 and £14,025,000; and for 1913 they are £11,241,000 and £12,930,000.

Engineering Notes.

Telephone Troubles.

Telephone companies in some districts of the Near East have often to put up with a great amount of grumbling from authorities and subscribers, who (especially the latter), at the least apparent failing of the instruments, rush to the Press to protest against the "inefficiency" of the whole system. The trouble is, apparently, worse in systems connecting distant towns. In such cases the dissatisfied parties are probably not aware that in tropical as well as in semi-tropical countries the efficiency of a telephonic system is more often affected by atmospheric and other natural conditions than by any apparent technical deficiency. In a very interesting paper recently read before the Institution of Electrical Engineers by Mr. Llewellen Preece it was explained that telephone troubles in the tropics arise from such causes as damp, vegetation, animals, and insects. The heat is in itself not responsible for much trouble, but when this is combined with an atmospheric humidity varying between 80 and 90 per cent. it is possible to appreciate the reasons for the telephone engineers' complaints. When, in addition, it is realised that this damp heat produces a marvellous growth of vegetation, so dense that it is impossible to pierce through it, and when again it is learnt that insect life is as prolific as vegetation, and sometimes even more trying, then we are in a position to understand the difficulties and to sympathise with the tropical engineers. With regard to insects, Mr. Preece explained how these creatures will attack both instruments and lines. The spider is a real pest; it delights to retreat into the telephone case and there to build to itself a nest, so that it is no uncommon experience to find instruments entirely put out of action owing to the diligent work of this insect. To circumvent the insect plague it is essential that the telephone cases should be sealed up as closely as possible. The switch hook should carry a brass plate, which keeps the slot in which the arm work is entirely covered. It is also advisable to have no terminals above the instruments, but to take the conductors through holes into the case and seal up these holes. It has been discovered that whereas insects will nest in porcelain insulators—which are dark inside—they refuse to inhabit the transparent glass insulators, which, if made of the oil type, should, Mr. Preece said, bring about considerable improvement in the insulation. The above remarks and suggestions of Mr. Preece may bring some relief to the attacked telephone companies if perused by the protesting authorities in the Near East.

A Useful Oil Pump.

Olive oil has an aptitude to take, as well as to give, the odour, either bad or good, of any liquid or solid substance with which it may come into contact. Many olive oil growers, and merchants, in the Near East, are often disappointed when an otherwise excellent quality of oil has been tainted in its transference from reservoirs, barrels, or earthenware tubs, to smaller vessels through the use of a pump which has, previously, been used in the same way for common oils, and sometimes for paraffin! In such cases a great drop of value is the result. It will, therefore, interest olive-oil mill owners, merchants, and farmers in the oil districts of the Near East to know that a useful oil-pump of British design and construction has, recently, been brought out, the efficiency and cheapness of which will tend to ameliorate the unsatisfactory practice of using one pump for all kinds of oils. This oil-pump is an inexpensive mechanism intended to facilitate the transference of oil and other liquids from large to smaller receptacles, and *vice versâ*. The idea is that each class of oil or liquid should have its own pump, which can be readily removed when one supply is exhausted, and another to be started; or in warehouses when a barrel is emptied and a fresh one is placed on the stand. The pump has a funnel head and a strong, simple plunger, which will lift the thickest of cylinder oil or such thin liquids as petrol or water. It is, also, suitable for a variety of purposes on the farm and in the garden, whilst its price is only 18s.

British Scientific Instruments.

Hitherto Germany has led the world in the manufacture of scientific instruments and apparatus (says the Engineering Supplement of the *Times*). An analysis of the trade returns up to the outbreak of war indicates that if the volume of British exports of this class of goods was not small, that of Germany was on a far larger scale, attaining its greatest value in telescopes, field-glasses, microscopes, and other optical apparatus, and in recording and measuring instruments. There are signs that this supremacy is not likely to be retained by Germany after the war. British manufacturers, even if it needed the dislocation of trade caused by the war to enable them to demonstrate the fact, are able to supply the present needs for scientific instruments in workshops and manufacturing laboratories, and have also lately given evidence of their capacity to design new types of instruments for research work. It would be easy to multiply instances of the important part which such apparatus plays in modern manufacture; one example will, however, suffice. It is recognized that in the manufacture of steel for armour plate, guns, and projectiles the physical properties of the steel are absolutely dependent upon accurate measurements of temperature, owing to the important changes which take place within a comparatively small range. Sir Robert Hadfield, whose views on such a subject carry weight, recently stated before the Society of Arts that there is no longer any need to rely on foreign manufacturers for pyrometers or similar apparatus, the best types of which are now produced in British workshops. It is hoped that in the near future it may be possible to make a similar statement in connection with all the scientific instruments which are such important weapons in the hands of the modern manufacturer.

Roumania's Chemical Industry.

The chemical industry of Roumania is of comparatively recent origin, says the *Pall Mall Gazette*, and is in course of development; but it has been impossible for the interested firms to take steps fully to control their own market and conquer the neighbouring Balkan markets during the course of the European conflict. In this connection the *Zeitschrift für Angewandte Chemie* states that Roumania lacks the necessary raw materials, machinery, and technical men, and it happens, therefore, that the country suffers from the accompaniments of the great war without being able to find an abundant sale for its products, despite the absence of the most important competitors. Above all, the country is lacking in alkalies, caustic soda, ammonia, soda, and potash, together with mineral acids, as the land is still unable to meet the domestic requirements. Moreover, the chemical industry is in many ways dependent upon the imports of Spanish and Portuguese pyrites, the supply of which has now become so irregular that the mineral acids branch has had to introduce restrictions in working.

Demand for Motor Boats.

Two weeks ago (says *Motor Boat*) mention was made of the fact that motor boats were required for carrying the wounded in the Persian Gulf. Two have now been despatched, and others have been sent to the Dardanelles to carry the wounded from the Gallipoli Peninsula to Mudros. Two motor boats, fitted respectively with 20 h.p. and 25 h.p. motors, have been sent out, and a third is about to go, or has already been despatched. The largest one is a twin-screw vessel with 32 h.p. motors, which will be used for towing a barge that has been provided by the well-known poet, Mr. John Masefield. This barge is 44 ft. in length, with a beam of 12 ft. 6 ins., and will shortly be sent out after being properly fitted up. It is possible that there may be a call for more motor boats in the near future; perhaps owners will note this.

Bulgarian Mining Concessions.

From May 1 to June 30 the Bulgarian Minister of Commerce and Industry granted twenty-nine prospecting licences, of which fourteen were for oil, two for talc, two for talc and asbestos, one for asbestos, three for copper, one for copper and lead, two for iron, and one for graphite.

ROUMANIAN TRADE.

(From Our Own Correspondent.)

Bucharest, August 12.

In Transit from Bulgaria.

A large quantity of Bulgarian merchandise destined for Germany and Austria-Hungary has accumulated in this country, on account of the difficulty of passing railway waggons across the frontier. No Roumanian trucks are allowed out, as they have a habit of not returning, whilst those put at the disposal of the Roumanian authorities by Germany and Austria-Hungary are quite inadequate.

At Ramadan (Gingevo) there are at present 700 trucks (7,000 tons) of merchandise of various descriptions. As many complaints come daily from Bulgaria, it has been decided to devote twenty-five trucks daily to transporting these goods to the frontier at Predeal, from whence they will be carried by German and Austrian waggons. At least another 1,000 waggons of goods remain in lighter at Ramadan, awaiting means of transport.

Bucharest, August 17.

Grain Exports.

The Cabinet Council held on the 13th inst. occupied itself principally with the question of raising the prohibition of cereals. After long deliberations it was finally decided to do so.

The actual permission does not really give greater opportunities to exporters, principally the puppets of the German Government buyers. Large quantities of grain of various descriptions from last year's crops have first to be exported before permission will be given for the export of this season's crops. The most that can be sent out of the country daily by all frontier stations is 300 trucks, or 3,000 tons; as, however, other merchandise may have to be exported, it is safe to say that on an average 2,500 tons daily will be the maximum export.

The taxes for exportation decided on are as follows:—Wheat. rye, and flour therefrom, 600 frs. per wagon; barley, oats, and flour, 500 frs. per wagon; maize and meal from maize, 400 frs. per wagon; peas, beans, and lentils, 900 frs. per wagon; linseed, colza, and other oil seeds, 1,000 frs. per wagon; millet and various wild seeds, 300 frs. per wagon; cattle cake from the above, 200 frs. per wagon; linseed oil and other oils, 1,000 frs. per wagon.

Export viâ the frontiers by carts is authorised, a tax of 200 frs. per wagon for agriculturists and 500 frs. for dealers being levied. Transport by cart is, of course, only to frontier stations, where the grain must be transported to Austrian and German railway trucks.

Bonus to Farmers.

The Minister of Agriculture, Mr. Constantinesco, has proposed the following arrangement for furthering the interests of agriculturists:—

1. To grant proprietors of grain deposited at the different railway stations 60 per cent. of the value until transported to the frontiers.

2. The amount placed at the disposal of all the local credit banks to be 100 million francs, and if necessary the National Bank to make the local banks further advances. The grain to be in itself a sufficient guarantee for advances.

Near East Markets.

CYPRUS NOTES.

(From a Correspondent.)

Olive Cultivation.

The scarcity of olive oil and the high price of island olives have been increasingly felt. Both are used largely by the Cypriot peasantry for food. Fortunately, the exportation of considerable quantities of oil consigned by Cyprus merchants, which have been detained in the Custom House of Alexandria, has now been allowed by the Egyptian Government. The present situation emphasises the need of an extension of olive cultivation, which could be increased on a very large scale in many parts of the island, and has been strongly advocated by the Directors of Agriculture. As regards the culture of the trees, which is as bad as it can be, the Agricultural Department has wisely taken the matter in hand, and some improvements have already been effected. Olive oil presses are still very primitive, and are being gradually superseded by those of modern type.

Shipping Facilities.

Complaints are raised as to the insufficiency of steamboat communication and of facilities for exporting goods, especially fruit and vegetables, to Egypt. On several occasions consignments of potatoes and other produce have been refused by the steamers of the Khedivial Company, which receives a Government subsidy for its regular weekly service. It is argued by complainants that the agreement implies, or ought to imply, that there should be full accommodation not only for mails, passengers, and goods according to circumstances, but that if one steamer is not sufficient during the busy season of the year, the company should provide two, in order that trade and the interests of merchants should not suffer as they have done.

Demand for Mules.

Island mules are again in request for purposes of war. Five hundred are about to be purchased, and it is probable that much larger numbers will soon be sought in Cyprus on account of the British and Allied armies. The Near East has before now pointed out that the breeding of mules in the island is one of the enterprises in which capital might perhaps be profitably employed, in farming.

Copper Mines.

The preliminary work of the American company in connection with the projected copper mining at Skouriotissa is progressing. Machinery and plant will be imported from America. The operations will include the construction of a railway line to the port of Karavostási in the bay of Morphou for transport of the ore. As regards the appropriation of properties for the line, a matter which always presents difficulties in Cyprus, it is probable—in view of the formalities which the existing law involves—that the cost will be undertaken on account of the Government, which will in that case lease the line to the company for a long term of years. If all goes well, as all hope will be the case, this new enterprise will be watched with great interest. One important benefit will be that it will afford relief at a very opportune moment to thousands of hands.

BAGHDAD DATES.

The U.S. Consul at Baghdad reports (June 10):—

"During 1914 the date harvest in and around Baghdad was good—in fact, better than the average—but, in the absence of a foreign market—the exportation of foodstuffs from this district being prohibited—prices ruled low, and there were no general sales, as in other years. The prospects for the 1915 crop in the vicinity of Baghdad are for a diminished yield, due to lack of labour and an apparent lack of a market. However, the crop could not be classed as 'poor,' and it is expected that local dealers will be well supplied with fruit.

"Practically all of the dates shipped from Turkish Arabia are collected, prepared, and exported from Busreh. It was reported that the Busreh yield for 1914 was good, but, owing to interruption to communication, no information has been received in Baghdad as to the crop for 1915. This consulate has received a letter from the New York office of an American date-exporting firm in Busreh, stating that it sent two shiploads of dates from the latter city to the United States, but no mention is made of the quantity shipped, nor is any information given as to prices."

PRODUCE REPORT.

London, September 2.

Currants.

There has been only a moderate demand this past week, but owing to reports from Greece of damage to the crop by rain quotations have advanced. A fair quantity of new fruit to arrive has been sold at also advanced prices. The same, almost, condition prevails in the Liverpool market.

Sultanas.

There is a fair demand for Smyrna fruit, and prices are unchanged; while in the Liverpool market, owing to the extreme prices demanded by the holders of the remaining very small stock, business is about at a standstill condition.

Figs.

Calamata figs continue to attract attention, and prices for new crop to arrive have advanced 2s. in the week.

Dates.

There has been only a moderate demand this past week, with limited sales at recent values.

Seeds.

Linseed is still quiet, with 56s. the nearest quotations for London-Calcutta spot, afloat and Aug.-Sept. Cottonseed remains inactive, London-Egyptian spot quoted £9 15s., Sept. £9 12s. 6d. and Oct. £9 5s. per ton. Rapeseed is firm but quiet; Toria, Sept.-Oct. is quoted 52s. 6d.; Guzerat, ditto, 59s.; brown Cawnpore, pure basis, Aug.-Sept., 53s. Mustard seed keeps firm, very little of the new crop being yet available. Rangoon beans are £17 10s. to £18 per ton, c.i.f. terms.

Oils.

Linseed oil is quiet and rather easier forward; spot pipes, £25 5s.; barrels, month, and Sept.-Dec., £26; Jan.-April, £27. Cotton oil is quiet, crude, spot, in pipes, £26 15s. to £27; refined pale pipes, £30; and barrels sweet, £34 to £35.

Oilcakes.

Egyptian cotton cakes on spot are practically exhausted, but quotations are £8 per ton, ex quay, and £7 10s. per ton for Nov.-April shipment. English makes are £7 17s. 6d. to £8 per ton ex mill. Linseed cakes are rather quiet, with only little business doing, but prices remain firm at recent rates. Greek linseed cakes on passage have been sold at £11 per ton c.i.f., while Calcuttas went at £11 10s. per ton ex ship. English makes are quoted £11 12s. 6d. to £11 15s. ex mill.

Locust Beans.

There are no stocks on spot, but nominal quotations are £8 per ton for whole and £8 10s. for kibbled, while Cypros are offered at £6 15s. ex ship terms.

EGYPTIAN COTTON CROP.

(From Our Own Correspondent.)

Cairo, August 19.

The crop, so far, promises well, but it is too early to foretell what the final result will be. The boll-worm has to be taken into consideration. Its ravages in past years have been such that cultivators cannot feel safe until the end of September.

It remains to be seen what effect the new steps taken by the Allies with reference to cotton export to Germany and the proposed agreement with the United States will have on the prices of Egyptian cotton. The question is one of vital interest to Egypt, and it is confidently hoped that Egyptian interests will not be overlooked by the protecting Power.

The Nile flood is very poor. A statement by the Minister of Public Works says that this year's flood is similar to that of 1907.

There is a dearth of sacks for the cotton, and prices rule high. The Government has been asked to import a large quantity from India to be distributed among the fellaheen, the price to be collected later with the land taxes.

MANCHESTER TRADE WITH EGYPT.

The *Daily Dispatch* says:—

In view of the desirability of increasing the nation's exports, leading commercial men are already actively looking for new openings for trade.

A Lancashire manufacturer writes, pointing out that for years there have been opportunities for extending our Egyptian textile trade, and he thinks the time is now opportune. "I mean, of course, for textile firms in Lancashire and Yorkshire, as the Egyptian merchants want variety, and we are able to supply them with that," he writes.

"For some time our foreign rivals in that country have," he adds, "been most active in pushing their goods, and if our own manufacturers would push things a little, I think they would be able to get hold of new markets."

The paper adds that one of its representatives has discussed the question with a few Egyptian merchants and shippers in Manchester, and they all agreed that there were big openings out there. "A certain amount of foreign competition there will," said one informant, "be gradually eliminated owing to the war, and merchants here will take advantage of that wherever they can.

"We have the bulk of the best textile trade in Egypt, and you may depend upon it we shall retain that. A large quantity of the material which Germany and Austria sends there is so poor that manufacturers on this side of the water will not attempt to compete with them on that class of goods."

"English manufacturers would not be able to do a direct trade unless they were prepared to give a long credit," said another informant.

"This they do not intend to do. We deal fairly and give a little credit, and under this system British manufacturers have kept up an excellent trade.

"We are all fully alive to new openings in Egyptian trade, and know how to develop them. Whenever foreign samples which are worth dealing with have been sent to us, we have invariably been able to match them or produce something better. The British trade with Egypt will keep on growing, in spite of the German manufacturers being well backed up by their Government."

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.
Only superior qualities of
Hallawees, Khudrawees, Sayers and Zehdi
are packed.
In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.
SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.

COMPANY MEETING.

EGYPTIAN DELTA LIGHT RAILWAYS.

The annual general meeting of the above company was held on Monday at Winchester House, Old Broad Street, E.C., Sir William Garstin, G.C.M.G. (chairman), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—You will, I am sure, permit me to take as read the directors' report and the accounts circulated therewith. Before proceeding to the business of this meeting I have to refer, with deep sorrow, to the loss we have sustained in the death of the Hon. Sir Charles W. Fremantle, K.C.B., who had been Deputy-Chairman of the Board from the commencement of the company until the time of his death, and had on various occasions ably presided at the company's annual meetings. It will probably be convenient if at this stage I also refer to other changes which, in consequence of the existing conditions, have taken place in the directorate. At the time of the outbreak of the war the section of our Board in Egypt consisted of four directors; of these, one was an Egyptian, one a German, and two were Austrians. The German and Austrian directors, being enemy subjects, were requested to vacate their seats, and have done so; consequently the Board in Egypt is now represented by H.E. Scander Pasha Fehmy, as director resident. The Board has decided, at all events for the time being, not to replace the vacancies that have occurred in the number of directors. The amount of £2,000 fixed by our articles of association as distributable among the directors as fees is, in consequence, reduced. This will result in a present saving to the company of £850 per annum. I do not propose, gentlemen, to detain you long on this occasion. I am sure that you will share my opinion that no useful purpose can be served by a minute consideration of our affairs while governed by circumstances so abnormal and so entirely beyond our control as are those existing at the present moment. Any comparison with previous years would be of little value, and I do not propose to take up your time by attempting to make one. A year ago it was my privilege to describe to you the advantages which had accrued to this company from the important modifications which had been granted to us in the terms of our new concession by the Government of Egypt. I was able, at the same time, to explain how our position had been strengthened and our prospects improved, and how we had thus been enabled to consider extensions and ameliorations of our system of light railways upon a considerable scale. Our prospects at that time appeared very satisfactory, and we certainly had good reason to look forward to an assured and prosperous future. During the four months of last year prior to the outbreak of war our receipts from all sources were well maintained, and were slightly in excess of those for the same period in the year preceding.

You may perhaps recollect that in my last year's speech, when alluding to the balance that we then proposed to carry forward, instead of distributing it as dividend, I made a few remarks in favour of a cautious policy. I said: "Under these circumstances, although our future appears to be a very satisfactory one, I am sure you will agree with me in advocating a policy of prudence. It will be well to see how our new arrangement actually works before we calculate upon any large increase in our dividends." I little thought at that moment, gentlemen, how speedily my words would be justified. My speech was made to you on July 14 of last year, and that day three weeks—namely, on August 4—war was declared with Germany. With this declaration our bright prospects faded, and I fear there is little hope of improvement until the war is over. I fear, moreover, that even the advent of peace will not at once materially improve our position. Egypt has great recuperative powers—more, indeed, than most countries—but even Egypt must, I think, feel the effects of this war for a considerable period of time. I make these remarks because I think it best that you should realise that the bad times through which we are at present passing are likely to endure for some time to come. I do not make them because I feel in the slightest degree despondent as regards the future of our undertaking. On the contrary, I have never felt more confident as to this future than I do at this moment. In these Delta Railways you possess a thoroughly sound property, which will undoubtedly, when these evil times have passed away, bring you in a regular and safe return for the capital that you have invested in it. We must, then, determine to carry on, enforcing every economy in our working that is possible, and consistent with the requirements of the public and the Government, and await the return of prosperity and security to Egypt—a return which is I repeat, certain to arrive. Meanwhile, we have reason to congratulate ourselves that the modifications in our concessions were granted to us by the Government before the present crisis occurred. Had we still been under the old concession our position at this moment would have been a far less satisfactory one than is actually the case.

We are only going through what every company in Egypt is now going through—namely, a period of serious diminution in our receipts. The figures in the directors' report show you how great has been the falling off of our receipts in passenger and goods traffic, and, consequently, how the proportion between our gross earnings and our costs of working has risen. This result is unavoidable, I am sorry to say. The lines must be kept up and maintained in good working order, even though the receipts fall off. You can, however, count upon our exercising the strictest control over our expenditure and not allowing anything to be spent that is not absolutely necessary for the efficiency of our system. By so doing we shall, I am convinced, weather the storm, and, when it has passed away, be able to take full advantage of the return of prosperity. I regret greatly that we have been obliged to suspend entirely the

construction of our new lines. From these we had every reason to expect a good return for our money, but, of course, until the war is over there can be no question of carrying out new works, even were the money available for their construction. As soon as war became a certainty we took steps for the curtailment of our expenditure in every branch of our enterprise, even to the cancelling of engagements entered into, wherever this could be effected without loss. To the special conditions existing in Egypt are due the delay in the transfer of the Helouan Railway and its dependencies to the Government. To the same cause is due the non-removal of the Cairo Quarry Lines. This delay has, however, caused us no injury. It has, on the contrary, proved rather to our advantage than otherwise, as we have continued to work the Helouan Railway at a small profit. It has, moreover, provided employment for some of our staff, who would otherwise have been in excess of the requirements of our light lines, owing to the extensions of these latter having been suspended. The removal of the Cairo Quarry Lines is now arranged for, and can be completed as soon as the materials can be utilised elsewhere. Turning to the accounts for the year under review, we find that the steady annual increase of earnings of some £13,000 per annum, to which we had become accustomed and for which we had good reason to hope, has this year been converted into a decrease of £60,844—a reduction of 24 per cent. as compared with the receipts of the previous year. Although this loss is partly due to the fall in our passenger receipts and in our goods receipts to other items as well as cotton, it is mainly due to the collapse of the cotton market that took place on the outbreak of war and that has existed ever since. In spite of the fact that the yield of the cotton crop in Egypt for 1914 was considerably below that of recent years, the demand for this article was so largely reduced throughout the world that the price dropped for a time to little over 50 per cent. of that to which the market had become accustomed. The Egyptian Government, with the aid of that of England, afforded early and valuable assistance. With the time thus gained, the position has recently improved considerably. It will, I think, interest you to know that our ratio of loss compares favourably with that suffered by those Departments of the State which are as dependent as ourselves upon the prevailing business conditions. This is due to the loyal way in which our staff in Egypt, under the control of our able agent, have worked throughout the whole of this trying period.

Our working expenses were reduced by over £13,000, or 9 per cent., but still attained to 72.31 per cent. of our much-reduced gross earnings. In accordance with the modified terms of our concession these have been written down to 64 per cent. of our gross earnings, by debit, so far as it would admit, to the reserve specially created for such purpose last year. The excess has been placed to a suspense account, pending adjustment by short outlay in subsequent years. We have decided to recommend a dividend of only 2½ per cent. and increase our carry forward by the sum of over £7,000. I feel certain that you will agree with us in this policy in view of the uncertainty of the duration of this war and of the possibly even more serious consequences that it may yet entail. It must not be forgotten that, in the year under discussion, we had four months of good earnings and only eight months of bad returns. In the current year we shall have an entire twelve months affected by the war. Our latest traffic returns point to the probability of our losing at least £20,000. or the equivalent of 2 per cent., from this fact. I fear also that we may be adversely affected by the restrictions that have wisely —I may indeed say necessarily—been placed by the Government of Egypt upon the cultivation of cotton. In arriving at our present decision, gentlemen, we are only continuing the conservative policy adopted by this Board of recent years, to which is due the fact that our present position is not much worse than is actually the case. I am glad to be able to tell you that, fortunately, as matters have turned out, we have been able to dispose of over £100,000 of our debentures and £35,000 Bengal and North-Western Railway Three per Cent. Debenture stock, which were left to us by our former sinking funds. Thus, without any undue sacrifice, we are in possession of sufficient cash for our present requirements, whatever may happen. I am also pleased to tell you that we are able to be of assistance to the Government at the present time in the manufacture of munitions of war, so far as the capacity of our workshops will permit. We do not regard this work as remunerative, but it helps to keep our staff together and affords us satisfaction to be of such use in the present emergency. In conclusion, I would ask you once more to share the confidence that I have already expressed, and that I so strongly feel, in the future of our railways. The calamity that has affected Egypt, in common with a great part of the civilized world, must one day pass away. When that shall happen prosperity will, I feel assured, return to our undertaking, and will, I trust, be afterwards maintained. Should any shareholder desire to ask questions, I shall be happy to reply to the best of my ability. I now move: "That the report of the directors, dated August 10, 1915, together with the statement of accounts and balance-sheet for the year ended March 31, 1915, be and they are hereby approved, confirmed, and adopted."

Mr. Montagu Sharpe seconded the resolution, which was carried unanimously.

The Chairman next moved: "That a dividend of 2½ per cent. for the year ended March 31, 1915, on the preference share capital of the company be and it is hereby declared, to be paid to the holders of preference shares standing on the registers of the company at August 10, 1915, and to holders of preference share warrants to bearer."

This was seconded by Mr. Robert Miller and agreed to.

H.E. Scander Pasha Fahmy, the director retiring by rotation, was re-elected.

A vote of thanks to the Chairman concluded the proceedings.

CONSTANTINOPLE FIRE.

(From Our Special Correspondent.)

Athens, August 25.

The number of houses destroyed in the second conflagration is reported to be 1,194; of which 134 were stone and the remainder timber. The insurance companies are said to be involved to the extent of £200,000, the Ottoman Insurance Company being the greatest sufferer. Permission has been given by the Board of Trade to English offices to pay their claims out of funds in Constantinople, but no money must be remitted to Turkey. Those agencies who have insufficient funds in hand are meeting their losses by giving the claimant's bills on their head offices in England, which will only be paid after the war.

COMPANY RESULTS, &c.

Anglo-Egyptian Oilfields.—Gemsah production for the week, 164 tons (last week 344 tons); Hurgada production for the week, 238 tons (last week 247 tons).

Egyptian Delta Light Railways.—Receipts for the ten days ended August 10 amount to £E.4,211, as against £E.4,739 for the corresponding period of last year.

Notice is given that Dividend No. 29, Bearer Warrant Coupon No. 26, for a dividend of 2½ per cent. for the year ended March 31, 1915, on the preference share capital of the company, less income-tax, at 1s. 8d. in the £, is payable at the National Bank of Egypt, London, Cairo, and Alexandria, at the current rate of exchange.

Greek Government 5 per cent. Loan of 1914.—The coupons falling due on September 1 should be presented for payment between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, or at the office of Messrs. Emile Erlanger and Co., 8, Crosby Square, E.C., or at the London County and Westminster Bank, Limited, Lothbury, where lists may be obtained. Coupons must be left three clear days for examination.

Sudd-Fuel (Suddite), Ltd.—Mr. J. E. Ward, of 44, Bedford Row, W.C., has been appointed receiver, July 23.

NOTES OF THE WEEK.

Expectation is running high in connection with every theatre of this wide-flung war. The Tsar has placed himself at the head of his army, and the Grand Duke Nicholas becomes Commander-in-Chief on the Caucasian front and Viceroy of the Caucasus. In his rescript to the Grand Duke Nicholas the Tsar states that, whereas at the beginning of the war he was unavoidably prevented from following his inclination to put himself at the head of the army, his duty to the country impels him to-day, when the enemy has penetrated into the interior of the Empire, to take supreme command of the active forces and to share with his army the fatigues of war and to safeguard with it Russian soil from the attempts of the enemy. This step has a much wider significance than a change in the highest command in another country would have. The Grand Duke Nicholas finds himself superseded; but he is superseded by one who is not only Chief of the State, but also the religious head of the nation, whom the Russian nation might have expected to see assuming the duties of Commander-in-Chief at such a crisis. To this extent the change is an admission that the state of affairs on the eastern front calls for drastic measures. At the same time, it is hardly to be supposed that the Tsar would be allowed to take the step which he has taken, if there were no other prospect before the Russian armies than a continuance of the retreat that has been in progress for so many weeks. The German thrust may still be able to make good at certain points in the long eastern battle-front; but expectation will be seriously at fault, if the Russians do not prove able now to do more than hold the Austro-German forces.

On the western front, we know from official statements, a steady bombardment of the whole line has been in progress for a fortnight. That fact alone shows that the Allies are now abreast of their requirements in munitions, but it must also herald an attempt to assume the offensive on a scale that has not been possible since the opposing forces "dug themselves in." The British Fleet has renewed the bombardment of the Belgian coast; the French air fleet has never been so energetic. What the results of these activities will be is still a sealed book; but expectation is surely justified.

Finally, in the Near East, where the prospect of any immediate change is faintest of all, hope refuses to be banished. No sooner have we schooled ourselves to believe that there is no chance of Roumanian or Bulgarian intervention before the fall of Constantinople than the most optimistic opinions regarding the operations on Gallipoli Peninsula begin to reassert themselves. We know at least that while the military efforts at the Dardanelles have not been slackened, the steady pressure of diplomacy, now working on right lines, has been maintained at the Balkan capitals. A distinct stage has been reached with the delivery of Serbia's reply to the representations of the Quadruple Entente. Its tenour has not been revealed officially, but there is no ground for supposing that the Serbian Government is not ready to fall in with the wishes of the Allies. If this should prove to be the case, the Balkan question will have advanced a long way toward settlement. Military considerations may still counsel a postponement of Roumanian and Bulgarian co-operation in the field, but at any moment events in another theatre of the war may brush aside the need for excessive caution.

It is noticeable that a stiffening has gradually taken place in the attitude of Roumania towards the Central Powers. German efforts to smuggle contraband of war over the Roumanian railway system have been frustrated before, but apparently sufficient success has been achieved to justify the continuance of attempts to evade the vigilance of the Roumanian Customs authorities. The further seizure of twenty truck-loads of alleged hospital material, which, on examination, was found to contain explosives and materials for manufacturing asphyxiating gases, should convince the Central Powers of the hopelessness of these tactics of despair. But the Roumanian Government has dealt a still harder blow to Germany in prohibiting the transit of gold through the country. Turkey is now cut off not only from her supply of munitions, but also from her banker.

Digitized by Google

We have always been inclined to discount reports of Turkey's embarrassments. It is so easy to find one section of the people dismayed by the activities of submarines, another by a shortage of bread or coal, or yet a third section indignant over the shortcomings of their rulers. But so long as the strength and the discipline of the army were maintained, particularly in a country of despotic traditions, there was little likelihood of these popular symptoms influencing the conduct of military affairs. Constantinople might be plunged in darkness, the price of provisions might be uncomfortably high, but the determining factor in the situation remained the prodigious strength of the Turkish positions on Gallipoli Peninsula. It would, however, be a mistake to suppose that the moral stamina of the Turks is going to prove as high as that of the Germans in this war. In the case of the latter the heart of the nation is in the struggle, although it has been deceived by the crudest misrepresentations. By no stretch of the imagination can it be pretended that the Turks have made the quarrel of the Committee of Union and Progress with the Quadruple Entente a national one. The time must come, therefore, when the national acquiescence in things as they are found will break down under the terrible strain of modern warfare. We have no means of knowing when that stage will be reached; but there can be no harm in noting various indications that seem to point to its gradual approach, not the least of which is the resignation, announced to-day, of the Sheikh-ul-Islam.

Information of the state of affairs in Constantinople can only reach us by devious channels. Most of these will labour under the disadvantage of a desire to make their reports as agreeable as possible to the recipients; others will be at pains to manufacture their intelligence entirely out of their own imagination. With such mental reservations as the situation requires, however, we may follow with some interest the steady accumulation of evidence of the discomfiture of the Turks. The most picturesque of these reports purports to give the gist of the first interview between the new German Plenipotentiary to the Sublime Porte and the Sultan. Prince Hohenlohe is represented as having been taken completely aback by the outspokenness of the Sultan, who indulged in a series of complaints and reproaches against his German allies. He is said to have taxed Germany with indifference to the fate of the Ottoman Empire, "which had been abandoned by its allies, and, bereft of munitions and of money, was sustaining, single-handed, a desperate and unequal struggle in the Dardanelles and in the Caucasus, whereas the Kaiser had promised to come to the aid of Turkey." If such views are entertained in high places, it is not difficult to imagine that the country, as a whole, is discontented and miserable.

That the inhabitants of Constantinople are suffering the full inconvenience of a shortage of coal is apparent from the elaborate arrangements made to maintain the supply which reaches the capital from the Anatolian coast. With the establishment of Russian control over the Black Sea this supply became endangered. When the vigilance of the Russian fleet made large colliers an easy prey, and the bombardment of Zunguldak, without interfering with the coal output of the district, had probably affected the shipping facilities of the harbour, enormous fleets of sailing vessels were employed to smuggle the coal through the Bosphorus. But more than a month ago the Russian authorities announced that, as the result of a systematic search of the whole coast, they had accounted for over 150 of these craft, and we may infer that the Turks found themselves compelled to resort once more to the large transports, this time with a naval convoy. On September 6 two Russian torpedo-boat destroyers sighted the cruiser Hamidieh and two torpedo-boats convoying four colliers from Anatolia. The Russians at once gave battle and succeeded in damaging the Hamidieh and putting the three Turkish ships to flight. When the latter gained the refuge of the Bosphorus the destroyers returned and sank the colliers off Zunguldak. A fiasco of this nature and the steady arrival of large batches of wounded from Gallipoli are significant factors in a situation dominated by an entire absence of any national enthusiasm for the war.

In a varying degree it would be thought that moral considerations would tell in the long run on the attitude of the Balkan States towards the war. It is not difficult to see how the different countries have been obsessed by the glamour of Germany's military prowess. So long as German successes have been the outstanding feature of the war—and it must be remembered that the German news service has been careful to represent the course of the war as a long series of German victories—we had to expect that feeling in the neutral countries would take on a very strong German bias. By the irony of fate the first real doubts regarding the invincibility of Germany follow hard upon a really brilliant sequence of German successes in the Eastern theatre. It is seen, in some cases for the first time, that what the Germans have hitherto claimed as victories have been at best partial successes marked by no definite results. In the light of this discovery a different complexion is placed on the whole course of the European struggle. Germany's failure to achieve decisive results implies distinct success for the Allied Powers, the more so as her strength can be shown to be on the decline, while that of her enemies may reasonably be supposed to be increasing. That the neutral States of the Balkans should have maintained their neutrality up to this stage is the strongest possible argument against any one of them making common cause with the Central Powers. If German diplomacy ever entertained the idea of winning over these States to its side, it has since abandoned it, for its efforts are now directed to persuade the respective Governments by threats or cajolery to maintain their unnatural neutrality. Sooner or later, however, moral considerations may be expected to override the sensational appeal made by Germany's military strength, and then the Balkan States will adopt a policy that is alone consonant with their interests and their honour.

Some weeks ago it was announced, on the authority of the *Times* correspondent in the Balkan Peninsula, that an agreement had been signed between Turkey and Bulgaria providing for the surrender to the latter of that part of the Dedeagatch railway which runs through Turkey, together with all Turkish territory west of the Maritza. Later information revealed the fact that, whereas an understanding in principle had been reached by the two Governments, it had not been possible to settle the details. Now at last a formal agreement has been signed and the transfer of territory is announced to take place next week. There is no need to lay much stress on the political aspect of the agreement. It represents a diplomatic success for Bulgaria; from a practical point of view it has no permanent value. If the Central Powers and Turkey were to be victorious in this war, Bulgaria's enjoyment of her new possession would be short-lived. On the other hand, if the Bulgarian Government cares to join the Allied Powers it will have not only the part of Turkey west of the Maritza, but will be confirmed in the possession of Turkish territory up to the Enos-Midia line.

Egypt has again been the scene of an attempted assassination. Fathi Pasha, Minister of Wakfs, was attacked on September 4 by a Government employee, who drove a dagger into his left shoulder and stabbed him in both cheeks. The Minister fired at his assailant, but missed him. The latter, however, was subsequently arrested. Fathi Pasha's condition is not serious. Until the result of the inquiry now in progress is known it is impossible to tell whether the outrage has any political significance, or is to be regarded as a personal matter. Unfortunately, political murder has to be reckoned with as a means that will be employed whenever possible by Germany and Turkey to foment unrest in Egypt. That their efforts have not been more successful since the establishment of the Protectorate must be attributed to the vigilance and good fortune of the Anglo-Egyptian authorities rather than to any lack of effort on the part of Turco-German agents.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, August 26.

The Holiday Season.

One of the features of this summer in Egypt has been the large number of persons staying in the country who are in the habit of spending the hot months in cooler climates. It will be remembered that last summer, when the war suddenly broke out, thousands of Egyptians in France, England, Germany, Switzerland, Constantinople, and Syria were almost stranded. A general rush was made for the Nile Valley, and great difficulties were experienced in some cases. The lesson has not been quickly forgotten, and, with the exception of a limited number of Government officials and business men, mostly Europeans, the majority of would-be summer tourists have preferred to remain here, with the result that the few Egyptian summer resorts are crowded. This is especially the case in Alexandria, where, owing to the Court being in residence and the Residency and Diplomatic Agencies being in full force, the *élite* of Egyptian Society are staying. Hotels and houses in the suburbs are at a premium, and the trains to Alexandria are quite full. It will be interesting to know the financial profit that will accrue to Egypt from the enforced economy caused by this change. It is claimed in some quarters that the gain is represented by a sum bordering on half a million sterling. Some people have gone to Cyprus, where at Mount Troödos the cool breezes and the change of scenery are said to be more beneficial than a stay at the seaside in Egypt. But the voyage to the "Enchanted Island" is long and tedious. This is to be regretted, as Cyprus may in future enter the lists as a good competitor with some claim to favour.

Egypt as a Summer Resort.

Some local organs have taken the present opportunity to preach to the Egyptian the advisability of spending summer on his native soil, and thus saving the money and trouble of the annual summer trip to Europe on the plea of escaping from the excessive heat of the Nile Valley. It has, however, been pointed out before now that, where rest and cooler climates are the object, it is cheaper to go to Europe than spend the summer, say, at Alexandria, where rents or hotel charges are so much higher than in Europe that the difference more than covers the expenses of the trip by land and water, to say nothing of the superiority of European places over the actual Egyptian summer resorts, some of which are in a very primitive condition. Much could be done to improve the Egyptian resorts and make them more attractive and more accessible to people of modest means who, either through lack of fairly long holidays or business pressure, cannot very well leave the country for remote watering places. A movement was initiated by a young Egyptian doctor to popularize Egyptian resorts, but it has met with only qualified success.

Egyptian Politics.

Several persons who were arrested recently by the Government for political reasons, and not in connection with the bomb outrage, have been released. Among those set free are a member of the Legislative Assembly and the omda of a large provincial town. It is believed that others will be similarly treated. But the rest will be kept at present under restraint until the investigation which is being conducted at the Cairo Governorat is completed, when a final decision will be arrived at.

It will be remembered that some time during the past winter seventeen students of the Egyptian School of Law were expelled for intentionally absenting themselves during a visit of the Sultan to that school. These seventeen students have now been arrested, and an inquiry has been opened in their case.

Several well-known persons have written to the native Press deprecating and condemning the folly of short-sighted persons who fail to appreciate Egypt's fortune and disregard the signs of the times. They express the greatest abhorrence of the deeds of *exaltés* and contempt of their methods. This is significant, as it shows that honest persons are beginning to display moral courage—a quality which might be developed with advantage here; and that these people are having a chance of being heard now. The time is past when such persons would have been howled down by the alleged "patriots" of the Nationalist Party.

Express Train Derailed.

What might have proved to be a disaster, but was fortunately averted in time, occurred on the Egyptian State Railway line of Upper Egypt. When the Cairo-Luxor express, which left Cairo on Monday at 8 p.m., reached a point between Abu Kirkas and Itlidim, in the Minia Province, it was derailed. The driver noticed that the line ahead was irregularly placed and stopped his engine, but not before the train had left the rails and run some fifty yards, the brake van only being left on the line. The wheels of the engine and cars fortunately stuck in the sand, for otherwise the whole train would have been hurled into a large irrigation canal near by. None of the passengers were injured. The Railway Administration sent trains to convey them, and porters to unload the train. This was speedily carried out, and on Wednesday morning the line was repaired and the trains resumed their normal movements. A semi-official statement appeared in to-day's morning papers. It states that the perpetrators of this outrage were actuated by lust of revenge on the omda of a neighbouring village. This fact was elicited at the inquiry, and the culprits have been arrested.

Cutting the Khalig.

The annual and traditional ceremony of "Cutting the Khalig" was celebrated with the usual pomp on Wednesday evening, and was presided over by the Governor of Cairo, representing his Highness the Sultan. No fireworks were displayed, an omission due to present circumstances. This resulted in reducing the number of accidents which annually marked this ceremony, but otherwise the usual proceedings were observed. The Hojja of the Nile was duly written and attested by the Cadis, and signed by the Governor. Guns were fired, and the Egyptian National Anthem was played by the military band in attendance. The usual distribution of pelisses among Cadis and Sheikhs took place.

Forged Bank Notes.

A forged £E5 National Bank note was found among a bundle of notes in the State Railways Administration. The National Bank and Parquet were informed, and an inquiry has been instituted. It proves that the note in question is one of the old issue. It is not really forged, but is one of the specimen notes sent by the Bank to Government departments and financial institutions. Some one apparently had added a number and date and circulated it. It is believed that the case is unique, but an inquiry is proceeding.

The New Court Dress.

It is now stated that the new Court dresses or uniforms for his Highness the Sultan, the Princes, and Ministers have been decided upon, and that the final specimens submitted to his Highness were approved by him. It is said that these uniforms will be worn for the first time at the reception to be held on the occasion of the Grand Bairam, some time in October.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, August 30.

Scarcity of Food Supplies.

The Greek papers announce that Constantinople is in darkness, and that the Galata Bridge has been destroyed by a submarine, but there is so far no confirmation of these reports. The former is not at all improbable, as the stocks of coal in Constantinople are daily becoming less, and no fresh arrivals from the Black Sea have been announced lately. It is rumoured the gas-works have been obliged to stop, and the recent scarcity of bread makes it look as if the mills are not able to produce flour in sufficient quantity.

The Municipal Council held a special meeting last week to consider the question of the shortage of the principal necessaries of life. A law has been passed giving the police power to adopt measures regarding the sale of articles which they consider to be of first necessity.

The Prefect of the city explained the position of several articles, and in reference to bread said the shortage was not due to want of wheat, but rather to insufficient transport to convey the grain from Anatolia to Constantinople, but now that the military authorities have placed thirty wagons per day at their disposal, there would be no further difficulty in this respect.

The inferior quality of bread is due to the mixing of Anatolian flour with that produced in Constantinople. The flour mills are now under the control of the Municipality, but the Prefect is silent as to what he intends doing when fuel for the mills is no longer obtainable.

Sugar Stocktaking.

With regard to sugar, the Municipality has called upon all dealers in this article to declare their stocks within twenty-four hours, and, pending this stocktaking, has prohibited the sale of the article. The Prefect of the City stated that he hoped that very soon some hundreds of wagons of sugar would arrive in Constantinople.

As regards petroleum, the Prefect said that the difficulty of importing this article had been overcome, and that they had succeeded in importing a quantity which would enable this to be sold at 47 piastres per tin.

To meet the shortage of firewood, the woods at Riva and Beicos are to be cut, and it is expected the supply will be nearly sufficient for the city's requirements; the sale will be under the control of the Municipality, who have fixed the price at 30 piastres per cheki.

Charcoal, the Prefect admitted, was more difficult to find, but he hoped to meet the need of the poor by obtaining 3,000 okes a day from the gasworks, where wood is being burnt with coal, and from the Beicos Forest when the trees are cut.

During the month of July the production of vegetables was nine thousand tons short of the normal supply, and this deficiency had naturally been the cause of the increase in prices.

In spite of the optimistic views of the Prefect, it is evident that the scarcity of the necessaries of life in Constantinople is pre-occupying the authorities, and the stoppage of supplies is likely to place Constantinople in a state of famine and great misery this winter if the present condition of things continues till then.

Cabinet Dissensions.

There are rumours of dissension in the Cabinet, and it is said the Sheikh-ul-Islam does not attend.

There is much movement of soldiers. Recruits continue to arrive from Konia, and they cross from Scutari to Cabatash during the night, for fear of being torpedoed by a submarine. These recruits have no uniform, and are armed with Schneider and Winchester rifles. Large forces appear to be concentrated at Ouzoun Keupru, from which point they can be sent either to Gallipoli, Adrianople, or Constantinople. Many German officers have arrived to fill vacancies caused by losses at the Dardanelles. It is said there is a shortage of materials in Constantinople for making munitions.

The *Hilal* announces that 143 prisoners arrived in Constantinople from the Dardanelles on the 22nd, and were taken to the Taxim Barracks. There are over 250 prisoners in the Admiralty Hospital, and some are kept on the "General."

Relations with Italy.

The *Hilal* of the 22nd publishes a communiqué to the effect that the Italian Ambassador had notified the Sublime Porte that Italy had broken off its relations with the Turkish Government, and that the Marquis Garroni had asked for his passports, in consequence of which the Turkish Government had recalled its Ambassador from Rome. The Marquis Garroni left Constantinople on August 21 by special train.

In a leading article on this subject, the *Hilal* expresses a sigh of relief, and says the Italian Ambassador's departure has not surprised anyone, as it was evident that when Italy declared war on Austria she would also break off relations with Turkey. The Ambassador's departure clears the situation, it says, and removes the inconvenience which his continued presence in Constantinople had created! The article then indulges in its usual invectives against the perfidy of Italy.

Smyrna Quiet.

Smyrna is quiet, but in darkness. There is practically no light of any sort, and tea, coffee, and sugar are unobtainable.

DISCORD AT CONSTANTINOPLE.

In connection with our Special Correspondent's reference to the absence of the Sheikh-ul-Islam from the meetings of the Cabinet, the following Reuter's telegram from Athens, dated September 9, will be of interest:—

Trustworthy advices from Constantinople report the resignation of the Sheikh-ul-Islam and the Prefect of the City. The latter resigns as a protest against malversations to the amount of 300,000 liras made by a section of the Provisions Committee of National Defence, of which he was President. The Sheikh-ul-Islam's decision is due to the favouritism shown to Mussulmans and Jews, to the detriment of other citizens. The Prefect has been forcibly compelled to remain in office. No decision has yet been taken regarding the Sheikh-ul-Islam's resignation.

GERMAN INTRIGUES IN PERSIA.

Reuter's Agency understands that there is no truth in the German report sent through the Wireless Press that the British lost over 2,000 men while attempting to take possession of Bushire. As a result of the killing of two British officers on July 12 near Bushire by tribesmen, Bushire was occupied by the British on August 8 without opposition. This was as a protest against the failure of the Persian Government to punish the tribal chiefs who, it is known, were acting assisted by Germans. Reuter's Agency learns that according to private intelligence from Teheran a fresh Cabinet crisis occurred early in August. Letters received in London described the situation on August 19 as going from bad to worse. The Central Persian telegraph line had been cut since August 15, and at that time there was no news from Europe. The Bushire road was completely blocked and, according to the writer, the Persian Government had done absolutely nothing to prevent German intrigues. The gendarmerie had become disaffected through not having been paid, and there was reported fighting among the tribes outside Kashan, between Teheran and Ispahan.

The same agency is informed that the Persian Government, on hearing of the attack on the British Consul-General at Ispahan, instructed the Persian Minister for Foreign Affairs to call at the British Legation in Teheran and express its great regret at the incident. The Minister added that every means would be taken to apprehend the culprit and to make full reparation. The Persian Government also instructed its Minister in London to take similar action at the Foreign Office. The Persian telegram states that owing to the unrest at Ispahan the Government had offered the British Consul-General the services of a guard of gendarmerie.

Reuter's Agency also learns from a foreign diplomatic source in London that the latest outrage on the British Consul-General at Ispahan has rendered critical a situation already serious, and the steps that it may be necessary to take are forming the subject of discussion among the Entente Powers.

MOTOR-BOATS IN THE DARDANELLES.

Among the sums acknowledged yesterday by *The Times* Fund for the Sick and Wounded is one of £1,600 raised by the efforts of Mr. Masefield, Mr. Galsworthy, and their friends, to provide a picket-boat and a lighter for Red Cross work in the Mediterranean. An editorial in the paper alluded to, refers to the demand for motor-boats in the Dardanelles in the following terms:—

"We have already drawn attention to the urgent need for motor-boats as a means of transporting the wounded of the Dardanelles Expeditionary Force, and this gift, with the personal service of Mr. Masefield, is invaluable. Our appeal is corroborated in the strongest terms by Sir Courtauld Thomson, the Joint Committee's Commissioner for the Near East, who recently wrote from on board a hospital ship in the Mediterranean. The whole situation here turns on motor-boats. They are, in fact, to the Dardanelles forces what the motor-ambulance and the motor-lorry is to Red Cross work on the Western front. Sir Courtauld Thomson adds, 'Masefield's picket-boat will be worth its weight in gold.'

"Subscriptions should be sent to 83, Pall Mall, S.W., cheques being drawn to the Joint War Committee and crossed 'Bank of England.'"

ABOUT JERUSALEM.

Since the participation of Turkey in the present war tidings from and of Jerusalem have been miserably scanty. Palestine is almost entirely cut off from all communication with the outer world, for the majority of the ships calling at Jaffa were Russian, British (Khedivial), French, Austrian, and Italian; there were occasional Greek steamers, and one Bulgarian, in whose advent last May we were all deeply interested, but which, apparently, came but once. Jerusalem, therefore, has become more and more isolated, and we at home are cut off from all communication with the few English people still out there and with our many Syrian friends. Communication with the latter, through neutral countries, has been tried, but even if it were always successful, it would be most unfair on them to arouse the suspicion of the authorities by their being known to receive letters from English sources; their case is hard enough already without adding to it this entirely unnecessary and useless risk. The few facts I am able to give here have been gleaned from many sources during some months, and are put together for the information of those who may be completely out of touch with Jerusalem.

Life, on the surface, proceeds much as usual at Jerusalem, but there is undoubtedly a great deal of distress everywhere. For instance, the poor—Christian, Moslem, and Jewish—depend so much on the individual charity of foreigners, and this is now lost to them; while the foreign schools and hospitals, which are the backbone of the country, are shut. Many of these buildings are now being occupied by the Turks; the Russian buildings near the Jaffa Gate, the big Latin school of St. Peter (Ratisbon), the Bishop's House, St. George's Boys' School, St. Mary's Home, St. Anne's (Bethesda), and St. Stephen's, are certainly all being used.

A curious story is told about the present occupation of St. Anne's, whose beautiful old Crusading Church was once used by Saladin as a college for the sons of his nobles, and still bears the tablet he placed over the west door; it was taken over for the use of the military, but the soldiers soon protested violently against being quartered here, saying that it was full of spirits, and that they were disturbed by most horrible dreams. After a while the Turks offered to give it back to the monks, but they refused, and very rightly, to receive it back except with proper formality through their respective Governments.

Turkish Courtesy.

The Turkish authorities seem to have behaved with courtesy in all cases that we know of, as when they took over the medical stores from St. Helena's Nursing Home and Dispensary, they first offered Canon Hichens, of St. George's, a choice of some of the things for use in the Boys' School, which was then open. Again, when taking possession of the Bishop's house in February, due order was observed, and the furniture was moved by permission into one room, under the supervision of one of the Syrian masters of St. George's. The Cathedral and the College Library were intact up to the end of April, under the American Consular seal. The young Turkish officer who conducted the search in the Cathedral in November last was a stranger to the place, and was evidently anxious to display his authority; the old officials who had known Bishop Blyth remained outside in the gateway, and were plainly sorry and ashamed of the whole affair. The L.J.S. Hospital, the largest English hospital in Palestine, and Bishop Gobat's School have both been annexed, I believe; and "Abraham's Vineyard" is being used for a typhus hospital; but, so far as is known, the British Ophthalmic Hospital has not yet been taken over; no English hospital in Palestine shows a finer record than this one, and that is saying much, for they are all splendid.

Though Jerusalem is reported as being quiet, there is undoubtedly a great deal of suffering amongst the people. All foreign supplies are in suspense, the oranges could not be exported last year, and the total absence of pilgrims and tourists spells ruin for many and many a shop, not only in Jerusalem; numbers of families must be enduring great privations, if not actually starving. The drain of recruits for the army continues, and even the most urgent and valid reasons against service are rejected. I know of two men, Christians, one being over age, while the other had paid the exemption tax twice in one year, who have been taken; and a carpenter, the eldest son of a widowed mother, with five young sisters, who was slowly building up a good business after many misfortunes, has been seized and sent to Ama'an as a military baker.

Of the majority of our Jerusalem friends, Christian or Moslem, we know nothing—except that they are suffering. In the early summer a terrible plague of locusts swept over the land; anyone who remembers a similar visitation which took place some ten or twelve years ago will know what an appalling thing it is. The land is described as having been stripped bare from Tiberias to Bethlehem, not a leaf left on fig-tree or vine. Mercifully, the harvest had been gathered in, and corn and bread are said to be plentiful still in Jerusalem. Little has been said about the water supply, always one of our greatest anxieties out there, but up to the end of December the rainfall was unusually good.

In melancholy contrast to the general good behaviour of the Turkish authorities has been that of their German colleagues, or, rather, task-masters. Everyone knows that it was not the will of Turkey as a country to go to war with England, but German gold and German lies, and the selfishness of a bought pro-German clique at the Porte have driven Turkey to her doom. There is no love lost between the Turks and the Germans, and there has been at least one stand-up fight at Fast's Hotel (the German headquarters at Jerusalem) between the overbearing Germans and the Turks. The brutal, bullying character of German officialism is loathed and resented by the Turks, who are powerless under it, however. The Germans triumph and bluster in the Holy City, on which the crowning indignity of a German governor, someone called Kauffmann, has now been laid. It is sad to think also that the German Consul at Jerusalem, so much liked and respected by us all for many years, could actually stand at the Jaffa Gate and distribute leaflets of German "news," printed in Arabic, disseminating those amazing lies about the Allied forces and German successes, which have made the German communiqués the mock of the civilised world; no doubt it was done under orders, but the thought that he, a Christian and a Western, could condescend to such an act comes like a blow. At the very time that the Indian troops were landing at Marseilles, the walls of Jerusalem were placarded with the announcement that India was in open revolt against British rule.

"Kultur" in the Holy City.

The Germans are said to be "improving" the Holy City by widening the streets and introducing sanitary measures. Heaven grant that their "improvements" stop at that! So far, the Church of the Holy Sepulchre and the Mosque are safe, and there is very little fear that the Turks will harm or destroy them, or any other of the many treasures of the city, but who dare say as much for the Germans, with memories of Louvain, and Aerschott, and Malines, and Rheims burning in us still? At present these priceless treasures of Christendom, the Churches of the Holy Sepulchre and of the Nativity, are safe in the guardianship of neutral Greece.

For months past the Germans have been importing arms and ammunition and artillery into Jerusalem, and, indeed, at least four years ago there was good reason to believe that guns were brought in sections, secretly, to a German hospice at Jerusalem. From the building on the Mount of Olives the Germans command the city and most of the buildings belonging to the Allied nations. We can, and we do, hope for the safety and preservation of the Holy City from German lust and "frightfulness," but its salvation lies not in any "soul of goodness in things" German.

Darkness, silence, and fear surround the Holy City now; we cannot help her, however much we long to do so; but most surely the faith and service of many creeds and many generations are helping her through the present distress; she stands midway between the ages, and belongs to all alike. At present we can but keep sad vigil with her from without, not letting go our belief in her glorious future; and ever

"My face is towards Jerusalem,
My heart remembers it."

ESTELLE BLYTH.

ENEMY SUBJECTS IN EGYPT.

An order has been sent by the General Officer Commanding the Forces in Egypt to the Egyptian civil authorities that until further notice no permits to change residence or to travel in Egypt outside the district in which they are registered will be given to any enemy subject, either male or female.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, August 28.

Life in Belgrade.

Although, as a matter of fact, a real state of war has not existed in Serbia during the last nine months, the cannonading frequently taking place between Belgrade and positions on the Austro-Hungarian frontier show that the capital is in the war zone, and suffers most in Serbia from the existing European war.

Certainly Belgrade is no longer bombarded as it was at the beginning of the war. Thanks to the heavy cannon brought for the defence of the town and served by British and French artillerymen, and the defensive works carried on by the Russians, Austrian river warships have been chased away beyond the precincts of the town, and the Austrian land batteries silenced each time they begin to speak.

Whenever the town is disturbed by the enemy's cannonading some of the inhabitants leave; nevertheless, there is a continual influx of inhabitants who at the beginning of the war had sought refuge in other parts of Serbia. At one time 90 per cent. had fled, and there were hardly 10,000 inhabitants, mostly of the poorer class, who remained. Now it is computed that there are again 50,000 inhabitants in the capital.

There is, as might be expected, a great deal of misery, but much is done to alleviate the distress. The Belgrade municipality has distributed for the support of needy sufferers since the beginning of hostilities 878,800 fr., and advanced loans amounting to 60,000 fr. to property holders who have ceased to derive incomes from their properties.

A Parliamentary Committee was nominated in March last, which, in combination with local committees throughout the country, made pecuniary grants to families who had lost relations serving in the defence of their country, and were not receiving any local relief from their respective municipalities. But the Serbian Press to-day states that this very small help on the part of the Central Government has been suspended, presumably for want of sufficient funds, or because the Government deems it more expedient to employ its money for other and more pressing purposes.

Relief Measures.

Still, if one source of relief fails others appear to take its place. The Russians have established a free kitchen at Belgrade, from which the very poor daily obtain rations of good food. The British have established at Belgrade an asylum for children which is attended to by British nurses, and British doctors at Belgrade receive outdoor patients daily, prescribe for them, and give them medicine gratis.

There has been a scarcity of salt, petroleum, firewood, sugar, rice, matches, oil, soap, and shoes in all the villages and in most of the towns of Serbia; but the Belgrade municipality strives with all its might to alleviate the pressing wants of the citizens. It has established centres which supply the public with firewood, coal, groceries, and other stores which cannot or which can only with difficulty be procured from retail shops. The citizens have only to provide themselves with a legitimation card from the Belgrade municipality, and can then, at reduced prices, procure to a limited extent all the scarcer commodities.

Ten trucks of salt, a great quantity of sugar and rice, and a considerable amount of firewood and coal have just been brought to Belgrade by the municipality for distribution to the citizens at moderate prices.

It is, however, to be regretted that bread, the staff of life, though not so scarce at Belgrade as it was a short time ago, is of bad quality and very expensive.

As regards meat, beef can only be procured at Belgrade one day a week, whereas mutton and pork can be bought every day.

Boots and shoes are double the price they were before the war, and as regards spectacles and eyeglasses, it would require Aladdin's wonderful lamp to discover and procure them. A friend of mine now residing at Belgrade broke his eyeglass, and hunted through the whole town to procure another pair, but in vain: the spectacle shops were all closed, and glasses were nowhere obtainable! Yet, wonderful to relate, there is one enterprising confectioner, but only one, and he seems to do a flourishing business.

Sir Ralph Paget, formerly British Minister Plenipotentiary in Serbia, has made a gift of 5,000 fr. for the sufferers at Podringa. This district possessed the richest and most thriving fields in Serbia, and was utterly devastated by the Austrian Army at the time of their invasion of Serbia.

The Harvest.

The greater part of the land in Serbia formerly planted with maize and wheat remains unplanted, so that the next harvest will be considerably less than it formerly was: hence the necessity of sowing the fields is keenly felt. Abundance of seed has been sent from the United States of America, and ought to be liberally distributed under vigilant Government control.

There are no cattle to plough the land. Great Britain has made lavish pecuniary grants to this country. Cannot steam ploughs be bought with part of this money and be distributed among the Serbian farmers?

In consequence of the danger arising from any sudden bombardment by the Austrians, the trains to Belgrade do not go beyond ——, a distant suburb of Belgrade, and travellers have to drive along an indirect route from the station to the town, keeping always at a distance from the Save. This enables them to have a good view of the surrounding hills and fields, which, instead of being, as is usual at this time of the year, golden bright with ripe wheat, are clad in the green verdure of wild bushes and grass.

These are the first symptoms of desolation which meet the eye when approaching the capital of Serbia, and when the town is reached the animation of cabs, carts, and vehicles is no more seen as of yore, but a new life supplants the past. The presence of British, French, and Russian Missions, and soldiers and officers of the allied countries, enliven the otherwise deserted streets, while the motor-cars belonging to the Allies go frequently dashing along the roads in the pursuit of the good work and the charitable designs which have brought them together in this once flourishing town.

HOSPITAL WORK IN SERBIA.

A representative of The Near East called the other day at the office of the Wounded Allies' Relief Committee, Sardinia House, Kingsway, and in an interview with Miss R. M. Morrison, the publicity agent of the committee, gleaned the following interesting particulars of the work done for Serbia and Montenegro. Of course, this is only one branch of the committee's activities; besides what has been done in the Balkans, work has been done for Belgian and French sick, wounded, and disabled soldiers in England and elsewhere.

The Serbian unit went out early in April and started work in May. It was in charge of two Belgian doctors, Dr. René Lauwens and Dr. Camille Veunens, and there were a dozen nurses. By desire of the Serbian Government it was stationed at Kragujevatz. At the time Serbia was in the grip of typhus, and it was in the first place with a view to dealing with this scourge that the hospital unit was sent out. The hospital had about two hundred cases under its care before the epidemic was suppressed. It is now adapted for the reception of the wounded, and its staff has been given charge by the Serbian Government of two additional hospitals on adjoining or practically adjoining sites.

The three hospitals thus combined into one form the third base hospital for Serbia, and have six hundred beds, which are under the direction of Dr. W. Graham Aspland. The work at present being done is practically that of a civil hospital, for the conditions among the civil population of Serbia, so far as concerns medical assistance, are worse than among the military. Kragujevatz is a town of 50,000 inhabitants, but has only one civil doctor; though in order to make things a little better the Wounded Allies' Relief Committee opened a dispensary in the town. Some similar organisations have opened dispensaries also. Bad as things are in Kragujevatz they are yet worse in the villages and small towns, where, of course, there are no doctors at all.

With regard to Montenegro, as soon as it became known in England that there was great need for help the committee despatched a sanitary commission to the country. This was headed by a lady, Dr. Isabel Ormiston, a specialist in sanitation and Chief Medical Inspector of Schools to the Govern-

Digitized by Google

ment of Tasmania. The purpose of the commission was to report on what the situation required, and its report was to the effect that the Montenegrin Government made an urgent request for a hospital with two hundred beds to deal with typhus cases, and that it would be necessary for this unit to bring not only hospital supplies of every sort but even food. Accordingly fifty tons of stores—of a value of £2,500—was despatched with the unit. The hospital is stationed at Podgoritza. Like the hospital in Serbia, it is fitted to deal with both fever cases and surgical, and is doing various kinds of work. According to latest advices (end of July) there were still a few cases of typhus in the fever wards, as well as some of malaria and dysentery. Dr. Isabel Ormiston returned after making her report, but it is interesting to note that there are two lady doctors on the staff of the Montenegro unit. These are Doctors Constance B. Slater and Lillias Hamilton. The latter when in England is warden of the Studley Horticultural College in Warwickshire, and is a doctor of long experience, having, in fact, served in the Afghan War of about thirty-five years ago.

It will easily be understood that life in the backward communities of south-eastern Europe has its special hardships for people reared among the more advanced communities of the West, and that these hardships are often of a sort to fall with greatest weight upon women. Recently the committee sent out a gentleman, Dr. V. H. Rutherford (he is, we are informed, the Liberal candidate for the Bishop Auckland division), to inspect and report on the state of things obtaining. Describing his experiences and speaking of the difficulties of getting about the country, he said that in Serbia trains run at an average speed of about five miles an hour; but, unfortunately, the railway authorities have no idea of so arranging time-tables that trains on one branch of the railway shall meet those on another. Thus the traveller arriving at a junction may find he has to wait several hours before he is able to resume his journey. In Montenegro he is saved this petty annoyance, for there are no railways whatever. All travelling is by road, but the roads in Montenegro consist of mountain tracks usually traversed on muleback. Sometimes the track is cut in the face of a cliff, which towers above the traveller on the one hand while it slopes away below to the bed of a mountain torrent on the other side. Great is the danger when in such a place two mule trains meet on a path which is not more than wide enough for one. Over such roads the members of the Montenegrin Hospital unit had to travel, however; and it might happen that after a very long day, perhaps of fourteen hours, almost without food, they would find at the end no refreshment but coffee and black bread and no beds to sleep on. Where possible motors are used in Montenegro, but this is very dangerous, for even the best of the roads are strewn with large, loose stones.

Serbian conditions, as has been indicated, are nothing like so bad as this; but even there a motor ambulance that was sent out by the committee was found unsuited to the roads of the country, and R.C.H. touring motor-cars were substituted.

It is interesting to note, in conclusion, how well all those connected with the Wounded Allies' Relief Committee who have visited these countries speak of the people. Dr. Rutherford expressed himself as particularly struck not only with the smartness and efficiency of the Serbian soldiers, but also with the high intelligence and general culture of the Serbian officials. He noted a growth of education and that ideas of sanitation and hygiene are now making their way into the minds of the people. Naturally enough, Montenegro lags behind Serbia in these respects.

Our readers will forgive us for adding that the committee is still in need of funds for the extensive work it is performing in the Balkans, and that all contributions will be gratefully received by the Hon. Treasurer, Mr. T. O. Roberts (manager), London County and Westminster Bank, 217, Strand, W.C.

SOME OLD NEAR EASTERN PROVERBS OF THE SWORD.

The sword cannot be lent in time of war.

The sword is not to be used against him who asks forgiveness.

A sharp sword does not cut its own scabbard.

You can make a fan out of iron, but not a sword out of silk.

The sword cuts, but the arm boasts about it.

The tongue slays quicker than the sword.

Two swords cannot be put into one sheath.

Double-faced, like a Persian sword.

A good sword cannot be made from base iron.

Even though your sword be of Damascus, sell it and buy a gun.

M. M. P.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, August 19

More Munitions of War Confiscated.

In spite of their continued lack of success, the Germans do not, after all, appear to be discouraged in their attempts to smuggle munitions of war through to Turkey. Warning having been given that twenty trucks full of munitions were to be passed, the authorities were even more on the alert than ever; and on examination at the frontier station of Predeal six trucks containing "bales of cotton" were found to have melinite, asphyxiating gas, and various explosives stowed away in the middle of the bales. The trucks, as well as their contents, have been confiscated.

In connection with this subject I may pass on a story which is vouched for by those who tell it. It is to the effect that the German Minister, in the course of an interview with a certain high functionary, pressed for permission for munitions of war from Germany to pass through this country for Turkey. He was told that such permission could not be granted, whereupon, with true German truculence, he declared, "We shall pass them through anyhow!" "Indeed!" retorted the Roumanian functionary. "But if you are so determined about it, why not send them through Serbia?" And at this the diplomatist, his feelings quite beyond his powers of expressing them, took his departure.

Franco-Roumanian Friendship.

A young Roumanian named Georges Teodorescu, who some time ago joined the Foreign Legion in France, and is now a captain of Zouaves, has sent to his friends a letter which shows the intense love of and admiration for France that exists in this country. In one passage he writes: "On June 9 we had the great honour of fighting for France, we 250 Roumanians, commanded by our captain, Roman Butnariu, lieutenant in the Roumanian Army, who led us to the attack like a hero. Our victory was complete, and the next day General Joffre noticed us all in the orders of the day. It is right to say that at the end of this combat, which lasted forty-eight hours, of the 250 Roumanians only thirty-four remained alive. Lieutenant Butnariu, seriously wounded, was decorated in the hospital with the Legion of Honour. We find comfort for the loss of our comrades in the love of the French. At Lyons, where we went later, everybody embraced us and cried, 'Vive la Roumanie.'"

THE BALKAN DIFFICULTIES.

To the *Manchester Dispatch* Count Cheddo Miyatovitch has contributed a most interesting exposition of his views regarding the difficulties which confront the Balkan States in this war, and of the manner in which he imagines they may be the best overcome. His leanings are naturally to Serbia, but he has in no way allowed this fact to blur his judgment in his examination of the question as a whole. He points out that other countries beside Serbia stand in the way of Bulgaria's entry into the war arena on the side of the Allies. Serbia is willing to make concessions provided that she received adequate compensation; this compensation the other Powers concerned are unable to guarantee. We quote one of his paragraphs dealing with the all-important question of Serbian Macedonia:—

If we cede Macedonia to Bulgaria immediately we run the risk of mutiny in our ranks and civil war, for thousands of Macedonian Serbians are fighting in our army, and they would naturally resent, in the keenest manner possible, what they would consider to be their desertion by our Government, for which they have shown themselves willing to shed their blood.

He thinks, however, that the difficulties are by no means insuperable, but holds the opinion that the influence of Potsdam is apparent in the demands which Bulgaria has hitherto made as the price of the abandonment of her neutrality. We quote from the concluding passages of his article:—

I can see no reason to believe that Bulgaria will come into the struggle on either side until the Allies have demonstrated in an unmistakable manner that victory is assured to them. The forcing of the Dardanelles and the fall of Constantinople would, I believe, be sufficient to persuade all the Balkan Powers of this.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, August 21.

The Political Situation.

The recent Russian reverses in Poland have wrought a sudden change in the Bulgarian Government's policy. Austro-German diplomacy has lost no time in profiting by the present state of indecision, and has attempted to influence the Government with a view to obtaining from it a decision that it will at least uphold its policy of neutrality. Lieut.-General Fitcheff, who is considered to be one of the most pronounced advocates of Bulgaria joining the Entente Powers, has been deprived of his portfolio of Minister of War. Last Wednesday an official communication wap issued to the effect that General Fitcheff had resigned on account of illness, and that Major-General Jekoff had been appointed to succeed him.

The Crisis at the War Office.

The news of General Fitcheff's resignation is commented on here with lively interest. The general opinion is that the resigning Minister leaves the War Office at a time when his services are sorely needed by the army. As Minister of War, General Fitcheff worked continuously and with energy for the restoration of discipline and for the consolidation of the military power. His untiring efforts for the preparedness of his country for war were most valuable and fruitful, and through his resignation the army loses one of its best organisers. The new Minister of War, Major-General Jekoff, obtained his company in 1887. He graduated in the academy of the General Staff, and studied likewise in Turin. During the Balkan wars he was Chief of Staff of the Second Army, which captured Adrianople by assault. After the war he was appointed assistant chief officer of the General Staff, subsequently being made commander of the 7th Tundja Division, in which capacity he served in Constantinople as military expert on the Bulgarian Commission, conducting the Turco-Bulgarian negotiations concerned with the settlement of the Dedeagatch railway question. Last Friday he returned here to report on the negotiations, together with the other delegate, Dr. Tochkoff. Last Sunday, on the occasion of the anniversary of the King's accession to the throne, he was promoted to the rank of major-general. On Tuesday, Djavid Bey, formerly Turkish Minister of Finance, arrived in Sofia from Berlin on his way to Constantinople, and, accompanied by Fethi Bey, the Turkish Minister here, and the Bulgarian delegates of the Turco-Bulgarian Commission, he visited Dr. Radoslavoff, with whom he had an interview lasting two hours. On the following day General Fitcheff resigned, and was succeeded by General Jekoff.

Anniversary of King Ferdinand's Accession.

On Sunday, August 15, His Majesty Tsar Ferdinand celebrated the twenty-eighth anniversary of his accession to the Bulgarian throne. The occasion was celebrated by a Te Deum at the cathedral church of Sveta Nedelia, the Archbishop of Sofia, Mgr. Parthenius, officiating, assisted by all the clergy. Among those present were the Royal suite, the Cabinet Ministers, headed by Dr. Radoslavoff, the diplomatic body, the Mayor of Sofia, the General Staff, etc. After the service, the Cabinet Ministers, several ex-Ministers, the diplomats and officers proceeded to the Palace, where they signed the visitors' book. The Prime Minister in the name of the Government, General Fitcheff in that of the army, and the Mayor of Sofia in that of the citizens of the capital, sent congratulatory messages to his Majesty.

Promotions.

On the same day, the following colonels were promoted to the rank of generals: Jekoff, Jostoff, Topeloff, Nerezoff, Zagorsky and Burneff. The Chief of the Army Staff, Major-General Boyadjieff, was promoted to the rank of lieut.-general, and so was Major-General Todoroff, Chief Officer of the 2nd Inspectional District.

The Opposition.

The leaders of the Opposition, Messrs. Gueshoff and Malinoff, and Drs. Daneff and Kosturcoff, had an interview during the beginning of the week with Dr. Radoslavoff, who explained the political situation to them.

Messages of Condolence.

Since the news was received here of the death on the battlefield of M. Milakoff's son, M. Milakoff has been the recipient of a great number of messages of condolence from numerous people throughout Bulgaria, including the Macedo-Adrianople group of students. In the telegrams mention is made of the noble services of M. Milakoff in the Macedonian cause.

Dr. Gretzer's Dismissal.

Dr. Gretzer, for many years Court physician, has been relieved of his post. This has been widely commented on, but, it is officially stated, the rumours of his removal from the Court on account of his being a greater German than a doctor, are without foundation.

Armenian Immigrants.

Every day a number of notable Armenian families, expelled from Constantinople, arrive here. They consist of women, children and old men, the younger men having been sent into the interior of Turkey.

CYPRUS NOTES.

(From a Correspondent.)

Colonial Office Circular.

A circular of the Colonial Secretary of State, Mr. Bonar Law, warns all officials that, in the interests of the Service, no resignation of his appointment by an official, with a view to military service, can be accepted unless submitted by permission of the authorities first obtained, and that any official who does not comply with the order will have no claim to reinstatement, but will be regarded as having quitted the Service without leave. In a crisis like the present it would rather seem expedient that any official of suitable age and qualifications, in our Colonies and possessions, should have every facility given to him to offer his services to the Empire. In almost all cases arrangements could be made for carrying on the work of such an official without detriment to the public service.

Technical Education.

The village schoolmasters who have volunteered for the educational course in elementary agriculture and in gymnastics under Mr. Nikolaïdes, have shown great zeal and interest in the work, which has included a visit to the Experimental Farm at Athalassa, near Nicosia. This movement cannot fail to have increasingly good effects in rural districts. There is a general desire that the position of village schoolmasters and mistresses should be improved, and that some provision should be made for pensions on retirement through age or ill-health.

Bishopric of Famagusta.

The Greek Archbishop, Cyril, has decided upon the appointment of an Assistant Bishop for the District of Famagusta in the person of the Archimandrite Makarios Myrianthers, a cousin of the Primate. The appointment is said to be by request of the town and district of Famagusta, and it is believed that this will strengthen both the ecclesiastical and lay interests of the division. It is probable that there will be similar appointments of coadjutors in the other towns of Cyprus. This indicates a movement which aims at the extension of Greek Church influence throughout Cyprus. The bishops and abbots in some cases not only exercise influence over their flocks in matters appertaining to the Church and local education, but in their tours they take up grievances and complaints of villagers, which—if necessary—are brought before the Legislative Council.

THE KING AND CYPRUS WOUNDED.

The *Cyprus Gazette* reproduces the following telegram, dated August 10, 1915, and dispatched by H.E. the High Commissioner of Cyprus to the Rt. Hon. the Secretary of State for the Colonies:—

"Sick and wounded from the Dardanelles at the Convalescent Camp on Mount Troödos, who are benefiting from the mountain climate of Cyprus and receiving kindnesses from all classes of his Majesty's subjects in this newly annexed part of his Majesty's Dominions, beg to be allowed to submit their humble duty to his Majesty the King."

The following reply, dated August 12, 1915, was received from the Right Honourable A. Bonar Law, M.P.:—

"His Majesty the King commands me to express his pleasure on receipt of the loyal message from the sick and wounded on Mount Troödos. He wishes them speedy recovery."

SUDAN EXPLORATION.

(From a Correspondent.)

It will be learned with some regret that Professor Llewellyn Griffith, of Oxford University, the well-known Egyptologist and excavator of Nubian antiquities, has no intention of renewing his research work in the Sudan. At the present time the Professor is devoting himself to the completion of memoirs, that have been for some time in preparation, upon the results of his labours—records which will undoubtedly prove extremely valuable and interesting.

It was some nine years after his appointment to the post of Reader in Egyptology at the University of Oxford—1910—that Professor Griffith took charge of the excavation work in Nubia. He had previously been editor of the Archæological Survey and Archæological Reports of the Egypt Exploration Fund, and long recognised as an authority upon Egyptology generally. The four seasons which the Professor had passed in Egypt—1884-1888—in archæological work, in the company of Professor Flinders Petrie and M. Naville, were profitably employed, and upon his return to England he was appointed Assistant in the Department of Medical Antiquities and Ethnography of the British Museum, a position which he continued to fill between 1888 and 1896, when he became Honorary Lecturer in Egyptology at the University of Manchester.

Professor Griffith's Sudan explorations were commenced in 1910, and devoted to discoveries at Faras. The results of the first season's work showed that Faras occupies the site of the Meroitic and Nubian city of Pakhôras, and, further, that it is identical with the mediæval city of Bergrash, capital of the northern province of the Christian kingdom of Nubia. A large amount of interesting information was gleaned relating to the inscribed stones, weapons and stone implements, pottery and bronze vessels, beads, finger rings, and miscellaneous articles uncovered. The total amount of funds subscribed through the University of Oxford for the work in connection with the 1910 excavations came to about £1,350, while for the second season's work the subscriptions amounted to £1,250. The results of the two seasons' work were considered both satisfactory and encouraging, as the memoirs will show. Towards the cost of publishing these memoirs the University Press has voted the sum of £250.

The work of the third season—to carry on which various contributors subscribed a little over £930—was devoted to the historic site of Napata, the northern Meroë, where many very interesting and valuable monuments were found. Over 1,500 graves were also revealed, many proving to be cave-graves cut in compact sand and approached from the surface by a flight of steps. Other large graves were rectangular pits of some depth, lined with crude brick. The usual assortment of vessels, weapons, instruments, and ornaments were discovered in generous quantities; among the latter some amulets have been deemed of great importance for dating purposes.

FOR THE SOLDIERS IN EGYPT.

At the weekly united war service held in the United Free Assembly Hall, Edinburgh, last Thursday night, the speaker was Mr. William Oatts, of Glasgow. Speaking on his recent work among the troops in Egypt, he said that the conditions of troop life out there were very different from those at home. He had had a letter from one fellow who said that in his tent the temperature was 128 degrees One of the most troublesome things the soldiers had to face was the plague of flies. They were told to "kill that fly," but they would be doing nothing else in Egypt if they tried to kill the flies. This year had been an especially bad one for locusts. There was no higher service than encouraging the men to keep in touch with home. The presence of ladies in the tents had a refining and elevating influence. They were told that New Zealanders could talk as strongly as anyone, but in the three months he had never heard an unparliamentary word spoken in the tent, and he put it down to the presence of the lady in the tent. He made an appeal for newspapers to be sent to the soldiers.

NOTICE TO SUBSCRIBERS.

Subscribers to "The Near East" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"The Near East" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

LETTERS TO THE EDITOR.

The columns of The Near East *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

A PLEA FOR BULGARIA.

To the Editor of The Near East.

Sir,—In your issue of July 30, dealing with the relations between Bulgaria and Turkey, you allude to the effect produced upon the attitude of Roumania by the observance, on the part of Bulgaria, of a neutrality unfriendly to the Entente Powers, inasmuch as she has allowed the passage to Turkey of supplies of ammunition and material from Germany.

I do not wish to deny the truth of your allusion that Bulgaria has aided Turkey in the way referred to. I have lived in this country for some considerable time, and have had more than one painful opportunity of observing, incidentally during my travels, how convenient Bulgaria's neutrality must have been to our enemies at the Dardanelles.

The phantom of Bulgaria has certainly played a most important rôle, if not in reality, at least in the Press, and presumably in the diplomacy, both of Roumania and Greece, ever since the outbreak of the great war. Yet, judging by the threats which the Greek Press so frequently addresses to Bulgaria, with the idea, no doubt, of keeping the latter in "her place," one would suppose that the phantom was in reality as lifeless as a scarecrow. Nevertheless, both Roumania and Greece have found in the supposed Bulgarian danger a useful opportunity for postponing their entry into action and displaying their valour for their respective national unities.

The opportunity for attacking Bulgaria for facilitating the passage of munitions to Turkey on a large scale has been made ample use of by the Greek, Serbian, and Roumanian Press. At the time, no doubt, these attacks had the effect of creating a mistrust of Bulgaria on the part of the Allies, and presenting her neighbours in a more sympathetic light. But the effect has been outlived, for, in the meantime, the real stumbling-blocks to a united action on the part of the Balkan States have been discovered, and it is clearly seen that, just as in 1913, Bulgaria has been made the scapegoat for the hypocrisy of her neighbours.

It might perhaps be interesting to examine to what extent the hesitation of Greece and Roumania to join the Entente may be explained and justified by Bulgaria's apparently friendly attitude towards Turkey. The only route by which Germany can supply Turkey with materials has, since the outbreak of war, been viâ Roumania and Bulgaria. Therefore, all accusations which Roumania may bring against Bulgaria in respect of aiding Turkey turn also against herself. Bulgaria has probably had as much reason to mistrust the intentions of her neighbours as the latter have had to be suspicious of hers. Until the Allies began to show some active sympathy towards Bulgaria's aspirations, which are so unmistakably based on the principle of nationalities, it was probably for a long time, especially before Italy joined in the war, far from being clear to Bulgaria, who had been exposed to the full influence of the German Press propaganda, that the Entente must finally win. Under these circumstances, it would seem only natural that Bulgaria should have found it unwise to declare prematurely her sympathy with the Entente, which she certainly would have done if she had refused to pass on to Turkey the German material which Roumania had presumably already accepted to transport to the Bulgarian frontier.

If the Entente have been similarly accommodated by Greece with regard to the transport of material to Serbia, this display of sympathy has not, in certain instances, prevented the Greeks from obliging the Germans also. Bulgaria would probably also have accommodated the Entente, if her geographical situation had enabled her to do so. It should be remembered, moreover, that Greece has all along been backed up by the friendship of at least France and England, whereas Bulgaria—surrounded, as she is, by neighbours she has no reason to trust—has, since her misfortunes of the second Balkan War, been unfriended by any of the Great Powers. It is therefore not difficult to understand the position in which Bulgaria was placed when requested by Germany to transit to Turkey the material which would already have crossed Roumania. The only practical alternative to accepting Germany's demand would have been to declare war on Turkey and the Central Powers; but so long

Digitized by Google

as Bulgaria had not sufficient guarantee that her own national aspirations would be satisfied, she could scarcely be expected to espouse a cause involving unlimited sacrifices and relatively small gain to her, while exposing her to innumerable dangers, and assuring, at the same time, incalculable advantages to the Allies. In the absence of such guarantees, she could not, from her point of view, wisely have done other than to observe an attitude as conciliatory as possible to both parties of belligerents, while preserving her forces intact for all eventualities.

It might be remarked that, notwithstanding that Bulgaria has, during this time, participated with Roumania in affording facilities to Turkey, she has given unmistakable signs of confidence in the Entente, for it is hardly to be supposed that Germany has not offered her all she claims, and more, of Macedonia, in return for her intervention on the side of the Central Powers. Bulgaria has also manifested the same spirit towards the Entente in resisting the provocations which have frequently been tendered to her by those who would have liked to force her to take the side of Germany. In such an eventuality the necessity for a just revision of the Treaty of Bucharest in favour of Bulgaria would no longer have existed, and this circumstance would no doubt have removed the only obstacle against Roumania and Greece taking action on the side of the Entente.

All lovers of right will not fail to admire Bulgaria's forbearance and wisdom in stemming successfully the crisis she has undergone; and now that the principal difficulties in the way of Bulgaria's entry into action with the Allies seem likely to be removed, and the value of her co-operation generally appreciated, it remains for the fair-minded Press to rectify, so far as is possible, the unjust impressions which certain interested and unscrupulous organs have lost no opportunity of creating in respect of Bulgaria's attitude towards the Entente, and some of the latter's professed friends, since the beginning of the war.—I am, etc.,

H. L. Andrews.

Sofia, August 22, 1915.

SERBIA AND BULGARIA.

To the Editor of The Near East.

Sir,—The Macedonian question has again come on the order of the day, and it is only fair to hear both sides. The friends of Bulgaria, exploiting a temporary "necessity," have got ample opportunity for exposing their point of view; therefore, I hope that your Serbian Allies will be allowed to expose their cause before the British public, the more so as the Serbians were fighting on the side of the Allies at the time when the Bulgarians allowed the German officers and ammunition to reach Turkey and to make the Dardanelles impregnable.

The scientists have already stated that, ethnographically and historically, Macedonia belongs more to Serbia than to Bulgaria. If Serbia used the same arguments as Bulgarians use in the defence of their aspirations on Macedonia, Serbia might claim Sofia and its environs. Among Serbians, only over-zealous patriots are putting forward such exorbitant claims, whereas the Bulgarian Government takes such claims as the basis of its policy towards Serbia and the Allies.

The complete control of the Valley of the Vardar is necessary to Serbia as the only means for the defence of her western provinces. Besides, the Valley of the Vardar affords her the only access to the sea. Italy already possesses Valona, and claims Trieste and Pola, with the Dalmatian Archipelago, and has the complete control of the Adriatic, having made of it a closed Italian sea. Italy's mistrust of Serbia has dictated her some other demands concerning the settlement of the Southern Slav question.

If you are to deny to Serbia the alternative access to Salonika she must have full liberty in the Adriatic. Such Serbian claims would be in complete accordance with the Serbo-Bulgarian Treaty of 1912, which Treaty is often quoted by Bulgarians and their friends in Italy.

After her diplomatic defeat during the annexation crisis Serbia wanted to secure for herself the whole of the eastern coast of the Adriatic as far as the Greek frontier, but even the Treaty of 1912 she signed as willingly as Bulgaria did the Treaty of Bucharest, with the difference that the first Treaty was preceded by a diplomatic defeat of Serbia and the second one by a military defeat of Bulgaria.

The natural consequence of the Treaty of 1912 is the realization of all Serbian national claims in the western half of the Balkans. Bulgaria undertook obligations to assist Serbia with an army 200,000 strong for the realization of those claims. Now she cannot give them as she did not give them then. Will Great Powers, which appeal to the Treaty of 1912, supply that assistance and accept all political consequences of that Treaty?

The diplomacy of the Great Powers has always failed in the Balkans, and the best course is to let Balkan people settle their differences for themselves. The Balkan nation have their own peculiar psychology, and the failure of the European diplomacy is quite a natural one. Finally, let us ask, do the Great Powers consider that the declaration of war and the mobilization of the army represent also a real help and co-operation with the Allies?—Yours, etc.,

(Dr.) N. Stojanovic.

London, September 6, 1915.

"THE NEAR EAST."

THE FUTURE OF CYPRUS.

To the Editor of The Near East.

Sir,—I had not intended to say anything further about the Cyprian question, but my remarks seem to have caused a great amount of unnecessary alarm to the Moslem members of the Legislative Council, to judge by the piteous letter of Mr. Irfan in your last number. Though he gave no arguments in support of his views, and indulged a little in unwarrantable personalities, as well as a misconception of the word "frequent," I must congratulate Mr. Irfan on his loyalty to the British Empire. In order to spare him further anxiety about the future of the Moslem community, I should like to append a translation from a local paper, the *Aletheia*, criticising my letter. It will be observed that the Greeks of Cyprus reject the "transfer" if accompanied by the surrender of Kavalla, and thus the whole condition is voided:—

". . . If there be one question on which we differ from the writer (myself!), it is when he took up a paradoxical and egoistic point of view on the question of Kavalla, forgetting that in this he is arguing exactly contrary to the principles expressed in his article, seeing that the return of Kavalla to Bulgaria, even in exchange for Cyprus, is directly opposed to the principle of nationality.

"Apart from this point, we Cypriots can show ourselves most grateful to Mr. L. for having taken up the cudgels for a small nation, but we plainly assert that we would rather not have the proffered freedom if the price to be paid for it were so cherished a part of the mother country—*i.e.*, Kavalla.

"As to the Turkish minority in the island, we deem that there need be no expatriation, as we feel convinced that our Mohammedan fellow-citizens will experience under Greek rule the same justice that they have met with elsewhere under the Greek flag, unless the fanaticism of a few should lead them to act contrary to the laws of the country."—I am, etc.,

Kenneth Ledward, F.R.G.S.

London, September 8, 1915.

LADY GRAY-HILL'S PICTURES.

A correspondent writes:—The little exhibition of Lady Gray-Hill's work now on view at Walker's Galleries in New Bond Street will bring back happy memories to many travellers in the Near East. There are some of us to whom the desert will always remain an unforgettable memory. Its charm is a thing apart. Lady Gray-Hill has probably seen as much of its unfrequented parts as any English traveller, and in "Reuben's Shrine" (2) we get the clear desert atmosphere at its truest. The artist gets the same effect, this time in oils, in "Wayfarers in the Desert" (13). Perhaps the most attractive picture of all is that entitled "On the Red Sea Shore" (8), where one solitary Bedouin on his camel follows the shore during the wonderful golden afterglow of sunset. The scenery of the "Wady Gharandel" (4) is probably unique in the world, while the "Loot of Camels in the Desert of Palmyra" (6) depicts a scene unknown to most Europeans. The market boats scudding before the wind to Damietta (11) is a vivid bit of colouring in oils, especially attractive to Anglo-Egyptians. The pictures vary in price from seven to twelve guineas, and it is to be hoped that Lady Gray-Hill's effort to aid the French Red Cross Funds (to which the whole proceeds of the sale will be devoted) will meet with the success it deserves.

"ANZAC" READING ROOMS.

The London branch of the Australian Natives' Association has arranged to open free reading, writing, rest and refreshment rooms for wounded Australian and New Zealand soldiers in London. The rooms, which have been named "Anzac," adjoin the Commonwealth offices in Victoria Street, S.W. Contributions for maintenance may be sent to Mr. H. Kneebone, 72, Victoria Street, S.W.

TANGIER TO TEHERAN.

If the suave expressions of regret for the loss of American lives and Count Bernstorff's assurances regarding the future behaviour of German submarines are, as now seems probable, to be taken by America as being sufficient to condone for the "deliberately unfriendly" act of murder on the high seas, it is possible that the tourist season in Egypt may profit by the presence of many rich Americans this winter. It is hardly probable that they will be able to resist the lure of the country where, to its already boundless store of attractions, there have now been added new mementoes in the shape of fragments of shells used by the Turks in their great invasion. It is pleasant, indeed, to think of this new source of wealth which has been given to the traders of the Egyptian bazaars for future centuries. Prices will probably run high at the beginning because Birmingham is far too busy in the manufacture of live munitions to assist the Cairo Mousky in the matter of *débris*, but the necessarily limited demand will doubtless be met by fragments gathered from the practice fields of the Australian and other troops in the early days of their training. And, later, when things have settled down a bit, Birmingham will be able to resume her accustomed place, to the mutual satisfaction of all concerned. For as long as tourists are tourists, things will remain much the same as they were in the days long ago, when an unnamed poet wrote the following lines, which have run in my head ever since:—

Abdul Ben Haden—may his tribe grow clean!
Awoke one day, for he to sleep had been,
And in the neighbourhood of his tent descried
Two Yankee travellers, in the pride
Of plaided suits and martial helmets white,
And loud he chuckled at the welcome sight.
A parcel fresh from Birmingham he took,
And laid out brazen things of ancient look:
French coffee boiled he in a salmon tin,
And then strolled out and asked the strangers in.
They came, and with this swarthy Desert's son,
Drank mocha, bought his curios, every one,
And as he onward suffered them to stray,
He softly sang, "Ta-ra-ra-boom-de-ay.'

***

As they fall back before the invasion of the Huns, the Russians are carefully removing all bells from the churches, lest the enemy, who is notoriously hard up for suitable metals, should capture them and convert them into munitions of war. Now, I see, it is reported that the Austrian Government also has decided to remove a famous bell and turn it into guns and ammunition of one kind or another. But, candidly, I can hardly credit the report; for the bell in question is that of St. Stephen's, Vienna, which has—or ought to have—altogether exceptional value for our friend the enemy, if the history of it that was given to me when I was in Vienna is a true one. For, I was told, it was cast, early in the eighteenth century, out of 200 cannon captured from the Turks by the redoubtable Prince Eugene. The story suggests some obvious reflections upon the strange freaks of Circumstance. The guns, which were intended to aid in the victory of the Crescent, tamed into pealing out the summons to hear the message of the Cross; and then, after two centuries, reverting to their former character once more—perhaps to find Turkish gunners handling them again and placing their hopes of victory in the metal that has so long been useful in spreading the message of Peace. I wonder whether such reflections will occur to the aged Franz Josef, or that remarkably versatile ally of his, Kaiser Hajji Wilhelm.

***

Some time ago I saw a statement in one of the London journals that none of our nursery rhymes was without some historical or traditional fact behind it. I have been reminded of this by a tale which has just reached me from the Dinka country, in the Sudan. It appears that, according to the Dinka teaching, all the animals which at present inhabit our globe were given places in the upper regions prior to the making of the world. Things were, however, growing a bit crowded in those regions, and when the earth was made it was decided to dispatch several of each kind below to take up their residence on the new estate. Now the Dinkas have it that the dog was one of the first animals to fall, and having reached the earth in safety, sat on his haunches and awaited the arrival of the next animal. This proved to be a cow. But a cow is a clumsy beast at the best, and, losing her equilibrium in her descent, she landed head foremost, flattening her forehead in consequence, and causing the dog so much merriment that its mouth split with laughing. To the support of which tale the Dinkas produce the cow and the dog as evidence. This tale is not an invention, it is the truth regarding Dinka belief, and I cannot help wondering whether our *Hey-Diddle-Diddle* may not have had something to do with a similar legend in other lands. It is true that neither the Cat, the Fiddle, the Dish, nor the Spoon has any place in the story which I have quoted; but it seems to me that there is still left sufficient similarity in the thing to court inquiry. I wish I could remember the paper in which the statement to which I have alluded appeared; it is possible that the writer might be able to tell me more about it.

***

In one of our British newspapers I recently noticed a reference to the fact that the gypsies of Serbia had been called to arms, and that, notwithstanding their hatred of discipline and ordered living, they had joined heartily as one man eager to serve their fatherland. This is just as it should be, and from my knowledge of the gypsies in England I may say that it is no more than I would have expected. Since the outbreak of war I have talked with many classes of people, high and low, and for pure patriotism, unalloyed by any thought of personal gain, I give the palm to our gypsies. At first hearing it seems extraordinary that these folk, unaccustomed to the pressure of any of those fetters with which civilisation has grown familiar, should be willing to barter their freedom for the discipline of his Majesty's Army. And yet, when one comes to think it over, it is the most natural thing in the world. Your "traveller" does not moralise, but in his heart he has one great and undying ideal—freedom; when this is threatened he would go through Hades to preserve it. Illiterate, owning to few friends outside those of his own way of thinking, he yet in some strange way manages to keep keenly *au fâit* with affairs of the moment, and this war has seared his very soul. The young man who is fit and untied, and who refuses to join the Army, is not tolerated among the tents and vans of the loyal. They regard the war with eyes unblinded by any scales of political consideration; England, their mother, who has given them life and freedom, is assailed: what is there for her sons to do but to fight? To this question they will admit of no reply.

***

In England the gypsy stock has become hopelessly mixed by intermarriages with house-dwellers, but the spirit of the Romany is under all. And if these men and boys jump to arms at the first call for voluntary aid that reaches them from their country, it is not surprising that the pure-bred Romany of Serbia should also go with his heart in the job when his nation hailed him. After the war they will cast off their uniforms and in a month's time no one will be able to tell by their gait or manner that they once fought as soldiers. Until that time they will fight grimly and to the last man, knowing instinctively that they are fighting for everything that is dear to the heart of a free-born man.

***

According to a story told by the celebrated French writer, General Cherfils, in the *People* newspaper, the last word concerning Fashoda has been spoken between France and England. Years, indeed, have passed since all bitterness was buried, but the story told by the General concerns two of the protagonists who faced each other in the swamps of the Upper Nile in those almost forgotten days when France and England frowned gloomily one at the other across the narrow waters of the Channel. I give the story below in the gallant General's own words:—

The recent visit to both the British and French fronts of Lord Kitchener has given great pleasure to France. Everyone was tickled by the British War Minister's meeting with General Baratier, who, when still a captain, was Colonel Marchand's second-in-command at Fashoda. At the same time as Lord Kitchener met Gen. Baratier, another similar meeting took place at another point on the front. The incident was so characteristic of the delicacy of our British friends that I cannot refrain from recounting it. Gen. Douvier was lunching with a British general. In the course of conversation Gen. Douvier slyly remarked to his host: "General, I think you may have already met my brother-in-law; he once in years gone by had a little difference, may I say, with the English."

"Indeed, General," replied the British commander, "who may your brother-in-law be?"

"General Baratier," answered Gen. Douvier.

The British general smiled, looked Gen. Douvier in the face and said: "Oh, only a 'little difference.' How well you phrase things in French." Then, assuming a graver look and speaking with some solemnity, the British general added: "Well, general, tell your brother-in-law that we have done our best to efface the souvenir of that 'little difference.' We have changed the name of Fashoda on the map."

This little incident will touch the heart of every Frenchman. The British general's remark is a delicate reply to our "mot" of the Battle of Fontenoy: "Gentleman of England, you fire first!" As adversaries or friends, both British and French have always fought as gentlemen.

NEAR EAST BOOKSHELF.

THE PROPHETIC TOUCH.*

Although without knowledge of any languages other than Armenian and Syriac, the late Khrimean Hairik, head of the Armenian Church, must have not only thought deeply, but at the same time have been gifted with powers which almost amounted to those of a prophetic nature, when in the year 1900 he wrote his poem, "The Meeting of the Kings." In that year there were few among us who would have accorded to the King of the Belgians so important a place as that assigned to him by Hairik, yet in the light of the events which have been crowded into the nightmare months of the past year or so, it becomes increasingly apparent that in the gallant resistance of Belgium lie the germs of our ultimate victory.

The poem, which is quite short, has been published in the form of a brochure, which gives both the Armenian text and its English version. For the latter we are indebted to Mr. Laurence Binyon, who has given a rhythmical clothing to a word-for-word translation of the original. The identity of the writer of the foreword, or preface to the little work, is not made plain, but it was in the year 1903, while staying at Edjmiatsin, that the manuscript which is now published for the first time fell into his hands. "During my short stay there," he writes, "I passed many evenings in conversation with his Holiness, who, notwithstanding his great age of eighty-three years, was still full of his natural spirit and wit. One day he handed me a manuscript, saying, 'This cannot be published now in Russia. Take it to your free England; peradventure you will one day publish it there.'"

The argument of the poem is given in the first verse:—

"How it befell I know not,
Whether by challenge or invitation.
On a day the kings of the world
Assembled and came together.
Each in his turn to speak
And to question, one of another.
Which of them all has peace
And sweet slumber in the night-time.
With cares and perplexities infinite
How shall sleep not be troubled?"

Britain is the first to speak:—

"First spoke the Lord of Britain,
The mighty ruler of the ocean.
'Sweet is my sleep and peaceful,
I have armed ships without number,
I am invincible on the sea.'"

After detailing some of the glories which have come to him through this mastery of the ocean, the King refers to his unbounded riches:—

"'On a pillow of gold I lay my head,
And sleep secure in the night.'"

* * * * *

"Then was the turn of the German,
The self-glorious, arrogant Kaiser,
He spoke: 'No pillow of gold have I,
But I have drilled battalions,
An army unconquered and terrible.'"

To him the bed which brings rest untroubled is Krupp's "dreadful cannon." He proceeds:—

"Now one desire of my heart
I will reveal among you;
That Eastern Riddle which perplext our fathers,
Is the knot untied, is the question answered?
They who met in Congress at Berlin,
Left they not half the knot unravelled?
That Article, the sixty-first,
The hope and trust of Armenia,
Was reversed in act; a hundred thousand
Armenians perished and were sacrificed.
Turkey, men say, is sick unto death.
Physician am I; suffer me, therefore,
To cherish and tend that afflicted one."

France and Austria next speak: France of the bitterness by which her soul is wrung in the thought of Alsace and Lorraine, Austria of the dread sorrows which had overtaken his house. The Tsar speaks next with the peril of China looming heavily ahead, and then the Sovereign of Turkey is given place. The prediction in this case seems to have been touched with the light of prophecy, for it holds that this terrible struggle will end by the fall of Turkey at the shores of the Bosphorus, and that peace will then be to the world. It is, however, impossible to piece the arguments of this poem together in such a manner that its prophetic tendencies will be apparent and yet not over-emphasised in the short space of a review. But we predict for it a popularity that will certainly be well deserved.

Inspiration was surely behind the pen that gave proud place to the King of the Belgians at this meeting of fifteen years ago, and which gave him for his pillow "the heart of his people." He is the last monarch to speak, and the keynote of his desire is Peace. This is a powerful piece of work, but the last line of the following quotation will show that the author was under no delusions concerning the attitude of the nations to whom it was uttered:—

"The Masters of the World stood up.
'Hail to Belgium's King!' they cried.
'He has spoken the words of righteousness;
God's message was in his mouth.'
. . . But each to his own work!"

* "The Meeting of the Kings." By Khrimean Hairik, the Katholikos of All Armenians. Armenian text and English version by P. Tonapetean and Laurence Binyon; with a biographical sketch of the Author. (London: William Clowes and Sons, Limited. 1s.)

SUDANESE LOYALTY.

With the official concurrence of Sir F. Reginald Wingate, Governor-General of the Sudan, the very happy idea has been hit upon of collecting and publishing in the form of an attractive pamphlet the principal declarations made by the religious and tribal chiefs of the Sudan to the head of the Administration upon the outbreak of the war in Europe. That occasion, one which even the least nervous and pessimistic considered to be fraught with extreme danger to the non-Moslem governing classes, brought forth strong sentiments of loyalty from all sections and classes of the population of the Sudan, and thus not alone furnished one of the many bright pages in the history of the British Empire, but provided a striking testimony to the superiority of the principles upon which British rule is founded and the solidarity upon which this vast Empire is based.

On the day following the declaration of war between Great Britain and Turkey the Governor-General of the Sudan called together a number of leading religious chiefs in Khartoum and the vicinity, and explained to them the precise state of affairs. Immediately afterwards these notables met together on their own account, drawing up a declaration of their loyalty to Great Britain and their repudiation of the action of Turkey. This declaration, which forms an altogether unique historical document, was signed by every one of the chiefs with much Oriental solemnity. But the capital of the Sudan stood by no means alone in taking this gratifying action. As soon as the news of the outbreak of the war was communicated to the provinces the Administration commenced to receive telegrams and letters expressing the unswerving loyalty of the senders and of their followers. First among these was El Sayed Ali El-Mirghani, C.M.G., Chief of the Mirghani Tarika in the Sudan, who was then at Kassala. Then followed telegrams from El Sayed Ahmed El-Mirghani, his brother, and from other religious and tribal chiefs—all breathing the same clearly honest and sincere expressions. Most of these remarkable communications—remarkable chiefly because they were so entirely spontaneous—were published as they were received in the columns of the local newspapers; the idea of now collecting them in pamphlet form originated with M. L. B. Jureidini, the editor of the *Sudan Times*. The publication is in both English and Arabic, and is presented in tasteful covers of white and gold. All proceeds of the sale which accrue will be devoted to the fund of H.R.H. the Prince of Wales for the relief of the sufferers from the war. The price of the brochure is 5 piastres tariff (about one shilling).

THE PRESS ON THE NEAR EAST.

The Situation in the Near East.

Writing in the *Fortnightly Review* (September), Mr. H. Charles Woods reviews the situation in the Near East. His article is prefaced by a quotation which appeared in the May number of the same review, and which stated that although the much-talked-of war was at last in progress, little had really been done to "solve the countless problems which for years have not only endangered the peace of the Near East, but that of all Europe." The same thing applies to-day, and Mr. Woods, after recapitulating the various changes which have come about since the first article was penned—especially regarding the operations in the Dardanelles—goes on to consider the manner in which our interests and the interests of Europe generally could best be served in the Balkans. In regard to the Dardanelles, he considers that one of the following three plans will be necessary in order quickly to secure the desired results: "1st, by endeavouring to exhaust the Ottoman garrison of the Peninsula and to cut off its means of reinforcements and supply; 2nd, by undertaking landings in areas which we have not so far attacked; 3rd, by bringing Bulgaria into the war." He favours the latter course as being the quickest, and after detailing his reasons for this opinion he writes:—

The above remarks are sufficient to indicate not only the importance of Bulgaria in reference to the Dardanelles, but also that her position enables her practically to immobilize the military forces of her neighbours. They therefore prove that we should be justified in making considerable sacrifices and in asking our friends to make considerable sacrifices in order to secure for Bulgaria the conditions which would induce her to throw in her lot against the Turco-German enemy.

After stating that "instead of the events which take place from time to time in the Near East being accepted in proportion to their proper importance and meaning, the public mind is impregnated with information entirely detrimental to Bulgaria," the writer enters at some length into an examination of the events which followed the first Balkan war, and refers to the recent German loan, or advance, to Bulgaria. He shows the first to have been at least partially justified, and the latter to be without any feature which should justify the argument that because of it Germany has been given either a political or military *quid pro quo* by King Ferdinand's Government. In writing of Serbia, Mr. Woods says:—

The Serbians are passing through a most critical period in their history, because they do not seem to have realized that, in order to safeguard their eventual interests, it may be advisable for them to make concessions in Macedonia. Victorious as they have been, the advantages to be secured by and as a result of this war cannot be attained by Serbian arms alone. Their real, and consequently their primary interest must be an allied rather than a local victory. They can play their part in achieving this object not only upon the field of battle, but also in the arena of diplomacy. By agreeing to give to Bulgaria certain areas of Macedonia which now belong to her, Serbia may be making a temporary sacrifice. But she would be far more than repaid for a loss of territory brought about as a result of her recognition of the Serbo-Bulgarian Treaty and Conventions signed before the outbreak of the first Balkan war, by the annexation of territory which she is certain to secure in Bosnia and Herzegovina, and by the possession of a proper outlet upon the Adriatic.

Roumania, in the writer's opinion, has already recognised, or is at least fast recognising, that as a result of the present war the maintenance of the Treaty of Bucharest is becoming no longer necessary, and points to the significant fact, in support of his assertion, that this year there were no rejoicings in Roumania upon the anniversary of the fatal document.

The United Balkan States.

The ignorance of a large number of influential Britishers regarding the Balkan States forms one of the chief objects of condemnation in an article contributed by Mr. Oliver Bainbridge to the *Asiatic Review* (August 16) under the above heading:—

Their impressions on international questions may be quite honest, but the confusion that has arisen in the Balkans from such vague and loose notions cannot be gauged by any known measures of human computation. The impressions which they have of these States are not their possession in any true sense of the word.

The writer thinks that few, even of our Members of Parliament, recognise fairly the difficult part that these States have played, and are still playing, in history. Alone among the Great Powers he considers that Britain would be sufficiently trusted by the people of the Balkans to enable her to bring about the construction of a new and solid Balkan League—the United Balkan States—which would at once be recognised as a powerful factor in the calculations of the world. In his remarks regarding the attitude of the Balkan statesmen themselves, the writer says:—

It is time that the statesmen of the Balkans ceased to be "politicians" and became patriots, ceased groping about in a state of blindness, and correctly estimated the position of their countries in the European world, for their enemies are planning to wipe them out from the list of nations. They are spending their energy in thinking what they ought to have done, and chiding themselves for not having done it instead of planning how to do it.

The Position of Greece.

The position of Greece, from the point of view of her King and those of her people who were instrumental in over-riding Mr. Venizelos's desire for intervention, is fully discussed by Mr. Crawfurd Price in the *British Review* (September). The article in question is the first of a series on the Balkans and the War, and it was written with the avowed purpose of lifting "the difficulties which confront us out of the sea of personalities and misunderstandings in which they have been submerged." According to Mr. Price, the vital points of the problem which confronted Greece have never been properly understood by the people of England generally, and by but few writers in this country, while in Greece herself the issues have been lost sight of "by a thousand and one charges and counter charges of treason; by mutual shameless attacks on party leaders, and by a persistent abuse of the freedom of the Press." The writer calls attention to the success which has attended the efforts of the notorious Baron von Schenk, who was responsible for the German campaign in the Press of Athens, and proceeds to a statement of the obligations by which Greece was bound at the outbreak of hostilities. He entirely discountenances the idea that the decision of the Greek General Staff to abstain from intervention was due to Germanophile sentiment. Greece would have moved had she been convinced that Bulgaria would abstain from hostile action. She asked for a guarantee to this effect; it was not forthcoming. Coming to the point where Mr. Venizelos decided that the moment had arrived for Greece to act, Mr. Price says:—

It may be submitted that no constitutional monarch would be justified in engaging the armed forces of his country without the approval of his competent military authorities. If this argument be allowed, it must also be admitted that it was incumbent upon King Constantine to subject the proposal of his Premier to minute examination in order to ascertain whether or not it was feasible from a military point of view. He therefore consulted his General Staff, who were not long in arriving at the conclusion that, from a purely military point of view, the new proposition would involve Greece in risks as great as, if not greater than, the two schemes which had been previously discussed and abandoned.

In regard to this conclusion, he remarks:—

To-day, when the story of our own costly miscalculations has in part been made public, we shall, perhaps, be more inclined to admit that those Athenian soldiers brought to bear upon the problem a greater knowledge than we ourselves possessed, and a sensible recognition of the enormity of the operation.

Articles to Note.

"Behind the Turkish Lines," by Mr. Arthur Ruhl, in the *Daily Mail*, September 7.

"France at War," by Mr. Rudyard Kipling, in the *Daily Telegraph*. The first article appeared on Monday, the second on Wednesday, and the third is announced for to-day.

"The Holy Places of Islam," in the *Outlook*, September 4.

The *New Witness* has arranged for a weekly article on current topics by Mr. G. K. Chesterton, which will appear under the title of "At the Sign of the World's End." The first article appeared yesterday.

Tuesday is the birthday of H.H. Prince Michael of Montenegro, eldest son of Prince Mirko, who was born at Podgoritza, in 1908.

The Right Hon. Sir Arthur Nicolson, Bart., Permanent Under-Secretary of State for Foreign Affairs, and Lady Nicolson, were the guests of the King at Windsor Castle over the week-end, and returned to London on Monday.

Sir William Garstin was the guest of the King at Windsor over the week-end, and returned to London on Monday.

Duke Johann Albert of Mecklenburg, a near relative of the Queen of Bulgaria, arrived last week in Sofia. He was received at the King's private station by the Crown Prince and the German Minister.

Mr. H. O'Beirne was received on Friday by King Ferdinand of Bulgaria, to whom he presented his credentials as Minister Plenipotentiary on a special mission to the Bulgarian Court. M. Radoslavoff, the Prime Minister, was present at this ceremony.

Al-Ahram states that his Highness the Sultan, owing to the repairs going on at Abdin Palace, will not return to Cairo from Alexandria until October.

The Roumanian Minister left London on Wednesday morning for the Continent, where he will spend a few days on leave.

M. Metaxas, formerly Greek Minister in London, Mme. Metaxas, and Mlle. Metaxas arrived in London from Athens last week.

Lady Barclay is leaving London for Bucharest on the 13th inst.

Lady Barclay will be accompanied by her daughter, Lady Kennard, and the latter's son, as well as by Mrs. Rattigan, wife of the Secretary of Legation at Bucharest, who is going out to join her husband.

The Hon. Ronald Lindsay, Under-Secretary for Finance, has returned to Egypt from a short stay in Cyprus.

A telegram has been received from Captain T. H. Parry, M.P., who is in hospital at Alexandria, stating that he is progressing favourably.

Mr. Bennett, who has been appointed Commercial Attaché to the British Legation in Bucharest, is leaving London next week to take up his duties.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from

Miss Thomson, The Hall, Bexhill on-Sea.

The Egyptian Press announces that Mr. T. C. Macaulay, Sub-Director-General of Customs, who volunteered for service in the Dardanelles, has been wounded and has returned to Alexandria.

An engagement is announced between Edward Cyril Bowden-Smith, Egyptian Civil Service, second son of the Rev. F. H. and Mrs. Bowden-Smith, of Careys, Brockenhurst, Hants, and May Gladys, youngest daughter of the late Colonel Sir Alexander and Lady Moncrieff, of 21, Kensington Park Gardens and Bandirran, Perth, Scotland.

El Miralai Pearson Bey, Director of Surveys and Acting Director of Intelligence in the Sudan Government, is spending a few weeks in Egypt.

Mr. E. S. Coryton, Inspector at El Obeid, is reported to have dislocated his left clavicle, owing to the falling of his horse when on an inspection tour.

The Chief Commandant of Police in Cyprus, Captain Gallagher, D.S.O., is leaving for England on active service. His duties will be performed by Major Baily, Commissioner of Papho, who will be relieved by Captain Fleury, Commandant of Police at Famagusta, the latter's duties being taken over by Mr. S. Televantou.

Captain C. Riding, who has obtained his D.S.O. for gallantry and devotion to duty at the Dardanelles, was formerly in the Egyptian Army.

The promotion has been gazetted of Lieutenant Lord Claud N. Hamilton, D.S.O., Grenadier Guards, to be Captain. Lord Claud Hamilton is chairman of the Khedivial Mail S.S. and Graving Dock Co. and of the Egyptian Hotels, Limited.

The death from wounds in Gallipoli on August 30 is reported of Brigadier-General Paul Aloysius Kenna, V.C., D.S.O., A.D.C. The second son of the late James Kenna, he was born on August 16, 1862, and became lieutenant in the West India Regiment in August, 1886, and three years later was appointed to the 21st Lancers, of which he became lieutenant-colonel in 1906. He won the V.C. while serving with the Nile Expedition in 1898. His deed of gallantry was officially described as follows:—"At the battle of Khartoum, on September 2, 1898, Captain P. A. Kenna, 21st Lancers, assisted Major Crole Wyndham, of the same regiment, by taking him on his horse, behind the saddle (Major Wyndham's horse having been killed in the charge), thus enabling him to reach a place of safety; and after the charge of the 21st Lancers Captain Kenna returned to assist Lieutenant de Montmorency, who was endeavouring to recover the body of Second Lieutenant R. G. Grenfell." For his services in the South African War, which were twice mentioned in dispatches, he was awarded both medals with eight clasps, the D.S.O., and the brevet of Major. In that campaign he served on the Staff and afterwards in command of a column, and was present at the relief of Kimberley and at the actions at Poplar Grove, Dreifontein, Karee Siding, Vet River, Zand River, Johannesburg, Pretoria, Diamond Hill, Reit River, Belfast, and Colesberg. In 1902-4 he again saw active service, this time with the Somaliland Field Force, and was twice mentioned in dispatches. General Kenna married, first, in July, 1895, Lady Cecil Josephine Bertie (who died in October of that year), third daughter of the seventh Earl of Abingdon, and, secondly, in 1905, Angela Mary, youngest daughter of the late Hubert Aloysius Tichborne Hibbert.

The death is announced of Lieut.-Colonel Henry Glanville Allen Moore, commanding the 6th East Yorkshire Regiment, who has been killed at the Dardanelles. He was born in 1865, served in the ranks for almost five years, and gained the grade he held at the time of his death by sheer personal ability. He was a lieutenant at the time of the Nile Expedition (1898), was present at the battle of Omdurman, and received the Egyptian medal with clasp.

Captain A. A. C. Taylor, whose death is reported from Gallipoli, was born on September 28, 1876, and was educated at Sherborne School. He joined the 1st Royal Dublin Fusiliers in 1897, and was gazetted captain in 1902. He went through the South African War, serving with distinction, gaining the Queen's medal with six clasps and the King's medal with two clasps, also being several times severely wounded. After the South African War he was appointed to Egypt, where subsequently he became Acting Lieut.-Governor of the Bahr-el-Ghazal. He afterwards served in the Ministry of the Interior at Cairo under Sir Ronald Graham. At the outbreak of the present war he was appointed Commandant at Port Said. Then he was lent to the Indian Government to form an Arab force for the Persian Gulf campaign at Busreh. He spoke Turkish, Arabic, French, and German. He was decorated with the Order of the Medjidieh.

Captain Charles Edward Koebel, Royal West Surrey Regiment, who died of wounds at Gallipoli on August 24, was the third son of Mr. Oscar Koebel, of Murley Grange, Bishopsteignton, Devon. Born in January, 1878, he received his first appointment in April, 1898, and obtained his company in 1903. From 1908 to 1911 he served as adjutant of his regiment, and in the latter year was appointed for employment with the Egyptian Army.

We regret to record the death of Lieutenant the Hon. Charles Alfred Lister, R.M., Hood Battalion, Royal Naval Division, the second and only surviving son and heir of Lord Ribblesdale, and nephew of Mr. Asquith. He was born in 1887 and entered the diplomatic service. He was nominated an Attaché in 1910, and was appointed to Rome in the following year. In 1913 he was transferred to Constantinople, where he acted as third secretary, and was granted, in 1914, an allowance for knowledge of Turkish. A month later, on the outbreak of the Turkish war, he was placed *en disponibilité*, and enlisted in the army.

Lieutenant Frank Savill Tomkins, 7th Gloucestershire Regiment, who was reported wounded and believed to be killed at the Dardanelles on August 8, was the only son of the late Mr. Alfred Savill Tomkins, of "Holmwood," Caterham Valley, Surrey. He was born on August 28, 1885, and educated at Marlborough College and in France and Germany. He was admitted a solicitor in October, 1908, and practised in Alexandria, Egypt, and in London. He joined the Inns of Court O.T.C. in September last, and obtained a commission in the 7th Gloucestershire Regiment, being promoted lieutenant in March last.

The death is announced from Ramleh, Alexandria, on the 2nd inst., of Mr. R. C. Crafton, who was one of the oldest and most respected of the Anglo-Egyptian residents. He went to Egypt from Croydon in the sixties and retired from business about 1886, continuing to reside in the country. Mr. Crafton was a liberal supporter of most of the local charities, and was interested in every movement for the welfare of the British community. For many years he devoted much time and attention to the British Merchant Seamen's Home, and as an active member of the committee he had the satisfaction of seeing the success of that institution, which has for more than thirty years been largely used and much appreciated by those for whom it was started. He was seventy-six years of age.

Archæology has suffered a serious loss in the death of Mr. James Dixon, lieutenant in the Border Regiment, who was killed in action at the Dardanelles on August 9. Mr. Dixon, says the *Daily Telegraph*, was a draughtsman of uncommon ability, and had hitherto exercised his talent chiefly in the direction of archæological work, having assisted as excavator and draughtsman in various archæological expeditions to Egypt during the last few years. Although still in his twenties, he had worked for the Egyptian Government in Nubia, for the Egypt Exploration Fund (with Professor Naville and Mr. Peet) at Abydos, and with Mr. Wellcome in the Sudan, and his handiwork is or will be seen in the publications of these expeditions. The Egypt Exploration Fund is most especi-

Digitized by Google

ally bound to regret his loss, as it was hoped that in the future he would do much work for British archæology in Egypt.

The death took place last week of Lieut.-General Charles Augustus Goodfellow, V.C., a veteran of the Indian Mutiny. General Goodfellow also served in Abyssinia in 1868, and was mentioned in despatches.

Lieutenant Christopher W. Lowther, Westmorland and Cumberland Yeomanry, a nephew of Sir Gerard Lowther, was dangerously wounded on Thursday last in the right lung by a piece of shell. He is reported to be going on as well as can be expected, but it must be some time yet before he can be said to be out of danger.

Major H. Phillips Fletcher, of the Middlesex Hussars, has been awarded the "Croix de Guerre," on the recommendation of Admiral Dartige Fournet, of the French Mediterranean Squadron. His name has also appeared in the "Ordres du jour," which in France corresponds to being "mentioned in dispatches." Major Fletcher has been specially lent to the Aviation Maritime as Military Observer, and for the last four months has been making aerial reconnaissances from the coast of Turkish positions and dropping bombs on munition factories in Asia Minor, Syria, and Arabia.

Mr. Naville, the manager of the Beyrout offices of the Imperial Ottoman Bank, who was reported to have been taken prisoner by the Turks, has arrived in Athens from Constantinople, and is proceeding to Egypt.

Lance-Corporal A. Brown, of the Imperial Ottoman Bank staff, has received a commission as lieutenant in the Army Ordnance Department.

The funeral of Mr. T. B. Etherington Smith, of the Egyptian Ministry of Finance, whose death from diphtheria occurred at Cairo on the 20th ult., took place on the following morning and was largely attended. The service was conducted by the Rev. C. T. Horan, Chaplain of All Saints'. Among those present were Lord Edward Cecil, the Hon. R. Lindsay, Mr. E. H. Goschen, and many other officials of the Ministry of Finance as well as of the Ministry of Education.

M. Bonesco, First Secretary of the Roumanian Legation, who spent the last week-end in North Wales, returned to Cromwell Road on Tuesday.

In an account of the work done by the British Refugees from Turkey Fund, the name of Mrs. Frank Barker was omitted from the list of members of the executive committee. As a matter of fact, Mrs. Barker is now vice-president of the Fund, and takes a very active part in the work, the meetings of the committee being held at her house.

Mr. W. Mackenzie, formerly of Smyrna, is now in Egypt, where he has received a commission as first lieutenant in the Egyptian Labour Corps.

Mr. Arthur P. Tully, of Constantinople, who was some time ago exiled to Konia, has, we hear, since been removed still further into the interior, to a point some two or three hours away from the railway.

The Rev. James Duggan, the well-known Modernist, whose death took place last week, served as an Army chaplain in Cyprus in 1877.

The late Mr. Alfred Hambley Rowe, of Eaton Place, S.W., and formerly of Cairo, left estate valued at £23,558.

Mr. Oliver Bainbridge has just received from the King of Montenegro a large autographed photograph which his Majesty sent him with an assurance of his sincere regards.

Bombardier H. H. Binns has been granted a commission, and left England last Saturday week for the Dardanelles as interpreter.

APPOINTMENTS, PROMOTIONS, etc.

The appointment of Sir Henry Babington Smith, K.C.B., C.S.I., to the British Financial Commission which is proceeding to the United States, is officially announced.

Mr. R. S. Peterson, of the Egyptian Ministry of Finance, has been appointed to the post of Sub-Director-General of Accounts, rendered vacant by the death of Mr. Etherington-Smith.

Mr. F. C. Madden, Professor of Surgery in the Egyptian Government School of Medicine, has been appointed operating surgeon to the British forces in Egypt.

Bimbashi Lewis, of the Intelligence Department, Sudan Government, who has been serving for some time at the Dardanelles, has returned to Khartoum and resumed his duties.

El Lewa H. A. Bray Pasha, Principal Medical Officer, El Kaimakam C. C. Macnamara Bey, Officer Commanding Equatorial Battalion, and El Bimbashi G. P. L. Cosens, Sudan Government, have been struck off the strength of the Egyptian Army.

El Kaimakam J. Powell Bey, M.B., Medical Corps, Egyptian Army, has been granted the temporary rank of Miralai.

El Kaimakam S. S. Butler Bey, Sudan Government, has been struck off the strength of the Egyptian Army.

The following appointments and transfers in the Egyptian Army are announced :—

El Kaimakam D. C. Percy-Smith Bey, D.S.O., Officer Comanding Nuba Territorials, to be Officer Commanding Equatorial Battalion; El Kaimakam A. Craufurd Bey, 13th Sudanese, to be Officer Commanding 12th Sudanese; El Kaimakam H. V. V. Kyrke Bey, Deputy Assistant Adjutant-General, to be Assistant Adjutant-General; El Kaimakam G. R. Worthington-Wilmer Bey, 9th Sudanese, to be Officer Commanding 4th Battalion; El Bimbashi E. H. M. O'Farrell, Arab Battalion, to 1st Battalion; El Bimbashi D. Mills, 10th Sudanese, to Arab Battalion.

El Lewa N. M. Smyth Pasha, V.C., Officer Commanding Khartoum District, has been struck off the strength of the Egyptian Army (temporarily).

The *Egyptian Mail* announces that Major Blakeney, Sub-Director-General of the Egyptian State Railways, who has returned to the British Army, has been promoted lieutenant-colonel.

Captain L. S. Lloyd, the Royal Welsh Fusiliers, Captain J. H. Miller, the Loyal North Lancashire Regiment, Captain Guy G. F. F. Greville, the Prince of Wales's Leinster Regiment (Royal Canadians), and Lieutenant Edward G. Warren, the Northamptonshire Regiment, have been attached to the Egyptian Army as special service officers, and granted the temporary rank of Bimbashi. The services of the two first have been placed at the disposal of the Sudan Government, and the two latter have been attached to Khartoum district for duty.

The *Egyptian Gazette* announces (August 19) :—The Sultan has conferred the Grand Cordon of the Order of the Nile upon Rateb Pasha, ex-Sirdar of the Egyptian Army, and the Second Class of the same Order on Mr. Higgs, of the Ministry of Finance, who intends to retire from the Government service. His Highness also conferred the rank of Pasha on Mahmoud Hamdi el Arnaouti Bey, of Cairo.

Lieut.-Colonel Gentcheff, formerly commanding the First Cavalry Regiment in Sofia, has been appointed Military Attaché in Berlin, in succession to Major Dotcheff, who has been recalled.

Captain Nikola Christitch, a distinguished young cavalry officer, has been appointed Serbian Military Attaché with the Italian Army.

A message from Constantinople states that Ahmed Bandeddin Bey has been appointed Naval Attaché to the Turkish Embassy in Berlin.

DOMESTIC ANNOUNCEMENTS

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

GRIFFITH.—On September 3, at Glanmor, Alexandria, Egypt, the wife of G. Herbert Griffith, Egyptian State Railways, of a son (stillborn).

MARRIAGE.

BENTWICH—FRANKLIN.—On Tuesday, September 7, at the New West End Synagogue, by the Rev. Joseph F. Stern, assisted by the Rev. L. Geffen, Norman de Mattos Bentwich, elder son of Mr. Herbert Bentwich, of 21, Cavendish Road West, St. John's Wood, to Helen Caroline (Mamie), younger daughter of Mr. and Mrs. Arthur E. Franklin, of 35, Porchester Terrace, W.

DEATHS.

CRAFTON.—On September 2, at Ramleh, Alexandria, suddenly, Ralph Caldwell Crafton, late of Croydon, aged 71.

CLEAVER.—On August 24, at Dunraven, Belfast, John Martin Cleaver, B.A., second son of John Cleaver and Secretary of the Egypt General Mission; aged 43.

D'AUBUZ.—On the 4th inst., at Cairo, Egypt, James Claude Baril D'Aubuz, aged 46.

HIRSCH.—On the 25th ult., at the Deaconesses' Hospital, Alexandria, Frederick Hirsch, aged sixty-two.

WHERE TO STAY.

UPPER EGYPT.

Luxor.

The Winter Palace. The Luxor Hotel. The Karnak Hotel.

Assouan.

The Cataract Hotel. The Savoy Hotel. The Grand Hotel.

Are the Finest on the Nile.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.

MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Cyprus.

THE CYPRUS HOTEL CO.

Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(Proprietor of the Army and Navy Stores).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

GERMAN INTRIGUES IN PERSIA.

If ever British diplomacy is called upon to divide its activities into successes and failures there can be no doubt as to the category to which its efforts in Persia belong. Eight years ago Great Britain and Russia reminded one another and the world at large that Persia was of such particular interest to both of them that they regarded it as a duty imposed upon them to make themselves responsible for her welfare, and to allow no other country to interfere with their Persian preserves. In the war that has broken out between these two Powers and Germany and her Turkish vassal, the Persians had no direct interest; they had no reason to be friendly towards the Turks, who have for generations been a thorn in their side where the respective countries march together, and everything pointed to the easy observance of neutrality by Persia, with marked leanings of friendliness towards the two Powers who had charged themselves with the protection of Persian interests. An inquiry into the situation in Persia to-day reveals the uncomfortable fact that the Turco-German combination has only had to raise its little finger in order to have things almost entirely its own way in that country. Anglo-Russian interests as well as Persian interests merely required that nothing should disturb the peace of Persia during the European war. What has actually happened is that from one end of the country to the other constituted authority has been set at defiance. Turkish armies or their Kurdish counterpart have carried fire and sword through North-Western Persia, while posing with no little success as the friends and liberators of the Persians. Tribesmen are up in arms against the Gendarmerie, and in certain districts have inflicted serious reverses upon it. They have threatened the chief port in the Persian Gulf, and can lay claim to the murder of British officers and a Russian Vice-Consul, and to an attack on a British Consul-General. Persia is as far from being in the condition required by her own interests or those of the British and Russian Governments as she well could be, short of an actual declaration of war. This state of affairs is, of course, attributable to German intrigues, but it is none the less a triumph, from the German point of view, over the diplomacy of Great Britain and Russia. If Anglo-Russian dealings with Persia had lived up to the spirit of the Convention of 1907, it would have been impossible for the Germans to have suborned the Persians from a friendship of eight years in less than that number of months. The fact is that, in spite of a traditional understanding between Persia and Great Britain, the attitude of British diplomacy during the last few years has resulted in the complete estrangement of both people and Government. A few Germans have only had to enter the country with baggage suitable to their errand in order to carry more influence with officials and with tribesmen than has ever belonged to the whole of British representation in Persia.

With the consciousness of failure upon it it would have been thought that Anglo-Russian diplomacy would be at particular pains not to allow anything to prejudice its position in Persia for the period of the war. As the event proves, it has taken no steps either to rehabilitate itself in the eyes of the Persians by a display of zeal on their behalf or even to give the most cursory attention to Persian affairs that British and Russian interests alike required. Persia is financially dependent on the two Powers. At the outbreak of war last year practically all trade was stopped. At first navigation was rendered precarious by the presence of German cruisers on the high seas. When this menace was removed, unrest among the Arabs in Southern Persia proved an obstacle to the revival of trade, and Persia's export of opium and tobacco was affected. Internal conditions were aggravated by the temporary stoppage of certain imports from Russia, which led to a sudden rise in the price of commodities in general use. The efforts of the Persian Government before the war to have its financial needs adequately met by the two Powers had met with no success, and it was called upon to face the universal monetary crisis with no resources at its back. Even if in other respects the two Powers had shown themselves considerate towards Persian susceptibilities, it would not have been difficult for interested parties to build misunderstandings on their apparent indifference to Persia's empty treasury. Before long the Teheran Government and, we may be sure, all local exchequers were so hard pressed for funds that anyone who was able to offer the Persians ready money had at once established a claim to be a real friend of the country. The Germans were quick enough to seize their opportunity, and it will remain a mystery for all time how Anglo-Russian diplomacy could have allowed itself to be so completely forestalled as it has been in Persia. A recent telegram from Teheran announced that the Swedish Chief of the Gendarmerie had informed the Government that he would be obliged to disband his force, if it was to be kept any longer in arrears of pay. We have never laboured under any illusion regarding the Gendarmerie under Swedish control, but we have accepted it as the only alternative to a force under the command of British-Indian officers. So long as it remained the chief organization in the country for the maintenance of order it ought certainly to have been assured of the strong support of Great Britain and Russia. But so lightly has its responsibilities weighed upon Anglo-Russian diplomacy that it is content to see both the loyalty and efficiency of the Gendarmerie undermined by a handful of German agents, whom a word would have caused to be expelled from the country at any moment during the last twelve months.

It is to be feared that the situation in Persia has been allowed to become so bad that it will have to be much worse before it is better. Whether at this stage Great Britain and Russia can hope to convince the Teheran Government that they are now prepared to assume their responsibilities seriously remains to be seen. The effort, if it be made, will come at an inopportune moment. To their conviction that the agreement between Russia and Great Britain was arrived at merely to pave the way for the partition of the country the Persians now add disbelief in the invincibility of Russia owing to events in Azerbaijan, and above all in Europe. Individually they are probably well supplied for the time being with German money; their religious faith has been worked upon with some degree of success, and they may even have been persuaded to believe that the hour has now come for Persia to strike a blow for her deliverance from Anglo-Russian "thraldom." The idea sounds ridiculous to Western ears; but in the eyes of the misguided Persians it will enhance the reputation of the Germans who tender the advice. Their views of what is happening in Europe will be derived almost exclusively from German sources, and so long as their belief in it remains unshaken, why should they place any reliance in the statements of the two Powers they mistrust? It is obvious that if the people are in such a frame of mind anything may happen in Persia. Some precautions are understood to have been taken already; but the next step ought to be the complete overhauling of Anglo-Russian diplomacy in the country. Until Great Britain can regain the confidence of the Government and people there can be no security in Persia, and no guarantee that British commitments there may not have to be indefinitely extended at short notice. But we shall not win the confidence of the Persians until we have recognized the mistakes that have been made in our dealings with them in the past.

THE LAST CHARGE OF FUAD PASHA.

Fuad Pasha, who was Grand Vizier of Turkey from 1861 to 1866, in the reign of Sultan Abdul Aziz (1861-1875), was the son of a Turkish poet, and was born in 1814. After practising medicine for some few years, he entered the diplomatic service of his country, and was for a time First Secretary at the Embassy in London. In 1852 he was appointed Foreign Minister, a position for which he was certainly better qualified than many of his countrymen who have held it, having studied history, international law, and political economy closely, and having a remarkable command of French, the language of diplomacy. His hostility to Russia, especially in connection with the "Holy Places," earned him the active enmity of the Tsar, and led to his temporary retirement; but in 1855 he was reinstated and elevated to the rank of Pasha, and six years later he became Grand Vizier. Among his countrymen he still enjoys a high reputation as a statesman—and deservedly so. For, although he made mistakes, they were no more than others made by statesmen of acknowledged greatness; and, though he failed to save his country from the dangers that he clearly saw threatening it, the blame for that can hardly be laid at his door. It is at least safe to say that had the Turks followed the advice contained in his "political testament" Turkey would to-day find herself in a much happier position than that she actually occupies. This document, with its pathetic confession of things left undone, makes somewhat sad reading at the present time. But it is full of interest, and we believe our readers will be glad of an opportunity of studying it. It was originally published by the Turkish Press of Constantinople soon after the death of Fuad Pasha, and from that source an Arabic version was published in *Al Jawaib*, the organ of the late Ahmed Faris. It was reprinted about a year ago by certain Arabic journals, and the following translation has been sent us by a correspondent formerly resident in Syria. As will be seen, it is in the form of a letter addressed to the Sultan, and, though the advice it gives is rather in the nature of counsels of perfection, it is marked by obvious sincerity:—

Your Majesty,—I have but a few days or hours of my life left, and I desire, therefore, to spend these last few moments in fulfilling a sacred duty, and in expressing to your Majesty my thoughts, which are burdened with regret at the calamitous state our country has reached as the result of rash and stupid policy. And when these my words reach your Majesty I shall most probably have departed this life, and you will then listen to me without questioning my loyalty; for the voice which speaks from the grave is one of sincerity and truthfulness.

God has charged you with an arduous and responsible, but at the same time a glorious and honourable work, and in order that you might carry it out properly you must know this painful fact—that the Turkish Empire is in danger! The rapid development of our neighbours and the grievous mistakes made by our predecessors have brought us to our present exceedingly critical state. This compels your Majesty to lay aside an antiquated policy, and to take a new course by which the country may be free from the danger of downfall and disruption, and by which also it will be delivered from perils and risks.

Some unwise people attempt to convince your Majesty that our present resources are sufficient to enable us to recover our past glory and former dignity. What a grave mistake, and what unbounded credulity! Had our neighbours remained unchanged from the condition in which they were in the time of our ancestors, it would not be impossible for your Majesty to reach the high level of your predecessors, and to make the European kings subject to your sovereignty. But our neighbours have greatly developed from what they were two centuries ago, and have advanced so much that they have left us behind, and our slight improvement is nothing to be compared with theirs. No doubt the country has made improvement on its condition in the days of your predecessors, but this improvement proportionately falls below our present needs.

Your Majesty, perhaps your greatness and power is equal to that of your forefathers, or, perchance, you have excelled them, but this is not sufficient to enable you to retain your position in Europe; for you must be ready when occasion arises to equal your enemies, and even to be able to treat them with disdain. In other words, your Empire must be rich like England, well-trained like France, and possessing an army like Russia; otherwise it is in danger of a speedy fall and ruin. The question is not merely one of making rapid improvement, but of that improvement being on a level with that of the European nations. Your Majesty has all the means and materials which will enable you to put the country in the first rank of all European Powers; but in order to reach this result we have to change all our civil and political codes of law, as although a great number of them were useful in their day they have become harmful at present. Being able to progress and go forward to perfection, Man should continue his efforts in improving his conditions. Fortunately, this is in harmony with the essence of the Mohammedan religion, which contains all the truthful doctrines that are essential to advance in knowledge, and to uplift humanity. Those who pretend that our religion retards the progress of our country are not true Moslems. Every other religion except Islam contains dogmas and tenets interfering with the training of thought and the illumination of mind, but Islam is free from all these limitations. It makes it incumbent upon its followers to keep pace with other civilized peoples of the world, and to endeavour to do their best in training their mental faculties and in searching after knowledge and science, not only in Arabia and among themselves, but also in foreign countries, even if it be in China and other ends of the world. Let nobody imagine that the philosophy of Islam differs from that of other nations. Philosophy is one in every place, and its sun, which enlightens the mind, is one, too; and Islam, I believe, is the declarer of facts and the revealer of sciences. Every useful invention and all fresh progress, everywhere and in every nation, is for the Moslems. Therefore, nothing hinders us from appropriating the European codes of law. I, personally, knowing very well the essence of our religion, and being familiar with its facts, have well digested the subject with which I deal; otherwise I should have been treacherous in speaking against the interests of my religion, my country, and my sovereign in the last moments of my life, just as I am about to depart from this world, and to stand in the presence of the Just Judge.

I am fully assured that not a single law from the code in Europe is contrary to our religion—absolutely not one. It is my sincere belief that in order that Islam may be on the safe side we should receive these codes as soon as possible; for no nation which desires to retain its existence can afford to dispense with such laws. I here repeat again that if your Majesty permit this essential change in the laws of the country which are not in opposition to the tenets of our sacred religion you will do Islam the greatest possible legal service, and render the nation a benefit of which your illustrious fathers could not conceive.

This grave task includes several problems which my limited time and strength make me now unfit to consider. But your Majesty can attend to them if you are only willing to benefit by the services of that great man (Ali Pasha) whom I had the honour to have as my friend and counsellor, for whom I am praying God to prolong his life in your Majesty's service; for he has a wider experience than any other concerning the means of saving the Empire. And these things that I have written to your Majesty are not my own ideas alone, but I have explained them to him, and they have received his approval. Therefore, give him your entire trust, for the confidence of the Sultan strengthens the arm of his Vizier. Moreover, I beg your Majesty to help this faithful Minister, with whose skill, sagacity, prudence, and knowledge you cannot afford to dispense, and do not allow the folly of his colleagues to retard his resolution and weaken his energy. Nothing more hinders the determination than to be compelled to be a co-worker with those who cannot appreciate one's ideas or comprehend one's purposes.

And now in regard to foreign countries. As we are unable to wage war against them, we should, therefore, try to be on friendly terms with them and be in alliance with them. In order to safeguard our rights, we ought to possess power, sagacity, and courage in a degree surpassing that shown by our past sovereigns, by whom nations and countries were subdued. When one should seek to find the best ally among the European Powers, Great Britain will be always found occupying the premier position; for her policy and friendship are stable, like her laws. In the past she has rendered us magnificent services, and we cannot dispense with her help for the future. Whatever changes may take place, the English people, who are the most admirable of all other nations, and who are more trustworthy, should be our first and last ally. If I should have been asked to choose between England's friendship and the Porte losing a part of her dominions, I would have preferred the latter to the former.

France is an ally that we should always treat as far as we can with respect and reverence, not only because she can give us the best help, but also because she can do us the greatest harm. She is fond of magnificence or glory, even if it be in her foes. The best means of keeping on terms with the noble French people is to coincide with their thoughts and ideas, manifesting a friendly spirit towards them. Should France turn from us some day and show herself as our foe, that would be a cause for our final destruction.

SERBIAN MACEDONIA.

AN HISTORICAL SURVEY.

To the Editor of THE NEAR EAST.

Sir,—I am not a politician, and if I venture to write these lines on a subject of such a highly political character as the Macedonian question it is rather from a historical point of view, and in my quality of historian—literary historian, if you will—that I propose to undertake the task.

It is astonishing how certain erroneous ideas become deeply rooted in public opinion, and continue to prevail, in spite of all evidence to the contrary. One of these popular ideas is that Macedonia is historically Bulgarian. Macedonia—according to popular belief—belonged to the Bulgarians for centuries, and if at times she came under the rule of some other nation—the Serbs for example—this domination was of a purely ephemeral character.

There are, however, many ideas flattering to the national Bulgarian pride which were at one time generally accepted, but which have since been proved to be pure legends. It was believed, for example, that the ancient Slav language was the Bulgarian tongue. It is, however, generally recognised to-day that the latter was another ancient Slav dialect. It was also thought that the Slav writers of the tenth and eleventh centuries of the eastern portion of the Balkan peninsula were all Bulgarians. Recent investigations, however, have shown that several of them were not. In the course of this article I hope to disprove many more such erroneous ideas. I opine that the belief in a historically Bulgarian Macedonia is also a legend; and I hope that a trustworthy account of Serbian and Bulgarian domination and influence in Macedonia may bear out my contention.

I.—First Period (861-969).

(The Bulgarians are in possession of Macedonia for 108 years.)

There are four periods in Macedonian history which may be of interest in this connection. The first comprises the ninth and tenth centuries. When the Slavs colonised the Balkan Peninsula (fifth to the seventh century) two States were soon formed in the eastern part of the Peninsula, Bulgaria and Serbia. The first was in the east, and comprised the territory lying between the Danube and the Balkans; the original Bulgarian inhabitants were a Mongol tribe, who had became Slav on their first contact with the Slav tribes whom they found in the conquered country. The second was in the west, and extended from the upper reaches of the Drina to the Adriatic littoral in the south; the Serbian people there were pure Slavs. Macedonia stood between the two. Politically it was neither Serbian nor Bulgarian, but simply a Byzantine province. Ethnographically it was Slav, that is to say, of the same race as the Serbs or as the ancient Slavs of Bulgaria.

In the ninth century the Bulgarians conquered Macedonia. It was the Emperor Boris (852-889) who partially conquered it about the year 861. His successor, Symeon (893-927) took possession of the whole. The Emperor Peter (927-969) lost nearly half of the new conquests, and after his death the whole of Macedonia was lost to Bulgaria. Thus the Bulgarians possessed Macedonia from 861 to 969.

Nevertheless several historians affirm that Bulgarian rule in Macedonia lasted longer than this period. The reign of the Emperor Samuel in Macedonia (967 to 1014) and of his successors (up to 1018) was also, it is said, a Bulgarian reign.

I shall not attempt to discuss the question in detail. It is enough to say that recent historical investigations prove that the Empire of Samuel and his successors was an independent Macedonian empire, and not a Bulgarian one. Modern Serbian historians (v. Prokic, Postanak jedne slovenske carevine, Glas S. K. Akademije 76, 1908) maintain this with Byzantine chronicles in hand, as well as foreign historians, such as Jirecek, the greatest historian of the Serbs and Bulgars. In is, in fact, quite characteristic to point to the wide divergence of views between what Jirecek formerly wrote on the reign of Samuel (Geschichte der Bulgaren, 1870) and what he wrote quite recently (Geschichte der Serben, 1911). Here we have another of those legends already referred to, or, at least, one of those Bulgarian theories, gravely contested.

The new conception of the reign of Samuel is, moreover, very plausible. When Samuel founded his Macedonian empire (976) Bulgaria was already conquered by Byzantium (971). How, then, could an independent empire have been under the domination of a conquered province?

Therefore, the Bulgarians, during this first period, were in possession of Macedonia for 108 years (861-969).

II.—Second Period (XIIIth-XIVth Centuries).

(The Serbian Reign lasts 112 years, and has a great influence on the Country. The Bulgarian Conquest lasts sixteen years, leaving no traces.)

The second period comprises the thirteenth and fourteenth centuries. The Bulgarians freed themselves from the Byzantine yoke in 1186, and again conquered Macedonia from the Greeks in 1230, under the reign of Jean Asen II. They kept it till 1246, when the Greeks took it from them again. On two more occasions—the second time under Constantine Asen (1257-1277), when a Serb occupied the throne of Bulgaria—the Bulgarians, at war with the Greeks, made momentary raids into Macedonia. These, obviously, cannot be considered as having constituted a domination. Therefore, in the thirteenth century, the Bulgarians reigned in Macedonia for sixteen years. But then ended for all time their rule in Macedonia. "After Constantine Asen" (says Jirecek, in "Geschichte der Bulgaren," 376) "no Bulgarian Emperor could extend his power over this province." The Bulgarian episode in Macedonian history having been closed, we may now reckon the number of years that it lasted. The total is 124 years.

Now come the Serbs. Up to this time the Serbian State had had no part in Macedonian history. Owing to its geographical position, surrounded as it was by powerful rivals, it developed more slowly. It had no place in Balkan history as a great Power until after the other States had played their ephemeral rôles.

It is wrong to suppose, as is generally done, that the Serbs only held Macedonia under the reign of Dushan (1331-1335). Macedonia formed part of the Serbian State long before. I am not thinking of King Uros, who, in 1258, had Skoplje, Prilep, and Kichevo in his power—let us suppose that it was the same rôle as Constantine Asen played in Eastern Macedonia—but I am thinking of King Milutin (1282-1321), who really held Macedonia. In the course of a brilliant offensive against Byzantium he took, in 1282, Skoplje, Ovcepolje, Zletovo, Bregalniza, and a large part of Eastern and Western Macedonia as far as the district of Kustendji, which he held in 1300. His son, Stephan (1321-1331), went still further south and took Veles and Ishtip, approaching Strumnitza and threatening Ochrida. Emperor Dushan, the greatest of Serbian monarchs, had, as is known, the whole of Macedonia, not only with Prilep and Ochrida, but also with Strumnitza, Drama, Kavalla, and the district of Salonika, as well as Thessaly, Acarnamia, Epirus, and Albania. His empire was kept intact under the reign of his son Urosh (1355-1371). In 1371 the Turks conquered the Serbs, and Macedonia became vassal to them, whilst the north was still a free State. Neverthless, the kings and princes of Serbia, although vassals, still reigned in their Macedonian provinces. One of them, the celebrated King Marko, reigned there, with Prilep as his capital, until 1394. Then it was that Serbian rule in Macedonia came to an end, although until much later, up till the middle of the fifteenth century, the influence of the Serbian princely houses was still felt in Macedonia, when "Empress Mara," daughter of the Serbian despot, resided in Seres.

Altogether the Serbians reigned in Macedonia for 112 years (1282-1394). Is this less than the duration of Bulgarian rule? Undoubtedly. But, firstly, the difference is very little, and, secondly, it is not merely duration that has to be taken into account. In order to appreciate the true value of Serbian and Bulgarian rules in Macedonia we must consider the results, not only their duration. Supposing two men are given the same work to do, and a fairly long time to do it in; if one does it better in 112 hours than the other in 124, to which of the two would you award the palm? It is in this way that we must judge the value of these two historical facts. What is important is to see which of the two, Serbs or Bulgars, were more successful in assimilating the Slav element in Macedonia.

It is obvious that the Serbs have the advantage of the Bulgars in that they possessed Macedonia at a later period than the Bulgars. For a State to possess a province in the ninth century is not at all the same thing as possessing it in the fourteenth century. What were the Bulgars in the ninth century? Was the national sentiment of the mixed tribe, half Slav and half Mongol, as the Bulgars then were, sufficiently strong and attractive to assimilate the pure Slav element which they dominated? Certainly not. The Bulgars of these early ages were no more than simple conquerors. The Serbs, however, are in quite a different position. They held Macedonia for nearly six centuries after the "golden age" of the Bulgars had passed in that country, and many changes took place during this long period. In contrast to the Bulgarians, the national conscience of the Serbs was, at this period, defined, crystallised, and definitely formed. In entering Macedonia the Serbs were fully conscious of being Serbs, and quite confident that their Macedonian brethren would soon be the same people as themselves. They introduced an exemplary administration. They made equal laws for the citizens of the old State and for those of the new province. They brought an eminently national literature. They facilitated the development of commerce. In a word, they had at their disposal all the means afforded by the high State civilization of the period for assimilating the Slav element in Macedonia, which was so much akin to them. This is the reason why the Serbians were more likely to succeed in Macedonia during their 112 years than the Bulgarians could have been even if they had had 200 years.

Moreover, Serbian rule in Macedonia has left far deeper traces than that of the Bulgar.

The Serbian kings and emperors founded monasteries—splendid specimens of ancient Serbian art—in numbers that Macedonia had not known till then. I have not time to enumerate them all. But it suffices to say that there are a quantity of them round about Komanovo, around Skoplje, Slaviste, Lesnovo, Tetovo, Prilep, and Seres. The line stretches uninterruptedly as far as the Bulgarian frontier, as far as Mount Athos, as far as Albania. They are not isolated monasteries, but clusters of beautiful architectural works, miniatures of Mount Athos, which are scattered over the right and left banks of the Vardar. The Russian Archæological Commission, during its researches in 1900, found that Serbian architecture was predominant in western, central, and eastern Macedonia. The president of the Commission, the Academician, Kondakoff, expressly stated that the style of the mediæval art of the real Macedonia (as far as the Drama) was no longer Byzantine, but Greco-Slav, in other words, Greco-Serbian. "All that the Slavs have given to Macedonian archi-

Digitized by Google

tecture," he said, "is marked by undeniably Serbian influence." Here you have the remains of Serbian rule; but where are those of the Bulgarians?

Serbian literature has left in Macedonia traces no less deep than those of art. The literary monuments left by the Serbs are in a crushing majority compared with those of the Bulgars. The Russian savant, Grigorovich, during his journey to Ochrida in 1874, found Serbian manuscripts and inscriptions all round about this town, which the Bulgarians claim as eminently theirs. "Traces of Serbian influence are to be found in all the manuscripts and inscriptions of the 14th and 15th centuries that Grigorovich saw at Ochrida and in the neighbourhood," says Jirecek, in summing up the investigations of the Russian savant (Geschichte der Bulgaren, 466). The Bulgarian, Jordan Ivanoff, was obliged to publish many Serbian manuscripts and inscriptions executed in memory of the Serbian kings in his book, entitled, "Bulgarian Antiquities of Macedonia" (1906). If we were to count how many of the manuscripts, emanating from Macedonia, were Serbian and how many Bulgarian, I am sure that the advantage would be on the side of Serbian literature. If we were to reckon merely the manuscripts which are to be found in Bulgarian libraries, we could obtain an adequate idea. Three catalogues of this kind have been published, at any rate, as far as I am aware. The catalogue that Sprostranoff compiled of the library of the monastery at Rilo (1902) makes no mention of the origin of the manuscripts. The catalogue that the same author made of the library of the Holy Synod in Sofia (1900) does so in an inadequate manner. Thus, we cannot ascertain the number of the manuscripts of Macedonian origin in these catalogues, nor the proportion of the Serbian and Bulgarian languages in them. Nevertheless, there is not much to fear for our argument, since the general proportion is in its favour. The first catalogue includes nineteen items in the Bulgarian language, and, altogether, seventy in the Serbian; the latter figure, it is true, includes ten items which are not, strictly speaking, "manuscripts," but printed books or modern manuscripts. The second catalogue comprises twenty-three Bulgarian manuscripts and eighty-nine Serbian ones, which fact does not prevent the author of the catalogue from saying in the preface that they are "the remains of *our* ancient literature." That is to say, the remains of Bulgarian literature. In the third catalogue, that of the National Library of Sofia, which represents, as the author, Prof. Coneff, says, "the largest and most important collection of manuscripts existing in Bulgaria," the origin of the manuscripts is carefully marked, and here we can find what we seek. Now, there are twenty-five manuscripts of Macedonian origin. But of these twenty-five manuscripts, twenty-four are Serbian, and only one is not. And, again, that one (No. 97) is *Serbo-Bulgarian* and not Bulgarian. Note again that these Serbian manuscripts—it is Coneff himself who says so—are from Skoplje, Veles, Ishtip, Strumnitza, Debar, Prilep, and Ochrida, and Bulgarian savants themselves assert it. No better proof could be afforded of the immense superiority of Serbian over Bulgarian literary activity in Macedonia.

The popular Serbian folk songs, which are the pride of our literature, and which the best English poets, from Walter Scott to Owen Meredith, have translated, are also a striking proof of how deep is the furrow the Serbians have dug on Macedonian soil. To those who know these songs it is clear that the Macedonian cycle ranks very high among them. It is not only the kings Milutin and Stephan and the emperors Dushan and Urosh, during whose reigns Macedonia formed part of the Serbian State, who are sung there; but also the little Serbian despots, kings, and princes who governed certain Macedonian provinces are thus glorified. The principal heroes of the Serbian epopee are King Vukashin, who reigned in Prilep; the despot Ugljesa, who held Drama; the *voivode* Momcilo, whose country was between the Strumnitza and Thrace; the *voivode* Hrelja, whose capital was Strumnitza; Ljutica Bogdan, which State lay between Seres and the Vardar; the Bey Kostadin, with Ishtip and Kratovo in his power; and the list might be still further extended. Finally, to mention only the most celebrated personage of the Macedonian cycle and of all Serbian folklore, the national hero of our poetic legend, the Roland of our epopee, Kraljevic Marko was also a Serbian king of Macedonia, with Prilep as his residence. Not only the Macedonian kings and princes, but the whole Macedonian country also is sung in this epopee, from Skoplje to Salonika, and from the Maritza in Bulgaria to Scutari in Albania. Where, then, was this epopee sung? It is so natural to think, and the most conscientious studies have shown, that the real cradle of Serbian folk-songs is Macedonia. But what people have sung it? Was it the Bulgarians who created this beautiful Serbian epopee?

Third Period (16th-18th Century).

(The Serbs enjoy National Autonomy for 210 years.)

The third period covers the sixteenth and seventeenth centuries. During this time Macedonia was a simple Turkish province, just as Bulgaria was from 1393 and Serbia from 1459.

Nevertheless, the Serbs had during this same period a great national institution. It was the Serbian Patriarchate of Pec (Ipek). The Serbian Church, which, until the beginning of the eighteenth century, stood under the jurisdiction of the Patriarchate of Constantinople, was erected in 1219 to an independent Archbishropic, an autocephalous church, and was recognised as such by the Patriarch at Constantinople. In 1346 this Archbishopric was raised to the dignity of a Patriarchate, a dignity which was shortly afterwards (1375) recognised by the Patriarch of Constantinople. It lasted until 1459, i.e., until the end of the Serbian State. It was then subordinated to the Archbishopric of Ochrida, which was also independent of the Patriarchate of Constantinople. But in 1557 it was restored, and all its ancient rights were recognised by the Porte and by the Greek Church. This new Serbian Patriarchate lasted until 1867, when it was again suppressed and included in the Greek Patriarchate at Constantinople. Thus the new Serbian Patriarchate lasted 210 years.

This Patriarchate comprised many Serbian districts, and, among them, a large part of Macedonia. Tetovo, Skoplje, Kratovo, Kochani, Zletovo, Ishtip, and Radoviste were included therein, that is to say, the whole of northern Macedonia on both sides of the Vardar river. It is true that Southern Macedonia was not included, and that Ochrida, Monastir, Debar, Prilep, and Veles were beyond its spiritual jurisdiction, and remained under the jurisdiction of the Archbishopric of Ochrida. Nevertheless, a large part of Macedonia belonged to the national Serbian Church during 210 years of Ottoman rule.

The importance of the new Serbian Patriarchate is significant as regards Serbian claims on Macedonia. But it is above all important owing to the fact that Macedonia was attributed to the new Serbian institution in accordance with the principle of nationality.

It is only necessary to compare the new Serbian Patriarchate (1557-1767) with the ancient one (1346-1459) to see that it is in agreement with this principle and no other that Macedonia was given to the Serbian Church. The ancient Partiarchate comprised the countries belonging to the old Serbian State—that is to say, the Serbia of to-day (with Macedonia) and the districts to the south. It did not extend beyond the central part of the Balkanic peninsula, and all lands lying to the west, Bosnia, for instance, were beyond its frontiers. The new Patriarchate, however, did comprise this latter part. It did not only extend to Serbia (with Macedonia), but also to Bosnia, Herzegovina, Dalmatia, Slavonia, and even to Southern Hungary, in as far as it was populated by Slavs. All these countries were under Ottoman rule, and all of them were Serbs by nationality. When the Porte agreed to the restoration of the national Serbian Patriarchate she granted her, likewise, jurisdiction over the whole extension of Serbian nationality within the frontiers of the Turkish Empire. For the same reason, and in agreement with the same principle of nationality, the Porte recognised the Patriarchate's right over Macedonia.

As a matter of fact, when the Turks gave Macedonia to the new Patriarchate, were there any reserves expressed, or any doubts as to the national Serbian character of the whole country? Could they, perhaps, think that Macedonia was Bulgarian? Not at all. Imagine the state of affairs in Macedonia in those days. Forget what you know regarding the state of affairs in that country during the past few years, before the recent Balkan wars, when the intrigues of Bulgarian propaganda helped to complicate matters. In the sixteenth century the remains of the ancient Serbian Empire were still quite noticeable in Macedonia, and the memories thereof were vigorous. In the preceding chapter we have seen how numerous and how powerful were the remains of the Serbian reign in Macedonia and how they were to be discovered on historic monuments, in literature, and in the minds of the people. As, step by step, the Turks advanced into the country, they saw Serbian monasteries, Serbian monks copying manuscripts, old Serbians singing to crowds around them of the glorious past of their country. On the other hand, they saw nothing similar which might have been Bulgarian. How, then, could they possibly have thought that Macedonia was Bulgarian? Evidently, when the Turks granted Macedonia to the Serbs by the restoration of the Patriarchate of Ipek, they thought they were doing the most natural thing in the world, and that nobody in the world could have the least intention of protesting.

It may be said that if the Turks granted the Serbs Northern Macedonia according to the principle of nationality, and refused to give them Southern Macedonia, this refusal must likewise have been due to the application of the principle of nationality; in other words, that Southern Macedonia was non-Serb. This is not so. If it was decided to exclude the districts of Ochrida, Bitolj, Debar, Prilep, and Veles from the jurisdiction of the Patriarchate of Ipek, the principle of nationality did not enter into this decision. It was quite a special case. The districts in question were under the jurisdiction of the archbishopric of Ochrida, under which the Serbian national church had also been placed prior to the creation of a new patriarchate. When the latter was created, many of the districts belonging to the archbishopric were taken away in order to be included in the new institution. But if the districts mentioned above had been taken away it would have meant the suppression, pure and simple, of the archbishopric itself. Nobody, however, would have consented to this at the period we are referring to. The Archbishopric of Ochrida was a very old institution dating from the ninth century, when St. Clement, one of the first Slav apostles, founded it. The archbishopric's rights and traditions were fully respected by everyone. Read what Mr. Adrian Fortescue says in his excellent book, "The Orthodox Eastern Church" (1907), and you will see what the archbishopric was. The Serbs would never have asked for the suppression of this venerable ecclesiastical institution, even if to the advantage of their new church. During the period (fourteenth century) when the whole territory comprising the archbishopric's jurisdiction was in their political possession they respected the former's rights as though said territories did not belong to their State. Moreover, the Patriarchate of Constantinople, for reasons which we shall presently see, would not have permitted such a big extension of the Serbian Church to the detriment of the Archbishopric of Ochrida. Thus, if a certain part of Macedonia was not drawn into the Serbian Patriarchate of Ipek, it was not on account of the principle of nationality; it is no less true, how-

Digitized by Google

ever, that a large part of the country, in accordance with the above principle, was a province nationally Serb.

A second consideration showing the importance of the Patriarchate of Ipek in the 16th to 18th centuries, more particularly as regards Serbian rights over Macedonia, is that the patriarchate was a great national Serbian institution, and that it exercised a great influence on the Serbian people in Macedonia. Without doubt it was not the equivalent of the ancient Serbian Empire, but nevertheless it approached it in significance.

Let us examine what this patriarchate really was. In the first place the clergy were Serbs. The patriarchs were Serbs. The metropolitans were Serbs, and the bishops, priests, and monks. Then, again, the official language of the patriarchate was Serbian. Everything which the patriarch ordered and wrote to the metropolitans, or the metropolitans to the bishops, or the bishops to the priests, was in the Serbian language. Again, all the efforts of the patriarch and of the higher clergy were directed towards the awakening of the Serbian national sentiment. They strove to preserve the remains of the glorious past of Serbia. They restored the old monasteries and their mural paintings representing the portraits of Serbian kings and queens. They collected old manuscripts, had them copied, and preserved them. They wrote new works, principally historical works on Serbia. They even gave a remarkable *élan* to the literary activity of the race which had lain dormant and lost in the century which followed the fall of the Serbian State. They resuscitated ancient divine services in honour of Serbian saints, of St. Sabbas, patron of the Serbian church, and of others. But apart from this restoration of the national past, they exercised a direct influence on the people. They paid canonical visits throughout their dioceses, and there was not a town or a village in the Serbian districts which did not see its bishop, its metropolitan, and its patriarch. They spoke to people, reminded them of the glorious days of the past ages, and inspired them with the national sentiment.

Such a patriarchate was, therefore, a "sort of national organization among the Serbs," as Fortescue (page 307) rightly observes. It was a sort of national autonomy in the form of an ecclesiastical autonomy It was a Serbian centre in the middle of a Turkish Empire. It was a highroad of Serbian nationality, wherein were protected and preserved the Serbian name and nationality. To-day, there is a Serbian patriarchate, the descendant of the ancient patriarchate of Ipek, in southern Austria-Hungary, and it is also a highroad for Serbs in the centre of a Hungarian State. The Patriarchate of Ipek fulfilled the same rôle in Turkey, but to a greater extent, because, whereas in Hungary a Serbian empire never existed, in Turkey it did exist, and its remains were to be seen everywhere. The Patriarchate of Ipek was, therefore, in a great measure, a continuation of the ancient Serbian Empire, a restoration of a political organization of other days, a new form of the national State of olden times. This it was, above all, from the national point of view. That is why we are right in considering it, from this point of view, as almost the equivalent of the ancient empire which it replaced.

Imagine now what a powerful influence this new phase of the empire in Macedonia exercised on the people! The people considered themselves Serbs in exactly the same way as they did when they lived in the Empire of Dushan! Everything which surrounded them was Serbian; the clergy, from the patriarch to the least village curate, was Serbian; so were literature, language, divine services, and churches; and the people knew that all these were Serbian. Do you think that, in these circumstances, the people could not be Serbs?

So great is the importance of the Serbian patriarchate that we consider ourselves perfectly justified in adding the number of its years to those of the ancient Serbian State when fixing the balance of Serbian and Bulgarian rule over and influence in Macedonia. The Serbian epoch in Macedonia is, therefore, 322 years, whereas the Bulgarian epoch does not go beyond 124 years. Moreover, the latter belongs to a primitive age, whereas the former is to be placed in relatively modern times.

Let us remark incidentally that the Patriarchate of Ipek comprised, exclusive of Macedonia, also a large part of the Bulgaria of to-day. The districts of Kustendil, Samokov and Razlog were under the jurisdiction of our patriarcnate, and were frequently visited by our patriarchs, especially the celebrated monastery of Rilo. These districts were granted to the Patriarch of Ipek beyond doubt in agreement with the principle of nationality, and when the history of the Monastery of Rilo is invoked, the reason becomes apparent. It was the *voivode* Krelja who built the tower of the monastery; it was the Empress Mara with whose help the reliquaries of the patron of the monastery, St. John of Rilo, were transported thither; it was Vladislav Gramatik who has left us a wonderful description of this ceremony, and all these people were Serbs and not Bulgars.

IV.—The Same Period.

(*The Bulgars enjoy no Autonomy similar to that of the Serbs.*)

You will tell me, perhaps, that the Bulgars had a similar autonomy, even a better one in Southern Macedonia; that the Archbishopric of Ochrida, to which I have referred, was for the Bulgars what the Patriarchate of Ipek was for the Serbs; that it was a national Bulgarian Church just as the other was a national Serbian Church; that the Archbishop of Ochrida had even the title of "The Archbishop of all Bulgaria"; that, moreover, the archbishopric lasted longer than the Patriarchate of Ipek, existing, as it did, without a break from St. Clement, who died in 916 until 1767, when it was suppressed at the same time as the Patriarchate of Ipek.

Here, however, we have another of those legends to which we referred in our first chapter. This legend is absurd, however, as can be seen at a glance. If we know anything of history, the national Bulgarian Church was the Patriarchate of Tirnovo, but this Church is situate in Bulgaria, and not in Macedonia. Did the Bulgarians have two national Churches at the same time? As for the Archbishopric of Ochrida, if it was Bulgarian from the ninth to the eighteenth century, was it Bulgarian when Ochrida and the whole of Southern Macedonia was the political dominion of Byzantium (eleventh to thirteenth centuries)? In the fourteenth century this territory belonged to Serbia; did the Bishopric continue in spite of this to be Bulgarian? When the Serbian Church, in 1459, was included in the jurisdiction of the archbishopric, was it subjected to a Bulgarian Church? The Roumanian principalities, which, in the sixteenth century, were also under the spiritual power of the same archbishopric, were they also subjected to a Bulgarian church? The Greeks of Calabria, Apulia, Sicily, and Malta, who were also under the jurisdiction of the Archbishopric of Ochrida, were they also subjected to a Bulgarian Church? In which case, everybody must have been under the Bulgarian Church?

The fact is that the Archbishopric of Ochrida was not the Bulgarian national Church. The name "Bulgaria" remained, it is true, in the title of the archbishop, but it was all that was left of Bulgarian in the Church. It was only an old tradition, without any significance. When Basil II., the Emperor of Byzantium, destroyed the Macedonian Empire (1018), he respected the autocephalous church of St. Clement, and left it the independence which it had enjoyed. But, excepting the first archbishop, who was a Bulgar—or, better still, a Slav—all the others, or almost all, from the eleventh to the eighteenth centuries, were Greeks and not Bulgars. The metropolitans and the bishops were also Greeks. The whole character of this Church was Greek, and nothing but Greek.

But let the historians speak about this Church.

In his "History of the Orthodox Bulgarian, Serbian, and Roumanian Churches" (Moscow, 1870, page 142-143) the Russian historian Golubinsky reviewed the fate of the Archbishopric of Ochrida in the Byzantine, Bulgarian, Serbian, and Turkish periods. "Almost from the very moment when it passed into the power of the Greeks at the epoch of Basil II. in 1019, and until the end of its very existence, the Archbishopric of Ochrida was entirely a Greek church and not a Bulgarian church." He admits that during the short Bulgarian period in the thirteenth century the archbishopric might have been Bulgarian, and then continues: "It is positively and authentically certain that during all that time, excepting the ten or fifteen years of the reign of Jean Asen II. (1230-1240 or 1245) the archbishops were constantly Greeks and not Bulgars, and the archbishopric was constantly under the power of the Greeks and not of the Bulgars." During the Serbian period (fourteenth century) "the Greek character" of the institution "was not violated." As regards the Turkish period (fifteenth to eighteenth centuries), he says: "The Turks . . . finding that only the Greeks administered the Archbishopric—and I include therein the person of the Archbishop, as well as the Metropolitans and the Bishops . . . allowed matters to rest as they had found them, and from this time until the end of the period the Greeks remained masters of the Archbishopric." He admits, it is true, certain exceptions during this latter period. "It is very probable that during this period the Archbishops, as well as the Metropolitans and Bishops, were not one and all Greeks, and the archiepiscopal chair, as well as those of the Metropolitans and Bishops, were occupied, doubtless rarely, by Bulgars." But if he says so, he immediately limits his statement by adding: "But above all, these Bulgarian unities were lost among ten unities of Greeks; they are only negligible quantities, who cannot change the general aspect of the situation in favour of the Bulgars . . . in any case these Bulgars could only be Hellenophil Bulgars, that is to say, Hellenised Bulgars, who had renounced their nationality."

The most recent historian of the Church of St. Clements is Henry Gelzer, who wrote the best and most detailed study on the Archbishopric (or Patriarchate), and who also emphasises its Greek character. "In the period of which we are speaking," he says, in reviewing the Turkish period, "the Archbishopric of Ochrida, with its suffragan churches, was, contrary to that of Ipek, entirely Greek. ("Das Patriarchat von Achrida," 1902, p. 34.) As for the Bulgarian period (1230-1246), where Golubinsky admits exception in favour of the Bulgars and the possibility of there having been two Bulgarian archbishops (p. 124), Gelzer, with more recent documents to support him, doubts this, and says: "Golubinsky mentions two archbishops who may have been Bulgars, but that also is quite uncertain" (p. 19).

Jirecek is not exactly a historian of the archbishopric of Ochrida, but he is always very well informed, and he says: "Only Greeks were nominated archbishops of Ochrida" (Geschichte der Serben, 1911, p. 219).

Even the most Bulgarophil of all historians, Marin Drinoff, who published in Bulgaria a "History of the Bulgarian Church" (1869, p. 128), does not dare to deny this character, so constantly and so completely Greek, of the archbishopric, and contents himself by mentioning the matter with evasions and in a very vague and restricted manner. "In the fifteenth, and also as late as the middle of the sixteenth, century the priests and higher clergy were pure Bulgars." That is, after all, all that he has to say regarding the national character of the Archbishopric of Ochrida.

I think the matter is quite clear. But in order not to leave in doubt the non-Bulgarian character of the Church in question, it is our duty to analyse the part which the Serbs themselves played therein. Drinoff asserts that during a certain period, which, after all, is not long, the priests belonging to the archbishopric (as regards the "higher clergy," we have seen what that means) were "pure Bulgars." Without a doubt the priests and monks of the archiepiscopal diocese were also pure Serbs,

Digitized by Google

above all in the period referred to. It is natural to suppose that the Serbian priests and monks who were surprised in the churches and monasteries of the Serbian emperors of that diocese by the fall of the Serbian State (1459) remained where they were, and continued their functions under the new ecclesiastic jurisdiction, to which they belonged from that moment. Until the restoration of the Patriarchate of Ipek (middle of the sixteenth century) they could remain there, and even longer. As regards the higher clergy, it was Serbian as much as it was Bulgarian. In a previous quotation from Golubinsky, where he says that the archiepiscopal chair, as well as those of the metropolitans and bishops, were occupied by Bulgars, he adds that they were occupied "by Serbs also" (p. 143). Gelzer also says that the episcopal chairs were occupied by Bulgars and Serbs" (p. 16). We have authentic proof that two Serbs occupied the archiepiscopal chair of St. Clement. They were Symeon, who did so in 1550, after having been metropolitan at Raska (see v. *Ruvarac*, Archiv. f. slav. Philologie X. 1887), and, in 1574, a nephew of the first Serbian patriarch of the Serbian period (see v. Ruvarac, Glas S. K. Akademije, 62, 1901, p. 25).

The Archbishopric of Ochrida was, therefore, a Greek Church, purely and simply Greek. With very few exceptions the archbishops were Greek, Greek the metropolitans, and Greek the bishops. Greek was also the official language of the Church; the correspondence of the Archbishopric, published by Gelzer, is Greek, and all historians say so, including Drinoff. The bishopric was never Bulgarian, from its beginning to its end. Whenever there was the slightest change in its general Greek character it was more in favour of the Serbs than of the Bulgars. And in order to add a word to what was stated in the preceding chapter regarding the reasons why the diocese of Ochrida and others were not incorporated in the new patriarchate of Ipek, one reason must be found in the Greek character of the Church of Ochrida, protected as it was by the Greek Church at Constantinople.

The Bulgars, therefore, did not have their national Church in Macedonia during the sixteenth to eighteenth century, whereas the Serbs did. Ochrida was not for the former what Ipek was for the latter. In order to terminate this long analysis I shall refer to a parallel drawn with regard to Macedonia by Gelzer between the Serbian Church and the Bulgarian Church. "In Ochrida the state of affairs, from a national point of view, was essentially different from that at Ipek. In the latter the national Serbian spirit had been exclusively maintained from the patriarchal chair down to those of the bishops. The contrary happened in the case of the Bulgars. Their national patriarchate was that of Tirnovo, whereas Ochrida was, in reality, always in the hands of the Greeks" (p. 150).

V.—Fourth Period (Recent Epoch).

(The Serbs Liberate Macedonia.)

Where, then, is the Bulgarian epoch of Macedonian history? We have conscientiously searched for it through the centuries, but, with the best faith in the world, we can only find about 100 years in the primitive age and about fifteen years in the thirteenth century. Perhaps this Bulgarian epoch is to be found in recent history?

It is not necessary for me to insist on the past fifty years of political struggles in Macedonia which preceded the recent Balkan wars. This period, during which the Bulgars attempted, at the cost of all possible machinations, intrigues, ignominies, and crimes, to denationalise our people in Macedonia and to impose on them the Bulgarian nationality (happily without result), is sufficiently known in the current political literature of Macedonia. I recommend to my English readers the excellent pamphlet recently published by Mr. Crawfurd Price, "The Intervention of Bulgaria and the Central Macedonian Question," where he will find a brief, but very truthful, exposée of the question. Personally, I shall refer only briefly to the great historical happenings of the recent Balkan wars.

It is very characteristic, and of interest to those who seek the logical chain of historic events, to note that it was the Serbian Army and not the Bulgarian Army which freed Macedonia from the yoke of Turkish dominion. Throughout Serbian Macedonia, from Ishtip in the east to Ochrida in the west, it was always the Serbian soldier who came to free his Macedonian brother, and not the Bulgarian intruder, who had nothing to do there. Only one Bulgarian division put its foot on Macedonian soil during the war of 1912—it was the division of Rilo which passed through Ishtip—and then it only arrived after the Serbian Danube division had received the bread and salt of the population, the traditional offering of the Slavs to their liberators. It is, therefore, into Serbian hands that the Turks gave Macedonia, just as it had been from Serbian hands that the Turks had received it. This is the real logic of historical laws.

* * * *

No, certainly, Macedonia is not Bulgarian. With the exception of a short period in far-away ages, she was always Serb as long as she was Slav. She is likewise Serb to-day. She is, moreover, indispensable to the Serbian State, a circumstance which is generally ignored.

In an admirable essay on Alexander the Great, Edward Freeman characterises this great man not as a conqueror, but as the champion of the West against the East. I believe that the same idea can be applied to the Serbian people. The Serbs are not conquerors. They are simply the champions of the West against the East. Protecting the interests of the West, they fought for centuries against Byzantium, against Turkey, against Bulgaria, which, all of them Oriental States, attempted to invade the West. In this we see the historic mission of the Serbian people.

In order to accomplish this mission, the Serbian State must necessarily possess its ancient and actual Macedonian dominion. For it is there that the strength of the Serbian State lies. Consult history and you will see that Serbia was only strong when she possessed Macedonia, and that the loss of the latter caused the dismemberment of the powerful organism of the ancient Serbian Empire. Macedonia is for Serbia what the hair of his head was for Samson: cut it off and the strength is gone. It is from Macedonia that Alexander the Great accomplished his mission in the history of the world; it is with Macedonia that Serbia will accomplish her mission in the history of the Balkans. Give Serbia all the western provinces of the Peninsula—Bosnia, Dalmatia, Croatia, and the Slovene countries—and she will not be able to hold them if you refuse to give her Macedonia. There are very few people who realise that the possession of Macedonia by Serbia is in the interest of all the Southern Slavs. The people to whom are given Spalato, Agram, and Leibach must also be given Palanka, Ishtip, and Radoviste. It is the Vardar river which defends the Isonzo. It is in order to dominate this Macedonian river that the Serbs have struggled throughout their history, in times of their prosperity as well as in the hours of their need. The first Serbian princes of ancient Raska moved in the direction of the Vardar in their offensive against the Byzantines; the last Serbian rebels of the Pashalik of Belgrade strove to drive the enemy who had taken their dear river from them. Every drop of water of the Vardar was paid for by a drop of Serbian blood.

The Government of my country has declared itself to be prepared to make the indispensable sacrifices in Macedonia. As a simple Serbian citizen, I do not wish to object to what those competent and responsible believe it to be their duty to do. But when I think of the sacrifice, I am haunted by a memory.

During the recent Balkan wars there lay in hospital a seriously wounded Serbian officer, who was told by the surgeons that the only means of recovery were the application to his wound of a living piece of human flesh. One evening, a Serbian soldier, who also was wounded and lay in the same hospital, heard of this curious case. He meditated over it for a long time during the night, and, in his simple and modest soul, he decided to sacrifice himself for his officer. The following morning he declared that he was ready to undergo the operation. The surgeons performed it and the officer was healed.

Serbia is willing to make the same sacrifice. The only difference between her case and that of the soldier is that the latter sacrificed himself for his officer, whose first duty it was to defend him, whereas Serbia is sacrificing herself for her enemy, whose first task it will be to attack her.—I am, etc.,

PAVLE POPOVIC,
(Professor of Jugo-Slav Literature at the University, Belgrade).

SERBIA'S FLAG DAY

PATRONESS:
HER MAJESTY THE QUEEN

WEDNESDAY
September 22nd

is the day on which you can show, in a practical way, your gratitude to this gallant little nation which holds the pass for the Allies. Ravaged and desolate, she needs every penny we can spare to maintain her in her gallant fight.

Helpers are wanted

Will you volunteer in this work of sympathy?

Write to—
THE ORGANISER, COSMO HOTEL,
Southampton Row, W.C.

The SERBIAN RELIEF FUND

PRESIDENT: THE BISHOP OF LONDON.
CHAIRMAN: BERTRAM CHRISTIAN, ESQ.
HON. SEC.: R. W. SETON-WATSON, ESQ., D.LITT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The *Morning Post* published yesterday a despatch from its correspondent in Sofia as follows:—"The Premier has stated in an interview that the Turco-Bulgarian agreement for the cession of the Dedeagatch Railway has been concluded. The concession consists of the railway line with Karagatch station and a strip of territory two kilometres deep along the left bank of the Maritza. The right bank of the River Tundja has not been ceded. The Premier stated that the occupation of the ceded territory will take place in ten days. The ceremony will be conducted in the presence of the Bulgarian Ministers and Turkish Pashas."

***

If the above information is correct—and I have no reason to doubt its accuracy—a new page in the economic history of Bulgaria begins, namely, she will in future be able to import goods from abroad viâ Dedeagatch without having to depend on the questionable goodwill of the Turks. On the other hand, the full utility of the railway cannot be estimated until Bulgaria has thrown in her lot with the Entente Powers, who control the sea, on account of her immediate proximity to Turkey, to which country her imports might eventually be re-exported.

***

Last Thursday an agreement was signed between Great Britain and Greece whereby the Greek Government undertakes to adopt certain measures in order to prevent contraband traffic. That such an agreement between the Entente Powers and Greece was imminent was foreshadowed in THE NEAR EAST last week, and I am pleased to see that M. Venizelos has not lost his accustomed talent for expediting negotiations. In return for the assurance given by Greece, "Great Britain," says the *Times* Athens correspondent, "undertakes not to interfere with the export of raisins (currants?) and tobacco, to whatever destination they may be consigned, provided that the consignments in each case do not exceed normal limits. Further, Great Britain will permit the export for Greece of all goods intended for local consumption." The consequence of this arrangement will be to re-establish freedom of navigation between Greek ports without examination by the Allied warships.

***

The statement made by the U.S. Consul in Patras, to the effect that direct banking facilities have been established between Greece and America, and "that there is no longer need for the old, indirect communication viâ London," is surely a significant sign of the times. People there are, and their number is not restricted, who believe that one effect of the war will be the removal of the world's money centre from London to New York. How true this pessimistic outlook will prove remains to be seen; but there can be no doubt that American exporters are leaving no stone unturned to obtain direct banking facilities with their foreign markets, and they are finding that, in the present state of the money market, thoroughly upset as it has been by the war, they are being eagerly listened to by New York financiers, and are procuring the monetary help which was forbidden them a few years ago. Retaliation on our part (if we really wish to reassert our old position) would be worse than useless. For, once having established his direct banking communication with foreign countries, the 'cute Yankee will not revert to London again with a view to having his bills, etc., cleared.

***

As every financial operation, including those of so purely a commercial nature as referred to above, imply a commission for the intermediary—*i.e.*, London—bank, it stands to reason that those banks which hitherto made a tidy income out of the American foreign trade will see it dwindle and shrink away. The unimaginative banker will bemoan his fate, but the intelligent one will seek another source of revenue to replace the old one. This can easily be done, and to the greater advantage of his own country. For, if the United States stand in need of improved banking facilities, in order to extend their foreign trade, so do we, and our bankers, by backing our great industrial and exporting firms, are in a unique position to help in the matter. We want British commercial banks established in those markets—the Near East, for instance—where we intend to stimulate our trade; such banks will pay handsome dividends, and they will, besides, foster British trade. There are many ways to go about the formation of the banks in question, but the simplest, I think, would be the creation in London of a gigantic commercial banking institute (the bankers alluded to above could well form the nucleus), which would in due time open branches in foreign markets where a good proportion of the capital of the branch would be found locally.

***

Some such step must be taken sooner or later. The Americans, in order to improve their export trade, are shaking off their old indirect banking methods viâ London and are creating direct banking facilities with their markets. This is only the first step. The second step will be the creation of American commercial banks in those markets, and if they succeed in doing so before we have instituted our foreign commercial banks, we shall find ourselves in the same position of commercial inferiority to the United States as we stood to Germany during the past decade.

***

Dr. E. J. Dillon, well-known to my readers as an authority on Near Eastern matters, contributes an article to the *English Review* on economic questions and the war. His argument is that neutrals, such as Roumania, Bulgaria, and Greece, have lost faith in our ability to carry the war to a successful finish. This, of course, is mainly due to German lies. To counteract this, Dr. Dillon suggests that the Allies should at once supplement their military entente "by an economic league which shall reserve for its members those advantages, financial, commercial, and others, which are now lavished upon staunch friends and bitter enemies indiscriminately." The idea really is a financial and commercial Preference Tariff applicable only to the Entente Powers and their friends, but from which are to be excluded enemy and lukewarm neutral countries. "To-day some neutrals fancy it is to their advantage that we should be defeated. Well, let us give them an interest in our victory and a motive for contributing to it."

***

Though the working of the idea as put forward by Dr. Dillon offers some almost insurmountable difficulties, the idea itself has merits. "Without the freedom of the enormous world-markets of Great Britain, France, and Russia," the Germans would never have been able to expand commercially and industrially as they have done, which proves that our "enormous world-markets" are not to be despised even by malevolent neutrals. Besides, and it is no secret, the Germans and their allies intend to form a similar ring among themselves and their friends, and the ways and means are already being seriously studied in Berlin. Let us do likewise, creating a "most favoured nation" clause for our friends and Allies that will not only not be a diplomatic emptiness but an economic reality. It was free trade in England which gave Germany her great industrial *essor* and actually produced the present war. Let's be done with it, once and for all. As Dr. Dillon rightly observes: "Shall we bestow on them (our enemies) the same privileges after the war? If so . . . . we shall be suicidally running after fate, and shall richly deserve to overtake it."

***

I have received a copy of *Les Finances de la Grèce*, by M. A. Andréadèdes, which appeared in the April-May number of the *Journal des Economistes*. I shall refer to this valuable publication at some length in an early issue of THE NEAR EAST. Another publication of more than usual interest is *La Revue Commerciale*, a weekly trade paper which is being published in Salonika in French and Greek, and which gives useful information concerning the local market and trade movements to and from the Greek port's chequered hinterland. Subscriptions to this paper are 15 frs. per annum.

***

The bankruptcy which has been announced of the well-known Prague cotton works of Messrs. Herny and Son is a serious blow to the Bohemian cotton trade. The firm was well represented on the Balkan Peninsula, and had numerous clients in the Near East. It worked on an extensive credit system, and the articles it put on the market were of a cheap and inferior quality, but adequate enough for the tastes and purses of its clients. Doubtless, as the war continues, other Germano-Austrian cotton firms will have to be wound up, and it is therefore as well that we should be in a position, as soon as hostilities cease, to supply the demand in the Balkans for piece goods of all kinds. But, if we wish to be successful, we must give the people what they want, what they are accustomed to, and not foist goods upon them for which they have no liking, telling them politely whilst doing so that they can either "take what we give them or go without." It would, however, be characteristic of British methods in the past if some such advice were proffered to Near Eastern customers.

Bulgarian Financial Notes.

(From a Correspondent.)

Sofia, August 14.

According to the monthly reports of the Financial Ministry of Bulgaria the general amount of the Budget for 1915 is 551,575,786 lewas, of which 275,379,886 lewas are anticipated revenues and 276,195,900 lewas are allowed for expenditure. The figures for last year were 520,415,552 lewas, 256,995,000 lewas, and 263,420,552 lewas.

The collected revenues during the first quarter of the current year—January 1 to March 31, 1915—amounted to 38,206,556.40 lewas, as against 42,506,718.32 lewas expenditures.

The collected revenues came from the following sources :—

Direct taxation (impôts directs)	1,328,594·95
Excise (impôts indirects)	17,118,860·66
State monopolies	2,020,271·48
Other taxes	2,836,534·98
Fines, etc.	510,079·10
Railway, pest, telegraph and telephone	8,229,083.89
State properties and capital revenue	1,540,949·22
Communal and District revenues	566,965·85
Sundry revenues	4,055,216·27
Total	38,206,556.40

Expenditures were as follows :—

Civil List	1,540,322.15
State Debts	4,995,248·32
State Accounts Department	87,093·76
Foreign Office	2,053,137·38
Ministry of Interior	1.057.453·58
Ministry of Education	704,546·92
Ministry of Finance	652,473·19
Ministry of Justice	739,116·11
Ministry of War	6,028,571·79
Ministry of Commerce, Industry and Labour	1,503,952·15
Ministry of Public Buildings	527,978·10
Ministry of Agriculture and State Properties	622,398·90
Ministry of Railways and Ports	1,602,617·78
Chief Direction of Posts, Telegraph, and Telephones	604,202·19
Non-recurring State Expenditures	18,497,114·58
Supplementary Credits voted out of Regular Revenues for 1915	1,290,492·42
Total	42,506,518·32

The supplementary credits voted in 1914 and included in current expenditure during the life of the Budget for that year amount to 490,236,950.95 lewas, of which, from January 1, 1914, to March 31, 1915, the sum of 64,273,035.62 lewas was spent principally for the requirements of the Ministries of War and Railways, and for the support of Macedonian and Thracian refugees. The credits remaining unexpended on April 1, 1915, amounted to 425,963,915.33 lewas.

State Debt.

The situation of the State Debt of Bulgaria on March 31, 1915, was as follows :—

Actif.

(1) A la Banque de Paris and des Pays-Bas:	
Garantie subsidiaire de l'Emprunt Bulgare 5% or 1902	1,500,000·00

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, August 19.

The Oil Industry.

The petroleum industry appears to be the one to suffer most on account of the war. Owing to the absence of all means for export the quantity of raw petroleum, derivates, and benzine in store at the various depôts exceeds 1,000,000 tons, of which 260,000 tons is benzine. New reservoirs are being constructed for 800,000 tons. It is to be remarked that not a single company has interrupted its activities during the past year.

Incendiarism.

A dastardly attempt at setting fire to oil mills was committed three days ago in the petroleum districts at Tzintea.

The night guard of the "Sphinx" Company noticed a fuse burning in such a manner as to cause the explosives to which it was attached to blow up some works above a well. This, no doubt, would have set all the wells in the neighbourhood on fire.

Happily, the watchman had the presence of mind immediately to stamp out the fuse, thus preventing a catastrophe. The population are in a state of natural anxiety, as this is the second attempt of late in this district.

The police have the matter in hand, and believe they have a strong clue to the would-be perpetrators of the crime.

Permission for Importation.

The Ministry for Foreign Affairs has decided that those requesting the intervention of the Ministry with Governments abroad in order to permit of the importation of certain articles of commerce necessary for the country or its factories must in future address their demands to the Ministry of Commerce, which will decide whether the importation of the articles in question is absolutely necessary, and will at the same time demand from importers the necessary guarantee to insure that the merchandise in question will not be re-exported.

Treasury Receipts.

Receipts of the Treasury for the month of June reached the sum of 35,800,000 frs., which, as compared to June, 1914, shows a decrease of 7,975,000 frs. less. Total receipts up to June 30 amounted to 521,103,000 frs., the amount for the same period of last year being 567,123,000 frs. Expenditure for the same period amounted to 501,617,000 frs., thus leaving a balance of 19,485,000 frs. in favour of the Exchequer.

Trade Returns.

Related statistics of Roumania's foreign trade in 1912 have only just been published.

The value of exports and imports amounted to 1,280,000,000 fr., as against 1,261,000,000 in 1911.

The imports amounted to 637 million fr., an increase of 68 millions on the previous year.

The exports were 642 millions, being 49½ millions less than in 1911. This is accounted for by the crop being more feeble than in the previous year, and to the outbreak of war between Italy and Turkey, and the Balkan war, which caused the Dardanelles to be closed on several occasions.

Cyprus Salt Industry.

Imperial Institute Report.

The Cyprus salt industry is the subject of a supplement to the *Cyprus Gazette* (August 13). It deals with a report by the Imperial Institute on a sample of salt submitted to it for analysis on January 14, 1914. An interim report was furnished by the Imperial Institute in August, 1914, in which further information was asked for in order that various questions might be dealt with. This further information was supplied in September.

The following are extracts from the definite report now submitted to the Cyprus Government :—

It was pointed out in the first report that the salt sent for examination was unrefined, and that for export purposes it would be desirable to refine it by re-crystallisation, in order to produce a salt suitable for table use. The residue of the sample sent to the Imperial Institute has therefore been used for crystallisation experiments, the results of which may be briefly stated as follows :—

Analysis.

One pound of the salt was dissolved in 3.3 pounds of cold water, and the liquid allowed to stand until all insoluble matter had settled out. The clear liquid was then carefully decanted into shallow vessels, and left at a temperature of 30 deg. to 40 deg. C. to deposit crystals. The crops of salt crystals which separated each day were removed, drained and allowed to dry in the air. About 85 per cent. of the original weight of salt had separated in twelve days, and each of the twelve crops so obtained consisted of salt of good quality. The liquor continued to deposit crystals for another five days, but these represented salt which steadily deteriorated in quality owing to the presence of increasing quantities of magnesium and lime compounds.

The first twelve crops were thoroughly mixed together and analysed with the following results :—

	Per cent.
Sodium chloride	98·34
Potassium chloride	trace
Calcium sulphate	0·61
Magnesium sulphate	—
Magnesium chloride	0·17
Moisture	0·61

The re-crystallised salt was of good colour, and showed no tendency to deliquesce on exposure to air. It is not so pure as the best refined English salt, which contains 99.96 per cent. of sodium chloride, equal to only 4 parts of impurities in 10,000 parts of salt. The purified Cyprus salt would however be readily saleable as a refined salt, and is obviously of much better quality than the crude Cyprus salt.

It appears that the quantity of salt deposited annually at Larnaca is about 20,000 tons, of which only about 2,500 tons is now extracted for local use, leaving about 17,500 tons. Assuming that about 75 per cent. of this could be recovered by re-crystallisation as a refined salt, this would mean that about 13,000 tons of refined salt would be available for export. It is a point of some importance to ascertain whether this supply could be maintained annually, though the history of the salt industry of the island and such geological observations as have been made seem to indicate that it could.

Possible Markets.

The most likely markets for the refined Cyprus salt are the various countries of the Mediterranean, and possibly India, East Africa, and the Far East.

In many of these countries very little salt is imported and large quantities are made and exported, whilst in others the salt industry is a Government monopoly and importation of salt is prohibited. Countries in these two categories are ruled out as possible markets for Cyprus salt. The remaining countries are dealt with in an informative table annexed to the report, and include France, Belgium, Russia, Algeria, Morocco, British East Africa, Portuguese East Africa, Persia, and India.

It is clear from the table that there are a number of salt-importing countries which could probably take refined Cyprus salt, if the latter can be produced and shipped at rates equal to or lower than those now ruling for the salt imported there. On this point local inquiries would have to be made in the countries themselves, but before making these inquiries it will be necessary to know at what price refined Cyprus salt could be offered. For this purpose a large scale experiment in refining salt must be conducted in Cyprus, careful note being kept of the cost of production. With the information thus obtained and that now supplied in this report it may be possible for merchants in Cyprus to conduct the necessary inquiries in the countries considered most promising as markets for Cyprus salt, but if not the Imperial Institute will be glad to afford any further assistance that may be required.

In the United Kingdom and other countries where fuel is plentiful and cheap it is usual to evaporate brine solutions to the point at which they will crystallise by artificial heat. In countries where fuel is not abundant and the climatic conditions are suitable, solar heat is employed, and it is assumed that this latter plan will be adopted in Cyprus.

Lecture on Cyprus.

We have been favoured with a copy of the lecture which was to have been read by Professor H. B. Gray at the Imperial Institute in July, but which had to be unavoidably eliminated from the course of elementary Imperial lectures. The following are some extracts from the paper which has been submitted to us :—

The great industry of the island is agriculture, but the sleepiness and backwardness of the native farmers have prevented it being much developed. Probably it will prosper more now that the country is under direct British control. Fruit to the value of about £3,000 was exported in 1901; in 1911 this had grown to £5,400. Cyprian wine was once famous, and might well regain its ancient reputation.

The great industry of Cyprus is the production of the karob or locust bean. This (and not the insect of the same name) was the food of St. John the Baptist; probably, too, it is what is referred to as "the husks which the swine did eat" in the parable of the Prodigal Son. To-day it is bought at sweet shops and eaten by children, chiefly in poor neighbourhoods; but it plays no important part in the dietary of older people. Its nutritive properties are, however, well known, and no doubt our food reformers and physical regenerators will some day find a means of dealing with it. In appearance it is like a very large English bean. The seed is small and hard as stone, but the pulp is very sweet, and, as said, very nutritious. It is dried and made up into cakes, and used chiefly as food for horses, mules, and cattle. Thorley's Food is said to be largely made out of this pulp. How important the industry is to Cyprus may be gathered from the fact that the export increased from £88,000 in 1901 to £145,000 in 1911.

Among non-agricultural products asbestos is very abundant. This is a variety of hornblende, and its value for purposes where an incombustible fibre is required is well known. Copper is still produced, and also salt. No one quite knows the origin of the salt lagoons of Cyprus. The principal one lies to the south-west of Larnaca. The salt is probably due to the fact that during the rainy season water runs down from the mountains and fills the lakes with fresh water which the heat of summer afterwards evaporates. Then the soil being impregnated with salt, salt mixes with the fresh water and is left on the surface of the dried lake. It is harvested in August. It is a Government monopoly, and the annual revenue derived from it is about £7,000.

As already stated, the position of Cyprus has always given it a certain political importance. This is still the case. Lying due north of the Suez Canal, it forms an admirable eastern base from which to protect British interests with our Fleet; and, whenever the railway from Constantinople to the Euphrates valley becomes an accomplished fact, Cyprus will occupy a commanding position owing to its nearness to the Gulf of Alexandretta or Iskanderun.

TRADE NOTES.

Egypt.

The Director, Coastguard Stores, Arsenal. Alexandria, invites tenders for the supply of 4,500 kilos of engine oil. Date, September 30.

The Controller of the Tanzin Department, Cairo, invites tenders for the supply of 50 tons of cement. Date, September 11.

Mr. Walter W. Davies, of Cairo, was recently among the successful tenderers to the Egyptian Government for the supply of clothing to the Barlac Training College for Women Teachers.

Morocco.

H.M. Consul-General at Tangier has forwarded an extract from the Cherifian Bulletin Officiel to the Board of Trade, of July 26 last, containing a Dahir for the establishing of a system of general warehouses ("magasins généraux"), in the French Zone of Morocco. These warehouses are to be used for storing raw materials, manufactured articles, merchandise and produce; at the same time, commerce is to be encouraged by the granting of receipts and warrants on the goods deposited which can be negotiated as dock warrants can in the United Kingdom. These warehouses cannot be opened except by special permission, which will be granted only to persons who have a sufficient capital and from whom deposits of varying amounts will be required.

H.M. Consul at Fez (Mr. J. MacLeod, C.M.G.) reports that a French subject n that city wishes to purchase from United Kingdom manufacturers men's, women's, and children's woollen undergarments, including hosiery; also linen and cotton goods, especially all articles termed in French "fil d'Ecosse" (i.e., cotton thread).

United Kingdom manufacturers of the goods mentioned should apply to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., for the name and address of the enquirer.

Gibraltar.

A further amended list of prohibited exports is published in last week's issue of the Board of Trade *Journal*.

Libya.

The U.S. Consul in Tripoli reports :—

Until a comparatively recent date there was no market in this region for ready roofings. Italian influence has, however, changed this condition; new types of roofs have been introduced, and a gradual increase is likely in the utilization of such products; but to make the demand important changes must take place in the habits and purchasing power of the native masses. Of the 1,050,000 inhabitants in Libya, 95 per cent. are Arabs, and a large proportion of these are nomadic. Natives who live in the oases have fixed habitations—simple dwellings of stone, sun-dried bricks, or packed earth, with roofs fashioned from date-wood rafters overlaid with palm leaves and straw, the whole being covered with a coating of lime plaster. In coast towns structures are either of stone or brick, with division walls of like material.

All roofs in this last class of building were formerly flat and covered with lime concrete. With the arrival of the Italian forces in 1911 the need for military accommodations caused great building activity. Temporary structures were erected of wood, roofed with eternit, corrugated iron, paroid, or rubberoid. Later, similar quarters were built at interior points and knock-down houses of German origin were introduced. In buildings of a more permanent character reinforced concrete, concrete blocks, bricks, and eternit have been used. Sloping roofs were introduced; the newest hotel has one of eternit slates, and its exterior walls are completely covered with the same article in red. The headquarters of the principal steamship company—a two-story structure with tower—is also roofed and sheathed with eternit, as are the warehouses of the line.

Eternit is described as an artificial stone and is said to be composed of asbestos, other mineral substances, and chalk, fixed and hardened with acids. It is produced by an Italian firm in factories at Casale Monferrato. Sheets are either slate colour or red, and are of varying sizes, ranging from 12 ft. 3 ins. by 3 ft. 11¼ ins. to 1 ft. square. The smaller

Digitized by Google

sizes have found readiest sale. All orders are shipped direct from the factory, packed in crates of 100 sheets. The 40 by 40 centimetre sheets are used exclusively for roofs, have three truncated corners, and are sold c.i.f. Tripoli at 42 lire per 100. The large sheets, 120 centimetres square, are quoted at 471 lire, and those 100 centimetres square at 328.50 lire per 100 sheets.

This material can be cut without cracking, and with the aid of a specially contrived tool nails can be driven through with facility. It requires no underlining, and slates are attached directly to the crossbeams of roofs and to uprights of walls. The largest sheets weigh about 28½ pounds, the next 19¾ pounds, and the roofing slates 3 pounds each.

Paroid and rubberoid roofing will probably find little demand here except for temporary buildings. Another paper stocked locally is called "cartoni incatramati feltri" (tar-covered felt cardboard). It comes in rolls containing 10 square metres, and costs, in the heaviest grade, 0.80 lire per square metre. Corrugated iron also found some favour for roofs, and some public structures, such as the fish market and customs landing-stage, were covered with it.

It is estimated that in 1912 imports of roofing materials totalled not less than £10,000, and in 1913 about £8,000, fully 75 per cent. being eternit.

NEWS FROM ALL SOURCES.

The *Times* special correspondent at Mytilene says that travellers who have arrived from Constantinople report that the Turks have set fire to the town of Ismid, the ancient Nicomedia, which is inhabited mostly by Armenians. The fire lasted two days, August 27 and 28. Many Armenians are said to have been massacred during the conflagration.

The Bulgarian Minister of Finances has authorised several merchant firms to import Egyptian rice.

The Karlovo District (Bulgaria) exported to Great Britain and America in July, 172 kilos of attar of roses, valued at 150,000 frs.

The Bulgaria wheat crop this year is estimated at 1,800,000 metric tons.

The Greek steamer Marcella landed on Monday, at Port Talbot, Captain Olsen and fifteen of the crew of the Norwegian steamer Marie, which caught fire and sank in the Bay of Biscay on September 2. The Marie was bound to London with a general cargo valued at £1,000,000. The vessel caught fire in a strong gale when heavy seas were running, and the flames spread rapidly. The crew had a narrow escape, two boats being swamped in launching.

The Times special correspondent in Mytilene states that it is reported viâ Athens that 400 workmen from Krupp's arrived recently in Constantinople. [This lacks confirmation.]

The rumour which has been current to the effect that Turkey was attempting to obtain munitions in Bulgaria are devoid of foundation, it is stated in London, because, whereas Turkey has Krupp guns, Bulgaria is armed with Creusot cannon.

Numerous purchases of wool, hides, and cereals, which the Germans have effected for a month past in Bulgaria, says the Salonica correspondent of *Le Petit Marseillais*, include delivery *viâ* the Danube. The Germans appear, therefore, to anticipate being able to open the Danube route, now closed by the Serbians, and thus induce Bulgaria to join them.

Dr. von Rosenberg, Reporter on Balkan Affairs to the German Foreign Ministry, is accompanying the Duke of Mecklenburg on his diplomatic visit to Tsar Ferdinand of Bulgaria.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

'LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

Patras in 1914.

The U.S. Consul in Patras has published a useful report on his district for 1914, from which the following are extracts:—

Commercial and industrial conditions in the consular district of Patras, Greece, were upon the whole fairly good for the year 1914. Harvests were for the most part satisfactory, and growers experienced no great difficulty in marketing their products. The few industrial plants of the district operated without serious interruption. Oversea trade experienced only a slight falling off from the previous year, the loss falling rather to the import than the export side of the balance-sheet.

The first half-year was particularly satisfactory to all economic interests. The harvests of the preceding season had been favourable, and the year opened with stocks on hand sufficient to meet the prospective needs of consumption at home as well as the demands of foreign markets. The men who had served under the colours in the wars which the country had been engaged in during the two previous years had largely returned to their regular occupations. The prospects for trade, domestic and oversea, were encouraging. Then as the year drew on toward summer and the coming harvests the outlook in that direction became brighter with the favouring seasons. Farmer and merchant predicted and prepared for a period of unusual prosperity with the coming of autumn.

Suddenly, upon the eve of harvests, the European hostilities broke out, sweeping away for the time the foundations of trade and causing industrial paralysis. Western Greece felt the shock acutely. Not only was its banking at home paralyzed and its entire system of foreign credits thereby interrupted, but it suffered peculiarly in that with the breaking out of hostilities it saw the foreign markets upon which it had been confidently depending to place its great export crop of currants, ready for harvest, either entirely closed at a stroke or else so crippled as to hold out no definite hope for the immediate future.

Currants.

In discussing the commerce and industries of this district the currant trade always leads. This trade stands in somewhat the same relation to the district as cotton does to the Southern States of the United States, but with this significant difference, that whereas the cotton grower may always count on a large domestic consumption of his crop whatever may happen to oversea trade, the Greek currant grower can count upon no natural domestic market for his crop, but is entirely dependent upon the outside world to give him a market. Let the oversea trade be threatened and instantly an economic crisis presents itself not only to the currant grower, but to the entire district.

Business men, anticipating that under the circumstances (European war) there would be a great oversupply of fruit, and fearing the return to old chaotic conditions unless something could be done, appealed to the Government to raise the retention from 35 per cent. to 50 per cent. in kind—a proposal which meant the permanent retirement from the market of one-third of the entire currant crop. If this could be done, said the merchants, there was hope of holding the market somewhat firm; the less marketable fruit would find its way to the retention vaults of the company, there to be converted into wine or alcohol, and the remainder would suffice to meet all the demands from abroad.

The Government, although declining to act immediately, looked upon the appeal with such apparent favour that the local market was at once stimulated and recovered sharply from its depression. The appeal was finally granted, going into effect October 9, and causing a further advance in prices on the local market of some 7 per cent. Meantime every effort was made to reach, either directly or indirectly, the regular markets abroad. The result of all which was that prices soon became steady, and the movement of fruit steadily increased.

Exports.

Among exports from this district olives, olive oil, cheese, and wine figure as most important, after currants. The year's trade in all these proved satisfactory. The trade in olives and oil for any year is drawn chiefly from the crop of the preceding year, the harvest falling in November-December, and finding market in the new year. The harvest of 1913, the biennial full-crop year, had been fair, so that stocks of olives and oil for 1914 were ample. The largest part of both these commodities is taken up by the domestic need, but there is always a good export movement.

The exports of olive oil from the district are much more important than those of olives. The islands of Corfu, Leucas, and Paxos in this district supply four-fifths of all the olive oil exported from the Kingdom of Greece, the exports of oil from these three small islands amounting in full-crop years to some 4,000,000 gallons. Italy and France are the best customers, although both countries produce oil on a much larger scale than Greece. Italy takes about half the export crop. This amounts in full years to some 2,000,000 gallons. France, the next best customer, takes 15 to 30 per cent., or 500,000 to 1,000,000 gallons in full years. Russia stands next after France in the list of customers with annual purchases of about 375,000 gallons. Austria and the United States take about equal quantities.

The exports of cheese consist of two kinds—a soft, white, salted cheese, shipped in small casks, and head cheese of various grades. All cheese manufactured in the district or exported from it is made of goat's milk. The United States stands easily first as a customer of cheese from this district. The next best customer is Italy, which, however, takes only head cheese.

Great quantities of common wine, in casks, both red and white wine, are annually exported from the district. The shipments total about half of the exports of these wines from the entire kingdom. Official statistics covering the three years 1910-1912, the latest available, give the export of wine in casks from the district as about 6,000,000 gallons per year. The same authority shows that France is by far the heaviest importer, shipments to that country amounting annually to about 45 per cent. of all wine exports. The next best customer during this period was Germany, which took some 15 per cent. of the total wine exports. Austria, Italy, and Switzerland competed, in the order named, for third rank. The Netherlands, Great Britain, and Turkey came next.

This district produces large quantities of tobacco. There are three fairly distinct kinds produced, known locally as Tsembelia, Aromatic, and Basma. The article is light in both colour and weight. The leaf varies from four to five inches long in the Aromatic to nine or ten inches in the other grades. All three kinds are best suited for making cigarettes, of which grade quantities are manufactured and consumed in the district. The annual exports of tobacco from the district are large, varying in value from £120,000 to £180,000. Egypt is easily the best customer, with Germany, Austria, and Malta standing next.

The annual exports of valona amount to some £50,000. Considerable shipments were formerly made to the United States, but recently the trade has stopped almost completely. The article now goes to Austria, Germany, Italy, and Russia.

Imports.

The chief articles imported into the district are, in their order, wheat and other cereals, cotton and woollen goods, lumber, sugar and coffee, cured fish, flowers of sulphur and copper sulphate, coal, iron manufactures, rice, and hides. These make an annual total amounting to some £1,200,000, or 60 per cent. of all imports. The other 40 per cent. is distributed over a wide field of commodities. The district imports about one-half its wheat and other cereals, practically all its cotton and woollen goods, amounting annually to £200,000; nearly all its lumber; all its sugar and coffee; cured fish; flowers of sulphur and copper sulphate; coal; iron manufactures; rice; and much of its hides for tanning.

Trade in all these lines was favourable during the first half of 1914. Prices on foreign markets were satisfactory, and domestic demands for practically all these commodities encouraged importers. There was but little shifting in the channels of trade. The second half of the year, however, saw great dislocation. This was due to the closing of many foreign markets on which importers had depended, to the difficulty of securing other satisfactory markets, and to the crippling of transportation facilities. Business in one or two lines became paralyzed and did not recover perceptibly as the year closed.

Wheat and other cereals are usually supplied to the district from Black Sea ports. Upon the declaration of war by Turkey in October and the closing of the Dardanelles this market was closed. Importers at once turned to the United States as the only available source of supply, and during the last quarter of the year heavy orders were negotiated upon that market. Prices abroad rose steadily as the months passed, and shipping companies raised their ocean freights by as much as 300 per cent. or even more. These advances in cost caused a sharp advance on the local markets in the price of bread, the price advancing from 4 cents. per pound to 4¾ cents. Since half the expense of daily ration among the common people is bread this meant a perceptible advance in the keeping of a family. Coffee, which up to the outbreak of the war had come from Austria, was imported from the United States in considerable quantities toward the end of the year, the former market being closed. Copper sulphate was brought from Great Britain during the first half of the year, but that market not being available in the second half supplies were brought from the United States.

The lumber supply of the district comes normally from Austria via the Black Sea. In the second half of the year this source was completely cut off, and as no other market was immediately in reach, this trade became paralyzed. Importers, however, began to feel the American market in the last months of the year, and it is probable that supplies will shortly begin to arrive from that market.

Iron manufactures are brought from Great Britain, Belgium, and Germany to this district. The last half of the year witnessed a marked decline in movements, owing to the difficulties experienced in terms and transportation. The same was true of cotton and woollen goods, which come mainly from Great Britain and Germany. Other imports held to their usual channels, coal coming from Great Britain, sugar from Austria, cured fish from Labrador, though in lesser quantities on account of difficulty in transportation; sulphur and rice from Italy, and hides from any available market.

ROUMANIAN OIL PRODUCTION.

The production of crude oil in Roumania during June totalled approximately 135,000 tons, as compared with 149,000 tons for the previous month, or a decline of about 14,000 tons. The falling off is doubtless mainly due to the fact that the principal producers have been restricting their output owing to existing storage being full (says *Oil News*); new wells are being drilled, but as soon as these approach the oil stratum operations are suspended and the work will not be completed until more favourable conditions prevail. In the meantime the construction of new storage is proceeding, and by the middle of this month the storage at Baicoi in connection with the new pipe line will probably also be available for the use of the producers; this latter will have a capacity of some 15,000 tons.

Details of the larger producing companies and their output in June are :—

	Tons.

Engineering Notes.

Spraying Machines.

In spite of the extensive use, in the Levant, of sulphate of copper, lime, and other substances, in liquid form, for spraying vineyards, orchards, etc., as a prophylactic against phylloxera and other diseases, a subsequent, though sporadic, appearance of the latter is not unusual. And as this occurs even in vineyards, or gardens, where economy in spraying is not considered, and only the best quality of liquid is used, such appearance of the disease may safely be taken as an indication of faulty or imperfect spraying. With a deficient spraying-machine or apparatus, the liquid cannot be properly sprayed; vital parts of the plants or trees may thus be left "untreated," and, naturally, such parts, as well as any others which the spraying has not reached, will sooner or later be attacked by the disease, and there the germs will breed and the spreading of the disease will follow.

German Sprayers.

Various spraying-machines and devices are being used in the fruit-growing districts of the Levant, but, as a rule, the cheap German and Austrian mechanisms are mostly in evidence. Their cheapness is not so much a temptation as the way in which their manufacturers "push" them to the buyers' notice. They are bought because buyers know how and where to find them, although their efficiency may be doubtful. Some time ago we gave in these columns the description of some new spraying-machines of British construction. They were fitted with very powerful pumps, enabling the liquid, applied as a spray, to reach the corners, cracks, and crevices, of the plant, where generally disease and germs breed. This cannot be done with ordinary mechanical spraying devices, such as used in the Levant. But the price of those machines was, probably, not within the reach of the average vine or fruit grower, and, as smaller machines and knapsack sprayers are mostly used in the Near East, and are in demand at present, we will mention here a class of small spraying-machines and apparatus, which are all-British, and can meet the requirements of fruit growers and gardeners in the East. They are made on the same principle as the larger machines, and their spraying efficiency is as effective as that of the latter.

Cheap Knapsack Sprayers.

A sprayer which will appeal to all growers is a new knapsack sprayer which, evidently, has been produced for those to whom price is a consideration. Its copper container is of unusual thickness, all the parts are interchangeable, and the brass spraying arm is furnished with a strainer rod which prevents any choking or clogging of the nozzles. The thicker part of the rod forms an excellent handle when spraying, and from it the strainer can be removed for cleaning in a moment. Another knapsack sprayer is also very interesting, for it is a most easily manipulated little machine, containing powerful agitators, and a removable brass pump with brass ball valves and a large air chamber. Its copper container will hold 3¼ gallons of liquid, and the brass spraying arm has in association with it a special nozzle for fine spraying, a double swivel nozzle, which can be converted into a single nozzle, for potato or fruit tree work, and a special lime-washing nozzle. Another machine of similar type has an ingenious foot rest, which may be pulled out and used for steadying purposes whenever one cares to employ it as a bucket sprayer, while the brass pump may be entirely lifted from the container for cleaning purposes in a few seconds by loosening two thumbscrews.

Life of British Machinery.

In commenting on the respective trade methods of the United Kingdom and Germany with Russia, the British Consul at Helsinfors suggests that British machinery is too strongly made and practically never wears out. At first sight this circumstance would appear to be in favour of British trade. If, however, German machinery can be manufactured with such an exact structural strength as to fulfil all that is claimed for it, that is, to give a definite output for a definite number of years, it can obviously be supplied more cheaply than machinery giving 20 per cent. greater output for an indefinite period. There must be a great risk in manufacturing without a margin, but there seem to be sound reasons for not making the margin excessive.

Oil and Concrete.

It is reported that the Director of the United States Office of Public Roads has found that concrete may be made damp-proof by mixing mineral oil with the materials, and that the presence of the oil does not reduce the tensile strength or substantially lessen the compressive strength. The oil is added to the matrix after the latter has been well mixed, and after thorough incorporation all traces of the oil disappear—where is not stated. Perhaps this disappearance is the explanation of the apparent anomaly, and the concrete maintains its normal strength, in spite of the oil, deriving some compensation from the additional mixing. That the admixture of oil would tend to oppose the passage of moisture is not surprising, but it is strange that the strength of the mass should not, at the same time, be lessened. The addition of the oil seems to delay the setting of the concrete, but not the rate of increase in strength.

Galician Oil Wells Ablaze.

The Russians in their retreat, not wishing to leave the valuable oil wells in Galicia to the Germans, set them on fire, and it is said that the blaze lasted for eighteen days. The occurrence reminds us of a report from Lemberg, in Galicia, a few months before the war began, that an ingenious inventor had discovered, or rather compounded, a powder which had the valuable property of extinguishing fire. Of course, there are known compounds which have that property; but the Galician inventor claimed for his compound that it could extinguish oilfield fires. If there is any virtue in the invention a fortune will have awaited its author (besides the Iron Cross, which the Kaiser will, undoubtedly, have bestowed on him if his compound was responsible for putting out the fire in the Galician wells). However, nothing in the way of a fire is so difficult to extinguish as one in an oil well, and any means that could be found to handle such destructive blazes would be heartily welcomed by oil men the world over. According to the report of the discovery alluded to above, the powder is thrown on the flames with the effect of extinguishing them immediately. The tests, it was then said, were carried out on small wooden buildings saturated with tar and crude oil, while the floor in the interior was covered with crude oil and gasoline. When the powder was thrown on the flames, it is stated, the flames were instantaneously put out.

Industrial Alcohol.

Among the prizes offered in an international competition organised by the Russian Ministry of Finance in respect (1) of methods of utilising spirit or alcohol or their products, and (2) of new substances for denaturing spirit or alcohol, two groups are of interest to engineers and chemists, says the *Times* Engineering Supplement. Prizes ranging from 75,000 to 5,000 roubles will be awarded for the invention or perfection of apparatus for the utilisation of spirit for motive power, fuel, or illumination, and three prizes of 30,000, 15,000, and 5,000 roubles respectively are offered for finding novel denaturing materials for improving the existing methods of denaturing, which, while guaranteeing the free use of denatured spirit, would obviate any possibility of using it as a beverage, the object being the extension of the use of spirit for technical purposes. Inventors may reserve the right of benefiting by their inventions and of protecting themselves by letters patent.

A Small Light Plough.

A drawback to the employment of the English plough in the East is its weight. It is very heavy for the native animals, and also for the ploughman who is accustomed to the home-made native implement, and cannot reconcile himself with the heavy-weight English plough, which he finds too heavy to handle. There are, however, light ploughs made in Scotland, Ireland, and even in England, which could meet the requirements of the Oriental farmer, but apparently makers do not trouble to bring them to his notice. However, it will interest those agriculturists who prefer English implements to know that a very small plough can now be obtained in England, and at a very reasonable price. In a recent show it had the distinction of being the smallest implement of the kind. It is well adapted for colonial use, small holders, market gardeners, and horticulturists. This little implement weighs only 50 lbs. (18 okes), and is priced at 32s., whilst it will plough 6 ins. deep by 8 ins. wide.

Near East Markets.

PRODUCE REPORT.

London, September 9.

Currants.

There has been a strong demand for old fruit this past week, while quotations for new, "to arrive," still continue to mount upwards. First arrivals of new crop may be expected within a fortnight, and it is believed by many that if the present prices are maintained a hand-to-mouth business will probably be the result until the market is more settled. The stocks of currants in London on August 31 were 3,303 tons, against 2,116 tons of last year. In Liverpool the available spot parcels have nearly all been cleared at very full prices.

Sultanas.

As the time passes and the likelihood of receiving any supplies of Smyrna fruit this season becomes more remote, the demand for the available stocks increases and prices are higher. The stocks of Sultanas of all kinds in London on August 31 were 1,690 tons, against 2,783 tons last year, the same period. In Liverpool, in spite of the high prices now ruling, some good business has been done this past week in Smyrna fruit of recent arrival, and quotations range from 70s. to 85s.

Figs.

The demand for Greek figs continues, and prices are unchanged.

Seeds.

Linseed is quiet and at about late rates. London-Calcutta spot is quoted 56s., afloat, August-September and September-October, also 56s. Rapeseed is firm, but inactive. Guzera September-October is quoted 59s., and brown Cawnpore, pure basis, August-September 53s. Cottonseed remaining dull; London—Egyptian, spot, quoted £9 15s., September £9 8s. 9d., and October £9 5s. per ton.

Oils.

Linseed oil has been quieter this past week, especially for forward positions. Spot pipes (landed) £25 10s., barrels, ditto, £26 5s., September-December £26. Rape oil remains firm. Ordinary brown naked £34 to £35. English refined barrels £36 to £38.

Oilcakes.

Cottoncakes.—There is only small business passing for early new crop. The market is practically depleted of stocks, and prices are only nominal. Linseed-cake.—Owing to the high prices the consumptive demand has been considerably checked. Best London made is offered at £11 12s. 6d. to £11 15s. Decorticated cottoncakes are nominally quoted at £9 5s. to £9 10s. per ton.

Locust Beans.

The market is quiet, and offers are made sparingly at £8 per ton for whole, and £8 10s. for kibbled in bags.

Gums.

There is little doing, quotations being for Arabic, Turkish sorts 45s. to 60s.; Mastic, 3s. to 3s. 6d.; Tragacanth first 360s. to 900s., low to good sorts 90s. to 130s.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continue to receive a very large number of inquiries for the names of sellers or buyers of articles of which the sources of supply or markets have been interfered with by the war.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and the weekly list of articles (No. 37) which inquirers desire to purchase is ready, and may be obtained by United Kingdom manufacturers and exporters of British goods.

COTTON MARKET.

Liverpool.

September 9.

Messrs. Reynolds and Gibson telegraph:—

Egyptian Spot.—There was a good demand this week, and large business resulted at hardening rates. Quotations advanced ten points for upper, fifteen points for fine and extra-fine brown, and twenty points for all others. The sales, which include 450 bales of Sudan cotton and a fair proportion for speculation, represent 5,500 bales, as against 4,300 last week.

Manchester.

Since the last report the market has been under the influence of a further rise in raw cotton.

COTTON STATISTICS.

The Liverpool Cotton Association has published its annual circular, the statistics dealing with the season ending July 31, whilst comparative figures are made up to August 31 in previous seasons. According to Messrs. Frederick W. Tattersall and Company, the highest point of the market for American cotton during the season was on August 7, 1914, when middling was quoted at 6.50d. per lb. and the lowest point was on December 12, 1914, when it was quoted at 4.25d. The average price of American cotton for the season 1914-15 was 5.22d., as compared with 7.27d. in the previous year. The average price of fully good fair Egyptian cotton was 7.34d., against 9.45d. in 1913-14.

The total import of raw cotton into Great Britain, compared with the preceding year, shows an increase of 451,652 bales American and 13,673 bales East Indian, and a decrease of 246,026 Brazilian, 10,456 Egyptian, 24,816 Peruvian, 4,872 West Indian and 14,767 African.

COTTON PRODUCTION IN THE EMPIRE.

The following statement showing, so far as the information is available, the quantity of ginned cotton produced in the various British self-governing dominions, Crown colonies, possessions, and protectorates in 1914, as compared with the preceding year, has been compiled from information furnished by the respective trade correspondents of the Board of Trade:—

—	1913 (calendar year).	Year ended 31st March, 1914.	1914 (calendar year).

BAGHDAD RESOURCES

The U.S. Consul at Baghdad reports as follows:—

The occupations in which the people of Baghdad and vicinity are engaged may be divided into three classes—those incidental to life in the cities and towns; the agricultural and cattle breeding which engage the attention of the people and tribes living in the neighbourhood of Divanieh, Samawa, Shamieh, Hindieh, Kerbala, Diem, Hillah, and Azizieh; and the breeding of sheep and camels, combined with agriculture, among the Bedouins or nomad tribes, chief among whom are the Eneza and Shammer tribes. Some of the city dwellers are employed by the Government, while others are owners of lands or other properties from which they derive an income, and still others are merchants or farmers. The second class mentioned includes some who live in huts made of reeds or mud and others who frequently move from place to place and live in black tents made from the hair of animals.

The city of Baghdad consists of more than 30,000 houses, 5,000 shops, 208 khans, 235 coffee-houses, 325 gardens, 145 mosques, sixteen schools, forty takyas (convents of dervishes), fifty shrines, five printing establishments, six churches, six synagogues, and thirty baths, together with other private and public buildings. The population of the Baghdad district, including the nomad and settled Arabian tribes and other unregistered tribes, is estimated at 850,000. The greater number of the inhabitants are Arabs (among whom may be included the native Christians), the remainder being Kurds and Turks. The majority of the inhabitants are Mohammedans, and the rest are Jews and Chaldean, Syrian, and Armenian Christians.

Local Manufactures of Baghdad.

The local manufactures of Baghdad are silk "izars" or women's wraps, which are universally worn; "abas" or native cloaks for men, and other cotton and silk embroideries, as well as copper, gold, and silver articles. At a place called Mandeli, sixty-eight miles north-east of Baghdad, rich crude oil, bitumen, and salt mines are reported to exist. Great varieties of fruit and vegetables are very plentiful in the Baghdad district.

About five miles above Hillah, on the opposite or left bank of the Euphrates, is a series of artificial mounds of enormous size, and there is another lofty mound, thought to be the "hanging gardens" of Nebuchadnezzar. The bricks used were made from the soil of the country, in many parts an excellent clay. The ruins of the edifices that were constructed from these bricks are now the quarries from which the modern Arab obtains the material for his home. The most striking is the vast ruin which is regarded as the Tower of Babel, about six miles south-west of Hillah.

Features of Mosul Trade and Its Resources.

Mosul, which is about 400 miles north of Baghdad, on the western bank of the Tigris, is celebrated for the manufacture of various kinds of earthenware, such as water basins, bowls, etc. It also specializes in the manufacture of silk and cotton goods. These goods are exported to places in the vicinity. There are many marble quarries around the city, the product being used on a large scale, while a considerable quantity is shipped to Baghdad. There are also six springs of sulphur and other mineral waters, quicksilver, two rich crude petroleum fields, and three coal mines in the vicinity of Mosul. There are other rich oil fields in Gayara and at another place near the town of Kerkook, both in the Mosud vilayet.

Mosul contains thirty-four quarters, comprising 9,106 houses, 2,852 shops, seventeen baths, thirty-four khans, 110 commercial houses, sixty-two coffee-houses, 266 flour mills, fifty-six mosques, eleven dervishes' convents, thirty-one gardens, twenty churches, twenty-five marble quarries, eight monasteries, and various other buildings. The male population of the whole district, according to the official census of 1913, was 193,848, of which 182,900 were Moslems and 10,800 Christians and Jews. The majority of the people speak the Arabic language, the rest speaking Kurdish. The Turkish language also is understood.

EGYPTIAN FINANCES.

In a supplement to the *Official Journal* is given an account of the Egyptian Government revenues and expenditure from April 1 to the end of June.

Receipts totalled £E3,695,246, as against £E.4,055,608 for the corresponding period of last year; and the total expenditure was £E.4,350,501, as against £E.5,115,320, the deficit for the three months of this year being £E.655,255.

On the revenue side of the accounts there is shown a satisfactory increase in land tax receipts, which have swelled from £E.822,337 to £E.1,166,076. Telegraphs also show an increase, the receipts from this source amounting to £E30,374 as compared with £E.27,744. All the other important sources of revenue, however, reflect the disturbance of the war (says the *Egyptian Gazette*), notably Customs, which are down from £E.509,273 to £E.349,288.

Port and lighthouse dues have similarly suffered, the decrease in the case of the former being from £E.83,090 to £E.22,064, and in the case of the latter from £E.30,618 to £E.17,779.

Hard times are reflected in what seems to be diminished litigation and such like. Court fees, at all events, show a decided falling off in relation to both the Mixed Tribunals and the Mehkemehs, though a substantial increase is shown in the case of the Native Courts.

Railway receipts are down from £E.898,826 to £E.762,604, and postal receipts from £E.82,535 to £E.68,104. Sales of properties realised only £E.23,415, as compared with £E.49,957.

Rigorous economies are, of course, shown on the other side of the accounts, the expenditure for the three months being over three-quarters of a million less than during the corresponding period of 1914. The Ministry of Agriculture had over half a million less to spend; that is to say, only £E.1,183,003, instead of £E.1,744,481; railways had to manage on £E.591,239, whereas they previously accounted for £E.817,760, while telegraphs were reduced from £E.38,656 to £E.34,690.

An interesting item is "Forces of His Britannic Majesty in Egypt," £E.36,562. The Ministry of War spent £E.177,806, as against £E.279,886.

Pensions and indemnities in respect of both the civil and military services show fairly substantial increases.

PROSPEROUS EGYPT.

Under the above title the *Stock Exchange Gazette* publishes an informative article on Egypt, from which we reproduce the following extracts:—

The general outlook for the Nile Valley may be regarded as extremely promising just now. In normal years the Egyptian tourist traffic is responsible for an outlay of about £E1,000,000 in that country, but since the war started there has, of course, been very little holiday-making in Cairo or elsewhere in the Nile Valley. On the other hand, at least £E7,000,000 have been spent by the Government on the care and maintenance of troops in Egypt, who are still there in large numbers, for as soon as one draft goes off another takes its place. Now let us take another matter. In the twelve months which preceded the war Egypt exported goods representing a value of £E5,000,000 more than she imported; during the year which has since elapsed the corresponding figure has been £E7,000,000, which of itself indicates a high level of prosperity. Owing to war exigencies, the country has been so thrown upon its own resources since the end of July, 1914, that it has become self-supporting to an extent rarely known before, and the Government will see to it that, so far as possible, this state of affairs is continued after peace has been restored—in other words, that Egypt shall rank permanently as an exporting country.

Among politicians great developments are anticipated from the fact that members from every part of the British Empire have been quartered during the past year in the Land of the Pharaohs. In fact, already the leaven of intercourse with practical agriculturists from every part of the world is bearing fruit. We have it on good authority that the wheat-growing possibilities of the Nile Valley have been warmly appreciated by men from other countries, some of whom, it is by no means improbable, may return when the war is over and take up their abode in the lower parts of Egypt, so that a good deal of the land at present utilised for cotton-growing may quite possibly be added to the wheat area before many years have passed. Whether this would be a good thing or not depends entirely upon the question of produce prices. What is not open to doubt, however, is that the advent of practical colonists, possessing capital for development purposes, into the Nile Valley should benefit the entire country to an extent which it would be almost impossible to calculate in terms of pounds sterling. Egypt has been "discovered" by men from Australia, New Zealand, South Africa, and elsewhere, who intend to turn their new knowledge to practical account and for the benefit of their own pockets. Thereby they will not only be doing a wise thing for themselves, but they will be advancing the interests of the Empire after it has emerged triumphantly from the greatest crisis with which it has even been faced.

BALKAN BONDS.

Last week the *Financier* published an informative article on Greek, Roumanian, Serbian, and Bulgarian bonds, from which we quote the following:—

The prices quoted on the London Stock Exchange for the securities of the various Balkan States, other than Turkey, admittedly afford little guide to their actual value, since it is very seldom that any transaction is recorded, and where markings are shown in the list they are not always of very recent date. Still, it is interesting at this time to compare even the nominal prices now ruling with those that prevailed before the war, if only to ascertain the view of the financial community on the complex Balkan political problem. It might be supposed that the credit of Serbia, who has been our ally from

AGRICULTURAL BANK OF BULGARIA

(BANQUE AGRICOLE DE BULGARIE).

PRIVILEGED CREDIT ESTABLISHMENT.

the first, would stand higher in London than that of the other States, which have continued to preserve a more or less frigid neutrality. But, as a fact, not a single deal has been recorded in Serbian Four per Cent. Unified bonds since the Stock Exchange reopened, and the price of 67, at which they stood on July 27, 1914, still represents their nominal value in London. In Paris the equivalent bonds are quoted at 60 fr. per cent., equal to a price of about 55 in London. Montenegrin Fives were quoted at 82½ before the war, but have not since been dealt in. Both countries have continued to pay interest on their External Debt, no doubt with the help of loans received from the British and French Governments, and there is no reason why this arrangement should not be continued until peace is concluded, when the victors should be able to obtain fresh accommodation on satisfactory terms. The status of other Balkan securities suggests that Roumania and Greece are regarded as likely to throw in their lot with the Allies, while Bulgaria is more uncertain. This represents a very fair idea of the position at the moment, though the situation is so delicate that twenty-four hours may make all the difference to the aspect of the Balkan problem.

The following are the current quotations of Balkan loans, together with those preceding the war :—

	Price. Aug. 30, 1915.	July 27, 1914.	Rise or fall.
Bulgarian Six per Cent., 1892..	87	99	−12
,, Four and a-Half per Cent., 1909	67	80	−13
Greek Five per Cent., 1881	57	57	—
,, Five per Cent., 1884	56½	56	+ ½
,, Monopoly Four per Cent., 1887.....	47	49	− 2
,, Four per Cent. Rentes, 1889.....	42	45	− 3
,, Five per Cent. 1890 (Piræus Larissa Railway)	55	56	− 1
,, Five per Cent. Funding, 1893.....	50	54	− 4
,, Four per Cent. Railways Loan, 1902	65	77	−12
,, Five per Cent. National Loan, 1907	88½	94	− 5½
,, Five per Cent. Loan of 1914.....	76	90	−14
Montenegro Five per Cent. ..	—	82½	—
Roumania Four and a Half per Cent., 1913	85	92	− 7
Serbian Four per Cent. Unified	—	67	—

Minimum prices are fixed for five of the older Greek loans, the interest on which is paid out of the revenues assigned to the International Commission, and in each case the current price is well above the minimum. The Five per Cent. Loan of March-April, 1914, is perhaps a better indication of Greek credit. Issued at 92½, the loan was not popular with the public, owing, no doubt, to the fear that the perpetual friction between Greece and Turkey would sooner or later result in hostilities, and by July 27 the price had fallen to 90. Business was recorded yesterday at 76 cum the coupon due to-morrow. Despite the war Greek finances were in a comparatively prosperous condition during last year. The surplus revenues assigned to the service of the loans controlled by the Commission in respect of 1914 amounted to 7,293,400 drachmas, which is the best result since the Commission was established. The last due coupons were therefore paid at increased rates, those of the Monopoly Loan being paid at 83 per cent. of their face value, the 1881 and 1884 Loans and the Five per Cents. of 1890 at 76 per cent., and the Funding at 32 per cent. During the current year the pressure of the war, and especially the cost of armaments, must have been more severely felt, but the quotations of Greek bonds suggest that the credit of the country is still regarded as good. From the investor's point of view, however, almost everything depends upon the course adopted by the Greek Government during the present crisis.

ALEXANDRIA PRODUCE AND EXPORT COMPANY, LTD.

Under the above title a private company has been registered with a capital of £15,000 in £1 shares. The objects are stated to be:—To take over the business of Egyptian produce exporters formerly carried on by Messrs. Elie J. Constantinides and Co., of Alexandria, Egypt, and to carry on the said business, particularly in reference to cotton seed, oil cake, and cotton oil. The registered office is at 1, Craig's Court, Charing Cross, S.W.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemoah production for the week, 163 tons (last week 164 tons); Hurgada production for the week, 237 tons (last week 238 tons).

ANGLO-OTTOMAN TOBACCO.—The directors have declared a dividend of 6 per cent. per annum, less tax, on the six per cent. Cumulative Preference and Participating shares for the year ending March 31 last, payable on the 15th inst.

BULGARIAN GOVERNMENT FIVE PER CENT. GOLD LOAN, 1902.—Messrs. Stern Brothers announce that funds have been remitted to them from the Bulgarian Government to pay the Coupon No. 26, due September 14, 1915, of the bonds of the above issue belonging to English holders and bearing the English stamp. Such coupons will be paid on presentation on and after September 14, less income-tax at 2s. 6d. in the £.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended August 20 amounted to £E3,879, as against £E4,220 for the same period of last year.

ROUMANIAN 1905 FOUR PER CENT. REDEEMABLE STOCK RENTE.—The numbers are announced of the bonds drawn and redeemed at the 19th drawing on July 1. The amount redeemed is Frs. 3,130,000.

NOTES OF THE WEEK.

In the absence of fresh elements in the situation the Allied Powers will do well not to count upon the early co-operation of any of the Balkan States. Past sins are now coming home to roost. When a little intelligent interest in the Balkans might have brought a formidable federation over to our side, Entente diplomacy affected to ignore these countries. The suggestion that it might be worth while to investigate the grievances of Bulgaria, with a view to removing the friction which kept the various peoples apart, was met with the retort that we could not humiliate our friends in order to benefit those who showed no inclination to help us. Great Britain preferred to be represented at a Balkan capital by a diplomatist who had succeeded in alienating completely the sympathies of the people to whom he was accredited, and British diplomacy so far failed to appreciate the nature of the struggle upon which the Empire was embarked that it saw no necessity for making sure of its position among the States which formed the key to the military position in Europe.

To-day the Allied Powers would find the co-operation of the Balkan States of the utmost value. But the appeal to them savours so much of a request to pull chestnuts out of the fire for our benefit that we cannot wonder that they are holding back. Not the least unsatisfactory feature of the situation is that Roumania should have so far forgotten the national ideal which she made ready a little while ago to realise, that her attitude now turns on her estimate of the relative chances of ultimate victory possessed by the Central Powers and the Quadruple Entente. We must refuse to believe, however, that the Roumanians of Transylvania have been altogether forgotten by their kinsmen. Germany has played her cards well. A campaign against Austria-Hungary and Germany no longer appears as attractive as it did when the Russians seemed about to pour over the Carpathians. Popular clamour for intervention has been stilled, and the situation is once more in the hands of the politicians. German intrigue knows well how to batten upon such a state of affairs. Administrative paralysis is secured at a small outlay of German money, and the process of educating the people to the German view of things is continued assiduously.

Unfortunately for Germany, the time has come when Roumania's strict observance of neutrality becomes embarrassing to German designs. The Roumanian railway system is necessary to the transport of troops and munitions to Turkey, and unless the Roumanian Government can be persuaded to connive at this breach of neutrality, Turkish resistance at the Dardanelles is in danger of breaking down. German diplomacy seeks to deal with this situation in two ways. It tries to persuade or bully Roumania into acquiescing in the German demands, and, failing that, sets to work to replace the existing Cabinet by one more amenable to Germany's aims. For the moment the two processes are being carried on simultaneously. The present Premier of Roumania stands high in his country's respect, but at no period in his political career has he shown any strong initiative. He has recognized that Roumania's interests require her to make common cause with the Quadruple Entente, but he was unwilling to strike a blow for the realization of those interests, until safety should be made doubly safe. That day has not yet come, and Germany feels the need of more pliable material in the Roumanian Ministry. Such material is to hand in the country. The German-owned Press of Roumania is canvassing the prospects of a Conservative Cabinet under the two chief Germanophil reactionaries. No reason for a dissolution is apparent, as the only expression of popular feeling antagonistic to the present Government has been in the direction of participation of the war. For the moment this proposal has been dropped in view of the military situation in Europe. The strength of the German propaganda, therefore, can be gauged from the fact that it has been possible to air in the Press the cause of Roumanian participation with the Central Powers—a cause that was supposed to have been deprived of its sole supporter when King Carol died.

In Bulgaria the two schools of thought favouring, respectively, the Central Powers and the Quadruple Entente have been more equally matched. Neutrality became a national necessity, not merely, as in Roumania, a temporary compromise to spare the feelings of the Sovereign. Nursing grievances against all the belligerents, the Bulgarian Government has done its best to turn their preoccupations to its own advantage. It found the Central Powers more alive to

Digitized by Google

the facts of the situation than the Quadruple Entente, and has, therefore, achieved a greater measure of success in its negotiations with them. Thus it has not only obtained a loan from Berlin and Vienna, but has persuaded Turkey, as the outcome of amicable negotiation, to make an important concession to Bulgaria. In spite of the denials that the agreement for the transfer of the Adrianople section of the Dedeagatch Railway entails any political undertaking, we may feel confident that it represents for the time being a settled frame of mind on the part of the Bulgarian Government. M. Radoslavoff, the Premier, still protests his friendliness to the Quadruple Entente. But he must have convinced himself that there will be little need for some time to come for Bulgaria to modify her attitude. He does not believe in the Allies' capacity to force the Dardanelles or to obtain any decisive advantage over the Germans in the immediate future. Accordingly he takes what he can from the Turks, confident that the situation will not change soon enough to disappoint them in the early days of their belief that Bulgaria is at one with them in their struggle against the Quadruple Entente.

With Roumania and Bulgaria maintaining neutrality, Greece finds no alternative left open to her. The Chamber stands adjourned until the end of October, and M. Venizelos is engaged upon the task of discovering his "road." His efforts, we may feel certain, will be directed towards a permanent solution of the Balkan question rather than towards a decision upon Greece's attitude to the war. The greatest service that M. Venizelos can render the Quadruple Entente is to prepare the ground for an understanding among the Balkan States as soon as the military situation in Europe offers an opportunity for co-operation with the Allied Powers.

On Gallipoli Peninsula the British and Turkish forces continue to face one another with a dogged determination that does credit to both sides. The Turks must be watching Germany's efforts to send them reinforcements by hook or by crook no less eagerly than our own men are canvassing the possibilities of a winter campaign. Disappointment over the modicum of success achieved by the Suvla Bay landing is enhanced by Turco-German reports of the episode. It is admitted that the Turks were taken completely by surprise, an explanation given being that, as the landing took place during the last week of Ramazan, so bad a watch was kept that nobody saw the approach of the fleet of transports with the convoying warships. The British forces now have a connected front of twelve miles; but the task of turning the enemy out of his strong positions remains as formidable as ever. If the Turks were assured of an adequate supply of munitions they could go a long way towards making the British line untenable. But they can have little hope of even keeping up their supply to its present strength. The Allies must still look for support to extraneous advantages that are fighting on their behalf. Reference was made last week to Constantinople's supply of coal. It has not yet been found possible to prevent additions from reaching the stocks already in the capital. The Russian Fleet has performed some notable exploits; but the steady watchfulness that knows no relaxation seems to be wanting. The escape of a few Turkish colliers means so many days added to the period of the enemy's resistance. An effective blockade of the Bosphorus, there can be no doubt, would counteract the disadvantages under which the Allies are fighting on Gallipoli Peninsula, and would lead to the collapse of the Turkish resistance within very few weeks.

The Turks, there is reason to believe, are buoyed up with the hope that the Allies will not be able to face a winter campaign on Gallipoli. They would be hard put to it to find any confirmation of this theory from the military activities now in progress. We have such certain information of the difficulties under which the Turks are maintaining their resistance—Lord Kitchener referred in his speech in the House of Lords to the demoralization that had set in among their troops—that only very dire necessity could induce the Allies to forgo, even temporarily, the advantages they have secured at so heavy a cost. Outwardly, Constantinople is said to betray little of the exactions that war is making upon the Turks. Prices are exceptionally high, and the poorer section of the population must be in dire straits; but life in the city goes on much as before. Only the system of espionage and dilation reveals the actual uneasiness of the authorities and their realization of the fact that their position grows more perilous every day.

It is difficult for the European mind to credit the reports of the treatment meted out to the Armenians in Asia Minor. When we hear of the satisfactory treatment accorded by the Turks to our wounded and prisoners, we feel at a loss to explain how the same people can be guilty of the most abominable outrages upon their own fellow subjects in another part of the Empire. The answer may be found in the cult of militarism. The massacres of the Armenians have been undertaken to order as an alleged military necessity, and the agents will have been for the most part Kurds. Estimates of the numbers killed vary from 70,000 to 200,000. It is unnecessary to accept either figure to appreciate the guilt of the Turkish authorities and of the Germans who have inspired their conduct of affairs. If British wounded and prisoners are being treated satisfactorily from a desire on the part of the Turks to stand well with our nation when the war is over, it is strange that the same foresight should not have prompted them to refrain from antagonising whole races of their fellow-subjects. If Turkey's star should set in circumstances which temporarily prevent the exercise of a strong hand over all parts of the Empire, we need not be surprised if the Armenians and Greeks seize the opportunity to exact a terrible revenge.

Last week we ventured to suggest that the situation in Persia would have to become worse before any definite improvement in it could be recorded. The evacuation of the whole Ispahan region by British and Russian subjects tends to confirm our forebodings. German influence and mob law are now supreme in the town, and the former can be relied upon to make good use of the immunity it enjoys from all opposition or supervision. The outrage on Mr. T. G. Grahame, British Consul at Ispahan, has now been followed by the murder of the British Vice-Consul (? Acting Consul) at Shiraz Details of this latter crime are still lacking. If the fact of the murder be established, it can hardly fail to introduce a new factor into the Persian situation. British prestige has suffered too much already from our failure to exact respect for the lives of British subjects. It is impossible that the latest outrages should pass unnoticed. The time may not be opportune for dealing with the Persian question as a whole, but more will be expected of the British Government than the landing of a small force at Bushire.

The Persian Legation in London has issued a statement regarding the position in Persia. Telegrams received from Teheran, it says, state that the Government is taking every possible measure to deal with the situation at Ispahan, and also with the state of unrest prevailing in Southern Persia. Sympathy will be felt with the Persian Government, and has often been expressed in these pages. Of the excellence of its intentions there can be no doubt, and it can be relied upon to act within the limits of its powers. It is clear, however, that the situation in Persia has been brought about by the inability of the Central Government to exercise authority in the country. The outrages upon British subjects are the result of a long period of lawlessness, with which the Persian Government has been unable to cope. If it suddenly found itself able to deal with the situation created by recent events at Ispahan, it would stand convicted of a grave dereliction of duty in not having taken steps before to improve conditions in the country.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, September 3.

The Difficulties of the Situation.

The joint action taken a month ago by the Powers of the Entente with regard to Bulgaria, Serbia, and Greece, with a view to securing the co-operation of the former through an offer of territorial concessions from the two latter countries, and, on the other hand, the constant danger of a fresh descent upon Serbia by Austrian and German troops, supported by a simultaneous attack by Bulgaria, have brought about a very critical situation in the Balkans. In the case of Greece the Government has exceedingly difficult problems to face. The fact is that Greece—having committed the initial mistake of refusing to throw off her neutrality and assist in the operations against the Dardanelles in February, when the Russians were still in the Carpathians and the Turks, or rather the Germans, had not yet organised a serious defence, and when she would certainly have drawn in both Roumania and Bulgaria on her side—now finds herself in an embarrassing position. Greece's territorial integrity, the preservation of which has always served as a pretext to the Gounaris Cabinet for their opposition to the Nationalist policy of M. Venizelos, is now seriously threatened by the consequences of that same opposition policy; for the four Powers, finding that nothing more was to be done with Greece, turned to Bulgaria, in whose favour they have now decided to impose territorial concessions upon Greece, and to make a similar request to Serbia—also to the detriment of Greek interests.

The Serbian Concessions.

Thus Serbia, being threatened with an invasion by Austrian and German troops, and as the ally of the Powers of the Entente, felt obliged to consent to almost all their proposals for the cession of large territories to Bulgaria. Greece, on the other hand, seeing her ally obliged to make such sacrifices so as to contribute indirectly to the victory of the four Powers, on whom now Serbia's very existence depends, decided to facilitate operations as much as possible, and, while six months ago M. Venizelos was disposed to consent to the cession of the districts of Istip and Kotzana only, he has now consented to the cession of an area extending as far as Morihovo.

Greek Objections.

But the line fixed by the Powers in favour of Bulgaria included certain localities which possess great strategical importance for Greece, and the cession of these by Serbia to Bulgaria would endanger that part of Greek Macedonia which Bulgaria covets. These are the districts of Guevgheli and Doïran, about three hours by train from Salonika. This territory forms a weak point on the frontier between the natural barriers formed by Mount Belesh on the one side and the River Vardar on the other, and being the most vulnerable point on the Greek frontier it was apportioned to Greece by the preliminary Greco-Serbian alliance signed at Salonika on May 13, 1913. Later, however, by the final treaty signed at Belgrade, Greece consented to cede this district to Serbia as her ally, but she would run a very different risk if it were given to Bulgaria. Further, the cession to Bulgaria of the Greek region of Monastir would bring the Bulgarians into contact with the Albanians across the Lake of Ochrida, and, what is more, it would expose the only highway by land between Greece and the West—*i.e.*, the Salonika-Monastir-Uskub railway—to the tender mercies of a State which is the natural enemy of Greece, and which would thus further be in a position to hamper Serbia's communications with Salonika, the chief port available to her.

These are the considerations which have weighed with the Government in preparing their reply to Serbia. They have addressed a memorandum to the Serbian Government setting forth all the reasons why they cannot consent to the cession of these districts to Bulgaria; the necessity is emphasised of maintaining the territorial contact between Greece and Serbia over as wide an area as possible. The memorandum further states that if Serbia finds it impossible to retain the said district of Guevgheli-Doïran the Greek Government will be under the necessity of demanding its restitution by virtue of the second treaty of alliance, in which it was given up by Greece on this condition.

It seems certain that Serbia has realised the soundness of these objections and formulated her Note to the four Powers accordingly, and they have raised no difficulties. It now remains to be seen whether Bulgaria also will be satisfied, and this is by no means so certain.

Reaction of Germanophil Circles.

This action of the Government has provoked criticism from the Germanophil elements of the Opposition, and their newspapers have been at pains to show that it amounts to a renewal of the Greco-Serbian Alliance, which could no longer be considered valid, and was, therefore, a provocation to the Central Powers. The chief aim of the alliance was the preservation of the territorial *status quo*, and, according to these Germanophil papers, Greece ought to have taken advantage of the opportunity offered her by Serbia's consenting to making territorial concessions to Bulgaria to break the alliance and free herself from any obligations to an ally who, in her present exhausted condition, could no longer be of any use to Greece. The Germanophil Press further emphasises the dangers incurred by Greece in defending Serbia in case of an attack by Bulgaria, for she would then be opposed by Turkey also and by the two Central Empires, and they, therefore, advise the Government to invite Germany's intervention to prevent Bulgaria from attacking Serbia.

The above representations have been entirely disposed of by an official *communiqué* stating that the steps taken to confirm the reciprocal engagements existing between Serbia and Greece were an intimation to Bulgaria that Greece would not remain indifferent if she attacked Serbia, and that, in fact, they helped to avert this danger. The Greco-Serbian coalition is more important now than ever, says the *Patris*, in view of the proposed additions to Bulgarian territory, which will upset the existing territorial equilibrium of the Balkan States and make Bulgaria a dangerous neighbour to Greece and Serbia.

Austro-German Bluff.

The conviction prevails in competent circles in Athens that the threat of an invasion of the Balkans by Austro-German troops and the Bulgarian manœuvres on the Greek and Serbian frontiers are all part of a scheme of bluff to intimidate Serbia and Greece.

As regards Bulgaria, it is believed here that, having obtained from Turkey important compensations in return for her neutrality, she will now use the same argument with both groups of belligerents to obtain their recognition of the rights she claims to certain territories. It is thought, however, that the Entente at least will consider her price too high, and competent judges are of opinion that the four Powers ought to lose no more time in vain hopes, but should call upon Bulgaria to co-operate with them, and, if she refuses, treat her accordingly and proceed to make other arrangements.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, September 6.

Coal Supplies.

One of the greatest enigmas to the lay mind in the operations in the East has been the impotency of the Russians to prevent coal supplies reaching Constantinople from Zunguldak and district. Even now, when the Turkish Fleet consists of a few "lame ducks," and when it is of the utmost importance that no coal should reach Constantinople, the Germans are still able to send steamers from Constantinople to the Heraclea region, which stay there some days loading, and return safely. Last week two German steamers, the Rodosto and the Patmos, escorted by the Hamidieh, succeeded in running the gauntlet, and reached Constantinople with about 9,000 tons. Where was the Russian Fleet? it is asked. These arrivals are most opportune for the Turks, as the stock of coal in Constantinople is almost exhausted, and its absence will almost paralyse the operations of the military.

Constantinople in Darkness.

The gas works have not been working for some time, and Constantinople was in darkness until the municipality ordered all those who have electric light on their premises to place a light in the street, and in this way the Grande Rue de Pera and some of the principal streets are now partially lighted.

The bread question is very acute owing to the want of flour and grain in Constantinople. This is due partly to the want of coal at the mills and partly to the want of transport, the railway being occupied with the movement of troops and the transport of Armenians into the interior.

Plight of the Armenians.

From Ismidt and the surrounding villages, Armenian men, women, and children have been sent away with only the few articles they could carry, and practically penniless, as they had no time to sell their belongings, even had it been possible to do so. Only starvation and death appear to be before them. It is said the Armenian Bishop of Ismidt, a man of ninety years, was given the option of remaining in his diocese, but he replied that as head of his flock he would go wherever they went, and before his departure he publicly cursed the Turks, and pointing to a heap of ashes he declared they would become as such.

The accounts that reach here of the systematic extermination of the Armenian race, and the horrors which women and children have experienced, are most appalling. It is to be hoped that Talaat, Enver, and the others who are responsible for these crimes will be held personally responsible and receive the punishment they deserve. So far the Armenians have not been expelled from Constantinople, though it is rumoured that the unmarried will be transported to Asia Minor. If there is the slightest suspicion of an Armenian he is immediately exiled.

Position at Smyrna.

In Smyrna the Armenian inhabitants have not, so far, been molested; in fact, on the whole, Smyrna seems to be much better off than Constantinople. An Englishman who has just arrived from there states that perfect tranquillity prevails, and both the Vali and the Military Governor continue to manifest a benevolent attitude towards the English and French. Business is, of course, at a standstill, and there is much suffering amongst the poor, but meat, bread, and vegetables are cheap; all imported goods are scarce, and articles such as sugar, rice, tea, and coffee are becoming exhausted. There is still a little gas, and the trains manage to keep running by burning wood and lignite, so it is possible to bring in supplies of flour and wheat.

State of Constantinople.

The news from Constantinople is very different. In the first place, there is a much more aggressive feeling against the Allies, and life in general there is becoming unbearable and is a severe strain on the nerves. The prospects for the coming winter, with no fuel, no lighting, and scarcity of provisions, is not pleasant to contemplate. Although Pera outwardly maintains its old aspect, yet there is terrible want and misery amongst the poor, and the position daily becomes worse. Bread is obtainable with great difficulty and all provisions are increasing in price. The municipality have restricted the sale of sugar to about ½ lb. per person per month, and have fixed the price at 8 piastres per oke, but it remains to be seen whether the grocers will part with their stocks at such a low price.

Eviction of English Residents.

A large number of prisoners, English and French, have arrived in Constantinople lately, some of whom are wounded. The latter are being fairly well attended to, it is said. The number of Turkish wounded arriving in Constantinople is enormous, and the authorities are now actually turning English families out of their homes to make accommodation for the wounded. Large numbers seem to be taken to Moda, where many private residences have been converted into hospitals. Mr. Edwin Whittall's "Mansion," the British Club at Moda, and several other unoccupied English houses have been seized, but recently Mr. James La Fontaine and family were actually turned out of their house, and have been obliged to move into town. Notice was given to the occupants of the residences belonging to Lady Whittall, Mr. Reginald Whittall, and Mr. James Whittall to remove within forty-eight hours. So far, however, Lady Whittall's residence has been spared.

A large number of motor ambulances have recently arrived in Constantinople.

Importation of German "Kultur."

The Adviser to the Minister of Public Instruction, Herr Schmidt, has returned to Constantinople from Germany, where he had gone, says the *Hilal*, to engage some German professors for the University of Constantinople. These German professors are to arrive in October, and will learn the Turkish language as soon as possible.

Galata Bridge.

There was no truth in the report that the Galata Bridge had been destroyed by a submarine. The rumour probably arose from the attempted destruction of the Guebzé Bridge on the Anatolian Railway by a British submarine in the Gulf of Ismidt. The British submarines have done particularly brilliant work lately in the Marmora.

THE TURKISH LANGUAGE IN GERMANY.

The Berne correspondent of the *Morning Post* says:—"The Grand Duchy of Hesse is petitioning the German Government to introduce the Turkish language as an optional subject in all German High Schools and Universities in order that the value of German culture should be duly recognised in Turkey, where, it is urged, before the war there were about 600 French, 500 American and English, 200 Italian, and 60 Russian educational institutions, but only 25 German."

EARLIER POSTING TO THE EAST.

The Post Office announces that it has been found necessary temporarily to advance by one day the times of posting for printed and commercial papers and samples intended to be conveyed by the overland route to India and Australia viâ Suez. Until further notice is given the latest hours of posting such correspondence at the General Post Office, London, will be midnight on Tuesday, without late fee, 2 a.m. on Wednesday with late fee of ½d., and 3 a.m. on Wednesday with late fee of 1d. The latest hours of posting at other offices can be ascertained by inquiry at the offices concerned.

STORIES FROM GALLIPOLI.

THE TURK A CLEAN FIGHTER.

(From Our Own Correspondent.)

Port Said, September 1.

Several more batches of wounded have arrived here recently from Alexandria. They are mostly cases of injury to limbs or slight body wounds, although amongst them are, unfortunately, a number of "stretcher" cases. The ladies of the English colony, who have been doing such excellent work in assisting at the various hospitals, meet the trains bringing the wounded and distribute refreshments and smokes to the tired but cheery warriors.

There is a striking unanimity amongst the men as to the sterling fighting qualities of the Turk, and especially as to his "straight" methods. Our soldiers invariably agree that he is a good and clean fighter, and plays the game all through, and many tales are going the rounds in this connection. At one time, it appears, an armistice had been arranged between the combatants to bury the dead and to remove the wounded, and for several hours at intervals between their duties, our men were fraternising with the Turkish soldiers. The latter said they had no idea why they were fighting the English, whom they had always regarded as their best friends, but were simply obeying orders. On one occasion during the armistice a Turkish soldier picked up part of the equipment of one of our men and was slinking away with it. His officer, catching sight of him, pulled him back with considerable violence, and made him return the stolen gear to its owner, remarking that a Turk always respects his pledged word. This incident will only serve to strengthen the opinion of those who, in happier days, have known the Turk as he really is—a gentleman by instinct, if a hopeless fool in the hands of a few scheming politicians—that he is not yet imbued with the spirit of Teutonic "culture."

Another instance was afforded when an enemy shell landed in one of our Red Cross tents, causing considerable mischief amongst the unfortunate occupants. Shortly after, at the first favourable opportunity, the commanding officer of the Turkish forces sent a messenger expressing regret at the incident. The explanation given was that some of our troops were moving near the Red Cross tent, and the shell was directed at them. The Turkish officer, while regretting that the shell had struck the Red Cross tent, was most anxious that it should be understood that it was aimed at the combatants and not at the wounded.

During one of the recent "landings" a large troopship came under fire of the Turkish batteries. The troops had got away safely, but no orders had come to the steamer to retire out of range. The captain, a typically bluff representative of our mercantile marine, stood on the bridge and watched the shells bursting near his vessel. At first they were two hundred yards away, then a hundred, and then one burst about twenty feet off the vessel's stern. He calmly gave the order "Full speed ahead," and stopped as a shell exploded exactly on the spot he had previously occupied. The next few came gradually nearer the steamer, and as she went "Full speed astern" one burst a few yards in front of her bow. For some little time she was "standing by" and calmly dodging Turkish shells until the order came for retirement to a place of safety.

This, of course, is but one occasion of many that could be recorded on which the officers of our mercantile marine have shown a hearty contempt for the dangers they are daily called upon to face in the execution of their duty.

CYPRUS NOTES.

(From a Correspondent.)

The Greek papers take a very gloomy view of the present want of food and of employment in various parts of the island. Distress is now being felt in villages of the Karpass district, the north-eastern extremity. Prices have continued to rise, having in some cases quadrupled since the war began. Thus, potatoes, which were sold at 30 paras (1d.) the oke (2 4-5 lbs. av.), now cost 4 and 4½ piastres (6d.). Wheat has been sold in places at 8s. to 9s. 6d. the kilé (bushel).

There have been some trying heat waves. Hot, parching winds have swept the island, and have been very oppressive for all who are in the plains.

Any newsagent or bookstall in the United Kingdom can supply copies of "The Near East," which are on sale early on Friday morning. Should any difficulty be experienced in obtaining the paper, the Manager would be glad to receive a post card giving particulars, and he will take steps to rectify the matter.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, August 27.

Ramadan came to an end on August 11, and the usual celebrations were held. On the 12th there was a parade and levée held by the Governor-General and Sirdar, Sir Francis Reginald Wingate. It happens that, in the usual course of events, his Excellency is in Europe about this period of the year, so that it is some years since he was himself present in Khartoum at the end of the month of fasting. To mark the occasion a number of notables from the adjacent provinces were invited to Khartoum, and were present at the levée. On the 14th his Excellency gave a reception in the evening, for which the Palace gardens were illuminated, and the Sudanese band played a selection.

The Blue Nile Flood.

The Blue Nile flood is disappointing up to date, and it is feared that many of the "basins" in the northern provinces will get little or no water, as the river will not remain over the necessary level to enable the land to be properly watered. This would be particularly unfortunte for Dongola province, where the bulk of these basins are, as the people there have suffered by a series of disasters. Cattle plague, asal fly (aphis), low Nile, cutworm, and locusts, one after another, came to destroy the chances of recovery of the people just as the future began to look more hopeful. A considerable amount of charity has been dispensed by the Government in the districts afflicted, and it was greatly to be hoped that a high Nile long continued would give the Dongola cultivator a return for his work in opening canals for the feeding of the basins.

An Exchange of Military Courtesies.

An interesting ceremony was performed at El Obeid yesterday, when, in the presence of Savile Bey, Governor of Kordofan and Commandant of Kordofan Military District, the flag of the 7th Manchesters was formally presented to the 7th Egyptian Battalion by El Kaimakam Ahmed Hilmi Bey El Miteini, who formerly commanded the battalion, and who is now Deputy Assistant Adjutant-General, on behalf of the officers and men of the British battalion. It will be remembered that, prior to their departure from Khartoum, the 7th Manchesters were publicly presented with the flag of the 7th Egyptian Battalion, and it was in accordance with a promise made at that time by officers of the former regiment that their flag was sent to the Sudan for presentation on this occasion. Ahmed Hilmi Bey was deputed to make the presentation on behalf of the Manchesters, and proceeded to El Obeid, where the Egyptian battalion is now stationed, for the ceremony. The presentation was carried out with the full formalities customary to such occasions, and in the afternoon a reception was given by the officers of the 7th Battalion to the British and Egyptian officers of the El Obeid garrison.

KHARTOUM CATHEDRAL.

There is now to be seen at the galleries of the Medici Society, Limited, 7, Grafton Street, London, W., an exhibition of stained glass cartons and sketches by artist craftsmen and women, which contains two exhibits of special interest to readers of The Near East. These are the clerestory window for the south transept of Khartoum Cathedral and the design for the similar window of the north transept. The former is intended to form a pair with the Nativity window in the same cathedral, and portrays the three Wise Men who came bearing gifts. In one of its sections Melchoir of Arabia is seen with frankincense; Gaspard of Tarsus bearing gold occupies the centre, and the third figure is Balthaki of Ethiopia with myrrh. The richness of colouring of this window contrasts strongly with the lighter tones of the windows shown alongside it and with the other design by the same artist; it recalls in this respect the work of the earlier part of the Middle Ages, and, according to modern ideas, shuts out far too much of the light. This is because it is to be placed in the south transept of a cathedral, with the blazing sun of the Sudan pouring a flood of light through it and giving an altogether brighter effect than is obtained against the grey London sky. The window is mostly in self-toned glass. The other window will represent Faith, Hope, and Charity.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, August 28.

The Political Situation.

The Government has not yet replied to the last Note of the Entente Powers, and will not do so until Serbia has given her answer in regard to the concessions to be made to Bulgaria. Meantime, it is believed that the negotiations with Turkey regarding the cession to Bulgaria of its portion of the Dedeagatch railway line are approaching a satisfactory conclusion; it is even said that the agreement has already been signed. This supposition is confirmed by information, received from private but trustworthy sources in Adrianople, to the effect that the military authorities of that city are evacuating the Kara-Agatch district, which, according to the agreement, will go to Bulgaria. All foodstuffs and munitions of war stored in this district are being transported to the city, as are the doors and windows of the military barracks at Kara-Agatch, which have been taken down. Other materials are being sent in the direction of Constantinople. Workmen are busy night and day on the forts situated along the right bank of the Maritza and are speedily denuding them of all defence works. The 14th Division, under the German General Bach, was expected to arrive at Adrianople, but, owing to the critical position of the Turkish army in Gallipoli, it has been sent to the peninsula instead. Some forty other troop trains have also been despatched there. Enver Pasha, who has been superintending the evacuation of Kara-Agatch, left yesterday for Gallipoli. All this would seem to confirm the statement that the Turco-Bulgarian agreement is a *fait accompli*, and that Turkey is about to cede to Bulgaria her portion of the Dedeagatch railway line, together with the Kara-Agatch railway station. Notwithstanding these concessions, the Government states that Bulgaria has not entered into any political engagements with Turkey, and that she still retains an absolutely free hand.

The Opposition Manifesto.

The pressure which is being brought to bear by the Central Powers upon the Bulgarian Government to induce it to reject the proposals of the Entente and to attack Serbia, or at least to permit the free passage through the country of German war material for Turkey, has led to the various parliamentary groups of the Opposition—the Democrats, Agrarians, Narodniaks (M. Gueshoff's party), Zinkovists, Radical-Democrats, and Social Democrats—uniting *en bloc* and addressing an appeal to the nation. They demand from the Government the prompt summoning of an extraordinary session of the Chamber to deliberate upon the political situation, and to form a Coalition Cabinet to decide the future attitude of Bulgaria towards the belligerent States. The Prime Minister, in the course of separate interviews with the leaders of these various parties, declined to accede to the demands of the Opposition, and the latter now issue this manifesto as a protest against the action of the Government, and look to the nation to support them whole-heartedly in calling for the immediate summoning of an extraordinary session of the Narodno Sobranje. The Ministerial journal *Narodni Prava*, commenting on this manifesto, says that there is no necessity for an extraordinary session of the Chamber, nor for a Coalition Cabinet, as there has not been the slightest change in the Government's policy, which still remains, as hitherto, one of strict and loyal neutrality.

An Anniversary.

Last Tuesday (August 24) the Bulgarian nation celebrated the thirty-eighth anniversary of the glorious and heroic defence of the Shipka Pass during the Russo-Turkish War in 1877. On the occasion a Requiem service and Te Deum were celebrated at the Cathedral Church Sveta Nedelia, at which were present veteran heroes of the great exploit, in their old uniforms. Present also were the Royal Suite, the Russian Minister, M. Savinisky, with the staff of the Legation, the Cabinet Ministers, generals of the garrison, and an immense crowd of citizens. After the service the Minister for War, General Jerkoff, addressed the veterans in a short speech, referring to the significance of the festival they were celebrating. The President of the Opoltchenic Society, M. Gligor Naïdenoff, on behalf of the veterans, placed a wreath on the monument of the Tsar Liberator (Alexander II.). The President also sent congratulatory messages to the surviving Russian generals who took part in the defence of Shipka. In the evening a banquet was given in honour of the veteran heroes.

SERBIAN FLAG DAY IN LONDON.

As announced last week, Wednesday next is to be celebrated in London as the Serbian Flag Day. The valour of our small Allies in the Balkans, the intrepidity with which they hurled the offensive Austrian invader out of their valleys and fields, has always appealed to the Briton and invoked his sincere admiration. It is, therefore, to be hoped that on Wednesday the Londoner will respond heartily to the appeal made to him by fair vendors of flags, and unhesitatingly give his offering to the good cause. Strange to say, London is not the first city or town to have its "Serbian Day." It was only last week, on Saturday, that Leicester celebrated one, which was, according to all accounts, a great success, patronised, as it was, by the Mayor and Corporation. The organisation for the "Day" was in charge of the Alexandra Day Council, and the old Town Hall Square, of historic memories, was the scene, in the afternoon, of a fervent demonstration of sympathy with Serbia. In London the "Flag Day" next Wednesday has been organised by the Serbian Relief Fund. Mrs. Lloyd George will be in charge of the chief Westminster depôt, and Mrs. Herbert Samuel of the Paddington section. Many other well-known ladies will assist, and in practically every metropolitan borough special arrangements are being made to aid this very needy and most necessary fund. Incidentally it may be mentioned that the whole of the proceeds of the first public presentation of Mr. D. W. Griffith's cinematograph spectacle, "The Birth of a Nation," at the Scala Theatre on Monday evening, September 27, will be devoted to the Serbian Relief Fund.

A PERSIAN MORALITY PLAY.

The setting of "Life's Mystery," a morality play by a living Persian author, Mirza Assad 'U'llah, should be "A Rose Garden in Iran," but, as given for the first time in English in England, on September 11, the terrace and broad west lawn of Spring Grove House, Isleworth, with spreading cedars and stately elms as a background, made an excellent substitute. The play, in three acts, has been translated from the Persian original by Dr. Ameen 'U'llah Fareed, son of the venerable author, and adapted for the stage by Dr. Paul Tyner. It was given at Spring Grove House, now the Miller Institute, for the benefit of Mirza Assad 'U'llah, whose property in Palestine has been destroyed in the war, by the New Life Players, among whom were Dr. Miller, Dr. Tyner, Dr. and Mrs. Fareed, and Mrs. Alexander. Characteristic and appropriate music, specially composed for the occasion, was rendered by Professor Inayat Khan and the Royal Musicians of Hindustan. The large audience was accommodated in a semi-circle on the lawn, and the raised terrace, with its flowers and shrubs, and convenient windows for entrances and exits, made an excellent stage.

The author of the play is a Persian sage and teacher; he was a companion of the Bab and is a kinsman of Baha 'U'llah, the Bahai leader who visited England about two years ago. The play is in the manner of the ancient mystery plays of Persia, which had a marked influence on the development of Greek drama and, centuries later, on the morality plays of the Middle Ages. "Life's Mystery" deals with the conflicting claims of Nature and the Soul of Man, modernised by science and religion; argument between Nature and Philosophy leads to no definite result, so the disputants agree to lay their claims before the Supreme Court of Life for adjudication. The Divine Man appears in person to state his case; his bold words, together with the explanations of Divine Wisdom, convert Nature, who acclaims the justice of the verdict when given against him; Idealism and Realism are reconciled. Oriental dances by Mme. Behache, including a symbolical butterfly dance, and Persian love songs by "Khorshid," were incidental features of the play; brilliant sunshine illuminated the stage and brought out the colouring of the Oriental costumes.

THE SIEGE OF VAN.

(From Our Correspondent lately in Tabriz.)

Tiflis (Caucasia), July 10.

On May 6 or 7 the welcome tidings were received in Tiflis that Van, the ancient capital of the Armenian Ardzruni dynasty, had been occupied by the Russian troops under General Oganesov (really Ohanesian, an Armenian general in command of the Russian Caucasian Army), assisted by six Armenian volunteer regiments commanded by Andranig, the well-known Armenian revolutionary, who had already fought against the Turks during the first Balkan War, and had been given the rank and decorations of a general by Tsar Ferdinand of Bulgaria.

Long before Van was occupied by the Russian troops, the Turks, according to a pre-arranged programme and special instructions sent by Talaat Bey (?) to that effect, began to massacre all the male population of the district of Van—that is, all they could get hold of. They began at Shadokh, the most populous and largest village, where not a single soul escaped death except women, children, and men over sixty years of age. The more comely young married women and girls were carried away by the Kurds or the soldiers and captains of Jevded Pasha. Jevded Pasha was the Vali of Van and the commander-in-chief of a Turkish army operating in the Van Province. The division of the Turkish army operating in Azerbaijan was under the command of Khalil Pasha. Jevded Pasha began by systematically exterminating the Armenians in the Van Province, beginning with the villages—as is the time-honoured custom—because in the villages there are no ways and means to communicate with the outside world. However, news reached the city of Van that "there was trouble in the villages between the Turks and the Armenians"; nevertheless, the exact nature of the trouble was not made known.

Death of Prince Ishkhan.

There was in Van at the time Prince Ishkhan, the well-known Armenian, and leader of the Dashnagtsagan Revolutionary Committee. On several occasions in former times, when "trouble" had broken out between the Turks and the Armenians, Jevded Pasha had requested Ishkhan to go to the villages in the company of police officers to try and reconcile the two contending parties. Ishkhan had always gone and accomplished his mission to the perfect satisfaction of Jevded Pasha. This time, however, a different programme was arranged. In order to get rid of the Dashnagtsagan leaders, and thus choke in its cradle a possible Armenian insurrection at Van when the news of the massacres reached the capital, he wrote to Ishkhan, in extremely polite terms, calling him his "dear friend," and inviting him to call at the army headquarters, saying that there was trouble again between Armenian and Turk villagers, and that Ishkhan should come at once with three other Armenians, mentioning the names of three leaders, and go to the villages in order to settle all quarrels. Ishkhan, not aware of any plot against his life, consented to go at once, but without the other leaders, who happened to be away at the time. But he took with him four other companions. Soldiers and police officers were placed under his command to enforce his orders and decisions upon the stubborn villagers. On the road the party made a short halt in a coffee-house for lunch.

In the meantime, Jevded Pasha sent (as is fit for a Turk) thirty of his trusted horsemen, with instructions to overtake the party and kill all the five Armenians. The horsemen arrived just when the party was lunching in the coffee-house, and, pretending not to know who they were, started a dispute with them, and shot the five dead on the spot. When they returned and reported the result of their "heroism" Jevded rewarded them by giving each a Turkish lira and an *aferim*.

There was in Van at that time also Vramian, another Dashnagtsagan leader, who was also the Armenian Deputy of Van in the Turkish Parliament. After disposing of Ishkhan and his party, Jevded Pasha invited Vramian and another leader to call on him. The last-named, perhaps scenting danger by a natural instinct (as happens sometimes when one feels a coming catastrophe), declined point-blank to accept the invitation, and also advised his comrade to decline it. But Vramian had frequently called on Jevded before, and did not hesitate—in his capacity as a member of Parliament—to call again, above all, as his refusal might have amounted to cowardice. He went to Jevded Pasha's headquarters, and upon his arrival was placed at once under arrest, being told that he was just the man they were looking for. Vramian was sent, in chains, to one of the small uninhabited islands in the Lake of Van, where, after tying a large stone to his feet, he was thrown into the sea to become food for the *gizil-ala* (gold-spotted) fish of the lake.

Long before this, before the "peace-loving" Pasha was busy issuing peaceful invitations to Armenian leaders, in order that he might make use of their wide influence to settle disputes among Turk and Armenian villagers, the massacres, ordered from Constantinople, were being systematically carried out in the villages. Talaat Bey had made the threat that "if the Armenians make a move for insurrection and rebellion I will deal such a blow to them that they will not be able to think of an *Autonomous Armenia* for fifty years to come," and he was making his threat good!

In the meantime some six to eight persons had succeeded in escaping from the massacres of Shadokh. Travelling in the dark of night and by way of hills and valleys—not by the ordinary roads, which were closed—they reached Van, and reported the massacres going on in the villages, the mean murder of Ishkhan and his comrades, and the arrest of Vramian, about which the people of Van knew nothing.

Preparing for the Siege.

Then the Armenians—the revolutionary parties as well as the peaceful citizens—began to prepare to defend themselves, as they knew well enough that, when the villages were "cleaned and cleared" of Armenians, it would be their turn next to feel the sharp edge of the Turkish scimitar. Jevded Pasha, hearing of the Armenian "rebellion" in Van, sent for the Armenian Bishop to come over for an important "consultation," but already his "consultations" and peaceful invitations were too well known, and the Bishop declined the invitation. Then came a second "invitation," promising the safe return of the Bishop to Van if the "consultation" and "negotiations" failed. But the Bishop knew Jevded and the Turks in general too well. Then came a third invitation, accompanied with a threat to bombard and destroy the city if the Bishop declined, but all in vain, as the threat itself disclosed the Pasha's intentions.

Thereupon Jevded Pasha came and surrounded the city of Van with 8,000 Turks and Kurds, leaving a few hundred behind to finish the work entrusted to them in the villages. The Pasha again attempted to persuade the Armenians—in the most polite terms—"to lay down their arms, surrender without conditions, and to trust to the clemency of his Majesty the Sultan," which, he promised, he was sure to obtain for them. He com-

municated with them through Signor Sulgarti, the Italian Consul of Van. All his efforts failed, however.

It is said there were some 40,000 to 50,000 Armenians in Van, and of this number only 450 men had arms, 250 being armed with Mausers, Russian Berdans, and Martinis, the other 200 having ten-shooting pistols between them, and whatever they could find at the time. They fought and defended the city and themselves for twenty-nine days. On the thirtieth the Russian Army arrived from the north, under the command of General Oganesov (Ohanesian), and the Armenian volunteers from the east, from the Persian border, under the leadership of Andranig, and relieved the town. The Russian Foreign Minister, M. Sazonoff, in his recent speech in the Duma, made mention of the defence of Van by Armenians for a month, and of the valuable service the Armenian volunteer regiments (droojina) rendered to the Russian Army and to the common cause of the Allies by fighting gallantly against the common enemy.

After the Siege.

After Van was taken the various Armenian Committees began to get busier than bees. Instead of housing and feeding the thousands of refugees, they decided to send them to their homes and to rebuild the latter. Moreover, as it was spring, the men were to cultivate and sow their fields. For this purpose the various committees joined hands, and, with the funds, hired carts for transport, appointed special persons to feed and to lead the migrants to their homes, and there to assist them in any and every way possible to build their wrecked homes, to sow and to reap. In this way large sums of money were spent by the Committees, who also bought oxen, reaping and sowing machines, and seed, which were distributed according to requirements.

The Committees also opened hospitals in Van, Manazgerd and other towns in the Van province, and in the smaller towns and villages "treatment rooms" were opened in charge of trained male nurses. Doctors were sent to these hospitals from Tiflis and elsewhere, together with large quantities of medicines and bandages, tea and sugar, and material for clothing the poor, as in Van there was literally nothing to be found. During the famous thirty days' defence of the city, "the boys"—as the defenders of Van are referred to fondly by the Armenians—had no doctors to attend to their wounded, no medicines, and no bandages. The local Armenian doctors had all been taken into the army by the Turkish military authorities, and none were to be found in the villages. The only doctor in the city was Dr. Allen, the American missionary, who had done his best for the wounded fighters, but even he could not do all the work, could not attend to all the sick and the wounded, as he had to attend to his own hospital as well.

I have copies of the daily bulletins of those thirty days, which were issued and signed by the "Armenian Military Council," and the keynote of all of them is: "Boys, spare your cartridges," "Don't fire in vain," and "Each of your bullets must enter the flesh of the enemy." I shall perhaps use some of them when I come to write of the taking of Van by the Russian troops and by the Armenian "boys."

Before closing this letter I must add that since the occupation of Van and the vilayet of Van by the Russian troops the number of the Armenian volunteers has been increased six to eightfold, and perhaps more, because nearly all the young men able to bear arms have since been armed, and have enlisted in the volunteer fighting lines. Besides, a good number of the refugees who were in Caucasia have returned to Van, are armed, and have entered the volunteer lines.

THE COMMERCIAL INTELLIGENCE OFFICE OF EGYPT

23, Sharia Soliman Pasha, Cairo.

Commercial Information supplied by arrangement to British Firms dealing with Egypt and the Near East. Correspondence invited.

F. W. CUMING & CO., Ltd., General Managers.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE BALKANS AT THE BRITISH ASSOCIATION.

To the Editor of THE NEAR EAST.

Sir,—At last week's meeting of the British Association, as you are doubtless aware, the Balkan situation formed the subject of four papers in the Section of Anthropology. Firstly, Professor Elliot-Smith insisted that the facts of geography and racial distribution must be taken into account in the final settlement. By means of a series of maps, he drew attention to the maze of mixed nationalities in the district, and argued that on ethnological grounds Bulgaria had a greater right than Serbia to the part of Macedonia now in occupation by the latter. Sir Arthur Evans, in another paper, said that the Macedonian population was homogeneously Bulgar except along the coast. Mr. K. M. Dawkins dealt with the "Greek Element in Asia Minor," and, in course of an able exposé, stated that the local Greek language, owing to its mixture with Turkish, was of great linguistic interest. Mr. Pember Reeves, again, in his address, argued that, while the northern boundary of the Greek kingdom could be defended on racial grounds, the eastern could not. Most of Bulgarian Thrace, as well as Turkish Thrace, ought to belong to Greece, if the excuse for Bulgaria coming to Dedeagatch was economic, not racial.

It will be seen from the cursory review I have given of the four Balkan papers read that, whereas Bulgaria and Greece—principally the former—had each eloquent champions of their respective causes, Serbia's claims seem not to have been granted a hearing. If, as Mr. Crawfurd Price asserts in a letter to the *Morning Post*, the Serbian Minister "received no notification whatever" of the British Association's decision "to proceed to a discussion of the Balkan problem," whereas it is to be presumed that both Professor Elliot-Smith and Sir Arthur Evans had ample time in which to prepare their papers, it is sincerely to be regretted, though I am loth to believe that any such procedure was intentionally contemplated. On the other hand, the fuel which is being heaped from all sides—and unwisely, one thinks—on the fire of Macedonian strife, is already inexhaustible in quantity; and so acrimonious has the discussion between Serbs and Bulgars again grown, that no good object can have been attained by reading the papers alluded to. It would, perhaps, have been better if the British Association had refrained this year from placing its official seal on the Balkan ethnographical disputes that are now raging.—I am, etc.,

London, September 14. C. R.

SERBIAN MACEDONIA.

To the Editor of THE NEAR EAST.

Sir,—I shall be obliged if you will insert a correction of my article "Serbian Macedonia," which appeared in the last issue of THE NEAR EAST. Among the MSS. in the Catalogue of Prof. Coneff, two are Serbo-Bulgarian and one Bulgarian (p. 531). Small faults (p. 530a, line 21: "latter" instead of "former"; p. 531a, line 9: "eighteenth century" instead of "thirteenth century," etc.) can be easily corrected by the reader.—Yours, etc.,

P. POPOVIC.

AN APPEAL FROM THE FRONT.

Nurse Wheatley, who is well known to a large number of our readers, writes to us from No. 21 Ambulance Train, British Expeditionary Force:—

"I have been wanting to tell you for some time what a comfort the men at No. 3 Casualty Clearing Station find the bells your readers so kindly contributed. Every day the patients bless the donors, and I am sure that if they heard the sighs of relief of the weary man as he settles into his comfortable bed they would feel amply repaid.

"I wonder whether anyone would be good enough to help me with my train? We are one of the newest and largest running, and there are one or two comforts I want in order to make it perfect, such as a narrow strip of carpet in each ward and a dust cover of khaki for each cot.

"I am quite ashamed to beg again, after your former generosity, but I do trust everyone will realise that their gifts actually reach the men individually and directly, and that it is for them I plead. I cannot at present tell the exact cost, but have written for an estimate, and perhaps in the meantime my former kind friends would notify if they would help again."

TANGIER TO TEHERAN.

On all sides I notice references in the British Press to the marked differences which characterize the Turk and the German as a fighter, and a letter which we publish this week from our Port Said Correspondent fully bears out the statements alluded to. It is a queer thing that the Turk should at last be ridding himself of that misapplied phrase "the unspeakable Turk" by simple contrast with members of the one nation which, above all others, claimed to be the apostle of civilization and high culture. Yet, although, Heaven knows, the Turk has enough to make him rabid in these days when his enemies are pressing him hard and his so-called friends are beginning to let him see exactly the position he really holds in their regard, we find him fighting cleanly and like a gentleman, with his passions strictly subservient to the dictates of humanity and honour. How little did the man in the street know of the Turk when this war began! He was commonly regarded as something next door to a savage, as a being who made war doubly hideous by methods of appalling cruelty and most extravagant vice. And in the German, we thought, forsooth, that here was an enemy worthy of our steel, a strong people who would fight strongly, but, at the least, an adversary with whom we could shake hands at the finish, no matter where the victory lay. Well, we know better now. If the war should end to-morrow there is not an Englishman who would cherish hatred for the Turk; there is not an Englishman who would carelessly admit a German to his table, or introduce him to his women folk. So much has the German doctrine of "Kultur" been responsible for. There is scarcely a term of opprobrium to be found between the covers of our most copious dictionaries that could not truthfully be applied to German soldiers on the sworn evidence of witnesses accepted after due examination by our own Government. I sometimes hear it said that one must not judge a whole nation by the acts of a few, and, to a certain extent, there is, of course, justice in the remark. But the dog has a reputation for biting, and we approach his kind with care until we have satisfied ourselves that the particular animal we wish to touch is free from vice. This, I think, will be our attitude towards Germans for many years to come. It is all very well to speak of men carrying out orders; I am glad to think that neither could officers be found in England to give such orders as have been common enough in the German army since the war began, nor, in the unlikely event of such a thing happening, men to obey them.

***

When the war is over I hope that we shall remember that those of our race who remained in Constantinople after the beginning of hostilities have come back now in September with no word of complaint to utter for the treatment they had received at the hands of the Turk. One party which arrived last week included two women and two children, the ages of these latter being five years and a-half and one year respectively. All had been well treated since the first day of war; no obstacle was put in the way of their departure. But the most touching incident in connection with this subject comes to me through the *Egyptian Gazette*, whose representative has recently interviewed Harry Field, a well-known Cairo jockey, who was in Constantinople when war broke out, and who has since ridden for Enver Pasha at a race meeting organized for the benefit of the wounded. Mr. Field relates that only one death had occurred among the British prisoners up to the time of his departure from the city. The soldier who died was an Australian, and all arrangements had been made for an ordinary funeral, when, at the last moment, a detachment of Turkish troops in parade dress arrived with orders to accord full military honours to the deceased. As the cortège passed, all the Turkish troops in the streets halted and saluted. Who shall say that the Turk is "unspeakable" after this?

***

I have just been reading a full account of the alleged appearance of angelic warriors at Mons, as it is set forth by Mr. Ralph Shirley, editor of the *Occult Review*. Personally, I have always been inclined to accept the story as true, and I am more than ever convinced that it is right to put faith in it after reading the carefully collated evidence placed before us by Mr. Shirley. In one way the record is disappointing, because it includes no evidence at first hand, and people are incredulous regarding stories of this sort when they come to us through the medium of third persons, however reliable they may be. Yet, when one comes to consider it, it is not at all unnatural that men who spoke freely of the phenomenon at the time when their whole beings were obsessed by the wonder of it all should be reluctant to enter into details regarding it for the benefit of an incredulous public when the hour of relief was long past and life had settled down again upon its accustomed basis of materialism. We shall hear of it again, no doubt, but that will be when the war is over and men grow confidential in the half-light of a summer's evening, or when mystery awakes as the wind shrills round the British homestead, where the soldier sits with his family about the fire at night. It is not in the English nature to speak openly of these things—as yet. But, as I sometimes talk with our smart khaki-clad soldiers, it seems to me that in some strange way they are already assimilating something of the simplicity of belief that hitherto I had only come across in the peoples of the East. In the immensity of this war we are losing the sentimental frillings that were fast becoming so essential a part of our lives, and we are going back to sternness and to life as it was in the brave days when Britain was fighting inch by inch for the heritage which is ours to-day. And, incidentally, we are finding our souls.

***

In looking back to-day it is hard to realise that we are the same people who blandly regarded the carnage of the Balkan wars. It is harder to recognize in the people of to-day the same race that "Mafficked" during the latter days of the South African War. It is still harder to realize that there were many among us who regarded any national tendency to belief in psychic manifestation as the hall-mark of weakness and national effeminacy. Yet we must admit, many of us, that we read of the tale of Prince Marko and his phantom hordes in Serbia with a smile of amusement that but thinly veiled the sneer of scorn. Our thoughts went back to the old days of witchcraft in England, and we thanked God that we were not as other men. Yet here we are, only a few short years afterwards, not only discussing our own particular miracles, but inclined to regard as being beyond the pale of our fellowship any nation that takes its stand upon the material ground that was all in all to us in the early days of 1914. And this, I take it, is one of the most satisfactory signs of our present outlook. We have only to look to Serbia to see that such beliefs count heavily; that a conviction of spiritual support leads men to heights of achievement that, alone, we could never scale. Would the Turk have fought so bravely had not his religion taught him that the blood of his enemies was a baptism sufficient to ensure for him the glories of Paradise? I think that we are learning much from the East in these days of our trial, or, rather, that, in shedding the choking husks of our civilization, we are coming back to the foundation of our strength, leaving the real fruit of knowledge and civilization pure. If I am right in this, we shall have gained far more than we have lost in either lives or money, because we shall have attained a new basis of understanding between East and West.

***

I have not yet read Dr. Marion Newbigin's book on the "Geographical Aspects of Balkan Problems," so I cannot speak of it with any authority; but to a lay mind such as my own, it seems rather rough luck to put down the disturbed state of affairs in the Balkans to the grouping of their hills and valleys. I mean, that it is hard on the hills and valleys. And it is hard, too, upon other peoples who have imagined their achievements to be due to their own powers, as, if there is anything in Dr. Newbigin's argument as I understand it, much of the credit for accomplishment must necessarily go to the smooth geographical features of a country rather than to its people, if other countries are to be blamed for their irregularities. The one point that I find really comforting—it must be remembered that I am only speaking of the book from the knowledge gained through a review in a daily newspaper—is that Teuton and Turk are up against it, so to speak; they are not only fighting the Allied Forces as we know them, but also Nature as well. I do not clearly understand why, but it has to do with the geographical formations of the various countries engaged. The point, however, is one that interests me tremendously, and though, as I sometimes write myself, I usually pay not the slightest attention to anything I see in the papers, I am for once going to trust to the review and buy the book.

***

Some five or six weeks ago I referred to the derivation of the name "Anzac," and in doing so mentioned an impression of mine that the now famous spot was also known as "Jove's Cove." I now learn from a letter received a few days ago that the impression was not entirely wrong. My correspondent, who is particularly well informed, writes:—"The inhabitants call the whole of the Gallipoli Peninsula Joves—pronounced in two syllables. The actual native name for the hill above Anzac is Sari Bair, and the valley to the south is known as Chakal Deré (Jackals' Glen)."

***

While every member of the Egyptian Government is evidently doing his level best to safeguard the persons of our British, Australian, and New Zealand troops in the country, the sudden necessity for posting notices in the English language is sometimes responsible for rather curious effects. At first sight, for instance, one might almost imagine the magistrate responsible for the following notice, which appears at a dangerous point on the Egyptian coast, to be a person of almost fiendish sternness, rather than the well-meaning and kind-hearted gentleman he undoubtedly is. The notice, placed at a prominent point of the headland, runs thus:—

"Any person passing this point will be drowned.—By Order of the Magistrate."

NEAR EAST BOOKSHELF.

JUGOSLAVIA.*

In this pamphlet Dr. Seton-Watson makes another valuable contribution to the literature of the war. The questions with which he deals are complicated and delicate, but he handles them with courage and assurance born of confidence, and so tactfully withal that even those who differ from his conclusions will find it difficult to quarrel with his manner of stating his case. This in itself is no small achievement, for the air of the Balkans seems to have a strange power of warping judgment and of converting the best-intentioned of would-be impartial investigators of the Great Problem into fervid—not to say rabid—partisans. Fortunately, Dr. Seton-Watson has not fallen under this maleficent spell. He has gathered his information on the spot, but he has kept his head during the process, and he writes of facts as he finds them, instead of endeavouring to force them to fit in with his own theories and sympathies. For which mercy one at least of his readers is truly thankful.

THE NEAR EAST has consistently upheld the policy of treating the Balkan problem as a whole instead of endeavouring to deal with it in a series of watertight compartments, and this view finds strong support in Dr. Seton-Watson's pamphlet. On his first page he writes:—

> Hitherto it (the Balkan problem) has been too often treated piecemeal, mainly owing to the selfish interest and short-sighted outlook of a number of States all meddling and pulling different ways. This has brought its own revenge; and, indeed, it is no exaggeration to ascribe the Balkan deadlock of the past year to the unhappy tendency to take up one small section of the problem after another, so to speak, without its context. The Balkan problem can never be solved on a Serbian or Bulgarian or Greek basis, but only upon a basis of general Balkan policy.

He puts his finger on another weak spot in what we must perforce refer to as Europe's Balkan policy when he writes of "Europe's persistent refusal to study or understand Balkan psychology," and remarks that "those historians who deny the influence of personality on history had better give the Balkans a wide berth."

The causes of the antagonism between Serbia and Austria-Hungary are well brought out. On the one hand we have the Serbs of Serbia and Montenegro bent on liberating their kinsmen across the border, and those kinsmen equally bent on their own liberation and the uniting of all the Southern Slavs—an idea which, Dr. Seton-Watson tells us, "is not as modern as might be supposed. In a vague and ill-defined form it can be traced to individual writers in the seventeenth and eighteenth centuries." On the other hand we have Austria-Hungary bent on crushing such dangerous dreams and fancies, and constantly casting covetous eyes on Salonika and the valleys of the Morava, the highway to the East.

> The Serbs are the chief obstacle to the German *Drang nach Osten*. . . . Serbia is the chief obstacle to these plans of political predominance from Berlin to Bagdad, which lie at the back of Germany's mind in this world-war. . . .

The remarkable thing is not that the struggle has come at last, but that its coming was so long postponed. Scarcely less remarkable is it that Bulgaria and Roumania should have left Serbia to face the brunt of the storm alone and unaided; that the reconstitution of the Balkan *bloc* should still be a matter of doubt. And one wonders how ever the Turks can have been blinded to the "Berlin to Baghdad" peril. As regards Bulgaria and Roumania, their attitude is explained to some extent by the ceaseless intrigues of the Central Powers and the skilful way in which they played upon Balkan jealousies and fostered racial and even religious rivalries. As to the Turks' partnership with their precious "allies," Dr. Seton-Watson puts the matter pithily when he says:—

> It is no accident that the Entente has to fight against the triple league of the German, the Magyar, and the Turk, for to-day their unholy alliance represents the claim of Brute Force to ride roughshod over the smaller nationalities, just as the Entente represents the Principle of Nationality and the rights of every nation, great or small, to its own freedom and individuality.

In the latter portion of his pamphlet the author discusses in detail "what Southern Slav unity means in practice, what are the difficulties in its way," and what are "the political results which such a union would involve." To do justice to his handling of these subjects it would be necessary to reproduce his closely reasoned arguments at length, which is as impossible as it would be unfair. Readers, therefore, must be referred to the original. But we may quote one paragraph which will seem to indicate the field of discussion:—

> Southern Slav unity, then, means the union of the Triune Kingdom of Croatia-Slavonia-Dalmatia, of Bosnia-Herzegovina, of the Eastern or Slav portion of Istria, of the Slovene territory of southern Austria (in Carniola, Carinthia, and Styria), and of the Western or Serb section of the Banat, with the existing Kingdoms of Serbia and Montenegro, in a single Southern Slav State, the new Jugoslavia. Geographically it involves the acquisition of the river frontier of the Drave and the Mur on the north; the protection of Belgrade by a fair partition of the Banat between Serbia and Roumania; the discovery of a reasonable line separating Italian and Southern Slav territory on the west, and representing as nearly as possible a compromise between ethnography and geography (or strategy, as it is now more fashionable to call it), and on the south the union of Montenegro and Serbia.

The programme is certainly an ambitious one, and the difficulties in the way of its execution are numerous and formidable. But Dr. Seton-Watson faces them boldly, and believes that they can all be overcome. His courage even carries him to the length of publishing a couple of maps which—— But no, we will content ourselves with referring the reader to them, merely stating that he will find them fascinating objects of study. In this connection one fact of happy augury for the future is strongly emphasized. Dr. Seton-Watson states, "with full knowledge of its truth and on the basis of irrefutable information," that:—

> At the time of Italy's agreement with the Triple Entente there were no discussions or negotiations of any kind between Italy and Serbia in respect to the future fate of Dalmatia and Croatia. The Italian Press was full of rumours to the effect that a special arrangement had been reached between Rome and Nish, and a statement was even placed in the mouth of "Mr. Jankovitch, a Secretary in the Serbian Foreign Office," expressing his satisfaction at this agreement.

But the whole business was a bit of intrigue pure and simple, and "Mr. Jankovitch" appears to have been a kind of Serbian "Mrs. Harris" or "Noakes of Newcastle." So we may perhaps hope that some of the other "lions in the path" of the infant Jugoslavia will prove equally unsubstantial when the time comes to deal with them. If that be so, the Balkans may yet find peace along lines not far removed from those suggested in this interesting and ably-written pamphlet.

* "The Balkans, Italy, and the Adriatic." By R. W. Seton-Watson, D.Litt. (Nisbet and Co. 1s.).

NEAR EAST BOOK NOTES.

Mr. Granville Fortescue, the only English-speaking correspondent to pass through the Dardanelles since the outbreak of the war with Turkey, includes an account of that experience, as well as of his recent impressions in the Balkans and Russia, in a new book, originally announced as "From Warsaw to Constantinople." This title has now been altered to "Russia, the Balkans, and the Dardanelles." The volume is expected before the end of the month from Mr. Melrose, who also hopes to have ready early in October the new book by Mr. Stanley Washburn—"The Russian Campaign, April to August, 1915."

Messrs. George Newnes, Limited, have just published in a shilling volume, with the appropriate title "An Epic of Heroism," Mr. Ashmead-Bartlett's despatches from the Dardanelles. Readers of the daily Press are already acquainted with these, but they will find, as usual, that the interest of their story is greatly intensified when it is read at a sitting, with the continuity that is impossible in serial form. The epic events so far related here are those from the preparations described on April 8 to the battle of July 12-13, of which the author's account was written on the subsequent day.

Messrs. Grant, of Edinburgh, have issued a new and revised edition of Sir William Muir's "The Caliphate, its Rise, Decline, and Fall," by Mr. T. H. Weir, Lecturer in Arabic in the University of Glasgow. This well-known work originally appeared in 1883. A third edition was published in 1899, and Mr. Weir has now made a number of small corrections.

Next month Messrs. Jack will publish the first two volumes of a new library, entitled, "Through the Eye" series, which aims at the organised presentment of knowledge by means of illustrations. One of these will be "The Civilization of the Ancient Egyptians," by E. B. Gosse, and later volumes will include "Greek Civilization," by Professor J. S. Phillimore.

Mr. Heinemann announces the publication of "A Woman in the Sahara," by Miss Helen C. Gordon, largely concerned with the life of the women of the harem.

Messrs. Luzac have issued this week "Lord Kitchener and his Work in Palestine," by Dr. Samuel Daiches, at the price of 2s. 6d. net.

AN IMPORTANT NEW BOOK ABOUT EGYPT.

By BARON DE KUSEL (Bey),

Sometime English Controller-General of Egyptian Customs.

AN ENGLISHMAN'S RECOLLECTIONS OF EGYPT. 1863 to 1887.

With an Epilogue dealing with the present time, 1914.

With thirty-two illustrations and a map.

To-day, Julkada 8, is the birthday of H.I.H. Refia Sultana, daughter of the ex-Sultan of Turkey, who married Damad Ali Fuad Bey.

It is officially announced in Cairo that Prince Mohammed Ali Fazel passed away about two months ago in Constantinople. The Palace has consequently gone into mourning for twenty days.

Field-Marshal the Earl Kitchener of Khartoum had an audience of the King on Tuesday.

The Earl of Cromer, who has been the guest of Sir Hugh and Lady Alice Shaw-Stewart at their place near Greenock, has returned to town.

Sir F. Reginald Wingate, Governor-General of the Sudan, left Khartoum at the beginning of September for Erkowit, where his Excellency will remain till the end of the month. All the members of the Governor-General's staff are with him at the hill station.

Abbas Hilmi, the ex-Khedive, has left Lucerne (Switzerland), after having spent two months there in the strictest incognito.

The Roumanian Minister returned to London from Paris last week, and on Saturday afternoon his Excellency visited the Serbian Minister at the Legation in Queen's Gate.

Madame Hadji-Mischef, the wife of the Bulgarian Minister, has returned to the Legation from Bognor.

Sir Valentine Chirol has returned to London from a visit to the Near East.

Viscount and Viscountess Midleton left England on Saturday for Egypt, where they have been called by cable to the bedside of their son, the Hon. George Brodrick, A.D.C. to Sir Ian Hamilton, who is understood to be suffering from typhoid fever, contracted in Gallipoli.

Sir Arthur J. Evans has been selected as the President of the British Association for next year, when the meeting will be held at Newcastle-on-Tyne.

One of the war photographs published in the London Press this week depicts the Crown Prince Alexander of Serbia and Rear-Admiral E. C. Troubridge watching range-firing operations "somewhere" in Serbia.

Rear-Admiral Troubridge, who, it appears, has been given a special sphere of work in helping the Serbians on the Danube, will be remembered in connection with the incident of the escape of the Goeben and Breslau early in the war. It is acknowledged, though perhaps not officially, that he came out of this quite satisfactorily, as indeed the fact of his present command attests. Admiral Troubridge descends from one of Nelson's captains, and has himself had a distinguished career in the senior service.

On September 10, the death took place at 46, Chester Square, of the Right Hon. Sir Claude Maxwell MacDonald, G.C.M.G., G.C.V.O., K.C.B. Sir Claude MacDonald was born in 1852. He first saw active service in the Egyptian expedition of 1882, and was appointed in the following year Military Attaché to the British Agency in Cairo. He took part in the operations in the Eastern Sudan in 1884, and was wounded at the battle of Tamai. In 1887 he proceeded to Zanzibar as Acting Agent and Consul-General. The funeral service was held on Tuesday in Marlborough House Chapel, St. James's Palace, Canon Edgar Sheppard officiating. Among those present were Admiral of the Fleet Sir E. Seymour, Sir Valentine Chirol, and Sir Maurice de Bunsen. A service for Sir Claude, as Secretary-General of the Order of St. John, was also held at the Priory Church of St. John, Clerkenwell.

The alarm that was caused by the announcement that Mr. T. G. Grahame, British Consul-General at Ispahan, had succumbed to the wounds inflicted on him during the attack reported in our last issue, was afterwards allayed by the issue of a correction by Reuter's Agency. The Foreign Office states that the most recent official report received is to the effect that Mr. Grahame is progressing satisfactorily, but it is, unfortunately, true that the British Vice-Consul at Shiraz has died after being shot at and wounded.

A message from Ispahan states that the British and Russian colonies have been obliged to leave there. The Russian Consul, with the French and British missionary ladies, has already left for Teheran. The British Consuls and Bank staff were to have left on Tuesday.

The Duke of Mecklenburg, who, accompanied by Dr. von Rosenberg, Reporter on Balkan Affairs to the German Ministry for Foreign Affairs, had for ten days been the guest of King Ferdinand, left Sofia for Constantinople on the 9th inst. It is rumoured that he will shortly visit Athens.

Commander Serra, Italian Diplomatic Agent and Consul-General in Cairo, left Egypt last week for Italy, where he was to spend a month.

Our Sofia Correspondent states that the Marquis di Garroni, former Italian Ambassador at Constantinople, accompanied by the staff of the Embassy, arrived at Dedeagatch, by special train from Constantinople, on August 25. Before leaving, by Italian steamer on the 27th, his Excellency sent a message of thanks to the Bulgarian Premier for the hospitality that had been shown him.

Lieutenant-Colonel Sir Courtauld Thomson, Chief Commissioner of the British Red Cross Society and the Order of St. John in the Mediterranean, arrived home last week on short leave of absence.

Our Khartoum Correspondent writes under date of August 20:—Various officers have returned from a spell of duty at the Dardanelles. Amongst them are Captain Harman, and Captain J. P. L. Mostyn, of the Norfolk Regiment; Captain P. C. Joyce, of the Connaught Rangers, and Captain W. S. Blunt, R.E. Mr. T. A. Leach, Junior Inspector in the Blue Nile Province, has also returned from a change of air, which included a period on a British ship off Sollum and a trip to the Dardanelles. Major H. D. Pearson, R.E., Director of Surveys, who has been acting Assistant Director of Intelligence since the outbreak of war, is proceeding north for a change.

Dr. Christopherson, Director of the Khartoum and Omdurman Civil Hospitals, left Khartoum on the 26th ult. on short leave, which (the *Sudan Times* understands) he is going to pass in Serbia.

The Rev. Mr. Robins, who is senior curate to Bishop Gwynne in Khartoum, is, we understand, shortly to be married, and will return to the Sudan from Europe in November.

A Cyprus correspondent writes:—"A fresh batch of officials, who are, by permission, volunteering for military service, include Mr. Jardine, Assistant to the Chief Secretary; Mr. Noble, Assistant Principal Forest Officer; Messrs. Millard and Watts, and Mr. Cunningham, of the P.O. Department."

Dr. Corbie, District Medical Officer of Nicosia, is at Troodos on leave of absence.

Baron de Kusel Bey left England on Saturday by the P. and O. steamer for Port Said. The Baron is, we understand, returning to Egypt in connection with a practical scheme which has been devised in the interests of British manufacturers.

Among the passengers for Egypt by the P. and O. steamer "Mongolia," leaving London to-morrow, are the Hon. Mr. Justice Amos, Mr. and Mrs. E. C. Bowden-Smith, Mr. and Mrs. P. Carver, the Hon. Mrs. R. Lindsay, Mr. and Mrs. C. T. McKillop, Mrs. W. Peel, Mrs. E. A. Phelps, Mr. and Mrs. P. M. Tottenham, and Captain Westropp.

Mrs. Todd Osborne, whose work in connection with the Mission to Mediterranean Garrisons is so well known, is leaving England shortly for Egypt in connection with the work being carried on at the Russell Soldiers' Home in Cairo.

The marriage arranged between Lieutenant Robin C. Carver and Miss Rose Ashton will take place in Egypt early in October.

Archdeacon Ward left Cairo for England last week.

Hon. Major and Quartermaster G. W. Anderson, of the Egyptian Army, whose death is announced from Egypt, saw much active service. In the Afghan War, 1878-1880, he was with the Kuram Field Force at the assault and capture of Peiwar Kotal and the passage of the Chappri Defile. He took part in the action of Matoon with the Khost Valley Expedition, and while serving with the Kabul Field Force was present at the Battle of Charasiah and the occupation of Kabul. He was also at the actions at Doaba and Lataband, the relief of Sherpur, and the action at Childukbteran, and took part in the march from Kabul to the relief of Kandahar. For these services he was awarded the medal with four clasps and the bronze star His other campaigns were the Egyptian Expedition of 1882, including the Battle of Tel-el-Kebir (medal with clasp and bronze star), the Bechuanaland Expedition, 1884-5, and the Nile Expedition, 1898. In the last-named he was present at the Battles of Atbara and Khartoum, and for his services, which were mentioned in despatches, was granted the honorary rank of captain. He was attached to the Egyptian Army in 1901 with the rank of major, and was subsequently accorded the title of Bey. Five years later he was appointed Director of Stores on the Headquarters Staff of the Egyptian Army, and was decorated with the Order of the Mejidieh. Major Anderson was the author of "Seaforth Songs and Ballads," and also of another work, "Lays of Strathbogie."

It is not generally known that Mr. J. Martin Cleaver, who died recently, after a brief illness, in Belfast, worked as a missionary in Egypt for four years, from 1898 to 1902. He was one of the founders of the Egypt General Mission, and it was his intention to remain in the country, but unfortunately his health necessitated his return home after four years' service. He then took up the secretaryship of the mission, and was keenly interested in it up to the moment of his death. He was the son of Mr. John Cleaver, of the firm of Robinson and Cleaver, and before entering the mission field he had taken his degree at Trinity College, Dublin and had practised as a solicitor.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.
Entire Charge. Trained Nurse. Qualified Resident Master.
Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from
Miss Thomson, The Hall, Bexhill on-Sea.

Professor John A. Todd, Professor of Economics and head of the Department of Economics and Commerce at Nottingham University, and formerly of the Khedivial School of Law, Cairo, is leaving England for India by the P. and O. steamer Mongolia, which sails from Marseilles on the 25th inst. He has secured a special "cold-weather" lectureship in economics in the University of the Punjab, and has been granted six months' leave by the Nottingham authorities for the purpose. Professor Todd, the second of whose series of articles on "The Making of Modern Egypt" appears in the current issue of THE NEAR EAST, hopes to revisit the Nile Valley on his way home next spring.

Mr. A. F. Hirsch, whose death, as the result of a sudden attack of peritonitis, is reported from Alexandria, was one of the oldest Anglo-Egyptian residents in that town. He first went to Egypt in 1877.

The Bishop in Fuh-Kien, China, the Right Rev. Horace MacCartle Eyre Price, who has recently been on furlough in England, is visiting Egypt for the purpose of performing the ceremony of confirmation in that country. Bishop Price, who was consecrated in 1906, was formerly a C.M.S. missionary in Sierra Leone and Japan.

News has reached Cambridge that Sub-Lieutenant Ronald Roscoe Thornely, R.N.V.R., of the Mediterranean Expeditionary Force, was wounded at the Dardanelles on August 31. Sub-Lieutenant Thornely is the eldest son of Mr. Thomas Thornely, of Merton Hall, Cambridge, and Fellow of Trinity Hall. He graduated B.A. at Trinity Hall, taking honours in the Mechanical Sciences Tripos, and has been for three years in the Egyptian Government Service, his last post being that of Assistant Director of Irrigation Works at Alexandria. In December, 1914, he was given a temporary commission in the Royal Naval Volunteer Reserve.

Captain William Henry Veitch Cameron, 1st Highland Light Infantry, who fell December 20, 1914, while in action with his regiment, served at one time in Egypt when his regiment was stationed there.

Major Kenneth Wyndham Arbuthnot, 2nd Seaforth Highlanders, who was recently killed in action near Ypres, left estate to the value of £23,281. Major Arbuthnot, who was formerly Brigade-Major to the Gordon Infantry Brigade, Scottish Command, had seen service in the Sudan and also on the North-West Frontier of India.

Lieutenant Norman Holbrook, V.C., is on his way home from the Dardanelles in a hospital ship. The gallant officer quickly recovered from his wound in the base hospital at Alexandria, where he was taken after being shot, but shortly afterwards he fell seriously ill, and had to be readmitted. Lieutenant Holbrook has become widely known through his submarine feats around Gallipoli.

Information was received last week of Captain Rupert Raw, who was reported missing on August 23, in the following cable message from Alexandria:—"Tenth August, Captain Raw advanced with thirty men, was cut off by larger party of Turks, not been heard of since."

At the Chapel Royal, Savoy, on Wednesday, Nadine, younger daughter of the late Sir Reginald Beauchamp, Bart., of Langley Park, Norwich, was married to Mr. George Bettesworth Piggott, formerly a judge of his Majesty's Supreme Court for the Ottoman Dominions. The bride is a granddaughter of the fifth Earl of Roden, and her uncle, Sir Horace Beauchamp, is reported missing at the Dardanelles. Major Bradshaw, Queen's Bays, acted as best man.

On the 15th inst. the marriage was solemnized, very quietly owing to the war, at the Bar Church, Scarborough, of Miss Ada Kathleen Binns, youngest daughter of Mr. and Mrs. Laurence G. Binns, of Bebek, Constantinople, with Rev. G. Douglas Reith, B.D., son of Rev. Dr. and Mrs. Reith, of Glasgow. The ceremony was performed by Dr. Reith, assisted by Rev. J. A. Middleton, of the Bar Church. The bride, who was given away by her father, was attired in a crepe de Chine gown trimmed with chiffon and pearls, and wore a Honiton lace veil lent by the bridegroom's mother. She was attended by two bridesmaids, Miss Ethel M. Binns (sister of the bride) and Miss Isobel Rowntree (niece of the bride). Captain J. C. W. Reith, R.E. (brother of the bridegroom), acted as best man. The church was very prettily decorated with flowers sent by Mrs. Ellis, of Wrea Head, Scalby. The hymns were "How welcome was the call," "O perfect love," and "O God of Bethel." After a quiet family gathering at the house of Mrs. Maurice Rowntree (sister of the bride), the newly-married couple left Scarborough for Ravenscar, where they will spend a few days before proceeding to their future home at Clunie, Perthshire.

If any of our readers know the present address of Mrs. Arnold and Miss White, who returned to England this week from Constantinople, they will oblige by communicating with the Editor of THE NEAR EAST.

A patriotic masque pageant was held in the grounds of Donaldson's Hospital, Glasgow, last Saturday, on behalf of the work of Mrs. St. Clair Stobart in the organisation of war hospitals. Dr. Stobart has taken hospitals of women doctors to Belgium and France, and is at present in Serbia.

In the Greek Church in Moscow Road, Bayswater, was held on Wednesday afternoon the first part of the funeral service for Mr. Leonidas Bistis, a Greek shipowner, who lost his life in the Lusitania. His body was recovered near the Irish coast three months and a half after the disaster.

According to the *Echo de Paris*, Djemal Pasha is now at Baghdad, where he is said to be in open enmity to Enver Pasha. He is credited with the intention of forming a coalition to bring about the downfall of the War Minister.

The same journal states that Bekry Bey, former Vali of Beyrout, has been transferred to Aleppo.

According to the *Malta Chronicle*, Lieutenant H. W. Huber and Second Lieutenant A. N. Vella Bernard, two officers of the King's Own Malta Regiment, of Malta, who volunteered for service in the Dardanelles some time ago, are now to be joined by five more volunteer officers from the same regiment. They are Captain F. M. Stivala, who served with the Mounted Infantry in the Transvaal and has the medal with four clasps; Lieutenant P. A. Micallef Eynaud, Lieutenant A. G. Dandria, Second Lieutenant J. E. Agius, and Second Lieutenant C. A. Muscat. The five officers were entertained at a farewell dinner at Fort Manoel on August 28 by the officers of the regiment.

Lieutenant-Colonel William Dent Bewsher, commanding the 10th Battalion of the Hampshire Regiment, who is among the officers reported wounded at the Dardanelles, saw active service with his regiment at Aden in 1903, when he served as adjutant of the 1st Battalion during the operations in the interior.

An officer, one of the Near Eastern contingent at the Front, tells the following story of British daring which came under his personal observation:—"The other day the Huns had hoisted a blue and white Bavarian flag on their parapet opposite one of our trenches held by the 10th Lancashire Fusiliers, and a sergeant and private from that battalion went out in broad daylight and returned with it in triumph!"

OBITUARY.

REV. PROFESSOR VAN MILLINGEN.

We regret to announce the death, at Rusthall, near Tunbridge Wells, on September 15, of the Rev. Professor van Millingen, D.D., of Robert College, Constantinople. Professor van Millingen had for many years occupied the Chair of History at Robert College. He was at the same time one of the most conspicuous figures in the British colony at Constantinople. As the only English member of the Faculty of the College, he was one of the principal links between that important institution and the British community. Dying at an advanced age, he, nevertheless, leaves in both a void which it will be difficult to fill. His ripe judgment was an invaluable asset to the College, of which, in recent years, he was more than once acting president. Other qualities not less notable secured him a special place in the esteem of his own countrymen. His fine scholarship conferred lustre on both.

Alexander van Millingen was descended of a Dutch family of Myningen, in Holland, one member of which established himself in London in the latter half of the eighteenth century. One of this ancestor's grandsons was Dr. Julius van Millingen, who, having graduated in medicine in Scotland, accompanied Lord Byron to Greece during the War of Independence, and eventually, after many vicissitudes, settled in Turkey and served four successive Sultans as Court Physician. The late professor was a son of this Dr. Julius van Millingen by his second marriage. He studied at Malta and in Scotland, entered the ranks of the clergy of the Church of Scotland at an early age, and became in due course pastor of the Free Church of Scotland at Genoa, and, later, of the Union Church in Pera, Constantinople. But though to the end of his life he was an effective preacher and was well known in that capacity in Constantinople, he had inherited from his father a taste for antique learning, and the greater part of his later life was devoted to those studies which made him the leading English authority on Byzantine archæology. Too conscientious a student to publish any but his best work in permanent form, he gave relatively few books to the world. What he published was of all the more solid worth, and, while in such a work as "Constantinople" (Beautiful Books series) he showed that he could do the work of a *vulgarisateur*, his other works, and especially his last, "Byzantine Churches in Constantinople," are monuments of erudition and accurate scholarship.

Professor van Millingen remained in Constantinople for some time after the outbreak of war between Great Britain and Turkey. He left, however, with his wife and daughter, early in the present year. He remained for some time in Italy, but eventually he came to this country. Shortly after his arrival he fell ill in London, and, though he was able to move to Tunbridge Wells about three weeks ago, he steadily lost ground. The immediate cause of his death was heart failure. It cannot be doubted that his end was hastened by the disturbance of an ordered life in his beautifully placed house at Rumeli Hissar, on the Bosphorus, as a result of the war. He looked eagerly for the triumph of our arms at the Dardanelles, and his personal interests were to a large extent bound up in it; but it is worth recording, as an example of the broad sympathy and largeness of view of the man, that, in almost his last conversation with the writer, he should have expressed what he called a kind of satisfaction in finding that the Turks, so long our friends, could fight so clean a fight and were proving themselves adversaries not unworthy of our steel.

Professor van Millingen was twice married. His first wife was Miss Cora Welch, daughter of the late Hermanus Welch, of New Haven, Conn. His second wife was Hope, daughter of the late Henry Somerset Mackenzie, of Penwenack, Cornwall. He leaves issue by his second wife two sons and one daughter. His elder son, Mr. Charles van Millingen, received his commission in the 14th Rifle Brigade on August 18.

WHITTALL, Rifleman Walter, 7th Service Batt. Rifle Brigade. (*Wounded.*)
WOODS, Harold, Interpreter, Mediterranean Expeditionary Force, Alexandria.
WRATISLAW, Captain J. C., 8th Leicestershire Regiment, 110 Brigade, 37th Division, B.E.F., France.

APPOINTMENTS, PROMOTIONS, etc.

Lieutenant James U. F. C. Alexander, Coldstream Guards, has been taken on the strength of the Egyptian Army, with the rank of Bimbashi, and posted to the 10th Sudanese.

El Kaim. G. B. Stoney Bey, Sudan Government, has been struck off the strength of the Egyptian Army.

The following officer is granted the temporary rank of Miralai:—El Kaim. L. K. Smith Bey, D.S.O., Officer Commanding 9th Sudanese (whilst Acting Officer-Commanding Khartoum District).

Kennedy Pasha, Director of the Sudan Public Works Department, has returned to Khartoum from the Dardanelles, after an absence of several weeks.

Mr. MacMichael, who was recently transferred from Khartoum to Kordofan, has left Khartoum for his new post. It is probable (says the *Sudan Times*) that Mr. Munro, Inspector of Khartoum North, will succeed him at Omdurman.

M. Léon Islavine has been appointed Russian Minister in Cettigne in place of M. de Giers, who retires from the Diplomatic Service, having reached the age limit.

The *London Gazette* announces the promotion of Paymaster H. P. W. G. Murray, to Staff Paymaster, for services in connection with the International Commission at Scutari, 1913, with seniority of September 9.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

DEATHS.

BLAKENEY.—On August 20, at Heliopolis, Egypt, Joyce Yvonne, the very dearly loved little daughter of Major and Mrs. R. B. D. Blakeney, aged ten months.

HAYES.—On September 6, at Suez, Arthur J. Hayes, L.S.A. (London), Medical Officer Quarantine, Suez. son of the late George Hayes, of St. Michaels, Azores, and Mrs. Hayes, of Woodchurch Road, West Hampstead.

VAN MILLINGEN.—On September 15, at Rusthall, Tunbridge Wells, the Rev. Professor Alexander van Millingen, D.D., of Robert College, Constantinople, of heart failure; aged seventy-five. American and Italian papers please copy. (Funeral at Rusthall on Saturday at 3 p.m.)

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Alexandria.
WINDSOR HOTEL (*Facing the Sea on the New Quay*).
Most delightful and healthy situation of any Hotel in Alexandria. Electric Light throughout. Daily Concerts on Verandah. Meals served *al fresco*. French Cuisine and English Management.
Inclusive Terms from P.T. 50 (10s.) per day.
Special Terms to Government Officials, Commercial Travellers, and for long stays.
Proprietor and Manager—AUG. van MILLINGEN.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

FRIDAY, SEPTEMBER 17, 1915.

THE BALKAN KNOT.

The situation in the Balkans has the distinction of being unsatisfactory to the Central Powers, to the Quadruple Entente, and, it can hardly be doubted, to the Balkan States themselves. Hitherto Germany has played her cards to prevent Roumania and Bulgaria from throwing in their lot with the Allied Powers; but now a close observance of the rules of neutrality no longer suits the German game. Turkish appeals for further help are becoming more and more insistent, and the continued resistance of the Turks at the Dardanelles is far too valuable to the German scheme of military operations to allow these appeals to be lightly disregarded. Reports that the Porte has fixed a day in the present month as the last date on which the army can hold out without German assistance need not be taken too literally. The Turkish military authorities are well aware that under existing conditions the end must come sooner or later, and in urging their allies to hasten to their aid they will naturally underrate their own powers of resistance. What is established is that Turkey is being too hard pressed at the Dardanelles, and is feeling the pinch of war too acutely to face the future with any confidence. If help is to be sent to her, Balkan neutrality must go by the board, for German troops need to be conveyed by the State railways of Roumania and Bulgaria to Constantinople. The threat that an Austro-German army would hack its way through Serbia, and, if need be, through Bulgaria, could never have been intended seriously. Such a project might have been feasible at an earlier stage of the war; it is altogether out of the question as things are at present, in the face of the enemy's commitments and losses in the eastern and western theatres of the war and on the Italian frontier. The threat, however, was used, and to lend colour to it a small Austro-German force was moved to the neighbourhood of Orsova. But the last thing that the German Government can wish to bring about is the intervention of the neutral Balkan States in the war as the result of an invasion of their territory. Of the corn and oil that Germany requires from the Roumanians, some stands a chance of finding its way into Austria-Hungary and Germany if the relations between Roumania and these two countries remain outwardly friendly. A declaration of war would reduce Germany to the necessity of trying to fetch the goods she wants by force of arms. As for the help that she is anxious to send to Turkey, it could hardly count on reaching its destination in time to save the defenders on Gallipoli, if it had to force its way through hostile territory. Germany's only chance, therefore, of succouring her Turkish ally is to ignore the Serbians and to browbeat the Roumanians and Bulgarians into submission. Under penalty of invasion Roumania is required to allow German troops to pass into Turkey and to free large quantities of grain and oil for export into Austria-Hungary and Germany. If she were to accede to this demand, the acquiescence of Bulgaria, who commands the immediate approaches to Turkey, could be relied upon as a matter of course.

What, then, is to be Roumania's attitude towards this peremptory demand of the German Government? Will she maintain her refusal, or will she yield the point from a desire to avoid being dragged into the war? In the event of her rejecting the demand, can German diplomacy be relied upon in exercising pressure not to overstep the boundary of Roumanian tolerance in such a way as to precipitate war? These questions only restate in a different form the Balkan problem as it presents itself to-day in the middle of the European war. Roumania's desire to incorporate within her own dominions the three or four millions of her kinsfolk now under Hungarian rule remains constant. She is prepared to give battle for their liberation, provided there is a reasonable chance of success for her arms. But so long as the Austro-German forces are able to thrust back the Russian line the Roumanian military authorities hesitate to try the fortunes of war single-handed. If the Balkan States could participate as a united whole in the struggle, they would be independent of all considerations of the fate of the Russians. But the goal of a Balkan understanding remains almost as far off as ever. How difficult it is to reach is known to all who are acquainted with the conditions in the Near East. The antagonisms between the different States were crystallised by the events which led up to the Treaty of Bucharest, and until the memory of that unfortunate pact has been eradicated there can be no satisfactory meeting-ground for these close neighbours. Protracted negotiations have been in progress between the Powers of the Quadruple Entente and the Balkan States to secure the cancellation of the Treaty, for which Germany was mainly responsible. Some headway it was thought had been made, and the preliminary stages towards an understanding seemed to have been reached. But a complete change in the military situation in Europe supervened. The Balkan knot at once relapses into a state which defies all efforts to untie it. There remains the alternative of cutting it. Instead of waiting for the establishment, by a natural process, of goodwill among the Balkan States, an attempt might be made to force the respective Governments into line with their own national interests. Such a development in the situation is not altogether out of the question. The necessary pressure might come from one of two directions—from Germany, who may succeed in driving Roumania into the war, or from the Dardanelles, where the collapse of the Turkish resistance would inevitably modify the attitude of all the Balkan States.

Germany, therefore, finds herself on the horns of a dilemma. She must risk throwing Roumania into the arms of the Quadruple Entente, in order to bring help to the Turks, or she must face the elimination of Turkey from the war, if she is to avoid the possibility of complications with Roumania. At the present moment she is striving her utmost to reduce the risks of antagonizing Roumania if she tries to send the necessary reinforcements to Turkey. The ground has been prepared for some time by the employment of German gold, while no effort has been spared to convince the Roumanians of the invincibility of Germany's arms. Her successes in the eastern theatre of the war have come at an opportune moment, and she has been at pains to drive home their lesson by resorting to the crudest terrorism. The Allied Powers will do well to try to put themselves in the place of a small Balkan State that has lived habitually under the shadow of the overwhelming strength of the two Germanic Powers. Such a State may well feel that it has some excuse for being more impressed by the exhibition of German strength than by the reiterated assurances of the Allies' ultimate determination to win. To carry weight the resolve of the Entente Powers must be supported by some definite earnest of future victory. While that is delayed, it is surely suicidal to leave the field entirely to our German enemies. We have urged continually in these pages the necessity of adjusting our activities in the Balkans to local conditions and the temperament of the people. The British Government possesses full knowledge of all the means by which Germany has succeeded in terrorizing the different countries. To counteract her influence it is not always necessary to imitate her ways; but there can be no justification for an attitude which affects to disapprove of German methods and takes no steps to checkmate them. Our immediate task is to support the Roumanians in their refusal to allow German troops and munitions to pass through to Turkey, while reminding them that the realization of their national ideal, from which Germany is anxious to distract their attention, can only be attained through the agency of the Quadruple Entente.

THE MAKING OF MODERN EGYPT. —II.

FROM MOHAMMED ALI PASHA TO THE KHEDIVE ISMAIL.

By Professor Todd.

The previous article (THE NEAR EAST, August 20, 1915) described the marvellous rise of Mohammed Ali to fame and power. As Pasha of Egypt he was really the sovereign of an independent country, for the suzerainty of Turkey over Egypt has never been anything but nominal from the conquest of the country by Sultan Selim in 1517. But the growing strength of Mohammed Ali moved the powers of the Sublime Porte to a more definite assertion of their authority, which, though couched in the form of a rightful claim for assistance, may well have been inspired by the further motive that if the venture proved too much for him, it would still serve a useful purpose by getting rid of him. On the outbreak of the Greek Revolution in 1822, they appointed him Governor of the Morea, and called upon him to send his new fleet to assist in the campaign. Thus came the battle of Navarino, where, in a quarrel not his own, Mohammed Ali's fleet was destroyed by ours, and his wings were severely clipped for a time. Within ten years, however, the fleet had been replaced, and Mohammed Ali determined to emulate the achievement of Greece and secure his own freedom from Turkish suzerainty. In 1832 his eldest son Ibrahim led a powerful army into Syria, and so successful was he that he quickly overran the whole of that province and part of Asia Minor, and was practically at the doors of Stamboul, when the intervention of England suddenly snatched the spoils of victory from his hand. After some years of diplomatic discussion, interspersed with further desultory fighting with the Turks, Lord Palmerston took up an attitude of definite opposition to Mohammed Ali, who had no alternative but to fight England, or withdraw. At first he tried to fight, but he had sense enough to know when he was beaten, and very soon was forced to withdraw the remnant of Ibrahim's army from Syria. The oppressive character of the latter's rule there is recalled by a story in Kinglake's "Eothen" which refers to the name of Ibrahim as a terrifying bogey, still in use. Then, in 1841, Lord Palmerston, as a concession to the old man's wounded pride, made the Porte grant the famous Firman upon which the political position of Egypt has ever since depended. Mohammed Ali was given the hereditary Pashalik of Egypt, the tribute was fixed, and his relations to the Porte with regard to the army, etc., were clearly laid down.

Thus in his old age (he was now over 70) Mohammed Ali returned to his task of creating a new Egypt, but under very different conditions. Financially crippled by the cost of the war, many of his great schemes were going awry, and in a few years his mental powers began to fail. In 1848, Ibrahim, himself in very feeble health, was appointed Regent. The old man's last public appearance was in 1847, at the laying of the foundation stone of the great Delta Barrage, the failure to complete which may be taken as typical of his life. He died on August 2, 1849, predeceased by Ibrahim, and, in accordance with the Turkish law of succession, the Pashalik, instead of going to the latter's eldest son, went to the eldest surviving male of the family. This happened to be his grandson, Abbas, who was actually ten years older than Mohammed Ali's own youngest son, Said Pasha; the latter, therefore, did not come to the throne until after his nephew's short reign was over. Abbas's policy may be described in one word as reaction, for everything that Mohammed Ali had done he proceeded to undo; while what Mohammed Ali had left undone was never finished. Pestered by European concession-hunters, he shut himself up in his palace, where his life became a mystery, ending in his murder by two of his attendants in 1854.

His uncle, Said Pasha, who succeeded him, was of a very different type. Frank and genial in his manner, well educated in France, and favourably disposed to foreigners and the advancement of his country, his name survives only in one connection. In 1854 he granted the first concession to Ferdinand de Lesseps for the construction of the Suez Canal, and it is after him that Port Said was named.

In many other ways that concession serves to link up past and present in the history of Egypt. De Lesseps' claim on Said Pasha is said to have been that his father, when French Consul in Kavalla, had rendered assistance to Mohammed Ali, who was then setting out for his first campaign in Egypt. The arguments by which De Lesseps gained the concession were that the Canal would restore to Egypt her ancient control over the trade between Europe and the East, and that it would cost Egypt nothing, for Europe would provide the capital. The whole subsequent history of Egypt is the tale of the falsification of those two promises. It was the Canal that made it necessary for England to acquire a position of authoritative control over the government of Egypt a generation later; and it was the financial burden which the Canal threw upon Said and his successor, Ismail, that were the chief excuses for the first of the great loans, which in the end brought the European creditors into financial control of Egypt. Mohammed Ali, in his later years, had been in sore financial straits, but did not resort to a national debt. Said Pasha was the first to avail himself of these modern methods, and Ismail carried them out to their logical conclusion by borrowing till he could borrow no more, and his creditors foreclosed.

It was on January 18, 1863, that the famous, or infamous, Ismail Pasha came to the throne, on the death of his uncle, Said Pasha. Ismail was the son of the great Ibrahim, but not the eldest son. His elder brother met with a terrible death in 1858, through one of those "accidents" which so often happen to members of a ruling family in Oriental countries. A special train carrying many members of the family to a *fantasia* in Cairo was being backed on to the train ferry over the Nile at Kafr-el-Zayat; by some mischance the forward gates on the boat had been left open, and the engine-driver unwittingly backed his train right over into the river. The whole of the party were drowned, but Ismail, who should have been with them, whether from accident or from secret knowledge on his mother's part, had pleaded indisposition and stayed at home in Alexandria.

Ismail began his reign under the brightest auspices and apparently with the best of intentions, strikingly illustrated by his published views with regard to the Suez Canal. "I am all for the Canal," he said, "but I want the Canal to be for Egypt, not Egypt for the Canal." But though he failed notoriously to live up to these expectations, it is a common mistake to write him down as an unmitigated failure. On the contrary, it is hardly too much to say that, in his own way, he was a worthy successor of Mohammed Ali, a real "chip of the old block." He was a man of great ideas, ever ready to listen to schemes for the advancement of his country, which, of course, meant himself, for in those days no Oriental ruler would ever have thought of regarding the country as anything but his own private estate. Ismail did many things for Egypt, and the only fair method of estimating his contribution to its history is to consider first what he did, and then what it cost.

His reign began under a lucky star: the cotton famine due to the American Civil War not only sent the prices of Egyptian cotton to famine heights, but also drew the attention of Lancashire to its peculiar qualities, and when the war was over it never entirely lost the position which it had thus gained. Ismail naturally took steps to secure his full share of this new-found wealth. With the Oriental instinct for land-grabbing, he proceeded to add to his comparatively small estates by every possible means. Lands were bought at prices fixed by the buyer, which, however, were seldom paid. Confiscation on the most flimsy excuses was resorted to at every turn, and in 1876, when the smash came, Ismail owned about one-fifth of the whole cultivated area of Egypt. Again one thing leads to another. These great estates required increased labour for their cultivation, and the labour supply of the country was being depleted by the *corvée*, or forced labour, which Said Pasha had undertaken to find for the construction of the Canal. Ismail was always quick to avail himself of the highest moral grounds for repudiating a bargain which he did not wish to carry out. The abuses to which this *corvée* had become subject, and the oppression and sufferings of the labourers, were a public scandal which Ismail refused to tolerate any longer. He stopped the *corvée* and diverted the labourers to his own estates, with financial consequences to Egypt which proved nothing short of disastrous. At the same time he cancelled the concession granted by Said to the Canal Company of all the land along the Sweet-water Canal, which carried fresh water from the Nile at Cairo to the Canal works at Ismailia and Port Said. These Ismail calmly annexed to

HEART TONIC.

DIGESTIVE AND NON-GOUTY.

By Appointment to

KING GEORGE.

KING OF SPAIN

Digitized by Google

his own domains, and for a time he was able to defy the company and ignore their protests.

But Ismail's ambitions were not entirely material. He had set his heart upon the acquisition of a higher title of dignity than that of Pasha, and upon having this title made hereditary in his own family. In 1867 he succeeded, at the expense of enormous backsheesh distributed in Constantinople, in getting the Persian title of Khedive conferred upon him. But in the East something more is required to establish one's title than merely a legal document. There were two dispossessed claimants to the throne—namely, an uncle and a brother—and these had to be got out of the country and their lands added by forced sale to Ismail's domains. By a curious irony of fate Ismail forgot at the same time to get rid of Tewfik, who was by a few hours actually his eldest son, but emphatically not his favourite; and it was not till nearly forty years later that his favourite son, Hussein (the present Sultan), did come to the throne through the British Government setting aside Ismail's altered succession. Again, Ismail was not content to pose merely as an Oriental potentate, and especially as only a vassal of the Sultan. The opening of the Suez Canal gave him the opportunity for a display of regal hospitality, to which practically every crowned head in Europe was invited, and many of them accepted the invitation or were represented. The lavish scale of the entertainments provided is still recalled by the great road built from the village of Giza to the Pyramids, five miles in an absolutely straight line, for the one day of the Empress Eugenie's visit, for which also the Opera House in Cairo was built, and the opera of "Aïda" specially written by Verdi for the opening night. Ismail's reward was seen in the almost royal reception accorded to him when he subsequently paid State visits to the capitals of Europe.

Mohammed Ali had begun the rebuilding of Cairo by ruthlessly driving the long straight street which bears his name through the centre of the city, as it was then, to the Citadel, where his own mosque now stands. Ismail, with the same ambition, built an entirely new quarter of the city on French lines, which now bears his name, Ismailia, as well as numerous palaces for his own occupation.

Lastly, Ismail again brought the Sudan under something like real control by Egypt. In 1869 he sent Sir Samuel Baker to explore the sources of the White Nile, and the regions round the source which he annexed were named by him Ismailia. From 1874 Ismail really tried to make something out of the Sudan; and perhaps the most surprising of all his acts was the sending of General Gordon to take over the Governorship of the new Equatorial province. In 1877 Gordon's commission was extended to that of Governor-General of the Sudan, and for the first time he brought something like civilization into the country. He at least was the only man who up till then had managed to make the Sudan pay its way, and he was the first to make an honest attempt to suppress slave trading; but the story of his tragedy belongs to a later period.

In fifteen years, then, Ismail had changed the whole face of Egypt, for on the surface at least it enjoyed peace and prosperity such as it had not known for centuries. The exports and imports of the country had increased by leaps and bounds. Law and order of a sort were maintained throughout the country to the extent that foreigners, even women, might roam it from end to end without fear of molestation. There seemed some justification for the boast attributed to Ismail that Egypt was no longer part of Africa, but of Europe. It remains, however, in a later article to turn to the other side of the picture and to count the cost of all this apparent progress.

TELEGRAPH MONEY ORDERS FOR EGYPT.

Beginning this week, and for the period of the war, the telegrams of advice of telegraph money orders payable in Egypt will be accepted for transmission at the deferred rate for the telegrams of advice if the orders are intended for payment to soldiers, sailors, doctors, or nurses serving with his Majesty's Forces. Telegrams for members of the Forces in Egypt must in all cases bear the number, rank, and regiment of the addressee, even though they may be addressed to a hospital.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

THE LAST CHARGE OF FUAD PASHA.

II.

We published last week the first part of the "political testament" of Fuad Pasha, Grand Vizier of Turkey from 1861 to 1866, and to-day we give some further extracts from this interesting document. As previously explained, it is in the form of a letter, addressed by the Minister to the Sultan Abdul Aziz. It was originally published in the Constantinople Press, and thence translated into Arabic and published in *Al Jawaib* and other Arabic journals; and we are indebted to a correspondent formerly resident in Syria for the translation from which we quote.

After dealing with the value to Turkey of British and French friendship and support, the document goes on to a consideration of the worth to the Ottoman Empire of the other European Powers, and a discussion of the internal policy recommended by Fuad Pasha. The following are the most interesting passages from the latter portion of the document:—

Austria-Hungary has been diverted from interfering with the Eastern Question by European interests. Surely she committed a grave blunder in the Crimean War, and she will find in future a great danger threatening her from the north, and that will be very serious for her as well as for us. . . . Prussia has up to the present paid no attention to the Eastern Question. Probably her policy has compelled her to sacrifice it on the altar of the German alliance; but when that problem is settled completely she will find her way to the Eastern Question just as the other Powers have done. I trust that the result of her policy will not lead to our enemies laying their hands upon our European possessions.

Russia is the natural foe of our country; for one of her essential sentiments is to seek for extension in the East. Had I been a Prime Minister in Russia I would not have allowed any obstacle to hinder me from capturing Constantinople. We should therefore not be surprised nor complain of her enmity towards us, for she is only treating us in a similar manner to our treatment of Greece. It is the height of folly for us to defend ourselves against her assaults upon our dominions by mere assertion of our rights; for we need force to protect them—but not such as we have resorted to in the past, which has already become obsolete, and such forms of force it is useless to attempt to revive. Our real need is now the new strength by which the European Powers have fortified themselves—that is, the force of education and of the new methods of civilization. Russia is no longer what she was in the time of Peter the Great, but she has advanced considerably, and, after a limited time, when the construction of her railways is complete, her progress will be multiplied tenfold. . . .

Speaking of Russia leads me to say a word about Persia, whose Government, owing to her stubborn fanaticism, has always been allied to our foes, for she even persuaded herself in the time of the Crimean War to be on Russia's side against us, though the winds of Eastern policy blew against her desire and prevented her from obtaining her wish.

The throne of the Shah is dependent upon the Russian Cabinet, while in the Government there is the utmost degree of frailty, folly, and poverty. Persia, therefore, cannot show us enmity or cause us real harm as long as we are free from complications and entanglements; but if Russia fights us, then Persia will be the first of our foes, and in spite of our great caution concerning her, she will attack us because of her desire to retain political independence. Fortunately, the Porte, possessing material resources, at the same time can make use of moral suasion in order to frighten the Government of the Shah, whose foundations have been shaken by despotism and manifold political trickery; and in the meanwhile she is being surrounded by the *Sunni* Mohammedans.

We should not forsake Greece, for while she has no personal importance of her own, she is an instrument employed by hostile Powers to do the work of the cuttle-fish—to obscure our clear waters and trouble us.

The European poets, with the object of reviving the names of Homer and Aristotle, resuscitated a nation which disappeared some 2,000 years ago, but the result of this work was that they brought into existence a home for intriguers and conspirators. It is possible that the Greeks will continue for some time, taking pride in their vanished glory, though they have been far away from it for many centuries and wandering in foolishness and ignorance. They are endeavouring to revive their Eastern empire, but, being self-deceived on the one hand and being separated

Digitized by Google

from the other nations on the other hand, they will, as a consequence, be hated by the Eastern peoples.

The Turkish Government has found many skilful experts amongst the Greeks, but their racial spirit will always remain opposed to our interests. It is, therefore, our political duty to keep a separation between the Greeks who are our subjects and the other Christian communities, and also to keep up a division between the Bulgarian and that of the Greek Orthodox Church, and at the same time to prevent them from joining the Russian or the Roman Church. The Porte should also prevent any secret effort made to unite the Armenians, or the Gregorians, with the Orthodox Church. Let our efforts for rendering good services to our Christian subjects be directed and confined to liberating them from clerical autocracy, and the best policy we could follow is to prevent any interference in religious questions on the part of the heads of Christian communities.

Now concerning our home affairs. We have to direct our endeavour to one point, viz., the mingling of our peoples into one, for, apart from this, there is no other means of unification of our Empire. We must not permit it to become Slavonic or Ionian, nor allow it to be biassed by any particular community or race; for the stability of the Empire depends on the fusing of the races together. Stability is already secured for a country like Germany, or a nation like France, numbering 40,000,000, or a kingdom like England, which is fortified by the most impregnable natural forts. But Montenegro, Serbia, Armenia, and the other States, which possess nothing exceptional in the way of general advantage, if they continue to exist, will be fancy Governments, or the relics of ancient Powers which have already become obsolete; and they are left for a prey for every new conqueror or a stumbling-stone in the way of human advance and a danger to the general peace. . . .

The wisest means to preserve our Government from downfall is the reorganization of our laws upon a firm foundation, in order that we may be able to gather in one the differing elements of the country without distinction of race and religion, binding them together in the bonds of equality. This plan requires that our Christian subjects be permitted to occupy high governmental positions, which will place us in a difficulty, for if this shut door once be opened to them, they will rush through with full resolution and earnestness. They will endeavour to surpass those of their Moslem colleagues who have got on—and this feeling of competition has been lately exhibited by the Armenians. It, therefore, behoves us to be wise in undertaking this matter, keeping the door open only for the trustworthy who acknowledge and stand by the unity of the Empire.

The religion of our Christian subjects, generally speaking, contains two principles, moral and political, the former of which the Government ought not to notice, taking up an attitude of entire indifference towards it, while to the latter it should direct its most careful and watchful attention. We should have nothing to do with the manner in which one of our officials worships God, whether he worships Him according to the law of Moses or in compliance with the teachings of Christ; for that is not a sufficient reason to deprive us of the benefit of his services. But if we find that the same individual is not doing his best for the unification of the Empire, and if we are certain that he is turning his attention to resuscitating a new Byzantine kingdom, or that he serves the interest of some foreign country, we must depose him unhesitatingly, for he is a conspirator against both the country and nation.

Equality is the foundation upon which both the Government and the country can stand, and equality is the only rule I request that every official should adhere to.

In order that your Majesty should impress the import of this hidden principle, you have to try to establish justice. No one could deny that this path is a rugged one, and very difficult as well, but it is inevitable, and cannot be avoided. It tends to the security and the safety of both the life and the property of your subjects.

Your Majesty will have to take pains for the construction of railways, for when our lines equal those of the European Powers our country will occupy the most exalted position amongst them.

The most important question, which must not be neglected, is that of education, which is the very foundation of all progress, and apart from which one cannot hope to attain any moral or material greatness. It includes the Army and Navy and the administrative departments as well, without which we cannot retain power, independence, government, or even a future existence.

Education in our land is for certain reasons greatly behind, although Islam commands us to promote and spread it. Our numerous schools, which have cost us such heavy expenditure, have supplied us in very scanty measure with the principles of general education. I regret my failure to carry out this enterprise during my public career, as my time was continually taken up with foreign affairs, and I am therefore transmitting it to my successors. And this I affirm is the most useful and important of undertakings.

I know well that some Mohammedans will regard me, because of these opinions, as an infidel and adversary of Islam; but, being aware that they misunderstand my words and fail to comprehend my ideas, I forgive them. The time will come some day when they will ascertain that I, the reformer, was more loyal in my belief, and a better type of Moslem, than all those credulous Mohammedans who will shower upon me violent curses and expose me to the arrows of contempt. They will come to know—but it will be too late—that I fought more than any martyr for the cause of their religion and government, which they subjected to downfall and degradation.

The first principle of any law, whether it be divine or human, is that of self-preservation. My only purpose and desire has been the preservation of Islam; and in order to attain my object I did not make use of blind fanaticism, nor empty partizanship, but followed the methods set before us by the God of Islam, who sets the same before the other nations of the world.

My trembling and feeble hand can write no more. I therefore stop at this point, and beg your Majesty to direct your attention to the last words spoken by one of your unfortunate servants, who, in spite of his human frailty, still loves his countrymen and tries his best to do what will be of benefit for them, who is now departing this world without regret, and dies a Moslem, submitting himself to the decrees of destiny and surrendering his soul to the Great Judge, the Most Merciful and Compassionate.

THE TAKING OF NASIRIYEH.

The *Morning Post* publishes some extracts from the letter, in the form of a diary, sent by an officer with the Expeditionary Force in Mesopotamia to his mother at home. We reproduce the essential paragraph:—

July 24.—At. 4.15 a.m. our artillery started bombarding the enemy's position on both sides of the river. At 5 a.m. the —— with other regiments attacked one side, which was followed by an attack on the other side. A very big battle, lasting till 11 a.m. The —— did magnificently in spite of the heat, as did all the others. The Turkish position was a very strong one, and defended with barbed wire. At 1 p.m. some of our ships went in pursuit of the enemy, who had fled; some 350 prisoners already brought in by them. We hung about till 6 p.m., when we moved down to the river bank again. Meanwhile we hear that the troops who have moved on have captured fourteen guns and sunk the Thornycroft hostile motor-boat, which carries a pom-pom. The whole place full of ours and the enemy's wounded. Glad to be at the end of such a day and with such heat. The enemy have received a very heavy knock, and we should be in Nasiriyeh to-morrow early. Some of the captured mitrailleuses (French pattern) have been brought to our camp. The remainder of the enemy are said to be in full flight for Kut-el-Amara.

Another account of the same brilliant victory on the part of our troops is culled from a letter published by the *Times* from an officer with the same force:—

July 24.—The Brigade moved forward at 4 a.m. and were in position as a reserve by 5 a.m., when our artillery concentrated its fire on the enemy's front trenches on the left bank. At 5.30 a.m. the —th Brigade attacked and three-quarters of an hour after we heard that the —— regiment had secured their trenches near the river bank. Guns then switched on to the positions on the right bank, and this was followed up by the attack by the —th Brigade on that side. At 8.40 the —th Brigade and we of the headquarters with the ——s only remained on at divisional headquarters as the last reserve. At this time there was a distinct slackening of gun and rifle fire, and at 9.20 a.m. in a final burst the —th Brigade stormed the trenches on the right bank.

On getting back to headquarters I found the Mejidieh just getting alongside to embark the ——s, and by 3 p.m. we had disembarked on the right bank by the 17 palms position. Here we met our senior naval officers and —— of the Intelligence, hearing from them that the enemy had cleared from both banks south of the junction and appeared to be getting away material from their position there. Here was the opportunity of pushing troops through, and we got the O.C. Brigade's permission to re-embark the ——s, ordering the Mejidieh to move up to and under the cover of the bend of the river.

Meanwhile we landed just above the Maiyadiyah Creek, where we found the ground covered with ammunition, stores, and hastily discarded equipment and kits. The General took us off and boarded the Mejidieh with us. The Shusan and the Masoudi, with two horse barges in tow containing a 4.7 gun each, pushed ahead and opened fire on the Turks' position at the junction, from which a couple of shells had just come shrieking over the Mejidieh. A hail of shell was now sent on the Turks' position and completely silenced them. The Shusan pushed up to the junction and shelled the Turks, who were now commencing to retreat. Meanwhile the —th and —th Brigades had advanced up either bank. The affair was over. The Mejidieh turned the corner at the junction at 5.30 p.m., and shortly afterwards the enemy's position and camp were occupied, all the Turks that remained bolting off to the north.

THE PRESS ON THE NEAR EAST.

The Macedonian Question.

In the current issue of the Italian review *Nuova Antologia* there appears an interesting article on the Macedonian question by M. K. Stojanovic, Serbian Deputy and ex-Minister. In the most concise manner the author adduces arguments of a geographical, linguistic, historic, and economic order, proving that Macedonia is a Serbian country, and that she is indispensable to the Serbian State. "Macedonia," says the author, "forms, with Serbia, a geographical unit," the valley of the Vardar being simply a continuation of the valley of the Morava, while it is "separated from Bulgaria by great chains of mountains, which render all communication between the two countries impossible. The only means of communication between the two is through Serbia." By language the country is Serbian, and, according to M. Stojanovic, "Serbia governed Macedonia with the Serbian language, never having had need of interpreters." Historically, "Macedonia is not a Bulgarian country"; she abounds in Serbian monuments and traditions, whereas no such traces of the Bulgarian conquest are to be found. From the economic point of view Macedonia is "the most important Serbian province." The Macedonians have always regarded themselves as Serbians. In 1804 the Macedonians fought in large numbers for the deliverance of Serbia, and to-day in the towns and villages of Serbia are to be found numerous families of Macedonian origin.

The Persian Situation.

In a leading article on Wednesday morning the *Times* analyses the "well-meant" communiqué issued on Tuesday by the Persian Legation in London, and emphasises the fact that "the only protection which the Persian authorities seem able to have offered the British, French, and Russian residents at Ispahan was a small escort to Teheran."

The situation thus revealed is extraordinary. Ispahan is a city where for some years past the authority of the Persian Government has often been vague and shadowy. The foreign residents have, however, enjoyed reasonable immunity from personal danger, and have generally remained on good terms with the local Governor. The position altered when German agents, plentifully supplied with gold, began to bribe the lawless tribesmen who swarm in Southern Persia to attack prominent Englishmen and Russians. The tribesmen fulfilled their part of the bargain so ardently that the British and Russian banks and consulates at Ispahan had to be guarded by the Persian gendarmerie under Swedish officers.

The attack on Mr. Grahame, continues the article, "was evidently the culminating episode in a minor reign of terror," but its effect was "that the entire Allied community thought it prudent to leave Ispahan." The Persian authorities made excellent arrangements for their departure, but "we cannot be impressed by the control exercised by a Government which is unable to guarantee the safety of Allied residents in a great Persian city while the German agents presumably remain in undisturbed tranquillity." In conclusion, it is stated that—

Unsatisfactory though the condition of Persia has become, particularly in the southern provinces, the problem must probably await a larger settlement until a more convenient season. It is full of anomalies and difficulties, but the central factor is the weakness of the Persian Government.

The Balkan Riddle.

In a leading article under the above heading, the *Daily News* (September 11) reviewed the Balkan situation up to the end of last week. In reference to the agreement between Bulgaria and Turkey the writer says:—

The agreement, even if actually signed, need not be taken too seriously. It gives Bulgaria the Dedeagatch railway. What it gives Turkey is not known. It may be munitions; it may be merely a diplomatic entente. It is improbable in the last degree that Bulgaria has bartered her neutrality at so low a price. Agreement or no agreement, her hands must be assumed to be still free.

On the other side, the *News* considers that everything points to the success of our diplomacy and that of our Allies:

Roumania, at least, is making it daily clearer by her rigorous veto on the passage of munitions that her decision is finally taken. There is little doubt that Rumanian activity will be materially stimulated by the Russian successes in Galicia. Indeed, through the whole of the Peninsula the Tsar's assumption of the chief command, auspiciously coinciding with Russian victories in the region where the fortunes of the campaign most intimately concern the Balkans, must substantially simplify the task of the Entente diplomacy.

Turkey's Prisoners.

In a short article upon the treatment of Turkey's prisoners, the *Manchester Guardian* (September 11) again calls attention to the difference between Turkish and German methods of warfare, and more especially in the relative treatment of prisoners:—

As far as can be judged from British prisoners' letters which have reached this country, as soon as the captives have been removed from the firing zone they have been in very much better case, both for what medical attentions they needed and for accommodation and rations, than the British prisoners made by Germany on the western front. Extracts from the letters of an Australian officer which we publish to-day speak of both officers and men as receiving "splendid treatment."

Education in Egypt.

The *Times*, in its Educational Supplement (September), contains an article from its Cairo Correspondent on this important subject. He shows that considerable progress has been made in the extension of technical education during the fifteen years that have elapsed since the first serious effort in this direction was made. "The people are being gradually brought to realise that a technical or an industrial career carries with it no social stigma, and that instruction in agriculture or the arts and crafts is just as necessary as it is in law or in medicine." The writer proceeds to detail the lines upon which the educational system has been based, and shows that technical education has been divided into three main branches—industrial, agricultural, and commercial.

Of these the first two are, for obvious reasons, the most important. The organisation in these branches has been subdivided into three sections to correspond with the social grades of the people and with the requirements of the various classes of either branch. In this manner the elements produced by the three main divisions in the scheme of general education—the Kuttabs (village schools), the primary schools, and the secondary schools—have been provided for so as to produce efficient manual workmen, foremen and managers, and skilled professional workers. Thus under industrial education there are trade schools, a technical school, and a school of engineering; and under agricultural education farm schools, intermediate schools, and a school of agriculture.

The activities of the Department of Education do not end with the mere training of pupils. It keeps "a watchful eye on any local industries which it thinks could be profitably encouraged or in which new methods might with advantage be applied."

In summing up the advantages and disadvantages of the present system the writer says:—

One cannot help feeling that, albeit in a measure it may be necessary to equip young Egyptians so that they may be able to take their place in the industrial world, it is most desirable that they should be assisted to retain as many as possible of their national characteristics. . . . A scheme for the promotion of industrial education in a country like Egypt should not be directed at assisting the masses to compete with Europe or to run their industries on European lines. Its mission should primarily be educative, in the sense that it should discountenance all attempts at wasting energy on turning out articles which . . . will always be produced and supplied by Europe at much lower prices; it should encourage the masses to continue and develop their purely native industries and so be able to meet the local demands of the districts; and it should endeavour to improve their methods not by the introduction of European machinery and contrivances, but by means that are easily understood by them and are within the reach of all.

The writer considers some modification in the existing system to be necessary, but he does not anticipate any difficulty in effecting it when the authorities find that in some respects their efforts are having an effect opposite to the one they had in view when they embarked on their present scheme.

Articles to Note.

"Bulgaria as the Centre of the Position," by Cheddo Miyatovich, in the *Standard*, September 14.

"A Frontier Outpost in Serbia," by Miss E. Chivers Davies, in the *Morning Post*, September 14.

"Athens at the Cross Roads": An Interview with Dr. Ronald Burrows, by Mr. Percy Alden, M.P., in the *Daily Chronicle*, September 13.

"The Senussis," in the *Standard*, September 13.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

In the latest issue to hand of the Turkish paper *Hilal* there appears a paragraph to the effect that the exploitation of the chrome mine of Kous-Jegaz, in the vilayet of Broussa, granted three years ago to a German, by name Karl Reiser, has been annulled, owing to the fact that the concessionaire has done nothing to work his concession. The case illustrates the way the Teutons open up valuable Turkish tracts for the greater benefit of the Ottoman Exchequer!

***

On the whole, letters from Cyprus which reach me express satisfaction at the agreement concluded between the Government of the island and the Cairo Motor Company, because it tends to keep alive the much-wanted motor service. Regret is, however, expressed that the amount of the Government grant has not been made public, because, until this is done, it is impossible to judge the maximum schedule of fares as published. Letters tell me that unless the fares are reduced to "half, or even less," very few Cypriot passengers are likely to travel by the motors, and then only the well-to-do ones. The natives will compare the rates with those charged for carriages, which will carry four to six passengers. As regards these latter rates, I am told that four years ago the charge for a carriage from Limasol to Nicosia was advertised as follows: — Without change of horses half-way, 25s., which in the case of a party of four clubbing together enabled them to do the journey for about 6s. a head. The charges have not changed much since then, so that the new service, unless its rates are much lower than the maximum published, or enormous reductions are made for parties or families, will be up against serious competition. The general opinion is that the Cairo Motor Company will not begin by charging the maximum rates allowed for; but unless their grant is a high one they will not be able to make both ends meet, in which case, as I predicted last week, they will be forced to renounce their agreement, and then there will be another lull in the service, which is just what all friends of Cyprus wish to avoid.

***

Another grievance from our island in the Eastern Mediterranean is contained in the following extract from a letter received this week:—"The island export trade still suffers to some extent from want of accommodation in the weekly mail steamers to Egypt. Recently the difficulty has been due not so much to want of space as of time. If the hours allowed for Cypriot ports are insufficient wherein to load, merchants consider that arrangements should be made which would curtail the time spent in Egyptian ports." Even supposing the latter remedy to be unfeasible, surely there are other means whereby the stay in Cyprian ports can be sufficiently lengthened to enable the loading of goods that are ready to be shipped?

News from Turkey continues contradictory and unreliable, but, from all accounts, it seems that, in spite of Russia's serious attempts to stop the transport of coal from Zunguldak to Constantinople, there is still some blockade-running going on. As long as this is permitted, so long will the Turks be able to hold out at the Dardanelles, but not a day longer. As for the city itself, and apart from military considerations, the absence of coal is beginning to make itself seriously felt—as our Special Correspondent in Athens points out. The price of bread has gone up, and there is even difficulty in obtaining it; factories are, of course, closed, and the supply of gas is practically non-existent.

***

On the other hand, rumours were current on the 'Change yesterday that the feeling of insecurity in Constantinople had grown so intense within the last few days that the Government had already decided to move its offices and archives into the interior, and would be accompanied by the larger financial institutions. It is, of course, impossible either to confirm or deny the rumour; but I am inclined to think that it is, at least, premature. The fact, however, that a French official communiqué reports anarchy and brigandage in Broussa shows that the Young Turk régime, under German tutelage, is on the brink.

***

The writer of the article on "British Electrical Trade with Egypt," which appeared recently in the *Electrical Review*, and from which we reproduce some extracts, is, as the Editor of the *Review* states, "most highly qualified to report upon the Egyptian electrical trade." His warnings and suggestions must therefore be carefully read and pondered by those wishing to keep the Germans away in future from the Egyptian market. I have frequently insisted that the end of this military and political war will see the beginning of the real trade war between the great industrial centres of Central Europe and ourselves, and evidently the writer of the article under review has no illusions as to the truth of my assertion. The German electrical industry (and it was by no means the only industry) practically ousted us from the world market before the war, and after it is over the struggle will begin again. We must be prepared for it. Egypt, certainly, is a market which should be ours, and ours only; but unless we organize our resources and learn to rely more on our own efforts than on the "nationality" of the goods we sell, results will be discouraging rather than otherwise. In the electrical trade, if a powerful combine is necessary to compete with the Siemens and A.E.G. combine in Germany, let it be created—without delay.

***

I have received a copy of the following circular, issued last week by the Cunard and Ellerman Lines:—"Until further notice persons or firms desiring to export goods to Greece, otherwise than on the authority of a Privy Council licence, are to be informed that before exportation can be allowed, the consignees in Greece should place themselves in communication with H.M. Legation at Athens and state what guarantees they can offer that the goods will be consumed in Greece. If the guarantees are satisfactory, instructions as to further steps which they should take in the matter will be communicated to them by H.M. Legation. Any correspondence submitted by would-be exporters purporting to contain acceptance of guarantees, etc., by the Legation is to be forwarded to the Board before being accepted as an authority for exportation."

***

Mr. W. Lawrence Balls, the well-known expert in cotton, addressed the Botanical Section of the British Association at Manchester on Wednesday last on "The Application of Science to the Cotton Industry." After touching on the industrial importance of his subject, Mr. Balls stated that in the course of nine years in Egypt, conducting scientific research with the cotton plant, he had found a great gulf fixed between the grower and spinner of cotton. On the grower's side of the cotton industry science had made many advances, and the objectives of applied science in the growing of cotton were:—Increase of the yield from existing areas, quick and reliable methods of testing the suitability of new areas, reporting and forecasting the crop in any given season, and, lastly, the adaptation of the qualities of cotton cultivated to fit with the demand. These objectives were attainable by two very distinct paths: the behaviour of the individual plant in relation to its environment was chiefly the study of yield, while the kind of plant grown was chiefly responsible for quality. The lecturer showed how science might be applied to steady the market by providing precise crop reports and crop forecasts, which might even be issued daily like weather charts. Outlining the methods which he had originated in Egypt, he also showed how the seed supply might be controlled, to provide seed which did not deteriorate with the lapse of time, and how such supply might be so arranged as to anticipate and meet the coming demands of the spinning mills.

***

The great object of Mr. Balls's lecture was, however, to urge on his audience the necessity for the creation of some body "which would take upon itself the function of connecting the grower with the spinner"—on scientific as well as administrative grounds. This becomes all the more vital to our industry in view of the fact that the Germans are "developing a new industry in regenerated cellulose 'silks' and films." The *Manchester Guardian* dealt favourably with Mr. Balls's advocacy of the proposed cotton department in its leading article, and the Vice-Chancellor of Manchester University intimated that the University was willing to do everything in its power to help forward "the scheme for a central research department" to which the lecturer had referred.

***

Mention is made elsewhere of the expected arrival shortly of "British" dates on the London market. At first sight this strikes the layman as remarkable, but when it is remembered that our men are occupying Southern Mesopotamia, the great date-producing country of the world, the statement becomes explicable. From private sources I learn that the Mesopotamia date crop this year is, on the whole, a good one, so that shipments to this country should almost be up to the average.

Trade of Aden.

Under the above title, the United States Consul at Aden publishes an informative article in the American Consular Reports for July 28, from which the following are some extracts:—

Though its commerce is in itself very limited, Aden is the great distributing centre for British, French, and Italian Somaliland, Abyssinia, and Arabia from Jedda on the Red Sea to Bussreh on the Persian Gulf. It receives from these countries for transhipment to America and Europe olibanum and Arabic gums, dates, beeswax, mother-of-pearl shells, ivory, coffee, and large quantities of hides, goatskins, and sheepskins. It distributed to these large tracts of territory the products of America, Europe, China, and Japan, including machinery and tools, kerosene, gasoline, coal, canned goods, alcoholic beverages, automobiles, carriages, silks, wheat, flour, starch, tobacco, aniline dyes, soap, candles, groceries, wearing apparel, hardware, typewriters, and millions of yards of grey, white, and coloured cotton piece goods.

Great Distributing Centre.

Aden's import and export trade is divided into foreign, Indian, and inland. The foreign and Indian commerce is carried in the many vessels that call at Aden, and in the myriad dhows, or sambuks, that ply between Aden and the French, British, and Italian Somaliland, Hodeida, Mocha, other ports on the Red Sea, and on the southern Arabian coast. Its inland commerce is borne upon those "ships of the desert" that compose the many caravans that travel between Aden and the Arabian mainland, including the fertile Yemen.

There is no sewerage system, waterworks, or street railway. The drinking water, obtained by condensing sea water, is as pure as can be obtained anywhere. This water is supplied to the many ships that make Aden a port of call. A project to bring water from a distance of about thirty miles from Aden is now in abeyance on account of the European crisis. When this is accomplished a much-needed sewerage system will be installed.

An electric railway between the various parts of Aden—Tawahi, Maala, Crater, and Sheikh Othman—would undoubtedly pay well upon the comparatively small capital required for its installation. Not only could it carry passengers between these places, but also freight from Tawahi and Crater to the wharves at Maala. The same power plant could develop sufficient electricity to supply Aden with electric lights and power for electric fans, which would tend to make life endurable in one of the hottest places on the globe.

Among its few manufactures Aden has two large salt works, whose unique Dutch windmills, outlined against a cloudless sky, pump the sea water into large reservoirs, where it is evaporated by the fierce rays of a sun that shines nearly every day in the year.

Other products are cigarettes of a medium quality and Turkish delight, a candy made of starch.

Aden's total sea-borne trade in merchandise during the fiscal year ended March 31, 1914, amounted to £6,827,760, of which £3,651,960 was in imports. Added to this was the caravan trade by land, which amounted to £301,845. Thus the total trade of Aden, excluding treasure and Government transactions, amounted to £7,129,605, or £589,167 less than in the preceding year, the decrease in imports being £270,637. The fiscal years 1912 and 1913 were abnormal in respect to imports and exports, the Italian blockade of Red Sea ports then diverting to Aden much trade that otherwise would have gone directly to those ports and their hinterland. Nevertheless, the trade of Aden for the year under review was exceeded only by that of 1913, and showed healthy progress in both imports and exports with one exception, cotton piece goods.

Bombay sends to Aden a large amount of merchandise that is listed under imports from the United Kingdom and possessions, but these goods may have been originally imported into Bombay from the United States, Austria, France, Germany, or some other European country. On the other hand, French Somaliland, whose chief port is Jibouti, and Italian Somaliland, or Eritrea, of which Massowa is the principal port, also tranship to Aden considerable merchandise that is probably of French, Italian, or other European origin. It is therefore impossible to obtain an accurate account of the origin of merchandise imported into Aden.

Principal Imports.

There are about 100 automobiles in Aden, probably 75 per cent. of these being of American manufacture, Fords and Overlands, over 50 per cent. being the former. A cheap car is more economical at Aden, as the climate and dust have a bad effect, and the inexperience of the chauffeurs assists in the rapid deterioration of the cars. The carriage is fast being supplanted by the automobile for private use and public hire. The natives who can afford to own a car or pay the fare prefer automobiles to carriages. There is scarcely any demand for carriages.

Only two countries sent kerosene to Aden in 1913, the United States and Sumatra. Petroleum has been discovered near Berbera, in British Somaliland, and on the Fursan Islands, in the Red Sea, but no efforts at development have thus far been made at either place. However, the proximity of these oil fields may have a very serious effect upon the sale of American oil in the Red Sea and the Indian Ocean districts. Nearly all of Aden's coal supply comes from England. At the beginning of the war, when there was fear of a shortage, it was hoped that American coal would find an entering wedge. However, a plentiful supply of English coal is now on hand. There was a decrease in imports in coal during the year under review of 8,955 tons.

The demand for phonographs and records at Aden is extremely limited.

There is a good market for a cheap soap; the natives prefer a very hard soap, for though it is not as serviceable as a softer one, it lasts longer.

The demand for American shoes is very limited, English shapes in footwear being preferred by the European residents, most of whom are English.

The following table shows the imports of wheat by countries during the last three years:—

Countries.	1911-12.	1912-13.	1913-14.
	Pounds.	Pounds.	Pounds.
India	14,510,888	25,245,696	17,971,464
Other British Possessions	16,856	6,300	24,752
Austria	33,600	41,888	—
France	—	9,856	—
Russia	133,056	182,084	296,570
Egypt	40,180	71,652	146,020
All other	48,944	31,164	10,388
Total	14,783,524	25,588,640	18,419,194

American starch is in good demand, in fact the only times that merchants availed themselves of the catalogues at this consulate were on two occasions when they wanted the names of American starch manufacturers. Little is used for laundry purposes, most of it being consumed in the manufacture of Turkish delight and other native sweets.

There were no imports of canned goods from the United States during the period under review, but as most of the canned fruits on sale are from California, especially peaches, these goods were undoubtedly transhipped from Bombay. While there are only a few hundred Europeans at Aden, there is a fairly large demand for canned fruits, as fresh fruits are scarce and extremely difficult to obtain. The natives seldom purchase canned goods of any description. They prefer dates, fresh and dried, and sweets brought from the Persian Gulf ports in the many dhows therefrom that make Aden their objective.

Coffee Exports.

According to the report of the Aden Port Trust, Aden's exports of coffee in 1913-14 amounted to £473,415. Mocha coffee goes principally to the United States and Harrar coffee to France, Harrar coffee being preferred to Mocha in Europe. At times the price of Harrar coffee is higher than that of Mocha. Though the entire output of Harrar and Mocha is insignificant as compared with the world's total production of coffee, the peculiar and highly aromatic qualities of these beans give them a unique position that is not sensibly affected by movements in the great coffee markets of the world.

The following tables show the imports and exports of coffee from Aden during the last two years:—

Countries.	1912-13.	1913-14.
Imports—	Cwt.	Cwt.
Abyssinia (Harrar coffee)	49,234	54,612
Arabian ports (Mocha coffee)	76,175	65,269
Straits Settlements	9,062	3,302
Other countries	5,709	4,350
Total	140,178	127,543
Imports—		
United States	36,402	38,394
France	30,909	26,571
African ports	32,643	21,345
United Kingdom	8,725	6,224
Other countries	44,195	46,489
Total	152,874	139,023

Upon the declaration of war between Great Britain and Turkey it was thought that the imports of Mocha coffee would materially decrease, but 1,109,596 pounds were imported into Aden between August 1, 1914, and March 1, 1915, which shows that imports thereof since the commencement of the present war have been about normal. The caravan trade from the Yemen and through the country of friendly tribes near Aden has not ceased. Medi, Ghizan, and even Mocha, are permitted to ship coffee to Aden by means of dhows. Up to the time of the entrance of Italy into the war much coffee from Hodeida reached Aden via Massawa, but it is quite improbable that the imports of Mocha coffee into Aden will be affected by the cessation of trade between Hodeida and Massowa.

In the early part of March, 1915, Mocha coffee advanced in price to about twenty-four cents per pound, but later in the same month it declined to about sixteen cents, at which price there is plenty now on sale in the Aden market. The only difficulty in the way of exports of this coffee to the United States is the lack of shipping facilities at Aden.

Skins.

During the year under review imports of goat and sheep skins into Aden fell off by 425,490 skins, and exports by 739,719 skins. The decrease in imports is attributed to famine and drought at the sources of supply in Arabia and Somaliland. In the report published by the Port Trust at Aden, the "high tariff in the United States" is mentioned as one of the causes therof. However, there was during the year under review no duty on raw skins imported into the United States. Moreover, the total exports thereof to the United States, according to the report of the Aden Port Trust, increased over the preceding year by £18,273, notwithstanding the decrease in the total exports to all countries from Aden.

The following table shows the exports of goat and sheep skins for the last two fiscal years:—

Countries.	1912-13.	1913-14.
Goatskins—	Number.	Number.
United States	2,786,192	3,161,002
United Kingdom	1,087,875	270,185
France	496,775	483,550
India (Bombay)	250,060	295,090
All other countries	18,002	58,340
Total	4,638,904	4,268,167
Sheepskins—		
United Kingdom	899,944	697,401
United States	523,921	302,846
France	453,430	485,857
Belgium	265,070	42,940
Netherlands	6,000	32,950
All other countries	119,730	291,529
Total	2,268,095	1,853,523

In Somaliland skins could have been purchased soon after the outbreak of war at 40 per cent. of their real value. However, prices have since advanced until they are now about 20 per cent. below those prevailing before the war. If increased freight, war-risk insurance, lack of shipping facilities, and loss in interest on account of delays be taken into consideration, the present prices are

Digitized by Google

very little under those ruling prior to the war.

Since the outbreak of the war there has been a large demand for hides in Europe, particularly in Italy where large quantities have been shipped from Jibouti and Massowa.

It must be appreciated that the demands of Aden, its hinterland, and the many peoples contiguous to the Red Sea and the Indian Ocean supplied by it, are limited to actual necessities. Where 90 per cent. of the people wear no stockings or shoes, no other wearing apparel than two pieces of cotton to cover the upper and nether parts of the body, whose food is principally rice and dates and whose houses are of the crudest an cheapest construction, there is a very limited market for anything but these necessities. The table of imports only too truly demonstrates this fact, for the principal import from America or Europe to Aden, outside of food, is cotton piece goods. However, as these peoples develop and their material resources increase, what are now luxuries will become necessities and the country that first introduces its manufactures will have a decided advantage over those that make the effort later.

Present Outlook.

Manufacturers will not profit at present by sending salesmen to these countries, and the introduction of manufactures by correspondence is not very satisfactory. However, it is believed that an inexpensive method of introducing American (British?) manufactures into these districts would be for the manufacturer to make arangements with business nouses at Aden, having branches at Massowa, Hodeida, Jibouti, Harrar, Berbera, Adis Ababa, and other places, to put in a sample line of articles or products for which a demand has commenced or for which one may be created. By this inexpensive method the customer may see, touch, handle, and examine the article, may compare it with others and convince himself that it is just what he needs and wants. If he were to purchase an article by correspondence, it is quite probable that it would not be the particular one he wanted, thereby creating a prejudice that is difficult to overcome.

An ordinary square box, lined with zinc, is used as an ice box, into which the ice, provisions, etc., are thrown promiscuously. If an American (British?) manufacturer were to induce a merchant here to put in a sample line of refrigerators there is very little doubt but that a demand would be created for the article. There is now an excellent opportunity in this district to make permanent the predominancy of American cottons and for the increased sale by American manufacturers of starch, canned goods, soaps, candles, groceries, hardware, and glassware. Kerosene and automobiles offer a good field, but there does not seem to be any opportunity of increase in the sales thereof until after the war. The sale of automobiles will probably decrease until the war is ended.

The *Echo de Paris* learns from Salonika that M. Diamantidis, the Greek Minister of Railways and Communications, has opened negotiations with Bulgaria and Rumania with a view to regulating the freedom of transport by way of Salonika so that Greece may secure Bulgarian and Roumanian wheat instead of, as usual, purchasing from America. Bulgaria and Rumania will receive, in exchange, any goods which may be sent them by the Quadruple Entente. [There is no confirmation here of the latter part of the message.]

Greek Currant Industry.

Annual Report.

The following are extracts from Messrs. Burlumi's annual report on currants, published on September 14:—

The shipments of currants from Greece during the year ending August 22 reached 105,000 tons. To the retention stores of the Privileged Currant Company there were delivered 49,000 tons; about 3,000 tons of fresh and dried currants were used for wine making and other industrial purposes in Greece, and it is estimated that about 1,500 tons of old fruit has been carried over to the new season, making a total of 158,500 tons. Deducting 4,000 tons of old fruit brought over from the previous season of 1913-14 and 9,500 tons of retention currants sold to the exporters by the Privileged Currant Company, we find that the crop of 1914 has given 145,000 tons, against 161,000 tons in 1913 and 167,000 tons in 1912.

The 105,000 tons shipped to foreign countries were distributed as follows:—

To the United Kingdom and New Zealand, 71,300 tons, against 65,500 tons in 1913-14; to the United States and Canada, 13,600 tons, against 17,700 tons; and to the Continent of Europe, 20,100 tons, against 34,800 tons; with a total of 105,000 tons, against 118,000 tons.

Home Consumption.

The clearances for home consumption in the United Kingdom from August 1, 1914, to July 31, 1915, have been 69,332 tons, against 63,015 and 63,690 tons in the two seasons ending in July 1914 and 1913 respectively. A large increase was registered in the deliveries of the first four months of the year 1915, which cleared 21,106 tons, against 12,269 tons in the same period of 1914, showing an increase of 8,837 tons, equal to 73 per cent. This large increase is accounted for in many ways; some of the experts believe that the rise in wages has enabled workers to spend more money in the purchase of currants, and others attribute the increase to the large use of currants by the fighting forces of the country. It may be that both these causes, with the comparative dearness of sultanas, have contributed to the increase.

The Privileged Company received during the season in their warrant stores 17,000 tons of currants, on which they made advances to the owners. The whole of this quantity had been redeemed and withdrawn by the end of the season. They have bought for wine making a quantity of fresh currants equivalent to about 1,800 tons of dried fruit. No dried fruit has been offered to the company for purchase by the growers, but on the contrary the company sold to the exporters 9,500 tons of retention currants at 145 drachmas per 1,000 Venetian pounds. In their retention stores the Privileged Company received 49,000 tons, making 57,000 tons with the certificates in circulation at the end of the previous season. The Land Tax in kind, including the additional 15 per cent. on the exported quantity, absorbed 46,500 tons, leaving 10,500 tons represented by certificates in circulation on August 22, 1915. The retention currants and the fresh fruit purchased by the company have been sold, as to 9,500 tons to exporters at 145 drachmas per 1,000 Venetian pounds, in accordance with the Act 633 of 1914, and the balance to the Wine and Spirits Company and to the local distillers. The total weight of fresh and dried currants used for industrial purposes in Greece has been during the season 44,500 tons, against 60,000 tons in 1913-14, and 59,000 tons in 1912-13. The stock of retention currants in Greece at the end of August was about 4,500 tons, against 25,000 tons at the end of August, 1914.

New Crop.

The new crop promised an abundant yield, until early in June *peronosporos*, in a virulent form, attacked the vines. The farmers did their best to fight the pest, and sprayed the plants with such a profusion of sulphate of copper that the supplies were soon exhausted and the price of the article rose to more than three times its normal level. The effort has not been very successful; the plants were so weakened by the disease that they could not retain the fruit during the process of maturity, and the still unripe berries fell from the bunches to the ground, diminishing the yield to a considerable extent. To avoid total loss many districts hurried the harvest and gathered the fruit in an immature and unripe condition. To make matters worse heavy rains fell while the later cuttings were still on the drying grounds, and this part of the crop as well as what remained still on the plants has been seriously damaged. The yield is now estimated at about 125,000 tons, of which about 40,000 tons have been damaged by rain, and the main part of them are finding their way into the retention stores. Samples of the sound fruit received overland show the crop to be deficient in size and in colour, but in all other respects fairly satisfactory. Forward sales of new Pyrgos currants were made in the spring at 22s. per cwt., c.i.f. London, in quarter cases. The price rose later much higher by degrees, until it touched 30s. This was the price demanded by the shippers in Greece, but buyers on this side resisted and the sales effected at the higher figures must have been very few. There are now four steamers afloat for the United Kingdom, and the prices demanded for g.a.s.d. Pyrgos are the following:—At from 29s. to 29s. 6d. in quarter cases, and at from 26s. to 26s. 6d. in half bags per cwt., c.i.f. London. Many causes have contributed to this rise in prices. The shortness of the crop and the higher cost of cultivation, in consequence of the dearness of all materials and especially of sulphate of copper, have made the farmers very reluctant to part with their diminished crop, unless at a price commensurate with their expenses and their labour in producing it. The rise in the cost of all accessories is another material cause. Packages are dearer than they have ever been. Quarter cases, the packages mainly used for and preferred by the trade of the United Kingdom, cost now 4s. 6d. per cwt., against 1s. 9d. per cwt. a year ago. Half bags cost now 1s. 6d. per cwt., against 6d. per cwt. a year ago. Freight and insurance and labour cost more, so that it is not in any way the greed of the grower that makes the article dear, but a combination of causes over which he has no control. The estimated supplies allow for a total export of about 100,000 tons, without touching the retention currants; but these currants of about 25,000 tons become available for export as soon as the lowest market price in Greece touches 200 drachmas per 1,000 Venetian pounds, equivalent at the present exchange of 24.80 to 24s. 3d. per cwt., f.o.b. Greece, in half bags.

ANGLO-GREEK CONVENTION.

In connection with the publication in THE NEAR EAST last week of the general terms of the Anglo-Greek Convention recently signed, our Athens correspondent sends us the following further particulars:—

"Great Britain permits the free export of tobacco and currants from Greece, for all destinations, but from neutral ports and in quantities not exceeding the usual proportions exported to each respective destination. The export of goods from Great Britain and the British Colonies to Greece will also be permitted within the limits of the quantity available, and on the basis of a formal request to be tendered by the Greek importer to the British Legation, in which the amount of goods required must be stated and the importer's title as merchant proved. Those requests will be forwarded to London and a commission there will decide whether they can be fulfilled. It will also be permitted to re-export goods received in Greece to Russia and Roumania under a guarantee from the Greek Government. Export to Turkey is, of course, not permitted. Customs Superintendents will be appointed by the Greek Government at the suggestion of the British Government, with executive powers to control exports.

"Since the conclusion of this convention the Greek merchant marine has ceased to be subjected to visitations from the Allied fleets, to the great satisfaction of the whole country."

On September 1 the rate of exchange at Sofia for cheques on London was 34.10—34.60 lewas per pound sterling.

Cyprus Vintage Outlook.

(From a Correspondent.)

Cyprus, September 4.

Vintage prospects are less satisfactory than was hoped. The yield of grapes will be small in many areas. This is partly due to want of timely and sufficient sulphuring of vines, which are largely attacked by oïdium. The apathy of villagers, in view of Government efforts extending over many years, is deplorable. Full instructions have been given by successive Directors of Agriculture and Commissioners as regards the times and methods of spraying, both orally and by leaflets, some of them printed in "village Greek." Sulphur and appliances have been sold practically at cost price. Experience, it must be confessed, seems fully to confirm the view that in Cyprus, as it is, the only way to accomplish any practical improvements in agriculture is for the Government itself to undertake them, and to charge the cost to agriculturists or communities, as in the case of locust destruction. Failure on the part of individuals to apply a remedy involves spread of disease, or pests, for all. In some localities the influence of individuals has been able to accomplish a great deal. As an example may be taken the large wine-producing village of Omodhos in the Limassol district. Here the fact that villagers have shown commendable zeal in combating the destructive mildew is largely due to the personal energy and magnetic example of the Mukhtar, Mr. Herodotus Modinos, who has for years taken a spirited lead. This year the yield of grapes in this village will be large in quantity and quality as a result of local effort in sulphuring.

Carobs.

The yield of locust beans, gathered in the latter part of August, will be below the average. In Limassol district, the largest producing area, the crop is disappointing In the Kyrenia district, where the "short-pod" disease (brachikarpía), although combatted to some extent, has worked considerable havoc, the yield will be unsatisfactory. Prices, however, so far are good, in parts reaching 20s. 6d. the kantar.

SUDAN CROP PROSPECTS.

(From Our Own Correspondent.)

Khartoum, August 20.

A very opportune rain just after Ramadan has very much improved the prospects of the crops, which were already very fair. The Gezira is expected to do better than last year, as more land has been watered and the natives have no difficulty in supplying the necessary seed. In the southern part, towards Singa, the rain has, if anything, been on the side of excess, insomuch that natives have had to sow two or even three times to replace seed that had been washed out. There was, too, in places a pest of grasshoppers that did considerable damage to the young shoots, but their number decreased and fresh sowing replaced the damage. Sesame is reported on extremely well throughout. In Kordofan and the west, as in the northern Gezira, there was a slight drought which caused a little alarm and made the price of grain rise temporarily, but the rain came in time, and there is every prospect of a good harvest.

Shipments continue to be made to Port Sudan and Suakin for transport to Jeddah, which is good evidence to show that the native is confident of the future.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

Near East Markets.

BULGARIAN CROP NOTES.

(From a Correspondent.)

Sofia, August.

Now when the corn is almost all gathered in, it can be positively affirmed that the damage from the various cryptogamous diseases of lying down, rotting, growing weedy, scorching, etc., the wheat harvest this year is unusually excellent, not only in quantity, but also in quality. According to the results of the trial thrashing-floors in chosen agricultural parts of the country, a decare (equal 0.247 acres) of autumnal wheat in Northern Bulgaria has given from 90 to 180 kilos against 80 to 150 kilos during 1912, which, equally with 1911, was one of the most fruitful years in recent times. In South Bulgaria, a decare of autumnal wheat has given 75-150 kilos against 70-120 last year.

Maize promises a very abundant crop.

Millet is very good and even excellent, the harvest has already begun.

Beans of the Raslog district, of North-East Bulgaria, and generally of the whole country, are abundant. There are, however, some places where they have been considerably damaged. Potatoes promise well. Conditions for beet growing have been exceptionally favourable, especially in North Bulgaria.

In places where water is abundant, rice has grown splendidly, and the crop promises to be an extraordinary good one. Damage by hail has, on the whole, been very insignificant.

Tobacco is everywhere either moderately or very good.

The vines, although damaged in places where copper solutions were unobtainable, are better than last year.

"BRITISH DATES."

The Christmas fruit season which is now beginning, says *The Times*, will be one of the most extraordinary ever known. All dried fruit is expected to be dear, while some of the familiar varieties will not reach the British market at all. An interesting feature will be the shipments next month of "British dates" from the part of Turkish Arabia now in British occupation. A few dates are received from Egypt, but the bulk of the supply comes from the Tigris and Euphrates valley, and the success of British arms in the Garden of Eden district means that large shipments will be made to this country. Supplies will also be sent direct, in British ships from Bussorah, to Australia and South Africa.

PALESTINE ORANGE CROP.

The citrus-fruit industry of Palestine, which, prior to the war, was rapidly becoming of great commercial importance to that historic country, is experiencing serious reverses, says an American consular report. In the 1913-14 season exports of oranges to Egypt and Europe from Jaffa alone were 2,128,570 boxes, but of the 1914-15 crop only about 150,000 boxes could be shipped, the balance of the fruit being lost. Alexandretta also had 400,000 boxes of oranges available for export, and Tripoli in Syria a like number, all of which were a dead loss to the growers, because the war prevented shipment.

Added to these troubles, a scourge of locusts has now devastated the citrus groves of Syria. Consul-General Hollis (U.S.) reports from Beyrout under date of June 30, 1915, that about two-thirds of this season's (1915-16) orange, mandarin, and citron crop has been destroyed by locusts. The U.S. Consular Agent at Haifa adds, under date of July 3, 1915, that "the locusts have eaten all the leaves and peeled the small branches of the citrus trees." Mr. Hollis reported just prior to this last disaster that prospects for the citrus fruits this season were unfavourable, as there was no petroleum available to run the motors to irrigate the land.

These many reverses will give a great setback to the orange-growing industry in Palestine, which was started only a few years ago, but with the resumption of normal conditions in Europe, it will probably be further extended. Jaffa and other Syrian oranges have been gaining a strong foothold on the markets of England and northern Europe.

PRODUCE REPORT.

London, September 16.

Currants.

In spite of the continuous advance of prices there has been a steady demand for all grades, although very little, if any, remains available. It is asserted that many country buyers, fearing higher rates, have placed substantial orders for new fruit. It is believed, however, that after the first arrivals the market will be in a more settled form. Steamers with new season fruit are reported on their way for this and the Liverpool ports.

Sultanas.

Spot prices are dearer. Nothing can be said yet with certainty as to any arrival of Smyrna fruit in the near future, whilst the crop in Greece is reported as very moderate.

Figs.

New season's fruit is now being freely offered, especially Calamata, with good business passing.

Dates.

The demand is moderate, Sairs being 16s. to 17s., Hallowi 21s. to 22s., and Egyptian 23s. to 27s.

Seeds.

Linseed is quiet and buyers inclined to hold off. Calcutta, spot, passage, and Aug.-Sept. 56s., Sept.-Oct. 56s. 3d., Oct.-Nov. 56s. 6d. Rapeseed is steady but quiet. Guzerat, Sept.-Oct., quoted 60s., and brown Cawnpore, pure basis, Aug.-Sept., 53s. Cottonseed is firmly held, but inactive at unchanged rates. Rangoon beans are steadily held at £18 per ton; and mustard seed, being in restricted supplies, does not offer very freely.

Oils.

Linseed oil is firmer, and to-day is 2s. 6d. dearer for near positions, with a moderate inquiry. Spot, London, pipes, sold at £26 10s., barrels £27 2s. 6d., month, £27 2s. 6d., Oct.-Dec. ditto. Cotton oil remains quiet; crude, spot, pipes £26 15s. to £27, refined pale pipes £29 10s., and barrels, sweet, £34 to £35. Rape oil keeps firm. Ordinary brown, naked, spot, £34 to £35, English refined, barrels, £36 to £38.

Oilcakes.

Cotton cakes: Egyptian, spot, is all cleared, but business is being done for early new crop arrivals at £7 15s. ex ship, whilst for Nov.-April shipments prohibitive prices are asked. English makes are offered at £8 2s. 6d. to £8 5s. Linseed cakes are of rather slow demand, and quotations are unchanged.

Locust Beans.

The scarcity continues, prices being firm at £8 per ton for whole, and £8 10s. for kibbled.

SYRIAN OLIVE GROVES.

The U.S. Consul-General at Beyrout, writing on June 30, said:—

"During the past two months dense swarms of locusts have devastated the country, and it is now an established fact that the olive oil crop has been greatly affected by them. The olive trees growing near the sea coast have suffered less than those in the mountains, but it is estimated that two-thirds of the entire olive crop has been totally destroyed by these pests. Prices of olive oil have, in view of this fact, greatly advanced, and are at present as follows:—First quality, 16 piastres per oke; second quality, 14 piastres per oke."

COTTON MARKET.

Liverpool. September 16.

Egyptian Spot.—The market has been less active this week, but a fair business has been done at advancing prices, and quotations show advances ranging from 65-75 points for the week. The sales, which include 750 bales of Sudan cotton, are estimated at 3,700, against 5,500 bales last week.

Manchester.

In cloth for India the inquiry has been better than for some time past.

EGYPTIAN COTTON STATISTICS.

The State Statistics Department has published the annual report on the Egyptian cotton crop.

The quantity of cotton received at Alexandria from September 1, 1914, to June 30, 1915, is estimated at 46,344,349 cantars, which, calculating at 12 talaris per cantar, represents a value of £E15,277,723. During the corresponding period of last year cotton was estimated at 19 talaris per cantar, and was estimated as being worth £E29,946,199.

The quantity of cotton seed received at Alexandria during the period in question is estimated at 3,513,283 ardebs, worth £E2,513,283 at an average of P.T. 67 per ardeb; the figures for the preceding year were £E3,898,782.

The value of cotton and cotton seed this year is £E17,741,006, as against £E32,844,982 during 1913-14, a decrease of £E15,103,975.

EGYPTIAN COTTON REPORT.

The following reference to the cotton crop has been published in the Egyptian Minister of Agriculture's monthly report for August:—

"Cotton worm attack is over without any damage to the crop. The pink boll worm has rapidly spread over the whole country, and is severest in the southern provinces of the Delta. In the northern provinces the increase in the intensity of the attack has been slight. In Upper Egypt, the attack has been moderate with the exception of Beni Souef and Minieh, where it is more marked. The common boll worm attack is almost negligible. The cotton is opening well, and a large amount is almost ready for picking. In a fortnight picking of the early sown cotton is likely to be general throughout Lower Egypt. In Upper Egypt the first picking is general in Minieh and south, and is about to begin in the north. On the whole, the crop prospects are very satisfactory, but the fear of a serious pink boll worm attack in some provinces where cotton has been planted late has caused a lowering of the general estimate in Lower Egypt."

ADANA COTTON.

The U.S. Consul in Mersina, writing on July 10, said:—

"The local cotton situation has been unchanged during June, except that the ravages of locusts threaten to reduce this year's crop to 30,000 bales, or one-fourth of that of 1914. In addition to the cotton goods of local manufacture, the stock of cotton goods of European origin is valued at £76,000, while on July 1, 1914, it was valued at £90,000."

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.

Only superior qualities of

Hallawees, Khudrawees, Sayers and Zehdi

are packed.

In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.

SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.

Sole Proprietor:

BAHJET S. FORAGE, BASRAH.

British Electrical Trade with Egypt.

In the current issue of the *Electrical Review* "Anglo-Egyptian" has published an exceedingly informative article on the above subject, from which we reproduce the following extracts:—

"Egypt has hitherto been largely exploited by the important German and Austrian electrical houses, and also in a measure by the French; indeed, it may be truthfully stated that during the last ten years only a very small percentage of the total electrical material which has been imported into that country has been manufactured in Great Britain. . . . Let us prepare for the future, for the time will come when we may start afresh without the fear of foreign competition, as it is to be assumed that home competition alone will have to be dealt with. One must not, however, lose sight of the fact that practically the same circumstances will govern the conditions under which business will be carried out in the Egyptian market, the difference being solely that foreign competition will be eliminated. I trust that in making this latter statement I shall not be regarded as too optimistic, for is it not one of the great advantages that we are fighting for at the present moment? It is but a natural sequence to the satisfactory termination of the war.

"Various English electrical manufacturing companies have already announced their intentions of slipping into the breach caused by the recession of their antagonists from the Egyptian market. Several of these concerns are capable in all ways as regards manufactures of supplying fully the requirements in that part of the world. But there are few amongst them who manufacture the complete range of electrical supplies catalogued by such firms as the A.E.G. and the Siemens combinations. And there are fewer still who have brought to bear upon the Egyptian market that system of organisation and thoroughness of business methods which have won for them practically the whole of the Egyptian trade.

"The question which now arises is this: What was the reason for our failure in the past? The answer is that it was simply a question of price and organisation. In the majority of cases where British manufacturers have failed to capture Government contracts during the last nine years I am of opinion that it may be attributed to one of the two foregoing reasons.

Government Tenders.

"Government tenders as regards electrical plant usually call for the plant to be erected on site and handed over in working order. Payments are effected partly against shipping documents, erection and tests on site, the balance, which is usually 20 per cent., being paid after satisfactory working for, say, three months, or other pre-determined period.

"It is feasible to believe that it is in the unknown factor that the manufacturer meets his pitfalls—that is to say, he is in many cases at a loss to define correctly his real expenses after the goods arrive at the unloading port. To meet this deficiency he covers his estimate with a margin which would be unnecessary if he understood thoroughly the procedure and numerous items of expenditure to which the goods were subject on landing; in addition, the intricate questions of supervision, labour, railway freight, cartage, cost of excavation and materials for erection, all generally form very important items in the estimate.

"These difficulties may be met by the appointment of a reliable and experienced commercial engineer as agent, who should assume responsibility for all goods after their reception at the unloading port.

"German, Austrian, and French competitors go further than this. With the exception of the A.E.G., who do business through a firm of old-established agents having branches at Cairo and Alexandria, such firms as Siemens and Halske, Siemens Schuckert, Ganz and Co., and the French Thomson-Houston Co. are represented by branch houses under the control of technical commercial managers, aided by competent staffs. Each branch comprises also a retail department replete with large stocks of all classes of electrical supplies. Expenses are paid by retail sales and small contracts for electric light and wiring installations. The bulk of the stocks are on consignment, and are paid for in accordance with arrangements made with the parent firms.

"It seems that, with the exception of a few firms in this country who manufacture a complete line of electrical supplies, the branch system of doing business would be inadvisable on account of the diversity of material required to maintain an efficient stock. An easy method of getting over this difficulty would be for a number of firms to collaborate for opening a branch and sub-divide the expenses and profits in accordance with their proportionate interests.

"If it is desired to cater only for the requirements of the various Government departments, then a local agent residing at Cairo is all that is necessary.

"It may be useful to terminate these notes by giving some idea of the present situation in Egypt as regards our competitors. At the commencement of hostilities the British authorities carefully segregated the German and Austrian branches from their parent houses. The A.E.G. agents discontinued their representation and opened up negotiations with an important English manufacturing concern. The management of the Ganz and Co. and of the Siemens branches was taken over by certain of their English and Swiss employees. This step was taken with the approval of the British authorities, who exercise control over their financial transactions. Goods of proved enemy origin coming into Egypt through neutral countries are confiscated, so that there is no possibility of stocks being replenished from sources which are prejudicial to British interests."

Engineering Notes.

Present Demand for Machinery.

Now is the time that landowners and farmers in the Near East begin to realise their products, and decide as to what machinery and implements they must purchase for the approaching season. It is also the time for putting into effect any projects that they may have for the improvement of their estates, such as the establishment of flour mills, olive oil mills and presses, cotton gins, pumping plants for irrigation, brick and tile making machinery, wood-sawing mills, and many other small plants of machinery which in recent years are being successfully introduced on private estates throughout the East. Such little factories are not only profitable as an enterprise, but are also the means of a general improvement in the locality where they are established. This latter fact carries with it to the owner a local influence which is highly appreciated by the Oriental squires. As this year has been a good one for all crops, and landowners and growers in the Eastern neutral and friendly countries have realised good prices for their products, there is a probability that agricultural machinery and implements, as well as light machinery for industrial purposes, will be in greater demand than usual. Large British firms may be too busy at present to undertake new orders for such machinery, but there are hundreds of smaller ones who can do so, and there are many stores in the country with good stocks of new and second-hand machinery and implements which could supply what is at present wanted in those markets. Second-hand machinery is not objected to if guaranteed as sound and in good working order, and as for terms of payments, as we mentioned in these columns before, no *bonâ-fide* buyer expects in these war times to obtain goods on credit. The Americans, who did a very good trade in the Near East during the past two years in all classes of machinery, worked mostly on the cash system.

Small Machines and Implements

We made allusion in last week's notes to the weight of the English plough as a drawback to its employment in the East, and we mentioned the existence of a very small plough, weighing only 50 lb., made in England, and most suitable for the requirements of the average Oriental farmer. In the same way we allude now to the apparently very limited sale of ploughing tractors, and other similar contrivances. Their weight and the number of men (2) required to work them are responsible for these limited sales. The demand for low-priced, easily handled, light, and simple motor-ploughs is continuously growing everywhere; and sales would be good in the East if people there were to be approached by makers of such machines. In describing, in these columns, machinery or implements which, from local experience, we consider suitable for the East, we often receive inquiries as to where such machines can be obtained. It is a proof, therefore, that they are wanted, and with regard to the new motor-ploughs, it is probable that such machines are not yet introduced or, perhaps, known there. It will, therefore, interest proprietors who are contemplating to buy mechanical ploughs this year to know that there is a small motor-plough, of English construction, easily handled by one man, and of a price within the reach of the average farmer. It is arranged for ploughing two furrows; and, it is said, can plough three acres (twelve stremata) in a day, with an average consumption of one and a-half gallon of fuel per acre. As the implement requires the attention of a ploughman only, its economy over horse-traction is pronounced. The engine has an enclosed centrifugal governor, and, therefore, adjusts itself automatically to its work, the ploughman having only to consider the starting and stopping clutches, control levers not being required.

Easy Adjustment.

Each wheel is driven independently, and both are so mounted that they can be raised or lowered to give the correct position for the ploughs; the wheel adjustment being arranged for a maximum depth of 10 in. when ploughing only one furrow. Its overall length is 12 ft., its height 3 ft. 3 in., and its width is under 2 ft. 6 in., whilst its weight, inclusive of the ploughs, is merely 12 cwt. The gearing is entirely enclosed, all the moving parts work in oil, two speeds are provided, and the engine is guaranteed to develop 8½ h.p. when using petrol or benzol, or 10 per cent. less when using paraffin. Cultivators, harrows, horse hoes, or other implements may be attached in place of the ploughs by simply removing a drawpin, and the engine is capable of driving such barn machinery as generally receives its power from small stationary motors. The implement is balanced on its two driving wheels, a form of construction which renders the machine extremely easy to manipulate, especially among fruit trees and at the headlands, whilst the method of adjusting the driving wheels enables one to plough furrows of equal depths along hillsides, as well as to easily open and neatly finish the work.

Motor Boats for Persian Gulf.

The U.S. Consul at Karachi foresees a demand for motor boats and automobiles in the Persian Gulf district at the close of the present European war. Addressing himself to the American exporters, he suggests that catalogues and price lists be sent to his office, in order that they may be ready for use as soon as contraband conditions make it possible for the Consulate to assist importers and exporters of these lines. We hope that the suggestion will not be lost on the British authorities on the spot, and that they will facilitate propaganda in favour of British cars and boats.

Port Said Drainage.

According to the recent report of Heddaya Bey, the Governor-General of the Suez Canal, the Port Said drainage scheme is making highly satisfactory progress and will, it is confidently expected, be in working order at the end of this year. The purification works and sewage farm are situated to the west of the cemetery, and have the object in view of utilising the purified sewage in irrigating crops instead of passing it into the sea. Forty feddans (about 168,000 square metres) have been laid out for the sewage farm. This area is limited on the north by the cemetery road, and on the south by the Lake, thus having an average width of 200 metres by 840 metres long. This area being exposed to the strong north wind and to the high tides, it has been found necessary to raise strong banks on the north and south sides and plant thereon several lines of trees. An experiment which was tried lower down on the foreshore opposite the abbatoir proved that the tamarisk is the tree that most successfully resists the wind in this salty climate. Cuttings were planted round the farm in March, 1915, with a view to developing the trees whilst the drainage was in progress. This sewage farm will furnish the town, in the future, with vegetables, which now have to be brought from the interior, and will doubtless make the sea front the most agreeable promenade in Port Said.

Estimates.

The investigation of the scheme was finished in 1911, leaving only the financial aspect of it to be settled; about £170,000 was required to complete the drainage scheme. On May 28, 1915, negotiations were opened between the Government and the Municipality with respect to a loan to be advanced by the Suez Canal Company, repayment to be guaranteed by the Government. These negotiations were concluded in November of the same year.

Contracts.

The work was opened in July, 1913, and was divided into seven parts:—(1) Sewer reticulation; (2) Sealed sewage and air mains; (3) Ejectors; (4) Sewage disposal works; (5) Air compressing machinery; (6) Power station; (7) Public latrines. Each of these parts formed a separate contract. The four first contracts were signed before 1914, and were let as follows:—Sewer Reticulation to the Industrial Building Co., of Egypt; Sealed Sewage and Air Mains to Messrs. Sayer and Culley; Ejectors to Messrs. Hughes and Lancaster; and Sewage Disposal works to the Industrial Building Co. The contracts for parts 5 and 6 were let in 1914 to the following contractors:—Compressor Station Machinery to Messrs. Sayer and Colley; and the Power Station to Messrs. Mattioli and Famaroli. The work followed a normal course until August, 1914, when the Industrial Building Company suspended work owing to financial difficulties as a result of the outbreak of war. The committee advised under the circumstances the reletting of these two contracts.

Trade Notes.

Egypt.

The Egyptian Council of Ministers, at a special meeting on August 30, approved a decree, which the Sultan signed, increasing the Customs dues on imported alcoholic liquors, tobacco and cigarettes, and timber for building purposes, to take effect on August 31. The impost on alcoholic liquors is increased to 10 per cent., and that on timber to 8 per cent. The tobacco increases vary with the character of the article. The cigar impost is increased to 400 milièmes a kilo., that on cigarettes to 420, and that on leaf tobacco to 320, the latter two, however, being 100 milliemes less from countries that have an agreement with Egypt.

H.M. Consul-General at Alexandria reports that tenders are invited by the Egyptian Coastguard Administration for the supply of (1) 4,500 kilogs. of engine oil, and (2) 1,500 metres of Imperial Navy canvas for making water bottles and awnings. Copies of the specifications and conditions of tender may be obtained from the Director of Stores, Coastguard Administration, Alexandria, by whom sealed tenders will be received up to noon on September 30. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be served upon him.

The *Journal Officiel* for August 16 contains revised Tariff Valuations (No. 27) for use in assessing duties on iron and steel manufactures imported into Egypt, with effect from August 16 to October 15, 1915, or until denunciation.

The Val de Travers Asphalt Paving Co. were the successful tenderers recently to the Cairo Tanzim Department for the supply of 100 tons of natural asphalt.

Sudan.

The director of the Commercial Intelligence Branch of the Central Economic Board at Khartoum reports that a general merchant in that town, who claims to have over twelve years' experience in the business, desires to secure the representation, on a commission basis, of United Kingdom manufacturers of enamelled ware and china and glass ware, brooms, and bentwood chairs. The inquirer states that these articles have hitherto been imported from Germany and Austria, and that since the war began no supplies have been imported from other countries. United Kingdom manufacturers of the goods mentioned should apply to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., for the name and address of the inquirer.

The following general statement of the imports and exports of the Sudan during the years 1907-1914, is taken from the Customs Reports recently issued :—

Year.	Imports. Public.	Imports. Government.	Exports.
1907	916,243	687,894	449,329
1908	1,183,054	709,744	515,938
1909	1,119,072	656,885	673,702
1910	1,213,915	717,511	977,621
1911	1,508,974	764,975	1,376,958
1912	1,471,039	496,390	1,373,119
1913	1,605,600	499,698	1,185,180
1914	1,400,333	470,199	1,020,260

Cyprus.

Tenders are invited by the Postal Department, Nicosia, for the supply of approximately eighteen pairs of brown boots for the year ending March 31, 1916. All boots to be supplied before December 15, 1915. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Boots, Postal Department," in the left-hand top corner of the envelope, and should reach the office of the Treasurer not later than 11 a.m. on November 2, 1915. All details regarding the articles to be supplied can be obtained from the office of the Island Postmaster, Nicosia.

The Government of Cyprus has published a statement declaring the following articles to be treated as absolute contraband: "Raw cotton, cotton linters, cotton waste, and cotton yarns.

Bulgaria.

The Board of Trade are in receipt, through the Foreign Office, of telegraphic information to the effect that the Bulgarian Government have authorised the exportation from Bulgaria of rye, the produce of the 1914 harvest.

Morocco.

The Acting British Consul at Casablanca (Mr. H. L. Rabino) has forwarded an extract from the local Press containing a list of manufactured and food products which, before the war, were imported into Morocco by Germany or Austria-Hungary. Among the principal manufactured goods in this list are:—Steel and iron bars for blacksmiths and locksmiths, toys, phonographs and musical instruments, common joinery timber (pitchpine, walnut, and oak), candles, cement, colours and varnishes, china and table glassware (particularly tea and coffee glasses), felt for praying carpets, fezzes, watches and clocks (especially wall, cuckoo, and chiming clocks), which the Moors value more as ornaments than timepieces, steam engines, stout paper for making Moorish slippers, packing paper, perfumery, soaps and cosmetics (strongly perfumed and cheap), chemical products, ironmongery, enamelled ware, cutlery, carpets and hangings of showy colours, woollen tissues and drapery of appropriate shades and very "dressy," glass beads, cheap imitation coral and pearl necklaces and bracelets. Food products include the following: Green tea and coffee, preserved meat and fish, condensed milk, rice, pepper and spices, sweets, and moist and (cheap) refined sugar.

There have been appointed in Morocco agents for the import of American flour and matches. An American laundry soap is also being introduced on the market.

Greece.

The American dollar is the one foreign currency that is at a premium on this market, writes the U.S. Consul at Patras. It has been well above par for six months past, with every indication that it will continue indefinitely to hold its ranking position.

Direct banking facilities have been established by leading banks with correspondents in New York, so that there is no longer need for the old indirect communication via London. According to information given to this consulate, American buyers of products of the Patras consular district may in future do their banking direct to Patras and in dollars instead of in pounds sterling, as formerly. Local exporters indicate their willingness to quote in terms of dollars whenever American clients desire it. The establishment of direct banking facilities will, no doubt, play an important part in the development of trade between this district and the United States.

Arabistan.

The following information is extracted from the Consular Report on the Trade and Commerce of the Province of Arabistan for the year ending March 20, 1914 :—

The imports show an increase of £205,432 over those of 1912-13. Out of the total imports, amounting to £812,096, the share of the United Kingdom and India is £612,354, or 75 per cent. The imports include material to the value of over £200,000 imported by the Anglo-Persian Oil Company, Ltd.; of this £188,000 was from the United Kingdom and £22,000 from British India. Sugar, loaf (£127,183) showed an increase of £63,245. Very large imports were made and the market was flooded. Wool, raw (£22,562) showed an increase of £9,089. The export of wool seems to be increasing steadily. It is chiefly sent to British India.

No considerable opening is apparent unless British or Indian manufacturers can produce sugar of suitable quality at a cheap rate. At present British-made sugar is a little too expensive, while Indian cane sugar is not appreciated. The people like a very white sugar, whether loaf or crystal, and do not seem to mind if its sweetening quality is inferior. A great deal of the sugar imported came from Austria and Germany. An Indian trader might be able to do profitable business in wood. Enamelled iron, glass and cheap lamps were imported from Austria-Hungary and Germany; possibly British manufacturers could compete in the market for these commodities.

The principal hindrance to British trade is the Customs tariff, which is so high on certain classes of goods that it puts a premium on smuggling. Traders who import by legitimate means cannot compete in the sale of tea, coffee, spirits and various other commodities. The other well-known hindrance to trade in Persia, viz., the lack of proper communication with the interior, affects Mohammerah as well as the rest of South Persia, but not quite so badly, as the Ahwaz-Ispahan road is safer than the other roads from the south.

The number of British and British-Indian subjects is steadily increasing. By far the larger proportion are employed by the Anglo-Persian Oil Co., Ltd., and owing to extensions in the company's undertakings the number will increase.

There is a British Consul at Mohammerah and a Vice-Consul at Ahwaz. The latter visits Ispahan from May until October in connection with Bakhtiari affairs. Trade inquiries should first be made at the Commercial Intelligence Branch of the Board of Trade in London.

ADEN SHIPPING.

The U.S. Consul at Aden gives the following table showing the number and nationality of all vessels that called at the port during the years ended March 31, 1913 and 1914 respectively :—

Nationality.	1912-13.	1913-14.
	Number.	Number.
British	793	767
British Indian	152	172
Austrian	132	151
Danish	3	1
Dutch	20	18
French	108	117
German	162	180
Italian	116	84
Norwegian	30	4
Swedish	3	3
Russian	9	19
Spanish	6	9
All other	1	4
Total	1,535	1,529

Of a total of 1,529 merchant vessels that entered this port during the year under review, 151 were of Austrian and 180 of German nationality. These 231 vessels obviously have not called here since the outbreak of the war. If to these were added the many ships now used as transports, or elsewhere employed, the number of vessels now calling at Aden is materially decreased. Moreover, nearly all the ships that now enter Aden have little or no space for cargo, as they are able to procure more freight than they can carry from ports entered before reaching Aden.

Exporters of skins and coffee, therefore, find it difficult to ship their products to the United States. Interest charges, moreover, accumulate on their purchases. A short time ago several Aden merchants tried to charter a vessel to take their merchandise to the States, but they were unable to obtain satisfactory terms. The situation now has eased up somewhat, and shipments are going forward without unreasonable delay, though freight rates are about 25 per cent. higher than they were prior to the war.

All the large English, French, Austrian, German, and Indian lines, whose ships entered or enter here, are subsidized by their respective Governments. The nation that sends its products in its own ships has an advantage in foreign trade. The native sees in the ship and its flag the personification of the nation.

The Savings Bank of Bulgaria

(FROM A CORRESPONDENT.)

SOFIA, August 30.

In 1914 the Savings Bank of Bulgaria received deposits to the amount of 33,318,954 lewas, as against 31,996,612 lewas in 1913. The total sum of repayments amounted to 35,754,479.58 lewas, as against 27,458,779.41 lewas in 1913. Comparing repayments with deposits, the former exceed the latter by 2,415,525.58 lewas, which reduces the balance at the end of the year by 2,415,525.58 lewas. Instead of 50,962,290.98 lewas, as on January 1, 1914, at the end of the same year the total savings fund was reduced to 48,546,765.40 lewas, this being due to the European war, which made life more expensive than before, and compelled many people to draw upon their savings.

Effective of the Savings Bank.

The deposited capital of the Savings Bank in the National Bank of Bulgaria on December 31, 1913, was as follows:—

		Lewas.
(A) In metallic gold	42,719,628.50	
In metallic silver	7,306,767.58	50,026,393.08
(B) In shares:		
6 % State Mortgage Loan, 1892		10,825,500.00
5% Sofia City Loan, 1906		4,926,000.00
5% Varna City Loan, 1907		2,000,000.00
Total		67,777,893.08

During 1914 there were deposited in the bank in cash 401,660 lewas gold and 32,923,999.75 lewas silver, or 33,325,659.75 lewas, which, with the above, gives a total of 101,103,552.83 lewas. During the same year the National Bank of Bulgaria paid on account of the Savings Bank 36,572,655.63 lewas, leaving 64,530,897.20 lewas, which, with the interest for 1914 (3,254,053.40 lewas), gives a total of 67,784,950.40 lewas at the end of 1914, against 67,777,893.08 for 1913.

Comparing the deposited and paid-up funds in the bank during 1913 and 1914, we find in the latter year an increase of 1,138,881.45 lewas deposited, and of 8,156,149.77 lewas paid up.

The gold effective of the Savings Bank on January 1, 1914, amounted to 42,719,628.50 lewas, which, together with the sums received in gold during 1914 (4,038,507.74 lewas), gives a general amount of 46,758,136.24 lewas as follows:—

	Lewas.
Capital in gold on January 1, 1914	42,719,628.50
Interest	1,980,092.74
Interest on coupons of 6% State Mortgage Loan, 1892	638,955·00
Redeemed bonds of the 6% State Loan, 1902	653,000·00
Interest on coupons of the 5% Sofia City Loan, 1906	246,300·00
Interest on coupons of the 5% Varna City Loan, 1907	100,000·00
Redeemed bonds of the 5% Sofia City Loan, 1906	18,500·00
Receipts in gold	401,660·00
Total	46,758,136·24

Interest and Profits.

During 1914 the funds of the Savings Bank deposited in the National Bank of Bulgaria gave:—

	Lewas.
Interest—	
On deposited funds	2,268,798·20
On 6% State Mortgage Loan (1906) shares	638,955·00
On coupons of 5% Sofia City Loan, 1906	246,300·00
On coupons of 5% Varna City Loan, 1907	100,000·00
	3,254,053·20
Profits	14,738·25
	3,268,791·45

From the last sum has been spent:—

Interest on deposits	2,448,764·95
Commission due to the bank	2,762·97
2% of profits due to the subsidiary cash office at the Chief Director of Posts, Telegraphs and Telephones	16,345·27
	2,467,873·19

Leaving a balance of profit of 800,918.26 lewas.

The average value of deposits during the year was 160.54 lewas, and of repayments 201.73 lewas, against 211.62 lewas for deposits, and 183.76 for repayments, in 1913.

The growth of the operations of the Savings Bank and the constant increase of the amounts saved (except in 1914) are shown in the following figures for the last ten years:—

Year.	Deposits. Lewas.	Repayments. Lewas.
1904	14,866,735	10,462,063·44
1905	18,032,022	12,752,150·70
1906	21,809,659	16,858,059·80
1907	22,842,472	19,956,271·54
1908	23,458,894	21,286,410·75
1909	28,132,547	23,725,019·55
1910	30,526,733	27,349,166·65
1911	35,784,557	29,741,205·37
1912	33,149,113	29,794,703·96
1913	31,996,612	27,458,779·41
1914	33,318,954	35,734,479·58

CYPRUS CURRENCY COMMISSION.

A supplement to the *Cyprus Gazette* (September 4) announces the appointment of the Treasurer of the Island of Cyprus to be Currency Commissioner with the following attributes:—

The Currency Commissioner may from time to time issue notes in the prescribed forms, copies of which may be seen at the branches of the Imperial Ottoman Bank or the office of the Treasurer, and in such numbers as he may think fit, not exceeding such maximum value as the High Commissioner in Council may prescribe.

The notes shall be for the value of five pounds, ten shillings, and five shillings respectively.

The notes so issued shall be redeemed at their face value by the Government at the expiration of six months of the termination of the present war or before that date should the Government so desire.

Under the title of Pyramids Estate, a private company has been registered at Somerset House with a capital of £150 in £1 shares. The objects are stated to be:—To acquire and turn to account lands and properties in the Province of Gizeh, Egypt. The company has been registered by Messrs. Surtees, Phillpotts and Co., of 6, St. Helen's Place, E.C.

AGRICULTURAL BANK OF BULGARIA

(BANQUE AGRICOLE DE BULGARIE).

PRIVILEGED CREDIT ESTABLISHMENT.

ESTABLISHED IN 1864.

BANKING IN ADEN.

The U.S. Consul reports that there is only one bank in Aden, a branch of the National Bank of India, Limited; but one of the large shipping and commercial houses does a private banking business. The Indian Government has not declared a moratorium. It will probably not do so, as it is unnecessary and would be very detrimental to business, and otherwise prejudicial. The bank here is not extending any credits except upon securities actually delivered to the bank. However, advances are freely made against produce about to be shipped, or in the negotiation of export bills drawn under approved credits, opened either in London or the United States. Bills drawn under such credits are taken on D.A. (documents to be delivered against acceptance) terms. Where such credits are not opened the bank insists upon D.P. (documents to be delivered against payment) terms.

Bills drawn on all countries of continental Europe are strictly avoided. The bank insists that on all produce upon which advances are made, insurance covering war risk be taken out with the British Government or a first-class British insurance company in London. Its rate of interest is 2 per cent. above the prevailing rate at Bombay.

PRIVILEGED CURRANT COMPANY OF GREECE.

Messrs. Burlumi report:—

The Privileged Company distributed to its ordinary shareholders a dividend of 4 per cent. for the year ended August 22, 1914. The profits were sufficient for the payment of the whole statutory dividend of 6 per cent., but the board proposed, and the general meeting of the shareholders accepted unanimously, that large amounts should be written off certain doubtful accounts, and that over 100,000 drachmas should be and was carried over. The profits of the company for the year ending August 22 last have been larger than those of the year before, and there is very little doubt in Greece that the full statutory dividend will be shortly distributed. The Wine and Spirits Company have paid 9 per cent. for the year 1914, and an interim dividend of 5 per cent. for 1915.

NEWS FROM ALL SOURCES.

The firm of Johann Herny and Son, of Prague, the largest Czech cotton works, working chiefly for the Balkan States, has been, says the *Morning Post* Berne correspondent, declared bankrupt. The liabilities amount to £680,000, and the assets to £560,000.

The U.S. Consul at Aden has telegraphed to Washington to the effect that American-owned skins, of which there is a considerable amount awaiting shipment at Aden, may be allowed to be exported on guarantee by British consular officer in America of the *bona fides* of the consignee, subject to a bond to be executed by the shipper.

At Wednesday's meeting of the British Association in Manchester, Sir Charles Macara, Bart., in the Economics Section, spoke principally on labour disputes, and said that the chief factor in creating unrest had been the rise in the price of commodities. He deprecated the interference of politicians in industrial disputes. These frequently were due to a mistaken belief in the existence of large returns to capital. Compulsory arbitration when large bodies of men were concerned was impracticable, but an inquiry into the merits of a dispute by experienced men representing capital and labour, and the publication of their findings, would with public opinion provide the only possible compulsion. It was desirable not to grant war bonuses or wage advances until after investigation by the leaders of labour and capital.

Receipts for the Bulgarian financial year 1914, up to May 31, 1915, amounted to 215,925.850 frs., as against expenditure totalling 217,234,502 frs.

Annamite workmen to the number of 574 have arrived in France. They will be employed at Tarbes and Pau in making munitions.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 150 tons (last week, 168 tons); Hurgada production for week, 163 tons (last week, 237 tons).

MACEDONIAN TOBACCO CO., LIMITED.—Notice is given that a dividend at the rate of 5 per cent. per annum, free of income-tax, has been declared on the shares of the above company for the year ended September 13, 1914, and is now payable at the offices of the company in Cavalla, Greece. Holders of share warrants to bearer must deposit their coupons (No. 3) at the company's office as above, and leave them three clear days for the purpose of examination.

PIRÆUS, ATHENS AND PELOPONNESUS RAILWAY FOUR AND A HALF PER CENT. BONDS.—Messrs. R. Raphael and Sons announce the numbers drawn for repayment at par on October 15.

PRINCE LINE.—The directors recommend a final dividend of 15 per cent., making 19 per cent. for the year.

NOTES OF THE WEEK.

The general mobilization of the Bulgarian Army, which was ordered by Royal Decree on September 19, is an event of first importance. According to the official interpretation of this measure, Bulgaria is maintaining her neutrality, but it is to be an armed neutrality. It may be permissible to ask, "*Qui trompe-t-on ici?*" We are not in the secrets of the Bulgarian Government, which has kept its own counsel well. But there are certain outstanding features in the situation, and these it can do no harm to analyse. In the first place, if we accept the official interpretation, an "armed neutrality" implies that it is felt that there is some danger of a violation, by design or accident, of Bulgarian territory. There is only one quarter from which Bulgaria is in danger of invasion. It is from the north-west, where Germany and Austria-Hungary are collecting troops ostensibly for an expedition across Serbia and Bulgaria to Constantinople.

Both Holland and Switzerland have maintained a neutrality which may be termed armed or semi-armed; and they have their justification in the fact that their territories adjoin the actual theatre of war. Bulgaria is not in exactly the same position, as is evident from her omission to adopt armed neutrality at the beginning of the war. If she takes this course now, it must be—always supposing that the official interpretation covers the whole ground—that a new situation has arisen bringing the danger of invasion appreciably nearer than it has been before. This may be the case. We know that Germany has been inclined to take up of late a firmer attitude towards the neutral States of the Balkans. There is the gathering of troops on the Hungarian bank of the Danube, and it may be that the bullying methods of German diplomacy has caused umbrage at Sofia. If Germany were to undertake the threatened expedition to the assistance of the Turks, she would not only have to march through Bulgaria, but would have to make sure that her lines of communication remained intact. To safeguard herself in this way there cannot be the least doubt that Germany would have to interfere more or less drastically with Bulgaria's liberty of action, if not with her actual independence. A tardy realization of this fact might well induce the Bulgarian Government to view Germany's threatened move with misgiving.

If Bulgaria has nothing to fear from the Central Powers, then "armed neutrality" becomes a costly and meaningless proceeding, for by no stretch of the imagination can it be urged that there is any danger of an invasion of Bulgarian territory from any of her immediate neighbours, Serbia, Roumania, and Greece. There are certain unsatisfactory features of the situation which cannot be ignored. The Bulgarian Premier is reported to have told his political followers that the mobilization is the outcome of "a convention with Turkey for the future maintenance of armed neutrality" on the part of Bulgaria. The first divisions of the army to be affected by the Royal Decree are on the western frontier. As far as is known any pressure that has been brought to bear upon King Ferdinand has been in the direction of co-operation with the Entente. His own leanings are towards Germany, and it is he who will have suggested the mobilization.

If doubt is cast on the theory of "armed neutrality" and the Bulgarian mobilization is regarded in the light of a normal preliminary to the declaration of war, we have to inquire, in the absence of definite knowledge on the subject, whether Bulgaria is likely to be going to throw in her lot with the Central Powers or with the Quadruple Entente, whether she will fight hand in hand with Turkey or will make common cause with the Serbians, and possibly with the Greeks and Roumanians. From the German point of view the ideal situation would be a declaration of war by Bulgaria against the Allies, followed by a joint attack of an Austro-German and a Bulgarian force upon the Serbians and the rapid advance of a Teuton-Bulgar expedition to Constantinople. If Roumania and Greece have been persuaded to acquiesce in this course, there would be no great obstacle to the German plan, until the Allied Powers were in a position to reverse its effects. On the other hand, if, in the far more probable eventuality, Roumanian and Greek sympathies are with the Entente, it would be impossible for them to stand aside and see Germany drive a wedge through the Balkans and be-

Digitized by Google

come linked up with Turkey. The first hostile movement on Bulgaria's part must cause Roumania and Greece to fall upon her, and it would be very problematical whether the Austro-German forces could deal with the Serbian resistance rapidly enough to come to the help of Bulgaria.

There remains the possibility of the Bulgarian mobilization being a preliminary to co-operation with the Allied Powers. We know it to be the one course entirely consonant with the real interests of the country. Germany's ambitions in the Near East can only be realised at the expense of the Balkan States. She may pretend for her own purposes to be willing to gratify all their aspirations; but no Government with any claim to statesmanship could convince its countrymen that an alliance with Germany would be of lasting benefit to the Balkans. Bulgaria least of all, it would be thought, could dally with such a notion. The victory of the Germanic Powers in this war would mean that Turkey would have to be compensated. She could only receive compensation in any way satisfactory to her at Bulgaria's expense. Is it likely that the Bulgarian Government will deliberately set about to compass the ruin of the country?

It must be admitted that up to the eve of mobilization Bulgaria has shown no sign of wishing to co-operate with the Allied Powers. A deputation from the Opposition had an audience of the King only last week in order to protest against Bulgaria throwing in her lot with the Central Powers. King Ferdinand is reported to have given assurances that no action would be taken against the wishes of the nation, but it has to be admitted that the fears of the Opposition are shared in well-informed circles outside Bulgaria. On the other hand, the strikingly candid statement of the Premier will be recalled in which he declared that Bulgaria was ready to march against Turkey as soon as her claims in Macedonia had been satisfied. This utterance and the activities of the Allies' diplomacy to bring about an understanding among the Balkan States justify the expectation that the Bulgarian mobilization may yet prove not to bear the meaning which there is a natural tendency to attach to it. We shall do well, however, not to raise our hopes too high. There are many wheels within wheels in the Balkans, and after the experience of the second Balkan War it would be rash to prophesy that the course that will be followed by a Balkan State will necessarily be the one prompted by its own interests. Dr. Radoslavoff is reported to have spoken of the quickly developing situation, and to have assured his followers that a general mobilization has only been ordered to enable Bulgaria to be prepared for all eventualities. It must be left to the near future to show us which of the courses open to her Bulgaria is really going to adopt.

The activities shown by the German and Austrian forces on the north bank of the Danube might seem to lend colour to the threats of an Austro-German invasion of Serbia. According to a statement published in Berlin there has been an artillery duel near Semendria, and on the Save, as well as at other points on the Danube, the enemy's guns have been in action. The Serbians, however, continue to regard the threatened invasion with equanimity. French airmen report that so far no considerable concentration of troops has taken place near Orsova. As was suggested in these columns some weeks ago, nothing would be more calculated to close up the Balkan ranks than a German invasion. This view is now shared in Roumania, where it is held that Roumania's determination to intervene in the event of a German attack on Serbia has contributed to the abandonment of the scheme.

In view of the confidence expressed in these pages and elsewhere that the co-operation of Roumania with the Allies might be expected at quite an early stage in the war, it is of interest to note what M. Filipesco, the head of the Roumanian Conservative Party, has to say on the subject. In an article in the organ of his party he writes:—"If I did not press matters farther towards our entering into the conflict in September, 1914, it was because on September 2 last year I had the promise that within twelve days the army would pass the Carpathians. If yesterday I was the dupe, to-day it is M. Bratiano (the Premier), who awaits an occasion like that of a year ago, when we could have gained an indestructible title to the gratitude of Europe." The assurances which M. Filipesco received were also given in other quarters entitled to the same credence as was to be placed in the Premier's word.

A noticeable point in Lord Kitchener's references in the House of Lords to the operations in Gallipoli was his tribute to the Turks. "It is only fair to acknowledge," he said, "that—judged from a humane point of view—the methods of warfare pursued by the Turks are vastly superior to those which disgrace their German masters." Reference has frequently been made in these columns to this characteristic of the Turkish troops in Gallipoli, and we can only hope that their clean record will be maintained to the end of the war. Instances have been reported of prisoners being allowed to telegraph to their relatives during the afternoon of the day on which they were captured, and to write letters the next day. In some cases our wounded have been recovered after they had received first-aid from the Turks, and left with water by their side. Such acts justify the hope that, when the breach comes with Germany and all her methods, it will be complete and lasting.

The reverse of the shield is presented in the reports of Turkish treatment of the Armenians. We have yet to learn the full extent of the persecution and massacres of which these unfortunate people have been the victims. Some idea of the wholesale manner in which they have been dealt with may be gained from the fact that French cruisers found a large body of men, women, and children taking refuge against the Turks in the massif of Jebel Musa, to the north of the Bay of Antioch. Here they had been besieged for some weeks. They were able to signal to the French squadron, and were ultimately rescued to the number of five thousand and conveyed on men-of-war to Port Said. The contrast between the treatment of British prisoners of war and that meted out to the Armenians goes to prove that while the instincts of the Turks are sound, they are constitutionally unfitted to govern subject races. If peace and prosperity are to be introduced into Turkey after the war, this characteristic must receive attention in the settlement imposed upon the Turks.

A report from Teheran to Petrograd states that as a result of their wages not having been paid for several months the chief of the Gendarmerie, after three warnings, has proceeded to disband the force. The guards at the Legations and Government institutions are said to have been withdrawn, and the detachments of Gendarmerie stationed in various parts of the country are returning to Teheran. If this report be true, the situation may be a very critical one for Persia unless the matter is handled promptly and satisfactorily by the British and Russian Governments. It may be that in the face of the extreme step taken by the Swedish commandant the Persian Government will release the money owing to the Gendarmerie, and that the force will continue to exercise its functions within its existing limitations. If, on the other hand, the Teheran authorities are actually without the means to pay the Gendarmerie, it would be thought that the two protecting Powers would not choose the present moment for allowing the Gendarmerie to be disbanded for arrears in their pay. It may be necessary to let the Swedish officers carry out their intentions as a convenient method of escape from an impossible position. But there ought to be no delay in the reforming of a Gendarmerie force, commanded by British officers from India, whose pay will not be dependent on the state of the Persian Exchequer.

LETTER FROM CAIRO.

(From Our Correspondent.)

Cairo, September 8.

Attempt on Minister's Life.

The historic assassination of General Kleber in the early part of the last century is, unfortunately, no more the unique incident of the kind it used to be in Egypt. The assassination of Boutros Pasha Ghali, Prime Minister of Egypt, a few years ago, has been the prelude to a new epoch in the history of this very rare crime in modern Egypt. The attempt on the life of the ex-Khedive in Constantinople last summer was committed by an Egyptian, who was not allowed to live and tell his tale, which might have revealed his accomplices. The two attempts on the Sultan of Egypt are too fresh in the minds of the public to need recapitulation here. But hardly had the inquiry regarding the last of the two been completed when a similar attempt was made to assassinate Ibrahim Pasha Fathi, the Minister of Wakfs, on Saturday evening, the 4th inst.

Before proceeding with the account of the crime I wish to convey to your readers some idea as to the person, character, and past achievements of the Minister who was the object of this base attack. Ibrahim Pasha Fathi is a military man. He enjoys the rank of a ferik, or general, in the Egyptian Army, and was one of the most trusted of Kitchener's officers. His achievements in the Sudan campaign covered him with glory, and when, later, he was sent by Lord Cromer at the head of a military and political mission to arrange the Sinai affair, he displayed a good deal of tact and acumen and impressed the Turkish delegates very favourably. He was able, with the other members of the mission, to settle the question in a fair manner, and was publicly thanked here. Until Lord Kitchener came back to Egypt as H.M.'s Agent, General Ibrahim Pasha was on pension. Lord Kitchener, knowing his ability, employed him in an administrative capacity. He was nominated Governor of Assiut, and later of Gharbia Province, where his work was conspicuous. A few months ago he joined the Ministry upon the resignation of Ismail Pasha Sidky.

The Minister was last Saturday proceeding to Beni Suef, Upper Egypt, on a short tour of inspection. Standing on the station platform, before the express started, he conversed with some of his old brothers-in-arms, when suddenly a young man approached and, from behind, plunged a long two-edged dagger, which he had wrapped in some newspapers, into his left shoulder. The Pasha turned about and received two more stabs, one in the right cheek and the other in the left. The Pasha produced a pistol and fired at the feet of the assassin, but missed him. An officer standing by struck twice with his cane at the assassin, who fled out of the station brandishing his dagger and threatening people. He was, however, arrested, and the Pasha's wounds were attended to. Although the wound in the shoulder was grave there is absolutely no danger. Fathi Pasha is doing well, and it is hoped he will soon be able to leave his bed. The attempt has caused intense resentment and abhorrence all over the country.

The assassin is a Government employee, attached to the Treasury Department in the Ministry of Finance. It came as no surprise to anybody to know that his past life is a series of failures, debaucheries, hard drinking, and an inveterate addiction to hashish. Just before his attempt he had embezzled £E800 of public funds, which he spent in his debaucheries, but claimed in the inquiry to have expended in benevolent objects. On Friday night he had been seen with a native *demi-mondaine* in a café in the Boulak quarter, where he had indulged in drinks and hashish. This is the class of patriot who pretends to save the *patrie* from despots and the accomplices of despots. Such was Wardani, the assassin of Boutros Pasha, and Mohammed Khalil, who attempted the Sultan's life in Cairo last winter—a set of mean, despicable, uncontrollable individuals who are "wanted" for some crime, or who have lost all and plunged deep in the Slough of Despond. And they are the would-be "saviours" of Egypt!

At the inquiry, conducted in the presence of the Prime Minister and the Minister of Justice, the assassin boasted of his guilt, and coolly stated that he had carefully planned the crime and armed himself with the dagger and a loaded revolver that had been found on him. He further stated that he wanted to rid Egypt of all the Ministers and high functionaries. Turning to the Minister of Justice, he said: "Before this inquiry is through you will be no more, for your turn is sure to come soon." This is believed to be an empty threat used by the assassin in the hope of influencing the Minister in question. To the member of the Parquet who was conducting the inquiry he said: "Why do you prevaricate? Would you not do the same thing if you had a chance?" In short, the assassin, whose name, by the way, is Saleh Abdel-Latif, has been displaying remarkable sangfroid and a total disregard of the consequences of his base crime. *Exalté*, callous, and morally wrecked by the life he led, he takes pride in being an assassin, and exults in his "courage." His only regret is that his attempt has been abortive.

The Bomb Outrage.

The inquiry in connection with this crime has now been closed. Four persons are implicated and are in custody, two of whom are Shams ed-Din and Helbawi, the tenant of No. 99, Ras el-Tin Street, and the man who is alleged to have thrown the bomb. The official *communiqué* on the subject, which was promised about twenty days ago, will soon be published.

The Blockade of Syria.

A great sensation was caused among the Syrian colony and the public in general by the announcement of the blockade of the Syrian coast. This was followed this week by a statement, published by *Al-Mokattam*, that the Aroad Island, the only island in the vicinity of the Syrian coast, was occupied by the French on August 31. The hopes of Syrians are now raised, and it is believed that the turn of the Lebanese to show their devotion to the Allies has come at last. They are only anxious to display their sympathy by acts. The news has impressed the Egyptians, as it brings the war again very near their country. Thinking people are beginning to realise that Turkey's dissolution is drawing nigh, and that before the end of October some of the greatest events in the latter-day history of the Near East will have taken place.

EGYPT'S SULTAN AND THE WAR.

According to the Havre correspondent of the *Daily Telegraph*, M. Firmin van den Bosch, a Belgian judge of the Mixed Courts in Egypt, on his return from Europe, showed the Sultan of Egypt photographs of the atrocities committed in Belgium by the Germans. The Sultan on seeing them exclaimed, "They talk of peace! Do you know what every neutral whom Germany wishes to use as a mediator ought to reply? 'Commence by repairing the injustice which you admit you have committed against Belgium, restore the liberty to the nation which you have martyred, give back their country to the soldiers who are fighting solely for liberty, restore to his kingdom the hero King. Only then can one talk of peace. Doubtless peace is desirable, but a peace based on justice and not on force. Force can do much, can exterminate an army, massacre women and priests, and destroy monuments, but it cannot destroy the soul of a people, especially when that people has been personified in the sight of the world by figures like King Albert and Queen Elisabeth, the Premier, M. de Broqueville, Cardinal Mercier, and Burgomaster Max.'"

The Sultan rose, and, emphasising each word, said: "The independence of Belgium is a matter of interest not only to the Allies nor even to Europe. It is a matter for the world, for it is not a political question only. It is a moral matter."

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, September 13.

The past week does not appear to have been productive of any developments of importance at Constantinople. The Greek papers announce that the Sheik-ul-Islam has resigned, and that a large fire has occurred at Ismid, but no confirmation of these rumours has yet come to hand here.

The Question of Coal.

Probably the most unsatisfactory item of news is the announcement of further small arrivals of coal from the Black Sea. How these vessels are able to remain several days at Zunguldak or Eregli without being destroyed by Russian warships is a mystery. At this rate sufficient coal is available for naval and military requirements, but desperate efforts were apparently being made last week to bring in large supplies, and three steamers—the Seihoun, the Patmos, and another of the Deutsche Levante Linie—laden with coal are reported to have been sunk by Russian warships. The Hamidieh and the Goeben went into the Black Sea to convoy these steamers into the Bosphorus, but were apparently unsuccessful.

The number of steamers that have been destroyed in the Black Sea is said to be thirty, and in the Sea of Marmora forty-two. Amongst those recently sunk in the Marmora are the German steamers Tenedos, Chios, and Lily Rickmers; and the Bosphorus passenger boats Nos. 33, 34, and 39 have also disappeared.

Shortage of Bread and Oil.

The supply of bread has recently been reduced to a quarter of an oke per person. The mills have either no coal or no wheat, and it was feared that bread would be almost unobtainable in a few days. The Mussulman communities receive preferential treatment in obtaining their daily requirements, to the detriment of the Christians.

In spite of the optimism of the Prefect of the city, referred to in a recent article, petroleum, which in normal times is sold at about twelve piastres per tin, is now only obtainable with difficulty at 150 piastres. A cargo has been expected from Roumania, but nothing had arrived last week. Rice and sugar are selling at twelve piastres per oke. The Prefect has issued a recommendation to the Medical Faculty to avoid, as far as possible, prescribing syrups to their patients, in view of the scarcity of sugar.

Turkish Sick and Wounded.

Numbers of wounded arrive in Constantinople daily. It is estimated that there are now about 70,000 in the capital, and a very large number were expected last week, as all empty houses and large buildings of residential flats were being converted into hospitals. Foreigners are now not allowed to visit the hospitals.

The Turkish losses at the Dardanelles during the days of the Suvla landing are said to have amounted to 32,000 men. Dysentery appears to have broken out amongst the Turks on the Gallipoli Peninsula, and 500 cases per day are reported.

Submarine Operations.

The Turks in their *communiqué* of the 4th claim to have sunk a submarine of the Allies, but the following account of the incident is reported. A British submarine landed four men somewhere near Buyuk Chekmedjeh with the object of destroying the bridge there; but the men were caught, and on receiving information a Turkish destroyer hurried to the scene. When the destroyer came in view the submarine appears to have submerged and caught up a tug boat on which their four men had been placed with the object of being taken to Constantinople. The submarine took off her four men from the tug boat, sank her, and then turned her attention to the destroyer, which she also sank, as well as some other small craft. In their *communiqué* of the 5th the Turks, however, make a definite statement with regard to submarine E7, which, they say, they sank in the Dardanelles on the previous day, and took three officers and twenty-five men prisoners.

Fresh Regulations for Foreigners.

The authorities in general are becoming much more aggressive towards foreigners, and the military authorities have issued the following regulations:—

First.—The male subjects of enemy countries are not allowed to circulate in the streets of the capital before sunrise and after nine o'clock at night. Shopkeepers must also conform to this regulation.

Second.—Any subject of enemy countries being obliged for urgent reasons to leave his house during the prohibited hours must obtain permission from the nearest police station.

Third.—Any subject as above having already registered his residence at the police station must notify the police several days beforehand if he wishes to move. A delay of twenty-four hours is given to those who have moved before the publication of these regulations.

Fourth.—Any subject intending to spend the night away from home must notify the police and obtain a special permit.

Anyone offending against these regulations will be brought before the court-martial.

NEWS OF SYRIA.

(From a Correspondent.)

Alexandria, September 10.

As a result of the blockade of the Syrian coast by the French Fleet, the U.S. cruiser Chester, which left Beyrout on August 26, had to proceed to Canea (Crete) and land there about 450 refugees, the majority being Jews, naturalised British and French subjects, with a sprinkling of Greeks. The military authorities at Beyrout are said to have prevented the Italians from embarking. The destitute among the British subjects will be sent over to Cyprus, while the French Government will look after the destitute among its own subjects. The authorities here, having encountered no little difficulty in coping with the problem of affording relief to the thousands of destitute refugees who have been brought over from Palestine by American warships, could not allow of further numbers being thrown on their hands.

A Wholesale Execution.

Among the British subjects on board the Chester was a wealthy Jewish merchant, who has, by special permission, been able to join his family at Alexandria. He reports the shocking news of the hanging at Beyrout on August 21 of twelve notables accused of being partisans of the Arab movement. As the informant declares that he was an eye-witness of this revolting act of vengeance, and even gives the names of the victims, there can, unfortunately, be little room for doubt. These unfortunate victims of the Young Turks' barbaric vengeance were leading members of representative families in Tripoli, Beyrout, Damascus, and Nablus. One of them was a lawyer and a promising leader of thought among the new generation of Moslems at Beyrout; while another was the President of the Arab Club at Constantinople. It is said that Jemal Pasha came over from Damascus expressly to attend, with the Vali of Beyrout, this wholesale execution, and that the bodies of the hanged remained exposed in Liberty Square for six hours, after which they were carried to the sands on the western outskirts of the town and there buried ignominiously.

Jemal Pasha's Dream of Power.

More than mere punishment or vengeance for a supposed political crime seems to have been the aim of the Young Turks. The shocking manner of this wholesale execution was no doubt meant to strike terror to the hearts of the population and nip in the bud the Arab movement that was showing fresh signs of activity, especially among the grievously disillusioned Moslem element. Curiously enough, the list of hanged does not contain the name of a single Christian. This, coupled with the fact that Jemal Pasha had lately shown the Maronite Patriarch marked courtesy, lends verisimilitude to the persistent rumours of secret proposals having been made by the Pasha to the Allies. There seems to be good ground for crediting the reports of disagreement between Enver and Jemal, and of the refusal of the latter to conform to the repeated orders for him to proceed to Constantinople. It is said that on the occasion of an entertainment given in his honour by one of the leading notables of Damascus the Pasha, in the course of a speech, went so far as to refer to the disastrous consequences of this war into which Turkey has been dragged, and, after flattering his hearers with an allusion to his Arab descent, to emphasise the need for all the Arabs at this critical juncture to think seriously of their political destiny and to organise their activities accordingly. Another version—for the authenticity of which persons of authority vouch—is that Jemal Pasha once threw out a tentative suggestion regarding his being declared eventually Sultan of the Arabs, and when one of his hearers received the hint with an exclamation expressive of his feelings as to the absurdity of the mere thought, the Pasha made a mental note of the fact, and, realising the hopelessness of his dream of power, has since shaped his policy in regard to the Arab movement accordingly.

Now that Ruad Island, of historic fame, has entered the possession of the Allies as a naval base, probably foreshadowing imminent action on the Syrian coast, we may, sooner than is expected, be able to judge, by the character of Jemal's opposition, how far these rumours of his secret proposals to the Allies rest on fact.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, September 1.

Austria-Hungary and Roumania.

There are many rumours afloat regarding Austro-Hungarian preparations for an attack on this country. The *Epoca* publishes a long description, which it says it has received from a trustworthy source, and according to which all the defiles on the Hungarian side of the Carpathians have been fortified, while lines of trenches have been dug along the whole Roumanian frontier. Batteries of heavy artillery are also reported to be posted opposite the various passes, and 150,000 troops are said to be held in readiness at various places. It is certain that for a week or more the Hungarian officials have been moving away from Predeal, where only a single seller of railway tickets now remains. The examination of passports takes place at Kronstadt (Brassov), where everybody is most carefully searched and baggage is gone through minutely. On the journey between Predeal and Brassov all blinds of railway carriages are drawn, and nobody is allowed to look out of the window on any pretext.

All this makes the public very uneasy, and rumours of mobilization are once more heard on all sides, though no signs of any such move are to be seen anywhere, and military circles appear to discredit the reports; indeed, the entry of Roumania into action at the present juncture seems highly improbable.

A Policy of Pin-pricks?

The raising of the prohibition against the export of cereals does not seem likely to be of any great benefit to those merchants who were so clamorous to export, for the Hungarian authorities have for some days refused to allow their wagons to cross into Roumania, which has led to none being allowed out of this country. As to discharging at the frontier and loading into Hungarian or German trucks, that is impossible, for the Hungarian authorities will place none at the disposal of would-be exporters. The result is that cereals and other goods have been accumulating in enormous quantities at the frontier stations; and the Ministry of Public Works has issued a circular informing farmers and exporters of the facts, and requesting them not to send any more grain to the frontier till further notice. For the past few days even carts have not been allowed to come to the frontier to load grain from this side, and as a consequence many of the roads are blocked with carts and wagons waiting for orders.

It is not easy to see what the Austro-Hungarian authorities hope to achieve by their present tactics. Is a system of "pin-pricks" to be introduced, or are the trucks all needed for military purposes? Certain it is that before the unloading and loading at the frontier was stopped the Customs authorities had insisted on examining every sack of maize, alleging that pamphlets of a revolutionary character were being smuggled through in them for distribution amongst the Roumanian inhabitants of Transylvania; and it is even said that there was a fear of bombs, arms, etc., being taken into Transylvania in similar fashion. Again, the Hungarian authorities allege that they found chalked on some trucks the message, "To-day we send grain in them; to-morrow we shall come ourselves." Even if this be true, it can only have been a joke, and to take it seriously is surely pure childishness on the part of the Hungarian authorities. In so doing, they appear to be cutting off their nose to spite their face, for, according to all reports received here, both Austria and Germany are beginning to feel seriously the shortage of grain.

Judging by the following incident, it would seem quite likely that the whole business is a campaign of spite, initiated by Germany, as a consequence of this country's steady refusal to permit the passage of munitions of war for Turkey. A paper here reports that a Jassy firm which had commercial relations with a Belgian house in Charleroi was surprised at receiving no reply to any of the numerous letters it had occasion to send. A few days ago, however, it received back the whole of the letters it had despatched over a period of four months, with a notification from the German Post-master at Charleroi stating that the Belgians are not permitted to receive correspondence from Roumania!

Further German Attempts at Smuggling.

Although attended by little success, attempts to smuggle munitions of war across the frontier and through to Turkey continue to be made. The latest discovery made is of two cases, one containing dynamite and the other caps, at a house in Bucharest. These, it was proved, had been smuggled over the frontier with the connivance of two railway porters. Whether the dynamite was intended to be passed through into Turkey is not known; but some papers hint that it was intended for use in this country, by German agents, in the event of Roumania going to war.

Another case of attempted smuggling by Germans was discovered two days ago at Predeal, on the arrival of some 120 tons of "textile goods" destined for Turkey. On examining them, the Customs authorities found that nearly every one of these bales contained little cases of picric acid and melanite. The twelve trucks containing the goods, and the goods themselves, were promptly forwarded to Bucharest for confiscation.

Smuggling in the other direction is also attempted, several lots of cattle having been seized by the frontier guards while being "passed" over the Carpathians. The risks of this business are very great, but so are the profits, and many persons are tempted to try their luck.

Another article that engages the attention of the would-be smuggler is motor tyres, which are evidently in great request across the frontier. The attempts to "run" them seem, however, to be attended with as little success as those of the cattle smugglers. Two motor-cars full of tyres were stopped on the frontier yesterday. Two individuals, who were caught while in the act of carrying some tyres over the frontier by way of forest paths, confessed that they were from Sinaia, where there was quite a collection of stolen tyres awaiting a chance to smuggle them over the border. These had been collected by a contractor (with a German name) for certain work in connection with the rebuilding of the railway station, upon whom, it is said, suspicion had rested for some time.

Balkanic Rumours.

For the past few days certain papers have been spreading alarmist reports to the effect that an attack on Serbia by Bulgaria was imminent, the latter country having reached a full understanding with Turkey; and that in such case Roumania would not stand idly by, but would immediately go to the help of Serbia. There seems to be very little doubt that if such a situation should arise, both Roumania and Greece would at once move to Serbia's assistance; but the chance of its arising is surely remote, for it is now announced that although negotiations have been very actively carried on between Sofia and Constantinople, no conclusion has been reached as yet.

The German Legation has issued, through the local Press, a formal denial of the report that Germany had actually presented an ultimatum to the Roumanian Government with reference to the question of permitting the passage through this country of munitions of war for Turkey.

GAY ROUMANIA.

A Roumanian correspondent writes:—

Sinaia is suffering not at all from the strained political situation. A good many people had intended remaining at home this year, instead of holiday making, but the warm weather sent them flocking to the cool shade of the forests, which stretch away to the frontier; and just now not a room is to be had for love or money at any of the hotels or lodging-houses along the Prahova valley. Sinaia is crowded, and the Casino and other "attractions" are in full swing. A French theatrical and variety company performs to crowded houses nightly, and gambling goes on unrestricted until the early hours of the morning, large sums being won and lost—chiefly lost—nightly. One would have thought that with things as they are, and Roumania uncertain if and when she may be drawn into the war, a slightly less reckless life would be better. But, no; not only at Sinaia, but at Constantza, Busteni, Lacul Serat, and elsewhere play—and heavy play—goes on. Yet, within an hour's drive of the first-named place Hungarian troops are massing and trenches are being dug, even in Sinaia itself and the surrounding mountains soldiers are numerous; and as one journeys from the capital one sees every railway bridge guarded by militia and gendarmerie.

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, September 4.

A Critical Situation.

The Serbian reply to the Note (of August 3) of the Entente Powers was last Wednesday handed to the four representatives, at Nish, of those Powers; but so far no communication as to its tenour has been made to the Bulgarian Government.

Feeling in this country is entirely in favour of the Entente, but even the most fervent supporters of its cause insist that as a condition of Bulgaria joining the Entente and undertaking action against Turkey, Bulgarian troops must immediately occupy the "undisputed zone" of Macedonia as defined by the Serbo-Bulgarian Treaty of 1912. Unless this condition be fulfilled, Bulgaria will not stir. But, on the other hand, although Austro-German diplomacy is straining every nerve to induce the Government to attack Serbia, the nation is, I believe, entirely opposed to such a perilous adventure, which would involve it in a war against Russia, Great Britain, France, and Italy.

New British Minister Received.

Yesterday morning, at 11.30, the new British Minister, Mr. Hugh O'Beirne, C.V.O., C.B., was received in audience by King Ferdinand, and presented his credentials. Dr. Radoslavoff, Prime and Foreign Minister, and Crown Prince Boris were present. After presenting his credentials, the new Minister had a conversation with His Majesty, which lasted until one o'clock. His reception, though informal, was very cordial.

The Duke of Mecklenburg's Visit.

Last Sunday the Duke of Mecklenburg-Schwerin arrived here by special train, and was met at the Royal station at Podueni by the Crown Prince Boris and the staff of the German Legation. The Duke, who is a brother of the Russian Grand Duchess Vladimir Marie Pavlona and a near relation of Queen Eleonore, is accompanied by Herr Rosenberg, of the Berlin Foreign Office, who is acting as his secretary. From the station he was driven to the Palace here, where he still remains. He has had a long interview with Dr. Radoslavoff. The Duke, it may be mentioned, is a Knight of the Order of SS. Cyril and Methodius, the premier Bulgarian order.

Greek Sailings to Dedeagatch.

The Greek trading vessels which, as already reported, had stopped calling at Dedeagatch, have resumed their calls since the return to power of M. Venizelos. The latter, it seems, has succeeded in removing the restrictions which led to the abandonment of the Greek vessels' visits.

The State of Constantinople.

Travellers who have arrived here recently from Constantinople report that there is a great scarcity of bread there, and that the population is in a state of considerable distress. The wealthier citizens are able to obtain corn and bread, though at very high prices; but the majority of the citizens are said to be eating boiled maize and boiled wheat. Some cases of death from starvation have been reported lately; the numbers of the poor have been greatly increased owing to lack of work, and their condition is wretched in the extreme.

THE BULGARIAN ARMY.

Some particulars of the Bulgarian army have been supplied to Reuter's Agency by a reserve officer who has been recalled by telegram to Sofia. He said:—

"The general mobilisation includes ten divisions of the Bulgarian army, the latter having been increased by one division since the Balkan War. Before the war this would have involved 216,000 rifles. Now it affects 250,000 rifles, but the response is always about 10 per cent. greater than the calculation. The deficiency in officers caused by the Balkan War has now been supplied by Bulgaria's two military schools. The military school for reserve officers at Sofia graduated a class of about 800 last year. This year a fourth class of 1,400 was enrolled, including a great many men who had interrupted their courses in European universities. The reserve officers are all men of completed university or secondary education. In June last this class held its rifle practice, and it is presumed that it will now be assigned to the various regiments. The Bulgarian Sandhurst also responded to the demand by admitting a class of nearly one thousand. The summoning of the Macedonians a week ago indicated a disposition on the part of the new Minister for War, General Jecoff, to tap the whole of the able-bodied men of the country.

"From what I know, the Bulgarian regimental stores in the past months have been amply replenished on the basis of providing for each of the forty regiments 6,000 complete equipments, so that the reservists now called to the colours will be better uniformed than during the Balkan War.

"The Krupp artillery taken from the Turks in 1912-13 was sufficient to turn all the non-quick-firing regiments into quick-firing regiments, but the non-quick-firing cannon have also been retained for service, implying a virtual increase of Bulgarian artillery of nearly one-third. The Army has worked very hard, and the spirit of the officers is splendid."

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, September 4.

The Locust Plague.

A fresh and serious invasion of locusts has taken place from Syria, where they have caused great havoc. Swarms have appeared in many parts of the island. In a group of villages in the Limassol district considerable damage has been done to olive-trees and gardens. The Government arranged to purchase them by the oke, four piastres having been paid, till, owing to the large quantities brought in, the price was reduced to three piastres (4d.), and subsequently to two. This visitation adds to the calamities of Cyprus and foreshadows trouble next year.

Officials and the War.

More officials have applied for permission to offer their services during the war, including Mr. Russell, King's Advocate; Mr. Thorn, President District Court, Larnaca; Mr. Fenn, Acting Treasurer; Mr. Francis, Government Analyst; and Mr. Moncrieff, Government Veterinary Surgeon.

The summer has been an oppressive and trying one. At Nicosia the heat has been excessive. On the coast, where damp adds its effects, the indoor temperature has reached 102 degs. F. at times. Convalescents continue to arrive from Egypt at intervals. Generous gifts of cigarettes and many other comforts have been forwarded to Troödos from all parts of the island.

Murder of a Zaptieh.

As an outcome of a quarrel between two Turks at the village of Louroutzina, in the Nicosia district, during which one drew a knife, a Turkish zaptieh, named Ibrahim, who arrived at the moment and was proceeding to apprehend the offender, was stabbed in the breast and mortally wounded.

Any newsagent or bookstall in the United Kingdom can supply copies of "The Near East," which are on sale early on Friday morning. Should any difficulty be experienced in obtaining the paper, the Manager would be glad to receive a post card giving particulars, and he will take steps to rectify the matter.

SCOTTISH WOMEN'S HOSPITALS IN SERBIA.

(From a Correspondent.)

The Scottish Women's Hospitals have been doing excellent work in Serbia. There are now three hospitals at work at Kragujevatz, Mladenovatz, Valievo, and, in addition, a military hospital of 200 beds is under their supervision at Lazaravatz.

The Scottish Women's Hospitals were organised by the Scottish Federation of the National Union of Women's Suffrage Societies, and, in addition to these hospitals in Serbia, they have two in France, at Royaumont and at Troyes.

The first Serbian unit left this country in December, being conveyed by Government transport to Salonika, where it landed early in January. It was immediately sent up to Kragujevatz, and given a hospital of 250 beds, although it had only gone out staffed and equipped for nursing 100 beds. Dr. Eleanor Soltau was in charge of the unit, and it is a remarkable fact that within forty-eight hours of their arrival the party were ready to receive patients. No praise is too great for the devotedness of the members of this first unit, who remained at their posts through all the dreadful typhus epidemic in the beginning of the year. The hospital was ever full to overflowing, and the work of nursing sick and wounded Serbs back to health continued ceaselessly night and day. As the typhus increased further reinforcements were sent out from home, to the number of twenty nurses; and further equipment to the value of over £1,000, and in particular large supplies of disinfectants, were forwarded. After a visit to Valievo, in the north, those in charge of the unit determined to open another typhus hospital at Kragujevatz. In the beginning of the war Valievo suffered terribly at the hands of the Austrians, who had swept over the frontier, laying waste all around them, and when they were driven back by the Serbians they left in Valievo alone 70,000 sick and wounded. Hospital accommodation was taxed to its uttermost, and every available building became a hospital. The Scottish Women's Hospitals Unit agreed to take typhus patients from Valievo, and the first batch arrived early one cold grey morning, having travelled the whole distance from Valievo to Kragujevatz in bullock wagons. It was a pitiful sight: some of the men were mere shadows of their former selves, and appearing to be in the last stages of exhaustion.

The Serbs are a wonderful people, having marvellous recuperative powers, and respond quickly to good doctoring and nursing. At first they looked upon their "Englesha Sestra" (nurse) with grave suspicion, but gradually they responded to the kindly treatment they received, and proved excellent patients.

About this time there were many cases of recurrent fever in the district, and the Scottish Women's Hospitals took charge of a recurrent fever block. In March five additional women doctors were sent from home by the Scottish Women's Hospitals at the request of the Serbian Government, and these doctors were stationed in the various blocks which were under the charge of the first unit. In addition to the very large supplies of equipment, the hospital possessed an X-ray apparatus, which was practically the only one in the district, and it proved of immense value.

In April Dr. Elsie Inglis, who had been the commissioner of the hospitals at home, left for Serbia to inspect the work, and it was decided that another complete unit, staffed and equipped to nurse 200 beds, should be despatched to Serbia. This unit was under the charge of Dr. Alice Hutchison, and in order to minimise infection as much as possible tents were taken out to house the staff and patients in.

This hospital, on its way out, was retained at Malta to nurse our own wounded Tommies from the Dardanelles, and on arriving in Serbia was sent straight to Valievo. This hospital is situated on the slope of a hill outside the town, and Sir Ralph Paget, who is in charge of British interests out there, says he has nothing but praise for the splendid organisation of this hospital. The sanitary arrangements have been carried out in the most up-to-date manner, and the whole hospital is organised on the most modern lines.

About this time it was decided to divide up the unit at Kragujevatz, and start another centre at Mladenovatz. This hospital at Mladenovatz likewise has the advantage of being housed under canvas, and there the sanitary arrangements have been carried out with great care. Also at Lazarevatz a hospital, which has been taken over from the military, has quite recently been opened. It was taken over at the request of Colonel Gentitch, who was very anxious that the Scottish Women's Hospitals should supervise it. All these hospitals are placed in the north-west district of Serbia, the area in which there has been the greatest amount of distress, and which, in the event of further hostilities, must again suffer severely.

Those who have returned home have nothing but praise for the Serbs. They are a brave, heroic people, and their endurance in the face of suffering is truly wonderful. The Serbs have shown great kindness to their Austrian prisoners, who are used in all the hospitals as orderlies, and from reports we learn that they make excellent orderlies.

Travelling is a great difficulty in Serbia. The roads, especially after the heavy rains, are always in very bad condition, and it has been found necessary to send out motor ambulances and touring cars for the use of the hospitals.

A great deal could be done amongst the women and children. Splendid work could be carried out by instructing the Serbs in the most up-to-date methods of sanitation. In many of the towns the old cesspools still exist, and this is always a danger to public health.

We owe to Serbia a great debt, which let us hope we will be able to repay; for during many centuries she has been the buffer State between the Turkish Empire and the rest of Europe. Had it not been for her heroic stand at the beginning of the war the powers of Austria and Turkey would undoubtedly have joined hands across the Balkans. She is sad in her songs, but in her songs only. Let us do all we can to safeguard the liberties of this heroic little State.

C. M. C.

Those desirous of helping the Scottish Women's Hospitals should send subscriptions to the Hon. Secretary, Dr. Elsie Inglis, 2, St. Andrew Square, Edinburgh, or to the Hon. Treasurer, Mrs. Laurie, Red House, Greenock.

SERBIAN FLAG DAY.

The Serbian Flag Day collection in aid of the funds of the Serbian Relief Committee was held in London on Wednesday, similar "days" having previously been set apart for the purpose in some of the larger provincial towns. The effort to raise money was well organised, and, supported by a host of willing helpers, was crowned with success. Londoners were glad to have an opportunity to show their appreciation of our gallant Ally's prowess; and wherever one went, in the City and in the West-end alike, the pretty little flags were very much in evidence. There were nearly eight thousand collectors, and about 3,000,000 flags were disposed of. Very rarely was the recipient of a flag content to give copper coin in exchange, and in one case at least a £5 note was paid for the emblem.

The majority of the London boroughs lent their aid to the movement. In some there were as many as seven depôts. There were three in the City of London, where a tremendous number of flags were disposed of. That at the London Chamber of Commerce was under the care of Lady Primrose; Lady Grogan was in charge of the centre at the Memorial Hall, Farringdon Street; while Mrs. Masterman superintended the activities at Bishopsgate Institute. A large number of flags were also sold in the City of Westminster, where there were five depôts. Lady Webb had a station in Oxford Street, and Lady Lethbridge had charge of a depôt at Brompton Road. Many flags were sold in the large drapery establishments, where assistants were specially told off to dispose of them, and many well-known actresses did good work during the day, and had the satisfaction of returning full boxes to the depôts. At the railway stations and Tube entrances the collectors were very busy, and at the close of the day, when the boxes were taken from the depôts to the banks, the view of the organiser and his assistants was that London's Serbian Flag Day had been a distinct success.

Leicester had its own Serbian Flag Day on the 11th inst., when £2,128 was collected in the streets—by far the largest sum that has been collected in Leicester for any object of the kind. Prominent amongst the workers and helpers here were the Mayor and Mayoress, Sister Scott (of Lady Paget's unit), and the Rev. J. D. Freeman.

Brighton's Serbian Flag Day was held on September 7, when upwards of £500 was raised. 150,000 flags were on sale, and 500 collecting-boxes were used.

THE POPE AND THE ARMENIANS.

At the request of the representatives of the Armenian Committee in London, Mr. T. P. O'Connor, M.P., addressed to Cardinal Bourne a request that the intervention of the Pope might be asked to protect the Armenians from further massacre. In reply to his letter Mr. O'Connor has received the following from Cardinal Bourne:—"September 14, 1915. Dear Mr. O'Connor,—Immediately on receipt of your letter of August 23 I communicated with the Cardinal Secretary of State. I have to-day received a letter from his Eminence assuring me that the Holy See has done, and is doing, all in its power on behalf of the unhappy Armenians who are subjects of the Ottoman Empire. The facts are evidently well known in Rome, and have awakened the keen sympathy of his Holiness.—Believe me, yours very sincerely, F. Card. Bourne, Archbishop of Westminster."

ARMENIAN REFUGEES IN CAUCASIA.

By Mirza Firooz Khan.

BAKU, July 30.

The Armenian refugees who fled from Turkey, escaping with practically nothing but their lives, were received in Caucasia by their kinsmen and brethren with all the sympathy, kindness, and love that they could expect—or more than they could have expected. Every individual Armenian, I believe, took part in receiving them and providing for their ease and comfort. Nor were all the refugees Armenians. About 60 per cent. were Armenians, 30 per cent. Greeks, and the remainder Nestorians, Jacobites, Maronites, etc. But the Armenians of Caucasia made no distinction between them; they welcomed all alike with open arms, with brotherly kindness, and hearty sympathy. How, indeed, could any distinction be made between them? They were all Christians, and all were fleeing from the sword of the common enemy, the Turk and the Kurd.

There were thousands upon thousands of these worn-out men, frightened women, and hungry children, emaciated, with blue lips, fingers and toes. It was winter, remember; and cold winter, too. The flight took place between the latter half of December and the first half of January, which are the two coldest months in Armenia. And these refugees had come all the way from Van to Erivan on foot, crossing many untrodden passes and snow-covered hills and mountains. Forty per cent. of them had caught cold, and were sick with pneumonia or typhoid, while 60 per cent. had both their toes and their fingers frozen, which later on were amputated by the doctors provided by the Armenian Committees.

When the stream of refugees began to flow in a "Committee of Brotherly Help" was at once formed in Etchmiazin under the presidency of his Holiness the Catholicos, the members being mostly archbishops, bishops, vartabeds, and the professors of Kevorkian Academy—a seminary in Etchmiatzin, founded by the Armenian Catholicos Kevork (George), and named after him. An "Armenian Central Committee of Tiflis" was formed. Another committee, also formed in Tiflis, and called "Help-giving Society," began to work for the homeless and penniless emigrants, and "The Armenian Benevolent Association of Kavkaz" (thirty years old) came in and joined hands and funds with the "Central Committee of Tiflis" for the same cause and the same purpose. A "National Bureau" was also formed in Tiflis, the funds of which were to be used to arm and clothe the "Armenian Volunteer Armies," which are now fighting gallantly side by side with the Russian regular troops in Persia, Turkey, and Armenia. Another society was formed in Cairo under the presidency of H.E. Nubar Pasha, which was to aid the other societies and look after the Armenian national interests and aspirations in general.

The societies of Etchmiatzin and Tiflis, which were called "Central Societies," had branches in nearly every town and village in Caucasia, and in some of the larger cities in Russia, and contributions both in money and kind began to flow in from all parts of the country and from all classes of the people. Contributions came, too, from Egypt, India, the United States, Canada, London, and Persia (east of Azerbaijan). These societies at once rented large and spacious houses for the reception and accommodation of the thousands of refugees, and the Armenian young ladies and school teachers volunteered their services to assist the committees in caring for the homeless unfortunates. They prepared beds for them, hot water for laundry purposes, and provided them with tea, bread, and soup. These ladies came from good, wealthy homes, where they had never had to work, but had been waited on by servants; but now they were glad to toil for their unfortunate sisters and brothers, and their work was literally a labour of love to them. I have met many of them, and they have told me of the real pleasure they found in their service; and I believe they spoke the simple truth.

The committees established good hospitals for the care of the sick and wounded—frost-bite and gangrene cases chiefly—and gave the direction of them to capable medical men. I have visited some of these emergency hospitals, and the doctor in charge of one of them, a great friend of mine, told me they lacked nothing but trained nurses. "We have," he said, "good beds, warm, thick blankets, plenty of drugs, though not all we need—there are none in Tiflis, and it takes a good deal of time to order them from Petrograd. We have a good cook and servants, and nearly all the instruments that I may need. To make up for the lack of nurses, I am training some myself. I have in my hospital a few ladies who come from wealthy homes and are students in the local gymnasia. They know practically nothing of hospital work and nursing, but they are willing to learn, and I am teaching them. They do not work for pay; they are simply anxious to help these unfortunate patients, and are glad to make themselves useful; and they have mastered a good deal of work already. They can take the temperatures, hardly ever having broken a thermometer, and can undress and redress any of the wounds. I perform four or five operations—amputations of gangrenous toes and fingers—daily, and these girls help me, and they do not seem to mind the sight of the blood and ugly wounds at all! I have thirty-five beds in my hospital, and receive about forty to fifty out-patients daily. These out-patients ought to have been in the hospital as well. They are as sick as any, and one-half of them need operations; but I have no more beds. These out-patients occupy most of my time. I have applied several times to the trustees of the hospital to increase the number of beds at least to sixty, and I hope soon to have that number. The out-patients do not seem to take care of themselves, and fall sick again and again."

My friend went on to say that there were in the "homes" scores of children suffering from measles and scarlet fever. The mortality was very high, 15 per cent. of the little patients dying for lack of good food and proper ventilation. "You see," he said, "it is a terribly cold winter, and these refugees, being mostly peasants, have no idea at all of the value of good fresh air. The lack of good nursing, too, accounts for the high rate of mortality to a large extent; for the mothers, though glad to have the doctor call, frequently neglect his instructions entirely. And, remember, I have nearly 1,800 refugees to look after myself alone!"

Fresh batches of refugees continued to arrive daily; and the earlier arrivals, as they recovered sufficiently, were sent out to the villages to make room for the newcomers, who were in the same plight as, or worse than, the earlier ones, suffering from typhoid, frozen fingers, gangrenous toes. Said my friend the doctor: "I have inquired how they got so frost-bitten, and they tell me that when they fled on the approach of the Turks they had to climb high, snow-covered mountains, and there hide until the pursuers disappeared. 'Sometimes,' they say, 'we had to remain amidst the snows for three or even as long as five days, hungry, shivering with cold, and unable to sleep. There on those snowy mountains we got our fingers and feet frozen; and when it was safe to come down and continue our flight we could not walk—our feet became the sores and wounds you see now. Most of the children and babies were frozen to death—and we left them there on the mountains unburied.' And the poor man or woman will break down, sobbing."

The refugees who were sent off when they were fit, to make room for fresh unfortunates, are distributed amongst the Armenian villages, according to the size and wealth of each village; and so many persons are assigned to the care of each family, according to its means and ability to care for them. The total number of these refugees is about 120,000, mostly women, children, and old men. The able-bodied and young men have been taken by the Turkish Government either as soldiers or as labourers, to work on the newly constructed railroads; or they have been arrested as a precaution against any "Armenian rebellion," and have been hanged or severely used; though some of them are being used as beasts of burden to transport the heavy baggage of the Turks, who, on the advance of the Russian forces, are moving to the interior of Asia Minor, carrying with them everything that can possibly be moved.

Up to the present it is estimated the Armenian villagers, patient and hospitable in an extraordinary degree, have spent, in cash and kind, some seven million roubles in entertaining their persecuted guests. There has been some grumbling amongst the poorer villagers, who complain that they cannot possibly support their own families and at the same time another family of six or eight persons indefinitely, and that if this thing continues long they themselves will soon have to go begging. But the grumbling has never been translated into action. The villagers have never actually refused to receive and entertain the refugees.

Besides this enormous outlay by the villagers, large sums—hundreds of thousands of roubles—have been spent by the various Armenian committees in maintaining their many hospitals, paying doctors, feeding and clothing the refugees in the larger cities, transporting them to various places, and—the most important work of all—in forming Armenian volunteer regiments, several thousands strong, and equipping them with uniforms, arms, and even small sums of money! Of these volunteers I hope to write more fully in another letter.

LIFE IN URMIA.

We are indebted to a correspondent for permission to publish the following portions of a letter written from Urmia by an American missionary. The letter tells its own tale of heroism, and is a wonderful record of suffering patiently borne and of tireless self-sacrifice for the helpless and homeless victims of the Huns' tools and mercenaries. Some idea of what the refugees owe to the American missionaries was given by the article published in THE NEAR EAST of September 3. This letter helps to fill in the picture. Unfortunately, the writer lost his own wife, who gave her life in the service of the suffering refugees.

URMIA, July 20.

We have had a terrible time here. The Kurds and Turks took possession of this city on January 2, and held it till May 20. The interval can only be described as a reign of terror. After the Turks got possession of the city, and the Kurds were in a measure put under control, there was no great danger to us missionaries, but the poor people all over this plain have suffered terribly in the destruction of property, the dishonouring of their women, and the loss of life. It is estimated that 90 per cent. of the property of the Syrians has been destroyed. Very many girls were carried into captivity and many more women ravished by the brutal Kurds.

We recovered many girls, even while the Turks were here, and others have been restored since the return of the Russians. These last, however, have had more difficulty in getting back to their people, as they had been longer with their Moslem masters or husbands. They have been thrown upon us, and we have now some thirty of them still on our hands. Their friends feel the disgrace of it, and some of the Syrians harbour a bitter spirit toward them because, through fear, they had denied their faith. This feeling is so bitter it is not safe for them to leave our yards. Only a few days ago some of them ventured out on the street (against strict orders) and when they were recognised a mob of Syrians gathered and chased them back into our compound. Only the timely appearance on the scene of one of our ladies prevented bodily injury being inflicted on them.

As to the loss of life, 4,000 died of disease on the mission premises, most of these right here in our city yards. Over a thousand were killed by the Kurds and Turks, and of those who fled perhaps a thousand died in exile. This will give some idea of what the Syrian people have suffered.

The bulk of the inhabitants gathered here in our mission premises, to the number of about 15,000, most of them (10,000 to 12,000) in our city yard; and we had to keep them over four and a-half months. It would be too long a story to tell of the difficulty we have had in feeding these people, nursing them, and caring for their sick; there were 2,000 cases at one time of typhoid and typhus. It was while engaged in this work of visiting and caring for the sick that Mrs. McDowell fell a victim to the disease. Of the 18 missionaries, counting the young Swiss lady teacher of the missionary children, Miss Perrochet, 13 of them have been laid up with typhoid or typhus, also two of the children. Miss Perrochet, Mrs. McDowell, and Mrs. Shedd died of the fever. Dr. Shedd and I are the only men who have escaped the disease. Mr. Muller was the last to recover, and he is just getting around.

Of our family at the seminary, there were taken down in rapid succession Mrs. McDowell, Miss Lewis, Miss Schoebel, the cook, the second maid, the man servant (Miss L. and Miss S—— had taken it at the college). Then, of those who came in to nurse Miss L. and Miss S., viz., Miss Bridges, of the American Orphanage, three or four teachers who volunteered their services, and, following them, several of the girl pupils. Two or three died. I was the only one of the house who escaped.

The hospital circle was equally hard hit. Mrs. Cochrane, the matron, and Miss Lamme and Miss Coan went down in quick succession. Dr. Packard nearly succumbed, his chief native physician died, and also the Syrian physician who took his place, besides three other physicians, the two druggists and several nurses. Finally, the hospital ran itself, the patients helping themselves to drugs!

Of our other troubles I need not speak. We have still 5,000 mountain people from the adjoining mountains and Gawar whom we have fed up to the present. Conditions are still unstable, and any day may precipitate a repetition of those experiences. The people are fearful. Added to these our mountain districts have been attacked. Kochanis and —— are in the hands of the Turks and Kurds; villages have been burned and many people killed. Mar Shimon and his people have taken refuge on a high mountain, whence they are sending out a pitiful cry for help. They are entirely surrounded by three armies of Turks and Kurds, who are bent on exterminating them. From Gawar to Van, across to the Persian border, there is not a single village left, and I fear very much that by the close of the war my entire field will be nothing but a waste of ashes.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Letters to Mediterranean Force. September 16.

Mr. O'SHEE asked the Under-Secretary for War whether letters and parcels sent to soldiers in the 10th Division of the Army with the Mediterranean Expeditionary Force from ten weeks to two months ago had not reached them at the end of August; what caused this very long delay, and whether these letters and parcels had yet reached their destination?

Mr. TENNANT: As regards the particular point raised in the question, the hon. member will recognise that it is quite impossible for me to say whether particular parcels or letters addressed to a particular unit have been received or not. As regards the general question, proposals are under consideration for giving an accelerated service, and no doubt my right hon. friend the Postmaster-General will make a statement as soon as the arrangements are settled.

Persian Unrest.

Replying to Sir J. D. REES, Sir E. GREY said: No information has been received as to an attack having been made on British and Russian Consular officers near Hamadan. His Majesty's Consul-General at Ispahan was shot at and slightly wounded on the 1st inst., one of the Indian orderlies of his escort being killed. The British Vice-Consul at Shiraz was seriously wounded on the 7th inst., and I regret to state that he has since succumbed. The present state of disorder in Persia is engaging the anxious attention of his Majesty's Government, who will omit no measures which can properly be taken to safeguard British life and property.

Persian Gulf Medal. September 21.

Colonel YATE asked the Secretary of State for India whether the medal rolls of the officers and men of the Royal Indian Marine who took part in the operations for the suppression of the arms traffic in the Persian Gulf during the years 1909 to 1914 had now been completed, with the view to the grant to them of the naval general service medal lately sanctioned by his Majesty in recognition of those services.

Mr. CHAMBERLAIN: The Government of India have not yet furnished the rolls of officers and men of the Royal Indian Marine whom they recommend for the medal. The question of eligibility will be determined by the Admiralty on consideration of the information contained in the rolls.

Inroads into Mekran.

Colonel YATE asked the Secretary of State for India if he could give any information as to the inroads into Mekran, in the Baluchistan province of India, by Persian raiders from Persian territory, which were said to have been driven out again by the Mekran Levy Corps; and whether steps would now be taken by the Government of India to increase the strength of the Mekran Levy Corps, with a view to a more adequate protection of the frontier and the due punishment of these Persian raiders.

Mr. CHAMBERLAIN: I think the incident to which my hon. and gallant friend refers is an inroad into British Baluchistan by a force of Persian Baluchis from the direction of Bampur at the end of June. The raiders were driven out with heavy loss by the Mekran Levy Corps. Since that date another raid has been threatened, but, as far as I am aware, it has not taken place. The strength of the Mekran Levy Corps was increased last year, and a further increase was sanctioned last month.

Grenades for the Dardanelles.

Lieutenant-Commander WEDGWOOD asked the Under-Secretary for War whether complaints had been received as to a shortage of hand-grenades or trench mortars in the Dardanelles; and whether the remedying of this shortage came under the War Office or the Ministry of Munitions.

Mr. TENNANT said demands had been received from the General Officer Commanding-in-Chief, Mediterranean Force, from time to time for grenades and trench mortars. For some weeks the supply of grenades had exceeded the demand, but the supply of trench mortars had not reached the number required. More would be sent as soon as they and the requisite ammunition for them were delivered. All these stores were supplied by the Ministry of Munitions on the requisition of the War Office.

Post to Dardanelles. September 22.

Mr. H. SAMUEL, replying to Mr. A. SYKES, said: It is not clear to what extent deficiencies in the postal service to the Dardanelles are due to causes within the control of the Post Office and to what extent they arise from the difficulties with which the naval and military authorities are confronted in transporting the mails from the bases to the front. I am taking steps to review the whole of the existing arrangements, and will make a statement as soon as I am in a position to do so. In answer to a supplementary question, Mr. SAMUEL said he was told that there had been cases of theft from the mails. The inquiry would cover that matter also.

TANGIER TO TEHERAN.

Out of the medley of conflicting rumours which come to us from Turkey from time to time, one alone seems to be assuming the definite form of fact. Turkey, of all our enemies in this titanic struggle, appears to be suffering most heavily in so far at least as her non-combatants are concerned: the women and children behind the lines and those of her manhood who, standing at the extremes of life, are immune from the call of war. Gradually we are finding a certain consistency in the dispatches which reach Fleet Street from the various correspondents afield; they all point to the peril of Constantinople, which alone among the capitals is languishing under the dreadful strain of siege warfare. At any rate, that is the picture drawn for our comfort by the correspondents aforesaid. As I have hinted before, I am inclined to think it is too rosy (from our point of view). But we shall see. Meanwhile the knot of Balkan affairs remains tied, and a period, we are told, has been put to the possibility of further Turkish resistance. From whatever point we regard it, we are passing through one of the most dramatic phases of the war. And almost equally is it one of the most pathetic. As an admirer of the Turk—the true Turk, not the Germanised variety—I feel a certain amount of sympathy for him as he struggles bravely to save the ashes of the Empire that he was deluded into laying upon the altar of German ambition; as an admirer of Greece with her deathless tradition I find it hard not to pity her in her inaction in the face of wonderful opportunity. I do not meddle in politics, and I am no prophet, yet it seems to me that already the supreme moment of centuries is passing from the fair land of Greece into the limbo of lost opportunities, just as with Turkey it passed with the first shot of war. And: "Of all sad words of tongue or pen, The saddest are these: 'It might have been.'"

***

I had already written the above paragraph when I came across a quotation from an article by Dr. Rohrbach, which has reached England through the medium of the Press Association. For the benefit of the uninitiated I may explain that the learned doctor is a German humourist of the most approved type, who is good enough to make public all that is to happen concerning Constantinople, Egypt, and England. His opinions differ from mine and they are penned in a spirit of great and abiding confidence in the ultimate *straffing* of England, and at the hands of the Turks, too. So much is to be done when the German armies have linked hands with Turkey through Serbia, when the English are driven from the banks of the Nile—in fact, when the German millenium of Dr. Rohrbach's imagination arrives, that it seems all my sympathy in the former paragraph was futile. Still, rather than waste a paragraph already in type I'll leave it as it stands, leaving Time to judge between us.

***

The Egyptian scribe is at times a picturesque writer, with a natural kink for rhetoric. He can also sum up a political situation with innate acumen. Thus, for instance, the following graphic picture of the precarious tight-rope instability of some of the Balkan States is worthy of a more lasting monument than the leading column of a daily Egyptian paper:—

"It is, perhaps, premature to talk of any of the Balkan States taking sides as yet (says the writer); they are all sitting on the fence, a pastime at which they have all become very proficient of late. Which one loses its balance first, and then whether it falls into the pebbly bottom of the Germanic whirlpool or into the down-lined armchair of the Quadruple Entente remains to be seen."

***

Like the rest of us, the archæologists must find it hard indeed to see any good in the War, which has been responsible for the destruction of many precious relics of the past. But occasionally we hear of its leading to interesting discoveries which might never have been made but for its coming. Such, for instance, was that of the discovery of some fine early Greek pottery in the Dardanelles, which filled the heart of at least one French soldier—perhaps he was a bit of an archæologist himself in the piping times of peace—with delight; and such is the find, reported this week of gold and silver coins of the Seventeenth Century, which were unearthed in the forest of Champenaux, near Nancy, by some soldiers who were digging a trench. The treasure was apparently buried during the reign of Louis XIII., and it appears to have been of considerable value. These things lead us to wonder whether amongst our troops in Lower Mesopotamia there happen to be any ardent Assyriologists. If so, they are to be envied; for in their spare moments—if they have any!—they should enjoy unrivalled opportunities of securing really choice *antikas*. Close to the Shatt-el-Hai, which runs from Kut-el-Amara to Nasriyeh, there are such promising hunting grounds as Tello, where De Sarzec dug, Yokha, where, I believe, the Germans have carried on excavations, Surghul, and many another likely mound. And further north there are Sinkereh, Warka, Tel Ede, Fara, Abu Hatab, and Niffer, to say nothing of Hillah itself, the finest site, I suppose, in all Babylonia.

***

Far be it from me to suggest that our soldiers should go in for indiscriminate plunder of any of these venerable mounds. But—well, in a flat country such mounds are almost bound to be made use of by the opposing forces and—things will happen! A crater caused by the bursting of a shell might provide some souvenirs of an unique kind, and it would surely be a good deed to remove any interesting relic that was threatened with destruction to a place of safety—the B.M. for preference. Moreover, in digging trenches it would do no harm to "make a job of it." If only I could be given charge of such operations at Niffer, for example, I think I should not be tempted to spare the spade work to the north and north-east of the great Ziggurat, which the Americans had not time to explore. For does not tradition record that somewhere thereabouts there was a "golden boat" which should be worth finding?

***

I do not like locusts; in fact, I dislike them almost as much as I dislike scorpions, snakes, and those weird beetles that the people of Busreh call "flying scorpions." I have never suffered any personal injury from them, as I have from other insect pests of the East; but I have seen enough of them and of the harm wrought by them to make me loathe them heartily. And a friend who knows my feeling has been at the pains to send me a cutting from the *Egyptian Gazette* of August 19, which has increased my dislike of the destructive creatures. The cutting referred to contains a description of the harm done by locusts in Palestine this year, and of the fight put up against them by the unhappy agriculturists. Unfortunately, that fight was waged in vain in many parts: the Hauran wheat fields were ravaged completely, according to the account, and elsewhere, though "women, men, and children fought day and night for many weeks on end," they became finally "too weary and tired to drive off the last invasion which broke into their plantations and ravaged everything. All the orange, almond, and olive groves were destroyed, most of the other fruit trees and vineyards, too. . . ."

***

It is a pitiable picture, especially to anyone who has ever seen for himself what an invading horde of locusts can do. The writer (who is a resident of Haifa) reports that in two cases the creatures actually killed and partially devoured infants. And this horrible fact lends point to the comparison he institutes between the insects and those other baby-killers the Huns. "It is only after seeing the locust at work," he writes, "that one can have a clear and vivid conception of the German 'organisation.' Just the same discipline and order, just the same blind desire to fill the belly at the cost of whatever expense and suffering to others."

***

Painful though the subject certainly is, it is not without a touch of humour—supplied, we need not be surprised to learn, by the Ottoman officials. These gentry were at pains to persuade the Arabs that the locusts had been let loose on the land by French and British warships, which had brought cargoes of them from Egypt for the purpose. After that, the Germans' employment of bees against our troops in East Africa seems quite humane, not to say lacking in imagination, does it not? Another humorous feature of the situation was the storing of the locust eggs gathered by the inhabitants, by order of the Government, and the typically Turkish failures to sterilize them. When in due course the young locusts hatched out, the soldiers who had been stationed on guard over the eggs, to see that nobody stole them—or that no landing parties from the Allies' warships came to their rescue, one supposes!—were quite at a loss how to deal with the young insects, which, being Government property, were commonly left to wander off at their own sweet will. Truly Turkey is still quite Turkish in parts.

CORSAIR.

CENSORSHIP EVASION AT BUSREH.

The Military Governor of Busreh recently issued the following proclamation:—The authorities have reason to know that a practice has been started whereby passengers proceeding by vessels from ports in the occupied territories to India and other countries carry letters for persons who wish to evade the censorship. Such letters are usually carried concealed in the baggage or on the person of the passenger. In some cases as many as 30 letters have been found on one individual. It is to be distinctly understood that the sending or carrying of letters or papers to or from the occupied territories other than through the recognised postal channel is prohibited by the Military Government and that offenders will be severely dealt with. All necessary steps will be taken to stop this practice, and passengers and their baggage will be liable to search on the journey.

NEAR EAST BOOKSHELF.

RELIGION AND NATIONALITY IN SERBIA*

Father Velimirovic—one of the foremost present-day writers of Serbia, who has the merit of having modernised the Christian preaching of his country, imparting to it not only deep faith but also philosophical reasoning and literary touches—has paid with an excellent pamphlet, under review, his tribute to the cause of welding the Jugoslav people into one political State. As a monk, he looks on the question from the clerical point of view. "The future Jugoslav State will contain about fifty dioceses, half of them Catholic, and the other Orthodox," he says. Is this, however, the reason for fearing in the future State an eventual dissension among the believers of these two Churches? Categorically, Father Velimirovic answers: "No." The Jugoslav clergy, both Orthodox and Catholic, has shown, through centuries of struggle and bondage, the greatest mutual tolerance and a perfect identity of their aspirations. Many examples quoted by Velimirovic renders his thesis obvious and bring him to the following conclusion:—"The people," he says, in the solemn, rhetorical style of ancient preachers, "who were united in bondage will certainly not be divided in freedom, otherwise freedom would not be better than bondage, but worse. The people who learnt the lesson of love in bondage will surely continue to love in freedom, otherwise freedom would be a worse temptation. The people who learnt tolerance in bondage will not forget to be tolerant in freedom."

A token of the prevailing religious tolerance among Jugoslavs is given by Father Velimirovic when he, an Orthodox monk, dedicates his pamphlet to the memory of a great Catholic bishop, the Jugoslav patriot Strossmayer.

WHY AND WHITHER ?†

The problem of Fate and Free-will is one which will probably continue to agitate the minds of thinkers until the end of time. Many people pass the better part of their lives in the unquestioning acceptance of life as it appears to them, without taking thought of the guiding motives of existence to others. To the author of the book under review the struggle for knowledge begins early in life, and peace is only to be found when the mind has definitely accepted a permanent and unassailable theory. In his English dedication he writes:—

"I remember as a boy being taken to task by my father for failing to do something which he thought I could certainly have done if I had brought to it a little more of will and exertion, and which I even then half-consciously felt I could never have done even had I willed and exerted my utmost. The incident was insignificant enough, and that half-conscious feeling I experienced was only momentary, but insignificant and momentary as the incident and feeling may have been, in them was laid the germ of this book."

In other words, the child's mind was for the moment face to face with the problem to which, grown to manhood, he has subsequently devoted so much thought and interest. Was energy or will power combined sufficient to carry one over the hills of life or was there something that was mightier than both, a nameless obstacle that no will power in the world might remove? Mr. Wadia, half-consciously interested at that time, has devoted much time and study to the question in later days, and the interesting little volume before us is the result of his inquiries.

The first portion of his book is mainly confined to a statement of authoritative opinion—that is to say, they contain the conclusions arrived at of leading thinkers of the past. To a great extent these opinions have been reproduced in the author's own words, and where actual quotations have been made they have been unavoidable. Of the fifth, the last chapter is devoted to an expression of the author's personal opinions, but this is a very long chapter. It might well, indeed, have been sub-divided. Arrived at the definite belief in a fixed and determinate future, the author proceeds to expound his reasons for this belief. We must leave to the reader an examination of his arguments, as a quotation here and there would be valueless. Such a belief is not arrived at by one argument or a dozen; it is the blending together of innumerable evidences that convinces the soul. On the other hand, one of the author's replies to readers who inquire the reason for his belief carries one far on the road towards understanding. "Has he," asks the author, "never seen the stars?" Such, we take it, would be the reply of any dweller in the wide lone spaces of the world where a profound, if only half realised, belief in Fate grips the hearts of the people.

Mr. Wadia has written an interesting book, and he has written it in a style that robs a seemingly heavy subject of its weight.

* "Religion and Nationality in Serbia." By Father Nicholas Velimirovic. With prefatory note by R. W. Seton-Watson, D.Litt. (London: Nisbett and Co., Ltd. 3d.)

JOHN LANE: THE BODLEY HEAD, W

NEAR EAST BOOK NOTES.

"The History of Tyre," written by Professor Wallace Fleming, and published by Milford, is a new volume in the Oriental Studies series of Colombia University. It gives the history of the city from its earliest days up to the present times.

"Sumerian Business and Administrative Documents from the Earliest Times to the Dynasty of Agade" is the title of a volume recently issued by the University of Pennsylvania. It is from the pen of Mr. George Barton, and contains numerous plates.

A new publication of the British Museum is Part III. (Sections VIII. and IX.) of the Catalogue of the Hebrew and Samaritan Manuscripts in the Museum. It deals with miscellaneous manuscripts and charters, and is edited by the Rev. G. Margoliouth.

The new edition of Sir William Muir's "The Caliphate, its Rise, Decline, and Fall," which, as announced in these columns last week, has been published by Mr. J. Grant, Edinburgh, follows the system of transliteration adopted by the Royal Asiatic Society.

The Anglo-Hellenic League has published pamphlet No. 22 of its series of informative articles. It is devoted to an analysis of the "Greeks in Asia Minor," and gives some valuable particulars concerning this vexed question. Disagreements, economic and other, between Moslems and Greeks are duly emphasised.

The Faith Press announces for publication to-morrow "Hellenism in England: A Short History of the Greek People in this Country, from the Earliest to the Present Day." The book which is published at 2s. 6d. net, is written by Theodore E. Dowling, D.D., sometime Archdeacon in Syria, and Edwin W. Fletcher, F.S.A.Scot., Honorary Secretary of the St. Paul's Ecclesiological Society, and H.E. the Greek Minister, M. Gennadius, contributes an Introduction. There are seventeen illustrations.

BOOK RECEIVED.

Geographical Aspects of Balkan Problems. By Marion I. Newbiggin. With a coloured map of South-Eastern Europe and sketch maps. (Constable, London. 7s. 6d. net.)

MANCHESTER ARMENIANS' APPEAL.

On Monday a deputation of Armenians residing in Manchester waited on the Lord Mayor of that city in order to enlist his help for their countrymen in Turkey. Murder and outrage were, they said, the lot of multitudes of their people in the Turkish dominions. Great numbers of Armenians have had to fly for refuge into Russian territory. In these circumstances the Armenians in Manchester wished to appeal to the Manchester public to help them in devising means for the relief of their fellow-countrymen. "We are fighting for the Allies," one of the speakers said, "and that is the only reason why our people are being murdered and outraged by the Turks."

The Lord Mayor said he would do what he could to bring the appeal of the deputation before the Manchester public. The position was fraught with difficulty, but whatever he could do to alleviate the situation of the unfortunate Armenians would be gladly done.

THE PUBLISHER

would be obliged if Readers would inform him if they experience any difficulty in obtaining copies of the paper.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian (New Style).	Julian (Old Style).	—	Moslem.	Jewish.
1915. Sept.	1915. Sept.		1333. Julkada.	5676. Tisri.
24	11	Friday	15	16
25	12	Saturday.....	16	17
26	13	Sunday	17	18
27	14	Monday	18	19
28	15	Tuesday	19	20
29	16	Wednesday	20	21
30	17	Thursday	21	22

Sunday is the birthday of the King of Denmark.

Prince Paul of Serbia has left London for Berwick.

Lady Lang has returned to town for the winter months.

H.H. Prince Said Halim is leaving England shortly on a tour.

Our Bucharest Correspondent reports that H. M. Queen Marie has not, as previously stated, taken up regular residence at Sinaia this year, but has only been there occasionally, for a day or two at a time. Her Majesty has, apart from visiting Constantza for some few days, been making excursions to parts of Roumania little known to her, and recently returned from a journey which she made accompanied by her daughters and M. B. Mortzun, Minister of the Interior, in the Valley of the Bistritza, where she visited several ancient monasteries. The journey down part of the Bistritza valley was performed by the royal party on one of the immense timber rafts.

Sir Mark Sykes, M.P., left Viceregal Lodge, Simla, on August 23.

The Venerable Archdeacon Ward and Mrs. Ward left Alexandria on the 9th inst., and proceeded to Port Said to embark on the P. and O. liner Persia for home.

On the previous Saturday some of the ladies of St Mark's congregation assembled to bid good-bye to Mrs. Ward, to offer her their best wishes for the future, and to present her with an Egyptian necklace, which had been subscribed for by her many friends. The necklace, which is a copy of the "Uselch" painted on the mummy cases of ladies of rank in Ancient Egypt, was presented by Mrs. Critchley on behalf of the subscribers; and Miss Dodd, who had acted as secretary, also spoke of the pleasure of the donors in making the gift and of their warm appreciation of Mrs. Ward's work in the church and of her kindness to its members.

The Right Rev. H. McC. E. Price, Bishop in Fuh-Kien, South China, who, as recorded in these columns last week, is visiting Egypt for the purpose of performing the ceremony of confirmation in that country, has now undertaken the duties of a Chaplain to the Forces in the Dardanelles for a year.

The Rev. L. G. P. and Mrs. Fry have returned to Alexandria from England, and are at present staying at 7, Rue Adib, in the flat formerly occupied by Archdeacon Ward.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from

Miss Thomson, The Hall, Bexhill on-Sea.

Lieutenant H. E. Poynter, A.S.C., has been transferred to No. 2 Base Supply Depot, Portishead, Somerset, where he has been joined by Mrs. Poynter.

Mr. C. E. Heathcote-Smith is now serving as H.B.M. Vice-Consul at Mytilene.

We are informed that Lieutenant H. A. D. Hoyland has been appointed H.B.M. Acting Vice-Consul for Thasos.

Lieutenant Summers, R.N.V.R., who left Constantinople on the outbreak of war, is now serving in the Eastern Mediterranean Squadron.

Our Special Correspondent in Athens writes (September 13):—

Mr. Charles Ferguson, of the Imperial Ottoman Bank, who arrived in Constantinople some time ago from Urfa, to which place he had been exiled from Aleppo, has now been sent to Tchorum, on the grounds that his coming to Constantinople had been a mistake.

The marriage took place on Wednesday of last week, at the Chapel Royal, Savoy, between Nadine, younger daughter of the late Sir Reginald Beauchamp, Bart., of Longley Park, Norwich, granddaughter of the fifth Earl of Roden, and George Bettesworth Piggott, formerly a Judge of his Majesty's Supreme Court for the Ottoman Dominions, son of Mr. Fraser Piggott, of Fitz Hall, near Midhurst. The bride was given away by her brother-in-law, Major Barker-Hahlo. Lady Dorothy Walpole was to have attended as bridesmaid, but was prevented at the last moment through the death of a near relative. Major Bradshaw, Queen's Bays, acted as best man. On account of the bride's uncle, Colonel Sir Horace Beauchamp, Bart, C.B., being reported missing at the Dardanelles, the wedding was very quiet.

The Rev. H. C. Robins, chaplain, Khartoum, was married to Miss Dorothy Lloyd, daughter of the late S. Zachary Lloyd, of Areley Hall, Stourport, Worcestershire, at St. Bartholomew's Church, Areley Kings, on September 16. The marriage was performed by the Rev. Canon B. K. Cunningham, Warden of the Bishop's Hostel, Farnham, assisted by the Rev. D. Vaudrey, rector of the parish. The bride wore a dress of white charmeuse veiled with old family lace, and was attended by three of her little nieces, and one of the bridegroom's, as bridesmaids, and was given away by her eldest brother, Mr. F. Z. Lloyd. The best man was the Rev. E. S. G. Wickham, of Aldershot. After the service a reception was held at Areley Hall by Mr. and Mrs. F. Z. Lloyd, and the bride and bridegroom left for Little Stretton, where the honeymoon is being spent. They will sail for Egypt towards the end of October, as, at the request of Bishop Gwynne, who is still at the front as Deputy Chaplain General, Mr. Robins will continue his chaplaincy work at Khartoum for another twelve months.

Our Bucharest Correspondent, writing under date of September 1, says:—

M. Marinkovitch, the Serbian Minister, accompanied by Mme. Marinkovitch, has left on a few days' leave, and M. Rakitch will be in charge during his absence.

Colonel Langlois, the French Military Attaché at Petrograd, has arrived at Bucharest.

M. Mihaly, leader of the National Roumanian party in Transylvania, has arrived at Bucharest, and has been received by Dr. Aughelesco, Minister of Public Works.

M. Titus Maioresco, the late Prime Minister, who has been abroad for some weeks, is expected back shortly in Roumania.

Dr. V. H. Rutherford has recently returned from a tour of inspection of the Wounded Allies' Relief Committee's hospitals in Serbia and Montenegro. He says that to make the W.A.R.C. hospital the very best in Kragujevatz, if not in the whole of Serbia, an X-ray apparatus is required. The Committee appeals to the public for donations towards the cost of the apparatus and of the radiographer. Contributions should be sent to the hon. treasurer, Mr. T. O. Roberts, manager, London County and Westminster Bank, 217, Strand.

Captain John Sweetland Dallas, who died of wounds in the hospital at Alexandria on September 12, was the only son of Mr. William Liscombe Dallas, of Simla, India, I.C.S., retired, and was born at Simla in 1885. Educated at Blundell's, Tiverton, he proceeded thence to Sandhurst with a view to joining the Indian Army, though his original intention and wish had been to enter the Royal Engineers. He was appointed second lieutenant (unattached) in January, 1905, and joined the Indian Army in March, 1906, becoming a lieutenant in the 6th Gurkhas. On the outbreak of the present war he accompanied his regiment to Egypt, where he first saw active service in the defence of the Suez Canal; but was chiefly occupied in the duties of musketry instructor to some of the colonial troops in Egypt. Early in the year he went with his regiment to the Dardanelles, and very shortly afterwards was severely wounded and was sent to hospital in Alexandria. He made a rapid and complete recovery and on June 28 was passed as again fit for duty. He returned at once to the front and very shortly afterwards was dangerously wounded in the head. He was sent back to Alexandria, where it was found that one eye was destroyed and the brain seriously injured. For a short time hopes were entertained of his recovery, but almost without regaining consciousness he died of his wounds.

A Dardanelles Day is being organised by the Edridge Habitation of the Primrose League for November 6. Lady Ian Hamilton, who is attending at Thornton Heath Baths Hall to receive the comforts, has written: "Our men will need constant supplies of warm things and cigarettes for the winter, and I shall be glad to have plenty to send to Gallipoli."

A cablegram reached the Church Missionary House from Persia on September 11, conveying the information that all the mission staff had withdrawn from Ispahan to Ahwaz. It is gathered from the message that the workers and the work at Yezd and Kerman are, for the time being, safe, at least.

The death has occurred, at his residence, Stoke Knoll, Bishopstoke, of Major-General H. G. Robinson, late Bombay Staff Corps, who went through the Crimean War, and acted for some time as Deputy Assistant Quartermaster-General of the Cavalry Turkish Contingent, for which he received the fourth class of the Order of the Medjidieh and the Turkish Medal.

". . . You remember Captain Parker, of Jerusalem fame. I came across his grave in —— wood, surrounded on every side by the extreme ravages of war. Even the little cross exhibited bullet holes, and the trees round about were leafless, standing torn and bruised, broken and disfigured, through the fierce shell fire. Yet, in spite of the utter desolation of the scene, the spot somehow suggested peace. Captain Parker was serving with the 8th Rifle Brigade. . . ."

This mention of Captain the Hon. M. Parker (which is extracted from a private letter received by a correspondent) will recall to readers of THE NEAR EAST a side of his connection with Jerusalem. The manner in which the famous and mysterious "excavations" in Siloam came to an abrupt end was at the time the subject of much keen and acrimonious discussion, in which the whole matter blazed up and was forgotten. But not so soon was Captain Parker forgotten by the natives in his employ. He had to the full the Englishman's rare knack of ruling the Eastern with understanding, and none of those who worked under him as interpreters, clerks, or for the rough labour, ever spoke of him save with liking and affection. During a period when unusually heavy snowstorms had made it necessary to close the work Captain Parker relieved the distress of the Siloam villagers, himself riding out to see that their wives and families were cared for, and even administering a little simple medical help when necessary. His native clerks, one and all, spoke of his unvarying patience in teaching and superintending their work; their regret when he left was genuine. Captain Parker was a familiar figure to the congregation at St. George's Cathedral, and was generally to be seen at the choral evensong on Sunday afternoons.

OBITUARY.

THE REV. ALEXANDER VAN MILLINGEN, D.D.

The following appreciation of the late Prof. van Millingen reached us last week, too late for publication. It will, however, be read with interest by many friends and admirers of the Professor:—

A large number of friends, who are now in England, will hear with regret of the death of Dr. Alexander van Millingen. He was professor of history at Robert College, and the writer of this notice was informed by the deceased only three or four weeks ago that he had insisted upon resigning his post because of failing health. His services there were greatly valued both by the late Dr. Washburn and by Dr. Gates, both of whom had urged him to continue to hold the office, though unable to lecture. He was the son of Dr. Julius van Millingen, who attended Lord Byron on his death-bed. He was twice married, his first wife being an American lady. The day before his death, the 14th inst., was the twentieth anniversary of his marriage to Miss Hope Mackenzie, granddaughter of Mr. Mackenzie, the author of "The Man of Feeling," and a friend of Sir Walter Scott.

During the last quarter of a century, Dr. van Millingen was largely occupied with the archæology of Constantinople, and his two contributions to the literature on the subject will continue to be standard works as long as people take interest in the history of that city. The first is a description of the walls of the city, and the second of the Christian churches within it and of the remains of them which still exist. Both are works of genuine and careful research, which will always be valuable to students. The high appreciation in which he was held by the faculty of Robert College was always gratifying to the British community in Constantinople, because, though he had been in America, and was associated with Americans in his life's work, he always remained a Briton in spirit and sentiment. His elder son, Charles, has already received a commission in H.M.'s Army. The doctor's family was of Dutch origin, and came to England with William III. His loss to the British community in the Near East has come at a particularly trying time. Everyone will sympathize with the members of his family, and especially with his widow, who has long been endeared to all sections of British and American residents in Constantinople.

E. P.

SERGEANT JOHN EDMUND ROBINSON.

A correspondent writes:—

The news of Mr. J. E. Robinson's death at Gallipoli on August 21 (as reported in the *Daily Telegraph* of September 7) will come as a shock to those who knew him at Jerusalem. He was a Yorkshireman, and was for three or four years Science Master at the C.M.S. College at Jerusalem. Mr. Robinson had gifts above the average. He was extremely clever in his own work, and his pupils liked him well and enjoyed his vivacious lessons; but it is his music that will be long remembered by all who had the delight of listening to him. He had a tenor voice of unusual purity and feeling, and was also a good violinist. He was full of music to his finger tips, and had the impressionable and sensitive temperament that goes with that talent, but nothing was able to chill his interest in things, nor his real kindness of heart. Mr. Robinson enlisted at the beginning of the war in the (Duke of Wellington's) West Riding of Yorkshire Regiment. He threw himself heart and soul into his new life, and one of his officers spoke of him to a friend as "one of our most promising men." His promotion was quick, for he was a sergeant at the time of his death. He was twenty-five years of age. Mr. Robinson always gave one the impression of being so brimful of life, so eager, friendly, and impulsive, that it is hard to reconcile the memory of him with the news that has just come. It is safe to say that the tidings of his death will awake in his Jerusalem friends many kind and friendly memories, and not one that is otherwise.

MR. DAVID REES.

We greatly regret to have to report the death of Mr. David Rees, Chief Agent of Reuter's Telegraph Company in Egypt and the Sudan. The immediate cause of death was pneumonia, but Mr. Rees had been in indifferent health for about twelve months, having been seized with a heart attack in September of last year. He had only recently returned to Cairo from Alexandria, where he had taken a month's holiday, when he was attacked by the illness to which he succumbed.

Mr. Rees will be greatly missed in Cairo, where he had resided for over thirty years, having gone to Egypt in 1884, to take up the appointment that he still held at his death. He was born in 1845, and was educated at Clifton and Cambridge. His wife was a daughter of M. Leysen, a distinguished Belgian engineer, and the deepest sympathy will be felt for her and for his son and two daughters in their bereavement. Mr. Rees was a keen fisherman, and had been accustomed to spend a considerable portion of his annual leave among the streams of the Austrian Alps, but this year he did not leave Egypt at all, owing to the war. Mr. Rees' long residence in Egypt, combined with the fact that he was personally acquainted with all the leading figures of its cosmopolitan society, made him an exceedingly interesting man to meet, and with him Cairo has lost one of the few members of the British community who knew Egypt in the days of the old *régime*, before its regeneration.

Sir Reginald Wingate was one of the first to send a telegram of condolence upon hearing of Mr. Rees' death, and expressions of sympathy have reached the family from all parts of the world. The funeral took place at the old English Cemetery, Cairo, and was attended by his wife and two daughters (the elder of whom married Mr. MacLoughlin some time ago) as chief mourners. Sir Reginald Wingate was represented by Miralai Pearson Bey, and the High Commissioner by Mr. Alban. Among others present were Mme. Carton de Wiart, Miss James, Harvey Pasha, Sir John Rogers, Major Spong, Major Liddel, Dr. Murison, Dr. Keatinge, Maitre Merzbach, Messrs. Peckitt, Campbell, Grainger-Stewart, G. C. and W. B. Delany, and Aspinall.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

MARRIAGES.

CLAUDIUS—RICKARD.—On September 22, at Christ Church, Westminster, by the Right Rev. Rennie McInnes, Bishop in Jerusalem, assisted by the Rev. F. K. Aglionby, Salid Claudius, Inspector-General of the Post Office in Egypt, to Marcia Rickard. Mr. and Mrs. Claudius will be proceeding to Holy Rood, Bulkeley, Alexandria, towards the end of October.

ROBINS—LLOYD.—On September 16, at S. Bartholomew's Church, Areley Kings, by the Rev. Canon B. K. Cunningham, assisted by the Rev. D. Vaudrey, rector of the parish, the Rev. Henry Charles Robins, Chaplain, Khartoum, to Dorothy, daughter of the late S. Zachary Lloyd, of Areley Hall, Stourport.

DEATH.

PAPANTONOPOULOS.—On September 21, at 35, Chepstow Place, W., Soterios Papantonopoulos, in his 83rd year. Funeral service at St. Sofia's Church, Bayswater, on Saturday, at 10.15.

TO OFFICERS leaving for War Zone Special Terms. ANY LANGUAGE under the sun TAUGHT, TRANSLATED, TYPEWRITTEN and DUPLICATED on machines in shortest periods.—Apply or write, The British Egyptian Syndicate, 90, Bishopsgate, E.C. Wire, "ABDELMALEK, London." 'Phone, 2947 London Wall.

EGYPT and the SOUDAN.—AGENCIES WANTED, by a gentleman of many years' residence in Egypt, and now on a visit to this country, for articles of general demand. Reasonable terms would be accepted.—Address Z.J., care of THE NEAR EAST Devonshire Square, London.

CAPTAIN ARTHUR CHARLES DAVIES, 6th BATTALION ROYAL WELSH FUSILIERS, Reported WOUNDED and MISSING on August 10 at the DARDANELLES.—Any INFORMATION will be gratefully received by his Wife, Mrs. Arthur Davies, Treffos, Menai Bridge, Anglesey.

WHERE TO STAY.

FRIDAY, SEPTEMBER 24, 1915.

POLITICAL PARTIES IN BULGARIA.

Recent indications of distinctly Germanophil tendencies in the Bulgarian Government have led to widespread agitation amongst the people, and as this agitation has taken in the first place the form of a demand on the part of the Opposition leaders for the immediate convocation of the Sobranje, it may be interesting to consider the condition of parliamentary parties in that assembly. The Sobranje consists of 244 members, of whom 128 have been until recently classed as supporters of the Government and 116 as belonging to the Opposition. But neither the Government majority nor the Opposition minority has ever been at all homogeneous. The Government majority has been made up of Liberals, under the immediate leadership of the Prime Minister, M. Radoslavoff, of National-Liberals, or Stambolovists, whose leader was M. Gennadieff, and of Young Liberals who followed M. Tontcheff, the Minister of Finance, reputed to be the most devoted adherent of Germany. These three groups, however, would not have commanded an absolute majority in the Sobranje had they not been able to rely on the votes of the Mohammedan members, who to the number of 16 represent Turkish constituencies in the newly acquired territory in Thrace as well as in the old Turkish districts of Northern Bulgaria.

Of the Opposition groups the most important numerically, and perhaps the most influential in the country, are the Agrarians, or Agriculturists, numbering 50, who represent almost exclusively the peasant electorates which are the backbone of the country. The Democrats only muster 20; but their leader, M. Malinoff, has been Prime Minister in his day, and his party includes such prominent men as M. Takeff and M. Laptcheeff, who have played important parts in Bulgarian public life. Another group which certainly exercises an influence in the country quite out of proportion to its parliamentary representation is the Nationalist party, which has only nine members, but is led by the former Prime Minister, M. Ivan Gueshoff, than whom no Bulgarian politician enjoys greater respect both as a veteran statesman and as a man of unblemished reputation. M. Daneff has only two followers, who call themselves Liberal-Progressists, and there is, besides a small Radical group of five, a Socialist party of 21 divided into two sections, known respectively as "broad" and "narrow."

The differences, often very microscopic, in regard to domestic politics which divide these groups both on the Government and the Opposition benches, are not of much interest at the present moment. Far more important is their attitude in regard to international politics. Since M. Gennadieff openly threw his influence into the scales in favour of intervention on the side of the Entente Powers, the National-Liberal or Stambolovist party, which was regarded as irreconcilably hostile to Russia, has been split up into two rival factions, and the followers of M. Gennadieff claim to be more numerous than those who have stuck to M. Petkoff, the leader of the Germanophil—or, at any rate, of the neutralist—wing. They are certainly sufficiently numerous to jeopardise the Government's majority on any straight issue which would commit Bulgaria to the Germanic cause, and they might not improbably recruit some adherents amongst the other groups upon which M. Radoslavoff relies. More important still is the fact that they include many active Macedonians. On the Opposition side M. Gueshoff, M. Malinoff and M. Daneff are pronounced supporters of the Entente, and could depend upon every one of their followers to oppose any departure from neutrality in favour of Germany. Of the Socialists, the larger number are also friendly to the Entente, whilst the "narrow" minority, which is, above all, pacifist, would on principle oppose co-operation with the Central Powers. The Agrarian party represented perhaps most truly of all the feeling of the bulk of the Bulgarian peasantry, which, at the beginning of the European War, was one of lassitude and discouragement resulting from the last Balkan war, but for many months past its attitude has been changing considerably. It was originally all for neutrality, but it has been steadily moving towards intervention on the side of the Allies.

It will be seen from the above that M. Radoslavoff's reluctance to convoke the Sobranje is quite intelligible, if he is contemplating a policy of closer co-operation with Germany. His majority would in that case certainly fall to pieces, and he could not look for support from any of the Opposition groups who, in so far as they do not actually advocate co-operation with the Entente Powers, are, at any rate, staunch neutralists. Nor could he hope to retain power by forming a coalition cabinet except by displacing some of his Germanophil colleagues and giving their portfolios to Opposition leaders, who would in no circumstances sanction any action which would bring Bulgaria into collision with the Entente Powers. It must not, however, be forgotten that a state of siege exists all over Bulgaria, and that with the help of an influential military coterie who, like King Ferdinand, have absolute faith in the ultimate triumph of Germany, a dissolution of the Sobranje, though in present circumstances it would resemble a *coup d'état*, might be attempted and perhaps even carried through successfully, if M. Radoslavoff's Government has already committed itself more deeply to the German cause than it has yet admitted. In view of the mobilization now ordered, it is difficult to avoid the conclusion that something in the nature of a *coup d'état* has commended itself to King Ferdinand and his advisers. Whether they will be in a position to commit the country to the policy to which the majority is opposed only the future can show. It is not too late to express the hope that Bulgaria will not repeat the mistake of 1913, but will allow herself to be warned in time, and will adopt the only course of action consonant with her interests.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

THE GATE OF PERSIA.

BY JOHN CLIVE ROOME.

British troops have occupied Bushire. A file of one-storied mud houses with quaint flat roofs and zig-zag lanes is Bushire, the first seaport of Persia and the despair of the traveller's dreams. Here there are no gardens of roses, no gazelle-eyed houris of the poet's ecstasy, no taverns where Hafiz caroused or Omar revelled; this is no land of milk and honey. Bushire is the Gate of Persia, but it is not Persia—not the Persia of song and story. It is the market-place of the subjects of the Shah; it is a seaport, but it has no harbour.

Out in the distance, seawards, may be seen in normal times one or two steamers, British, Russian or German—carriers of trade; probably a light cruiser of the Royal Indian Marine, symbolic of Britain's rôle as the policeman of the Persian Gulf, and the little gunboat which singly figures in official documents as the navy of the Shah. Shallow reaches of water intervene between the messengers of commerce and Bushire; and the native raft, with its picturesque, ragged, half-Arab, half-Persian crew, is the only link between the old world of Persia and the new.

The traveller looks at the woe-begone town in the desert and wonders if it is Persia—the Persia of Hafiz. No sooner has he set foot on Persian soil than a seedy-looking individual claims to represent to him the Imperial Government of Persia and asks for his passport. This formality over, the Belgian Customs officer begins to search his luggage for contraband, while the Arab smuggler elsewhere is busy arranging the details of a small expedition which would convey to the Persian traders in the bazaars India tea, rice, and sugar duty-free. By the time the Belgian Customs officer has bidden the traveller adieu an army of ragged muleteers and donkey-boys has gathered outside the Customs office, and the traveller gets his first glimpse into the character of the Persians.

There is what appears to him an interminable haggling over the charges of the donkey-boy, and when the caravan eventually decides to start on its way, the donkey desires to have the last argument.

"Hoon-oon-oon," groans the donkey-boy, and the simple traveller turns round to see what has caused the Arab to emit that mournful wail; but the groan has an electric effect on the donkey's tympanum, and the obstinate creature takes a sudden lurch forward, depositing his burden in an undignified position on the ground. Solemnly, without even a suspicion of a smile, the donkey-boy assists the traveller to his feet. Another groan and the donkey begins to amble up the pathway skirting the town. But, like the Persian himself, his donkey is addicted to philosophic reflection: it cannot go ten yards without halting for any period from a minute to an hour to think over the mystery of this vale of tears. After an experience of a donkey-ride in Persia, one begins to realise why Persians attach so little value to time.

Once at the confines of Bushire proper, the donkey has a stretch of sandy waste to traverse, and, true to its Persian instincts, it cannot do so without pondering over the why and wherefore of life. Beyond the sandy stretch of land lie the bungalows of the European residents of Bushire and of the Persian *élite*. There is also a promenade by the sea along which are situated the Consulates. The British Consulate, however, adjoins the town itself. Beyond the desert, the first building on the promenade is the Russian Consulate, and a short distance away is the German Consulate. The Europeans in Bushire are mostly engaged in trade or are employed in the Consulates. The town itself presents a puzzling maze of narrow, winding, filthy lanes with the houses on either side tumbling over each other. Few women are seen about in the streets, and those who do venture out are shrouded from head to foot in a thick black veil. The bazaars, with their two rows of dark and dismal shops, crammed with cheap Manchester, Birmingham, and German goods, emit the hundred odours of the East.

One of the most popular institutions of the town is the hospital maintained by the British Consulate. The medical officer belongs to the Indian Medical Service. In other ways also it is the influence of the British officers sent out by the Government of India that has made Bushire what it is to-day. To the small detachment of Indian soldiers attached to the British Consulate has fallen the task on many occasions of maintaining peace in Bushire, and to the Royal Indian Marine has been assigned the work of policing the Persian Gulf.

Powerless as is the Persian Government itself in exerting any influence over the unruly tribesmen of Southern Persia, it is only the fear of British reprisals that keeps them in check. In spite of the moral influence of Britain, the tribesmen do, now and then, attack Bushire; but the sight of a British cruiser soon restores them to sanity, and they take to their heels. They then take advantage of Britain's unwillingness to interfere in the internal affairs of their country to wreak their vengeance on the Persian traders who use the roads, by wholesale plundering of caravans. Trade suffers, and British merchants also sustain heavy losses.

Since the establishment of the new régime in Persia, insecurity of trade routes has become a normal condition of trade in Southern Persia. The tribesmen have shown themselves absolutely unamenable to discipline. They are slaves of "baksheesh," and although they own allegiance to their chiefs, a little persuasion backed up by gold can easily seduce them even from their loyalty to their chiefs. Moreover, besides the two principal tribes in Southern Persia who have found it impossible to live peacefully together, there are numerous irresponsible bands of vagabonds infesting the country. They acknowledge the authority neither of the Shah nor of any chief, but only of the man who hires their services. It is chiefly due to the excesses committed by these irresponsible tribesmen, at the instigation of the Germans, that it has been found expedient to send British troops to Bushire. This is by no means the first occasion that British troops have been landed at the port to restore peace and order, but the troops have always been withdrawn after they have accomplished their task. The Persian soldiery, innocent of drill and discipline as it is, is worthless as a police force, and where dealing with unruly tribesmen is concerned it believes in discretion being the better part of valour. There is a Persian Governor of Bushire, a perfect pattern of a Persian nobleman, who, by the way, is also the High Admiral of the Persian Navy, but his authority does not extend beyond his own threshold. Leaving aside the tribesmen of the *dasht*, even the Persian merchants in Bushire look upon the King of Kings of Teheran as only a relic of an old institution, and the Mejliss, or Persian Parliament, as the plaything of the populace.

BALKAN ETHNOGRAPHY AND THE BRITISH ASSOCIATION.

To the Editor of THE NEAR EAST.

Sir,—Allow me to relieve the mind of your correspondent, "C. R.," and incidentally of Mr. Crauford Price, who had sent a similar complaint to the *Morning Post*.

The fact that there was to be a discussion on the ethnography of the Balkan races had been public property for months and was well known to those interested in the work of the British Association. Professor Elliot-Smith's communication was of a very general nature on the origins and affinities of these races. My own object was to lay before the Anthropological section a map illustrating the extension of the Serbo-Croat and Slovene peoples on the Adriatic and the Drave. It had nothing to do with Macedonia, and was based on personal observations throughout the region in question. My whole statement was a plea for the claims of Serbian nationalities to the North and West.

Professor Elliot-Smith regarded the Macedonian Slavs as more closely allied to the Bulgars than to the Slavs. In discussing his paper I mentioned the result of my own observations, made *sine ira et studio*, years ago, before the outbreak of the recent troubles, and lately recorded in your columns. I was able to substantiate the fact that, except at least on the Upper Vardar, the Macedonian Slavs used the article after the noun, which itself is regarded as a Bulgarian shibboleth; that they called themselves Bulgars, and had from the earliest Middle Ages been called Bulgars by the Greeks. No competent authority can deny these statements.

As to the vexed question of the Southern boundaries of Slav and Greek, nothing, I think, was said by any speaker—certainly not by myself—that could arouse Greek susceptibilities. No prudent man, who bears in mind the shifting and partial extermination of populations during the recent internecine struggles in that unhappy province, would wish under present circumstances to dogmatise on this question.

The scientific discussion of questions of Balkan ethnography and the record of neutral observers were themselves a quite legitimate subject for the consideration of the Anthropological Section of the Association.

Let me add that the complaint made by these critics that the Greek and Serbian Legations were not specially notified of the forthcoming discussion is singularly beside the mark. As the matter had been publicly announced months before, anyone interested was at liberty to attend the discussion. But it is hard to believe that the participation of persons, who, both by their nationality and their official position, were bound to take an *ex parte* view, would have promoted a dispassionate consideration of the questions at issue.—I am, etc.,

ARTHUR EVANS.

Youlbury, Berks, September 18, 1915.

THE PRESS ON THE NEAR EAST.

The Balkan Situation.

In the *Westminster Gazette* (September 20), Mr. H. Charles Woods has an interesting résumé of the Balkan situation. He insists that—

The first and primary condition necessary to insure the creation of this Balkan League, and therefore to enable the present neutrals to realise their national aspirations, is that Bulgaria should be provided with those concessions or compensations for which her people have lived since the signature of the disastrous Treaty of Bucharest on August 7, 1913.

Roumania has already, he thinks, recognised that her interests lie on the side of the Allies. It is quite an open question whether the concessions that she would be willing to make to Bulgaria would amount to the whole of the territory taken from the latter country at the time of the second Balkan war, but Mr. Woods continues:—

But in any case, provided she is assured of a good strategic frontier on the south of the Dobrudja, any sacrifices which Roumania may make there would be far more than repaid by the fact that she would thus now undoubtedly secure a free hand to conquer the districts of Austria and Hungary which contain a Rumane population estimated to number nearly four million souls.

Serbia, in making the sacrifices necessary to securing a united Balkan front in opposition to the Central Empires, would be "amply repaid by the acquisition of various Slav areas situated on the west and by the permanent possession of such an outlet upon the Adriatic that the little kingdom will be no longer dependent for her export trade upon the goodwill of neighbours whose interests can seldom be the same as hers." Mr. Woods regards Greece as an uncertain quantity at the present moment, although he looks to M. Venizelos to extricate his country from the grip of those who still consider that the Central Powers may win, and who are, therefore, anxious to maintain their neutrality to the end.

The Serbo-Bulgarian Situation.

In the *British Review* (September), Mr. A. H. E. Taylor continues his series of articles on the Balkans and the War. His article in this number is devoted to the Serbo-Bulgarian situation. In the beginning of his article he says that "It is natural that many should be urging upon our gallant Balkan ally the necessity of meeting Bulgarian demands in the general interest, yet the essential questions at issue are largely misunderstood, partly owing, perhaps, to the prevalence of a strong pro-Bulgar sentiment and partly to a misapprehension of the circumstances attending both the conclusion and rupture of the Serbo-Bulgarian Treaty of 1912." He then proceeds to a brief examination of the treaty, its origin and aims, and of the events leading up to the second Balkan war. In order to show the origin of Balkan rivalries Mr. Taylor goes back to the time prior to 1870, when the Exarchist Church was formed and conditions began to change.

The original sphere of the operations of this body, which, it must be remembered always, differs in no matter of doctrine, ritual, or religious observance from the Patriarchist Church, was in Bulgaria proper. Its operations were gradually extended to Macedonia, where it became a Bulgarising agency. The Serbs of the Principality had their own autocephalous church in communion with the Patriarch, and this body was unable to send a mission into Macedonia without committing an act of schism. The result was that the Exarchist Church had matters all its own way, since the only method by which the Slavs could obtain the services of a Slav clergy was by adhesion to the Exarchist body.

The necessity of obtaining a port on the Adriatic was the chief reason that led Serbia into the signing of the agreement of 1912, and according to Mr. Taylor the Balkan States desired no disclosure of the fact that they intended a root and branch settlement of the Balkan question, because they feared that in doing so they might alarm Europe, and they were thus forced by the jealousies of the Powers to conceal their plans. Coming down to the time when the first peace negotiations between the Allies and Turkey were broken off, the writer says:—

The negotiations had been broken off on the question of Adrianople at the demand of Bulgaria, though, in fact, the great Powers had signified that they would themselves see to it that the town should pass into Bulgarian hands. The other allies had obtained all that they required, and there was no mention in the treaty, implicit or explicit, of Adrianople or Thrace, both of which by race are predominantly Greco-Turkish, yet they loyally continued the war. The action of Bulgaria appears to be the more self-willed as she now declares that Thrace is of only secondary interest to her and not worth bothering about. If that attitude represents her real opinion, then her action in 1913 becomes almost incredibly foolish.

The following quotation refers to the situation as it stood when Russia had informed Serbia that she could give no support at that juncture:—

It has been suggested that Serbia did not at this juncture demand an alteration in the Macedonian terms of the treaty. I am in a position to set that right. Serbia replied that she was sending forward two divisions, 50,000 men, with practically the whole of her siege artillery, but in view of the altered circumstances must demand compensation. This compensation, of course, could only be had in Macedonia. Bulgaria tacitly accepted the aid, but made no reply to the note. The demand was not, as has been represented, for compensation for aid given at Adrianople.

The writer's sympathies seem to be entirely with Serbia regarding the incidents which led up to the second Balkan war. In coming down to the present time he says:—

The danger lies precisely in the attitude that declares that Bulgaria cannot "permit" a greater Greece. What is required is a sense of realities and an honest attempt to arrive at a practicable agreement. The dangers to Bulgarian aspirations of an intransigeant attitude should be manifest, and it is false friendship not to point them out. At the moment of writing, Bulgarian arrogance is increasing to a point that would be ludicrous did it not contain the seeds of tragedy.

After analysing the reasons which are presumably holding Bulgaria from action now, Mr. Taylor concludes:—

But Bulgaria must seize the opportunities that present themselves while there is yet time, or her disillusionment will be great and may be final. The language recently held to Serbia by several writers is altogether deplorable, and the idea of coercing a superbly brave ally in our own interests is little less than iniquitous. To requite her services by forcing her to yield in matters vitally affecting her future and even her real independence in response to the blackmailing demands of Bulgaria—who would doubtless be as false and hostile in the future as in the past—would be an act worthy of our foes. No such reward should be given to the cynical *realismus* openly avowed by the Bulgarian premier.

Germany and Turkey.

The Military Correspondent of the *Outlook* (September 18), in a review of the situation, adopts a most optimistic tone regarding the progress of events at the Dardanelles, and after commenting upon the various theories which have appeared recently from time to time regarding the possibilities of a speedy end to the campaign, writes:—

Be that as it may, of one thing we may now rest confident: whichever the Germans may favour of their various alleged plans for conveying assistance to Turkey, there is no longer the slightest prospect of their succour arriving in time. Had they attempted the crossing of the north-eastern corner of Serbia and secured the co-operation of Bulgaria, they would have ruined the latter country, but they might have accomplished their object within the limits imposed by transport difficulties, but, however, efficiently organised, that operation would have needed time that is no longer available.

Armenia.

According to the Paris correspondent of the *Standard* (September 20), who quotes from information gathered after patient research by the *Temps* and other papers, the Turkish massacre of Armenians which is now proceeding exceeds anything that occurred in the worst days of Abdul Hamid. The local authorities are said to preside over the massacres; only robust children are spared and are sold as slaves, whilst the women and young girls are distributed among the harems of the Turkish officials. It is also affirmed that while the Porte officially denies the existence of a war of extermination, no secret is made of the intention of making an end of the Armenians.

The Turks are determined that if the Allies are to enter Constantinople there shall be no Armenians left to exult. The able-bodied men were set to work at the fortifications as long as they were able and were useful, but no news was ever obtainable from them when once they had gone. Their women and children were separated from them, and whilst the former were placed in Turkish households in any and every capacity, the children were put in Moslem schools. . . To give an idea of the state of desperation to which the Armenians are reduced my informants said that mothers had over and over again thrown their children into the rivers rather than see them die slowly of starvation or be mutilated before their eyes.

This unfortunately only confirms the statement recently made by the correspondent of *The Times* at Salonika, who concluded an article dealing with the

Digitized by Google

various reports from Constantinople with the following paragraph:—

Meanwhile one point on which all are agreed is the terrible character of the Turkish atrocities against the Armenians. It is believed that it is the official intention that this shall be a campaign of extermination, involving the murdering of from 800,000 to 1,000,000 persons. Christians can escape murder by embracing Mohammedanism; in which case all the female members of the convert's family of a marriageable age—wife, sisters, or children—are distributed around to other Turks, making reversian to Christianity in the future practically impossible. The American Minister at Constantinople is said to have protested recently against the massacres in view of the danger to which they exposed American missionaries. The only response to his protest was the hanging of twenty leading Armenians next day in the streets of Constantinople.

Bulgaria and the Allies.

In an article under the above heading a "Bulgarian Diplomatist" deals, in the *National Review* (September), with his country's position at the present day. The writer begins his article by commenting upon the change which has been wrought in the attitude of the Great Powers towards the Balkans during the past few months. He considers that "whereas the general tendency at first was to discount the military value of a Balkan intervention, the danger now is that public opinion might rush to the other extreme and exaggerate the potentialities of that factor." This he regards as being due to no lack of faith on the part of the Allies in their own armies, but to a clearer realisation of the magnitude of the task before them. His attitude in this regard is clearly emphasised in the following paragraph:—

It would be absurd to claim for the Balkan States the power of turning defeat into victory, or to pretend, as some have done, that they hold in their hands the issue of the war. But so long as the military situation has not been definitely compromised, their intervention on either side might have a considerable influence on the duration of the war.

Bulgaria could, by her geographical position, render the greater service by intervention, while, on the other hand, her inaction necessarily makes it difficult for Roumania or Greece to take the initiative. He continues:—

The Bulgarian nation is not blind to the fact that an Austro-German victory must sooner or later end in German hegemony over the Balkans. This danger is common to all the Balkan countries and creates between them a bond of solidarity. On the other hand, the Bulgarians have little to fear and much to gain from the success of the Allies. The prospect of Russia as mistress of Constantinople causes some searching of heart and is adroitly exploited by German emissaries. People in Bulgaria, however, have common sense enough to realise that German supremacy on the Bosphorus would be an infinitely greater misfortune.

The stumbling block in the way of the realisation of Bulgarian sympathy with the Allies is to be found in the presence of Serbia among the group of the Entente Powers. The Bulgarians recognise her popularity among the Allies, but they cannot be enthusiastic at their rival's prowess, while the latter "holds territories and populations which she had previously recognised to be Bulgarian by right of nationality." In dealing with the possibilities of Bulgaria's ultimate intervention, the writer thinks such intervention possible, but only if, and when, the Allies are in a position to satisfy her claims. He adds:—

For each district which the Bulgarians now claim they can point to a violated treaty. They insist upon recovering Macedonia because her retention by Serbia is contrary to the Serbo-Bulgarian treaty. Although . . . that treaty became nugatory, its moral force continues, since its enactments were based on equity. . . . As regards the Dobrudja question, Bulgaria takes her stand on the Protocol of Petrograd which embodied the verdict of entire Europe. In the same way, she can appeal to the Treaty of London as a title to her right on the Midia-Enos line. The only Bulgarian claim which cannot be justified by reference to a former treaty is that affecting the port of Kavalla and its hinterland. And the reason for this is that the war against Turkey broke out before Greece and Bulgaria had been able to define their mutual rights by way of treaty. Had this been done, no one doubts that Bulgaria would have obtained the territories now coveted, and a great deal besides.

In regard to Kavalla, it is pointed out that Bulgaria's claim to that region is not based on ethnic consideration, but "on the circumstance that, geographically, Kavalla forms part of Bulgaria, and is for her an absolutely indispensable port on the Ægean coast."

The following quotation is from the concluding paragraph of the article:—

For months past Bulgaria has stood at the parting of the roads. More than once the Allies had splendid opportunities of winning her to their side, but allowed them to pass by unutilised. Even now, when conditions have changed for the worse, it is not too late to secure her co-operation. The sympathies of the large majority of the Bulgarian nation are with the Allied cause. But sympathies, however strong, will not induce the Bulgarians to face the horrors of a fresh war. Bulgaria must be given unequivocal proofs that by taking such a fateful step she will obtain the certain reparation of her many wrongs.

Punishment in Baghdad.

Dr. F. Johnson, of the C.M.S., who was in charge of the mission's hospital at Baghdad at the time of the outbreak of war with Turkey (and who, it will be remembered, contributed an account of his experiences to THE NEAR EAST shortly after his arrival in this country), has some interesting notes in the October *Gleaner*. While he was in Baghdad, he writes:—

Scenes both pathetic and humorous were of daily occurrence. On two occasions lads were brought in for stealing; punishment in the shape of stripes on the hand was dealt out and bravely borne. An officer consulted me as to what the lads could stand in the way of punishment. I replied that it was not my business to express an opinion, but I remarked that many in the city were feeling the pinch of hunger and that consequently temptation to the lads was strong.

The Moslem World.

With the October number, the *Moslem World* completes its fifth year of issue, and we are glad to be able to congratulate the editor, the Rev. S. M. Zwemer, upon the position which, under his able guidance, the review has won for itself.

This new number is full of valuable and informative articles, amongst which we should be disposed to award the palm to "The Moslem Press and the War," by Stephen van R. Trowbridge and Selim Effendi Abd-ul-Ahad. "The main purpose of this article," the writers tell us, "is to give a poll of the Cairo Press, as the most reliable interpretation of what is really going on in the minds of Moslems. Official communiqués and official interviews are not worth as much as the newspaper editorials, though even these leave much unsaid because of the censorship." "The War and Islam from the German Missionary Point of View," by the Rev. H. U. Weitbrecht, is another article of considerable interest, though the interest is of a somewhat peculiar kind. Bishop Stileman contributes an inspiring message on relinquishing his work in Persia. "Uthman and the Recension of the Koran" is a translation of a scholarly essay by Prince Leone Caetani; and other important articles are "Mohammedan Tradition and the Gospel," by the Rev. W. H. T. Gairdner; "An Old Turki Manuscript of the Koran," by the Rev. Adolf Mingana; "A Moslem Apocryphal Psalter," by the Editor; and "The Use of the Apocrypha by Moslems," by Professor D. S. Margoliouth. We hope to refer to some of these articles at greater length in our next issue.

Articles to Note.

"The Spirit of the Serb," by Mrs. Arthur Moore, in the *Daily Chronicle* (September 22).

"La guerra italo-turca. Cause e scope," by F. Evoli, and "I Bulgari e la Macedonia," by G. Nurigianoff, in *La Vita Italiana* (September 15).

"At the Gate of the Balkans," by Mrs. Arthur Moore, in the *Daily Chronicle* (September 18).

"Our Turkish Opponent," by a British Resident of Thirty Years' Standing, in the *World* (September 14).

"Gallipoli Hindrances," by H. W. Nevinson, in the *Yorkshire Post* (September 20).

"To Durazzo," in the *Manchester Guardian* (September 20).

"Europe's War Bill," by H. J. Jennings, in the *British Review* (September).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The monthly bulletin of the Egyptian Ministry of Agriculture on the condition of the cotton crop as on August 31 appears to have created a favourable impression, and yet I fail to see why. The weather and Nile, admittedly, have been favourable to the plant's growth and to the maturing of the boll; but, on the other hand, the spread of the pink boll-worm has been general, with the exception, perhaps, of the southern provinces of the Delta, and even in the latter it is feared that the dread pest will assert itself. The damage done varies: whilst in Upper Egypt, as a whole, "the attack has been moderate," in Beni Suef and Minia it appears to be rather "marked." From a private source I learn that the more recent reports reaching Alexandria are still less favourable, so that, what with the pink boll-worm and the reduction in the acreage sown with cotton, the crop outlook is far from being optimistic. To which must be added the report of the appearance of a third species of boll-worm, announced elsewhere. No further details are to hand concerning this new menace, but if it has come to join hands with the pink boll-worm the Government will have its hands full. As it is, at present Government is taking the most energetic steps to get the fellaheen to help exterminate the pink boll-worm by burning the cotton plant after the cotton has been picked. Unfortunately, it is not an easy task, because the fellah relies more or less on his dead plants for fuel during the winter, and to destroy his stock of fuel is, to him, a wicked waste of what Allah in his wisdom intended him to use.

***

Whilst on the subject of the Egyptian cotton crop, it is of interest to note that last Friday Reuter's Cairo correspondent cabled that *it is stated* that "the Council of Ministers has decided to remove the prohibition by which cultivators are not allowed to devote more than one-third of their property to cotton cultivation." On the face of it this is merely a rumour, as there are many current in Cairo at this time of the year, when cotton prices and prospects are the one and all-absorbing topic. Consequently all remarks on the subject are premature. This much can, however, be said: if the measure, which is really a war measure and was introduced last year, is to be repealed, it shows either one of two things—that the restriction of cotton cultivation is no longer imperative, or that it has proven a failure. Presumably we shall ultimately be told the real reason for the repeal.

***

One aspect of the War Budget introduced by Mr. McKenna is of particular interest to Near Eastern exporters, namely, that applying to an increased import duty on dried fruit. Sultanas, which hitherto paid a duty of 7s. per cwt., will now have to pay 10s. 6d., as will also raisins, figs, dates, etc. As regards sultanas, the increase will hardly affect them, as in any case imports will not be considerable, the great shipping port of Smyrna being practically closed to trade with this country. Smyrna figs are in precisely the same position; dates, on the other hand, are peculiarly placed, because, whereas in former years they were imported from abroad, from Turkey—or, better still, from Mesopotamia—this year they will be imported from British territory, the Mesopotamian groves having fallen into our hands. It would be a pity to penalise these "British dates" in the first year of their appearance on the London market.

***

The most questionable effect, however, of the new duty in dried fruits concerns Greek currants. According to an arrangement between the British and Greek Governments, an exception has been made in the duties levied by Great Britain on dried fruits in favour of Greek currants. Thus, whereas sultanas, raisins, etc., have paid a duty of 7s. per cwt., Greek currants only paid a duty of 2s. per cwt. In exchange for this concession, the Greek Government allowed certain British textile goods to enter Greece at reduced import rates. The question now arises: What effect will the increase on the duty of currants have on our arrangement with Greece, and how will it affect our exports of Manchester goods to Greece? Has the matter been duly considered at the Treasury? It will be interesting to know.

***

We have been so accustomed during the past year, when glancing at the traffic returns of the Egyptian Delta Light Railways, to a decrease in the takings for each period of ten days, as compared with the same period in the preceding year, that the return dated September 9 comes as a welcome surprise with its increase for the eleven days ended August 31 of £E344. Of course, as compared with 1913 the takings will still show a considerable decrease, which is, however, no criterion to go by, because war returns can only be compared with other war returns. In the case of the Delta Light Railways this can now be done, and I hope to see in the future a steady and continual increase over last year's returns.

***

Another Near Eastern railway, of particular interest to the British public—namely, the Ottoman Railway, from Smyrna to Aidin—has just issued its half-yearly report. The report commences with the statement that the line in still in the possession of the Turkish Government, and that no returns have been received since August last. Little can, therefore, be now said concerning this undertaking, but I heartily agree with the directors' optimism when they say that, provided no serious damage is done to the company's property, it should not take long to get matters straight again once the Allies have disposed of the Turkish resistance and are at Constantinople. Up to the present I do not think, from what I have heard, that any serious damage has been done. As a matter of fact, from reports reaching me, the situation at Smyrna is infinitely better than in Constantinople, and the Vali of the former port seems to be acting more like a gentleman than a German, which cannot be said of all "Young" Turks as opposed to "Old" Turks.

***

Reference to gentlemen Turks reminds me of a statement made to me recently by an officer who had been serving with his Majesty's forces at the Dardanelles. "It is wrong," he said, "to compare the Turks with the Germans. The Turks can teach the Germans lessons in behaviour. They fight like gentlemen, and not like Huns." In trade, likewise, the Turk is a gentleman. "His word is as good as his bond," says Mr. A. W. Arnold, writing in the *Pall Mall Gazette;* "as an example of Turkish honesty, there were at Fiume many hundreds of girls in the great tobacco factory. In spite of the strict supervision a quantity of tobacco is stolen. The girls put dust, etc., in the cigarettes, and take the tobacco. There are Austrians, Italians, Greeks, Czechs, Slavs, etc., and I saw a few Turkish. The manager told me they were slow, and they seemed singularly quiet, but they were known to be so honest that their cigarettes were not examined, nor even weighed."

***

In view of the rise of telegraphic charges in the United Kingdom, it may be recalled, says the *Evening Standard,* that Roumania holds the record for cheapness of telegraphic communication. Telegrams of not more than a certain number of words can be sent anywhere within the Roumanian borders for 2½d., and at that price prove a fruitful source of revenue.

***

I have received the following communication from a Bradford firm:—"We have lately had some orders sent from Bulgaria, and after taking a great deal of trouble with preliminary information as to prices and deliveries, we accidentally learned that no cargo for Bulgaria is allowed to be shifted without the express sanction of the Foreign Office. In practice this means that shipments to Bulgaria are prohibited. We have in front of us a circular from the Johnson Line, Limited, Liverpool, dated July 6, where this information is given."

***

Perhaps by the time these lines appear in print any discussion of the above communication will only be of academic interest. Matters are moving so rapidly in the Balkans. But this much can be said: During the past few weeks the British Government has, rightly, no doubt, taken extreme measures to prevent exports from Great Britain, which might be useful to a possible enemy, reaching Bulgaria, and it is therefore quite likely that general preventive measures have been introduced. As regards the G.P.O., they were yesterday quite ready to take parcels for transmission by parcel post to Bulgaria, though they refused to guarantee safe arrival. Prior to the new situation created in the Balkans, goods for Bulgaria could be shipped in British bottoms via Salonika for transmission to Sofia or Dedeagatch by rail; but in that case they had to submit to the Greek import regulations obtaining at the port. Or they could be shipped in neutral or Allied bottoms direct to Dedeagatch; as a matter of fact, the Messageries Maritimes advertise a boat to sail from Marseilles to Salonika and Dedeagatch or October 1. This was impossible in the case of British vessels, because our Admiralty had declared the Dedeagatch approach to be a danger zone. Beyond this there were, to the best of our belief, no restrictions placed on exports to Bulgaria. That the situation has changed within the past few days—or even weeks—can come as a surprise to no one, and it is therefore to be supposed that Foreign Office action has taken place in the decisive manner alluded to above.

Alexandria Prize Court.

In re S.S. "Koerber" and S.S. "Lutzow" (ex Cargo).

The following judgments have been delivered by Judge P. Grain in the Alexandria Prize Court in the above demands for the disposal of cargo on board the s.s. Koerber and the s.s. Lutzow.

S.S. "Koerber."

Judge Grain said:—The goods in this case, consisting of 72 chests of tea, were shipped by Messrs. Westphal King and Ramsay, Ltd., on July 17, 1914, at Foochow, on board the s.s. Koerber, an Austrian ship already dealt with by this Court. The consignees were Austrian subjects in Vienna and Trieste, and the contract was documents against acceptance. Westphal King and Ramsay, through the Bank of Taiwan, Ltd., drew bills on Messrs. Brandt and Co., bankers and merchants, of London, an admitted British firm. Messrs. Brandt and Co. accepted the drafts on August 24, 1914, after the outbreak of war. An affidavit put in by one of the directors of Messrs. Westphal King and Ramsay states "that owing to a Proclamation issued at the commencement of August, 1914, it was impossible for Messrs. Brandt and Co. to accept this draft and enter into liability on an account of an alien enemy, and I am informed that they accepted the said draft to protect the interests of the shipment, with the intention of retaining the goods themselves to meet the draft." And in a letter put in from Messrs. Brandt and Co. they say: "It was impossible for us to accept on the aforementioned date a draft for account of an enemy interests. We accepted the draft solely on our own account."

On these grounds Mr. Halford, who appears for Brandt and Co., claims a release for the firm. The Procurator, Mr. Preston, opposes it, and asks that the goods shall be confiscated on the ground that Brandt and Co. had no power to accept on their own behalf, and that in reality they accepted on behalf of the alien enemy, and in so doing were trading with the enemy, and that therefore the goods should be confiscated. He cites Kershaw v. Kelsey, Scott's Cases, 1902 Ed. p. 537; Smalls Administrators v. Lumpkin's Executors, Scott's Cases, 1902, pp. 539, 541; The Rapid, Scott's Cases, p. 558; Amoy and others v. McGregor, Scott's Cases, p. 561; Southfields (cargo ex), lately decided by the Prize Court in London.

In the first place I am of opinion that Messrs. Brandt and Co. had no power to accept on their own behalf, as there was no contract or contemplated contract as regards the vesting the property of the goods between them and Messrs. Westphal King and Ramsay. The contracting parties were Westphal King and Ramsay and Austrian consignees, and I cannot see how Brandt and Co. can have power to thrust themselves into the contract after the outbreak of war in order, as it is stated in one of their letters put in, "to protect the interest of the shipment, retaining the goods themselves to meet the draft." If Brandt and Co. had accepted on August 24 on behalf of the enemy I am inclined to think that this case would come under the case of the Rapid, and the goods would be liable to confiscation, but it appears that they intended to accept on their own behalf and not on behalf of the enemy. It may be that this was done for the purpose of defeating the prize law with regard to bankers' lien, and converting their lien into direct ownership. I hold therefore in this case that there has been no such acceptance as is sufficient to pass the property in the goods, and as the contract is one of "documents against acceptance," the property in the goods remains vested in the consignors, Messrs. Westphal, King and Ramsay, and the order of the Court is that these goods be released to that firm.

S.S. "Lutzow."

Judge Grain said:—The goods in this matter, cases of coatings, were sold and shipped by Heisch, Heinrichsen and Co., a German firm at Hamburg, and were consigned and invoiced to Messrs. Tomisai and Co. in Japan. The contract is one of "documents against acceptance," and the drafts drawn by the shippers on the consignees, through Lloyds Bank, in consequence of the outbreak of war, have not been accepted. So far there is no difficulty about the matter; the drafts not having been accepted, the property in the goods has not passed and remains in the German firm at Hamburg.

But Mr. Booth, who appears for the Sumitomo Bank of Japan and the consignees, Messrs. Tomisai and Co., urges that there is another element in this case to be considered, namely, that the Sumitomo Bank have given Lloyds Bank a letter of credit to accept drafts on behalf of the consignees; that in consequence of this letter of credit whenever a draft arrives it will be, and is bound to be, accepted as a matter of course. And Mr. Booth therefore argues that the letter of credit being in existence the drafts are really accepted as soon as they are drawn and forwarded, and that it must be assumed in this case that the drafts have been accepted and the property passed to Messrs. Tomisai and Co., of Japan.

But, in my opinion, this is assuming too much from a letter of credit; many things might happen to prevent the drafts being accepted notwithstanding the letter of credit, such as the Bank holding the letter of credit going bankrupt and being closed down, and, as is the case here, the outbreak of war.

A letter of credit is merely a request by one party to another party to advance money or give credit to a third party or accept bills drawn upon himself. And the person to whom the letter of credit is addressed is merely in the same position, and in no better position, than the person on whose behalf the letter is given. It only gives him authority to accept drafts when they come before him. In this case the cargo is shipped under special conditions, viz., documents against acceptance, and until the drafts are actually accepted no property passes. And although in this case, had it not been for the war, the drafts were certain to have been accepted by reason of the letter of credit, nevertheless no actual acceptance has taken place.

I therefore hold that the property in these goods remains in the consignors, the German firm at Hamburg, Heisch, Heinrichsen and Co., and are consequently enemy goods. The order of the Court will be confiscation and sale.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, September 4.

Motor Service.

So far only three motors have arrived, and these are smaller than those of the late Cyprus Motor Transport Company. The charges for fares do not meet with general satisfaction. From Nicosia to Larnaca, the fare is 4s. 6d.; to Limassol, 13s. 6d. Complaints are also made that the Nicosia office of the company is not in a central position. There was bound to be some grumbling, but the difficulties which attend the working of any company in Cyprus are not always recognised. It must be hoped that after a fair trial matters may be arranged to the satisfaction of all.

Pottery Works.

The new pottery works at Lapithos (Kyrenia district)—an example of enterprise—are doing very successful work, and are turning a large number of articles of domestic use, which will no longer be required from abroad.

Carob Trees.

An Order of the High Commissioner defines various areas in the districts of Nicosia and Famagusta, in which the Director of Agriculture, and agents appointed by him for the purpose, may take the necessary steps for dealing with carob trees affected by disease.

The Astra-Romana has obtained the authorization of the Roumanian Mining Department to bore its first well on the new lands which the company has acquired at Floresti. This well will be first bored by the Canadian system until it reaches the sand strata, after which it will be continued by the rotary system. By means of this exploration well the company means to establish relations between the two productive fields of Baicoi-Ferbatori and Filipesti de Padure.

Trade Notes.

Egypt.

The Director, Coast Guard Stores, Arsenal, Alexandria, calls for tenders for the supply of 500 metres of canvas Imperial Navy No. 1, and 1,000 metres of canvas Imperial Navy No. 2. Close September 30.

The Egyptian State Railways and Telegraphs Administration, Cairo, calls for tenders for the supply of 12,000 kilograms of Fifal rope. Close October 27.

The Vacuum Oil Company and the Asiatic Petroleum Company (Egypt), Limited, were recently the successful tenderers to the Egyptian Government for the supply of petroleum at the Citadel Stores, Cairo.

Sudan.

According to the report for 1914 of the directors of the Sudan Central Economic Board, the value of the imports into the Sudan in 1914, inclusive of Government stores, amounted to £E1,891,454, as compared with £E2,109,776 in 1913. In the first quarter of the current year the value of the import trade was £E342,901, as compared with £E519,109 during January—March, 1914.

The following table shows the values of the imports of some of the principal articles in the years 1913 and 1914 and in the first quarter of each of the years 1914 and 1915 :—

—	Calendar Year.		Jan.-March.	
	1913.	1914.	1914.	1915.
	£E.	£E.	£E.	£E.
Dura and maize	58,193	214,197	46,118	356
Rice	25,049	29,805	4,921	500
Wheat flour.....	86,168	102,352	27,988	12,351
Sugar	258,750	239,076	70,002	52,933
Coffee.....	67,545	57,319	7,305	6,019
Tea.....	39,114	36,502	6,786	4,492
Tobacco, tombac, cigars, & cigarettes	47,303	43,880	11,961	10,292
Coal	108,037	76,222	25,426	10,093
Soap	28,536	24,498	7,541	6,014
Cotton fabrics	503,616	343,222	110,421	95,431
Machinery (electrical, agricultural, etc.) and parts	32,526	47,325	21,246	2,810
Empty sacks	29,815	14,097	7,139	11,474

The value of the exports during the year 1914 amounted to £E1,020,260, as against £E1,185,186 in 1913. In spite of the war exports increased, every effort being made to get produce out of the country while opportunity offered.

The values of some of the principal articles exported in 1913 and 1914 and in the first quarter of each of the years 1914 and 1915 are shown in the following table :—

—	Calendar Year.		Jan.-March.	
	1913.	1914.	1914.	1915.
	£E.	£E.	£E.	£E.
Cattle	74,664	99,868	40,069	27,347
Sheep and goats	97,059	85,975	32,456	20,296
Hides, untanned	22,821	49,080	14,217	20,478
Skins, untanned	31,906	38,427	15,905	6,400
Ivory.....	113,236	84,605	23,568	6,099
Dura.....	21,716	4,429	2,701	44,293
Cotton seed.....	21,097	12,509	3,862	32
Sesame	104,939	52,899	34,739	24,262
Dates.....	31,872	29,372	8,127	4,074
Gum	371,528	314,919	84,838	39,824
Cotton, ginned	152,110	93,555	33,266	7,885
Gold	43,802	68,146	10,267	18,041

Cyprus.

The *Cyprus Gazette* of September 10 contains an Order in Council to the effect that for a period of two years from and after the first day of November, 1915, the importation of motor cars, parts of motor cars and their fittings and gearing shall be admitted into Cyprus free of all duties of Customs whatsoever.

During the quarter ended June 30, 1915, Cyprus imported goods to the value of £118,507 (exclusive of specie amounting to £5,866) as against £156,408 (exclusive of £9,756) for the corresponding period of 1914, or a decrease of £41,731.

Figures for exports during the corresponding periods were, respectively, £121,825 (£1,773) and £122,705 (£20,256), or a decrease of £21,363.

Bulgaria.

Our Sofia Correspondent writes:—From January 1, 1915, to August 1, 1915, Bulgaria imported goods to the amount of 72,063,865 lewas, and exported to that of 52,694,000 lewas.

Greece.

The following particulars regarding the trade of the Cyclades in 1914 have been received from H.M. Consul at Syra.

The Cyclades include the islands of Syra, Zea, Santorin, Chio, Mitylene, and Samos, and the total value of the trade of these islands (with the exception of Mitylene, for which no figures have been obtained) for the year 1914 amounted to £1,739,915.

Of the total import trade of Syra during 1914, valued at £305,535, the United Kingdom supplied £142,000 worth, or nearly half, and thus continues to hold the first position. Imports of coal amounted to 58,311 tons in 1914, as against 74,883 tons in 1913. Other goods imported from the United Kingdom in 1914 included cotton and woollen goods, iron and other metals, chemicals, herrings, and other salted and dried fish, all of which showed a decline. With regard to the island of Samos, the imports consisted chiefly of manufactured goods, colonial produce, and flour, and amounted in value to about £280,000. The exports, chiefly wine, tobacco, cigarettes, leather and olive oil, amounted in value to about £265,000. Until recently the major portion of manufactured cotton and woollen goods were obtained from the United Kingdom. The travellers from Germany and Italy who have visited the Island regularly have, by affording greater facilities for payment, gradually secured a considerable portion of the trade.

The value of the imports into Zea in 1914 was £12,240, as against £10,320 in 1913, and consisted chiefly of food stuffs and provisions.

Chio prefers British goods, which have been imported in large quantities, and the import of these would be still larger if greater facilities in respect of payment were afforded by United Kingdom firms. A first and successful attempt to ship oranges and mandarines, the staple exports of Chio, to London was made in 1914, but the disorganisation of shipping prevented the full development of this scheme.

As regards Mitylene, business in cotton goods of United Kingdom manufacture was done on a restricted basis. Merchants complain of high freights, and that British exporters do not closely follow the wishes of their clients.

Roumania.

Our Bucharest Correspondent, writing on September 1, said :—An important adjudication for the Roumanian State Railways has just been closed for the supply of 330 passenger carriages, of which 50 are first class, 80 second class, and 200 third class, all provided with Westinghouse brakes, steam heating, electric lighting, and to be delivered in eight months. The value of the whole order is 7,500,000 lei. More than twenty firms were invited to tender, out of which only five did so. The result of the adjudication has not been made public.

WAR ON GERMAN TRADE.

In connection with the campaign undertaken by the Board of Trade, on the advice of their Advisory Committee on Commercial Intelligence, to assist British manufacturers and merchants to secure trade formerly in the hands of German or Austro-Hungarian firms, the Board continue to receive a very large number of inquiries for the names of sellers or buyers of articles of which the sources of supply or markets have been interfered with.

Special arrangements have been made in the Commercial Intelligence Branch of the Board of Trade for dealing with these inquiries, and the weekly list of articles (No. 39) which inquirers desire to purchase is ready, and may be obtained by United Kingdom manufacturers and exporters of British goods.

FRAUDULENT PRACTICES IN EGYPT.

The *Monthly Journal* of the British Chamber of Commerce of Egypt has an article on the above subject, from which the following extracts are taken :—

"In every case in which a home firm has been defrauded, the loss might have been avoided or, at all events, mitigated, if the services which the Chamber offers to all British traders had been taken advantage of.

Questionable Agents.

"A case in which the advice of the Chamber was recently asked, was that of an important British firm who had been represented in Egypt for some years by a certain commission agent. The man in question was originally of good financial standing, but during the last few years had suffered heavy losses. The firm complained that proceeds of bills which had been collected through their agent had not been remitted to them. The amount involved was important, and although the Chamber, owing to special circumstances, was not able to ascertain whether the agent himself was responsible for the fraud, we were in a position to furnish valuable legal advice as to the various courses which existed for the obtaining of reparation or satisfaction. The moral of this example is that home firms, even though the results of their business relations have been quite satisfactory, should regularly each year institute inquiries regarding the status of their representatives, for in Egypt changes in position are often rapid, and in the present instance we would have been in a position some two or three years previously to report that the affairs of the man in question were in an unsatisfactory condition. The loss might thus have been avoided, or, at all events, reduced.

"Another class of fraud which is not very uncommon is that in which firms have been induced, either by plausible promises of good business results, or through the giving of false references, to ship goods to a stranger.

"An attempt at fraud which we were, fortunately, able to prevent, as a result of a home exporter investigating references through the Chamber, was in the case of a man who, in sending a trial order for goods, gave as a reference 'X. Y. and Co.,' bankers, Alexandria. As the result of our inquiries we found that the address given by this man was that of a second-rate hotel, and that 'X. Y. and Co.' were unknown locally, and we reported to our friend accordingly. Either he or a confederate, it would appear, intended to obtain possession at the post office of any inquiries addressed to 'X. Y. and Co.' and reply favourably to them.

"Home firms buying produce for which they pay cash against documents in Egypt are also warned to exercise great care in selecting a reliable export house. A recent instance of a British firm of produce importers who bought dates in this manner, which turned out on delivery to be of so bad a quality as to be almost worthless, is one amongst several that have been brought to our notice. Intending buyers should apply to the Chamber for a list of reliable shippers in their particular line to avoid loss in this manner.

"In conclusion, we would repeat that it is our experience that in by far the larger number of cases that have come to our knowledge in which home manufacturers have been defrauded, the most elementary precautions have been omitted, and often no inquiries have been made as to the status of the proposer of the business. The Chamber is ready on all occasions to recommend agents or shippers, to investigate references and to furnish reports to members, who, it is suggested, should communicate with us in the event of any difficulty or irregularity in their relations with local firms.

"The above examples are mentioned with the object of placing our home members on their guard against similar frauds, and to demonstrate to them the advantage of consulting the Chamber should they meet with difficulties of this description."

According to a telegram received by an indirect route from Baghdad (states Reuter's Agency) all the British subjects in Baghdad were in good health at the end of August, and were being well treated.

VESSELS SUNK IN THE SEA OF MARMORA.

(From an Occasional Correspondent.)

Dedeagatch, Sept. 10.

The following is an incomplete list of the steamers which have been sunk by the Allies in the Sea of Marmora. There are many more than those indicated herewith, but unfortunately I have not been able to obtain their names: Madeleine Rickmers, 7,000 tons; Derindje, 7,000 tons; Stamboul, Skyros, Tenedos, Chios, Patmos, and Kerkyru, all about 4,500-5,000 tons each; owners, Deutsche Levant Line. Iskander, ex Craigforth (British) which struck a mine at Kavak, damaged, repaired, but detained by the Turks, eventually released to find the Straits closed. Bahr Ahmer, 5,000 tons; Bezmi Alem, 5,400 tons; Midhat Pasha, 4,500 tons; Izne Adha, 2,400 tons; ex Russian s.s. Ida seized by Turks; Yechil Irmak, 2,000 tons; Niloufer, 1,200 tons; Nika, 700 tons; Bigha, 700 tons, and several others whose names have not been received belonging to the Société Ottomane de Navigation, Heliopolis, 3,200 tons; Mahmoud Shefket Pacha, 3,000 tons; On Temouz, 2,300 tons; and Ella, 3,000 tons; the last three owned by M. Gumuchdjian, Selanik, 2,700 tons; Morna, 2,200 tons; Hilal, 2,000 tons; Prinkipessa Djounia, 2,000 tons; Dafni, 1,800 tons; Ispahan, 1,800 tons; Nedjat, 1,700 tons; Persia, 1,600 tons; Washington, 1,500 tons; Addis, 1,200 tons; Taxiarchis, 1,200 tons; Guzel Guirid, 1,200 tons; Aidinjik, 1,200 tons; Beicos, 1,300 tons; Oghour Ola, 1,100 tons; Gheorgios, 110 tons; Marie Roget, 1,000 tons; Nikea, 1,000 tons; Heibeli Ada, 900 tons; Alexandros, 950 tons; Saadet, 800 tons; Millet, 700 tons; Erdek, 750 tons; Edirneh, 700 tons; Newa, 700 tons; Banderma, 650 tons; Terraki, 350 tons; Broussa, 300 tons; Hairoullah, 150 tons; Chelidon, 80 tons; and Marmara Express No. 1 (passenger steamer). Practically all the tugboats belonging to the port of Constantinople, including the Bordeaux, Rhone, etc., etc., of the French Cie. de Sauvetage, also numberless sailing craft of all sizes and description which were engaged in the transport of coal from Heraclea, Zunguldak, etc., etc.

There are several other steamers of large tonnage which have been sunk in the Black Sea, but whose names I have not been able to ascertain.

ADEN COTTON IMPORTS.

During the year ended March 31, 1915, says the U.S. Consul, imports of cotton piece-goods into Aden were valued at £550,212, a decrease of £114,118, as compared with the preceding year.

Purchases by Abyssinians and Somalis represent 56 per cent. of the cotton piece goods shipped from Aden as a distributing point. German East Africa, Hodeida, Mocha, Jedda, and Loheia will probably be closed to the trade during the war, which will mean a possible loss of over 30 per cent.

The quantity and value of imports of grey goods from March 31, 1914, to March 31, 1915, by countries, is shown in the following list:—

Countries of Origin.	Yards.
United States	16,711,440
Austria	1,377,600
Belgium	98,500
Italy	401,950
United Kingdom and possessions	14,851,642
Other countries	189,650
Total	33,630,782

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

Athens and the War.

The U.S. Consul-General at Athens reports for the year 1914 as follows (extracts):—

The year 1914 opened auspiciously and general conditions throughout the twelve months, despite much political uncertainty and the existence of war in other parts of Europe, were fairly good.

With the outbreak of the European war, conditions were immediately sharply affected. There was an atmosphere of great uneasiness and alarm, and this was especially manifest among the smaller merchants, savings-bank depositors, and the weaker financial institutions. In a short while, however, matters began to adjust themselves, and because of the quickened demand for supplies of all kinds many merchants who had found themselves overstocked at the beginning of the war were able to clear their storehouses at profitable figures

Greek Marine.

But it is the Greek merchant marine that has especially profited by the war, and that has affected for good, either directly or indirectly, the whole commercial structure of the State. Various independent estimates place the earnings of Greek ships for the six months ended December 31, 1914, at over $20,000,000. The withdrawal of many British and French ships for use in other parts of the world and the disappearance of the Austrian and German and, later on, the Turkish flag from Mediterranean and other waters gave to the Greek mercantile fleet a great opportunity, which it was quick to grasp.

Local manufacturers of textiles did well, especially the last half of 1914. Flour millers and other producers of foodstuffs also profited.

There has been a steady rise in the cost of living within the district the past year, and this has been felt sharply by the lower classes This rise has been caused in a large measure by the closing of the Dardanelles and shutting off of the supply of Russian wheat, the large advance in ocean freights, the augmented demand for food brought about by the presence of vast armies in the field. with the presence in the district of large numbers of refugees of Greek nationality from Turkish dominions and elsewhere.

Magnesite and Chrome.

The yield of magnesite from Greek magnesite ore is unusually high. The following shows the percentages of magnesite obtained from the Grecian ore and that from the product of other countries:—Grecian, 97.8; Transvaal, 96.5; Austrian, 95.36; Californian, 93.66.

The abnormal increase in exports of this ore from Greece to the United States in 1914 may be ascribed to the closing to American buyers of the markets in Hungary from which supplies are usually drawn. In ordinary times it is difficult for the Greek magnesite miner to compete with the Hungarian producers because of superior freight facilities offered through the port of Trieste. The war has radically changed the situation, and despite the sharp advance in freight rates Greece is now the principal source of supply for the American market.

Shipments are usually made from Bubœa, either in the form of raw magnesite for firms who desire to do their own calcining, or else as dead-burnt or calcined magnesite. Much of this product is used in the making of "seamless" floors or in the form of bricks for lining furnaces in smelting industries.

The exports of chrome ore from Greece to the United States in 1914 amounted to 8,155 tons, as against 4,600 long tons in 1913. This ore is produced in Pharsala, in Thessaly, and the entire product is exported. The United States is one of the principal consumers. From this ore is produced potassium chromate, lead chromate, etc., which are brilliantly coloured and are used in dyeing, calico printing, etc.

Many of the largest marble works and quarries have been shut down since the beginning of the war, save a few that have been kept working to supply local demands and for occasional shipments abroad. Exports to Antwerp and Hamburg have ceased, while stocks on hand at New York are reported to be sufficient to meet current needs.

Skins sent to the United States from Greece are mostly from the goat. For lamb and sheep skins Austria and Germany usually offer better prices. There is nothing of special significance in the decline in the movement to the United States in the past year save a diminished demand due to a waiting attitude on the part of buyers. Strong efforts have been made in recent months by local merchants to increase sales in the United States, but without success.

Tobacco.

During 1914 the district of Argolis-Corinthia produced about 4,232,250 lbs. of tobacco, which went almost entirely to Italy and the Netherlands, much of which found its way into Germany. The price of this tobacco was 6 to 8 cents per lb.

In the Province of Attica is grown a tobacco known as "Basma." The total yield of this quality is small, amounting in the past year to some 85,000 lbs., which was sold for delivery in 1915. Prices were 20 to 33 cents per lb.

A small quantity of tobacco is grown in the islands of Amorgos and Paros, of the Northern Cyclades, the yield for last year being estimated at 225,000 lbs., which is for delivery in the current year. Prices ranged from 17 to 20 cents. per lb.

The principal tobacco-producing section of Old Greece is in Thessaly. In 1914 on its fertile plans were cut more than 10,000,000 lbs. of this plant, the prices paid to the growers being from 17 to 20 cents per lb. These prices were in excess of the preceding year, and may be ascribed in a large measure to the closing of the Dardanelles, which has affected trade in so many lines.

Local buyers estimate the crop of 1914 as being 20 per cent. ahead of the preceding twelve months, and of superior quality. Although weather conditions during the season were unfavourable, yet the increase in the area under cultivation which has marked recent years was sufficient to more than offset the effects of this. The tobacco-buying season begins here in August.

Agriculture.

The consular district of Athens is essentially agricultural in character, but the industry is largely pursued in a primitive manner. The ancient wooden plow with an iron point is seen everywhere, while machinery fr irrigating and drainage schemes aore of the simplest character. The alluvial soil of the many valleys is extremely fertile and would yield rich results if properly tilled. The Government is taking an increasing interest in agriculture, and efforts are being made to teach the farming class modern methods of agriculture, the necessity for rotation of crops, the use of natural and artificial fertilisers, etc.

Wheat and barley are the principal crops grown, but these are far from meeting the requirements of the population. The acreage of cotton is being increased; the chief cotton-growing section is in Bœotia.

In many parts of the district there are extensive flocks of sheep and goats. Sheep farming is the most profitable branch of stock raising. In general, however, the situation in Greece as regards this pursuit is not encouraging. In the past few years there has been a decrease in the number of horses and cattle, perhaps due to the existence of war during 1912 and 1913 and the resulting requirements of the Government. Furthermore, within recent years foot-and-mouth disease has done much harm; this is now believed to have disappeared.

Industry.

There are but few industries in this consular district outside of the principal cities, such as Athens, Piræus, Volo, Laurium, Trikala.

At Laurium are to be found mines of lead and silver, with smelting works therefor. In addition to the lead ore (galena blend, pyrites, sulphuric leads), a certain amount of zinc and iron ore is produced. Some of the leading ports to which shipment are made are Antwerp, Marseilles, Newcastle, and Swansea. Many small industries flourish at Volo, including manufactories of agricultural implements of simple character. At Trikala there is an electric-lighting plant, cotton gins, and factories producing shoes, gloves, hats, and silks.

Athens and Piræus, lying about six miles apart and connected by steam and electric railways, form for many purposes an economic unit. Piræus is the shipping point for Athens and is the chief port of the district and of Greece. It is also a busy manufacturing town of nearly 100,000 inhabitants. Knit goods and textiles, ice, paper, flour, wines and beers, oil, and soap are some of its manufactured products. In the city there are about 30 distilleries, some 15 flour mills, a dozen oil factories, with an equal number of iron-working plants; there are also 14 cotton and weaving mills.

The milling of flour at Piræus is an important and growing industry. To-day some 80 per cent. of the flour consumed in Old Greece is milled there. The adoption of modern appliances has increased the output as well as improved the quality of the flour manufactured. The average daily production of these mills is now 750 tons.

During the past year the Standard Oil Company made arrangements for the construction of a complete plant for the storage of oil, as well as a factory in which cans and cases will be manufactured for their own use in supplying oil otherwise than in bulk.

Naval Yard.

One of the largest works now receiving the attention of the Hellenic Government is the construction of a new navy yard and arsenal at Scaramanga, on the Bay of Eleusis, to supersede the present yard, which lies opposite on the island of Salamis. This construction is being carried out under the supervision and after the plans of a corps of British engineers. The estimated cost is in the neighbourhood of £3,000,000. No definite data is obtainable regarding this work, but it is understood that it will be several years before it can be completed. It will give to Greece a landlocked harbour for its fleet, with ample facilities for repair work. It will also provide a much more convenient location than the present one.

An adequate water supply for the cities of Athens and Piræus is a question that has been agitated for a long time. In recent years the augmentation of the population has made the need an even more pressing one. At present water is brought in from springs on Mount Parnes, an ancient Roman aqueduct and reservoir being partly utilised. An additional supply is also received from Kephissia, some ten miles above the city, where artesian wells have been driven.

Almost every year there are epidemics of typhoid fever, the cause of which can be traced in some measure to an impure and imperfect water supply. Almost every house in Athens has its own small reservoir, into which water is received at certain hours of the day from the city pipes. For this purpose the city is divided into districts, whose mains are in turn filled from the central reservoir.

Sewerage.

Not less important and pressing is the need for an adequate sewerage system. Many houses now have their cesspools, which are pumped out as occasion requires, but a large number have their pipes connected with the city drains, which were originally constructed to carry off surface water.

To meet this situation a bill was laid before the Greek Parliament at the close of 1913 looking to the construction of an elaborate water and sewerage system. The total cost of the work is estimated at £2,800,000.

Within the past year British architects have visited Athens to examine the ground with a view to beautifying the city. Many buildings are to be demolished; boulevards and avenues are to be laid out, etc. The outbreak of the war has put a stop to the project, but it is believed to be only in abeyance. Part of the general plan is the construction of a union station, the building of workmen's cottages, the reforestation of near-by hillsides in pines and cypresses, etc.

Engineering Notes.

Labour-saving Tools.

It is wonderful to notice the great progress that has been made within the last few years in the design and efficiency of this class of machinery. Everything to-day is for a rapid and accurate production at a minimum cost of labour. Screws, bolts, nuts, studs, handles, etc., are produced from the bar in hundreds per hour by a boy working one machine. Brass fittings, bushes, etc., are produced with equal rapidity, while surfacing, boring, milling, and drilling can be done all with one machine at high speeds by an ordinary man. It must be mentioned that some of the best designs of these machines are British, made as a rule in the Midlands.

A Small Pumping Outfit.

Considerable interest was attracted at a recent show by a 1½-h.p. pumping outfit specially adapted for small factories, country houses, and light estate duties, this being capable of raising approximately 600 gallons of water per hour. The engine and pump are mounted on one base, and the weight of the outfit (which was listed at £28) is roughly 490 lbs.

Dredger for Persian Gulf.

It is stated that a powerful suction dredger is being despatched to the Persian Gulf, and will be engaged in dredging the bar in the Shatt-el-Arab. At present vessels drawing 19 ft. of water can cross at high tide, but in view of the necessity for vessels of larger draught being able to proceed high up the river further dredging operations are to be started.

New Method of Galvanizing.

The galvanizing of metals, that is to say, the process in electro-metallurgy of depositing metals from solutions of their salts upon metallic surfaces, by the action of electric currents, is not unfamiliar to the metal workers in the East, whilst other processes of coating baser metals with gold, silver, zinc, copper, etc., were known to Oriental workers long before Galvani and Volta's electro-chemical discoveries were known and utilised in the West. Indeed, there are some very old "plated" Oriental jewellery, ikons, and articles used in Eastern churches and other places of worship that prove the above assertion, and likewise prove the superiority in appearance and substance of the old coating as compared with that on modern electro-plated articles. However, with reference to the "galvanizing" of metals, such as iron or steel plates, sheets, pipes, and other articles for commercial purposes, the ordinary modern process forms, in the East, an important part of an industry, which at the present time, owing to the scarcity and high price of zinc, spelter, and other metals, is, like everywhere, considerably embarrassed. The new method, therefore, of what is termed "dry galvanizing" may be of use to those who are interested in the industry, because it is more economical than the ordinary "galvanizing" method. It must be mentioned here that "galvanized iron" is wrongly named so, for it is not in any way electrically treated, as the name might seem to imply. It is simply iron dipped in molten zinc. The zinc forms with the iron an alloy which resists rust. This process, obviously, requires large quantities of zinc.

Dry Galvanizing.

The process of dry galvanizing differs from hot and electro-galvanizing in many respects. A point of particular interest in the former is that iron and steel can be coated with a thin, even deposit of zinc, at a temperature several hundred degrees below the melting point of zinc. The first step in the process is to free the iron from scale and oxide by any of the well-known methods, such as dipping in an acid solution or sand blasting. The articles to be "galvanized" are then placed in a closed iron receptacle, charged with zinc dust, heated to a temperature of from 500 deg. to 600 deg. F., for a few hours, and allowed to cool; the receptacle is then opened and the iron articles removed, when they are found to be coated with a fine homogeneous covering of zinc, the thickness depending on the temperature and the length of the immersion. It will be observed that the temperature required to bring about this result is about 200 deg. below the melting-point of zinc. The low temperature required and the economy effected on the zinc consumed make the process cheap, as compared with the process of dipping in molten zinc, and it is claimed to have the additional advantage that it does not deteriorate iron or steel of small section to the same extent as hot "galvanizing." The whole of the zinc is utilised, and there is no waste. The process of dry-galvanizing is not limited to the coating of iron with zinc, but can also be applied to coating iron with copper, aluminium, and antimony. It can also be applied to coating various other metals, such as aluminium and copper with zinc. Copper and its alloys subjected to this process are case hardened on the surface and rendered so hard that they are scratched with difficulty. The zinc powder used in the process is the zinc dust of commerce, and must not be confused with zinc oxide. It is obtained during the process of distilling zinc from its ores; and as zinc dust is used for a variety of purposes. It can be obtained in any desired quantity. One of the peculiar properties of zinc dust is that it cannot be melted or reduced to the metallic form under ordinary conditions, even when heated to a very high temperature under considerable pressure. Articles coated with grease receive as good, if not a better, coating of zinc, than those which are free from grease. This fact is important, as it enables machine work, such as bolts, nuts, screws, etc., to be thrown direct after machining into the receptable without any preparation or cleaning. This process of dry "galvanizing" offers many facilities and great economy to those manufacturers who have not sufficient work to keep a large bath of molten zinc continuously employed. Articles can be "galvanized" by this process at a few hours' notice, as the receptacle can readily be heated by gas or coke furnace. A useful type of furnace for small work consists of a closed iron chamber in the form of a cylinder or polygon, and arranged to be rotated or oscillated about an axis. The chamber is provided with an iron door, either at one end, or at the side, according to the class of articles to be treated. A side door is found to be the most suitable for small articles, such as bolts, nuts, small castings, etc., and the end doors for tubes, oblong or cylindrical articles. The surfaces obtained by hot and cold galvanizing and by dry galvanizing are different in each case, but they can readily be distinguished by those conversant with the three processes. In the case of hot galvanizing, the surface is spangled, or, if not spangled, has the appearance of cast metal. In the case of cold galvanizing the surface is free from spangles, and has a matted or frosted surface, uniform, if the work has been well executed. Dry galvanizing is again distinctive from the two former processes; the general appearance resembles more that of cold galvanizing, but is more lustrous and metallic, and is uniformly distributed over the whole surface, which is not always the case with the hot and cold galvanizing processes. The advantages that this dry galvanizing claims are, that there is no waste of zinc due to the formation of zinc iron alloys; less zinc is required; the temperature required is lower, consequently, the amount of fuel consumed is less; labour is less, as the articles do not require to be cleansed as carefully as in hot galvanizing; the cost of working is less; and the plant is very much cheaper.

Export of Merchandise to Roumania.

A petition has been submitted to the Ministry of Communications in Athens by the merchants of Salonika for the disposal of a number of wagons on the Bucharest-Salonika line for the export of merchandise to Roumania. The Minister of Communications promised that he would attend to the matter and take the necessary measures this week.

FIRE IN ALEXANDRIA.

On September 4 no fewer than four fires broke out at Alexandria, says the *Egyptian Gazette*.

At 9.15 p.m. the Tamvaco shoonah, at Gabbari, was found to be on fire. Cotton and cottonseed was stored there and a great deal of damage was done. At 11 p.m. a fire broke out in the shoonah belonging to the Presse Allemande. Twenty minutes after a fire broke out at Gabbari station, and soon after midnight a native house in Gamaa el-Miri Street was found to be on fire.

The Tamvaco fire was a somewhat serious affair, as, in spite of the efforts of the brigade, the shoonah has been almost completely gutted, and the loss may be estimated at anything from £E25,000 to £30,000. The shoonah contained two hundred thousand sacks, four thousand ardebs of cottonseed, and a hundred ardebs of wheat.

Near East Markets.

BULGARIAN HARVEST.

(From Our Own Correspondent.)

Sofia, September 4.

According to the calculations of the Ministry of Agriculture, the average figures of this year's crops amount to:—Wheat, 1,257,699 tons; rye, 193,605 tons; other grain, exclusive of maize, 2,078,789 tons.

SUDAN DATE CROPS.

(From Our Own Correspondent.)

Khartoum, August 31.

From Halfa Province it is reported that the prospects of the coming date crop are very favourable. In order that the natives may be able to dispose of their dates to the best advantage, it has been decided to establish Government date markets at Kosha and Delgo, and to forbid all transactions in dates in the districts of Sukkot and Mahas outside the limits of the Government markets.

SUDAN GUM.

The *Sudan Times* recently published an interesting article in its Arabic edition on the best means for improving the gum crops. The following are the suggestions proffered by the author:—

To make a commercial agreement for fixing a minimum price for gum. It is a well-known fact that whenever the prices of gum on the market fall, there is a proportionate fall in the interest which the population take in the gum trees; and vice versa.

To take precautions against the extension of forest fires, which are caused by burning of the dry grass during the dry season. The best precautions consist in clearing up long belts of land running east by west, and thus dividing the land into separate zones. As the prevailing wind during the dry season is from the north, if the fire should start in one zone or area, it is carried southwards by the wind until it reaches the cleared belt.

To dig up wells in the old or defunct gum gardens, in order to make it possible for the natives to cultivate these lands with grain crops.

A practical scheme for working out a system of rotations is suggested by the writer. He suggests that when the Ushur Assessment Committees in the gum districts proceed to assess the ushur, they should keep their eyes open to those lands where there appears to be a number of trees springing up among the dura. Such lands will be expropriated and taken up by the Government, the owners being compensated with equal tracts of land which were formerly gum gardens, and which are of great fertility for grain.

RICE CULTURE IN MACEDONIA.

Rice culture has not made great advance in Greek Macedonia. Domestic production is not equal to the demand, although the possibilities for the development of the local industry are considerable, says the U.S. Consul at Salonika, because of the abundance of marshy land in certain parts of this district. During 1914, 5,408 tons of rice were imported through the port of Salonika, while 1,125 tons were exported. The lack of development of the industry and the present large importation of rice is due to the shortage of agricultural labour in this district.

Vodena, near Salonika, is the chief centre of rice production in Greek Macedonia, the annual production in this region being estimated at from 30 to 40 long tons. Water runs continually through the soil in this region. The sowing season is in April and the crop is reaped in October. The yield per dounoum is from 300 to 800 okes of unshelled rice. One hundred okes will supply about 50 okes of shelled rice. About 10 okes of seed are required for sowing a dounoum.

M. Aristide Blank, of the firm of Marmorosch Blank and Co., who has been abroad on financial matters, has returned to Bucharest.

PRODUCE REPORT

London, September 23.

Currants.

The s.s. Erato arrived on Sunday, the 20th, and the s.s. Daphne on Tuesday with the first new crop fruit. The two ships together brought 2,000 tons. Some disappointment is expressed with regard to quality, which has evidently been affected by unseasonable rains and want of more spraying, the latter owing to an apparent scarcity of sulphate of copper. An unusual thing is the arrival of Vostizza fruit in bags, for which the scarcity of wood is responsible, as we alluded to in previous reports. Hitherto only common Provincial was sent in bags; but since boxes to contain ½ cwt. of fruit jumped from 8d. to 1s. 10d. each—and even at the latter price could not easily be obtained—nothing else could be done but to send even the higher grades in bags. Pyrgos is to-day quoted 30s. 6d., in bags, duty paid, and 33s. 6d. in boxes, also duty paid. Vostizza 41s. to 45s., and in some instances 50s. It must be mentioned that these prices are not the result in any way of the proposed new tax, as the currants, owing to a convention between England and Greece, pay only 2s. per cwt. duty, which, with the increase of 50 per cent., will be 3s., and not 10s. 6d., as in some papers was stated. The addition, therefore, of 1s. per cwt. on the duty will not affect the retail prices at all.

In Liverpool the s.s Fabian arrived on Monday with the first new fruit. The market there is now becoming active, as, owing to the scarcity of spot parcels, there was very little doing during the last two or three weeks.

Sultanas.

Prices continue to advance, and it is said that 65s. to 85s. has been asked for new fruit.

Figs.

Greek figs have advanced in price, and a fair business is being done for fruit to arrive.

Seeds.

Linseed.—The market is dull, and values easier; the demand generally has been unsatisfactory this week, and there is no improvement at closing. London-Calcutta spot is quoted 55s. 3d., Aug.-Sept. was sold 55s., Sept.-Oct. quoted 55s. 6d., Oct.-Nov. 56s. Cotton-seed is firmer, but quiet; London-Egyptian Sept. is quoted £10, October £9 16s. 3d., and Nov.-Jan. £9 5s. per ton. Rapeseed remains quiet, but held for full rates. Guzerat Sept.-Oct. quoted 60s., and brown Cawnpore pure basis, ditto, 53s. A moderate business is passing in canaryseed, and, although there is an improved tone in the market, no appreciable alteration in prices has taken place.

Oils.

Linseed oil is dull and neglected, but prices improved since last report; spot pipes £26, barrels £26 15s., landed, month £26 12s. 6d., Oct.-Dec. £26 15s., Jan.-April £26 17s. 6d., May-Aug. £27 7s. 6d. Cotton oil has been fully maintained, and there is a better demand; crude spot in pipes £27, refined pale pipes £30, and barrels sweet £35 to £36. Rape oil maintains a very firm tone, ordinary brown naked £34 to £35, English refined, barrels, £36 to £38.

Oilcakes.

Cotton Cakes.—There is no Egyptian to be obtained on the spot, but moderate business is being done in early new crop positions at £7 10s. to £7 15s., ex steamer to arrive. English makes are offered in moderate quantities at £8 2s. 6d. to £8 5s. per ton. Linseed Cakes.—Owing to the limited quantity available values are fairly well maintained, but trade is very restricted in consequence of the little consumptive demand. Best London made is quoted at £11 12s. 6d. to £11 15s., East Indian pures may be bought at £11 5s. ex steamer to arrive.

Locust Beans.

The demand is very good, but the scarcity continues, and prices are fully maintained at £8 per ton for whole, and £8 10s. per ton for kibbled.

Gums.

There is very little doing. Arabic, Turkish sorts offered at 57s. 6d. to 65s., Ghezira 15s to 46s., Myrrh, good to fine, 96s. to 100s. cwt.; Tragacanth, first, 560s. to 900s., and low to good sorts 96s. to 130s.

EGYPTIAN COTTON.

(From Our Correspondents.)

Cairo, September 8.

It is stated that a third species of boll-worm has been discovered. I have not been able to obtain, at the time of writing, any scientific description of this fresh pest, but, if reports are to be trusted, it is a serious menace to future crops.

[Further mention is made of the Egyptian cotton prospects on page 591.]

Alexandria, September 15.

Prices have steadily gone up. It seems as though high prices were to prevail this year, in view of the restriction of the acreage sown with cotton seed, and of the boll worm damage The crop this year will not exceed 5,500,000 to 6,000,000 kantars, and, together with last year's stocks still held, will suffice for the world's demand. The fellah is selling his cotton as he harvests it, fearing a drop in prices.

The quality of the new crop is satisfactory, and the fibre is good, but the yield per acre is low.

The demand from abroad is active, but arrivals could be improved.

The first gathering has given good results, but it seems as though the second and third gatherings will be insignificant.

Cotton seed prices show a tendency to rise, and are in great demand owing to the high price of oil and oilcakes.

COTTON MARKET.

Liverpool, November 23.

Egyptian Spot.—There has been less demand this week, but a fair business has been done at fluctuating prices. Quotations show an advance of 30 points for the week. Sales are estimated at 3,500 bales against 5,500 last week.

Manchester.

Since our last report the turnover in cloth for shipment has been disappointing, largely due to advancing prices in raw material which has checked business for India. There is a wide difference between offers, and prices put negotiations out of the question.

MEASURES AGAINST THE BOLL WORM.

Reuter's Agency reports from Cairo that a circular has been issued by the Ministry of Agriculture, in which cultivators are warned that the most stringent measures will be taken to ensure the strict enforcement of the terms of the Law No. 19 for 1912 as modified by Law No. 4 for 1914. The object of this law is to destroy all bolls which remain on the cotton plants after the last picking, and thus to prevent the worm from living to attack the crop of the following season.

It is so obviously in the cultivator's interest to save their cotton crop from the attack of this worm that they should be prepared to spare no effort in this direction. As it is a very simple matter to carry out the terms of the law, and the expense entailed is next to nothing, there is no excuse for those who fail to neglect to do so.

In order to rid the cotton sticks of the bolls remaining after the last picking, which are those in which the boll worms lie hidden, all that is necessary is either to let a herd of sheep or goats on to the field, or to engage a few children to go through the field after the last picking has been completed to pick and burn all the remaining bolls.

If cotton-sticks are found with bolls attached after the dates laid down in the law, they will be invariably burnt without delay, whether still standing in the field, stacked at the sides of the fields, in the dwellings, or in heaps ready for use in engines.

The Cunard S.S. Co., Ltd., and the Ellerman Lines, Ltd., have issued the following advice:—

"Until further notice persons or firms desiring to export goods to Greece, otherwise than on the authority of a Privy Council licence, are to be informed that before exportation can be allowed, the consignees in Greece should place themselves in communication with H.M. Legation at Athens and state what guarantees they can offer that the goods will be consumed in Greece. If the guarantees are satisfactory, instructions as to further steps which they should take in the matter will be communicated to them."

ALEXANDRIA NOTES.

(From Our Own Correspondent.)

Alexandria, Sept. 5.

The Situation.

The situation is improving. When war broke out Egypt was in a trying position, but since the beginning of the year the economic situation has improved so markedly that to-day it is almost normal.

Last year's depreciation in the price of cotton hit the fellah very hard. But the present rise will enable him easily to meet his debts and taxes.

The commercial balance in favour of Egypt has never been so marked as it is now. From January 1 to July 31, 1915, imports were £E9,634,713, as against £E16,356,196 in 1914, or a decrease of £E6,721,483 in seven months. The decrease in exports, on the other hand, was only £E2,415,715 (£E14,318,516 as against £E16,734,231). It will thus be seen that exports are higher than imports, which signifies increased revenues for the country. To the latter must, moreover, be added the revenues accruing from the presence of an increased British Army.

Sir J. Maxwell's Proclamation.

Sir John Maxwell's proclamation commandeering certain foodstuffs and articles of first necessity has had a most salutary effect. It will no longer be possible for unscrupulous dealers to make enormous profits at the expense of the public. One of the effects of the proclamation has been a drop in the price of sugar. The high prices prevailing for this commodity have been a source of great profit to dealers and to the Sucrerie et Raffinerie d'Egypte. The latter company will, as a matter of fact, be able this year to redeem some of its heavy mortgages.

Crown Brewery of Alexandria.

The Société des Sucreries is not the only one to realise good war profits. Another company is the Crown Brewery of Alexandria, whose output and sales have increased owing to the absence of German and Austrian beers on the market. Net profits for 1914 amount to £E5,323, distributed (after deductions made for amortisation) as follows: (1) 5 per cent. to reserve; (2) 5 per cent. interest on the share capital; (3) 10 per cent. to the Board; and (4) 15 per cent. to the special reserve. The remainder has been distributed to shareholders in the form of a bonus of 2 frs. per capital and preference share.

Results of the company's working during the past few months are brilliant, and it is expected that a higher dividend will be paid next year.

Increased Import Dues.

The increase in the import tariff on alcohol and tobacco has been favourably received by the public, who understand that the Government is intent on making both budget ends meet. As regards timber, however, the increase is openly criticised, principally in view of the scarcity and dearness of wood.

Alexandria Cotton Company.

It is announced that the important firm of P. Pilavachi and Co., Ltd., with offices at Liverpool and Alexandria, has been converted into "The Alexandria Cotton Company, Limited."

Credit Franco-Egyptien.

At the last meeting the directors' report was approved, and also the proposal for the reduction of capital with a view to cover doubtful credits. This will tend to normalise the company's position.

Credit Foncier Egyptien.

The board has proposed a dividend of 15 fr. per working share for the past financial year.

New Companies.

The following new companies have been formed:—Zoltos Frères, with a capital of £E4,000, importers; N. Alfieri and Co., with a capital of £E3,000, brokers.

COMPANY NOTES.

Ottoman Railway from Smyrna to Aidin.

The report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30 states that incorporated therewith are the accounts from Smyrna to August 31, 1914, since which date no further returns have been received. These accounts will be subject to adjustment as and when later returns are received. Payment of the interest on the preferred shares due May 1 last, amounting to £9,000, was postponed, the funds of the company being insufficient to meet it; but in view of the interest falling due on July 1 upon the Four per Cent. and Five per Cent. debenture stocks, meetings of the debenture holders were summoned and held in accordance with the deed of trust on June 11, when special resolutions were unanimously passed deferring all payments of debenture interest on both issues for twelve months after the signing of peace between the British and Turkish Governments, or for the period of three years from June 30, 1915, whichever period should be the shorter. The scheme provided, *inter alia*, that the deferred payments should carry interest in the case of both issues at 5 per cent. per annum, payable at the termination of the above-mentioned period either in cash or debenture stock at the discretion of the company. A special meeting of shareholders held on June 10 approved this scheme, and certificates for the interest due July 1 last, amounting to £74,175, were accordingly posted to the Four per Cent. and Five per Cent. debenture stockholders.

Our Bucharest correspondent writes:—"The creation is announced of a munitions factory in Bucharest, under the title of Fabrique de Munitions et d'Armes Soc. Anon. Bucarest. The capital is 1,000,000 lei in 2,000 shares of 500 lei. Only Roumanian capital is to participate. The principal shareholders are Marmorosch, Blank and Co., Jacques Catz, M. A. Badulescu, and Kiritzescu and Co. Thirty per cent. of the capital has already been deposited in the National Bank. The construction of the factory will commence immediately, the necessary machinery having already been acquired.

Constantinople Water Company.

The Constantinople Water Company, a French concern in which Swiss capital is largely invested, has declared a dividend of 55 piastres per share of 500 fr. on account of profits made in 1914. This belated payment (says the *Financier*) will be made on presentation of coupon No. 28 to the Imperial Ottoman Bank in Constantinople or at the offices of bankers in Neuchatel (Switzerland), a declaration being required in the latter case that the shares do not belong to enemies of Turkey, and the company will retain the bulk of the money until the Dardanelles are forced.

AGRICULTURAL BANK OF BULGARIA

(BANQUE AGRICOLE DE BULGARIE).

PRIVILEGED CREDIT ESTABLISHMENT.

ESTABLISHED IN 1864.

CAPITAL (fully paid-up) - - Frs. 45,500,000

Prince Line.

The Hon. Robert James presided at the annual meeting of the Prince Line Steamship Company held at York yesterday. The proceedings were private. The Press was subsequently informed that the report and balance-sheet had been unanimously adopted by the shareholders, and that a dividend of 15 per cent., making 19 per cent. for the year, had been declared. It was stated that at the subsequent extraordinary meeting a resolution was carried by an overwhelming majority approving the proposal of the directors to so alter the articles of association as to give the directors authority to, "in their discretion, without assigning any reason, decline to register any transfer of shares to any person not approved by them or any transfer of shares upon which the company may be entitled to a lien or any transfer of shares made to an infant or person of unsound mind."

Baku Russian Petroleum.

The report of the Baku Russian Petroleum Company (1909), Limited, states that the accounts show at the credit of profit and loss account (including £10,527 balance carried forward from previous year) a gross trading profit of £48,346, from which has to be deducted debenture interest, £5,532, and provision for taxes in Russia and England, £5,000, leaving a sum of £37,813, against which there has to be debited £60,236, the depreciation charged in the accounts, and accordingly the £40,000 already standing to credit of that account is reduced to £17,577, whilst the £40,000 standing to credit of general reserve remains intact. When considering the accounts, the year 1914 should be looked upon as consisting of two distinct periods—the first period from January to the end of May; the second from that date to the end of the year. During the first period operations of the company's properties at Baku were carried on under normal conditions, and the gross trading profit for the five months was satisfactory. During the second period strikes prevailed at Baku in June and July, which were followed shortly by the outbreak of the war. In this latter period the trading profits of the company were adversely affected by the loss of two months' production; by damage to wells arising from stoppage of work, and by unsatisfactory labour conditions owing to the war. The figures, therefore, are the result of ten months' working, whilst, of course, the standing and other charges and expenses are in respect of twelve months. During the year oil was obtained from eighty wells, also boring was proceeding on five new wells. At the end of the year sixty-five wells were producing, nine were undergoing repair, whilst operations on six were temporarily suspended. Owing to the outbreak of the war and closing of the Dardanelles, important parts of new boring machinery could not be delivered at Baku. The Dutch and German drillers engaged in connection with this work were either repatriated or interned. The commencement of operations with the new plant and machinery was delayed for some time until other drillers could be engaged and the missing parts could be procured in Baku. Some of the items and charges in the Russian accounts seem to be rather heavy. Steps have already been taken to effect some economies at Baku. The directors propose to make a closer investigation into the expenditure at Baku as soon as war conditions permit. The London administration charges have also been engaging the attention of the board and arrangements made securing considerable reductions.

COMPANY RESULTS, &c.

Anglo-Egyptian Oilfields. — Gemsah, week 134 tons, previous week 150 tons. Hurgada, week 245 tons, against 168 tons.

Baku-Russian Petroleum.—Mr. Herbert Allen has ceased, dating from August 11, to be a director of this company.

Egyptian Delta Light Railways.—Traffic returns for the 11 days ended August 31 amounted to £E4,775, as against £E4,431 for the corresponding period of last year.

Khedivial Mail Steamship and Graving Dock.—Holders of preference share warrants to bearer should present coupons Nos. 33 and 34. Transfer books will be closed from 27th to 30th instant, inclusive.

Ottoman Railway from Smyrna to Aidin.—Meeting 28th inst., noon, Winchester House, E.C.

Roumanian Consolidated Oilfields.—Production for the week ended 11st inst. : 1,581 tons. Moreni well No. 30 still flowing steadily.

Suez Canal.—Receipts for the 21st inst. amounted to 190,000 frs., as compared with 330,000 frs. the corresponding day a year ago.

NOTES OF THE WEEK.

The events immediately following the issue of the Royal Decree for the mobilization of the Bulgarian Army have made it possible to gauge the inwardness of Bulgaria's action. It was something more than a *coup de théâtre* on the part of King Ferdinand. Public opinion in Bulgaria is divided into three camps, representing those who wish to make common cause with the Central Powers, those who realize that the country's interests require its co-operation with the Quadruple Entente, and those who think that Bulgaria ought to remain neutral. To the first category belong King Ferdinand and his advisers, but in view of the attitude of the bulk of the nation they have hesitated to take the fatal step. German insistence and German threats, however, became more alarming, and it was decided to try the effect on all concerned of a mobilization of the army. Dr. Radoslavoff, the Premier, would seem, if a statement attributed to him be true, to have been told off to represent the mobilization as undertaken in friendly understanding with Turkey. The explanation at least coincided with the chief factors in the situation that a leaning towards the Germanic Powers had prompted the step, and that the latter alone would be inclined to regard the mobilization with favour.

If the Bulgarian authorities were anxious to know how the mobilization order would be received, they were not kept long in uncertainty. In Bulgaria itself it was obeyed without enthusiasm, in such a way as to leave no doubt as to the unpopularity of the step. Abroad the effect was instantaneous. Within twenty-four hours after the facts were known in Greece the Government of M. Venizelos had obtained King Constantine's signature to a Decree for the mobilization of twenty classes of the Reserve. Bulgaria's opportunity for effecting any surprise movement on Germany's behalf had practically vanished. It became necessary, therefore, to explain away her action. The mobilization, it was pointed out, was not directed against Serbia. Bulgaria entertained no aggressive intentions, but was firmly resolved to defend by force of arms her rights and independence. In view of the possible extension of the area of hostilities the necessity of taking precautionary measures for the defence of the country was apparent. This subtle allusion to the threatened invasion of Serbia by an Austro-German force was, no doubt, regarded as a master stroke of Bulgarian diplomacy, as it would tend to put Bulgaria right with the Entente Powers.

The actual effect of the explanation can hardly have been what Bulgaria's rulers anticipated. They were shown to be playing fast and loose with both belligerent parties, and to be prepared to sacrifice the interests of their country merely from a desire to adopt a policy of adventure. If it were true that the Radoslavoff Cabinet had any reason to anticipate a menace to its independence from an Austro-German advance, its duty to Bulgaria was clear. It ought at once to have made common cause with the Quadruple Entente for the protection of its rights. If there were no danger of such an advance, then Bulgaria's integrity was in no way threatened, and there was no justification for the costly indulgence in mobilization. A week ago we ventured to hope that behind the mobilization lay the first glimmerings of a realization on the part of the Bulgarian Government that an Austro-German victory would ultimately lead to Bulgaria's loss of independence, and that Bulgaria's salvation must be worked out in co-operation with the Entente Powers. If this had been the case, no time would have been lost in overtures to the Allied Governments. But it is now known that the Bulgarian Government took no step in this direction.

The last hope of there being some honest purpose behind Bulgaria's action was shattered by the Foreign Secretary's speech in the House of Commons on Tuesday. Sir Edward Grey's remarks showed conclusively that Bulgaria had mobilized without seeking to arrive at the shadow of an understanding with the Quadruple Entente on the subject. They showed too, unfortunately, how wide is the breach brought about between Bulgaria and Great Britain by the policy of King Ferdinand and his advisers, for Sir Edward Grey was not even at pains to cloak his meaning in diplomatic circumlocution. He began by recording the traditional attitude of Great Britain to Bulgaria. "Not only is there no hostility in this country to Bulgaria, but there is traditionally a warm feeling of sympathy for the Bulgarian people. As long, therefore, as Bulgaria does not side with the enemies of Great Britain and her Allies, there can be no question of British influence or

Digitized by Google

forces being used in a sense hostile to Bulgarian interests; and, as long as the Bulgarian attitude is unaggressive, there should be no disturbance of friendly relations." The British Foreign Secretary then added this deliberate warning:—"*If, on the other hand, the Bulgarian mobilization were to result in Bulgaria assuming an aggressive attitude on the side of our enemies, we are prepared to give to our friends in the Balkans all the support in our power in the manner that would be most welcome to them, in concert with our Allies, without reserve and without qualification.*"

Sir Edward Grey would not have uttered this warning unless the British Government had some ground for believing that there was a distinct danger of Bulgaria adopting the course against which she is thus warned. The fact that such a danger existed has been recognized in these pages, for the reason that, with the destinies of Bulgaria in the hands of its present rulers, there can be no guarantee that the real interests of the country will be the deciding factor in any State decision. We have believed, however, as was stated last week, that in the present instance the sound instinct of the Bulgarian nation would prevail over folly and worse in another place. Before Sir Edward Grey's speech was made the Bulgarian mobilization had been thwarted of its real purpose A variety of circumstances had combined to give King Ferdinand and his advisers pause—the check to the German arms in the eastern theatre, the significant successes of the Allies in the west, and, last but not least, the manifest reluctance of the Bulgarian nation to embark upon a policy of national suicide. Sir Edward Grey will have helped the Bulgarian Government to retrace its steps into a course of sanity, which, we may hope, will ultimately lead Bulgaria to the realization of her national ideals. We could have wished, however, that the whole of Sir Edward Grey's speech could have been delivered many months ago, for we cannot help thinking that if the British Government could have shown at the outbreak of the war the same firmness in dealing with the Balkan situation, the course of events in the Near East would have taken a very different course.

For the future, the Bulgarians have no excuse for misunderstanding the attitude of Great Britain. It was very clearly laid down by Sir Edward Grey. "Our policy," he said, "has been to secure agreement between the Balkan States, which would assure to each of them, not only independence, but a brilliant future, based, as a general principle, on the territorial and political union of kindred nationalities. To secure this agreement, we have recognized that the legitimate aspirations of all Balkan States must find satisfaction. The policy of Germany, on the other hand, has been to create for her own purposes disunion and war between the Balkan States. . . . . It would naturally be Germany's policy to use any Balkan State she could influence to further this plan [to realize the German aspiration of German influence from Berlin to Baghdad], with the inevitable result that that State would eventually be subordinate to her; and, though territorial gains might be promised, it would lose real independence. This is directly contrary to the policy of the Allies, which is to further the national aspirations of the Balkan States without sacrificing the independence of any of them."

Bulgaria's difficulty will now be to remove the obstacles which stand in the way of her realizing her national ideals through the agency of the Quadruple Entente. If King Ferdinand and his present advisers had been able to have their own way, Bulgaria would have been bound to the German chariot, and the knell of her independence would have sounded. It remains to be seen whether they can trim their sails in a manner acceptable to the nation as a whole, or whether important changes in the government of the country will have to be effected before Bulgaria can come into her own. Great Britain will be anxious to make the task as easy as possible, but the matter rests in Bulgarian hands.

In contrast with the absence in Bulgaria of enthusiasm over the mobilization of the Army, the steps taken by M. Venizelos have evoked the most gratifying response throughout Greece. The first point that emerges from the course of events during the last week in Greece is that a complete understanding exists between King Constantine and M. Venizelos. There was no delay in the issue of the Royal Decree mobilizing the Army, and there is ample evidence that, if Bulgaria moved against Serbia or her Allies, Greece would at once act. Roumania could hardly fail to follow her example. For the moment the Roumanian Government is adopting a watching attitude. It has 160,000 men under the colours, and all preparations have been made for the instant mobilization of the remainder of the army, when the time comes. The faith of the Bratiano Cabinet is not robust enough to make it throw in its lot "without reserve and without qualification" with the Quadruple Entente, while Russia is still being driven back by the Germans. It would prefer to find an opening for military co-operation when there is a surer prospect of a speedier termination of the struggle; but if Bulgaria were to adopt an aggressive attitude, Roumania would not hesitate to act. There is a desire on the part of many Roumanian politicians to come to an understanding with Bulgaria, but the intransigeant attitude of the Bulgarian Government has so far checked the scheme.

Recent events in the western theatre of the war, the Russian stand against the Austro-German forces, and the prospect of developments at the Dardanelles, are likely to make a profound impression on all the Balkan States. The Allies' successes in France and Flanders offer the first concrete proof that Germany does not necessarily possess the invincibility to which she lays claim. If they are followed by successes of a similar nature on Gallipoli Peninsula, we may expect to see the present power of the Pro-Germans in the Balkans at once swept away, and the last hindrance to the adoption of a common policy in the interests of the Peninsula as a whole will have been removed.

Significant news comes from Mesopotamia. The British Expeditionary Force has engaged and defeated the Turks at Kut-el-Amarah, and the possibility of an advance up the Tigris to Baghdad need no longer be ignored. The Turkish advanced position was seven miles east of Kut-el-Amarah, astride the Tigris, which here runs due east, and extending for some miles on either bank. After a fight which only lasted until the early afternoon, thanks to a successful night march which brought some of our troops on the enemy's left flank, where they were least expected, the Turks evacuated their trenches and retired west. They were pursued, and abandoning the position immediately defending Kut-el-Amarah, fled "towards Baghdad." The official report adds: "Our force is pushing in pursuit." Baghdad is little more than a hundred miles as the crow flies from Kut-el-Amarah, but double that distance by the tortuous course of the Tigris. Kut, in turn, is some 300 miles from the Persian Gulf. The expeditionary force has, therefore, covered three-quarters of the distance to Baghdad, and it is very doubtful whether the terrain between Kut and Baghdad lends itself to the preparation of any formidable defence works by the enemy. Throughout its advance it has been uniformly successful. The Turks have in nearly every instance fought well, but have not been equal to resisting the British attacks. The pre-occupations of the Ottoman Government in Europe have doubtless prevented it from giving all the attention it would have liked to give to the campaign in Mesopotamia. Even Djemal Pasha's force for the conquest of Egypt melted away before the imperious demands for reinforcements for the Dardanelles. It was unlikely that troops would be spared for a still more distant theatre at the head of the Persian Gulf. Reports are still being spread of what is yet to be done against Egypt; but even if the preparations for a fresh attack were being made seriously, it might be doubted whether they will be in time to forestal far more important developments in European Turkey.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 21.

H.H. the Sultan.

It has now been definitely decided that the seat of government will not be removed again to Cairo until the end of October. H.H. the Sultan and the Ministers were to have returned to the capital for the winter in another fortnight, but as Kourban Bairam falls about October 18, it was thought best to defer their departure from Alexandria until after the five-day feast. By that time it is hoped that the repairs and alterations to Abdin Palace, including the erection of iron railings round the section facing the square, will have been completed.

The Attempt on Fathi Pasha.

The inquiry into the attempted assassination of H.E. Ibrahim Pasha Fathi, Minister of Wakfs, has for all practical purposes been concluded, and the Procureur-General has transmitted the *dossier* to the military authorities for the necessary action. There is but one accused in this case—Saleh Abdel Latif, the man who committed the act. He still maintains the callous and disdainful attitude that he adopted at the outset, and, in addition to the threat which he levelled at the head of the Minister of Justice at the beginning of the inquiry, he openly boasted of having shadowed Rushdi Pasha, the Prime Minister, whom he would have assassinated if he had got away from the station after his attempt on Fathi Pasha.

The information contained in a previous letter (of the 8th inst.) as to the bad antecedents and immoral conduct of Saleh Abdel Latif is now fully confirmed. Steps have been taken to ascertain what has become of the £E800 he embezzled from the public funds; for the theft was effected on the Thursday, and on the Saturday, when he was arrested, he had only a few pounds on him. It is not possible for him to have spent this large sum in such a short space of time, and it is believed that a large portion has been hidden away somewhere by him or by his boon companions. Albeit no accomplices have been found, and the accused claims for himself full responsibility for his act, those who understand the working of the Oriental mind, and have been close observers of the tactics of the reactionary Egyptian element during the past decade, are convinced that this is no isolated act, but that it is part of a widespread conspiracy directed from Europe by the Nationalist party. Naturally, the authorities are disinclined to make any statement on the point, but there are ample indications that these revolutionary acts owe their inspiration to a common source.

I am glad to be able to report that H.E. the Minister of Wakfs has almost completely recovered from his wounds. He has been out for several drives, and has been able to attend to part of his duties. It may be of interest to note that Fathi Pasha was sitting by the side of the Sultan when the recent attempt was made on the latter in Alexandria, and that he took a prominent part in the subsequent inquiry, and rendered material assistance in the detection of the accomplices. Nine persons are now in custody in connection with the outrage on the Sultan, and the authorities state that they have sufficient evidence to warrant their being brought to trial. One of the accused is a teacher in the Moslem Benevolent School in Alexandria, one an employee of the Egyptian State Railways, two are lawyers, one a doctor, and four are students or ex-students in the Government Schools. It is understood that all are being held at the disposal of the military authorities, but the date of their trial by a military court has as yet not been fixed.

H.E. Hussein Pasha Rushdi, the Prime Minister, gave an interview to a local contemporary this week, in the course of which he made some very pointed remarks as to the net result of any successful attempts on the life of the Sultan and his Ministers. He confirmed the view recently expressed by your correspondent that if this country were to lose its ruler at the hand of an assassin, annexation by Great Britain would ensue, and added that even if the threats levelled at those holding Ministerial posts did achieve the object of those responsible for the creation of what they hoped would be a reign of terror, i.e., the deterring of all Egyptians from accepting such high positions under the existing régime, the sole result would be that British Ministers would be appointed, and the national position of all Egyptians would be worse than before. Rushdi Pasha also pointed out that even supposing Germany proved victorious, and forced the British to leave Egypt, it would only be to replace them on the banks of the Nile; and that the history of the two nations plainly showed that such an eventuality would have the most disastrous consequences for the Egyptian nation. The statements made by the enlightened Premier are welcome. One is, however, tired of expressing the hope that they will be taken to heart by the wretched miscreants who have schemed, and are still scheming, against the lives of the Ruler and the Ministers of this country. It would appear that only the most drastic action in regard to both principals and accomplices will have the effect of setting a term to their machinations.

The Wakfs Scandals.

The cases against Khairy Pasha and others for misapplication of funds have been postponed until the 24th prox. Meanwhile Mohammed Pasha Said, the ex-Premier, who was appointed Curator of the Seif-ed-Dine Daira, has succeeded in settling out of court the action which he had brought against the Egyptian Enterprise and Development and Gharbia Land Companies for the cancellation of the land exchange which his predecessor, Hussein Pasha Moharrem, had arranged. It is understood that the Daira retains the two Alexandria buildings, and purchases only one of the estates, that had been offered in exchange, at £E15 per feddan less than the price originally fixed. Said Pasha is certainly to be congratulated on having extricated the Seif-ed-Dine Daira from its unfortunate predicament without a lawsuit, which, apart from the fact that it would certainly have proved protracted, would at the same time have been unpleasant for all parties.

TRIAL OF CAIRO ASSASSIN.

Saleh Abdel Latif, who, on September 4, stabbed Fathi Pasha, Minister of Wakfs, at Cairo Station, was on Monday charged with attempting to murder Fathi Pashi, and with compassing the death of the Premier and the Ministers of Justice and of Wakfs. He pleaded guilty to the first charge and not guilty to the second, although the second was based on statements which he himself made after arrest. The trial concluded at two o'clock, and the verdict was forwarded to the General Officer Commanding. On the Wednesday the prisoner received sentence of death.

ARREST OF BRITISH SUBJECTS.

According to private messages from Constantinople received in Sofia viâ Dedeagatch the Turkish authorities arrested and deported to the interior on September 18 nine British subjects.

ARMENIAN REFUGEES IN EGYPT.

(From Our Own Correspondent.)

Port Said, September 19.

Two French warships which recently arrived here have landed over 4,000 Armenian refugees, the first instalment of a multitude of destitute, homeless people, who for weeks past have been tramping the mountains, escaping from their life-long enemies and oppressors, the Turks.

The stories told by these unfortunate refugees go to show that a descent was made by Turkish soldiers and Bashi Bozouks on the peaceful villages of Armenia, and that women, children, and old men were mercilessly turned out of their houses and driven with sword and whip into the mountains. A large number of the young men were forcibly enlisted in the Turkish army, death being the only alternative; while a certain proportion of the men fled at the approach of the Turks, and, armed with ancient rifles and revolvers, succeeded in keeping them at a distance while making their way with the women and children in a southerly direction to the coast.

For several weeks these unhappy people wandered over the mountains with little food and less shelter, and hundreds are said to have died through the privations endured. Women and children fell in the mountain paths, weakened through lack of food, and had perforce to be left to die of cold and starvation. A guerilla warfare was maintained all the time between those of the refugees who had weapons and the Turkish troops.

As the refugees came within sight of the coast at Antioch Bay, near Aleppo, two French cruisers appeared, and the Armenians signalled for help. The guns of the warships opened fire on the Turks, thus keeping them back, while the women and children were brought down the mountain side and taken off in the cruisers' boats. A large number of men also came with the boats, but some of them preferred to remain on the hills and continue the guerilla warfare against the hated Turk. In certain parts of the mountainous district almost impregnable positions have been taken up by the Armenians, who, having entrenched themselves, are successfully keeping the foe at bay. Desperate in the knowledge that they can expect no mercy at the hands of the Turks, they are prepared to sell their lives dearly, and are said to have already accounted for several hundred Turkish soldiers and irregulars.

The refugees are being temporarily harboured here in the spacious 'tween decks of an Australian transport, while shelters and tents are being erected for them on the Asiatic side of the harbour. As the greater proportion of these unfortunate people are very poorly clad, efforts are being made locally to provide them with clothing. The Armenian Patriarch of Egypt has arrived from Cairo with several Armenian doctors and other members of the colony, who are doing everything in their power to help alleviate the misery of their compatriots, the first and most necessary steps in this direction having been taken by the British military authorities.

The French cruisers, which returned after handing over their charges to the authorities here, are expected back shortly with several thousand more refugees.

BARRACK LIFE IN KHARTOUM.

(From a Correspondent.)

The experiences of the British soldier in the Sudan, even more than in Egypt, are usually very pleasant, and the minimum of grumbling, even from the most chronic of malcontents, is heard. Notwithstanding the undoubted climatic and other trials to health and temper entailed by a long sojourn in Khartoum throughout the year, the lot of the British garrison is by no means unpleasant. Indeed, it may be said that everything that common sense, coupled with good discipline, can suggest for the advantage of our troops undergoing barrack life in the far Sudan has been and is being done. There is a complete absence of pampering, but a plenitude of comfort. The principal British barracks are those at Khartoum contained in a series of large and airy brick buildings, connected, and situated in a pleasant and healthy position upon the banks of the historic Blue Nile. An abundance of tree-shade is afforded—an immense advantage where the glare of the fierce African sun must be endured for three hundred out of the three hundred and sixty-five days of the year. Special attention has likewise been devoted to the number and the character of the bath-houses. "Tommy," above all things, is a very clean person; the lack of bathing facilities, to which so many residents in the interior of the generally waterless Sudan must accustom themselves, concerns him not at all, In addition to many bath-houses—including some fitted with showers—the British soldier upon occasion has the privilege of bathing in the waters of the Nile itself, and of that privilege he avails himself as fully as the regulations will permit.

The barrack-rooms are lofty, being constructed upon the bungalow system, and the electric light is found practically everywhere. The latter fact proves somewhat of a mixed blessing, since it attracts myriads of insects, ranging from the irritating, almost invisible midge to the lumbering, noisy night-beetle, which, in ever-increasing battalions, whirls madly around, and finally dashes against the electric-light globes, heaps of scaly bodies being swept up every morning and thrown away. Mosquitoes also are attracted, but owing to the excellent, severe sanitary precautions in force the number and deadliness of these tropical pests are not found to be very serious.

Like the rations served out, the barrack-room meal hours in force among the troops at Khartoum are strictly adapted to the peculiar climate of the country. Early breakfast is provided at 5.30 a.m., consisting of bread, some kind of preserve, and occasionally of some cereal food; dinner, served at noon, consists of meat variously cooked, vegetables, and plenty of good, wholesome bread; tea, taken at 5 p.m., includes tinned fruits, preserves, etc. Few, if any, complaints are recorded among the men in regard to the character of the catering, especially since a change was made in the contractors, whose services are carried out under the strict supervision of the military authorities.

"Tommy" is not permitted to fall into the pernicious sluggish habits which a sojourn in a hot climate, unattended by sufficient physical exercise, is calculated to produce. In the Sudan, as in India, during the intensely hot days and nights of summer the human being must be careful both of his food and of his drink. In the great majority of cases where long residence is obligatory—some of the British regiments have served in Egypt and the Sudan uninterruptedly for seven years, although the 2/3rd City of London Regiment (Royal Fusiliers), which has just left Khartoum, only arrived there from Malta in April last, thus remaining but four months in the Sudan—this rule is so well understood that the men go home as "fit" as they come out. There is but little necessity, perhaps, for either officer or man to measure out his food by ounces or his drink by gills, to abstain from this food or that, or dread to taste of an ice-pudding or to shudder at the mention of a cocktail. The present generation at least lead a hardy, simple life, enjoying it, in marked contrast, one would say, to the earliest military settlers in the East, who appear to have been an indolent, dissipated, gasping lot of swollen-livered individuals, from the general downwards.

The Sudan military authorities have very wisely ordained that "Tommy" shall have sufficient but not too much physical exercise. Rising at 5 a.m., he has two hours of sound drill from 6 to 8 a.m., and that is all the violent exercise for the day. Between 10 and 11 a.m. there is an inspection of the barrack-rooms, beds, rifles, and bayonets. Consideration is shown in many ways for the men's physical comfort, as, for instance, allowing them to discard their tunics when upon parade owing to the great and often prostrating heat of the summer climate.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, September 17.

The Austro-German Invasion of the Balkans.

Much uneasiness was felt in Athens yesterday on account of telegraphic news received stating that a large number of German troops were concentrated on the Hungarian frontier and announcing their early descent upon the Balkans to go to the aid of their allies at Constantinople. As no official confirmation has up to the present been received, however, it is believed that this threat, held out repeatedly for so many months, is only a piece of bluff, at any rate for the moment.

The probable consequences of such an invasion are much discussed in the Press. Whatever route the troops might take to gain Constantinople, it is feared in political circles that such an advance, if made, would cause a general conflagration in the Balkans, which would probably involve Greece also. In certain Germanophil circles it is said that, in order to maintain Greece's neutrality, Germany would prevent Bulgaria from profiting by this invasion to attack Serbia, in which case Greece would be obliged to intervene on behalf of her ally; and in support of this assertion, it is added that it is in Germany's interests to prevent the uncovering of another front in the Balkans, above all at the present moment. From this it would seem that Bulgaria's *rôle* will be limited to guarding the flank of the German troops, by keeping Roumania in check should she seem disposed to come to the aid of the Serbians in order to prevent the Germans from reaching Constantinople. However, contrary to these statements, the latest telegrams say that Germany will make every endeavour to secure the co-operation of Bulgaria before deciding on the projected invasion.

Roumania's Attitude.

In spite of the rumours current that Roumania has definitely thrown in her lot with the Entente Powers, nothing is yet certain, and it would seem that, like Bulgaria, she continues to sit on the fence, finding herself in a very difficult position owing to her geographical situation, which, in a large measure, renders her financially dependent on Austria-Hungary and Germany. It appears that in consequence of her refusal to allow the transit of munitions for Turkey across her territory, the two allied empires, in order to exercise pressure upon her, threatened to close the outlets for her harvest, which this year represents a value of 700 millions (lei).

It is reported here that for some time Greece and Roumania have been endeavouring to come to an agreement, with the object of securing co-operation between Greece, Roumania, and Serbia against Bulgaria and her eventual allies. Greek official circles, however, are very reticent on the subject, and the *Patris*, the leading Government organ, denies that negotiations have yet been opened between the two States. The descent of the Germans on the East, should it take place, and that at a time when the Entente Powers are making a final effort to persuade the Balkan States to co-operate with them, would no doubt have a very considerable influence on the decisions of these States, and could not but increase their present hesitation.

M. Venizelos's Position.

The Greek Government is closely watching the new phase which the Balkan situation is tending to assume. Certainly no one would counsel Greek participation in the European struggle at the present juncture, for circumstances now are no more favourable than they were last February. Thus M. Venizelos could not help following the policy of neutrality advocated daily by the Germanophil Press if, contrary to expectations, Roumania should not offer any resistance to the passage of the Austro-Germans and prevent them from linking up with their Turkish allies. But should the Balkans be involved in a struggle on which the future of the various States of the Peninsula would depend, then M. Venizelos would not hesitate for a moment to intervene. If, therefore, Roumania departs from her neutrality and unites with the Russians and Serbs to prevent the projected Austro-German invasion, and Bulgaria seizes the opportunity to attack either Roumania or Serbia, how, asks the Ministerialist *Patris*, could Greece do anything but intervene to restrain Bulgaria and defend her own most vital interests, while at the same time serving the cause of the Entente?

In the event of Bulgaria mobilizing, Greece would be compelled to take the same step, to secure herself against a sudden occupation of Kavalla, or, perhaps, even of Salonika. Such an eventuality, which would have the effect of bringing the two armies face to face, would almost inevitably lead to a conflict, in view of the hatred which exists between the two peoples. M. Venizelos foresees that, one way or another, Bulgaria is about to aggrandize herself, and that as soon as she feels herself bigger and stronger than Greece, she will not fail to declare war on the latter, so as to wrest Macedonia from her. As for the guarantees which Germany would be disposed to give—that is to say, compelling Bulgaria to respect the territorial integrity of Greece—no value can be placed on these, even if she should be victorious. Therefore, judging by the tone of the Government Press, M. Venizelos appears to be of opinion that should it be impossible to obtain Bulgaria's co-operation on the side of the Entente—in which case Greece would also obtain an extension of territory—it would be preferable for the latter, should an opportunity present itself, to settle accounts with her now, while conditions are more favourable to Greece.

According to M. Venizelos, to maintain its policy of neutrality until the end of the war would mean the ruin of Greece. His principal mouthpiece, the *Patris*, openly declares that "Greece will in no case allow the creation of a Big Bulgaria, her natural rival and enemy, without obtaining a similar extension of territory. And if those (hinting at the King) who have the right to disapprove of the policy of the responsible Government of the country prefer that of the Opposition, the former is ready to make way for another Government."

In order to make the meaning of these statements more clear I may add that certain anti-Venizelist journals which are supposed to represent the opinions of high circles have stated more than once that the King is determined to insist on the continuance of neutrality, even should Bulgaria profit by the German invasion to attack Serbia, and that he would not recognise any *casus fœderis* that would compel Greece to come to the aid of her ally, Serbia.

Demarche of the Entente at Sofia.

It is with these same ideas in mind that the Venizelist Press again reproaches the Western Powers with treating Bulgaria too considerately, by leaving her free to choose at her leisure between the offers of the two belligerent groups, and thereby creating a danger not only to themselves, but also to Greece. It would seem that M. Venizelos has already made this view known to the Entente Powers, having declared that if they allow Bulgaria to negotiate indefinitely with both sides they will create a situation which no sacrifice on the part of Greece could remedy. It is hoped, too, that the *démarche* made by the representatives of the four Powers to Bulgaria last Tuesday took a peremptory form, and that the concessions offered aim at obtaining not simply her neutrality, but her effective co-operation.

The contents of this communication appear to have been kept secret. It seems, however, that, together with Serbia's reply, the Western Powers communicated to the Bulgarian Government the reply of Greece.

BULGARIAN LETTER.

(From Our Own Correspondent.)
Sofia, September 11.

Bulgaria and Armenia.

On Wednesday Dr. Radoslavoff received a deputation which presented to him a memorial regarding the situation in Armenia. The deputation, which was led by M. Nazarian, a representative of the Armenian Bishop in Bulgaria, consisted of six deputies of the Bulgarian Parliament, representing various political parties in the Chamber, and two representatives of the Bulgarian Press. The Prime Minister was extremely sympathetic, and declared that he has always been interested in the condition of the Armenians, and has always done whatever he could to alleviate their lot. He also informed the deputation that three days earlier King Ferdinand had received telegrams from the Armenian bishops in Armenia and Egypt, asking him to exert his influence to put a stop to the outrages perpetrated by the Turkish authorities upon the Armenians. These telegrams King Ferdinand had handed to Dr. Radoslavoff, who had forwarded them to the Bulgarian Minister at Constantinople, with instructions to deliver them to the Sublime Porte, and to declare that "the personal will of the King of the Bulgarians is that the outrages against the Armenians should be stopped."

Accepting the memorial, the Prime Minister promised that he would have it translated into French and forwarded to the Bulgarian Minister at Constantinople, with instructions to take the necessary steps at the Porte. He also expressed a hope that positive results might be expected from Bulgaria's action. Referring to Armenian refugees, Dr. Radoslavoff promised that every facility should be granted to them, that no difficulties should be raised over the question of passports, and that, as has been the case during the past twenty years, Armenian refugees will find a cordial welcome in Bulgaria.

Important Statement by Dr. Radoslavoff.

The Prime Minister declared to the delegates that Bulgaria is ready to face the events to which the general situation is leading up, and that the economic condition of the country is fairly satisfactory. This year's crops which are required in the country will be reserved, and only the surplus will be permitted to be exported.

A member of the deputation, Dr. Fadencheht, representing the Radical parliamentary group, seized the opportunity to express to the Prime Minister the misgivings of the Opposition lest the Government should commit itself and the country to an adventure by deciding to attack Serbia. To this Dr. Radoslavoff replied: "To-day, when I am negotiating with the Entente Powers regarding the concessions that Serbia ought to make to Bulgaria, it cannot be thought, even for a moment, that the Government is deliberating an attack on Serbia, thereby involving the country in a catastrophe. For one moment, gentlemen, do consider that the Ministerial seats are occupied by Bulgarians, who love—as you yourselves do—their country, our dear fatherland."

The Turco-Bulgarian Agreement.

Questioned regarding the course of the Turco-Bulgarian negotiations, the Premier readily made the following important statement:—"I may declare that our relations with Turkey are excellent. We are dominating in fact the territory along the Maritza and the railway to Dedeagatch. Our new frontier with Turkey follows the course of the river Tunja to Adrianople, leaving to Bulgaria a certain hinterland, with Kara-Agatch remaining in our territory. From Kara-Agatch to Sufli the frontier runs two kilometres east of Maritza, and from Sufli to Enos it runs along the left bank of the river Maritza. By the agreement Bulgaria has not undertaken any engagements towards Turkey. We have been granted these concessions in recognition of our neutrality up to the present."

Recruits Disbanded.

The Ministry of War has issued an order for the disbandment of the thirty-seventh class of recruits, their term of service having expired.

BULGARIA AND GREAT BRITAIN

DR. RADOSLAVOFF'S MESSAGE.

On Tuesday the *Morning Post* published a most interesting interview granted to one of its representatives by M. Constantine Stephanove, Professor of English at the University of Sofia, who is at present on a mission to this country to explain the position taken up with regard to the war by the Government and people of Bulgaria.

After explaining that he did not come in any official capacity, but that he represented Bulgarian associations which are anxious that the true position of affairs should be understood in this country, M. Stephanove said: "I had a long conversation with Dr. Radoslavoff, who had been informed of my intended journey, and he said: 'You can tell the English people that the Bulgarians entertain towards them the very friendliest feelings. Between the two nations there is an historical bond of sympathy. We, on our part, do not forget that in the past England has been the champion of Bulgarian unity and Bulgarian independence.'

"I ventured to ask what I should say to my English friends supposing they seemed to think that even if the Entente Powers agreed to the realisation of Bulgarian ideals, Bulgaria would still be powerless to help them because of some supposed understanding with the Central European Powers, whereupon he said: 'Tell your English friends that if the Entente Powers pledge themselves to satisfy our sacred wishes and legitimate claims we shall at once throw in our lot with them. That is my policy, and even if it were not I could not do otherwise, because if I did there would at once be such an outburst of popular feeling that no Government could stand against it.' I then asked him whether there was any truth in the rumours to the effect that Bulgaria had entered into certain obligations towards the Central Powers. He replied: 'None whatever, either with the Central Powers or with Turkey. My aim for the present is to remain neutral as far as I possibly can, until the time comes when the realisation of Bulgarian ideals compels me to take action.'"

M. Stephanove went on to inform the *Morning Post's* representative that he was in entire agreement with Dr. Radoslavoff, and to explain the Bulgarian view of the present difficulties in the way of a complete understanding between Bulgaria and her neighbours. "The trouble," he said, "arises out of the second Balkan war, when Bulgaria was robbed of the reward of her sacrifices. All Bulgaria asks is that the Treaty of Bucharest, which has never been recognised by the Great Powers, should be rescinded, and that the provisions of the London Treaty of 1913, which had their full concurrence, should be observed. If this had been done a year ago there would have been such enthusiasm throughout the country for the Allied cause that no Government, no matter how pro-German it might have been, could have withstood it, and within ten days Bulgarian troops would have occupied Constantinople."

The Macedonians, the Professor stated, are "more Bulgarian that the Bulgarians," and he estimates that not less than one hundred thousand Macedonians will respond to the call of the Bulgarian Minister of War if they are needed. In the war against Turkey they responded in such numbers that it was impossible to equip them until arms and clothing had been captured from the enemy. As to the feelings of his countrymen towards England, Professor Stephanove declared:

"Of one thing I can assure you, and that is that in Bulgaria there is nothing but admiration for England and for the straightforward methods she pursues as regards her foreign policy. While we have Austrophiles and Austrophobes, Russophiles and Russophobes, in fact 'philes' and 'phobes' of almost every description, we have not a single Anglophobe. The whole nation is unanimous in saying that it would be quite content to leave its fate in the hands of England. At the worst Bulgaria will remain neutral. Never will she throw in her lot with the Teutonic Powers against her old friend England. And amidst so much that is dark and tortuous in European diplomacy the Bulgarian people have implicit faith in England's word. If England only takes the initiative and promises that the obligations imposed by the Treaty of London shall be fulfilled a great popular movement will be at once started in Bulgaria, and Bulgarians and Macedonians will be ready to take up arms in favour of the Entente."

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, September 9.

The Peril of the Balkans.

The exact terms of the reply of the Serbian Government to the *démarches* of the Quadruple Entente are not yet known here, but one thing appears certain—that Serbia has consented to important concessions, and it remains to be seen if these concessions, made at the request of the Quadruple Entente, will enable the Entente to conclude satisfactorily their negotiations for the reconstruction of a Balkan Alliance, including Bulgaria as well as other Balkan States.

Five centuries ago it was the want of unanimity among the leaders of the Balkan countries that was the cause of the Turks' success and the fall of the Serbian Empire, and to-day if the young Balkan States, blinded by their own vanity, remain disunited, they cannot hope to enjoy a long career of freedom and independence. The Turks are crying out for help, and the German Press is urging Germany to attack Serbia in order to gain an open route to Constantinople. Union is strength, as was proved when the united Balkan States vanquished the Turks, and it is now high time, in this hour of danger, that quarrels should cease and the sores of dissensions be healed, so that the tried steel of the united Balkans may defeat the enemy's assaults.

Press Influence.

Unfortunately, the upbraidings of the independent Serbian Press and the provocative tone of the Bulgarian Press do not tend to soothe the angry feelings of the people of either country. The Serbians have lately been led to believe that their country is on the eve of again becoming as large and powerful as in the Middle Ages; that they have gained Macedonia, and would also acquire part of Albania, parts of Slavonia and Croatia, Dalmatia, Bosnia and Herzegovina; and they resent any action of the friendly Great Powers which would tend to deprive them of any of those territories which they have learnt to look upon as their just rights. Neither do they believe that the Serbian Government would acquiesce in any line of conduct that would deprive them of what they assert they have conquered and possess; and they give expression to feelings of resentment at what they term "the suicide" which their friends would impose on them.

To meet the demands of the Quadruple Entente was doubtless a difficult task for the Government, for it had to resolve, contrary to public opinion, to abandon cherished conquests dearly bought. But this has been done, and in pursuit of the new line of conduct measures have been taken to prevent the continuance of harmful writings in the independent Serbian Press. It is a pity that the semi-official organs did not sooner write in the generous and liberal tone now adopted.

The semi-official *Samouprava*, the organ of the Old Radical party, says that Serbia does not hesitate to make new sacrifices in order to renew the Balkan alliance; but in another article also states that the Bulgarian manœuvres in the proximity of the Serbian frontier, its too friendly neutrality to Germany, and other indices are not exactly signs to inspire confidence. The semi-official *Odjek*, the organ of the Young Radical party, expresses itself in conciliatory terms on the subject of compensation to be accorded to Bulgaria, which, it says, should be in proportion to the latter's action in the anti-Germanic cause.

The Bulgarian semi-official organ, *Bulgarie*, betrays a spirit of discontent. In an article headed "Serbia and the Entente" it asserts that the vote of the Serbian Parliament on the subject of the Note of the Quadruple Entente does not possess the significance given to it by the French Press, because the concessions agreed to are subject to such conditions as would render them unacceptable; and the article terminates by asking what would be the Serbians' attitude under less perilous circumstances if, with the danger of an Austro-German attack hanging over their heads, they now heed so little the suggestions of their great allies.

Roumanian Friendship.

The attitude of Roumania is favourably commented on here. The Press says that the first sign of Roumania's desire to link its destinies with the Quadruple Entente is its refusal to allow ammunition sent by Germany for Turkey to pass through its territory; and yesterday appeared the statement that the Roumanian Government has notified the Bulgarian Government that the Serbo-Greek-Roumanian friendship remains intact, and that in the event of the Bulgarian armies attacking Serbia, Bulgaria would have Roumania and Greece against her. On this subject the Serbian Press to-day states that the Bulgarian troops which were concentrated near the River Timok for manœuvres have been ordered to withdraw into the interior of the country.

The Serbian Parliament, which by a large majority passed a vote of confidence in the Government, is prorogued to October 17. The President of the House stated, however, that in case of urgency the Government reserves to itself the right to convoke Parliament before that date.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, September 6.

M. Marghiloman's Position.

Not long ago Count Tiza invited M. Marghiloman to a conference to be held at any village in Transylvania that the latter might select. The Count stated that he wished to explain his own views on the question of the eventual autonomy of Transylvania, and to learn those of the ex-leader of the Conservative party. As your readers may remember, the Austro-Hungarian Government made proposals on this subject to Roumania some time ago, hoping to persuade her to remain neutral, or even to range herself on the side of the Central Powers. The idea was discussed in some of the Conservative papers at the time; but nothing ever came of what was regarded as the offer of the practically impossible. M. Marghiloman, according to reports, found it undesirable to take part in a conference which might be interpreted very variously by political parties in this country. However, at a meeting held in connection with the formation of a club, to consist of his political adherents, he declared that on the return of M. Maiorescu he would make a statement regarding the policy he has followed up to the present and his views of what should be done for the Roumanians of Transylvania. Immediately after the inauguration of the club, he (M. Marghiloman) will, with the collaboration of M. Maiorescu, M. P. Carp, M. Th. Rosetti, and other "old" members of his party, drew up a memorandum setting out the political programme of the Conservative party, which will be submitted to the King as the basis on which the party would prepare to accept office.

Unfortunately for M. Marghiloman the idea hangs fire. Without M. Maiorescu and his following nothing can be accomplished; and M. Maiorescu has decided to stay at Lucerne instead of returning to Roumania. This decision is generally regarded as a sign that the ex-Premier dissents from the policy proposed by M. Marghiloman, and the fact is greeted with satisfaction by the Liberals, who argue that half at least of the "Conservators" are with them as far as foreign policy is concerned.

More Attempted Smuggling.

Yet another case of attempted smuggling of munitions has come to light. This time it is a Turkish courier from the Turkish Embassy at Berlin who is the would-be smuggler. He was found to have boxes of caps among his baggage. They have been confiscated.

Journalistic Amenities.

Another exchange of compliments between newspapers has taken place—between the *Universul* and the *Adeverul*. The ultra-national proprietor of the latter and of the *Dimineatza* accused the *Universul*, hitherto an independent and impartial journal, of having sold its soul to the Germans. Without denying this charge, the *Universul* retaliated by accusing M. Mille, the proprietor

Digitized by Google

of the two other papers, and a member of Parliament, of having actually done a good haul in exporting cattle, eggs and lard to a certain army contractor in Budapest, while at the same time he was demanding instant action against Austria-Hungary and Germany, and inveighing fiercely, morning and evening, against those countries. In return the proprietor of "The Truth" and "The Morning" has demonstrated how the *Universul* has been in treaty to let, if not to sell, itself to the Teutonic propagandists, and has thus forced it, at the eleventh hour, to back out of the deal. The whole affair is not a pretty one.

The Balkans.

September 29.

LORD ST. DAVIDS asked whether the Government could make any statement regarding the present position in the Balkans. He said they must all feel regret that during the fourteen months of the war the Governments of the Allied Powers had not succeeded in recementing that union of the Balkan States which might have done so much to bring this war to a conclusion. The Balkan negotiations should have been not in writing but by word of mouth, not by junior representatives, but by a man of high Cabinet position. There were people in the Balkans who thought they could attack Serbia without attacking Great Britain or Russia. He would suggest that Russia should be asked to send a force to Serbia, however small, and let it be known that these men were on the Serbian frontier, and that if anybody attacked Serbia it would be the uniform of Russia, who liberated Bulgaria, that would have to be fired upon first of all.

THE MARQUESS OF CREWE said he had no desire, even if he had the authority, to add anything to what had been said the previous day by Sir E. Grey. It was a sad and familiar fact that the relations between some of the Balkan States had been completely poisoned by the events of 1913. There was always something tempting in the desire to send persons of first-class eminence to deal personally with a difficult and complicated situation, although that was not always successful, as Germany had found in two recent instances. If it had been possible—which it distinctly was not—for the different Foreign Ministers of the Allied Powers to meet and discuss these questions, he did not for a moment say that they would have succeeded in arriving at a solution of the intensely difficult Balkan problem, but he agreed that there would have been a better chance of doing so than was possible by the ordinary methods of telegraph and post. It would have been equally impossible to find other representatives of the Allied Powers who could have undertaken such a mission. While, therefore, as a matter of principle, he was far from disputing the advantages which might have followed from the course suggested by the noble Lord, it was not a possible course to pursue in the circumstances which actually existed. As to the noble Lord's suggestion with regard to Russian troops acting in conjunction with Serbian, and a force from Cyprus in conjunction with Greece, both would be considered. We, of course, expected that the Balkan States would take the course they conceived to be soundest in their own interests. It would be impossible to expect them to take any other course. In their view, what those interests were was bound to be affected by the logic of events, and he would once more lay emphasis on the indisputable facts stated by the Foreign Secretary as to the different results to be expected from the policy of the Allied Powers and the policy of the Central Powers, assuming that either was in a position to carry its policy into effect after the war. He sincerely hoped that the grave words of the Foreign Secretary would have been taken to heart, as he believed they would be, by all the parties concerned. The statesmen who controlled the destinies of the Balkan States were competent politicians, with great knowledge of affairs, and fully alive to all the facts of the political situation, and he declined to believe that, after the statement of the Foreign Secretary, so clear in pointing to the inevitable results, without any use of menace or any desire to do anything except call attention to the facts as they were, those facts could be ignored by any of those States upon whose action so much depended, even more for themselves than for ourselves.

HOUSE OF COMMONS.

Roumania and the War.

September 22.

Mr. KING complained that the Home Secretary, in his defence of the Press Bureau, had not answered the charge that the Government were deliberately keeping from the nation the real truth, which it ought to know, about many things, and were maintaining a totally wrong set of ideas in the minds of the people. For example, in January last reference was made in *The Times* to the participation of Roumania in the war and to a British loan to Roumania, and a map was published under the heading "Roumania's Theatre of War." There must have been some ground for those references or the Press Bureau would not have passed them. Now, eight months later, the nation was entitled to know how it stood with relation to Roumania and the Balkan States. How could the people understand the policy of this country if they knew nothing of fundamental facts like that?

Munitions for Turkey.

September 23.

Mr. G. TERRELL asked the Secretary for Foreign Affairs whether Germany and Austria were supplying Turkey with munitions of war, and through which of the neutral countries such supplies were being carried.

Sir E. GREY: I think it would be better for me to ask to be excused from answering this question. If I thought that by answering the question I could make it more difficult for Germany and Austria to supply munitions to Turkey I would gladly do so, but I am afraid the effect would not be that.

Catholic Chaplains in Egypt.

Sir THOS. ESMONDE asked what arrangements had been made for the attendance of Catholic chaplains in the military hospitals in Egypt.

Mr. TENNANT (Under-Secretary for War): There are now over 60 whole-time Roman Catholic chaplains in or on their way to the Eastern Mediterranean, but I cannot say how they are distributed between the base in Egypt and the fighting force in Gallipoli. So far as I am aware, the number of these chaplains is sufficient to meet requirements. In any case, the Army Council have sent, or are in process of sending, the full numbers which have been asked for by the local military authorities, who alone know the requirements of the situation.

British Prisoners in Turkey.

September 28.

Mr. MURRAY MACDONALD asked whether anything was being done to obtain from Turkey a list of British prisoners captured in the Dardanelles; and if so, with what result.

Sir E. GREY: Every effort has been made, through the United States Ambassador, to obtain lists of British prisoners of war captured in the Dardanelles, and the Ottoman Government have been warned that, until they fulfil their obligations in this respect, no further lists of Turkish prisoners in the custody of the British Forces will be furnished to them nor will specific inquiries concerning missing Turkish officers be answered. So far we have only received from the Turkish Government the names of twenty officers and men of the crew of the submarine E 15, the names of thirty-two officers and men of the submarine AE 2, and the names of two officers and fourteen men of the military forces. In addition to the above, we have received the names of about one hundred and twenty officers and men through the kind offices of the United States Ambassador at Constantinople. It must, however, not be concluded that the Secretary of State for War has not received further information from other sources as to officers and men reported missing from the British Mediterranean Expeditionary Force.

Bulgaria and Great Britain.

Sir E. GREY, replying to a question put by Sir P. Magnus, said: My official information from the Bulgarian Government is that they have taken up a position of armed neutrality to defend their rights and independence, and that they have no aggressive intentions whatever against Bulgaria's neighbours. It would, perhaps, be well that I should explain shortly our view of the Balkan situation. Not only is there no hostility in this country to Bulgaria, but there is traditionally a warm feeling of sympathy for the Bulgarian people. As long, therefore, as Bulgaria does not side with the enemies of Great Britain and her Allies there can be no question of British influence or forces being used in a sense hostile to Bulgarian interests; and, as long as the Bulgarian attitude is unaggressive, there should be no disturbance of friendly relations. If, on the other hand, the Bulgarian mobilization were to result in Bulgaria assuming an aggressive attitude on the side of our enemies, we are prepared to give to our friends in the Balkans all the support in our power in the manner that would be most welcome to them, in concert with our Allies, without reserve and without qualification. We are, of course, in consultation with our Allies on the situation, and I believe that the view that I express is theirs also. Our policy has been to secure agreement between the Balkan States, which would assure to each of them not only independence, but a brilliant future, based as a general principle on the territorial and political union of kindred nationalities. To secure this agreement we have recognised that the legitimate aspirations of all Balkan States must find satisfaction. The policy of Germany, on the other hand, has been to create for her own purposes disunion and war between the Balkan States. She first made use of Austria-Hungary to precipitate a European war, with the result that that Empire is now completely subordinated to Germany and dependent upon her. Turkey, whose interests would have been preserved by remaining neutral, was gratuitously forced by Germany into this war, and, having been used, is now being subordinated and made dependent upon Germany, in order to realise the German aspiration of German influence from Berlin to Baghdad. In the same way it would naturally be Germany's policy to use any Balkan State she could influence to further this plan, with the inevitable result that that State would eventually be subordinated to her; and, though territorial gains might be promised, it would lose real independence. This is directly contrary to the policy of the Allies, which is to further the national aspirations of the Balkan States without sacrificing the independence of any of them.

Dardanelles Casualties.

September 29.

CAPTAIN AMERY asked whether the total figure of 87,630 British casualties at the Dardanelles for the period up to August 21 included the casualties of the Australian, New Zealand, and Indian forces which took part in the operations.

Mr. TENNANT, in a written reply, stated: The figure given included the casualties of the Australian, New Zealand, and Indian forces.

THE OCCUPATION OF RUAD.

(From a Correspondent.)

Alexandria, September 20.

The manner of the recent landing at Ruad Island and of dealing with the Armenian refugee problem may be regarded as a masterly stroke of diplomacy on the part of the French Government.

Enver, filled with the inordinate ambition of a youthful adventurer, and intoxicated by a rapidly won success, was not long in imbibing the Prussian spirit of racial pride and domination, so that on his accession to supreme power he strove, with no small measure of success, to inspire the Turkish people with that exalted racial pride which has led to the revival of the dormant spirit of Arab nationalism. The Arab soul, dulled by centuries of oppression, at last stirred itself in an effort for freedom. But, under Teuton guidance and inspiration, the Young Turks struck savagely at the root of a renascent Arab movement, and committed themselves to the wholesale hanging of the *élite* of the Syrian Arabs. Besides the twelve notables hanged at Beyrout, fifteen more are known to have been hanged at Damascus and eight at Aley. This savagery made the already wide gulf between the Turks and the Arabs quite unbridgeable, and snapped the last shreds of the once potent bond of religion. Common misfortune had already brought the various elements constituting the Syrian population more closely together, and now the afflicted Moslems, temporarily forgetting their national dreams and aspirations, yearned for salvation—and vengeance!

The Turks' policy of devastation and repression culminated in this supreme act of wholesale murder of their so-called brethren of the Faith in the latter part of August; and when the French seized this psychological moment and carried out their *coup* at Ruad Island, contrary to expectation, not only did the inhabitants, who are mostly Moslems, accord them an enthusiastic reception, but a sympathetic wave spread throughout the length and breadth of the mainland as far as Aleppo.

No sooner had the French marines set foot ashore at Ruad, and the Tricolour risen above the tiny isle, than the Mufti and the leading sheikhs, the President of the Municipality, and the higher officials of the Kaimakamat, together with the notables of the place, followed by practically all the inhabitants, hastened to welcome the liberators. Presently, at the Seraglio, the Mufti delivered to the new Governor an address characterized by the strongest expression of devotion and loyalty. It proclaimed the sincere attachment of the Syrians to France, and their grateful appreciation of all that she has done for them in the past, and stated that the reception now accorded to her fleet was but the prelude to the greater national welcome that awaited the French in Syria. The Mufti wound up his address with the significant declaration that the population of Ruad consider the day whereon the French landed in their isle as the beginning of a new era, and that this happy day, on which the Turks' misrule of three centuries ceased, should indeed mark the commencement of their true history.

A correspondent of the *Mokattam* reports that a Syrian journalist who had played an important part in the Arab reform movement, and was one of the deputation that went to Paris a couple of years ago, acted as interpreter between the Mufti and the Governor, and that he made on behalf of the latter, after a few words of thanks, the following statements, which may be regarded as having a high political significance:—The object of the landing, he said, was primarily to free the inhabitants of the island from Turkish misrule; then for France to prove to the Syrians, while on the threshold of their land, that she has not forgotten her friends and her duties towards them, even in these most critical moments of her history; finally, that she means to prove to them that their loyalty has not been in vain, that it shall have its reward, and that she wishes to make them forget the evils of the past rule by that which they have ever dreamt and yearned for, viz., the rule for which their forbears have fought for centuries and made such sacrifice as entitle them to claim it, especially now that the Allies have proclaimed before the world as the sacred aim of their grim struggle the affirmation of the right of the smaller nations to self-government, with an equitable distribution of authority among the various racial and sectarian elements where such heterogeneity exists.

These are momentous utterances, calculated to allay considerably, if not wholly to overcome, the deep-rooted prejudice that the Moslems of Syria have always entertained towards the French.

Almost simultaneously with the landing at Ruad the French Fleet has been the means of saving about 5,000 Armenians—old men, women, and children—who had fled from the interior to the coast, and were picked up, near Swedieh, by the warships. The victims arrived at Alexandria last week, and the tales of horror and cold-blooded cruelty that they tell recall the worst outbursts of savagery that characterized the Dark Ages. It seems to be the settled policy of the Turkish Government to exterminate the Armenian race; for all accounts agree that this monstrous campaign has been led by the military authorities, who used as additional instruments the irregular Kurdish hordes. Some of the Turkish civil population, be it said to their credit, are known to have given refuge in their homes to the hunted Armenians. Although other massacres have been perpetrated by the Turks in the recent past, yet this is said to have exceeded all the previous ones in systematic thoroughness; and the burden of criminality must rest in a large measure on their German masters. The French warships are expected to save more helpless Armenians. Meanwhile the Island of Ruad is already becoming a sort of nucleus of French influence. After only a fortnight's occupation the number of its inhabitants rose from 2,000 to 5,000 souls, this rapid increase being determined by the influx of refugees from the mainland. Besides distributing among them large quantities of provisions, the French have allowed the islanders to fly the French flag over their small craft, which are allowed to ply without let or hindrance wherever they wish.

A VISIT TO RUAD ISLAND.

(From a Correspondent.)

The French occupation of Ruad has drawn attention to that small and little-known island, and the following short description of a visit paid to it at Easter in 1908 may, therefore, be of interest. It is taken from a diary kept by the writer, and given just as set down at the time:—

Tartûs (Tortosa), Syria,
Easter Eve, 1908.

Our camp (consisting in our seven selves, fourteen men, and some twenty-eight animals) left Bussirah at 7 a.m. Having decided to have an Easter rest (we were on our way from Jerusalem to Urfa) we settled down at Tartûs by 11 o'clock, this being a small walled town, important during the Crusades, the Crusading church being handsome and in fair repair.

Our camp was pitched on a turf bank sloping to the sea, the shore was of firm sand interspersed with rocks, amid which men waded that evening spearing fish by the light of torches, without much luck.

Easter Day, April 19.

We read Matins in the dining tent, and those of the men who were Christians made festival, including the Greeks, although the Greek Easter comes later. After breakfast we crossed in a row boat, using sail, to the Island of Ruad (Aradus), a mile and a-half from the mainland. Just a ridge of rock, 880 yards long by 550 broad, on which layers of sand have been deposited, some 3,000 sailors and sponge fishers constituting its population. The day was fine, and we had a lovely view of the lilac-tinted Lebanon range from the Sarcenic castle crowning the highest point of the island, a castle possessing machicolated walls, really machicolated—people sometimes speak of walls being machicolated when the necessary apertures are non-existent. But on first reaching Ruad, which has extensive remains of town walls from 28 to 32 feet high, there was an amusing little scene.

The Customs official, a Turk, forbade our landing, and, yelling and threatening the boatmen with his stick, he ordered us to proceed to the Customs, an unheard-of command. Our Syrian dragoman shouted indignantly: "Do you wish to be sent to prison? Are these ladies and gentlemen goods that they should pass through the Customs? They have an *iradé*, and are under the special protection of the Sultan." Then H. sprang ashore, and shook him, crying, "Yok—Yok" (*i.e.*, "No—No."). After this he vanished and was seen no more. H. and L. regretted that they had not run him into the water, which proceeding would have pleased the crowd, as he was an official of Imperial appointment and therefore unpopular.

The *gendarmerie* is appointed by local authorities. We were told that his attitude was probably adopted with a view to *bakshish*; if so, it proved that Ruad was not frequently visited by Anglo-Saxons, as, indeed, it never is. The natives, of a gay and friendly disposition, not only examined us from doors, windows, and housetops, they leaped in numbers from roof to roof, the streets being too narrow to contain the curious throng. There was little to buy except *koumi* as an Easter gift to our men.

Returning, the water rippled gently in delicate shades of blue and green, and we spent some time rowing about in search of a spring of fresh water which rises in the sea off Tartûs. Then landed at the mouth of a little river some distance from the town, walking back along sands covered with multitudes of tiny shells to our Easter feast—a whole sheep, stuffed with rice and pine kernels, which we assisted to baste. It was finished by the men.

TANGIER TO TEHERAN.

I have been much amused by a little paragraph in the *Westminster Gazette*, which is headed "The Oldest Temperance Lecture." It refers to some sound advice given by some Egyptian Polonius to his son at least 3,500 years before the Christian era, and is taken from a papyrus of that date. Here is the advice:—

My son, do not linger in the wine-shop or drink too much wine. It causeth thee to utter words regarding thy neighbour which thou rememberest not. Thou fallest upon the ground, thy limbs become weak as those of a child. One cometh to trade with thee and findest thee so. Then they say, "Take away the follow, for he is drunk." . . .

May one respectfully suggest that a certain All-Highest might pass on this excellent advice to a certain Crown Prince and his officers?

***

Last week I expressed some doubt regarding the reports that appear almost daily in the Press about the state of Constantinople. But, however well the Young Turks and their Teutonic taskmasters may look after themselves and their comfort, there can be very little doubt that the poorer classes in the city are experiencing a terrible time. Here is an extract from a letter written by a trustworthy witness on August 3:—"We are living from day to day, and things are growing worse every day. The speedy or delayed outcome will apparently depend on the Balkan States. Coal now costs twenty dollars a ton, and even then is not to be had. All prices of food are so high that the poor are, many of them, slowly starving." The two months that have elapsed since the letter was written can hardly have made the situation any easier for those "slowly starving" poor.

***

Testimony to the honourable fighting of the Turks, as contrasted with the utter lack of honour shown by the Germans, continues to accumulate. Thus an artillery officer writes: "The Turks . . . are worth twenty times more than any Germans, both with regard to straight fighting and honour. I always had the impression that the Turk was a hideous creature suggestive of an armed brigand, with a revolver between his teeth and a knife in each hand—or *vice versa*. As a matter of fact, he is a very ordinary individual, a good fighter, and is possessed of more than the average amount of pluck and daring." The same officer reports that our men captured one Turkish sniper who had been a worry to them for days, and who, on being made prisoner at last, was found to be "a girl about 19 years of age." This looks like a return to those old days of the "Thousand Nights and a Night" stories, when the Arab girls shared the "delights" of battle with their men-folk.

***

Some months ago—in THE NEAR EAST of May 21, to be precise—I referred to the subject of mirage and allied phenomena as observed in the Mesopotamian region. Apropos of this, a correspondent directs my attention to a passage that occurs in a remarkably interesting letter from Sir George Birdwood, K.C.I.E., published in *The Times* of September 21. Referring to the time when, as medical officer of the Hon. East India Company's steam frigate "Ajdaha," he took part in the Persian Expedition of 1856-57 and sailed up the Shatt-el-Arab to Mohammerah, Sir George writes as follows:—

> The whole scenery of the Euphrates in this region is of exceptional fascination. Beyond the thick border of date palms along the banks of the river extend in every direction vast saline plains, reflecting, and also refracting, all that was there on earth in the heaven above. The sun at both rising and setting would for from five to ten minutes perform the most astonishing acrobatic sort of feats, one semblance of the sun on top of another forming a glorious pillar of light on the horizon, and then tumbling down in the most alarming way, and either disappearing altogether or, of a morning, leaving the real sun behind them, looking quite unaware of what had happened. Sometimes far distant objects were brought right down to the river's banks. But the wonder of wonders was the mirage (*cf.* "mirror," "miracle") of our Fleet, steam frigates and transports—perhaps forty—in their prolonged procession over our heads, now all upright, and again, in the twinkling of an eye, upside down. The effect was as of magic of the most spiritual potency. . .

Certainly in that region one sees most beautiful effects of light and atmosphere. Mohammerah is not a lovely spot in reality, but I shall always think of it with pleasure as I first saw it, at evening, when river, palm-clad banks, mud hovels, and sky were for a few brief minutes converted into a perfect study in violets and blues by the magic of the Eastern twilight.

***

So long as human nature remains what it is none of us, I suppose, will take undiluted pleasure in criticism of ourselves and our actions, though, if we are wise, we shall not be above trying to profit by it. The man who cannot stand criticism is to be pitied; the man who tells you that he "will not be criticised" is usually the very one who most merits criticism, and would most benefit by it, if his conceit would let him. And as it is with the individual, so it is with nations. "Tetchiness" is the sign of a consciousness of shortcomings, of weakness, of inefficiency. Let us, therefore, be thankful that our own Government, as a whole, does not exhibit signs of this failing; that it takes in such good part the very liberal doses of criticism that are administered to it by legions of self-appointed *hakims*. It is a good sign; though there is sometimes a danger of going too far in the direction of letting the self-appointed ones carry their criticisms too far. In Turkey, I observe, the Government is showing distinct signs of "nerves," which are doubtless the result of a conscience that is very far from clear. According to a special correspondent of the *Temps*, who writes from Dedeagatch, the Mohammedan population of Constantinople has at length "lost patience through its privations," and "the principal cause of indignation is the imprisonment and exile of a great number of patriotic Turks who are accused of criticising the Government policy." I notice also that the Sofia correspondent of *The Times* reports that the *Preporetz* has been confiscated and suspended for an indefinite time for publishing an appeal, signed by many leading Bulgarians, against the Germanophil policy of the Government. Both these items of news seem to me to support the theories propounded above. The so-called Government of Turkey evidently realises that the breakers ahead are very close indeed now, and does not like the sound of them. The news from Sofia is significant.

***

The enigmatic attitude maintained by Bulgaria during the past ten days will hardly enhance the reputation of King Ferdinand. He has always been fond of endeavouring to be all things to all men. This time it looks as if he has, for once, allowed his weakness to run away with his discretion. This reminds me of a story concerning him that was told me two days ago, and which has at least the merit of being beyond suspicion as regards its truth. Recently his Majesty received in one morning three travellers—the first a diplomatist, the second a journalist, and the third a titled globe-trotter. As luck would have it, the three individuals thus honoured met very soon afterwards, and not unnaturally compared notes. The varying manner of their reception was an index to King Ferdinand's—shall we say, versatility? The diplomatist was received with a stately courtesy worthy of a Great Monarch, and the audience was formal to a degree. The journalist found his Majesty gazing out of the window, lost—apparently—in deepest thought, and had to stand unnoticed for a full three minutes. Then the King turned and made a remark, not too profound, about the future of Europe depending on—something which, I fear, I have forgotten. Finally, the globe-trotter, when it came to his turn to enter the Royal Presence, was greeted in a spirit of good-comradeship—a "Hang-politics!-Let's-have-a-quiet-smoke-and-a-chat" style, calculated to show how glad the Weary Monarch was to escape for a brief spell from the Burdens of State. All, in its way, a pretty piece of play-acting.

***

There has been so much in the papers recently concerning the optimists and the pessimists of our country that I have begun to hate both words. And yet it is difficult to avoid their use. What term other than optimist could one, for instance, apply to Lord Bryce in the light of his views concerning American opinion on the one hand and the gentle Hun and Armenia on the other? His lordship is reported to have expressed the opinion that a strong hint from America might influence Germany to intercede for the Armenians, and save the remainder of their race from the horrible butchery which is at present overwhelming them. And this in the light of the various murders which have been committed on the high seas by the Germans themselves! That these murders are presumably no longer to be perpetrated is not due to any growth of humane feelings on the part of the murderers; the change in policy is due to the fact that the system was becoming an increasing source of embarrassment to those responsible for it. In other words, the police were too vigilant—it is no fun murdering women and children if you are to be punished for it. I am not usually considered to be a pessimist, but I cannot for the life of me believe that Germany is going to lift a finger to save the people of Armenia unless she can be convinced that it is to her own personal interests so to do. The remedy, if indeed there be one, lies, in my opinion, with the Turk himself. Let him once grasp the fact that Armenian lives count as their own to the Allies against whom he is fighting and the massacres would cease. But to expect Germany to turn a listening ear to America on the subject is, to my mind, merely adding ridicule to the horror of it all.

NEAR EAST BOOKSHELF.

A KING POET.*

For if the shaft of Destiny hath quit
The bow of Fate, whose hand shall be so skilled
To pluck the flying arrow back? Whose wit
Shall by a hair's breadth change the course of it?

Thus sang, in the halcyon days of Islamic Spain, a King of Seville, Mu'tamid by name, the greatest scion of the Beni Abbad, or Abbadids. His father before him had shaped out of the town on the Guadalquivir a kingdom stretching from the Atlantic to the confines of Murcia. Impetuous, ambitious, haughty, cruel, and unscrupulous, he had routed (or done away with) his enemies, and on his deathbed he bequeathed to his son "a Paradise on earth." The young man, barely out of his teens, revelled in his heritage; he trod paths of roses and dreamed dreams of love until, in an evil hour, he was overcome by covetous neighbours, was driven from his perfect realm, and exiled to Morocco, where he died:—

Low lie thy palaces, and desolate
The halls, Mu'tamid, of thy ancient State;
Yet at thy tomb we kiss, as it is meet,
The dust with weeping from thy quiet feet.

This, in a nutshell, is the history of the unfortunate Mu'tamid. He had had friends—many, and enemies more. His father, a stern, cold warrior, would have overcome them one by one, but the son was of a different temperament. The *joie de vivre* of the sunny south was in his veins, as it is even to this day in the almond and orange groves of Seville and Cordova. He listened to the call of beauty and poetry, forgetting that around him were Berber warriors spoiling for the luxuries of his palaces and bowers. The result was inevitable; he was overcome. Nevertheless, the period of his reign was one of the most glorious epochs of Spanish-Arabic literature, and thus, whatever fame Mu'tamid may lose as an administrator, he gains as an enlightened ruler, a patron of the arts, and a poet of more than ordinary ability. His court was the meeting-place for poets and rhymesters, for men of wit and of learning. At that time Seville was the centre of Arabic learning (Mu'tamid was an Arab, be it remembered, and not a Moor), and the anthology of its literature, as collected in the invaluable and rare Kalaid-Elikian Lil-Faith ibn Khakan, is a fine testimony to the imaginative exuberance of the period. The translator of Mu'tamid's poems (or some few of them) in the work under review does not seem to have had access to the above anthology. She seems, on the contrary to have relied on German translators from the original, and on the aid of some literal translations from the Arabic by an Afghan scholar. It is not surprising, therefore, that some of the finest passages of Mu'tamid's verses in captivity have been overlooked; nor does the small collection include his defence of Ibn Zeidoun, ex-Vizier, who had been attacked by slanderers. On the other hand, much is made of some of his love-sonnets, rendered into acceptable English, and even in the introductory notice his amorous proclivities are insisted upon. The result is an impression that Mu'tamid was a love-sick poet-king. Nothing could be further from the truth. He was primarily a monarch, patron of the arts; in second lieu a poet of no mean order; and, thirdly, a magnanimous ruler in an age of unscrupulous deeds. As a matter of fact, his reign shines forth in the history of Islam in Spain as one of its brightest pages.

Apart from this, however, the translator has given us some fair specimens of the lyric aptitudes of the Sevillian ruler, and the small book will be well received by those who have tasted of Oriental literature and, like refined *gourmets*, let the savour linger in their memory.

BOOK NOTES.

We have received a copy of the "Egyptian Gazette War Map No. 2: Gallipoli Peninsula." Produced by "Geographia, Limited," it is well printed in colours and shows the contours of the area covered very clearly. Roads ("main" and "indifferent"), tracks and forts are indicated, and the lettering is particularly good and legible. An inset map covers the area between Rodosto and Enos in one direction and between Baba Eski and Tenedos in the other. Publishers and producers are to be congratulated on a very creditable map, which should prove popular in Egypt, where it may be obtained at the *Gazette* offices at the price of P.T.5.

"From Faith to Certainty," by Chandri Mohammad Sayal, M.A., is an interesting little brochure, copies of which may be obtained from the author at 39, Upper Bedford Place, Russell Square.

"Forty Years in Constantinople," by Sir Edwin Pears, will be published by Mr. Herbert Jenkins on October 6. Sir Edwin's experience is unique. He has seen three revolutions and three Sultans deposed, and has known eleven British Ambassadors at Constantinople. He has met the principal men of all nations whose names are intimately associated with the Near East, and perhaps one of the most interesting chapters in a volume which is practically the secret history of the Near East is that where he tells how war between Great Britain and Turkey might have been prevented.

AN APPEAL.

To the Editor of THE NEAR EAST.

Sir,—Famine, typhus, and dysentery prevail among the 200,000 Armenian refugees who have succeeded in reaching the shelter of the Russian frontier. Help available on the spot is totally inadequate.

Will you kindly draw attention to the fact that the Armenian Red Cross and Refugee Fund, whose president is Viscountess Bryce, exists for the purpose of affording relief to these poor people, and that contributions may be sent to me?—I am, etc.,

EMILY J. ROBINSON (Miss),
Hon. Sec. Armenian Red Cross and Refugee Fund.

PLOTS IN PERSIA.

Under date of September 27, Reuter's Petrograd correspondent reports:—

According to a message from Teheran, dated the 13th inst., Tewfik Bey, the Turkish Consul-General at Resht, in Northern Persia, was arrested by the Russians and sent to the Caucasus. The arrest was provoked by the clandestine machinations of Tewfik Bey in the region of the movements of Russian troops, and also by his attempt to organise espionage in the Caucasus. Papers which were seized at his residence revealed a rich mass of valuable material in this connection. The arrest of Tewfik Bey is at the same time a reprisal for the attacks made in August upon the Russian and British Consuls at Kermanshah.

AN IMPORTANT NEW BOOK ABOUT EGYPT.

By BARON DE KUSEL (Bey),
Sometime English Controller-General of Egyptian Customs.

AN ENGLISHMAN'S RECOLLECTIONS OF EGYPT. 1863 to 1887.

With an Epilogue dealing with the present time, 1914.

With thirty-two illustrations and a map.
Demy Octavo. **10s. 6d.** net.

"He writes freshly and agreeably of his life and its varied experience . . . and of the many well-known personages . . . with whom he was thrown."—*Times.*

JOHN LANE: THE BODLEY HEAD, W

* The Poems of Mu'tamid, King of Seville, rendered into English verse by Dulcie Lawrence Smith. "Wisdom of the East" Series. (Murray. 1s.)

4	21	Monday	25	26
5	22	Tuesday	26	27
6	23	Wednesday	27	28
7	24	Thursday	28	29

Next Friday (September 25, O.S.) is the birthday of the King of Montenegro, who was born at Niegosh in 1841.

The *Gazette* announces that his Imperial Majesty the Emperor of Russia has been graciously pleased to confer the Order of Saint Alexander Nevsky upon General the Right Honourable Sir Arthur Henry Paget, G.C.B., K.C.V.O., Colonel, the Buffs (East Kent Regiment).

Our Khartoum correspondent writes :—Mr. A. L. Butler, Superintendent of the Game Preservation Department, left Khartoum for Cairo and England on September 9 to take leave prior to his retirement at the end of the year. Mr. Butler joined the Sudan Government on January 1, 1901, and he has managed his department single-handed ever since. He had previous experience in New Guinea, Java, and elsewhere, and had been on a collecting expedition connected with Lord Rothschild. In the Sudan he has applied himself more especially to the study of birds, and has made a very complete collection of birds of the Sudan, and set them, and they are exhibited in the Gordon College. He has also discovered a number of new species. Some four years ago he married, and Mrs. Butler was as enthusiastic in her love of animals as himself, and has written several pleasing stories on the familiar domestic life of some animals—chiefly based on pets kept in the Zoo at Khartoum.

The appointment of Mr. Andrew Percy Bennett, C.M.G., as Commercial Attaché to the British Legation at Bucharest, which we announced in our issue of the 17th ult., appears in Tuesday's *London Gazette*.

Mr. Bennett, who was born on July 30, 1866, is an M.A. of Christ's College, Cambridge, where he graduated in Honours in Mediæval and Modern Languages in 1891. He was nominated Vice-Consul at Manila on July 10, 1893, and transferred in 1895 to Galatz, where he acted as Consul-General in each year from 1895 to 1897. Promoted to be Consul at New York, December 14, 1896, he was Acting Consul-General there in 1897 and 1898. Later he was appointed Commercial Attaché to the Embassies at Vienna and Rome, and to the Legation at Athens in 1899. His headquarters were transferred to London, April 1, 1907. He was made a C.M.G. in 1912, and was given the local rank of a First Secretary in the Diplomatic Service in 1913.

Colonel J. J. Asser, C.B., who for several years held the important post of Adjutant-General in the Egyptian Army, has recently been appointed a base commandant, with the rank of brigadier-general. He formerly belonged to the Dorsetshire Regiment. He entered the Service twenty-one years ago, is a colonel of 1911, and has the Nile (1897-98-99) and Sudan (1910) Expeditions to his credit.

Professor Zujévoikh, the President of the Serbian Academy of Science, arrived in London from Nish on Sunday evening.

Reuter's Berne correspondent reports (under date of September 24):—The former Serbian Minister in Constantinople, Dr. Nenadovitch, cousin to King Peter of Serbia, has died in Zurich as the result of an operation. Dr. Nenadovitch studied at Zurich, taught law in Belgrade, and on the accession to the throne of King Peter became Chief of the Royal Cabinet. Subsequently Dr. Nenadovitch was appointed Serbian Minister in Constantinople. During the exile of King Peter Dr. Nenadovitch lived in Geneva and other Swiss towns.

Mr. R. L. Naville, of the Imperial Ottoman Bank, has arrived in Paris.

Rev. H. B. Rivington and Rev. A. Lee-Warner have left Khartoum, and are coming to England for a period of rest and recuperation, which has been necessitated by the effects of the climate and arduous work.

M. Lacau, the new Director-General of the Egyptian Antiquities Service in succession to Sir Gaston Maspero, has arrived at Cairo, and has taken over his new duties. M. Lacau was formerly the head of the French Institute of Archæology at Cairo. During the interregnum between the departure of Sir Gaston Maspero and the arrival of M. Lacau, Mr. Daresey, the Secretary-General of the Antiquities Service, has performed the duties.

M. Al. Lahovary, Roumanian Minister in Paris, who lately went to Bucharest to be present at the funeral of his daughter—who was the victim of a revolver accident—has now returned to his post and resumed his duties.

The engagement recently announced between Dettie, only daughter of the late Mr. Edward Annan and Mrs. Lang, of Trefriw, North Wales, and Mr Stanley Morton, son of the late Mr. John Morton, Constantinople, presently serving in the 24th (Service) Battalion Royal Fusiliers, is cancelled.

The marriage of Mr. Alexander Fachiri and Miss Adila de Hunyadvár took place at the Greek Church on Wednesday afternoon.

Our Bucharest Correspondent writes (September 6):—

Baron André de Kerkhove de Denterghen, First Secretary of the Belgian Legation, has left Bucharest to take up other duties.

M. Milan Rakitch, Councillor of Legation, who is in charge of the Serbian Legation in the absence of the Serbian Minister, M. Marinkovitch, now on leave, has returned from Sinaia. During his absence at Sinaia M. Nastassojevitch, 2nd Secretary, was in charge at the Legation.

M. Antonescu, the Roumanian Minister of Justice, and Madame Antonescu have left Bucharest for Switzerland. During M. Antonescu's absence M. Radovitch, Minister of Commerce, is in charge of the Ministry of Justice.

M. Antonescu was formerly a Governor of the National Bank of Roumania, and it is perhaps owing to this fact that a rumour has got abroad that he has been charged with a financial mission. We understand, however, that there is no foundation for this rumour.

Our Sofia Correspondent reports, under date of September 11:—

Last Wednesday morning there arrived here from Italy Shems-ed-Din Pasha Nelbuye, "Sultan of Tripolitania and Benghazi," who was expelled by the Italians after Italy's declaration of war on Turkey. With his suite he put up at the Hotel Bristol; and in the afternoon, accompanied by his secretary, he visited the Turkish Minister, Fethi Bey. On Thursday night he left for Constantinople, where he will permanently reside.

M. Jean Cruppi, the former French Minister of Finance, arrived here on Wednesday on his return journey from Petrograd to Paris. He left the following day for Nish and Salonika.

The Duke of Mecklenburg, who had been here ten days as the guest of King Ferdinand, left for Constantinople on Thursday night.

News has recently been received in London from a trustworthy source in Constantinople that Mr. George C. Simmons, the well-known banker in that city, is quite well. His daughter, Miss Ethel M. Simmons, is at present devoting herself to nursing wounded Belgian soldiers at 45, Courtfield Gardens, Kensington.

Mr. George Edward Simmons and Mr. Arthur Herbert Simmons, formerly of Constantinople, are at present residing in Cyprus. Their address is Victoria Road, Nicosia, Cyprus.

Lieutenant Lord Ipswich, of the Coldstream Guards, who was for some years with the Aboukir Company at Alexandria, has had his ear pierced as the result of the bursting of a shell, and is now with his father, Lord Euston, at Whittlebury Lodge, where he has been joined by Lady Ipswich and their infant son.

Lieutenant R. B. Angus, R.E., late of the Egyptian Public Works Department and 17, Victoria Street, S.W., was killed at the Dardanelles on September 22.

Sub-Lieutenant B. W. Kenny, R.N.D., formerly of the Manchester staff of the Imperial Ottoman Bank, has been invalided from the Dardanelles, and is now at the Red Cross Hospital at Gizeh.

The Egyptian papers report that Mr. A. W. C. Roll, of the Alexandria branch of the Imperial Ottoman Bank, who has been fighting at the front in Flanders for some months past, has been slightly wounded. His many friends in Alexandria will be glad to learn that he is progressing favourably.

Another member of the staff of the Alexandria branch of the I.O.B., Sergeant P. Berjeaut, who is serving with the French Army at Gallipoli, has been specially mentioned in despatches, and will receive the Croix de Guerre with two stars. He has been wounded.

Mr. Cecil Morville Pope, son of Kaimakam Pope Bey, Inspector of Prisons, Upper Egypt, has received a commission in the Durham Light Infantry.

Mr. A. P. Mack, who was formerly well known in Egypt, where he was interested in the development of mining, is reported by the Egyptian Press to have been taken prisoner in Flanders. He is a captain in the Suffolk Regiment.

In the course of his monthly statement to the C.M.S. Committee at their last meeting the honorary secretary (the Rev. Cyril Bardsley) read the following telegram received from Dr. Carr: "Community ordered evacuate Ispahan go Ahwaz wire money direct Yezd and Kerman."

By arrangement with the British Red Cross Society the British Farmers' Red Cross Fund is providing £20,000 for the extension and maintenance of a convalescent home, containing 1,000 beds, at the Summer Palace of Montazah, lent by the Sultan of Egypt. Subscriptions should be sent to the secretary, Room 5, Tower Bridge Flour Mills, Bermondsey, S.E.

In a telegram, dated September 28, the Paris correspondent of *The Times* reports that General Marchand has been seriously wounded during the operations in Champagne. He was hit by a shell splinter, which struck his spinal column. The doctors, however, are not without hope of saving his life. The President of the Republic has conferred on him the Grand Star of the Legion of Honour.

HOME SCHOOL

for Boys whose Parents are abroad. :: Ages 7 to 14.

Entire Charge. Trained Nurse. Qualified Resident Master.

Boys prepared for Public Schools and Royal Navy.

Terms and Prospectus from

Miss Thomson, The Hall, Bexhill on-Sea.

APPOINTMENTS, PROMOTIONS, etc.

The Egyptian Army Orders issued on September 5 contained the following farewell order:—

"Upon the reversion to the British Army of El Lewa H. A. Bray Pasha, Medical Corps, the Sirdar wishes to record his appreciation of the excellent services rendered by this officer whilst employed with the Egyptian Army. Lewa Bray Pasha served in the Nyam Nyam Expedition, 1905, and has recently held the following important appointments, in all of which he performed valuable services:—Principal Medical Officer, Egyptian Army; Director-General Sudan Medical Department; President Sleeping Sickness Commission. The Sirdar, on behalf of all ranks, wishes him every success in his future career."

The *Egyptian Gazette* announces (September 13):—

Athanasius Bey Kassab, Director of General Accounts in the Ministry of Finance, will shortly be appointed Sub-Director-General of that department in place of the late Mr. Etherington-Smith.

Mr. Patterson will receive official appointment as Director-General on the 1st prox., when Adib Pasha will formally retire on pension.

Mr. C. Barton, Director of Accounts in the State Domains Administration, will be transferred to the General Accounts Department as Director.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

DEATHS.

FAIRLEY.—On September 22, at Tabriz, Persia, Richard Routh Fairley, aged 11 months, infant son of William Cunningham Fairley.

WESLEY.—On September 23, suddenly, at 4, Ashurst Road, Seaford, Sussex, F. Gertrude Wesley, beloved wife of Stephen Nowill, of Constantinople.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

FRIDAY, OCTOBER 1, 1915.

FOUND WANTING.

The crisis in Bulgaria, there is some reason to believe, is passing. How near the country was a week ago to national suicide may never be accurately known; but it is certain that its fate was hanging by the slenderest thread. Three years ago, when a number of points at issue between the Balkan States called for the most tactful handling, King Ferdinand of Bulgaria gave the order for the Bulgarian army to fall upon its former allies. That step led immediately to the defeat and humiliation of Bulgaria. By an adroitness which has stood him in good stead throughout his reign King Ferdinand was able to divest himself of his responsibility for Bulgaria's fatal move, and to leave his politicians to partition the blame amongst themselves. Once again Bulgaria has found herself at the parting of the ways. On the one hand the path points in the distance to liberty and justice, the establishment on a firm basis of the independence of small nations; on the other hand there is directly in the foreground the exhibition of Germany's physical strength, over which floats, for a weak mind, the spectre of German terrorism. Some natures are a sealed book to the German Government. In the wildest flights of its imagination it had probably never contemplated the prospect of a King, supported by the unanimous voice of his subjects, daring to sacrifice everything rather than prove false to his principles. Yet King Albert of Belgium threw back into the teeth of the bully of Europe his threats and base suggestions, and staked all on the justice of his cause. In the case of King Ferdinand of Bulgaria, it is to be feared, Germany has been more sure of her ground. History will make allowances for the difficulties of his position, his Germanic antecedents, the sense of injustice under which Bulgaria labours as she glares angrily at her neighbours. But the country's choice was in his hands. He alone could see clearly the issues at stake in the world-war, and yet with full knowledge of all the facts he could, under German influence, pin his faith in the victory of German arms. In other words, so little did the vision of faith inspire him, so little did he believe in the ultimate triumph of right and justice, that he could imagine a state of affairs which would allow Germany to dictate her will to Europe and would leave Belgium in the hands of her spoliators and oppressors. No country outside Turkey has so far openly subscribed to this belief. For some, and no doubt for many individuals, the path of liberty and justice has seemed perplexingly obscured, and they have been content to withhold judgment on a problem of extreme intricacy. But King Ferdinand was prepared to make public profession of his lack of faith and to commit his adopted country once more to a policy of adventure.

"Where there is no vision the people perish." There would have been no vision on the part of her rulers, if Bulgaria had stood committed to the support of the German cause. When the Royal Decree for the mobilization of the Bulgarian army was signed on September 19, the desire to see Bulgaria throwing in her lot with the Central Powers must have prompted in a considerable measure King Ferdinand's action. The intransigeant attitude which Bulgaria has adopted towards the Quadruple Entente, the cynical prosecution of negotiations with both belligerent parties, and her compromising action in concluding an agreement with Turkey during these negotiations, show how little sympathy King Ferdinand and his advisers had for the cause for which the Entente Powers are fighting. Fortunately, however, for Bulgaria, circumstances are likely to prove too strong for the Government. The sentiment of the country has been shown to be unmistakably opposed to co-operation with Germany and Austria-Hungary. It would be possible to exploit the national antipathy, due to recent events, felt towards the Greeks and Serbs, and even if the army were to offend so far against discipline as to indicate a reluctance to fight against Russia and Great Britain, Bulgaria could play her part as Germany's willing tool by confining her attention to her immediate neighbours. A more potent factor still in the situation is to be found in the events in the main theatres of the war. The great German drive in the East has not only encountered some significant checks, but here and there the Russians are developing an offensive movement which proves conclusively that the German claim to have put them virtually out of action for six months or more has not been substantiated. While this impression is gaining strength, the Allied Powers in the West have demonstrated that Germany is by no means invincible along this front. We have no intention of falling into the mistake made by Bulgaria's rulers of judging the course of events by unfinished successes in this or that theatre of the war. The Russians are still yielding ground, and in the West the Allies have only given an earnest of what their united efforts may yet be able to achieve. But enough has happened in both theatres to give the Bulgarian Government pause, and for the moment the outside world which was thrown into some consternation, not unmingled with genuine sympathy for Bulgaria, by the mobilisation order, is viewing with amusement the explanations offered for a costly, unnecessary and dangerous step.

The rapidity with which Greece replied to Bulgaria's provocation by mobilising her own army may also have come as an unwelcome surprise to King Ferdinand and the Radislavoff Cabinet. It is impossible to tell with what fantastic information German agents in Sofia may have beguiled the present rulers of Bulgaria's destiny. They may have counted on Greece's domestic preoccupations and on Roumania's indifference, to enable them to manœuvre into an advantageous position for the desired *coup*. But even when they arrived at this stage in their train of reasoning, it is difficult to imagine that they hope to be allowed to attack Serbia without rousing either Greece or Roumania to action. Indeed, the utter hopelessness of Bulgaria's position, unless she could reckon on Greek and Roumanian neutrality, is so apparent that the impartial observer is left wondering whether behind the mobilisation there can have been any thought of making common cause with the Germanic Powers. If there were not, if the explanations subsequently advanced were really the determining factors in King Ferdinand's mind, the criticisms passed upon Bulgaria's action would still do no one an injustice. The fact that only in Germany was the mobilisation of the Bulgarian army received with any satisfaction is a sure sign that the step could not benefit anyone else. If Bulgaria did not intend to render a service to Germany, the mobilisation was entirely a work of supererogation. It could not hope to influence the course of negotiations, because its effect is immediately neutralised by the action of Greece and Roumania, and it could not have been carried out in agreement with the Entente Powers. We are left, therefore, to the conclusion that King Ferdinand and his advisers dallied with the idea of a *coup*, and resolved upon the necessary preliminary. This time the opportunity denied them in 1913 has been given. They have had time to realise their mistake, and there is still hope that Bulgaria will not be launched on a fatal policy of adventure. If this should prove to be the case, good fortune and the sound common sense of the people will have triumphed over foolishness in high places. Whatever happens to Bulgaria, even if she is still to be sacrificed for Germany's ends, the admiration felt for the splendid qualities of her people will remain unabated. We may go further, and say that the strong ties which bind Russia, and in lesser degree Great Britain, to the Bulgarians will not have been severed. If war has to be between them and the Quadruple Entente, it will be waged by us to liberate a people of high character and great potentialities from the vicious influence of unenlightened government.

SERBIA'S SACRIFICE.

(From Our Own Correspondent.)

Nish, September 4.

The joyous comments one heard from every Serbian when part of the Russian forces crossed the Carpathians, the bright expectation that very soon the Serbian Army would advance on Buda-pest to join the invading Russians, have, through the continuous retreat of the Russian forces, been giving place to murmurs of despair. The fall of Warsaw, the further rapid advance of the German armies, have caused consternation in the hearts of Serbians. The fear of Russia making a separate peace and of Serbia becoming a prey to a renewed invasion, of combined German and Austrian forces, raised a dark cloud, which portended renewed distress and probable disaster to the already suffering nation.

The official Russian statement that war would be continued to the utmost, and that Russia would make no separate peace, has alleviated the depression. But it needed the Serbian Prime Minister's energetic declaration, that the bare idea of Serbia concluding a separate peace would constitute a crime, in order to impress on the people of this country that the present adversity is likely to be but a severe ordeal, from which the Powers of the Quadruple Entente and their Allies will eventually emerge victorious.

It was needful that the spirits of the Serbian people should be fortified; for they are now called upon to make sacrifices to which all of them are bitterly opposed. There has been for a long time a feeling of ill-will, varied by short intervals of friendship, between the Serbian and Bulgarian peoples. But, just as in the case of England and Germany, there was before the war in each country a party which strenuously endeavoured to promote peace between the two countries; so both in Serbia and Bulgaria there were strong political parties which for several years did all in their power to draw the two countries together. University students and professors sent delegates on an interchange of friendly visits to Sofia and Belgrade; the commercial communities did the same; Serbian parliamentary and political bodies, led by the present Prime Minister, made strenuous efforts to arrive at a friendly and economic *entente* with Bulgaria. These efforts progressed favourably, and finally terminated in an offensive and defensive alliance and a joint war against Turkey for the liberation of the Christian population.

Throughout the whole duration of the Serbian and Bulgarian efforts towards a *rapprochement*, Austria was working in opposition to those efforts, her aim being to bring Serbia to subjection to Austrian policy or to reduce the country to complete insignificance.

Serbia fought her political and economic battles with Austria bravely; she shook off Austria's economic yoke; weak and single-handed, she accepted the Customs war against her puissant neighbour; and in so doing served the cause of Balkan independence well. Austria's object was to suffocate Serbia, to facilitate her own advance to the Ægean Sea, to which Serbia barred the way. After the war against Turkey, when the unhappy conflict with Bulgaria was also at an end, Austria once more found play for her hostility to Serbia. When the Serbian Army penetrated into and occupied northern Albania it was compelled to retire under pressure of Austrian threats.

As regards an alliance of the Balkan States, Serbia was always well aware of its importance. She knew that such an alliance constituted the best guarantee for the independence of these States. And Austria also knew this, and always exerted her influence accordingly. The very contracts made between Serbia and Bulgaria prior to their joint war against Turkey show how eagerly and at what sacrifices Serbia desired an alliance of the Balkan States for the promotion of the interests of these States; and one which would likewise serve as a barrier against the encroachments of Austria.

The course of events during the war against Turkey did not run as was anticipated by both Serbia and Bulgaria. The latter country had not been able to fulfil its war engagements towards Serbia, and its victories extended to the unexpected occupation of a large part of Thrace, whereas Serbia, through the machinations of Austria, was prevented from reaping the benefits of her hard-won victories over the Albanians; and in these circumstances Serbia considered that the agreements she had entered into with Bulgaria were no longer just, and that arbitration was called for. But the conduct of Bulgaria, urged on by Austria at Bregalnitza, in suddenly and unexpectedly attacking the friendly Serbian forces, put an end to the question of arbitration. From that moment the feelings between the peoples of the two countries became very embittered, and reconciliation appeared impossible, each considering itself the injured party.

The Bulgarians having used might to settle the points at issue between them, the Serbian people and Government and Serbian military circles considered that, as victors, they were justified in retaining the Macedonian territories they had gained at the price of the great sacrifices imposed on them through the aggressive conduct of Bulgaria.

Even now, smarting under the effects of this dreadful European war, the Serbian Government is alive to the necessity of an amicable understanding between the Balkan States in order to enable the well-disposed neutral States to enter into action against the common foe; and the collective and simultaneous action of the Quadruple Entente Powers at Nish, Sofia, Athens, and Bucharest cannot be said to have failed so far as this country is concerned. Serbia's reply to the Note of the Entente Powers demanding sacrifices from this country has met with a generous reception, favourable to the end in view for the general good of the Entente and all its Allies.

It is true that in laying the matter before Parliament in its secret sittings the Serbian Government has had to deal firmly and make clear the imperative necessities of the case. The whole negotiations, however, have been kept secret, and the details of the Serbian reply to the Powers of the Quadruple Entente are unknown to the public. It suffices to say that, according to the best-informed circles, Serbia has given a favourable reply, proving her entire confidence in the Entente Powers, who have now the means at their disposal of pursuing a friendly and energetic course with the neutral Balkan States, so as to arrive at a clear and decided understanding.

In well-informed quarters it is feared, however, that negotiations with Bulgaria will not terminate so well as might be desired, some people going so far as to suggest the possibility of Bulgaria having already made secret treaties with the enemy, King Ferdinand having had authority and power to do so if he should have deemed it fit.

The political situation is critical, and there may be complications difficult to surmount.

THE PRESS ON THE NEAR EAST.

Sir Edward Grey's Statement.

In a leading article upon the statement made by Sir Edward Grey in the House of Commons upon the position in the Balkans, the *Daily Telegraph* (September 29) expresses satisfaction that such an utterance should have been made, as the announcements of the past week "are very disturbing and confusing and cry aloud for some sort of interpretation." The article continues:—

We now know where we stand, and it is to be hoped that Bulgaria thoroughly understands also what the position involves. . . . We desire to promote agreement, and to suggest common aims, so that in due course a real Confederation of Balkan peoples may be realised. The German ambition is to sow discord, in order that the selfish desires of Teutonism may be fulfilled. . . . She has tied Austria to her chariot-wheels. She has practically enslaved Turkey, so that the Sublime Porte can scarcely call its soul its own. In similar fashion, and with equal ruthlessness, she would subordinate any Balkan State which was foolish enough to be seduced by her wiles.

Balkan Mobilizations.

In a leading article on the mobilizations of the Bulgarian and Greek armies, the *Times* (September 25) considers that the latter country undoubtedly judged the situation correctly when she replied to the mobilization of the Bulgarian forces by a similar movement on her own part. We quote from various passages in the article:—

It was impossible for Greece to lie under the menace to her ally Serbia, to her own security, and to the whole future of the Balkan people which the sudden move of King Ferdinand creates, without taking this precaution for the vindication of her interests and for the discharge of her obligations. The tortuous policy of the Court of Sofia has long caused the deepest suspicion amongst the Allies, but they were ready and anxious to guarantee a fair settlement of the claims of Bulgaria, upon condition that she did her part in the cause of European freedom.

The writer describes the various events which immediately preceded Bulgaria's action, and continues:—

We still hope that King Ferdinand may pause before he stakes the future of his dynasty by forcing Bulgaria to draw the sword in a cause which we believe that his people know and feel to be opposed to their deepest and most abiding interests.

A great part of the concluding portions of the article is devoted to the real objects for which "Berlin and Vienna woo Bulgaria as an accomplice," and shows that they are merely part of the "world policy" of the German Government, which aims at "German domination from the North Sea to the Persian Gulf and as far as the frontiers of India." After summing up the various causes which should bind the Slavs together, and referring to the debt which Bulgaria owes both to Russia and to England, the article proceeds:—

The English abhor ingratitude with the contempt of a generous race. They would resent a betrayal of Balkan interests and of European interests by any State, but they would resent it with special bitterness were it perpetrated, or sanctioned, by a people who owe Russia and themselves so great a debt as does Bulgaria. And let it not be urged that ingratitude may always be committed with impunity in politics. The fate of Austria herself is an instance to the contrary. We trust that King Ferdinand and Bulgaria will take the lesson to heart, and will remember, before they are irrevocably committed, that the Allies will give their most strenuous support to any of their Balkan friends whom Bulgaria may attack, and will never stay their hands until Germans, Austrians, and Turks, with all who may aid them and abet them, are utterly overthrown.

The *Manchester Guardian* (September 27), in a leading article on Bulgaria, says:—

While, therefore, it is to be hoped that Bulgaria will, as the semi-official statements suggest, guard her frontiers jealously against Austro-German pressure or encroachment, it is to be presumed also that the Entente Powers have long ago thought out their military plans in case Bulgaria should be tempted to attack Serbia. . . . The Entente Powers, no doubt, have reckoned on all possible developments and will know how to act.

"MILKMAID" BRAND

Sterilised Fresh Milk

Obtainable from all leading Grocers and Druggists in Egypt and the Levant.

The *Manchester Courier* (September 25) also deals with the subject in an article from which we quote:—

Whatever may be the final outcome of the Balkan negotiations, it is obvious that the Allies are prepared for all emergencies. Nor should it be overlooked that the Allies have resources which as yet have been almost untouched. The mastery of the world's seas is ours; both France and England have vast numbers of fighters to draw on; Russia is still mobilizing; and Japan is waiting and willing to join in. Temporary advantage might accrue to Germany from a suicidal policy on the part of Bulgaria, but the final victory for the Allies is as certain as ever.

An Independent Judgment.

In an article dealing with the results of twelve months of war, Mr. Frank H. Simonds, editor of the New York *Evening Sun*, gives in the American *Review of Reviews*, and quoted by our paper of that name, the unbiased opinion of a neutral on the position of the various belligerents. The following paragraph shows the American opinion regarding German aims in the Balkans:—

Peace now would mean that 25,000,000 Austrian Slavs would be bent to German purpose; that this vast empire would in its own time descend to the Ægean, crush the remnant of independent southern Slavs, and throw aside the weak Hellenic barrier.

A German on the Balkans.

According to the *Daily News*, Herr Theodor Wolff, writing in a recent number of the *Berliner Tageblatt*, discusses the Balkan situation in an article from which we take the following extract, and which was evidently written with an eye to Serbian friendship:—

Those whose senses are not blinded by prejudice cannot deny that the Serbian nation has fought bravely, and has given proof of passionate patriotism and tenacious vitality. It used to be represented, in light-minded irony, as an opera-bouffe nation; at its own cost, and, unfortunately, Europe's, it has shown in a very convincing manner that it is ripe for a tragedy. . . . There are but few people who suffer from the desire to see Serbia wiped out from the book of nations. We only need in the Balkans, now and afterwards, an unimpeded connection with the friendly Turkish Empire and a pacific consolidation all round, which can best be secured by the annexation of Macedonia to Bulgaria. Apart from this, most of us know that forcible strangulation and suppression has never yet brought anybody any profit. We wish every nation plenty of breathing air and opportunities for development.

At the same time the Serbian people, and Nicholas Pashitch, who has been directing the storm-tossed boat ever since September, 1912—and has gone through a good deal—must themselves understand the signs of fate. Possibly their soul is still, like the soul of Iphigenia, seeking the land of the Greeks.

Perhaps the wise and discreet Venizelos, leaving aside his honest and pronounced sympathy for the Entente Powers, for which we must not blame him, will consider whether he could not better serve his friendly neighbouring nations by some other policy than that which seeks a solution of all questions by the sword. The advice of such an experienced statesman might well prove more wholesome than the often incalculable deed.

The Persian Gulf Campaign.

A recent number of *The Times* heads its leading article with the query, "Why is the Persian Gulf Campaign Ignored?" In dealing with the subject as a whole, the writer says:—

The expedition has done bold and gallant deeds, and has waged true amphibious warfare in conjunction with units of the Royal Navy and Royal Indian Marine. It has fought several battles in which, while suffering serious loss, it has generally inflicted far heavier losses upon the enemy. It has carried the British flag into one of the few corners of the earth where our victorious banners have never before been seen. It has captured the important city of Basra, one of the greatest of Turkish seaports. It has established itself, after two partially successful attempts, at the confluence of the Rivers Tigris and Euphrates. It has advanced so far up the Tigris that months ago a civil post office was actually established at Amara, a long stride along the road to Baghdad. It has penetrated over a hundred miles along the swamps and shallow lakes of the Lower Euphrates, and after a month of almost incredible toil it drove a fres Turkish concentration headlong, and established a new base.

The main purpose of the article is to lodge a complaint against the reticence of the Government in its distribution of news regarding the campaign.

French Claims on Syria.

To the *Contemporary Review* (September) Mr. T. F. Farman contributes an article on the above subject. The writer shows that the German menace to French interests is by no means a matter of recent growth, and considers that before the outbreak of the present war Germany had come to regard both Syria and Mesopotamia as virtually hers. He quotes Count Cressaty, who in the year 1913 said in his book on Syria that the main object of the construction of the Baghdad Railway by the Germans was to "cover those regions with

Digitized by Google

a sort of preventive mortgage." In pursuing the subject of this railway the writer says:—

That the Turko-German enterprise should be pushed forward with greater activity than ever during the war created surprise, but it seems it was considered, and no doubt rightly, that the completion of that link between the lines already created on each side to the foot of the Taurus mountains would be of great utility for military operations against the Suez Canal and Egypt.

He shows that German efforts have been consistently directed towards the weakening of French influence in the Levant, and that the Germans have been careful to accord their active support to any Turkish movements which would lead to this result, especially in Syria.

Yes, in spite of the Turks, who, when they declared war on the Allies, abolished the capitulations on which the protective rights of France are based, and in spite of the absurd boast of the Sultan, who, in his speech from the throne on that occasion, declared he would never consent to their re-establishment, France must be regarded as in possession of that protectorate. At the conclusion of peace the Allies will most surely stipulate the complete re-establishment of the capitulations, with all the privileges they entail for the Christian Powers, in those portions of Turkey which may be left under the Sultan's rule.

Proceeding, the writer includes a brief statement of the manner in which the French secured their privileges in Syria, and details the more important events which have transpired in their regard. Mr. Farman shows that the theatrical manifestation of the Kaiser Wilhelm in Palestine and Syria in 1898 was less successful than the Royal schemer had anticipated, owing probably to the fact that Syria is, "so to say, saturated with French ideas." He shows, however, that although the French survived the schemes undertaken by their German rival for their overthrow, the French Government itself placed the interests of its country in jeopardy through thoughtless legislation:—

By the dispersion of the religious congregations in France, a blow was struck, perhaps unintentionally, which might have had baneful results. Later on, to palliate the evil effects of the measure, anti-clericalism was declared to be "not an article of exportation," and the French Ambassador at Constantinople was authorised to continue to extend his patronage to the Catholic missions in the Ottoman Empire. Indeed, though the successive French Ambassadors accredited to the Porte since that moment have been almost without exception freethinkers, they have all regularly attended Mass celebrated by the Catholic clergy belonging to religious Orders expelled from France. But the dispersion of the religious congregations in France resulted necessarily in the migration of the seminaries for training the missionaries. Removed to foreign lands, the majority of the new recruits of those institutions were no longer French, but Belgians, Germans, and Italians. The work of French propaganda in the East was thereby seriously compromised. French politicians of all shades of opinion recognised and regretted it.

After a dissertation on the different religions of the Levant, with their political significances, Mr. Farman says:—

It does not appear likely that either Great Britain or Russia will oppose the realisation of the ambition of the French to establish their protectorate over Syria, which would constitute something like a buffer State between the two greatest empires of the world—Russia, which will almost certainly annex Armenia, and Great Britain as master in Mesopotamia as well as in Egypt. As for the idea of giving Syria an autonomous government, it would inevitably prove disastrous.

Turkish Communication.

Colonel F. N. Maude, in an article contributed to the *Sheffield Independent* on the "*Raison d'être* of the Dardanelles," compares the operations at the Dardanelles with those of the Crimea in 1854, and of the Japanese against Port Arthur. The following quotation opens up a new point concerning our strategy which will probably not have presented itself to the lay observer:—

We wore out Russia in the Crimea really because, by the accident of the situation and our own inadequate land army, we were unable to cut off the communications of Sebastopol with the mainland. In the present case it seems to me that we have intentionally left some communications with Turkey still open to the enemy for the same reason, never quite interrupting them, but making them so difficult both by sea and land that only a proportion of those who set out to reinforce the garrison ever succeed in reaching it. The people of Constantinople are never allowed to forget how their army is gradually being bled to death.

Press Censorship in Egypt.

Last week we referred briefly to "The Moslem Press and the War," an excellent article contributed to the *Moslem World* (October) by Stephen van R. Trowbridge and Selim Effendi Abd-ul-Ahad. The main purpose of the article is "to give a poll of the Cairo Press, as the most reliable interpretation of what is going on in the minds of Moslems," and this is satisfactorily achieved. The writers approve—as all thinking people must do—of the Press censorship in Egypt, though they recognize its disadvantages. We read:—

The declaration of martial law in Egypt was accompanied by the institution of a rigid system of censorship. Probably this arbitrary law has been even more necessary in Egypt than in England or Germany. The publication of startling rumours or seditious articles would have thrown the whole country into disorder and strife. As it is, a firm, even government has been maintained, and there has been absolutely no rioting or restless behaviour. The law of the Press, with its chief ally the censorship, has kept the mind of the Egyptians under control through all these critical months.

Having regard to what some Egyptian minds are capable of, the advantages of the censorship are undoubted. But the Oriental is subtle, and the censor appears sometimes to be caught napping. The following quotation serves to show that certain "Mark Antonian" journalists might receive more careful attention:—

Had it not been for the censorship in Egypt, the fanaticism of some would have known no limits. Even a Moslem paper like *Al-Ahali*, founded by the ex-Prime Minister of Egypt, often appears with blank columns, owing to the censor having struck out certain paragraphs or articles. In many instances the genuine spirit of *Al-Ahali* is unmasked by references which probably escape the censor's notice. An example of this is the way in which the *Al-Ahali* deals with the hostilities against the Dardanelles. For one who reads between the lines, it is not difficult to detect a spirit of sarcasm at the Allies' action, though outwardly the passages seem to be quite harmless. It would be most difficult, if not altogether impossible, to give an exact rendering of any of those passages. They are not unlike Mark Antony's oration on the death of Cæsar. Although on the one hand *Al-Ahali* publishes Reuter's and the official *communiqués* with regard to the bombardment of the Dardanelles, yet, on the other hand, the comments are encouraging to those who sympathise with the Turks.

On the other hand, it is but fair to give credit where credit is due, and to recognize that many Egyptians are as anxious to "play the game" as others are not. The paragraph just quoted is followed by this:—

El-Muayyad is more careful. For some time past its policy has been a thorn in the side of Turkey. In many instances its support of the British cause has, in the sight of many an orthodox Azhari, been carried too far. Indeed, a schism in the opinions of the proprietors of the paper with regard to this policy led to the dismissal of Hafiz Bey Awad from the chair of chief editor. Hafiz Bey seemed to be more British than the British themselves! His open attacks on Turkey, because of her getting entangled in the European conflict, were becoming insupportable both to the proprietors and to readers.

The Dardanelles.

Writing on the present position of the belligerents in the *Sunday Chronicle* (September 26), Mr. A. H. Pollen arrives at the conclusion that final victory in the great world war is assured to the Allies, even although hostilities should continue and fortunes fluctuate for a very considerable time to come. He regards the situation in the Balkans as disconcerting, but is convinced that even should Bulgaria throw in her lot with the Central Empires, the effect of the blow would be strictly measurable, and would in no way affect the ultimate result of the war:—

If the Dardanelles expedition were to fail totally and had to be written off as a military disaster without precedent, the final issue of the whole war would not be affected. There is not the slightest reason for supposing that it will or can possibly fail. It has been very near complete success, and will, I should imagine without doubt, finally achieve it, but its failure or success can only affect the final issue by retarding it or accelerating it. The character of the issue is decided by the array of forces on either side, always of course assuming that the unity of national sentiment, to make every sacrifice necessary for victory, remains as strongly marked in Russia, Italy, France, and England as it is in Germany and Austria.

Articles to Note.

"Kavala," in the *Daily Telegraph* (September 24).

"The Conqueror of the Turks: John Sobieski, 1629-1696." By Roger Martin, in *Kharki* (September).

"The Man of the Hour: King Ferdinand of Bulgaria" and "The Bulgaria Puzzle." By S. Coudurier de Chassaigne, in the *Sunday Times* (September 26).

"Boundary and Contraband," in the *World's Work* (September).

"Men of the Moment: Enver Pasha," in the *Review of Reviews* (September).

"Bulgaria's Intentions." By Count Cheddo Miyatovitch, in the *Manchester Dispatch* (September 27).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The resolution imposing additional Customs duties on dried fruits was agreed to by the House of Commons on Wednesday, after an amendment had been adopted for the exclusion of currants from the incidence of the additional impost. Mr. Montagu explained that the attention of the Government had been called [THE NEAR EAST was the only Press organ in the United Kingdom to call attention to this matter] to the fact that in 1890 a convention was signed with the Greek Government under which we undertook not to increase the existing duty on currants without a year's notice. The convention had not been repudiated, and as the agreed notice had not been given, the Government felt bound to withdraw this part of the resolution. The loss which the Treasury would suffer was £60,000.

***

My reference last week to the new duty on dried fruit, wherein—on information given me—I included dates, has brought me many letters pointing out that no such duty on dates exists, and consequently it cannot be increased. One such letter is reproduced elsewhere. Incidentally I may add that I am more than pleased that dates are not to be taxed, more particularly as regards "British dates" from Irak. It might be worth our while in future to give them some sort of preference on the home market, but I am afraid this would be too much to ask from statesmen who have an honest horror of anything clad in the raiments of Preferential Tariff.

***

The one item of the proposed new taxation which has met with the most serious opposition is that involving the temporary abolition of the halfpenny postcard. The question must be regarded from two points of view, from that of the Exchequer and from the public standpoint. If the halfpenny postcard, instead of having been a source of revenue to the State, had been run at a loss, it matters not if it is abolished. But if it was a source of revenue—and I believe it was—then it is a great pity that it should be interfered with, because the chances are that it will cease to be as remunerative as it used to be. From the public point of view the suggested alteration has nothing to show in its favour, but when we examine it in connection with trade interests we find that it is directly damaging. Firms like Messrs. Raphael Tuck and Sons, who have built up the illustrated postcard industry in this country and have done their utmost to keep this market from being absolutely swamped by German dumpers, will be hit so hard that they will have to reduce their output, which means a grave trade dislocation. And all for what? For a possible and very hypothetical increase in postal revenues. Is the game worth the candle? I hardly think so, and when the proposed increased rates are extended to circulars the damage done to trade will be more considerable than the Chancellor seems to have anticipated. I hope, however, that in view of the great opposition to the proposal from all quarters, the Government will drop it and seek increased revenues from another source more plentiful and less damaging.

The internecine war between the directors of the Baku Russian Petroleum Company, which came to a climax on Tuesday at the meeting of shareholders, is to be regretted. There was, as is usual in such circumstances, a lot of bickering, but Mr. Herbert Allen, the late chairman, held his ground ably, and practically carried his point. His suggestion for the election of a committee was adopted, and however much we may be opposed to the creation of such examining bodies, we welcome it in the hope that it will result in clearing the atmosphere and in reinstating the chairman. Thus will the future of the company be brighter.

***

The reference made elsewhere to the new factory being erected in Cairo by Messrs. J. Compton and Sons, of cotton fame, will be read with great interest here. It connotes a worthy effort on our part to capture Austria's clothing trade in our new Protectorate. I understand, however, that it is not intended to open in Egypt a spinning and weaving factory, as might be imagined from the context of the article which appeared in the *Egyptian Gazette*. The successful working of any such factory in Egypt would be doubtful, primarily owing to the great expense of fuel. What is intended principally is a cutting and fitting establishment on modern lines, and, given any form of protection against Austrian "dumping," it should, after the war is over, be a prosperous business.

***

I wish to call the attention of the proper agricultural authorities to the concluding paragraph of the article reproduced elsewhere by Rev. Dr. Glazebrook, American Consul at Jerusalem, on "Devastation by Locusts in Palestine." In it mention is made of a "species of fly, probably the bee fly of the family of Bombylidæ," which seems to attack the eggs of the locust. A specimen of this fly has been sent to the Department of Agriculture in Washington. Experiments with the live insect should prove highly interesting, and perhaps useful.

***

According to the Rev. Glazebrook's description of the devastation of Palestine by locusts this year, the damage done is incalculable and complete. Misery and famine will stare the inhabitants in the face, through the vineyards and olive groves, from which come the peasants' staple articles of food, having been destroyed. The Jaffa orange groves seem to have been miraculously preserved. What the effect of the dearth in Palestine will be on the fighting resources of the Turks remains to be seen. Apart from this, however, I sympathise deeply with the poor peasants of Palestine.

***

At the half-yearly meeting of the Ottoman Railway on Tuesday Lord Rathmore, the chairman, said that the line remained in possession of the Turkish Government and there was no means of obtaining any reliable information from Smyrna. They naturally supposed that the Turks, in their own interests, would not wilfully damage the railway, on which the future prosperity of the country depended. After the war the company would make a claim of considerable dimensions against the Turkish Government for loss of traffic.

***

According to a Central News message from Paris, reports have reached that city from Bucharest to the effect that "M. Radoslavoff has informed the Roumanian Government that owing to the difficulties which have been placed in the way of the transit of merchandise from Germany destined for Bulgaria, it is intended by way of reprisal to confiscate 30 per cent. of the value of goods passing through Bulgaria for Roumania." Though the above may sound as though, behind it, there lurked an *arrière pensée*, I prefer to discard any such suspicion, believing that the message has merely relation to purely economic questions.

***

Our Bucharest Correspondent refers on another page somewhat optimistically to a proposed tramline from Campina to Sinaia. He makes two statements which will not be readily accepted by those who know the locality. The first is that the line would be of easy construction. Now this is hardly accurate, because Campina is almost in the plains, whereas Sinaia—one of the prettiest resorts I have ever seen—is in the Carpathians, and is only to be reached along the narrow bed of the Prahova River, along and across which—in a score of places—passes the railway line. The second suggestion is that the proposed tramline would pay. This is hardly likely, considering that Campina, by no means a beautiful spot, is by way of being a small town, and that Sinai hôteliers depend almost entirely on the wealthy Bucharest holiday-makers for their living. A simpler scheme would be to electrify the line from Bucharest, through Campina, to Sinaia, and then run a more frequent, comfortable and rapid service between the two (to the best of my belief the last train passing through Sinaia is not timed later than 9 p.m.), and to reduce the fares. This would be a much more sensible way of "pushing" the beautiful mountain resort.

***

"Mr. Henry Ford, the motor-car manufacturer, has threatened to withdraw the deposits of his firm from any bank participating in the Anglo-French Loan." Who is Mr. Henry Ford? He is the head of the great Ford motor-car firm, which, thanks to the past supine folly of British statesmen in upholding archaic Cobdenism, has been able to swamp this market with his cars. His gratitude is eloquent. In the Near East he has established his merchandise also, even in countries which to-day are fighting (or are about to fight) on the side of the Entente Powers for their liberties. These people rely to a great extent on the success of the Anglo-French Loan in order to keep up the fight against the Huns, and now Mr. Henry Ford, presumably a millionaire, arrives to place obstacles in their path, and to tender his help to their, and our, enemy. Surely this act of generous support of the tyrants of the Balkans will not be forgotten by his Roumanian, Greek, Serb, Montenegrin, Italian, and French clients! Nor should we, probably his best customers, forget his true sympathy with our cause.

COMMENTATOR.

ENGLISHMAN, with good connections in England and Near East, desires FINANCIAL BACKING to open out, after War, a General Merchants' Agency Business in Turkey. Several good Agencies in hand, and other profitable business can be secured on proof of financial ability to handle.

Principals or Solicitors only, apply to "AGENCIES.," "NEAR EAST," Devonshire Square, London.

Roumanian Oil Market.

(From Our Own Correspondent.)

Bucharest, September 6.

After a long period of stagnation and falling in prices of raw petroleum, a slight rise and a more firm demand is to be noted.

The price of raw petroleum at Bushtenari has increased by 25 to 30 centimes per 100 kgs., that is to say, from 3.40 fr. to 3.65 fr. and 3.50 fr. per 100 kgs., with a fairly good demand on the part of the middle-sized and smaller refineries. This is apart from the Bushtenari type of oil, raw petroleum of the Moreni-Tzuicani, Tzintea, etc., classes, which contain 1 per cent. less benzine and more residues. These types of raw petroleum demand the same price as Bushtenari oils were getting a little time ago.

Output.

The general production is stationary at from 410 wagons to 420 wagons per day. A certain number of wells at Moreni-Tzuicani, Moreni-Bana (Ograda), and Baicoi have ceased their eruptions, and no new springs have been come on lately. The results of well No. 20 of the "Columbia," in the bed of the river Cricov at Bana Ograda are watched with much interest; indications point to a satisfactory result, and to a consequent increase of the oil-producing territory; difficulties of transport of materials, etc., naturally hinder work in this, a fresh district. In spite of this, boring goes on in a satisfactory manner. In a day or two attempts will be made to collect oil.

The "spouters" of the Roumanian Consolidated in the same district, Nos. 30 and 49, give together about 180 tons per day. The "Aquila" well, No. 101, in the same district which gave a production of 35,000 tons, and then was choked, has been cleaned, and it is hoped this fruitful well will soon again commence its production.

At Baicoi there is nothing new to report.

Working Material.

The want of working materials is felt more from day to day, and the prices asked for what is available become fantastic. As regards tubes, those in abandoned wells are being extracted, and though, naturally, their quality leaves much to be desired, they are fetching high prices. Wire cables are hardly to be found in the country.

Exportation is going on in an almost normal condition (naturally by land only), but during the first few days a reduction in the number of tank wagons going over the frontier is to be noticed, probably due to the general crowding of the lines and sidings owing to the Hungarian prohibition on grain exports. In the same manner a large falling off is noticeable in the number of "returned empties" arriving from Austria and Germany, probably because the lines are interrupted by the movement of troops.

The prices of "lampant" for exportation are increased somewhat above the low mark to which they had fallen on account of minimum prices being fixed for Germany by the authorities. The best prices are paid for oil for the districts occupied by the Austro-German troops, such as Poland, and even for Belgium. Large companies have made important contracts at maximum prices.

Tank wagons are much in demand, and high prices are being paid. The best prices are obtained for oil in tank wagons, so the price for oil in drums has fallen off considerably.

Benzine Exports.

It might be noted that practically no benzine has been exported except some relatively small quantities to Bulgaria. The entire export is in lampaut and lubricating oils, the only two qualities permitted for export. The rumours of smuggling of benzine to Germany and Austria are quite fantastic; indeed, were any of the companies to lower themselves to such a business, the strict control exercised by the authorities, both at the refineries and the frontier, would make this quite impossible, and all attempts would prove abortive.

The total production of petroleum on the Roumanian oilfields during the first half of the present year amounted to 906,472 tons, as against 878,526 tons obtained during the corresponding period of 1914, thus showing an increase of 27,946 tons, or 3 per cent. This, says the *Roumanian Review*, notwithstanding the great difficulties the Roumanian petroleum industry has had to fight against from the very beginning of the war, it has not only maintained but even exceeded the previous production. These difficulties consist of a considerable reduction of the number of hands, shortage of boring materials, the cessation of exports, and the accumulation of crude oil and products. There is, therefore, every reason to hope that after the cessation of the war the Roumanian petroleum industry will at once be capable of great development and progress.

The following table shows the production during the recorded period on the various districts:—

	Six months. 1915.		Six months. 1914.
Prahova.....	795,813	..	752,012
Dambovitza.....	52,330	..	20,554
Buzeu.....	43,830	..	81,883
Bacau.....	14,499	..	24,067
General total....	906,472	..	878,516

It will be noted that while the districts Prahova and Dambovitza register increases, the two other districts—Buzeu and Bacau—on the contrary, show decreases. This is explained by the fact that the districts Prahova and Dambovitza are near the centres of the refining industry, to which they are connected by an extensive net of pipelines, which naturally facilitate the transport of crude oil, as well as of refined products. The production of the two latter districts, however, must for the most part be transported in tank waggons to the centre of the refining industry, and therefore these districts have been the first to suffer. Especially in the Buzeu district, the various firms have been obliged to restrict their production to a great extent. As regards the various fields, the Moreni field continues to be at the head with 416,633 tons, as against 445,680 tons obtained during the corresponding period last year, thus showing a decrease of 39,017 tons, which is due to a voluntary reduction in the production. The participation of the Moreni field in the total production is expressed in the figure of 46 per cent.

The next in importance is Bustenari, with 145,683 tons, or 16 per cent. in the total production. It is to be noticed that the oil-field of Bustenari continues to produce greatly reduced quantities, which fact is due on one side to the natural exhaustion of the old sources and on the other side to the fact that very little new boring work was undertaken here. The third place is occupied by Baicoi, with a production of 108,520 tons, as against 11,696 tons produced during the corresponding period last year; that is to say, showing a production ten times as large, this being due to the discovery of the Fierbatori field. The participation of this field in the total production is 12 per cent., as against 1.35 per cent. last year. Then follows the field of Campina, with 64,735 tons, as against 94,699 tons last year, and a participation of 7.12 per cent., as against 10.91 per cent. last year. Tzintea shows a production of 54,295 tons, as against 36,940 tons, showing an increase of 17,355 tons and a participation of 6 per cent.

WITHDRAWAL OF GREEK TONNAGE.

A distinct stiffening of freight rates this week has synchronized with the recall of Greek steamers to their home ports (says the *Times*) in consequence of the mobilization from all parts of the world. Grain freights from North America, especially, have been firmer, for a considerable share of the grain shipments from North America to the Mediterranean has been carried in Greek vessels. The British trade which will be directly affected most will be the coal export trade, for it has been common for Greek steamers, after discharging their cargoes from North and South America to Continental ports, to proceed to this country and load coal in the Tyne or at South Wales. The total number of Greek steamers as recorded in Lloyd's Register Book is 433 of 892,991 tons gross—mostly of the tramp cargo steamer type.

Locust Plague in Palestine.

The following descriptive account of this year's locust plague in Palestine will be read sympathetically by all Britons, in spite of the fact that the Ottoman Government, against the wishes of the people, plunged the country into a war against its best friends. The writer of the article is the Rev. O. A. Glazebrook, the United States Consul at Jerusalem. The despatch is dated July 17:—

The recent devastation by locusts in Palestine will have disastrous effect on the people of the country, whose sustenance is thus so largely destroyed. I have had to depend upon outside sources for some of the information, but the actual invasion, the result of the devastation, and the work of protection I have seen with my own eyes. It is not an overdrawn metaphor to describe this inroad as an invasion. Truly, the onward march of the serried ranks of the devastating insects was "more terrible than an army with banners." As far as the eye could reach, the fields were covered by the locusts, and even the street in front of the American Consulate had the appearance, in the movement of the green and black mass, of a flowing river.

Such locust invasions are not unusual phenomena in Palestine. The last general and destructive visitation of the locusts occurred in 1865. Since then they have reappeared at different times in smaller numbers and limited areas, the last of these being some eleven years ago, but undoubtedly the disaster caused by the present visitation is not only greater and more general, but more profoundly felt than any in the recollection of the present generation.

Advance Swarms.

On February 28, 1915, the first swarms of adult locusts were seen in the bordering "Judean Wilderness," but it was not until the early part of March that they flew over and past Jerusalem. These adults did little damage, but, being of the largest and most devouring species of all migratory locusts (*Schistocerca peregrina*), the same kind alluded to in that most graphic of all descriptions of such ravages—the prophecy of Joel—apprehensions were grave that the result would be most disastrous. These apprehensions have been fully realised.

As soon as the news of the locust invasion reached his Excellency, Djemal Pasha, Ottoman Minister of the Navy and commander of the Fourth Army, he vigorously grappled with the situation. He appointed a "Central Commission to fight the locusts" under the presidency of his Excellency, Midhat Bey, Governor of Jerusalem. The field which the commission was to cover was the Sandjak of Jerusalem and the Vilayets of Beirut and Damascus, and this commission was officially attached to the headquarters of the Fourth Army at Jerusalem. Dr. Aaron Aaransohn, who is well known to the Department of Agriculture at Washington, was appointed High Commissioner for the above-mentioned Provinces. This appointment promised well, as the doctor is one of the most scientific men in Syria and director of the Jewish Agricultural Experiment Station of Palestine.

Combative Measures.

Under the direction of this commission an order was issued requiring every male residing in the cities from the ages of fifteen to sixty years to collect twenty kilos (forty-four pounds) of locusts or to pay an exemption fee of one Turkish pound ($4.40). This rule was rigorously enforced—stores being closed if the owners could not show a receipt for eggs or cash—that about 800 persons paid the tax, while the others either gathered the required amount or purchased them from peasants who brought them in secretly for sale. In the village half of the inhabitants were compelled to go out each alternate day to dig for locust eggs.

Towards the end of May the larvæ, already about an inch long, made their first appearance near Jerusalem on the plain of Raphaim and aroused the people to the necessity for immediate organized resistance. The method of procedure was to form lines of men, women, and children along the roads separating the private gardens from the open fields beyond, flagging the locusts. Tin-lined boxes were sunk in the earth in the direction in which the locusts were advancing. The flaggers would drive them together in a dense column toward the trap, where guards at each end would keep them from escaping. Sometimes the drives were so large that the ground in front of the boxes would become clogged, when the locusts would have to be shovelled into the boxes to make room for those pressing from behind. To protect the trees from the young crawling locusts pieces of tin or zinc, in the shape of inverted funnels, were tightly placed around the trunks of the trees.

Ineffective Results.

In spite of all this fighting of the larvæ instances are very rare where the results were satisfactory. Few crops or orchards escaped devastation. This was especially true on the Plain of Sharon, where the Jewish and German colonies, with their beautiful orange gardens, vineyards, and orchards, suffered most severely. The only exception was the orange gardens in Jaffa proper, which, doubtless, owed their immunity to the sea breezes. In the lowlands there was a complete destruction of the summer crops such as garden vegetables, melons, apricots, and grapes, for all of which the plain between Jerusalem and Jaffa is renowned and upon whose supply the Jerusalem markets depend. The result is that there are few vegetables or fruits to be had in the markets, and such as appear command an almost prohibitive price.

In the mountain district, notably about Jerusalem and Hebron, the heaviest loss from the onslaught of the locusts has been in connection with the olive groves and vineyards. Olive oil is a staple of food among the peasants and poorer classes, taking the place of meat. The grape, too, is a similar staple among all classes. The loss of this crop will be most keenly felt. This year, especially on account of the almost entire absence of sugar, now selling, when obtainable, at a fabulous price, the grape crop was counted upon as a substitute from which "dibs," a kind of molasses, and divers kinds of jams are made without the use of sugar.

Strange to relate, storks, which were always looked upon as the most effective enemy of the locusts, this year seemed to have been proportionately too few to have had a perceptive effect upon them. The common house sparrow and domestic fowls have doubtless devoured quantities of them, but here again the invading host was so tremendous that this natural help was not noticeable. During the digging for the locust eggs it was noticed that a species of fly, probably the bee fly of the family of Bombylidæ, had infested many of the egg sacks and destroyed the contents.

NEWS FROM ALL SOURCES

The Rumanian Ministry of Finances (says our Bucharest correspondent) has given orders to the Chiefs of Customs carefully to control any bran being exported, as it is known that many despatching bran have mixed with it a certain quantity of flour, which is sifted on arriving abroad. The reason for this subterfuge is that the tax on bran is 200fr. per waggon, whilst that on flour is 600 fr. per waggon.

With a view to provision for the sanitation and general upkeep of the Busreh Municipality, a house tax has been imposed on all buildings within the limits of the Municipality.

Several Kalamata (Greece) firms have recently decided to form an association, in order to co-operate for the improvement of the quality and packing of local exports, to find new markets therefor, and to further the interests of the trade generally. Twenty-two exporters have signed the constitution and by-laws of this association, but as yet they have elected neither president nor directors.

Mr. John A. Scott, of Messrs. Richmond Scott and Co., of Alexandria, has been appointed receiver and manager of the property of the Société Fruitière et Forestière d'Egypte.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, September 10.

The fresh invasion of locusts from Syria is a serious misfortune. Considerable havoc has been caused in most of the districts, trees being in places stripped of their leaves and summer produce generally attacked. The locusts are for the most part not of the species which have so long bred in the island (viz., the *Stavronotus Cruciatus*). They are of a red colour in parts. The swarms have spread over larger portions of the hill country as well as the plains. The vine area has therefore not escaped, and consternation has been caused wherever the dense flights have appeared. In the Limassol district some of the principal villages in which red wine is made in large quantities, and is the main industry of the people, have been selected by the pest. At Kiláni, Vouni, and some neighbouring groups much damage has been done. The outlook is alarming, as repetitions of this late summer invasion must be feared in coming years, especially as in Syria the combative measures taken have been, of course, quite inadequate. The Greek papers urge the Government to dispense with all half measures and to spare no efforts to destroy the foe at whatever cost, as there is fortunately a considerable balance to the credit of the Locust Fund.

Carob Thieving.

To add to the losses arising from short crops in many parts, there has been a recrudescence of an evil which had been greatly diminished in late years, and which, it was hoped, was being gradually stamped out. Extensive raids have been made by thieves on the trees. To prevent this trouble, which used to exist on a very large scale, various preventive measures have been adopted. One was the passing of a law under which dates are fixed before which it is unlawful to gather the beans. One date, generally about August 20, is fixed for lower villages, another, about a week later, for the higher. Villagers found in possession before these dates are dealt with. The prevailing poverty no doubt accounts largely for the increase of thefts this year. The worst part of it is that the trees suffer seriously, as the thieves, being hurried in their proceedings, beat the branches bearing the pods with violence, and so injure the shoots which often bear the nascent buds together with the ripe fruit. This evil can only be stamped out by a gradual elevation of the moral tone in the rural districts. The field watchmen cannot cope to any sufficient extent with robbery carried out by night. There is a tendency to blame the long-suffering Cyprus police, which excellent force does all it can in the matter.

The *Busra Times* announces that, with effect from September 15, no European liquors or spirits may be imported into Amara for sale unless they have passed through the Busreh Customs House, and unless a declaration has been made at the time of payment of duty at Busreh that the liquors or spirits are intended for Amara, and a certificate has been obtained from the Busreh Customs House to that effect. Such certificates shall be valid for import into Amara up to a maximum period of fourteen days from the date of their grant. European liquors or spirits arriving at Amara without such Customs certificates will be confiscated by the Amara Customs Department.

SUDAN DATES.

(From a Correspondent.)

The intelligence published in these columns last week, to the effect that the date crop in the Halfa Province promised exceptional advantages, bears rather more importance than the bare recital of the fact would at first suggest.

The Province of Halfa, it may be pointed out, is one of the poorest of the fourteen political departments of the Sudan. The soil is generally of so unproductive a character that it fails adequately to support even the comparatively small population of the district, with the result that many of the more sturdy among the inhabitants are often compelled to emigrate to other parts of the country, while those who remain are frequently in need of the practical assistance of the Government in matters of food supply, especially in times of low Nile. The fact that the next date harvest appears to be particularly promising may, therefore, mean very much to the people of Halfa themselves and be of no small moment to the Central Government.

In years past a considerable date trade was built up between Dongola and other parts of the country, and between Halfa and Egypt. Samples from both provinces were also submitted to the British Chamber of Commerce at Aden, which is an important centre of the date traffic from the Persian Gulf districts. The experiment proved, on the whole, encouraging. There seems to be but little reason why the Sudan dry date, although of a different quality from the soft date of the Persian Gulf, should not compete with the latter. For years past date-tree planting has been carried on extensively in the Dongola district, the Government having actively encouraged this enterprise among the natives by reducing the railway transportation rates. Date-tree planting is also prospering in the Berber Province.

In the Halfa Province the Gorgoda date is grown in preference to the Barakawi, notwithstanding that the latter is a superior fruit and obtains higher prices. This may be accounted for by the earlier bearing of the Gorgoda variety, and the fact that enterprising purchasers of so-called Barakawi shoots from Sukkot (the chief source of supply) often discover that they have been deceived. The shoots of the latter-named variety are also very costly, the price averaging from 2 to 4 p.t. each at Wadi Halfa, while the freight is heavy owing to the Railway Department having classified the shoots as "young trees." It is difficult to understand why Dongola should have been favoured in one respect while Halfa has been seriously handicapped in another. To the uninitiated this policy seems to be somewhat perverse.

Date-growing contains such wide possibilities, if sufficiently extensive and if conducted upon a careful and systematic basis, that some day it may attract the serious attention of foreign and even British capitalists. In this regard it may be recalled that when Captain Jackson, for many years the popular and successful Senior Inspector of the Province of Dongola, retired voluntarily some time ago, he elected to remain in the country, and purchased an extensive area of ground in close proximity to the scene of his former official activity. Here he set up as a date-grower, and his example may eventually be followed by other Britons in search of a profitable and pleasant occupation in a British-governed country.

In conclusion, it may be mentioned that out of a total export from the Sudan of dates to the value of £E29,372 in 1914 Egypt took to the value of £E29,331, or practically the whole export trade.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

COOPER, ALLEN & Co., Ltd.,

SUDAN NOTES.

FROM OUR OWN CORRESPONDENT.
KHARTOUM, September 10.

Khartoum has been visited by one or two very severe rainstorms recently, and the intervening weather has been correspondingly humid. Last year the rain was all over by the last week of September; this year the river is still rising and the rains look like continuing.

Rains have occurred all over the northern Gezira, thus ensuring a good harvest, unless locusts intervene.

Locusts have destroyed everything in Berber and Dongola, and as fast as the wind blew one swarm into the desert another swarm blew in. The province is in a precarious condition. In Berber, on the other hand, the fall of rain after the locusts had gone enables the cultivators to get a rain crop, where otherwise they might have starved.

ROUMANIAN GRAIN DEAL.

(FROM OUR OWN CORRESPONDENT.)
BUCHAREST, September 6.

In agreement with the convention concluded between Germany and Roumania, by which the former agreed to export to Roumania 5,000 tons of Silesian coal in exchange for a like quantity of maize and oats, the German Legation has informed the Ministry of Finance that the first instalment of the former has arrived at Brassov and will pass the frontier in a day or two. It is announced that the 500 wagons transporting the coal will serve on the return journey to convey Bulgarian goods destined for Germany.

DRIED FRUIT DUTIES.

To the Editor of THE NEAR EAST.

Sir,—It was stated last week that the new duty of 10s. 6d. per cwt. on dried fruit included dates.

This statement I am glad to correct, as dates remain duty free. The new Order says:—"Existing duties on dried fruit to be increased 50 per cent." Some writers, not conversant with the trade, thought that dates, being dried fruit, would have to pay, forgetting that dates come in duty free, and, therefore, cannot come under the heading of dried fruit *already paying* Custom duties.

Currants should now pay 10s. 6d. per cwt., but about twenty years ago, when Greece was in very low water, the British Exchequer came to its rescue by reducing the duty from 7s. per cwt. to 2s. I am not aware, however, that we have been rewarded by Greece in any way for giving it this preference.

I have, however, always been of the opinion that all the above dried fruit should come in duty free, as they constitute a most useful diet for our people, which cannot be replaced by any other home product. The most sensible way would be to tax those imports which compete with our home productions. But so far "the fear of approaching anything like the protection of our industries and agriculture" has obsessed our statesmen to such an extent that they have helped to ruin many of our industries, and have made us dependent on Germany, for instance, for many things which we are quite able to produce ourselves.—Yours, etc.,

ALEXANDER SEFI.

September 25, 1915.

The Board of Trade are in receipt, through the Foreign Office, of information from H.M. Minister at Sofia to the effect that the exportation from Bulgaria of planks cut into small sections for packing has been prohibited.

PRODUCE REPORT

LONDON, September 30.

Currants.

No other arrivals since those reported last week, but there are five steamers on the way, some of them near at hand. A number of steamers were being loaded in Greece, but owing to the mobilising order they were commandeered by the Government and had to discharge their cargo, which will be brought later on by other steamers. The market is very strong, partly owing to the deficiency of other kinds of dried fruit. Pyrgos bags 30s. to 31s., Amalias 37s. to 38s., Patras 38s. to 40s., Gulf 40s. to 42s., and Vostizza 42s. to 50s. With regard to the extra duty of 1s. on currants, as per new Budget, it has been found that owing to the existing convention between England and Greece no such increase of duty can be imposed; therefore, the duty for currants remains unaltered, viz., 2s. per cwt.

Sultanas.

There is no prospect of any arrival of new fruit at present. Old fruit is quoted 72s. to 80s.

Seeds.

Linseed.—The market is firm and in some instances 3d. dearer, but there is not much doing despite the strong market at higher prices for linseed oil. London-Calcutta near at hand offers at 54s. 9d., Sept.-Oct. 55s. 6d., Oct.-Nov. 56s. Cottonseed is very firm and offers are difficult to find. Hull is reported to have paid £10 18s. 6d. for Egyptian on the spot. London-Egyptian Sept. £10 10s. and Oct. £10. Bombay Sept.-Oct. to Hull was done at £8 15s. 9d. Rapeseed ruled firm, but is quiet; Guzerat Sept.-Oct. is quoted 61s., and brown Cawnpore, pure basis, 53s. 6d.

Oils.

Linseed oil is very firm, with a good demand at 5s. to 15s. advance. Spot pipes £26 10s., barrels and month £27 10s., Oct.-Dec. £27 15s., Jan.-April £28. Rape oil is fully steady. Ordinary brown naked spot £34 to £35. English refined barrels £36 to £38. Cotton oil is firm. Crude spot in pipes £27 10s., refined pale pipes £30, and barrels sweet £35 to £36 as to make.

Oilcakes.

Cotton Cakes.—Egyptian on spot is not available, thus English makes command extreme values, £8 2s. 6d. to £8 5s., although some business was done on early new shipment at £7 15s. ex ship, while Nov.-April shipments are offered at £7 10s.

Linseed Cakes.—There has been only a speculative demand for winter delivery, but although values appear weak, are not quotably lower. Best London is unchanged, viz., £11 10s. to £11 15s. East India seed, pures, £11 5s. ex steamer for early shipment.

Locust Beans.

No alteration. Continue scarce and as dear at £8 per ton for whole, and £8 10s. for kibbled.

For the purpose of "pilaff," 80—100 tons of rice are consumed yearly in the Aleppo Consular district (says the U.S. Consul), 30 tons of which are raised in Aleppo Province or imported from the Province of Diarbekir, while the balance is imported from Egypt and Rangoon. The amount of rice imported depends largely upon the local price of wheat. When wheat sells at moderate prices, 35 to 40 tons of Egyptian and 15 to 30 tons of Rangoon rice are imported. When wheat is dear 40 to 45 tons of rice are brought in from Egypt and 30 to 35 tons from Rangoon annually.

NEW EGYPTIAN INDUSTRY.

Messrs. J. Compton and Sons, of Tower Hill, London, are opening a cloth factory in Cairo.

The following particulars concerning the above venture are from the *Egyptian Gazette* of the 14th ult.:—

Early this year Messrs. J. Compton and Sons determined to make a thorough inquiry into the prospects of capturing the clothing business in Egypt from Austrian hands, and Mr. W. J. Compton proceeded to Cairo last March to investigate the conditions. He interviewed many of the leading officials, and took careful stock of the advantage of starting a big factory in Cairo for the manufacture of clothing on a huge scale so as to defy all competition. The officials of the Government welcomed the scheme, and it was decided to select a site at Cairo for the factory. The cigarette factory of Engelhard and Co., a German firm who had suspended business, was chosen. It is on the Shubra Road, and covers about three thousand square metres. Alexandria was visited, and it was decided to have a branch office there, but all the manufacturing work will be done at Cairo.

The factory at Cairo will start work about October 15, with at first about three hundred hands. This modest number, of course, will later be largely increased. Moreover, the firm is making at its factories in England uniforms for a number of States in the near East, and this branch of the business will probably be removed to Egypt, which will become the firm's distributing and manufacturing centre for the Balkans and the Eastern Mediterranean generally. Besides the site of three thousand metres at the factory, there is ample space for extension of the premises as the business grows larger. All the machinery has arrived from England and is now being put up. Teachers, who will instruct the natives in the art of handling the machines and other work, are expected shortly. It is hoped to employ native girls in the trade, and it is expected that natives will be turned into capable factory hands in a couple of months.

OFFICIAL PURCHASES OF COTTON.

The *Times* Cairo correspondent announces that the British Government has decided, in the interests of the Egyptian cultivators, to become a buyer of Egyptian cotton whenever the state of the market indicates the necessity of such intervention for the maintenance of prices at a remunerative level. This decision (adds the correspondent) will give widespread satisfaction, and will allay much anxiety, for it should obviate any approach to a repetition of the serious situation of last autumn, when cultivators disposed of a large part of the crop at ruinously low prices to dealers, who subsequently made all the profit.

MOROCCAN TRADE.

H.M. Chargé d'Affaires at Tangier reports, under date September 5, that sealed tenders will be received, within a period of forty days from the date (not stated) of the publication of the specifications in the official Bulletin of the Spanish Zone, at the Secretary's Office, Public Works Department, Tetuan, for the construction of a lighthouse at Tres Forcas. A preliminary deposit of 5,400 pesetas (about £216) is required to qualify any tender. The specifications and other particulars may be consulted by resident agents of British firms at the Secretary's office, as above.

With reference to a previous notice respecting the importation through the ports of the French zone in Morocco of certain classes of agricultural apparatus on payment only of the special tax of 2½ per cent. *ad valorem* prescribed by Article 65 of the Act of Algeciras, the Board of Trade are in receipt, through the Foreign Office, of a copy of an Order of the General Commander-in-Chief in the French zone in Morocco, dated August 22, which reduces the duty on the same articles imported into Eastern Morocco (over the land frontier) from 5 to 2½ per cent. *ad valorem*.

The *Journal Officiel* for September 2 contains tariff valuations (No. 7) for petroleum on importation into Egypt, which are to remain in force until the end of the month.

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.
Only superior qualities of
Hallawees, Khudrawees, Sayers and Zehdi
are packed.
In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.
SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.
Sole Proprietor:
BAHJET S. FORAGE, BASRAH.

Engineering Notes.

Agricultural Implements Wanted.

In spite of the war preparations and the recent call "to arms" in the Near East, there is and will be a great demand for agricultural implements this year. The scarcity of manual labour is already felt, and promises to be more pronounced. Officials as well as private individuals know that agriculture must be maintained, and every effort is being made to get a supply of modern implements for the approaching cultivating season. Ploughs, harrows, corn and seed drills, manure distributors, sowing machines, potato planters and diggers, etc., are mostly wanted. Hitherto Austria-Hungary and Germany supplied most of these implements, but now only America is making offers, and as the American designs are not quite suitable for the Oriental way of cultivation, there is an ample opening for British makers to secure large orders this year. For the benefit of agriculturists and others in the Near East we will describe in these columns the latest improved designs of agricultural implements of British construction, which, from personal experience, we consider suitable for the various wants of the native farmer and agriculturist.

Manure Distributors.

The use of artificial manure is increasing every year in the East, and apart from considerable quantities that are imported, there are large factories in the Near East that produce some excellent qualities for local use and the supply of the neighbouring countries and South Russia. Most of the distributors used are of Hungarian origin, but those who use machines of British construction find the latter far superior, stronger, simpler, and easier to manage than the Hungarian, although their price is slightly higher. A machine for the Near Eastern countries must be made to suit the requirements of a fruit farm owner as well as a root grower; that is to say, to be of general use in an estate. It must be fitted with a metal hopper, by preference, as wooden hoppers do not last long in hot climates. An English pattern that seems to have given satisfaction is one built upon the disc delivery principle, and the rate of distribution can be altered without changing any cog wheels. It is simple in construction and perfectly easy to operate.

Potato Diggers.

There was a time when potatoes for consumption in the Near East were supplied by Italy and Austria, but now the cultivation of the tuber is almost general in all districts. It is not well known, however, to growers that there are machines or implements for the raising of the crop, and others cannot believe that such work can be done by a machine without damaging the tubers. But now that manual labour will be very scarce, potato farmers will be obliged to have mechanical diggers or raisers, and the pattern used in England and Ireland will be found very suitable. It digs clean, and owing to its slow motion, the potatoes are not bruised or damaged in the slightest degree, and are left in a narrow row. The share is of hardened steel, and can be adjusted to the correct working depth by a lever at the side of the driver; its draught is sufficiently easy to enable it to be worked by two horses.

Sinaia Tram Line.

Our Bucharest correspondent writes:—A local journal, in speaking of means of attracting more trippers to Sinaia and the Prahova valley, advocates a tramline from Campina to Predeal. Although it would be of use only during six months of the year, the paper says, it would be a paying concern and would be easy to construct. There are no communications for visitors except about three trains per day. As a matter of fact, the service could be run practically all the year at less frequent intervals in the non-season months. Having a ready and cheap means of communication would attract many people out of season, especially during holiday times at Christmas, Easter, etc. The idea is well worth the attention of British tram-building lines, as the concession would be a valuable one.

Small Submarines.

It has been reported from America that Mr. Henry Ford, the well-known motor-car millionaire, has designed a small submarine that can be operated by two men and an electric motor. Its estimated cost is £1,000, and its radius fifty miles. However, in spite of Mr. Ford's fame as an engineering genius, the report has been taken by some as a "tall tale." Yet the invention of such a submarine craft is quite possible, and its use for coast defence may be invaluable. The idea is by no means new, for at the time when Nordenfeldt of Sweden brought out his first submarine, a Greek, named Gryparis, designed and constructed a small craft not unlike the modern submarines in shape, minus the periscope, tower, and other deck fittings, which could be submerged and operated under water by the inventor and his son. But submarine boats were not believed in at the time, and the poor inventor had not the means to complete his invention and prove the utility of the boat as a naval weapon. In the meantime, the Greek Government bought the Nordenfeldt submarine, which, although larger and scientifically designed, proved just as disappointing, and after lying for some years in a corner of the port at Piræus, both Gryparis' and Nordenfeldt's submarines were disposed of as scrap-iron! Let us hope that Mr. Ford's invention will prove a complete success, for the cheapness of the craft will enable all nations to provide themselves with great numbers of such "mosquito" craft for their coast defence.

Anti-Zeppelin Fleet.

However, even if the Ford invention is to be believed implicitly, the same fate can hardly await the story of the hurried completion in the United States and Canada of a fleet of 10,000 armoured aeroplanes, equipped with machine guns, searchlights, and a newly perfected bomb-dropping device for use by the British Government in protecting London and the English coast from further attacks by Zeppelins. Fully equipped, the great war planes are expected to fly at a height of 12,000 feet for four hours. With their revolving searchlights and a signalling system it will be possible, the newspapers declare, to circumvent any attack by German dirigibles on any vital spot along the English coast and to make it impossible for a Zeppelin to reach London. As a further protection against Zeppelin outrages, the *New York Times* announces the completion of hundreds of tiny air scouts, measuring only thirty feet across the wings, that will be used by the British military authorities for Zeppelin chasing. The Press Bureau had no sufficient reason to stop the publication of this report, but left the responsibility for its accuracy with the publisher. In the meantime one can imagine what the London sky will look like with 10,000 aeroplanes and hundreds of tiny air scouts with revolving searchlights, etc., flying about! Why, there will be no room left for any Zeppelin to come in; and it is well known that these heroes of the night detest meeting aeroplanes, even if it is only a couple of them.

GREEK RAILWAY CONSTRUCTION.

(From Our Own Correspondent.)

Athens, September 17.

On Mr. Venizelos' return to power, work in connection with the line being built to connect with the European railways was actively pushed forward, and it is hoped that the line will be open in the beginning of April, 1916. The Minister of Communications, Mr. Diamantidis, who has just made a tour of inspection of the line, reports that nearly all the work along the line is finished, and if the orders for the material for the bridges had not been delayed by the former Government, the line would have been ready at the end of this year. The line extends, for the greater part, along the coast, passing by Platamona, Caterine, and Libanovo, and terminates at Platy. Here it rejoins the Monastir-Salonika line. The total length, as far as Salonika, is 508 kilometres, of which 36½ kilometres lie between Platy and Salonika. However, so that it will not be necessary for trains for western Europe to go as far as Salonika to join the Salonika-Uskub-Belgrade line, a branch line has been constructed, 3.6 kilometres in length, which will link up the junction line with the Monastir line, from the bridge of the Vardar to Topsin. That is to say, that the international express arriving at Platy will run on to the Monastir-Salonika line, and after having gone a short distance to the Vardar bridge, will turn to the right on the said branch line, by which it will join, at Topsin, the Salonika-Uskub-Belgrade line.

The total cost of the junction line is reckoned at thirteen million francs.

It is estimated that the journey from Athens to Salonika will take fourteen hours at first and eleven hours afterwards. Thirty-six hours is given for the journey from Salonika to Vienna, so that it will be possible to go from Athens to Paris in seventy hours. There will be two trains a day to start with, one in the morning and one in the evening, and it is hoped later on to add a third, leaving at midday.

The railway companies of the other Balkan States have been invited to send delegates to Athens shortly to draw up a common tariff, and an international agency will be established at Athens for the sale of tickets. Prices will be on the base of twelve centimes a kilometre for first-class, eight centimes for second, and six centimes for third.

CAIRO EXPRESS AGENCY
An English Firm with an English Staff
Best Agency for booking Steamer Passages by any Line.

Trade Notes.

EGYPT'S TRADE IN JULY.

(From Our Own Correspondent.)

Cairo, September 20.

The Egyptian Customs statistics for July show a continuation of the diminution in trade that has set in since the outbreak of the war, but under Imports the decrease is appreciably less than the monthly average during the preceding half-year.

During July imports amounted to £E1,561,294, and exports to £E1,018,359, as against £E2,387,751 and £E1,381,701 respectively in the same month in 1914. It is to be noted, however, that whereas in the latter month the imports exceeded the exports by about £E1,000,000, this July the excess was merely £E550,000, so that the balance of trade still continues in favour of the country.

Under Imports the more important decreases were cereals £E248,119, livestock £E55,015, construction wood and wooden furniture £E147,254—in view of the recent increase in the duty on these articles, it is perhaps interesting to note that the imports thereof have fallen off by £E722,985 since the beginning of the year—cotton tissues £E34,101, and worked iron and steel, etc., £E190,724.

On the other hand, petroleum imports increased by £E13,415, coal by £E25,098—though the quantity fell off by 61,346 tons—sacks by £E25,528, and chemical manures by £E8,880.

The main decreases under exports were cotton £E465,774, cotton-seed £E8,762, rice £E13,426, refined petroleum £E58,278, and benzine £E34,380, and cigarettes £E10,016. Livestock increased by £E6,621, eggs by £E5,065, cereals by £E146,817—thus accounting for the decrease in imports in this category—sugar £E17,172, and gold and silver bar £E29,681.

During the month under review British imports showed an improvement on those during July, 1914, as also did those from the United States, which supplied all the petroleum (£E40,047); Chili, whence practically all the chemical manures (£E68,448) came; Greece and Italy. It is interesting to note that Great Britain and India supplied all the sacks (£E48,937) and practically all the flour (£E32,991), and that of the coal imported (£E191,714), £E33,930 came from America, and the balance from Great Britain.

The British Empire substantially increased its purchases from Egypt; America and Japan showed an improvement—mainly cotton—as also did Italy, which took nearly 70 per cent. of the wheat exported; Switzerland, on the other hand, has dropped from £E50,254 to £E757, which certainly shows that for the time being at any rate, that country has stopped acting as the transit-house for Germany in so far as Egyptian cotton is concerned.

Next to the marked increase in the export of cereals, perhaps the most pleasing feature of the statistics is the expansion of the sugar industry. England, France, India, Italian Somaliland, Morocco, and even our newly acquired possession—Bassorah—have all purchased Egyptian sugar, the exports of which—allowing for the raw sugar imported to enable the factories to work at their fullest capacity—has increased by 17,500 tons, or £E372,600, since January 1, 1915.

The table of the exchange of trade between Egypt and the Sudan shows that the latter sold to the former goods to the value of £E57,922, and purchased from it for the amount of £E76,135 during July. The principal imports into Egypt were livestock £E9,274, cereals £E20,582, gum £E3,413, cotton £E12,107, and the main exports to the Sudan refined sugar £E23,001, and cotton tissues £E20,394.

Since the war broke out there has been a great dearth in Egypt of certain well-known pharmaceutical products, and their prices have risen enormously. For instance, the price of Epsom salts has risen from £E4 to nearly £E40 per ton, and even so it is difficult to obtain. Benzo-naphtol is now unobtainable. Many other necessary products are also either unobtainable or out of the reach of modest purses. It was at first thought that America would be able to supply all that was needed in this country, but it was soon found that although America was ready and willing to do so, there was such a shortage of ships, and freights were so high, that it took six or seven months to import products that formerly arrived within a month of ordering. Hence the shortage and the rise in prices. A certain quantity of pharmaceutical products was seized on board German ships in Alexandria, but these were immediately sent to India by the purchasers when the cargoes were sold.

CYPRUS TRADE.

The *Cyprus Gazette* of September 10 gives the following particulars concerning Cyprus imports and exports during the quarter ended June 30, 1915, as compared with those for the corresponding period in previous year.

During the period mentioned (1915) Cyprus imported to the value of £124,373, as against £166,164 in 1914. Principal articles of import were:—

Article.	Quarter ended June 30, 1914.		1915.
Live animals, articles of food, and drinks and narcotics:—	£		£
Beans and peas	1,506	..	1,097
Butter, including butterine, etc.	3,689	..	2,473
Coffee, raw	3,179	..	7,885
Wheat	5	..	1,297
Flour	2,568	..	3,977

EGYPTIAN STATE ACCOUNTS DURING JULY.

(From Our Own Correspondent.)

Cairo, September 20.

The latest official Journal contains the figures of the State Accounts for the period ending July 31. The revenue amounts to £E4,923,346 and the expenditure to £E5,344,224. Twelve months ago the figures were £E5,358,741 and £E6,380,075 respectively, so that there is a falling off of £E435,395 in revenue and a reduction of £E1,035,851 in expenditure during the first four months of the financial year. As a consequence the excess of expenditure over revenue at the end of the period has been reduced from £E1,021,334 to £E420,878.

Land taxes during the month showed an increase of £E14,794, making a total increase of £E336,216, or 25 per cent. in the four months; Domains Receipts improved by £E70,741, Rent of Land by £E5,150, and Extraordinary Receipts by £E26,953. On the other hand, Customs Receipts further declined by £E48,652, Port Dues by £E22,054, Railways by £E48,678, Legal Dues by £E15,562, and Post Office by £E5,961.

The decrease in most of the departments was expected, but that in the Postal receipts, which on the four months amounts to £E20,392, or 20 per cent., is most unfortunate, and it would be interesting to know whether, as alleged in so many reliable circles, the recent increase in postage rates has had anything to do with this marked falling off.

PERSIAN FINANCES.

Mr. M. P. Price, writing from Tabriz on August 8 to the *Economist* on the economic situation in Persia, said that, while anything but satisfactory, it is better than one would expect under the circumstances.

"The Persian exchange is apt to depend on the Russian rouble, and the normal exchange before the war was 27 krans to five roubles. Since the war the fall of the Russian rouble on the European exchanges has had its influence also in Persia, and the Russian five-rouble note can now be bought for only 23 krans. On the other hand, a rise has taken place in the value of the pound sterling, which in August, 1914, was worth 67 krans and in August, 1915, 63 krans. Thus while the exchange with Russia is favourable, the exchange with England is unfavourable. Undoubtedly one of the reasons for the fall in the pound sterling is the difficulty of obtaining under present circhances a trade balance. Persia still continues to import, though, of course, on a much more restricted scale than before, but for months past she has almost ceased to do any export trade at all, and the trade balance for the year will probably go against her with a corresponding fall in the value of the Persian silver kran against the Russian rouble.

Prices of Necessaries.

"Meanwhile the prices of necessaries have risen enormously. Tea, which still comes in by the Gulf, has risen since the war from 4 to 18 krans per lb. Naphtha and sugar, the export of which is prohibited via Julfa, is finding its way in small quantities through Astara and Resht. Before the war naphtha was 2 krans and sugar 5 krans per batman, and at the present time 4½ and 20 krans per batman respectively. On the other hand, the export trade, which alone can keep the price of necessaries down and the value of the kran up, has largely ceased. Carpets are no longer exported to Europe, and the great staple export of Persia, viz., dried fruit, has not yet commenced. Difficulties of transport to Russia are anticipated. The Russian railways will not accept goods beyond Rostof-on-the-Don, and the markets of Central Russia can only be reached via Astrakhan and the Volga. The cost of transport to Russia by this route is 2 roubles 30 kopecks per pood. In addition to this, the native Persian banks, who generally give credit to the Armenian merchants serving this trade, have considerably curtailed their operations this year owing to the uncertainty of the situation The outlook for the export trade, therefore, is not bright.

Deficit.

"Meanwhile, the deficit in the annual Budget for Azerbaijan this year amounts to 200,000 tomans. This is largely accounted for by the impossibility of collecting the Malliat, or land tax, in those parts of the province which have been devastated by the war. On the other hand, there does not appear to be any retrenchment in the current outgoings. The possibilities of British cotton goods reaching the North Persian markets is now, owing to the closing of the Trebizond-Erzerum overland route, confined to the Russian parcel post service through the Caucasus, and in the present state of the traffic on the Russian railways there is great difficulty in obtaining delivery owing to war traffic. Moreover, British export trade to North Persia after the war will entirely depend on whatever arrangement is made in the political reconstruction of Armenia, and also on the goodwill of the Russian Govern-

ment in continuing the parcel post service. Nevertheless, the difficulties under which Persia is labouring are small compared with those of Europe, and in this respect, at least, the Persians may consider themselves fortunate in having maintained their political independence and some measure of their foreign trade throughout these troublous times."

COMPANY NOTES.

Baku Russian Petroleum.

A largely attended meeting of the shareholders of the Baku Russian Petroleum Co. (1909) was held on Tuesday, at which the differences that have arisen between Mr. Herbert Allen and the majority of the directors were discussed at great length. Eventually a resolution, agreed to by both sides, was passed to the effect that further consideration of the report and accounts should be deferred to the 27th prox., that in the meantime the same should be referred back to the board for reconsideration, and that a committee of four shareholders should be appointed to confer with the board thereon, the members of the committee to be selected by Mr. John Crisp and Mr. Herbert Gibson, the solicitors respectively of the company and of Mr. Allen.

Ottoman Railway from Smyrna to Aidin.

Lord Rathmore presided at the annual meeting of the Ottoman Railway (Smyrna to Aidin) held on Tuesday. He said the Ottoman Government still remained in possession of the railway and its revenues, and the board had no means of obtaining any official or reliable information, but it was natural to suppose that, in their own interests, the Turkish Government and people would not wilfully damage their property, the preservation of which was of such great importance to the future prosperity of the country. The accounts did not include any traffic receipts on revenue account, but the net revenue account was charged with debenture interest, with the result that there was a debit balance to be carried forward of £28,528. Until the conclusion of the war there would be no means of formulating the claim which the company would have to make against the Ottoman Government for loss of traffic and the disturbance of their possession of the line. Their general manager, Mr. Barfield, and some of their most important officials had succeeded, after the railway had been seized by the Turkish Government, in reaching England in safety. They were still here, and the directors were retaining them in the company's service on half pay, as it would be of great importance that when they come again into possession of the line they should have the nucleus of an efficient staff ready to resume the working of the railway. Having alluded to the unanimous support of the scheme approving the deferring of all payments of debenture interest, according to the terms therein set forth, the report was adopted.

COMPANY RESULTS, &c.

Agricultural Bank of Egypt.—Coupon No. 22 of the 3½ per cent. bonds, due October 1, will be paid on that date by the National Bank of Egypt, 6 and 7, King William Street, E.C.

Egyptian Delta Light Railways.—Receipts for the ten days ended September 10 amount to £E4,201, as against £E3,923 for the corresponding period of 1914.

Khedivial Mail Steamship.—The directors announce a dividend of 5½ per cent., less income-tax, on the preference shares for the year to June 30, payable September 30 (coupons 33 and 34).

The *Cyprus Gazette* for August 27 contains an Order of the High Commissioner, issued under the "Diseases of Plants Prevention Law, 1893," notifying that the importation of cotton seed from Egypt into Cyprus shall be permitted only if it be accompanied by a certificate signed by an authorised officer of the Ministry of Agriculture, Egypt, testifying that the seed proposed to be imported has been properly fumigated before shipment.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to July 31, 1915 (New Style: January 14 to August 13, 1915) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, July, 1915		2,815,126	1,848,000
Do. do. do 1914		2,948,092	2,243,532
Estimated Receipts for 7 months (Law of Control)		16,858,333	6,241,666
Actual Receipts, 7 months, 1915		21,227,502	14,348,887
Do. do. do., 19.4		22,279,819	17,355,173
Difference between estimated and actual receipts for 7 months	1915	+ 4,369,168	+ 8,107,220
	1914	+ 5,421,485	+11,113.507

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

A week that has witnessed the presentation of an ultimatum to Bulgaria by Russia, the landing of an Anglo-French force at Salonika, and the resignation of M. Venizelos' Cabinet may well be termed eventful, even amid the shock of a world-war. The situation created by these incidents, however, remains obscure, for there are too many indeterminate factors in it to enable an opinion to be hazarded on the probable course of events in the near future.

The hopes entertained that Bulgaria would be diverted from a policy of adventure by the rapidity with which Greece replied to the Bulgarian mobilization have not been realised. Information reached the Governments of the Entente Powers that German and Austrian officers had been arriving for several days in Bulgaria with a view to playing an active part in directing the Bulgarian Army. Similar action had been taken by Germany in the case of Turkey last year, and it was obvious that preparations were on foot in Bulgaria to carry out an unprovoked attack on Serbia and Greece. Accordingly, on October 4 the Russian Government presented an ultimatum to Bulgaria demanding that the German and Austrian officers in the country should be sent away, and that the Bulgarian Government should openly break with the enemies of the Slav cause and of Russia within twenty-four hours.

The reply given by Bulgaria to this Note has not been regarded as satisfactory by the Russian Government, and the representatives of the Powers of the Quadruple Entente have been recalled from Sofia. No overt act of hostility has yet taken place, but every indication points to the supposition that King Ferdinand and his advisers intend to persevere in their course. Their decision will not have been hurriedly taken. In Bulgaria itself the Government's policy has been viewed for some time past with the utmost misgiving. As the Sobranje has been adjourned indefinitely, the leaders of the Opposition adopted the exceptional course of demanding an audience of King Ferdinand in order to lay their views before him. The interview was remarkable for the outspokenness of the statements made by the deputation, and, if report be true, by the King in reply. King Ferdinand was reminded that he was imperilling both his dynasty and his own head. He showed, however, no indication of abandoning the policy which had met with such vigorous condemnation from the Opposition leaders, and four days later the mobilization decree was published.

In view of the opposition to the Government's policy, the absence of enthusiasm which characterized the mobilization, and of the Greek reply, the action of King Ferdinand and his advisers becomes susceptible of only one explanation. They must have committed themselves so completely to Germany that there was no room left for logical argument. When King Ferdinand's character is borne in mind, it is not difficult to appreciate the effect which German methods of persuasion will have had upon him. His fears and his ambitions will have been worked upon in turn. Even if he had not been able to satisfy himself that the Central Powers must be the victors in this war, a threat from the Austro-Hungarian Government that his extensive estates in Hungary were liable to confiscation would have sufficed to make him subordinate the interests of Bulgaria to his own ends. To what extent visions of a Bulgarian Empire, with himself as Tsar, may have helped King Ferdinand to throw in his lot with Germany we need not stop to inquire. Only very material arguments would have sufficed to rescue him from German toils. But the diplomacy of the Quadruple Entente neither understood the workings of King Ferdinand's mind, nor was it prepared in dealing with him to adopt the methods which alone would appeal to him.

It remains to be seen whether the Bulgarian army and the Bulgarian nation as a whole will follow King Ferdinand and his German guard to the bitter end. There are indications that all is not going as smoothly as the King might wish. If it be true that the Bulgarian public is still in ignorance of the real course of events, it may be possible at first to represent Serbia as the aggressor, and to stir up enthusiasm in the army for a campaign of revenge. Sooner or later, however, the appearance of Russia among Bulgaria's enemies will cause the facts to be known. In the meantime the Entente Powers should act as far as is compatible with military prudence on the defensive, avoiding, if pos-

sible, any measures calculated to cut the ground from under the feet of the Bulgarian Opposition, which must be working hard to thwart the suicidal policy to which King Ferdinand and the Radoslavoff Cabinet seem to be committed.

As far as the military situation in the Balkans was concerned, there was good reason to suppose that the effect of Bulgaria's intervention in the war would be neutralized by Roumania and Greece. The mobilization of the Greek Army showed that the Greek Government and King Constantine were united in a resolve to withstand Bulgarian aggression, and there was reason to hope that, as soon as Greece was involved in war, Roumania would also abandon her neutrality on the side of the Quadruple Entente. A hitch, however, has occurred in the realization of this programme. M. Venizelos has felt compelled to hand in the resignation of his Cabinet to King Constantine, and for the moment the part to be played by Greece in the future course of events is obscure.

In face of the menace to Serbia and Greece created by the mobilization of the Bulgarian army, the Entente Powers had no other course open to them than to promise support to both these States. To secure the maximum benefit of such support it was necessary that the Bulgarian attack should be as far as possible forestalled, that the Allied forces should be in a position to defend Serbian and Greek territory before the completion of Bulgaria's mobilization enabled her to strike. With this object in view it was arranged between the Allied Governments and the Greek Government that an Anglo-French expeditionary force should be landed without delay at Salonika, and sent to the districts threatened by the Bulgarians. As Greece had not formally declared herself on the side of the Quadruple Entente, M. Venizelos appears to have considered that the case would be met by a formal protest on Greece's part, and to have agreed to lose no time in securing the support of the Greek Chamber for his forward policy. The landing at Salonika was begun, and M. Venizelos made his statement to the Chamber.

We must infer that the Greek Premier had overlooked the advantage which the technical breach of Greece's neutrality had given to his political opponents. The session of the Chamber was a stormy one, and M. Venizelos, in spite of the fact that the mobilization order had been received with almost unanimous approval, was only able to secure support for his line of action by 142 votes to 102. Whether King Constantine, who has been consistently opposed to war in co-operation with the Quadruple Entente, regarded that majority as insufficient to justify Greece's entry into the European war against the Central Powers is not yet established. He summoned the Premier, and informed him that he would not be allowed to follow out his policy to the end. M. Venizelos at once resigned, and with him his whole Cabinet. Their resignations were accepted, and M. Zaimis becomes Premier, with a Ministry composed of the chief Opposition leaders.

One explanation given of King Constantine's action is that the German Minister protested against certain parts of M. Venizelos' speech to the Chamber as being of a character insulting to Germany. In conveying this protest to the Premier King Constantine intimated that he had incurred the Royal displeasure in going beyond the terms of the explanations which it had been agreed were to be given to the Chamber. M. Venizelos thereupon offered the resignation of the Cabinet, which was at once accepted. According to this version, the fall of M. Venizelos would be reduced to a personal matter between himself and the King, without any special bearing on Greek policy in general. The nomination as Premier of M. Zaimis, who is known not to be unfriendly to the Quadruple Entente, might, therefore, enable the understanding arrived at between the latter and M. Venizelos to be carried out in its entirety. Against this theory, however, must be set the probabilities of the situation, and certain statements attributed to M. Venizelos. The latter would seem to make no secret of the wide divergency between his own views and King Constantine's. Talking to deputies and friends after his resignation he is stated to have said that real agreement between himself and the King had never existed since his resumption of the Premiership. In the face of Bulgaria's equivocal attitude, they were able to agree on the subject of Greece's mobilization, but the agreement would not go beyond that point.

It is difficult to believe that King Constantine would have forced M. Venizelos to resign at this crisis in Balkan history on account of any minor disagreement. We are led to infer, therefore, that he still retains his objection to Greece's co-operation on any terms with the Quadruple Entente. If with this attitude he combines a reluctance to stand by the terms of the alliance between Greece and Serbia, the situation in Greece is critical. King Constantine could only persist in the maintenance of Greek neutrality, if he were confident that Greece was exposed to no risk of attack from Bulgaria. To have this assurance it would be necessary for Greece and Bulgaria to subordinate conjointly their national policies to German instructions. How the Greek nation would accept such a state of affairs remains to be seen. We may be certain, however, that the Entente Powers could not overlook such a breach of faith on Greece's part towards their common ally Serbia. The terms of the Greco-Serbian Alliance provided for military co-operation in certain events. The despatch of an Anglo-French Expeditionary Force to Serbia may safeguard Serbian integrity, but it does not relieve Greece of her obligations. The equivocal attitude adopted by King Constantine is prejudicial to the interests of the Entente Powers, and it is incumbent upon the latter to take steps that will force the Greek nation to declare itself on one side or the other.

Recent references in Parliament have served to focus attention on the Middle East. In regard to the unhappy plight of the Armenians, nothing more can be done at present than to take note of the ruthless policy of extermination adopted by the Turks, at the prompting of their German advisers, and to register a vow that the full reckoning shall be paid by both in due time. The situation in Persia, on the other hand, calls for immediate attention, and in this connection we welcome the well-informed speech delivered by Colonel Yate in the House of Commons, which will be found on another page. Not the least interesting part of that speech is the reference to possible substitutes for the Swedish gendarmerie. If it be the case that the Swedish officers have resigned their positions, and that the gendarmerie is actually, or in process of being, disbanded, the need for raising a force to take its place is urgent. It has long been recognized in competent quarters that British officers of the Indian Army will sooner or later have to be employed, if law and order are to be maintained in Persia.

We would again call attention to the needs of the British Refugees from Turkey Fund. Readers of THE NEAR EAST are aware of the good work that this fund has been able to accomplish in Athens, in London, and in Constantinople. Our pages have borne testimony to the support already given to the fund, but we fear that subscriptions have not been as persistent as the demands which the Committee has had to meet. A considerable monthly outlay has to be provided for at all three centres, more particularly in Athens. The fact that so many of the recipients are abroad adds to the Committee's difficulties, for it is unthinkable that these British subjects should be left in need by the failure of the means which have helped them to tide over the time since they were compelled to leave Constantinople or have lost their ordinary means of livelihood in that city. A fresh appeal for funds has been sent to the Committee by the British Minister in Athens, and it is hoped that former subscribers will again come forward to the assistance of the fund and will see that many others follow their good example.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, September 27.

The Attempted Assassinations.

So far no date has been fixed for the trial by military court of the nine men implicated in the attempt on the life of H.H. the Sultan. It was understood that the inquiry had been concluded; but I gather that further information requiring investigation has reached the authorities in regard to the bomb outrage, for what one might call a subsidiary inquiry has now been opened in Alexandria. The important points that have to be established are the connection that existed between the bomb outrage and the attempt on Fathi Pasha, and who else in the country is implicated in the conspiracy. That there was some connection between the two acts would appear certain from the fact that Saleh Abdel Latif gave as his chief motive for attacking the Minister of Wakfs that the latter had materially assisted in bringing to book some of the men now accused in the bomb outrage. Shams ed-Din, the man who rented the house from which the bomb was thrown by Helbawi, and who was the latter's chief accomplice, is shown to have concerted with the other accused for the perpetration of the act; but there is every reason to believe that, although all those about to be indicted were directly concerned in the conception and execution of the outrage, they did not act on their own initiative, but were inspired from Geneva and Stamboul, through intermediaries whom the authorities are now endeavouring to trace.

There is evidence to prove that Mohammed Khalil's attempt on the Sultan last April was not the individual or spontaneous act that it was considered to be at the time. It is highly probable that it will be found that the same brains that directed the two attempts on the Sovereign's life were responsible not only for the stabbing of Fathi Pasha, but also for all the revolutionary acts that have taken place in Egypt during the past six years. The legal advisers to the military authorities have already dealt with the evidence in the case of Saleh Abdel Latif, and his trial will take place to-day. That of Helbawi and his companions will be delayed somewhat, as, more vital questions being involved in the bomb outrage, the Parquet will naturally wait until it has completed its chain of evidence to show how the conspiracy originated before handing the dossier over to the General.

The Ghafir Tax.

Many people cry out against the imposition of martial law when a country is not actually in a state of war, but there is no disputing the point that in a country like Egypt martial law is an invaluable aid to the civil administration. Of this we have just had a proof. The public peace is maintained in the cities and the provinces by the police force, which is about 9,000 strong, and which is supplemented by 32,000 *ghafirs* (night and day watchmen). The police force is paid for entirely out of the general budget, but the cost of the *ghafirs*, since their disposition is in a great measure dependent on the nature of the population and of the property ownership in each district, was intended to be met by the levying of a tax on each householder or landowner. The consent of the Powers had, of course, to be obtained for the imposition of this tax on foreigners, but it has never been given by all, and so the payment of the tax could not be made obligatory. Under normal conditions a certain section of the native and of the foreign population does pay the tax, but the bulk of the cost of the *ghafir* force has hitherto had to be borne by the State. Since the outbreak of the war, it appears, the situation has financially become aggravated, and the refusals to pay the amounts due have increased wholesale, thereby jeopardising the existence of a most necessary factor in the maintenance of public security. Since the *ghafir* force renders what, for comparison's sake, may be called a personal service to the inhabitants, there was ample justification for the levying of this direct tax; but the international obstacles from which the country has so suffered in the past intervened, and the administrative authorities were confronted with a serious problem just at a time when the general budget could ill-afford such expenditure. A simple solution has, however, been found. General Maxwell has issued a proclamation calling upon all liable to *ghafir* tax to pay it as soon as the civil authorities make the demand, and warning the public that any refusal to pay will render them liable to prosecution for disobedience of a military order, without prejudice to whatever action may be permissible under the civil law of the land. This is the first occasion on which the military authorities have had to intervene on behalf of their civil colleagues. In the circumstances, this intervention is most welcome, and it should serve as a lesson to all those who still incline to think that they can to-day resort to the same subterfuges for getting out of their municipal and other obligations, and set up the same obstacles to the execution of the civil administration, as they did a year ago.

Effect of the War on Food Prices.

From time to time since the war started letters have appeared in the local Press complaining of the high price of the necessaries of life, and to judge by these complaints one would imagine that the population was suffering from an abnormal rise in the cost of living. A very interesting memorandum on the subject has just been published in their Monthly Return for August by the Ministries of Finance and Agriculture. In this note a comparison is made between the prices of articles of first necessity in Egypt and those in Great Britain, Germany, Austria, Italy, and Norway after a year of war. In almost every case the prices abroad have risen considerably, whilst those in Egypt have generally fallen; indeed, cereals have dropped very appreciably. Imported articles which cannot be produced in the country have, of course, risen very much, either owing to higher freights or the closing down of sources of supply. All things considered, the complaints referred to are wholly unfounded, and have undoubtedly been spread about by interested parties. One cordially agrees with the conclusion of the memorandum "that, though Egypt has undoubtedly suffered through the war, owing to loss on her staple product and to the rise—in some cases the very high rise—of imported goods, there are compensations." But whilst the writers give as an illustration of those compensations that "the necessaries of life produced in the country have on the whole fallen in price," one would like to have seen emphasis laid on the fact that the rise in the price of imported goods and of the few local articles that have risen has been and is still being more than compensated by the enormous sums of money that are being spent in the country by the British Government. At least two-thirds of the value of the imports since war started is represented by the amount in question, and Egypt should consider herself exceptionally favoured by the gods in that, instead of having the cost of the necessaries of life rising against her and having to pay out vast sums for unremunerative purposes, as is happening in practically every other country in the world, excepting, perhaps, America, her cost of living should have barely altered—I refer to the masses, of course—and she should be the recipient of more money than she has ever before received from outside.

SUDAN SLAVERY REPRESSION.

(From a Correspondent.)

With the return of Captain H. E. Dumbell a few days ago to the Sudan to resume his duties as an inspector in the Repression of Slave Trade (Horrieh) Department, this branch of the Administration will regain the services of one-half of its personnel. Of the four inspectors who compose it, three (including Captain Dumbell) have been absent of late upon medical grounds, while the fourth, Mr. F. Atterbury, has been temporarily in Egypt. Upon at least one occasion, namely October, 1913, the whole of the four inspectors were on leave at the same time. The Department last year suffered two notable losses—first, in the death, after a severe operation at a London nursing home, of Captain the Hon. Maurice Patrick MacNaghten, who had seen eleven years' service with the Administration; and, secondly, in the retirement from the post of director of Major H. V. Ravenscroft, after twenty years service in the Egyptian Army and ten as director of the Slave Trade Repression Department.

This Department of the Sudan Government is still considered important, although, thanks to the vigilance and untiring energy with which the Government has carried on its work, conditions have materially altered since it was first established. So bad were things formerly that the most drastic steps were taken to bring about an improvement, calling, in one instance at least, for the public hanging of a notorious slave dealer, Ibrahim Wad Mahmoud, after whose removal the province of Kassala, where he had carried on his nefarious trade, was rendered almost free from the scourge.

Much of the amelioration in the condition of things some ten years ago was brought about by the active patrolling of the Suakin district, where a strong body of men was employed moving along the coast north of the port mentioned, and eventually joining hands with another patrol sent out from Derawi, on the Nile. The plan proved thoroughly effective, it served to impress the Arabs with the Government's power, and proved a troublesome thorn in the side of the slave-runners on the Red Sea coast. At this period, and, indeed, for long after, Arabs used to steal and buy slaves from Nubas, who sold—and would, to-day, sell, if they could—those of their own people who were wholly unprotected (such as orphans), and sometimes those who had been captured in fights with the tribes of other hills.

Of late months there have been rather more cases of slavery reported to the authorities, doubtless due to the recent scarcity of grain; but the undiminished vigilance of the Government renders anything like a return to the bad old conditions absolutely impossible. From time to time cases of kidnapping come to light; especially in the neighbourhood of Suakin. Instances of abduction of the most approved romantic type are also still occasionally discovered, and promptly punished. Latterly there have been established a number of additional military and police posts charged with the supervision of this kind of illegal practice, including those at Halaib, Mohamed Ghul, Darur, Geziret Abdulla, Hambakta, Sebaat, Akik, and Karora. Constant patrols are also maintained between Halaib and Mohamed Ghul, Darur and Mohamed Ghul, Port Sudan and Suakin, and between Suakin and Tokar. A new post of eleven non-commissioned officers and men, under a superintendent, has been formed at Wadob, in the Gemelab country.

As always, the Sudan Government is meeting with little but obstruction and annoyance from the Abyssinian authorities in its efforts. The disturbed state of the Abyssinian border and increased control of the chiefs living on the Sudan side of the frontier have somewhat diminished the traffic in slaves; but it is always possible to find men who are willing to go to Abyssinia to fetch both slaves and rifles. The authorities, however, are fully alive to what is going on at this side, as well as among the Fellata and other pilgrims, who are much inclined to do a little quiet dealing in slaves when they think that the eye of authority is turned the other way.

Sometimes it is necessary to teach these gentry a sharp lesson, such as that administered to the Nubas, who actually attacked a detachment of thirty-five non-commissioned officers and men who had been sent to Jebel Kasha at the beginning of July of last year to form a post which is still maintained there. As a rule, however, it is not found necessary to keep detachments of this character for more than a few months at a time at any given place. Their temporary presence seems to have a good moral effect. The small detachment of twenty-six non-commissioned officers and men, for instance, who were sent, mounted on mules, to the Sebat Valley (in the Upper Nile Province) late in November of 1913, returned to El Obeid at the end of the month of May following; while the post of eleven men, mounted on camels, sent to Nahud at the beginning of last year, were brought back to headquarters in the following July. In both of these cases the results attained were considered to be perfectly satisfactory.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, September 22.

Young Turks' Dissension.

The rumours of dissension among the Young Turks are probably not incorrect, but while it may be true that the Sheik-ul-Islam was desirous of resigning, he is still in office. The dissension is hardly likely to lead to any change of policy as long as Enver and Talaat are alive.

Rahmi Bey, the Vali of Smyrna, has been on a visit to Constantinople, and was returning to Smyrna last Wednesday. It is said that he is opposed to the policy of the Cabinet, especially with regard to the persecution of the Armenians, whom he and Perteb Pasha, the Military Commander of Smyrna, have agreed to protect.

Persecution of Armenians.

The reports that arrive of the treatment of the Armenians in Asia Minor are most distressing. It is estimated that there are 600,000 of them homeless and wandering about, and along the Anatolian railway line groups of them are to be seen destitute and starving. The Turks, it would appear, are making a deliberate attempt to exterminate the whole race, and thereby to provide homes and plunder for Mussulman refugees who have left the Gallipoli Peninsula and places in Thrace. In Constantinople many arrests among the lower classes of the Armenians continue to take place, and these unfortunates are exiled to share the fate of their co-religionists in the interior.

Enver has been to Smyrna and Adallia on inspection, and on his return to Constantinople was received with much pomp, officers being in full uniform.

It is reported that the fortifications of Adrianople have been demolished. If correct, this would indicate, of course, that there is a very definite understanding between Bulgaria and Turkey.

Transport Difficulties.

Preparations are being made to construct a railway line from the main line at Ouzoun Keupru to the Bulair lines at Gallipoli, as not only is vehicular transport insufficient, but the roads will be almost impassable in the winter. The transport of munitions from Constantinople to the Dardanelles has been largely carried on by means of lighters, but in the winter the weather will seriously interfere with the navigation of these small craft, and there are only about a dozen transports now left in Constantinople.

A supply of benzine and petroleum has arrived in Constantinople by train.

An explosion recently occurred at the powder factory at Karagatch, on the Golden Horn, when thirteen were killed and twenty-five wounded, including some Germans, and an aeroplane fell into the sea off Macrikeuy, and two aviators, said to be Germans, were drowned.

Druse Recruits.

A large number of Druse recruits, in their national costume, have arrived in Constantinople; but they appear to be such an unruly lot, not obeying their officers, that they have been sent to the Black Sea coast.

Measures Against Enemy Subjects.

A somewhat disconcerting announcement has appeared in the papers to the effect that a commission has been formed to take steps to indemnify those who have experienced loss from the bombardment of property by the enemy, "contrary to the rules of warfare," out of the proceeds of the properties belonging to enemy subjects residing in Turkey. Advices from Constantinople state that no decision has been taken in the matter, but if the measure is carried out, the private properties of British subjects will apparently be seized.

The Temettu (income-tax) inspectors are also becoming troublesome. They are visiting offices to see whether the salaries actually paid to the staffs are in agreement with the official declarations given by merchants. In most cases the curiosity of the inspector is not satisfied, and he threatens terrible things.

The Prize Court has declared as prizes of war the sailing boats belonging to Messrs. Nowill, Hoyland, and Tucker.

All the pilots and divers in Constantinople have lately been arrested. Amongst them are two Englishmen, George Crawford and J. Ashover.

The £1 Turkish notes are now in circulation.

Any newsagent or bookstall in the United Kingdom can supply copies of "THE NEAR EAST," which are on sale early on Friday morning. Should any difficulty be experienced in obtaining the paper, the Manager would be glad to receive a post card giving particulars, and he will take steps to rectify the matter.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, September 25.

The Balkan Crisis.

Events have passed so rapidly in the Balkans these past few days that one still feels somewhat dazed. When I said in my last letter that it would be enough for Bulgaria to mobilize to make Greece do likewise, I little thought that they would both have done so only eight days later.

As soon as the first news of the military movements in Bulgaria had been telegraphed here by the Greek Minister at Sofia, M. Venizelos announced to the Bulgarian Minister that Greece would have to take similar measures. But barely eight hours afterwards an urgent telegram from the Greek Military Attaché at Sofia, which arrived here on Thursday morning, announced the promulgation of the decree of mobilization of the whole Bulgarian Army.

Greek Mobilization.

This astonishing news immediately spread all over the city, together with news of the Government's decision to mobilize the whole Greek Army. Everyone thought that the King would refuse to sign the decree, and that a Ministerial crisis was inevitable. However, the Sovereign gave his signature to the decree of mobilization submitted to him by M. Venizelos without the slightest objection. A little later, towards evening, the decree calling to the colours twenty classes of reservists, in addition to the four classes already under arms, was posted up at various points. The call was very well received, and the men started their preparations with admirable enthusiasm. This is due to the confidence the people have in M. Venizelos, as a prudent statesman who knows his business, and in the King as a strategist who has known and will always know how to handle his armies safely.

The following day the Government started to commandeer merchant vessels for the transport of troops, as well as horses, carriages, carts, and everything that might be of use to the army.

In order to meet the first expenses of mobilization, which will amount to nearly one and a-half millions of drachmai a day, the Government has concluded a provisional loan of fifteen millions with the National Bank of Greece. But, as this sum will only suffice for a fortnight, M. Venizelos has been guaranteed the means necessary.

A meeting of the Chamber has been called for Wednesday, the 29th inst., to discuss the situation and to authorise the Government, according to the terms of the Constitution, to proclaim a state of siege, which will apply to Macedonia, and most probably to Athens and Piræus also. As for the fleet, there does not seem to be any reason for mobilizing it, at any rate for the present.

King Constantine and M. Venizelos.

Although the King, realising to the full the danger of Bulgaria's mobilization, did not hesitate to sign the decree of mobilization, he and M. Venizelos were not in accord as to the actual line of action of the mobilized army, nor as to the course of action to be pursued by Greece should the expected developments in the Balkans take place. In submitting the decree of mobilization to his Majesty, M. Venizelos did not fail to inform him of the decision come to by the Cabinet that the mobilization was a purely defensive measure, but "defensive" in the sense that Greece meant also to defend the interests of her ally Serbia should Bulgaria attempt to occupy Serbian Macedonia. In that event Greece could no longer maintain her neutrality, but must take her part in the great European conflict. M. Venizelos also told the King that if the latter did not share his point of view, he had decided to resign, and suggested to his Majesty that, in that case, it would be better if his successor undertook the direction of the mobilization. But as the measure was an urgent one, admitting of no delay, and in order to avoid a Ministerial crisis, the King confined himself to approving and signing the mobilization order, reservations being made regarding the other questions appertaining to it. Thus the situation remains uncertain.

The following day certain journals that are known to get information from high circles, and to be inspired by them, announced that a Ministerial crisis threatened, and urged that, as Bulgaria would only occupy territory that had been voluntarily ceded to her by Serbia, Greece was under no obligation to intervene in favour of the latter. They added that disagreement would not fail to show itself the following day, since M. Venizelos was endeavouring to make Bulgaria's aggression on Serbia a pretext for abandoning neutrality in favour of the Entente Powers. The *Nea Himéra* said that, as the two Central Powers will soon be the arbitrators of the Balkan situation, and as, in consequence, it behoves Greece to be on good terms with them, M. Venizelos is not the man to deal with the situation, and that he should be replaced by someone else—meaning M. Gounaris—who, after having obtained the necessary guarantees from the two Central Powers, would proceed to partially disband the mobilized troops, retaining only those who were strictly necessary to guard the frontiers.

Being aware of the origin of these articles (which we have indicated), M. Venizelos, as soon as he was acquainted with them, demanded another audience of the King, in order to have his position *vis-à-vis* his Sovereign made quite clear. The interview took place this morning, and lasted an hour, during which explanations of all the questions were given, and entire agreement was established between the King and M. Venizelos. It seems certain that the King ended by sharing his Premier's views as to Greece's interest in preventing the aggrandizement of Bulgaria at the expense of Serbia, Greece's only ally, and in fulfilling the obligations of her treaty of alliance. Now, if Germany wishes Greece not to attack Bulgaria, she has only to prevent the latter from attacking Serbia.

Greece's Decision.

The King seems, besides, to be beginning to realise the wisdom of the policy pursued by M. Venizelos, who is quite convinced that Greece has nothing to hope from Germany, and that she should join hands with the Entente Powers, whose enmity she should very much fear to incur. Also, if one may judge by the communication made to the Press by M. Venizelos after the audience, the King appears to have been persuaded to follow his Premier's policy. In short, it is said that they are in accord as to the measures already taken and those which are to be taken to deal with the situation.

Moreover, M. Venizelos has made known to the Press that the Powers of the Quadruple Entente have promised to send to Greece reinforcements of at least 150,000 French and British troops should she decide to defend Serbia against Bulgaria, and to furnish her with pecuniary assistance to enable her to meet not only the expenses of the army, but also her other needs.

In view of all this, and the acceptance of these offers with the approbation of the Sovereign, it may be said that Greece has joined the side of the Quadruple Entente, and may be considered as having already abandoned her neutrality in their favour. It now remains to be seen how events will shape. It seems certain that Bulgaria, after Greece's mobilization—which she did not in the least expect—will not dare to attack Serbia. Indeed, M. Radoslavoff was at pains to assure the Greek Minister yesterday that Bulgaria has no intention of attacking either Greece or Serbia.

THE EVZONOI.

The flower of the Greek Army, now being mobilized, is the Evzonoi, or Royal Guard, says the *Pall Mall Gazette*, which is made up of men specially selected by the Military Council for fine appearance and marksmanship. When in full dress, with snow-white kilt, zouave jacket with hanging sleeves, embroidered shirt, red Albanian shoes with turn up toes, finished off with woollen tufts and jaunty cap and tassel, nothing could beat the Evzonoi for picturesque effect; and the Kaiser, when visiting Athens some years ago, was so struck with their appearance that he advised the King to turn all his troops into Evzonoi.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, September 19.

The Frontier Re-opened.

The uneasiness prevalent a week ago has subsided. The alarm caused by the closing of the Austro-Hungarian frontier is already almost forgotten, save by the unfortunates who happened to be detained on the wrong side of the border; for the order was rescinded a day or two ago. Nevertheless, the incident was an unpleasant one for those Roumanian subjects who were kept for a while at Brassov. They were put through a most searching examination by the authorities; in some cases women were stripped to the skin in an alleged "search for documents," and even the soles of children's boots were examined.

What the real object of closing the frontier may have been it is impossible to say. If it were a species of bluff, intended to frighten Roumania into allowing munitions for Turkey to pass through her territory, it failed woefully to achieve its object; for Roumania's reply to the act was to hurry troops up to the frontier in considerable numbers, and to take every precaution against an attack. It is reported that requests to permit the passage of munitions actually followed the closing of the frontier, but were refused. Another report is that all the rumours spread—by Teuton agents—as to the massing of German and Austrian troops on the Transylvanian frontier are merely a blind, intended to distract attention from serious movements having as their objective Bessarabia.

German Proposals.

The fact that some such movement is in progress has stirred the partisans of MM. Marghiloman and Carp up to renewed activity. There are now rumours of a possible change of Government, and of M. Bratiano resigning in favour of one or the other if German pressure becomes irresistible. It is openly stated that Germany has made proposals to the Conservative party, and has promised the cession of Bessarabia in return for benevolent neutrality—which is to say, permission for munitions to pass through to Turkey. It should be borne in mind that there are a number of influential Old Conservatives who studied in Germany, and believe it to be still the same Germany that they knew three or four decades ago. These men cannot judge impartially, nor see that, come what may, the Entente Powers must eventually win. Should they, by great misfortune, come into power and remain in power any length of time, they may, through their ill-judged policy, see this country left empty-handed at the end of the war. This contingency is somewhat remote, however, for their following is a small one. There is a rumour that a fusion of the Marghiloman faction with the present Government is possible. In such case, it is understood, the Filipescu group and the "Takists," or Democratic Conservatives, would hold aloof, as their policy is a Western one, not Eastern.

The Jews in Roumania.

Unfortunately, there is a strong anti-Russian feeling amongst quite the lowest classes. This is due to the constant work of the Jew, who is a more intelligent and more fluent talker than his Roumanian neighbour, and who, hailing from Russia, or being descended from immigrants from that country, tells endless tales of oppression and injustice. He forgets, or is ignorant of, the fact that the Jew in Germany is to-day in a far worse plight than his Russian cousin. The poor Jew in Roumania has no means of judging, and by his gossip among his neighbours he has certainly done much harm. He forgets, too, the freedom enjoyed by his people in Great Britain, France, and Italy. It would be a good thing if means were taken to teach him—and through him his Roumanian neighbours—the injustice and incorrectness of his views.

M. Marghiloman's Party.

M. Marghiloman has announced for to-day the inauguration of the new club for his party, and no doubt some important decisions will be arrived at on this occasion. M. Maiorescu has so far not signified any intention to return to Roumania yet; but it is supposed that he is a "sleeping partner" in the new concern, and his following will doubtless be present at the gathering.

New Military Club.

The premises of the Military Club, which are rapidly approaching completion, although the building will not be ready for occupation before next year, will be by far the most imposing edifice in Bucharest. The basement will contain a large restaurant, cinema hall, and billiard-room; the ground floor and part of the first floor will be occupied by the club itself, a large theatre, a room for the war game, and a restaurant for officers. The rest of the building will be let. The terrace before the club will have a fine garden. This, it is said, has already been bespoken by "Capsa's," which will desert its historic site in the Calla Victoriei.

Roumanian Prisoners in France.

A correspondent of the *Epoca*, while visiting prisoners of war in France, found amongst them forty-one Roumanians from the districts of Bukovina, Transylvania, Marmuresh, and the Banat. They were delighted to hear their native language again, so far from their homes, and deeply moved when the journalist promised to interest himself on their behalf. They begged for books and papers in Roumanian, in order that they might learn how the fortunes of war were going, and questioned the visitor very closely as to the attitude of this country.

Population Statistics.

According to statistics published by the Ministry of Domains, the population of Roumania at the end of 1914 numbered 7,771,341 persons. During the year there were 327,345 births and 182,349 deaths. The highest percentages of births were recorded in the two districts of Durastor and Caliacra, comprising the territory taken over from Bulgaria, principally peopled by Bulgars and Turks.

BRITAIN AND THE SOUTHERN SLAVS.

Speaking at the University of Leeds on Tuesday, M. Mestrovitch, the famous Serbian sculptor, delivered a stirring message of the Serbs to this country.

"It would," he said, "be a great joy for my people if it could be known in Austria-Hungary as in free Serbia that Britain is ready also to be a friend and protector of our spiritual development. There is no greater honour for Serbia and the Southern Slavs than to see that the great civilized peoples of Europe accept them as brothers in human ideals. Our people have been divided from the rest of the world for many centuries before there was any possibility of developing their personality. They have been in a humiliating slavery to the Turks and to the dynasty of Austria-Hungary; so they lived in a grave physical struggle for human freedom and for their very life.

"May the result of the present struggle be, through the victory of the Allies and a just Congress of Peace, that no vital part of Serbo-Croats and Slovenes, or of any other people, should remain in any subjection. My people wish to see such a justice and freedom in all the world, and hope that they themselves will be redeemed from warfare and the blood-heroism. Serbia will not despair even in this most grave and fateful moment of the Southern Slav history, because she knows that the noble and freedom-loving peoples of Russia, England, and France are her protectors."

MONTENEGRIN REJOICINGS OVER VICTORY.

Sir J. Roper Parkington, Consul-General of Montenegro, has received the following official telegram from Cettinje:—"The announcement of the brilliant victories of the Allied armies, both on the French and Russian frontiers, occasioned indescribable joy throughout Montenegro. The good news was communicated to the army by a special order of the day, and in Cettinje the enthusiasm culminated in a great demonstration before the English, Russian, French, Belgian, Serbian, Italian, and Greek Legations."

SERBIA, BULGARIA AND THE POWERS.

(From Our Own Correspondent.)

Nish, September 15.

The Bulgarian Press criticises and censures the Serbian reply to the Note of the Quadruple Entente, apparently regarding it in the light of a negotiation between Serbia and Bulgaria. But the question in its present stage is one between Serbia and the Quadruple Entente, and it is for the latter to decide whether they are content or not with Serbia's reply, and whether they consider it expedient to proceed in their negotiations with Bulgaria, for to all appearances Bulgaria stands in a dubious position.

We will examine later the reports concerning Bulgaria, but first let us consider the hostile criticisms of the Bulgarian Press, which appear daily.

In Serbia's defence, the semi-official organ *Samouprava* declares that Serbia, in its reply to the Quadruple Entente's Note, made concessions that went to an extreme limit; but adds significantly that all Balkan States should be of accord on the points of common interests, and should be animated by a good disposition to ensure their successful realisation. "The Balkan States," says the *Samouprava*, "should possess the moral strength to accept all necessary sacrifices which Balkan interests, and we may even say which European interests, demand; but on reading the daily papers and the declarations of certain statesmen one sees clearly that there are States whose sole aim is to satisfy their territorial ambitions by creating in the Balkans a preponderant position for themselves."

The *Samouprava* continues:—

When any Balkan State obstinately puts forward demands and pretensions making of them a *sine quâ non* condition, and when that State refuses to permit an examination of its pretensions, and likewise insists on obtaining guarantees which betray a distrust of the Great Powers, it becomes apparent that by these proceedings a Balkan alliance loses its chances of success.

The paper winds up with these words:—

The *démarches* of the Quadruple Powers will have greatly aided to clear up the political situation in the Balkans. The result of this new *démarche* will be to have ascertained all that may be expected from each of the peoples of the Balkans, and if there is no success in forming an alliance, the State which has been the cause of failure should be made to bear all the political consequences of the situation which it has created.

But to return to Bulgaria's position. What makes it dubious? First, the sympathies of her King and her present political leaders for Austria and Germany lend an air of probability to the suspicion entertained in this country of an existing secret contract with the Germanic group. But supposing there is no such undertaking, and treating these Bulgarian sympathies as a *quantité négligeable*, we still remain confronted by the fact that M. Radoslavoff, the Bulgarian Prime Minister, a short time ago informed a delegation of the Agrarian party that a treaty with the Porte was a settled matter, and would be signed in a few days, which would give over to Bulgaria that indispensable land which they had been anxious to obtain possession of—namely, the territory through which the railway runs from Adrianople to the port of Dedeagatch. And to-day the news is current in Serbia that not only has the treaty or contract been signed, but that the ceded territory is already occupied by the Bulgarians.

This report, which is here fully believed, has strongly affected Serbian public opinion. First, this transaction is greatly regretted, as it is maintained that by it Bulgaria is pledged not to undertake any military action against Turkey, and consequently that for Bulgaria to aid the Quadruple Powers by undertaking to march against Constantinople would be an impossibility. Further, it is asserted that Bulgaria has thereby given proof that she believes more in the final victory of the Central Powers than in that of the Quadruple Powers, and therefore openly declares her sympathies for the Central Powers, for whom it may be expected she will display a still more friendly neutrality than hitherto. The popular belief in Serbia is, therefore, that any further diplomatic action on the part of the Quadruple Entente for an alliance of the Balkan States to include Bulgaria would be a hopeless and consequently useless task. Bulgaria, they say, has shown her colours, and from a doubtful friend has become a suspected enemy, from whom everything antagonistic is to be feared.

Turning from the Serbian view, let us take an independent survey of the situation. Germany, seeing that the attack on the Dardanelles progresses and that Turkey is at its last gasp, may have put pressure on the Turks to consent to the amputation of the territory through which the Dedeagatch railway passes, and possibly intended to alarm the Quadruple Powers and their Allies with the news of an accomplished Turco-Bulgarian treaty of peace. There are some grounds for this supposition, as it is known that this news, which spread like wild-fire, first emanated from Berlin official circles. But, however ambiguous the conduct of Bulgaria may be, is it likely that she would so ally herself to one in dying agonies as deliberately to bind herself in a way that would prevent her obtaining anything but a small strip of land which under any circumstances she would be likely to acquire sooner or later?

We do not know the text of the treaty between Bulgaria and Turkey, but we may ask if its terms are likely to be such as would absolutely debar Bulgaria from a friendly understanding with the Quadruple Entente. This is doubtful, but it may well be that Bulgaria has overestimated her power and importance, and that she may consider she can advantageously sell her neutrality to both friend and foe.

Supposing that the Dedeagatch treaty does not clash with Bulgaria's full liberty of action, then if Bulgaria is clearly made to understand that her neutrality is of *no* importance and is not desired by the Quadruple Powers, she will have to make up her mind to accept the offers of the Powers of the Quadruple Entente, or to get nothing at all in the event of the almost certain final victory of the Entente.

Every day brings a decrease of the forces of the Germanic group, and every day an increase of the power of her adversaries, and Bulgaria's only hope would be to seize her opportunity before it is too late, or she may find that the Balkan alliance will be formed without her.

Roumania used to be the stout defender of the Bucharest Treaty. But to-day Roumania is prepared, in the common interests, to consent to the revision of the Treaty and to make every necessary sacrifice, which would be also in the interests of Bulgaria if the latter were disposed to become an honest and faithful ally, agreeing to the suggestions of the Quadruple Powers, who assuredly would only insist on such conditions as are fair and honest for all parties concerned.

The fall of Constantinople, which may shortly be expected, will put an end to Balkanic negotiations and divergencies. It will then be too late for any delinquent Balkan State to do aught but regret not having seized an earlier opportunity to come to terms.

BAHAISM IN TEHERAN.

Mr. Lotfullah S. Hakim has received from his brother, Dr. Arastoo, a very interesting account of the progress of the emancipation of the Bahai women in Teheran. Some months ago a tablet dealing with the emancipation of women, forwarded to Teheran, was printed and spread among the Bahais. As a result of this tablet, four months ago the leading Bahai families began holding private gatherings, at which all members of the family are present—the women unveiled. "I hope it will not be long," says Dr. Arastoo, "until amongst the Bahais in Teheran the equality of men and women is firmly established. The spirituality of the meetings and the service of the ladies are beyond my power of explanation. We are also engaged in writing to the other cities (of Persia) wherever the Bahais are, that they should also begin striving for the emancipation of the women."

BULGARIAN LETTER.

(From Our Own Correspondent.)

Sofia, September 18.

The Opposition and the King.

Yesterday morning the leaders of the Opposition, M. Malinoff, M. Gueshoff, Dr. Daneff, M. Naitcho Tzanoff (Radical), and M. Alexander Stambolisky (Agrarian) were received collectively in audience by King Ferdinand, the Crown Prince Boris and M. Dobrovitch, chief of his Majesty's private Cabinet, being also present. The political leaders mentioned, representing all the groups or parties of the Opposition except the Socialists, expounded the views of their parties upon the foreign policy of Bulgaria.

The first speaker was the leader of the Democratic party, M. Alexander Malinoff, who reviewed the present political situation, and expressed himself as opposed to any agreement that would engage Bulgaria to act against the Entente Powers. He emphasized the view of his party that only through an understanding with the Powers of the Quadruple Entente could Bulgaria secure her national union and avoid *pogroms*. The least that could be done would be to preserve neutrality a certain time longer.

Next spoke M. Stamboulisky, representing the Agrarian group. He pointed out the grave responsibility that the Crown would incur if it permitted the beginning of any fresh adventures, and urged the King not to allow the Government to embark upon any such course. The Government, he declared, ought to maintain its neutrality, and no serious step ought to be taken without the summoning of the Chamber and the formation of a broad Coalition Cabinet, representative of all political parties and views in the country.

M. Tzanoff, the leader of the Radicals, read out an appeal to his Majesty to frustrate the attempts to compromise the future existence of Bulgaria.

M. Gueshoff, the former Prime Minister, pointed out that the situation in the theatres of war does not indicate at all that Germany and Austria-Hungary have won the victory. And he supported the view that the only way to secure a calm existence for Bulgaria and the attainment of the triumph of her national aspirations lies in an understanding with the Entente Powers.

Dr. Daneff, who spoke last, developed at some length the programme for the formation of a broad Coalition Cabinet and the results of an understanding with the Powers of the Quadruple Entente.

King Ferdinand's Views.

After conversing with the leader of the Agrarians, the King said: "We have a definite view, which fully corresponds with the recognised interests of Bulgaria, which it will follow to the end." His Majesty shook hands with the Radical leader, saying to him, "I sincerely thank you for the good counsel that you have offered me, and I am glad to have made your acquaintance." At the end of the audience—which lasted from eleven o'clock to about a quarter-past one—his Majesty said, "I take note of what you have said to me, and I will try to report as far as possible in detail your declarations, and the warning of M. Stamboulisky, to M. Radoslavoff, my Prime Minister."

Yesterday evening, at five o'clock, the leaders of the Opposition met at M. Gueshoff's house and drew up the following statement regarding their meeting:

The audience accorded by the King to the representatives of the Democratic, Agrarian, National, and Progressive Liberal groups took place to-day, September 4/17, in the presence of the Crown Prince and M. Dobrovitch. It lasted from 11 a.m. to 1.20 p.m.

In the course of the audience each of the representatives, basing himself on the standpoint of his party, submitted the policy of the present Government to criticism, and insisted upon the summoning of the Narodno Sobranje and the formation of a broad Coalition Cabinet, in order to avoid a policy of adventure contrary to the sentiments and interests of the nation and fatal to the country.

The King took note of the declarations of the leaders of the Opposition, and said that the Prime Minister should be informed regarding them.

The comments of the Press upon the audience are very meagre, owing to the strict censorship that has been exercised over all printed matter since last Monday.

TANGIER TO TEHERAN.

At the moment of writing I have not the faintest idea how the muddle in the Balkans is going to work itself out—and I very much doubt if anybody else has any really clear ideas on the subject. But it certainly looks as if two crowned heads must be in some danger, and I imagine that ex-Sultan Abdul Hamid, Mohammed Ali Shah, and other monarchs who have retired from business with more or less good grace, must be inclined to congratulate themselves on the fact that they are as they are. Do they, I wonder, get the news daily? And if so, do they indulge in a mild "flutter" on certain chances, which it would be indelicate to refer to more plainly? If so, they must find it hard work to keep in touch with the "latest betting."

***

A Greek friend tells me that when the leaders of the Bulgarian Opposition groups had their straight talk with King Ferdinand, one of them, M. Stamboulisky, the Agrarian leader, so far "forgot himself" as to say bluntly: "If Bulgaria is forced into war there will be a revolution, and you will lose your head." Whether the story be true or not I cannot, of course, say; though I am inclined to believe it. It goes on to tell that King Ferdinand, greatly annoyed by this blunt speech, turned on the speaker and snapped out: "Never mind *my* head! Look after your own!" And now, I see, the *Corriere della Sera* reports that "M. Malinoff, the Bulgarian Opposition leader, has left (Sofia) for Rustchuk on urgent business," and that M. Stamboulisky "is not to be found." That looks ominous. I hope M. Malinoff, who is an able man, reached the frontier safely. As to M. Stamboulisky, if the report that he was "watched" after the famous audience be true, I fear there can be very little hope for him.

***

The story I told last week about King Ferdinand of Bulgaria reminds me of another, told me some time ago by a friend, regarding an experience of his with that theatrical monarch. My friend was representing an important journal at the time, and during a visit he paid to Sofia he was more than once received in audience by King (then Prince) Ferdinand, who, for reasons of his own, was always extremely affable to him. On one occasion, anxious to be even more gracious than usual, the Prince remarked: "Of course, my dear X—, I regard *you* not as a journalist, but as an historian of contemporary events." If he lives long enough to read these lines, the Great One may be interested to know the comment of the "historian" upon this gracious opinion. It consisted of two words: "Pompous ass!"

***

The influence of the Syrian Protestant College, Beyrout, is far-reaching and, it is safe to add, invariably good. The college often has unpromising material to work upon, and even its devoted staff cannot convert every sow's ear into a silken purse; but it does wonders in many cases, and when it has good stuff to work on in the first instance, it turns out men of real character and grit. A case in point seems to be that of Emir Arslan, the Ottoman Consul at Buenos Ayres. Ordered by his Government to hand over his duties to the German Consul, he preferred to resign, and to remove his seals and papers rather than entrust them to the Hun. Doubtless he knew more about the opinion entertained of the Germans in Buenos Ayres than his Government did. But his action called for courage, and it seems to me that he does credit to the S.P.C.

***

I see that the Bishop of London has issued an appeal for gifts on behalf of our soldiers at Gallipoli. In these times the charitable are being assailed on all sides, and it must sometimes be hard to decide where to place one's money with the greatest advantage to all concerned. In this case there should be no doubt at all. The hardships of our men in Gallipoli are very much greater than many of us seem to realise. It is an essential to victory that every possible means should be undertaken to make their lot as cheerful as possible when they are sick or wounded, or during the brief periods of respite from the firing line. Moreover, we may be quite sure that all monies sent in answer to an appeal signed by the Bishop of London will be spent to the very fullest advantage of those for whom they are connected. Of all the dignitaries of the Church of England there is not one who is better entitled to speak on behalf of our soldiers than A. F. London. His sympathy is not of the pulpit only. He has been to the Front, and has risked the fire of the trenches, and every utterance that he has made since the beginning of the war has been couched in terms that show how deep is his understanding, not only of our country's need, but of the need of her individual soldiers. And he has been singularly reticent in calling upon the public for money. Now that he has done so I trust that the response will be as generous as the cause is worthy.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Armenian Massacres. October 6.

The Earl of CROMER asked whether the Government had received any reliable information confirmatory of the statements made in the Press to the effect that renewed massacres of Armenians had taken place on a large scale, whether the statements that German Consular officials had been privy to these massacres rested on any substantial evidence, and whether any further communications had recently been addressed to the Porte in connection with this subject. The report that there had been 800,000 victims, he said, seemed incredible. It was also most incredible that any Government of a civilised country should allow its agents to be parties to organising and encouraging such massacres. Count Reventlow, he noticed, had stated that the German Empire were of opinion that this was a matter which concerned Turkey alone. He did not suppose that there would be any trustworthy evidence to prove the complicity of the German Government or their agents in these massacres. But when we considered the commanding influence of the German Government at Constantinople anyone who knew the East would be of opinion that the German Government cannot be acquitted of a vast moral responsibility unless it can be shown that, knowing of these practices, they took most vigorous and energetic steps to stop these proceedings. It was very desirable to lose no opportunity to let the people of this country know for what we are fighting. We are fighting for a great many things, and one of the objects which we desire to attain is that Armenia shall no longer be constituted a sort of Turkish shambles. We had to remember that we have seventy million Mohammedan fellow subjects, who naturally have a certain amount of sympathy with their co-religionists, and would be unwilling to believe ill of them unless they had positive proof. He believed that all the educated Mohammedans of India would look with as great horror as we do ourselves upon the proceedings of the Turkish Government. Only they ought to have information laid before them on which to form an opinion, and when they had that information he did not doubt that they would see that it would be almost tantamount to an insult to the Mohammedan religion and to the feelings of all right-thinking Moslems if they in any way identified the cause of Islam with the cause of the existing Government at Constantinople. It would also be very desirable to enlighten Egyptian opinion.

We had heard in the last few days that a very important Near Eastern community, under the auspices of a Prince of foreign extraction and strong pro-German proclivities, was about to commit not only a grave political error, but also one of the blackest acts of political ingratitude that the history of the world has ever known. He did not suppose that anything said there would reach the Bulgarian public, because the Press there was controlled by the Germans, but they ought to do all in their power to show Bulgaria what measure was being meted out to another Christian community by those with whom they were about to enter into an almost unnatural alliance.

He had never been a Turcophobe. He admired and recognized the manly, virile qualities of the Turkish nation, and he thought that at this juncture many of them were to be pitied. The Turks, if left to themselves, would wish to live at peace with the rest of the world, and especially with England. Unfortunately they had fallen into the hands of a narrow clique, who had undermined the real independence of the Ottoman Empire. But, whatever could be said in defence of the Turkish nation, not one word could be said in defence of the Turkish Government. It appeared that the present Turkish Government, equally with their predecessors, had made government by massacre part of their political system. If that were so, if we could not do anything else, we could denounce their conduct to the whole of the civilized world, and warn all other races that by showing sympathy with Turkey they will, in the eyes of posterity, have acquired a stain that can never be removed.

The MARQUIS OF CREWE said he entirely agreed with the noble earl that it was advantageous not only here, but in every part of the world, that so far as they were in possession of officially confirmed facts they should be known to the world at large. A communication had been received from the British Consul at Batoum largely founded on statements which had been published in the newspapers at Tiflis, where there was every opportunity of ascertaining what were the actual facts, and they were of the most deplorable character. The Consul described the appalling horrors which had taken place in the district of Samsoun, where the population were absolutely exterminated, except for a few who were able to escape. The whole country was completely ravaged, and a certain number of the inhabitants succeeded in escaping to the mountains. There was a great influx of Armenians and Chaldean refugees into the Caucasian provinces. The Governor of one of the provinces stated that 160,000 refugees had passed through his district, and he gave the most terrible description of their condition, ravaged by disease, many of them starving, and dying at the rate of at least 100 a day. Nothing could be said in too high praise of the efforts that had been made locally to cope with this hideous condition of things. A committee, helped by a great number of voluntary workers from Tiflis and other towns, hastened to the district, and had done everything possible to relieve the misery of these unfortunate people. Very large supplies of comforts, medicines, and foodstuffs were needed if the condition of the refugees was to be materially relieved. Then in two other Caucasian districts there were about 9,000 refugees who were in no better case, and it was stated in one report that unless relief were forthcoming half of them would probably die. There was also a miserable account of refugees in other places. These were deplorable facts, and he most heartily concurred with what fell from the noble earl when he stated that dreadful excesses such as these were not less revolting to our Moslem subjects in India and to enlightened Mussulman opinion everywhere than they were to ourselves. They were, of course, in no way authorised by the precepts of Islam, and they would not be condoned by the judgment of Mussulmans. He was also in agreement with the noble earl when he added that these stories might well go to the heart of any European people or section of people who were disposed to ally their fortunes with Turkey at the present moment.

In conclusion, he had no official confirmation of the statements which had been made that the German Consular representatives in Asia had not merely looked on, but had positively encouraged these horrors. Having regard to the statements that had been made by Americans, who were in a position to form an opinion, he was bound to say, knowing what he did of what had happened elsewhere, that there could not be said to be any antecedent improbability in the assertion. As regarded the third question, the Government had not thought that any advantage would follow an attempt to make either direct or indirect communications to the Turkish Government on the subject. They were in possession of the views of his Majesty's Government and to reiterate them would serve no useful purpose.

Viscount BRYCE remarked that he was sorry to state that information which reached him from many quarters went to show that the figure of 800,000 people destroyed since May last was unfortunately quite a probable number. It was a premeditated and systematic policy of massacre. It was a policy which had been entertained for a considerable time by the gang who were in possession of the Government of Turkey. They only hesitated to put it into practice until they thought a favourable moment had arrived in May. In the massacre at Trebizond—the facts of which were vouched for by the Italian Consul—the whole Armenian population, which numbered from eight to ten thousand, was destroyed in one afternoon under orders from Constantinople. He was afraid it must be said that practically nearly the whole of the Armenian nation had been wiped out, and few crimes so hideous and on so large a scale had been recorded in history. There was no ground for the suggestion that there had been any rising on the part of the Armenians. The Armenian volunteers who had fought with the Russians came from Transcaucasia. There was no excuse on any political grounds for the conduct of the Turkish Government. It was simply an attempt to carry out the maxim once enunciated by Sultan Abdul Hamid, namely, the way to get rid of the Armenian question was to get rid of the Armenians. It was being carried out with more bloodthirsty completeness by the people now in command of the Turkish Government than it ever was in Abdul Hamid's time. He had not been able to obtain any authentic information with regard to the part played by German officials in promoting or encouraging these massacres, but the only chance of saving the unfortunate remnants of this ancient Christian nation was to be found in an expression of the public opinion of the world, and especially of neutral nations.

HOUSE OF COMMONS.

Royal Edward Survivors in Egypt. Sept. 30.

Sir DANIEL GODDARD asked the Financial Secretary to the War Office whether he was aware that the Colonial allowance was not being paid to the troops of the Expeditionary Force to the Dardanelles who were landed in Egypt after the loss of the Royal Edward, and who had resided there for six weeks; and whether, in view of the fact that this allowance was announced officially as being issued to all whose stay there exceeded fourteen days, he would explain why the allowance was withheld.

Mr. FORSTER: It appears that other allowances, not less favourable to the troops, were at first given in lieu. Instructions have already been issued that the Colonial allowance should be paid in future.

Hospital Ships for Gallipoli Wounded.

Sir HENRY CRAIK asked the Under-Secretary for War whether the arrangements for dealing with the sick and wounded at Gallipoli were entirely under the charge of the authorities of the Royal Army Medical Corps, and whether they had an adequate supply of properly equipped hospital ships for the purpose.

Mr. TENNANT: The medical arrangements on land are entirely in the hands of the R.A.M.C. The transport of the sick and wounded, of course, involves the co-operation of the naval authorities, who have the control over the working of the ships, which is exercised through a naval hospital transport officer. There are fifty ships regularly engaged on this service, which, it is hoped, will prove an adequate number, but as an emergency measure other transports can be utilised in addition.

Sir C. KINLOCH-COOKE: Was there an adequate supply of properly equipped hospital ships for the landing of troops at Suvla Bay?

Mr. TENNANT: I must ask for notice of that question.

First Attack on the Dardanelles.

Mr. OUTHWAITE asked the Foreign Secretary whether, in view of the statement made recently by the British Ambassador at Petrograd to the effect that the first attack on the Dardanelles was in part due to a request made by the Russian Government that this operation should be undertaken for the purpose of drawing Turkish forces from the Caucasus, he could make any statement on the subject.

Lord ROBERT CECIL: I have no doubt it is the case that the operations against the Dardanelles have diverted Turkish troops from the Russian and Egyptian frontiers. But to make a fuller statement as to the strategic objects of military and naval operations which are still in progress does not seem to me expedient, nor could I make it independently of the military and naval authorities.

THE STATE OF PERSIA.

Owing to pressure on our space, we were unable to publish last week the speech upon the state of Persia delivered by Colonel Yate in the House of Commons on September 28. The subject is of great importance, and we have pleasure in giving now the full report of the speech and of Lord Robert Cecil's reply:—

Colonel YATE: I wish to raise for a few minutes to-day the question of the warfare which is now being waged against us and our Allies in Persia by the Germans in that country, and to ask what steps are being taken to put a stop to it. Persia, as we all know, is supposed to be a neutral country, yet we find that the whole of Persia is occupied and terrorised by armed bands under German officers, who apparently are doing their best to raise the whole country against us. The Persian Government is powerless. The Shah himself is helpless. The Mejliss do nothing but talk and try to make as much money as they can for themselves, and the local Governors in the various provinces have neither sufficient money nor the men to raise a finger against any of these German armed bands, who apparently do what they like and go where they like. We have all read in the papers of the anarchy in Ispahan and the flight of the Russian and French residents there. We were all glad to see in the papers on Sunday morning last that all these men, women, and children had arrived safely at Teheran. Not only at Ispahan, though, but at Shiraz, Yezd, and Kirman and other places also, there are many British subjects employed in the Consular service, the telegraphs, the Imperial Bank of Persia, merchants and missionaries. News as to the safely of these people is most anxiously awaited all through the country. The Indo-European telegraph line from Bushire to Ispahan has long been cut, and now it is reported that the Central Persian line has been cut as well; consequently a stop has been put to all communications between Europe and Asia.

All this is the result of open intrigues carried on by Germany and Germans amongst the various tribes since the commencement of the war, and the large sums of money spent by them in inducing these tribes to do as much damage as they can to British interests throughout Southern Persia, even to the extent of inciting them to murder British officials and those employed by the other companies I have named. The state of things at Bushire is even worse. Bushire is under the protection of Indian troops, supported by vessels of the Royal Navy lying in the roadstead. The local tribesmen, owing to the successful efforts of the late Acting German Consul there, named Wassmuss, are in active hostility. It is said that Wassmuss, on the declaration of war, made his way into these districts viâ Baghdad, and at once commenced an anti-British propaganda among the tribesmen. He had almost unlimited funds at his disposal, and by this means he easily induced them to adopt a hostile attitude. In July they ambushed and killed Major Oliphant and Captain Ranking, and night after night they attacked and sniped Bushire. They were continually attacking the residences of British subjects and merchants. Attacks were made on the houses of employees of the Imperial Bank of Persia, and valuable property was taken off. All houses have had to be vacated, and the women and children sent away. The latest reports say that there are almost nightly attacks on European property, and the troops, with such a long line to defend, cannot prevent small bands of raiders getting through. The papers about a fortnight ago reported that an attack in force had been driven off, but these attacks may be repeated again and again, and this shows how serious the situation is in that part of Persia. Unless these tribesmen are punished severely, their villages razed and their chiefs taken as hostages, things will go from bad to worse.

Had the matter been taken in hand earlier, things would not have been so bad. If we had organised a strong force of Persian levies under British officers during the last few years, instead of trusting solely to the Swedish gendarmerie, which is failing us so entirely now the crisis has come, we might ahve had the situation much better in hand. We have had an excellent illustration of what can be done by local levies under British officers in the repulse the other day of the Persian raiders into Mekran, on the Baluchistan border, by the Mekran Levy Corps. I do not mind saying that this levy was originally raised by myself when I was Chief Commissioner of Baluchistan. It is composed of Baluchis and the Brahuis, of much the same stock as the Persian raiders on the other side of the border, who tried to invade them. That corps could be increased to any extent. Regular troops are not the best material for punishing nomad tribesmen like those who have been bribed by the Germans to attack us in Persia, neither are Regular troops required even to hunt down the bands under Germans themselves now traversing Persia from one end to the other. None of these bands have any artillery or any real organisation or discipline. If I might venture to make a suggestion, it would be that this Mekran Levy Corps should be used as the nucleus for the raising of a combined Indian and Persian Levy Corps under the command of British officers of the Indian Army, with good knowledge of Persian, to hunt down these various bands.

Nothing can be expected of the Persian Government. Nothing can be done by them. They are hopeless and helpless. All that is required is a backing of Regular troops, and that we already have in the Indian regiments at Bushire. The present dual control by which Persia remains under the charge of the Foreign Office, while the Persian Gulf and the military control is under the charge of the Government of India, must tend, in my opinion, to delay and confusion. I would suggest, if I may be bold enough to make a suggestion, that the entire charge of the whole of Southern Persia, both military and political, should be given to the Government of India, who alone are able to deal promptly with affairs on the spot. Until that is done, I honestly say that I do not see how our interests in Southern Persia can be properly safeguarded. The oil wells and pipe line are being threatened by attacks from tribesmen under German officers on the western side; the telegraph lines are cut and the lives of all British subjects are threatened in the centre, and further raids on Baluchistan are also threatened on the East. I urge on the Under-Secretary for Foreign Affairs that something must be done, and what I hope to see done is that some endeavour will be made to get a strong and good Persian Governor, if there is such a man in Persia, for Ispahan and Fars, and to give him the services of a good combined Persian and Indian Levy Corps, such as I have suggested, to put down these German raiders and to place the whole of Southern Persia under the charge of the Government of India. I would suggest that the Secretary for Foreign Affairs should consult with the Secretary of State for India on this subject, and see if some prompt and energetic action can be taken.

The UNDER-SECRETARY OF STATE FOR FOREIGN AFFAIRS (Lord Robert Cecil): I am sure my hon. and gallant friend will recognise the great difficulty of discussing this or any other subject affecting the Foreign Office at a time like this, and I am bound to speak with the utmost reserve upon it. At the same time I can assure him that the matter has been already the subject of very anxious consideration and consultation between the India Office and the Foreign Office. There is no lack at all of common action between those two offices, and the difficulties, such as they are—I am not going to underrate them at all—arise not from the many Departmental difficulties here, but from the essential and inevitable difficulties of the situation in Persia. It is perfectly true—I regret very much that it should be so—that at Bushire there was a lawless attack, I have very little doubt instigated by German and Austrian intrigues and by German money, which resulted in the very deplorable and regrettable death of two gallant British officers. Since that time Bushire has been occupied by British troops, and is still in the occupation of British troops. I do not know that there was anything more, as far as Bushire is concerned itself, which could have been done than was done immediately after the outrage took place. My hon. and gallant friend says some hard things about the Persian Government, but it is only right to say that the Persian Government have expressed their regret for that outrage, and we think at any rate that there is reason to hope that the steps which they have taken will result in the prevention of any repetition of the outrages which have occurred. I quite agree that the Persian Government is in a very difficult position. No one doubts that, but I do not think there is any reason to doubt that their wish is to carry out the duties of a Government in preserving law and order. Then, at Ispahan, which is within our portion of Persia, there was also an attack—pure murder, of course — upon the British Consul-General. Fortunately, he was only wounded, but I regret to say his Indian orderly was killed; and there are undoubtedly Germans and Austrians who have engaged the services of paid bandits whose whole object is to create disorder and to threaten the lives of th British and Russian civilians who are in charge of purely pe .ul interests in a neutral country. That is part of the Ger n methods of making war. Then it is true, under these circumstances, the British Colony have withdrawn from Ispahan, and so have the Russians, and gone to Teheran. There, too, strong remonstrances have been made to the Persian Government, and we have reason to hope, after what has occurred there, that there is at any rate a very earnest desire on the part of the present Persian Government to prevent the repetition of these outrages. I regret to say that at Shiraz also a similar outrage has taken place. There the British Vice-Consul was seriously wounded, and has since died. There has been a change made in the Governor-General at Fars, and we hope the new Governor-General will be able to preserve order more successfully in his Province than the old one. I do not know that there is very much more that I can usefully say. My hon. and gallant friend has made a certain suggestion, namely, that we should organize an irregular force and put it under the command, I do not know whether of a native or a British officer. I think he will see the enormous difficulty of even entertaining any proposal of that kind during the progress of a gigantic war. There are, unfortunately, enormous difficulties in any Imperial war in which the whole energies and monetary resources of the country are being taxed to their utmost. But we have done our best with the present Persian Government, and I think there is some ground for hoping that things will improve. I do not want to go into detail, but we are taking measures to improve the financial position of Persia, and our Minister, who has most ably conducted the whole of the negotiations and done most admirably, is now conducting negotiations with the Persian Minister for Foreign Affairs on that basis, and is prepared to make very considerable concessions of that kind with the consent of His Majesty's Government, provided, of course, that an impartial administration may be thereby secured. I am afraid I cannot say more at present. I can only express the hope that these very regrettable occurrences will not take place again, and we may be very certain that that kind of warfare, and that means of carrying on warfare, is not really ultimately likely to be of service to the German cause, and even in Persia proceedings of that kind are likely to cover the Germans not with glory, but with contempt.

NEAR EAST BOOKSHELF.

GEOGRAPHY AND BALKAN PROBLEMS.*

So much has been written and debated on the eternal riddle of Balkan races and politics, and so much of it has been wasteful, that it needs a bold man indeed to come forward at this late hour of the day and present to the public a book wherein it is intended "to summarise those geographical facts which made the Balkan Peninsula the potential storm centre of Europe." Professor Newbigin is, happily, such a man, and his contribution to the great polemic, however much it is to be regretted that it was not published earlier in the year is, nevertheless, welcome, because it throws new light on some of the dark spots in the Balkans. The attitude taken up by Bulgaria within the past few weeks has, of course, intrinsically altered the political situation, and, therefore, any discussion of Balkan problems to-day can only be of academic interest and barren of results. But the author "is not without some hope that unless the day of peace dawns, the volume will not entirely lose significance"; for, he adds, naively, "We cannot believe that the new Britain which will arise after the war can ever re-acquire her former insular indifference to the politics and geography of the Near East." We trust that the professor is right; but even if we did lapse again into our proverbial indifference as to what goes on around us, the book itself will not lose thereby in intrinsic value.

What is more, it possesses an immediate significance unrelated—by some impish decree of fate—to the main object proposed by the author. It was his intention to give us a useful survey of geographical conditions and accidents in the Balkan Peninsula and to trace therefrom the natural aspirations of the various States concerned. The conclusions arrived at are true to facts, but, unfortunately, the rapid development of the political situation within the past few days renders such considerations momentarily superfluous. To take a case in point. The acquisition recently by Bulgaria of that section of the Maritza flowing through Turkish territory is merely a milestone in Bulgaria's natural *Drang nach Suèden* in the wake of her rivers, the Maritza, Mesta, and Struma. This is a fact which none who knows the Balkans will deny. Similarly, Serbia's lines of advance towards the west (along the Drin, etc.) and towards the south (up the Morava and down the Vardar) can be explained by the geographical peculiarities of that landlocked kingdom; and the same process applies to Montenegro's attempts to seize Scutari, to the coastal expansion of Greece along the Ægean, to the fatal anti-climax of the Albanian comedy. These are all matters of the past, however regrettable most of them, but unfortunately beyond redemption. With the Balkans once again in the melting pot, no man can say what to-morrow has in store for them or for us, nor what will emerge from the great cauldron of strife. But whatever it is, we might do well to remember some of the causes of trouble in the past, and shape the future States (or State) so as to avoid a repetition of the sublime series of errors which culminated in the Treaty of Bucharest. A detailed perusal of the book under review will then be of advantage to the statesman. For the Peninsula as a whole is geographically of extraordinary interest, and "the very complexity of structure which gives it its geographical interest has made its history troubled in the extreme." As the geographical facts must continue to exercise their effect, "we cannot hope that the future will be smooth and untroubled, but there is at least more prospect of finding a solution of the numerous problems if we recognise that they have a root in physical features." These features, as stated, have been carefully examined by Professor Newbigin.

The immediate value of "Geographical Aspects of Balkan Problems" lies, however, not so much in academic considerations as in those of a more pressing and topical interest. To the best of our knowledge, no book has been published which gives so graphic and concise a picture of the topography of the Balkan Peninsula, and, at a moment when our three Expeditionary Forces in France, the Dardanelles and Irak are likely to be increased to four by a supplementary Serbian Force with its eyes turned to the north and east, the information contained in Professor Newbigin's volume will be welcome not only to the practical strategist, but also to the man in the street and to the writer whose duty it is to analyse campaigns—and predict them with varying accuracy. They will find in the book under review an able guide to the probable lines of advance on our part, and the probable lines of retreat on the part of our enemies. The peculiar characteristics of Balkan topography—the coastal ranges, with their gaps, the erratic "elbow" twists of the rivers, the narrow *couloirs* and low watersheds, etc.—are factors which will have to be taken into consideration in the campaign which, apparently, will shortly commence, and they will, moreover, directly influence the movements and counter-movements of troops.

Perhaps, in view of the landing of Allied troops in Salonika, the chapter dealing with Trade Routes will be the most interesting of any in Professor Newbigin's volume. A map illustrates the old Roman roads across the Peninsula, and, strange to say, their general trend was from west to east—that is to say, they proceeded from the Adriatic to Constantinople: from Durazzo, through Ochrida to Monastir, Salonika, Kavalla, and Constantinople; from Alessio to Nish, Sofia, Constantinople, and from Metkovitch to Sarajevo, Nish, Sofia, and Constantinople. The penetration, therefore, of troops for the relief of Serbia would, in Roman days, have proceeded across Albania to Monastir in the south, or to Prizrend in the north; to-day it has proceeded viâ Salonika, but, possibly, in view of King Constantine's open friendship for his imperial brother-in-law, the Kaiser, we shall have to revert again to the old western roads of penetration. Why not, with Italy holding the northern flank?

* Geographical Aspects of Balkan Problems in their Relation to the Great European War. By Marion I. Newbigin, D.Sc. (London: Constable. 7s. 6d.).

BOOK NOTES.

Messrs. G. Bell and Sons have just published "The Architecture of Ancient Egypt," by Edward Bell. The price of the book is 6s. net.

A lot of useful information regarding the Jewish agricultural colonies in Palestine is given in "Palestine and the Powers," which is written by Mr. F. G. Jaunaway, and published (at 3s. 6d. net) by C. C. Walker. Those who are interested in the question of the Jews' return to Palestine will find the subject treated at some length and with much enthusiasm in this work.

BOOKS RECEIVED.

Forty Years in Constantinople: The Recollections of Sir Edwin Pears, 1873-1915. With 16 illustrations. (Herbert Jenkins. 16s. net.)

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE FUTURE OF CYPRUS.

To the Editor of THE NEAR EAST.

Sir,—The moment for winding up this discussion seems to have arrived. Permit me to point out that what the Island needs is a plain statement of the British Government's intentions. Two roads lie open. On the one hand, the Colonial Office can officially announce through the High Commissioner that until the conclusion of peace no decision will be come to as to the future of the Island, and that the Allied Powers will be asked, as a matter of common interest, to decide the question.

On the other hand, the British Government can state in unmistakable terms that the annexation is to endure. It matters not which course is pursued. The result will be the same. In common fairness to all loyal Cypriotes an end should be put to the present state of suspense. Ordinary human nature hates indecision, but respects firmness. In South Africa indecision cost us many millions. Is a policy of drift true statesmanship?—I am, etc.,

13	30	Wednesday	4	5
14	Oct. 1	Thursday	5	6

To-day is the birthday of King Nicholas of Montenegro.

Monday is the birthday of H.R.H. Prince Peter of Montenegro, third son and ninth child of King Nicholas, who was born at Cettinje in 1889. His Royal Highness, who is Grand Voyvode of Zaklum, is a lieutenant of artillery in both the Russian and the Serbian armies.

Tuesday is the birthday of H.R.H. Princess Elizabeth of Roumania, who was born at Castle Pelesh, September 29, 1904 (O.S.).

Tuesday also is the birthday of H.R.H. Princess Natalie, wife of Prince Mirko of Montenegro, who was born at Trieste in 1882, and married to the Prince in July, 1902.

In a letter dated September 19, our Bucharest Correspondent writes:—After spending a few days at Constantza, the members of the Royal Family have now gone for a week's excursion on the Danube. As already reported, they are this year making acquaintance with parts of the country hitherto unknown to them, and showing themselves to their subjects in as many quarters as possible.

Prince Carol of Roumania reaches his twenty-third year on the 16th inst., and he will then (our Bucharest Correspondent reports) be promoted to the rank of major in his regiment, the 2nd Rifle Battalion ("Queen Elizabeth's").

Prince Cantacuzene of Roumania left London for Perth last week.

M. Georges Cretzeanu, the Roumanian Minister at Madrid, arrived in London last Friday, and visited the Roumanian Minister.

In connection with the above paragraph, it may be noted that our Bucharest Correspondent reports that M. Cretzeanu left the Roumanian capital for Madrid on September 18.

In the same letter our Correspondent reported that M. Michel Pacleanu, Roumanian Minister at Berne, was expected at Bucharest on leave.

Prince Bibesco, Secretary to the Roumanian Legation, who left for Paris last week, returned to London on Sunday night.

Mrs. Morgenthau, wife of the American Ambassador in Constantinople, has arrived in London on her way to the States.

According to a native Egyptian paper, Mr. W. P. G. Graham, formerly Director-General of the Public Health Department, is returning to Egypt during the coming winter to take charge of the Red Cross Society's work in Cairo.

CAPTAIN ARTHUR CHARLES DAVIES, 6th BATTALION ROYAL WELSH FUSILIERS, Reported WOUNDED and MISSING on August 10 at the DARDANELLES.—Any INFORMATION will be gratefully received by his Wife, Mrs. Arthur Davies, Treffos, Menai Bridge, Anglesey.

We regret to hear that Mrs. Van Millingen, widow of Professor A. Van Millingen, is confined to a nursing home in London with indisposition.

Prince Kamel Fadel arrived at Alexandria on September 16 by the Messageries Maritimes steamer "Karnak," on his return from France.

The present address of the Bishop in Persia is 12, Homefield Road, Wimbledon, S.W.

Lewa Herbert Pasha, O.C. Cairo District, who had been detailed for temporary service with the Mediterranean Expeditionary Force, returned to Cairo a fortnight ago and resumed his duties after over four months' absence.

The death is reported from Roumania of General C. Candiano, who greatly distinguished himself in the war of 1877. He died at his country seat at Finta.

Mr. and Mrs. A. Van Millingen of Alexandria are at present on a visit to London, and return to Egypt on the 19th inst.

Our Cyprus Correspondent writes (September 17):—

Mr. T. Millard, of the Treasury, and Mr. A. I. Cunningham, Assistant Postmaster, leave Cyprus this mail for England to undertake military duties.

We regret to learn that Mr. Maurice Constantinidi, son of Mr. C. Constantinidi, for many years manager of the Imperial Ottoman Bank in Cyprus, has been killed at the Dardanelles.

On Sunday, the 12th inst., the newly built Anglican Church at Limassol was for the first time used for public service. The Rev. Canon F. Newham officiated both morning and evening. This little church has been erected to meet the needs of the English community at Limassol, who have hitherto had the use of a rented building. Archdeacon Beresford Potter has been mainly instrumental in providing this very suitable and pleasing little church for the benefit of the present and future English community, who are greatly indebted to him for his strenuous efforts on their behalf.

Another Cyprus correspondent writes:—

Several officials who applied for permission to offer their services for the war failed to obtain it, including Mr. Russell, King's Advocate, and Mr. Thorn, President of the District Court of Larnaca. Government is only granting leave to those who can be spared without inconvenience or detriment to the service.

During the absence of Mr. Cunningham, the duties of private secretary to the High Commissioner will be performed by Mr. G. Jeffrey, Curator of Public Monuments in Cyprus.

Mr. Fred Ongley, Registrar-General, who has been in England on leave, owing to eye trouble, was unable to return, as intended, in August. It was found advisable that he should undergo an operation for appendicitis, which, as his many friends were glad to hear, was carried out quite successfully.

Four members of the Red Cross personnel who have been serving in Montenegro have been honoured by the Montenegrin Government. Dr. Tebbs has been awarded the Order of Danilo and a gold medal; Sister Trelilcock has been presented with a gold medal; and Orderly Lines and Orderly Rosenblatt have each received a silver medal.

Colonel Arthur de Salis Hadow, commanding 10th Battalion of the Yorkshire Regiment, who was killed in action in France on September 26, was born in July, 1858, and was the seventh son of the late Mr. P. D. Hadow, of The Priory, Sudbury, Middlesex. Educated at Harrow School, he joined the 6th Battalion of the Royal Lancashire Militia in 1877, and in 1878 was gazetted to the Princess of Wales's Own (Yorkshire Regiment), in which he served for thirty-two years. He was with his battalion in the Nile Frontier Force in 1885-1886. Most of his service was abroad, fifteen years of it being spent in India. He retired in 1910, but on the outbreak of the war he offered his services, and was appointed to the command of the 10th (Service) Battalion Yorkshire Regiment. Colonel Hadow proceeded to France with his battalion early in September, and was killed in action while leading a charge on September 26. He leaves a widow and three children.

News was received in London on Tuesday that Lieut.-Colonel Lord Ninian Crichton-Stuart, M.P., commanding the 6th Welsh Regiment, had been killed in action. He was the second son of the third Marquess of Bute, and brother of the present Marquess.

Lieutenant-Colonel Walter Thomas Gaisford, commanding 7th Battalion Seaforth Highlanders, was, we regret to learn, killed in action in France on September 25. He joined the Seaforths in May, 1891, and was promoted lieutenant in January, 1894, captain in October, 1899, and major in May, 1908. He was appointed to the command of the 7th Battalion on August 19 last year. From April, 1900, to July, 1903, the late officer was aide-de-camp to the major-general commanding in Egypt, and from April, 1905, to September, 1908, acted as adjutant of Volunteers and Territorials. He was present at the battles of the Atbara and Khartoum in the Nile Expedition of 1898. He was the son of the late Mr. Thomas Gaisford, of Offington, Worthing, and of the late Lady Alice Gaisford, and was forty-four years old.

Lieut.-Colonel Angus Falconar Douglas-Hamilton, commanding 6th Cameron Highlanders, who is reported killed in France between September 25 and 27, was the youngest son of Major-General Octavius Douglas-Hamilton. He was born in 1864, and joined the Cameron Highlanders in 1884. He served with the regiment during the latter part of the Nile Expedition in 1885 (medal and clasp) and in the Sudan with the Frontier Field Force in 1885-6, being present at Kosheh during its investment and at the engagement at Giniss. He was adjutant of the 6th Gordon Highlanders from 1894-99 and rejoined his regiment, the 2nd Cameron Highlanders, in 1899, and served with them in Gibraltar, Malta, South Africa, North China, and India till he retired in 1911. On the outbreak of the war he was appointed transport officer on the Embarkation Staff at Southampton, and in October last was appointed lieutenant-colonel of the 6th Cameron Highlanders. He married, on August 1, 1894, Anna, younger daughter of the late Captain A. W. Mackenzie, of Ord, Rossshire, and had one daughter.

Major Arthur David Nicholson, 1st Battalion Cameron Highlanders, who died on September 26 at Crefeld, Germany, from the results of an accident, was in the Nile Expedition of 1898, and was severely wounded at the battle of Khartoum. He was mentioned in despatches, and received the Egyptian medal with clasp and the Nile medal. For services in the South African War (1900-2) he was awarded the Queen's medal with three clasps and the King's medal with two clasps. He was the son of Major-General Stuart Nicholson, was forty-two years of age, and had been in the Army since 1893.

Second Lieutenant Cyril Cochrane, 1st Battalion Gordon Highlanders, who was killed in action in Flanders on September 25-26, was born in September, 1890, and was educated in France, Switzerland, and at Sandhurst. He received his commission in the Gordon Highlanders in September, 1911, and served with his regiment in India and in Egypt. When the present war broke out he was on sick leave after an operation, and he was unable to rejoin his regiment until last February. Mr. Cochrane was the only child of Mr. and Mrs. Alexander Cochrane, of Chichester.

We regret to learn that Major Myles Ponsonby, second son of the Earl of Bessborough, who is the chairman of the Imperial Ottoman Bank, has been killed in action in France. A memorial service will be held at St. James's, Piccadilly, on Saturday, at 11.30 a.m.

Second Lieutenant F. A. Booth, 2nd Battalion East Kents ("The Buffs"), is reported

Digitized by Google

killed in action, in France, in the fighting of September 27-29. He was formerly on the staff of the Imperial Ottoman Bank.

Mr. Richard Fitzmaurice, another former member of the I.O.B. staff, who was serving as a private in the London Scottish, is also reported killed in action in the fighting of September 25.

Mr. R. L. Naville, of Beyrout, arrived in London on Saturday.

M. Hadjeff, a member of the Bulgarian Sobranje, and a prominent supporter of Dr. Daneff, arrived in Bucharest a fortnight ago.

Captain A. Warden Baker, 7th Royal Scots Fusiliers, late of Constantinople, who was wounded on September 26, is now in England and is progressing favourably.

Captain Matila Costiesco-Ghyka, of the Roumanian Legation, who has been visiting various provincial towns, has returned to London.

A letter received by Mr. Mark Judge from Captain the Hon. Aubrey Herbert, M.P., and written from Alexandria, during a week's sick leave (after four months at the Dardanelles), states: "I've had a very nice week's sick leave, and am going back well." This will be good news to Captain Herbert's many friends in this country.

Writing home to Cardiff from a hospital at Alexandria, Private W. Davies, of the Welsh Regiment, describes a brave deed done at the Dardanelles. He says they advanced at 4.30 in the morning to attack a hill. Major R. P. Yates led his men gallantly, himself fighting with rifle and bayonet. "There were many brave deeds that day," Davies says, "and particularly would I mention that of Private A. Comley. We used to chaff Comley, who is only 5 ft. 4 in. high, asking him what he would do when he would meet a six-foot Turk, but we never laugh at him now, for he proved a real hero. Major Yates fell wounded. Comley, who was also wounded, saw him fall, and getting up started to run fifty yards to the major's side. We shouted to him to stop, for the Turks' fire was very heavy. Comley, however, got to the major's side, bandaged him, and then began rolling him back, crawling behind him, and so brought him to safety."

The Lord Mayor has consented to preside at a meeting to be held at the Mansion House on Friday, the 15th inst., for the purpose of raising a national fund to be called the Armenian Refugee (Lord Mayor's) Fund for the relief of Armenians who have escaped from Turkey to avoid the present persecution. Two hundred and fifty thousand Armenians are said to have taken refuge in the Russian Caucasus, besides very large numbers in Bulgaria and some in Egypt. Viscount Bryce is taking a very active interest in the matter, and will be one of the speakers.

APPOINTMENTS, PROMOTIONS, etc.

Mr. H. L. FitzPatrick, director of the Tanzim Department of Cairo, has been granted three and a-half months' leave as from September 20. He has been attached to the Medical Section of the British Expeditionary Force in Gallipoli.

Mr. Bardsley has been appointed Inspector, Khartoum North, to replace Mr. Munro, who has been transferred to Omdurman.

El Kaimakam T. G. Anderson Bey, Assistant Adjutant-General, has been struck off the strength of the Egyptian Army.

The *Egyptian Gazette* of September 16 reported that Colonel Garner, formerly Assistant Director of the Egyptian Public Health Department, was expected from the Dardanelles about the end of September, when he would take up his old post again.

M. A. Vichy, First Secretary of the Roumanian Legation at Rome, has been transferred to Vienna.

Mr. J. Haines, Under-Secretary of State, Egyptian Ministry of Agriculture, is spending six weeks' leave in this country.

FORTHCOMING LECTURES.

The war has had its natural effect upon the scholastic world in drawing attention to subjects connected with itself. Thus the Balkan States will receive more notice in the coming session of London University than would have been the case in a year of peace.

At King's College there will be a course of ten lectures by Dr. R. W. Seton Watson on the Balkan Peoples. The first will be delivered on Thursday, October 21 next. They will be free to the public, and the time, 6.30 p.m., is one convenient to those who are occupied throughout the day. Application for tickets should be made to the Education Officer, L.C.C. Education Offices, Victoria Embankment, W.C.

Dr. Seton Watson will also deliver a short course of four lectures at the London School of Economics, his subject being "Austria-Hungary and the Southern Slavs." The first of these will be delivered on Monday, October 25, at five o'clock. Other courses of lectures on Mondays at five o'clock will follow at this institution, dealing with Poland, Bohemia, and Alsace-Lorraine, with Mesopotamia and with the Balkan States.

There will be two lectures on Mesopotamia, which is defined as the region between the Persian Gulf and Armenia, the first on January 24. The lecturer will be Mr. D. G. Hogarth.

There will be six lectures on the Balkan States delivered by the Director of the School, the Hon. W. P. Reeves, Ph.D. These will commence on February 7.

All the above are free to the public; other interesting courses of lectures at the same institution, but for admission to which a fee will be charged, are as follows:—

Mr. Mackinder will deliver a course of ten lectures on the "Geography of the War Area" at 11 a.m. on Saturdays, commencing on October 16.

Professor Sargent will deliver a course of lectures on the "Geography of the Railways, Canals and Seaports in the War Area," at 6.15 p.m. on Tuesdays, beginning on January 18.

Professor Seligman will deliver a course of ten lectures on Tuesdays and Wednesdays at 2 p.m., beginning on February 8 next. His subject is the "Anglo-Egyptian Sudan and Uganda."

At University College on Monday next at 3 p.m. Professor L. W. Lyde will deliver an address on "Racial Frontiers in Central and South-Eastern Europe."

Sir Edwin Pears will lecture on "Turkey" at 8, Hereford Gardens, W., next Monday, at 3.30 p.m. This is the first of the third series of lectures on belligerent countries arranged by the Conservative and Unionist Women's Franchise Association. Tickets, 1s. each, may be obtained from 48, Dover Street, W.

The first meeting of the new session of the Royal Geographical Society will be held on Monday, November 15, when the president, Mr. Douglas Freshfield, will give an address on "The Southern Frontiers of Austria."

Professor A. F. Pollard will deliver a course of ten lectures, commencing October 14, on the "Progress of the War." The time is 5.30 p.m.

On Thursday, October 28, also at 5.30 p.m., Professor F. M. Simpson will lecture on "St. Sophia, Constantinople, and the Mosques of Constantinople and Brusa."

These are all free to the public by ticket, which can be obtained from the Secretary of University College. Other interesting courses of lectures now being delivered at University College are on Egyptology by Professor W. M. Flinders Petrie, on "Assyro-Babylonian Legends and History," by Dr. T. G. Pinches, and on "The War and the British Realms," by Professor A. F. Pollard.

In addition to the above, Professor Gardner will lecture on Wednesday, 13th, at 5.30 p.m., on "Greece and the War." The lecture will be free to the public, and no ticket will be required.

Finally we may mention that on Tuesday next at 8.30 p.m., at the Royal Victoria Hall, Waterloo Road, Dr. Seton Watson will lecture on "Serbia and her Aspirations."

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

CRAWFORD.—On September 28, at 12, Parkway Meols, Cheshire, the wife of Robert Crawford, of Liverpool and Constantinople, of a son.

CONSTANDURDS.—On the 3rd inst., at "Belhaven," Sutton, to Mr. and Mrs. Ath. Constanduros—a son.

MARRIAGE.

DIXON—PEAKE.—On October 3, at Port Said, Lieut.-Commander Alan Dixon, R.N., second son of the late Staff Captain Jesse Dixon, R.N., and Mrs. Dixon, of 11, Woodgrange Avenue, Ealing, to Muriel Vera Peake, eldest daughter of Mr. and Mrs. Peake, of Port Tewfik, Egypt.

DEATH.

NOWILL.—On September 23, suddenly, at 4, Ashurst Road, Seaford, Sussex, F. Gertrude Wesley, beloved wife of Stephen Nowill, of Constantinople.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Alexandria.
WINDSOR HOTEL (*Facing the Sea on the New Quay*).
Most delightful and healthy situation of any Hotel in Alexandria. Electric Light throughout. Daily Concerts on Verandah. Meals served *al fresco*. French Cuisine and English Management.
Inclusive Terms from P.T. 50 (10s.) per day.
Special Terms to Government Officials, Commercial Travellers, and for long stays.
Proprietor and Manager—AUG. van MILLINGEN.

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEM HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famaguste, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

FRIDAY, OCTOBER 8, 1915.

THE BALKAN TANGLE.

Events have moved with dramatic suddenness in the Near East during the past week. When the mobilization of the Bulgarian army was followed immediately by a similar step in Greece, the Bulgarian Government hastened to send assurances to Nish and Athens that it entertained no aggressive designs upon either of its neighbours on the west and south. It became known, however, that a large number of German officers were entering Bulgaria, and were being drafted to various commands in the Bulgarian army. In order to forestall a repetition of what had happened in the case of Turkey, when German officers brought about a Turkish attack on Russia, the Russian Government on Monday last presented an ultimatum to Bulgaria requiring her to break at once with the German Powers and to send all German and Austrian officers out of the country. In the event of the Bulgarian Government failing to comply with this request, the Russian representative would be withdrawn from Sofia. The Bulgarian reply confines itself virtually to a categoric denial of the statement that German and Austrian officers are serving with the Bulgarian army, and the Russian Government has carried out its threat. In the meantime, as the movements of the Bulgarian forces indicated that King Ferdinand and his advisers were already too far committed to Germany to draw back, the Entente Powers took steps to make good their promises of support to Serbia and Greece. In agreement, we must suppose, with the Hellenic Government, it was arranged that an Anglo-French expeditionary force should land at Salonika for the protection of the territories (both Serbian and Greek) threatened by Bulgaria. So long as Greece failed to make a formal declaration that she had thrown in her lot with the Quadruple Entente, the movement was open to misrepresentation, as it involved a technical violation of Greek neutrality. Military exigencies, however, required that no time should be lost in forestalling the Bulgarian attack, and, in the opinion of M. Venizelos, the requirements of the case could be met by a formal protest on the part of the Greek Government, while he proceeded at the earliest possible moment to obtain the acquiescence of the Greek Chamber in his policy. The event has proved that in adopting this course M. Venizelos and the Entente Powers have once more played into the hands of the former's political opponents. After a stormy session the Chamber only gave its assent to the Premier by a majority of forty votes. The discussion proved that the Opposition was prepared to take the fullest possible advantage of the technical flaw in M. Venizelos's line of action. Worse was to follow. Deceived by King Constantine's ready consent for the mobilization of the Greek army, M. Venizelos appears to have taken it for granted that he would allow the protection of Greek interests to be carried out to its logical conclusion. But either the course of the debate in the Chamber or a further twist of the German thumbscrew in the privacy of the Royal Palace has prompted the King to refuse to allow his Premier to pursue the policy for which he had obtained the Chamber's consent. M. Venizelos adopted the only course open to him: he handed in the resignation of his Cabinet.

The issue in Greece, as in Bulgaria, now rests with the people. King Constantine will have no difficulty in finding politicians to support his action; but it is obvious that, if the premiership passes out of the hands of M. Venizelos, the Governments of the Entente Powers cannot accept his successor as the spokesman of Greece. King Constantine has elected to act as his own Prime Minister, and it is with him that the Powers will now have to arrive at an understanding. The situation is not without its complications, as the landing of the Anglo-French Expeditionary Force has already been effected and a portion of the troops has passed over the Greek railway system towards Serbia. For the moment there is no indication as to the probable course of events in Bulgaria and Greece. If Germany exercises a strong hand in both countries through their respective rulers, Bulgaria may confine her attentions at first to Serbia, while Greece shelters herself behind the quibble advanced in the Chamber that her treaty of alliance has become invalid in consequence of Serbia's agreement to cede to Bulgaria part of the conquered territories, the maintenance of which had formed the basis of the treaty. What may happen after that it is unnecessary here to speculate. We do not subscribe to the belief that the co-operation with the Quadruple Entente of all or some of the three as yet non-belligerent States in the Balkans is essential to the successful termination of the war. That it would shorten the war is certain. But in dealing with the Near East we may levy toll on some of its fatalism and reflect that the hitches which now hamper the normal development of events are due to unhealthy growths in the body politic which have to be recognised and removed before the Balkans can settle down to a long period of peace and satisfactory progress.

By those who have believed that the sound common sense of the Balkan peoples will ultimately assert itself to bring about good feeling between all the States the present *dénouement* will be watched with keen interest, quite apart from its bearing on the military operations of the Quadruple Entente. The antagonism that may exist between the national interests and those of a foreign dynasty has now been brought to a head in two countries, and both Bulgaria and Greece must decide how the problem is to be solved. It appears in its most acute form in Bulgaria. If the Bulgarian people allows itself to be drawn into the war, it accepts responsibility for the whole course of the diplomatic action associated with King Ferdinand's name. The Bulgarians had no quarrel with the Powers of the Quadruple Entente. It can also be shown that from a military point of view they are on the eve of committing themselves to an enterprise of a somewhat risky nature. To this may be added the precariousness of the political future which they would be storing up for themselves if, on their own reckoning, as a result of the German victories on which they are counting, they had to settle down without a friend in Europe to the position of an insignificant factor in a great Teutonic empire stretching from Berlin and Antwerp to the Persian Gulf. The worst fate that could befall Bulgaria would be that the present expectations of her Sovereign should be realised, that Germany should be able to use her as a stepping-stone to an Asiatic empire. She will be spared that fate, we believe, because it would be the negation of all that the civilised world has been striving after during the past centuries. But if the nation responds to King Ferdinand's summons to take up arms for Germany against the Slav peoples, they make his crime their own without the excuse which may be urged on his behalf. He has never made Bulgaria's interests his own, but has remained a Sovereign apart, in the midst of an alien people, covertly despising and despised. When the parting of the ways comes, he throws in his lot unhesitatingly with the people of his birth, refusing to listen to the appeal made on behalf of the country of his adoption. That the Bulgarian nation should follow him in this cynical adventure ought to be unthinkable. It would be if Bulgarian politicians had remained true to their country.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

THE ARMENIAN MASSACRES.

(From Our Own Correspondent.)

Cairo, September 26.

In addition to playing an important part in the defence of the Empire, Egypt seems destined in this war to offer sanctuary to all the peoples of the Levant who are fleeing from the oppression of the Turks. During the early days of the war the warships of the neutral Powers, in particular those of the United States, brought to Alexandria thousands of Syrian and Jewish refugees from Syria and Palestine; and, as has been reported in The Near East, a complete organisation has been established, under the able direction of Mr. W. Hornblower, by the Egyptian Government, for providing for the subjects of other Powers pending their repatriation, and for those who, having lost their all and having no claim on other governments, must be kept alive and assisted to find a means of securing a livelihood.

To-day provision has had to be made for the Armenians, who are the latest to arouse the ire of the Turks, and whom the French cruisers have rescued from their fury. About 4,300 refugees are now in Port Said. Of these 915 are men, 1,408 women, 702 boys, 539 girls, and the rest infants, some of whom were born when the Turkish atrocities were at their worst. All the refugees, who are a most respectable, well-educated set of people, come from Suedia, the port of Antioch, on the northern bank of the Orontes river, in the vilayet of Aleppo. And a fine story of heroic resistance they have to relate!

It appears that at the end of July they received orders from the authorities to sell up their possessions and prepare to be deported within a week. They had already heard what had happened to their compatriots in other parts of Asia Minor, and since it was evident that they would meet with the same fate if they obeyed orders, the inhabitants of Suedia decided to die fighting. All but 300 accordingly took to the Gebel Musa, the mountain behind Suedia, taking with them all the cattle and provisions they could lay their hands on.

Of the 4,300 odd who took to the hills, only 600 were fighting men, and of these but 150 were armed with rifles. The rest had only muzzle-loading, sporting guns. But they put up a magnificent fight. They divided their organisation into two parts—military, with four leaders to arrange for their defence; and civil, with a commission of eight to deal with their internal administration. The hills were guarded by detachments of from 10 to 40 men, who were relieved every twenty-four hours, whilst on the coast—the refugees held all the hills around the town down to the sea—were posted ten men, whose duty it was to watch for any friendly ship, and notify to it their critical situation.

During the seven weeks they were in the hills they repulsed four determined attacks; though, as a matter of fact, isolated fighting continued throughout. Only a small force of regulars was sent against them on the first occasion, and it was easily repulsed. A larger force was then sent, but after a fight of eleven hours, it was driven off. Troops were next requisitioned from Aleppo, and with them came a horde of scallywags, including a well-known Pan-Islamic agitator, Sheikh Maaruf (who had gathered the horde together and came with them to egg them on to attack). The most desperate fight of all took place after this. It lasted continuously for 26 hours, and so severely were the regulars handled in this affair—in which, by the way, the Armenians captured a welcome supply of guns and ammunition—that they left the refugees alone for nearly three weeks. By the time the next attack was made the Armenians had established communication with the French cruisers, which had been blockading the Syrian coast and were attracted by the waving on the shore, by the above-mentioned watching party, of a huge white flag having a red cross painted on it.

The cruisers lost no time in starting to rescue the Armenians. It took one and a-half days to get them all on board, and the embarkation took place under cover of shell fire directed at the Turks. The French vessels turned up in the nick of time, for the situation of the Armenians in the hills was becoming desperate; they were running short of food and ammunition, and the time was approaching when the weather would have forced them down from the hills. During the whole of the fighting the Armenians lost 21 killed and 16 wounded—the latter are now in hospital at Port Said—and they estimate the losses of the Turks at over 800 killed and wounded. One cannot help admiring the determination of these unfortunate folk to die fighting rather than accept deportation, which spelt death and mutilation in the end, and the marvellous resistance that they put up against such odds. At the same time, it does not say much for the quality of the troops now in Syria and Asia Minor that, with numbers and supplies in their favour, they should have been held at bay and worsted by such a handful of men.

That the Suedia Armenians were correct in their expectation of the fate that awaited them and theirs, if they had obeyed the authorities and allowed themselves to be peacefully deported, is proved by the authentic reports that have reached here of the treatment of their co-religionists in practically every part of Asia Minor. A fiat of extermination seems to have gone forth from Stamboul, and the extent of the massacres far exceeds any that were perpetrated under Abdul Hamid, whom the Young Turks are so fond of holding up as the murderer of defenceless women and children, and as the originator of all that was abominable and uncivilized in Turkey; whilst the manner of the execution of the fiat far excels in ingenuity, brutality and callousness anything that has occurred in Belgium or the North of France.

The Turks, as everyone knows, have always hated the Armenians, but have been hitherto kept in hand by the Powers, though occasionally, as was the case at Adana, they have given vent to their hatred. Since war started they have undoubtedly been waiting for an opportunity to make away with the objects of their hatred. But up to the beginning of May they left them, comparatively speaking, unmolested, only endeavouring to get as many men of military age as possible to pay the military exemption fee and to impress a good number of those who could not find the money into the labour battalions, where they have been used for making roads, digging trenches, etc.

The present outbreak seems to have been caused by the defeat of Enver by the Russians. The hot-headed, vainglorious Minister of War returned from the Caucasus, whither he had gone confident of victory, full of fury at his own discomfiture, and particularly enraged at the Armenians, who had been amongst the keenest fighters on the Russian side. He found ready sympathy in his colleague at the Interior, Talaat—the man who posed six years ago before the London public as the champion of liberty and civilization—who, having served his apprenticeship in such gentle matters, in the course of his expulsion of the Greeks from the Smyrna area after the last Balkan war, considered the moment propitious for putting into effect his long-nourished project for the extermination of the whole Armenian race. In issuing his orders for the execution of this dastardly design he is authoritatively reported to have said: "After this, for fifty years, there will be no Armenian Question!"

The receipt of the order by the provincial authorities had the effect of re-kindling the slumbering flame of hatred. With a zest that was worthy of a better cause, they flung themselves wholeheartedly into the fray, and atrocities and other abominations have been, and are being, perpetrated, such as Abdul Hamid, with all his reputed love for a good healthy massacre, never dreamed of. The German Consuls are everywhere active movers in this orgy of blood and lust, but the leading spirit is Talaat, ably seconded by his friend and adviser, the Jewish Baron Max von Oppenheim, who has had a varied and unsavoury career in Egypt, Turkey, and Asia Minor, in the "diplomatic" service of his Imperial master, and who has been the centre of Pan-Islamic and anti-English intrigue wherever he has tarried during the past decade.

In the case of the more important Armenians, the plea most favoured by the authorities has been to order them to proceed to some place in the interior. A conveyance is then provided, and the notables move off under escort. But they never reach their destination, for the escort invariably reports that *en route* they were attacked by brigands, and that in the scrimmage the latter killed the passengers! This was the procedure adopted in the case of Zohrab Eff., a noted member of the Turkish Parliament; Vartakez Eff., M.P. for Erzeroum, who had previously been singled out by Talaat for special display of friendship; Aghnuni Eff., one of the chief Dashnakists; Haladjian Eff., ex-Minister of Public Works; and Pasdermadjian Eff., ex-Minister of Agriculture, who were put into two carriages at Urfa for conveyance under escort to Diarbekir, and who were murdered on the way. (The death of Haladjian Eff. is unconfirmed, but there is reason to credit the report.)

But these instances of comparatively clean, straightforward killing have been the exception, and scarce a district but has been the scene of the very worst "abominations." In Erzeroum, Trebizond, and Van a terrible massacre was carried out by the Kurds. A large number of the Armenians managed to get across the Russian frontier, but they left behind them thousands of their brethren dead and mutilated, while those of their womenfolk and children who fell into Turkish hands suffered all the outrages that only a bestial mind can conceive. At Sivas, Samsoun, and Ordu similar

treatment was meted out. At Marash and Aintab the women and children were sent off to Aleppo, and the men were either killed on the spot or taken off to the labour battalions. The German Consul at Aleppo, one Rossler, worthy colleague of Hardegg and Co., proceeded to Aintab to "superintend" operations. At Zeitoun a trick was played on the people. They were informed that only fifteen leading men would be deported—men whom the authorities said they suspected—and that if these men went the rest would be left undisturbed. The people acquiesced, but fifteen days later the authorities asked for 20 more; these went, and ten days later a further fifteen were demanded. When these had been given up there remained no leaders, and the crier was then sent round to say that all Armenians must be deported at once. They could not resist, and all were taken away to their different fates. Those who have studied Turkish history of late years are not surprised at this trick played on the Zeitoun Armenians by the authorities; for the military governor of North Syria, who is responsible for this, is Fakhry Pasha, the man who managed to persuade the Armenians of Adana to disarm, and so brought about the last massacre in that district. At Urfa, whither, at Baron von Oppenheim's instigation, all the European women and children interned at Damascus and elsewhere had been transferred, wholesale murders of Armenians were carried out before their eyes in the streets by the soldiers. There is at present in Alexandria an English child who witnessed some of these terrible sights.

In addition, Talaat seems to have drawn on history for a means of effecting his purpose with the least trouble. It may be recollected that formerly Constantinople was overrun with pariah dogs. The nuisance became so great that at last it was decided to deal drastically with it. So the poor brutes were rounded up and placed on a deserted island, where they eventually died of thirst and hunger. In like manner, thousands of Armenian women and children have been sent out into the Mesopotamian desert west of Mosul, where there is neither food nor water, or to a place between Aleppo and Baghdad, called Deir-es-Zor, where, it is true, there is water, but where no arrangements have been made to supply them with food. By this time those who have been sent out there must have died a lingering death. The "deportations," even from one centre to another, are carried out in a most inhuman and brutal manner. In the first place, the deportees are ordered to bring donkeys, mules, or horses, which the escort invariably ride themselves, leaving the owners to trudge along on foot. Secondly, only women and children are deported; the men are either killed or taken into the labour battalions. The reason is obvious. The escort forces them along, and literally over-drives them, with the result that the weaker women, those with child, and the children gradually fall out or collapse, and are left to die on the road, the task of the escort being thus lightened by the reduction in the number of its convoy. It is said that one can know exactly the route followed by one of these "deportation" parties by the dead bodies of women and children lying along it. This scheme of deportation is one of the most gruesome and ingenious methods of massacre by killing slowly that could well be conceived, and one that shows Talaat up as a greater exponent of the science of "Fürchterlichkeit" than his friends the Kultur protagonists themselves.

From all parts come the same terrible stories, of women publicly ravished or thrown into brothels, or handed over to favoured Moslems for the adornment of their harems, or deported wholesale, as narrated above; of children forcibly converted to Islam; of men hanged or crucified, or otherwise done to death, and horribly mutilated. The work of massacre is still going on. Bodies of hapless Armenians continue to come down the Tigris, into which they had been cast alive, tied together, two by two, and back to back—and it is difficult to say how many Armenians have been exterminated already. Competent authorities put the number at not far short of 200,000. Whilst it is quite impossible to verify this figure, there is no shadow of doubt whatsoever that this is easily, by reason of its nature and the scale on which it is being carried out, the largest, most barbarous, and most revolting massacre that has ever been attempted in the history of the Near East.

But whilst the massacre of these helpless people is bad enough, and demands the exaction of the sternest retribution, the danger is even greater than appears on the surface. These brutal atrocities are for the most part being carried out either with direct official sanction or under the eyes and with the cognizance of the officials; and the fear is that this encouragement will cause the Turks and Kurds to acquire a thirst for blood and then turn on the other Christians in the country. There is a rumour that orders have gone from Constantinople to stop the attacks on the Armenians; but as long as Talaat is in power such statements should not be trusted, for he is probably only doing what he did in connection with the Greek massacres in Smyrna, when, in deference to the outcry in Europe, he made a tour of the districts and announced officially that the massacres had been stopped, when all the while he was encouraging their continuation. The danger is as great for the subjects of the netural Powers as it is for those of the Entente, and unless the worst is to be risked, something will have to be done to bring pressure to bear on the clique that is responsible at Stamboul to force it to cry halt to the abominable state of affairs which the closing days of the Turkish Empire have brought into being.

AMERICA AND THE ARMENIANS.

A Reuter's message from Washington, dated October 4, states: Mr. Morgenthau, the American Ambassador in Constantinople, has been instructed to inform the Turkish Minister for Foreign Affairs that, unless the Armenian massacres cease, friendly relations between the United States and Turkey will be threatened. It is explained by State Department officials that a diplomatic break with Turkey is not contemplated. What is threatened is the breaking of the friendly relations between the American people and the people of Turkey.

The *Daily Chronicle* learns that an offer to transport to America the whole of the Armenians now being driven from their homes by the Turks has been made to the Porte by Mr. Morgenthau. Horrified by the terrible massacres and cruelties which accompanied the removal of the Armenians from their homes, and by his helplessness to assist them through the usual channels, the Ambassador offered to make himself personally responsible for a million dollars and to find other men in the United States to raise another four millions—a million sterling in all—the money to be spent in emigrating the remaining Armenians to America.

LIFE IN CONSTANTINOPLE.

A letter just received from Constantinople by a correspondent gives some details regarding the state of affairs in the Turkish capital which tend to confirm the reports of distress that find their way through from other quarters. The Dolma Baghtshé gasworks are closed, and the railways are using half wood and half coal. Bread is black and difficult to obtain. "Moda and San Stefano are practically two large hospitals; that is to say, every house has been taken over for the wounded." Hotels and cafés have been ordered to place lights outside their doors to light up the streets at night. The English High School for Boys has been turned into a hospital, and the Turks have taken over and occupied several British houses in Chichili.

SERBIA ON THE KINEMATOGRAPH.

Colonel Ahearne, who was in charge of the expedition sent in June last to the relief of the wounded and suffering in Serbia by the Wounded Allies' Relief Committee, gave an address last Wednesday at the West End Kinema, Coventry Street, London, in which he briefly recounted how the Balkan States gained their independence; he also gave some account of the country. The lecture was illustrated by the kinematograph views being shown of Salonika, Nish, Mladenovatz, Kragujevatz, and other places in Greece and Serbia. One of the pictures was that of the villa where Abdul Hamid was imprisoned by the Young Turks, behind a high wall specially built to intern him, with 250 soldiers to guard him.

A picture was shown of King Peter of Serbia, and the lecturer told how once, when the fortunes of the army seemed desperate, the King told his men that he absolved them from their oath to himself. From their oath to their country he could not absolve them; but if any wished to return to their homse, he promised they should not be proceeded against. Needless to say, all remained. Another picture was that of Marko Kralievitch, born at Prilip, a Serbian king and hero. Kralievitch died in 1394, but, according to a local legend, he and his horse, Sharatz, are still living in a neighbouring cave. Marko, having buried his sword in the vault, lay down to sleep; but Sharatz nibbles at the moss before him, and little by little the sword is edged out of the stone. When Sharatz shall have finished the moss and the sword shall have fallen to earth, Marko will awaken and reappear in the world.

The Turks have definite names for the Greeks who inhabit Ottoman territory and for those who are their own masters (says a writer in the *Daily Chronicle*). The latter are Yunan and their country Yunanistan—names derived from "Ionia"; while the Greeks and Turks are Rûm. By origin this is simply "Romans," and is an inheritance from the Byzantine days, when the inhabitants of Constantinople, the New Rome, were called Romaioi, while the provincials were known as Helladikoi. "Rûm" was the conquering Turks' name for the Byzantine Empire. It survives in Rumelia, while the popular Greek language of the present day is still known as Romaic. But every Greek, in Greece or in Turkey, calls himself a Hellene.

THE PRESS ON THE NEAR EAST

Ferdinand of Bulgaria.

During the past week innumerable articles upon Bulgaria, the Bulgarians, and their ruler have appeared in the Press. The Bulgarians themselves have found at least as many friends, if not as many champions, as they have enemies, or hostile critics. But upon the whole the articles upon King Ferdinand have been more candid than complimentary. The following extracts are taken from two of the best of these articles that we have read. The first two are from "King Ferdinand, a Personal Sketch," by a Hungarian correspondent of the *Morning Post* (October 5), the others from "Ferdinand of Bulgaria: 'The Balkan Nero,'" in the *Times* of October 6:—

Neither M. Radoslavoff nor any other Bulgarian politician is strong enough to direct the destinies of his country against the will of King Ferdinand. His egoism and ambition brought about the disaster of the second Balkan War, and will in all likelihood bring about another; and his sympathies and interests are so bound up with the Central Empires that every step he takes is dictated entirely by personal motives and not in accordance with the good of his country.

King Ferdinand, as I mentioned above, spends a few months every year in Hungary on his extensive estates in the northern plains, where he owns a great deal of land and has a castle and magnificent shooting. His guests relate that the King speaks Hungarian perfectly, and often enters into conversation with the peasants working on his estates. The bulk of his fortune is in Hungary, his private income there being three million kronen (£120,000) a year. In Hungary he calls himself Count Murány, an ancient Hungarian name.

Fear and cunning, to which are joined inordinate ambition, are the chief characteristics of Ferdinand of Bulgaria. To himself he seems a much-wronged and misunderstood man—*Un roi incompris*. He never tires of pouring into sympathetic ears the greatness of his services to Bulgaria, or of dilating upon the sufferings he has borne and the sacrifices he has made on her behalf. But he has his moments of cynical self-revelation.

The better part of Ferdinand of Bulgaria disappeared with the death, in 1907, of his mother, Princess Clémentine of Coburg, daughter of Louis Philippe. She had worked, intrigued, and spent vast sums for him, and had lent a certain quality of manliness to his policy. He took no step without consulting her. At every critical turn, when she was absent from Sofia, the Bulgarian Minister at Vienna would be dispatched post haste to her residence of Ebenthal. There, owing to her extreme deafness, questions had to be written on slips of paper. She would reply orally. After one protracted consultation, the slips of paper had accumulated into a goodly heap, and the Minister, as he left the presence of his Sovereign's mother, cast a wistful glance at the tell-tale record of the way he had discharged his mission. "Burn them," said the Princess, and the Minister departed reassured. Princess Clémentine always "played the game." This quality formed no part of the rich inheritance she bequeathed to her son.

"The Ambassador."

Readers of THE NEAR EAST are well aware of the debt our countrymen in Turkey, and those who have left that country since the war also, owe to the United States Ambassador. They know, too, how deeply grateful our countrymen are for the unvarying kindness he showed them and his strenuous efforts on their behalf. They will, therefore, read with particular interest the following extract from an article, "A Democrat in Constantinople," in the *Independent* (New York) of September 27:—

Henry Morgenthau has made the United States a force in the diplomacy of Constantinople. That he has been able to use the opportunities that have come to him, and to sustain his responsibilities with success, is due in large part to the man's personal power. This power in turn seems to have its roots in the Ambassador's single-minded adherence to certain ideals which we count peculiarly American, an adherence which attracts attention and arouses pride in those of us in the American colony who have seen him at work this winter.

Mr. Morgenthau is a delightful man to meet. He is absolutely genuine. At the first encounter I was sure of two things: that while Mr. Morgenthau never pretends to be what he is not, he never allows anyone to estimate him at less than he is. Picture a small man, grey haired and rather bald, with good shoulders, and a head set slightly forward on them; keen eyes, a mouth which smiles so much that the stern lines about it are not much in evidence, a decided chin with a close-cropped beard, a brisk step and a hearty manner, and you have "the Ambassador"—so he is known to high and low of many nations in Constantinople.

Perhaps our most boasted American ideal is democracy. We fall short in it often enough, but in Pera, devoted to the etiquette of Continental diplomacy, the virtue is a very rare article, and this renders Mr. Morgenthau's possession of it very conspicuous.

For Future Guidance.

The following extract taken from an interview with Sir Edwin Pears, which appeared in last Friday's *Standard*, refers to a subject which is not a new one to readers of THE NEAR EAST. Sir Edwin's words will no doubt find an echo in the hearts of many of our countrymen lately resident in Constantinople:—

"In diplomatic circles, prior to the war, we were at a grave disadvantage as compared with Germany," said Sir Edwin yesterday to a *Standard* representative, "and all through a matter that might easily have been remedied. When Sir Louis Mallet was Ambassador there he was in the unfortunate position of never having been in Turkey and of knowing no Turkish. He had three secretaries, but these were at the same disadvantage. Opposed to them was the German Ambassador, with the finest staff of secretaries and interpreters in Constantinople. We had had a first-class dragoman, Mr. G. H. Fitzmaurice, with a great knowledge of Turkey and speaking the language like a native, but my belief is that the Turkish Ambassador in England requested that when Sir Louis Mallet returned to Constantinople Mr. Fitzmaurice should not return with him. The result was that the Ambassador was left without an interpreter fit for the post. . . . Now, at the time the Ambassador was handicapped in the way I have mentioned there were three men in Constantinople in the Consular Service who were just as good as any that the Germans had. One was Sir Adam Block, who had been first dragoman at the Embassy, and was highly approved by Sir William White, Sir Philip Currie, and others. He, however, had passed out of the Consular Service as far as he could, and had become the representative of the British bondholders on the Council of Administration of the Ottoman Public Debt—in other words, he had become a Turkish instead of a British servant. Another was Mr. Robert Graves, and the third a Mr. Lamb. Mr. Lamb had been first dragoman, but chose to become Consular-General at Salonika. One of these three men should have been called immediately to act as dragoman to Sir Louis Mallet."

But that, of course, would have been "irregular"!

Bulgaria.

The following extracts from the British Press regarding Bulgaria's choice, which have appeared under various dates during the past week, afford interesting indications of the general English attitude towards that country. The *Morning Post* (October 2) regrets that Britain may be forced to draw her sword against a second of her friends, Bulgaria, in addition to Turkey, and adds of Bulgaria:—

She must make her choice according to her lights, but this much is certain—England must win, because her Fleet holds Germany by the throat, and can force her, in time, to disgorge all she has swallowed. She is willing to meet Bulgaria half-way, but if the sword is drawn now against us, her old friends, it is and must be *Finis Bulgariæ*.

The *Westminster Gazette* (October 4) refers to the miscalculations of the Central Empires:—

Certainly it was not supposed that Greece would mobilize when Bulgaria did, and still less that there would be a new and formidable offensive by the Western Allies. In existing circumstances, any formidable new enterprise by the Central Powers in this region must be a dangerous addition to their commitments, and this particular enterprise will have moral and political results that in the long run must much more than neutralize any immediate military advantage.

The *Pall Mall Gazette* (October 4) has a word to add in reference to Roumania:—

If the troops of the Entente Powers are ready to take the field simultaneously with those of Greece, there will soon be other things for King Ferdinand to think about than the mutilation of his neighbours. Other wavering scales in the Balkans may be decided in their final inclination by prompt and decisive measures. Germany and Austria are still trying to persuade Roumania to connivance at the passage of munitions into Turkey. The counsels of Bucharest are intricate and sometimes obscure, but they might be rapidly disentangled by a display of resolute action on the part of ourselves and our Allies.

Mr. Lovat Fraser, in the concluding sentences of an article upon "Why Bulgaria is Taking the Wrong Turning," which he contributes to the *Daily Mail* (October 4), writes:—

Should Bulgaria range herself on the side of the Germanic Powers, I think Tsar Ferdinand will have decreed his own political extinction and the Bulgarian nation will have shattered its own bright future. Serbia has an army of brave veterans. The gallant Greek army has in recent years shown its prowess and has greatly increased its strength. Roumania is still undeclared. The Roumanian army is the biggest in the Balkans, and I personally believe the Roumanian troops to be more than a match for the Bulgarians. No one who has examined the Grivitza Redoubts at Plevna and studied on the spot the story of Roumania's deeds of arms can doubt that the war has further surprises in store should Roumania unsheathe her sword.

Mesopotamia.

In commenting upon the recent victory in Mesopotamia, the *Manchester Courier* (September 30) says:—

From a trade point of view it is eminently desirable that Baghdad should be under the control of the British. At all times a great commercial centre, it will derive new importance from the Euphrates Railway, the concession for which was obtained by Germany from the Sultan Abdul Hamid. Water carriage will probably always be cheaper from this country, but in any case it is desirable that the administration of such an important distributing centre for Persia and Mesopotamia should be out of Ottoman hands! In more directions than one Enver Bey has injured his countrymen.

The *Times*, in a leading article on the same subject, is eulogistic regarding the scope and effect of Sir John Nixon's success, and, after referring to the hardships which our soldiers have necessarily been forced to endure in the course of their advance, continues:—

Their operations have exercised a considerable influence on the movements of the Turks in other regions, and this influence will doubtless become more pronounced after this latest success. Now that the temperature is becoming less intolerable, that the inundations are subsiding and the soil is hardening, their progress promises to be continued at a more rapid rate.

The *Daily Chronicle* (September 30) compares the campaign with that of the Nile, which it considers the campaign resembles more nearly than any other in the present war.

It is, however, a harder task, not only because the enemy have considerable forces of Turkish regulars with artillery, but because, instead of having one river-valley to deal with, he has two, the Tigris and the Euphrates, and also the troublesome Persian country on his right flank. Our success in this quarter has a distinct effect in weakening Turkey, who has lost large forces there, and is also losing large sources of revenue. It stands entirely to the credit of the Indian Army, whose high organization and capacity for Asiatic warfare it has shown in a most favourable light.

A View on the Bosphorus.

From "Two Bosphorus Castles," the second of three excellent "Turkish Sketches" contributed to the October *Blackwood* by W. J. C., we take the following passage, descriptive of the prospect from Roumeli Hissar:—

No other Bosphorus views equal those to be had here. You must be 300 ft. above the water, and yet it is so immediately below that you think a stone might be tossed into it. Vessels are seen as if looked down upon from a bridge. You look down also on the red roofs of the village within the castle and of the greater village without, and upon the massive waterside tower on which tradition says that Mahomet II. stood and watched his guns being fired. Gazing southward, the Bosphorus and its recurring headlands and bays are open to Stamboul and the Sea of Marmora, and northward as far as Beicos. The wooded hills enclosing the valley of the Sweet Waters, and Canlija and Candilli heights both dotted with houses, seem to rise the greater for your own lofty position, and to be close at hand beyond a blue river flowing in its gorge. Only inland, behind you, is the scene out of harmony. There, at the foot of the tower, begin the buildings of an American college—Robert College, of fame throughout Turkey and the Balkan States—whose buildings are great, and raw, and modern, and have no grace of created surroundings, although in a noble position.

Constantinople Transformed.

Under the above heading Mr. A. Robert Mountsier, literary editor of *Judge* (New York), contributes an interesting article to the *Daily News* (October 2). After being afforded the fullest possible opportunities for study of the internal conditions of Turkey during the last two months, he has come to the conclusion that the country is fighting without heart. He says that "Business is bad, food is dearer, and bread is scarce." On one occasion a food riot occurred at a time when every shop was hung with flags in honour of a great victory over the British.

"We want bread, not flags," shouted one woman, and the crowd took up the cry. Then a riot broke out, and the flags on the bakery and on the neighbouring buildings were torn down. When help came to the lone policeman about a dozen women were arrested and thrown into gaol. If they were fortunate enough to receive bread and water while there, bread riots might have become exceedingly popular in Constantinople.

The poorer classes of people, hearing of victory after victory, argue simply, but effectively, "If our soldiers are victorious, why don't our husbands, our sons come back to us? Why are there so many wounded? Why don't we have all the bread we want?"

According to this neutral observer, the Young Turk leaders are busily occupied in lining their pockets against all eventualities.

The disappearance of public moneys is so well known that rarely is a Turk to be seen putting anything into the "For the National Defence" cans, which are shoved under one's nose in the street, on tramcars, in restaurants, in public gardens, everywhere but in the home. Nor is the Turkish public any longer contributing freely to the funds of the Red Crescent.

He concludes his article in the following ominous words:—

So long as they are successful, the Turks will endure the Germans and take all the credit for this success to themselves; but when the dark days come—well, I should not like to be a German in Constantinople, and least of all a Young Turk official.

A correspondent of the *Petit Parisien*, who at great personal risk succeeded in entering Constantinople, has much the same tale to tell. He found the Germans dominant and swaggering everywhere, and comments upon the fact that there was never a hostile cry or a discordant note among a large crowd when a string of British prisoners were marched by under guard. A few people, men and women, offered them cigarettes, that was all. This writer concludes his observations in the paragraph quoted below:—

The situation is distinctly bad. Munitions are beginning to fail. This war is unpopular with the Turks, and the Germans, who pretend that they are the friends of Turkey and treat them like savages, are also unpopular.

It is a pitiful picture of the depths to which the formerly proud and independent Turk has been reduced by Enver and his crew, with the brutal fist of the German officer. It is almost incredible to those who know the Turk that they should have submitted so long, and the statement that the day the Allies enter will be a day of rejoicing need astonish nobody. May it not be far distant!

THE ALBANIAN COMMITTEE.

A meeting of the Albanian Committee was held on September 14, at 7, Pall Mall. The notice convening the meeting said:—"At this time it is felt that the following declarations of the Prime Minister and the Foreign Secretary call for all the reinforcement that can be given to them. Mr. Asquith, speaking at the Guildhall on September 4, 1914, said:—'We have not drawn the sword without due consideration, nor will we sheathe it again until the rights of the small nationalities are established on unassailable bases.' Sir Edward Grey, speaking at Bechstein Hall on March 23 last, said:—'We wish the nations of Europe to be free to live their independent lives, working out their own forms of government for themselves and their own development, whether they be great States or small States, in full liberty. That is our ideal.' It is felt that the Albanian Committee might now with some effect appeal to the Government to continue to stand by the Albanian Nationality, and so consummate all that this country has done for it."

The Prime Minister and the Foreign Secretary were informed of the meeting and its purpose, and invited to send any message they might desire the meeting to consider. Mr. Asquith, in reply, said he had no new message to send, and Sir Edward Grey's reply was that he had nothing to add to the statement quoted in the notice convening the meeting.

The committee unanimously passed a resolution that in view of the statements made by the Prime Minister and the Foreign Secretary, that the great object of the war was the protection of the smaller nations, this meeting of the Albanian Committee of London ventures to impress upon Ministers of the Crown our obligations towards the Albanians now struggling for the integrity of their land, for liberty and life, and urges upon Ministers the duty of securing freedom for the most ancient nationality in the Balkan Peninsula. It was agreed to forward copies of the resolution to all His Majesty's Ministers.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

One day this week I had a long conversation with a business man from Alexandria who is at the present moment in London. Whatever his opinion of the political situation may be, he is at least frankly optimistic as regards Egypt's economic situation. There was, he admits, a decided decrease in the tourist traffic last year, but the presence in the country of so many of our soldiers has more than recompensed for the loss of sightseers. The natives of Cairo, Alexandria, and Port Said, who in previous years eked out a questionable existence, have been overwhelmed with "Tommy's" spending powers, and are now in clover. The country people, peasants and landowners, are likewise doing well, selling food produce at good, and cotton at excellent, prices. Hotels in Alexandria are doing remarkably well, and so they are at Port Said, and in the central districts of Cairo, European stores and shops—especially the few British stores—are likewise doing extremely well, or, to use my informant's expression, are coining money. From the above account it would really seem that Egypt, economically speaking, is not to be pitied: exports are increasing from month to month, and, as always happens in such cases, the country's purchasing powers abroad, or her imports, increase likewise. Therefore, the frank optimism which characterises the articles from our Cairo Correspondent on Egyptian trade and finances, published elsewhere in the current issue of THE NEAR EAST, is fully justified. Let us hope that nothing will occur to alter the present favourable economic situation.

***

I have received an announcement to the effect that the Eastern Bank, Limited, of 4, Crosby Square, E.C., have opened a branch at Busreh, Persian Gulf, and have been appointed bankers to the Government of India at that port. I congratulate the bank on its initiative. Before the war broke out it opened an office in Baghdad, and, in spite of the troubles which have harassed the Ottoman Empire during the past few years, was doing remarkably well. There has always been a fair trade between India and the head of the Gulf, and it is likely to grow considerably as soon as the present political situation has cleared up. I, therefore, do not doubt that the Eastern Bank will make a success of its new venture.

***

In the current issue of *Kelly's Monthly Trade Review*, an appeal is made for the creation in London of a Roumanian Chamber of Commerce. The idea is an excellent one, but I doubt if the time is opportune for its formation. With the Balkans again in the melting-pot, or just about to be thrown in, no steps of a commercial nature tending to increase our foreign trade are likely to be taken. I hope, however, that, when the war is over, the scheme will be revived, because, as the writer points out, "Owing to the stand taken by Roumania, it is clear that she will have to introduce drastic changes in her old commercial relations. New outlets and new sources of supply will have to be found. The trading instinct is naturally well-developed, and so we need not wonder that the business folk of Bucharest, Braila, Galatz, etc., are already taking steps to prevent a commercial deadlock." We can help her (concludes the article), and to this end the foundation of a strong Anglo-Roumanian Chamber of Commerce in London should be set about "without delay." The last phrase is, as I have pointed out, of questionable wisdom, and unfortunately inopportune.

***

We publish on another page some particulars concerning Greek shipping. The development within recent years of the mercantile marine of Greece has been in every way remarkable, and the present war has, up to the present, proved a veritable gold mine to the Greek shipper. With freights extraordinarily high, and very little competition, he has been able to make huge profits and at the same time to acquire new and important markets. The turn events have taken in the Near East will temporarily affect the number of Greek vessels available for transport, principally owing to the fact that the Greek Government has requisitioned as many as it could lay hands on. As one-eighth of the Welsh coal shipped here is carried in Greek vessels, a considerable gap will be caused in the supply of bottoms available for the carriage of coal outwards from this country. This will mean higher rates, already abnormally high. As stated, for the time being, Greek shipping will be affected by the requisitioning order, but, unless King Constantine rushes into the Kaiser's arms, the dislocation will by no means be permanent. Should "Tino," however, do the incredible thing, it will be a sorry day for Greek shipping.

***

In connection with the rapid development of the Greek mercantile fleet, the following extracts from an article which appeared last week in the *Morning Post* are of interest. After asserting that the lay mind can realise but little of the extent to which the Greek mercantile navy has increased within recent years, the writer observes that since the war began, "Greek shipowners have participated to the fullest extent in the large profits which have been made; they have enjoyed the full freedom of the seas, and in most markets they have shared equally with British shipowners the prosperity which has resulted to the whole shipping community but without any of its accompanying disabilities." The writer then adds: "The strong point of the Greek shipowner is his ability to buy and sell vessels at a profit. While engaged in running tramp steamers with the fullest benefit to himself, his dealings in steamships bring him in considerable sums. Most of these profits, although made in this country, and by virtue of the safety conferred upon Greek steamers by the British Navy, are untaxed, as they are, of course, securely banked in Greece. In addition, the Greek shipping community has consistently purchased neutral and British tonnage, mostly of the best type, for some years past, and even at the present greatly enhanced price of shipping a Greek purchaser can nearly always be found for a good neutral vessel. The result has been that the Greek steamer is found in nearly every trade in the world."

***

Our Bucharest correspondent, writing on the 19th of last month, stated that on the previous Wednesday gold to the value of fifteen million francs arrived at that capital from Germany in transit for Constantinople. It arrived in a first-class carriage, runs the story, and weighed four tons, being packed in ninety-seven cases, part specie and part ingot. The object of this considerable sum in gold is said to be to enable the Ottoman Treasury to issue Treasury bonds. It will be remembered that some time ago there was a question of the issue of such bonds to the value of £T6,000,000, to be guaranteed by the surplus of certain tithes held for the Ottoman Government by the Public Debt Administration. This scheme fell through, and Djavid Bey obtained in Berlin and Vienna a loan of £T6,000,000 in gold, which was deposited, so it is said, in the Reichsbank, and accredited to the Ottoman Debt Administration. To the best of my belief, banknotes to the value of £T6,000,000 were subsequently issued, guaranteed by the Ottoman Debt Administration. The 15,000,000 francs mentioned by our correspondent can hardly have reference to the above issue of notes, and we must, therefore assume either that a further bond issue is contemplated by the Ottoman Treasury or that a certain amount of gold has been acquired by Turkey against banknotes in Germany for the purpose of salaries—ministerial salaries rather than those owing to smaller officials. On the other hand, it is just possible that the gold is not intended to reach Constantinople, but that its real destination, as soon as it has crossed the Danube, is Sofia, rather than Stamboul.

***

I wish to call the attention of my readers to the North-West Tannery Company, of Cawnpore. This company occupies a unique position among Indian industrial firms on account of the great variety of leather, and articles made of leather, which they manufacture. In addition to tanning and currying leather of almost every kind in enormous quantities, the firm in question also manufactures all kinds of articles of which leather is the principal component part. Their saddlery, harness, and equipment are famed throughout India and the Far East for their durability, style, and moderate price, and no finer travelling requisites can be found in any other part of the globe. As India is a happy hunting ground for the sportsman, the North-West Tannery take full advantage of this fact and make a speciality of tanning and dressing crocodile, buck, nilgai, sambhar, snake, or python skins and adapting them for trunks, bags, cases, etc., which serve both as useful and ornamental trophies. They also do a most extensive taxidermy business. Their boot and shoe department turns out about 1,000 pairs of boots and shoes per day.

COMMENTATOR.

ENGLISHMAN, with good connections in England and Near East, desires FINANCIAL BACKING to open out, after War, a General Merchants' and Agency Business in Turkey. Several good Agencies in hand, and other profitable business can be secured on proof of financial ability to handle.

Principals or Solicitors only, apply to "AGENCIES," "NEAR EAST," Devonshire Square, London.

The Future of Cyprus.

Mr. J. R. Van Millingen contributes an article on "Cyprus: Its Present and Future," in the current issue of the *Contemporary Review*, from which the following extracts are reproduced. After going carefully into the history of our Convention with Turkey, whereby we occupied the island and paid the Ottoman Government a yearly tribute (appropriated for the service of the 1855 Ottoman Loan), the writer refers to the improvements introduced by us in the island, principally social reforms, and then says:—

Want of Funds.

But we placed no initial capital at the disposal of Cyprus, and the development of its resources was, in consequence, greatly retarded. The fact that we only held it on conditional trust, and not as a permanency, precluded the possibility of its contracting any loan for such development, and the same reason held back private speculators and capitalists who otherwise might have embarked on enterprises beneficial to it. Further, the tribute hung like a harpy over the unfortunate island, snatching away the surplus of revenue it urgently needed for the afforestation of the mountains which had been stripped of their trees, for the construction of roads, waterworks, harbours, the development of agriculture, and numberless other requirements. Grants, it is true, were made from time to time by Great Britain, but the average was only £31,500 a year—and what could be done with such a pittance? Nevertheless, our Cyprus officials did their best, and although it took them the best part of thirty-six years, they can record the construction of over 760 miles of main roads, besides 1,000 miles of secondary roads and 2,000 bridges and culverts, where formerly there were practically none. The old Venetian port of Famagusta has also been made available for steamers of heavy draught, and a railway connects it with the Bay of Morphu on the other extremity of the island. As a proof of the steady prosperity of Cyprus we may mention that the population, which in 1878 was 180,000, has increased to over 280,000, and the imports and exports, which were £177,651 and £157,328 respectively, stood in 1911 at £635,427 and £702,803.

An Agricultural Country.

Cyprus is pre-eminently an agricultural country, but the inadequate funds in the hands of the authorities have not allowed any very marked developments in that line. Agricultural schools have been established, but the great desideratum of the island is water, and the rainfall is scanty and undependable. The scarcity of rain is doubtless due to the ruthless deforestation of the country, once renowned for its splendid forests, by its Venetian, Turkish, and other occupants. Want of funds has prevented anything being done for its afforestation except the fencing of certain districts to prevent the destruction of saplings by goats. Another remedy for the scarcity of water is the construction of dams for storing the waste which in winter rushes into the sea. A modest attempt in this direction was made in 1897, but for various reasons was practically a failure. Here again afforestation is necessary to retard evaporation.

Mr. Van Millingen proceeds to analyze the entry of Turkey into the war against us, and believes that the opportunity now presents itself for settling the Tribute question:—

Settlement of the Tribute.

The Tribute, as already stated, has been applied by us, in part, to meet the service of the Ottoman 1858 loan, which was guaranteed by Great Britain and France, and payment of which was suspended by the Porte in 1875. The original amount was £5,000,000, with interest at 4 per cent. and a sinking fund of 1 per cent. The security given was the Customs revenues of Smyrna and Syria. At the time of the Ottoman default the outstanding amount was £3,815,000. All the bonds have since been drawn, but have remained unpaid; the interest, however, of £152,608 a year has been regularly met by our Exchequer—£70,000 being derived from the Egyptian Tribute to Turkey, and the balance of £82,608 from that of Cyprus. Why France, who co-operated with us in guaranteeing the loan, was not called upon to meet her share of the engagement need not here be explained. Both Governments will now doubtless see that in the final settlement with Turkey the capital of this loan shall form part of our claim on the Porte, and that thus Cyprus is delivered from the yoke which has pressed so heavily upon it.

The Baghdad Railway.

Cyprus stands as a sentinel across the Gulf of Alexandretta, and it was doubtless this geographical feature, as well as its proximity to Egypt, which influenced Lord Beaconsfield to contract with Turkey for its occupancy by us. Some of us may think that Crete, with the best natural harbours of the Mediterranean, would have been more valuable than Cyprus, which has no corresponding natural harbours, and which now stands considerably out of the direct course of navigation. But with the near prospect that the Mediterranean terminus of the Baghdad-Busreh Railway will lie in the Gulf of Alexandretta, the future will vindicate the wisdom of Lord Beaconsfield's selection. Alexandretta to Busreh will not only be our alternate, but our shortest, way to India, and our duty is to guard it. It will be remembered that in the original survey made by Telford for a Euphrates railway, and submitted to our Parliament, long before any German scheme was contemplated, Alexandretta was indicated as the most advantageous terminus. It is the natural port of Mesopotamia, and in proposals for a railway concession which the writer laid before the Sublime Porte some thirty-five years ago, emphasis was laid on the advantages of this starting point and the crossing of the Euphrates near Aleppo. The concession was refused by the Military Council, influenced doubtless by Germany, "for strategic reasons." When either line is open Cyprus will no longer be outside the trade line of shipping, but within it.

In the subsequent German-made plans, Beyrout was chosen as the Baghdad port on the Mediterranean, and then again Alexandretta was reverted to.

Both Beyrout and Alexandretta are equidistant from Cyprus, and are dominated by it. When either line is open, Cyprus will no longer be outside the trade line of shipping, but within it. Further, with the future of Syria and Palestine in the melting pot, and the possibility of a *coup de main* on the Suez Canal, our interests call upon us to consolidate our position in the island, which, under certain eventualities, might prove a very important station for the concentration of troops and the storage of supplies and ammunition.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, September 19.

3,000 wagons of the 4,400 wagons of Silesian coal which the Roumanian Government has ordered in Germany are destined for the Bucharest gasworks, and the remainder for those at Galatz. After the extraction of the gas, the coke will be put on sale to the public at a price to be fixed by Government.

Negotiations are in progress between the Greek and Roumanian Governments for the purchase by the former of Roumanian wheat. Up till now Greece has always purchased large quantities of American wheat. It seems unlikely, however, that Greece will be willing to pay the extraordinarily high prices obtaining at present here, and paid by Germany and Austria.

During the month of August 86,110 tons of cereals and flour passed the Roumanian frontiers for Germany and Austria-Hungary. From April to August the quantity exported was 32,718 wagons, or 327,180 tons. During the same period last year 854,760 tons were exported by rail.

The Ministry of Commerce brings to the notice of importers of goods viâ Salonika that it is very necessary that the respective bills of lading bear the words "In transit for Roumania," and that instructions in the above sense should be given to shippers abroad.

Great Britain has acceded to the demand made by the Roumanian Government for the supply of rice necessary for the country's needs, but only on the condition that the Roumanian authorities prohibit the re-exportation to Germany or Austria.

M. J. Jonesco has left for Salonika, where he is charged by the Ministry of Commerce to receive the goods, etc., ordered in Great Britain by the Roumanian Government.

TRADE OF SALONIKA

In spite of its sadly troubled career, Salonika remains the principal Ægean port of the Balkan Peninsula, says a writer in *Kelly's Monthly Trade Review*, through which practically all of Macedonia's imports pass, and most of the exports, while two-thirds of those of Albania find their way in or out by way of this busy mart. The terminus of four important railway systems, it taps by this means Albania by way of Monastir, north-western Macedonia to the confines of Novi-Bazar, Serbia, Bulgaria, and the whole of the vilayet of Adrianople right to Constantinople. Normally its imports are valued at something like £3,000,000 and its exports at £1,500,000. Since it has passed from the hands of the Turks great improvements have been made both as regards the harbour itself and the town. The former has been made more accessible and commodious, the latter more sanitary and capable of affording hospitality. A trade of close upon £5,000,000 is a considerable one for a single port, but it is small compared to what it is destined to be. Not only must the transit trade, both inward and outward, to Albania, Serbia, Bulgaria, greatly increase, but Macedonia will before long add enormously to the commerce, for the country at the back of this port could well bear immense and diversified crops, fine flocks and herds. Naturally in a country where warfare has been endemic for long years, agricultural, pastoral, and industrial development has been slow, and received many setbacks, the population has become partly nomadic, but in spite of this has increased. Given peace, the growth of population will become more marked and the produce of the country will go up by leaps and bounds. In Macedonia, as in Bulgaria, we are sure to witness rapid improvement in urban areas. All that will mean increase of trade, and the people, having more to sell, will have the wherewithal for bigger purchases.

How are the Macedonian buyers to be reached? No doubt we should send out competent commercial travellers as soon as travelling about is possible. But we must recognize local customs, remember the ancient rôle of Salonika as a mart and *entrepôt*. It is the side of trade organization that British commerce should set to work at once to develop. Salonika must be provided with commercial houses handling both exports and imports, but, above all, which hold on hand a fair stock of the goods offered for sale. Such goods must be on view, and as far as possible ready for immediate delivery. The essential point, however, is that British manufactures of various kinds should be constantly on view, ready for inspection by the merchants doing business in the port, coming to the markets and banks from outlying towns and districts, or even passing through from Serbia to Bulgaria. Salonika is a great international mart, an ever-open market or fair, and so we must keep British goods, or at all events ample samples thereof, constantly on view. That is how flourishing business can be built up, for it is a system understood by the people most concerned.

As for the goods most in demand, these include textiles, agricultural, industrial, and domestic machinery, hardware, steel and other metals (wrought and partly wrought), and chemicals. Much else is wanted, and demand for more will follow as circumstances improve.

Greek Shipping.

In view of the possible entry of Greece into the arena of hostilities and the fact that the Greek Government has requisitioned as many of the vessels of that nationality as they can place their hands on, some statistics concerning the Greek mercantile marine will doubtless be of interest to our readers. The following particulars are taken from an article by Mr. A. Andreades and published in the *Journal des Economistes* before Italy entered the war.

"On March 5, at a lecture on Greek finances, I stated that the profits to be made by the Greek mercantile marine in 1914-15 could be estimated at 100 million francs. Several of my friends having asked for further details concerning my estimate, I shall give them here.

"I do not wish to enter into particulars concerning the development of the Greek mercantile marine. It is only necessary to remind my readers that Greece is, after Norway, the country which has the largest mercantile marine in proportion to its population, and that the Greek mercantile marine has developed in the last thirty years more rapidly than that of any other country including Norway, as shown by the following table :—

	1883. Tons.	1908. Tons.	1912. Tons.
Great Britain..	3,823,000	6,737,000	10,784,104
Germany.....	546,000	1,017,000	2,911,087
Norway	77,000	394,000	1,019,987
France.....	444,000	502,000	942,593
Italy.....	112,000	265,000	677,209
Russia.....	98,000	214,000	440,519
Greece	26,000	87,000	402,137

"Regarding the intrinsic evolution of the Greek mercantile marine (I refer only to steamships because the sailing vessel is doomed) the following table will show its rapid increase :—

Year.	Vessels.	Tons.
1875.....	28	8,240
1883.....	50	24,160
1892.....	104	61,092
1901.....	198	160,979
1907.....	285	288,573
1911.....	343	387,634
1913.....	389	433,663

"I now turn to the enormous profits being made by the Greek mercantile marine since the beginning of the war. One of the first consequences of the latter was the immobilisation of the German, Austrian, and Russian fleets, with a total of 3,000 ships of 3,600,000 tons. Further a large proportion of the British and French fleets were taken over for Governmental work, with the result that neutral ships acquired a new position of importance.

"If we analyse the steamers and sailing vessels of more than 100 tons belonging to the seven neutral States of Europe (including Italy, which at the time the article was written was a neutral State), we can establish the following table :—

	Vessels.	Tons.
Norwegian.....	2,191	2,504,722
Italian.....	1,160	1,668,296
Dutch	806	1,496,455
Swedish	1,466	1,118,086
Greece	493	860,438
Spain	649	848,823
Denmark	822	823,181

"If only the number of vessels belonging to each country were taken into consideration it would seem as though Greece, with 415 steamers and 78 sailing vessels, occupied the last place. But in reality her situation is infinitely better than appears from the above table. Not only is her tonnage more important that that of Spain and Denmark, but she possesses a still more important advantage. To-day the vessels of which commerce stands in greatest need are those of over 2,000 tons, commonly called trans-Atlantic vessels. During the past few years Greek shipbuilders have understood that it was to their interest to procure such vessels, with the result that to-day Greece has 332 of these trans-Atlantic ships, and is, from this point of view, the fourth on the list of the seven neutral countries.

"Further, if the number of trans-Atlantic steamers is compared with the total mercantile fleet of each country, Greece occupies the first place as under.

Greece	47 per cent.
Holland	33 ,,
Spain	20 ,,
Italy	27 ,,
Norway	11 ,,
Denmark	11 ,,
Sweden	9 ,,

"It is, therefore, not astonishing that Greece should have profited more than any other State from the rise in freights. But let us examine the question more closely and attempt to estimate probable gains.

"Since the beginning of the winter freights rose without precedent. Rates from England to the Mediterranean used to vary, with rare exceptions, between 5s. and 9s. per ton. To-day they are up to 20s. to 24s. per ton; those from the United States to the Mediterranean are 50s. per ton, and from South America to the Mediterranean 65s. per ton.

"Greek trans-Atlantic ships can transport 680,000 tons gross, plus 226,000, or a total of 906,000 tons. Adding to these the tonnage of other boats, which, though under 2,000 tons, can nevertheless cross the Atlantic, a grand total of about 1,000,000 tons is obtained. It is on the basis of these figures that profits have to be calculated.

"The more conservative shippers calculate that if this situation continues for another year, profits will amount to anything between 100-150 per cent. for old vessels and 50 per cent for new vessels. Even if the exceptional situation does not last longer than six months, Greek vessels navigating the ocean will produce from 50 to 60 million francs. As a matter of fact, they represent a million tons, each ton being valued at a rate of from 50 to 60 francs.

"Moreover, during this same time the vessels remaining in the Mediterranean will be advantageously employed in coastal trade, and their profits will have to be added to those mentioned above.

"Therefore, in calculating the profits of the Greek mercantile marine from November, 1914—November, 1915, the suggested figure of 100,000,000 francs will not be found to be excessive."

Later statistics show that the Greek mercantile fleet on January 1, 1915, consisted of 474 steamers of 549,983 tons, as against 450 steamers of 493,000 tons on January 1, 1914.

The *Liverpool Journal of Commerce*, referring to the question of the increase of Greek tonnage in recent years, draws up the following table :—

Jan. 1, 1900	245,094	tons gross
1905	398,383	,,
1910	527,581	,,
1915	900,000	,,

The same journal adds :—

"In the period from July 1, 1913, until the end of 1914—only eighteen months—no fewer than 85 ships, representing altogether 219,450 tons, were added to the Greek register, an increase which can be shown by no other maritime country with the exception of England, Germany, and the United States.

"Of late years the Greek shipowners have been making a serious bid for a share of the Levant trade, and when the war is over the Germans, who had the bulk of that trade in their hands, will find the Greeks established in a very strong position from which it will be extremely difficult to dislodge them."

KHEDIVIAL MAIL RATES.

According to an order published by the *Cyprus Gazette* of September 24, the High Commissioner has granted to the Khedivial Mail Steamship and Graving Dock Company, Limited, an extension of the permission to increase the maximum passenger and freight rates specified in the articles of agreement by an amount not exceeding 25 per cent., for a further period of three months commencing from October 1, 1915, and ending December 31, 1915.

Aly Bey Hafiz Ramadan has been appointed trustee for H.H. Prince Aly Fadel during his absence, and co-guardian, with H.H. Princess Fatma Fadel, of his two children, their Highnesses Prince Saïd Fadel and Prince Ibrahim Fadel.

PORT OF SALONIKA.

(From a Correspondent.)

The Greek Government has just published a law establishing a free zone in the port of Salonika. Two of the principal clauses of this law are as under :—

1. Throughout the area of the free zone, no Customs dues will be levied, nor any other import, with the exception of port dues and the tax for the preservation of merchandise in the warehouses. All merchandise, save that which can be excluded by royal decree, will be accepted in depot within the stores of the French zone, and all the operations of warehousing, packing, etc., will be without the intervention of the Customs authorities.

2. The preservation of goods in the free zone is accorded only to produce emanating from countries which enjoy the conventional tariff in Greece. A royal decree, on the proposition of the Government, would be accorded this favour in special cases, even for goods coming from a country which does not enjoy the conventional tariff.

The Greeks, in announcing this change (says a Paris contemporary), so soon after becoming the masters of Salonika, show a striking example of practical sense as compared with French policy, since they have not a single free port after thirty years' controversy in favour of an institution which must have a great and decisive influence on their maritime and economic development.

CYPRUS SHIPPING.

105 sailing vessels of 5,550 tons and thirty-one steam vessels of 30,871 tons entered in the foreign trade of the Island of Cyprus for the quarter ended June 30, 1915. The figures for the corresponding period of last year were 225 sailing vessels of 7,895 tons, and sixty-three steamers of 95,112. In the coastal trade the vessels for the same period (1915) were 594 sailing vessels of 7,730 tons, and fifty-six steamers of 55,457, as against (1914) 483 sailing vessels of 8,862 tons, and seventy-three steamers of 84,979 tons.

CONSTANTINOPLE FIRE.

(From Our Special Correspondent.)

Athens, September 22.

The following is a reported list of the losses sustained by the Insurance companies in the second conflagration at Constantinople :—

Patras Currant Crop.

H.M. Consul at Patras gives the following review of the local currant crop and trade:—

The currant crop of 1914 promised very well up to the end of July, and all districts reported a full yield of excellent quality, no disease whatever having appeared among the vines. It was then estimated that the crop of the district would amount to 152,500 tons net. The remainder of the 1913 crop was 12,000 tons net, making a total of 164,500 net tons. Everything seemed to promise well for the currant trade generally, but when the war broke out it was feared that the German and Austro-Hungarian trade, averaging about 30,000 tons annually, would be completely lost, a matter which would certainly cause a great decline in the price of all currants. These fears were still further accentuated by the annulment of the obligation under which the Privileged Company for the Protection of Currant Growers and Merchants was compelled to buy any currants offered to it at certain guaranteed prices, thus indicating an impression that the decline would be so great that most growers would rush to sell their goods to the company and bring about its downfall.

Besides this measure it was proposed, in order to counteract the probable loss of German and Austro-Hungarian trade, that the quantity of currants which by law must be retained in the country with a view of enhancing the value of exports should be increased from 35 to 50 per cent. As a result of this proposal the export trade was compelled to await events, making no offer until a decision was reached.

While this state of uncertainty, which paralysed all business, prevailed, very heavy rain fell in most currant districts in the Morea and Ionian Islands, causing great damage to the crop, which was mostly exposed on the drying grounds. The crops of Pyrgos, Amalias, Zante, and Cephalonia were badly damaged to the extent of about three-fifths. The Gulf, Patras, and Vostizza suffered to some extent, but most of the provincial districts escaped with very slight damage.

This rendered the situation more difficult, and scarcely any business transactions took place until the Greek Government announced that all first shipments would be assessed at 35 per cent. retention, and that, should it decide upon raising the percentage to 50 per cent., 20 days' grace would be allowed after the date of the decree imposing the percentage.

The uncertainty as regards retention being thus partly removed, business was begun, but no steamer with new currants sailed for the United Kingdom before September 3, whereas the usual sailing date is August 24 to 26. Merchants started very cautiously, only the very choicest quality commanding usual prices.

Notwithstanding the higher rates of freight, war risk, etc., the c.i.f. prices of currants have not been higher than in normal seasons, and since most other dried fruits, such as sultanas, dates, and prunes, have been much dearer than usual, the demand for currants in all markets of consumption has been exceptionally good, and prices since the beginning of the present year have advanced slightly. Shipments up to the end of March, 1915, amounted to 93,710 tons net, of which the United Kingdom took 63,855 tons net; the United States 11,280 tons net; the Netherlands 9,920 tons net; and Germany, via Italy, 6,765 tons net.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

CONTRACTORS TO GOVERNMENT

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.

Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

New Egerton Woollen Mills Co.,Ltd.

Near East Markets.

CYPRUS LOCUSTS

(From a Correspondent.)

Cyprus, September 18.

The visitation of Syrian locusts is likely to have serious effect on some of the vineyards, especially in the Limassol district. They appear to have descended in considerable numbers, and in many cases have stripped vines of fruit and leaves. They have not been left undisturbed, however, and by means of fires, various noises, and to a small extent, it is said, by the attacks of "bee-eaters," the swarms have been dispersed and driven off. The total damage done will probably be very much less than that represented by the vine-owners concerned, but there is no doubt that individuals will have suffered—some of them considerably. These locusts seem very partial to olives, and have, in several localities, destroyed both fruit, leaves, and the bark of the branches.

September 20.

Locusts have continued their destructive work in many parts of the island, and there are gloomy forebodings as to the swarms that will probably hatch out next year. The quantities collected are relatively small.

POSITION OF DRIED FRUIT.

In connection with the new duty imposed on dried fruit, we pointed out last week that it would not affect the currant trade. The following are extracts from an article which appeared in the *Grocers' Gazette* a few days before the new Budget was introduced. It gives an able review of the dried fruit market towards the beginning of this month:—

Currants.

In view of the unprecedented economic position existing in respect of most descriptions of dried fruit, a short review of the general conditions should be helpful. Currants supply the largest bulk of consumption in this country, and are fortunately the least affected up to the present by the war. The rise in price, although considerable, is not so great as to interfere with consumption; indeed, the comparative cheapness of currants as an article of food, combined with the scarcity of other kinds of dried fruits, has resulted in a largely increased consumption for the first eight months of the year. Some diminution of the bountiful harvest which was earlier expected has, unfortunately, taken place owing to the shortage of sulphate of copper for the protection of the vines during the spring, and later to heavy rains at the period of harvest. There should, however, be some nine-tenths or so of the usual quantity available for export, and it may reasonably be hoped that the English demand, large as it must inevitably be, will be able to be reasonably satisfied. A large part of the shipments of the new crop has already been contracted for by grocers and manufacturers, but a good selection should be obtainable during the next six or seven weeks. Prices may be expected to range between a possible 4d. per lb. and a reasonably profitable 5d. or 6d.

Raisins.

As compared with the position of currants, that of raisins generally must be estimated as much less favourable. The Valencia crop has fallen on evil times. Estimates from reliable sources put the probable production as low as 6,000 tons, which is about one-third of the United Kingdom's consumption of normal years. Unfortunately, the position in Turkey does not promise any relief from the crop of Elemes, which would be a most useful substitute for Valencias. On the other hand, the Cretan crop, which in previous years has been mostly sent to Germany, is apparently available for our markets. These raisins are excellent in size, colour, and preparation. The 6d. raisin, however, of whatever kind, will hardly be possible this year with a reasonable profit to the grocer. Sultanas are, perhaps, in the most unfortunate position. Last year's Smyrna crop was ultimately available, although late; but existing United Kingdom stocks are now reduced to very small dimensions. As to the growing crop, almost nothing can be said at present, owing to the difficulty of communication. It would, however, be reasonable to suppose that cultivation will have been much neglected, and production correspondingly reduced. Even if some sort of a crop should have resulted, the prospect of effecting shipments from Turkey would seem to be exceedingly remote. It is to be feared that the Greek crop will be a small one, and this growth will assuredly meet with a generous reception—a large proportion of it has already been contracted for. As regards other growths, a certain quantity of Afghan fruit will reach us by way of the Indian Ocean, but this will only arrive in November. Persian sultanas depend almost as much as Smyrnas on the development of the war with Turkey, since they are almost entirely shipped via the Dardanelles. Prices of all kinds of sultanas will doubtless rule high—the Government demand alone is considerable and regular—and the public of the war time will be called upon to pay 10d. to 1s. per lb.

Dates.

Dates will occupy an important position this year in the list of dried fruit. The growing districts having fortunately passed lately under British rule, it is to be expected that the quality will be even better than previously, although there has for many years been nothing to complain of in that respect. At present the prices are very reasonable, and, unless a sharp rise should take place, need hardly go much above the normal. Figs are likely to present a difficulty. Even if shipments from Turkey should eventually be possible, there will probably be no wood and no packers available during the time whilst the figs are in a condition to be manipulated. Layers and Loucoums may therefore be ruled out of calculation for the coming season. Even if it should become possible later to ship naturals from Turkey, still the early demand will have to be satisfied from the supplies of Spanish, Portuguese, and Italian fruit.

PRODUCE REPORT

London, October 7.

Currants.

The s.s. Micra Asia, s.s. Panariellos, and s.s. Sheldrake arrived with about 4,000 tons altogether. The fruit is being landed, but most of it has already been disposed of. Prices are firm, with tendency to a further advance.

Sultanas.

The prices of the remaining stocks, which are now very small, continue to advance. Smyrna common to fine sold at 75s. to 90s., and Afghan 75s. to 80s.

Figs.

Greek figs continue in good demand, some parcels of recent arrivals having been sold quickly and at full prices.

Dates.

The demand is moderate, with little spot business doing. Persians are quoted 16s. to 22s.

Seeds.

Linseed.—A further rise in Argentine freights has compelled sellers to ask a further 1s. advance, and 53s. 6d. is the lowest that will now buy La Plata Oct.-Nov. and Nov.-Dec., while London-Calcutta spot is quoted 55s., afloat 55s. 6d., Sept.-Oct. sold at 56s., and Oct.-Nov. 56s. Cotton seed is firm and held for higher prices in sympathy with the rise in cotton oil. London-Egyptian loading £10 10s., and Oct. £10 8s. 9d. per ton. Rapeseed is well maintained, Toria Sept.-Oct. quoted 53s. 6d., Guzerat ditto 62s., and brown Cawnpore pure basis ditto 53s. 6d.

Oils.

Linseed oil is firm with a good demand at full prices, with 5s. advance for distant positions. Spot pipes £25 15s., barrels £27 10s., Oct.-Dec. £27 17s. 6d., Jan.-April £28 10s., and May-Aug. £29. Cotton oil is fully maintained; crude spot in pipes £28 10s., refined pale pipes £31 10s., and barrels, sweet, £36 to £37, as to makes. Rapeseed oil is very firm, ordinary brown naked spot £35 to £36, English refined barrels £37 10s. to £39.

Oilcakes.

Cotton Cakes.—Owing to the absence of supplies from Egypt prices of English have again advanced, £8 12s. 6d. being asked for best brands, and £8 2s. 6d. to £8 5s. for Bombays. Linseed Cakes.—The demand is very poor for all descriptions, but owing to the home mills working on short time, and consequently producing smaller quantities, prices are well maintained. Best London made £11 10s. to £11 15s., East India seed, pures, £11 5s. ex ship.

Locust Beans.

Landed parcels bring £8 for whole, and £8 10s. for kibbled, while from a cargo of Cypros now due £7 5s., free on to barge, has been accepted.

COTTON MARKET.

(From Our Own Correspondent.)

Liverpool.

October 7.

Messrs. Reynolds and Gibson telegraph:—Egyptian Spot.—The market has been quiet throughout the week, and only a moderate business is reported. The undertone, however, has been good, and after various fluctuations quotations on balance show an advance of 25 points. The sales, which include 200 bales of Sudan cotton, are estimated at 2,500 bales, against 3,700 bales last week.

Manchester.

Violent fluctuations in the raw material have been against a large turnover. Yarn and cloth for the Near East have been far from satisfactory, and business has been difficult to arrange.

THE GREEK CRISIS.

The *Financial Times*, under the heading of "Views of the Greek Community in London," publishes the following account of the impression produced by the unexpected resignation of M. Venizelos:—

"After being in office for less than four months, M. Venizelos, the most powerful Prime Minister seen at Athens for many years, and one of the foremost statesmen in Europe, has tendered his resignation in view of the fact that King Constantine is not prepared to carry out the terms of the Græco-Serbian Treaty. This news, which arrived in London on Wednesday, was received everywhere with deep regret and some apprehension as portending another German plot in the Balkans. The Greek community in the metropolis are, however, disposed to believe that the enormous personal influence wielded by the late Prime Minister throughout his native country will lead to some sort of compromise with the Crown, and the next development in the wholly unexpected crisis which has arisen at Athens is, therefore, awaited with anxiety. Among those members of the Anglo-Greek community with whom it was possible to get into touch on Wednesday the suggestion that the Greek Army might after all operate against the Allies was scouted, the view generally held being that the King of the Hellenes is determined, if possible, to maintain strict armed neutrality. It is very doubtful, however, whether under any circumstances this rôle can be maintained, for, in the first place, it is important that no impediment should be set in the way of the Allies' expedition to certain strategic points calculated to protect Serbia's lines of communication, and it is in this connection more than any other that the next development at Athens is so anxiously awaited. It is extremely improbable that the British Foreign Office was taken by surprise by the fall of M. Venizelos' Cabinet, and there is a deep-rooted impression among business men of Greek nationality in this country that counter measures have been arranged for in London and Paris which will prevent the isolation of the Serbs, whose position at the moment is undoubtedly full of peril. It was stated by a high authority a few days ago that a good many surprises might be expected before long in the Balkans, and it may be fairly assumed that while Wednesday's bolt from the blue was not favourable to the Allies, there are probably other developments impending of a more hopeful character."

German Petroleum Interests.

The current issue of the *Petroleum World* contains an article on the history and ramifications of Germany's great oil concern, the Deutsche-Erdoel-Aktiengesellschaft, whose capital is 30,750,000 marks. The following particulars show to what an extent it is interested in the Roumanian oilfields.

1. It is interested to the extent of £469,000 in 7 per cent. preference shares of the Premier Oil and Pipe Line Company.

2. It owns (1) 9,223,250 lei (about 75 per cent of the total capital) shares of the Roumanian company "Concordia"; (2) 2,240,000 lei (about 60 per cent. of the total capital) of the "Vega" Petroleum Refining Company: (3) 2,505,000 lei (rather more than 50 per cent. of the total capital) shares of the "Crédit Pétrolifer" (Roumanian Pipeline and Transport Company in Bucharest); and (4) 252,000 lei (out of 500,000 lei) shares in the Erste Rumänische Bohrgesellschaft (First Roumanian Drilling Company), Ploesti.

Concerning the Crédit Pétrolifer and the Concordia, mentioned above, the following particulars are given:—

Crédit Pétrolifer.—Capital, originally 3,000,000 lei (£120,000), divided into three series of 1,000,000 lei each, each series comprising 2,000 shares of a nominal value of 500 lei each. By resolution of the general meeting held in June, 1906, the capital was increased by 2,000,000 lei (£80,000), and by resolution of the general meeting held in September, 1907, by a further 1,000,000 lei (£40,000); according to the latest information available, however, the latter resolution was not carried into effect. Object.—The financing and assisting of Roumanian oil undertakings, the acquisition and exploitation of concessions, the installation of petroleum storage and means of transport, participation in oil undertakings at home and abroad. The company is engaged in the trade and transport of oil and oil products of all kinds; it owns mechanical workshops in Campina, pipelines of a total length of 160 miles, and tanks, water-pumping stations and electricity works in Braila and Constantza. A pipe line was also being laid from the Copaceni field to Scaiosi.

Concordia.—Founded July, 1907, by the fusion of the "Bustenari" A.G. für Petroleumindustrie with the Telega Oil Company. The property brought in by the Bustenari Company was valued at 14,230,000 lei, and that by the Telega Oil Company at 8,500,000 lei. The shareholders of the Bustenari Company received for each 1,000 lei of their shares 1,423 lei shares in the Concordia, whilst the Société Pétrolifére Italo-Roumaine, as owners of the Telega Oil Company, received the full equivalent for the shares of the latter, *i.e.*, 8,500,000 lei shares in the Concordia. A further 2,700,000 lei Concordia shares were taken up by the Allgemeine Petroleum Industrie A.G. and the Société Pétrolifére Italo-Roumaine at 200 per cent. cash, the former taking 650,000 lei, and the latter 1,620,000 lei. Objects.—(1) The production of crude oil, ozokerite and similar products from the oil-bearing lands owned or to be acquired by the company; (2) the refining and marketing of the products obtained; (3) participation in undertakings of any kind connected therewith; (4) the erection, leasing or purchase of refineries, tanks, pipe lines, and any similar installations. Property.—Oil fields in Roumania, consisting of extensive areas in the developed districts of Bustenari, Telega, Bordeni, Poenarania, Chiciura and Moreni. In addition the company have at their disposal upwards of 48,750 acres of land in various promising oil districts (Campina, Visinesti - Bezdead, Matitza, Catina, Ceptura, etc.), in which development work is in progress. In the year 1912 all the properties, wells and plant of the Moreni Baicoi Company, Ltd., situated in Moreni, were acquired. In 1913 an agreement was made with the Colombia Société Roumano-Française de Pétrole, Bucharest, on the basis of which the Concordia received 20 per cent. of the production of two plots with five wells. At the time this agreement was made the Concordia's share in the output amounted to 100 to 120 tons of oil per day.

The production of the Telega Oil Company was:—

	Tons.
1904-05	46,065
1905-06	53,392

that of the Bustenari:

1905-06	103,872
1906-07	134,300

and that of the Concordia:

1907-08	176,179
1908 (9 months)	126,468
1909	113,238
1910	99,265
1911	83,231
1912	134,088

CYPRUS COPPER.

Good work appears to have been done by the American Copper Mining Syndicate at the Skronriotissa Mine, says our Cyprus Correspondent. Results have been sufficiently promising to encourage further outlay, and from reports in the local Press, as well as from other sources, it would seem that the patient labour and cautious direction which have for some time been evident are likely to find fruition. Two American engineers have lately arrived to strengthen the hands of the local manager, and were it not for the war we should no doubt see more marked progress in the development of the concern, which is, naturally, of considerable interest to the island. We understand that it is intended to construct a small harbour or quay at the port of Karavostassi, distant about five miles from the mine.

Engineering Notes.

Motor Boats in Egypt.

So far there has not been a very large number of boats placed in service in Egypt and the Sudan (says *Motor Boat*). It should be remembered that the waterways of Egypt, other than the Nile, are not extensive, but as far back as 1902 the Sudan Government placed orders for several open motor launches, which were used for postal service on the Blue Nile, running from Old Dongola to Kordefan. So far as the Lower Nile is concerned, but few boats—and those chiefly privately owned—have been put into service. Some years ago, however, Messrs. Thomas Cook and Sons, Ltd., of Egypt, put several boats into commission; but they eventually sold them, as they were not found to be satisfactory for the country in which they were run. This was no doubt due to the fact that the question of design for the Tropics must be different from that suitable for colder countries, and, further, at that time the internal-combustion engine had not reached the high standard of efficiency which it has at present. However, in other parts of Egypt the motor boat has proved itself very efficacious, and this is most noteworthy at Port Said, where practically the whole of the official boats—and there is a great number of them—are now being propelled by internal-combustion engines. The native seems to have thoroughly mastered the art of looking after these small vessels, and the trim way in which they are kept and the smart manner in which they are brought alongside and generally handled cannot fail to impress the observer.

The Egyptian Mechanic.

The native of Egypt—that is, the fellaheen class—is very apt with regard to machinery, and may be said to be far in advance of his Indian brother. He is not such a capable mechanic, perhaps, but as a running man he is quite good, as he does not interfere with things on the engine unless they really require adjustment. However, with the larger vessels which are run it is not usual to put Egyptian engineers in charge for this purpose. The Greek makes a good all-round driver, and his employment on the larger type of motor boat, if it were put in use, would in all probability prove itself to be a sound commercial proposition. At Alexandria, most of the Customs, port authorities and medical commission launches are now propelled by motors, and the same thing again occurs at Port Tewfik, popularly known as Suez.

Future of the Motor Boat.

As the whole of the coal used in Egypt is imported and the price is fairly high (we cannot state exact figures at the moment, but eighteen months ago 42s. a ton was being charged at Port Said for coal), and oil is found but a comparatively few miles away, it necessarily follows that the employment of oil fuel of that class should prove itself a much more satisfactory undertaking. Unfortunately, there is no register obtainable at the moment which will give the actual number of boats employed in Egypt and the Sudan, but taking the total the number must be, roughly speaking, between 300 and 400, this including, of course, the whole of the coasting ports as well as those vessels which are used in connection with the inspection of lighthouses.

Irrigation in the Sudan.

Al-Mokattam, Cairo, states that Mr. Buckley, one of the Inspectors of Irrigation in the Public Works Ministry, has left Egypt on leave for Italy, where he will stay forty-five days before returning to Egypt. About the beginning of December he will proceed to the Sudan with a party of engineers, in order to study the irrigation projects which are to be carried out gradually in the Sudan, especially those on the Abyssinian frontier. The mission will take four or five months to complete its work. It is believed that afterwards Mr. Buckley will be appointed permanently in the Sudan.

The Cyprus Motor Company.

Our Cyprus correspondent writes:—The Motor Company has reduced the fares for the journey to and from Nicosia to Larnaca to 3s. Further changes are contemplated, including a reduction of the fare for the Nicosia-Limassol journey, and the establishment of an office in a more central place in the capital. The service is still the subject of some grumbling. It is pointed out, for example, that for Limassol, which is the second town as regards population and importance, it brings little benefit. Under the arrangements of the former service one could go to Larnaca and return the same day, after spending several hours there. At present the journey to Larnaca or to the capital involves long delays at the former place. The post office service is similarly relatively unsatisfactory. Many will accordingly probably prefer a carriage drive, which moreover does not involve the risk of a breakdown on the road. It would seem that there is room for some improvement.

Cultivators and Sowing Machines.

Although the employment of modern agricultural machinery and implements is gradually increasing in the Near East in estates belonging, as a rule, to wealthy and progressive owners, the same cannot be said of the owners of smaller estates or holdings. The average smallholders, who are generally well to do people, still adhere to the poetical precepts of agriculture, and in many important agricultural centres the construction of agricultural implements and the *modus operandi* are still the same as those described in the "Works and Days" of Hesiod, who lived probably about B.C. 850. His advice to the farmer "to provide farming implements suited to his hand" has been followed to this day by an adherence to the patterns which Hesiod himself recommended. Most likely this is due to the fact that no other practical advice or guidance has been given to the farmer, and that he never had an opportunity to hear, or see, that modern agricultural implements are "suited to his hand," and can be handled with less labour and much better results. Hesiod also advised the farmer to have a slave to go behind the plough to break the clods and *trouble the birds* by covering up the seeds; and this advice is still being followed, because, probably, the existence of a machine that can do such work in one operation much better and incomparably quicker is not known. Yet the price of such a machine is within the means of the average Eastern farmer—a fact which enterprising manufacturers should not forget. We refer to the combined cultivating and sowing machine, which is made in various designs. For the average kind of ground in the Near East a pattern simple in construction, strong, and durable must be chosen. One of the types that has proved successful in those regions is a combined machine by which, while the ground is being thoroughly cultivated, the seeds are covered as fast as they are sown. It leaves no seeds for the birds to pick up or the wind to blow away. Each section of the cultivator is independent of the other and will drop into a depression and thoroughly cover the seed deposited therein. The sowing attachment is fitted with a fluted force feed, which gives a positive feed, and sows alike up hill and down, when the hopper is filled or when it is almost empty. The feeds can be adjusted for different quantities of seed, and for different kinds of grain, by sliding them in and out of the feed cups.

A New Potato Planting Machine.

This is a simple and efficient hand-machine which will carry a certain quantity of potatoes and can readily be pushed along by one man, and plant the potatoes along a furrow at the required regular intervals, the potatoes being subsequently covered with soil. If desired, the machine can be arranged to be drawn by a horse and to cover the potatoes with soil as they are planted. In using the machine, it is placed in position at the head of the furrow with the planting wheel in the furrow in which the potatoes are to be planted, and the seed-potatoes are placed in the feeding-wheel of the tray. As the machine is pushed along the ground by the operator the planting-wheel is caused to revolve, and as it revolves the seed-potatoes are fed into the pockets of the wheel through the opening of the tray, and as each pocket containing a potato reaches the ground the potato falls therefrom into the furrow, being subsequently covered with soil by a mechanical device.

A New Mower.

A new mower which has recently been brought out is a light, but strong, machine mounted on high wheels, its special construction enabling the knife to start cutting when the machine is put in motion, thereby preventing "blocking" when cutting meadow grass. For lifting the finger-bar a foot-lever is provided, whilst a hand-lever may be employed to lift the bar and turn it up into a vertical position, to clear away any obstacle, such as ant heaps, trees, or bushes; and at the same time this throws the machine out of gear. The gearing is very strong and totally enclosed, rendering it impossible for spanners, stones, or loose bolts to drop into it while running and thus cause damage. When required, attachments for converting the mower into a back-delivery reaper can be easily fitted.

Egypt's Trade.

A Marked Improvement.

(From Our Own Correspondent.)

Cairo, September 23.

The Customs statistics for August published this week are, perhaps, the most satisfactory that we have had since the outbreak of war. Starting with August, 1914, imports have month by month consistently shown a falling-off compared with the preceding year, whilst exports have to all intents and purposes followed suit; only in February and April was any improvement evident, and then but a very small one, £E220,632 and £E111,776 respectively.

The August return indicates, however, a very different state of affairs. The imports increased during the month by £E324,712 and the exports by £E966,699, the figures being respectively £E1,814,673 and £E1,279,809, against £E1,489,961 and £E313,110 for August, 1914. Of course, that month was the one in which war broke out, and the country began to bear the brunt of the consequent dislocation of the world's trade; but even by comparison with August 1913, the improvement in the situation is most satisfactory.

Imports.

The chief increases in imports during the month under review were frozen meat by £E46,042—80 per cent. of which came from Australia—raw sugar by £E100,743—practically all from Java—petroleum by £E26,112—of the total of £E57,707, the United States sent £E57,495—stationery by £E16,803, coal by £E196,615—the quantity increased by 32,100 tons—cotton tissues by £E120,282, sacks by £E57,348, and tobacco by £E28,784. On the other hand livestock decreased by £E28,801, rice by £E31,473, cereals by £E36,874, construction wood by £E97,016, and worked iron and steel by £E66,715.

Great Britain's share of imports during the month jumped from £E437,997 to £828,026, whilst India increased by £E63,159 to £E146,976—mostly sacks, cereals, rice, indigo, and textiles. The United States trebled their sales to £E119,191, due chiefly to petroleum and coal, Brazil again provided practically all the coffee, France improved by £E30,303, Greece by £E62,544, and Italy by £E45,258.

Exports.

Under exports it is eminently satisfactory to note that the increase is directly due to agricultural products. Thus, cereals improved by £E285,110 during the month from practically nil, sugar by £E45,413, and cotton by £E566,692 (214,492 cantars more), whilst skins increased by £E18,185, eggs by £E3,024, wool by £E12,423, cigarettes by £E8,326, and gold and silver bar by £E50,693. The sole important decrease during the month was cottonseed £E39,702.

The countries that most notably increased their purchases from Egypt were Great Britain from £E167,699 to £E515,513, the United States from £E41,677 to £E230,929, Spain from £E8,961 to £E64,679, France from £E17,243 to £E145,291, Italy from £E4,586 to £E219,232, Persia from £E1 to £E10,800, and Russia from £E19 to £E11,369. It is interesting to note that the whole of the exports to the United States, Spain, and Russia was cotton, and that of France and Italy's purchases one-third was that commodity, and the balance was wheat and lentils. The appearance of Persia in the export statistics is due to the fact that that country has started to purchase Egyptian sugar, a large quantity of which still goes to France and Morocco. Nearly half the increased purchases of Great Britain was cotton, the balance being made up of gold and silver bar, and cereals.

Sudan Trade.

During last month there was a turnover of £E137,157 in trade between the Sudan and Egypt, the former selling to and purchasing from the latter goods to the value of £E48,984 and £E88,173, respectively. Imports from the Sudan into Egypt included livestock £E2,649, skins £E2,217, cereals £E12,296, gum £E2,302, and cotton £E19,117, whilst the traffic in the opposite direction included leather goods £E3,884, refined sugar £19,593, coffee £E9,046, and cotton tissues £E22,629.

In conclusion the following table may not be without interest, since it indicates the manner in which the war has affected the trade of Egypt. (It will be noted that I close my figures on July 31, as that enables a comparison for a complete year of war to be made):—

	Year ending, 31/7/14. £E.	Year ending, 31/7/15. £E.	Decrease. £E.
Imports	29,095,691	14,998,465	14,097,226
Exports	33,452,058	21,665,022	11,786,136
Balance for or against exports	+4,356,367	+6,667,457	+2,311,090

From this we see that a year of war has caused imports to fall off by £E1,491,226, or nearly 50 per cent., and that exports have diminished by £E11,786,136, or a little over 33 1-3 per cent. On the other hand it is satisfactory to find, that although the general trade turnover has decreased by over 40 per cent., the balance of exports over imports has risen from £E4,356,367 to £E6,667,457 during the period of the war. In this connection it may be mentioned that at the end of 1913, the balance in favour of exports was only £E3,786,870, and that at the end of August this year it was £E4,148.939. Whilst the decrease in cotton exports and the shipping difficulties during the early part of the war year undoubtedly have had a lot to do with the diminution in imports, there is little doubt that national retrenchment of expenditure and the improvement in the agricultural position of the country—cereal and textile imports have decreased by £E1,507,808 and £E1,216,722, respectively, since January 1, whilst cereal and sugar exports have increased by £E699,562 and £E418,060—have brought about this welcome change in the balance of trade. Since we are now entering upon the period when exports nominally become heaviest owing to the moving of the cotton-crop, there is every reason to expect a further improvement during the coming months, not only in general trade conditions, but also in the economic situation of the country as a whole.

TRADE NOTES.

The Sécrétaire Général des Domaines de l'Etat (Service Technique), Cairo, invites tenders for the supply of 5,400 kilos of yellow grease. Dated November 1.

The Army Finance Department of Cairo invites tenders for the supply of 10 tons of candles, to be delivered c.i.f. Alexandria, Port Said, or Port Sudan. November 2.

Tenders are invited by the Lunacy Division, Abbassia, Cairo, for the supply of clothing, bedding, furniture, hardware, slippers, brushes, and other household necessaries, for one year from April 1, 1916. Date November 15.

Tenders are invited by the Director of Personnel and Equipment Department, Cairo, for the supply of cloth uniforms, white drill uniforms, khaki drill uniforms, saddlery, accoutrements, wood, furniture, enamel ware, leather, boots, paints, tarbrushes, cotton shirts, blankets (woollen), miscellaneous stores, required by the Police Stores Department, Bulâq, for one year, commencing on January 1, 1916, and ending on December 31, 1916. Date December 1.

Tenders are invited by the Inspector of Irrigation, First Circle, Cairo, for work in connection with the annual winter clearances of canals and drains in First Circle of Irrigation. The approximate cost of work is £E25,000, as detailed in schedule of rates. Date October 10.

The Chef du Panquet de la Cour d'appel Trebizène, Cairo, invites tenders for the supply of 268 khaki-coloured suits and 129 blue coats. For further particulars apply to the Cabinet of the Procureur-General, Courts of Justice, Bah-el-Khalg, Cairo. October 9.

Egypt.

In connection with the increased import duties previously referred to in these columns, the *Board of Trade Journal* gives a table showing the new rates of duty leviable on alcoholic liquors, building wood and tobacco, as well as the rates previously in force:—

Articles.	Rates of Import Duty. Old rates.	New rates.
	Millièmes.	Millièmes.
Alcoholic liquors	8% ad. val.	10% ad. val.
Building wood	4% " "	8% " "
Tobacco:—		
In leaf—		
The produce of countries which have not concluded special arrangements with Egypt .....per kilog.	0·270	0·320
Accompanied by a certificate of origin from a country having a special arrangement with Egypt per kilog.	0·250	0·300
In leaves stripped of their stems, stalks or median ribs, also cut, pressed, or powdered tobacco, and cigarettes—		
The produce of countries which have not concluded special arrangements with Egypt per kilog.	0·320	0·420
Accompanied by a certificate of origin from a country having a special arrangement with Egypt..per kilog.	0·300	0·400
Cigars of any kind of origin	0·300	0·400

A kilog. = 2·2046 lbs. avoirdupois; 1,000 millièmes = £E. 1 = £1 0s. 6d.

Sudan.

The Sudan Government Railways, Alexandria Agency, 6, Old Bourse Street, invites tenders for the supply of pitch pine and Swedish pine. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office. October 8.

Roumania.

The Commercial Intelligence Branch of the Board of Trade is advised that in view of the difficulties at present existing in regard to exchange between the United Kingdom and Roumania, sellers of goods ordered thence would do well to require cash in London in advance. It is understood that business is already being conducted on this basis.

It may be explained that the law now in force in Roumania legalizes payment of sterling indebtedness at the par of 25.22 lei per £ (and that no agreement to pay at a different rate would hold at law there), whereas the collecting bank would have to pay a very much higher rate (say some 15 per cent. higher) for a draft on London.

Bulgaria.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that the exportation of the undermentioned articles from Bulgaria has been prohibited:—bran, barley, hay, straw, and rye of the old and new crops, cheese, "comestibles" of all sorts, fat, lentils, lard, peas, red pepper, potatoes, salt, spirits, tea, vinegar, wine, woollen goods, yarns, cloths and serges.

Persia.

With reference to a notice relative to parcel post imports into Persia and the apprehended closing of the parcel post routes via Julfa and Askabad, H.M. Minister at Petrograd reports that the consideration of the question of closing the above-mentioned routes to foreign postal parcels despatched in transit through Russia to Persia has been indefinitely postponed.

Egyptian State Finances.

The Effect of a Year of War.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, September 23.

The publication of the State Accounts for the period ending July 31 affords an opportunity for making certain interesting deductions and comparisons. The war having broken out during the first days of August, 1914, the figures now published by the Egyptian Ministry of Finance enable us to see exactly what effect a year of war conditions has had on the revenues of the country.

The appended table may prove interesting, as it serves to show (1) what the loss in revenue compared with the preceding normal year has been; (2) how the actual figures compare with the Budget estimate for the current financial year; (3) which are the heads of revenue most affected. (It is to be noted that the official financial year was from April 1 to March 31, but that fact should not materially influence the remarks I have to make on the figures.)

As can be seen, the war has so far cost Egypt £E3,089,858 in actual revenue. This is in itself a serious loss, since it represents nigh on 20 per cent. of the State's income, but it must in nowise be regarded as a permanent or recurring one, for it was entirely due to the peculiar conditions that set in during the early part of the war, and that were far and away more serious than they could possibly become in the near future.

Indeed, various considerations lead one to view the situation, if not with complete satisfaction, at any rate with equanimity and hope. It would be waste of time and space for me to develop this point to-day—I have done so at great length on previous occasions—but that my contention is correct is proved by the fact that of the loss of £E3,089,858, the first eight months of the war were responsible for £E2,654,463, leaving but £E435,395 for the remainder of the year, that is to say, for the first four months of the current financial year.

The Budget was framed on the assumption that the revenue would fall off by £E3,287,587 as compared with that realised during the twelve months just preceding the outbreak of hostilities. When one takes into consideration, firstly, that the summer months, April to September, are the worst from the point of view of the financial year; secondly, that the cotton market has of late kept unusually brisk; thirdly, that prices are markedly improved; and fourthly, that the estimates are £E197,729 less than the actual amount realised during the first year of war, which included, as far as Egypt was concerned, what is generally admitted to have been the worst financial and commercial period, one is, I think, entitled to doubt whether the ensuing eight months will show such a huge falling off as the £E2,852,192 provided for in the Budget.

Let us for a moment turn to the individual revenue heads. Land and Direct Taxes were £E213,312 more than the estimate. It may be objected that there will be Sharaki land this year, and that possibly the collections at the end of the financial year will be affected by the remission of taxation that will have to be made. But it is estimated that the Sharaki will not exceed 200,000 feddans. In 1913 the Sharaki was 400,000 feddans, and the amount remitted in consequence was £E251,000. Even

granted that the current year has to bear the whole brunt, it is scarcely likely that the Land Tax receipts will fall below the Budget estimate, seeing that during the first four months of the current year they were £E293,216 up (after allowing for the full increase anticipated from arrears, etc.), and the heaviest instalments fall in the December quarter.

Customs Dues.

Next come Customs and Tobacco Dues. The amount realised during the year of war is less than the estimate for 1915-16. Trade during the early part was practically at a standstill, whereas since the turn of the year it has, comparatively speaking, improved. The August returns, indeed, show that trade is fast recovering, and there should be every prospect of the Budget figures being fully attained. Railways, be it noted, realised more than the estimate, and this despite the fact that during part of the period the goods traffic dwindled for obvious reasons to vanishing point. Of course, part of this £E91,319 may represent military transport, but even granted that this item is responsible for the entire increase, the railway receipts should be well up, for good cotton prices and increased imports spell more traffic.

Domains.

Domains receipts require a word of explanation. They were during the year of war but half of the estimate for 1915-16. The reason was that that administration was unable to dispose of all its 1914 cotton. There is every reason to believe that the balance of that crop, together with the 1915 one, will now be sold at good prices, and that the Domains receipts should be well up to, if not above, the estimate. As it is, at the end of July they were £E64,369 up as compared with the same period in 1914.

In conclusion, if one takes the last column and compares it with the Budget, one will find that in almost every case the receipts at the end of July exceeded one-third of the year's estimate. Only in Port Dues, Military Exemption, Divers Receipts, Direct Taxes—the reason for the latter is that the heaviest instalments fall in the autumn—and Domains is the proportion less, and although this is, it must be admitted, no sure test, the fact that we are emerging from the dead season and that trade prospects are so much brighter inclines one to the conclusion that, as I wrote in my review published on July 16, the final results of the 1915-16 financial year will be much better than the Budget led one to anticipate.

CYPRUS FINANCIAL LAWS.

The *Cyprus Gazette* of September 24 publishes the following communiqué:—

The Right Honourable the Secretary of State for the Colonies has intimated that his Majesty will not be advised to exercise his power of disallowance with regard to the following laws enacted by the Legislative Council of Cyprus:—

No. IV. of 1915.—To appropriate an additional sum not exceeding twenty-one thousand five hundred and fifty pounds to the service of the Government of Cyprus.

No. V. of 1915.—To make further provision for the twelve months ended on the thirty-first day of March, 1915.

At the asbestos quarries at Amianthus, on Mount Troödos, a liberal increase of wages has been granted to all labourers—men, women and children. The Bishop of Kitium recently visited the place and received an ovation. Amianthus is growing into a well-to-do settlement

COMPANY RESULTS, &c.

Anglo-Egyptian. — Gemsah: Week, 245 tons (previous week, 327 tons). Hurgada: Week, 230 tons, against 226 tons.

Anglo-Roumanian.—Week ended 11th ultimo, 190 tons; 18th ultimo, 149 tons.

Egyptian Delta Light Railways.—Coupon No. 36, falling due October 1, on the 5 per cent. debentures should now be lodged at the Bank of England.

Ottoman Three-and-a-Half Per Cent. Loan of 1894.—Messrs. Dent, Palmer, and Company announce the numbers of 394 Bonds of 1894 which have been drawn for payment on October 15, when interest thereon will cease.

Roumanian Consolidated.—Week ended September 25, 2,566 tons. Cable adds:—"Moreni well—No. 53 flowing steadily, producing over 200 tons daily; No. 30 still flowing steadily; No. 45 sand came up in well, now cleaning. Baicoi—Well No. 2, testing oilsand; No. 4, completed repairs, now testing."

Suez Canal.—Receipts on the 5th inst. amounted to 220,000 fr., against 830,000 fr. same day last year.

Ural Caspian.—The directors have declared an interim dividend of 1s. per share, less income-tax, on account of 1914-15.

SUDAN GOVERNMENT LOAN.

The last issue of the *Sudan Government Gazette*, dated September 11, contains the Sudan Guaranteed Loan Ordinance 1915, which is intended to amend the schedule to the Sudan Guaranteed Loan Ordinance 1913. The following is the text of this ordinance:—

1. This ordinance may be cited as the Sudan Guaranteed Loan Ordinance 1915, and the Sudan Guaranteed Loan Ordinance 1913, and this ordinance may be cited together as the Sudan Guaranteed Loan Ordinances 1913 and 1915.

2. The Sudan Guaranteed Loan Ordinance 1913 shall have effect as if the schedule to this ordinance were substituted for the schedule of that ordinance defining the purpose for which the loan authorized to be raised under that ordinance is applicable.

THE SCHEDULE.

	£
I. Works for the purpose of irrigating the Gezira Plain	2,000,000
II. Extension of the Sudan Railway System	800,000
III. Other irrigation works and contingencies	200,000
	£3,000,000

The Roumanian oil producing companies are complaining bitterly of the condition of the main road between Campina and Bushtenari. Two years ago floods carried away a length of 600 ft., and repairs have not yet been carried out. The oil men have hired neighbouring land and themselves run a road over it; but in rainy weather this is almost impassable, and the transport of heavy supplies over it is practically impossible. About 18,000 francs is necessary to repair the public road, and the producers have offered 6,000 francs towards this. A deputation on the matter has waited upon the Minister of Public Works, says the *Petroleum World*.

NOTES OF THE WEEK.

The march of events in the Balkans has been rapid. Germany, having made up her mind to strike, is acting with characteristic thoroughness. The invasion of Serbia by Austro-German forces was launched from a number of points simultaneously. At Belgrade and Semendria the enemy were successful, and both these towns are in his hands. The Austro-German forces, however, paid heavily for their successes. Everywhere along the wide Danube front and on the Drina their crossing was stubbornly contested, while at Orsova they are for the time being held at bay. If the early days of the invasion are an earnest of what is to follow, the task before the Germans is likely to be as difficult as Serbia's heroic army can make it. The delay in Bulgaria taking the field gave rise to the supposition that she wanted to see how her allies fared before committing herself. If she ever hoped to be able to adopt such a comfortable course, she reckoned without her host. Germany picks no chestnuts out of the fire for other people. The unexpected opposition encountered by the Austro-German forces soon set the Bulgarian army moving.

The die has now been cast by Bulgaria, and all eyes are turned to-day on Serbia. Attacked on three sides, she is threatened with national extinction unless she can hold out until help reaches her. From the record of the invaders we know that the campaign will be waged with all the ruthlessness of which they are individually and collectively capable. The Bulgarians will seek to exterminate from sheer hatred, the Germans from policy, the Austrians under instructions. Serbia holds the fate of the East, and for that reason, as the *Frankfurter Zeitung* reminds us, the blow is to be at her heart. "If we desire," it points out, "to make the new turn in the Balkans a permanent gain, our troops must make a whole job of it, and Serbia must be thrown to the ground." Before that consummation is reached a reckoning with the Serbian army has to be made, with troops that are hurrying to Serbia's support, and perhaps with others that may yet decide to strike a blow on her behalf and their own.

The hopes entertained in most quarters friendly to the Bulgarians that at the last moment the Bulgarian nation would rise up to denounce the policy to which it was being committed against its own interests have so far not been realized. Any opposition that may have manifested itself against mobilization has not sufficed to prevent the Bulgarian army from invading Serbia at a number of points. For the moment Bulgarian strategy appears to be directed towards effecting a junction with the Germanic forces invading from the north. As the main object of the invasion of Serbia is to open up through communication with Turkey, the enemy will naturally seek to establish himself in the triangular tract of territory having its angles marked by Belgrade, Orsova, and Nish. Fortunately some of the most difficult country is to be found here, which will lend itself to the development of guerilla tactics by the Serbian army.

The desire of the Bulgarians must be to forestall, if possible, the reinforcements which are being sent by the Entente Powers to the support of the Serbians. From the statement made in the French Chamber by M. Viviani, it has to be inferred that the Allies have determined to make good to Serbia all that she loses by the defection of Greece. "Our action," he said, "must be vigorous," and he declared that the British and French Governments had been guided by their military advisers in arriving at the number of men required. It would not be proper even to hazard a guess at what this number may be. We shall hope that the optimism of the French Premier did not conceal any belittling of the task before the Allies. The co-operation of the Russians is likely to be a severer blow for the Bulgarians than even the reinforcements sent through Salonika. If report be true, the uneasy conscience of the Sofia Government has already found expression in the despatch of Turkish troops for the defence of the Bulgarian seaboard. This precaution indicates that King Ferdinand and his advisers are aware that they cannot trust the bulk of the Bulgarian army to take up arms against their Russian kinsfolk. The success attending the mobilization has doubtless been achieved by keeping the nation as much as possible in the dark regarding the actual state of affairs, and encouraging the belief that the Bulgarians are in reality taking steps to defend themselves against Serbian aggression.

Digitized by Google

The remarks attributed to King Ferdinand when the representatives of Great Britain and France took leave of him leave no room for doubt that he has been actuated by an unshakable belief in the victory of the Central Powers. He reveals himself as a frank opportunist, whose one aim is to be on the side of the victor. There is more honesty in this attitude than in that adopted by other Bulgarian apologists, who inveigh against the indeterminate and conditional nature of the offers made to Bulgaria by the Quadruple Entente. What offers, it may be asked, has Germany been able to make to Bulgaria? They are even more conditional and remote than the concessions guaranteed by the Entente Powers, which were to be voluntary on the part of the States concerned, for they depend on the defeat and practical elimination of more than half Europe. Not only so, but if it be true that Bulgaria was also promised Constantinople, Germany's offers entail an act of deliberate treachery against her Turkish allies. And if Germany is ready to betray one ally to-day, Bulgaria may be sure that her turn for betrayal will also come.

Not the least interesting part of the French Premier's statement was the passage dealing with Bulgaria's action. In the face of her mobilization, the Allied Governments at once declared that all the advantages and guarantees which they had stated themselves to be ready to offer Bulgaria had to be considered as null and void and definitely cancelled, and they resumed their liberty of action towards the other Balkan States. The understanding between the British Government and the Republic, M. Viviani continued, is complete, and cannot be better expressed than in the following terms: "From now on France and Britain, in agreement with their Allies, have come to a complete agreement to send assistance to Serbia, and to ensure for the benefit of Serbia and Greece that Germany shall respect the Bucharest Treaty, of which we are guarantors." If the Bulgarians have time to spare to a consideration of the irony of fate, they will be struck by the fact that they have thrown in their lot with Germany, who claims direct responsibility for the Bucharest Treaty, solely in order to upset the terms of that Treaty. Their action causes the Triple Entente, which was prepared to see the Treaty torn up, to determine that its provisions shall now be upheld. Bulgaria by her suicidal policy will thus have succeeded in forging more closely round her the fetters which it was the national desire to cast off for ever.

The delay in Sir Edward Grey's promised statement on the situation in the Balkans causes M. Viviani's speech to the French Chamber to be at the time when these lines go to press the sole *exposé* of the policy of the Entente Powers. We are obliged, therefore, to devote as much space as possible to a consideration of its contents. It was characterized throughout by marked optimism, which it is to be hoped the situation, as known to the Entente Governments, justifies. No less striking were the remarkably generous references made to Roumania. The efforts of the Allies in Roumania, said the French Premier, had not remained without success. "The state of semi-mobilization in which she holds her troops will allow her to repel any aggression, to defend herself against all German pressure, and to watch with the closest attention events on both the Austrian and the Bulgarian frontier. Roumania knows, moreover, that only the victory of the Quadruple Entente can ensure her independence and lead to the satisfaction of the national aspirations."

The man in the street would not be inclined to deal so kindly with Roumania's delay in striking a blow for her national ideals. Critics in Roumania itself are far more severe, and on previous occasions we have given expression to the surprise very generally felt that the Bratiano Cabinet, if it has any justification for its attitude, should not take the leaders of the Opposition into its confidence with a view to eliminating criticism, until the moment for action arrives.

It was noticeable that for Greece M. Viviani had no honeyed words to spare. For the moment King Constantine competes with King Ferdinand of Bulgaria for the more emphatic condemnation of the verdict of history. The Bulgarians might plead their traditional hostility to Serbia, the close proximity of the Germanic Powers, and the deliberate alienation of their sympathies by the diplomacy of the Entente Powers. King Constantine has no such excuses. He has acted contrary to the wishes of the people, and has betrayed their interests; he has overridden the Constitution of the country, and he has committed a deliberate breach of faith. If his attitude is supported or even tolerated in Greece, we have the measure of the national honour and of the statesmanship which the Greeks can command.

M. Zaimis, the new Premier, has met the Greek Chamber and has announced that for the present the Government will adopt a policy of armed neutrality. This statement has been amplified by Greek representatives accredited to the Allied Powers by a declaration to the effect that Greek neutrality will be characterized by complete and sincere benevolence to the Quadruple Entente. In other words, Greece will not oppose the landing of the Allies' troops at Salonika, but she will not take the field in support of Serbia. A formal request from the Serbian Government for Greek assistance in accordance with the terms of the Serbo-Greek alliance has been met with a refusal. It is understood that King Constantine and the Zaimis Cabinet adopt the view that the treaty which provided for mutual support in the event of one or other of the contracting parties being attacked by Bulgaria does not apply when Bulgaria attacks as a member of a larger confederation of States. Such an argument does not avail to disguise the breach of faith for which the King of the Hellenes has made himself personally responsible.

Nothing that can be said outside Greece is likely to carry more weight than the impassioned appeal of M. Venizelos in the Greek Chamber, after the new Premier had stated the Government's policy. He pointed out that even if Greece had no treaty with Serbia, she was bound to defend that country against Bulgarian aggression in her own interests and to preserve the equilibrium of the Balkans. If Germany should ultimately be the victor, Bulgaria is sure to be so enlarged as to render Greece's chances against her illusory. The truth of M. Venizelos's warning is confirmed by the announcement that according to the secret treaty signed between Germany and Bulgaria the latter is to receive the whole of Albania, all Serbian Macedonia south of a line from Prizrend to Tsaribrod, and Greek Macedonia, including Salonika, Drama, Serres, Kavalla, Florina, and Castoria. The accuracy of this version of the treaty has been denied in the German Press; but no other course could be adopted by the German Government, in view of the fact that it had also promised Greece as a bribe for her neutrality a part of southern Albania, as well as the Dodecanese and Cyprus. It says little for the intelligence which the Kings of Bulgaria and the Hellenes bring to bear upon their reading of international affairs that they should have been ready to place reliance in the promises made by Germany. The bribe offered to Greece becomes illusory unless Germany succeeds to the command of the seas, but it was held good enough to justify the tearing up of yet another "scrap of paper."

The proceedings in the Greek Chamber, however, showed that M. Venizelos expects that Greece will ultimately adopt the right course of action. It is difficult indeed to believe that the Hellenic nation will have to be judged for all time by the breach of faith to which it has now been committed. From the point of view of the future federation of the Balkans the present outlook appears black enough. But even if Greece should be held back until Serbia's danger has been averted, we shall hope that in due course both Greeks and Bulgarians will find means of disavowing policies which are demonstrably opposed to the interests of their respective countries.

LETTER FROM CAIRO.

(From Our Own Correspondent.)
Cairo, October 4.

Execution of Fathi Pasha's Assailant.

The trial of Saleh Abdel Latif Bedawi, the man who stabbed H.E. Ibrahim Fathi Pasha, the Minister of Wakfs, at Cairo station on September 4, took place on Monday last before a military court, and was concluded the same day. The room used was the Court of Assize, as in the case of Mohammed Khalil, the man who made the first attempt on the Sultan's life in April last, and the arrangements made were the same as those described on the occasion of that trial. Mr. A. S. Preston acted as Judge Advocate, Mr. S. E. Jeffes as Prosecutor, and Mr. C. H. Perrott as counsel for the defence. There was a good crowd of Egyptians in the well of the court and outside the building.

Saleh Abdel Latif was charged: first, with compassing and devising to bring and put to death Hussein Rushdi Pasha, Ibrahim Fathi Pasha, and Abdel Khalek Sarwat Pasha, Ministers in the Government of H.H. Sultan Hussein, Ruler over Egypt under the Protecting Power of Great Britain, and in execution of this design with stabbing the said Ibrahim Fathi Pasha, to the prejudice of good order and in contempt of the military control of Egypt, established by martial law; secondly (and alternatively), with feloniously and unlawfully wounding Ibrahim Fathi Pasha with intent to kill him, to the prejudice of good order and in contempt of the military control of Egypt, established by martial law. Accused pleaded "not guilty" to the first, and "guilty" to the second charge.

The first witness called was the Parquet *substitut*, who conducted the inquiry when the accused was first arrested, who testified to his having made before him certain statements, which the prosecution regarded as a confession, and on which the first charge was based. For the defence, Mr. Perrott objected to this confession being accepted as evidence against his client; but the Court overruled the objection. The statements made by the accused were addressed to the Minister of Justice, who was present, and were to the effect that it was a lucky chance for him that he (Saleh) had been arrested. "If it is not to-day, be sure that your turn will come to-morrow," said the prisoner, adding that he intended to kill Fathi Pasha because he was a traitor, and also Rushdi Pasha, and that he tried to escape after the attempt, not in order to save himself, but in order to go to Alexandria to kill Rushdi Pasha and Sarwat Pasha.

H.E. Ibrahim Pasha Fathi was next called. He narrated what had happened at Cairo station on September 4, and described the injuries he had suffered—the wound in his left shoulder was still open, whilst his left cheek had an ugly-looking triangular scar. Fathi Pasha said he had never seen his aggressor prior to the attempt on his life, and, far from having ever done him or his any injury, he had recently learnt that, whilst he was Mudir of Gharbia, he had done good to Saleh Abdel Latif's brother. Corroborative evidence as to the attempt was then given by other witnesses; the knife used, a two-edged one, with "Retribution to Traitors" written in Arabic on the handle, was produced and identified; and then the accused entered the box and gave evidence on his own behalf.

Saleh Abdel Latif presented a marked contrast to his predecessor in that same dock—Mohammed Khalil, the Sultan's aggressor of April last. He was a tall, keen-eyed, intelligent-looking man, certainly did not give the appearance of an *exalté*, and appeared to feel his position and to take an interest in the proceedings. His evidence, which was given in English, was in the form of a statement to the effect that when he made the statements referred to he was tired and very excited, that he ran away merely because he was afraid of Fathi Pasha's pistol, and that the words he used to Sarwat Pasha were intended to warn him and Rushdi Pasha that there were others who might want to kill them, as the people were angry with them. He explained that he had decided to kill Fathi Pasha because he had heard that that gentleman had been responsible for the arrest of many people who had been the sole support of their families. He had, however, since learnt that this information had been untrue, and he had expressed his regrets to Fathi Pasha.

Counsel for the prosecution and for the defence then addressed the Court briefly, and the Judge Advocate summed up. When asked if he had anything to say in mitigation of sentence, the accused obtained permission to speak in Arabic; but, as his statement was merely a further explanation of the motives that had prompted his action, he was stopped by the President. He then said that he hoped the punishment would be mitigated. After this the Court withdrew to consider its verdict. It pronounced an acquittal on the first charge, and, on the second, after confirmation by General Maxwell, the accused was sentenced to death. The sentence has been generally approved by all serious-minded Egyptians, and was quietly carried out yesterday morning.

The Holy Carpet.

Notwithstanding the difficulties, political and otherwise, that lie in the way of the Mecca Pilgrimage this year, the Egyptian Government has decided that the "Carpet" that is annually despatched to the Holy Shrines shall be sent; and the two ceremonies attendant on its departure took place on Thursday and Saturday on the square below the Citadel, under the presidency of H.E. Hussein Rushdi Pasha, who represented the Sultan. The "Carpet" will, however, not be taken under escort to Mecca, as in former years, but only as far as Jeddah, where it will be handed over to the representative of the Sherif of Mecca, who has undertaken to convey it to its destination. Arrangements have also been made, whereby the usual cereal contribution made by the Egyptian Government to the ulema and poor of Mecca shall also be sent, without fear of intervention by the Turkish authorities.

The Egyptian Ministry of Finance (says a Cairo telegram) has issued a circular letter to the various Ministries and Departments requesting their Budget Estimates for the financial year 1916-1917, and urging them to observe the strictest care and economy.

EARLY EGYPTIAN TOOLS.

Professor Flinders Petrie commenced on Thursday last, at University College, London, a course of lectures dealing with the history of the tools of Egypt in relation to the similar forms used in other countries. He said it was a mistake to suppose that the first metal tools were always copies of stone tools which had preceded them. In many cases it could be seen that the stone tool was an elaboration of what had previously been made in metal. In Egypt, roughly speaking, stone was superseded by copper, generally with a small admixture of some other metal, about 8000 B.C., and this period lasted until about 2000 B.C. Then commenced the bronze age, properly so called, the period when copper was alloyed with a definite proportion of tin. This lasted down to about 1000 B.C., and then began the iron age. The lecture was illustrated by the magic lantern, and interesting slides showed early Egyptian tools in comparison with those of other parts of the world.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, September 29.

Turks' Confidence.

The agreement between Bulgaria and Turkey and the mobilization of the Bulgarian army appear to be the topics of the day in Constantinople, but the *Hilal* is silent on the subject, and so, apparently, are other papers. A dinner was given at Tokatlian's last week to Enver, Talaat and other leading Turks and several Bulgarians.

There seems to be a still greater feeling of confidence amongst the Turks just now. They announce that General Mackensen, with an army of 300,000 men, will pass through Constantinople, and will proceed to the conquest of Egypt! It is also said that a contract has been entered into for the importation of 80,000 tons of German coal; so they are confident that communication with Germany, through Bulgaria and Serbia, is soon to be established.

This confidence makes them more arrogant and vindictive against foreigners. A decision has been taken to the effect that foreigners not possessing property in Turkey must henceforth furnish a guarantee before being able to institute legal proceedings against an Ottoman, and announcement appears to the effect that the Ministry of Commerce proposes to take steps against those insurance companies who have not complied with the new law.

Rahmi Bey, the Vali of the Aidin vilayet, has returned to Smyrna.

Black Sea Operations.

In their *communiqué* of the 19th, the Turks announce that one of their squadrons visited the Crimean coast and bombarded a lighthouse and a factory, and sunk four Russian sailing vessels.

Last week the Goeben again made a trip to the Black Sea.

The proposed railway from Ouzoun Keupru turns out to be a Decauville line from Ouzoun Keupru to the lignite mines at Kechan.

Supplies from Bulgaria.

Since the signing of the Turco-Bulgarian agreement many waggon loads of flour have arrived from Bulgaria, and these arrivals have considerably relieved the situation in Constantinople, bread now being available in sufficient quantities. All groceries are, however, very dear; and although a certain amount of petroleum has arrived, it is difficult to obtain.

Wounded in large numbers continue to arrive daily in Constantinople. There are also daily arrivals of Germans, evidently soldiers. At the same time many Germans are leaving, including sick and wounded. There appears to be a feeling amongst the Germans that sooner or later the Turks will turn on them.

German Pin-Pricks.

In the meantime the Germans are evidently inducing the Turks to be aggressive to the enemy subjects and, doubtless at the instigation of the Huns, they are exiling Englishmen to Asia Minor. According to latest advices from Constantinople, the following have been sent from Constantinople to towns in the interior: Messrs. Harold Ashover, Colley, Leete, Farley, Hoare, Gilbert and Willard. Others expect to follow at any moment. Dr. McClean was under arrest for one night, but the American Ambassador obtained his release.

Ladies and children are still allowed to leave, and Mrs. Richard Bond, Mrs. Douch and family and Mrs. Percy Wills and family have come away.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, October 4.

Cypriot Greeks and the War.

The news of the mobilization of Bulgaria followed by that of Greece has caused great excitement. Articles in the Greek papers dwell on the shameless perfidy of the "brutal and barbarous" nation which tramples under foot its most sacred obligations. Information as to the exact designs of Bulgaria are lacking; but in view of the Turco-Bulgarian pacts, and other circumstances, there is no room for doubt that the movement at Sofia is on the side of Turkey and against that of Serbia and Greece, "the faithful Allies of the Entente Powers." One duty only now devolves upon every Greek, in whatever country he may be—to be prepared to do his utmost for the defence of his Mother Country and the fulfilment of her destiny. The youth of Cyprus will be prepared, with enthusiasm, to win fresh and still more glorious, laurels on the field of battle. All who cannot take such a part must do their duty by contributing whatever may be possible towards the sinews of war. Although the island is suffering from a serious economic crisis, there can be no shrinking from this duty. It is for the Archbishop and the bishops to take the lead in an energetic movement for this purpose.

Bread Supply of Nicosia.

On several occasions lately there has been some difficulty on the part of the poor in obtaining their bread. The bakers, who receive wheat from the Government tithe stores, are bound to sell in Nicosia at 3 piastres (4d.) the oke. But they have failed to make a sufficient quantity, and there is some suspicion that bread is sent out of the town, to fetch higher prices. Government is asked to take measures for meeting this need. It is also suggested that the Municipality of Nicosia should establish bakeries of its own, and sell at the regulation price.

Motor Service.

The Motor Company has adopted several changes, which give great satisfaction. The journey between Nicosia and Limassol can now be made in the day. The only question remaining is that of a possible reduction in some of the fares.

THE AMERICAN COLLEGE, BEYROUT.

(From a Correspondent.)

Alexandria, October 3.

I gather from Americans here that the prospects of the Syrian Protestant College at Beyrout reopening very shortly are not good. Nothing is known here as to the result of Dr. Bliss's visit to Constantinople, but there is a likelihood that the college may be closed during the coming year. This is rendered all the more probable owing to the difficulties that many of the American instructors are experiencing in getting back to Beyrout at all, after spending their summer holidays in Europe. A number of them are now in this city, awaiting the result of the American Consul's efforts to secure permission for them to land in Beyrout, and, I understand, negotiations are proceeding with Constantinople by way of Athens to obtain such permission.

DISTRESS IN SYRIA.

Writing in the *Life of Faith* (September 29) "A. M. G." says that never before has Syria experienced such an acute crisis as that through which it is now passing; trade is ruined, many people are dying of starvation, "the whole country is in a state of chaos, and the Jewish communities are suffering the most horrible persecution."

"All schools are closed with the exception of the American Protestant College, which has overcome the present difficulties, and continues its valuable work. This institution has extended its help and protection to Asfuriyeh, the Lebanon Hospital for Mental Diseases, so that it has during all this first year of this terrible war been able to keep its doors open and the work going on without interruption. Jews, Moslems, Christians, all who are in need have been admitted. The committee in London have recent tidings that all is well, and that the doctor and matron are still at their posts, and very busy with the work. The Turkish Government instructed the Administrators to fly the Turkish flag; and this with the American Red Cross flag is a sign to all that the hospital is recognised, and permitted to continue. Provisions are an exorbitant price in Syria, and difficult to get at this time, but they have been obtained so far through the sympathy and kindness shown by many."

The American Ambassador in Paris has informed the French Government that, in spite of the efforts and protests of the American Consul-General at Beyrout, the Turkish authorities have broken the seals affixed by him to the French Consulate there, and have proceeded to examine the archives.

REMINISCENCES OF TSER.

BY A PARTICIPANT.

"Yes, I was at the battle of Tser, but I did not know it!" Thus Captain X, on the anniversary of the famous Serbian victory, in which Austrian numbers were routed by Serbian mettle.

"I did not know that the place was Tser, nor that we were in a regular battle. It looked as if our division had been surrounded, and nothing remained but a fight to the death. We had rushed so madly to meet the foe, as soon as we heard that they had actually set foot on our territory, that nothing was in order with regard to uniform and equipment. In lieu of straps, my men had bits of cord and old string to tie on their rifles with, and if ever murderous rage was in my heart, I felt it then against the Government that could not give us kit-bags or ammunition. As we ran forward we took every bit of clothes-line, and every rod we could seize, for—it seems incredible now—many were unarmed until the very last moment before we got the order to charge. The cartridges were handed round while we were moving, and altogether it was the most hurried jump into a fight that was ever seen. Here we were, dressing ourselves as we ran, and facing us was the magnificent Pilsen regiment, No. 7, one of the finest of the Imperial Army—smart, shining, calm, perfectly prepared. We, the 3rd Cavalry regiment, went for it tooth and nail. In less than half-an-hour it began to stagger, and shortly after there was a stampede. While some fled, others ran towards us crying: "Sokol! Sokol!" Batches of thirty and forty, Czechs at their head, surrendered, and we were glad of their guns. One man lay on the ground—he was a German—pretending to be dead. It was very funny. Sometimes he lifted his head a little to peep round, and then lay down again, still as death. One of our fellows kicked him, and he jumped up at once and fell on his knees. He was so voluble we sent him quickly to the rear to find listeners. A fellow came up to me and announced himself with great dignity as a Social Democrat. I told him it made no difference whatever.

"That night we slept on the conquered position, and next day we started in pursuit. The road to Pernauer, on the Drina, was strewn with ambulances, books, boxes of salt, sugar, parcels of linen, saddles, dead horses, cannon, and helmets. . . . But near the Drina they made a stand. We got behind them, while the fight was proceeding on top of the mountain, and we fought for their battery and took it. Then our luck turned, and we, in our turn, were surrounded as we were trying to get their bridge of pontoons. We had to retreat, fighting for every inch of our way back. . . . .

"But the worst was at Bela Reka—this was on August 17, the third day of the fight—when our entire regiment came under cross-fire, and we became scattered, lost, snared. They shot us down like rabbits. We were in a hollow, and our mounts were exhausted. We had had nothing to eat all day but plums. Still we kept darting from one point to another, the horses as anxious as ourselves to escape the bullets. They were closing round on us from the heights when we made one desperate rush up an incline to get to the road. I had but ten men with me, and knew nothing of the rest. I found numbers of them, however, at Lipolist, where we reformed, and were feeling fine, till our own artillery began shelling us. . . . We galloped like mad to the other end of the village, raising a cloud of dust that hid us still more, and now, indeed, we felt our end had come. I had a huge animal, and wished I had made a more modest choice when I bought him. I looked at my Commander, and he only raised his eyebrows. That was all the consolation I got. I never could understand why we were not blown to bits by our best battery. Seeing some cavalry behind the Austrian lines, they rightly went for us!

"'That fool M,' said the Commander, at last, alluding to his best friend; 'he would shell his own grandfather when he has the howitzer at hand.'

"I had some good comrades among the artillerists myself, and I hoped they would not be killed until I met them. Meantime, some of our men had found their way to the battery, and suddenly its fire was diverted. We fought and marched all night till we came into touch again with our own. Then we dismounted, unhitched our swords, and lay down, contented, in the mud.

There was no more to do just then, for the trouble was over. The battle of Tser, as it was afterwards known to us, and in Europe, had been decided in our favour. For the first time the forces of Young Serbia had been measured with those of the ancient and mighty empire of Austria-Hungary, and the issue was not doubtful. . . . Not one object of the spoils we had seen did I covet, but I longed as never before or since for a glass of wine—the sour Serbian wine that makes your ears tingle. But if anybody had started to bring it me, he would have found me impossible to awaken by the time he came back. We slept fourteen hours without budging, and then we had a meal in proportion.

"This is all I know about the battle of Tser."

SERBIAN LETTER.

(FROM OUR OWN CORRESPONDENT.)

NISH, September 24.

The Bulgarian Mobilization.

I was yesterday officially informed that a general mobilization of the Bulgarian Army has been ordered, and some of the Serbian papers state that at 3 a.m. yesterday bonfires were lighted at certain conspicuous parts of the country in Bulgaria as a signal for the mobilization. It is also asserted that Bulgarian troops have been sent forward towards the Serbian and Roumanian frontiers.

At the time when the Serbian Government first gave a favourable reply to the Quadruple Entente's request concerning the cession of territories in Macedonia it was generally believed here that Serbia's concessions would not ward off an offensive movement on the part of Bulgaria against Serbia. To-day there is a firm conviction prevalent that Bulgaria's mobilization is directed against this country, and that war between the two States is almost inevitable. Yesterday's *Odjek*, a semi-official organ, stated:—

The situation in Sofia becomes day by day more and more complicated. The King of Bulgaria and the leaders of the Opposition parties have lately, at a special audience, had an exchange of sharp words. In fact, the Opposition leaders adopted a menacing tone. But we do not consider the incident very tragic; we believe the King will continue quietly to carry out his own plans.

In well-informed circles it is said that, according to advices received from Sofia, M. Radoslavoff, the Bulgarian Prime Minister, when addressing members of the political party, made no secret of the attempt of the Opposition to compromise the policy of the Government, and said that the neutrality hitherto persevered in can be easily turned into an armed neutrality, but that this must not be taken as implying the danger of an outbreak of war.

Pro-Turkish Bulgarians!

Showing another side of the picture, it is reported here that on the day of the promulgation of the order for general mobilization there was a demonstration in Sofia, the participants carrying banners of Austria and Germany, and shouting: "Down with the Quadruple Entente! Down with Serbia! Turkey for ever!" In connection with this must be taken into consideration the news circulated here that the Turco-Bulgarian Treaty is an accomplished fact, and that Bulgarian troops have been already sent to occupy districts given over to Bulgaria.

Preparing for Eventualities.

The uncertainty of the situation is keenly felt by everyone, and preparations are being actively made to cope with the worst that may happen. The day before yesterday the Serbian Prime Minister, being desirous of conferring with the Powers of the Quadruple Entente, the representatives of Great Britain, France, Russia and Italy called simultaneously at the Serbian Foreign Office, and were received in a body by the Premier.

To-day a leading Serbian politician thus expressed himself: "We cannot regard with indifference the general mobilization in Bulgaria. It must mean something, and if the Quadruple Entente still have hopes of averting a new adventure on the part of Bulgaria which can only prove fatal to that country one thing is necessary—rapidity of action. Events precipitate themselves, and every hour's delay is detrimental.

Any newsagent or bookstall in the United Kingdom can supply copies of THE NEAR EAST, which are on sale early on Friday morning. Should any difficulty be experienced in obtaining the paper, the Manager would be glad to receive a post card giving particulars, and he will take steps to rectify the matter.

THE SITUATION IN PERSIA.—II.

BY JAMSHEED.

A correspondent, who signs himself "Freydoon," has endeavoured to refute some parts of my article in THE NEAR EAST of August 13. As we appear to have the same aim and object—to avoid separating the cause of Persia from that of England, and more particularly to prevent Persia from making common cause with the Turco-Germans—it may be worth while to reply by throwing some light upon points raised in his letter, published in THE NEAR EAST of August 20.

1. "In no Persian paper have I seen an advocacy of Persia fighting on the side of the Germans or the Turks."

There could not be a more direct denial of the statement which, with a full knowledge of the facts, I put forward. Therefore it is necessary to cite our authorities, and to recommend to the study of "Freydoon": (a) the following journals, the *Khavar*, the *Muffetsh Iran*, the *Rastakheez;* (b) some pamphlets, published anonymously, entitled "Who are the barbarians?" "What is our duty?"; (c) some brochures on "The Policy of Great Britain towards Egypt" and on "British Rule in India"; (d) many poems, the literary quality of which is less in evidence than the spirit of hatred; and (e) a brochure published by the Society of Persian Patriots, and entitled, the "Patriotic Call." I will not extend the list any further. "Freydoon" will be able to acquaint himself with the violent turn of this Press and this propaganda against the Quadruple Entente, and of its exaltation of Germany, who is represented as the determined and disinterested (!) friend of the Moslem nations, with whom Persia ought therefore to ally herself, since both of them have a common enemy.

II. "No responsible person or party, with influence on public opinion, advocates or would think of advocating such measure" (as fighting on the side of the Germans or the Turks).

To put forward such a statement is to ignore the evidence of facts. The Grand Mujtahid Nurullah of Ispahan in the mosques preaches war against Great Britain and Russia, and threatens with malediction and ruin those who would dare to maintain relations with the representatives of those Powers, or should receive any money from them. Can it be denied that a Grand Mujtahid exercises considerable influence on public opinion? This influence is such that the situation at Ispahan is alarming: the Consul-General, Mr. Grahame, has been the object of an attempted assassination, an Indian soldier of his escort has been killed, and terrorists threaten officials of the British and Russian Consulates and banks, with the result that (at the time of writing) most of the subjects of the Allied Powers are preparing to leave Ispahan.

The British Vice-Consul at Shiraz has been attacked, and has succumbed to his injuries. The British and Russian Consuls at Kermanshah have been attacked by the population, led by the German Vice-Consul, Herr Schoenemann. At Bushire two British officers were killed by tribesmen, with whom were some Germans. And so long ago as last April the Russian Consul at Ispahan, M. Kaver, was assassinated.

Do not these facts suffice to prove the existence of a criminal German propaganda and the co-operation of influential fanatical patriots who work upon the unhappy people to stir them up to worse excesses?

The Democratic party constitutes, in fact, the Radical party in the Mejliss; it holds in check all the Cabinets that assume office. Rather than give way to the Democratic deputies, three of these Cabinets have preferred to resign; the last Ministerial crisis lasted two months; it centred entirely upon the attitude that the Government ought to take up with regard to neutrality.

The Democrats protest because Great Britain and Russia do not withdraw their troops from Persian territory; but they find nothing to say against the massacres and organised pillaging in Azerbaijan, carried out by the Turkish troops under the command of Khalil Bey; they are silent regarding the violation of the frontier in the neighbourhood of Kermanshah by the troops of Reouf Bey, and the exactions inflicted upon the Persian tribesmen by his orders; and similarly they are silent regarding the conduct—worthy of a brigand—of the German Vice-Consul Schoenemann, who leads armed bands and attacks the British and Russian Consuls. But, on the other hand, the Minister of the Interior, Prince Firman Firma, is violently assailed in the Mejliss for having opposed the Turkish hordes, and the Cabinet is outvoted for having supported the Minister who did his duty.

Will these examples suffice to prove to "Freydoon" that, unhappily for Persia, there are some men and some influential parties that, openly or secretly, agitate and work to range Persia on the side of Germany and Turkey; and that there is a Press that upholds this dangerous policy, and that condemns all the Allied Powers in its hatred of Russia?

III. "Deep study of the situation leaves no room for doubt that the remedy for this state of affairs would not be the dissolution of Parliament or the formation of a Cabinet such as your correspondent suggests" (i.e., a coalition Cabinet).

(a) It may be readily granted that in the present situation the dissolution of Parliament would be a violent measure, and that it might give rise to some disorder; but has the Parliament, which has been sitting more or less permanently, foreseen or prevented disorders? In this connection we may quote from the *Atlaat*, of Teheran:—

Finances are reduced to zero; the gendarmerie is disorganised owing to lack of money; the police have not been paid for months; the governors of provinces do not know what instructions to give; the chiefs of the tribes are getting out of hand; disorder is spreading from the capital to the provinces; the situation emboldens the brigands, who rob and pillage even in the environs of Teheran.

In the South, grave incidents have taken place, and no measures have been taken. The greater part of the Press and public opinion strongly condemn the parliamentary differences which have such a bad result.

The picture thus drawn by the Teheran journal is edifying. It proves that order does not reign in the country precisely owing to parliamentary disunion—and by disunion we must understand the ill-will of the Mejliss which, in such extraordinarily grave circumstances, paralyses the work of government and, under the pretext of controlling, helps to confuse the authorities.

To speak frankly, we are living in a state of sheer anarchy, because the Cabinets, however they may be formed, have no effective or moral authority, and in order to exist, can only be docile and passive agents in the hands of a tryannical and aggressive minority. In face of the facts we cannot close our eyes and stop our ears, and pretend that the parliamentary regime, as it exists to-day, can be a panacea for the evils from which we are suffering. And since we know the source of much of the evil, it is necessary, for the good of the Fatherland, to put an end to it and to prevent it doing any further mischief.

(b) The Coalition Cabinet that we recommend to cope with the situation would, according to "Freydoon," have an ephemeral existence, because it would be too heterogeneous, being formed of Liberal patriots, of notorious reactionaries, and of traitors to their country.

Not to hark back too far, to the beginnings of the Constitutional regime—which would, however, furnish us with some typical examples—let us remember that Sultan Ahmed Shah came to the throne on July 21, 1914, and that in the space of little more than a year, in the midst of an unparalleled war, he has been confronted by four Ministerial crises. The Cabinets, however, were homogeneous. But they were none the more viable for that!

As for the charge of making an indiscriminate mixture of Liberals, reactionaries and traitors, it may be pointed out that, with the exception of the great Liberal Taghizadeh, all the individuals mentioned in our list were either former Prime Ministers or Ministers of the Constitutional regime. To cite only one example, which stands out strikingly from amongst them, we may recall the fact that the Cabinet of Prince Ain ed-Dowleh, which has resigned, was formed last April in accordance with the views of the Mejliss. Now, Prince Ain ed-Dowleh was the immediate cause of the revolution of 1906, and it was he who commanded the troops dispatched by Mohammed Ali Shah, after the bombardment of the Parliament, June 21, 1908, to besiege the heroic people of Tabriz who had risen against the tyranny of their Sovereign.

Is it inconsistent to recommend the formation of a Cabinet composed of former constitutional Ministers, including Prince Ain ed-Dowleh, or rather is it not the Mejliss that is inconsistent when it asks the Shah to place in power a notorious reactionary who bitterly opposed the revolution and the Liberals of Tabriz? For when we deem the presence of Prince Ain-ed-Dowleh necessary and wish to see him collaborating with the Liberals and others, so-called reactionaries, it is because we place their enlightened patriotism above their political tenets; because we hold that, having experience of the conduct of affairs of State, they will be in a position to bring the Persian ship into port, despite the difficulties caused by those who trust in Wilhelm II., the self-styled champion of Moslem nations!

In recommending the formation of a coalition Cabinet we desire, by introducing well-known Radicals side by side with constitutional Conservatives, to give a real pledge to those who, like "Freydoon," are inclined to fear that the dissolution of the Mejliss would only be the prelude to a return to reaction; and we believe that these unyielding elements of the Persian political body, freed from the trammels of a Parliament acting in opposition to the principles which are its *raison d'être*, would form a quite homogeneous body. For, aiming at the eventual prosperity and independence of Persia, this body would, with that object in view, know how to avoid the pitfalls and traps prepared by Germany and those who, in their political blindness, have faith in that nation for which treaties are mere "scraps of paper."

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE FUTURE OF CYPRUS.

To the Editor of THE NEAR EAST.

Sir,—Just a few lines in your interesting paper, THE NEAR EAST. Under the heading "The Future of Cyprus," Mr. Kenneth Ledward, F.R.G.S., writes from London, September 8, 1915, and his words hurt me very much, as I have lived in this island over twenty years—not all at one stretch. Mr. Ledward writes as though his knowledge were from *hearsay*. I am a constant reader of THE NEAR EAST, and did *not* agree with any of Mr. Ledward's letters.

Let me add, I am proud that our Sovereign has such loyal subjects as the Moslems of Cyprus, some of whom I have known for many years.—I am, etc.,

ENGLISHWOMAN.

Limassol, Cyprus, September 29, 1915.

TURKEY AND THE ARMENIANS.

To the Editor of THE NEAR EAST.

Sir,—The following words of a Turkish poet—Zia Pasha, I believe—still hold good:—"Fidelity is simply foolishness in this country" (*Sadakat dediklery mahza jinnet dir bou milkde*). Again, we recognise some other Turks who, under the anguish of official injustice, could not help crying out and exclaiming: "Ah, when will Russia or England come to the rescue and save us from the hands of this cruel and pitiless (*zalim*) Government?"

Armenians, as subjects and Christian inhabitants of Turkey, would naturally suffer much more, but several of the Armenian leaders gave an indulgent and lenient explanation of those faults, ascribing them solely to the incapacity of the Government officials, and believing that there would finally come a righteous administration.

Unfortunately, the experience of long years showed that official Turkey was not only weak and indifferent towards the rights of Armenians, but also discontented and antipathetic. The Young Turks themselves took thousands of oaths in the name of righteousness and equality, and repeatedly promised to remedy the wrongs committed by Abdul Hamid, the so-called Red Sultan. Yet it was the same Hamidian plan which they carried out against the Armenians of Adana; and some of the corpses which were thrown into the river, floating over the waters of the Mediterranean, reached the shores of Cyprus, and were buried in our cemetery of Nicosia, I being an eye-witness.

Owing to religious fanaticism, the Ottoman Empire fell behind-hand for centuries. Turkey's present leaders confess this, they being incomparably more learned and civilized than their ancestors. They have been subjected to serious disasters and losses, but have they availed themselves of the sorrowful lessons of the past? This is the all-important question. The reply would have been in the affirmative had they followed a liberal policy towards the non-Mohammedan races, especially the Armenian people, who, since the Balkan War, have been the only Christian nation in Turkey.

What could we Armenians expect of the Germans? It is self-evident. As a matter of fact, they have of late been courting us. Take, for instance, the State visit of the commander of the ill-famed "Goeben" at the outbreak of the war to the head of the Armenian Church in Cilicia; the various bodies formed in Berlin in favour of the Armenian cause; the eulogy by the German Press of the sterling qualities of the Armenian race. But, nevertheless, the Armenians had well-founded reasons for doubting the straightforwardness of their policy. Hence our present antipathy and discontent; and, having consequently shown sympathy towards the Entente, our present discontent and antipathy against German methods should not be a matter of surprise.

A German missionary, at the commencement of the great war, declared that the Armenians would be massacred should their sympathies be with the Entente Powers. We now witness the sad realization of the cynical threats and predictions of the said missionary, and once more have the heights of Masis and Ararad been covered with the skeletons of scores of thousands of innocent Armenians, and it is again the same Christian blood that flows down the Tigris and the Euphrates. Moreover, Talaat Bey addressed the American Ambassador at Constantinople in the following words:—"I will place the Armenians in such a state as to render them unable to pronounce the words 'Independent Armenia' for fifty years to come." Be that as it may, the truth remains that the Turkish Government of to-day is obstinately and mercilessly endeavouring to exterminate our nation.

There was a time when Turkey, in the face of public opinion and the threats of the Great Powers, was rather cautious in exercising a free hand over us. The "Red Sultan" himself tried somehow or other to justify his criminal acts by throwing dust in the eyes of the Powers. Things have now changed. Turkey has drawn her sword against the very nations that would professedly have been our mediators and protectors. The Young Turks have repudiated the policy of the old Government, and have preferred to adopt the policy of Blood and Iron of their Prussian masters.

Will the Turks succeed in saving their tottering Empire by persecuting and tyrannizing over the non-Moslem races with a view to their extermination? No. Suffering humanity will certainly emerge victorious through the untold cruelties, sanguinary atrocities, and indescribable horrors that have been torturing it since time immemorial, and will break the fetters, no matter how strong and powerful they may be; and sooner or later will "Ramesis the Judge" claim a strict account of the sufferings of the innumerable defenceless victims. After all, there *is* such a thing as everlasting justice in this world, and I cannot omit the following words of the famous author Victor Hugo, "Il y a une justice immanente."—I am, etc.,

DYON MEN.

Nicosia, Cyprus, September, 1915.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Armenian Massacres. October 12.

Replying to Mr. ANEURIN WILLIAMS, who asked for information regarding the Armenian massacres in Turkey, Sir E. GREY said that all the information he could give on the subject was contained in the statement of Lord Crewe in the House of Lords last week. That statement went further than was usual in reply to a question in the House of Commons, and he did not propose to read it. There could be but one feeling of horror and indignation at the outrages.

The Balkan Situation. October 13.

Sir H. DALZIEL asked the Minister of Munitions (in the absence of the Prime Minister) whether he was aware that there was a general desire in the House that Sir E. Grey's statement (to be made the following day) on the Balkan situation should be made in a form that would allow members to offer some comments upon it.

Mr. LLOYD GEORGE: I will represent the matter to the Prime Minister.

NEW SCHOOL OF SLAVONIC.

A new movement of great importance for the future relations between Britain and the Slavonic world is to be inaugurated by the Prime Minister in person on Tuesday next (says the *Morning Post*). The University of London King's College has decided to found a School of Slavonic Studies. The Serbian Government and other donors have contributed towards the fund. Though necessarily provisional in character during war time, it will in its final form consist of a professorship of Slavonic History and Literature, three lectureships—in Russian, in Polish and Czech, and in Southern Slav languages—and a comprehensive Slavonic Library and "Seminar." It was essential for the success of the scheme to secure the services of Slav scholars of real distinction, and the events of the war have made this possible. Dr. T. G. Masaryk, Professor of Philosophy in the Czech University of Prague and one of the prominent politicians in the Austrian Parliament, has become an exile from his native Bohemia, and, having made London and Paris the centre of his political work, has accepted for one year the post of lecturer in Slavonic Literature and Sociology at King's College. Professor Masaryk, whose writings on philosophical and political subjects are well known throughout the Slav world, is equally well known for his exposure of the forgeries upon which the Austro-Hungarian Foreign Office had built up its case against Serbia during the Bosnian crisis, and which formed the basis of the famous Friedjung trial in December, 1909. He enjoys a unique reputation among the intellectuals of every Slavonic country, and his appointment is certain to be received with enthusiasm by all Slavs.

Mr. Michael Trofimov, Lecturer at Liverpool University, has been appointed Lecturer in Russian; and Mr. Serge Tueic, one of the most promising of the younger Serbo-Croat dramatists and novelists, Lecturer in Serbian. Mr. R. W. Seton Watson, author of a number of books on Austro-Hungarian and Balkan history and politics, has been made Hon. Lecturer in East European History.

Professor Masaryk's lecture will deal with "The Problem of Small Nations in the European Crisis." Mr. Asquith will take the chair at 5.15 p.m.

FOR INSURANCES OF ALL KINDS.

THROUGH ALBANIA TO SERBIA.

(From a Correspondent.)

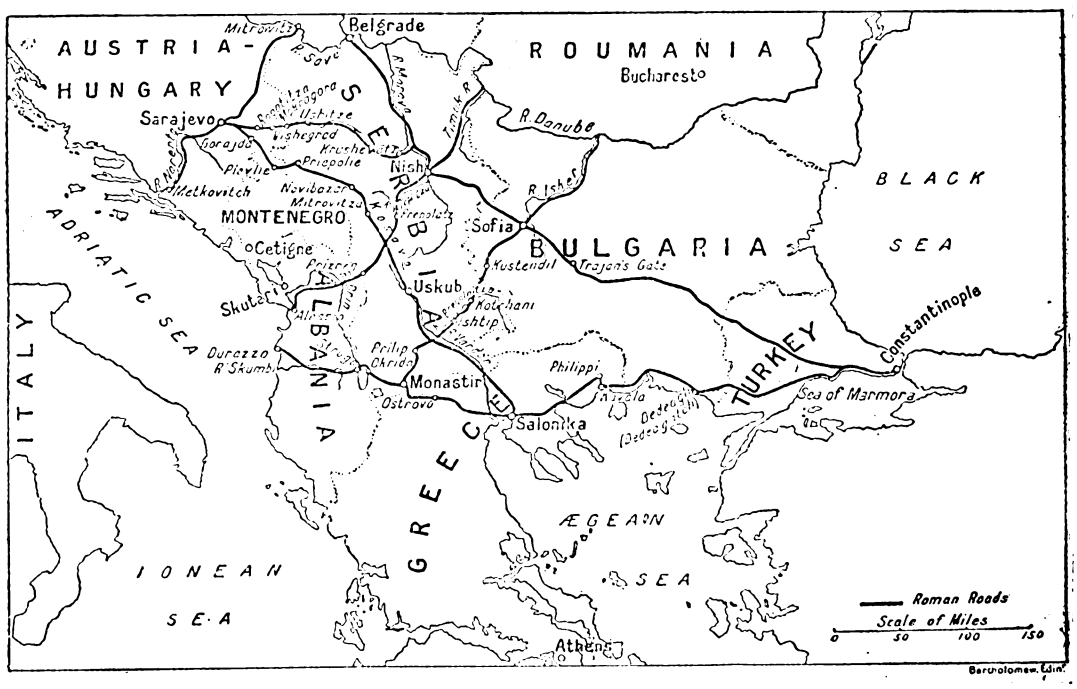
To the average man the news of the landing of an expeditionary force in Salonika is regarded as a necessary evil if Serbia is to be helped and the Germans smashed. Beyond that it conveys to him little or nothing; he leaves the carrying out of the strategic plan to our generals, and fervently hopes that they will be successful. "When ignorance is bliss"——

On the other hand, people who are acquainted with the Near East, and for whom maps convey more than is expressed by a medley of lines, are apt to probe deeper into the nature of our third Near Eastern expeditionary force. There are questions which arise to puzzle them, and doubts which assail them. Why land at Salonika, they ask, and how many men have been landed? The last question is at present unanswerable, though, of course, the number of troops landed may be known to the German General Staff. Regarding the first question, however, some pertinent remarks may safely be made.

Salonika is the nearest port to Serbia available to the Entente Powers, and is connected by rail with its Serbian hinterland. It has one great drawback, however, and that is that the line which connects it with Veles, Skoplje, and Nish lies perilously near the Bulgarian frontier—as a matter of fact, runs alongside it, sometimes at no greater distance than about three miles. The Bulgarians being on the warpath, the line is utterly unsafe from the Vardar River to the Morava. Small bodies of men can attack and destroy it under cover along every mile of its course, and an army cannot stop them. Hence the strategic value of the Salonika-Nish railway, as a means of bringing aid and supplies to Serbia, is nil. Equally insecure is the Salonika-Monastir railway, for similar reasons, whereas the position of Salonika itself, supposing the Bulgars adopt Germany's now well-known strategy of starting a campaign by means of an impetuous "drive," regardless of lives and consequences, is precarious in the extreme, unless the most ample precautionary measures have been taken. What these are must be decided by the military authorities, but when it is pointed out that the Bulgars are backed by Turkish armies (some of which have most likely already taken up their strategic positions), it will be seen that nothing short of an almost inexhaustible expeditionary force, fully equipped, will be able to cope with all eventualities.

The question now arises: in view of the doubtful advantages offered to the Allies by the port of Salonika, could no other port have been chosen in its place? Admittedly, it is too late now to alter what has already been done, but would it not be wiser, perhaps, in view of Bulgarian aggression, and the insecurity of the Salonika route, to send any further troops that may be needed for the Balkan campaign by an alternative route, if such be available? As it happens, there are other ports which can be made use of by the Allies, if necessary. Transport from them to the interior offers certain difficulties, but with a little energy they can be overcome; moreover, reinforcements marching from the ports in question to the relief of the Serbs could be rendered practically immune to flank attacks, and could strengthen the Serbian rear without having their numbers counted by a host of Salonika spies. The ports are two in number. They are Durazzo and Alessio, both in Albania, and both on the Adriatic, within shelter of the Italian fleet. Roughly speaking, they are about fifty miles from the Serbian frontier, as against the thirty miles which separate Salonika from Gevgheli. Strange to say, neither of them are new as regards their relation to the Serbian hinterland, because both were, in the glorious days of the Roman Empire, the great military ports for Roman penetration into and across the Balkan Peninsula. This will easily be seen by the highly interesting map published on this page, and which is reproduced by the kind permission of the publishers and authors of "Geographical Aspects of Balkan Problems," by Marion L. Newbigin, D.Sc. (Constable)—a valuable contribution to the literature on the Balkans which was reviewed in these columns last week.

In reality, there were in those days three roads of penetration into the Balkans, one of which—the most northern, through Bosnia-Herzegovina and then along the Western Morava river, is to-day impracticable, because passing



THE OLD ROMAN ROADS OF PENETRATION.

through enemy country. Of the remaining two, the most important was the southernmost, the celebrated Via Egnatia, which linked up Rome with Armenia through Constantinople. Starting at Durazzo, it entered the Shkumbi Valley, and, passing through modern Elbassan, reached Struga, on Lake Ochrida, which is to-day in Serbian territory. The other, alternative, road "started from the present Alessio, at the mouth of the Drin, followed the Drin for a certain distance, left it to cross the plateau, where the river takes a northward bend, and runs through a canyon, reached Prizren, entered the Kosovo basin, crossed the Prepolatz saddle to obtain the Toplitza Valley, reached Nish, and then crossed to the Timok Valley, which was followed to the Danube." (Newbigin.) "This road," says the same author, "is of great interest in connection with Serbia's scheme for a connection with the Adriatic, for it follows very closely the line of one of the Danube-Adriatic railway schemes." To what an extent this is true, and how closely modern routes of communication, either existing or proposed, coincide with the old Roman *viæ*, is clearly demonstrated by the map on the following page, reproduced from an article which appeared on "Serbian Railway Constructions" in The Near East of May 22, 1914.

The present neglected state of Durazzo and Alessio offers considerable landing difficulties, but they can be overcome; the old Roman military roads have degenerated into awkward lanes or more awkward bridle-paths, but they also can be improved; as for the Albanians, any opposition which they might offer to the transport of troops can be removed, if advisable. Given the negative value of

Digitized by Google

Salonika as being too near the enemy's lines, the Durazzo, or Alessio, route should be carefully considered, in connection with which statement the following observations may be made:—

In the first place, Albania must be regarded as the true rear of the Serbian position, and, as such, must be strongly held by the Entente Powers. The Serbian position is in the form of a "7," the only line of retreat against a successful Austro-German and Turco-Bulgarian drive being in the direction of the Adriatic (it is already reported that the Serbian capital is to be removed from Nish to Monastir). The German objective in the Balkans is, admittedly, to reach Constantinople and to keep the path thus carved out of Serbia free from flank aggressions. This latter can only be obtained by pushing the Serbs as far west of the Morava Valley as possible, and by cutting off Southern Serbia from Greece by means of a wedge driven from the Vardar to the Adriatic. It stands to reason, therefore, that the Albanian rear is of vital importance to Serbia, a circumstance which, in the opinion of many people acquainted with the Near East, has been sorely

Railways in Serbia, Existing and Projected.

overlooked hitherto. It is not too late to redeem our oversight and to help Serbia through Albania. When all is said and done, the fate of Salonika depends exclusively on Greek action, and its fate can no longer affect Serbia to any great extent, considering that her only line of retreat—should she be driven thus far, which God forbid—is towards the hills and into the valleys of Albania.

The second observation concerns Italy. "What is Italy doing?" asked M. Pichon, pertinently, on Wednesday. By the time these remarks are published the answer may be forthcoming. In the meantime, there are many who point out that she cannot be using her whole army in her particular theatre of operations, and that she must have many men available for service elsewhere in the common cause. Here, then, is her chance: she can send a powerful army across the Straits of Otranto, through Albania, to the help of Serbia. After all, Italy has more interest than any of the Entente Powers in keeping the enemy from the Adriatic, and this can only be done by throwing an expedition of, roughly, a quarter of a million men into the Balkan Peninsula, preferably along the old Roman military roads of penetration. Two objects will thereby be achieved: Serbia will have been effectively helped in her hour of need, and the Teutons will find that their road to Constantinople is a myth which, at the first available opportunity, will be destroyed by fresh and superior forces.

In an article on "The West and the Balkans," the Military Correspondent of *The Times* asked yesterday if we are going to recommence at Salonika the adventure of the Dardanelles. He says:—

"There are two aspects of this affair, the one in which Roumania, aided by Russia and Greece, aided by the Allies, come to Serbia's aid, and the other in which Greece or Roumania, or both, take no part. In the first case, there is very good reason why we should land at Salonika every man that we can spare, but with this highly important proviso, that we should not weaken our strength in the principal theatre. We should find in the armies of Roumania and Greece a counterpoise at least to those of Mackensen and Ferdinand, and the forces of the Mediterranean Powers should be equal to neutralise the forces of Turkey. In this event, and in this event only, is the operation promising, and our loyalty to our Serbian Ally prompts us to undertake it.

"If neither Greece nor Roumania intervenes, the chances of success are so slight that the adventure is not promising. We might long ago have recognized the importance of the Eastern Mediterranean, and have massed strategic reserves drawn from the Armies of the Allies whose territories border on the Middle Sea, but with our usual improvidence we have not done so. . . . Meanwhile, the heroic little State of Serbia is encompassed by enemies who are acting rapidly while we are still in the stage of talking and diplomatizing. Such foes are unevenly matched, and though the French Premier announces joint efforts by the Allies, they will not help Serbia unless the promised help arrives, and arrives in time. We owe a debt of which we are fully conscious to our Serbian Ally, and everything that we can do which has even an outside chance of success ought to be done and at once, but we owe also a debt to our own troops, and must not launch them upon enterprises when a cool calculation of time, distance, and numbers shows us that we are attempting the impossible."

Digitized by Google

TANGIER TO TEHERAN.

There is reason to hope for an early improvement in regard to the delivery of letters and parcels sent to members of our forces at the Dardanelles, inasmuch as the Secretary of the War Office has announced that measures are being taken to that end. It is certainly time that some steps were taken; complaints have been very numerous, and though a few of them may have been unreasonable, very many of them were justified up to the hilt. I heard only two days ago of the wife of one distinguished officer who had received no word from her husband since August 23, although she knows that he has written to her every other day. As to the pilfering from parcels that has been going on, it is surely remarkable that no means can be devised to put a stop to it. Sir Ian Hamilton, I notice, in thanking a committee of Elswick and Scotswood workmen for sending comforts to the troops, wrote: "Pray Heaven, the parcels will escape thieves and scoundrels, who waylaid some of the gifts, and will arrive in good condition." It is to be hoped the thieves and scoundrels referred to may have read Sir Ian's words—and taken them to heart. Their conduct is too despicable for words, and worthy only of the Huns.

***

Anyone who has read my previous notes on the Turks will bear testimony to my sincerity when, in the words of Lord Cromer, I say: "I have never been and I am not a Turcophobe." But there is a limit to all things, and as I write with details of the Armenian massacres fresh in my mind I find my sympathy for the whole nation tainted against my better judgment. When I analyse the subject I know that responsibility for this hideous slaughter lies with the pestilential vampires who have sold their country, body and soul, to one of the most evil powers that the world has known; but there are times when the mind refuses to wait upon analysis. And at the present moment the shadow of Armenia looms heavily across the world, robbing the true Turk of the well-deserved light which properly should shine upon his gallantry. There is evidence enough that the rank and file of the Moslem people have striven to protect the Armenians from the fiendish wrath of Enver and his lust-besotted followers at Constantinople; but their efforts have been fruitless. The massacres go on. When Germany passed through Belgium, leaving behind her the most loathesome record in history, she signed the death warrant of the Armenian people. The massacres have been publicly discussed by public men in Germany, and have been, tacitly at least, approved. Let us not forget this. Our sailors and soldiers are not fighting merely for the safety of England to-day. They are fighting that their children and their children's children may be spared the horrors of unspeakable servitude to a nation which recognises no laws of God or man. Napoleon was sent to banishment, because, guiltless though he was of rape and murder, he threatened the peace of Europe. What punishment can fit the crimes committed by Germany in Europe, and by Turkey in Armenia at the present time? The torture chambers of the Tower are mercifully closed for good and all, but the hangman's rope remains. And if, at the conclusion of this war, we fail to hang by the neck each individual proved to have been responsible for directing the crimes to which I have referred, then we shall fail most dismally in our duty to humanity.

***

What corner of Europe, I wonder, will be left untouched by war before the peace bells ring? Assuredly not many. At the present moment I am much disturbed by the attitude of Greece, not because of any material advantages which she could place at the disposal of the Allies by her intervention, but because I feel that she is casting worthiness on one side, and is taking more heed of the smug comfort of the moment than of the glory of her ancient traditions or the value of her national bond. What has become of the martial spirit of the Hellenes, when there can be found quibblers within her borders to question the sacredness of a bonded treaty, rather than take up arms in its support? Is it because their merchants grow fat and listless, as they draw blood money from the belligerents, that the neutral nations—not all, but some—will swallow any insult rather than risk battle? Candidly, I do not like to think of the future of Greece in face of her growing languor. If there is one thing certain about this war I should imagine it to be the certainty of Greek participation before the end, but what national honour is the country to gain if she is to be forced into the fight like a cornered hyena that must either turn or die? I recollect a Greek patriot whom I met in Alexandria. He used to visit me on Sunday mornings and spout poetry—very indifferent stuff it was, too—on the wrongs of the Grecian people. Now, although the poetry, as poetry, was bad, the man was all aflame with enthusiasm of the right kind, and as I watched him I used to speculate upon the chances of a future bringing relief to his heart. His mind held only one picture, the picture of his country triumphant, and that was the heart and soul of him. Somehow, I came to regard this enthusiasm as a latent characteristic of the Greek community, and in subsequent visits to Athens it seemed impossible that the spirit of Greece could ever die, so loudly speak the memories of the splendid hills around. But during the first crisis I watched Greece with disappointment, now I watch her with dismay. Is the old spirit, then, really dead? Time alone will show whether former impressions or later doubts are correct.

***

When the dramatist of a future generation shall pore over the history books of our own times in search of material for his art, I wager that his eye will lighten when it falls upon details of the interview between King Ferdinand and his former Ministers prior to the entrance of Bulgaria into the great world war. Cut and dried, he will find a drama there, with even the ending, it may be, set forth in a manner of which we, of the present hour, dream nothing. I sometimes try to find relief from the awful reality of this war in turning over its events in my mind and imagining which the schoolboy of a future generation will curse. Excluding the great battles, I think that hitherto the description of how our Ambassador at Berlin delivered his ultimatum to a furious and bewildered Hun is the one which most appealed to me. But the meeting at the Palace of Sofia runs it close indeed. I liked Stamboulisky the best. It is not often given to a subject, even in these democratic days, to tell his King to his face that his head is in danger. I like to picture the scene from its beginning as each Minister in his turn added strength to the opinions of the others, until the climax came with Stamboulisky's words. I imagine the King furious with a fury that can surely only come to kings outraged, and his reply makes perfect the drama of the incident—"Do not mind my head, it is already old; rather mind your own." Brave words, these, indeed, on either side: plain phrases that went direct to the heart of things. For a moment, at least, etiquette ceased to be; nothing but the hardiest things could live in such an atmosphere. I fancy that ere this war is done the head of King Ferdinand, or that of the outspoken Commoner who bearded him, will fall. Which? That it is impossible to say. But on the side of the Commoner there is a proverb which has come to us through the ages, and would seem to fit this case, "Vox populi, vox Dei."

***

The Bulgarians, it seems to me, are even now more to be pitied than blamed, and I believe my feeling is shared by the majority of Englishmen. For the plain fact is that they have been, and are being, fooled and misled by a campaign of lies, conducted on a scale hitherto unprecedented even in the Balkans. And when they awake to the truth they will, I am sure, bitterly, and rightly, resent their treatment by the man who, above all others, ought to have told them the truth and spared them the presence of the highly placed liars who have deceived them. It is often said that a people gets the government it deserves; whether it gets the rulers it deserves is another matter. The Bulgarians certainly have not. A brave, simple-minded people, anxious chiefly to go their own way in peace, they have been cursed with a cowardly, selfish Sovereign, to whom intrigue is the breath of life, and who has used them as pawns in his own game, with never a thought for *their* interests. What the better-informed Bulgars think of him and his schemes has been shown clearly enough during the past ten days or so. His most capable diplomatists have marked their dissatisfaction with his policy in unmistakable fashion; several of his best generals have done likewise; and Bulgarians resident outside of Bulgaria—and therefore in a position to learn the truth—have almost unanimously condemned the "policy of adventure" and the base ingratitude to old friends that has characterized it. Thousands of them have, in fact, declared their readiness to fight against it. How such a notorious coward as Ferdinand can ever have made up his mind to take the fatal plunge I shall never be able to understand. Whatever befalls him, however, no decent person will ever pity him. But for his dupes, the people whom he has so cruelly sacrificed to his own ambition, we must all feel a certain amount of pity just now. We draw a strongly marked distinction between Ferdinand *of* Bulgaria and the Bulgarians.

NEAR EAST BOOKSHELF.

THE BEGINNING OF A CAREER.

In reproducing in book form the text of a lecture which he delivered before the Jews' College Union Society in the early part of the year, Dr. Samuel Daiches has given to the public a valuable link in the life-history of the Secretary of State for War. As he points out in the beginning of his work, Lord Kitchener is generally recognised as one of the chief men in the world at the present day, and it is to the early development of his mind in the days when, as a lieutenant in the Royal Engineers, Kitchener was first given responsibility, that Dr. Daiches devotes his attention in the little work just published.

In many ways the information which this book contains will come as a surprise to people who have only read of the War Secretary in the newspapers, and who regard him only as a stern and unbending soldier possessed of an indomitable will and more than ordinary powers of organisation, to the exclusion of all lighter traits of character. Dr. Daiches' record treats with the earlier history of Lord Kitchener, it is true, but it is equally true that it was during these early years that the soldier was acquiring the knowledge and assimilating and strengthening those powers of insight and observation which, combined with will power, proved to be so important a factor to his success in later days. It is a popular belief that Lord Kitchener sprang into sudden fame at a very early age, and after but a meagre preparation for the great things that he was subsequently to accomplish. This, true to a certain extent, is not wholly so. Although his early work included no great campaigns, he had proved himself to be a master of detail many years before, at the age of forty-nine years, he conquered the Sudan.

There is an earlier period in Kitchener's life, of which the public has not thought sufficiently, the importance of which for the future development of Lord Kitchener cannot be overestimated. That period provided Kitchener with work in which he could and did develop and show his great capacities—work which strengthened his powers of vision and which opened for him new sources of quiet and strong inspiration. That was the period of his work in Palestine.

The period dealt with is between the years 1874 and 1878. It was in the former year that Kitchener was selected to fill a vacancy caused by the death of the second in command of the survey party operating in Palestine. Writing of the time immediately following the young officer's appointment, Dr. Daiches says that it soon became felt that the new recruit was the most energetic of the party. He seems to have spent the greater part of his leisure in learning Arabic and Turkish—an accomplishment which stood him in good stead in later days. It is not generally known that a book was published at about this time, under the title of "Lieutenant Kitchener's Guinea Book of Biblical Photographs." Both the photographs and the letterpress which accompany them were the work of Kitchener himself.

The fighting qualities of the famous soldier were first called upon in a hand-to-hand skirmish with a party of inhabitants from Safed, in which Lieutenant Condor, the chief of the survey party, was severely wounded in the head. The attack was conducted under the leadership of one Ali Agha Alan, to whom Kitchener refers in a later report, when he alludes to the Sheikh's repentance in a paragraph which certainly suggests humour, a quality which Kitchener is not usually supposed to possess.

To-day I had the Governor, the British Consul, and our old enemy, Ali Agha Alan, the cause of the row; the latter expressed deep sorrow for what he had done, as well he may, as I hear he and the Mogrebbins are all but ruined.

Indeed, a great many of the reports quoted by Dr. Daiches are worth reading on account of the indication of character which they give, quite apart from their archæological and general interest. "The Druses are giving a good deal of trouble, cutting people's throats on the road to Damascus," he writes in one. There is no waste of words here.

The versatility of his mind is made very apparent in these reports. Every possible side of interest finds a place in them. When the actual survey work of the party is dealt with, the writer turns his attention to other subjects bearing upon his presence in the country. As a result of this thoroughness, we were put in possession of a reliable record of the country and its people. The following paragraph, which is taken from his third report, shows Kitchener to have been not only a keen observer as a young man, but also gifted with the power of recording his impressions on paper. It refers to the scenery at the Sea of Galilee:—

The scenery of the lake is hardly what would be expected of a basin 685 ft. below sea-level. The hills on the eastern side have an almost perfectly level outline, scarcely broken by any valley of importance, and decidedly monotonous in appearance; still the bright sunshine throws a rosy haze over the country, and the contrast with the bright blue water is very beautiful. The best views of the lake are from a distance on the many heights from which it is visible, as thus seen in the evening it is particularly lovely. Deep blue shadows seem to increase the size of the hills, and there is always a rosy flush in the sky and over snow-clad Hermon.

Judging from a paragraph referring to the village of Tubas, methods of conscription do not appear to have greatly altered in the East if we recollect the manner in which Enver Pasha is reported to have found recruits at the beginning of the present war.

Tubas is a large village of about 1,500 inhabitants, situated in a most fertile country. By paying £100 in gold to the Pasha of Nablus the people have escaped the conscription up to now, but I expect their term is nearly out, and unless they pay another heavy bribe they will soon be called upon to make up for the time they have been spared.

Dr. Daiches concludes his observation with a note of satisfaction that the man whom of all others he reveres at the present day should have started his career of success in Palestine:—

He saw in Palestine the continuity of Jewish life—from Joshua down to the rabbis he saw at Jerusalem and Tiberias. He saw that many of the greatest men of the Jewish people, in the first centuries after the destruction of the second Temple, in the Middle Ages, and in later times, had their last resting-place in the land they always claimed as theirs. Kitchener saw that a change was coming over Palestine. Did Kitchener think of it that after Armageddon the Jews (or a portion of them) might return to their ancient land? Who knows? We will not ask. We are gratified to know that the greatness of Kitchener showed itself first in his work in Palestine, and that it grew during his sojourn in that land.

Taken as a whole, Dr. Daiches' book, although it might have been considerably improved by a closer attention to literary as opposed to oratorical needs, is one which we can recommend to our readers. Its object of contributing "to a larger understanding of the character and capacity of one of the most prominent personalities of our times" is, at least, fully attained.

* "Lord Kitchener and his Work in Palestine." By Dr. Samuel Daiches. (London: Luzac and Co. 2s. 6d. net.)

JUGOSLAV CULTURE.*

M. M. Marjanovic, one of the most eminent Croatian publicists and essayists, has written a little pamphlet about the Jugoslav culture. The Jugoslavs, or Southern Slavs—*i.e.*, the Serbs, Croats, and Slovenes, who are one and the same people designated by three different names—are very little known by English people, although they well repay study. Their culture is perhaps the most ignored. W. R. Morfill once wrote (in "The Literature of the Serbians and Croats," *Westminster Review*, April, 1878, p. 304): "We hear people so often tell us, with consummate effrontery, that this branch of the Slavonic family is absolutely without culture." We are far from considering that this is due to "consummate effrontery"; it is due only to the lack of knowledge; but we agree with Morfill that the popular belief regarding Jugoslav culture was as he has stated. To-day, in spite of all Morfill's books and articles on Southern Slav literature and language, and despite all the studies of Sir Arthur Evans on Southern Slav architecture and art, circumstances have not improved, and the general view on the literary and artistic manifestations of the Jugoslav people remains almost the same as it was in the time when Morfill wrote the above lines. It was therefore a good idea of M. Marjanovic's to publish his essay on Jugoslav culture. The English reader may find in this little pamphlet of only 16 pages a small but a good guide to Jugoslav literature, sciences and art.

* "Jugoslav Culture." By Milan Marjanovic.

BOOK NOTES.

Mr. Heinemann has just published "A Woman in the Sahara," by Miss Helen C. Gordon. The author and a friend spent some time in various towns on the northern border of the Sahara; and the book describes their experiences and the life and customs of the natives, especially of the members of the harem.

Messrs. Longmans, Green and Co. issued last month "The Migrations of Early Culture," by Professor Grafton Elliot Smith, M.A. The volume, which is one of the Manchester University Press series, is described as "a study of the significance of the geographical distribution of the practice of mummification as evidence of the migrations of peoples and the spread of certain customs and beliefs." The price is 3s. 6d. net.

Messrs. Chatto and Windus have just published "A History of Babylon from the Foundation of the Monarchy to the Persian Conquest," by Dr. Leonard W. King, of the British Museum. The author is our leading Assyriologist, and his name is a sufficient guarantee that the book may be regarded as authoritative, based on the latest available data, and, at the same time, readable. The volume contains maps, plans, and illustrations, and its price is 18s. net.

BOOKS RECEIVED.

Hellenism in England: A Short History of the Greek People in this Country, from the Earliest to the Present Day. By Theodore E. Dowling, D.D., and Edwin W. Fletcher, F.S.A. Scot.; with an Introduction by H.E. the Greek Minister, M. Gennadias. (Faith Press. 2s. 6d. net.)

Quarterly Statement of the Palestine Exploration Fund. (Offices of the P.E.F. 2s. net.)

21	8	Thursday	12	13

To-morrow is the birthday of H.R.H. Prince Carol of Roumania, who was born at Sinaia in 1893.

The *London Gazette* announces that the King has been pleased to give directions for the following appointment to the Most Distinguished Order of Saint Michael and Saint George: To be an Honorary Member of the Second Class, or Knights Commanders of the said Most Distinguished Order: His Excellency Ibrahim Fathi Pasha, Minister of Wakfs in Egypt.

The honour referred to in the above paragraph is the second British Order bestowed on his Excellency, the first one being the Distinguished Service Order conferred on him during the Sudan campaign. Sir Ibrahim Fathy Pasha resumed his duties at the Wakfs Ministry three weeks ago, having practically recovered from the effects of the recent attempt upon his life.

The Aga Khan has returned to London from Paris and is staying at the Ritz Hotel.

We regret to learn that Sir Gerard Lowther, formerly British Ambassador in Constantinople, is lying seriously ill at Sandwich Bay.

Lady Whittall has left Esher for Athens.

His Honour Judge Cator and Mrs. Cator have returned to Alexandria from England, and are staying at the Carlton Hotel.

Judge Sandars has left London on his return to Alexandria.

Viscount and Viscountess Midleton have arrived in England from Egypt with the Hon. George Brodrick, who has been invalided from the Dardanelles after typhoid fever.

The Egyptian papers to hand by the last mail announce that Sir Reginald Wingate and his staff "will in all probability return to Khartoum before the Bairam for the winter. Lady Wingate, too, is expected back in Khartoum at a not far distant date."

At the time of going to press we are uncertain whether M. Hadji Misheff, the Bulgarian Minister, and his staff, have actually left London. It was understood, however, that they were to leave on Thursday, and on Wednesday they were actively preparing for departure and in saying good-bye to friends. The departure of the Minister and of M. Mincoff, his popular secretary, will be much regretted, quite apart from the circumstances by which it has been brought about.

CAPTAIN ARTHUR CHARLES DAVIES, 6th BATTALION ROYAL WELSH FUSILIERS, Reported WOUNDED and MISSING on August 10 at the DARDANELLES.—Any INFORMATION will be gratefully received by his Wife, Mrs. Arthur Davies, Treffos, Menai Bridge, Anglesey.

TO OFFICERS leaving for War Zone Special Terms. ANY LANGUAGE under the sun TAUGHT, TRANSLATED, TYPEWRITTEN and DUPLICATED on machines in shortest periods.—Apply or write, The British Egyptian Syndicate, 90, Bishopsgate, E.C. Wire, "ABDELMALEK, London." 'Phone, 2947 London Wall.

A Cyprus correspondent writes:—The High Commissioner and the officials now at Troödos will, according to present arrangements, return to Nicosia in the last week of October.

The *Sudan Times* announces that El Lewa E. E. Bernard Pasha, C.M.G., the Financial Secretary, is expected back from Europe about the middle of this month. He was granted six weeks' leave on medical grounds, with permission to travel in Italy and France.

The Rt. Rev. Lord Bishop in Jerusalem and Mrs. McInnes are leaving London, on their return to Egypt, by the P. and O. steamer "Morea," on the 30th inst.

It is officially announced that H.H. the Sultan of Egypt has been pleased to bestow the Grand Cordon of the Order of Mohammed Ali upon Prince Kamel Fadel, Prince Ali Haidar Shinassi, and Prince Yussuf Kamal; and the grade of Bey of the 2nd Class upon Mohammed Kamal Bey and Mohammed Riad Affifi Bey, both of H.H.'s private Wakfs.

H.E. the Serbian Minister visited the French Embassy on Sunday afternoon.

The engagement is announced of Geoffrey Fitzherbert de Teissier, Captain, Scots Guards, eldest son of Baron and Baroness de Teissier, of 16, Eccleston Square, and Katharine Henriette, eldest daughter of the late Theodore Seligman, of New York, and Lady Waldstein, and stepdaughter of Sir Charles Waldstein, of Newton Hall, Newton, Cambridge.

On October 8, at the British Consulate, Alexandria, and afterwards at the English Church, the marriage took place of Mr. Claud Archibald Aubrey Douglas-Hamilton, Egyptian Civil Service, youngest son of Mr. and Mrs. Douglas-Hamilton, of Broadlands St. Peter's, with Miss Evelyn Addison, only daughter of Mr. and Mrs. T. A. Chater, of 25, Addison Road North, W., and Chesham Bois, Bucks.

The Rev. H. B. Rivington and the Rev. A. Lee-Warner arrived in London this week from Port Sudan by the Union-Castle steamer.

Mr. W. King-Wood, C.I.E., Director of the Persian Section, Indo-European Telegraphs, left London on Monday for Teheran, by way of Petrograd.

El Miralai Powell Bey, Acting P.M.O. of the Egyptian Army, and Mrs. Powell arrived at Khartoum from the North on September 26.

In spite of the fact that their hospitals are all situated on the north-western frontier and in the direct line of the possible invasion of Serbia, eighteen more nurses and orderlies left on Saturday to reinforce the hospital units of the Scottish Women's Hospitals, N.U.W.S.S., in Serbia.

A Memorial Service was held on Saturday morning at St. James's Church, Piccadilly, for the late Major the Hon. Cyril Myles Brabazon Ponsonby, M.V.O., Grenadier Guards, second son of the Earl and Countess of Bessborough, who was killed in action in France on September 28. Queen Alexandra was represented by Earl Howe, Colonel Henry Streatfeild was present on behalf of Field-Marshal the Duke of Connaught, Honorary Colonel of the regiment, and Princess Henry of Battenberg was represented by Mr. Victor Corkran. Among the immediate relatives present were the Earl and Countess of Bessborough, the Hon. Mrs. Myles Ponsonby, Colonel and Mrs. Longfield, Viscountess Duncannon, Lord and Lady Oranmore and Browne, Lady Irene Congreve, the Hon. Cyril and Mrs. Ponsonby, the Hon. Michael Ponsonby, the Hon. Arthur Ponsonby, the Hon. Walter Ponsonby, Lord and Lady Raglan, and the Hon. Mrs. Charles Eliot. In the general congregation were the Marchesa Imperiali, the Earl and Countess of Cromer, the Earl and Countess of Desart, the Earl of Albemarle, Viscount Knollys, Lord and Lady Arthur Hill, Lady Phillips, Lord and Lady Barrymore, Sir David Erskine, Major-General Sir Hugh McCalmont, Sir Owen Philipps, Mr. Robert Naville, Director-General of the Franco-Serbian Bank, and Mr. W. Philip Sheppard, representing the management and all at 26, Throgmorton Street, and Mr. Herbert Locke, representing the management and staff of the Roumanian Bank in London.

Among the passengers for Egypt by the P. and O. steamer "Mooltan," which leaves London to-morrow, are Sir Malcolm and Lady McIlwraith, Miss McIlwraith, His Honour Judge and Mrs. Maxwell Fleming, Mr. and Mrs. G. Alderson, Mrs. Christopherson, Mr. J. E. Cornish, Mr. A. P. Friend, and Mr. P. D. McNaughten.

Sir Mortimer Durand will take the chair at a meeting of the Central Asian Society to be held next Wednesday afternoon, when Mr. H. Charles Woods will read a paper on "The Dardanelles Campaign."

Major Wilfred Edward Nicol, D.S.O., 1st Grenadier Guards, who died on October 1 of wounds received in action, received his commission in the Grenadier Guards in 1900, was promoted lieutenant in 1904, and captain in 1908. He was employed with the Macedonian Gendarmerie from August 10, 1907, to March 14, 1909, and with the Turkish Gendarmerie from March 15, 1909, to July 10, 1911, and was awarded the Liakat medal, third class, of the Medjidieh. Major Nicol saw active service in the South African War and received the Queen's medal and two clasps. He was awarded the Distinguished Service Order "for gallantry and ability" at Neuve Chapelle, and mentioned in dispatches on May 31, 1915.

Captain Oswald Ireland Wood, 1st Suffolk Regiment, killed in France between October 1 and 3, was the elder son of the late Lieutenant-Colonel Oswald Gillespie Wood, C.B., R.A.M.C. He obtained his commission as second lieutenant in the 2nd Suffolk Regiment in September, 1911. When war was declared he was with the 1st Suffolk Regiment in Egypt, and came back from there with that battalion and went to the front. In April last he was wounded and was invalided home, and afterwards rejoined his battalion at the front in July.

Lieutenant Christopher Dearmer, R.N.V.R., Armoured Cars, whose death from wounds was reported two days ago, was the son of the Rev. Dr. Percy Dearmer, vicar of St. Mary, Primrose Hill, and of the late Mrs. Dearmer, the author and playwright who, while attached to the Stobart Hospital Mission in Serbia, died of enteric on July 11, after a fortnight's illness. Lieutenant Dearmer's brother, Lieutenant Geoffrey Dearmer, is serving in the Royal Fusiliers.

The Alexandria correspondent of the *Morning Post* reports, in a letter dated September 22, that at Urfa "there are about one hundred British subjects among the prisoners, but comparatively few are British born. Among them is Captain Gasken, British Consul at Baghdad, who was imprisoned and subjected to very bad treatment before being sent to Urfa. Other Englishmen are Captain White, R.N., and several engineers of the Sir John Jackson company, who were engaged on the Mesopotamia irrigation projects when the war broke out Mr. Opie, Secretary of the Khedivial Mail Line at Alexandria, Miss Macey (from Beyrout), Mr. Glockler and two sons, Mr. Rudolph Young, Mr. Hensman (of the Grand New Hotel, Jerusalem), Mr. McFarlane, Mr. Hall, Mr. Robinson, Mr. Cripps, and Mr. and Mrs. Kenneth Joly. The ladies mentioned have now arrived safely at Alexandria, but the men are still at Urfa.

From a correspondent we learn that instead of "Mr. and Mrs. Kenneth Joly" in the above report, we should read "Mr. and Mrs. Joly and Mr. Kenneth Joly, their son."

The death is announced of Bimbashi C. E. Koebel, Inspector Kassala Province, Sudan Government, as a result of wounds received in action in the Dardanelles on August 24.

Digitized by Google

A telegram from Sir Henry MacMahon, High Commissioner of Egypt, assures the Joint Committee of the British Red Cross Society and the Order of St. John of his sympathetic support to the "Our Day" movement. He says, "I will do everything possible to assist and have local committees everywhere." He suggests, however, a local change of date, since the holidays of the Bairam festival include October 21 and "Our Day" will therefore be kept in Egypt a week later.

Professor J. Hope Moulton has been re-elected President of the Manchester Egyptian and Oriental Society, and Sir Henry Miers, Vice-Chancellor of the University, has been added to the vice-presidents of the Society. Professor Moulton left England on Saturday for a year's visit to India.

Mr. Charles Baehler has left Château Neu-Habsburg, Lucerne, on his return to Cairo.

Mr. Charles Rosher, F.R.G.S., left England on Tuesday to take up the duties of editor-in-chief of a new English daily paper, *The Pharos*, to be established in Alexandria.

The Lord Mayor's Fund now being organised for the relief of the Armenian refugees made a start last week by telegraphing a first £1,000 to the British Consul in Moscow. Although its appeal to the public had not been issued, various generous gifts enabled it to act thus early. The meeting at the Mansion House at three o'clock this afternoon promises to be of great interest. The Lord Mayor himself will speak, and among others who will address the gathering are Viscount Bryce, Cardinal Bourne, the Bishop of Oxford, and Mr. T. P. O'Connor. Contributions may be sent to the office of the fund, 96, Victoria Street, Westminster, or to the Mansion House.

The tenth annual general meeting of the Lebanon Hospital for Mental Diseases, Asfuriyeh, near Beyrout, Syria, will be held (by kind invitation of Dr. and Mrs. Fortescue Fox) at 36, Devonshire Place, W., next Wednesday (October 20), at 4 p.m., when the annual report and accounts will be presented.

M. Radovitch, the Montenegrin ex-Premier, who is now in Rome, after fulfilling a mission here, has expressed to the Rome correspondent of the *Morning Post* the satisfaction felt by his countrymen that the British Red Cross, which has rendered such signal services to Montenegro, is still remaining there.

Mr. Bertram Christian, Chairman of the Serbian Relief Fund, has received through the Foreign Office a communication from Sir Ralph Paget, dated Nish, October 10, announcing that the Serbian Relief Fund Unit No. 5 (2nd British Farmers' Unit) has arrived safely at Mladenovatz, but probably with the loss of its equipment. Mrs. Moore, who is in charge of the Relief Fund's temporary orphanage at Belgrade, is also safe.

A Reuter's message from Naples dated October 13, states:—Ten ladies belonging to the British Red Cross have arrived here from Nish, via Salonika. Four remained here to nurse the wounded from the Dardanelles. The others proceeded to London.

Sir F. Elliot, the British Minister in Athens, has presented to the Greek Minister for Foreign Affairs a silver cup awarded by the Board of Trade to Thomas Mitzis, the captain of the Greek vessel "Leon," which rescued the crew of the steamer "Gadsby" sunk in the Channel last July.

Messrs. Robert and Joseph Davies Bryan, of the well-known firm of Davies Bryan and Co., Cairo, Alexandria and Khartoum, have been accorded a warm vote of thanks by the Carnarvon Town Council for their services to Welsh soldiers in Egypt. The Bryans met the vessels on arrival, visited hospitals, and also assisted in tracing missing soldiers and communicating with their relatives in Wales.

The report, published by some native Egyptian papers, that Mr. W. P. G. Graham, formerly Director-General of the Public Hygiene Department, is returning to Egypt to take charge of the Red Cross work in Cairo, is incorrect. The *Egyptian Gazette* states that Mr. Graham is returning to Egypt, but his work there will be confined to the R.A.M.C., and he will take no part in the work of the British Red Cross and Order of St. John.

M. Joseph Angeloff, Consul-General for Bulgaria in Manchester, has, we understand, resigned his office as a protest against the policy of King Ferdinand. His many friends in this country will sympathise most heartily with his feelings in a position that must be painful indeed to him, and admire the sterling honesty and courage he shows in declining to cast in his lot with those who are bent upon dragging the honour of his country through the mire.

The War Office has received information from the Secretary of the International Prisoners of War Agency, Geneva, that according to a recent telegraphic communication from the Greek Red Cross Society, that Society is willing to furnish information to the families of prisoners in the Eastern theatre of war. Inquiries should be addressed to Comité Pour les Prisonniers de Guerre, M. A. Coussidés, Ministère des Communications, Athens.

The British Farmers' Red Cross Fund is doing excellent work, we are glad to note, in many theatres of the war. The whole of the money received by this fund is paid over intact to the national British Red Cross Society, and allocated to certain schemes by arrangement. Amongst the services rendered in this way we may note that the Fund has provided £20,000 for the extension and one year's upkeep of a convalescent home (containing 1,000 beds) at the summer palace of Montazah, lent by H.H. the Sultan of Egypt. Another sum of £20,000 has been devoted to hospital work in connection with the wounded of our Expeditionary Force in the Dardanelles. On April 2 the British Farmers' Hospital for Serbians (No. 4 Serbian Unit), equipped at a cost of £5,000, was dispatched; two months later a second Serbian hospital, equipped at like cost, was dispatched; and £1,000 has also been cabled out for Dr. Barrie's Serbian Hospital. Subscriptions for the Fund, which are urgently needed, should be sent to Room 5, Tower Buildings, Flour Mills, Bermondsey, S.E.

APPOINTMENTS, PROMOTIONS, etc.

Dr. P. Karovitch, who has been temporarily attached as Secretary to the Serbian Legation in London, has arrived and has entered upon his duties.

The Egyptian Council of Ministers has approved the appointment of Mr. Reginald S. Patterson, Controller of Accounts of the Public Works Ministry, as Director-General of Government Accounts, the appointment to date from October 1.

Kaimakam Anderson Bey, R.A.M.C., Assistant-Adjutant-General, Recruiting, has been struck off the strength of the Egyptian Army. He is now serving with the British Forces in Gallipoli.

Captain John H. M. Mee, the Duke of Edinburgh's (Wiltshire Regiment), has been taken on the strength of the Egyptian Army with the rank of Bimbashi, and posted to the 11th Sudanese.

The Sultan of Egypt has conferred a robe of honour ("pelisse d'honeur scientifique") of the 1st Class upon Sheikh Abdel Rahman Qorâa, Wekil of the Mosque of Al Azhar and Director-General of Moslem Religious Educational Establishments.

According to an official message from Nish, Dr. Vesnitch, the Serbian Minister in Paris, is not retiring. He has been granted short leave of absence, during which M. Dragomir Stephanovitch will act as Chargé d'Affaires.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

ALLEN.—On October 9, at Ghezireh, Cairo, the wife (*née* Dorothy M. Parsons) of Arthur Baylis Allen, Egyptian Civil Service, of a son.

GAIRDNER.—On October 1, at Cairo, Egypt, the wife of Canon Gairdner, of the Church Missionary Society, of a daughter.

MARRIAGE.

CARVER—ASHTON.—On October 4, at the Military Hospital Chapel, Citadel, Cairo, by Capt. the Rev. G. D. Hepple, Lieutenant Robin C. Carver, attached Royal Flying Corps, youngest son of the late Henry Clifton Carver, of Wilmslow, and of Mrs. Carver, Alderley Edge, to Rose Caroline, third daughter of the late Charles Henry Ashton and of Mrs. Ashton, The Grange, Ellesmere.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

UPPER EGYPT.

Luxor.
The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.
The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.
Are the Finest on the Nile.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEH HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najem Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

FACING THE MUSIC.

The muddle that the diplomacy of the Allied Powers has made of the Balkan question leaps to the eye; what is at present not so clear, but is of paramount importance, is the precise way in which a satisfactory finish is to emerge from the unsatisfactory muddle. To readers of THE NEAR EAST there will be nothing new in the discovery made by the daily Press that British diplomacy has broken down in the Balkans. It had already failed a year ago. But there was then still time to rectify some of the mistakes made. Turkey was already lost to us. Bulgaria remained, and we had it in our power to bring the whole of the Balkans into line with the Triple Entente. British diplomacy, however, preferred to affect a monumental indifference to the Balkan question. It was known that Bulgaria was smarting under the wrong which, she considered, had been done her by the Bucharest Treaty, and was burning to take advantage of Serbia's difficulties in order to avenge herself. It was known, too, that her defection to Germany's side, in the event of any uncertainty attaching to the attitude of Roumania and Greece, must constitute a serious military problem to the Allies. Last February we referred in these columns to the danger of failing to grapple with the Balkan question in the one way that made a solution possible. We pointed out that the Bulgarians were not likely to be convinced of Great Britain's good intentions so long as we were represented at Sofia by a diplomatist notoriously unsympathetic towards the people of the country. Two years previously, when direct charges were being laid before Sir Edward Grey, we drew attention to the danger to Anglo-Bulgarian relations of perpetuating this diplomatic solecism. But the warnings fell on deaf ears, and it was not until a few weeks ago, when the damage was already done, that the British Government consented to make a change in its representation at the Bulgarian capital. At no time during the past two or three years has it required any special prescience to appreciate the possible trend of events in Bulgaria. All that was necessary was that some attention should be given to Balkan affairs, and when the war broke out that a serious attempt should be made to take advantage of the strong position in which German and Austro-Hungarian action placed the Powers of the Triple Entente in regard to the Balkans. Apart from all other considerations there were a million and a-quarter men available for one or other side, and they offered, if associated with the Quadruple Entente, the strategical advantage of an attack on the Central Powers on a third and entirely distinct front. The advantage was great enough to justify even sacrifices in order to obtain it, but the Balkans continued to be treated with comparative indifference, born not of want of heart, but of sheer ignorance of their potential value to the Allied Powers.

But now the mistake has been made. We are reaping the results, and the issue at stake is too serious for time to be wasted over recriminations. The day will come when the personal reckoning for a long series of diplomatic errors has to be made. At present we are called upon to face the music, and to extricate ourselves from an embarrassing position with what grace we can. The details of the situation are clear. Serbia is attacked from the north and west by Austro-German forces and on the east by Bulgaria. If she goes under, not only is the Turkish army galvanised into fresh life by an adequate supply of munitions and the position of the Allies on Gallipoli Peninsula rendered untenable, but Germany herself obtains access to all the foodstuffs and raw material that the Near East and Asia Minor have to offer her, and is able to stultify to a considerable extent the blockade which British control of the sea has established. It is imperative, therefore, for the Entente Powers to come to the aid of Serbia. If Roumania and Greece could be relied upon to shoulder their responsibilities, there would be no need for anxiety in regard to the extension of the war area to the Balkans. These two States would do more than neutralize Bulgaria's adhesion to the Central Powers, while the despatch by the Quadruple Entente of a comparatively small force to Serbia would enable that country to render a good account of itself against any troops that the enemy is likely to spare from its eastern and western fronts. Unfortunately, neither Roumania nor Greece has yet made up its mind to adopt the only course which honour and self-interest alike dictate. In these circumstances the duty is imposed upon the Entente Powers of rescuing Serbia from the fate which threatens her. The opening up of free communication between Germany and Constantinople would be too grave a menace to the Allied cause to allow any fears of weakening our other fronts to deter us from opposing the strongest resistance to the Austro-German and Bulgarian invasion of Serbia. Men and munitions must be found for yet another expeditionary force, while the Allies' strength in the main theatres of the war is maintained.

If ever there was a time for Britain being true to herself it has come now. We had every right to count on the support of Roumania and Greece, but if for one reason or another these States play false, the Entente Powers have reserves enough for this fresh emergency. Too much recrimination over the past, such as the daily Press has attempted to indulge in during the last few days, is liable to distract attention from the task that now lies before us. A point would seem to have been reached at which even the most supine Government must be stirred to action. The threat of the enemy's south-eastern thrust, which, if successful, would have immediate effects in Mesopotamia and on the banks of the Suez Canal, and might prolong the war indefinitely, has forced the Allied Governments to adopt vigorous steps to meet the new danger. With an appropriateness that must be accidental rather than intentional, the British Cabinet has allowed the French Government to give expression to the new spirit which now actuates the Allies. It is too late to anticipate the invasion of Serbia, but the Entente Powers are resolved that the menace shall be met in adequate strength. "The British and French Governments," the French Premier has informed the world, "acting on the advice of their military authorities, agree as to the number of men required. Russia has desired to join her Allies in order to give help to the Serbian people, and to-morrow her troops will fight side by side with ours." If the operations of the Allies in the Balkans are carried out in this spirit, there need be little doubt as to the ultimate result. The first steps of an Austro-German invasion of Serbia will prove the easiest; the difficulties of the invaders will begin when they enter the more mountainous districts. They have the advantage that the Bulgarian attack from the eastern front gives them, and we must expect to see Serbian towns fall into the enemy's hands. But if the Serbian army can avoid giving battle at a disadvantage in numbers and indulge in guerilla tactics, a long time may elapse before the free passage for German munitions to Constantinople, which is to save Turkey, is opened. The Balkans represent the third theatre in which Germany will have tried to achieve a definite result. She will meet with no greater success than she has in the other two, if the Allied Powers act up to the spirit of the French Premier's declaration. We start with the disadvantage of having to allow the initiative to be with the enemy. That is the penalty for diplomatic mismanagement of the Balkan question. But having made up our minds to face the music, we may hope that Great Britain, with the help of her Allies, will now see the thing through in such a way that much of the stigma attaching to our handling of the question in the past will be removed.

THE MAKING OF MODERN EGYPT.—III.

BANKRUPTCY AND RECONSTRUCTION.

By Professor Todd.

It has been shown in the second article of this series how Mohammed Ali's remarkable rise to power and greatness proved in a way its own undoing. Similarly, though by different methods, Ismail's great schemes for the reconstruction of Egypt on European lines proved his undoing. Ismail's great weakness was finance. There he was Oriental to the backbone, with an Oriental's incapacity to see that debt must be paid in the long run, and that money borrowed must therefore be well spent if the wherewithal for repayment is to be found. Within a period of less than twelve years he increased the Egyptian State Debt from about £10,000,000 to nearly £100,000,000, which, under the circumstances, probably constitutes a unique record. Of this gigantic sum only a comparatively small part, certainly less than half, was spent on public works, railways, harbours, and his own domains, besides many other enterprises of very doubtful utility. Practically the whole of the remainder went in interest and sinking funds on the debts themselves and in discounts or losses on the flotation of the loans, for the terms upon which the money was borrowed naturally grew worse with every loan, and in the later stages were simply usurious. In addition to all this, it is estimated that during Ismail's reign the excess of revenue over ordinary expenditure must have amounted in all to over £40,000,000. But any attempt to account for this balance is pure speculation. It was lost by mismanagement and fraud, or squandered in foolish extravagance, by which Ismail himself benefited but little, and Egypt not at all. Had Ismail been advised and controlled by honest and competent financiers, the greater part of the debt would never have been incurred; but he would not have been Ismail! What he wanted was men to do his bidding and find the money somehow. And the story told of one of these men, his foster brother, Ismail Pasha Sadyk, known to history as the "Mufettish," or inspector, is typical of how he treated them. From 1868 onwards this notorious Finance Minister proved himself past-master of the art of extorting money from the fellaheen, as well as from the European moneylenders, though in the long run the relation between the parties in the latter case was pretty well reversed. But when in 1876 Nemesis came in the form of the Goschen-Joubert inquiry, Ismail the Khedive calmly threw Ismail the Mufettish to the dogs, and indeed was almost certainly instrumental in procuring his murder. There are many tales of how it was done, none of them perhaps true, but the fact is that the Mufettish "disappeared" just the day before Goschen's Conversion Scheme was published.

Ismail's treatment of Nubar Pasha may be quoted, on the other hand, as an illustration of how he treated honest men. Nubar had been his chief financial emissary in connection with some of the earlier loans; but Ismail, dissatisfied with his efforts, threw him over about 1866, and he had to keep clear of Egypt for some years. But when in 1875 Ismail, having pledged every available asset to his creditors, and sold the Suez Canal shares to the British Government, found himself at last forced to appeal to Great Britain for the advice of a financial expert, and Cave's Mission and Report were followed by the Goschen-Joubert inquiry, it was to Nubar Pasha that the foreign experts turned, as practically the only Egyptian (and he was an Armenian by birth) who had at once the knowledge of the intricacies of Egyptian financial methods and the common honesty which European financial methods assume.

The tale of the conversion of the Egyptian State Debt from a hopeless burden on a bankrupt land to a very moderate mortgage on a valuable estate is too long to be told here, but the outstanding features of the history may be briefly outlined as follows: In the first place, the whole success of the conversion was due not entirely to the honesty and industry of those who carried it through, including the political and financial heads of the country as well as the irrigation engineers, but also to the extraordinary luck which raised the value of Egypt's chief crop (cotton) to an altogether unheard-of figure. In the second place, the success was achieved not only without the assistance of Ismail, but actually in spite of his continual opposition, which was none the less strenuous for the fact that it was always underhand. Ismail was always past-master of the art of intrigue, and when Western methods failed him he had not the slightest objection to adopting others, as, for example, when, within a few miles of Cairo, brigands in his employ held up a train from Alexandria carrying funds to the Ministry of Finance, and deliberately removed the contents to his palace at Shubra. At another time public riots in Cairo, for which he was certainly responsible indirectly, if not directly, proved a convenient excuse for getting rid of the Ministry of Nubar Pasha and Sir Charles Rivers-Wilson, which, in Ismail's opinion, had lasted long enough. But that time Ismail overreached himself. The European Powers had stood him long enough, and on June 26, 1879, Ismail found himself ignominously compelled to hand over his Crown to his despised eldest son, Tewfik. Next it is to be noted that the original creditors in the long run proved to have been too well treated. Could it have been possible for anyone to forecast in 1876 the future of the Egyptian cotton crop, and to buy up the Egyptian creditors' claims at their market value then, he would probably have found them willing to accept about 5s. in the £ cash down; but they were all paid in full, and sometimes a good deal over, in converted stocks, which, though they bore a lower rate of interest than the original debts, have since proved of infinitely greater capital value. But if the creditors did well, it must in fairness be admitted that so in the long run did Egypt, for it was the Debt that brought Europe into Egypt, and that was indeed an ultimate blessing, from a financial point of view at least.

It remains only to note how in the long run European control came to be British control, and how the British Occupation became a British Protectorate. Again the causes were partly financial. In the supposed final clearing up of Egypt's affairs by the Law of Liquidation in 1880 certain necessary economies in the army produced a considerable amount of discontent, which gradually focussed themselves in the person of Arabi Pasha. Arabi was certainly little more than a tool, though it has never been clearly shown whose was the hand that held the tool; but his revolt would probably never have become serious had not an accidental *fracas* in Alexandria led to riots there and throughout the country, in which a number of Europeans were killed. That proved the last straw, and as France did not see its way to join in measures of the necessary severity, England took such measures single-handed, and the bombardment of Alexandria, the battle of Tel-el Kebir, and the British Occupation of Egypt in 1882 marked the beginning of a new chapter in Egypt's history.

Egypt, however, was by no means yet free of troubles and tragedies. Of the latter, the greatest and least necessary was Gordon's second expedition to the Sudan and the failure of the relief expedition to reach Khartoum in time to save him. But Egypt's share of the cost of that expedition once more proved enough to upset her financial balance, and again her finances came under a European inquiry and rearrangement. Then came the last great struggle against bankruptcy, when for three years Lord Cromer and Nubar Pasha had to adopt every possible expedient, and some which we would hardly consider possible nowadays, to make ends meet. They were given three years to do it, and they only succeeded by the barest possible margin at the last moment, when on December 31, 1888, they contrived to square the accounts by postponing the payment of all the officials' salaries to the following day, which meant the next financial year; and ever since then salaries in Egypt are paid, not on the last day of the month, but on the first day of the following month.

Since 1888 Egypt's progress has been steady and rapid. Administrative reforms which had been under consideration since about 1875, but which, owing to political and financial difficulties, had been in abeyance or only partially enforced, were now, under British authority, gently but firmly imposed upon more or less unwilling native Ministers. Money was found for irrigation schemes which rapidly repaid their cost and much over, and, in spite of the cost of the second Sudan campaign, which terminated with the battle of Omdurman in 1898, Egypt was able in 1904 to get rid of most of the fetters which international creditors had imposed upon her (for her own good) nearly twenty years earlier.

Events since then are too recent to require retelling as history. The four years' interregnum which followed Lord Cromer's retirement in 1907 only served to prove in record time the utter unfitness of the Egyptians to govern themselves yet; and the decision of Khedive Abbas II. to throw

in his lot in the summer of 1914 with German influence at Constantinople proved, what had long been suspected, his incapacity to be even the hand by which England would rule the country. His removal and the declaration of a formal British Protectorate over Egypt will be only the beginning of the end of the old system of international control. The Capitulations, the Mixed Courts, and the Caisse de la Dette will go as soon as the authorities have time to work out the details of the new institutions which are to replace them; but that will take time. The new ruler, Sultan Hussein, can be relied upon to combine the friendliness to England of Tewfik with the shrewd common sense of their common father, Ismail, and their grandfather, Mohammed Ali.

In conclusion, it is indeed a strange turn of fate that Ismail's favourite son, for whom he fought so hard and spent so much to gain the alteration of the succession and a higher title, should be placed on his father's throne nearly forty years after Ismail's deposition by that very British Government which Ismail all along thought to make use of when it suited him, and to throw aside as soon as he was strong enough; that to do so the British Government had to set aside the very order of succession for which Ismail fought and revert to the old Turkish law of the nearest male agnate, and that to the position which the father had coveted for him so long ago they added a title which Ismail in his wildest dreams would never have dared to hope for, the title of his own master, Sultan.

[Previous articles in this series appeared in THE NEAR EAST of August 20 and September 17.]

SIR EDWIN PEARS ON TURKEY AND BULGARIA.

On Monday last Sir Edwin Pears delivered an address before the members of the Conservative and Unionist Women's Association at 8, Hereford Gardens, W., his subject being "Political and Social Conditions in Turkey." He briefly retold the story of the Turkish people from the earliest times until A.D. 1683, when their empire covered, besides their possessions in Asia and North Africa, the whole of the Balkan Peninsula, southern Russia, and Hungary. In that year the siege of Vienna by the Turks failed, and from that time on the story of the Turkish Empire was one of continual decline in extent and power. The Turk had never shown any capacity for the government of subject races; he believed himself to be of a race divinely appointed to dominate his despised Christian subjects. His idea of government had usually been to suppress any rising by massacre, though he had improved in that respect. The massacres of the nineteenth century were less terrible than those of the eighteenth, and those of the eighteenth less terrible than those of the seventeenth century. Of the three great massacres of the nineteenth century, Greeks, Bulgarians, and Armenians had been the victims, and on each of those three occasions Englishmen and Frenchmen had protected and assisted the persecuted population; but he could not recall a case where a German had ever done so.

Speaking of the events that had led up to the present position in Bulgaria, he mentioned that King Ferdinand was an officer in the Austrian army before he became ruler of Bulgaria, and had always been under Austrian influence. After the war of the Balkan League against Turkey there were differences between Bulgaria and Serbia, but these had been settled by the Premiers of the two countries, when General Savoff, the Bulgarian commander, came in with new conditions. The Bulgarian Premier, M. Gueshoff, declined to have anything to do with these new conditions, which he foresaw would cause war with Serbia. War did, in fact, take place, with the result that Bulgaria, who had fought the hardest in the war against Turkey, found herself with by far the least accession of territory. He (Sir Edwin) did not believe that the Bulgarian people wished now to fight Russia or England; he believed that if an honest vote could be taken there would be a nine-tenths majority against any such course; but a trick had been played upon them. All classes there were irritated at the losses inflicted by the Treaty of Bucharest, and were accordingly hostile to Greece and Serbia. They did not know that the losses and the war itself had been brought about by Austria, using Ferdinand as a tool, and they did not see that in fighting Serbia and Greece they were fighting Russia and England. If hostilities could be staved off for a few days he still hoped that an awakened country would make its voice heard and its will prevail. If diplomacy was energetic, means might yet be found of letting it be known that the Entente Powers were all determined to do justice to Bulgaria. The danger was that we might drift into war through neglecting to counteract the machinations of Germany.

HOSPITAL EXPERIENCES IN SERBIA.

Major Morrison, some time Surgeon-in-Chief of the third military hospital at Skoplje, recounted his experiences in Serbia at a meeting of the Medical Society of London on Tuesday last. He said that a few weeks after the declaration of war he had been invited by the Order of St. John to take charge of their proposed Serbian Hospital expedition. That expedition was united with another sent by a Serbian relief fund, and, thus combined, numbered about fifty members, comprising medical staff, dressers, nurses, orderlies, and wardmates. It sailed on October 29, arrived at Skoplje on November 17, and received its first consignment of wounded a week later. This contingent numbered 180 men, who were in a shocking condition. Many of them had not been able to change their clothes for months, and their wounds had been untended for a fortnight or more. Their clothing was infested with battalions of lice. A large proportion of them were suffering from septic compound fractures, and many had gangrenous feet. All chilled, in spite of fever, and half-famished, they had surely sounded the depth of human misery. But in less than four hours they were all tended and fed, stripped, washed and shorn, treated surgically on simple lines, and put to bed, precedence being given to those who were manifestly the most seriously ill. Within a few days the hospital was full. Nearly all the earlier patients were septicemic in an extreme degree, and in some there was added the complication of recurrent fever (typhoid or dysentery), while five developed lockjaw, which ran a rapidly fatal course. In the early days of the hospital the volume of surgical work meant high pressure for the two surgeons, and the day's quota was not always finished by midnight. Other parties from England had followed his to Serbia, and some groups had returned, the net result being that at the end of March there were over 300 of such British workers, men and women, in the country. America was also strongly represented, and other countries sending helpers were Russia and Greece.

THE SITUATION IN THE NEAR EAST.

Speaking at the Services Club on Friday last, Mr. L. S. Amery, M.P., said that if Germany could, with the help of Bulgaria, break down the resistance of Serbia, and so get into contact with the Bulgarian Army and, through Bulgaria, with Turkey, unlimited ammunition would be available for the Turks at the Dardanelles. Our position there was extremely difficult; but the one mitigation of the difficulties of our troops was that, although the Turks could cover almost every inch of the ground with shell fire, they had not many shells. But once the little wall that Serbia had put up was broken down, we should have to face a new situation, in which the Turks would have unlimited ammunition. They would also have new rifles for their army in Macedonia and for the reinforcements needed for a second attack on Egypt and the Suez Canal. The difficulty that the Turks had had to face all through was that of obtaining munitions: anything from half a million to three-quarters of a million of Turks could be turned into soldiers if rifles and guns were forthcoming; and if Germany could get into contact with Turkey she would be able to put into the field that number of well-drilled and well-equipped Turkish troops. There would also be free passage from Germany to Persia (already in a very serious condition), to Afghanistan, and to the North-West Frontier of India. One enormous advantage that the control of the sea had given us was that of blockading Germany and keeping her from essential supplies of foodstuffs and raw materials. But on the day on which Germany and Bulgaria joined hands the wheat harvest of Bulgaria, the wheat, maize and barley harvests of Turkey, and other such supplies would be free to pour into Germany. With Roumania completely isolated we could not hope that Roumanian supplies of wheat, maize, and petrol would not go to Germany as well. Vast mineral resources in Asia Minor would be available to Germany, also a copper mine in North-Eastern Serbia that had just begun to be effectively exploited. Cotton could be grown in Mesopotamia, and might be available by the time our belated policy of cotton contraband began to take effect.

Bulgaria's decision was the result of her desire to get territory now held by Greece and Serbia. Another consideration was that she believed that if the Allies won Russia would be installed at Constantinople. Bulgaria preferred that Constantinople should remain in Turkish hands, because she hoped that some time in the future it might fall to herself. In addition to these factors, it must be remembered that King Ferdinand believed that the Central Powers would win. As to Greece and Roumania, their sympathies and interests were both with the Allies, but they were in a difficult position, and in considering their action we should look at matters from the point of view of small States with everything at stake.

RUSSIA AND THE BALKANS.

At University College, on Monday, Professor Lyde delivered an interesting lecture on "Racial Frontiers of Europe." Referring to the Balkan States, he said that the Bulgarians furnished the finest type of men, and should have an extension of territory and readjustment of frontier. The Albanians were less capable of being assimilated, while Serbia was the most shut-in country of all, although holding the common trunk of two important gorges. Of course, the Balkan States were a great feature before the world now, and his opinion was that the Power most interested in its waterways should be the predominant Power there, and he gave the decision in favour of Russia.

PERSIAN GULF MEDALS.

The medals for the operations in the Persian Gulf, 1909-11, numbering 7,000, are now being distributed. Nearly 200 of those who earned them are known to have died since, and the medals will be issued to their relatives.

THE PRESS ON THE NEAR EAST.

Double Treason?

Mr. Hilaire Belloc devotes a considerable portion of an article in the *Illustrated Sunday Herald* (October 10) to a geographical examination of the Balkan States, together with a statement of the various religious differences that separate the inhabitants of each group. In referring to the Treaty of Bucharest, he lays particular stress upon the attitude of Austria at that time, and shows that Austrian diplomacy was directed primarily to keeping up a lasting feud in the Balkans, thus preventing a firm union of the States which could resist the German race on the one side and expel its old Turkish masters from Europe on the other. Coming to the Bulgarian question of to-day, Mr. Belloc writes:—

I think that the indignation of the Bulgarian people at the loss of these fellow-citizens of theirs is being exploited indeed in the interests of Germany for the moment by Ferdinand, but that a much longer view ahead is taken by him than by his contemporaries.

After dealing with the obvious advantages which Germany secures by Bulgaria's intervention on her side, the writer proceeds:—

The King of Bulgaria is probably acting thus precisely because he thinks the Austro-Germans have now no longer a chance of winning the war.

He knows (as does everybody in this country) that the enemy's effectives will probably begin to decline next month, and will certainly begin to decline not later than the end of the year. He perceives, therefore, that the Austro-German anxiety will begin to become acute in quite a short time. He purposes to use them, I take it, to his own advantage for the moment. Having secured the territory his people covet, having given to the enemy that road to Turkey which they have so long desired, he will watch the increasing difficulties in which the Germans and Austrians will find themselves with the progress of 1916, and, already in possession of all that his act of treason can give him, he will commit a second act of treason and will appeal to the Allies.

The Future of Turkey.

In an article dealing with the new outlook induced by the entrance of Bulgaria into the war, the *Spectator* (October 9) sympathises with the Bulgarian nation as a whole, but points out that once the fatal step is taken nothing can save her from the consequences of King Ferdinand's evil deeds falling upon her. "When the war is over it will be Russia and not Turkey who will be Bulgaria's neighbour at Adrianople and on the Bosphorus." In turning to the Grecian crisis the writer admits that it is as yet difficult to understand its full bearing upon developments, but thinks that there is full time and opportunity for the people to realise the situation, and that if the voice of the people makes itself fully heard the King will follow the general wishes of the country. In dealing with the rival claims of Turkey and Bulgaria in the light of promises made by the Central Empires, the article continues:—

In all probability the Turks will soon realise that the Germans are more likely to pay Bulgaria than them. The Germans, when Turkey has been made as much use of as possible, will be very glad to find an excuse for getting rid of their obligations to her. They do not intend to make Turkey once more an independent Power. Her provinces are too valuable for that. Germany wants Egypt for herself and not for Turkey. The same thing applies to the best parts of Asia Minor and Syria. If, therefore, Germany wins, she will prefer to keep faith with Bulgaria. No doubt the heavily bribed leaders of the Young Turks will not be in a position to make a protest; but when the true significance of what has happened at last dawns upon the Turkish people and the Turkish army, and they find they have been sold twice over, they will show the passions of their kind.

In regard to Roumania, this writer thinks that her statesmen will realise that "if it is a question of looking for German favours Bulgaria has obviously stepped in before them, and that there is not room in the Balkans for two Powers to play the part of the pet and *protégé* of Austria and Germany."

The Greek Crisis.

The *Referee* (October 10), in an article headed "The Iron Hand for the Velvet Glove," comments upon the inequality of the weapons with which the diplomatic war has been waged between Germany and the Allies in the Balkans. "A soft-gloved hand is no match for a mailed fist." In the paragraph we quote the writer sums up the conclusions of his paper on the situation, conclusions which, it may be remarked, appear to have been arrived at by a large number of British journals, although they have not been set forth in so straightforward a manner:—

King Constantine has taken the way imperiously pointed out to him by his forceful brother-in-law's uplifted sword, and, instead of wasting unavailing regrets over a rudely-shattered illusion, it behoves the Allies to have done with words and trust only to the strength of their right hands and the keenness of the sword of justice. Under the influence of crafty advisers, no doubt, the King of Greece has chosen to renounce his honourable obligation—has refused, on the ground of a quibble, to help the companion of his victories, although he shares his Ally's danger, and may have to dree his weird alone and uncommiserated.

The *Pall Mall Gazette* also goes straight to the point in the following paragraph, quoted from a recent leading article:—

We have discoursed *ad nauseam* to the Balkan peoples upon our own high-mindedness and benevolence. It is time to demonstrate that we have the means of backing them and the will to override opposition. The moral support which the Greek nation requires in order to insist that its purposes shall be realized and its government carried out in a truly constitutional manner can be most usefully tendered in the diction of military and naval strength. The pathway into the present maze has been paved with good intentions. The exit from it can be achieved only by unhesitating self-assertion.

The *Manchester Guardian*, on the other hand, advocates the continuance of diplomatic methods, such as have been in progress for months past. In referring to a statement, emanating from French official quarters, that seemed to imply that the Allied forces would push forward to the assistance of Serbia, "in the teeth of serious protest and opposition from Greece," this paper says that "the political arguments for further consideration are so obvious and so strong that they need not be set forth here." The writer continues:—

The proper course would appear to be at once to enter into negotiation with the new Ministry which is now being formed, and on which M. Venizelos, though he will not be a member of it, is bound through his command of a Parliamentary majority to have a great influence, and, if possible, to come to a friendly understanding with it which, while not involving any necessary breach of Greek neutrality, would yet leave the situation an open one, and enable us to give effectual help should the need arise to Greece's ally, Serbia, and to strike an effectual blow for the liberty of the Balkans.

The Albanian Road to Serbia.

In its review of "The Events of the Week" the *Nation* (October 9) takes a properly serious, but not an alarmist, view of the situation brought about by Bulgaria's intervention. It thinks that "it would pay Russia to secure the adherence of Roumania, even at the cost of Bessarabia"; but holds, wisely, that rather than reckon upon the co-operation of Roumania or Greece, "it is best for the Powers of the Entente to depend upon themselves."

They cannot afford to leave their armies in the air, and, although it is incredible that Greece, with a country so terribly at the mercy of sea-power, should definitely side against us, it would be well to be prepared for all eventualities. Both Albania and Monenegro are countries with practically no railway system, or it would have been better to have landed at one of their ports. This would have been an admirable solution of the problem, since an advanced base could have been made at Antivari or Alessio. And with plenty of motor transport this may still be the best way of dealing with the situation. The Turks had to cope with greater difficulties in their advance against the Suez Canal. Yet they brought across the Sinai Peninsula a force of some 12,000 men, with pontoon sections, field batteries, and two 6-inch howitzers, and, what is more, took their beaten army with all its guns back again. With Italy and Serbia both interested in the opening up of northern Albania, it would be to their interest to lay a light railway to the Serbian railway system, and Italy could well undertake this work. The German engineers have probably laid some hundreds of miles of railway in the east and west, and in the west the Allies have on several occasions been compelled to lay new roads. At any rate, what Turkey can do surely the Allies can achieve, and it would be as well to have a safe exit somewhere. Further, as a French contemporary suggests, there must be no driblets. If the expedition continues it must be in force.

It is, perhaps, rather a novel idea to think of learning from the Turks. But if they can teach us, why not? The plan indicated certainly appears worthy of consideration.

Hungarian Persecutions.

Some of our readers are perhaps acquainted with the brochure written by Professor R. A. Reiss, of the University of Lausanne, entitled "Comment les Austro-Hongrois ont fait la guerre en Serbie." Whoever has done so must have been strongly moved by compassion and indignation by the recital of the atrocities committed by the Hungarian troops. And the same feelings will be experienced by those who read the article, "L'Autriche-Hongrie en Guerre contre ses Sujets," contributed by MM. Pierre Lanux and Milan Toplica to *La Revue Hebdomadaire* (September 4). The subject is almost the same; for the criminal has not changed and the crimes are very often of the same character; but the Austrian Government and the police take the place of the army, and it is in the Austrian empire that the crimes are perpetrated. The Austro-Hungarian Administration persecutes the Serbs, Croats, and Slovenes, its own subjects, in every possible way, simply because these poor people are of the same race as the Serbs of Serbia. It is impossible to give an adequate summary of this article, as it is impossible to say which part of it is the most important. All the evidence cited is important.

"In Bosnia," we are told, "before any mobilization, the police imprisoned more than 5,000 Serbs without any plausible pretext. . . . In Dalmatia all the prefects of towns, and almost all the people's representatives, were imprisoned . . . and at Marburg alone 332 Dalmatians were imprisoned. . . . In Istria sixty-seven Catholic priests and four deputies met the same fate." After a long list of families driven out of Bosnia alone in the month of March, we read: "In scarce a month the Government of Bosnia expelled 5,260 Serbian families"; and further on: "The number of Bosniak refugees in Montenegro alone amounts to 70,000." A few pages further on we find testimony no less eloquent: "An engineer saw with his own eyes at Trebinje (Bosnia) thirty-seven people led off to the gallows at one time; amongst them were six women. . . . A military chauffeur almost fainted in passing along a road at Trebinje along which every tree bore a victim." And so forth. It is to be noted that all the examples given in the article "are selected—the authors guaranteeing them and providing their proofs—after most strict investigation."

The better to understand the tragic fate of the hapless Jugoslav people, it must be borne in mind that while the families in the country are being thus treated, the sons of these same families are forced to fight in the ranks of the Austro-Hungarian army. We see what effect this produces upon the Jugoslav soldiers when they return home:—

Wounded in a battle, a Serb of Syrmia, an Austrian soldier, obtained leave to return to his home. But, arrived there, this is what he found: his father had been hanged on a charge of high treason, his mother had been driven from home, two of his brothers had been killed at the front, and the last two were still fighting *for their generous Sovereign.*

German Humanity.

In the course of a powerful indictment of Germany for her share of the responsibility for the latest—and greatest—of the Armenian massacres, the *Nation* says well:—

Germany's responsibility for this crime is direct. She is admittedly indifferent; it is charged against her in the United States that some of her consuls have aided individual massacres. In her Pagan mood she dissociates herself from Christian humanity; nevertheless, she stands to-day under a load of guilt unexampled in modern history.

When it occurs to them that some neutral force, which they must respect, objects to their holding the garments of the murderers of the Armenian nation, the Germans will probably try and dissociate themselves from this crime. But Count Reventlow's endorsement of it is no more than the sequel of the Kaiser's effusive tender of friendship and patronage in 1898, and his ensuing visit to Constantinople, which an ugly monument commemorates. Turkey and Germany first clasped hands over the Hamidian massacres. No other European Power could then have touched Turkey; and Germany's persistent courtship of her was the first definite act of policy which culminated in the dragonnades of last August. It will be interesting to see what the leaders of Catholic and Protestant Germany will have to say. Is this also a case in which "might makes right"?

British in the Balkans.

In a leading article on the "Outlook in the West and East" the *Daily Chronicle* (October 11) forecasts the probable plan of campaign which will be adopted by Germany and her allies in the Balkans, and is emphatic concerning the need of prompt and sufficient assistance being sent to Serbia. "It is impossible not to send troops; honour and interest seem quite unmistakable on the point; and it would be the height of folly to send too few." The writer reserves all comment upon the relation which the new campaign must bear to that of Gallipoli beyond remarking that, even if the offensive is suspended, the presence of our troops will detain a large number of Turkish effectives on that front. We quote the concluding paragraph of the article:—

The arguments for throwing a large force through Salonika promptly can hardly be over-stated. Politically it would certainly make a great difference, and very probably all the difference, to the final attitude of Roumania and Greece; and the attitude of Bulgaria herself could scarcely be unaffected by it. The occasion seems emphatically one for us to act strongly and rapidly, and, if necessary, to draw pretty heavily on our reserves for the purpose. If we do not we run a great risk of seeing the Balkan area of the war transformed into the decisive area, and in it the war decided against us.

"The Suffragette" on Serbia.

The *Suffragette* for October 1 makes a sympathetic reference to Serbia in its review of the week:—

Victory and long life to Serbia, beloved and gallant ally! . . . Serbia and her people have compelled the admiration and love of this country. Their heroism and their golden-hearted loyalty have dispelled the mists that Germanism, for purposes of its own, had tried to interpose between ourselves and Serbia. The long Serbian struggle for freedom, independence, and right is one of the most glorious in human history. We are glad that our country is helping to write this last and triumphant charter of Serbia's centuries-old crusade for national liberty.

Cities of the Balkans.

In an article entitled, "A Railway Journey," Mr. R. A. Scott-James describes in the *Westminster Gazette* (October 7) much of the country of the Near East that is absorbing the interest of Europe at the present moment. The first paragraph quoted refers to the Plains of Hungary:—

For mile after mile, hour after hour, the traveller moves through perfectly flat but very rich, well-tilled, and well-wooded country. From time to time appear the remains of old castles and little white church towers, survivals from the Middle Ages. And there are crosses, many of which mark the spot where of old the Christians fought against the infidel Turk. Might not one expect the buried to cry out against this new unholy alliance between infidels and Huns—Huns in the strict sense—against the civilization of the West?

The writer describes the country in Serbia where the railway leaves the Danube and turns south among the mountains as the "Arcadia of modern Europe."

Silver streams leap down green-carpeted valleys, and rustic bridges and paths lead you from meadow to woodland and woodland to meadow, and little clusters of brown houses, shaded by trees from the sun, and sheltered by the mountains from the fiercer winter gales, are the dwelling-places of peasants who still wear their gay national costumes. Every hill is the home of a deity who has become, often enough, a saint, or is sacred to the memory of a national hero.

In describing the Bulgarians the writer speaks of them as being energetic, passionate, capable, and often reckless, and of their capital he writes:—

Sofia strikes one as a new town, though it has a long history behind it. It has a tramway system of its own. It has big, square, uncouth public buildings, and two modern hotels, with cafés on the ground floor stretching, Parisian fashion, into the street. It seems ridiculously small to be really the capital of a powerful nation, and Cabinet Ministers live in houses that we should call cottages.

Articles to Note.

"Jerusalem and the War," by Miss Annie E. Landau, in the *Jewish Chronicle* (September 24).

"Czar Ferdinand and the Balkan Crisis," in the *World* (October 5).

"The Imitation of Napoleon by the Germans," in the *Contemporary Review* (October).

"Germany's Railway Grip on Asia Minor," by L. Morton, in the *Windsor Magazine* (October).

"Orsovo," by J. M. Dodington, in the *Badminton Magazine* (October).

"A History of the War," in the *Fortnightly Review* (October).

"Obiter Dicta," in the *British Review* (October).

"A Maid of Modern Athens," by Athena Pretenderis, in *Vanity Fair* (October).

MR. BALFOUR AND THE ARMENIANS.

In reply to an invitation, addressed to him by Mr. T. P. O'Connor, M.P., on behalf of the Committee, to attend the inaugural meeting of the Armenian Refugees' (Lord Mayor's) Fund at the Mansion House to-day, Mr. Balfour has written the following letter:—

"Admiralty, Whitehall,
"October 6.

"My Dear Mr. O'Connor,—I am very sorry that the pressure of public work puts it out of my power to take part in your meeting next week. I earnestly hope it will be a success. In the midst of all the horrors of this war nothing, I think, is more horrible than the treatment meted out to the wretched Armenians by the Turkish Government, who claim to represent Progress and Reform. It is a crime which surpasses the worst deeds of their predecessors. As they are entirely dependent for support upon the Germans, the latter surely could, if they would, put an end to so disgraceful a condition of affairs; and I should hope that the German-Americans, who must be anxious to save what remains of Germany's good name, would use their influence to check the further continuance of these purposeless barbarities.—Yours sincerely, "Arthur James Balfour."

THE SPIRIT OF SERBIA.

Speaking at the Royal Victoria Hall on Tuesday last, Dr. Seton Watson said that as the result of our grave miscalculations and sins of omission the fate of Serbia hung in the balance, with, as he believed, that of the whole future of the Entente and the British Empire. In mediæval times Serbia had blocked the way to the Turkish invaders, and now she was the last obstacle to the achievement of the programme that Germany had long thought over secretly and was now boastfully proclaiming, of extending her authority from Berlin to Baghdad. Only prompt, energetic, and spirited action could save us from disaster.

Dr. Watson told several stories illustrating the spirit of the Serbian people. One was of a young soldier who, at the time of the last Austrian invasion, lost heart when things were at their worst, deserted, and went home to his native village. Here his old grandfather met him, and said: "What do you mean by coming here? No member of my family has ever fled from the battle-field. Go back, or you will have my curse and not my blessing." The young man returned to his regiment, where the colonel told him he would overlook the act of desertion, but bade him never to forget the words of his grandfather. Then came the great advance, and the young man captured a flag. He came back badly wounded, and, handing the flag to his captain, said: "We are near to my village, now. Tell my grandfather about it." He died, and was buried on the field. The next day, when the village was reached, the old man was found on his death bed, brought there by the ill-treatment of the Austrians because he had refused to be their guide to Kragujevatz.

AUSTRIANS ATTACK MONTENEGRO.

Sir J. Roper Parkington, Consul-General for Montenegro, has received the following official telegram from Cettinje:—"On Saturday last the Austrians commenced an attack on practically the entire Austro-Montenegrin frontier. Attempts were made to cross the Drina in three places, but were vigorously opposed by our troops operating in Bosnia; at the same time the Austrians attacked Prahovo, but were repulsed with great loss."

GERMANY AND TURKEY.

In the current issue of *La Vita Italiana* Signor Paolo Orsini discusses the brand-new Teuto-Turkish alliance from an historian's standpoint. Why, he asks, has a European Power, which was the last to enter the turbid sphere of Eastern politics, ousted all rivals? An answer is to be found in Germany's internal condition, and in the later phases assumed by the perennial Eastern question. Fifty years ago the Fatherland was split into seven independent States, subject now to Austrian and to French influence. Prussia alone knew her own mind. Under Bismarck's guidance, she secured the leadership of a united Germany at the cost of two successful wars. But she was still too remote from Turkey to meddle with Eastern politics; and when at length she came into direct contact with affairs of the Orient at the Berlin Conference of 1878, Bismarck declared that "the Balkans were not worth the bones of a Pomeranian grenadier." While professing perfect disinterestedness, he schemed to secure a footing for Germany in the Near East. He checkmated Russia by helping to destroy the Treaty of St. Stefano, and diverted Austrian attention from German politics by assigning to her the guardianship of two Turkish provinces.

William II. has reaped where Bismarck sowed. His design is simple enough, despite its grandeur, and it has hitherto succeeded because he pursued it with sleuth-hound tenacity. To Austria, he gave the task of Germanising the Balkans; for himself, he reserved the colonization of Asia Minor, and the construction of a railway which would link Berlin with the Persian Gulf. His dream is an Empire far exceeding that of Alexander, and serving as a stepping-stone to world-dominion. It may seem that of a megalomaniac, yet it might have materialised had not his ambition brought forces into the field which must ultimately prevail against him.

Signor Orsini traces the successive steps by which Germany has risen from the status of suppliant for a share in Eastern commerce, to become the virtual ruler of Turkey. He points out the immense advantage with regard to the ex-Sultan which her unique position secured. Alone among the Great Powers she did not ostensibly seek territorial aggrandisement at Turkey's expense. While others exasperated the umbrageous despot by demanding reforms, or protesting against his massacres, Germany posed as his protector against Western aggression. So William II. slowly wormed his way into Abdul Hamid's confidence, and finally became indispensable. The Turkish army was remodelled and armed by von der Goltz; Marschall von Bieberstein and his myrmidons proved more than a match for the diplomatists pitted against them by England and France. When the setting was made ready for his theatrical entrance, William II. embarked on a new crusade. In one of Islam's Holy Places he stood forth as a close ally of the "Khalif," and protector of Moslems throughout the world. Such perseverance in the teeth of tremendous difficulties must wring a tribute of admiration from Germany's foes. But they should realise, ere it be too late, that the Kaiser's ambition to rule the world from the ancient seat of empire will be thwarted only if they, too, display a similar resolve to conquer at all costs.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The turn political events have taken in the Balkans must needs reflect on the economic situation. This, as far as the Near East is concerned, is as bad as it possibly can be. Germany has been wanting copper for munitions, and now she is penetrating into Northern Serbia, where one of the richest copper mines in the world is situated. Months ago I pointed out in these columns that we—the Allies—should do our utmost to keep the Germans away from this mining district; but we did nothing until a few weeks ago, and then only in a half-hearted manner. It is a pity!

***

Bulgaria, on the other hand, claims that she has joined forces with the Central Powers because she can only dispose of her grain crops at fabulous prices to Austria and Germany. Perhaps it is the last crop she will ever dispose of. But, in the meantime, it is regrettable that we were unable, with our huge resources, to make her a serious, tempting bid for her crop. It could easily have been shipped at Dedeagatch on friendly bottoms and have been dispersed throughout the world at little pecuniary loss to ourselves. As it is, Germany and Turkey, short of cereals, acquire this year's Bulgarian harvest at fancy prices (long credit and no security) merely for the asking.

***

As for Greece, her attitude is enigmatic. Italy is no friend of hers, and our pro-Bulgar attitude has given the German propagandists an excellent opportunity for villifying us in the eyes of the Hellenes. There is only one consolation, and that is that, in spite of all our diplomatic blunders in the Near East, it is inconceivable that Greece should side with Bulgar and Turk, her two natural enemies, against us. Elsewhere we reproduce extracts from interviews between a representative of the *Morning Post* and three well-known members of the Anglo-Greek community in this country. I have, also, within the past few days spoken to various Greek business men resident in this country, and they are unanimous in stating that between Greece and Bulgaria there can be no friendship until Bulgaria is brought to her senses, until she relinquishes that domineering spirit of Prussianism-let-loose which has characterised her in the past to the detriment of her neighbours.

***

Roumania's attitude is likewise enigmatic. She has no open seaboard, and her exports, unless they be directed up the Danube or across the Black Sea, have no outlet. No wonder, therefore, that she should be at some loss to dispose of her oil and grain, and that reports reach us that Germany is likely to be a heavy purchaser. Here, again, we must be careful and circumspect. If Roumania is to strike (on our side) she will want guarantees, and one of these is that when the settling day comes her position should be improved in such a way as to ensure her a free outlet for her products to the sea. It is not my intention here to examine how this can be done, but it will have to be done if peace is to be maintained in future in the Balkan Peninsula.

***

The task undertaken by the Committee of the British Refugees from Turkey Fund is decidedly up-hill work. Some time ago, I have been given to understand, a few circulars asking for subscriptions to this useful fund were sent out to some of our leading firms interested in the Turkish market. Results were deplorable; there was one favourable reply, three refusals, and the remaining firms, perhaps a dozen in number, gave no reply at all. This is regrettable. There are many British refugees from Turkey, who, owing to the war, are in straitened circumstances. The majority of them were in business before the war broke out and were good clients of British firms. Could not these latter, therefore, respond now by helping the former in their hour of need? I am sure they could—and would—if the matter were ventilated, and I appeal to them now. All donations should be sent to the British Refugees from Turkey Fund, Lowndes House, Lowndes Place, Belgrave Square.

***

In connection with the references made by Sir Edward Pears to the mismanagement of our affairs in Constantinople, and to the fact that no redress was obtainable from either Consulate or Embassy, Mr W. S. McGregor, of the Imperial Ottoman Gas Works, writes to the *Daily Mail* in support of Sir Edwin Pears' contention, and says: "I am speaking feelingly, as possibly Sir Edwin Pears may remember. A contract made in England was repudiated by the Turks when it suited them in favour of a German (over £500 was due), and the only satisfaction to be had was that the Embassy had done their best and could not recover. Mr. Morgenthau, the American Ambassador, said: 'Had you been a German, Russian, or even an American, your just claim would have been paid in twenty-four hours.'"

***

Leaving the question of diplomatic incapacity to be discussed elsewhere, a few words anent the Consular Service may be said here. For the past four or five years, ever since THE NEAR EAST first saw the light of day in its present form, the failings of our Consular Service have been pointed out, and we have urged reforms. We have, in this respect, erred in good company, but all to no good. There is a sacred *noli me tangere* halo surrounding the service that makes it invulnerable; it is bound and laden with chains forged by centuries of red-tape to formulæ and prohibitions that are worthless; its members, more often than not, are "delightful fellows"—sociable, pleasant and kindly when off duty, but keeping strictly within the meshes which surround them when on duty. In the Consular Service it is, therefore, not the men who are generally to blame, but the whole system, which is antediluvian, fossilised and archaic. Compared with the activity and thoroughness of the German and American systems, it is dead, of no use to traders as a body, and therefore heartily condemned by them. Still, it exists, and will continue to exist, owing to Foreign Office indifference and red-tape conservatism, unless the whole business community of the United Kingdom rises up against it. Until this happens, no administrator in Downing Street will trouble the placid, somnolent waters of our great Consular Service.

***

As predicted in these columns two weeks ago, when opposing the increase of the half-penny postcard rate to one penny, the Postmaster-General has wisely dropped his proposal. I congratulate Sir Adolph Tuck, and those associated with him, in keeping the postcard down to the old rate. Had they not been successful, the illustrated postcard industry in this country would have been ruined. While on this subject, I should like to state that when in Belgrade last year, four months before the war broke out, one of the very few travellers whom I met representing a British firm was a gentleman working for Messrs. Tuck. He had been all through the Near East, Syria and Egypt, and had done remarkably well with his wares, in spite of the cheaper prices of Austro-Hungarian and German cards. This shows what can be done with travellers if they are actively employed, and it ought to convince other British firms who have hitherto been slow to work the Near East market that, when the war is over, it will be their bounden duty to send travellers thither.

***

The rapid strides made in the woollen industry of India of late years has placed it in the front rank of Eastern trade. The natural advantages of pure wool clothing material in a climate such as India, where the extreme variations of temperature are so treacherous, is fully realised by Indian residents, and enormous mills, employing many thousands of hands, are daily engaged in supplying the ever-increasing demand for woollen clothing materials. In a country where labour and climate are so much against that assiduous care and attention which are necessary in woollen manufacture, it is hard to realise that such a perfect standard of production as exists is possible, yet, without exaggeration, it would tax many of the leading mills at home to improve upon the high-grade quality of Indian woollen goods. The Indian woollen mills are nothing if not up to date. All the latest machinery and scientific improvements are employed in the production of their goods, and the promptitude and precision with which huge orders are dealt with is a source of continuous surprise to business men from home. In the management of the Indian woollen mills are to be found some of the foremost experts in the woollen industry, and it is doubtless not a little due to their knowledge that Indian woollen goods hold their place amongst the leading clothing fabrics of the world. The two principal woollen mills of India are the Cawnpore Woollen Mills Co, Limited ("Lalimli"), of Cawnpore, and the New Egerton Woollen Mills, of Dhariwal, in the Punjab; these two concerns are the pioneers of the Indian woollen industry, and it is to their untiring efforts in a struggle against most unfavourable conditions that the industry owes its present proud position. Both firms publish booklets containing full information regarding their goods, and offer to send copies free to anyone applying for same, as they deal direct with the consumer.

COMMENTATOR.

ENGLISHMAN, with good connections in England and Near East, desires FINANCIAL BACKING to open out, after War, a General Merchants' and Agency Business in Turkey. Several good Agencies in hand, and other profitable business can be secured on proof of financial ability to handle.

Principals or Solicitors only, apply to "AGENCIES," "NEAR EAST," Devonshire Square, London.

Trade Notes.

Egypt.

H.M. Consul-General at Alexandria reports that tenders are invited by the Egyptian Ministry of the Interior (Lunacy Division) for the supply and delivery of miscellaneous supplies (including clothing, bedding, furniture, hardware, slippers, brushes, and other household necessaries) required by the Abbassia and Khanka Asylums at Abbassia, Cairo.

Copies of the specification and form of tender may be obtained from the Director of the Lunacy Division, Ministry of the Interior, Cairo, at which address sealed tenders, on the proper forms, will be received up to November 15. A copy of the specification and form of tender may be consulted by United Kingdom manufacturers of the goods mentioned at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

H.M. Consul-General at Alexandria also reports that tenders are invited by the Egyptian Coastguard Administration for the supply of general stores, including wood, rope, stable necessaries, marine stores, bicycles, and clothing.

H.M. Consul at Cairo reports that tenders are invited by the Egyptian State Railways and Telegraphs Department for the supply of 20,000 oak sleepers and 101,300 pine sleepers. The sleepers must be of very good quality wood and preferably of one of the following species:—European and Japanese oak, Montenegrin, Swedish and Norwegian and Baltic red pine or any other species of oak or pine of equal quality. In default, tenders for sleepers of any other quality of wood coming from Japan, America, India or Australia, would be taken into consideration. Copies of the specification, containing form of tender and form of bank guarantee, may be purchased, price 2s. each, from Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Sealed tenders, on the proper forms, will be received, up to 10 a.m., on December 15, by the General Manager, Egyptian State Railways and Telegraphs, Cairo. The tenderer must forward to the Chief Engineer (Way and Works), Egyptian State Railways, Cairo, samples (in duplicate) of the wood for the sleepers he proposes to supply.

A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer is required to qualify any tender. Domicile (legal) in Egypt is necessary for the contractor. A copy of the specification, etc., may be consulted by United Kingdom manufacturers of timber sleepers at the Commercial Intelligence Branch of the Board of Trade.

A firm in Alexandria wishes to get into touch with Canadian manufacturers of cheese and flour. For further information application should be made to the Canadian Trade Commissioner's Office, Portland House, Basinghall Street, London, E.C.

In consequence of the adjudication held on September 11, 1915, at the Cairo Tanzim Department, for the supply of fifty tons of cement during the period ending March 31, 1916, the offer of Messrs. W. and H. Ablitt, Cairo, has been accepted for £E180.

DELICIOUS COFFEE.
RED WHITE & BLUE
For Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

Tenders are invited by the Director of Coast Guards Stores, Arsenal, Alexandria, for the supply of general stores and clothing required for the year 1916. Specification may be seen and all information obtained at the Head Office, Coast Guards Administration, Bab el Luq, Cairo. Date November 15.

Tenders are invited by the Director-General, Coast Guard Administration, Cairo, for the supply of coal, petroleum, and benzine required by the Service during the year 1916. Specification may be seen and all information obtained at the Coast Guard Magazine, Arsenal, Alexandria, or at the Coast Guard offices at Port Said, Ismailia, Suez, and Damietta. Date December 1.

Sudan.

With reference to a Notice published in April in these columns respecting the requirement of Consular Certificates of Origin for goods imported into the Sudan from certain European countries under a notice of February 11 last, the Board of Trade have now received copy of a further Notice dated July 31, 1915, which amends the above-mentioned Notice by providing that Certificates of Origin, in prescribed form, or other evidence satisfactory to the Director of Customs, must be presented in respect of all goods imported into the Sudan from any port in Greece or Bulgaria.

Malta.

The Board of Trade have received copy of a Government Notice (No. 210), dated September 27, 1915, prohibiting, under Articles 94 and 97 of Ordinance No. 8 of 1908, the importation of cotton seed into Malta from Port Sudan, with the exception of cotton seed required for use as fodder for Sudanese cattle.

Cyprus.

The Board of Trade have received, from the Chief Collector of Customs at Larnaca, copy of a further Order-in-Council (No. 641), dated September 3, 1915, which continues for another period of two years from November 1, 1915, the free importation of motor cars, parts of motor cars and their fittings and gearing, into Cyprus.

The Chief Collector of Customs at Larnaca (the Board of Trade Correspondent for Cyprus) reports that he has set apart a special room at his office for the exhibition of samples, and is prepared to receive samples of goods of United Kingdom manufacture and to bring them before the notice of the merchants in the island interested. The samples most required are for the following goods:—China and glassware of cheap qualities; fancy leather goods; rubber goods of all kinds; leather; cutlery; tools of all kinds, especially those used by carpenters; electro-plated goods; imitation jewellery; buttons of all descriptions; cheap laces; men's and women's wear, especially cheap blouses and underwear; ready-made clothing of all kinds; boots and shoes; umbrellas; parasols; stationery; school and office requisites; paints; oils; lamps; ship chandlery; watches, etc. Samples should be addressed to the Chief Collector of Customs, Larnaca, Cyprus, and should be accompanied by an advertisement card showing the name and address of the manufacturer and a price list quoting terms of payment and prices for delivery c.i.f.

Tunis.

With reference to previous notices published in these columns respecting the prohibition of the exportation and re-exportation of certain articles from Tunis, the Board of Trade are in receipt, through the Foreign Office, of copies of two Beylical Decrees, dated August 31 and September 13, which extend the prohibition to include the following articles, viz.:—

(1) Decree of August 31, 1915:—Woods, viz, mahogany, "okoumé," plane, beech, birch, lime, ash; iridium; osmium, rhodium, ruthenium; wines; receptacles for compressed or liquefied gases, of iron and steel; cotton yarns; cotton rags; and tussah silk, raw, woven or spun.

(2) Decree of September 13, 1915:—Coal; coke (carbonised coal); Sponges, washed and unwashed

SUDAN TRADE IN AUGUST.

The following extracts are from the monthly report for August issued by the Central Economic Board of the Sudan Government:—

Gum.

Nine hundred and fifty-three thousand one hundred and twenty-two kilos of gum, valued at £E27,407, were exported viâ Port Sudan during the month. A report from the Kordofan Province states that the gum season is now over; 26 cantars 99 rotles were sold in the Suk during the month, bringing the total for the season up to 167,389 kantars 63 rotles, which is over 27,000 kantars more than last year and not quite 7,100 kantars less than the record year of 1912-1913.

The following table shows the quantity of gum carried on the Kosti-El Obeid Railway from January to July, 1914 and 1915.

Period.		Quantity. Tons.
January,	1914	747
,,	1915	424
February,	1914	1,198
,,	1915	716
March,	1914	2,198
,,	1915	1,639
April,	1914	1,843
,,	1915	1,961
May,	1914	1,393
,,	1915	2,586
June,	1914	629
,,	1915	1,561
July,	1914	204
,,	1915	593
Total,	1914	8,212
	1915	9,480

Cattle Plague.

Two fresh outbreaks of rinderpest have been reported, one in Kordofan Province and the other at the Experimental Farm, Khartoum North. The latter outbreak is of minor importance. Sennar Province is reported free of this disease. The only other infected district is Kassala, the conditions here approximating those of last month.

Contagious pleuro-pneumonia still exists in the Kosti district, White Nile Province.

The outbreak in Mongalla Province is confined to Government transport cattle and is decreasing steadily.

PARCEL POST TO ROUMANIA.

The parcel post to Roumania by way of France is suspended, but parcels are accepted for transmission to Roumania (1) by way of Archangel, (2) by way of Sweden and Russia, and (3) by way of Norway, Sweden, and Russia, at the following rates:—

	Via Archangel.	Via Sweden and Russia.	Via Norway Sweden and Russia.
	s. d.	s. d.	s. d.
For a parcel weighing not more than 3lb.	2 4	2 9	3 2
For a parcel weighing more than 3lb., but not more than 7lb.	2 8	3 4	3 6
For a parcel weighing more than 7lb., but not more than 11lb.	3 0	3 10	3 10

Parcels cannot be accepted for insurance. The other conditions relating to the service by these new routes are the same as those for the service by way of France as shown in the Post Office Guide.

NEW SUEZ CANAL ORDER.

The following Order has been published by General Sir John Grenfell Maxwell:—

No passengers from any vessel unless actually disembarking or transhipping shall be permitted to land in the Suez Canal zone saving those provided with regular passports and who are either British subjects or subjects of an Allied Power.

Ships' officers and members of the crew on duty belonging to merchant vessels shall be permitted to land if provided with a pass signed by the master of the ship and countersigned by the police.

The Suez Canal zone includes Port Said and Port Tewfik and all intermediate landing places ("ports" or "gares") on either side of the Suez Canal.

With reference to the complaints of the non-delivery of correspondence to members of the Mediterranean Expeditionary Force, the Secretary of the War Office desires to state that special measures are now being taken to expedite delivery of letters and parcels, and it is hoped that an improvement in the service will shortly be effected.

Near East Markets.

EGYPTIAN COTTON.

(From Our Own Correspondent.)

Cairo, October 4.

It has been announced that the British Government, ever anxious for the well-being of the Egyptian cultivators and in order to ensure that they will be able to dispose of their cotton under advantageous conditions, has decided to purchase Egyptian cotton whenever it may appear that its intervention is necessary in order to maintain prices at a level that will be remunerative to the growers. As things are going at present, it is not expected that the proposed Government action will become necessary, for prices are better than they have been for some considerable time. All the same, the announcement of the decision is welcome, as it guarantees the fellaheen against a recurrence of last year's situation, when they sold at a huge loss and all the profit went into the pockets of the dealers, and, at the same time, as *Al Mokattam* says, it is an outward and visible sign to the Egyptian nation that British protection is not merely nominal, but that the British Government intend to give it very practical effect in the interest of their protégée.

COTTON MARKET.

(From Our Own Correspondent.)

Liverpool. October 14.

Messrs. Reynolds and Gibson telegraph:—Egyptian Spot.—The market has been quiet throughout the week, only a moderate business being done at fluctuating prices. Quotations show an advance of 10 points, except for fully good, fair, and below Upper, which are unchanged, and fine and extra fine Joannovich, Sakellarides, and Abassi are advanced 20 points. Sales, including 220 bales of Sudan cotton, are estimated at 2,000 bales, against 2,500 last week.

Manchester.

Since our last report there has been extensive inquiries from India for price goods.

TEXTILE INDUSTRY IN ROUMANIA.

The old adage that "it's an ill wind that blows nobody good" may be regarded as strictly relevant to the textile manufacturers of Roumania at the present time, says the *Textile Mercury*. While the world-war is raging outside the Roumanian manufacturers have the home market to themselves—and what this means may be gauged by the fillip received during the Austrian crisis and the time of the Balkan war, when competition from outside was suspended only in part. When every allowance is made for the obstruction to the circulation of money entailed by the difficulties in the way of exporting agricultural produce, the fact that Roumania has become entirely dependent on home manufactures implies a large margin of advantage to native industries.

The chief manufactures are located in Northern Roumania, and coarse goods and small firms are the rule; nevertheless, there are undertakings of a larger growth, and the calibre of these may be illustrated by particulars concerning sundry leading companies. In the front rank of these stands the manufactory of woollen goods, underclothing, etc., near Bacau, the company having its head offices at Bucharest. As to the company's position, the fact that a dividend of 15 per cent. on its three million francs share capital was declared just before the European war broke out may be allowed to speak for itself.

Next to be adverted to are various undertakings in Jassy, first and foremost of which is the Societate Anonima Romano-Italiana a Industriulor Textile, with a capital of one and a-half million lei or francs. It specialises in hemp spinning, rope, twine, cordage, and allied commodities, and employs 400 persons, chiefly women and children; the wages average 1.40 to 2 francs per day for the latter and up to 4 francs for adults. Attached to the works are dwellings for 100 employed families.

Another firm is the Testabura Jasi, with a capital of 750,000 francs; it is engaged in the manufacture of cotton stuffs for underclothing, linings, etc., and possesses a dyeworks attached. The employees number between 200 and 300 (chiefly women and children), the wages of adults ranging up to 4 francs per day. Next comes the "Moldova" firm, with a capital of 320,000 francs, specialising in the manufacture of cotton hosiery goods, such as jackets, body underwear, and stockings; it employs about 150 workpeople. In the outskirts of Bucharest is the English-owned Fabrica Romana, a well-equipped cotton weaving and bleaching concern, with a considerable number of Lancashire operatives.

Coming next to the smaller undertakings, the chief stocking manufactory in Jassy (belonging to Hodan, Cave and Co.) is deserving of mention. This firm, which speculates in cotton and woollen stockings, and runs its works by electric power, began some eight years ago with half-a-dozen employees, and during the interval has increased them to ten times that number, while the employees' wages have also risen considerably during the last four years.

BULGARIAN WHEAT EXPORTS.

The *Frankfurter Zeitung* published on the 9th inst. the conclusion of a document circulated in Bulgaria by the Bulgarian Government. Arguments are therein adduced for the purpose of proving that the requirements of Bulgarian grain growers necessitate Bulgaria choosing the side of the Central Powers. "If we export our grain to Italy, France, and England we shall not receive half the prices we could get if we were to export our grain to Germany and Austro-Hungary. If our grain supply is exported to these two States it will bring Bulgaria about 360,000,000 lewa, a sum which is twice as great as our entire export in the best years can be."

The document then claims that the free passage of the Danube is an absolute necessity for Bulgaria. Serbia and Russia do not permit Bulgaria to use this river. "Serbia will hear nothing of opening the Danube, therefore, in agreement with Germany and Austria-Hungary, we must create a free passage of the Danube by force."

PERSIAN GRAIN.

The great arid wastes of Persia would lead one to believe that the country does not produce sufficient grain to supply the needs of its population, says the U.S. Consul at Teheran. Such, however, is not the case, and considerable quantities of grain are exported each year. The principal grains grown are wheat, barley, and rice. Corn is planted in small quantities, but is only used for roasting ears. Oats and rye are seldom sown. Except along the Caspian coast, Persian agriculture is dependent almost entirely on irrigation.

The agricultural implements used in Persia are of the most primitive kind. Ploughs are made from forks of small trees with the addition of a share of iron. It is doubtful, however, whether the yield of grain would be greatly increased by using modern ploughs, as there is no sod and this crude implement seems to stir the soil fairly well.

Wheat is grown throughout Persia and considerable quantities are exported. The amount exported from the interior would be greater if transportation charges were not so high. Barley is grown in great quantities, and is the principal animal food: It is also used for making bread in the poorer districts. Rice is grown along the Caspian Sea, where there are immense plantations, and also around Urumia, and in some districts in south-west Persia.

PRODUCE REPORT

London, October 14.

Currants.

The market continued strong and dearer this past week, and low descriptions are scarce. Pyrgos in bags quoted 34s., and in quarter-cases 37s. to 39s.; Gulf, 44s. to 46s.; Vostizza, 47s. to 53s.; and Patras, 40s. to 42s. The stocks of currants in London on September 30 were 2,754 tons, against 2,965 tons the same period last year.

Sultanas.

The advance of prices continues. Greek have been sold, from 95s. to 100s.; and Afghan, 76s. to 78s. The stocks of sultanas, of all kinds, in London on September 30 were 1,246 tons, against 2,645 tons last year. With such a small supply of this fruit it is obvious that the advance will be increasing until arrivals of new fruit from Greece and Afghanistan relieve the situation.

Figs.

The market is steady. Calamatas were sold at 42s., and Malagas 35s. to 42s.

Dates.

New Persian are slightly cheaper, and there is no improvement in the demand.

Seeds.

Linseed.—In sympathy with the strong demand for oil, an active business is passing at 6d. advance. London-Calcutta spot and near at hand sold at 57s. 6d. to 57s. 9d. and October-November at 58s., with further buyers. Cottonseed.—There are no actual sellers of Egyptian, the Alexandria market being too high for offers. Rapeseed is firmly held. Toria pure basis October-November, 55s.; brown Cawnpore, ditto, 55s., and Guzerat 62s. 6d.

Oils.

Linseed oil is dearer with a good demand. Spot pipes £28 5s., barrels and month £29; October-December, £29 10s.; January-April, £30, were paid to-day; May-August, £31 asked, with £30 15s. refused. Cotton oil is strong and dearer. Spot pipes, crude, £30; refined pale, £34; sweet edible, barrels, £37 to £39. Rape oil is firm. Ordinary brown naked spot, £35 to £36; English barrels, refined, £37 10s. to £39.

Oilcakes.

Cotton-cakes.—There are no Egyptian available on spot, but there are sellers for October and November shipments at £8 to £8 2s. 6d., ex ship, and a fair business is passing at these prices. English makes command £8 12s. 6d. to £8 15s., and Bombay £8 5s. Linseed-cake.—No improvement in the demand, the market being very dull for the time of year, but with no anxiety from holders to sell, prices remain practically unchanged. Best London-made remains £11 10s. to £11 15s. East India seed pures £11 7s. 6d. to £11 10s.

Locust Beans.

There is comparatively only a small demand, but prices are maintained, for whole at £8 5s. per ton, and kibbled at £8 10s.

The Bucharest correspondent of the *Secolo* telegraphs that Brig.-General B. Hamilton has arrived at Nish.

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.

Only superior qualities of

Hallawees, Khudrawees, Sayers and Zehdi

are packed.

In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.

SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.

Sole Proprietor:

BAHJET S. FORAGE, BASRAH.

Mineral Resources of Asiatic Turkey.

Asiatic Turkey is rich in many different ores and other minerals (says *Engineering*), the deposits being situated at considerable intervals in the various provinces. In addition to metallic ores, there are deposits of sulphur, meerschaum, marble, salt, petroleum, asphalt, and coal; precious stones are also found in some places.

Although foreign capitalists in recent years have given some attention to the undoubted possibilities of the country, no progress of real importance has yet been made with the mining industry. One of the principal reasons for this is probably the absence of adequate means of communication and transport, many of the deposits being located in out-of-the-way places at a great distance from railways and seaports. The labour question also presents difficulties, the natives being of little use and foreign labour being most expensive and difficult to obtain. Another reason is to be found in the fact that the Government have done nothing to encourage mining operations; in fact, they have done the reverse by imposing rather heavy fees on the concession-holders. Any concession is subject to an annual fee of 10 piastres (about 1s. 9½d.) per djerib, or hectare, as long as the concession runs, whether it is worked or not. There is a further tax of 1 to 5 per cent. on the production of mines worked by shafts or galleries, and of 10 to 20 per cent. on open mines or quarries. The cost of an annual permit to work up to 100 tons of ore on a claim ranges from £4 10s. to £13 10s., and for the right to work up to 2,000 tons of coal or ore an annual charge of from £45 to £180 is made.

These high fees tend to encourage the importation of commodities which are to be found in the country.

The mineral resources of Asia Minor are the best known, chrome-iron ore being found in vast quantities in the vilayet of Brussa (Kutaiah) in the South-Western part at Denisli and Makri, and in the South-Eastern part near the Gulf of Alexandretta. The most important deposits in the vilayets of Brussa and Khodavendikiar comprise those at Dagardi, which are estimated to contain 10,000,000 tons, and are regarded as the largest and richest in the world. Here the State has worked some 12,000 to 15,000 tons annually for about fifteen years, the value of the annual production being about 45,000 tons. The ore has to be conveyed on camels or mules to the nearest railway station, Kutaiah, a distance of over forty-three miles. Other chrome-ore mines in the Brussa district are being worked to the extent of 6,000 tons to 7,000 tons annually, the ore being shipped to England and America. There are also large deposits of pyrites and other iron ores, but they are only worked to a very limited extent, and the quantity exported is insignificant. There are large deposits on the south-east coast of the Black Sea, between Tireboli and Rize, in the vilayets of Erzerum and Sivas, south of Aivalyk, opposite the island of Mitylene, and especially at Zeitune, about ninety miles north of Alexandretta. The aggregate production of iron ore in Turkey in 1910 is given as from 50,000 to 60,000 tons, and as 100,000 tons in the year 1911. Manganese ore is found in the districts of Smyrna and Makri, and also at Mersina and Kerassunte, but the exploitation is irregular.

Both Germany and Austria, especially the former, have hoped to benefit largely from future developments of the mineral wealth of Turkey under their financial and industrial guidance. That results have hitherto been so meagre is attributed to apprehensions on the part of the Turkish Government that unsatisfactory results would follow the too easy admission of enterprising and grasping foreigners. These fears, it seems to us, are not entirely groundless in connection with Turkey's new allies, so that after the war there may be room for others.

COST OF LIVING IN GREECE.

There has been a rapid rise in the prices of foodstuffs in Greece since the beginning of the war, says the U.S. Consul in Athens. According to authoritative publications, the increase in the price of cereals and flour has been 50 per cent., legumes have increased 45 per cent., while the price of meats has remained practically stationary. This is perhaps explained by the fact that the average Greek is not a consumer of meat. The increase in cost of flour is due to the closing of the Dardanelles and the high freight rates on this commodity from America.

The rise in cost of the following articles in the six months from January to June, inclusive, is shown here by percentages: Wheat, 2 per cent.; barley, 6 per cent.; corn, 40 per cent.; semolina, 15 per cent.; farina, 20 per cent.; bread, 9 per cent.; beans, 18 per cent.; chick peas, 40 per cent.

Eliminating the comparatively trifling rise in wheat and barley—these having reached the highest point in their price curve before January—it will be seen that the average increase during this period is approximately 24 per cent.

Another disquieting factor in present economic conditions is the unprecedented increase in rents, conservatively estimated as ranging from 25 to 40 per cent. This has been caused by the presence of large numbers of Greeks from all parts of Europe and Asia Minor who have gathered in Athens since the beginning of the war, as well as of various foreign missions which have been established here since that time.

Lieutenant T. W. Moore, R.N.R., secretary of the Imperial Merchant Service Guild, has just received a communication from Captain V. E. Lazzolo, who formerly commanded the Ellerman liner "City of Khios," but is now interned in Turkey, stating that he and his fellow prisoners have been informed that they are not allowed to send or receive letters exceeding four lines. Letters of greater length will not be allowed to go through.

Engineering Notes.

Wealth in Peat-Bogs.

To the ordinary traveller the aspect of a peat-bog is, as a rule, anything but inviting, while in some parts its existence is often considered as a scourge to the surrounding district. Yet modern science has, more or less successfully, proved that there is as much wealth in a peat-bog as may be found in a valuable mine. Peat, as is known, is formed by vegetable substances partly decomposed and more or less compressed. It is formed in damp places, where the roots of mosses and other moisture-loving plants begin to decay, while the uppermost part throws up fresh shoots, so that what was once only a shallow pool becomes a bog many feet thick. Peat-bogs are found in many parts of England, are more common in Scotland, and still more numerous in Ireland. Some large ones occur in the South of Europe, and many are found in the Near East, even near the sea. In the latter region the bogs are a real scourge in winter. Besides, little or nothing is apparently known of the utility of peat, or even that it can be used as fuel for domestic purposes, as is done by the Irish peasantry. It will, therefore, be of interest to enterprising parties and others in the Near East to know that, far from being a scourge, peat-bogs are a rich and valuable property, for science has proved that peat can be utilised as fuel and a substitute for coal. Consequently peat-bogs are a source of power, and as it is a well-known fact that industries always gather around any source of power, the prospects of districts in which such bogs are found are quite obvious.

Various efforts have been made to compress peat and so make it commercially available as fuel, but, as a rule, with little success, for although a good article could be produced out of peat, the cost of production has hitherto been too high to compete with coal. One of the reasons was that the processes generally relied on mechanical pressure for the expulsion of water. Other more successful processes for compressing peat until its specific gravity was nearly equal to that of coal, are now in use in Germany, Holland, Switzerland, Hungary, and to a small extent in Scotland and Ireland. But an invention which utilises electricity for the purpose of releasing the water is interesting, and probably more suitable for some localities in the Near East. By this process the raw peat in a broken state is put into a large vertical cylinder perforated with an enormous number of small holes. This cylinder is set in rapid motion and a large percentage of the water is expelled by centrifugal force. When the water has been driven out electrodes are inserted in the peat, which is made the medium of completing the circuit between the positive and negative points. The resistance offered by the soft peat to the passage of the electric current leads to the generation of heat, which pulverises the material into minute particles. The current breaks up the cells of the peat and reduces them to fine powder, but the powder still retains all the oils in the original peat, the electric current in no way injuring the properties of the peat. The powdered peat is passed on to a kneading apparatus, where a teasing manipulator is used to bring the mass into a plaster condition, when it can be readily concentrated in any form desired. It is next passed on to the moulder, and the material is then formed into briquettes or any other shape required, and is ready for storing. The whole operation occupies about two hours. The distinguishing feature of this process as compared with others is the application of electricity for breaking up the peat cells.

Many advantages are claimed for this fuel. In the first place, it is practically smokeless. It takes up less space than coal. It makes no clinker or cinder, deteriorates but little by keeping, does not crumble by handling, and has a high calorific. Another important consideration is the amount of space that will be required for the storing of this fuel in railway trucks, ships' holds, or bunkers. Ordinary coal takes on an average forty cubic feet for a ton, and weighs 55 lbs. per cubic foot. The electro-peat coal takes about 34 cubic feet to the ton, and weighs 66 lbs. per cubic foot. As to calorific value of the product as compared with ordinary coal, it has been found that the time in raising water from 65 deg. F. to boiling-point is eighteen minutes in favour of the peat as compared with Welsh coal. With regard to the production of electro coal peat, as compared with the cost of working a coal mine, there is a great saving. It is said that a ton of this peat-fuel can be produced for five shillings. It is calculated that a square mile of bog, 10 ft. deep, contains peat equal in heating power to more than 350,000 tons of coal. In a scheme for the utilisation of peat the recovery of ammonia and other by-products is also a subject of great importance.

As a Nourishing Plant Food.

Apart from the utilisation of peat as a source of power, *i.e.*, a substitute for coal, there are great possibilities in its use as a medium for increasing the output of vegetables. At the meeting of the British Association recently, Professor W. B. Bottomley gave some very interesting illustrations of his experiments with bacterised peat. He made the discovery that bacterised peat has an extraordinary influence on the growth of plants. It accelerates growth by approximately three times the normal, and the Professor asserts that, employed on a large scale, not only would the food supply be greatly increased, but large tracts of bog land, which are now practically useless, would be numbered among our most valuable assets. For they will supply the peat which, after bacterial treatment, is converted into extraordinarily nourishing plant food. Next week the professor will exhibit at the Royal Botanical Gardens vegetable plants which have been grown with bacterised peat. And, as he stated, he is quite prepared to give to the country, for the benefit of the war, his interests, patents, and rights in the manufacture of bacterised peat if a national committee, or some other representative authoritative body, could be found to carry out experiments on a large scale.

Stoppages of Gas Supply in Turkey.

The correspondent of the *Nieuws van den Dag* in the Turkish capital reports that scarcity is gradually beginning to be felt in almost everything; and the prescriptions and regulations interfering with the ordinary manner of living are becoming ever more severe and more numerous. Among other things he reports is that the three gasworks have had to come to a stop, so that there is no more street lighting. The electricity works will have to do the same during the present week; and then the trams will be unable to run. For days there has been not a drop of petroleum to be got in the city. Candles arrive now and again by parcel post from Austria, and then cost three piastres apiece—a price for which a whole packet could formerly be bought. The correspondent reflects: "How we shall warm ourselves in the winter if the present condition of things continues a few months longer is still an unsolved riddle."

RAILWAY PROGRESS IN SYRIA.

The U.S. Consul at Aleppo, writing on July 31, gives the following interesting particulars concerning Turkish railway progress in Syria and Asia Minor:—

Despite the great crisis prevailing, there has been no diminution in the railroad progress of the country. The Jaffa-Jerusalem line, controlled by a French company, but whose twenty-five-year lease is about to expire, was taken over by the military authorities at the outbreak of the war. Work was immediately begun to connect this line with the Haifa-Damascus line, and in this way link the system with Aleppo (on the Baghdad line), and eventually connect with Constantinople.

Lydda, a station on the Jaffa-Jerusalem line, is the junction, whence the new line runs due north via Sebastiah, Jenin, and Afoulah, joining the Haifa-Damascus line to Deraa (on the Hedjaz line), a distance of 167 miles; thence over the Hedjaz line for a distance of eighty miles to Damascus, the entire distance from Jerusalem to Damascus being about 280 miles, and entailing a twenty-four-hour journey. On May 20, 1915, this branch line was opened to traffic, and the writer was the first passenger completing the railroad journey from Jerusalem to Damascus.

New Mileage of Baghdad Railway.

Equal energy has been displayed in the extension of the line from Aleppo towards Baghdad, known as the German or Baghdad Railway. In spite of all sorts of difficulties created by the abnormal situation, the Baghdad company has succeeded in opening for traffic more than sixty-two miles of line within the last two months. On June 1, the thirty-nine-mile line between Tell Abiad and Touem was completed, including the construction of a bridge across the Euphrates. On July 23 the twenty-six-mile line between Touem and Ras-el-Ain was opened. The following stations at present compose the itinerary of this branch: Aleppo, Mouslemiie, Akterine, Tchoban Beyi, Akje Koyounli, Hulmenie, Jerablus, Siftek, Ser Arab Pounar, Kharab Nass, Qul Tepe, Tell Abiad, Ghodjar, Touem, Tell-el-Hamoud, and Ras-el-Ain. Trains leaving Aleppo at six in the morning arrive at the last station at five in the afternoon.

Mention must be made of the fifty-six miles constructed at the southern terminus of this line, from Baghdad to Samara. There now remain about 373 miles before the entire line between Aleppo and Baghdad is completed.

The Constantinople-Aleppo Line.

The Constantinople-Aleppo line is gradually nearing completion. At present trains run direct from Constantinople to Posanteah (a three-day journey); here immense tunnels are being pierced through the Taurus Mountains. From Tarsus to Mamoure a completed branch of this line is in operation (about a day's journey), whence another series of tunnels is in process of construction. For the remaining seventy-one miles between Rajou and Aleppo the line is completed, and trains are running regularly. Under present conditions the journey between Constantinople and Aleppo is completed in six days.

NISH-SALONIKA RAILWAY.

Under the above heading a correspondent, signing Georgina Pennant, publishes the following letter in the *Times*:—"At this moment, when so much attention is directed towards the landing of Anglo-French troops at Salonika, the following details—which do not seem to be widely known—with respect to the railway from there to Nish and Belgrade may be of interest to your readers. In May, 1914, a convention was signed between Greece and Serbia by which the latter country obtained on a fifty years' lease a piece of ground on the railhead at the Port of Salonika to use for importing without control anything that she required. This all-important railway, which only runs through Greek territory for 60 kilometres, is only a single line, but it has crossing places about every 20 kilometres and also possibilities of being further developed without much difficulty. Owing to this convention, the Government at Berlin has been unable to protest at Athens against the supply of munitions to Serbia viâ Salonika, and it is by this route that all war and hospital requirements have been furnished her by her Allies since the outbreak of hostilities."

GREEK TONNAGE.

A contributor to one of the Tyneside papers writes:—Nobody expected the calling in of the Greek tonnage to the Ægean Sea, or the more recent ban put upon another class of traders, but their immediate effect has been to force up outward rates to the Mediterranean to record figures and to seriously advance homeward rates from America. A steamer can now secure the enormous rate of 11s. per quarter for carrying wheat from North America to this country, while as much as 65s. per ton can be obtained for a grain cargo from the River Plate, an advance of about 10s. a ton within the last few days. It seems clear that the withdrawal of Greek tonnage will cause a great demand for tonnage in both the American and British markets in which the Greek steamers were largely employed. So far as the North American trade is concerned, it is some satisfaction to know that these huge freights are a set-off to our indebtedness for munitions; also that a good proportion of the excess profits will be annexed by Mr. McKenna for national purposes. There are those, however, who would rather see these extra earnings set aside to replace lost vessels.

NEWS FROM ALL SOURCES

An Egyptian paper states that the authorities have given orders to prohibit the exportation of eggs from Egypt, and that a Ministerial decision is expected to be issued shortly to the above effect.

Mr. M. di A. Nacamuli, after sixteen years of valuable work in the service of the National Bank of Egypt at Alexandria as chief of the Merchandise Department, is retiring from the active list as from August 31, 1915. Mr. H. C. Thomas, who has hitherto been Assistant Chief of the Department, has been appointed to succeed him.

Owing to the difficulty in getting supplies of caustic soda from Europe, says the *Egyptian Gazette*, the soap makers in Egypt have in many cases been obliged to stop their business, with the result that soap has risen considerably in price. For example, the Yaffaui has risen from P.T.3 to P.T.8, and the Nablusi from P.T.4½ to P.T.10. Both these kinds of soap are much used by the natives. Caustic oil, also, is used for refining cotton oil seed, and so the cost of oil has increased.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

SUDAN IRRIGATION.

We published last week the text of the amended schedule of the Sudan Guaranteed Loan Ordinance, 1913, under the title of the "Sudan Guaranteed Loan Ordinance, 1915." The schedule, it will be remembered, allowed £2,000,000 for "Works for the purpose of irrigating the Gezira Plain," as against only £1,000,000 allotted to the work by the schedule of the Sudan Loan Act, 1913. In this connection the following extract from an article which appeared recently in the *Sudan Times* on the "Gezira Irrigation Project," will be of interest:—

"It will be remembered that immediately upon the outbreak of the European war, work on the Gezira Irrigation Scheme, which had been going on at a rapid pace, had to be stopped rather abruptly. The reasons were of course financial. But now, it seems, financial conditions are in certain respects easier; and we hear that arrangements are being made for resuming work on the Gezira enterprise. These negotiations have been going on between the Sudan Government and Egypt, and, so the rumour goes, the negotiations have lately come to a satisfactory result. Though we have not heard these rumours from authoritative sources, we are inclined to believe them, and to connect with them the expected visit to the Sudan of Mr. Buckley, of the Egyptian Public Works Ministry, and the party of engineers, to whose visit we referred in our last issue. If so, work will soon be started.

Writing in the *African World* on October 2, Mr. Percy F. Martin said:—

"The energy with which the Sudan Administration are pursuing the matter of irrigation, and the large sums of money which it is proposed to expend upon the consummation of the great Gezira scheme—the total cost of which was to have been some £3,000,000—show how large an interest the Government holds in the ultimate extension of this form of land cultivation. . . A recent report upon the scheme confirms and accentuates in every way the favourable opinions which had been already formed upon the practical possibilities and utilities—including the technical standpoint—of the enterprise. The careful attention that was devoted to the selection of a site for the great dam has been abundantly justified by further testing and experimental work of an exhaustive character. This site, as may be remembered, is situated five miles south of the town of Sennar. It is here that will be constructed the immense dam capable of utilising the whole of the water supply in the Blue Nile during the period when water is required for irrigation, and the cost of which, as was originally estimated, will alone amount to £E1,420,000. The Gezira Canal, it was believed, would call for the outlay of another £E580,000. Latterly, however, the figures covering the whole enterprise have been reconsidered and as a consequence re-cast, with the following result:—Works for the purpose of irrigating the Gezira plain will cost a round £2,000,000; extension of the Sudan Railway system another £E800,000; and other irrigation works and 'contingencies' £E200,000, thus bringing up the grand total to the sum of £3,000,000 above mentioned. . . To make the undertaking remunerative—and Sir William Garstin sees no reason, when it is once in full operation, why it should not pay an interest upon its cost of construction and working of something like 8 per cent.—the Government will impose a tax on the irrigated land, low at first and increasing gradually as the land improves and cotton is introduced."

Balkan Securities.

At the present moment (says the *Economist*) the situation in the Balkans is dubious and critical, with Bulgaria inclining to Germany, while Greece and Roumania waver. London is not much interested in Balkan securities, and present prices of securities of the Balkan States do not give us an accurate criterion as to how values have been affected by the momentous Russian ultimatum to Bulgaria. There have only been two transactions on the London market in any Balkan stocks this week, and those were in Bulgarian 6 per cents. on October 6, at 79⅞ and 80. Apparently dealers are apprehensive, and find it a matter of difficulty to form an accurate conception of the real value of the issues of the Balkan States. The following table shows a number of Balkan securities and the fall in values since the outbreak of the war:—

Description.	Issue Price.	Present Amount.	Mean Price, July 27, 1914.	Last Business Done.	Fall.
		£			
Bulgaria 6% (State) Bds., 1892	—	2,521,800	99	80	19
Do. 4½% Gold Bds., 1907	—	F140,720,000	82	—	—
Do. 4½% Gold Bds., 1909	—	3,853,872	80	67½	12½
Greek 5% Funding Loan, 1893	—	335,000	54	51	3
Do. 4% Railways Loan, 1902	83½	2,222,680	77	64¾	12¼
Do. 5% Loan, 1914 (London issue)	92½	884,278	90	73	17
Montenegro 5% Govt. Loan	—	239,800	82½	—	—
Roumania 4½% Gold Loan, 1913	90½	1 793,385	92	85	7
Serbian 4% Unified Bds.	—	937,600	67	—	—

No minimum prices have been fixed for any of the above securities. The Stock Exchange Committee fixed minimum prices in five Greek stocks which do not appear in our table. The last dealing in Bulgarian 6 per cents. was on October 6, and in 4½ per cents. on September 13. Declines have not been severe, considering the uncertainty of the position in Bulgaria. The last Greek loan in London was in 1914 in 5 per cents. at 92¼. Now it stands at 73. Montenegro and Serbia, two of our Allies, have loans in London, but no transactions have been recorded since the outbreak of the war. The Roumanian loan was issued in 1913 at 90 1-12, and now stands at 85. But it is important to recall the fact that on January 27, 1915, the Bank of England advanced £5,000,000 to the Bank of Roumania against Roumanian Treasury bills.

The Financial World gives the following particulars concerning Bulgarian finances:—

Bulgaria's public debt amounts approximately to £25,000,000, exclusive of loans believed to have been provided recently for political purposes by Germany. A fairly large proportion of Bulgarian Government bonds is held in this country, but the French are mainly responsible for financing Bulgaria. There are three issues in which London has taken part, although four issues of bonds are known here. Only the three are quoted in the Official List, and all are exempt from Bulgarian taxes and budget duties. The six per cent. bonds are best known. They are of £20, £40, £100, and £500 denomination, with their value in francs, reichsmarks, and Austrian currency also expressed on them. They were issued in 1892, the amount now outstanding being £3,338,220. The bonds are specially secured by a first mortgage on State railways and on the harbours at Varna and Burgas. Coupons are payable in January and July, the principal to be repaid at par in or before 1926 by half-yearly drawings, payments to be made in gold in London—by the Imperial Ottoman Bank—Paris, Berlin, Amsterdam, Geneva, Vienna, and Sofia. Should Bulgaria default with the interest for two years it is provided that the bondholders may sell the railways—if they can! At the time of the outbreak of the war with Germany the quotation was about 99, whilst the latest price given in the Official List, under business done, is 79⅞ and 80—on the 6th inst. The 5 per cent. gold bonds of 1902 were issued in London and on the Continent by the Imperial Ottoman Bank and Messrs. Stern Bros., the amount now outstanding being £3,900,800. The price of issue here was £89.10 per bond of £99. The loan is a direct obligation of the State of Bulgaria, and is specially secured by a preferential charge on the tobacco duties. Coupons are payable in March and September, whilst the redemption of the loan is to be effected in or before 1953 at par by half-yearly drawings. There are two series of Four and a Half per Cent. Loan. The one dating back to 1907 was issued in Paris, and chiefly concerns the French investor, although it is quoted in this country, the mean price being 82 when the Stock Exchange closed in July, 1914. The other Four and a Half per Cents. were brought out in February, 1910, the issue in London being made by Messrs. J. H. Schroder and Co. On the 15th of last month these bonds changed hands at 67½, compared with the mean price of 80 on July 27, 1914. The loan was raised for the completion of railways and harbours and the repayment of floating debt. As to the advances made by Germany, the details of these are, of course, not publicly known, but in July, 1914, £4,800,000 Bulgarian Treasury bills were offered in Germany on the basis of 7¼ per cent.

EGYPTIAN COMPANIES.

Publication of Weekly Receipts

The *Egyptian Gazette* writes:—

"We have received complaints from a number of readers on the subject of the cessation of our publication of the weekly receipts of the Alexandria and Ramleh Railway Co., Limited, and of the Alexandria Tramway Company. On inquiry of the management of these companies as to why the statistics were no longer furnished us, we have been informed that the Board of Directors has refused to allow the publication on the ground that the shareholders may be easily led into error on only seeing the temporary increase in the receipts without taking into consideration the supplementary working expenses due to the rise in the price of combustibles and other articles of the first necessity. The management goes on to state that some articles that have appeared in certain local journals justify this policy of the board of directors, and it is likely that it is in consequence of similar considerations that no other company engaged in the working of a public concession in Alexandria publishes its weekly receipts."

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

THE EGYPTIAN BUDGET.

Reuter reports from Cairo that the Ministry of Finance has issued a circular-letter to the various Ministries and Departments requesting their Budget estimates for the financial year 1916-17. In this circular the Ministry points to the considerable fall in the State revenue, owing to the European war, which renders the balancing of the Budget impossible, in spite of the economies already effected on this year's Budget, and urges the Departments, in preparing their Budgets, to observe the strictest care and economy. The Ministry also points out that the reserve fund had to be drawn upon to make up the deficit of the last Budget, and that this fund will certainly be exhausted if it be not administered with the strictest care, so that, as the revenue is not expected to recover for some time to come, every possible economy must be made.

EGYPTIAN GOLD DEMANDS.

There is every indication, says the *Standard*, that the earmarking of gold on Egyptian account at the Bank of England will shortly come to an end. The issue of notes, by which, since the commencement of the war, the movement of the crops has been financed, now amount to 8½ millions sterling, which is practically up to the maximum of last year, and although, owing to certain circumstances, this may be exceeded, the further requirements are not expected to be of great importance. The area under cotton in Egypt this year shows a reduction of about one-fifth, and the crop is expected to amount to only 4½ million cantars, which would also show a reduction of about 20 per cent. on last year's figures. Currency requirements in connection with the actual moving of the crop therefore should be considerably smaller on the present occasion, but this may be neutralised by the current high price of the staple, which at 19½ Egyptian cents per cantar compares with only 13 cents a year ago. In addition, too, the presence of large numbers of troops in the country may result in increased demands for currency, but in the view of good authorities on this side the utmost limit to which the note circulation is likely to rise would be nine millions sterling, and as the notes are backed as to 50 per cent. in gold and 50 per cent. in securities any further drafts upon the gold supplies at the Bank of England should be limited to well under half a million.

COMPANY RESULTS, &c.

Egyptian Delta Light Railways.—Receipts for the ten days ended September 20 amounted to £E4,495, as against £E3,665 for the corresponding period of last year.

Hellenic Transport and Industrial Corporation.—The first annual meeting of shareholders will be held at the offices of the company, 16 and 17, Pall Mall, London, on the 21st inst. at 3 p.m.

Land and Mortgage Company of Egypt.—The numbers are announced of 84 four and a-half per cent. debenture bonds (Series "B"), which have been drawn at the offices of the company, and will be paid off at par on November 11.

Oriental Carpet Manufacturers.—The directors announce that in consequence of the war they are unable to hold the annual general meeting, communication between the various branches of the company being completely cut off from the head office at Smyrna.

Oriental Telephone and Electric Co.—The directors have declared the following interim dividends:—3 per cent. on the Six per Cent. Cumulative Preference shares for the current year, less income tax, and 4 per cent. on the Ordinary shares, free of income tax, payable to those shareholders whose names are on the share registers at this date. The warrants will be posted on the 30th inst.

Ottoman Three and a-Half per Cent. Loan of 1894 (Secured by the Egyptian Tribute).—Messrs. Dent, Palmer, and Co. give notice that the bonds drawn for redemption to-day, and also the half-yearly dividend due on the outstanding bonds of the above loan will be paid at their office.

Roumanian Government Four and a-Half Per Cent. Gold Bonds, 1913.—Messrs. J. Henry Schroeder and Co. announce that they have now received the necessary funds for the payment of the coupon and drawn bonds due on October 1, and that such coupons and bonds can now be lodged at their counting-house.

Suez Canal.—Receipts for the 9th and 10th inst. amounted to 430,000 frs., as compared with 350,000 frs. for the corresponding days last year.

NOTES OF THE WEEK.

The situation in Serbia is critical. Immediate successes on the part of the Austro-German and Bulgarian forces were not unexpected, and it may yet be possible for the Serbians to hold their foe at bay for some time in the mountainous districts in which the struggle will have to be fought out. But they are matched against heavy odds; the German attack under von Mackensen is being skilfully deployed, and the Bulgarian movements, we may be sure, are strictly co-ordinated with the German plan of campaign. Everything would seem to depend on the ability of the Entente Powers to reinforce the Serbians. As far as is known at present, the Allied forces, though dispatched by rail from Salonika, have not yet reached Uskub, much less Nish. Nothing has been divulged regarding their numbers; but we know that the capacity of the single line from Salonika is limited, and that the rolling stock of the railway is likely to be wholly inadequate for the movement of large bodies of troops.

The chief Bulgarian success for the moment is the reported capture of Vrania—a third of the distance between Uskub and Nish—which cuts railway communication between those two towns. Serbian accounts deny that Vrania has fallen, but admit that communication has been interrupted. The line at this point runs close to the Bulgarian frontier, and as the bulk of the Serbian forces must be farther north, it would probably have fallen to the lot of Anglo-French troops to defend Vrania, if they could have been in time. It has not been stated definitely on what date the Allied troops first appeared at Salonika. The French were probably there by October 2, and the British will have begun to arrive a week later. If the Allies had been directed by a single mind, there can be little doubt that the troops would have been pushed up hurriedly into Serbia in order to forestall the Bulgarian attack, leaving the Serbians free to devote their whole attention to the invaders on the north. But for reasons which have not been divulged, immediately after the landing at Salonika, paralysis seems to have seized the counsels of the Allies, and valuable time was lost at Salonika. The Bulgarians began their offensive at four main points along the frontier, and, in view of the pressure from the north, the Serbian forces opposed to them cannot have been numerous anywhere.

As things are, it would be idle to deny that Serbia's military problem is a formidable one. With strong reinforcements from the Allies already in the country she could have rendered a good account of herself. Even now, if the Anglo-French force were placed under the direction of a master-mind, it might be possible to save her. But when the delay at Salonika is recalled, it is obvious that there has been no firm resolve behind the expedition. Sir Edward Carson's resignation from the Cabinet confirms the worst fears. The situation, he explained to the House of Commons, necessitated, in his opinion, a clearly-defined and well-thought-out and decisive policy on the part of his Majesty's Government; but with what he understood "was laid down as a policy by the Government" he was unable to agree in any respect. The Entente Governments have delivered many resolute utterances; Italy declares war on Bulgaria, Russian troops are promised to be fighting side by side with the French and British "to-morrow," Great Britain is to give Serbia all the support in her power. The execution of all these plans, however, is bungled, and in the meantime the Serbians are passing through the fire. When all that is at stake for the Allies, if Serbia should fail to hold the gate to Constantinople, is remembered, it might be thought that the four Governments would have acted with vigour. But Italy only declared war on Bulgaria four days after France, and would appear even then to have to make up her mind as to the course to be pursued in giving effect to the declaration, and Russia has not yet been able to use her control of the Black Sea to any purpose against the Bulgarian coast. It is on such an occasion that we may envy the enemy his centralization of control, reflecting that if the same centralization existed on our side and were put to the good purpose to which Germany uses it, our Ally in the Balkans would not be *in extremis*.

The need of the moment is vigorous military action in every theatre of the war. Both in regard to Roumania and Greece we now have to deal with the situation in the Balkans as it stands to-day, not with any abstract theories of what that situation ought to be. Fear of Germany is the predominant factor, and until it can be exorcised no future advantages and no appeals to honour seem likely to carry weight with either Roumanians or Greeks. Unless the Greek

Government is unable to see beyond the words of an Imperial telegram to Queen Sophie, it must be engaged at this moment in plumbing the uncomfortable depths that threaten to swallow up those in the Balkans who chose a seat between the German and the Entente stools. In a Near East which is to be dominated by a Germanised Bulgaria and a Turco-German Asia Minor there will be little room for Greece, even though her destinies are still ruled over by a subservient monarch. On the other hand, if after a maximum effort, in which the Greeks have had no part, Bulgarian aggression is rolled back and Europe is freed from the menace of German militarism, there will be no incentive to consider the feelings of Greece. Roumania, as we know, stands in a different category. Germany has been able to make her the definite offer of Bessarabia as well as an outlet for her products. The Roumanians are more anxious to obtain Transylvania than Bessarabia; but when they scan the German bulletins of the war and listen to German threats, they find it hard to resist the attraction of what to them is the bird in the hand.

As ignorance of the part which the Near East could play in the European war, indifference to the situation in the Balkan States and a complete lack of forethought have brought the Entente Powers to the present straits, it may be well to consider betimes what the result would be, if Serbia went under. As already insisted upon, the immediate effect of an unlimited supply of munitions for the Turks must be the withdrawal of the Allied forces from the Dardanelles. The blow to British prestige from this confession of weakness would be severe in the Near East and beyond. Not only would the Turkish forces at Gallipoli be liberated for service in other theatres of the war, but new Turkish armies could be equipped and trained. The position of the British Expeditionary Force in Mesopotamia would be seriously prejudiced; there would be a fresh advance against Egypt. The liberation of the forces under General von Mackensen, or of all that was left of them, would hardly affect the position on the eastern and western fronts; but this in turn would be considerably modified, if as a result of Germany's victory over Serbia, Roumania were to find herself unable to stand out any longer against German arguments. A joint German-Roumanian attempt on Russia might follow, and our Eastern Ally's task would be made still heavier. Germany and Austria-Hungary would at once receive practically all they need in the way of foodstuffs and raw materials from the Near East and Asia Minor. In this way the direct bearing on the duration of the war might be considerable. In the aggregate these potential developments ought to make it well worth the while of the Allied Governments to risk much in order to save Serbia from going under.

It is significant of the lack of confidence with which the conduct of the military operations in the Near East has come to be regarded that even in responsible circles the prospect of a withdrawal of the Allied forces from the Dardanelles is contemplated with indifference. The Turks, we know, are being incited by their Government to believe that relief in the form of German troops is close at hand, and they will have derived some encouragement from reports of an impending retirement from Gallipoli. But if the Peninsula were evacuated, we should be sorry to think that the step would spell for the Turks relief from all pressure. We have had little liking for the Dardanelles enterprise, and would gladly have seen it abandoned months ago, when the determination which it argued on the part of the British Government could have been put to better use in securing the co-operation of Greece and Roumania in a combined invasion of Austria-Hungary. But it would be a different matter at this juncture by relinquishing our hold on Gallipoli to leave the Turkish forces free to support Bulgaria or to undertake fresh operations against Egypt or Mesopotamia. For Turkey's respite to be gained in that way, it would be necessary to suppose that the appointment of General Sir Charles Monro was merely intended to relieve Sir Ian Hamilton of the duties of an embarkation officer.

The curious will find a theme for speculation in the elaborate reports which the Admiralty has now allowed to be published of the new ships intended to cope with submarines. Several of these have been sent out to the Dardanelles, and are described in a picturesque communication from there. This sudden burst of confidence, unfortunately, only serves to emphasise the fact that neither the ingenuity of our ship-designers nor the excellent practice of our guns has availed to counteract the initial mistakes made in connection with the operations against the Dardanelles.

The statement made by Sir Edward Grey in the House of Commons on October 14 was essentially colourless and perfunctory. It disappointed his hearers, and it must equally have disappointed all those who outside the House were looking for an intelligent appreciation on the part of the British Government of its responsibilities in the Balkans. Perhaps the most pregnant sentence in the whole recital was the one in which Sir E. Grey said that "it must be obvious to everyone that the interest of Greece and Serbia is now one, and that in the long run they stand or fall together." But if our communications to the Zaimis Cabinet have been couched in this language, there is little wonder that Greece should maintain her neutrality. However much King Constantine might like to enter the lists against the Quadruple Entente, it is evident that the possibility of the stopping of Greece's currant trade, the bombardment of her coasts, and the capture of her shipping will prevent him from taking the step. On the other hand, a threat to adopt these measures, if Greece should not at once go to the rescue of her Ally, might materially help to bring the Greek Government to consider the true interests of Greece, and would, we believe, be better policy than to offer her Cyprus. If Bulgaria, with the help of the Central Powers, is successful against Serbia, her first desire must be to settle her quarrel with the Greeks. Not only would the latter lose Kavalla in those circumstances, but the whole northern coast-line of the Ægean, including Salonika, would fall to the victorious Bulgarians.

The indignation that the reports of the massacre by the Turks of thousands of Armenians in Asia Minor has evoked in this country found expression last week in a meeting at the Mansion House, over which the Lord Mayor presided. Reference has already been made in these columns to the horrible occurrences which have to be laid at the door of the Turkish Government. The fate of the Armenians, as Mr. A. J. Balfour reminded the meeting in a letter, is a crime that surpasses the worst deeds of the Porte's predecessors. There is good ground for supposing that it was instigated by its German overlords, for the thoroughness with which the deed was carried out would never have been attained, unless it had been planned by a master mind. The British nation for the time being is impotent to succour the hapless Armenians. It can, however, do something to improve the lot of such survivors as there may be, and to this end a Mansion House fund has been opened. The British Government is committed to the principle of holding the Turkish authorities responsible for these and similar misdeeds, and the country must see to it that this resolve is acted upon when the time comes for the inevitable reckoning.

An unconfirmed report reaches this country that the British Expeditionary Force is within a few miles of Baghdad. The news was not altogether unexpected, although the actual report may prove to be an intelligent anticipation of events. There would have been no point in sending British troops as far as Kut-el-Amara, if they were not intended to complete the journey to Baghdad. At the former point, we know, the Turks were routed a month ago, and the hundred miles of country that separated them from Baghdad offered no convenient ground for a fresh stand. By the river, which the British expedition would have to follow, the route to Baghdad would be two hundred miles in length. If the force encountered little or no opposition, not many days ought to elapse before we have official news of its progress.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, October 11.

The Balkan Crisis.

The one topic of conversation for the past few days has been the situation in the Balkans. The news of the resignation of M. Venizelos came as a veritable thunderbolt to everyone—probably as more of a shock to us than to you, seeing that for nearly a week we had had no indication of what was happening in the Balkans, and it had appeared to everyone, from the Greek Premier's declarations in the Chamber, that everything was going as it should. The next thing we heard was that all Bulgarian and Bulgarian protected subjects, of whom there are but very few in Egypt, had been ordered to register themselves, under pain of punishment by a military court, and from this we knew that matters had progressed to the point where diplomatic relations had been broken off between the Entente and Bulgaria; but we are still in the dark as to what preceded and directly led up to this development. No little regret is expressed that all the news from the Balkans should have been suppressed in this manner, and that the first intimation of any development should have been the bombshell cast in our midst in the form of the message that M. Venizelos had resigned. This sudden and laconic announcement set the most fantastic rumours in circulation, as always happens in a country like this in such circumstances; and there is little doubt that the silence which preceded, and to all intents and purposes has followed it, has had on local opinion an effect that could not have been worse if the full account of the progress of affairs had been made public. Even if it was considered advisable at the outset to keep back the details of the progress of events—and one is quite prepared to concede that there may have been very good reasons for this—once the very serious step taken by the Greek Premier and the British Government had been given publicity, there could surely have been no reason to maintain this silence, which as a result is being interpreted in the very worst light locally.

Local Greek Opinion.

As for the Greek colony, it is in a very perturbed and unhappy frame of mind. No community more loyal to the Crown or more attached to the principle of constitutional government could be found than the Hellenes of Egypt, who enjoy great influence in Greece proper, and have on more than one occasion given proof of their patriotism. They are plainly not satisfied with the explanation given of the reason why Venizelos found it necessary to resign, or with the latest declaration of policy made by the new Government, and it is no exaggeration to say that their loyalty to the Crown has been subjected to a severe strain by the attitude of King Constantine. They are prepared to admit that he is a great general, but they very much question his qualifications, in the present peculiar circumstances, to deal with the situation, and strongly resent the position in which he has placed M. Venizelos, in whose statesmanship, perspicacity, and sincerity they have the fullest confidence and on whose return to power they had counted confidently for the restoration of the prestige of their country with the Quadruple Entente. What the Greek colony does not seem to like at all is the Teutonic flavour about the interpretations which, it is understood, the King puts on the terms of the Greco-Serbian Treaty. From what I gather, the Court view is not that held here in Hellenic circles, where a much broader conception of the duty of Greece to herself and to those with whom her interests are so intimately bound up is entertained. The community feels the position very acutely, and awaits further events with painful anxiety; but it is convinced that, as after the first crisis last spring, only the return to power of M. Venizelos and the unrestricted adoption of his views can save the situation as far as their country is concerned.

The Armenian Refugees.

Sir Henry McMahon last week accompanied Lady McMahon to Port Said, where her ladyship embarked for England. During his stay at that town the High Commissioner paid a visit to the camp where the Armenian refugees rescued from Suedia by the French cruisers are quartered. Everything that is possible is being done for these unfortunate people, and it is hoped that in time work will be found for all of them. The Armenian community has formed a committee to co-operate with the Government, and has already subscribed a substantial sum towards the initial expenses. The Bishop of the Armenian Orthodox Church, who is taking an active part in the organisation of the assistance given to these people, and on whom I called last week, told me how grateful the refugees are to France and Great Britain for their help, and said that the men are tremendously keen to form a corps and fight side by side with the Allies against the Turks. It has, however, been considered advisable not to accede to their request at present, though later on means may, no doubt, be found to give them satisfaction, as was done in the case of the Zionists. Speaking of the work to be found for the refugees, the Bishop mentioned that one of the occupations of the people of Suedia is the manufacture of combs. In normal times these are made out of camels' bones, which are shipped to Suedia from Egypt, and a large part of the combs made out of them is, after manufacture, shipped back here again. There is no reason why the refugees should not carry on this industry over here, and efforts will be made to enable them to do so.

The Bomb Outrage.

Although the second inquiry into the bomb outrage and an investigation into another important matter which may reveal useful information has not been concluded yet, I understand that it has been decided not to delay the trial by a military court of the nine men implicated in the former. The prosecuting counsel is about to proceed to deal with the evidence, and the trial should take place very shortly before a military court, which will assemble at Alexandria, where the attempt on the Sultan took place.

BESIDE THE NILE.

'Tis there she dwells—too far by long, long league—
Where mirage builds and skies perpetual smile,
Where Pharaoh made with life and death mysterious intrigue,
This morning's flower beside the old, old Nile.

And slim is she as are the reeds that grow
Along that southern river, to beguile
The stranger eyes that would for beauty forth a-roving go,
This little dark-eyed maiden by the Nile.

How came she there, not here, I cannot say,
Our gardens may not know her yet awhile;
Beside her faithful river she would seem content to stay,
Sweet mystery in girlhood by the Nile.

A precious trust is she, great stream of Time—
(How marked with trusts hath been thy every mile!)
Ah, keep the desert back that steals from life its dew and rhyme,
And leave her always young beside the Nile.

PORT SAID NOTES.

(From Our Own Correspondent.)

Port Said, October 10.

The Greek Reservists.

About 400 Greek reservists left Port Said on Saturday by the steamer Goulandris for Athens. This is the first contingent from Port Said, the number of Greeks called up from here for military service totalling about a thousand. The reservists received an enthusiastic send-off from their colony, as, headed by a local band and a detachment of boy scouts, they marched through the streets to the quay. The Greek Consul, priests, and notables of the colony accompanied them on board to wish them God-speed and a safe return.

The Armenian Refugees.

A miniature town has been formed on the Asiatic side of the Canal at Port Said by the refugees from Armenia, whose numbers have recently been augmented by further arrivals from Northern Syria. Huts and tents form the greater part of the dwellings; streets have been laid out, and the refugees are settling down comfortably in their new quarters. Several marriages have taken place, and a movement is on foot to provide such as are capable of working with a means of earning their living.

Subscriptions to the local relief fund amount to over £400, and numerous gifts of clothing and food have been received.

Canal Zone Regulations.

The general regulations governing embarkation and disembarkation in the Suez Canal zone, including Port Said and Suez, have recently been made considerably more rigid than hitherto.

A proclamation by Sir John Maxwell, issued by the Provost Marshal of the Suez Canal zone, ordains that

No passenger from any vessel, unless actually disembarking or transhipping, shall be permitted to land in the Suez Canal zone, saving those provided with regular passports, and who are either British subjects or subjects of an Allied Power. Ships' officers and members of the crew on duty belonging to merchant vessels shall be permitted to land with a pass signed by the master of the ship and countersigned by the police.

A further notification made by the Provost Marshal to-day is to the effect that:—

All persons wishing to land in Egypt must be provided with a British passport, if they are British subjects, or with a passport bearing the visa of a British Consul.

For the passage of steamers through the Canal a military permit is necessary, and this is only granted after examination of the sandbag defences of bridges by naval officers. Such passes are issued between 8 a.m. and 8 p.m.

Steamers' transits are averaging slightly longer than in normal times; this is mainly owing to occasional delay at Ismailia, where outward bound ships are sometimes held up at night time. At the same time, it often happens that a steamer entering here in the morning is able to pass Kabrit before nightfall, and thus gets a clear run through, while homeward bound steamers are seldom delayed in their transit.

LIFE IN JERUSALEM.

(From a Correspondent.)

News from Jerusalem, dated August 25, has been received viâ Athens, according to which all is well, and the place quiet. Letters seem able seldom to leave or enter the country, and then with difficulty; and this news was by postcards written in English.

Knowing that the writers could hardly say anything but that all was well, however much otherwise the case might be, it is a comfort to have this statement confirmed by the report of an American Jew, lately come from Jerusalem, who said that all was quiet, and that though things are becoming very scarce and expensive, there is no actual starvation; the rice is finished, and petroleum so scarce and costly that the people are using *sceraj* (melted cooking which smells very nasty) and olive-oil for lighting purposes. The Nablûs soap, formerly four piastres the rotl, is now ten; and everything seems to be rising on much the same scale. The markets are open, however, and life proceeds much as usual. No Christians have been taken for active service yet, the Turks feeling that they could not be counted on at the front. For the comfort of this assurance we cannot be too thankful.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, Sept. 29.

A Hopeful Outlook.

The general situation of the Sudan is too normal to call for comment. Crops are, on the whole, good, and the year will probably be an average one. There are places where the harvest will be unusually good, but in other parts serious damage has been done by locusts, or grasshoppers, and the general average will come out as a normal year.

There has been a considerable increase in the demand for cattle to supply troops engaged at Gallipoli and in Egypt, and there is hope of extending the trade further. It is not improbable that the export of live stock, cattle, and sheep will exceed the value of any other exports from the Sudan, and this notwithstanding the fact that the prices for gum ruled high with a big output, whilst there has been an unprecedented export of grain to the Red Sea littoral. Thus what was expected to be a bad and difficult year has turned out extremely well for the natives, who have been able to place all the chief products of the country on the market at a good price.

The Blue Nile continues to hold up, and it is possible that the prospects of the basins in Berber and Dongola provinces may not be as bad as was anticipated—the local weatherwise prophesy an early, long and cold winter, from the behaviour of the Blue Nile flood. This will be most welcome, as the weather in Khartoum recently has been exceptionally hot and damp and undeniably unpleasant.

An Example to Follow.

It is gratifying to find that an important British firm, Messrs. J. Laing and Sons, have sent out their own representative in Mr. Lake, who arrived in Khartoum recently. Hitherto British firms have relied on German and Greek agents for the most part. As the former are now elsewhere and the latter mobilised, it is a shrewd step to take, and it is to be hoped that other firms will follow this example.

Native Elephant Killing.

The untutored savage, finding that ivory had its price, and lacking the arms and ammunition to kill elephants with, discovered a variety of means of obtaining his object, chief amongst which were burning and pits. A band of negroes having found a herd would set the grass alight all round them and thereby kill almost every animal within the ring of fire. The slaughter was, of course, indiscriminate, young and cow elephants were destroyed, and only a few good tusks obtained for a huge loss of life. In the same way, pits dug in the forest were as likely to trap the small or female elephant as the old tusker. It is always a difficult matter to persuade the savage of the inefficacy of his habitual methods, but arrangements have now been made, and it is hoped that these obsolete methods will be given up and only the big bull elephants killed off.

CYPRUS NOTES.

(From a Correspondent.)

The summer season is closing. It is a satisfaction to feel that all that was possible has been done to render life as pleasant as possible for the wounded and convalescent visitors to Mt. Troödos, including those who were kept in hospital.

Subscriptions towards a fund on behalf of the Belgians are being collected in all districts.

Forest fires have unfortunately taken place in several parts of the island. In the Machara forest there has been a destructive one, which has caused havoc over an area of about 500 native acres (*donums*), or nearly 200 English acres. Another fire occurred recently near the picturesque ruined fortress of Kantarà, in the Famagusta District. Cyprus can ill spare any of her trees, but forest fires are unhappily not uncommon. Though sometimes due to malicious injury, they are probably more often the result of accident, such as the careless throwing away of a cigarette, or failure to extinguish some small fire that has been kindled.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, October 5.

A Critical Situation.

Up to the last moment, even this morning, everything tended to indicate that Greece was drifting rapidly into war. The statement made in Parliament by M. Venizelos on Wednesday last, to the effect that Greece would never allow any Balkan State, meaning Bulgaria, to become predominant, had given rise to this belief, which was strengthened by the fact that the text of this statement had previously been approved by the King and by M. Gounaris, the leader of the Opposition, the latter of whom had raised no objection to it. This evident agreement between the different political factions in the country inspired confidence in the men who have been flocking to the colours. The number of these has already reached nearly 400,000.

General Hamilton at Salonika.

Friday last saw the fulfilment of the promise of the Entente Powers to M. Venizelos, when General Bruce Hamilton landed at Salonika with a number of French and British staff officers. On his arrival General Hamilton approached General Moscopoulos, commanding the 3rd Army Corps, with a view to arranging with him for the landing and transport of the troops, but as the latter had not been authorised to take any steps in the matter, he communicated with the Minister of War. This was followed by a consultation between M. Venizelos and the King, after which the former called on the British Minister. Immediately the organs of the Opposition set up the cry that Greece's neutrality had been violated. In order to placate the anti-Venizelist Press, the Ministerial organs declared that there had been a misunderstanding, that General Hamilton had landed of his own accord, and that the British Legation had given assurances to that effect. As, however, the landing at Salonika coincided with Sir Edward Grey's declarations in the House of Commons in favour of Bulgaria, grave apprehension was felt, even in official circles. It was feared that England, taking advantage of M. Venizelos' request for the despatch of troops to aid Greece in the event of war with Bulgaria, would occupy Greek Macedonia, with a view to guaranteeing to Bulgaria the territorial concessions offered her by the Western Powers.

Sir Edward Grey's Declaration.

These suspicions were allayed, however, by formal assurances made to the Government, as well as by Sir Edward Grey's subsequent statement to the Press, in which, while denouncing the presence of German officers in the Bulgarian Army, he employed terms that were no longer construed as friendly to Bulgaria. This declaration caused considerable satisfaction in Greece, where it is now believed that England has finally abandoned the vain hopes that her Government persisted in placing in Bulgaria. Russia's ultimatum also helped to confirm the belief that a change had taken place in the attitude of the Entente Powers towards Bulgaria. Now that that country has definitely thrown in its lot with that of the Central Powers, there would seem to be no possible doubt as to the course that Greek policy should follow. Everyone here is now convinced that Greece's only course is to throw in her lot with the Entente Powers.

The Arrival of French Troops.

On Saturday last M. Guillemin, the French Minister, presented a Note to the Government informing them of the arrival at Salonika of the first detachment of troops sent by France and England to aid Serbia and to maintain communications with that country, and stating that the two Powers relied upon Greece not to oppose any steps taken in the interests of her Ally. After consultation with the King, M. Venizelos replied by issuing a formal protest (which, it is said, was insisted upon by his Majesty) against the passage of these troops through Greek territory.

A Historical Sitting of the Chamber.

On the following day, after having communicated to the Chamber the text of the Entente Note and the reply thereto, M. Venizelos declared that to take any material steps to prevent the passage of troops to aid a State allied to Greece, and now threatened by Bulgaria, would, in the present upheaval, exceed the limits that honourable adherence to her policy of neutrality imposed upon Greece. M. Venizelos added that the passage of these troops through Greek territory should not cause any apprehension, as he had the formal assurances of the Entente Powers that the proposals they had made to Bulgaria, involving the cession of Greek and Serbian territory, had become null and void. The leaders of the Opposition—MM. Rallis, Théotokis, Gounaris, and Dimitracopoulos—protested strongly against the violation of Greek territory. The discussion then turned on the obligations imposed upon Greece by her treaty of alliance with Serbia and on the general policy that should be adopted. M. Théotokis maintained that, the object of the Greco-Serbian Treaty having been the preservation of territory acquired in the Second Balkan War, it had become void when Serbia agreed to cede a part of this territory to Bulgaria. M. Gounaris shared, more or less, in this opinion. M. Théotokis asked the Government what they would do if, in attacking Bulgaria to defend the Serbs, Greece found herself faced with German bayonets, and concluded by advocating strict neutrality to avoid incurring the enmity of the two Central Powers, which, he considered, would be a calamity for Greece. M. Venizelos replied that the Government had no intention of going to war with either Germany or Austria. It did not follow that she should, and he pointed to the case of Italy, who had been at war with Austria for four months, but had not declared war on Germany. He added, however, that if the Greek army, while accomplishing a task of honour, and defending the national interests, were to meet the Germans in the field, it would not fail in its duty, however much one might regret a conflict with a country with which Greece has no direct quarrel. These outspoken declarations of the Premier caused a great sensation in the Chamber.

M. Venizelos reminded the Chamber that the treaty with Serbia imposed on both States the duty of coming to the aid of each other against any third party, and that the duration of that treaty was ten years. Replying afterwards to the allegations against the Entente Powers made by M. Théotokis, the Premier declared that it was the Southern Slavs that Greece had to fear, not Russia, and that reminded him that England, in spite of her Bulgarophil sentiments, had let Greece have Crete and the islands, whilst the Central Powers were the allies of Turkey, whose interests were opposed to Greece. The pro-Entente policy of the Government was approved by a vote of confidence, and the Chamber rose at five o'clock in the morning.

The Cabinet's Resignation.

This afternoon M. Venizelos was received in a lengthy audience by the King, who declined to approve of the course of action proposed to be taken by his Prime Minister. As a consequence, M. Venizelos has handed his resignation to his Majesty. The news has aroused consternation in Athens. It is impossible to hazard any guess as to the future. Meanwhile, the landing of French troops commenced this morning. Whether it will be continued or not, no one knows. The situation is uncertain in the extreme.

October 10.

The New Cabinet.

The Coalition Cabinet formed by M. Alexander Zaimis, who, as President of the Council (after the war of 1897) and Governor-General of Crete, has rendered signal services to his country, has been qualified in certain diplomatic circles as a Coalition Cabinet directed against M. Venizelos. Composed almost exclusively of ex-Prime Ministers and former party leaders who, with

Digitized by Google

the exception of M. Gounaris, now possess no influence whatever in Parliament, the new Cabinet cannot be described as a Coalition Cabinet, inasmuch as it is not a combination of Parliamentary groups possessing the majority of votes in the country, which still belongs to the Venizelist party. Neither can it be called "Œcumenical," or universal, which is the appellation given in Greece to a Cabinet comprising all parties, since the Venizelist following are not represented.

The Cabinet's Policy.

The principal aim of the new Cabinet is to avoid at all costs entering into the war, whilst strictly maintaining an armed neutrality, with benevolent dispositions towards the Entente Powers. As regards the treaty obligations towards Serbia no official statement has as yet been issued on the subject. Judging, however, by statements in the Ministerialist Press, the members of the Cabinet, while recognising the validity of the Greco-Serb Treaty, in so far as it provides for action in the case of isolated aggression on the part of Bulgaria against Serbia, maintain that in the event of Bulgaria attacking Serbia simultaneously with the Central Powers, Greece is under no obligation to intervene, because, according to their theory, the conflict would have thus assumed a European character. To interpret the terms of the treaty thus is regarded in competent circles as a mere splitting of hairs, seeing that its provisions are explicit, and make no distinction of this sort. Now Bulgaria, who has doubtless been informed by its Minister at Athens of the Greek Government's attitude, will have nothing to fear from Greece, and will have no hesitation in attacking Serbia. From this point of view M. Venizelos made a fatal blunder in not deferring the action which precipitated the crisis and brought about his resignation, as Bulgaria, being aware of his attitude, would have continued to live under the menace of a Greek attack, and would have hesitated to invade Serbia, thus enabling the latter to employ the whole of her troops in repelling the Austro-German attack.

Its Fears.

The interpretation thus given by the new Cabinet justifies, at least in appearance, its refusal and the state of powerlessness in which it evidently finds itself to fulfil the engagements imposed upon Greece by the treaty of alliance. In reality, the Government seems to fear the danger arising from the German invasion and to believe that the Allies will not be able to despatch, at any rate in time, the 150,000 or 200,000 troops promised to M. Venizelos; in which case Greece, with Serbia, would not be able to resist effectually the numerous Austro-German troops—to which would be added the Turks—and that they would both be crushed. In these conditions the Government appears to be of opinion that the participation of Greece, whilst it would be of no use to either Serbia or the Entente, would expose Greece to grave dangers, not the least of which would be the capture of Salonika by the Austrians.

This gloomy prediction is in a large measure due to the influence wielded by certain military circles, who are always prone to exaggerate the strength of the Germans, while overlooking the fact that it is not an easy matter for them to detach from the other fronts very large contingents, nor to send them as far as the Balkans. But, in any case, it is an unfortunate fact that the authorities are not alive to the fate that would await Greece and Hellenism should the Germans, having crushed Serbia, march on Constantinople, reviving Turkey and creating a Great Bulgaria. This eventuality would mean for Greece the burial of all her national aspirations, and she would constantly find herself intimidated by two savage neighbours, one on land and the other at sea. Such an abstention on the part of the Greeks would be in direct opposition to the glorious traditions of their ancestors, who, heedless of the number of their adversaries, always fought to free their blood-brethren. As the Government does not appear to have the intention of demobilizing, it is a moot point whether the troops will have the patience to remain, probably the whole winter, inactive on the frontiers, if events do not force Greece into the struggle.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, October 6.

British Subjects Arrested.

With a certain respite in the persecution of the Armenians, the Turkish authorities seem to have turned their attention to the subjects of their enemies. The following Englishmen have been arrested in Constantinople and exiled to Karahissar:—Messrs. Leete, Rawe, Hoare, Willard, Harold Ashover, Lee, and Colley. Mr. Gilbert, of the Credit Lyonnais, was also arrested, but was subsequently liberated on account of his age. Mr. Charles Ferguson has now been sent to Urfa.

For the present, it is said, no other Englishmen will be exiled; but one never knows when the net will be cast again, and it is now rumoured that a similar fate awaits a number of Frenchmen. So far, however, no arrests have been made. It is said that these measures have been taken by the authorities as a reprisal for the arrests of Turks in England and elsewhere.

Arrival of Flour and Coal.

As mentioned last week, a large quantity of flour has arrived in Constantinople, but where it actually came from has remained a mystery. Some reports say part of it came from Adrianople and part from Bulgaria. Be this as it may, no further arrivals have since been announced, but the bread question is not likely to become acute again, just yet at any rate, as further arrivals of coal are reported, and the stocks in Constantinople are now said to amount to over 30,000 tons. The prediction made in a recent letter that the Russians would probably be even less successful in the future than they have been in the past in preventing coal coming into Constantinople is proving correct. The one article of which a lack would have paralysed Turkey's naval and military operations, besides producing a serious state of affairs in the capital, the Russians have been unable to prevent entering the Bosphorus.

Petroleum in small quantities finds its way into Constantinople, but is evidently snapped up by the authorities, as it is difficult to obtain, and at least £T1 a tin has to be paid. Fuel of all sorts is very scarce. Coal for private use is practically unobtainable, and about £T4 per ton has to be paid for coke, but is difficult to obtain even at that enormous price. Charcoal is about 150 piastres per 100 okes, and wood about eighty piastres per cheki, both being about five times their normal prices.

Turks' Confidence.

With the Turks' ability to replenish their stocks, and with Bulgaria as an ally, the economic position at Constantinople is likely to be considerably ameliorated, and any hope which may at one time have been entertained of reducing Constantinople to starvation may now be abandoned. Under present conditions, nothing but decisive military operations is likely to make any impression on the Turks. They are more buoyed up than ever, confident in the expectation that, now Bulgaria has joined them, a German army will soon be in Constantinople, and direct communication with Germany established.

The military authorities continue to seize every building they can for their wounded. One of their latest requisitions is the Asile des Pauvres at Chichli, an institution maintained by Catholic sisters for old people. The occupants were turned out without any ceremony at a few hours' notice, but fortunately room has been found for them in other charitable institutions. Many churches, with their dependencies, have been seized and converted into schools, and there is some fear of the Crimean Memorial Church meeting with a similar fate.

The authorities are now trying a new method to extort money out of the public. A committee has been formed for the purpose of obtaining warm clothing for the soldiers, and its agents visit shopkeepers and demand a contribution of goods or money. When the goods offered in a shop are unsuitable and money is unobtainable the shopkeepers are told to take their contributions to certain shops in Stamboul, where they will be exchanged for the articles required.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, September 28.

Desire for Mobilization.

The mobilization in Bulgaria, followed by that in Greece, caused the Roumanians whose sympathies are with the Entente—and they are 99 per cent. of the population—and who see in the present movement the most favourable opportunity to enter the European struggle and thus ensure the fulfilment of Roumanian aspirations, to hope, if not to expect, that M. Bratianu and his party would order a similar step. Expectations regarding the Cabinet Council of Saturday (25th inst.) ran high; and consequently the disappointment was great, when it was known that the Government had decided to make no change at all in its policy, and that the state of "expectant neutrality" was to continue. An official *communiqué* published in the Press runs as follows:—

A Council of Ministers was held yesterday at the house of M. Costinescu, Minister of Finance, who is unable to leave his room.

The Council considered the external situation, taking into consideration the mobilization of Bulgaria and Greece. The Ministers are unanimously of opinion that these fresh events are not of a character to modify in any way the course of conduct decided upon and followed up to the present by Roumania. Therefore, our troops will remain concentrated along our frontiers.

Regarding the proclamation of a state of siege, which has been referred to in some journals, it may be affirmed that this question has not even been discussed by the Ministry.

Save amongst the followers of M. Bratianu and the Marghilomanists, this decision has caused great dejection in the country. For some time past there have been murmurs, not loud perhaps, but certainly deep; but when called upon to adopt a more active policy M. Bratianu has always replied with the phrase, "The time has not yet come." And now, with Serbia threatened on both sides, with Greece mobilized to go to the help of her gallant neighbour, and with the German-Austrian forces on the frontier, he again uses the same time-worn expression.

Protest to M. Bratianu.

The people of Roumania are beginning to lose patience, and to ask what is the reason for this continual hesitation. A meeting took place on Sunday which was attended not only by leaders of the Opposition, such as M. Take Jonescu, Dr. Istrati, and M. Filipescu, but also by several influential Liberals, including General Crananceanu and M. Moldoveanu. The flagrant way in which German propagandists are allowed to carry on their work and similar topics were discussed, and the following resolution was passed:—

The undersigned Senators and Ministers of Parliament assembled this 26th day of September demand that an end shall be put to the foreign corruption that disgraces the country and poisons the national spirit. In face of the danger threatening the country, which degrades it from its high position, we demand general mobilization of all our military forces.

A delegation was chosen to present this resolution to the Prime Minister, who, it is generally reported, has been requested to give a reply by to-day.

What the reply will be is unknown as yet, but it is generally expected that it will be unfavourable. The country is certainly in a highly excited state, and both in the streets and in the cafés one hears a good deal of violent criticism of those in high places. The troops, too, who, to the number of almost a quarter of a million, have been mobilized at no great distance from the frontier for close on four months, are becoming impatient at having nothing to do. The near future may, therefore, see some interesting developments.

Bulgarian Deserters.

According to all accounts, the mobilization in Bulgaria is far from popular. In two days no less than 800 reservists, mostly with their military equipment, have deserted and crossed into Roumanian territory, principally from the Widdin district. They complain that they do not know whom they are to fight against, and that they could get no information on the point when they applied to their officers. And they were unwilling to fight against "Russia the Liberator" and her Allies.

From Sofia comes the news that hundreds of letters were addressed to King Ferdinand asking against whom the writers were summoned to fight.

An Ottoman Protestant.

The march of events has brought Roumania a new and interesting subject in the person of Batzaria Effendi, the well-known Macedonian and Ottoman statesman, who was at one time Minister of the Interior in Turkey. Apparently unable to approve of the policy of the present Government of Turkey, he has quitted that country and settled in Roumania, where he has applied for and obtained citizenship. At the same time he applied for enrolment in the military list in a class corresponding to his age, and as a result he is at present undergoing a period of instruction as a private in the 46th Regiment.

ROUMANIAN HISTORY AND FOLKLORE.

Mr. A. R. Wright lectured on Saturday last at the Horniman Museum, Forest Hill, on "Roumanian History and Folklore." He said that Dacia was conquered by Trajan and settled by Roman colonists, who intermarried with the original people. When the Roman armies afterwards withdrew south of the Danube, many of the people went with them, but others retired into the Carpathians, from which they emerged in the Middle Ages, gradually resettling the plains. To-day there were about thirteen million Roumanians, seven million in the country named after them, the others in continguous districts of Russia, Austria, and Serbia; which districts, together with the kingdom of Roumania, roughly corresponded to the ancient Dacia.

Mr. Wright told some quaint and amusing folklore stories. One related how, God having made the sheep as a help to Adam and Eve, who were starving after being turned out of Paradise, the devil made the wolf to prey upon the sheep; so God made the dog to protect the sheep from the wolf. Another story told how when God made the bee, the gipsy boldly pushed forward and seized it. God said nothing, but he was annoyed at the gipsy's impudence, and, as some consolation to the Roumanian, made and gave him the wasp. Afterwards the Roumanian was successful in making a swindling exchange, whereby the Roumanian got the bee, while the wasp went to the gipsy. So to-day the wasp is the gipsy's bee.

Gipsies are not liked in Roumania, nor are Jews, and about the latter a characteristic story is told. The Roumanian keeps Easter as the greatest of the year's feasts, and naturally believes that it is equally kept in heaven. At that time the gates of Heaven are left unguarded, so that if anyone has the luck to die at Easter he goes unchallenged into Heaven. Among those who thus got in was a Jew. Next morning the whole place was in a turmoil; angels and archangels came to the Jew and pointed out his mistake, but he declined to budge. Saint Peter tried to persuade him to retire, and afterwards King David and King Solomon, but all to no effect. Then a little angel said: "I know what to do." He went outside the gate, and just on the other side of the wall began to beat a drum, which in the East is the signal for a sale. The Jew cried out, "Wait, wait. I will bid." He ran after the supposed sale out of the gate of Heaven, which was promptly closed behind him.

Another and longer story related how anciently it was the woman who beat the man, not the man who beat the woman. One man was taught by a lark whose nest he had spared to reverse the process, and others followed the example. Upon this the women assembled, and resolved to cross the Danube. The other men turned upon the innovator who had introduced the unfortunate custom, and would have killed him. But again the lark proved his friend. Flying over the heads of the crowd of women the lark sang out, "There are no men on the other side of the Danube. There are no men on the other side of the Danube." Upon hearing this the women gave up their resolve; beaten or not beaten, they preferred to remain, and to-day, says the Roumanian, if a man lets his wife beat him he is not a man but a donkey.

Equally ungallant was the story of the woodpecker. This was originally a very inquisitive, mischief-making old woman. God filled a huge sack with insects, and tying it tightly gave it to the old woman, bidding her carry it home and beware of opening it on the way. The old woman took the sack on her back and trotted off, but could not restrain herself. No sooner had she gone a short distance than she sat down in the meadow and opened the sack. All the insects came out and scampered away; some hid in the earth, others scrambled under the grass, some ran up the trees. Then came the voice of God: "Where are the insects I gave you? From this moment you shall change into a bird and go about gathering them until you have got them all back into the sack." So the old woman became a bird, her long nose became a long beak, and she goes about hunting for the midges, beetles, and other insects that escaped. When she has refilled her sack she will resume her human shape.

Other lectures to be given shortly at this centre include one on "Our Eastern Allies," by Dr. A. C. Haddon, on the 30th of this month, and another by Professor Simpson on December 4, his subject being "Sant Sophia, Constantinople, and the Mosques of Constantinople and Brusa."

BRITISH REFUGEES IN ATHENS.

The attention of ex-British residents of Constantinople at present in Athens is drawn to the fact that "The Near East" is on sale every week at M. Th. Vafiades' Bookstore, here subscriptions are also received.

SERBIAN LETTER.

(From Our Own Correspondent.)

Nish, October 7.

The Diplomatists' Last Word.

Events are moving rapidly. The representatives of the Quadruple Entente at Sofia have said their last word and demanded their passports. The Serbian Minister, it is said, has already quitted Bulgaria, and the Bulgarian Minister is supposed to have left Nish last night. Even as I write it is not known whether the roar of cannon may not have already supplanted the voice of the diplomatists.

The two rival Balkan States are fully prepared and eager for the fray, and, as if in reply to the Entente's demand to Bulgaria for a categorical response, on the day before yesterday, for the first time during this war, there flew over Nish two enemy aeroplanes, which dropped some bombs, killing three persons and wounding several, and afterwards disappeared flying in the direction of Bulgaria.

This visit, and the throwing of bombs amidst the inhabitants of Serbia's temporary capital, had every appearance of a bellicose Germanic-Bulgarian declaration. Everywhere in the streets one heard the remark, "There is Bulgaria's reply! We know it now, before receiving the news from Sofia." And this morning we have had evidence of every preparation being made for the worst, in seeing the departure of many empty Red Cross railway wagons for the front.

Nish Calm and Courageous.

Last night the streets were quiet. The calm that reigned outwardly did not tally with the anxious inquiries passing from friend to friend; it was a time of strained suspense; none knew what the morrow might bring forth, yet all felt persuaded that war is now almost inevitable. But among those with whom I came in contact there seems to be no fear; they all expressed themselves in terms of great confidence, and they believe that a conflict with Bulgaria would end in a rapid victory for the Serbian arms. To-day one Nish paper makes use of these words: "Ah, now the soldiers of the bloody king of war may come in innumerable numbers, the eternal traitors of the Balkan cause may also come, the Serbian army, covered with the laurels of Kumanovo, of Monastir, of Bregnalitza, of Tzer, and of Rudnik, which has never merited reproach, awaits them without fear."

The threatened renewed attack, this time of German as well as of Austrian forces, has not yet been realised. It almost seemed at one time as if the enemy forces were more intent on preparaing for a defence than for an attack, for they directed their principal attention to the construction of trenches and to fortifying their position opposite the Serbian frontier along the Save and the Danube.

Austro-German Methods.

Lately, possibly with a view of encouraging and giving confidence to the Bulgarians, who are counting on the support of the Austro-German troops, Austrian and German aviators have amused themselves by throwing bombs into Serbian towns; and the day before yesterday, and again yesterday, the Austrian batteries bombarded parts of Belgrade, as well as the fortress. Whether bombarding a defenceless town and throwing bombs among civilians will attain the end the Austrians and Germans have in view is another question, and one that is not likely to be answered in the affirmative. Still, we must deplore the loss of many innocent lives and many persons wounded. On October 2 the enemy aeroplanes flying over Pozhaurevatz threw twenty-five bombs, killing one person and wounding three. On October 4 several enemy aeroplanes flew over the lower Morava and the Mlava, throwing thirty-three bombs.

Welcome for the French.

The town of Nish is to-day decorated with flags to welcome the French troops which are said to have landed already at Salonika.

Yesterday evening about four hundred reservists, who had arrived from Roumania on their way to Greece to join the army, formed a procession, carrying banners through the streets of Nish.

Nish continues to be overcrowded, and the Home Minister has issued an order that no permits shall be given to persons in other parts of Serbia to come here with the object of residing here permanently.

Prahova-Nish Line.

The broad-gauge railway from Nish to the Danube, Prahova-Negotin-Knajievatz-Nish, which has been some years in the course of construction, is likely to be in working order in about one month or six weeks. The last part of the work, the tunnel at Gremada, has been pierced, and the work is progressing rapidly. There is communication between the port of Prahova on the Serbian side and the railway station on the opposite side of the Danube on the Roumanian frontier.

The completion of this railway opens direct intercourse with Russia by trains passing through Roumania, and will greatly facilitate the passage of passengers and conveyance of goods or materials from the port of Salonika.

Nish, October 8.

Enemy Activities.

Since writing you yesterday I have heard that the last Austro-German forces' demonstrations were of a more serious character than any of the preceding ones. But these attempts at crossing into Serbian territory are probably movements intended to distract attention from the real points where the enemy intends to make an invasion in force.

It is reported that small bodies of the enemy's forces crossed into Serbia at four different points—across the Danube at the south-eastern end of Belgrade and across the Save at the north-eastern end of Belgrade, and also in two places crossed the Save in the north-western part of Serbia. Those who succeeded in landing either lost their lives or were taken prisoners. None succeeded in escaping. Two hundred prisoners, it is said, have been forwarded to Nish.

Referring to the aeroplane which dropped bombs on this town and disappeared, flying in the direction of Bulgaria, it appears that the aviators were received in that country with great enthusiasm; and I am told that this friendly reception of the enemy, and the failure to disarm the officers, or to intern them, is regarded here officially as a declaration of war. But I cannot conceive how this view can be taken of the incident unless the Bulgarian Government has been notified accordingly. All aeroplanes are not dangerous. Yesterday I had the pleasure of seeing a friendly aeroplane hovering over the town; it flew very low, and crowds gathered in the streets, gazing at this rare occurrence at Nish.

MR. ASQUITH ON SERBIAN BRAVERY.

The Prime Minister was presented by indisposition from presiding on Tuesday at a lecture given at King's College by Professor T. G. Masaryk on "The Problem of Small Nations in the European Crisis." Lord Robert Cecil, Under-Secretary for Foreign Affairs, presided over a large audience, which included the Belgian Minister and the Serbian Minister. Lord Robert Cecil said that the Prime Minister had asked him to convey the following message to the meeting:—

> I must send a message of most sincere apology and regret that I am unable, through indisposition, to carry out my promise to take the chair at Professor Masaryk's inaugural lecture. I congratulate King's College on his appointment, and I can assure him that we welcome his advent to London, both as a teacher—the influence of whose power and learning is felt throughout the Slav world—and as a man to whose personal qualities of candour, courage, and strength we all are glad to pay a tribute. We believe that his presence here will be a link to strengthen the sympathy which unites the people of Russia and Great Britain. First and foremost, the Allies are fighting for the liberties of small nations, to the end that they be left in future free from the tyranny of their more powerful neighbours to develop their own national life and institutions. Above all, to-day our thoughts and our sympathies are moved towards Serbia, whose undaunted courage wins day by day our unbounded sympathy and admiration.

NEAR EAST BOOKSHELF.

SIR EDWIN PEARS'S RECOLLECTIONS.*

"Forty Years in Constantinople," by Sir Edwin Pears, published by Messrs. Herbert Jenkins, Ltd., is certainly a *tour de force* when one considers the circumstances under which it was written, namely, in the space of a few short months and without the aid of the books and memoranda which the author was most unfortunately obliged to leave behind him in Constantinople. To compress the experiences of a lifetime into less than 400 pages is by no means an easy task, especially when these experiences cover such an interesting period of Turkish history and the author has come in contact with so many of the people who have contributed, in a more or less degree, to the making of that history.

Sir Edwin Pears has been happy in the choice of what he has narrated, and while there is a little which seems perhaps trivial enough to be omitted, one could wish that more could have been told. There is no mention, for instance, of the presence of the international fleet at Constantinople during the critical days of the war between Turkey and the Balkan States, when the Goeben first made her appearance in the Turkish waters where she is now so much at home.

For anyone desirous of obtaining a good idea of events in Turkey for the past 40 years, Sir Edwin's book will form very entertaining and enlightening reading, though one must not forget that the work is a book of reminiscences, not one of definite and purely historical record. But, read it from any standpoint that one may, it is an intensely interesting human document. The author has told a blunt, straightforward narrative, and has had the courage to criticise those in high places who he thinks have failed in the performance of their duties, whether through the fault of circumstances or their own.

At times Sir Edwin's attitude is more that of an advocate than a judge, but in this he is consistent at least. He has always been a strong opponent of Turkish misrule. His sympathies have been for the peoples he has seen most of and knows best, the Greeks, Armenians and Bulgarians, with whom intercourse was easier. Linguistic barriers are greater when among Turks; for the Eastern man when speaking a European language seems to lose something of his real self when translating his thoughts for Western understanding.

It is somewhat unfortunate that the author's memory has occasionally played him tricks, with results that reference to notes would probably have avoided. On page 278, in speaking of the attack on Constantinople by the army from Salonika during the counter revolution of 1909, he states that little opposition was met with at the Tashkishlar and Artillery Barracks, whereas it was not till the afternoon that these two places fell, after artillery had been freely used against them. Nor is there any mention of the fighting in Stambul, when the front entrance of the Sublime Porte was blown in by a shell. On page 280 the date 1899 is an obvious mistake for 1909.

A second edition—and there will doubtless be many editions—will enable Sir Edwin to correct such errors as Javad for Javid, the Minister of Finance, Tashkisla for Tashkishlar, Serkedji for Sirkedji; and his spelling of "kadikewi," will, we think, find few adherents. A little reflection might have avoided the statement, on page 320, that Sir Richard Crawford was the reorganiser of the Egyptian Customs. Sir Richard was Commissioner of Customs in London up to the time of his appointment to Turkey, where he succeeded so well in instilling British methods into the Ottoman Customs House authorities. "Cafes chantantes" should not have been allowed to slip in, and the Turks "drink" ("ichmek"), not "eat" their narghilés, as the author has suggested.

Apart from these and other minor errors, one cannot but admire the energy with which the book has been written. The author has always been a hard and conscientious worker, as all who know him will readily admit, and his contributions to the world's interest in and knowledge of the fascinating city of Byzantium, both past and present, deserve to earn him a high place in the esteem of all his readers.

Few books have been put upon the market so opportunely as this one. The Near East, with Constantinople as its centre, is in all the world's eye at this moment. Sir Edwin's forty years cover a period of dramatic and swiftly moving events, and his historical sense—so well illustrated in his previous books—enables him to tell his life story with a force and value beyond that which attaches to most autobiographies. It is not a book of the moment only—it is a forty-years' experience in too important a period and with too broad a background to enable it to appear without making a lasting impression.

It is really remarkable that with memory and not notes to draw upon the author lets so few important data escape him. The earlier chapters up to the fall of Abdul Hamid, are perhaps the most interesting, as the events recorded in them are less generally known and have the advantage of a perspective, while recent history is too near us to enable a historian to give it its true proportion.

* "Forty Years in Constantinople." The Recollections of Sir Edwin Pears 1873-1915 Herbert Jenkins. 16s. net.)

BOOK NOTES.

A book which is sure to be in great demand at the present juncture is "Eleftherios Venizelos: His Life and Work," which Mr. Murray has just published. It is a translation by Beatrice Barstow from the original of Dr. C. Kerofilas, and M. Take Jonescu has written a brief introduction.

A lively account of what one may call the outward life of the Turkish capital is provided in M. E. Edwards' "Journal d'un Habitant de Constantinople (1914-15)," which is published by Plon-Nourrit at 3.50 frs.

Among Messrs. Gay and Hancock's announcements, we notice "The Story of Prince Ahmed: From the Arabian Nights Entertainments," illustrated by Charles Robinson, with coloured plates. We have not seen the book, but mention it as likely to appeal to readers on the look-out for a suitable present for young friends. The price is 2s. 6d.

Messrs. Lippincott's autumn announcements include "The Civilization of Babylonia and Assyria," by Morris Jastrow, Junior.

"Across Asia Minor on Foot" is written by W. J. Childs, and published by Blackwood.

Messrs. Longmans, Green and Co. will publish very shortly "Constantinople, Old and New," by H. G. Dwight. The author has lived in Constantinople in boyhood and manhood in real intimacy with the people, and the vividness of his early impressions has been supplemented by a deep study of marked character and of the significance of the city's associations. The book is to be illustrated with photographs taken by the author himself.

The same firm have now in the press the first two volumes of "East and West through Fifteen Centuries: Being a General History from B.C. 44 to A.D. 1453," by Brigadier-General G. F. Young, C.B., author of "The Medici." The two volumes cover the history of 800 years up to, in the East, the death of the Emperor Leo the Iconoclast in 740, and in the West the death of Charles Martel in the same year.

Messrs. Grevel have published "Popular Stories of Ancient Egypt," a translation by Mrs. C. W. H. Johns of the fourth French edition of Sir Gaston Maspero's well-known work. The price is half-a-guinea net.

Messrs. Simpkin, Marshall and Co. have published, at 1s. net, "Light on the Balkan Darkness," by Mr. Crawfurd Price.

"L'Epopee Balkanique," by M. Paul Liseron, has just been issued in Paris (E. Sansot et Cie), at 3fr. 50c.

BOOKS on the NEAR EAST.

ROUMANIA AND THE GREAT WAR.

By R. W. SETON-WATSON, D.Litt. 2s.

Here, in a few pages, Dr. Seton-Watson takes us hurriedly through the salient features of Roumanian history with a view to offering an estimate of Roumanian policy in relation to the war.

THE DARDANELLES: Their Story and their Significance in the Great War.

By the author of "The Real Kaiser." 2s. net.

This book makes excellent reading, and is full of very useful information.

L'ALLIANCE BALKANIQUE.

By IV. E. GUESHOFF, formerly Prime Minister of Bulgaria. 2s. 8d. net.

This work is concerned mainly with the negotiations leading up to the alliance, and is of considerable interest and value.

BULGARIA AND THE POWERS.

By THE O'MAHONY. With a foreword by R. J. KELLY, K.C. 1s. net.

This little book tells of the fatal disagreement between the Balkan Allies at the end of the war with Turkey and of the disasters that fell upon Bulgaria.

REPORT ON PLANTATION WORK IN CYPRUS FROM 1879 TO 1914.

By A. K. BOVILL, Principal Forest Officer. 7s. 6d.

An interesting resumé of the work done during the period of the British Occupation in the matter of re-afforestation.

The above-mentioned books, or any other publications, may be obtained at the published price, plus 3d. postage, in the United Kingdom, or 6d. abroad, from

THE NEAR EAST (Book Department),
16-17, Devonshire Square, London, E.C.

TANGIER TO TEHERAN.

When I read of Russia's preparations against Bulgaria I am reminded of the sad story of Algy and the Bear. I suppose it was the word "Bulgy" that put it into my head, and I must say that with but a little alteration the thing seems peculiarly applicable. Everyone, I suppose, knows the story, but in case any of my readers may have escaped it, I will tell it here. It is a story in three chapters. In the first, Algy met a bear. In the second the bear was bulgy. In the third and last, it appeared that the bulge was Algy. Well, a Bulgar met a bear . . . . and so on.

***

In the *Morning Post* last Friday I came across three contiguous paragraphs which, taken together, offer an interesting little study in character as it stands revealed in certain Balkan royalties who are much in the public eye to-day. One occurs in a communication forwarded by the *Post's* Rome correspondent, and runs:—

King Peter of Serbia, although unwell, insists on being conveyed to the front to fight among his soldiers, as he did when he led them to victory over the Austrians last year. King Ferdinand is not likely to follow his example, for, as a Bulgarian once said to me, "Les Bourbons n'aiment pas la poudre."

I take off my hat to King Peter, who, in the hour of his country's ordeal, shows that he knows what a king should do—and does it. The second paragraph is in the form of a Reuter's message from Paris, which passes on a report received from an Italian source:—

Prince George of Greece sent his brother, King Constantine, a telegram in plain language, asking him to honour his engagements towards Serbia by declaring war on Bulgaria.

This may, or may not be true. But it is just what one would expect of a frank, large-hearted man like Prince George, to whom the sight of a gallant little nation standing up heroically against a couple of bullies like Germany and Austria, and at the same time fighting a third nation—and one which the Greeks have never loved—must be extraordinarily painful. For it is a sight, surely, to appeal to any man with a particle of chivalry in him; and Prince George is nothing if not chivalrous. The third paragraph occurs in a letter from the *Post's* Bucharest correspondent, who reports that King Ferdinand (of Bulgaria, of course) in bidding farewell to the departing French Minister, said:—

"I have French blood in my veins, but what can you expect? The Germans are victorious, and I would like you to advise your Government to conclude peace."

Evidently one rat at least is determined not to remain on a sinking ship. But when the ship comes safely into port I wonder where the rat will be?

***

It would be interesting, by the way, to know just how King Ferdinand and his advisers have managed to make the Bulgarians forget their former dislike of the Turks, who so long oppressed them. And how did they work them up to a point where they could forget the debt they owed to Russia?—Or, rather, have they succeeded in doing so at all? We may have an answer to the second question very shortly; but if it be in the affirmative, we shall have to wait some time for any answer to the first. And when that comes I fancy it will be about time for Ferdinand to make himself scarce. In the meantime, I observe, he has the satisfaction of knowing that the German Press is falling over itself, so to say, in its haste to hold him up to the gaze of an admiring world as a noble and enlightened statesman, and the person to whom the "turn of events in the Balkans is in the greatest degree due." It is also amusing to observe that all reference to the Kaiser's former claim that the Treaty of Bucharest, to which the Bulgarians so strongly objected, was due to his own august self.

***

Prince Carol of Roumania recently had an escape from a motor accident, which is likely, one supposes, to give a lesson to two youthful peasants. His Royal Highness was on his way from Sinaia when, suddenly, the chauffeur observed a fallen tree lying across the road. Fortunately he was able to pull the car up just in time to avoid a bad smash. And inquiries showed that two youths of the village had dragged the tree across the road in order to "see what would happen if a motor travelling fast should strike it." I do not know what would have happened, but I am prepared to hazard a guess that though the tree was not struck by the car, those two hopeful youths found that other things besides motors can, on occasion, "strike."

***

Seventeen German professors are reported to have really arrived in Constantinople to reorganise the Turkish University, and incidentally to pave the way for the further expansion of the German language. "Gott strafe Turkey" apparently. It is small wonder if, as reported, Constantinople is somewhat chaotic in these days. First, all wounded have to be brought into the capital at night so as not to alarm the populace. Next, all prisoners have to be marched round and round the city at intervals, like a stage army, so that the people may imagine each batch to be a new one. Added to all this the nerves of the Turk are being further wrung by the ministrations of fat Teutonic professors. But, at the same time, on the outskirts of the city, a triumphal arch is being erected, under which the Hajji Wilhelm is to pass when, having done something he said he was going to do, he arrives in Constantinople. When!

***

The controversy about conscription which is raging at the present moment reminds me of the extreme measures taken by a few of the less heroic Egyptians who were called upon to serve in the Sudan not so many years back. But in those days the Sudan had the reputation of being a gigantic graveyard where the bones of Egyptian soldiers were laid to rest. And on this particular subject the customary fatalism of the East appeared to fail, not the Egyptians as a people, but certain of their countrymen. It was no uncommon thing in those days for men to blind themselves rather than be sent to the Sudan for service with the Army. I remember once seeing a maimed Egyptian soldier in the streets of Khartoum, and I remarked upon his physical defects. Then it turned out that his injuries had been self-inflicted, and that he had been sent up country as a warning to the rest of his village, lest, seeing him escape service, others might go and do likewise. In these days, of course, the Sudan is no longer regarded with terror. Danger at the hands of its inhabitants has passed, while its fevers and its pestilences are well under control, thanks to the tireless band of Englishmen who have given the best years of their lives in fighting for the mastery. Even the mosquito has been banished from Khartoum, and from other river stations as well. If we in England worked half as laboriously to attain the destruction of the deadly house fly as the men of Khartoum worked for the destruction of the mosquito there would be never a fly left to carry disease when spring comes round. But even in these campaigns against insects an organised plan is necessary. In the early days of the mosquito campaign orders were issued for certain things to be done to destroy the larvæ, and "progress" was to be reported. Those who did not understand found food for much merriment in this latter order. The Government officials insisted, and the result we know. I wonder why it is that the Englishman abroad is usually so much more thorough than his brother at home.

***

It is not without interest at the present time to note that one of the most active, not to say violent, opponents of M. Venizelos is M. Théotokis. And M. Théotokis, who is, I believe, Deputy for Corfu, is, so to say, a neighbour of the Kaiser, when that August Personage makes holiday at the Achilleion. Can there be any connection between the two facts?

***

In a recent number of the *Daily Chronicle* I notice a reference to the walking capabilities of the Serbian peasant. When I come to think of it, it is curious that this characteristic of the Serb should, as far as I am aware, have escaped comment earlier in the war. To it he owes a great measure of his success as a soldier; for marches which would kill an ordinary man, or at the least render him incapable of fight at its end, are as nothing to him. I think one of the greatest evils of civilisation lies in the fact that it robs man of the necessity for natural physical exertion. The ordinary Londoner would sooner stand with bent head in the vitiated atmosphere of an omnibus than walk from the City to the Strand. In the country districts it is better, but even there your countryman usually takes his walk with a weather eye for'ard for a passing cart. It is only the gipsies who habitually walk in England. I know many families of these people who have never entered a train or tram, and, what is more, no money in the world would induce them to do so. And at times, when the camp is far in the forest country the women will cheerfully walk twelve miles in to the nearest town, stand on the pavements selling flowers all day, and tramp home again, singing, in the evening. But then they, although there is no pure Romany family left now, are not wholly English. I think that one of the things which most struck me when first I visited the Sudan was the marvellous walking capabilities of its inhabitants. A man on foot would follow me, mounted, all day, and then give me points in freshness after having cooked my dinner while I rested. I often wonder if things are the same now, or if the "blessings of civilisation" have wrought their accustomed change. I happened to be in the Sudan at the time when one of the Sudanese regiments were given boots for the first time. They were child-like in their delight, but the same afternoon, when the order to march off through thorny fore was given, the men carefully tied their boots together by their laces and slung them over their shoulders before they moved. It certainly seems strange that God should have given us five toes, if the best use we can make of them is to put them into boxes!

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

BRITISH DIPLOMACY IN THE BALKANS.

To the Editor of THE NEAR EAST.

Sir,—In your leading article on the 15th you say that British diplomacy in the Balkans broke down a year ago. Permit me to say that it broke down seven years ago, and has never recovered since. British diplomacy suffered eclipse in the Near East when it refused to uphold public rights on the wrongful annexation of Bosnia and the Herzegovina by Austria-Hungary, and allowed it to be inferred that new principles obtained in Balkan affairs, to the effect that a change in the political status of a Balkan State was no longer necessarily a matter of European concern, but could be the subject for adjustment between the parties locally affected. The danger of such a departure was fully recognised in THE NEAR EAST at the time, for in your editorial note of February 4, 1910, you said that "allowing the impression to prevail that Austria-Hungary could disregard the treaty rights of European Powers with impunity could not fail to bring loss of prestige to Great Britain in the Councils of Europe." And you remarked that the extent of the mischief had yet to be revealed, but there could be no doubt that encouragement had been given to Pan-German aggression to proceed on its path irrespective of European interests, and despite British protests. That the tearing up of one Treaty has now been followed by the tearing up of another is no more than was foreseen at the time, and it is in failing to arrest at the outset this disposition to treat international compacts as "mere scraps of paper," that British diplomacy made its initial and sovereign blunder.

But the blame should be put on the right shoulders. If there is one thing clearer than another it is this, that it was the British Government and not the Foreign Office which gave way before the Austrian refusal of a conference. The British withdrawal was the subject of public announcement by the Prime Minister, and not by Sir Edward Grey, and Sir Edward Grey publicly and, I believe in fact, was no party to it. Apparently indisposed to suffer any interruption of its domestic programme, the Government sought a peace-at-any-price formula, and left British interests in the Balkans to be vindicated in the debilitating atmosphere their withdrawal had created, and the results we now deplore.—I am, etc.,

October 19, 1915. OBSERVER.

THE "UNSPEAKABLE" TURK.

To the Editor of THE NEAR EAST.

Sir,—In your issue of September 17, page 553, you ask "Who shall say that the Turk is 'unspeakable' after this?"

Who? About 80,000,000 of Americans. Never more "unspeakable" than in the present "Holy War." His indescribable barbarities to the Armenians and Nestorians surpass any atrocities—Lord Bryce being reporter in both cases.

A very great deal of the sympathy of Americans for the Allies is deepened by the fact that they are also against the Turks. If your kind words for the Turks indicate that the British intend to let the Turks off easily, your American friends will be greatly disappointed. We wish the work done thoroughly this time, so that there may not be for ever hereafter any Armenian massacres.—I am, etc.,

THE TURK AS A FIGHTER.

To the Editor of THE NEAR EAST.

Sir,—All this talk about "clean fighting" on the part of the Turks at the Dardanelles seems rather beside the mark, when we read of the wholesale extermination of Armenians throughout Turkey by Turks as well as Kurds, of the remarkable cruel treatment of Russian wounded in the Armenian theatre of war, and the gross discourtesy and insult shown to English and French women interned in Syria, and the trouble that was taken to let them see the Urfa horrors.

As for the Kurds, were the officials and officers whose deeds Mirza Firooz Khan, your Persian correspondent, describes in a recent letter—and a most interesting one—all Kurds? Not they; they were Turks. I happen to have known several of the persons most deeply implicated in the massacres elsewhere, and they are Turks. The Turk is an automaton who is cruel when ordered, humane when bidden to be so. At the Dardanelles he was very humane after the first day or two, when he found that certain things did not pay. In this connection may I point out that nothing has been said in your columns of the torture and execution of two French officers taken prisoners under the white flag at Kum Kalé on April 25, or of the numerous abuses of the white flag of which the British and French navies have had to complain.

No, sir; I quite grant that the average Turk is no more inhuman than the average "gemüthlich" beer-swilling genial German; but he is as ready to commit cruelties when ordered to do so by a white-turbaned fanatic or a ruthless soldier or revolutionary as the German is ready to commit or condone any brutality under the influence of the *idée fixe*, whether that fixed idea is "Deutschland über alles" or Nietzsche's "This I say to you, breathren, become hard!"

The Turk is a pocket edition of the Boche. All of us have known decent Turks or decent Germans, only neither are individualists, that is all. Comes the order or the hint from a high official quarter, and they carry it out. That is all.—I am, etc.,

Egypt. ARISTODEMOS.

KING FERDINAND'S OVERSIGHT.

To the Editor of THE NEAR EAST.

Sir,—In the current issue of THE NEAR EAST, "Corsair" writes that he cannot understand how King Ferdinand of Bulgaria can ever have made up his mind to take the fatal plunge, referring, of course, to the fact that his Majesty does not enjoy a very high reputation for personal valour. But is it not fair to assume that it was precisely this characteristic that decided the King to act as he has done? No doubt he was anxious about his Hungarian estates, which, we are told, were threatened with confiscation if he did not climb off the fence on the Austro-Hungarian side—and quickly. But he was still more anxious, one feels sure, about his personal safety. And we read now that he was, and perhaps still is, firmly convinced that the Central Powers are going to be victorious; for he said as much to the departing French Minister, after insulting that diplomatist by reminding him that he (Ferdinand) had French blood in his veins.

Yes, sir, obviously the poor Bulgarian's ruler believes absolutely in German Might, in the Kaiser, the Shining Armour, the Mailed Fist, and all the rest of the Teutonic stage properties. But what surprises me is that he is so blind to the events of the last fifteen months. Does he not believe in Right, in Justice, and in a God of Justice, who is greater than many Kaisers and mightier than all the Prussians? Apparently not. For, whatever else may be in doubt, there can be no doubt as to which group of the belligerents has Right on its side to-day. Let King Ferdinand of Bulgaria ask any impartial neutral!

Have the Allies sunk a Lusitania—and gloried in the deed? Have they, with the set purpose of demonstrating their "frightfulness," systematically butchered helpless civilians by thousands, as the Huns have done in Belgium and the Austro-Hungarians—though on a smaller scale, it is true—in Bosnia, Dalmatia, and Serbia? Above all, is the honour of the Allies stained with any crime that can be compared with the latest, and greatest, massacre of the Armenians, for which the Turks and their German advisers and instigators will surely have to share the responsibility between them?

Such horrors as humanity has suffered at the hands of the Kaiser and his Huns, of Talaat and Enver and their tools, prove that they have no fear of any Power alive. But what of Ferdinand? Has *he* forgotten, too? If not, how comes he to have dragged Bulgaria in on the side of the oppressors? How can he profess to believe that the forces of oppression, the forces of evil, will be—nay—"*are* victorious"?

I, for one, cannot share that belief. I hold with the Armenian correspondent, whose letter appears in your current issue, that, "after all, there *is* such a thing as everlasting justice in this world." The fact that King Ferdinand has chosen to match himself against that Everlasting Justice is certainly an amazing one, in view of his temperament. But it will cause no uneasiness to those who have not forgotten. We rest assured that, sooner or later, he will find that he has not, after all, chosen the stronger side, and that he will pay the price of his error of judgment to the uttermost farthing.—I am, etc.,

AVANT-COUREUR.

Kensington, October 16, 1915.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Julian (Old Style).	Gregorian (New Style).	—	Moslem.	Jewish.
1915. Oct.	1915. Oct.		1333. Julhijja.	5676. Hesvan.
22	9	Friday	13	14
23	10	Saturday.....	14	15
24	11	Sunday	15	16
25	12	Monday	16	17
26	13	Tuesday	17	18
27	14	Wednesday	18	19
28	15	Thursday	19	20

Tuesday is the birthday of the King of Denmark.

H.R.H. Prince Danilo of Montenegro will, it is announced by the *Matin*, shortly join the staff of General Joffre.

H.H. the Aga Khan had the honour of being invited to luncheon with the King and Queen at Buckingham Palace on Sunday.

Reuter's Athens correspondent reports that Prince Alexander, second son of the King of Greece, who is an officer in an artillery regiment, was riding out to manœuvres at the head of his battery on Monday, when he had a fall from his horse and fractured his leg. The Queen and the Crown Prince hurried to the Piræus, where the accident occurred, and brought the Prince to Athens in a motor-ambulance.

Prince Mahmoud Hamdy, brother of the Sultan of Egypt, arrived at Alexandria on the 4th inst. by the Khedivial Mail Company's s.s. "Borullos," together with his family, on his way from Constantinople to Cairo.

Writing on September 28, our Roumanian Correspondent reports :—The country seat of Prince and Princess Bibescu at Posada, near Comarnic, was burnt to the ground on Sunday night. At the time their little daughter was at the castle with her English governess, and they only just succeeded in making their escape in their night attire. The entire building, which was constructed of wood, was burnt down, and only some furniture, once the property of Napoleon I., and a few pictures and tapestries were saved.

Lord Kitchener had an audience of the King at Buckingham Palace on Wednesday.

Sir Alexander Baird has arrived in Cairo for the season.

Lady Anne Blunt is expected to arrive in Egypt about the end of this month.

Lady Barclay and her daughter, Lady Kennard, and Mrs. Frank Rattigan, the wife of the First Secretary of the British Legation at Bucharest, arrived in the Roumanian capital on September 26.

Mrs. Youell has arrived in Galatz from England.

Mr. Percy Bennett, the recently appointed Commercial Attaché to the British Legation at Bucharest, has arrived in that city and has taken up his duties.

CAPTAIN ARTHUR CHARLES DAVIES, 6th BATTALION ROYAL WELSH FUSILIERS, Reported WOUNDED and MISSING on August 10 at the DARDANELLES.—Any INFORMATION will be gratefully received by his Wife, Mrs. Arthur Davies, Treffos, Menai Bridge, Anglesey.

TO OFFICERS leaving for War Zone Special Terms. ANY LANGUAGE under the sun TAUGHT, TRANSLATED, TYPEWRITTEN and DUPLICATED on machines in shortest periods.—Apply or write, The British Egyptian Syndicate, 90, Bishopsgate, E.C. Wire, "ABDELMALEK, London." 'Phone, 2947 London Wall.

The Rev. Canon Sterling, formerly of St. George's, Jerusalem, has joined the R.A.M.C., and is at present, we understand, attached to the 11th (Lonsdale) Battalion, the Border Regiment.

At the request of Bishop MacInnes, D.D., Archdeacon Ward has accepted a place on the Council of the Jerusalem and the East Mission. The post of editor of *Bible Lands*, a quarterly diocesan paper, has also been placed in his hands, and the Bishop has appointed him to be his Commissary in England.

We understand that Lieutenant Macdonald, A.S.C., who before he received his commission was employed in the Egyptian Department of Education, has lately left England for the Mediterranean.

Sub-Lieutenant J. S. La Fontaine, R.N.V.R., who was severely wounded on July 16 at Gallipoli, arrived in England last week, and is now at Haslar Hospital, Gosport, recovering from his wounds.

Mr. H. G. Dwight, long and pleasantly known in Constantinople, has just had published by Messrs. Scribner and Co., of New York, a scholarly and well-illustrated book entitled "Constantinople, Old and New." It will be a distinct and valuable addition to any "Near Eastern" bookshelf. We understand that Messrs. Longmans, Green, and Co. will publish the book in this country.

The Roumanian Minister of Commerce, M. Alex. Radovitch, was lately the victim of a serious motor accident. While accompanying the Royal Family on their excursion in the Dobruja, he was proceeding from Tulcea to Braila when the car collided with a post, and he was thrown out, receiving severe injuries. Happily, however, it was possible to convey him to Braila at once, and thence he was sent by special train to Bucharest, where, our Correspondent reports, he is progressing rapidly towards recovery.

The Bulgarian Minister, the members of his family, and the Legation staff left on Thursday night last week for The Hague. Under Sir Edward Grey's direction a special saloon was attached for their use to the boat train from Fenchurch Street, and Mr. Cecil Dormer, one of Sir Edward's private secretaries, was present at the station to see them off on behalf of his chief. From Fenchurch Street the travellers went to Tilbury, and there embarked for Holland. With the exception of Mr. Dormer, a representative of Scotland Yard, and a few private friends, there was no one on the platform to see the party off, and there was no demonstration of any kind. Before taking leave of Mr. Dormer, M. Hajji Misheff asked him to convey to the Foreign Secretary his gratitude for all the arrangements made for his comfort and convenience.

Under date October 12, Reuter's Cairo correspondent reports :—

Dr. Abbate Pasha, the doyen of the European colonists in Egypt, died yesterday at the age of ninety. Born in Palermo in the first years of the Italian "risorgimento," Dr. Abbate was identified with the revolutionary movement against the Bourbons, and had to flee for sanctuary to Egypt. He was accompanied by his old schoolmate Francesco Crispi, who took refuge in Malta. Arrived in Egypt, he became a collaborator of Clot Bey, and, with him, founded the Sanitary Service. In his medical capacity he took part in all the Sudan campaigns under Ismail Pasha, and later was appointed Surgeon-in-Chief to the Egyptian Expeditionary Army in 1877-78. With de Lesseps, Dr. Schweinfurth, Emin Pasha, Romolo Gessi, Gordon Pasha, the Marquis of Antimori, and others, he founded the Geographical Society of Egypt, of which he had always been the President. In later years he devoted himself entirely to science, and lived practically the life of a hermit, amongst his books, in a house at the Pyramids.

Brigadier-General G. W. H. Pain, C.B., who was recalled from the retired list last year and placed in command of the 108th Infantry Brigade of the Fourth New Army, has seen a great deal of service in Egypt and the Sudan. He was appointed to the Egyptian Army in 1888, and in the same year took part in the operations against the Dervishes in the Sudan. He received the medal and clasp and the Khedive's Bronze Star for his services on that occasion, and in the following year he received the 3rd Class of the Order of the Medjidieh for services with the Nile Frontier Force. Subsequently he took part in the operations against Osman Dinga, when, as a captain, he was in charge of the advance forces of the expedition. Some years later he narrowly escaped drowning when, during a heavy gale in the Red Sea, the transport, on which he was the only British officer, sprang a leak and for some time it looked as if nothing could save her from disaster. For his assistance in saving this vessel he received the commendation of the late Duke of Cambridge, who was then Commander-in-Chief. Receiving his majority in 1894, Major Pain remained in the Egyptian Army and served under Sir Herbert Kitchener in the British advance up the Nile two years later. He played a distinguished part in these operations, and was mentioned in despatches, besides being rewarded with the brevet of Lieutenant-Colonel. In the Nile Expedition of 1897-99 he served as acting Adjutant-General, Egyptian Army, and left the country in the following year.

Lieutenant-Colonel George de Wet Verner, 7th (late 2nd) Scottish Borderers, died on October 10 of wounds received in France on September 25. Born in December, 1859, he obtained his first commission in August, 1879, and reached the rank of substantive lieutenant-colonel in December, 1906, retiring in December, 1910. He was appointed to the command of the 7th K.O. Scottish Borderers on August 22 last year. Lieutenant-Colonel Verner had his first fighting in the Afghan War of 1879-80, and in 1884-5 was in the Sudan Expedition, earning another medal and the bronze star.

Major Colin Napier Buchanan-Dunlop, R.H.A., who was killed in action on October 14, was the second son of Lieutenant-Colonel Buchanan, of Whitley Rise, Reading. He was born in 1877, received his commission in 1896, and attained the rank of major in 1913. He was professor at the Royal Military College of Canada from 1903 to 1905, and was employed with the Egyptian Army in 1913-14. He saw active service in South Africa in 1899-1902, and was present, among other actions and operations, at the relief of Kimberley, Belmont, Modder River (where he was wounded), Magersfontein, Paardeberg, Poplar Grove, and Diamond Hill. For these services he was mentioned in despatches and received the brevet of major, the Queen's medal with five clasps, and the King's medal with two clasps.

On Thursday of last week, at Buckingham Palace, the King decorated Sergeant J. Somers, of the Royal Inniskilling Fusiliers, with the Victoria Cross for most conspicuous bravery on the night of July 1-2, in the Southern Zone of the Gallipoli Peninsula. When, owing to hostile bombing, some of our troops had retired from a sap, Sergeant Somers remained alone on the spot until a party brought up bombs. He then climbed over into the Turkish trench and bombed the Turks with great effect. Later on he advanced into the open under very heavy fire and held back the enemy by throwing bombs into their flank until a barricade had been established. During this period he frequently ran to and from our trenches to obtain fresh supplies of bombs. By his great gallantry and coolness Sergeant Somers was largely instrumental in effecting the recapture of a portion of our trench which had been lost.

On Monday, at Buckingham Palace, the King decorated Lieutenant W. T. Forshaw, the Manchester Regiment, with the Victoria Cross, for most conspicuous bravery and determination in the Gallipoli Peninsula from August 7 to 9, 1915. When holding the north-west corner of the "Vineyard" he was attacked and heavily bombed by Turks, who advanced time after time by three trenches, which converged at this point, but he held his own, not only directing his men and encouraging them by exposing himself with the utmost disregard to danger, but personally

Digitized by Google

throwing bombs continuously for forty-one hours. When his detachment was relieved after twenty-four hours he volunteered to continue the direction of operations. Three times during the night of August 8-9 he was again heavily attacked, and once the Turks got over the barricade, but, after shooting three with his revolver, he led his men forward and recaptured it. When he rejoined his battalion he was choked and sickened by bomb fumes, badly bruised by a fragment of shrapnel, and could barely lift his arm from continuous bomb-throwing. It was due to his personal example, magnificent courage, and endurance that this very important corner was held.

On the same occasion the King also decorated with the Victoria Cross, Second Lieutenant G. R. D. Moor, the Hampshire Regiment, for most conspicuous bravery and resource on June 5, 1915, during operations South of Krithia, Dardanelles. When a detachment of a battalion on his left, which had lost all its officers, was rapidly retiring before a heavy Turkish attack, Second Lieutenant Moor, immediately grasping the danger to the remainder of the line, dashed back some 200 yards, stemmed the retirement, led back the men, and recaptured the lost trench. This young officer, who only joined the Army in October, 1914, by his personal bravery and presence of mind saved a dangerous situation.

A party of nurses and a surgeon-radiographer left London last Friday to take up duties at the Wounded Allies' Relief Committee's Hospital at Kragujevatz, Serbia.

This evening at 8 o'clock Sir Edwin Pears will deliver a lecture on "Constantinople," in the theatre of the Y.M.C.A., Aldersgate Street.

The War Office announces the appointment of General Sir C. C. Monro, K.C.B., to the command of the Mediterranean Expeditionary Force, in succession to General Sir Ian Hamilton, G.C.B., D.S.O., who is returning to England to make a report. Pending the arrival of General Sir C. C. Monro, Lieutenant-General Sir W. R. Birdwood, K.C.S.I., K.C.M.G., C.B., C.I.E., D.S.O., has been appointed temporarily to command the Force.

Sir C. C. Monro was born in 1860, entered the Army in 1879, and reached the rank of colonel in 1903. He served during the operations on the North-Western Frontier of India, 1897-8, with the Malakand Field Force and with the Expedition into the Mohmand country. He also saw service with the Tirah Expeditionary Force, for which he received the medal with two clasps, and served on the Staff in the South African War, when he was mentioned in despatches, receiving at the same time the Queen's medal with three clasps and the brevet of lieutenant-colonel. He was made a C.B. in 1906, and was created a Knight Commander of the Order of the Bath last February "for services rendered in connection with operations in the field" during the present war. Sir Charles, who was on the General Headquarters Staff, was mentioned in despatches by Sir John French after the Battle of the Aisne.

General Sir Ian Hamilton left this country to take charge of the Gallipoli operations on March 13 last. He is 62 years of age, and one of our most distinguished military commanders. His first service was in the Afghan War of 1878-80. In the South African War he took part in the defence of Ladysmith, and later became Chief of the General Staff to Lord Kitchener.

In his despatch of August 26 Sir Ian Hamilton wrote of Sir W. R. Birdwood as follows: "Lieutenant-General Sir W. R. Birdwood has been the soul of Anzac. Not for a single day has he ever quitted his post. Cheery and full of human sympathy, he spent many hours of each twenty-four inspiring the defenders of the front trenches; and if he does not know every soldier in his force, at least, every soldier in the force believes he is known to his chief."

A telegram from Malta states that Admiral d'Artige du Fournet, the new Commander-in-Chief of the French Navy in Near Eastern waters, has entered upon his duties.

According to a message to the *Kölnische Zeitung* from Sofia, the illness of the Russian Minister in Sofia, M. Savinsky, has become considerably more serious.

General Radko Dimitrieff, the Bulgarian General serving in the Russian Army, has returned all his Bulgarian orders, states a Petrograd telegram.

Mrs. Harley, sister of Sir John French, visited the city hospital at Marseilles on Tuesday, and will shortly leave for the Levant on board a French liner, accompanied by forty nurses.

Lady Davies, wife of Lieutenant-General Sir Francis J. Davies; Mrs. De Lisle, wife of Major-General De Lisle; and Mrs. Paris, wife of Major-General A. Paris, appeal for funds to enable them to send plum puddings to the British troops and Naval Division in Gallipoli. To ensure the delivery of the puddings in the trenches by Christmas Day they must be dispatched by November 15. Subscriptions in money (amounts large or small) should be sent as soon as possible up to November 1 to Lady Davies, hon. secretary of the Gallipoli Puddings Fund, 2, Gloucester Place, Portman Square, London, or to Messrs. Child and Co., 1, Fleet Street.

APPOINTMENTS, PROMOTIONS, etc.

Mr. F. Ongley, Registrar-General of Cyprus, has taken up his duties, on returning from leave.

Mr. Edgar Edward David Gout has been appointed Acting Vice-Consul at Cairo. Before the war he was Clerk in the Consulate-General at Smyrna, where he was Acting Vice-Consul on various occasions, and was given the local rank of Vice-Consul in 1905.

The *Egyptian Gazette* announces that Mr. F. P. Walton, Professor in the Sultanieh School of Law, Cairo, has been appointed as Principal of that school, in succession to Mr. M. Sheldon Amos, who has reverted, at his own request, to the appointment of Councillor in the Native Court of Appeal. This post he held before his appointment as Principal of the School of Law.

The following appointments are officially announced in the Cyprus *Gazette*:—

Mr. Alexander Logan Murison, M.R.C.S., L.R.C.P., to be a District Medical Officer. Dated September 4, 1915.

Major George Croker Bayly, Commissioner of Paphos, to act as Chief Commandant of Police and Inspector of Prisons. Dated September 12, 1915.

Captain Arthur Marlay Fleury, a Local Commandant of Police, to act as Commissioner of Paphos. Dated September 12, 1915.

Mr. Spiridon Georghiou Televantou, an Inspector of Police, to act as a Local Commandant of Police. Dated September 12, 1915.

Mr. Alexander Stephen Mavrogordato, Finanical Assistant for Public Works, to act as Accountant, Treasury. Dated September 25, 1915.

The Cyprus *Gazette* announces that his Excellency the High Commissioner has been pleased to grant the following officers special leave of absence for the purpose of joining his Majesty's Forces:—

Mr. Henry Alwyn Bros, President District Court, Kyrenia. Dated December 11, 1914.

Mr. Crawford Noble, Assistant Principal Forest Officer. Dated August 28, 1915.

Captain Albert Ernest Gallagher, D.S.O., Chief Commandant of Police and Inspector of Prisons. Dated September 12, 1915.

Mr. Thomas Millard, Assistant Treasurer. Dated September 18, 1915.

Mr. Arthur Jary Cunningham, Assistant Island Postmaster. Dated September 18, 1915.

Mr. Baron Brooke Booth, Accountant, Treasury. Dated September 25, 1915.

Mr. Sharman, Principal of the Saidieh Secondary School, Cairo, who volunteered for service with the British Army during the early months of the war, has now returned to Egypt and resumed his duties.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

TITE.—At the Anglo-American Hospital, Cairo, on October 1, the wife of H. W. Tite, of a son.

MARRIAGES.

CLARKE—ETHELSTON.—On September 27, at Mount Troodes, Cyprus, William Peter Dunham Clarke, Sudan Civil Service, eldest son of William Alexander Clarke, of Ash, Whitchurch, Salop, to Ethel, eldest daughter of Edmund Ethelston, of Hinton, Whitchurch, Salop.

LOCH—VINCENT.—On September 27, at Simla, very quietly, owing to the war, Captain Percy Gordon Loch, Political Department, son of the late Lieut.-Colonel W. Loch, Political Department, to Isabel Wynne, daughter of Sir William Vincent, I.C.S., and Lady Vincent.

DEATH.

SHAKOOR.—On October 17, at Roelah Cottage, Liphook, Hants, Luceya Rose, beloved daughter of the late Milhem Shakoor Bey, of Cairo, and Mrs. Shakoor, and granddaughter of the late Richard Chute, J.P., D.L., of Chute Hall, Co. Kerry, and the Hon. Rose Chute.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

SEEING IT THROUGH.

In an atmosphere of irresolution, with the policy of living from hand to mouth applied to everything, from night clubs to recruiting, air raids, and the operations at the Dardanelles, it is difficult to find ground for confidence. But amid the uncertainty that dominates the situation in the Balkans we must perforce hold tenaciously to the latest undertaking which the British Government has given to the nation. As its spokesman in the House of Lords, Lord Crewe recently announced that the untoward event of the adhesion of Bulgaria to the cause of Germany and Turkey, and the renewed attempt to crush Serbia before a marked change could take place in any theatre of the war, would only serve to make sterner and fiercer the determination of the Allies to carry through the war to a definite conclusion of absolute victory. It is true that a statement on similar lines was made at a much earlier stage of the war, and that it did not prevent a multiplicity of mistakes wherever an opening occurred. But, as time passes, experience bought at a great price accumulates, and we like to fancy that sooner or later it must affect the faculty for error which the present war has engendered in high places. Unfortunately it cannot be stated with any degree of certainty that such a stage has yet been reached. So long as a considerable interval of time is allowed to lapse between the indication of the obvious course to be pursued and its fulfilment we must recognise that the lesson of experience is but half learned. Great Britain and her Allies stand on the threshold of grave developments in the Balkans. Austro-German forces are attacking the Serbians with an intensity that is eloquent of previous disappointments over the same ground and, perhaps, in other theatres of the war. Bulgarians, seeking to join hands with the invaders from the north, have cut the only railway line by which reinforcements can reach our hard-pressed Ally. In spite of the valour shown by the Serbians—success is costing the invaders heavy losses—it seems well-nigh impossible that their small army should be able to hold out indefinitely. A point must be reached sooner or later when the Serbian higher command may have to decide between two desperate courses—whether it will risk everything by remaining in the Belgrade-Nish-Orsova triangle in the hope of Anglo-French reinforcements arriving in time to turn the tables on the enemy, or whether it will try to make good its escape out of the triangle before it is too late. Does the "sterner and fiercer determination of the Allies to carry through the war to a definite conclusion of absolute victory" make provision for the safety of the Serbians, or does it not?

A little more than three weeks ago Sir Edward Grey gave a definite pledge in the name of Great Britain and her Allies to the Serbian nation. "If the Bulgarian mobilization," he told the House of Commons on September 28, "were to result in Bulgaria assuming an aggressive attitude on the side of our enemies, we are prepared to give to our friends in the Balkans all the support in our power, in the manner that would be most welcome to them, in concert with our Allies, without reserve and without qualification." A day or two later the aggressive attitude of the Bulgarians stood revealed, and in the first days of October an Allied or French force was landed at Salonika. To what extent the British Government has made good Sir Edward Grey's pledge future events will show. Our information to-day is necessarily incomplete. We hear of a Franco-Serbian force engaging the Bulgarians and capturing Strumnitza, a village in Bulgarian territory, but far removed from the districts where the Bulgarians are hurling their main forces against the Serbians. British troops have been landed at Salonika, but we have no knowledge whether they have proceeded up country, or, if they have, when they left and how far they have advanced. It would have been thought that, if Great Britain was "prepared" on September 28 to give the Serbians all the support in her power "without reserve and without qualification," an adequate number of British troops could have joined hands with the Serbian Army before now, and could have prevented the Bulgarians from cutting the line. We do not disguise from ourselves the fact that there is a school of military or political thought which is opposed to the "dispersion of effort" and would have us not follow the Germans into a Balkan campaign. That is a debatable point; but we must suppose that, when Sir Edward Grey gave his pledge to Serbia, the question had been discussed and decided in favour of giving military support to Serbia. In such circumstances there could be no room for further discussion or delay. A landing at Salonika ought to have been effected at once and troops hurried into the threatened districts of Serbia. We are not concerned here with the wisdom or unwisdom of the course. The only thing that mattered after Sir Edward Grey had spoken was that the pledge should be redeemed "without reserve and without qualification." Has this been done? The British public can pronounce no final verdict, as it is not in possession of all the facts. It cannot fail to note, however, that Sir Edward Carson, who presumably does know all the facts, has satisfied himself that it has not been done. No other interpretation can be placed on his resignation from the Cabinet.

If Sir Edward Carson's view be correct, the British Government has given a pledge to Serbia which it has not fulfilled. In such circumstances we should have looked for resignations in other quarters than on the part of the Attorney-General; but the Government's policy is enigmatical in other directions than towards the Balkans. It may be that a "sterner and fiercer determination" to "see the thing through" overrides questions of detail and such matters as Great Britain's plighted word. While nothing is likely to detract from the admiration felt for the course adopted by Sir Edward Carson, the British public would, no doubt, be reassured in some measure to find that there was still time to see the thing through without sacrificing Serbia. There are other ways of seeing the thing through than by concealing mistakes, with or without surreptitious attempts to rectify them. Although the sands of time are running low, as far as the Balkans are concerned, it ought yet to be possible to save Serbia from the annihilation that threatens her. Certain it is that, if the Serbians go under, then the course of the war for the Allied Powers is seriously affected, and for none more than for Great Britain. With communication opened up between Germany and Constantinople the Allies' position on Gallipoli becomes untenable, and a whole new vista of desperate remedies is conjured up, compared with which the minor resolution to throw at once our military and diplomatic weight into the scale in favour of Serbia calls for little courage.

THE SUDAN IN WARTIME.

(From a Correspondent.)

Since the time of its institution, over sixteen years ago, the Administration of the Sudan has probably not experienced any such period of inconvenience and handicap as has latterly been its bad fortune, due principally to the loss of many officers and high officials who have been called away by reason of the war. Apart from several lamentable deaths and resignations, the Military Department last year lost the valuable services of Major Grant, who, during the five years that he was Director of Military Works, did much to improve the operations of the department. A programme of some importance, largely formed under the direction of Major Grant, had been prepared for the current year, and in normal circumstances the greater part at least would probably have been carried out. But, owing to the short-handedness of the department, coupled with the fact that it is the fixed purpose of the Administration to conserve the funds at their disposal with the greatest care and not to expend a piastre more than is absolutely imperative, a practical cessation in all new military works has taken place.

Just before Major Grant left the Sudan, he had reported to the Governor-General upon the condition of affairs under his management, observing: "Owing to the war in Europe and the difficulty in obtaining material, it seems probable that little, if any, new work will be proceeded with for some time to come." The prophecy has proved correct. The maximum output of work possible from the department referred to depends upon the following:—(a) adequate initiative power and administrative control by British officers; (b) adequate executive control by Egyptian officers; (c) correct proportion of tradesmen to quantities of work to be done, viz., soldier artizans; and, (d) correct proportion of unskilled labour assisting artizans, viz., civilian unskilled labour.

It has been found that the proportion of (a) and (b) to (c) will have to be materially increased; but as an increase under (a) and (b) would be very difficult to obtain in these abnormal times, the only alternative has been to reduce the proportion of (c), viz., soldier artizans. In the annual budget proposals of the Military Department it has, therefore, been suggested to increase the strength of officers by one British officer and two Egyptian officers, and if this can be carried out—and in view of the scarcity among them, this is no simple thing—there would be but little question as to the ability of the department to do much towards carrying into effect the greater part of the substantial programme outlined. The difficulty has not yet been surmounted, however, and as a consequence much urgent work is still postponed, although it is quite possible to find the necessary number of artizans when required.

Where progress has been made has been in the Sapper Section, which now consists of one Sudanese officer and 36 other ranks. It is hoped to make speedy provision for the full organisation of this unit. All ranks have received some training under Mr. Hart, formerly of the Royal Engineers, and now superintendent of the military workshops. The subjects in which most advance has been noted are: trench work, knotting and lashing, erection of entanglements and trip wires, erection of observation towers, bridging experiments, and improved boats and rafts. The sappers are also being trained in trades, the younger members receiving daily instruction in reading and writing. A special officer is appointed for drill and physical training of the sappers.

A word of commendation should be said for the Headquarter Workshops, which compare in every way with the admirably conducted Government experimental workshops established at Khartoum—in the Gordon College—and at Kassala. The first-named, it may be mentioned, were completely equipped through the generosity of a private benefactor—Sir William Mather, P.C., J.P., formerly M.P. for Salford, Gorton and Rossendale divisions of Manchester. There are about 150 boys at the Khartoum and some 46 at the Kassala schools, while at that of Omdurman, which should also be referred to, as the one other useful establishment of its kind, there are about 53 boys. The Military Headquarter Workshops at Khartoum have been in full working order now for over 18 months, and they turn out all the doors and windows used in the department, all the timber roofing, and an increasing amount of iron roof framing, as well as many other miscellaneous articles, such as iron gates, fencing standards, arm-racks, portable magazines, shelving, etc., etc. No one who has visited any of these three Government schools, and has thus had the opportunity of seeing the boys at work, can doubt that they thoroughly enjoy their labours. A considerable proportion of the boys are Egyptians, and in very humble circumstances. The Sudanese appear to be by far the brighter and more enterprising among the pupils, as well as the cleanest and smartest in appearance. I have noted the same characteristics in connection with the primary schools, both in Khartoum and the provinces.

It is in no way surprising that the rising generation of Sudanese should learn to respect the Government which has done so much for their parents and elder brethren, and is doing equally good service for them. Their natural intelligence enables them to understand the value of their present privileges in regard to the moulding of their future lives, while their by no means blunted feelings—no matter what their detractors may state to the contrary—conduce to their entertaining a feeling of sincere gratitude to their instructors.

MR. H. C. WOODS ON THE DARDANELLES CAMPAIGN.

Speaking before the Central Asian Society on Wednesday last, Mr. H. Charles Woods said that the modern defences of the Dardanelles might be divided into three groups: those which defended the entrance to the straits, those at the Narrows, and those above the Narrows. Over and above these were any forts that might have been constructed during the last few months and temporary forts that were not part of the permanent defences of the straits. There were also the Bulair lines running across the isthmus and protecting the Peninsula of Gallipoli from attack from the east. The narrowness of the Dardanelles denied the power of real manœuvring to ships except those of small size, and it prevented the great guns of large ships from being used to full advantage. The Turks could put up mobile batteries in secluded valleys, and these guns having made their presence unpleasantly felt could be moved to another place even before they could be located and our fire brought to bear upon them. Since the commencement of operations, there had been three distinct stages. The first was the original naval attack, which might be said to have lasted from February 19 to March 18; the second stage was the landing on April 25, and the terrible fighting for three months that followed; while the third was that connected with Suvla Bay operations that took place in the month of August.

There could be no doubt that, provided the necessary forces were available, we were fully justified in undertaking a campaign which, had it been begun and carried out in the right way, would probably have constituted an overwhelming defeat for the Turks. Directly after the entry of the Goeben and the Breslau into the Dardanelles last year, the Allies might have demanded the immediate expulsion of those ships, and, failing this, might have occupied the straits. This might well have been done, not as an act of war against Turkey, but with the object of saving that country from her German enemies, and of keeping open an international highway which the Germans were not then in a position to close. Had an internal revolution followed in Turkey, as might have been the case, that would have been a gain to the Allies' cause, and if war had followed we should have been in a position in the straits to paralyse the power of the Turkish Empire, which would have collapsed if Constantinople had fallen into our hands. All this had been impossible because, unfortunately, we were not then in a position to send a fleet to the Dardanelles. We did not know even now whether it was originally intended to make a dash at the straits, or whether it was intended that the naval attack should be supported by military forces. If the first course was intended, it was clear that those responsible did not know the real strength of the defences. In the alternative, it was a mistake that the naval attack was ordered before an adequate landing force was on the spot to make an attack on the rear of the forts. The attack of February and March was an utter failure. Moreover, it showed the enemy the weak spots in his defences, and before the April attack was made he had ample time to turn the peninsula into an entrenched camp. As to this second attack it was apparent that the magnitude and importance of the Dardanelles operations had been underestimated—as they had continued to be ever since. It was undertaken by contingents, the strength of which was almost ridiculously small, with the result that it became impossible to maintain successes at first obtained. The Turks brought up reinforcements, and the Germans arrived and took over the complete direction of affairs. At the present moment, when a new commander-in-chief was about to take over the direction of operations, it was impossible to forecast the future of the Dardanelles campaign; for the entry of Bulgaria into the war and the continued neutrality of Greece and Roumania had created a situation the importance of which it was impossible to overestimate. We did not know how far this campaign would be influenced by the sending or the not sending of an expedition to some other part of the Balkan Peninsula, and, in any case, it was clear that withdrawal from the Dardanelles would be beset by dangers and accompanied by casualties the magnitude of which had never been equalled in the operations. He hoped the events that had taken place in the Dardanelles would be a warning that any new Balkan operations might prove a far larger operation than anything that was justified under present circumstances.

THE WAR IN THE BALKANS.

During the past week interest in the great war has centred in the Balkans, and this not only because a certain novelty attaches to our new Near Eastern campaign, but also because it is fully realised that among the hills and vales of Serbia preparations are being pushed forward for the staging of one of the big battles which will have to decide the fate of nations and empires. In the words of Mr. J. L. Garvin in the *Observer* on Sunday, "the Balkans, in the infinitely fateful weeks lying before us, will either be the grave of German ambition or the grave of British hopes." Needless to say, therefore, that the advance of our plucky little army from Salonika northwards into Serbia, accompanied by its French companion army, is being watched anxiously and hopefully, and that the brave resistance and slow retreat of the Serbs in the north is being followed painfully, and yet with sincere admiration.

The Strumitza Salient.

Before analysing the position in the vital sectors of the peculiar "7" shaped front of the Serbian position, a reference must be made to the successful and continued landing of allied forces in Salonika. From the mass of contradictory telegrams published daily from Paris, Rome, Athens, and Bucharest it is difficult to obtain a clear view of the situation—and this applies to the whole Near Eastern campaign—and it is likewise impossible to determine dates, so that we shall have to devote ourselves in the following paragraphs to the news to hand since last week, though in reality the fighting may have occurred more than ten days ago. It would appear certain, however, that the Allied forces have advanced in considerable numbers from Salonika northwards into Serbia, General Sarrail being in command of the French contingent, part of whom, it is said, have got through to Nish. A report published on Tuesday, semi-officially confirmed on Wednesday, and denied yesterday, states that we have crossed the Bulgarian frontier and taken Strumitza. If true, it is an excellent beginning, both as regards its cheering effect on the Serbian *moral* and as regards the importance of its position (or rather that of the hills to the immediate east of the Strumitza River) in relation to the Uskub-Salonika railway line. If, however, the Bulgars' claim to have taken Ishtip by passing down the Ramitza valley is true, it is difficult to see how we have occupied Strumitza itself. At any rate, our forces seem to have cleared the enemy out of the Valandova region to the south of the Bulgarian Strumitza salient and to have kept him away from the railway line in this sector. This must momentarily, and until we have hurriedly sent troops northwards to the Serbian relief, be our main objective south of Vrania.

The Timok Sector.

From the very nature of Serbia's geographical position, the two sectors of most immediate military interest are the Timok region, in the north-east, and the region comprising the low water-shed between the Morava and Vardar Rivers. The former can roughly be said to reach from Zaichar, in a north-westerly direction, to the Danube, and thence along the latter river, in its erratic course east and southwards, to its junction with the Timok River. It forms a salient which, if it falls into the hands of the enemy, will form the connecting link between Berlin and Constantinople through Sofia. In this section desperate fighting has been going on throughout the week, but as to net results very little is known. According to a Bucharest report, Prahovo, Serbia's only railhead port on the Danube opposite Roumania, has been evacuated. Another report states that some of the forts at Zaichar have been taken by the Bulgars, and that they have crossed the Timok River, which forms the boundary between the two countries, in a score of places. The latest Serbian official *communiqué* to hand (dated Sunday) states that the engagements in this sector "have been of no great importance," from which it would appear as though German strategy were bent rather on smashing the Serbian defence of this triangle southwards along the Belgrade-Nish and Pozarevaz-Nish lines as far as Parachin, and thence eastwards along the Parachin-Zaichar line. If successful it would have the effect of cutting off the defenders of the Timok sector from Voivode Putnik's main army. The position is one of extreme peril, and if the Bulgarian claims to wonderful achievements in this sector are substantiated by facts, and unless we can rush up men to the assistance of the Serbs, this important region will have to be given up. The question is, how long can the Serbs hold out?

The Significance of Vrania.

The next most important sector is, as stated, the region forming the water-shed between the Vardar and the Morava, between Vrania, in the north, and Uskub, in the south. The whole of this region is the historic (Kossovo and Kumanovo) and geographical centre of Serbia, and it is here that the enemy are attempting to drive their wedge from east to west across Serbia.

Bulgarian reports state that Vrania has already fallen into the hands of the Bulgarians (it is reported to have occurred on Friday last), whereas a Serbian *communiqué*, issued by the Serbian Legation in London yesterday, but otherwise undated, denies the statement, though admitting that the enemy have seized and are holding "a point in the neighbourhood dominating the railway." The difference between the two reports is, unfortunately of little moment, as the strategic significance of Vrania depends entirely on the railway, and not on the importance of the town as such. It is regrettable that we were not in Vrania a week ago at least to help the Serbs protect this most vulnerable point. If the enemy can hurry up support from the east to his newly acquired position, it will be difficult to dislodge him, especially from the south, owing to the nature of the terrain, which is undulating, as opposed to the hilly surroundings of Vrania. The capture, moreover, of Egri Palankra and Kochana—the latter in the Bregalnitza valley—are, if confirmed, invaluable supports for the Bulgarian attack in this sector, and facilitate the continued interruption of the Salonika line and the westward drive from the Morava towards Northern Albania. It will thus be seen that the situation in this sector, the "waist-line" of Serbia, is far from reassuring. The recapture by us of the enemy position near or at Vrania would be most welcome news. It is essential to the success of the whole campaign.

Drina-Save-Danube Front.

Having thus briefly reviewed events in the two most vital points of the Serbian resistance—vital inasmuch as they are the immediate objectives of the enemy's strategy—we can pass to the other fronts of the Serbian army. The most important of these is the Danube front, because intimately connected with the Bulgarian attempts to break through the Timok defence. On this front, the Serbs are stubbornly fighting a superior force, with a heroism beyond ordinary conception. Belgrade has fallen, and is being ruthlessly sacked and pillaged by the Huns; Semendria and Pozarevaz, the one to the right and the other to the left of the mouth of the Morava, have been evacuated, but not before the enemy was severely punished. "Near the village of Lipe, near Semendria, stubborn fighting took place on the 9th," says an official *communiqué* published in Nish on the 12th inst. "The enemy were able to take and occupy Lipe, but their success cost them heavy losses. In no engagement since the beginning of the new offensive of the enemy has the latter had such great losses. The battlefield is covered with the enemy's dead." According to a German report, Milanovaz, further east on the Danube, has also been captured, and it is only about forty miles as the crow flies from the Bulgarian frontier, and barely twenty miles from Brza Palanka. If the latter falls into German hands, the extreme north-eastern corner of Serbia—formed by a peculiar elbow-twist of the Danube—is doomed, Negotin is threatened on three sides, and the Teuton will be in a position effusively to praise his Bulgar slave. While this strategic plan is maturing, the Teutons are advancing their main army slowly up the Morava valley from their headquarters in Pozarevaz; they are meeting with the fiercest resistance, are losing their soldiers by thousands, but continue, nevertheless, obstinate in their endeavour to penetrate into the heart of Serbia. Simultaneously, from Belgrade southwards and from the Save front, which is in reality merely the continuation of the Danube front, the Austro-Germans are pushing on (a German report says that Obrenovaz has fallen), whilst, step by step, the Serbs are defending their homes and their country from the fate of unhappy Belgium. They are holding their own bravely, but the fight is an unequal one. Magnificent defensive fighting has taken place along the Drina River, where the Austrians are endeavouring to retrieve their disastrous campaigns of last autumn, and where, in all probability, they will, with a view to separating the Serbs from the Montenegrins, attempt to drive a wedge from Vishegrad in a south-westerly direction through the old Sanjak of Novi Bazar. They have succeeded in crossing the Lower Drina in several places, most likely in the sector between the Jardar and the Save, for we hear that Machva, the fertile plain in the extreme north-west, has fallen into enemy hands. Yesterday's German report stated that Shabatz, after a fortnight's valiant defence on the part of the Serbs, had been captured; but, in any case, progress in this corner will be slower than along the Morava front, owing to the extremely difficult mountainous terrain to the south and south-east of Machva.

Gravity of the Situation.

In summing up the obscure military situation in the Balkans, as revealed to us by the conflicting news of the past week, we must rely on admissions of non-success rather than on assertions of victory. This gives us, roughly speaking, the following picture of what is happening: (1) In the southern sector, and as far north as the Strumnitza salient, we have kept the Bulgars away from the Uskub-Salonika Railway. (2) Farther north the Bulgars have crossed the frontier, and have approached (or captured) Egri Palanka and Kochana. They also lay claim to having descended the Bregalnitza to Ishtip. (3) In the Vrania region the Bulgars have cut the railway line between Nish and Uskub, and are in possession of a commanding position. Fierce fighting on this vital front is reported at the time of going to press. (4) Further north, Pirot, and through it Nish, is being threatened along the Nishava valley, but little progress is being made here. (5) In the Timok sector the Bulgars have crossed the boundary in numerous places, lay claim to have captured some frontier villages, and are threatening Negotin, Zaichar, and, further to the south, Kniashevaz. To the north of the same sector the Austro-Germans practically control the southern bank of the Danube, and, in spite of enormous losses, are advancing their main army up the Morava valley. (6) Further to the west the heavy fighting of the last few days to the south of Belgrade has resulted in the enemy pushing the Serbs from Avala slightly further south-east into the hills along the Belgrade-Parachin-Nish railway. (7) On the Save front it is reported that Obrenovaz and Shabatz have fallen, and the Lower Drina has been forced, but in this sector no immediate results are likely to be obtained by the enemy. More importance must, therefore, be attached to the Timok and Vrania sectors. It is here that the brunt of the great fight will have to be borne by the Serbs in the course of the next few weeks, and it is here that she will need all the help which, tardily, we are sending her. If it does not arrive in time, the road from Berlin to the Persian Gulf, in spite of the magnificent resistance of the Serbs, will be in the hands of the armies of the Huns. The moment is a grave one for all of us.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Egyptians as Aliens.

October 14.

The EARL OF CROMER asked whether the statement that had recently appeared in the Press to the effect that Egyptian residents in England were treated as alien enemies was correct. About a year ago he had pointed out that it was undesirable that young Egyptians should be treated as Ottoman subjects, although, of course, they were technically. Nothing was done at the time, and shortly afterwards the Protectorate of Egypt was proclaimed. Although he was not lawyer enough to say whether that made all Egyptians British subjects with all the privileges, he conceived that it did make it politically more desirable that no distinction should be made between Egyptians and other British subjects. An order was issued by the Home Secretary in December last in which the notification was given that Egyptians had ceased to be alien enemies, and he therefore thought the thing had been settled. But he saw it stated in a letter written to *The Times* by an Egyptian that a notice had been issued to him by the police that all Turkish subjects of military age were liable to internment, and therefore Egyptians had been told that unless they obtained exemptions their internment would take place. He wished to know if that statement was true.

LORD NEWTON said that on the 4th of this month instructions were issued to the Metropolitan Police to proceed with the internment of Ottoman subjects, and owing to some mistake, not yet explained, Egyptians had in some instances been served with the notice mentioned in the letter to which the noble lord referred. This mistake had now been corrected by the issue of a new Memorandum, which stated that "it is to be noted that Egyptians, as described in the Memorandum of December 26 last, are not subject to internment or repatriation, and are not to be served with notices." His noble friend had again pointed out the obvious absurdity of treating every technically Ottoman subject as an enemy, and in that everybody who had a most rudimentary acquaintance with the subject would agree with him. He personally (Lord Newton) had taken a great interest in this question and was able to assure the noble lord that there were very few Ottoman subjects interned at this moment in this country.

HOUSE OF COMMONS.

British Prisoners in Turkey.

October 14.

Replying to Mr. Peto, LORD R. CECIL said he had no official information as to the conditions under which British merchant seamen are interned in Turkey, but the United States Consul-General at Smyrna was doing all he could for the crews interned at Magnesia. In the absence of proper lists of prisoners it had been impossible to take all the same steps for the assistance of our prisoners in Turkey as of those in Germany, but the United States Ambassador at Constantinople had a fund at his disposal for the relief of British subjects interned in Turkey, and he was being consulted as to whether the activities of the Prisoners of War Help Committee could usefully be extended to Turkey. As far as the speaker was aware, letters and parcels addressed to British subjects interned in Turkey were duly received.

In reply to Mr. Butcher, LORD R. CECIL said:—We have repeatedly pressed the Turkish Government for lists of British prisoners. It was recently decided, in view of the failure of the Turkish Government to communicate to his Majesty's Government lists of the British prisoners of war in their hands, to suspend the dispatch of similar lists to the Turkish Government. In the meantime we have received four lists of British prisoners of war in Turkey, which have been forwarded to the Admiralty or War Office. We received information, dated September 1, that visiting of the British wounded had been absolutely prohibited as a retaliatory measure for supposed ill-treatment of Turkish prisoners. The United States Ambassador at Constantinople at once took steps to secure an official permit for the Secretary of the Embassy to visit freely all wounded in hospitals, and he expected that this would be given at an early date. There is, of course, no foundation whatever for the allegations of ill-treatment of Turkish prisoners, and we so informed the United States Ambassador, and asked him to convey that information to the Turkish Government. We also asked him to inform them that we had no objection to the inspection of any Turkish prisoners of war in our hands by United States Diplomatic or Consular officers, and that we expected that the Porte would give us reciprocal treatment.

Dardanelles Operations.

Mr. OUTHWAITE asked the Secretary for Foreign Affairs whether, in view of the statement made by the British Ambassador at Petrograd that the operations at the Dardanelles were initiated at the request of the Russian Government for the purpose of drawing Turkish forces from the Caucasus, he would state whether the Russian Government continued to attach the same importance to these operations, which, up to October 10, had resulted in 96,899 British casualties.

Lord ROBERT CECIL: It would obviously be improper for me to make any statement regarding the importance attaching to any special theatre of war by any one of our Allies, or even by ourselves. The operations in the Dardanelles are military and naval operations, and the statement of the Ambassador at Petrograd is quite accurate, if quoted accurately. But it must not be taken as a complete statement of all the considerations involved.

Indian Army Officers (Sick Leave).

Colonel YATE asked the Secretary of State for India whether he would consider the case of officers of the Indian Army who, after three months' absence in England, due to disablement on service, are placed on English furlough pay and extend to officers invalided to England the same rate of pay that they would receive if on sick leave in India.

Mr. CHAMBERLAIN: The different rates of pay which officers of the Indian Army receive while on sick leave in India and out of India respectively are long established and well recognised. A liberal concession has been already made by the grant of full Indian pay and full staff pay for the first three months of disablement, and I regret I cannot adopt my hon. and gallant friend's suggestion.

The Landing at Salonika.

Mr. G. TERRELL asked whether the Under-Secretary for War would state what British officer was in command of the forces which were being landed at Salonika, and why no public announcement had been made of his name.

Mr. TENNANT: I think my hon. friend must allow discretion to the Government to make announcements on such points as those mentioned at such time as it may be in the public interest to do so.

Anglo-Persian Oil Company.

Commander BELLAIRS asked whether, in organising the oil supply in the territory which has been captured from Turkey, no private monopoly would be conferred other than that secured by public tender; and whether the Government would take care that no pledges were given to the Anglo-Persian Oil Company or any other private company.

Lord ROBERT CECIL (Under-Secretary for Foreign Affairs): The subject of the oil in the territories in question is engaging the attention of H.M. Government. While it would be premature to make any definite statement at present, the points raised by the hon. and gallant member will not be lost sight of.

Russia and the Dardanelles.

Asked whether he would issue as a White Paper the speech recently made by the British Ambassador at Petrograd, in which the latter is reported to have stated that the first attack on the Dardanelles was undertaken at the request of the Russian Government, Lord ROBERT CECIL said: "It does not seem worth while to issue this separately. When the next presentation of papers on Russian affairs becomes possible it can be included. I understand it is already accessible in the Press."

Italy and Serbia.

Sir H. DALZIEL asked the Prime Minister whether Italian forces were to co-operate with the British and French forces in Serbia.

Mr. LLOYD GEORGE replied: The method in which Italy can most effectively co-operate in helping Serbia or in the common cause is under discussion between the Allies.

Allied Command in Serbia.

Asked by Sir H. DALZIEL whether the Commander-in-Chief of the Allied Expeditionary Force in Serbia would be French or British, Mr. LLOYD GEORGE replied: My right hon. friend regrets that he is not in a position to make an announcement in this matter.

The Bulgarian Negotiations.

Asked by Mr. KING whether it was intended to lay upon the table papers showing the negotiations with Bulgaria before the departure of the British Minister from Sofia, Lord R. CECIL said: It is difficult to separate the negotiations with Bulgaria from those with the other Balkan States, but papers will be laid as soon as this can be done without detriment to the public interest and in agreement with our Allies with whom we were a party to these negotiations.

Mesopotamia Operations.

October 20.

Replying to Mr. BUTCHER, Mr. TENNANT said that no time was being wasted in connection with the granting of distinctions and honours in recognition of the gallantry and brilliant achievements of the officers and men now operating in Mesopotamia. "It is hoped," added Mr. Tennant, "that the list will be issued almost immediately."

The Suvla Bay Command.

Lieutenant-Commander WEDGWOOD asked the Under-Secretary for War who the officer was who was in command of the troops that landed at Suvla Bay; whether he was still in command; and, if not, whether he was still in the Service receiving full pay.

Mr. TENNANT: The officer who was in command at Suvla Bay is no longer in any command. I do not think it would be in the public interest to say more on this point at the present time.

Baghdad Contingencies.

Mr. CHAMBERLAIN, in answer to a question by Lieutenant-Commander WEDGWOOD as to whether the possibility of a German advance on Baghdad was receiving the attention of those responsible for the Anglo-Indian Expeditionary Force in Mesopotamia, and whether a sufficient supply of river gunboats was available either to press the advance or cover the retreat, said: The contingencies mentioned by the hon. and gallant member and the provision required to be made against them have received due consideration.

Egyptian Legislative Assembly.

Replying to Mr. GINNELL, Sir E. GREY said: As far as I am aware, the Legislative Assembly of Egypt has not sat since the outbreak of war. The power of the Sultan and his responsible advisers has not been suspended.

THE PRESS ON THE NEAR EAST.

A Swiss View of Serbia.

In a leading article, "Ce qui se prépare," the *Journal de Genève* (October 12) adds its quota to the tribute of admiration which the civilized world has paid to the gallantry of Serbia in face of her terrible danger. We quote the following paragraphs:—

Depuis la chute de Venizelos, un secours grec est devenu peu probable. Les Roumains ne donnent pas signe de vie. Dans ces conditions, s'il ne se produit un miracle. . . . les Serbes pourront lutter avec tout l'héroïsme dont ils ont déjà donné au monde le superbe spectacle, leur triomphe paraît impossible. Ils vont être vaincus et écrasés. Leurs victoires même ont enragé leurs ennemis, bien décidés à les supprimer et à se partager leurs dépouilles. . . . Il n'y a peut-être pas, dans l'histoire, une épopée comparable à celle du peuple serbe.

And here is the writer's sad conclusion:—

Le peuple serbe, à l'inverse de ses voisins, peut avoir des défauts. Mais sa résurrection héroïque aurait dû lui valoir la sympathie de tous les Etats chrétiens. Il n'a trouvé longtemps devant lui que machinations ténébreuses. Il a été égaré par plusieurs mauvais bergers. Son fonds de dévouement, de bravoure, de confiance dans l'avenir, de fidélité à sa foi religieuse, n'a jamais été entamé. Il a donné dans sa lutte contre l'Autriche-Hongrie un exemple prodigieux. Le voir écraser aujourd'hui entre l'Allemagne, l'Autriche, les Turcs d'un côté, les sujets aveuglés de Ferdinand de Cobourg, de l'autre, par tant de brutalité, doublée de tant de félonie, ne sera-ce pas un spectacle atroce, surtout pour les petits peuples, qui estiment posséder, comme les grands, le droit de vivre et de se développer selon leurs traditions et leur génie propres?

Italy and Roumania.

In an article entitled "The Frontiers of Right," a writer in *World's Work* (October) makes the following observations regarding Roumania and Italy. Since the article was written the question of Italian troops for the Balkans has arisen, and Italy's hesitation seems to give colour to the paragraph which we quote:—

The curious international situation in regard to Roumania remains as it was, causing one almost to believe all the amazing stories told about secret treaties between this country, Serbia, Greece, and Italy. It is strangely significant that Italy is not yet at war with Germany, although she is with Austria and Turkey. The only reason one can imagine for such a situation is the truth of the story that an undisclosed treaty between Italy and Roumania compels the latter to go to the assistance of the former in case she is attacked by two Great Powers.

The Kaiser made ominous threats about the wreaking of his vengeance upon Italy in case she decided to go to war against the Central Empires, but so far he shows such a remarkable restraint in carrying out his threats that one is almost inclined to believe the story about the Italo-Roumanian agreement.

The Path to Victory.

In the usual short preface to its weekly article on the war the *Observer* (October 17) says that "if we fail in the Near East there can be no thorough victory over the Central Empires." The whole of this article is devoted to the position in the Balkans, and through it all there is the one imperative note, "Save Serbia." This, in the writer's opinion, is the keynote to success, the one unfailing guarantee of victory, which may be ours if we act with strength and promptitude now.

The conditions are such that if only we are strong and prompt enough we can wrest good out of evil and turn the Balkan struggle entirely and fatally to German disadvantage. . . .

The wider the Central Empires spread their forces the better, on condition that in the Balkans, as in France and Russia, they are baulked in the first instance of their fell purpose. Then, indeed, the enemy will be entangled in a hopeless situation. The Balkan enterprise will be a log tied to his leg. Serbia will be fatal, after all, to those who first decreed all the horror and slaughter of the world-war by the ultimatum against Serbia.

The writer urges the postponement of the offensive in the West if this is necessary to the despatch of men and munitions in sufficient quantities to ensure the certainty of success in the Balkans. In reference to our diplomacy in Greece and Roumania, the *Observer* says:—

We must act at Bucharest and at Athens as we failed to act at Sofia. We must guarantee Roumania and Greece that with the Allies they will be on the winning side. To make that guarantee fully effective we must pledge ourselves to raise the British and French forces in the Balkans within a stipulated time to a strength of half a million men, and more, if need be.

Coming to the repudiation of its treaty with Serbia by the Zaimis Ministry at Athens, the article continues:—

We doubt whether the consequences of that policy, if adhered to, have been fully understood in Athens. It would mean, in effect, a repudiation on the part of King Constantine and his Government of the Treaty of Bucharest, under which Greece received all her additions of territory. It is quite impossible for Greece to have all the profit arising out of the arrangements of 1913 with none of the responsibilities.

The following quotation is taken from the concluding paragraph of the article:—

If we grasp the situation, Germany must either give up the attack on Serbia and abandon both her Bulgars and her Turks, or the "Balkan ulcer" will be a drain on the enemy's strength—just when it is becoming, in any case, barely sufficient for its task anywhere—as was the "Spanish ulcer" on Napoleon's.

The Balkan Crisis.

In an editorial under the above title, the *Statist* of October 16 discusses the landing of Allied forces in Salonika, and concludes by saying:—

We would advise our readers to reserve judgment, to take fully into their consideration the strong reasons that exist for doing what is possible to prevent an Austro-German force overrunning Serbia, relieving Constantinople, and opening the way to the Persian Gulf. It is not a very small interest that we are fighting for. The attack of the Central European Empires is an attack upon a position which is of the very utmost interest to us, for it is practically an attack upon the road to India. It may be, of course, that strategic considerations would decide in favour of crushing the enemy in France, Belgium, and Poland rather than in dispersing forces so widely. But it is to be presumed that the British Empire, Russia, France, and Italy have all taken counsel with their military and naval advisers, and that they have not rushed blindly and ignorantly into what they must be aware is a very grave undertaking.

The Siege of the Central Powers.

The Right Hon. C. F. G. Masterman has contributed an article under the above head to the *Daily Chronicle* (October 20), in which he shows the German campaign in the Near East to be the last effort possible if the siege of the Central Powers is to be prevented from becoming absolutely complete. The writer enumerates the points at which the siege is already deadly, and continues:—

In all that gigantic encirclement of fire and steel, by land and sea, only one little door remains unstopped. It is a little door, but it is of immense importance, because it is a door behind which are the only conceivable reinforcements and reserves upon which those beleaguered Empires could draw. Like the "little door" of "Alice in Wonderland," it leads to the Enchanted Garden. Beyond it is all the magic of the East, which has fascinated and drawn to it and destroyed so many great conquerors.

Will this door be thrust open? If so, can it be kept open? In answer to the first question, the writer considers it possible that the door may be opened, but even if it is he does not think that it will remain so. There is no analogy, he thinks, between Belgium and Serbia. The one was a peace-loving country, flat, too, and unsuited to retaliation when once the German armies had passed through; Serbia is different.

The Serbian may break up into guerilla warfare amongst those hills and chestnut woods, as Spain did before the advance of Napoleon's armies, and prove equally unconquerable; and with Salonica as a secure sea base, like the Lisbon of a hundred years ago, it may be that the Serbians, like the Spanish guerillas, backed by help through that base from oversea, may not only render that corridor between Europe and Asia untenable, but materially assist in the killing and wounding of the German and Austrian effectives, which is the real and immediate purpose of the war.

Mr. Masterman considers any discussion as to the action that should be taken by the Anglo-French armies as either futile or mischievous. Only the Governments of the allied nations can know the exact circumstances; it should be left without question to the Governments to decide.

An Appeal from M. Mestrovic.

A correspondent, a Serbian gentleman now in England, has drawn our attention to an article which had escaped our notice. It is entitled "The Sorrows of My Country," and is contributed to the *Weekly Dispatch* (October 10) by M. Ivan Mestrovic, the famous sculptor, whose name is well known to readers of THE NEAR EAST. At the moment when the German invasion of Serbia began M. Mestrovic was impelled to express the feelings of his race in face of the dire peril with which it is threatened:—

I can only speak what I feel in my inmost soul, but in so doing I think I am only expressing the feelings of every man of my race at a time when we are endeavouring to carry into execution the dream of so many generations of our ancestors, which is nothing less than the final union and liberation from tyranny of the whole southern Slav race.

Everywhere around me I hear you say in England, "Poor little Serbia."

You cannot tell how those words of intelligent compassion thrill my soul, as indeed they must move every man with a

Digitized by Google

soul when he thinks of the agony of Serbia in a struggle which is more Homeric even than Homer

Serbia, he says, is prepared to resist to the death, "but how different the stature of the combatants, and as if to accentuate this difference, lo! those who are her brothers in blood are falling away from her and leaving her alone to bear the brunt of the shock, forgetting the while that to-day the Balkans must stand as one together or fall into eternal slavery." And here is a passage eloquent of the feeling that unites all the Jugoslav peoples:—

I was myself born in Dalmatia, the country, I consider, which of all civilisation possesses the most beautiful traditions and the cradle of the Jugoslav ideals of unity, so you can imagine the tortures I feel at the thought that even after this war, with its deluge of heroes' blood, my country, instead of becoming united to the kindred race, must be wrenched farther apart than ever!

The blood that has flowed red in the valley of the Vardar has made it too precious to give up, and the tears that have flowed in torrents down the grey rocks of the Dalmatian coast have made the land for ever proof against whatever cannon shall attempt to threaten its liberty. The sighs and aspirations of Croatia are too precious, the necessity of Slavonia too urgent, and the sufferings of Bosnia, so long crushed under an iron heel, are too acute that they should be longer separated and kept apart instead of being encouraged to join in the great fraternal movement of emancipation begun by Serbia and Montengro

So great are our sufferings, in fact, that Serbia appears to me as a figure drowning in the blood of its own wounds. Surely—I cry out—surely Europe cannot at such a time demand of us the amputation of our very limbs—Croatia, Istria, Macedonia, Dalmatia!

The article concludes with an urgent appeal for help:—

Ah, hurry, hurry, lest it be too late, and, believe me, as I know my own people, I tell you this—when victory and peace crown our cause at least there is no nation on earth will prove its gratitude to humanity than will my own beloved united Jugoslavia.

The Problem of the Adriatic.

In contributing his second article on the above subject to the *Outlook* (October 9), Mr. V. R. Savitch gives a detailed table of the nationalities of the inhabitants of the provinces of the Adriatic coasts, where meet the interests of the Italians and the Serbo-Croatians. The Slav population is shown to be 1,052,082, out of a grand total numbering 1,506,891, the balance being made up of 372,623 Italians and 32,186 Germans. He then proceeds to combat certain arguments of the Italian Press that Italy possesses ethnographic claims upon these provinces, and that as they contain a large Italian population they should be incorporated by Italy in order to achieve her national unity.

The argument for Italian incorporation of those provinces based upon ethnography must fall at once when we look at the numbers of the racial statistics. In Dalmatia, against a pure Serbo-Croatian population numbering 630,000, the Italians number only 18,000, which represents less than 3 per cent. of the total population. Therefore to base the Italian rights of occupation upon ethnography would be sheer absurdity.

In the remaining provinces of Istria, Trieste, and Goritza the writer admits that the Italian claims on ethnographical grounds are better founded, although they are not justified, and quotes an imposing array of statistics in support of his latter assertion. He denies also that there are any sufficient historical rights to justify Italian claims and concludes:—

The closer study of the Italian claims on the Adriatic will convince us at once that those claims, though announced in the name of military efficiency and strategic frontiers, are calculated to serve the interests of Italian commercialism, and to secure for Italy a practical monopoly of the whole trade in the Adriatic. Not only the Serbo-Croatian ports would be placed in Italian territorial waters, and under the command of the Italian guns, but the Italian territorial claims in the Northern Dalmatia are carefully calculated to the effect to impede and hinder a possible new railway communication between Croatia and her historical ports in Dalmatia. The projected railway line, before reaching Splet (Spalato), would have to pass through Italian territory, and its trade would be obliged to pass to an Italian port. Of course, the commercial and economic development of the South Slav country would be handicapped, which must be a new source of antagonism and friction between both nations.

The Cost of Greek Hesitation.

In writing of the hesitation of Greece in the *Morning Post* (October 15), Mr. E. B. Osborn insists that if the country remains a spectator, her position will be compromised, whatever the ultimate decision:—

If Serbia be crushed and the road cleared to Constantinople and Salonika for the Germanic policy of *Drang nach Osten* (which seeks its profit in Asia Minor and Mesopotamia), Greece must inevitably be deprived of the territory she gained in the Balkan wars.

A clear statement of the territorial and other advantages which went to Greece as the result of the Balkan wars is followed by the obvious argument that in the event of victory attending the Germanic Powers "the *spolia opima* would be returned to Turkey, and Bulgaria would take the rest—how else could they be recompensed for their services to Austria and Germany?" If, on the other hand, the Allies are victorious, the writer considers that the "benevolent neutrality" of these times will command less for Greece than what would have been given had one single Greek soldier fallen in the cause of civilisation:—

It is true no doubt, that no penalty would be imposed for her failure to grasp a great opportunity—that nothing would be done to bring home to her the vast difference between "benevolence" based on definite treaty-rights (Serbia is entitled to the use of Salonika as a supply-port) and the beneficence which risks all to gain all in a glorious cause. In the peace settlement that should come, however, Serbia will be regarded as the equal of any of the Great Powers engaged, and must be rewarded in proportion to the stupendous sacrifices she has made. She must, *inter alia*, have her long-desired outlet on the Ægean, and Greece, if she chooses to remain a spectator throughout, might have to pay something for her seat at the spectacle. Why not? She cannot expect to have it both ways; she is not in the position of, say, Spain or Norway.

The remainder of an interesting article is divided between an examination of the causes which, in Mr. Osborn's opinion, have combined to hold Greece from decisive action and a disquisition on "Philhellenism."

Russia and the Dardanelles.

Although the entrance of Bulgaria into the war has considerably modified the picture presented by "A Military Correspondent," who writes of the Eastern war areas in the *Asiatic Review* (October 1), there is still much of interest in his résumé. The article is divided into two parts, the first of which deals with the Dardanelles and the second with the Russian retreat. In his observations on the Dardanelles the writer points to the ever-increasing difficulty of transport of men and material which besets the Turk in this campaign. This difficulty, by the way, is in no way set aside by the mere fact of Bulgaria's intervention, as some of the more pessimistic of our journals appear to imagine. We quote a paragraph in reference to the part which Russia has played towards the attainment of this end:—

One factor of the campaign which has not received the attention it merits is the aid furnished by Russia in the Black Sea—indirect aid, it is true, but not less valuable for that. When it was found that a shortage of munitions was likely to occur in Gallipoli, the German masters of Turkey established munition factories at Constantinople, and an immediate shortage was averted. But for the working of munition factories coal is needed, and, since there is no rail communication between the Turkish coalfields and Constantinople, fleets of colliers conveyed the mineral to the factories by way of the Black Sea—until the Russian Black Sea Fleet got to work. The Turkish plan at the outset was to send numbers of small colliers out, in the hope that some, at least, would get through—and they were sunk by the hundred by Russian torpedo-boats. When these small unescorted craft had been practically swept off the water, the plan of sending larger vessels under escort was tried—and with no better success, for in the last Black Sea action the Turkish escort vessels were severely punished, and the coal-carriers were sunk.

Articles to Note.

"Bulgaria and Her Method of Fighting," by an Englishman from Sofia, in the *World* (October 19).

"Bulgaria," by M. W. Patterson, in the *Standard* (October 20).

ROLL OF HONOUR.

British Subjects from Turkey in H.M.'s Forces.

The Editor of THE NEAR EAST *would be obliged if relatives of former British residents in the Near East who have joined H.M.'s forces would communicate additional names or other particulars for insertion in our Roll of Honour. Biographical details concerning those who have fallen in their country's service would also be appreciated.*

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A., Colchester.
ATKINSON, Gunner T., "A" Co., Royal Field Artillery.
BAKER, Captain A. Warden, 7th Royal Scots Fusiliers.
BARRON, 2nd Lieut. J. B., Worcester Regiment, France.
BATH, Nurse, Sister, Army Hospital, Malta.

WOODS, Harold, Interpreter, Mediterranean Expeditionary Force, Alexandria.
WRATISLAW, Captain J. C., 8th Leicestershire Regiment, 110 Brigade, 37th Division, B.E.F., France.

An appeal for further contributions and gifts to enable the supply of comforts to our troops in Gallipoli to be continued is made by Lady Ian Hamilton and the Committee of Lady Hamilton's Dardanelles Fund. The work of despatching the gifts to the front is now discharged on behalf of Lady Hamilton's fund by the Queen Alexandra's Field Force Fund, whose premises are at 24A, Hill Street, Knightsbridge. It is worthy of note that though numerous complaints have been received of the non-arrival of packages despatched by the ordinary parcels post, so far the things forwarded by Lady Hamilton's workers have found their way with accuracy into the hands of the men for whom they were intended. In many cases acknowledgments follow from the men or their officers, and they are alike strong in their expressions of gratitude and appreciation. In a letter from a base depôt an Army chaplain writes: "Last week I had one of the greatest treats of my life, and I only wish I could write a full report to show you and your Committee how grateful we are for your good gifts, and what a service you are performing to our dear lads. God bless you all for it—that is not only my prayer, but the prayer of hundreds of our boys, who are giving their best. What does not a shirt mean to a man who has not had his off for weeks! And many of our boys are of gentle birth. . . . Most of the men are in bivouac, and we have unfortunately had some tropical thunderstorms, with cold nights. I leave the rest to your imagination."

The brother of the Prime Minister of Abyssinia, who had been undergoing treatment at Alexandria for about two months, is now at Cairo, where he has been admitted into the French Hospital at Abbassia, says the *Egyptian Gazette*. He has proceeded to Cairo on the invitation of a delegate of his Eminence the Coptic Patriarch.

Dr. R. O. Moon delivered the first of the Chadwick Public Lectures on "Typhus in Serbia" at the Royal Society of Medicine, Wimpole Street, on Wednesday. He said that during the present war the armies of France and England, fighting in numbers which had never been equalled before, had remained entirely free from typhus. The second lecture of the course will be given on Friday, the 29th inst.

Mr. Ellis Ashmead Bartlett, who has just returned from Gallipoli, will lecture at the Queen's Hall, Langham Place, on Wednesday next, at 8.15, on "The Operations in the Dardanelles."

At the quarterly Court of Governors of the Seamen's Hospital Society (Dreadnought), held on the 14th inst. at the Institute of Chartered Accountants, Sir Percival Nairne presiding, it was reported by the committee that five convoys of sick and wounded naval ratings from the Dardanelles had been received at the Dreadnought, while a sixth was expected. The result of the special appeal made by Lord Devonport's Committee has been the collection of £34,000, and contributions are still being received.

Now that the cold weather is approaching help is urgently required for the Royal Naval Air Service Comforts Fund, originated last year by Mrs. Sueter, wife of Commodore Murray F. Sueter, the present Superintendent of Aircraft Construction. Contributions in kind should consist of warm underclothing, mufflers, etc. The cash contributions are devoted primarily to the purchase of such garments when urgently required by the men abroad who cannot purchase them on the spot, and for the purpose of buying cigarettes, tobacco, etc. Cheques should be made out to Mrs. Sueter, The Howe, Watlington, Oxon. Contributions in kind specifically intended for the men of the Royal Naval Air Service with the Mediterranean Expeditionary Force may be sent to Mrs. Samson, mother of Commander C. R. Samson, at the Grand Hotel, Trafalgar Square, and to Mrs. Thomson, 10, Great Stanhope Street.

The Hon. B. R. Wise, having been instructed by the State Government in Sydney to hand over to the proper authorities the sum of £5,000, representing £3,000 subscribed by private citizens and £2,000 by the Government of New South Wales, for the relief of distress in Serbia and Montenegro, has forwarded a cheque for £4,000 to the Serbian Relief Fund and one for £1,000 to the Montenegrin Red Cross and Relief Fund.

The Sailors' and Soldiers' Tobacco Fund is making a special effort to provide a Christmas gift for our troops at the Front, including those in the Mediterranean and the Persian Gulf. All contributions should be addressed to the Managing Secretary, Sailors' and Soldiers' Tobacco Fund, Central House, Kingsway.

Lady Maud Wilbraham writes: "The Admiralty are asking me to send as many sweaters as I can for the hospital ships coming back from Gallipoli, as the men suffer so from the cold in the Bay of Biscay and on landing. I have already sent 260, and they ask for more. Parcels should be sent to me at 62, Lower Sloane Street, S.W."

A DAY IN THE DARDANELLES
LECTURE BY
H. W. NEVINSON
(War Correspondent just returned from Gallipoli),
Portman Rooms, Baker Street,
SUNDAY, OCTOBER 24th, 5 p.m.
Reserved seats, 2/6 and 1/-, from United Suffragists, 27, Chancery Lane, W.C.; or at the Portman Rooms.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Sir Edward Grey's reference to cotton prices in Egypt (reproduced elsewhere) was the official view of a very complicated question. As such, it appears to have disposed of the whole problem in less than a dozen lines. I would that I could be as concise! Last year, when war broke out, the grower had to be protected from utter ruin. Prices collapsed, and he could not sell his purchases at anything under a decided loss. Steps were taken to prevent this, and the Governments of the great cotton-growing countries appeared on the scene as purchasers at normal prices. This sent the price up, and the growers were saved. This year prices are inflated, due principally to speculation in America. An authority on cotton questions, to whom I have spoken, believes that this speculation is mainly due to the fact that it has generally been given out—not without a motive—that the stocks held in America are far lower than they really are, and that the world's consumption will show no great decrease. Both suppositions, and more particularly the latter, are entirely erroneous. The fact is that this year's cotton supply is more than enough to meet all demands, and that, therefore, there is no need for inflated prices and no further need to protect the grower. The man to be protected now is the consumer, and this can only be done if the Governments interested step in as sellers instead of buyers. They were buyers last year to protect the grower; let them now be sellers to protect the consumer, else prices will go on rising to an extent beyond all justification. I see that the High Commissioner for Egypt has promised the grower Government support, if necessary. I do not know whether, in the long run, this will have been a wise move or not, because I am sure that it will tend to keep prices up above their normal, to the great detriment of the consumer.

***

Last Thursday week Commander Bellairs asked in the House whether, in organising the oil supply in the territory which had been captured from Turkey, no private monopoly would be conferred other than that secured by public tender; and whether the Government would take care that no pledges were given to the Anglo-Persian Oil Company or any other private company. The answer was that "the subject of the oil in the territories in question is engaging the attention of H.M. Government," but that the points raised would not be lost sight of. I do not see how Government could have given any other answer to so futile a question—an echo, one might think, of last year's violent opposition to the arrangement concluded between the Government and the Anglo-Persian Oilfields, whereby the latter certainly lost a good deal of that "private" character to which Commander Bellairs was pleased to refer. This point should not be lost sight of in future.

***

Another oil topic of considerable interest reproduced in our financial columns is the circular issued by the directors of the Anglo-Egyptian Oilfields. The gist of the circular is, practically, an admission that the company's available financial resources are approaching exhaustion. What is wanted, argue the directors, is a better working arrangement with the Egyptian Government, and, if it should be obtained, an increase of capital, by £50,000 to £100,000, might be justified. Supposing, however, these better conditions are not obtainable, what is to happen? We are not told. One immediate effect of the circular was to send the Anglo-Egyptian "B" shares down to 3s.

***

I have frequently pointed out in these columns that there are many experts, both in this country and in Egypt, who maintain that the management of the Anglo-Egyptian Oilfields never went about the development of the Egyptian field in the right way; that they continuously exploited shallow oils only—sometimes, admittedly, with momentarily successful results; and that they refused to give the deep boring a chance of proving the existence or non-existence of lower petroliferous strata. It has even been asserted that, unless "deep" oil is struck, the future of Egypt as an oil-producing country is nil, as it cannot depend on shallow oil alone. The necessary deduction to be made from the above expert view is that if the company continues tapping its various properties only by means of numerous small borings, the venture will never pay, whatever the working arrangement with the Government. The latter, on the other hand, should impose on the company a condition (for a consideration, if necessary) obliging it to sink at least some of its wells to a depth where, according to the experts of deep boring, oil should be struck. An alternative is that the Government should, on its own initiative, test the theories held by the last-named engineers, and thereby free itself from the charge of indifference as to the oil resources of the country. Eventually, and supposing the test to have been successful, the Government could exploit its own fields. It would, therefore, hardly be advisable for it to bind itself to any private concern now drilling in Egypt. In any case, the negotiations between the Egyptian Government and the Anglo-Egyptian Oilfields will be followed with great interest.

***

Though, as will be seen by an official statement published elsewhere, Bulgarians have been declared "enemy aliens," and as such have to submit to strict police registration, they are not to be interned. In the House of Commons Mr. Brace on Tuesday declared that "it is not proposed at present to intern or repatriate Bulgarians unless in individual cases special reason is found for doing so."

***

In connection with the notice published recently in THE NEAR EAST of the tenders invited by the Egyptian Postal Administration for the supply of general stores, we have received a copy of the specification, which can be seen at THE NEAR EAST offices by firms interested. The closing date for offers is December 1. The stores required include:—Mail bags, boots, fuel, ready-made furniture, letter-boxes and accessories, hardware articles, electric lamps and accessories, electric fans, enamelled plates, safes, stamps and punches, special postal stationery, telltale watch requisites, lead seals, rolling-stock and accessories, flags, disinfectants, etc., etc.

***

Judge Grain, in delivering his judgment in the case of the cargo of the s.s. "Baerenfels" and s.s. "Gutenfels"—reported fully elsewhere—made a most interesting statement. "It has struck me," he said, "as a somewhat curious fact that in a very large majority of the cases which have come before me, in which German firms have decided to turn themselves into British companies, the date chosen for this conversion is invariably on or about November, 1912. It may, of course (he added), be mere coincidence." It will be remembered in this connection that in November, 1912, the first Balkan war was at its height, and that the international situation at the various Chancelleries was, at the time, anything but reassuring.

***

The current issue of the *Cyprus Gazette* to hand contains the following statement: "In the third schedule of the contract for Cyprus Motor Mail Service, published in Supplement No. 1 to the *Cyprus Gazette*, No. 1182 of Aug. 13, 1915, insert the following rates to be paid by the Postmaster to the contractors: Rates.—£960 per annum; payable monthly, £80." It will be remembered that when the original contract was published, I drew the attention of the Cyprus authorities to the fact that they had omitted to state what subsidy the motor company was to receive, and that, therefore, it was impossible to pass any criticism on the contract as it stood. I am glad to see that the authorities have now published the necessary addendum. The grant of £960 per annum is certainly not an exorbitant one; I only hope that it is sufficiently high to enable the new company to keep its service going.

***

One of the chief hives of industry in Cawnpore is the Elgin Mills. Established some fifty years ago, the Elgin Mills have gradually increased and prospered until to-day they are recognised as one of the largest and most notable monuments of British commercial enterprise in India. The great variety of manufactured goods issuing from this well-known mill would surprise many. In addition to a wide range of cotton goods such as twills, drills, towels, shirtings, sheetings, etc., the Elgin Mills are recognised as the largest tent manufacturers in India. Another of their specialities is the manufacture of horse clothing for practically every occasion, in all styles, whilst a third department deals solely with the making of uniforms, the firm being contractors to the Police, Telegraph, Postal Army Hospital, Excise, Railway, and various other Government departments. All readers of THE NEAR EAST who are interested in this firm's output should send for their catalogue.

***

Mr. Edward Atkin, the hon. secretary of the Anglo-Armenian Association, writes to the *Times* as follows: "Although Armenians who reside in the United Kingdom are treated humanely by the Home Secretary, the goods of Armenians in Turkey sold to their countrymen in the United States are seized in transit at Liverpool by Customs officers, notwithstanding the fact that there is no ground for suspicion that the confiscated merchandise is contraband of war or destined for the use or comfort of the King's enemies. This treatment of the chattels of a martyred nation, which has the misfortune to groan under the Ottoman yoke, on the plea (no doubt strictly legal) that 'alien enemies' includes *all* Turkish subjects, will hardly commend itself to those who have some acquaintance with history and are not blind to the dictates of justice or deaf to the appeals of an outraged people in bonds."

COMMENTATOR.

Alexandria Prize Court.

S.S. "Barenfels" and S.S. "Gutenfels" (ex Cargo).

On September 18, Judge Grain delivered three judgments in the Alexandria Prize Court, of which the following extracts concern the first two judgments, viz., s.s. "Barenfels" and s.s. "Gutenfels," both ex cargo. The judgment in the case of s.s. "Luetzow" (ex cargo) will be published in a forthcoming issue of THE NEAR EAST.

S.S. Barenfels (ex Cargo).

This is a claim put forward by Mr. Booth on behalf of the liquidator appointed by the Controller of Hostile Trading Companies, India, of the Badische Co., Ltd., of Bombay, and although I have already decided against them in a previous claim of this company, in the case of the s.s. "Gutenfels" (cargo ex 11/555), nevertheless, Mr. Booth urges that there are some new facts in this case which may cause me to come to a different decision with regard to this particular cargo. In an affidavit put in and sworn to by Maurice Suter, the liquidator of the company in Bombay, it is stated that the chief business of the company was to import and sell dye stuffs bought by the company through its home (Germany) directors from the manufacturers, the Badische und Anilin und Soda Fabrik at Ludwigshafen; that the control of the company was in Bombay, and all its operations of giving orders for goods and selling the goods to its customers were performed in Bombay. A balance-sheet of the company struck on January, 1915, shows that a sum of Rs. 185,710.6 is owing to the Badische Anilin und Soda Fabrik, while various firms (including a sum of Rs. 12,231.3 due from Badische Co., Ltd., London) owe the company the sum of Rs. 180,801.14.1.

Mr. Booth urges that these goods were bought by the Badische Company, who were acting as merchants in Germany through their resident directors there; that the directors bought the goods and invoiced them to their firm in Bombay; that as the consignors of the goods they are entitled to the release of this cargo. But it appears to me that the affidavit of the liquidator, Maurice Suter, is against him on this point, because he states: "These goods are paid for by the company in due course of business by remittances made to its home (Germany) directors after the goods have been received in India, for which reason the goods claimed for by the company in this case have not been paid for."

I see no reason to alter the decision I arrived at in the former case, viz., that the property in these goods remains in the German manufacturers, the Badische Anilin und Soda Fabrik, and, therefore, the order will be that this cargo is condemned as enemy cargo and the goods to be sold under the order of the s.s. "Barenfels," dated March 17, 1915.

S.S. Barenfels and S.S. Gutenfels (Ex-Cargo).

The facts in this case are as follows:—On or about July 18, 1914, various consignments of goods were shipped at Bremen on the s.s Barenfels and Gutenfels by, as the Procurator alleges, a German firm, Herren Schroder Smidt and Co., but Mr. Booth, who appears for Schroder Smidt and Co., Limited, a registered British company in Calcutta, claims that they were shipped by a branch of the British company which had carried on business in Germany on behalf of the registered company.

The various consignments of goods were as follows:—A: 25 cases of velvet. B: 1,000 kegs of red earth and 1 case of cotton goods. C: 12,868 bundles of Belgian steel bars. D: 250 bundles of Austrian steel bars, 1 package of church utensils, 1,011 bundles of German steel bars, 22 packages of paper, 250 bags of phosphates, 1 package of leather, 200 casks of lubricating oil, and 292 packages of woollen, cotton, and silk goods.

I mention the various consignments because the facts differ slightly with regard to each. The "A" consignment, the velvet, was shipped on board the s.s. Gutenfels. These goods, according to the invoices produced, were bought by Herren Schroder Smidt and Co., Bremen (that is the printed heading of the invoice), and consigned to the order of the company in Calcutta.

This is one of the many cases which have come before this court where a British company, consisting mostly of Germans and bearing a German name, is carrying on business in India or British Colonies with firms in Germany bearing names identical with the German name of the British company. And when they come before this court the cry is: "It was not a German firm we were dealing with in Germany, but a branch of our British company from India or the British Colony." The only directors of the British company mentioned in the affidavit before me are George Hach, Hermann Smidt, and Adolf Bertelsman, all of whom apparently resided at Bremen, and Julius Frerichs, who was permanent director at Calcutta. The first question I have got to decide is, Was this mercantile house, which on the invoices describes itself as "Herren Schroder Smidt and Co., Bremen," a branch of Messrs. Schroder Smidt and Co., Limited, of Calcutta, or was it really, in fact, a separate concern altogether, a German firm of merchants who were using the British company in Calcutta as their distributing agents to native dealers in India? I do not think, in the absence of any precise evidence on the point, that I shall be assuming too much if I assume that the German members of this company located in Germany have been carrying on business as a private German firm in Germany for a considerable number of years, while the British company is of very recent growth, as it was only formed in November, 1912, and so had had but a short trading life when these goods were shipped in July, 1914. Therefore, there appears to me to be a very strong presumption that it was the well-established German firm who were carrying out the various business transactions, and that the British company in India was in reality merely the distributing agent of the German firm.

With regard to consignment "A," no bills of lading nor bills of exchange are produced, the goods are invoiced from and bought by Herren Schroder Smidt and Co., and there is no evidence before me to show that the property has passed from the shippers, Herren Schroder Smidt and Co., of Bremen, beyond the affidavit of Mr. Frerichs, the German permanent director of the British company, who merely states that they were bought by the branch of the British company, and that, "according to the usual course of procedure, the said goods should have been paid for" by the branch of the British company. I think there is a very strong presumption in this matter that these goods were bought by the German firm for the purpose of forwarding for sale to natives in India by the British company in India, and as there is no evidence beyond the affidavit already referred to of the goods having been paid for, I hold that the property in the goods remains in the German firm of Schroder Smidt and Co., and the order will be for condemnation and sale.

In the next consignment, "B," there is one bill of lading for each consignment produced, but neither of the original invoices, although a printed invoice is produced from the British company in Calcutta to a native firm in India, dated June 4, 1915, the goods having been shipped in July, 1914. The bill of lading shows that they were shipped by Schroder Smidt and Co., Limited, but only one bill has arrived, and as the affidavit states that the goods were bought in Bremen, presumably from German firms, and there is no evidence that they were ever paid for, the order will be for condemnation and sale.

With regard to consignment "C," it was all invoiced from a German firm, the Deutsche Eisenhandel of Berlin, to various native firms in India, and shipped by the German firm of J. Freige Eisenexport on board the s.s. Barenfels on or about July 13, 1914. Beyond the affidavit of Mr. Frerichs there is practically nothing to show that the British company had anything to do with this consignment. There is no reason to think that the native firms have paid for these goods. Therefore, the property remains in the German consignors, and there will be an order for condemnation and sale.

The last consignment, "D." The completion of the shipment of these goods on board the s.s Barenfels was on or before July 18, 1914, and Mr. Frerichs, in his affidavit, states that most of these goods were sold forward to native Indian dealers, and that in the ordinary course of events the goods would have been procured by the branch office of the company, and would have been paid for out of the funds of the company in possession of the branch at Bremen. And apparently when the goods are shipped one bill of lading is forwarded to Calcutta, and on the goods being paid for the other two bills of lading are forwarded at weekly intervals. But in this matter only one bill of lading has arrived at Calcutta—the first. Most of those goods were shipped by German firms from Bremen, but in some cases Schroder Smidt and Co. appear as shippers; but in all cases the documents show that the goods have all been bought from German firms, and all the various firms either to native firms of India or to Messrs. Schroder Smidt and Co., the British company at Calcutta. But there is nothing to show that the German firms have been paid for their goods, and there is a very strong probability that they have not been paid for. The German invoices mostly bear on the face of them "Calcutta, delivered a/c.," "payable by Bremen."

I have very little doubt that the system pursued was for the branch of the British company, Messrs. Schroder Smidt and Co., or the German firm, Herren Schroder Smidt and Co., to buy goods from various German firms for the purpose of being sold to native firms in India. These goods were forwarded to Calcutta and sold on arrival by the British company, Schroder Smidt and Co., who were doubtless the distributing agents of various German firms. The goods having been sold, the Calcutta firm notified their German directors of the branch company at Bremen, and they paid the various German firms who had bought and forwarded the goods.

I am of opinion that the property in these goods is still in the various German firms who invoiced them to the native firms of India. Therefore, they are enemy goods, and the order will be condemnation and sale.

SHIPPING CONGESTION AT SALONIKA.

The congestion at Salonika (says *Syren and Shipping*) is giving rise to many claims for damage, and underwriters of goods consigned there are anticipating that matters will be still worse before they mend. It seems that the bulk of the goods landed are in transit for Serbia, Roumania, or Russia; while, of course, others are for Greek consignees. The facilities of the port, which are by no means of an up-to-date character, are now still further taxed by military exigencies. Steamers on arrival discharge their cargoes into lighters, and there they remain until they can be handled ashore. These barges are frequently overloaded, and the handling is generally careless, and hence many claims through sea-water damage and breakage. The harbour-master is powerless, in spite of representations that the barges should be rendered more seaworthy and that the railway authorities should give greater dispatch. Pending an improvement in the present state of affairs, underwriters must, of course, protect themselves by increasing their premiums.

Trade Notes.

Egypt.

H.M. Consul at Cairo reports that tenders are invited by the Egyptian Ministry of the Interior for the supply of equipment and clothing required by the Stores Department during 1916, including the following:—Bandoliers, belts, bayonet frogs, ammunition pouches, cartridges, and other accoutrements; brushes; bits, bridles, chains, collars, reins and other horse and camel equipment; camp equipment; bedsteads, chairs, cupboards, tables and other furniture; tools; calico, canvas, uniform cloth and other textile materials; leather; oils; paints; boots; breeches, jackets, shirts, tunics, trousers and other clothing.

Copies of the specifications, with forms of tender, etc., may be obtained, at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected between the hours of 9 a.m. and noon, and at 2 p.m. and 4 p.m. Representatives calling at Sir A. L. Webb's office must produce a written request from their firm to do so. Sealed tenders, on the proper form, will be received, up to noon on December 1, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo.

Tenders are invited by the Egyptian Ministry of the Interior (Lunacy Division) for the supply and delivery of miscellaneous supplies (including clothing, bedding, furniture, hardware, slippers, brushes, and other household necessaries) required by the Abbassia and Khanka Asylums at Abbassia, Cairo. Copies of the specification and form of tender may be obtained from the Director of the Lunacy Division, Ministry of the Interior, Cairo, at which address sealed tenders, on the proper forms, will be received up to November 15. A copy of the specification and form of tender may be consulted by United Kingdom manufacturers of the goods mentioned at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Tenders are invited by the Director-General, Coast Guard Administration, Cairo, for the supply of coal, petroleum, and benzine required by the Service during the year 1916. Specification may be seen and all information obtained at the Coast Guard Magazine, Arsenal, Alexandria, or at the Coast Guard offices at Port Said, Ismailia, Suez, and Damietta. Date, December 1.

Tenders are invited by the Director of Coast Guards Stores, Arsenal, Alexandria, for the supply of general stores and clothing required for the year 1916. Specification may be seen and all information obtained at the Head Office, Coast Guards Administration, Bab el Luq, Cairo. Date November 15.

Tenders are invited by the Controller, Cairo Tanzim Department, for the supply of general stores required by the Giza and Gezira Water Works during the financial year 1916-1917. Date, December 2.

Tenders are invited by the Army Finance Department, Cairo, for the supply of ten tons of candles to be delivered c.i.f. Alexandria, Port Said, or Port Sudan. Date, November 2.

Tenders are invited by the Controller, Cairo Tanzim Department, for the supply of general stores required during the financial year 1916-17. Date, December 1.

The General Secretary of the Domaines de l'Etat, Cairo, calls for tenders for the supply of 5,400 kilogms. of yellow grease. Date, November 1

For particulars concerning the tenders invited by the Egyptian Postal Administration, see page 705.

The tariff on cotton thread which expired September 30, 1915, will no longer continue in force, and Customs dues will in future be collected "ad valorem."

Cyprus.

The *Cyprus Gazette* (Extraordinary) for September 13 last, contains a notification laying down the procedure with regards to bills of lading for goods which are contraband of war or fall to be dealt with under the Retaliation Order in Council of March 11, 1915.

Bills of lading, or certified copies, are now invariably required to be on board the vessel in the case of goods, whatever their nature may be, *i.e.*, whether contraband or not. In the case of goods destined to Russia or neutral countries in Europe, such bills must be drawn either in the name of the actual consignee or to a bank or other financial house with the marginal endorsement "Notify A.B."—A.B. being the consignee as shown in the declaration of destination. Shipments for England, France, and Italy need not be for a named consignee, provided that the bill of lading and manifest clearly show that the destination is as stated. Goods for the Netherlands should be consigned to the Netherlands Oversea Trust.

Morocco.

The Board of Trade are in receipt, through the Foreign Office, of a copy of a Dahir, dated April 29, 1915 (amending the Dahir of April 8, 1914), which prohibits the importation into, the manufacture, circulation, storing, sale, or offering for sale in the French zone in Morocco of absinthe and similar products, and of essence of absinthe and similar products. The Dahir defines "absinthe" as covering all alcohol (however manufactured) containing aromatic principles derived from the wormwood (absinthe) plant, whether alone or combined with other aromatic substances; and also contains a definition of products which are to be regarded as "products similar to absinthe."

FURTHER EXPORT RESTRICTIONS.

The further restriction of the export of cotton and other articles recommended by the Board of Trade is made operative by an Order in Council published on Tuesday as a supplement to the *London Gazette*.

The exportation of "all manufactures and products of cotton, except cotton lace and cotton waste," is now prohibited to all foreign countries in Europe and on the Mediterranean and Black Seas, other than France, Russia (except through Baltic ports), Italy, Spain, and Portugal.

The Order also prohibits the exportation of coke made in gas works to all destinations abroad other than British Possessions and Protectorates, in the same way as all coal except that shipped as bunker coal is forbidden to be sent to foreign countries.

The exportation of acetic ether, ether, phosgene (carbonyl chloride), and platinum is prohibited to all destinations, while the following articles can only be exported to British Possessions and Protectorates:—Chronometers and all kinds of nautical instruments, compasses for ships, and parts thereof, including fittings such as binnacles, animal hair of all kinds, and tops, noils, and yarns of animal hair, insulated copper wire, electric light wires and cables, and power cables.

Among new goods the exportation of which is prohibited to foreign countries in Europe and on the Mediterranean and Black Seas, other than France, Russia (except through Baltic ports), Italy, Spain, and Portugal are arsenical ore, black plates and black sheets under one-eighth of an inch in thickness, furs dressed or undressed, and manufactures thereof, and ramie.

In connection with the new Order in Council by virtue of which the exportation of "chronometers and all kinds of nautical instruments" and "compasses for ships, and parts thereof, including fittings such as binnacles" is prohibited to all destinations abroad other than British Possessions and Protectorates, the Board of Trade give notice that in future firms in this country will be required to obtain the approval of the Admiralty before accepting orders for such goods from firms in foreign countries, and that applications for licences to export such goods must be accompanied by the order issued to the firm by the Admiralty permitting them to take the work in hand.—*The Times.*

THE WAR WITH BULGARIA

The following notification appeared in a Supplement to the London *Gazette* on Saturday:—

"Whereas the Convention relating to the status of enemy merchant vessels at the outbreak of hostilities, signed at The Hague on the 18th day of October, 1907, has not been ratified by the King of the Bulgarians, therefore We do not think fit to extend to Bulgarian ships the Order in Council issued on the 4th day of August, 1914, with reference to the departure from Our ports of enemy vessels, which at the outbreak of hostilities were in any such port or which subsequently entered the same." The operative clauses of the Proclamation are:—

1. The Proclamations and Orders in Council issued with reference to the state of war between Us and the German Emperor, or with reference to the state of war between Us and the German Emperor and the Emperor of Austria, King of Hungary, or with reference to the state of war between Us and the German Emperor, the Emperor of Austria, King of Hungary, and the Sultan of Turkey, other than the Order in Council issued on the 4th day of August, 1914, with reference to the departure from Our ports of enemy vessels, which at the outbreak of hostilities were in any such ports, or which subsequently entered the same, shall, if still in force, apply to the state of war between Us and the King of the Bulgarians as from this 16th day of October, 1915.

2. The Proclamation issued on the 5th day of August, 1914, warning all Our subjects, and all persons resident or being in Our Dominions, from contributing to or participating in, or assisting in the floating of, any loan raised on behalf of the German Government, or from advancing money to or entering into any contract or dealings whatsoever with the said Government, or otherwise aiding, abetting, or assisting the said Government, shall be deemed as from this 16th day of October, 1915, to apply to all loans raised on behalf of, or contracts or dealings entered into with, or to aiding, abetting, or assisting the Bulgarian Government.

3. The words "enemy country" in any of the Proclamations or Orders in Council referred to in Article 1 of this Proclamation shall include the Dominions of the King of the Bulgarians, and the words "persons of enemy nationality" in any of the said Proclamations or Orders in Council shall include subjects of the King of the Bulgarians.

The Vice-Admiral commanding the Eastern Mediterranean Squadron of the Allied Fleets has declared a blockade of the Bulgarian coast in the Ægean Sea, commencing from 6 a.m. on the 16th instant. Forty-eight hours' grace from the moment of the commencement of the blockade has been assigned for the departure of neutral vessels from the blockaded area.

BULGARIANS AS ALIEN ENEMIES.

It is officially announced that as a state of war now exists between Great Britain and Bulgaria persons of Bulgarian nationality are alien enemies within the meaning of the Alien Restriction Order. They are therefore subject to the provisions of the Order requiring them to register themselves with the police, forbidding them to enter or reside in prohibited areas or to travel more than five miles from their place of residence without permits from the police, and placing other restrictions upon them.

BULGARIAN CONSULATE IN MANCHESTER.

In accordance with the decision which he had already announced and the opinions he expressed to a representative of the *Manchester Guardian*, Mr. Joseph Angeloff, the Bulgarian Consul in Manchester, sent in his resignation nearly a week ago to the Bulgarian Government. Mr. Angeloff has stated that he had received no acknowledgment of or acceptance of his resignation. Nevertheless, he has removed from his business premises in Portland Street the Bulgarian national arms and the brass plates announcing that the consular office was there situated, and has ceased to perform consular duties.

Engineering Notes.

Portable Air Compressors.

In the recent report of a mining company in the East the apparently unsatisfactory output of a property was attributed to the limited use of pneumatic tools, owing to the want ot suitable air compressors. It was mentioned that whenever work was required at a given spot, the whole installation of the air compressing plant had to be taken down, carried and re-erected, a procedure which required considerable time to be carried out, while the pneumatic tools remained idle. Yet there are portable air compressors which can be removed from place to place without disturbing the plant, and always ready for work at any convenient spot. Such compressors may be obtained in Great Britain in all sizes, and for any specified class of work. These compressors can be used, not only in mines and quarries, but also in dockyards and other places where a convenient form of power can be advantageously employed. A type of recent design, which is now being successfully employed in mines, shipyards, and contractors' works, is in the form of a complete installation fixed upon a substantially constructed truck, fitted with large, broad wheels, the front ones being mounted on a turntable to allow of the plant being manœuvred into any position. It is driven by a paraffin engine of ample power, with air cylinders and covers thoroughly water-jacketed; it has an inter-cooler of large surface carried at the back of the cylinders. The lubrication throughout the machine is on the forced system. The valve gear in this compressor is of the multiple ported small lift type, and included is an automatic air-regulating device, so that the output of the machine can be automatically controlled in accordance with the demand for air. Driven direct from the compressor, a small pump affords an adequate water supply, whilst an air receiver is coupled to the compressor replete with all necessary mountings. The water tank for cooling purposes is situated beneath the truck, from whence it is connected to both the engine and compressor. Should the plant be located in an exposed position, it may be readily closed in with wooden shutters, which form part of the equipment. As a reliable means of transmitting energy in a convenient form from one point to another, and where space considerations are of importance, this type of machine can be most advantageously employed.

Wireless Telephony.

According to recent reports from New York, long distance wireless telephony is now an undisputable fact. The president of the American Telephone and Telegraph Company spoke from his office in New York to the chief engineer of the company at Mare Island in California, 3,000 miles away. But owing to the want of sufficiently high wireless aerial equipment in New York, the president's voice had first to be carried over the telephone wires for a distance of 500 miles to the wireless station in Arlington, Virginia, and from there the words were sent across a space of 2,500 miles without the aid of wires into a receiving instrument at Mare Island. By the same route the engineer answered various questions, and also said that were it not for the European war it would have been found much easier to have talked by wireless telephone from New York to London, Paris, or Berlin, than to San Francisco. He also asserted that as soon as the experiments are completed, it will be a simple matter to call up a friend in mid-ocean and have a chat, and eventually there will be no place, however isolated, which will not have its wireless telephone station. He admitted, however, that wireless telephony would never replace the wire telephone, because the former was a much more difficult process, and at present no means had been discovered of making wireless telephone conversations private from any eavesdropper whose instrument was keyed to the same pitch.

Motor Ambulances.

Referring to the improvement in motor-ambulances during the past twelve months, a writer in *The Times'* "Red Cross Supplement," published yesterday, says that the new cars have twin back wheels which are a great safeguard on bad roads. The first standard motor-ambulances, which one may now call the old type, have a rectangular frame covered by canvas curtains which can be rolled up at the sides. The stretchers are placed on the supports at the sides, and on projections from a central bar, so that when the ambulance is fully loaded a nurse or orderly cannot sit inside the car. The new type is wider and provides a gangway between the stretchers. On the inside, too, curves take the place of right angles to facilitate cleaning. The frames for carrying the stretchers, two on each side, are adjustable and stable, and by an ingenious contrivance can be packed away on each side so as to afford seating accommodation for eight patients when there are no stretchers to be carried. The canvas awning, painted in service green, is fixed, and the sides cannot be rolled up as in the early pattern. The interior is painted in leadless white; such windows as are necessary are of celluloid to minimize the risk of injury should they be broken, and an electric bulb in the roof takes the place of the former oil lamps. A speaking-tube for communication between the driver and the attendant and a dressing-box beneath the attendant's seat are further refinements of the new type.

Baghdad Railway.

A telegram from Constantinople received in Amsterdam on Wednesday announces that the section from Islahie to Radju of the Baghdad Railway was opened on Tuesday. Both these stations are situated east of Amanus and north of Aleppo. The opening of this section brings the Syrian system of railways thirty miles nearer to the main tunnel of the line, which has already been pierced near Bagtche.

EGYPTIAN CROPS.

The state of Egypt's crops, exclusive of cotton, in September last was, according to the Egyptian Government's official bulletin, which has just reached us, as follows:—

Rice.

Weather favourable, and water supply, on the whole, sufficient, except in some areas lying at the tails of canals in Beheira and Sharqia. The crop is practically free from pests and in excellent condition. Harvesting has commenced in Beheira, and "Yabani" is being reaped in most places in Daqahlia. Elsewhere, the crop is almost ripe.

Maize.

Weather favourable, and water supply, on the whole, sufficient, notwithstanding complaints as to shortage of water in Menufia. Watering, thinning, and hoeing are in progress. Isolated attack of borer and cut-worm are reported in various provinces but with insignificant damage. The crop is growing well and is very promising. It is to be feared, however, that with the continuance of the cool weather which has set in rather early, the maize may not ripen very well, especially the late-sown. Early-sown maize is now in flower and has formed cobs.

Millet.

Sêfi millet is nearly all harvested. The crop in the basins has escaped damage from flood. *Nili* millet was sown late for the most part owing to delay in filling the *Nili* canals. The plants, however, are doing well.

Sugar Cane.

Weather favourable, and water supply, for the most part, adequate. The stalk borer is still prevalent, but the crop continues to make good progress.

Ground Nuts.

Weather favourable, and water supply plentiful. The crop is coming to maturity and promises an average yield.

TOBACCO-GROWING IN EGYPT.

It appears, says the *Egyptian Gazette*, that the question of cultivating tobacco in Egypt is again to the fore. It is stated that the Ministry of the Interior is considering the possibility of raising money by allowing the cultivation of tobacco again and taxing all fields in which tobacco is grown.

GREEK TOBACCO CROP.

Greek tobacco growers anticipate a crop for 1915 superior in quality and quantity to that of 1914, says the U.S. Vice-Consul at Athens, writing on August 31. The Macedonian yield is expected to equal that of 1914, while in the Phthiotis-Phocis districts indications point to an increase of 20 to 30 per cent. Larissa is said to have a crop 15 per cent. larger than that of the past season, and the Argolis-Corinth provinces promise an increase of 30 per cent. The average increase would seem to be not far from 15 per cent. when all districts are taken into consideration.

The figures for the tobacco crop for 1914 have just been given out in an annual report of the Ministry of National Economy. Reduced to English equivalents, they are given below:—

Province.	Acreage.	Pounds
Thessaly and Arta	13,308	12,524,60
Mainland of Greece	14,372	9,889,35
Peloponessus	6,177	4,655,47
Cyclades and Euboea	742	55,87
Ionian Isles	247·1	169,29
Macedonia	38,300	34,916,60
Epirus	790·7	434,51
Ægean Isles	5,930	4,232,25
Crete	494.2	310,36

As the tobacco crop in Greece matures in September-October, the tobacco year coincides with the calendar year.

The currant crop for the coming year, wrote the U.S. Consul at Kalamata, Greece, on August 15, is expected to be about 35,000,000 pounds, against 50,000,000 pounds last year, a falling off of about 30 per cent. This decrease is due to unfavourable weather conditions and to the development of injurious insect pests, chiefly the Peronosporos.

PRODUCE REPORT.

Currants.

LONDON, October 21.

Owing to scarcity of supplies, the market continues very firm. Provincial and Pyrgos quoted 38s. to 40s., bags 34s. 6d. Amalias, 39s. to 41s.; Gulf, 45s. to 47s.; Vostizza, 47s. to 55s.; and Smalls, 39s. to 43s. Several steamers are on the way, but all with only small quantities.

Sultanas.

Whatever remains is being bought at continuously increasing prices. Smyrna common to fine, 80s. to 100s.; Greek, 100s. to 120s.; and Afghan, 76s. to 80s. Some Cretan fruit was sold from 90s. to 96s.

Figs.

The market is steady. Calamatas sell at 43s. to 44s.; Taps, 36s. to 38s.; and Malagas, 36s. to 42s.

Seeds.

Linseed: The market is steady. London-Calcutta, spot, quoted 59s. 3d.; November-December, 59s. 6d.; and business is also passing in October-November at 59s. 3d. Resellers of La Plata would accept 56s. 6d. for October-November, but shippers generally hold for 57s. and over. Cotton seed has been firm, but quiet. London-Egyptian loading is quoted £11 10s. per ton. Rape seed remains firm. Brown Cawnpore, October-November, quoted 55s. 9d.; and Guzerat, ditto, 63s.

Oils.

Linseed oils is firm and in good request. Spot pipes, £28s. 5d., barrels and month, £29s. 5d.; January-April, £29 17s. 6d., paid; and May-August, £30 15s., buyers. Cotton oil is very firmly held. Crude spot pipes, £30 15s.; refined pale pipes, £34; and barrel sweet, £37 to £39, as to make. Rape oil remains firm. Ordinary brown naked spot, £35 to £36; English refined barrels, £38 to £39.

Oilcakes.

Cotton cakes: Owing to the absence of new crop arrivals of cakes or seeds from Alexandria, the prices of £8 17s. 6d. to £9 are asked for English, spot delivery; whilst for Egyptian October-November shipment, £8 10s., ex-ship, is quoted. At the latter price only little business is passing. Linseed cake: There is only a limited consumptive demand, which is attributed to the abundance of natural foodstuffs. Values, however, are firmly held up, with the hope of even higher prices as the winter approaches. East India seed pures are offered at £11 7s. 6d. to £11 10s., while best London-made sells quietly at about last week's quotations, £11 12s. 6d. to £11 15s. Fine seedy Argentine is selling at £11 10s. to £11 12s. 6d. per ton.

Locust Beans.

Ready parcels can be bought at £8 per ton for whole, and £8 10s. for kibbled; but for shipment rather high prices are held.

Gums.

The market is quiet, with little doing, in all descriptions. Arabic, Turkey sorts are quoted £3 5s. to £3 12s. 6d.; Ghezira, 15s. to 48s.; East India common, to fine, 45s. to 60s.; mastic, 3s. to 3s. 6d.; myrrh, good to fine, 96s. to 100s. per cwt.; sandarac, 28s. to 83s.; Tragacanth, first, £28 to £45; low to good sorts, £4 10s. to £7 2s. 6d.

OIL PRODUCTION OF THE WORLD.

According to a return compiled by the United States Geological Survey, the quantity of petroleum entering the markets of the world in 1914 was 400,483,489 barrels of 42 gallons, against 384,667,550 in the previous year. Of this quantity the United States is credited with 265,762,535 barrels, or two-thirds of the total. Russia stands second in the list with 67,020,522 barrels, followed by Mexico (21,188,427 barrels), Roumania (12,826,579 barrels), and Dutch East Indies (12,705,208 barrels). The largest proportionate increase in output was in Egypt, the production of which rose from 94,635 barrels in 1913 to 777,038 barrels last year.

COTTON MARKET.

(FROM OUR OWN CORRESPONDENT.)

Liverpool.

Messrs. Reynolds and Gibson telegraph:—

Egyptian Spot.—There has been an active demand for cotton this week, more especially the last few days, and large business has resulted. Holders have met the market freely, and quotations show a decline of five points. Sales are estimated at 3,900 bales, against 2,000 last week.

Manchester.

The inquiry for yarn continues to be on the quiet side, but as production is only moderate, prices keep fairly steady, and inquiry for piece goods for India has been considerable.

EGYPTIAN COTTON REPORTS.

The Ministry of Agriculture, Cairo, under date October 3, publishes its monthly bulletin for September. Taking 100 as representing, irrespective of the area under cultivation, the average crop of each division of the country, we obtain from Lower Egypt 93 in September, as against 100 in August, and for Upper Egypt 99 in September, as compared with 98 in August. The bulletin then continues:—Weather in general was favourable during the first half of the month, but rather cold during the second half. The water supply was sufficient. The crop has been for the most part seventeen days to a month earlier than usual in maturing, but, in spite of the fact that it promised to be well above the average at the end of July, there has recently been a deterioration in its general state, due mainly to pink boll worm attacks in all the Mudirias in Lower Egypt. Upper Egypt, on the other hand, has not suffered to a large extent, and has yielded a good crop. On the whole, the boll worm attack arrived earlier than last year, but as the crop was also earlier the effect produced has been almost the same. Certain districts have suffered much more than others, and late maturing cotton is in most cases in an unfavourable condition. The gradual substitution of the pink boll worm for the Earias has been very marked throughout Egypt.

It is particularly unfortunate that the reversion to the bad method which was adopted generally under special circumstances last year, with regard to the gathering of the cotton crop in one instead of two or three pickings, should have been continued in practice this year, when there is no excuse for it. The result has been that a certain amount of cotton has fallen on the ground and become damaged, and that the seed as well as the lint crops from some estates has suffered from the mixture of the two pickings.

The following report on the state of the cotton crop was issued by the Alexandria General Produce Association on October 1:—

Lower Egypt.—The temperature, which was fairly favourable during the first fortnight, has since become cooler; on the other hand, the fogs which we have had at this time in the past years have not occurred this season. Damage by boll worm and pink worm are fairly serious, and vary according to districts. The first picking is general, and fifteen days in advance. Results are very variable; in several districts they are estimated as equal and slightly better than last year, whilst in other parts they are considerably inferior. Second picking will give a worse result on the whole. Reports for the third picking predict a minimum result. Ginning yields are very variable, but a good deal lower than last year.

Upper Egypt and Fayoum.—The temperature, with the exception of two or three rather cool days, has been on the whole favourable. Some slight fogs of no importance were re-

corded at the beginning of the month. With the exception of the worm attack mentioned last month, there has been no new damage. First pickings have given satisfactory results —better than last year—whereas second pickings will be less. Ginning yields are slightly less than last year.

In connection with the above reports, it can be mentioned incidentally that the area under cotton cultivation shows a big fall from 1,755,000 feddans last year to 1,186,000 feddans this year. Consignments of ginned cotton to Alexandria show a decline from 7,627,000 cantars to 6,398,000 cantars.

COTTON NOTES.

The current issue (October) of the *Monthly Journal* of the British Chamber of Commerce of Egypt states that arrivals of cotton in Alexandria for September totalled about 400,000 cantars. It then continues:—Comparison with last season's corresponding figures is useless; but the arrivals for the first month of the season are very satisfactory, and have no doubt been influenced to a great extent by the big advance in prices since last month. The exports fall short of the arrivals by about 150,000 cantars, thus increasing the stock of cotton in Alexandria to over 1,000,000 cantars.

The spot market during the month has been exceptionally strong, and prices since our last report show a considerable advance. The advance has been caused by a big rise in the contracts market, due chiefly to a big "bull" campaign in America on unsatisfactory crop news, and influenced also by adverse reports of the Egyptian crop, both as regards quantity and quality.

With regard to the size of the present crop, it is not likely to be so small as some of the "bull" clique would have us believe, taking into account that with a decreased acreage the present crop was never expected to be as large as usual. Judging from the arrivals so far received, the quality certainly seems to have suffered chiefly owing to worm trouble, and also to a very hot spell of weather, which caused a too early ripening of the second pickings, with the result that in many cases the first and second pickings all came together. The consequence is that the top grades are likely to be very scarce. A redeeming feature of the crop is that the staple is quite equal to, if not superior, that of last season.

His Excellency the High Commissioner has informed the Egyptian Government, in a communication addressed to the Prime Minister, that the Government of His Britannic Majesty, desiring to assure the well-being of the Egyptian cultivator by facilitating the sale of the cotton crop under advantageous conditions, has decided to intervene as purchaser, should it be necessary, in order to keep the prices of cotton at remunerative rates. This decision of His Majesty's Government, says the *Monthly Journal*, is a fresh proof of the constant interest which it takes in the condition of the agricultural population of Egypt, and a proof of the advantages which arise from the intimate and cordial relations existing between the two countries.

In the House of Commons, on Wednesday, Sir Edward Grey, in replying to Mr. Ginnel, said that the market price on the Liverpool Exchange of fully good fair brown Egyptian cotton in the middle of July, 1914, was 9.10d. per pound, and the price on October 18, 1915, was 9.95d. per pound. The price of middling American was 7.35d. in July, 1914, and 7.29d. on October 18, 1915. Thus, the price of American cotton, though rising, was still slightly lower than before the war. On the other hand, the price of Egyptian cotton had been higher than before the war for the last three or four weeks. Having regard to the fact that the exchange between this country and Egypt was in favour of Egypt, he did not understand how there could be any difficulty in carrying on legitimate trade.

Prominent Industries of India

Economic Note on Morocco.

Growing Importance of Casablanca.

H.M. Consul at Casablanca has forwarded a copy of a pamphlet entitled *Notice Economique sur Casablanca et la Région des Chaouia,* issued in connection with the Franco-Moroccan Exhibition at Casablanca, from which the following information is extracted:—

Since 1907 the town of Casablanca has developed considerably and now extends 8 kiloms. (about 5 miles) along the sea-front. Work is being actively carried on in connection with the harbour, which in a few years will possess a water area of 141 hectares (348 acres), with a depth of 12 metres (39 ft.) at the entrance. The quays will be extended to a length of 615 metres (670 yards). There are eleven warehouses for the reception of merchandise.

The value of the trade of Casablanca in 1913 was 79,372,000 frs., an amount three times greater than the value in 1910. In 1914 trade naturally declined as a result of the European war and reached a total of only 55,676,000 frs., of which imports accounted for 47,008,000 frs., and exports for 8,668,000 frs. The positions occupied by the several countries participating in trade with Casablanca in 1913 were (1) France, (2) United Kingdom, (3) Spain, (4) Germany, (5) Belgium, and (6) the United States.

The total trade of Germany with Casablanca in 1910 was valued at 3,546,000 frs. and in 1913 at 5,769,000 frs. Imports from Germany progressively increased from 966,000 frs. in the former year to 3,509,000 frs. in the latter. Trade with both Germany and Austria naturally declined in 1914. The following articles, and their values, are given as the principal "Austro-German" imports into Casablanca in 1913:—Sawn wood for joinery and cabinet-making (285,000 frs.); hosiery (34,000 frs.); cement (38,000 frs.); iron and ironmongery (203,000 frs.); wire (32,000 frs.); drinking glasses (102,000 frs.); ornamental glassware, artificial coral, etc. (24,000 frs.); clocks (27,000 frs.); sewing machines (34,000 frs.); steam and other engines (91,000 frs.); furniture (77,000 frs.); packing paper (42,000 frs.); chinaware (56,000 frs.); locks, etc. (58,000 frs.); woollen tissues, drapery, etc. (385,000 frs.); cotton tissues (29,000 frs); pepper (27,000 frs.); potatoes (25,000 frs.); and rice (36,000 frs.); refined sugar (542,000 frs.); tea (298,000 frs.).

The pamphlet proceeds to state that the German success in obtaining trade was due in the first place to the facilities for payment for goods which German firms gave; the credits allowed were at least three months from the date of shipment of goods, and in the case of textiles credit of even six to eight months was given or, alternatively, clients were allowed to settle by instalments for goods as these were sold. The second factor contributing to the success of German firms was that they worked through the medium of commission firms in Hamburg, Berlin, etc. Travellers from these commission firms brought to the Casablanca market considerable quantities of goods of all kinds, such as Bohemian glass, Hamburg sugar, Leipzig woollen stuffs, aniline dyes from Baden, etc., so that native clients were not obliged to apply to a different manufacturer for each one of the articles desired to purchase. German commercial travellers, moreover, contributed to the progress of German trade by organising exhibitions comprising wide ranges of cheap goods.

Amongst the "European" industries developing at Casablanca the following are mentioned:—Those connected with building and constructional work, wood and metal working, alimentary goods, and others, such as printing, and the preparation of "crin vegetal." It is anticipated that after the war additional factories and works will spring up on the outskirts of Casablanca. Native industries include carpet making, dyeing, the manufacture of rush mats and art pottery, water vessels, etc., but these industries are stated to be declining as a result of European competition.

In addition to the State Bank of Morocco, there are several banks and credit societies at Casablanca which undertake all kinds of banking business, and the leading banks have agencies in the interior. The rate of discount is generally 7 per cent., but rises occasionally to 8½ per cent.

The "Magasins Généraux" issue receipts and warrants on goods deposited (see notice on p. 720 of the "Board of Trade Journal" of September 2).

French currency tends more and more to replace the Moroccan currency amongst European, but scarcely any French gold is in circulation. The bills of exchange usually dealt in are those negotiated through the Bank of Algeria.

In addition to the military railway, merchandise can be conveyed into the interior by motor vehicles. A number of motor transport firms are established at Casablanca, and services are provided to Rabat, Fez, Marakesh, Mazagan, Fedalah, etc. A cheaper means of transport is by horse-drawn vehicles. Goods are also transported by camels.

CAIRO BOURSE PREMISES.

It will be remembered, says the *Egyptian Gazette,* that Mr. Melachrino, the well-known cigarette manufacturer, purchased the building of the Cairo Bourse a few weeks ago. He has now discovered that in the deed of sale of the land by the Société Immobilière d'Egypte to the Cairo Bourse Company, it is stipulated that the land is intended for use as a Bourse, and has asked them to cancel this restriction from the act before he takes it over. As the Board of Administration of the company is at Brussels, they cannot refer to them, and the sale will in consequence have to stand over for the present.

In accordance with an Egyptian Ministerial Order, the export of eggs has been temporarily suspended by the Customs authorities. It is hoped that this measure will appreciably reduce the price of eggs, which, since the beginning of last month, when their export was authorized, has risen considerably. During last month, 1,255 cases of eggs were exported to Europe, two thirds of which were sent to England.

ANGLO-EGYPTIAN OILFIELDS.

Need of Further Capital.

The directors of Anglo-Egyptian Oilfields, Limited, have issued a circular forecasting the need of further capital. They state that the share capital is fully paid up, and the company's available financial resources are approaching exhaustion. At the present rate of production and of expenditure the funds would not last far into next year. The directors have every reason to hope that the boring operations now being conducted, if freed from such obligations as are unsuited to existing conditions, can be carried on with greater economy and despatch and may result in securing a paying production. To attain this end and to subject the fields to a sufficient test, it will be necessary to invite the co-operation both of the Egyptian Government and of the shareholders. Sir Reginald MacLeod, K.C.B., a member of the board, is proceeding to Egypt to place himself in communication with the Government, and on his return the shareholders will be further informed of the position, and the directors hope that the prospects may then be such as to justify them in inviting the shareholders to provide such further capital as may be required to secure the end in view. If satisfactory arrangements can be made, and prospects are held to justify further outlay, the additional capital required might be from £50,000 to £100,000, which would represent a contribution of from 1s. to 2s. per share.

CONSOLIDATED LANDED INTERESTS, EGYPT.

Under the above title a limited liability company has been registered in Egypt with a capital of £E2,000, divided into 500 shares of £E4. The subscribers are Dr. Herbert Milton (British), 380 shares; Mr. Astley P. Friend (British), 50 shares; Mr. William Henry Perkins (British), 15 shares; Mr. Giona M. Pietroni (British), 15 shares; M. Hector Fonti (Italian), 20 shares; M. Michel Farwagi (Egyptian), 10 shares; and M. D. Paléologue (Greek), 10 shares. The objects are stated to be: To acquire and otherwise deal in real estate. The company was registered on May 19.

OBITUARY.

News has been received in Egypt from Paris of the death there of Mr. Eric M. Cattaui. He was born at Cairo in 1848, and when twenty years of age left Egypt in order to found a branch of the Cattaui Bank in the French capital. The office of the bank in Paris was on many occasions a pivot for financial operations in this country, and there began the first negotiations for the purchase of the Daira Sanieh estates. Mr. Cattaui was one of the founders of the Crédit Foncier Egyptien, and remained on the board of directors until last year. The French Government made him a Chevalier of the Legion of Honour for his services in advancing French interests in Egypt. He leaves a widow and three daughters, Madame Frederic Reitlinger, Madame Henri Lipman, and the Countess de Minervi.

The Postmaster-General gives notice that insured letters and parcels are accepted for transmission to Roumania. The maximum limit of insurance is £400; and insured parcels cannot be sent by the route by sea direct to Sweden.

NATIONAL BANK OF GREECE.

GREEK OPINION ON THE WAR.

A representative of the *Morning Post* has had interviews with Messrs. G. Marchetti, G. A. Burlumi, and M. Embericos, three well-known members of the Greek business community in London, who have given their frank views on the situation. The opinions they express can be regarded as representative of those held by the entire Greek community in this country. We reproduce the following extracts from the three interviews :—

Mr. Marchetti said :—"In the first place, there is, I am afriad, a widespread misunderstanding of the scope of the treaty between Greece and Serbia. That treaty was never meant to involve us as partners in a European war. It was a treaty to defend Serbia and ourselves against aggressive action on the part of any other Balkan State. The fact that Serbia herself has not up to the present appealed to us to come to her assistance is evidence of that understanding.

"I regret to say that there is not in Greece at the present moment that enthusiasm for the cause of Great Britain and her Allies which we would wish to see displayed. That is the fault of British diplomacy, which has aroused irritation and suspicion in consequence of the efforts it has made to conciliate Bulgaria at the expense of Greece, who has been asked to make concessions on points she regards as vital to the maintenance of her position. The successes of the German army on the Eastern side have no doubt made an impression on the Balkan States, but wise and prudent diplomacy could have destroyed this feeling and done much for the Quadruple Entente. Greece, of course, does not forget how much she owes to Great Britain and France. The policy of M. Venizelos is the policy of the majority of the Greek people, who thoroughly realise that their interests are with Britain, Russia, France, and Italy."

Mr. Burlumi said :—"I am convinced that Greece must come in—it is only a question of time. Whatever happens, she will never side with the Central Powers. It is an impossibility. The feeling of the country is pro-Entente. In Greece, what we call the three protective Powers—France, Britain, and Russia—have always been popular, taking the population at large. I do not think Greece can wait in a state of armed neutrality very long. It is absolutely impossible for a small country with little more than five million people to keep an army of nearly half a million under arms for more than a month without things coming to a head one way or the other, either demobilising or fighting. Greece will have to fight with the Entente and against Bulgaria. The Bulgarians and the Turks are the traditional enemies of the Greeks." Pointing out that M. Zaimis was a great friend of France, M. Burlumi expressed the view that, although some of the members of his Government had leanings towards the Central Powers, they would not cause him to change his policy. They were sufficiently patriotic to see that the interests of Greece lay with the Entente Powers. "There is a great deal of dissatisfaction among Greeks here," he said, "owing to the fact that British diplomacy has failed in the Near East. It has patted Bulgaria on the back through thick and thin at the expense of Serbia and Greece. Until the other day concessions were talked about of territory won by the shedding of precious blood two years ago. After the first Balkan War the Bulgarians went into Greece and Serbia like a thief in the night. That will never be forgiven, but the Great Entente Powers were trying to force Greece and Serbia to make liberal concessions to Bulgaria in order to bring them together."

Mr. Embericos said :—"There are not, figuratively speaking, five men in Greece whose feelings are not with the Great Entente Powers. My opinion is that Greece should declare herself with the Allies at once, and proceed against Bulgaria rather than wait on Bulgarian policy. If she does that she will serve both her own interests and that of the Allies. It is absolutely impossible for her to escape from the war. She will have to come in sooner or later to defend her own interests, and later, perhaps, may be too late. If Bulgaria becomes larger it can only be at the expense of Greece and Serbia."

FRENCH INTERESTS IN THE ORIENT.

One of the immediate consequences of the entry of Turkey into the war has been, quite naturally, to destroy, for the moment, the enormous strides made and about to be made by our capital and industry throughout the Orient in the domain of railways and public works, says *La Dépêche Coloniale*.

Thus an idea can be gained of the importance of the subject by the simple statement that the origin of the ports of Constantinople, Salonika, Smyrna, Beyrout, and Tripoli is due to French enterprise.

As regards the railways exploited or under construction in Ottoman territory, under the direction of our compatriots, or by means of our capital, the following enumeration, though brief, will suffice to show what a formidable debt Turkey will find herself owing, from this point of view alone, on the conclusion of hostilities, it being understood that the figures given are simple valuations.

First of all, there is the Salonika-Constantinople Railway. This line was ravaged in the Turco-Bulgarian War; a claim in respect of this was about to be lodged when the European conflagration broke out. The capital sunk in this venture represents 30,000,000 francs.

The Danube-Adriatic Railway, now under construction and starting from Scutari: The works, abandoned at the time of the Turco-Balkan War, have reached by now a total expenditure of about four to five million francs.

The Smyrna-Kassaba Railway and extensions represents the value of about 40,000,000 frs.

The branch line between Panderma and Sanma and the junctions Smyrna-Haidar, Pacha-Scutari, confiscated; representing 10,000,000 frs.

The Beyrout-Damas-Hamah and extensions registers a capital which cannot be less than 100,000,000 frs.

Finally, there is the unfortunate affair of the Yemen Railway in Arabia. This undertaking comprised the establishment of a port in the environs of Hodeidah-Sanaa and its extensions, including the Sanaa-Aden line, already surveyed, giving it a length of 850 kilometres. The works, executed in totality or in parts, already over 90 kilometres, crossing a portion of the 150 kilometres of desert region which separates the banks of the Red Sea from the fertile plateau, are probably lost; they represent, with the material, an expenditure of 50,000,000 frs.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN.—Production for last week—Gemsah, 161 tons (last, 155 tons); Hurghada, 240 tons (last, 240 tons).

ANGLO-ROUMANIAN.—Production of oil for the week ended 2nd inst., 308 tons.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended September 30 amounted to £E5,234, as against £E3,611 for the corresponding period of last year.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for the week ended October 9, 2,650 tons. Moreni wells Nos. 30, 49, and 53 still flowing.

ROYAL EXCHANGE ASSURANCE.—At a court of directors, held on Wednesday, it was decided to pay, on November 6 next, an interim dividend of £4 10s. per cent., less income-tax, on the capital stock of the corporation, in respect of the half-year ending June 30, 1915.

SUEZ CANAL.—Receipts for the 18th inst. amounted to 200,000 frs., as compared with 220,000 frs. for the corresponding day last year.

H.M. Consul-General at Tangier reports that, with a view to facilitating the colonisation and development of Morocco, the Resident-General has reorganised the services having relation thereto by centralising them under the direction and control of the Secretary-General of the Protectorate.

NOTES OF THE WEEK.

"Serbia is making superhuman efforts to defend her existence, in response to the advice and the desire of her great Ally. For this she is condemned to death by the Austro-Germans and Bulgarians. For twenty days our common enemies have tried to annihilate us. In spite of the heroism of our soldiers our resistance cannot be expected to be maintained indefinitely. We beg you, the many friends of Serbia in England, to do all that you possibly can to ensure your troops reaching us, that they may help our army, and that we may defend together that common cause that is now so gravely menaced."

A more pathetic appeal than the Serbian Premier sends to Great Britain in the above words could hardly be imagined. It is right that the British public should grasp the situation in Serbia and understand something of the circumstances which have wrung this despairing cry from M. Pasitch. With roughly about a quarter of a million effectives, the Serbians are seeking to defend themselves against a more numerous Austro-German force invading the country at three widely separated points from the north, and the same number of Bulgarians, who are attacking in four main columns from the east. A further Austro-German force is advancing from the west, aiming apparently at Ushitza, the terminus of the Kruchevatz railway, and it is the progress made by this army, with probably very little opposition to overcome, and the force at Valievo, that has suddenly rendered the position of the Serbians so precarious. The main effort of the German headquarters will have been directed towards expelling the Serbians from the territory contained in the angle formed by the Danube and the Timok, in order to open up communication with the Bulgarians and expedite the transport of munitions to the latter, but primarily to the Turks. In the absence of reinforcements which would enable her to turn the tables on her enemies, Serbia's hope lay in her ability to imitate the Russian tactics and to withdraw gradually westward or south-westward, while inflicting heavy punishment on the advancing Austro-German and Bulgarian forces. The movements of the latter have been unexpectedly rapid, and have doubtless encouraged the Germans to believe that a determined thrust from the west will enable them to cut off the retreat of the Serbian army and to capture or annihilate it.

There can be no doubt as to the grave and immediate danger in which the Serbian army finds itself. On the information available to the public there would seem to be little chance of any effective help reaching the Serbians from the Allied Powers to enable them to hold their enemies advancing from three points of the compass. It will rest, therefore, with Serbian generalship to extricate the army from its peril and to withdraw it towards Montenegro and Albania. In such a critical position it is clear that the active support of the small Montenegrin army might be of the greatest value. The retreat will have to be conducted in hilly country, and these hardy mountaineers are excellent at guerilla tactics. But a strange silence has brooded over Montenegro for some months, and it is not possible to state what part the Montenegrins will play in Serbia's dire need. It may be that Montenegro as well as Serbia has been adopting a watching policy at the advice of their Allies, who preferred to see them conserving their strength rather than expending it in aimless attacks on Austria-Hungary. An enemy report speaks of a Montenegrin battalion taking part in the operations east of Vishegrad, and, if this be true, we shall hope to learn that Montenegro has definitely placed all her resources at Serbia's disposal.

It will have come as a shock to the British public to find with what apparent callousness the British Government contemplates the prospect of Serbia going under. "I am afraid," said Lord Lansdowne, speaking on behalf of the Government in the House of Lords on Tuesday, "we must admit that the progress of the campaign in Northern Serbia has been such as to render it highly improbable that the Serbian Army will be able to withstand for any long time the attack to which it is exposed from the Austro-German force in the north, aided, as it is, by the stab in the back that Serbia has received at the hands of Bulgaria." Lord Lansdowne was explaining the inability of the Government to state what was going to be done with the Allied Force in the Eastern Mediterranean. "The military plan must depend upon the military situa-

Digitized by Google

tion. . . . It will be necessary to take careful stock of the position. It will be necessary for the naval and military advisers of the British and French Governments to consult and to endeavour to come to a conclusion, and it cannot be until these consultations have taken place that we can be in a position to say that we intend to use the British force for this particular purpose or for that."

We can well imagine that every word in this frigid statement will pierce as deeply into Serbia's soul as any German bayonet thrusts into the bodies of her valiant army. A month ago the British Government gave its pledge to the Serbian nation—"If the Bulgarian mobilization were to result in Bulgaria assuming an aggressive attitude on the side of our enemies, we are prepared to give to our friends in the Balkans all the support in our power, in the manner that would be most welcome to them, in concert with our Allies, without reserve and without qualification." By "all the support in our power," Lord Lansdowne now explains, Great Britain meant the despatch of 13,000 men, who would be landed at Salonika, but would by no means be sent on at once from that port into Serbia. No doubt it was expected that Greece would honourably fulfil her bargain with Serbia; but there was no mention of Greece in Sir Edward Grey's undertaking, when he assured the Serbians that Great Britain and her Allies were then "prepared" to give all the support in their power. The episode, we believe, will leave a stain on the British escutcheon, the responsibility for which rests on a body of men who, after fifteen months of war, remain utterly impervious to the nation's clamouring that they should "get on" or make room for others, fewer in number and capable of interpreting in action the national mood.

As if to make Great Britain's breach of faith appear as suicidal as it is criminal, Lord Lansdowne complacently announced that the German invasion of Serbia was foreseen. "The Central Powers," he told the House of Lords, "naturally looked about them to discover some new direction in which to seek for a decision satisfactory to themselves, and their choice fell, *as it obviously was likely to fall*, upon the great attempt to make a push to the south-east through Bulgaria, *threatening our forces in Gallipoli, threatening Constantinople, and perhaps Egypt, to say nothing of vaster aspirations which perhaps lay behind.*" The German move was anticipated, its probable effects on Great Britain's military position were realized; but a fortnight after the move, which had been two or more months in course of preparation, had started the British Government has only 13,000 men in Salonika to oppose to it. When the Germans have joined hands with the Bulgarians and opened up communication with Constantinople then comes the heroic determination which is expected to still the voice of criticism. Further reinforcements are to be sent to the Eastern Mediterranean. "What we shall endeavour to use it (the British force) for will be to counter the movement of the Central Powers across Bulgaria." It sounds very magnificent, but it is not war.

As far as it is possible to follow the military operations in Serbia, we may regard it as established that the Serbians have been ejected from the north-eastern corner, where the Danube makes an irregular horseshoe bend between Serbia and the adjoining territories of Hungary, Roumania, and Bulgaria. Bulgarians have occupied Negotin and Prahovo; Austrians are at Kladovo. Thus the narrow link between Serbia and Roumania is severed, and the latter country becomes isolated from Western Europe. What effect this fact will have on the attitude of the Roumanian Government remains to be seen. Its line of communication was cut when Bulgaria marched against Serbia; but there was the chance that the Entente Powers and the Serbs would make short work of the Bulgarians. Now that the Germans and Bulgarians have joined hands, Roumania is practically surrounded by the enemies of the Entente. Will the military situation, which appeals strongly to all the Balkan States, induce the Roumanian Government to throw itself into the Germanic camp? So long as M. Bratiano remains Premier we refuse to believe that it will. The Allies, however, must be prepared to see the fiercest pressure brought to bear on Roumania by the Germans, and if further untoward events are to be avoided no time must be lost in allowing the Roumanians to see that we are this time in earnest in launching the expedition which is "to counter the movement of the Central Powers across Bulgaria."

In the hope of covering up its own shortcomings the British Government offered Cyprus to Greece if she would give immediate and full support to Serbia. The offer, which was at once rejected by Greece, furnished another proof of the complete misreading of the Balkan situation of which the Allied Governments have been guilty from the outset of the war. King Constantine is not a Ferdinand of Bulgaria; he has no fantastic ambitions. His one guiding principle in the present crisis is a desire to safeguard interests which he considers would be in danger if he were to lead the Greek Army against the Bulgarians. The offer of further territory for Greece, therefore, has no attractions for him, and was bound to be refused. If the Allies wish for Greek support while King Constantine and his present advisers direct the destinies of Greece, they must persuade them that the national safety is in greater danger from breaking faith with Serbia than from declaring war on Bulgaria.

The publication in the form of a Blue Book of despatches from the generals directing the operations in the Persian Gulf and Mesopotamia is a tardy acknowledgment of the uniformly successful progress of the Indian Expeditionary Force "D." These despatches, however, do not bring the narrative of events beyond last April, when the determined attack by the enemy on Shaiba, near Busreh, was repulsed with heavy losses. They have, moreover, been published some time ago in India. Their official appearance in print in this country—a concession made by the Government to a popular demand—will, we hope, serve to remind the Expeditionary Force that their splendid efforts and sacrifices are not really ignored by their fellow-countrymen. Progress has been so rapid that they have encouraged us to fix our eyes on the ultimate goal of the expedition, and have helped us to forget all that their steady advance means to officers and men day by day. Recent questions in Parliament prove that public opinion is no longer minded to take things for granted, but it is a matter for regret that the elementary nature of the questions put to the Government regarding the steps to be taken in the face of the new menace arising from the opening up by Germany of through communication to Constantinople should indicate how much the conduct of military operations in the Near East has shaken confidence in the general management of the war.

The announcement that a detachment of the Persian Cossack brigade, 320 strong, has been sent to Hamadan, "to help the Russian and British Consuls in their struggle against the violence of our enemies, who have been considerably reinforced at Hamadan," throws a lurid light on the situation in Persia. It points to the ubiquitous activities of "our enemies" in that country, and leaves it to be inferred that no really effective measures can be taken at present to cope with the menace. The Persian Cossack detachment, it is to be hoped, will ensure the safety of the British and Russian Consuls at Hamadan, but will hardly avail to clear that part of Persia of German agents and their tools.

A decree has been issued in Cairo indefinitely postponing the meeting of the Egyptian Legislative Assembly and suspending the operation of the election provisions of the Organic Law. This step will evoke no surprise, as it is evident that the present situation ill accords with the normal progress of a constitutional experiment which is still a novelty for the country.

NEWS FROM TURKEY.

(From a Correspondent.)

Alexandria, October 10.

Annexation of the Lebanon.

Although the blockade of the Syrian Coast has put a stop to direct communication between Syria and Egypt, even by the American warships, yet the occupation of the Island of Ruad by the French affords now an indirect means of getting occasional news of Syria. For in spite of the vigilance of the Turkish authorities, surreptitious flights of persons from the mainland to Ruad continue; and the news brought by these persons is transmitted through the owners of the sailing craft of Ruad, who are allowed to trade freely between that island and Cyprus and Egypt. The latest report is that the Turkish Government has declared the annexation of the Lebanon as a Turkish vilayet, and has appointed Hassan Munir Bey as Governor-General. Although this province has since the war been governed under martial law by the Turks, its internal administration and local privileges have not been interfered with. It now remains to be seen whether the onerous system of taxation obtaining in the vilayets will be applied to this poor and rocky province, and whether its hitherto free inhabitants will be subjected to military service.

The French at Ruad.

This move is perhaps a counterblast to the French occupation of Ruad. This tiny island, through its proximity to the mainland, is serving as a very useful intelligence base. The French seem to be showing every kindness to the Moslem inhabitants of the island, and all those who take refuge therein. They lose no opportunity to impress upon the people the fact that they have not come as conquerors, but as liberators and friendly guides, and special emphasis is laid on the fact that no distinction whatever shall be made between the different sects, but that Christians and Moslems alike shall receive the same paternal treatment at their hands.

French Aviator's Feat.

The continual flights made by the French aviators over the Lebanon must prove a source of constant irritation to Turkish pride. It is reported that while a French aviator was hovering in his seaplane over the village of Aley a company of Turkish soldiers opened fire on him, and hit one of the wings of the seaplane. The aviator made a few turns in the air in such a way as to deceive the Turks into the belief that he was seriously hit; and as he continued to descend a large number of Turkish troops assembled in and around a large summer residence belonging to an Italian subject in a neighbouring village, in the hope of seeing the aviator drop in their midst as a captive, when the latter suddenly dropped a bomb on the building, blowing it up, together with the troops.

Turkish Destructiveness.

The work of wanton destruction of trees is reported to be still going on in Syria. This would seem to indicated that the Turks are very badly off for fuel. The fine pine forest lying on the southern outskirts of Beyrout, which is known to have been planted by order of Ibrahim Pasha during his conquest of Syria, is now being cut down; and what promised to become under an enlightened Government a fashionable promenade is doomed to disappear, to the great grief of the Beyroutines. The immense and rich olive plantations known as Sahrat Esh Shwifat lying on the stretch of plain between the sea and the Lebanon are said to be meeting the same fate. When it is remembered that an olive tree takes years before it can yield fruit the degree of wantonness reached by Turkish barbarity is realised.

The Syrian Protestant College.

The president of the American College is reported to have succeeded in his mission at Constantinople. Thanks to his tact, he has been able to persuade the Turkish authorities to postpone the immediate application of their programme providing for the use of Turkish as the principal teaching medium by the proposal that Turkish should be at first taught as a secondary language, and that as soon as the students have become well grounded in Turkish, it should become the principal medium of instruction for the higher sciences.

(From Our Special Correspondent.)

Athens, October 13.

The Turco-Bulgarian Accord.

Outside official circles in Constantinople the Turco-Bulgarian Agreement and the mobilisation of the Bulgarian Army appear to be received with certain misgivings, and instead of strengthening confidence in the governing clique, the effect has been rather to create further discord. In the first place there is a very general opinion that the alliance can only be temporary; for in view of her desire to possess Thrace it is realised that Bulgaria will not be satisfied until she has reoccupied the territory she had to abandon after the first Balkan War. On the other hand, it is felt that should the German Army succeed in getting to Constantinople a military occupation will follow, and the entire administration be taken over by the Germans, an event which would be more distasteful to the Turks than the entry of the Allies into Constantinople. In spite of these opinions, however, which are said to be shared by the majority, no change in the political situation is likely to occur.

Parliament Meets.

Parliament met on September 28, the Senate presided over by Rifaat Bey, and the Chamber of Deputies under the presidency of Hussein Djahid Bey. The sittings were short, and both houses adjourned for a week.

The general situation remains practically unchanged in Constantinople. Bread is again scarce, owing, it is said, to the railways in Bulgaria being occupied by the military, which prevents flour coming in from Roumania. On the other hand, there appear to be regular arrivals of coal.

The Armenians are now being expelled from Rodosto, and there are again rumours that the Armenian population in Constantinople is to share the same fate.

More Military Requisitions.

The military authorities are again largely requisitioning all sorts of articles in Constantinople, mostly materials suitable for soldiers' clothing. The effect of these requisitions is to increase the ruin of shopkeepers.

Enemy Subjects' Property.

Nothing further has been heard of the Government's intention to seize the properties of enemy subjects in order to defray the losses sustained by Ottomans through bombardment or other military operations. A law has, however, been passed enabling the Government to deal with the properties, liabilities, and assets of persons who have been exiled.

Baron Wangenheim, the German Ambassador, has returned to Constantinople.

THE TURKISH ATROCITIES.

Englishwomen's Terrible Experiences.

(From Our Own Correspondent.)

Cairo, October 3.

By all accounts, the work of extermination of the Armenians in Asia Minor is continuing, and the latest reports are every whit as gruesome in their details as the earlier ones. A good deal of information has been corroborated by Allied lady refugees, who have been brought to Alexandria from Alexandretta by the American cruisers. I have before me a letter, which I have received from one of the English ladies, in which she graphically describes her experiences and shows how cavalierly and cruelly she and her companions were treated by the authorities in the interior.

All their men folk had been taken from them in December and sent to Urfa in May, having been detained in the meanwhile at Damascus, where, during the visit of one of H.M.'s cruisers to Alexandretta and Adana, they were closely confined and threatened with death if a single Turk was killed during the bombardment. The last week in July the authorities commenced to send the Allied women and children from Beyrout to the interior. They were given very short notice, and took two days to reach Aleppo. There they were kept for six days, and in spite of the American Consul's efforts to have them detained there permanently and so save them from what he knew was to follow, they were made to continue their journey.

All went well until they came to the Euphrates bridge, where they were stopped to allow a German to take a photograph of the train. After a while they started again, and got across the bridge; but once more they were stopped, and sent back. Three times they crossed, and three times they had to retrace their steps. At length, after waiting a considerable time in the burning heat, they were sent on their way. It subsequently transpired that the German who was "taking a photograph" was a cinematograph operator, who was securing a film of the "10,000 Allied prisoners on their way from the Dardanelles to the interior of Asia Minor"! This film is to be shown in Constantinople and also in Germany, where it will doubtless evoke wildest applause. One wonders whether the Kultur intellect in its enthusiasm will ever spot the similarity of the "seven" trains, or the curious fact that the "10,000" prisoners are very "womanly" and "childlike" in appearance!

At Seraraj-Poaner the refugees were bundled out of the train and ordered to go to a dirty khan, where they were kept until 11 p.m., when fifteen carriages—pathetically described by my correspondent as "barrels on wheels"—arrived for their conveyance. At midnight they started off on their journey to Urfa. The road was very bad, and at 2 a.m. they arrived at Suruj, where more ill-treatment awaited them. They were crowded into the filthy yard of a khan, and the police forced them by threats to pay for the hire of their carriages. They were to have resumed their journey an hour later, but they did not start again until 8 a.m. The reason given by the police was that the road was not safe after dark owing to brigands, but from the fact that they passed numbers of blackened bodies on the road from Suruj to Urfa my correspondent and her companions are more than inclined to believe what was told them afterwards, viz., that they were kept back so that they should not meet the Armenian women and children, who were being driven from the interior during the night, and who, as they fall out and die by the roadside, are burned as they lie.

Eventually they reached Urfa, though only after much suffering from the intense heat and the lack of water. Most of the refugees went up to the Monastery, just outside the town, where their men-folk had been interned, but some, principally French, remained in the town. "The Monastery," writes my correspondent, "is a big, rambling place with only shutters to the windows, no glass, and everything is very rough, with a general absence of furniture. We each had a camp-bed, mug, knife, fork, spoon, and chair, and several shared a table. The American Missionary had most of the beds, chairs, and tables made in his school. We had to feed ourselves, and some of us clubbed together and formed a sort of mess, getting one of the French prisoners to cook for us. There were two or three police on guard at the gate—not much protection in the case of a rising of the mob. On August 10 all the unmarried women were ordered out of the country. They had a bad time of it going to Aleppo and then on to Alexandretta, with only two police in charge, and were much distressed on the way, as they overtook some of the 2,000 Armenian women and children from Diarbekir, who were being driven along the road. A friend told me that some of the poor women just dropped by the wayside from hunger and fatigue, and were left there to die, and little babies and children were seen alone on the road." (I have since heard that those of the refugees who tried to do anything for these poor abandoned infants were very roughly treated by their escort.)

The Urfa massacres started on the afternoon of August 13, when about 150 Armenians were killed and a few police wounded. None of the refugees were allowed out until two days later, when they found the place comparatively quiet, "but daily some Armenians were killed, and we could see birds of prey hovering over the place where their bodies had been thrown."

On August 24 the first batch of married women and children left in charge of the American Vice-Consul at Aleppo, who had come up with relief funds. (The Turkish officials offered to distribute the money, but the Vice-Consul was not "having any.") At Aleppo the first contingent waited for the rest, and then all went on to Alexandretta, where they joined forces with the unmarried women. They had to wait some time at Alexandretta in filthy accommodation, and many went down with fever, but at last on September 18 the U.S. warship Chester came in and took them all on board. Thus, the two months' Odyssey to and from the interior of Asia Minor of these unfortunate but brave women and children came to an end. While they are thankful to have escaped from the horrors and cruel treatment that further captivity had in store for them, they are far from being in a happy frame of mind, for their men are still at Urfa, a desolate spot, and their "great wish is to get them moved to a more civilised spot, if they cannot be got out of the country."

My correspondent makes a brief reference to what she saw and heard of the massacres whilst in Urfa. All the time they were there, and even before they arrived, Armenians were being constantly driven through from the interior to an unknown destination. According to her, the men were first taken and done away with, and then the women and children were driven over the mountains until they dropped from starvation and fatigue, and when the refugees left Urfa there was talk of the local Armenians being similarly treated. (It is interesting to note, as an illustration of the attitude of the other elements of the population, that at the outset the Moslems of Diarbekir protested against the massacre of their fellow-citizens, but that very soon they repented them of their opposition, and the massacre was allowed to follow its normal course.)

In common with her companions, however, my correspondent suffered too much mentally and physically to be able to go into details as to her experiences, which, to say the least of them, were harrowing. Nevertheless one can read between the lines, and the account given serves to confirm only too clearly the grim tales that had reached here ahead of the refugees. Her letter closes with the following sentence:—"I wish we could impress upon our people at home the terrible state of affairs in the interior of Turkey, so that some-

thing might be done, not only for our men, but for the unfortunate Armenians"; and all out here who know anything about the situation sincerely re-echo her wishes.

The two questions are, indeed, intimately bound up with one another. The anti-Armenian movement, if allowed to continue, may easily and suddenly turn into an anti-Christian one, and in that event the lives of our men and those of our Allies interned in Asia Minor and Syria, as well as those of neutral subjects resident there, would become not worth a minute's purchase. It is understood that the German and Austrian Ambassadors have protested at the Porte, and that they have been promised that the massacres shall cease at once. But, as I wrote last week, under existing conditions and in view of past experience, such promises are worthless and cause one to feel more anxious than ever, if indeed the protests were made with any seriousness. The situation demands very strong action on the part of the few remaining neutral Powers both at Constantinople and through Berlin and Vienna, but short of the removal of Talaat from his present post as master of the pageant of blood, it is difficult to see what satisfactory guarantee of practical effect being given to their demands the neutral Powers could obtain.

ODESSA NOTES.

(FROM OUR OWN CORRESPONDENT.)

ODESSA, October 6.

Russia and Bulgaria.

The action of Bulgaria in throwing in her lot with Russia's enemies has caused amazement and intense disgust throughout Russia. For, surely, if there was one Power to whom Russia had a right to look for sympathy, if not for active help, it was Bulgaria. It is only another illustration that all that is base and unworthy in international life at the present day seems drawn irresistibly towards the Hun. Judged by this standard, therefore, it does not seem any longer surprising that the nation which exhibited such a greed for power in the last Balkan War, and which turned its sword against its allies, should now be found on that side which represents barbarity, oppression, and lust of power, the would-be extinguisher of all small nations.

Bulgarian Residents' Protest.

Meantime, the position of the many thousands of Bulgarians resident in Russia is a very unenviable one. Drawn by many bonds of sympathy and love towards their liberator, they cannot find words strong enough to express their disapprobation of the course which has been forced upon their country by an alien German king and political renegade.

The Bulgarian colony of Odessa has just telegraphed to M. Radoslavoff the following protest:—

We, Bulgarians living in Odessa, are greatly disturbed by the events of the last few days, which leave no room for doubt that the Government presided over by you has placed itself entirely at the service of the Germans, and is endeavouring to throw the nation into a new adventure.

We are strongly convinced that at the present moment of conflict between the nations the national and political interests of our country demand unity with the Powers of the Quadruple Entente, fighting for right, justice, and the principle of nationality; and we consider that Bulgarian policy directed against Russia and her Allies is a policy directed against the interests of Bulgaria herself and her future.

We know that our nation is to the depth of its soul filled with love for its Liberator, and also believes that its national aspirations can only be achieved through her, and not in alliance with her enemies, the Austrians and Germans, the direction you are forcing her.

Therefore we energetically protest against your German policy as an extremely dangerous game with the highest interests of the country, its feelings and sympathies, which policy may cause internal disorders, or intervention from outside, with damage to the political independence and integrity of the country.

Copies of this telegram were also sent to MM. Malinoff, Gueshoff, Daneff, and others.

NOTICE TO SUBSCRIBERS.

Subscribers to "THE NEAR EAST" who have left the Ottoman Dominions since the war will oblige by notifying the Manager of their new address as early as possible, so that the supply of the paper should not be unduly interrupted.

LITIGATION IN THE SUDAN.

(FROM A CORRESPONDENT.)

It has been previously observed that the Sudanese, in common with the majority of Eastern peoples, are by disposition very litigious. Not alone are the Civil Courts usually well occupied with the hearing of plaints—mainly of a very trivial nature—but the Mohammedan Courts are not infrequently congested, notwithstanding the large staff of officials, including the Grand Kadi, seventeen Naib Kadis, and many subordinate judges and inspectors, who attend almost daily throughout the year. In 1913 the Mohammedan Courts alone heard and adjudicated upon over 10,450 cases, an advance of 980 upon the number of suits entered and heard in 1912. In 1914 the Civil and Mohammedan Courts between them were engaged upon deciding 16,438 cases, a total which showed an increase of some 1,400 over that of the previous year, which amounted to 15,041. Strangely enough, this increase in the number of suits was unaccompanied by an advance in the amount of Court fees or lawyers' costs; in fact, the receipts among the former were but little affected, while the native gentlemen of the long robe suffered a reduction all round in their earnings. The shrinkage in the total amount of costs earned for the period mentioned was £E500, the figures, as returned by the Court officials, being £E4,364 for 1914, as against £E4,853 for 1913.

It would seem that the average value of the legal charges earned—excluding those relating to the levying of execution—and which hal already declined from 349 milliemes in 1912 to 280 milliemes in 1913, during the year of 1914 fell further to 233 milliemes per suit. This exceptionally favourable state of the litigation market—from the point of view of the litigants, *bien entendu*—not unnaturally led to an increased amount of law cases of all kinds, both the Civil and Religious Courts being fully employed. According to Mr. W. Sterry, the Chief Justice, there exists no great prospect of an increase in lawyers' fees until a greater amount of public confidence has been established. It must be further remembered that the completion of the land settlement last year throughout the greater part of the Sudan, and the absence of speculation in land, have tended to reduce litigation both in substance and value.

Recently a completely new set of rules and charges regulating the collection of Court fees and the scale of solicitors' and advocates' costs was promulgated, and a study of these assists one to understand more readily how the greater part of the people of the Sudan are enabled to indulge in the moderately cheap luxury of suing one another. Apart from the collection of Court fees—which latter compare very favourably with our own in regard to their reasonableness—the scale of solicitors' and advocates' charges are strictly limited in amount; no Sudanese litigant need dread the delivery of his legal adviser's "little bill," since he may know in advance almost to a piastre what that should be.

Thus, if the suit brought be in connection with a sum of money amounting to less than £E5, the lawyer cannot charge more than 20 p.t. (= about 4s.) for preparing the case; 15 p.t. (say, 3s.) for appearing at the trial (if the case be undefended), or 35 p.t. (say, 7s.) if it be defended. The new scale of costs introduced applies thereafter according to the value of the amount in dispute, so that the most voracious litigant becomes the most valuable client, and, obviously, it is no part of the solicitor's business to suggest moderation in the framing of the statement of claim. A claimant for an amount of anything up to £E50 must pay his legal adviser 100 p.t. (=£1 0s. 6d.) for preparing his case; 200 p.t. (say, £2 1s.) for pleading it, if it be undefended; and 500 p.t. (= £5 2s. 6d.) if it be defended. In the form of a "refresher"—if allowed—the suitor must hand over to his advocate a further fee of 300 p.t. (= £3 1s. 6d.). Whether or not an advocate is entitled to a "refresher" depends entirely upon the view of the Court.

The very poor litigant is considered, and his interests are carefully protected from injury. The rascally lawyer tout—so well known in the precincts of our own law courts—is in the Sudan deprived of any possibility of fattening upon the needs or the ignorance of the more humble suitor. The Court fees are framed so as to give the latter a chance of coming to the Fount of Justice to be heard with the same facilities as his more wealthy brother. The suitor for an amount under £E5 cannot be called upon for any lawyer's fees without a special order of the Court; the Government dues, on the other hand, amount to about 10 per cent. of the value of the amount mentioned in the suit.

Heavier suits bring in Court fees proportionately. Thus a litigant claiming an amount of £84 would have to pay in fees about £7 15s.; of £163, a little over £11 10s.; of £430, about £19 12s; and for a claim amounting to £1,350 the fees would total £34 10s. It will be seen, therefore, that the charges are carefully graduated. On the other hand, no matter how large a sum may be involved, there is a limit to the fees when the claim amounts to over £1,000. That fee limit is fixed at £E200 (= £205).

THE WAR IN THE BALKANS.

The Enemy's Encircling Movement.

In last week's summary of the war we pointed out what we considered to be the most vital sectors of the Serbian east-west and north-south fronts. They were the Timok sector, where the Bulgarians were advancing to join forces with the Austro-Germans, and the Vrania-Uskub line, where the former were attempting to thrust in a wedge between north and south Serbia, thus rendering impossible the arrival of help to the Serbs from Salonika. In both these sectors the enemy have been partially, if not wholly, successful.

North-Eastern Serbia.

On Wednesday evening the German official communiqué stated that in Liubicevats, on the Danube, near Brza-Palanka (thirty-two miles north of the Bulgarian frontier, thirteen miles south-east of the Hungarian frontier) direct connection with the army of General Boyadjieff had been established by patrols of Austro-German officers. Thus will have been gained the first objective of the enemy's strategy, namely, the establishment of a passage from Berlin to Constantinople. The significance of this needs no emphasis, and even supposing the German claim to be fallacious, it is evident to all that it only sins in being premature. The Timok sector, henceforth, is merely of academic interest. The Serbs will have to fall back on the Morava line, abandoning Zaichar and Kniashevaz, whereas the enemy will advance from the north, north-east, and east until he controls, and is in a position to hold against all attacks, the Belgrade-Sofia line, the only practicable means of communication between Berlin and Constantinople, through Parachin and Nish. This can hardly be done yet, and certainly not until the Serbs have been driven lock, stock, and barrel out of the whole of Northern Serbia. The apparently slow advance of the Germans in the north may, apart from the heroic resistance offered them by the Serbs, be accounted for by Mackensen's desire not to move his main army up the Morava until his other armies are in a position to move forward simultaneously south-west from Orsova, south from Belgrade, Obrenovatz and Shabatz, and east through Ushitz from the Drina. In the meantime, another Austro-German advance from Vishegrad in a south-easterly direction through the old Sanjak of Novi Bazar is developing, and threatens Serbia's connection with Montenegro and Albania. It is difficult to determine how far Mackensen has developed his movement, owing to lack of authentic news. The Serbian report (October 24) says:

> On the northern front, after desperate fighting, the Serbian troops withdrew upon the following line—Right bank of the Mlava to Veliko Orachie, right bank of the Jasenitza (south of Semendrin, in the Morava valley). Other forces withdrew to the right bank of the Kubrchniza (south-west of Belgrade) and the right bank of the Turia (south of Belgrade).

As compared with this, the official enemy reports, issued on the 26th, claim the capture of Valievo in the west and of Racha, to the south of Palanka, in the Morava valley. If the latter is confirmed, the position of Kragujevatz is more than perilous, the enemy being within twenty miles of this, Serbia's only arsenal.

Central Serbia.

Taking this sector as reaching along the Bulgaro-Serbian line from the Nishava to the Bregalnitza rivers, we find, in the first place that the enemy claims to have invested Pirot on the Nish-Sofia line; but, even so, the advance on Nish from this direction offers tremendous natural difficulties. Further south, it appears almost certain that the enemy now command the Nish-Salonika line from near Leskovaz to near Veles, their greatest achievement during the past week having been the capture of Uskub last Friday. A mere glance at the map will suffice to show the importance of this town, to defend which the Serbs exerted themselves during three days with a heroism beyond all praise. With the Kustendil-Uskub road in Bulgarian possession, enemy troops (including Turkish soldiery) can be sent into the very heart of Macedonia and occupy a position from which only a strong Allied army can dislodge them; and, further, by making use of the Uskub-Mitroviza line through the Kachanak gorge and across the plains of Kossovo, they will eventually, *unless stopped by us*, join forces with the Austrian army advancing from Vishegrad in the direction of Novi Bazar. In other words, we are witnessing the slow development of the threatened encircling movement which has for object the total annihilation of Voivode Putnik's army. The Serbs, retreating from Uskub, seem to have fallen back to the north-west along the Mitroviza line according to one report, and, according to another, southwards along the Treska in the direction of Prilip, whence they were able to strengthen the Serbian attack on Veles.

In possession of the triangle Uskub-Egir Palanka-Kochana-Istip, the Bulgars immediately attacked Veles, and on Saturday succeeded in occupying that portion of the town lying on the left bank of the Vardar. Despatches, however, which reached London on Wednesday, report that the Serbs have dislodged the enemy, thrown him back on the Bregalnitza, and are following him to Istip. This successful counter-attack on the part of our brave Allies is believed to threaten the Bulgarian position at Uskub, and at the time of going to press it is even reported (unofficially) from Athens that the city has been recaptured.

Anglo-French Relief Expedition.

The whole situation in the southern central sector depends on the aid sent by us to the Serbs. We know from Government statements in Parliament that we have 13,000 men in Serbia, and that they are operating, together with the French (whose numbers have not been revealed), on the Serbo-Greek frontier. From French official communiqués we know that fighting against the Bulgars has taken place to the south of the Strumitza wedge, and that the enemy has been driven out of Valandovo—for the second time, presumably, because a week ago the same statement was published—and that he is retiring on Strumitza. It is to be presumed, therefore, that the Anglo-French expeditionary force, insufficiently strong for a big advance along the Vardar, is fighting its way slowly in the very south of Serbia, and has neither penetrated to any great distance into Bulgaria, nor been able to render effective aid to the Serbs fighting in the vicinity of Veles.

In conclusion, the bombardment by the Allies' Fleet of Dedeagatch, Makri, and Porto Lagos, Bulgarian ports in the Ægean, must be recorded. It was a highly successful operation, though apparently of no vital strategic importance. A report from Athens even states that transport along the Salonika-Constantinople line has not been interfered with, the vulnerable sections near the coast having been replaced by loop-lines further inland.

SERBIA DOOMED.

Mr. Ashmead-Bartlett, in his lecture on Wednesday, said that we had pledged ourselves to go to Serbia's assistance, and nothing could be more deplorable than a pledge given which was not kept. He believed that those who had made the pledge, with the best intentions in the world, felt they could ultimately keep it; but the strategic position was such that it would be impossible to save Serbia this year. The French had sent a certain number of divisions, and we had sent 13,000 men out there; but such a force could do nothing at all to stop the inevitable end. Serbia would be forced to go under. We could not save Serbia by pouring large masses of men into Salonika. The difficulties of operating there were enormous, and the single line of railway was already occupied by the enemy.

It would not be possible to send an army to Bulgaria this year. There were only three or four weeks in which operations would be possible now in Bulgaria, and we had not an army sufficiently well organised to attempt a serious attack now. There was, however, no reason why we should not hold Salonika and keep our troops in Greece. If we had thought out our position ahead, we should have had an army out there long ago, which would not only have stopped Bulgaria from coming in against us, but would have forced her to come in on our side.

It was an enormous advantage to act on the defensive. Before we could send any troops to Serbia which would have any decisive effect there, Serbia would be finished, and our enemies would be in possession of all the defensive positions which they ought to hold. It would be the greatest mistake to attack those positions.

ALLIED SUBJECTS IN SOFIA.

According to a message from Sofia to the *Neue Freie Presse*, the subjects of enemy Powers, and also Serbians, enjoy complete freedom in their movements. No one has been interned. The railway and electric-light companies, both of which are Belgian enterprises, have not been placed under Government control.

NEAR EAST BOOKSHELF.

A BIRD'S-EYE VIEW OF RUSSIA.*

Mr. E. A. Brayley-Hodgetts has rendered yeoman service to his country by providing the Man in the Street with a bird's-eye view of the Russian Empire. Our great Ally's history, religious belief, and government are sketched with a master hand. There are illuminating chapters describing peasant and urban life; Russia's military organization receives extended notice; and her expansion south-eastwards is followed step by step. Mr. Brayley-Hodgetts' power of compression borders on the marvellous, and it has involved no diminution of interest. His pages are enlivened by many personal touches, revealing a close acquaintance with the land in which his youth was spent. He emphasizes a fact which has been brought into strong relief by the war now raging—that Russia's social and political diseases are one and all, the result of her ancient subservience to the cordially-hated German, which is now happily a thing of the past. Another fact which cannot be gainsaid is that a deep-seated racial sympathy unites Britons and Russians who really know each other. It has survived the ordeal of mutual misunderstandings, and is destined to ripen into an enduring friendship.

THE SURVEY OF THE HOLY LAND.†

Palestine possesses a mysterious charm for millions unnumbered. Christians and Jews venerate that little strip of the Mediterranean shore as the cradle of their religions; Moslems because it enshrines a holy place ranking after Mecca and Medina. For historians, Palestine is the ancient battleground of mighty empires; for archæologists it conceals relics of dead civilisations which may illustrate the origin of our own. The general desire for greater knowledge of that wondrous region materialised in 1804; and for sixty years sporadic attempts were made to explore its hidden treasures. In 1865 they crystallised into an organic movement whose Jubilee is fitly celebrated by an official summary of its operations.

The Palestine Exploration Fund was started under the patronage of Queen Victoria, and its original committee included a large proportion of the intellectual giants who cast undying lustre on her reign. At its inaugural meeting, the Archbishop of York defined the principles which should govern the work undertaken by the Fund. It would be guided by the light of science, without the heat of controversy, and be unbiassed by the dogma of any creed. The Fund's success is due to its punctual observance of these golden rules.

After a preliminary reconnaissance, excavations began in the purlieus of Solomon's Temple, which were completed, as far as Turkish bigotry would allow, in 1897. In 1868 an expedition was sent to the Desert of Exodus, which set all doubts at rest as to the geography of Mount Sinai, and followed the wanderings of Israel in its quest for the Promised Land. Western Palestine was thoroughly surveyed and mapped between 1872 and 1883. Two years later began a topographical survey of the country east of the River Jordan; and it was brought to a successful conclusion in 1886. Geological researches on a comprehensive scale were undertaken in 1883-4, when the future F. M. Earl Kitchener of Khartoum proved his mettle by splendid work in the Wady Araba. Western Palestine was surveyed between 1890 and 1911; and in the years following, the Fund's prolonged labour was crowned by a survey of the southern territory, which fortunately ended ere warfare called a halt to scientific research.

The Palestine Exploration Fund owes its financial success to Mr. Walter Morrison, sole survivor of the original committee, who has served for many years as its honorary treasurer. From first to last, upwards of £138,000 has been expended in surveying and mapping the Holy Land. It has produced an amount of solid achievement which proves that Germans have no monopoly of organizing power.

BOOK NOTES.

The current "Quarterly Statement" of the Palestine Exploration Fund is full of interest. Colonel Sir Charles Watson contributes a useful paper on "Measures of distance in Palestine," and Mr. E. J. Pilcher another on "The Shekel of the Sanctuary." Mr. Joseph Offord's "Archæological Notes" and the concluding portion of Dr. Max van Berchem's notes on the "Graffiti of the Cistern at Wady-el-Joz" will repay reading, and the instalment of "The Immovable East," by Philip J. Baldensperger, gives much detailed information concerning clothes and fashions. Perhaps the contribution most likely to prove of general interest is the first of a series of "Occasional Papers on the Modern Inhabitants of Palestine," of which the authorship is shared by Dr. E. W. G. Masterman and Prof. R. A. S. Macalister. This series, based on "material collected by an intelligent native Christian," bids fair to be of extreme value to all students of Oriental manners and customs. The "Notes and News" contain a statement of the policy of the society in face of the conditions brought about by the war and an appeal for support for its work.

Mr. Werner Laurie is adding Pierre Loti's "Jerusalem" to his uniform edition of that author's works. Mr. W. P. Baines is the translator.

Mr. Andrew Melrose has published this week "Russia, the Balkans, and the Dardanelles," by Granville Fortescue. The price is 6s. net.

Messrs. Methuen have published a cheap edition of Miss Norma Lorimer's "By the Waters of Egypt," which originally appeared six years ago.

"JUGOSLOVENSKI GLASNIK."*

The idea of Jugoslav unity, which manifested itself at different times in different Jugoslav regions, has had its permanent home for a long time in Serbia. When the great movement for the uniting of Serbs, Croats, and Slovenes was born in Croatia in 1836 and was suppressed by the Austrian police in 1843, it was in the Serbian principality that it found a refuge. In 1844-45 the Croatian patriots found a hospitable welcome in Belgrade, and established there a review and a centre for the distribution of pamphlets issued for the purpose of spreading the idea of Jugoslav unity; and several eminent Serbian men of letters collaborated in the work. To say nothing of numerous other instances of the same spirit in Serbia, we may note that the best Serbian literary review, the *Srpski Knjizevni Glasnik* (founded in 1901), is simply a Jugoslav review in the widest sense of the expression.

Now, amidst the clash of war, a new review inspired by the same spirit, the *Jugoslovenski Glasnik** ("Southern Slav Courier"), has been founded at Nish, being edited by a committee of Serbs, Croats, and Slovenes. The members of this committee are for the greater part young Jugoslav immigrants from Austria, who have fought in the ranks of the Serbian and Montenegrin armies, the editor of the review, M. Simitch, himself having been one of the fighting men. Among the collaborators, besides the litterateurs of Serbia, are Jugoslav writers who have also left their native soil and are now scattered in the chief cities of Europe. The Jugoslav Committee in London (president, Dr. Trumbic)—which has just given lively proof of its existence by the publication of the *Southern Slav Bulletin* and the "Southern Slav Library," which is now in course of preparation—is also taking a part in this Jugoslav movement at Nish; and we observe that Dr. Potocnjak, M. Marjanovitch, and Dr. Jedlovski, all members of the London committee, appear on the list of contributors to the new review.

The articles and notes of this review are all concerned exclusively with various phases of the Jugoslav question. They treat of Croatian aspirations, of the fate of Dalmatia, the aims and aspirations of the rising generation, the literary activities of the Jugoslav provinces, and so forth; and all with a view to the political union of Serbs, Croats, and Slovenes. Thus, as the editors themselves express it, their programme aims at "the fulfilment of the ardent hopes of the Serbo-Croatian-Slovene people; that is to say, at their deliverance from Austrian dominance and their political and national union." The young review dwells with real enthusiasm on British sympathy with the Jugoslav cause, and refers to the widespread evidence of this feeling that is afforded by the British Press. We note amongst other features translations of a graceful appreciation of M. Mestrovitch, by Mr. James Bone, and of an interesting article by Mr. H. Wickham Steed, "The British and the War."

TANGIER TO TEHERAN.

Up to the time of writing this has been a week of wild rumours and reports that we cannot possibly regard as satisfactory. In the West, it is true, a great German effort, east of Rheims, has collapsed, and the Huns, instead of having a "decisive victory" to report, as they had hoped, have a most decided repulse to think over—and say nothing about. And reports from many quarters show that Germany is in serious straits at home, however desperately she may strive to conceal the fact from those neutral States whom she wishes to impress with her power and prosperity. But the news from the Near East is depressing, and there is no gainsaying the fact. The magnificent courage that the Serbians are showing is the one bright spot in a gloomy picture, and its very brightness only serves to make the surrounding blackness worse. For what do we see? Greece, seemingly hypnotized, astonishing the world by her failure to act promptly, and the Allied Powers still wasting time in words when action is—and has been for some time—so urgently needed.

***

I have no doubt at all that the Greek people, who are nothing if not impulsive and warm-hearted, and who are not likely to forget the glorious pages of their past history, must be fuming furiously at being held in leash by counsels of prudence while their late Allies are being so badly hammered by their late (and old-standing) enemies. They are not likely to be deceived by the specious talk of the "need for recuperation" or the hair-splitting sophisms about the binding force of the treaty—*their* treaty—with Serbia. They know quite well where Honour calls them; and I believe they are ready to obey the call. But they are, as I have said above, hypnotized. And the hypnotic effect has been largely brought about by a skilful use of "words, words, words" by the German agents and the tools they have been able to procure, by one means or another, in Greece itself. Germany, in other words, is reaping the profit of the Press propaganda on which she has lavished her gold so freely in the Balkans, as elsewhere. Greece, and Roumania, too, to some extent, have been talked into a state of paralysis. They have been told so much about "strategy" and "politics" and the advantages of "sitting on the fence," and the risks of coming down from it on the wrong side have been so constantly, and so loudly, dinned into their ears, that they have been bemused by it all, and the national conscience in both countries has been benumbed.

***

To a certain extent the Allies are suffering from the same causes. We, too, have heard so much about the need for acting "wisely" that we seem to be in some danger of forgetting to act rightly—or even to act at all. For, after all is said and done, Serbia is our ally, and Serbia is desperately in need of help. Can there be any question whatever about the course we ought to follow? When one sees a couple of bullies setting about a small boy it is hardly decent to take too long in deciding how to act—especially if the small boy happens to be a friend.

***

Turning over the back numbers of THE NEAR EAST a few days ago I came across the following paragraph in the issue of April 2:—

> The Mayor of Sofia telegraphed his congratulations upon the fall of Przemysl to the Russian Commander-in-Chief, the Mayor of Petrograd, and the Bulgarian General Radko Dimitrieff.

This reads rather strangely just now, and I suspect that the worthy Mayor of Sofia hardly feels like telegraphing his congratulations to anyone. The Bulgarians must find it difficult to forget their old love even if they find it possible to get on with the new. Which still remains to be seen.

***

The war has, unfortunately, accustomed us all to put a good deal of faith in the power of the big gun. But, even so, I rubbed my eyes on Tuesday morning when, in reading an account of the bombardment of Dedeagatch by the Allied Fleet, I came across the statement that "the Customs House, the great steam flour-mill, and the first bridge on the Anatolian railway line were entirely destroyed. . . ." Two hundred miles, or thereabouts, must certainly be in the neighbourhood of a record. And after this the German talk about bombarding Dover from Calais (when they get there) seems quite modest. But, then, alas, the report comes from Athens.

***

In connection with this bombardment, by the way, the *Kölnische Zeitung*, in its eagerness to cement the new friendship with Bulgaria by what it fondly imagined would be taken as a tribute to Bulgarian valour, announced that "the Bulgarian batteries replied." M. Radoslavoff, on the other hand, refers to Dedeagatch as "an open place, possessing no means of resistance." It seems to be a case of "You pays your money and you takes your choice."

CORSAIR.

THE GALLIPOLI OPERATIONS.

On Wednesday evening, at Queen's Hall, Mr. E. Ashmead-Bartlett delivered a lecture on "The Operations in the Dardanelles."

He said that, in his opinion, we had embarked upon the expedition without any real knowledge of the Turkish Empire, having judged that the Turks were on their last legs after the Balkan War. He believed they still had 800,000 men under arms, though they had suffered great losses. Having described the early naval attacks, Mr. Bartlett turned to the Cape Helles landing. He thought we had no alternative to this landing, but to land troops at Anzac was a mistake. If the Australians had been put ashore at Cape Helles simultaneously with the 29th Division, the Naval Division, and the French, we should have had enough push behind the landing to capture Achi Baba, which, though it would not have been a decisive success, would have been useful for further operations.

After the attack on May 8, when we found that with the troops at our disposal progress was impossible, we should have reconsidered the whole position. Instead of that, we remained there, and new divisions were used up in various local attacks which merely encouraged the Turks. The operations on land were very much handicapped, as we could not get a proper concentration of artillery fire on certain sections of the enemy's trenches. Our men knew nothing of the ground, and the artillery was limited, and in the early days there was only a limited supply of munitions. During July the Cabinet decided to send out large reinforcements. That was essential, but it was more important—and it would have been possible at that time—to get Bulgaria on our side. We should have sent out a great mission to Bulgaria. There was a tremendous lot of bluff in dealing with the Balkan States. It was necessary to take a lot of trouble over them, to have great stage effects and stage management, and behind them a great deal of money. One week's wages spent in the right manner on the Bulgarians might have brought them in on our side, and the Greeks, too, and everyone else. If troops had been landed at Enos, it might have involved longer lines of communication, but it might also have had great effect upon Bulgaria. Everybody seemed to think that once we had got through the Narrows it would be possible to get right through to Constantinople. He did not believe that, for the Turks had fortified the whole channel right to Gallipoli and thence to the Sea of Marmora.

He had never believed that we had the smallest chance of success at Suvla Bay on account of the difficult country. Even had the landing succeeded we could not have held our positions. It failed because troops who had never been employed before in warfare were landed here. They did exceedingly well, but it was impossible to make highly-trained soldiers in a short period of time when there were not highly-trained officers to train them. Men were landed in a difficult country where troops got out of touch, and these new formations, not being accustomed to work without their officers, as our old Regular Army might have done, were at a loss what to do. Again, no arrangement had been made for the supply of water to the troops. It was supposed that they would be able to find water there. They did so, but the Turks had thrown dead bodies into the wells, and the water was not fit to drink. In addition to that so much secrecy had been observed that officers did not always know the objective they had to make for, and the men, having landed, were kept waiting for some time. It was after this reverse that the Bulgarian Attachés with the Turkish Army presented reports which changed the situation.

The Central Powers had the enormous advantage of holding the interior lines. We were always attacking them on the outer line of a great circle. Troops suffered when they were sent on expeditions. They were put in ships for two or three weeks, their discipline deteriorated, they had no opportunities for training together, and it was essential, when these expeditions were sent, that the men should be given time to settle down before they were used for important operations. In the Dardanelles we had used our troops too soon. At first that could not be helped, but if we could have kept the later forces together, and trained them on one of the islands, it would have given them a much better chance. We were firmly established where we were in the Dardanelles, but he did not think we could advance again.

THE CAPITULATIONS IN TURKEY.

A message from Constantinople states that the Turkish Chamber voted in favour of a law, which has already been temporarily in force since October, 1914, concerning the repeal of the Capitulations, and introducing a new jurisdiction respecting disputes between foreigners and Turkish subjects.

THE PUBLISHER would be obliged if Readers would inform him if they experience any difficulty in obtaining copies of the paper.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Neutrals and the Armenians.

October 21.

Commander BELLAIRS asked the Secretary for Foreign Affairs, in view of the refusal of the German Government to express any disapproval to Turkey concerning the systematic and wholesale massacre of Christians which had taken place in Armenia, whether he could state if any action was being taken by any neutral Power to save the situation and to protect the great American and other missionary enterprises in Asiatic Turkey.

Lord R. CECIL: I do not know what steps the neutral Governments may have taken in the matter. The Vatican has made earnest and repeated appeals both to the Turkish Government and to the German and Austro-Hungarian Governments to bring pressure to bear upon the Turkish Government with the same object.

The Constantinople Embassy.

Replying to a question put by Mr. W. NICHOLSON regarding the British Embassy at Constantinople, Lord R. CECIL said:—The principle underlying the organization of his Majesty's Embassy at Constantinople, which was identical with that adopted by the other Embassies there, has been subjected to considerable misrepresentation. It has been the practice to attach to his Majesty's Ambassador a staff of permanent officials, recruited from the Levant Consular Service, who have expert knowledge of the Turkish language, and are in close and continuous relation with the Turkish Ministries. At the time of the outbreak of the war with Turkey there were three such permanent officials on Sir Louis Mallet's immediate staff, having respectively seventeen, fifteen, and ten years' experience of Turkey. The Embassy was moreover in constant touch with the officials of his Majesty's Consulate-General, who have spent their lives in Turkey, and the Ambassador was assisted by the usual staff of diplomatic secretaries, who deal with the current business, which is, of course, conducted entirely in the French and English languages. Of these secretaries, three out of four had passed examinations entitling them to a special allowance for a colloquial knowledge of the Turkish language. At the end of February, 1914, Mr. Fitzmaurice, the First Dragoman at the Embassy, had a serious and protracted illness, which rendered him entirely unable to return to his post for some ten months. His place was temporarily taken by Mr. Ryan, the Second Dragoman to his Majesty's Embassy, who was indicated for this position by his seniority in the service and by his exceptional experience and ability.

British Prisoners in Turkey.

Lord R. CECIL, replying to Mr. J. MASON, said that he had received no information to the effect that the delivery of parcels to British prisoners of war in Turkey had been stopped. Answering another question, Lord R. CECIL said that his attention had recently been drawn to a statement to the effect that British prisoners of war in Turkey are not allowed to send or receive letters exceeding four lines; and that he had requested the United States Ambassador to be good enough to inquire into the correctness of this statement. If it should turn out to be true, he would certainly do all in his power to secure the withdrawal of such a regulation. So far as he was aware no restrictions are imposed in respect of the correspondence of Turkish prisoners in this country other than those contained in the general regulations in force in respect of the correspondence of all prisoners of war and civilians interned in this country.

Replying to Mr. PRINGLE, who asked what arrangements had been made to transmit clothing to British prisoners of war, Mr. TENNANT said that the sending of clothing to the prisoners in the hands of the Turks was difficult, but a satisfactory arrangement had now been arrived at.

Egypt and the War.

Mr. GINNELL asked whether the General Officer Commanding the British Forces in Egypt at the outbreak of war had the authority of H.M. Government for the pledge he gave to the Egyptian people that, recognising the respect and veneration with which the Sultan of Turkey, in his religious capacity, was regarded by the Mohammedans of Egypt, Great Britain took upon herself the sole burden of the war in Egypt without calling upon the Egyptian people for aid; whether the approval of the Egyptian Legislative Assembly was afterwards obtained before the Egyptians were called upon to fight against the Turks; and, if the theory was that they were fighting for Egypt, would the Foreign Secretary explain why medals in reward of bravery were conferred upon Egyptian officers not by the Sultan of Egypt but by British authorities.

Sir E. GREY: The answer to the first part of the question is in the affirmative; that to the second part in the negative, as the Assembly was not sitting. As regards the last part, I have no information on the subject, which would appear to be of a military nature.

No Egyptians Deported.

Mr. GINNELL inquired of the Foreign Secretary the number of Egyptians deported, or invited without option of refusal to leave Egypt, since the war began, the number interned in Malta and other places of internment, the number required to leave Alexandria and Cairo and go to live in villages, and the number in prison in Egypt on political grounds.

Sir E. GREY: So far as I am aware, no Egyptians have as yet been deported from that country. On the other points dealt with in the question I have no information.

Egyptians in London.

Mr. GINNELL asked the Home Secretary if he would explain why Egyptians resident in London, who were informed by the Home Office last December that they had ceased to be enemy aliens, were now informed by the police authorities that they were enemy aliens; and whether he would definitely define their status here, and not have them subjected to more annoyance than was consistent with that status.

Sir J. SIMON: Ever since Egypt became a British Protectorate Egyptians have been in the position of alien friends, and have been treated as such. The Metropolitan Police took off the register of alien enemies all who were known to be Egyptians, but in the case upon which the question is based, and one or two others, the individuals were not previously identified as Egyptians, and had not taken any steps whatever to claim the status of Egyptians and to have their names removed from the register of alien enemies. As soon as they made their status known, their names were removed from the register. I understand none of them have been interned.

British Minister at Sofia.

Mr. KING asked what was the date on which Sir Henry Bax-Ironside left Sofia, and the date on which Mr. O'Beirne presented his credentials as his successor.

Sir E. GREY: Mr. O'Beirne was sent to Sofia on a special mission at the beginning of July to conduct the Legation during Sir H. Bax-Ironside's absence on leave. He was presented by Sir H. Bax-Ironside to the Bulgarian Prime Minister in that capacity on July 8, and Sir H. Bax-Ironside left Sofia next day. Letters of credence as Envoy Extraordinary and Minister Plenipotentiary on special mission were issued to Mr. O'Bierne under date of August 5, and he presented these letters to King Ferdinand on September 3.

The Offer of Cyprus.

October 26.

Sir P. MAGNUS asked the Secretary for Foreign Affairs whether he could give the House any information as to the conditional offer by the Government to cede the island of Cyprus to the kingdom of Greece.

Sir E. GREY: His Majesty's Government felt bound, in the very critical position in which their Serbian Allies were placed, to make every possible effort to obtain for them the only assistance which was immediately available. Accordingly they made it known that if Greece would give full and immediate support to Serbia against Bulgaria his Majesty's Government would be prepared to give Cyprus to Greece. As Greece has not seen her way to support Serbia, the condition on which the offer was made has not been fulfilled, and it has, therefore, lapsed.

Sir P. MAGNUS: Will the right hon. gentleman inform the House as to the reasons for giving wide publicity to this offer before the Government had ascertained whether Greece was or was not willing to accept it?

Sir E. GREY asked for notice of the question.

British Troops in Serbia.

October 27.

Mr. HUGH LAW asked the Under Secretary for War whether any British troops had yet left Salonika for the Serbian front.

Mr. TENNANT: The British force in Greece is co-operating with our French Allies on the Græco-Serbian frontier.

The Persian Gulf Forces.

Mr. AUSTEN CHAMBERLAIN, asked by SIR J. JARDINE as to the medical arrangements made for the benefit of the forces, British and Indian, employed in Mesopotamia and the Persian Gulf, replied:—Details of the medical arrangements are not available in this country, but there is a well-equipped general hospital at Busreh, and other hospitals have been established at various points in the sphere of operations, while connection with India is maintained by hospital ships. The G.O.C. recently reported that he had an adequate staff of nurses. The Government of India are well aware of the importance we attach to making the best arrangements possible for the treatment of the sick and wounded, and will, I am confident, take all the measures in their power to save life and prevent suffering.

WHITE HORSE WHISKY.

GREAT AGE AND BOUQUET.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

BULGARIA AND ROUMANIA.

The Difficulties of the Foreign Office.

To the Editor of THE NEAR EAST.

Sir,—It is difficult for students of the Eastern question to understand the surprise with which the public regards the attitude of Bulgaria in the present war. If we disregard the direction given to her political leanings by the pro-German bias of her ruler, and if we take into account events rather than tendencies, we find enough in these for our conclusions. The seizure, in 1908, by Bulgaria, while still a Turkish dependency, of the Orient Railway, or that part of it which runs through her territory, was the first occurrence marking a new movement in the Balkan Peninsula in this connection. The declaration of independence by the Principality quickly followed, and this escape from the yoke of Ottoman suzerainty was associated with the movement in Austria-Hungary whereby sovereign rights were declared by that Power over Bosnia and the Herzegovina. A junction of events was thus brought about, and the gradual centralization of diplomatic pressure on Serbia, which was the more immediate effect, has come more and more to show its bearing as embodying designs upon that State. The motive that led Bulgaria to seize the railway is identical with the object Austria-Hungary has throughout had to serve in the provocation of Serbia. The root explanation lies in the fact that the Orient Railway between the frontiers of Bulgaria and Hungary runs through Serbian territory, and control over that portion of it is required for the completion of German communications with the East. The independence of Serbia constituted an obstacle in the path of Austrian progress that rendered the removal or modification sooner or later inevitable, and in the face of the Austro-Bulgarian compact, the Serbian kingdom, as was seen and stated by THE NEAR EAST at the time, was destined to become the object of pressure on *two* frontiers.

The subsequent efforts of Russia to mitigate the effects of this working agreement between Austria-Hungary and Bulgaria did not avail. Despite the brilliant handling of the matter by M. Isvolsky, the agreement survived the taking over by Russia of Bulgaria's debt to Turkey; it survived the improved relations which Russia was then in a position to bring about between Serbia and Bulgaria, which culminated in a Balkan confederacy, rendering possible the combined attack on Turkey that followed; and it survived the historic bonds of confraternity and union which marked the meeting of the two Tsars at Tsarskoe Selo on the occasion of King Ferdinand's visit to Russia at that time.

The dominant idea in Bulgarian statecraft is the development of a "big Bulgaria." It overrides all else. The conception was realized under the Treaty of San Stefano, but it quickly dissolved under the Treaty of Berlin, and, if Bulgaria has now turned to Austria-Hungary instead of to Russia, the alteration does not denote a change of purpose, but only what she considers an adoption of more effective methods. It is no mere matter of expediency which has now determined her co-operation with the Central Powers. It is the pursuit of her national policy, apart from all ethical considerations, and the ground plan of this has been public property since she gained her independence, and it is developed now—not sooner and not later—because the organized attack on Serbia in the north, now begun, has struck the hour when, according to pre-arrangement, she was to emerge from her seclusion and co-operate in the south. In the face of this, it is idle to say that the Foreign Office was taken by surprise, or that diplomacy alone could have changed Bulgaria's purpose. What alone could have given a different turn to events was military success that prevented the attack on Serbia by the Central Powers; for, in that case, the hour that proclaimed Bulgaria's adhesion would never have struck at all, and Bulgaria would have remained fixed in her neutrality.

With regard to Roumania, the considerations which dictate national policy are entirely different. A policy of adventure is remote from the ambitions of the people. The aims their diplomacy have to serve were stated at the Berlin Congress, and, resting as they do upon fundamental grounds, they have remained constant since. At that assembly the Roumanian representatives, in the memorandum which they read, not only sought recognition of their country's independence, but invited special measures as a means of preserving it. Roumania, they said, desired to see the pacific disposition of her destinies assured, and, in consequence, she begged that the efforts she had made in the late war should be "crowned with an European gift" by the guarantee of her neutrality, and this in order that she might realize her sole ambition of being the faithful guardian of the freedom of the mouth of the Danube. And her reasons were founded upon the desire for peace within her own borders. It was the lament of Roumania, according to her representatives, that, though she knew how to fulfil her duties of gratitude to Russia, she retained the memory of the sacrifices she had imposed upon herself for the sake of the aggrandisement, the fortune, and the glory of that Power, and that she bore in mind how, from Peter the Great to their own day, she had been, alternatively and simultaneously, the basis of the military operations of Russia, the granary which nourished her armies, and the theatre for the most terrible conflicts. In face of the military conditions that now obtain in Europe, how could the Foreign Office alone expect to prevail over a national choice so well founded?—I am, etc.,

DOUGLAS M. GANE.

October 28, 1915.

GREAT BRITAIN AND THE BALKANS.

To the Editor of THE NEAR EAST.

Sir,—Now that the prime importance of the Balkan States in the war is at last universally recognised, there are certain broad questions of policy which ought to be understood by the public, because in the Balkans, where the unexpected so often happens, they may well become once more of practical importance.

Two policies have been open to us from the very commencement of the war. Strong arguments could be advanced for each, provided only that it was clearly grasped and consistently pursued. One was the policy of revising the Treaty of Bucharest on the basis of nationality. It would have involved obvious difficulties, but would have avoided the immense military risk of Bulgarian hostility. It would have built up a solid wall between Germany and Turkey. To save space we may be allowed to refer to our book, "The War and the Balkans," published last April, in which this policy was fully explained. The other policy was to despair of Bulgaria, and attempt to form a really strong Serbo-Greco-Roumanian alliance against her. This would have avoided the risk of antagonising Greece and irritating Serbia, and might possibly have raised a strong barrier to the Austro-German advance. It would, on the other hand, have made Bulgarian hostility certain, and the Balkan *bloc* impossible, and would have discredited our claim to be fighting for nationality.

The Foreign Office has not adopted either policy. It went far enough (at the very last moment) in the direction of the former to offend Greece, but not nearly far enough to win Bulgaria. Its offer was deficient in two respects. It omitted to give guarantees in respect of Bulgaria's claims *vis-a-vis* Greece and Roumania, and as to the Serbian territory promised, it was qualified by certain conditions, which made its fulfilment appear doubtful. This made it impossible for our friends at Sofia who occupied a strong position in the Sobranje and in the country, and whose adherence to the cause of the Entente was admittedly sincere, to put forward a good case for intervention on our side. The net result was that we incurred Bulgarian hostility and failed to gain Greek support.

Recent events provide us with a lesson which it is vital that we should learn. A way must be found to remedy the inattention and half-heartedness which have been the root cause of our diplomatic failure in the Balkans.—We are, etc.,

NOEL BUXTON.

QUO VADIS, BRITANNIA?

To the Editor of THE NEAR EAST.

Sir,—Somebody may ask the armed Britons going now to the Balkans, "Quo Vadis?" I would like to give answer to such a question.

1. You are going, brave Britons, to fight against the same enemy who crushed Belgium and killed by bombs so many babies in London, and, because of his pride and ambition, transformed the whole of Europe into a hell of fire and suffering. You must be victorious over this enemy of yours and of mankind, no matter where you will fight against him. He is encircled from every side, and he cannot breathe; but he is trying to find any door to catch the air. He is trying to come through the Balkans to appear in Asia. He smiles to India and Egypt. He threatens the whole of Asia and

Digitized by Google

Africa. His plans are colossal. You are going, brave Britons, to stop this enemy on the Danube. You are told: "But it is too far to go over there!" Yes; but are not the Balkans nearer than Palestine? And if he is not stopped in the Balkans it will be almost impossible to stop him in Palestine.

2. You are going to hinder Germany's *Drang nach Osten*, the greatest peril for your magnificent Empire. If the Germans crush Serbia they will have the whole of the Balkans *nolens volens* included in their plans and ambitions. The Balkans will be for them by far more valuable than Poland, or Galicia, or Belgium. If they succeed in crushing Serbia there will be no more neutrals in the Balkans; *everybody will be your enemy except the dead and enslaved.* Serbia is waiting for you, desperately struggling against death and slavery. You will prevent the greatest peril, *Drang nach Osten*, and save the situation and help Serbia, and suggest respect to Serbia's neighbours and enemies only —only if you come *in time* and in the needed quantity.

3. You are going to help Serbia. Serbia once stopped the *Drang nach Osten*. But Serbia is now attacked not only by the invader from the North but by a ferocious enemy from the East. Be sure Serbia will do more than she can, but how could she resist with 300,000 men against 700,000? I know: Serbia is now a touchstone for England. Will England help Serbia or not? That is a double question; firstly, of the conscience and honour; secondly, of the interests. Is that not the same? Can there be any durable English interest which is against English conscience and honour?

Why did Providence make Great Britain great if not in order to impose upon her the duty to protect the little and oppressed ones? The greatness of Great Britain is now put to the test. The language: "I have to defend myself!" is a language suitable to Bulgars, Albanians, Magyars, and Kurds, and not a language of a nation like Great Britain, who is the guide of mankind in humanity and civilisation.

To think that Providence gave greatness to England only for England's sake is the same as to think that Providence gave the light and warmth to the sun for the sun's sake. What were the sun if it kept the light and warmth only for itself? A miserable, black spot in the universe.

You are going, brave Britons, to help Servia and hereby to justify the greatness of your country before God and history. That is a way of suffering you are going. But do not be afraid; that is the *only* way of honour, glory, and true greatness.

Nailed on her cross, Serbia—in the presence of the universe, of past and future—puts you this question: "Will you come and help me?" All the world, past and future, hears this question. That is a great temptation for you.

But be not indecisive. Now is the most sublime and at the same time the most tragic moment in British history.—I am, etc.,

NICHOLAS VELMIROVICH.

147, Cromwell Road, S.W., October 24.

THE BALKAN IMBROGLIO.

To the Editor of THE NEAR EAST.

Sir,—I venture to think that your readers will agree with "Observer" in holding the Cabinet jointly responsible with the Foreign Office for the *impasse* into which Balkan affairs have drifted. But is he accurate in dating the decline of British prestige from 1908? It surely began a quarter of a century ago, when William II. resolved to make Turkey a bridge on the high road connecting Berlin with Bombay. The Teuton's Eastward thrust has since been pursued with utter absence of scruple, and unceasing persistence, Wilhelmstrasse the while posting its most efficient agents at Constantinople, and giving them heart-whole support. If Germany has become the virtual ruler of Turkey it is because her wire-pullers kept their eyes fixed on a distant goal, and adopted every conceivable means of reaching it. Contrast their sleuth-hound perserverance, their careful selection of human agency, with the drift and opportunism of the British Government. Our party system renders consistent foreign policy impossible. Combatants who are blinded by the heat and smoke of battle cannot look beyond the horizon of domestic affairs, or think Imperially, as becomes the rulers of a world-wide Empire. When the Eastern Question came before Parliament, it merely furnished war-cries for use at the hustings. An instance in point is Mr. Gladstone's "Bulgarian Atrocities" campaign; when it had served his purpose he straightway switched his vast energy from the Near East to Irish Home Rule.

But the Foreign Office must share the blame for our progressive loss of prestige in South-Eastern Europe. The Diplomatic Service is still a close preserve for the "classes," just as the Army was before Lord Cardwell abolished purchase. Attachés receive a nominal salary, and comparatively few of them are able to shun delights and lead laborious days in preparation for a thorny career. When they become Great Britain's representatives they are still accredited to the local sovereign, whose satellites they become, increasing the prestige of frail mortals who are rarely qualified to wield absolute power. It is exceptional to find a British ambassador or minister following the trend of popular movements, studying public opinion, or, indeed, promoting the interests of his fellow-countrymen. This attitude of aloofness was very marked in the Near East, a region which required our ablest diplomacy, but has not secured it—at least of recent years. Constantinople and Athens were unpopular in Whitehall, as being hot-beds of intrigue and the tomb of many a reputation, while the minor courts are abodes of boredom in the eyes of the average diplomat.

Now, it is a commonplace of psychology that men are apt to admire in others precisely those qualities which they are conscious of not possessing. Orientals, being fatalists and addicted to *Kief*, are worshippers of initiative, of moral and physical force. It was by dint of his overpowering personality that Lord Stratford de Redcliffe governed Turkey for a generation. William II. grasped this paradox. In 1898 he presumptuously stood forth as the friend of the titular "Khalif" and Protector of Islam. Had Lord Cromer taken the helm at Constantinople in that crucial year, I venture to think that Turkey and the Balkans would now be an impassable barrier against the Kaiser's ambition to rule the world from its ancient seat of empire.—I am, etc.,

October 26. SIGMA.

A LADY DOCTOR'S EXPERIENCES IN SERBIA.

Speaking before the Church League for Women's Suffrage at Caxton Hall on October 19, Dr. H. B. Hanson said that she arrived at Salonika in March last. The railway carriages in which the journey to the Greek frontier had to be performed smelt so strongly of formalin that it was almost impossible to breathe, and there was no light in the train, except for candles that the passengers took with them. Arrived at Kragujevatz, she found that one of the members of a Scotch unit that had gone out in January had just died, and the second night after her arrival she sat up all night with another, who also died of the disease. The whole country was plague-stricken. There was not room in the hospitals for the sick people; they had to sleep in the corridors. There were not enough beds; these were improvised from planks, but when a patient was delirious the planks were apt to be disarranged and fall. There was a complete absence of nursing; the patients were laid on the beds, and Austrian orderlies took round food; rice pudding and a kind of soup could be got, but most of the sick people had hard brown bread, hard-boiled eggs, pieces of chicken, and so forth handed to them. What the patient did not eat at the time he kept under his pillow. Visitors also came with food, and on one occasion a patient was found with a nice little sucking pig. The English doctors introduced a dietary of good bread and beaten-up eggs, but the change was not relished. Medicines were taken round in the same way as food, and enough was given to last a patient two or three days. This might happen when a man was almost delirious. The weather had been very cold, and there was a shortage of blankets. Some of the patients lay curled up for warmth under a single blanket, until, when at last they were able to stretch themselves, they had almost lost the use of their limbs. Of four hundred doctors who were in the country when the typhus epidemic disease broke out, about one hundred succumbed to the disease. The Serbians gave a very impressive funeral to the members of foreign hospital units who died out there. First walked a man with a cross, then a number of boys like acolytes, then priests in gorgeous robes, then the royal band playing weird music, then the chief men among the municipal authorities, and then the leading military people. The coffin was borne on a military car, and was followed by military attachés of French, English, Russian, and other nationalities.

PARCELS FOR MEDITERRANEAN EXPEDITIONARY FORCE.

A notice has been issued by the Post Office warning the public that a large number of parcels are found to be undeliverable on arrival at the Dardanelles owing to insecure packing or illegible addresses. In view of the exceptional conditions of transit, involving several transhipments and exposure to weather, it is necessary that parcels for the Mediterranean Expeditionary Force should be very carefully packed. It is recommended that they should be as nearly round as possible, and well padded with shavings, crumpled paper, or similar protective material, and wrapped in waterproof paper. In addition, the following conditions should be complied with in all cases:—(1) The outer cover should be of strong linen, calico, canvas, or other textile, and must be securely sewn up. (2) The address must be written in bold letters on the covering in ink or indelible pencil, and not on a label, whether tied or pasted on. (3) Wooden or metal boxes with square corners should not be sent unless well padded, as such boxes are liable to damage other parcels in transit. (4) No perishable articles may be sent, and anything likely to become soft or sticky, such as chocolate or sweets, must be packed in tins well fastened down.

Parcels which do not comply with all these conditions are unlikely to reach their destination safely.

4	22	Thursday	26	27

To-day is the birthday of H.M. the Queen of Roumania, who was born in 1875.

Wednesday is the birthday of H.R.H. Prince Leopold of Belgium, Duke of Brabant.

Wednesday is the birthday of Mohammed V., Sultan of Turkey, who was born in 1844.

Under date of October 25, Reuter's Alexandria correspondent reports:—The marriage took place quietly yesterday afternoon of Samiha, daughter of the Sultan of Egypt, and Prince Ismail Daoud, Aide-de-Camp to the Sultan.

A telegram from Athens, received in London on Monday evening, reports that Prince George, the eldest son of King Constantine, has left for Salonika.

It is reported from Bucharest that Dr. Landolt, a celebrated French oculist, has been summoned to Roumania for the purpose of performing an operation on the eyes of Queen Elizabeth.

Lord Oranmore has left London for Ireland.

Lady Elcho has left London for Egypt.

General Sir C. C. Monro left London last Friday morning to take up his appointment as Commander-in-Chief of the Mediterranean Expeditionary Force. He arrived at Salonika on Wednesday.

General Sir Ian Hamilton arrived in London last Friday evening, accompanied by his aide-de-camp, Colonel Pollen, and General Braithwaite, Chief of Staff.

Lieutenant-Colonel Leslie Wilson, M.P. (Reading), who is now in Egypt, has been suffering from a slight attack of dysentery, but is now convalescent.

Turkey, says the Washington correspondent of the *Morning Post*, has for more than a year been represented in Washington by a Chargé d'Affaires, Rustem Bey, the Ambassador, having been withdrawn by his Government on an intimation from the President that his usefulness had ended. Mr. Morgenthau, the American Ambassador at Constantinople, would have been withdrawn to mark American displeasure at the Turkish Government's affront in not appointing Rustem Bey's successor, but for the fact that Mr. Morgenthau at the present time is charged with the interests of nine nations, that his work has given great satisfaction to the State Department, and that to withdraw him and to place the Embassy in the hands of a Chargé d'Affaires would embarrass not only the United States, but all the other Governments for whom he is acting.

CAPTAIN ARTHUR CHARLES DAVIES, 6th BATTALION ROYAL WELSH FUSILIERS, Reported WOUNDED and MISSING on August 10 at the DARDANELLES.—Any INFORMATION will be gratefully received by his Wife, Mrs. Arthur Davies, Treffos, Menai Bridge, Anglesey.

TO OFFICERS leaving for War Zone Special Terms. ANY LANGUAGE under the sun TAUGHT, TRANSLATED, TYPEWRITTEN and DUPLICATED on machines in shortest periods.—Apply or write, The British Egyptian Syndicate, 90, Bishopsgate, E.C. Wire, "ABDELMALEK, London." 'Phone, 2947 London Wall.

News has been received at the Foreign Office from Sir Ralph Paget to the effect that Lady Paget and her hospital staff were remaining at Skoplje, which is now in the hands of the Bulgarians. It was not thought, the letter added, that the staff was in any danger, and it was considered likely that the hospital would either be declared international, as there are American and Dutch citizens on the staff, or the staff would be interned.

The Cairo correspondent of the *Times* reports (October 27):—

The High Commissioner presided at a great representative meeting at the Opera House last night in aid of the Red Cross movement. Extensive arrangements have been made in Cairo, and to judge from reports of the interest taken in the movement by Egyptians from the provinces "Our Day" in Egypt, which is fixed for October 30, promises to be most successful.

On Thursday, October 21, at Harlesden Wesleyan Church, the marriage took place of Mr. Thomas Millard, of the Cyprus Civil Service, to Miss Alice Booth, eldest daughter of Mr. and Mrs. F. B. Booth, of Harlesden. Mr. Millard, who is Assistant-Treasurer at Nicosia, was lately granted special leave of absence for the purpose of joining his Majesty's forces.

We have received from Mr. G. B. Alderson the sum of £4 on behalf of the Serbian Relief Fund.

Two of Mr. Alderson's sons, Roy and Reggie, are on the Western front and have been taking part in the recent fighting. Two sons-in-law of Mr. Alderson (who, with Mrs. Alderson, is staying in Switzerland) have seen active service at Gallipoli. One, Major Cecil Grimshaw, was unfortunately killed in action, while the other, Lieut. Walter Calthrop, R.N., is still out there.

The Rev. S. H. Semple, M.A., of the United Free Church of Scotland Jewish Mission, Tiberias, Palestine, has sailed for duty as a chaplain with the troops serving in the Mediterranean Expeditionary Force.

Mr. Alfred C. Silley has left Dedeagatch for Athens.

Sub-Lieutenant J. S. La Fontaine, R.N.V.R., who is under treatment at Haslar Hospital, Gosport, has been promoted to the rank of lieutenant. His condition is now satisfactory.

Mr. H. L. Andrews has arrived in London from Sofia. His address for the present is care of the Crédit Lyonnais, Lombard Street, E.C.

The death has taken place at Ouchy, Switzerland, of Madame Musurus Pasha, widow of the former Turkish Ambassador in London, and daughter of Sir John Antoniades, K.C.M.G., the Alexandria banker. Musurus Pasha was Ambassador to the Court of St. James's from 1903 until his death in 1907.

At a vestry meeting held at Bournabat, near Smyrna, several months prior to the declaration of war with Turkey, it was resolved that a brass memorial tablet should be placed in St. Mary Magdalene's, Bournabat, to the memory of the late Sir J. W. Whittall, Kt., who was a liberal benefactor of that church. Subscriptions were received from a number of members of the congregation, and the tablet was entrusted to Messrs. Gawthorp and Sons, 16, Long Acre, who have now completed the brass, which, for obvious reasons, cannot be dispatched to its destination. The wording of the tablet is as follows:—"To the memory of Sir J. W. Whittall, Kt., eldest son of James and Magdalene Whittall, born at Smyrna, December 5, 1838, died at Constantinople April 10, 1910. This tablet is erected by the congregation in grateful remembrance of his affectionate interest in the welfare of this community and of this church." St. Mary Magdalene, it may be noted, was built over half a century ago by the late Charlton Whittall, head of the well-known firm of C. Whittall and Co., and a member of the Hon. Levant Company.

Lieutenant-Colonel George Butler Stoney, D.S.O. (Egyptian Army), 1st King's Own Scottish Borderers, who was killed in Gallipoli on October 15, aged 38, was the eldest son of the late Major G. Ormonde Stoney, of the same regiment. He was educated at Haileybury and Sandhurst, and joined his regiment during the Tirah campaign, 1897-8 (medal with two clasps). In 1908 he was seconded for service with the Egyptian Army, but in April, 1915, was lent by them to act as a landing officer at the Dardanelles, where he went through the experience of the River Clyde landing. On May 17, though only a captain, he was sent up to take command of his regiment on the Peninsula, and for his "great coolness and good leading, holding together in a most praiseworthy manner the battalion, which had suffered greatly," he was awarded the D.S.O. He was promoted Lieutenant-Colonel in October, having had the command of the battalion for five months. He was a keen polo-player, and captained the regimental polo team in Cairo in 1907. When on leave he made his home with his brother, Mr. T. R. Stoney, at Wootton Court, Wootton, Kent.

Lieutenant V. G. Starkey, 7th Battalion King's Own (Yorkshire Light Infantry), who was killed in action on October 14, was appointed Professor of French and Romance Philology at University College, Southampton, in the spring of 1914. After leaving the University he was engaged for some years in teaching modern languages. He then went abroad to devote himself to the study of the Romance languages, specialising more particularly in Roumanian. Several important papers by him are in course of publication.

The death has taken place at Durrants, Shipley, Sussex, of Commander Arthur Lingham, R.N., retired, aged 62. During the Egyptian War, 1882, he was lieutenant in the Agincourt, and was awarded the Egyptian medal and the Khedive's bronze star.

Second-Lieutenant Cyril Spartali, of the Royal Berkshire Regiment, who was killed in action in France on October 13, was the younger son of the late D. M. Spartali and Mrs Ellice-Clark (née Ralli), of 2, Palace Court, and was thus a member of two well-known Greek families who have long been settled in this country. He was educated at Harrow and Cambridge, and at the outbreak of the war was engaged in India with the firm of Ralli Brothers. He came home invalided from an attack of typhoid fever, but as soon as convalescent joined the Inns of Court Officers' Training Corps. He obtained his commission in February last, and proceeded in August to France, where, being an excellent French scholar, he was very useful to his company on their arrival in France. He was the younger brother of Second Lieutenant M. Spartali, 2nd South Wales Borderers, who was killed in Gallipoli in June.

Captain Keith Maurice Levi (Australian Army Medical Corps), attached 2nd Battalion Hampshire Regiment, killed in the Suvla Bay attack, Dardanelles, was the younger son of Mr. and Mrs. Joseph Levi, of St. Kilda, Victoria, Australia. He took his medical degree at Melbourne University in 1914, and was appointed to the resident staff of the Perth Hospital, Western Australia. On the outbreak of war he at once offered his services to the Commonwealth military authorities, who gave him a captain's commission in the Australian Expeditionary Force, and he went to Egypt with the Light Horse reinforcements. On arrival he joined the staff of the 1st Australian General Hospital, Heliopolis, working later on the hospital transports between the Dardanelles and Alexandria, and finally he was attached as medical officer to the 2nd Hampshire Regiment. During the Suvla Bay action he worked at the dressing station within the fire zone night and day, and was killed while so engaged by a shell which fell on the station. Captain Levi was in his 25th year.

We regret to announce that Second Lieutenant the Hon. Ivo Alan Charteris, Grenadier Guards, youngest son of the Earl and Countess of Wemyss, was killed in action in France on the 17th inst.

Digitized by Google

The engagement is announced of Mr. C. R. Skrimshire, M.A., formerly Headmaster of the English High School, Constantinople, and now Assistant Master at Wellington College, and Aileen, daughter of Mr. and Mrs. J. Lund, of 47, Putney Hill.

Lieutenant Gordon Sanderson, attached to the 2nd Battalion 2nd Gurkhas, was killed in France on October 13. He was the son of Mr. William Sanderson, of Field House, Settle, Yorkshire, and was educated at Oakham Grammar School. When war was declared he held the post of superintendent of the Archæological Survey, N.W. Provinces, India, and had previously been in the service of the P.W.D. in Egypt.

A correspondent writes from Alexandria, under date of October 10:—A number of American instructors and professors of the Syrian Protestant College, Beyrout, who had been on leave, arrived a couple of weeks ago in Egypt from America, and, after some negotiations with the Turkish authorities at Constantinople, carried on through the American Embassy, they have at last been granted special permission to proceed to Beyrout by the United States cruiser Chester.

A Constantinople telegram announces that Baron von Wangenheim, who had only recently returned to the Turkish capital, has died after a short illness.

Before going to Constantinople Baron von Wangenheim was for several years German Minister at Athens. He was appointed to Constantinople in May, 1912, and took up his duties in the following month. In July of this year, as he was suffering from a disease of the heart, he left Constantinople to go to Bad Nauheim. He spent some time in Sofia on his way, and doubtless, being an active servant of his Kaiser, turned the occasion to the profit of his country. Prince Hohenlohe was at the time appointed temporary Minister.

Baron Wangenheim was not nearly such a skilful diplomatist as Baron Marschall von Bieberstein, his predecessor at Constantinople; and it is probably true that he owed his appointment to the important position largely to the influence of the Queen of the Hellenes. But he was also high in the favour of the Kaiser, whom he usually attended on his visits to Corfu; and this fact undoubtedly stood him in good stead in his dealings with the Turkish officials. Moreover, it is certain that he had remarkable energy, and that he knew well how to impress the Oriental mind with a sense of his power and authority; while the funds placed at his disposal, which were apparently unlimited, played no small part in helping him to consolidate the position his predecessor had secured for Germany in the Turkish capital.

Prince Hohenlohe, who represented Germany in Constantinople during the illness of Baron von Wangenheim, the late German Ambassador, has been summoned by telegraph from Coburg to Berlin. Presumably he will now return to Constantinople.

On November 16, at 4 o'clock, at the Whitehall Rooms, Hotel Metropole, under the auspices of the Royal Colonial Institute, Mr. Roland N. Michell will lecture on "Cyprus To-day."

The first of the course of lectures on Austria-Hungary and the Southern Slavs that Dr. Seton-Watson is giving at the London School of Economics was delivered on Monday last to a large and interested audience. The subject dealt with was chiefly the history and political development of Hungary down to the date immediately preceding the present war.

Sir Edwin Pears lectured at the Y.M.C.A., Aldersgate Street, on Friday last week. The hall was crowded, and the audience listened most attentively while Sir Edwin told the story of the origin of Constantinople, the coming of the Turks into Asia Minor and then into Europe, and the part that the city has played in the world's history. The chair was occupied by Sir Charles James Tarring, who at one time presided over the British Supreme Consular Court at Constantinople.

The Queen of Roumania has been preparing for months to play a part in nursing the wounded should her services be needed, and her eldest daughter, Princess Elizabeth, is her eager helper (says the *Liverpool Post*). The suffering during the Balkan war with Turkey was the more appalling because some of it was avoidable, and avoidable evils, at least, Queen Marie is determined to remedy, although there is still much that is primitive in her adopted country which it is impossible for her to remedy. Visitors to gay and Parisian-looking Bucharest do not, at first sight, regard it as the capital of a primitive country, but so it is, and dainty, lovely Marie of Edinburgh, with her English upbringing, found it difficult enough to settle down comfortably when she arrived there, a bride of seventeen, nearly twenty-three years ago. The years have made little change, save in the capital and on the surface. Since the war shadow has grown nearer and nearer the Queen has contrived, however, to interest many of the more highly placed Roumanian women in nursing, and the country is a good deal better prepared to deal with wounded than was Serbia or Austria-Hungary, or even some Western countries at the beginning of the war. Princess Elizabeth, her daughter, is considered by many who have seen her to be the most beautiful princess in Europe—which is no marvel, seeing that father and mother are alike remarkably good-looking in their widely differing ways. There was talk at one time of an engagement between the Crown Prince Boris of Bulgaria, who was twenty-one in January, and Princess Elizabeth of Roumania, and the young son of Tsar Ferdinand is supposed to be madly in love with the daughter of his neighbour. But if troubles thicken, as they seem likely to do, the desire of his heart is likely to remain unrealised.

The congregation of the Greek Church at Melbourne has cabled to the Greek Government saying that it is their fervent wish that Greece should range herself with the Allies for the cause of Liberty and Justice.

APPOINTMENTS, PROMOTIONS, etc.

A telegram from Sofia received in Amsterdam states that Mr. Einstein, the special agent at the American Embassy at Constantinople, has been appointed Chargé d'Affaires at Sofia.

A Berlin telegram states that on Tuesday the Kaiser received the new Bulgarian Minister at Berlin, M. D. Rizoff, who presented his credentials.

A telegram from Constantiople viâ Berlin reports that Halil Bey on Monday informed the Chamber of his nomination as Minister for Foreign Affairs.

A Constantinople telegram received in Amsterdam, states that the Turkish Chamber has elected as its new President Hadji Avil, the deputy for Brusa, and formerly Vali of Adrianople, in place of Halil Bey, who has been made Minister for Foreign Affairs.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

RODOCANACHI.—On October 26, at 84, Gloucester Terrace, W., the wife of Peter Rodocanachi, of a son.

MARRIAGES.

MOIR—SHAW.—On October 23, 1915, at the British Legation, Teheran, Ian Hyacinth Moir, British Vice-Consul at Sultanabad, Persia, younger son of the late Thomas Moir, Registrar of Glasgow University, to Christina Fleming, only child of Dr. and Mrs. P. F. Shaw, of Mount Blair, Crosshill, Glasgow.

YOUNG—WHITE.—On October 18, at Mohammerah, Persian Gulf, by the Rev. H. N. Bridge, Chaplain to the Forces, Alfred Nicholson, only son of Mr. A. W. Young, of "Lloyds," and Eliot Place, Blackheath, to Doris Marjorie, only daughter of Mr. and Mrs. W. W. White, of Leyland Road, Lee.

Under date of October 26, Reuter's Athens correspondent reports:—Belated mail advices from Constantinople state that a reign of terror exists there, and that Talaat Bey, the Minister of the Interior, has even ordered the arrest of Ahmed Riza Bey, the Senator, for having criticised the policy of the Government in the Senate. Ahmed Riza Bey was released twenty-four hours later, on the intervention of the Heir to the Throne.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

FRIDAY, OCTOBER 29, 1915.

EXIT DIPLOMACY.

With Greece's rejection of the offer of Cyprus in return for full and immediate support rendered to Serbia the last, we may hope, has been heard for a little time of the crude and ill-starred efforts of the Allies' diplomacy in the Near East. It was the last door in the Balkan street left to Sir Edward Grey to knock at. He had been there before, and the door had only been quietly but firmly closed, in contradistinction to a more violent experience elsewhere. This time, however, Greece also has banged the door in the British Government's face, and if there is to be any more knocking at it, it will not betoken the approach of the polite but timorous mendicant. From the very outset of the war the halting diplomacy of the Entente Powers has failed to catch up with the situation in the Balkans. Some allowance can be made for the inevitable delay in bringing the policy of three Governments into line; but there can be no excuse for perpetuating until the fifteenth month of the war a condition of things which makes the prompt and decisive application of a policy once agreed upon virtually an impossibility. The initial difficulties of the Triple Entente in dealing with the Near East are admitted; the presence of identically the same difficulties at this stage implies incapacity or mismanagement. Now the situation is entirely beyond the reach of diplomacy, and the guns only can make their voices heard. Greece and Roumania for the moment must be left alone. This is not even the time to warn them of future pains and penalties. The business of the Allied Governments is with Bulgaria and the Austro-German forces invading Serbia. All other considerations must yield to the necessity of carrying relief to the Serbians. As to the chances which the Allied Governments still have of succouring this sorely tried people in time we cannot yet speak with certainty. A desperate attempt is being made by the Bulgarians on the east and south and the Austro-German forces in the north to surround the heroic Serbian army. The latter is fighting with a skill and determination which leaves room for the faint hope that it may yet defeat the enemy's intentions. But its position is precarious in the extreme. A French force, with British reinforcements, of wholly inadequate numbers, is advancing from the south; Allied fleets have bombarded Dedeagatch, and are reported to be effecting a landing at that port. It can only be a question of a few days before we know whether the intervention of the Entente Powers has been delayed too long to save Serbia from the worst fate.

It is something to the good that the Allied Governments have at last frankly accepted their responsibility in the matter and are prepared to put forth the maximum strength that can be spared from other theatres of the war. The Serbians, there is reason to believe, are not called upon to face an entirely unforeseen situation. They will have contemplated an overwhelming attack from the north and the possibility of their country being overrun by the enemy. We may expect, therefore, that they will not allow themselves to be cut off from their line of retreat. In the meantime, and however great their adversities, they will be buoyed up by a profound belief in the destiny of the Serbs, whether of the kingdom of Serbia or of Greater Serbia beyond, and by the knowledge that another small and gallant nation has had its whole territory overrun but remains unconquered and still a nation in being. Both the Germans and the Bulgarians could be relied upon to try to extirpate any Serbians who might be left behind in the country, by methods compared with which the record of Belgium would pale into insignificance. But even in this dire eventuality Europe would not have heard the last of the race, for there would still be Serbs to come again into their own when the war has reached its appointed end. If this point is emphasised now, it is not from any conviction that the enemy has yet taken the measure of the Serbians' powers of resistance. But it is necessary to combat the fatalistic theory that, as the Allied forces are probably too late to save the Serbians, they should take no steps to help them. Even if all were over from a military point of view, there would yet remain the residue for whom the country would have to be won back again. The duty of the Allies, therefore, is clear. It is to abandon mere diplomatic efforts to obtain support from Roumania and Greece, and to push forward their own forces into Serbia and Bulgaria from as many points as possible. The first turn of the tide in the Allies' favour may well have far-reaching results. Neither the Roumanians nor the Bulgarians are entirely satisfied with the present course of events. The former are isolated from the greater part of Europe while a state of war exists in Bulgaria; the Bulgarians may be eager enough to fight the Serbians, but will have little zest for finding themselves opposed to French, British, and possibly Russian troops. As for the Greeks, it must be inferred so long as the nation tolerates the action of King Constantine and the Zaimis Cabinet in repudiating the Serbian Alliance that both people and army shrink from war. Their help, therefore, cannot be counted upon until the military situation promises once more the maximum glory with the minimum risk.

Last February King Constantine was offered the opportunity of fighting against the Turks and securing a reversion of a large section of the Turkish heritage in Asia Minor. This time he was offered Cyprus if he would declare war against the Bulgarians. We are wholly opposed to both the bargains by means of which it was sought to secure the co-operation of Greece. With each our diplomacy sank to the German level of offering bribes. Instead of bearing in mind the principles for which we are at war and treating the Balkan Peninsula as a whole, explaining to the several States what they stood to gain individually and collectively by throwing in their lot with the Entente Powers, the latter elected to treat with them singly, discussing with each matters that intimately concerned the others, and encouraging each to believe that by means of bargaining it would benefit at the expense of one or more of the others. The distinction between the understandings arrived at between Italy and Serbia on the one hand and the Triple Entente on the other regarding the settlement after the war, and the offer to Greece of a considerable portion of Asia Minor, may not appear to be great. In the case of Cyprus, however, there is a very important difference between the two courses. Great Britain could never shut her eyes to the possibility that strict adherence to the principle of nationality would call for the transfer of Cyprus to Greece in the final settlement of the Near Eastern question. But if ever such a transfer were made, it would be under proper safeguards for the future of the island and the welfare of the Mohammedan minority. In the circumstances in which Cyprus was actually offered to Greece, Great Britain must have practically waived her claim to impose such safeguards. The folly of King Constantine's Government has prevented a great wrong being done to a people which for forty years has been encouraged to believe that it will always be able to count upon British protection against their Greek fellow-inhabitants. But Greece has refused Cyprus, and the offer has lapsed. It will, we trust, never be repeated under similar conditions. The Allied Powers must now rely on their own strength to save Serbia, or, if they should unhappily prove to be too late, to make good for her, as they intend to make good for Belgium.

"WIRELESS" EXPERIENCES AT CONSTANTINOPLE.

By W. Gordon Campbell.

The wonders of wireless telegraphy offer a fascinating field of study and experiment to all persons interested in scientific matters, and as a receiving station can be fitted up at a very trifling cost, it is not surprising that so many amateurs have taken up wireless, either as a source of amusement or as a subject of serious investigation. Unfortunately, however, for wireless enthusiasts in England, the outbreak of war has imposed a "close time" until peace is restored, because this new power is too dangerous a weapon to be left in the hands of any but the naval and military authorities.

In this country the process of dismantling amateur stations was carried out in a courteous and orderly manner; but in Turkey, where my own lot has been cast for several years past, matters were managed in a very different way. Everyone who possessed even the most harmless toy apparatus was assumed to be a spy in communication with the enemy outside the Dardanelles, and ran the risk of being hanged by the Court-Martial, which rarely paid any attention to the evidence. The mere fact that the police made such an accusation was usually regarded as sufficient. My own wireless installation was by no means a toy but a fairly complete receiving station, with which I could hear all messages within a considerable area, and I suppose my doings were consequently regarded as all the more suspicious. In any case, I had some exciting experiences with the Turkish police before escaping from Constantinople, and at the request of the Editor I have agreed to relate some of my adventures, which may, perhaps, interest the readers of THE NEAR EAST, and particularly those of my co-refugees to whom I am personally known.

The main Turkish wireless station is situated at Ok Meidan, an eminence overlooking the Golden Horn, and its aerial masts form conspicuous objects as seen from the streets of Pera. This station was erected a few years ago by the Marconi Company, and as I was then officially connected with the Admiralty I had permission to visit it at any time. On one occasion I passed a whole night there while the Marconi engineers carried out some experiments and explained to me the mysteries of wireless telegraphy. The result of this was that I took up the subject as a most interesting study, and set up an experimental station at the house in which I lived in Pera. The instruments, with the exception of the telephone receiver, were of my own construction, and the whole original installation only involved an outlay of about one pound sterling for materials! Additions were afterwards made, and the instruments continued in use for over two years.

At that time there were no special regulations in Turkey as to the use of wireless telegraphy by private persons, and my experiments were not interfered with until October last year, shortly before Turkey joined in the present war, when the most drastic "laws" were introduced prohibiting the use of wireless. Then began my series of lively adventures with the police, which led to my escaping in haste to a healthier climate beyond the Turkish frontier. But before describing the last scenes of this drama, which narrowly escaped becoming a tragedy, I may relate some of my experiences while the installation was in full working order.

During the siege of Adrianople I used to hear the Ok Meidan station communicating at frequent intervals with that city, and I was told by the officer in charge that, although the Bulgarians had tried their utmost to "jam" these messages they never succeeded. Ok Meidan would change their wave-length at prearranged intervals, or would ostensibly call up one of the Turkish warships in the harbour while really transmitting a code message to the besieged army. Of course, it would have been hopeless for the Bulgarians at Adrianople to try to jam a message to a ship quite near the transmitting station; and in this way they were often prevented from interfering.

At nine o'clock every night Ok Meidan used to begin a long message to Adrianople. I was therefore somewhat surprised when one evening the Constantinople station remained silent. I at once surmised that the place had fallen. On meeting later on in the evening a high Turkish official whom I knew I casually remarked that I was sorrry to learn Adrianople had at last fallen. He looked astonished, and asked: "What do you know about it?" "Never mind," I continued, "is it true?" "Well," he said, "my information is secret, but if you give me your word of honour that you will not repeat what I tell you until to-morrow evening I will give you the information I have." On my giving him the necessary assurance he informed me that he had just read the official telegram announcing the fall a few hours previously, but that nothing would be allowed to appear in the newspapers until two days later. It was therefore rather amusing to read the numerous articles and telegrams in the next morning's papers declaring that Adrianople could hold out for two or three months longer.

At that time we had about twenty-five foreign warships in the Bosphorus, including the British ships Weymouth and Zealandia; and about 4,000 bluejackets had been landed from this fleet to protect the embassies and the Christians generally. At our own Embassy a wireless station had been established on the roof, and it kept in constant touch with the ships. Some of the British operators came to see my installation, and gave me many useful hints, but they were not permitted to send me any wireless messages. In the evening many of these warships sent wireless messages with their full power to various bases. The British communicated with Malta, the Russians with Sevastopol, the Italians with Spezzia or Coltano, and the Austrians with Pola. Sometimes several ships were transmitting at the same time, and there was then a regular pandemonium of sounds in my telephone receiver. It was not always possible to tune my apparatus so as to listen to one ship without interference from the others. A friend of mine used to refer to this playfully as the "Concert of Europe," but there was much more discord than harmony about the "music." The messages were, of course, in code or cipher, but occasionally the ships spoke with one another in plain or open language. The Turkish station rarely used code, and one could therefore overhear many interesting communications made to the fleet. Perhaps the Turks imagined that few, if any, foreigners knew the Turkish language and their adaptation of the Morse code sufficiently well to read their messages. I think, however, that the Russian warship could read these messages, because I remember that one evening the Turkish station issued an urgent communication to the fleet about the movements of Russian warships outside the Bosphorus. Immediately thereafter the Russian ship at Constantinople called up Sevastopol and sent a long message in cipher.

But perhaps my most interesting experience was in connection with the arrival of the Goeben and the Breslau at the Dardanelles after escaping the vigilance of the British Fleet.

About ten o'clock one evening I heard the s.s. Corcovado—a German Transatlantic liner, then taking

refuge at Constantinople—calling for "A.G.O." These I knew to be the call-letters of the Goeben, which was then supposed to be at Messina, and I was naturally much surprised. I could not hear what the Goeben said, but the Corcovado's message was in "open" German, and related to the despatch of skilled workmen to the Dardanelles to execute certain repairs. A short time afterwards the Corcovado sent out a call for "D.G.L.," which, on reference to the Marconi list of call-letters, I found to correspond with the General of the Deutsche Ost-Afrika Linie—another big German liner. The Corcovado sent a message in German to the effect that things were then quiet at Constantinople, and that they thought it would be quite safe to do what the General proposed. Then followed a long message in code. I guessed from these messages that the General was not far away, and that she would attempt to escape into the Dardanelles. Sure enough, she turned up at Constantinople two days later, having succeeded in stealing through the British Fleet after disguising herself as much as possible.

After the arrival of the Goeben the Turkish station used to call her up every evening and exchange cordial messages in the French language. Later on the Goeben's call-letters were changed, but it was easy enough to recognise the high, penetrating note of her "Telefunken" apparatus. Turkey was still supposed to be neutral, but the wireless conversations clearly indicated what was going to happen. One night Ok Meidan politely tapped out, "Cher monsieur, avez vous des dépêches pour l'ambassade d'allemagne?" which clearly indicated that Ok Meidan was working as if it were a German station. A few days later Ok Meidan, for the first time, sent out messages in German, and at a higher speed than usual, showing that a German operator had been installed.

It would take too long to narrate other interesting experiences in "tapping the ether" at Constantinople and I must now pass on to the final scenes. Before doing so, however, I wish it to be clearly understood that what I have related above happened *before* the use of wireless was prohibited by the Turkish authorities, and that other amateurs, as well as many foreign ships in the harbour, could also hear the same messages. There was, therefore, no "spying"—secret or otherwise—as the ether oscillations were then free to everyone who could detect them; and, of course, as soon as such experiments were prohibited, my installation was dismantled.

A German in my neighbourhood, who had observed my aerial wires, reported me to the police, with the suggestion, I understand, that I was a dangerous spy. Accordingly one evening I received a visit from the Chief of Police for the Pera district and another officer. The former was most polite, but the latter interpolated some insulting remarks as to the fate awaiting me. They told me that I was suspected of communicating with the British fleet outside the Dardanelles! I pointed out the absurdity of this, as I had no transmitting apparatus whatever, and it would have required a powerful dynamo to provide the necessary power for such a distance. I further explained that I was not an electrician, but a lawyer, and that I merely spelt out wireless messages for my own amusement. Besides, I referred them to a high official at the Admiralty, who would vouch for me. This seemed to satisfy them at the time, and the only thing they insisted on was the handing over of my apparatus. At first I refused to do this without our Consul's consent, but on being assured that if I did so I should not be troubled again by the police, I gave way. They said everything would be handed back at the end of the war. The interview was quite pleasant, and the Chief of the Pera Police hoped I would call and have a coffee with him the next time I passed his station.

A few days later a new and still more drastic "law" was published, to the effect that any person still found to possess wireless apparatus would be taken before the Court-Martial and hanged right away as a spy, while anyone giving information leading to the discovery of such apparatus would receive a reward of £T100 (about £90 sterling).

My kind neighbour, the German, or some other *schwein* seems to have put the police again on my track, with the result that I received a further visit—this time from a new Chief of Police, who had replaced my former polite visitor. He entered my room with a companion, quite unannounced, and declared that I was reported still to have wireless apparatus there or elsewhere. This, of course, I denied, and invited them to make a search at once. They did so with great thoroughness, mounting on to the roof and poking into every corner; but they found nothing. Thereupon the Chief of Police dictated to his assistant a formal declaration that no apparatus had been found in my possession. They informed me, however, that they would make further inquiries about me, as they were not yet satisfied.

I felt pretty certain that the next step would be my arrest, and as the Court-Martial apparently assumed the guilt of everyone brought before it, I made up my mind to leave Turkey at once, if that was possible.

Next day I obtained the necessary papers, and duly registered my name with the police of my quarter. Fortune seemed to favour me in many ways that day, and early the following morning I proceeded to the railway station in Stambul in order to take the train for Dedeagatch, in Bulgaria. On the previous day no one had been allowed to leave, but, fortunately, the American Ambassador, Mr. Morgenthau, had obtained an assurance from Enver Pasha that on this particular morning everyone provided with the necessary papers would be allowed to go.

At last I secured a seat in the crowded train. I was still by no means out of the wood, because a telegram might at any moment interrupt my flight. Police travelled in every carriage, and passports were examined frequently during the journey. At last, however, we approached the Bulgarian frontier, and one can imagine the sigh of relief with which I recognised the fact that we were no longer in the land of the Turk.

I had not left Constantinople a moment too soon, for I afterwards learned that a few hours after my departure the police had again appeared, to effect my arrest. They were told that I had "just gone out," and that I would, no doubt, shortly return; and as my books and other belongings still remained undisturbed in my rooms, I suppose the police had no idea that I was then *en route* for the frontier.

NAVAL LOSSES IN THE MEDITERRANEAN.

In a written reply to a question put by Mr. King, who asked what were the total naval casualties resulting from the operations in the Mediterranean since the outbreak of the war, Mr. Macnamara, Secretary to the Admiralty, states:—

Exclusive of the Royal Naval Division, the casualties for which were included in the figures given in the reply made by my right hon. friend the Under-Secretary of State for War on the 14th instant, the figures up to the 20th instant are as follows:—

	Officers.	Men.
Killed	54	859
Wounded	56	524
Missing	9	80
Total	119	1,463

THE PRESS ON THE NEAR EAST.

Turk and Armenian: An American View.

The Independent (New York) of October 18 begins a brief but vigorous article upon the Armenian massacres with the statement: "The most extensive, the most atrocious, of religious massacres which the world has seen for centuries is now being perpetrated in Turkey." After summarising the situation, the writer goes on to ask: "What can we of the United States, who have given so much money and so many devoted lives for the regeneration of Turkey, do in this fearful emergency?" His answer is:—

We cannot reach Turkey with army or navy. Mightier armies than ours are now attacking and defending her. Indeed, Turkey is not her own. The munitions defending Constantinople come from Germany. The Turkish army is led by German officers. Germany's will rules at the Porte. Are we, then, to say that Germany is responsible for these massacres? Surely, surely, not directly. She could not have desired them. But she has been busy in the war, and it has not occurred to the War Office to forbid or prevent them. . . .

We appeal to Christian Germany to forbid Turkey utterly to exterminate Christianity in her Empire. We call upon every organ of public opinion in this country to join in this appeal. The public conscience of the world may not be listened to in Constantinople, but it must be heard at Berlin.

But the doom of Turkey must be near at hand. The world has endured the intolerable Turk to the end. Her crime cries to Heaven for punishment. Avenge, O Lord, thy slaughtered saints!

In Mesopotamia.

Writing in the *Evening Standard* (October 23), Mr. A. Wyatt Tilby examines the progress which we have made towards Baghdad, and in referring to our gains in this field of operation he remarks:—

The logic of events is making the German dream of domination in Persia and the Persian Gulf into a mockery.

It must be our business to see that what is won by arms is not lost by treaty. Our army has done brilliantly in the Euphrates Valley, and some day that story will be told. The story of our diplomacy in the Near and Middle East is less pleasant; it must not be repeated.

The Offer of Cyprus.

"It is not the cession of Cyprus," says the writer of the editorial notes in the *World*, but the very fact that the proposal has been made, which surprises us:

Are the people of this country so decadent that even with the aid of our Empire we cannot fight our own battles? Are we to revert to the system of which every reader of Gibbon knows the Roman Empire in its decline saw only too much? They bought off the Barbarian, and they paid people to fight their battles for them. . . . Where are we going to stop? Are we going to give Gibraltar to Spain to secure the assistance of the Spanish army? The Orkneys and Shetlands to Norway to secure Norwegian goodwill? Japan would, no doubt, like Australia, and even quite possibly we could win over the Turk with the cession of India. There are plenty of candidates for Egypt. Let us, however, retain Ceylon, because posterity would like some memento of our once great Empire.

We should like to know the name of the member of the Cabinet who first suggested this idea. . . Was there no one who, while realising that it was perhaps a clever diplomatic move, could appreciate the obvious deduction which would be drawn, namely, that we prefer to have someone to fight for us rather than fight ourselves. It may be said we have no choice. If so, one is sorry for the Government that placed us in such an invidious position. But is it true? We do not for a moment believe it. We do not believe that the manhood of this country has sunk to such an extent that a Greek soldier is preferred to a British infantryman. . . .

After the war, if so disposed, we could have given Cyprus to Greece, with grace and with a measure of dignified justice. . . . but to do this now under the stress of emergency, when apparently we have to go hat in hand and ask for aid because we are either not able or not willing to send a sufficient force ourselves, must make every decent-minded citizen squirm.

Some More Opinions.

The following paragraphs which we quote from leading journals concerning the bribe which Greece refused speak for themselves, and need no comment.

The *Morning Post* (October 22), in a leading article, describes the value of the island, and says:—

Now we propose to give it away in order to bribe Greece to fulfil her plain obligations in her own interests. We do not like the transaction. It is a very bad precedent, and might well encourage other Powers to ask a price for their neutrality or their support. When the British Empire is reduced to selling part of itself for the military support of Greece things might be considered as in a bad way. . . .

We have always been in a position strong enough to secure the co-operation of Greece without any promises except at the cost of our enemies; but as that strength seems to be in nerveless and incompetent hands, it has been thrown away. Being strong, we have acted as if we were weak, and are naturally taken at our own valuation.

The *Times* begins its leading article with the paragraph we quote:—

No clearer proof could be given of the desire of the British Government to act up to its professions in regard to a Balkan settlement in accordance with the principle of nationality than the news of its offer to cede the island of Cyprus to Greece on condition that Greece fulfil her obligations towards Serbia under the Greco-Serbian Treaty.

Should the reported rejection of the British offer prove to be absolute, and should the Hellenic people acquiesce in it, the Government of Great Britain and the Allies will at least have the advantage of knowing exactly where they stand, and what decisions are imposed upon them by the circumstances.

The *Daily Chronicle*, in a leading article, says:—

The offer is a splendid one, and if the Greek nation allows the Zaïmis Government to reject it, the world will have to revise its view of the seriousness of Hellenic aspirations. In the life of peoples as of individuals there come moments when those who "make the great refusal" commit an irreparable act.

We have continually said, and still say, that if the Allies want to make or keep friends in the Balkans they must show not only friendship but power there.

The *Daily Telegraph* says:—

The sooner we all recognise that purely chivalrous motives are not predominant in Balkan politics to-day the better. The cession of Cyprus, however, to the State to which most of its inhabitants are related by race and history clearly involves no departure from the principles upon which we have taken our stand from the beginning.

The *Daily Graphic* thinks that

The British Government has done a perfectly just thing in offering Cyprus to Greece as the price of her adhesion to the Quadruple Alliance. We are now at war with Turkey, and as a consequence of the war we have formally annexed Cyprus to the British Crown. It is therefore ours to give away, and the most obvious claimant for its possession is Greece.

The *Evening Standard* (October 21) also devotes a leading article to the question.

We object to bribes, and especially to useless bribes; and unquestionably the offer of Cyprus is a bribe. The only thing that distinguishes it from German bribes is that Germany offers other people's property and we offer our own. The future may reveal another difference, of course. Germany does get something in return for her bribes, and in this case we might easily pay the price without obtaining delivery of the goods. If the Greek Government coolly refuses to carry out its bargain with Serbia, how can we be sure it will carry out another? . . .

We object to the whole spirit of the transaction. This is our affair, and we ought to act and speak as strong people who know their friends—and also their enemies—instead of going, cap in hand, to a Government that has not only proved false, but is incapable of anything but falsity.

The *Liverpool Daily Post* remarks:—

English diplomatists have a reputation for being unfortunate in their deals in real estate. There was that Heligoland bargain, without which this war could not possibly have been fought, and the original Cyprus deal does not encourage us to undertake a second venture.

Gallipoli.

Mr. Sidney Low, writing in the *Sunday Pictorial* (October 24) considers the present situation in the Balkans to be one of very great gravity. After a comprehensive survey of the probable situation which would result from the present operations of Germany and Bulgaria if they are successfully carried through, he concludes:—

I suggest, therefore, that the wisest course would be to divert to Serbia the Anglo-French divisions now locked up at the beaches of Gallipoli. In the latter region there is plainly a deadlock, which may endure for months. We have lost nearly a hundred thousand men, and we are still only gaining ground by inches. We may cling to these bloodstained strands and gullies all through the winter, and by the spring be little nearer our objective. Long before that time the fate of Constantinople will be decided on the mainland.

The abandonment of the abortive Dardanelles expedition may be a misfortune; but disaster in Serbia would be a catastrophe which might decide the whole issue of the war in favour of our enemies.

The Bulgarians and their Betrayer.

In its issue of October 15 *La Nation Tchèque* addresses an eloquent and powerful appeal to the Bulgarian people, whom it invites, in effect, to dissociate themselves from the action, purely self-interested, of their King. Of that ruler the writer says well:—

Quelque pauvre d'esprit que soit le souverain qui consent à devenir l'instrument de Guillaume II, il n'est pas possible qu'il n'aperçoive pas l'inanité réelle de ses espérances. En réalité, il conduit volontairement son pays à l'abîme. Affaibli physiquement et moralement, hanté par la terreur de la mort et la peur d'une justice divine qui, si elle était égale à ses fautes, serait singulièrement cruelle, il est dominé par une double

Digitized by Google

pensée; l'espoir de racheter son apostasie indirecte en favorisant la défaite de l'Orthodoxie, et le désir de se venger des Russes et des Serbes, à qui il attribue sans raison l'échec de ses plans fastueux. Allemand de goûts et de cœur, il n'a jamais eu aucune sympathie pour le peuple qu'il gouverne; en 1913, il l'a jeté, par la plus stupide des résolutions, dans une situation des plus difficiles et il lui a enlevé la gloire que lui avaient justement méritée le dévouement de ses fils et le génie d'un Radko Dmitrieff. Aujourd'hui, il le livre en pâture à l'ambition des Habsbourgs et le met à la remorque d'Enver-Pacha.

As to what befalls Ferdinand, the writer—like most men of honour—is quite indifferent. Nor does he pretend to think that there is any hope of converting the Coburger to honour:—

A quels sentiments essaierions-nous de nous adresser?—A son honneur?—Il nous traiterait de niais, et à juste titre.—A sa raison?—Il est aveuglé par la haine et la peur. Il ne nous reste qu'à l'abandonner à la Némésis qui l'attend. L'histoire byzantine connaît un empereur qui a mérité le surnom de Tueur de Bulgares. Ferdinand de Cobourg est plus ambitieux: le titre auquel il aspire est celui d'assassin de la Bulgarie.

But the Bulgarian people are invited to consider what gratitude they may expect from Austria and from Germany in the light of the past and the present. Let them, says the writer, reflect upon the condition of the Croats and Dalmatians, who have furnished the Dual Monarchy with its bravest and most faithful soldiers; upon the Serbs of the Banat, tricked and swindled; upon Sobieski, who saved Vienna from the Turks; upon their own recent history. And he goes on:—"Sur l'ordre d'un roi félon, d'un monarque étranger, combattront-ils contre les Orthodoxes qui, si longtemps les ont soutenus dans leurs souffrances et qui, sans compter, ont versé leur sang pour briser leurs chaînes? Le peuple bulgare a un ennemi, et il n'en a qu'un, c'est son roi. Qu'il secoue un joug indigne! Qu'il reprenne son rang au milieu des peuples slaves."

Articles to Note.

"Turkey Under Arms," by M. A. H., in the *Queen*, October 23.

"A House Divided: King and People in Bulgaria," by Percival Gibbon, in the *Daily Chronicle*, October 26.

"The Dardanelles from the Turkish Side," by Granville Fortescue, in the *World* (October 26).

"Elephant in the Sobat-Pibor District, Sudan," by G. H. K., in the *Field* (October 23).

"The Bulgarians," by Oliver Bainbridge, in the *Review of Reviews* (October).

"Cairo, 1915," by Stephen Graham, in *Country Life* (October 23).

Part 62 of "The Times History of the War" is the First Dardanelles Number. It contains a good map and many illustrations, and the letterpress is, of course, full of interest.

THROUGH ALBANIA TO SERBIA.

In the House of Lords on Tuesday, Lord St. Davids expressed his surprise that the Government should think that it was only possible to go to the help of Serbia through Greece. If that was so they could not have been very wide awake in the early stages of the war, when they ought to have taken every precaution. There was another way besides the way through Salonika—there should be a way through Durazzo. The route into Serbia from Durazzo was about the same distance as the route from Salonika, and the Government had had fifteen months during which they might have made necessary arrangements. There might have been a railway to the mountains, and in any case there might have been a good motor route. Plenty of sheds could have been built for military purposes at Durazzo. If the Government had made no preparations to protect the route through Albania to Serbia *via* Durazzo, they had not deserved well of the country.

Lord Curzon replying, said: "I am informed that the question of a road into Serbia from Durazzo, really almost impossible in the circumstances of the case, is one that has not escaped the attention of the Government."

The *Times'* Rome correspondent, wiring on Wednesday, reported that the question of an Allied expedition through Montenegro to Mitrovitza or through Albania to Prisrend is arousing a certain amount of discussion. In competent Balkan circles it is maintained that these routes are perfectly feasible for a moderate-sized expedition, and it is contended further that in Northern Serbia, owing to the nature of the country, the large numbers generally spoken of in conection with the Salonika expedition are unnecessary. The Albanian route along the line of the old Via Ignatia is practically impossible, even for field artillery, which would have to be sent by the longer route *via* Ipek or Novi Bazar. But here, too, the question of communications arises, for the new high roads which are under construction are not yet finished.

DIPLOMACY AND FORCE.

Tuesday's *Times* contained a long and interesting letter from Lord Cromer, under the heading of "Diplomacy and Force." The letter is largely concerned with the criticisms of this country's policy in the Near East, and with developments brought about by the fresh Austro-German attack on Serbia. In regard to the first of these points Lord Cromer writes:—

It has been freely stated that both the Foreign Office and its subordinate agents have shown great want of judgment in the conduct of Balkan affairs. It is not only possible, but highly probable, that mistakes may have been committed. I have no means for judging how far the charge of unskilfulness is justified. I conceive that most of the critics are in this respect no more favourably situated than myself. If, eventually, a full account of recent diplomatic transactions is laid before Parliament, the material on which to form an opinion will be available. Until this is done criticism must, to say the least, be based on a very imperfect knowledge of the facts. In the meanwhile, I may say that I greatly doubt whether the most skilful diplomacy would have materially altered the course of events. It is not unskilful diplomacy, but German military success against Russia, that has induced King Ferdinand to throw in his lot with Germany and King Constantine to ignore his treaty obligations to Serbia. Both of these rulers must have been to some extent influenced by their German connections. Both have been apparently waiting to see which was most likely to prove the winning side. Both have been sufficiently sure of their positions to ignore what are possibly the wishes and what are certainly the true interests of the people over whom they rule.

Regarding the German thrust in the Balkans, Lord Cromer writes:—

The Germans, having failed to accomplish all they wished, whether on the side of Russia or on that of France, are now endeavouring to carry out another portion of the programme laid down long before the war by Hasse and other Pan-Germanists, that is to say, they wish to establish a German Empire which will extend from the Persian Gulf to the Baltic. I doubt whether it is as yet fully realised in this country that recent events have, for the time being, entirely changed the character of the war. For the moment the importance of the European situation is diminished. The struggle has become more than ever one for supremacy in the East. Politicians of any of the Allied nations, and especially of Great Britain, who do not recognise that the centre of gravity of the war has been at least temporarily shifted will, I venture to think, be making a very great mistake.

The letter concludes with a word to the pessimists:—"In the meanwhile, as an antidote to excessive pessimism, it may be as well to remember that in the past the last word has generally remained with the nation which held the command of the sea and which was best able to bear the financial strain of war."

THE ARMENIAN MASSACRES.

On Monday evening a meeting was held in the Midland Hall, Manchester, in connection with the Manchester Armenian Relief Fund, at which Viscount Bryce, Mr. Aneurin Williams, M.P., and Bishop Welldon were the principal speakers.

Viscount Bryce said that great as had been the sufferings of Belgium, France, Poland, Serbia, and this country, he did not think there were any that could compare in magnitude and in all the circumstances of horror with those which had attended the massacres in Armenia. The Armenians were the most orderly part of the subjects of the Turks; they were well educated and accustomed to the refinements of civilisation as much as ourselves. The Turkish Government had made up its mind at the beginning of the war to destroy this whole people. There was no fanaticism about it; there had been no outbreaks of Moslem passion on the part of the people. The whole thing had come from the Government. The suggestion that the massacres were the result of actions by the Armenians themselves was absolutely baseless. It was an assault by the gang of unscrupulous ruffians who had got possession of the Turkish Empire.

Bishop Welldon said there was one Christian Power which could, if it would, put an end to those massacres. That Power was Germany. Among the many infamies gathering about that land nothing could be more dreadful before the Judgment Seat of God than that the German Empire was encouraging and enabling the Turkish Government to exterminate a Christian people. That was the charge he brought against Germany.

Dr. R. W. Seton-Watson delivered, on the Thursday of last week, the first of the course of addresses he is giving at King's College on the Balkan peoples. The lecture dealt chiefly with the geography of the Balkan peninsula and the distribution of its peoples. One interesting fact noted was that the villages in the Balkans usually lie off the main roads. The inhabitants have had the alternative of retiring to the mountains to starve or remaining along the main roads to be trampled beneath the feet of the armies that since the dawn of history have never ceased to march across the peninsula. Another fact was that the Jews of the Balkans did not come direct from Palestine. They are Sephardim Jews and came from Spain, seeking under the Turk a refuge from Christian persecution.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The outlook in the Sudan is far from being pessimistic. In point of fact, it seems that, if there is one corner of the British Empire which is continuing the even tenor of its way, in spite of the war, it is the Sudan. Irrigation is being pushed forward in a normal fashion, and certain necessary reforms, enumerated elsewhere, have been introduced. There has been a considerable increase in the demand for cattle to supply troops engaged at Gallipoli and in Egypt, as our Sudan Correspondent pointed out, and there is hope of extending the trade further. It is not improbable that the export of live stock, cattle and sheep, will exceed the value of any other exports from the Sudan, and this notwithstanding the fact that the prices for gum ruled high with a big output, whilst there has been an unprecedented export of grain to the Red Sea littoral. Thus what was expected to be a bad and difficult year has turned out extremely well for the natives, who have been able to place all the chief products of the country on the market at a good price.

***

While on the subject of the Sudan, it is curious to note that a trial is being made by the Government with South African coal for its railways. According to the *Financier*, a steamer laden with such coal has left Delagoa Bay for Port Sudan. Some change will, it appears, be necessary in the grates—the mode of firing being different, so the services of a South African railway locomotive inspector have been requisitioned for the purpose of supervising the necessary alterations. It is possible that, if the experiment succeeds, the use of South African coal may also be arranged on the Egyptian State Railways. Trials will accordingly be watched with great interest.

***

Some months ago I predicted that the Egyptian Delta Light Railways would greatly improve their traffic receipts as compared with those of the corresponding period (in periods of ten days) last year. I was not wrong. From the beginning of the war, and until the first anniversary of its commencement, the receipts of the Delta Light Railways decreased sensibly as compared with the corresponding pre-war period of 1913. But, as soon as the evil year—August, 1914-August, 1915—had passed, I predicted better results. From October 1 to October 10, 1914, the traffic receipts of the company amounted to £E4,093; from October 1 to October 10, 1915, they amounted to £E6,117, showing an increase of £E2,024, or more than 33⅓ per cent. This is most commendable, and we can be prepared, I think, for further valuable increases. Receipts are not likely, however, to come up to those of October, 1913, when they varied between £E8,000 and £E10,000 per period of ten days, but, nevertheless, they are making a bold bid.

***

I am pleased to see that H.M. Vice-Consul at Alexandria, in his recent report, pays a glowing tribute to the British Chamber of Commerce of Egypt. He states that the Chamber now finds itself in a satisfactory financial position, and has achieved some good work during the year. "They have done their best to obtain greater protection to creditors in the mixed tribunals and a revision of the bankruptcy law. They have also been in communication with the Ministry of Finance with regard to the conditions ruling Government tenders, and the Ministry has seen its way to approving of several modifications desired by British manufacturers. Useful work has also been done in connection with the revision of the code of procedure in Egyptian courts, the use of misleading marks and trade descriptions, the increased duty on tobacco, the granting of preferential facilities to traders by the State railways, trading with enemy subjects, the reduced telegraphic facilities, the export trade in eggs, and the fraudulent imitation of liquors in Egypt." The record for 1914 is thus proved to be an exceptional one. May the Chamber be productive of still greater achievements, in favour of British trade, during the current financial year!

***

The fall of Prahova, and the defeat of the Serbs in the north-eastern corner of Serbia, is of more than usual interest, as it chiefly affects the Nish-Danube section of the Adriatic Railway. It will be remembered that our Special Correspondent in the Balkans in May, 1914, gave the following description of this new line:—"The sections and the state of work are at present as follows: The line from Prahova to Zaichar is being built by a French firm, and is to be finished by the end of this month; the Zaichar-Kniashevaz-Nish section is being built by the Serbian State, and is to be completed in two years." Evidently work on this section has been hurried, because our Nish correspondent, writing on October 7, said that the whole line from Nish to Prahova was likely to be in working order towards the beginning or middle of November, the last part of the work, the tunnel at Gremada, having been pierced. It is to be regretted that the enemy have arrived in time to open and exploit the line to the detriment of our brave Allies, and, further, to make use of the harbour works at Prahova.

***

Greece continues to be an enigma, the Royal oracle at Athens not having spoken—as the people wish him to speak. In the meantime, Greece is buying Cardiff coal in Wales, and we, it would appear, are selling it to her, and she is also making arrangements to buy grain in Bulgaria, if the following Reuter message from Amsterdam (October 26) is correct:—"According to a Sofia telegram from the Official Bulgarian News Agency, the Greek Government has instructed a Commission to proceed to Sofia to buy grain for the Government's account, and to discuss the question of its dispatch and delivery. The members of the Commission, it is added, have already arrived at Sofia." There is nothing, after all, like keeping up business appearances, even if treaties, unlike trade agreements, are scraps of paper.

***

Last week I criticised the circular issued by the directors of the Anglo-Egyptian oilfields, suggesting a possible (or eventual) call for more capital; incidentally I criticised the management of the company, and stated that the results of the negotiations between the directors and the Egyptian Government (everything seems to depend on these negotiations) would be eagerly awaited. In the meantime the *Financier* publishes the following apt remarks:—"Early last month" (it says) "when an interesting demand was reported for the 'B' shares and the price was advanced from 3s. 6d. to 6s. 3d., we deemed it pertinent to inquire where this interesting demand had its source. We were sceptical of the very moderate improvement in the production being sufficient to attract much attention in view of the statements that had been made in the report issued in June last regarding the experience in respect of both the Gemsah and Hurgada wells. We pointed out that the total production for 1914 was 101,911 tons, and forecasted that the current year would account for only about 30,000 tons, and we see no reason for revising this estimate. Expenses, it was apparent, could not show any reduction when it was borne in mind that an extension of the company's concessions was deemed necessary, and considerable further exploitation, boring and development were needful for the undertaking to be put on a possible permanent paying basis. It is not clear, from what has now been published, that hopes run high or that prospects will justify the directors in inviting the shareholders to provide further capital. The additional capital required, it is stated, might be £50,000 to £100,000, representing a contribution of 1s. to 2s. per share—a rather wide estimate."

***

I referred some weeks ago to the questionable action of Mr. Ford, head of the American Ford Motor Car Company, which has flooded the Near East and England with its cars. Mr. Ford, it appears, condemned the Allied Loan floated in America, and threatened bankers engaged in it with his dire wrath, forgetting that his millions have been largely accumulated in England, France, Russia, Belgium, Italy, and Serbia. Mr. Ford's action has not met with favour in his own native country. Mr. James Couzens has left the Ford Motor Company, of which he was one of the managing partners, as a protest against the action of his chief in denouncing the Anglo-French loan. Another car magnate, Mr. Charles W. Nash, president of the General Motors Company, has joined in the denunciation of Mr. Ford, and ridicules that gentleman's inconsistency in howling for peace while at the same time making millions of dollars profit out of the French and British Governments by manufacturing war cars for them at the Ford Company's Canadian works. As I said before, the action of Mr. Henry Ford must not be forgotten.

***

In connection with the notice published recently in THE NEAR EAST of the tenders invited by the Egyptian Postal Administration for the supply of general stores, we have received a copy of the specification, which can be seen at THE NEAR EAST offices by firms interested. The closing date for offers is December 1. The stores required include:—Mail bags, boots, fuel, ready-made furniture, letter-boxes and accessories, hardware articles, electric lamps and accessories, electric fans, enamelled plates, safes, stamps and punches, special postal stationery, telltale watch requisites, lead seals, rolling-stock and accessories, flags, disinfectants, etc., etc.

Alexandria Consular Report.

H.M. Vice-Consul at Alexandria publishes his annual report for 1914. The following are extracts from the report :—

During 1914 the total value of Egypt's imports was £E21,724,606, compared with £E27,865,195 in 1913 and £E25,907,759 in 1912. The value of exports was £E24,091,796 in 1914, as compared with £E31,662,065 in 1913, and £E34,574,321 in 1912.

1914 was an altogether abnormal year. A good cotton crop had been followed by a more prosperous period of trade than Egypt had experienced during the past few years. This is shown by the Customs returns, which for the first seven months displayed an increase both in exports and imports, the former showing an increase of £E1,789,993 over 1913 and the latter an increase of £E1,230,496. After the outbreak of war the extraordinary state of the world's finances and the doubts about the future had so deleterious an effect upon the volume of trade that the last five months of the year witnessed a shrinkage of imports to the value of over £E7,000,000, while exports show a decrease to the extent of more than £E9,000,000.

The only satisfactory point with regard to these figures from a British point of view was that the United Kingdom's share of exports and imports for these five months rose to 55.9 and 37.4 per cent. of the whole—a result largely due to the cessation of German and Austro-Hungarian competition.

Thanks to the economies effected by the Egyptian Government and the assistance rendered by the home Government's guarantee, confidence is being gradually restored, but it is impossible to anticipate a return to normal conditions for a long time to come.

Cotton Crop.

The cotton crop for the season 1914-15 is estimated at from 6,500,000 to 7,000,000 cantars as compared with 7,500,000 cantars for the season 1913-14—a considerably higher figure than was for long deemed possible. The decrease is almost entirely attributable to the damage effected by the attacks of ordinary boll and pink worms, which in some districts ruined two-thirds of the crop. Unless serious steps are taken to combat the evil, the outlook is threatening. A step in the right direction has probably been taken by a new law which decrees that all bolls still adhering to cotton plants must be removed and burned at least fifteen days before the date fixed in each district for the removal of the roots from the ground.

The quality of the crop suffered in most varieties, and the damage done would probably have been greater but for the fact that there had been an increased cultivation of the Sakellarides cotton, which matures early and escapes the worm to a greater extent than other varieties. It is unusually difficult to estimate the value to the grower of the cotton crop.

On the outbreak of European hostilities in August practically all transactions in the cotton market came to an abrupt termination for about six weeks. Some growers then sold a part of their crops at very low prices, but at this juncture the Finance Ministry obtained a guarantee of a sum up to £E5,000,000 which it might be necessary to borrow, and made arrangements with the National Bank of Egypt for the latter to make advances on favourable terms against cotton. They further introduced a scheme by which the Government were prepared to buy through the medium of four Alexandria cotton firms the crops of small cultivators.

These measures did very much to steady the market by giving a feeling of confidence. At the same time the demand for cotton greatly improved, Italy and Switzerland making extensive purchases. By the end of October and beginning of November the low prices tempted buyers in the United Kingdom, and America, too, began to purchase considerable quantities.

The result has been that the crop has moved off far more speedily than anyone ventured to anticipate. Prices have advanced, but, seeing that a considerable amount of cotton was sold early at poor prices, the present crop has been estimated as worth about £E18,000,000 or £E19,000,000 to the cultivators as compared with £E32,000,000 in the season 1913-14.

Irrigation.

Owing to the lowness of the Nile flood in 1913 large areas remained unwatered in 1914, causing a loss to revenue of more than £E500,000 in taxes, rents, etc. The rice area was much limited, and in some districts its cultivation was prohibited, while special measures had to be introduced to economize the water supply. The summer flood of 1914 was good, and there is now a sufficient supply to admit of the cultivation of rice, especially as the area devoted to cotton has now been diminished by the restrictions referred to above, while the low prices of cotton at the beginning of the season are likely to induce the farmer to revert to rice in cases where cotton had in recent years been substituted.

The construction of a dam on the White Nile has begun to supplement the supply from the Assouan dam and render it possible to transform lands now under flood to soil under perennial irrigation and facilitate the reclamation of salt lands. At the present time there is not always sufficient water for the irrigation of these lands.

The length of drains completed in Lower Egypt in 1914 as part of the big drainage scheme was considerable, but since the beginning of the war considerations of economy have necessitated the reduction and, in some cases, complete cessation of this work.

Agricultural Machinery.

Before the war Germany and Austria-Hungary supplied goods of agricultural utility and more particularly coal engines, which the fellah prefers to oil engines. For these engines cotton stalks are being largely used as fuel owing to the present high price of coal. It is possible that British manufacturers might do more in this trade, but it must not be forgotten that at the present time the whole of the Egyptian community is refraining, as far as possible, from any purchases that can possibly be avoided.

Finance.

One of the chief features in recent years which has prevented the country from recovering completely from the great financial crisis is the extent to which private indebtedness accumulated. It has long ago been demonstrated that the true remedy for this was retrenchment and abstention from fresh borrowing, and indications were not lacking that this policy was being adopted, but, in face of the situation created by the war, large reductions in expenditure are still necessary.

There are two hopeful signs on the other side. The first is the large increase of productivity, owing to the Government irrigation works and individual improvements. The second is the accumulation of hoarded gold in the country, which is estimated at about £20,000,000.

In Egypt debtors are greatly favoured by the existing state of the law, and they have taken full advantage of the moratorium to postpone their obligations. With reformed courts it is hoped that it will be possible to bring an end to this state of affairs.

Government Measures.

The crisis that occurred on the outbreak of war was met by the Government by emergency measures. A large addition was made to the currency by the issue of bank notes to the value of £6,000,000, while the gold reserve at the end of March reached 70 per cent. of the issue. At the critical moment Egyptian Treasury bills to the value of £2,350,000 were issued, but have been gradually withdrawn and replaced by gold in London. The use of paper currency has been accepted without difficulty, and may enable financiers in future to employ it to a larger extent than formerly, even in normal times. The proclamation of a moratorium enabled the banks, the best of which made little use of it in their own transactions, to tide over the critical period without much difficulty.

Revenues.

The serious fall in Government revenues, which is estimated at £2,500,000, is to be met by new taxation which cannot yet be specified, curtailment of new works and recourse to the reserve fund. There may possibly be a loan for the continuation of public works. The deficit for the financial year 1914-15 is £1,700,000, while the reserve fund on March 31, 1915, stood at about £3,400,000, or, allowing for the universal depreciation of securities, to about £2,600,000.

Alexandria Water Company.

Since reporting at this period last year, nothing of very great interest has happened; in fact, owing to the war and general lowering of house rents the balance-sheet will be affected somewhat by the consequent lowering of some of the water rates. There has been a large falling off in the water consumption of all Government and municipal departments also in the port where matters have practically been at a standstill since August. The decrease in the amount of water pumped is correspondingly marked; at the end of December the quantity was about 2,000,000 tons less than the previous year. Regarding the high-pressure installation at Minet-Bassal, there have been considerable extensions in the number of sprinklers installed, and several incipient cotton fires have been automatically extinguished by the sprinklers. One fire in the Customs enclosure last October took no less than 12,000 tons of water from the high-pressure installation in forty-five hours in addition to the water taken from the sea by the fire brigade.

Alexandria Municipality.

The outbreak of the war in August has affected very considerably the work done by the administration. Expenditure has to be cut down and the strictest economy exercised.

The construction of the Kaid Bey branch of the new breakwater is going on, about half has been completed.

The new commodious central fire station at Kom-el-Dick was completed in December.

Great progress has been made with the new Alexandria-Aboukir main road; about seven kiloms. inside the town limits will be completed in the spring of 1915 and another three and a-half kiloms. belonging to Behera province will be ready about the same time. The length of the Alexandria-Cairo road within the municipal limits was completed. Both these roads should become important arteries and facilitate greatly access to the surrounding agricultural country.

The total value of imports into Egypt and Alexandria from various parts of the British Empire during 1914 was as follows :—

	All Egypt. £E.		Alexandria £E.
British India	888,725	..	324,469
Australia & New Zealand	329,410	..	39,189
Far East possessions ..	58,493	..	8,497
African possessions	6,287	..	3

EXPORT NOTICE.

The Cunard Steamship Co., Limited, the Ellerman Lines, Limited, and Messrs. John Glynn and Son have issued the following important notice, dated October 21, viz. :—

"The Government have brought under our notice the necessity of our manifests being in complete accord with the bills of lading, and as shippers are frequently very late in rendering to us the necessary documents, which we may say must now go in the steamer's box before she sails, we request you to see that your bills of lading are handed to us two days prior to the steamer's sailing. It is also necessary if the goods are in transit to Switzerland or elsewhere that this should be clearly specified on the bills of lading. In the event of your not complying with our wishes in this respect, we give you notice that we cannot be held responsible for any delays or subsequent charges that may arise in consequence through the necessary papers not being supplied to us in time.

Trade Notes.

Egypt.

H.M. Consul at Cairo reports that tenders are invited by the Egyptian Coast Guard Administration for the supply and delivery of the following stores required during the year 1916 :—(1) 4,030 metric tons of large, first class, Cardiff coal and 40 tons of best quality Newcastle coal. (2) 170 metric tons of petroleum. (3) 11 metric tons of benzine. Copies of the specifications and conditions of tender may be obtained from the Director-General, Coast Guard Administration, Cairo, by whom sealed tenders will be received up to noon on December 1. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent., of the value of the offer must accompany each tender. The tenderer must be a person residing in Egypt, or must have a representative in that country, and must give in his offer an address in Egypt at which notices may be served upon him. A copy of each of the specifications and conditions of tender may be consulted by United Kingdom exporters of the materials mentioned at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

H.M. Consul at Cairo reports that tenders are invited by the Egyptian War Office, for the supply and delivery of 10 tons of candles, suitable for storage and use in a tropical climate. Sealed tenders, marked "Tender for the supply of Candles," will be received by the Financial Secretary, War Office, Cairo, up to 11 a.m. on November 2. A sample of 2 lbs. of the candles (in the manufacturer's original wrapping) which it is proposed to supply must accompany each tender. A preliminary deposit of £E10, or a bank guarantee of 10 per cent. of the amount of the offer, is required to qualify any tender. Copies of the specification and form of tender may be obtained from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. A copy of the specification and conditions of tender may be inspected by United Kingdom candle manufacturers at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

For particulars concerning the tenders invited by the Egyptian Postal Administration, see page 733.

Sudan.

A correspondent of the *Sudan Times* at Omdurman suggests the enactment of a new law or regulation, imposing a small tax or fee for the carrying of knives, daggers, spears, and other weapons of a similar nature. The tax may be considered as a modification of the firearm tax. The new regulation would have the double advantage of bringing in a more or less considerable income to the Government as well as limiting the number of persons who go about the streets carrying daggers and similar weapons. The principal motive for the suggestion is not merely financial but for the sake of public security. The free use of arms by all classes of the population is often the cause of much harm. Many an altercation which in Egypt would have culminated in a few blows or only violent curses, in the Sudan has a tragic end. The suggestion is a good one; though how to devise a way for ensuring the observance of any regulation enacted on this line, is not as easy as one might at first suppose.

Morocco.

H.M. Consul-General at Casablanca has forwarded a copy of the *Bulletin Officiel* of the Cherifian Government containing two Dahirs dated August 28, 1915, decreeing the above-mentioned reorganisation and accompanied by an "Exposé des Motifs" by the Resident-General. In this exposition of the motives prompting the reorganisation, the Resident-General points out that in view of the increasing development of European interests in Morocco and the still greater progress likely to arise in consequence of the Casablanca Exhibition, it is essential to co-ordinate the work of these Departments. The name of the new Department will be the "Direction de l'Agriculture, du Commerce et de la Colonisation de l'Empire Chérifian."

Greece.

H.M. Consul at Piræus reports that tenders are invited by the Greek Ministries of Interior, of Finances and of Communications, for the construction, maintenance and working, of the undertakings necessary for (1) the supply of water to Athens, Piræus, and their suburbs, by using the springs at Stymphalia or Melas; and (2) for the laying of a distributing system in Athens, Piræus and Neon Phalerum for water supply and sanitation. The estimated value of the contract is 56,000,000 drachmae (about £2,240,000). The specifications, plans, etc., may be consulted at the "Bureaux du service spécial pour l'alimentation d'eau et des égouts," Athens, where also copies may be made at the tenderer's expense. Sealed tenders will be received at the Ministry of Communications, Athens, up to 11 a.m. on December 17/30. A certificate of the deposit of 500,000 drachmae (about £20,000) with the Greek Treasury or the Greek National Bank is required to qualify any tender. A copy of the Greek Government Gazette of September 11/24, containing the conditions of tender (in French), may be consulted by United Kingdom contractors at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

With reference to the construction of the railway linking up the Piræus-Athens-Larissa line with the Oriental Railway, H.M. Consul at Piræus has forwarded a copy of the Greek Government Gazette (No. 316) of September 14/27, containing the text of an agreement, in the French language, made between the Greek Government and the United States Steel Products Company of New Jersey, U.S.A., concerning the supply of material for the above-mentioned railway which is being constructed from Papapouli to Topsin. This material includes rails, fishplates, fish bolts and washers for same, metal sleepers and chairs, bolts and washers for same. United Kingdom manufacturers of railway material may consult the above-mentioned Gazette at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

COAL FOR GREECE.

On the Cardiff Coal Exchange on Friday confirmation was forthcoming of a report that Greece was in the market for 50,000 tons of coal. It is understood that the Hellenic Government is negotiating through Greek merchants. It is proposed that the coal should be shipped in Greek vessels requisitioned at mobilisation. The circumstance is regarded as indicating developments in Greece favourable to the Entente.

Commenting on the above, the *Liverpool Journal of Commerce* says :—

The statement that the Greek Government were inquiring for 50,000 tons of Welsh coal has been construed in the lay Press as significant. It is not consistent with the policy of a well-informed nation like Greece to suddenly turn round at the eleventh hour for the wherewithal to move her Navy. Greece has been assembling supplies of American and British coals since the outbreak of war. In August of last year she actually imported over 14,000 tons of American coals from Hampton Roads, and since that date has been assembling supplies with that haste that characterises nations that might be suddenly embroiled in war. It was vitally essential to assemble grain and coal. Especially was this the case with coal, for Greece has had considerable difficulty in obtaining supplies of Welsh coals. Nevertheless it is known that large supplies of Welsh coal have been assembled at Piraeus. Permission of the authorities of course had to be obtained. It is not at all unlikely that the Greek Government will endeavour to obtain large quantities of Welsh coal, and permission to load will naturally only be given when our Government are assured that Greece will throw in her lot with those of the Allies. The present time is a most propitious one to obtain Welsh coals, inasmuch as supplies are abundant, and values have dropped to the extent of £1 per ton compared with the market prices a few months ago.

ALEXANDRIA PRIZE COURT.

S.S. "Lutzow" (ex Cargo).

On September 18, Judge Grain delivered the following judgment in the Alexandria Prize Court, concerning the cargo of the s.s. Lutzow.

Judgment.

The goods in this matter, three cases of woollen goods, were shipped by H. Vogelsang and Company, a German firm at Hamburg, on board the s.s. Lutzow for Tokio, via Yokohama, on or about July 13, 1914. The consignees were Messrs. Kaneko and Company, of Tokio, and the contract one of documents against acceptance. Messrs. Vogelsang and Company drew on the Deutsche Bank (London Agency) for the account of Messrs. Kaneko and Company, and, in the ordinary course, had not war broken out, the draft would have been accepted by the Deutsche Bank on or about August 1, 1914.

What did happen I had better state in the words of the Deutsche Bank themselves contained in a letter put in and dated July 15, 1915 :—

The draft for £130 10s. 5d. "came into our hands on August 1, 1914. Draft and documents were examined in the usual way, and when found in order the draft was marked for acceptance, *i.e.*, initialled for acceptance by the official who is responsible for this class of transaction. The acceptance formula was placed on the bill and signed by two officials on the same day, August 1. Under ordinary circumstances this acceptance would have been completed by delivery to the holders on the following working day, Tuesday, August 4. Owing to the fact, however, that the days following August 3 had been declared bank holidays, and that our bank had been closed by order of the British Government when war had broken out, delivery of the draft could not take place. Shortly afterwards we were granted a license by H.M. Government for certain transactions, but we were not allowed to complete the acceptance of any drafts which had been presented on August 1.

"We therefore had to cancel the acceptance formula and the signatures on the bills, but have no record of when this was done." And in another letter they say, "we were not permitted to complete the acceptance by handing over the bill to the holders."

It also appears from the correspondence that the Deutsche Bank somewhat foolishly parted with all the documents before the acceptances were complete, viz., on August 1, 1914, when they merely marked the bill for acceptance, on which date they forwarded all the documents to the Sumitomo Bank, who, in due course, remitted to the Deutsche Bank the necessary cover.

Mr. Booth urges that the property in these goods passed to the consignees Messrs. Kaneko and Company, when the bill was marked on the face of it as accepted. The bill is produced and bears on the face of it a stamp: "Accepted August 1, 1914. at the National Provincial Bank of England, Deutsche Bank (Berlin), London Agency, by sub-manager." This had been signed by two persons, but later the signatures and the stamped words have all been struck out in pen and ink.

I cannot accept Mr. Booth's view, because before the property can pass the acceptance must be completed. And the liability of the acceptor, though irrevocable when complete, and if this acceptance had been complete, would have passed the property. Nevertheless, it is not complete by the mere writing of a name, but upon the subsequent delivery of the bill, or upon communication to or according to the directions of the person entitled to the bill, that it has been accepted. In this particular case all had happened was that a name had been written on the bill, and as the claimants themselves say in one of their letters, "we were not permitted to complete the acceptance by handing over the bill to the holders," and so, as they state, they struck out and cancelled the stamped formula of acceptances and the signatures already stamped and written on the face of the bill.

Therefore, no complete acceptance having taken place, the property in the goods has not passed to the consignees, but remains in the consignors, the enemy firm of Vogelsang and Company, of Hamburg, and the order of the Court will be one for confiscation and sale.

Sudan Irrigation.

In connection with the recent alteration in the schedule attached to the Sudan Loan Act of 1913 (referred to in THE NEAR EAST of October 15), and bearing on irrigation works in the Sudan, the *Engineer* gives the following survey of reforms, etc., introduced in the Sudan Irrigation Department:—

Administrative Reforms.

Anterior to the beginning of 1914, control was centred in an Inspector-General, whose headquarters were at Khartoum, with outlying assistants—four in number—resident at the towns of Dongola, in the province of that name; Tokar, Red Sea Province; Malakal, Upper Nile Province; and Wad Medani, Blue Nile Province. Upon all important questions the Inspector-General consulted the Under-Secretary of State for Public Works in Egypt, and was held directly responsible under the latter's control. With the clearing up of a number of problems connected with the water supply of Egypt, as affected by the rivers in the Sudan, an Inspector-General at Khartoum became no longer necessary, and the inspectors at that centre—Khartoum for the White Nile Province, Sennar for the Blue Nile Province, Dongola and Tokar for the districts of Tokar and Kassala—were each separately made responsible to the Under-Secretary, who, in addition to his other duties, undertook to advise the Governor-General on irrigation matters; at the same time these inspectors acted upon instruction given to them by the Governors of the various provinces in which they were serving.

Work in the Gezira.

Notwithstanding the serious interruption to most of the carefully laid plans of the Government by the outbreak of war in Europe, and the extreme difficulty experienced in securing the necessary funds and the adequate amount of official supervision, no small amount of progress was made last year in connection with irrigation matters in the Anglo-Egyptian Sudan. On the Blue Nile—long before the trouble in Europe broke out or even threatened—for instance, the Gezira scheme was inaugurated by Lord Kitchener and the Governor-General, who visited the proposed site of the new barrage at Makwar, in the Sennar Province, and formally authorised its construction. Work was immediately put in hand, and a contract entered into for the construction of the main canal leading to the Gezira; this canal is designed to carry water for irrigating 200,000 feddans, roughly 200,000 acres. At the same time 1,000 convicts were sent from Egypt to assist in the construction works. Houses were built at Makwar, and all other arrangements made for a start with actual construction during the approaching winter. Then came the trouble in Europe, which, as indicated, put a practical stoppage to everything, the exception being in connection with the main canal, the contract for which had already been granted and entered upon. The delay now experienced in relation to the completion of the whole undertaking is of very great moment to the country, and is having, as may be understood, a serious effect upon its economic development; but no harm has been, or is being, done to the scheme itself, the delay sustained in the execution of which being but little injurious owing to the fact that the work had not advanced sufficiently to make any material difference to its successful completion at a somewhat later date. None the less the scheme is one which at the earliest possible moment should be urged forward to a speedy conclusion, in order to obtain full advantage from the money already expended upon it, entirely apart from its urgency as a necessary development scheme.

Staff.

The staff engaged for the Gezira canalisation scheme—in connection with the Egyptian Department represented in the Sudan—is divided into three sections, the Gezira scheme, the White Nile, and the Dongola. The first consists of a Director-General, Mr. L. N. Cooper, with headquarters at Alexandria, Egypt; an Inspector, Mr. R. J. Nisbet, also stationed at Alexandria; three Directors of Works, Messrs. E. O. F. Fulford, F. Newhouse, and F. L. F. Kelty, all of whom are stationed at Makwar; and four Assistant Directors, Messrs. R. H. Willan, R. G. Pritchard, J. A. Grant, and P. T. Rawlings, likewise engaged on the Makwar section. The White Nile division is in the hands of Mr. E. W. Buckley, Inspector; Mr. E. M. Tabor, Director of Works; Mr. M. McGillewie, and Mr. E. S. Waller, Assistant Director of Works. In the Dongola division are found Mr. G. Parker, Inspector; and Messrs. J. H. Greathead, R. B. Angus, and T. E. Hack as Assistant Director of Works. Of the seventeen officials mentioned, no fewer than ten were away on leave last month (September).

At the beginning of December Mr. Buckley, who is at present in Italy, is expected to arrive in the Sudan accompanied by a number of engineers to study further the projects, especially in connection with the Abyssinia border. It is estimated that this special mission will be occupied at least five months in gathering the necessary data and in preparing a report. Thereafter it is understood that Mr. E. W. Buckley will take up his position permanently in the Sudan as a servant of the Administration.

Kassala and Tokar.

In connection with other irrigation schemes in the Sudan, two of main importance are those destined to assist in the agricultural development of Kassala and Tokar; these will be proceeded with as soon as the necessary money can be procured. On the White Nile the main scheme considered is the construction of a dam to assist in the flood protection of, and the storing of summer water for, Egypt. In the Sudd region experimental work carried out by the Sudan dredging fleet has been brought to a temporary conclusion. Meanwhile some valuable knowledge has been obtained through these experiments of the conditions regulating the summer supply in the White Nile.

It is also intended to devote a substantial sum at the first opportunity to ameliorate further the existing conditions in the province of Dongola, in order to rescue the inhabitants from the state of extreme poverty into which they have, through no fault of their own, fallen. For the last three years the greater part of the province has been afflicted with a series of low flood Niles, with the result that the basin lands have been unable to obtain water at a level sufficiently high to flow into the feeder canals; so much has this been the case that the people have been face to face with famine.

ENGINEERING NOTES.

Dry Sprayers.

In previous notes we alluded to certain modern types of liquid spraying machines, and pointed out their applicability to vineyard, orchard, and garden work, as required by the agriculturists and farmers in the Near East. It has since been hinted by proprietors out there that modern dry sprayers are just as much wanted as liquid sprayers. Since the introduction of sulphate of copper and other liquids for spraying purposes several types of liquid sprayers have been introduced with more or less success; but for dry spraying the archaic and home-made sprayer is still in general use, and we are asked what kind of mechanical dry sprayers of English construction can be recommended. The question is not easily answered without particulars as to the kind of spraying for which the machine is required. A new type of dry sprayer, however, which we have seen at work seems to be suitable for general work, and can be recommended to small holders in the Near East. The machine is mounted on light but strongly made iron wheels, and can be fitted either with two or five nozzles, the former for the use of gardeners and small holders, and the latter for spraying as many rows of plants as the number of nozzles. The object of the designer of this sprayer was to produce a machine which would give ample blast without the use of a fan and bring its draught within the capacity of a small pony. Instead of a fan the makers use two cylinders and pistons, which run at a much lower speed than a fan, these giving a continuous and powerful blast and taking less power to drive. An agitator is provided, and the feed is so arranged that any quantity of powder can be sprayed. Roller bearings are used throughout, and the price of these machines is within the means of the average farmer in the East. There are, of course, several other types of such machines in the market, of various sizes, just as good, if not better than the above, the makers of which will find the Near East an excellent market if they approach the buyers, or, at least, inform them what they do and where to find them.

Motor Fuel Supplies.

Writing on the increased prices of petrol, *The Light Car* says:—"It is not very profitable to bemoan the rising cost of motoring. Lamentations achieve nothing, and the business in hand is to cast around for a remedy. At the present moment nothing can be achieved, but the eyes of the motoring community can be opened to the fact that after peace is declared there is no longer any necessity for us to rely on petrol magnates and oil trusts for the supply of our fuel. The British Empire is fully capable of producing all the fuel it needs, given intelligent and sympathetic State support instead of repression and restriction. Across Equatorial Africa are already spread thousands of acres of maize crops, capable of being developed into countless millions of acres if taken in hand by businesslike Governments and companies. From this maize all the alcohol necessary to supply the Empire can be produced, and when mixed in a 50 per cent. proportion with British benzole a spirit almost ideal for use in high-speed high-combustion engines is realizable."

Length of Egyptian Rails.

French and Egyptian railways lay rails 39 ft. 4 ins. long, says *Page's Weekly*, but 59 ft. rails are coming into common use. In England a usual length is now 45 ft. One or two railways use 48 ft. rails, while the London and North-Western uses 60 ft. rails. The Northern Railway of France is laying rails 78 ft. 9 in. long. In India and Australia, 36 ft. and 40 ft. rails are being laid in considerable quantities. In the United States long rails have not proved very successful, possibly because the usual type of permanent way is not so favourable to the use of long rails as of chair-supported rails, in conjunction with the wider extremes of temperature to be taken into account. Several lines have, it is stated, ordered considerable quantities of rails up to 60 ft. in length. In some instances these proved satisfactory, but with the poor roadbed conditions and lighter ballast of that time the 60 ft. rails were difficult to maintain, and most of them have since been shortened.

Near East Markets.

THE SITUATION IN TURKEY.

(From Our Own Correspondent.)

Athens, October 13.

The export trade from Turkey practically came to an end with the outbreak of hostilities. For a short time it was possible to make small shipments from Constantinople through Dedeagatch, and from Smyrna through Vurla, but both these outlets have for some time ceased to be available. Consequently for some months past there has been practically no trade done in Constantinople.

Mohair.

However, in the spring, Germany suddenly appeared as a buyer of mohair, and the stocks in Constantinople have gradually been bought up, until at the present time only 23,000 bales, mostly of inferior qualities, remain. Prices went up by leaps and bounds, and owing to the practical impossibility of bringing any of the new clip down from the interior through want of transport, as much as twenty-five piasters per oke was recently being asked for what little mohair of good quality was available in Constantinople. At the present time the only means of forwarding the article to Germany appears to be by parcels post, and the only way of bringing the wool down from the interior of Asia Minor is by the same process, in very small quantities. In the interior of Asia Minor the wool can be bought at very low prices, but there are no buyers in view of the impossibility of getting the stuff to Constantinople.

Opium.

Practically the only other article in which there has been any movement is opium, large sales of which have been made to Germany, but at the present time the market is rather quiet. The stock in Constantinople is 300 cases, and in the interior 67,000 cases. The latest quotation from Constantinople was 160 piasters per oke. There are some 150,200 cases of Turkish opium in Salonika and about eighty cases in Athens, but this is practically unsaleable for export, as they are liable to be seized in transport by the Allies.

Cereals.

With regard to the grain crops, the only two articles which are fairly plentiful are barley and wheat. The crop of the former would have been about 20 per cent. higher than that of last year, but owing to the absence of sufficient labourers, it is said there has been a good deal of wastage, and the crop may, therefore, be considered to be the same as in 1914. The wheat crop is estimated to be nearly 200,000 tons. Large sowings of maize were made, but owing to the absence of rains, the crop is practically a failure, and it is expected there will only be some 45,000 tons in the Ada Bazaar district, and this will be taken up for local consumption.

Linseed.

There are about 10,000 bags of linseed between Pandorma and Ismidt, for which ninety paras is paid for shipment to Germany. The bean crop is also a failure, being estimated at only about 1,000 tons, for which fifty-five paras per oke is being paid for local consumption. Millet is expected to yield only 2,000 sacks.

Canary Seed.

The crop of canary seed is only about 20,000 sacks, against an average crop of 100,000 sacks. Small quantities arrive at Rodosto and are sold at fifty-five paras per oke. There are practically no oats this year.

Nuts.

The nut crops in the Black Sea districts are about 130,000 cantars, against an average crop of 300,000 cantars, but it is said there are about 270,000 cantars remaining over from last year's crop. This article is, of course, very cheap, owing to the impossibility of shipment from Trebizonde and Kerassunde. Some time ago some shipments were made to Roumania, but now transport is not available.

PRODUCE REPORT.

London, October 28.

Currants.

The market is very firm, and the available supplies limited. Provincial is quoted 40s. to 41s.; Amalias, 41s. to 43s.; Gulf, 46s. to 48s.; and Vostizza, 48s. to 53s. The market in Greece is reported dearer.

Sultanas.

What is left of Smyrna fruit continues dearer. Greek sultanas command high prices, being of fine grade and in rather small supply. Parcels were sold at 95s. to 120s.

Figs.

Greek, Calamata, figs are in good demand, selling at 42s. to 46s. in bags.

Dates.

The market for new crop is firm, but generally quiet.

Seeds.

Linseed.—Owing to a strong inquiry for oil and still higher freights, the market has advanced 6d. London-Calcutta, in any position, is held for 62s. 6d. Bombay to Hull, Nov.-Dec., 63s. 6d. La Plata is not offered under 60s. Rapeseed is ruling firm, but quiet. Brown Cawnpore, pure basis, Oct.-Nov., 56s. 6d., and Guzerat ditto, 63s.

Cotton-seed is firm, but quiet. London-Egyptian, loading, is quoted at £11 8s. 9d. per ton.

Oils.

Linseed oil is very firm, and from 5s. to 10s. dearer, with buyers active. Spot pipes, £30 10s.; barrels and month, £31 5s.; Nov.-Dec., £31 10s.; Jan.-April, £32 5s.; May-Aug., £33 5s. Cotton oil is quiet. Crude spot, in pipes, £30 15s.; refined pale pipes, £33 10s.; and barrels, sweet, £37 to £39, as to make. Rape oil remains firm. Ordinary brown, naked spot, is quoted £36 to £37; English refined, barrels, £39 to £40.

Oilcakes.

Cotton Cakes.—Egyptians are still offered at £8 10s., ex ship, for Oct.-Nov. shipment, but without attracting attention. English makes are held at rather high prices, £8 17s. 6d. to £9 for Egyptian seed, and £8 15s. for Bombay.

Linseed Cakes.—In sympathy with other food stuffs, the market is improving, and there is a better demand at the increased prices. Best London is offered at £11 12s. 6d. to £11 15s. East Indian seed pures make £11 7s. 6d. to £11 10s.

Locust Beans.

There is again a scarcity, and only sparingly offered; £8 10s. for kibbled.

NEWS FROM ALL SOURCES.

The announcement in *The Times* that the risk of King Ferdinand's still being on the Bulgarian Throne on June 30 next had been written at £5 5s. per cent. led on Wednesday to further numerous insurances of the same kind. After the risk had again been accepted at £5 5s. per cent., a rate of £7 7s. was paid, and finally £10 10s. was quoted.

At the request of the Bulgarian authorities, states an Athens telegram, the foreign Consuls have left Dedeagatch for the interior.

MARITIME COMMERCE OF BULGARIA.

The maritime commerce of Bulgaria and its merchant shipping have greatly increased since the modernising of the Black Sea ports of Varna and Burgas, and would have been increasing still more rapidly if King Ferdinand's ambitions had left his people free to develop the new territory on the Ægean in peace, says the *Economist*. Of the two Black Sea ports, now cut off from the outside world by the closing of the Dardanelles, Burgas, at the head of the Gulf of Burgas and some 120 miles N.W. of the entrance to the Bosphorus, is connected by railway with Philippopolis (some 180 miles), and has a considerable export trade, chiefly in grain, and a population of about 13,000. It has a quay nearly 2,000 feet long, with 25 feet of water alongside, and the building of two other quays of similar dimensions was in contemplation before the Balkan wars. According to Mr. Vice-Consul Heard's report of last year (Cd. 7048), the total number of steamships clearing from the port in the first nine months of 1912 (after which the gulf was blocked by Turkish warships) was 635, with a tonnage of 533,814. Of these, 41, with a tonnage of 101,840, were British, but only three, and those in ballast, cleared for ports in the United Kingdom, the remainder proceeding to Belgian, Russian, and Roumanian ports. Varna (which is reported to have already undergone a Russian bombardment) is some 40 miles north of Burgas; it has a population of 40,000, and enjoys one of the best anchorages in the Black Sea. Great improvements and extensions in the port were made in 1908 and 1909, and a line of quays extends from the sea towards Lake Devna, situated about a mile inland. Vessels can load alongside these in 27 feet of water, but the approaches, both there and at Burgas, are commanded by high ground, and it would be difficult to land troops at either place, while the entrances are doubtless mined. Varna is connected by rail with Rustchuk, on the Danube (one of the oldest lines in the region, and originally owned by an English company), and with Sofia (336 miles) by Shumla and Tirnova. The steamships clearing from it in 1912 numbered 807, with a tonnage of 685,079, of which 68, with a tonnage of 126,143, were British, none of these, however, proceeding to United Kingdom ports. Varna stood to lose heavily by the cession to Roumania of the Bulgarian Dobrudja, which had become one of the chief corn-growing districts of the kingdom, and whose exports were, on the average, one-fifth of the total from Bulgaria. This had checked the projects of extending the quays towards Lake Devna. Baltchik, about 20 miles north of Varna, passed to Roumania with the Dobrudja.

Bulgaria acquired two outlets to the Ægean as a result of her brilliant campaign against Turkey in 1912. The first of these, Dedeagatch (population, 4,000), about ten miles N.W. of Enos on the frontier set for Turkey by the Treaty of London, grew up on the trade in the valonia of the region, and was further developed by the opening of the Salonika-Constantinople junction railway in 1896; but the port is only an open roadstead, subject to heavy seas in southerly gales, during which steamers take refuge some twenty miles off under the lee of Samothrace. Probably the approaches are heavily mined, and the water is shallow inshore. The projects of harbour construction there had been disposed of by the Bulgarian acquisition, under the Treaty of London, of Porto Lagos, some forty miles west of Dedeagatch.

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.
Only superior qualities of
Hallawees, Khudrawees, Sayers and Zehdi
are packed.
In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.
SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.
Sole Proprietor:
BAHJET S. FORAGE, BASRAH.

EGYPTIAN FINANCES.

(From Our Own Correspondent.)

Cairo, Oct. 15.

The August figures of the State accounts just published reveal once again an improvement in the position. The revenue for the five months under review comes to £E5,930,455, and the expenditure to £E6,308,929, as against £E6,114,730 and £E7,540,786 respectively at the same date a year ago. The excess of expenditure over revenue, which stood at £E1,426,056 on August 31, 1914, has been reduced to £E378,474 this year, thanks to the improvement in the collections and a continued reduction in the outgoings.

The August receipts have proved exceedingly good. As indicated, the total is £E184,275 worse than at the same date last year, but the month's collections have been £E251,120 better than they were in August, 1914, and what is even more comforting, since at that date war conditions had set in, they are actually only £E10,000 less than those effected during August, 1913, when things were quite normal.

During the month practically every department showed an improvement, Direct Taxes increased by £E90,402, Customs by £E29,653, Tobacco by £E77,627, Legal Dues by £E19,842, Railways by £E39,578, and Post Office by £E3,806. Port Dues and Domains were the only items of decrease of any importance.

The chief reductions in expenditure during the five months were Public Instruction £E44,905, Irrigation £E336,945, War Office £E120,136, Railways £E375,660, Post Office £E32,596, Finance £E114,338, Drainage £E57,713, and Public Works £E103,460. The only increases were Civil List by £E20,079, and Pensions by £E15,223.

It is interesting to note that in the case of both the Post Office and the Telegraph Administration the revenue exceeds the expenditure, whereas this time last year the reverse was the case, whilst as regards the Railways, the excess of revenue over expenditure has been increased from £E52,388 to £E282,725. All this indicates that the most stringent supervision is being exercised, though it is to be feared that in the case of the Railways, for example, the necessity for limiting expenditure may lead in the end to more outlay in the future, since repairs and renewals will have been postponed, with consequent detriment to the rolling stock.

THE EGYPTIAN SITUATION.

The decision to remove the restriction on the cotton area in Egypt came as a complete surprise, said the *Observer* on Sunday. We have accordingly got into touch with authoritative people in Alexandria and elsewhere, and their opinions may be of interest to many readers, especially in Lancashire. The restriction was, it is admitted, a precautionary measure, but it was thought that once the decree limiting the area to one-third of every estate—*i.e.*, an agricultural legislative measure of this description—had been introduced advantage would have been taken of its existence to continue to restrain the fellaheen from putting, as they have done in the past, too large a portion of their holdings under cotton every year, and so counteract the deterioration which has set in and of which overcropping is one of the causes.

The motives which appear to have prompted the repeal, or rather the non-renewal, of the restriction are (1) the extreme difficulty of enforcing the law owing to the extraordinary number of extremely small holdings; (2) the fact that the fear of the cessation in the cotton demand which prompted the promulgation of the decree a year ago no longer exists.

The present position certainly supports the second motive. At the end of the agricultural year (August 31) the stock at Alexandria had only increased by 10 per cent., or 80,000 cantars, as compared with the previous year, and practically all that has arrived since then has been exported. The 1915 crop is not expected to exceed 5,000,000 cantars (as compared with 7,600,000 cantars in 1914 and 7,500,000 cantars in 1913), the diminution being due not only to reduction of 35 per cent. in area, but also to cotton pests, which have been very active; and it is anticipated that all this and a substantial part of the stock will be got rid of during the year, thus leaving the field all the freer for a large crop in 1916. But, whilst the market approves of the decision of the Council of Ministers, there is no doubt that the experts regret very much that the cultivators should have regained their liberty of action in what is, after all, a matter of vital importance to the country as a whole.

The British Government's decision to purchase cotton, if it becomes apparent that prices are drooping too much and such action is necessary to keep them up to the point when they become remunerative to the cultivator, has given great satisfaction, for it is tantamount to guaranteeing the sale of the entire crop at good prices. The market at present is excellent, and the fellaheen are getting more for their cotton than they have got for the past three years. Indeed, despite reduced crop, the amount realised on it will be just as much as in a normal year, while the country has produced more cereals, part of which it has exported and part of which has served to feed the inhabitants, and thus has brought about a reduction in flour and cereal imports. All said and done, Egypt has, by contrast with all other countries, derived very great benefit from the war, and has absolutely nothing to complain of. It is indeed just possible that, despite the removal of the restriction, the area may not return to the normal of 1,700,000 feddans, owing to the fact that many cultivators, having been forced by law to grow other products and having found a ready market for the resultant crops, may elect to continue to produce these commodities.

GOLD IN EGYPT.

Mr. Ginnell asked the Secretary of State for Foreign Affairs on Wednesday in the House of Commons whether he would state the arrangements, if any, made to protect Egyptians from loss, in view of the refusal of the National Bank of Egypt to issue gold and the depreciation of paper money, so that a £5 note had to be paid for the value of £3.

Sir Edward Grey replied that, having regard to the fact that the exchange between this country and Egypt was in favour of Egypt, he did not understand how there could be any difficulty in carrying on legitimate trade.

ANGLO-EGYPTIAN BANK.

The directors of the Anglo-Egyptian Bank, Limited, recommend a dividend of 10s. per share, less income-tax, for the half-year to August 31, making, with the interim dividend of 5s. per share, 15 per cent. for the year. After providing in full for depreciation of securities and appropriating £20,000 for war contingencies and £5,000 bonus to staff, they carry forward £50,000. The date of the annual meeting is fixed for November 23.

The *Statist*, in its annual review of the banking world (October 23), refers to the above bank as follows:—

The Anglo-Egyptian Banking Company, Limited, was formed in July, 1864, and began operations on September 1 of that year. The first accounts were provisionally made up to February 28, 1865. The bank was formed with a capital of £2,000,000, of which £500,000 was paid up; but in the following year the paid-up amount was increased to £800,000. Business continued to progress on the whole, and in 1871 it was announced that, in consequence of the vast and rapid increase of the commerce of Egypt and the extension of agriculture in that country, new sources for the profitable employment of capital had been opened up, so that the board had arrived at the conclusion that it was necessary to increase the capital. It was therefore decided to double it by the issue of 40,000 shares of £20 each at £5 premium per share. Only half the number of shares were immediately issued, and it was not until the end of 1872 that the balance was placed; thereby the paid up amount was increased to £1,600,000.

An interesting little paragraph occurs in the report for the half-year ending August 31, 1880, where it states "the Bank's shares in the great Syndicate of Paris has been closed by the sale of the Suez Canal shares, which realized £224,000; and by taking over the Unified stock which formed the remainder of the security at market price of the day there resulted a profit of £92,758 6s. 7d." The bank had claims on the Egyptian Government amounting to about £300,000. These were settled in 1880 by the payment of 30 per cent. in cash and the balance in bonds and 5 per cent. preference stock at par; and it was added: "Henceforward Egypt will no doubt experience the advantage of the recent honourable adjustment of her pecuniary liabilities in the contentment of her population and in the increase of her commercial prosperity."

The next change in the affairs of the bank occurred in 1887, when it was reconstructed under its present title on a basis to admit of a return of capital. A sum of £10 per share was returned to the shareholders, thereby reducing the paid-up capital to £800,000; while in 1889 it was decided to return a further £400,000, or £5 per share, the report stating that the desirability of the operation must be evident from the accounts, "which show nearly £500,000 sterling lying in London at unremunerative rates," a position which it appeared to the board must constantly recur so long as the paid up capital remained at the old figure. Accordingly, the accounts for 1890 showed that the paid up capital had been reduced to £400,000, the subscribed amount being £1,200,000. The capital remained at this figure until 1904, when 20,000 additional shares were created, bringing the authorized amount to £1,500,000, and the paid up sum to £500,000, since when no further alteration has occurred.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

Aegion, Agrinion, Almyros, Amalias, Amphissa, Arta, Atalante, Calamata, Calavryta, Céphalonia, Chalkis, Corfu, Corinth, Cythère, Dimitzana, Gythium, Ithaque, Janina, Karditza, Kyparissia, Lamia, Larissa, Lévadia, Mégalopoli, Messina, Missolonghi, Naupacta, Nauplia, Patras, Paxos, Piræus, Poros, Pylos, Pyrgos, St. Maure, Salonika, Santorin, Sparta, Syra, Thèbes, Trikkala, Tripoli, Volo, Zante.

Every kind of Banking Business Transacted. **Correspondents in all Parts of the World.**

Digitized by Google

In 1895 there was no reserve fund, but since that time substantial allocations have been made, and by 1905 the reserve was equal to the paid up capital. By August, 1913, it reached a total of £680,000, and though it was possible to increase the fund at August 31 last, as already pointed out, it was preferred to increase the carry forward, and, consequently, the reserve fund still stands at £680,000, or £180,000 in excess of the paid up capital.

TABLE OF PROFITS.

Year ended Aug. 31.	Gross Profit.	Net Profit.	Dividend Amount.	Dividend Rate.	Reserve, Invest., Dprn., etc.	Carried Forward.
	£	£	£	%	£	£
1910	177,977	104,253	75,000	15	27,253	48,000
1911	190,649	114,905	75,000	15	37,905	50,000
1912	187,005	107,904	75,000	15	30,904	52,000
1913	188,453	108,027	75,000	15	33,026	52,000
1914	189,619	102,591	75,000	15	2,591	77,000

The proportion that the shown net profit bears to the paid up capital is 20.5 per cent.; to capital and reserve combined 8.7 per cent.; and to the total working resources, amounting to £5,461,757, 1.9 per cent.

A Reuter message from Cairo on Wednesday stated that bank notes to the value of £E5,000 have been extracted from a letter sent by the Cairo office of the Anglo-Egyptian Bank to its Zagazig branch. When the letter was opened at Zagazig it was found to contain only scraps of paper.

COMPANY RESULTS, &c.

ANGLO-ROUMANIAN.—Production of crude oil for week ending 16th inst., 244 tons.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production week ending October 16, 2,540 tons. Moreni wells 30, 49 and 53 still flowing.

BURMAH OIL.—The directors have declared interim dividends on the first preference shares of 7 1-5d. per share, less income-tax; on the second preference shares of 6s. per share, less income-tax; and on the ordinary shares of 1s. 6d. per share, free of income-tax, payable November 2.

ANGLO-EGYPTIAN OILFIELDS. — Gemsah, week, 178 tons (against 161 tons); Hurgada, week, 214 tons (against 240 tons).

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the 10 days ended October 10 amounted to £E6,117, as against £E4,093 for the corresponding period of last year.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to August 31, 1915 (New Style: January 14 to September 13, 1915) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Aug.,	1915	2,946,645	1,749,000
Do. do. do.	1914	2,765,870	1,454,530
Estimated Receipts for 8 months (Law of Control)		19,266,666	7,133,333
Actual Receipts, 8 months,	1915	24,174,147	16,097,887
Do. do. do.,	1914	25,045,689	18,809,703
Difference between estimated and actual receipts for 8 months	1915	+ 4,907,480	+ 8,964,553
	1914	+ 5,779,023	+11,676,370

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

THE ANGLO-EGYPTIAN BANK, LTD.
Notice is Hereby Given, that the TRANSFER BOOKS of this Company will be CLOSED from the 16th to the 30th November, both days inclusive.
By order of the Board,
GEO. H. SOUL, Secretary.

THE PORT OF KAVALLA.

Kavalla, says a writer in the *Daily Telegraph*, is a town of importance. The Messageries Maritimes boats from Marseilles to Constantinople make it a port of call. The traveller approaching from the sea looks upon a bold headland, with a small harbour on either side. Above the busy quays rises a long line of Oriental domes, and above that again a bluff line of rock cutting the town in half; on the sides of this scarp you see terraces of white houses, studded with minarets. High over all stands a massive castle. As the steamer draws closer in you can make out a long aqueduct on two tiers of arches, which brings water to the city from Mount Pangæus. The mountain looms dark in the distance, and from it two sheer cliffs approach the sea.

The present population of the town is difficult to estimate. The provisional census of 1913 returns it at 45,000, but this is probably exaggerated. A large influx takes place during the summer months, when the tobacco harvest has to be dealt with and prepared for export. During the last complete year before the Balkan Wars more than 12,000,000 kilogrammes of tobacco, that is more than £3,000.000 worth, passed through the warehouses and quays of Kavalla. The economic importance of the place needs no further illustration.

The best of what we still call Turkish tobacco is grown in the district round Kavalla. The country consists of plain backed by hill and mountain, and both the level country and the lower slopes of the upland are well watered and of extreme fertility. Before the break-up of the Turkish dominions it was estimated that the tobacco of Eastern Macedonia brought the exchequer of Constantinople a direct revenue of more than £400,000 a year. The value of the crop exported was more than £4,720,000. Not all of this, of course, was grown in the "debatable land" around Kavalla. Even the frontier of the Treaty of Bucharest gave some of the tobacco area to Bulgaria. But by far the greater part has been in Greek hands, and the value of its possession is sufficiently obvious. Besides the predominant tobacco industry the district also produces some cotton and carries a large quantity of stock. If it is not incongruous to link history with these commercial details, we may note in conclusion that on these fertile plains of the tobacco country stood Philippi, with its memories of Mark Antony and Brutus, and the affectionate last Epistle of St. Paul. The city now is but a mass of ruin among the fields.
