In the Balkan theatre, properly speaking, no developments have taken place during the past week, but we see no reason to alter our opinions as expressed last week. We are on the eve of far-reaching events, and the fall of Erzeroum is likely to be the first link in a chain of events in the Near and Middle East which will bind Germany to that same thraldom which she endeavoured to impose on Oriental peoples. On the Salonika front nothing of importance has transpired, and it is even believed, *vide* the daily Press, that the Germans have practically retired from Macedonia, leaving the Bulgars in charge of opposing our front. Needless to say, Germany, as spring is approaching, needs her men on other fronts which, to her, are of more immediate consequence. In Albania, on the other hand, the Austro-Bulgars are more or less active, and this stage continues to attract the immediate attention of the military world. The capture of Elbassan by the Bulgars is confirmed, and they are even reported at Fieri, about thirteen miles from Valona. The Serbian army, together with such refugees from Montenegro as are still available, have abandoned the Durazzo district—which has been strengthened by Italian troops—and are re-forming into a highly acceptable army in Corfu; their numbers will not be far short of 100,000 well-equipped troops. Incidentally, Reuter's reported from Paris yesterday that according to a Rome message to the *Petit Journal*, the possibility of important events taking place shortly in Albania is foreshadowed. "Austria," says the message, "will probably try to get hold of Valona with her available troops, but any surprise in that quarter has been foreseen, and Italy has taken every measure to paralyze an Austrian offensive." In our opinion, however, fighting in Albania will continue to be desultory (such as the recent Austro-Italian action at Tirana, east of Durazzo) until such time as the enemy is in a position to advance simultaneously against the two extremes (Salonika and Valona) of the Greco-Macedonian frontier held by the Allies. This, as previously asserted, cannot take place until the Roumanian riddle—a riddle as far as the enemy is concerned—has been solved. In the meantime, we have not been idle at Salonika. According to a rumour current in Paris last Friday, but as yet unconfirmed, General Sarrail has moved French troops across the Vardar, to the west of Salonika, with the purpose of occupying positions beyond the river from which the enemy's heavy artillery, if advantageously placed, could eventually have commanded the Allies' defences on the left bank. Air raids, likewise, have signalized the past eight days, but for every enemy machine which has hovered over our lines, at least five of ours have visited the Bulgar lines on the Strumna.

Roumania.

The fact that, as was emphasised last week, the key to the Balkan situation lies in Bucharest is borne out by diplomatic events in the capital of Roumania during the past week. The Böches have been doing their best to get Roumania on their side, and, by way of a bribe, have not only offered gold but munitions as well. This proves conclusively to what an extent any future Balkan campaign undertaken by the already exhausted Central Powers depends on the attitude of Roumania. Until Roumania has declared herself, no general strategic enemy attack against our front can be attempted, and fighting will continue to be desultory unless (*a*) we take the offensive, or (*b*) the enemy, rendered desperate, decides to stake all on a last throw, in the hope that he will break through our defence. He will be sorely disappointed.

THE COMMERCIAL INTELLIGENCE OFFICE OF EGYPT

General Managers.

THE BRITISH IN CONSTANTINOPLE.

A correspondent kindly sends us the following extracts from a letter written from Constantinople about December 29 :—

. . . . Messrs. Farley Leete, Ashover, and a couple of others were sent into the interior; they are well, we hear. Mr. Lee (?), who was caretaker of the Haidar Pasha cemetery, has returned from the interior. As to the Douch family, if you hear any inquiries about them you can assure any one who asks that they are all well and comfortable, in spite of their having been sent away from their home at St. Stefano. They are now living in the apartments occupied by Hayden, a dry goods and clothing establishment, whose shop is in Pera.

It may interest you to know that Mr. Guest, of the Co-operative Stores, is still here, and both he and his wife are well. Mr. Harry Hoare was sent to the interior with the other men whom I mentioned, and they are located near Konia. They are heard from frequently, and are all doing well, and are comfortable, with the exception of Mr. Leete, and it is reported that he is suffering from dysentery. The Mr. Hoare that I mentioned was one of the men who were sent at one time to Gallipoli.

Mr. and Mrs. Sykes are both well and attend Mr. Frew's church in Pera on Sundays. The many reports you hear about this place are false. I have had no trouble with the people, and never think of being stopped or bothered at any time. . . . We have had one cold spell. And that lasted about a week, and on account of the shortage of coal and fuel of every kind you can imagine the suffering. . . .

The electric light, plant, trams, and lighting system are still in operation. Kerosene (petroleum) is very scarce, and when it can be bought it costs 1½ to 2 liras Turkish for a tin of five gallons.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free :—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies :—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

THE PRESS ON THE NEAR EAST.

Hungary's War Feeling.

To the *Morning Post* (February 16) "A Hungarian Deputy" contributes an interesting article on the above topic. The greater part of the article is devoted to a consideration of Hungarian relations with the nations prior to the war. When war was declared all the natural affections and antipathies of the people were submerged in consequence of the statement that it is "a fight for the nation's life and death against Russian Panslavism, which threatens the independence and liberty of Hungary." The writer looks for a dreadful awakening, and continues:—

Some months ago the enthusiasm of the population was roused with the promise of Egypt, Suez, the Pyramids, and India. The way of this dream was the conquest of Serbia, the union of the Austro-Hungarian-German Armies with the Bulgarian one; and, after a triumphant entrance into Constantinople, the humiliation of England and the Empire of the world. Everything was prepared for this programme, and the idea of crushing Serbia, who, at the beginning of the war, resisted with such great energy the Austro-Hungarian attack, was not unpopular. But the realisation of the Oriental dream did not give the expected satisfaction, and had to be placed into line with the other evaporated hopes, like Paris, Calais, Petrograd, the apotheosis of Stambul, and all the Balkan States at the knees of the Central Powers. The Serbian territory has been occupied, but a part of the Serbian Army exists. Gallipoli remained in the hands of the Turks, but the doors of the Balkan States are guarded by an unexpected concentration of the Allies at Salonika. There is no doubt that the keys to the doors of the Balkan States are still in the hands of Great Britain and France. It was promised that the Allies, after a short fight, would be thrown into the sea; and now more than two months are passed, and the invincible armies of the Central Powers have not even begun to attack them. . . .

The population of Austro-Hungary begins to understand that, whatever may be the result of the Balkan move, this war cannot be won in Belgrade. England and France cannot be crushed in Constantinople or in the Balkans, and the final victory of the greatest war that history has ever known can only be obtained in the occupied northern departments of France and in Belgium. This conception finds every day more and more adherents; but if it is true, then all the other plans and programmes which during the last year were presented to the population of the Central Powers as absolute trumps to assure the triumph and final victory were false. Why, then, should not the presumption that the war will be quickly terminated to the full satisfaction of the Central Powers be also false?

German Aims in the Adriatic.

The *Manchester Guardian* published yesterday (February 17) an article entitled "The Abandonment of Montenegro," from the pen of Sir Arthur Evans, which constitutes a vigorous indictment of the policy of the Allies in the Near East. We quote the opening passages:—

The abandonment of Montenegro to her fate, the gradual process of destitution—nay, of actual starvation—that led up to it, the capture by the Austrians of the dominating height of Lovtchen, and the consequent consolidation of Austro-German naval power in the Southern Adriatic—these are tragic developments indeed, equally damaging to the Allies in the moral as in the material sphere.

Why was no helping hand held out? By what strange aberration of our foreign policy were such assets and so lethal a weapon freely placed in the enemy's hands? For we are not a disinterested Power in the Adriatic region. The splendid land-locked harbours of the eastern coast and the protected sea passage afforded by its parallel lines of islands afford it a whole chain of naval bases, from Pola to Sebenico and from Sebenico to Gravosa and the Bocche di Cattaro, such as cannot be found elsewhere in the whole Mediterranean basin. Its offensive development, directly or indirectly, under German hands is probably the most serious of all potential menaces to our future maritime connections with the East. Already it has become a hive of submarines.

So thoroughly was this realised at Berlin that for years every effort has been made by financial and other agencies, with willing help from Vienna, to strengthen the German hold on Dalmatia. One of the principal causes of the present war on the part of the German Powers was to secure their future naval development on the Adriatic by crushing once for all the independent Serbian States who were the natural champions of the South Slavonic movement towards union. It was clearly realised that the formation between the Drave and the Adriatic of a united South Slavonic State, in accordance with the wishes of the overwhelming majority of the population, was the greatest danger that threatened these ambitious schemes. So Serbia has been crushed; a reign of terror holds down the Slovene and Serbo-Croat provinces of the Monarchy, and now it has been the turn of Montenegro.

Lack of space debars us from quoting further, but we commend the article to the attention of our readers.

The Crisis for Roumania.

The *Observer* (February 13) this week devotes the greater part of its notes on the war to a consideration of problems of administration, and so on, at home. The following references, are, however, made to the attitude of Roumania, which was attracting considerable attention in the London Press last week:—

It would be difficult to say how much now depends upon the action of Roumania. At Bucharest the Central Empires are using every means of inducement and pressure to secure an agreement in their favour. They offer not only Bessarabia, but the great Russian port of Odessa. This is done with the object of sowing a deadly and eternal enmity between Roumania and the Tsar's Empire.

On the other hand, unless Bucharest gives guarantees for a continuance of rigid neutrality, or even for benevolent facilities permitting the Germans and Austrians to march through Roumanian territory, there may be an attack on two sides. The interest of the Central Empire is to make sure one way or the other before the Western Allies are able to make any strong move in the Balkans. We will only point out once more that the decision will turn upon estimates of relative military strength.

The Allies, when the Serbs are fully re-equipped, should have between 300,000 and 400,000 men in that region. We repeat our belief that if the number were raised to over half a million Roumania would come in with an army of the same size, and her entry would be a turning point in the Allies' fortunes. No persuasions of diplomacy on our side will make up for a paucity of effectives on the spot. In all probability Roumania's decision must in any case be taken during the next seven weeks, but it may be precipitated by events, and it is impossible to overestimate its importance

The Epic of the Dardanelles.

The most interesting article on the Dardanelles that we have yet read is one entitled "Six Months in the Dardanelles," by "Zachabona," which appears in *Blackwood's* (February). No quotation or series of quotations can give an adequate idea of the material with which this article is stocked; we have chosen the following because detailed descriptions of battles are few and far between in these days of strict censorship:—

Every man who survives the Dardanelles carries in his mind the only epitaph there can ever be for our dead lying there between the fatal hill and the sea: "They never hesitated." One instance will suffice. It was the night after a big attack, when the clear-eyed heavens looked down on simmering passions in that corner of the earth. The battle was not over; that much, at least, we could rely on. Any enemy movement, real or suspected, was enough to stir the embers of a bloody yesternight. It was real, as it happened—a pretty determined counter-stroke, heralded by vehement invocation of "Allah! Allah!" It was delivered in a part of the line which was badly consolidated, but held stubbornly by the Manchesters. For neighbours, a little to the rear, the latter had the 5th Royal Scots, under Colonel Wilson, and when at length the onslaught by tremendously superior numbers drove the Manchesters back a little, no single minute did the Scots allow the advantage to stand. They were up out of their trenches with a yell that nearly the whole line heard, charging like furies; nor did they breathe easy again till they had cleared every Turk out of our trench, which the enemy was just beginning to find very useful for bombing purposes. Another time it was the Worcesters, I think, who did a similar service for the Senegalese. And so one could multiply, "They never hesitated."

The Bulgarian Attitude.

The following quotation is taken from the beginning of a leading article in the *Times* (February 16):—

The increasing numbers of deserters who continue to arrive at Salonika are sufficient proof that the plight of the Bulgarian troops on the frontier is by no means enviable. All repeat the same tale of starvation. It is repeated this morning in our Bukarest telegram. With the approach of spring the discontent of the Bulgarian peasant soldiers is likely to grow. Their desire to return to their fields will become stronger, and with it the anxiety of their chiefs. Yet it would be folly to anticipate substantial results from Bulgarian discontent until military disaster have overtaken either Bulgaria herself or her confederates; and it would be worse than foolish in present circumstances to credit rumours of Bulgarian readiness to come to terms with the Allies. We can have no dealings with Bulgaria or with her Tsar-traitor, even should he, as is highly improbable, seriously wish to have dealings with us.

We quote below from the telegram referred to in the above paragraph:—

Much discontent is reported to prevail in Bulgaria owing to the increasing dearness of almost all commodities. Butter now costs 4s., olive oil 3s., meat 2s., coffee 4s. 10d. per lb. Bread is not

dear, but it is made in three qualities. The quality made entirely of wheat is difficult to obtain; the third quality, which is black, is unpalatable. The exportation of cereals to Germany and Austria continues, but must soon come to an end.

All expressions of popular feeling are rigidly suppressed. The Press censorship is exercised with the utmost rigour.

The leading article concludes:—

The restoration of Serbia to her rightful territory and her union with her Southern Slav kindred must, indeed, be essential objects of the Allies. These objects preclude any truck with Ferdinand of Coburg, or with his people unless they dissociate themselves from him. Even William of Hohenzollern, with all his crimes, is a more reputable Sovereign.

The Greeks in England.

We take the following paragraph from *Truth* (February 10), which prefaces its remarks upon the attitude of the Greeks in England with a reference to Dr. Ronald Burrow's article in the *Contemporary Review*, from which we quoted last week:—

The Greek community in London profess their devotion to M. Venizelos, and show it by deserting him. They have not raised so much as a little finger to help him. A public protest from the Greeks in London and Manchester against the unconstitutional usurpation of power by a revolutionary Government of placemen would have had an enormous effect in Athens; but it was not made. A league, or association, or something of the kind, has been formed in London to promote the cause of Hellenism, but all its members do is to talk. A private message of academical sympathy has been sent to M. Venizelos, but what he wants just now is not sympathy, but support, and he has not had it.

The Lesson of Gallipoli.

In an editorial note, the *United Empire* (February) deals very severely with our bungling of the Dardanelles enterprise, which is alluded to as having been "conceived in ignorance, and elaborated without conviction":—

Two factors, however, redeem the campaign from the opprobrium otherwise attaching to a venture for which, as must now be generally admitted, the subordination of military knowledge to the gambling instincts of politicians was responsible—the heroism of the troops who took part in it, and the unexplained success which attended their ultimate withdrawal. The nation is living in a glass house, and no stones must be thrown. The proposal that an attempt should be made to reach Constantinople through the Dardanelles was the subject of two or three months' cogitation on the part of the British Government and its advisers. They arrived at a decision which ran counter to Japanese experience and the long-considered views of the military experts of a minor Power. The scheme was put to the test and resulted in a costly failure. It is, perhaps, well that the nation should not overlook the failure in the satisfaction derived from the success of the final retirement. The Dardanelles operations are but an incident in the Near Eastern theatre of the war, and the campaign is not yet over. So far it has not been attended with any more success than that which marked the effort on the right flank of this Southern front. It remains full of difficulties and pitfalls, which can only be surmounted by the careful weighing of expert advice. If the lesson of the Dardanelles be taken to heart, the Allies will yet win through in the Balkans, and all will be well. But from the evil of a luckless adventure a still more permanent good may come, for nothing is more calculated to weld the Empire into a homogeneous unit than the memory of the heroism with which the supreme sacrifice was made by our fighting men from home and overseas on Gallipoli.

The Fate of Belgrade.

The *Fortnightly Review* (February) contains an interesting article by a Serbian officer on the fate of Serbia's capital. The first portion of this article deals with events prior to the Bulgarian invasion, but the most interesting part is that which narrates the actual happenings in the city at the time of the attack. This writer confirms the report that the fire of the Huns was directed upon the main road by which the hapless women and children were trying to escape. The following paragraph refers to the first German prisoners who were captured on their arrival:—

It gave me a curious sensation to set eyes on these fellows after having read so much about them, and seen so many pictures of them in the English papers. I spoke to several of them—some were Berliners, some Hamburgers, and it was astonishing how cool they kept when I told them they were the biggest swine on God's earth. I told one of them to take off his dirty helmet, which he did after being induced to hurry up about it by a kick on the latter end. I tore off the khaki cover and took the eagle with its inscription, "Mit Gott für König und Vaterland," which I shall preserve as a souvenir of the first Reichsdeutschers captured on Serbian soil. They have managed to crush Serbia for the moment by dint of overwhelming numbers and unlimited artillery, but this eagle will remind me that we kept them at bay as long as was humanly possible.

The Future of Serbia.

Under the above heading M. Pavlé Popovic, Professor of Literature, Belgrade University, contributes an article to a recent number of the *Morning Post*. The first portion of his article deals with what Serbia has done; our extracts are from the latter portion:—

I wish especially to emphasise that England . . . has every interest in assisting my country in her aspirations. England has not realised till now the importance of Serbia. She needed the whole Serbian tragedy to be enacted before her eyes for her to comprehend that, at the decisive moment, Serbia alone of all the Balkan States is ready to fight at her side, no matter what the cost. Serbia must needs drain the cup of poison to its dregs for this country to understand that it is she who holds the gate of Britain's Eastern Empire. For she is indeed the holder of that gate, and it was not till she had fallen that England began to see that Egypt was threatened from that quarter. It has been said that the first German guns fired across the Danube were aimed not at Serbia but at Egypt, and the saying is the bare truth.

No one knows what will be the extent of victory. If the Allies enter Berlin as conquerors they can dismember Germany at their leisure. If, however, they merely expel the foe from the countries he is now occupying, their greatest object will be to prevent Germany from being a permanent danger to them. And wherein lies this danger: for England especially? It is one that threatens the British Eastern possessions, and them alone. Germany is forcing open the gateway to the East that she may threaten the British Empire. Let you, then, close that gate with strong steel bars, and as for Serbia, who holds the key, make her so strong that she can successfully resist any German aggression in the future. In doing that you will be performing an act of justice. You will also be saving your prestige, which has been—am I allowed to say it?—badly shaken in the Balkans, where it was hoped you would have acted with greater energy. You will also safeguard your vast interests.

The writer says that it is to England that his country looks for the greatest support in its aspirations. Our last quotation is of the sentences which conclude the article:—

While Serbia bars the road to the East against the Germans, Bulgaria throws it open. All that Serbia strives to do for England, Bulgaria destroys. Bulgaria is England's only inveterate enemy in the Balkans, as Serbia is her only faithful friend. And as England's paramount interest is to close the gateway to the East, it is likewise her interest not only to strengthen Serbia, but also to weaken Bulgaria. Never again commit the error of demanding Macedonia for Bulgaria, but force Bulgaria to restore to Serbia all that of which she has so treacherously robbed her. It is your duty to make Bulgaria powerless to work evil on England and on the Allies. If you cannot be sure of entering Berlin, you can be absolutely sure of entering Sofia and crushing Bulgaria. This also must be the first objective of the Allies' armies.

M. Venizelos.

Mr. Martin H. Donohoe, cabling from Athens to the *Daily Chronicle* (February 14), says that the newspapers are busily discussing the probability of the return to political life of M. Venizelos. Mr. Donohoe continues:—

M. Venezelos, whom I saw to-day, assured me that he has no intention at the present moment of departing from the policy of aloofness which he decided upon a couple of months ago. The Nationalists at that time agreed upon a certain line of action. They had abstained from going to the polls, and the electors abstained from voting. The deadlock was to be continued until the Nationalists decided otherwise.

Their leader said that he took so little interest in the doings of the present assembly that he did not even trouble to read the published reports of its deliberations.

The financial question is again troubling Greece. The Government, after long deliberation, is casting about for new means of raising the financial wind.

Rigorous economy is to be practised in the public service by the suppression of a number of posts. It has been decided to tax war profits on the system adopted by England.

Articles to Note.

"Montenegrin Characteristics and Curiosities." By J. K. Carrington (illustrated), in the *Badminton Magazine* (February).

"The Coming Campaign." By Colonel F. N. Maude, C.B., in the *Sunday Times* (February 13).

"John Payne," in the *Birmingham Daily Post* (February 15).

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of the "NEAR EAST" to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

DR. REEVES ON THE BYZANTINE EMPIRE.

On February 7, at the London School of Economics, the Hon. W. Pember Reeves, Ph.D., commenced a course of addresses dealing with the origin and development of the Balkan States. His Excellency the Greek Minister was in the chair.

Dr. Reeves said he was going to tell the story of one of the longest, darkest and most lamentable tragedies in the history of the human race, to tell how peoples not behindhand in intellect, industry or manly qualities, comprising some of the most gifted members of the human race, members of a State the largest, most powerful, most highly civilised, and most prosperous in the world gradually fell from their high estate. They were broken down, he thought, not mainly through crimes of their own, but because they were worn out by centuries of incessant conflict with their barbarous enemies. They fell under the control of another great Power, not without its good qualities; but just as the Byzantine Empire was essentially civilised, Christian and European, so the Turkish Empire was essentially Oriental, barbaric and corrupt.

Dr. Reeves showed by a map the extent of the Byzantine Empire in the year 1030 A.D., when it covered what are now the Balkan States, Asia Minor, and the extreme south-east of Italy; Crete and Cyprus being included, but not the island of Sicily. He said the territory that Constantinople then ruled over either directly or as vassal States had an area of about 600,000 square miles. It was the strongest and most civilised, or, judged by a modern standard, the least poor, least barbaric and least unhappy State of those days. It had a remarkably good army, mostly composed of native soldiers, and the one good navy of the Middle Ages. It had the one well-organised civil service of those days. Its legal system is still the admiration of jurists. Throughout the Middle Ages the merchant, contractor, property owner, or ordinary simple citizen could on the whole rely on getting something like justice in the courts of Byzantium. As a centre of trade Constantinople is still important; but in those days when Vikings had driven commerce from the Atlantic and the Barbary corsairs had driven it from the Western Mediterranean, it was quite unrivalled. There were important manufactures of silk and other articles in various cities. The arts were developed to a very high degree, the greatest being architecture. The best architects of Western Europe do not to-day disdain to copy Byzantine models.

Among the causes of internal decay that Dr. Reeves enumerated as assisting the enemy from without were the ravages of plagues, which swept away sometimes a third of the population, and the tendency for the land of the country to fall into the hands of great families. Thus the rural population, from whom the army and navy were recruited, decayed, whilst the quarrels and ambitions of the great families were frequently the cause of civil war. Religious differences also were a common cause of dissension. One of these, the great iconoclast controversy, led to great hostility to the Byzantine Empire on the part of the Roman Catholic Church.

The chairman, in moving a vote of thanks to the lecturer, took the occasion to add some remarks. His Excellency said that the bitterness of the Popes was really because the Eastern Church would not acknowledge their domination. Constantinople would probably not have fallen to the Turks had it not been for the weakening effect produced by the Crusaders, who went to the Holy Land, traversing the Byzantine Empire, plundering and dstroying on their way. Their effort culminated in the so-called Fourth Crusade. On this occasion mercenaries hired by Venice never went to the Holy Land at all, but they attacked and took Constantinople, and there they remained. It was the greatest buccaneering expedition known to history. They did not remain more than sixty years, but the devastation they caused was so great that the Byzantine Empire never entirely recovered.

Dr. Reeves delivered his second lecture on Monday last, telling of the various invasions of Russians, Bulgars, Serbs, Normans and, finally, Turks. He said that among the chief causes that had brought about the Empire's downfall was the fact that it was a despotism. Whenever the Government was in incapable hands the country seemed to be paralysed; but, curiously enough, although there were revolts of the people and civil wars among rival pretenders to the throne, it did not seem to occur to anybody to change the form of government. The rivalry of Venice and Genoa with Constantinople was another factor that contributed to the downfall of the empire. Long before the Turks took Constantinople the empire had been reduced to the mere shadow of its former self. There was only a small patch of territory around Constantinople and a strip in the centre and south of what is now Greece that still acknowledged the emperor's authority, altogether about 12,000 square miles. Besides this there was an independent Christian community in Armenia. All the rest of the empire had fallen under the Turk, or was ruled by Serb or other non-Greek races. For about a hundred years nothing but the strength of the Constantinople fortifications prevented the city from falling into the hands of the Turks. Certain critical historians had expanded that fact into a theory that nothing but the military strength of Constantinople enabled the Byzantine empire to exist for eight or nine hundred years; but during almost the whole of that time the empire, though paralytic at moments when an incapable sovereign was on the throne, was never lacking in virility, but kept up its existence by hard fighting. The empire owed much of its undeserved repute for effeminacy to the fact that instead of going out in a blaze of glory it had been its fate to linger on.

EXCAVATIONS AT KNOSSOS.

On Thursday of last week, at University College, Dr. R. M. Burrows delivered a lecture on "Recent Discoveries in Crete." At the outset, Dr. Burrows remarked that he was present to take the place of Dr. Ernest Gardner, who was doing valuable work in the Near East. The war, he said, had practically put a stop to excavations in Crete during the last two years; he would deal with discoveries made within the last four or five years in the Palace of Knossos, under the direction of Sir Arthur Evans and the British School at Athens. The restorations made in the stairways of the Palace had been quite successful, but he could hardly say that about the way in which the frescoes had been restored. The crystalline slabs were very soft, and had been covered with plaster to protect them from the Cretan storms, which from the days of St. Paul to our own time had been noted for their violence. In the recent excavations the plaster had had to be cut off.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Roumania continues to be regarded in Germany as a "party to be suborned." What a mistake the Boches are making! Elsewhere our Bucharest Correspondent gives some particulars anent the German grain deal. It will be remembered that the enemy bought (*sic*) 50,000 trucks of cereals, two of the conditions being that the conclusion of the sale should take place within five months, and that the Boches should supply the empty trucks for transport purposes. The latter condition was wisely imposed by Roumania because if her trucks had been sent over the frontier they would simply have been commandeered by the robbers.

***

Now, 50,000 trucks in five months means 10,000 trucks per month, or, roughly, 300 trucks per day. Up to the end of January only 600 trucks had been exported, instead of, roughly, 6,000 trucks, at which rate the Roumanian agriculturist is doomed to keep his grain for years before it is paid. This is one instance of German bluff and insincerity, because never for a moment must it be supposed that Germany really intended to fulfil her part of the contract. She merely wished to create a good impression in Roumania.

***

In the meantime we bought and *paid for* 30,000 trucks of cereals in Roumania. This seems to have upset the Boches considerably. By offering to pay bigger prices for the cereals already sold to us, they hoped to get the Roumanian seller to cancel his contract and re-sell to Germany. But the Roumanian is not to be caught napping. "A bird in the hand," quoth he, and he pointed to Germany's purchase of 600 trucks in lieu of 6,000 in January according to contract terms. Not disheartened, the German Government created a bogus syndicate which was to buy grain heavily immediately, and at wonderful prices throughout Roumania —100,000 trucks of this and 100,000 trucks of that indiscriminately. Fortunately for Roumania, the trick was discovered by the authorities, and satisfactorily quashed, as our Correspondent shows, by forbidding the sale of cereals except through the Central Commission for Export.

***

Nothing daunted, the Germans seem to have persisted, according to a *Times* telegram from Bucharest. They immediately proceeded to make an attempt to bribe the Central Commission (£60,000 was to be the price) to annul the British contract, which, of course, was scornfully rejected. Now, according to a Copenhagen message to the *Morning Post*, "the Duke of Mecklenburg has left Berlin by the Orient express, travelling as the German Emperor's envoy to Bucharest. His special mission is to offer Roumania a loan of £12,000,000." In other words, another bribe, and one likely to be as sterile of results as the previous clumsy attempts to corrupt a nation which has, and will continue to have, a hearty contempt for the underhand tricks of Potsdam suborners.

***

"W. J. C." has contributed to *Blackwood's Magazine* a most instructive article on "Germany in Asia Minor," to which copious references has been made elsewhere. I wish, however, to emphasise one or two points in these columns.

***

In the first place, the author comes to the conclusion that, owing in a great measure to lack of transport, the Boches will not be able to obtain those supplies of cotton, grain, and copper from Asia Minor which they speculated on. Admittedly, the three articles in question are present in considerable quantities in Asiatic Turkey, but there are few roads and fewer railways. Besides, and as regards cotton, the writer of the article suspects that, although greater quantities of cotton are grown than is generally known, a great deal of this will be hoarded by growers in order to escape Government requisitioning —a possibility which, to put it mildly, is highly probable. However, the writer's conclusions that Germany will not be able to import large quantities of supplies from Asia Minor are not admitted by many who have had experience of the country, and in this connection I draw my readers' attention to a letter from Sir William Willcocks which appeared in *The Times* a few days ago, dated from Cairo. "We have telegrams from London," he writes, "telling us that German experts do not expect much cotton from Turkey, but look upon Bulgaria as a better field. This is one of those misleading statements of which hundreds emanate from Germany. Turkey is capable of supplying a great part of the cotton, some of the copper, and large quantities of meat; and no doubt Germany would like to see us sleeping over Turkey and wasting our energies attacking Bulgaria. The Allies should devote every energy they possess to put it out of the power of Turkey to fill up the gap in the blockade of the Central Powers."

***

Secondly, we have the question of the Baghdad Railway. In view of the fact that Erzerum has fallen, "W. J. C.'s" remarks on the subject acquire a startling significance. He argues that the *tracé* of the Baghdad Railway, if it had followed the natural inclinations of the Turks and not been determined by Pan-Germans bent on furthering their own aims in Egypt, would have followed the northern route from Eskishehr, viâ Angora and Sivas, with a branch to Erzeroum, and not the southern route, which was chosen by the Germans with ulterior motives inimical to the true interests of the Turkish Empire. The result of this dastardly intrigue on the part of the Bôches at Constantinople is that Erzeroum, hundreds of miles from the nearest railhead (at Angora) has been lost to Turkey. Not for a single moment do I regret it, but I should like to point out to all level-headed Turks that when the day of reckoning comes, and they are in a position to settle accounts with their tyrant oppressors, Enver, Goltz, and Company, they must not forget to charge them with having intentionally betrayed the Empire with a view to serve their own miserable ends.

***

Another point in connection with the Baghdad Railway is the question as to how much of the line, to the west of Adana through the Taurus and to the east through the Amanus Mountains, has been completed. How is work proceeding in the two big tunnels? According to the writer under review, they should be nearing completion. A writer in the *Engineer* ("The Baghdad Railway," February 4, 1916) takes a different view. "It is claimed," he says, "that the great tunnel (Bagtche, in the Amanus Mountains) has been completely pierced, but there is reason to believe that the statement is untrue, and is destined to remain unfulfilled for some time yet. . . . It is certain that shortly before the war broke out there was a very considerable amount of work remaining to be done. . . . At that period the Karapounar-Dorak section, one of the shortest, barely more than 34 kiloms. in length, was just on the point of completion, and this comprised only one out of the four tunnels (between Bagtche Station and Islahieh). It is this section of the line which offers the most serious engineering difficulties, necessitating great patience and enormous outlays of labour and capital. At this time of the year, moreover, the whole region of the country in which work is being carried out is subject to devastating storms, heavy rainfalls, mountain torrents and avalanches, landslides and heavy falls of rock. Thus the report of 'rapid progress' even now may be very seriously discounted." We have here two varying opinions. As regards the big tunnel through the Taurus, the writer in the *Engineer* expresses no opinion.

***

In last week's reference in these columns to Mr. H. Charles Woods' lecture before the Royal Geographical Society, the lecturer's name was inadvertently given as H. Chester Woods—a printer's slip which I feel sure was noticed by most of my readers. While on this subject, I may mention that the belief I expressed as regards the similar gauge of the Roumanian and Bulgarian sections of the Dobruja Railway is supported by the lecturer, who tells me that he has every reason to believe that they are "of the same—the normal Continental—gauge."

***

Last week Reuter's Cairo correspondent cabled through a remarkably short, but thoroughly reassuring, message to the effect that the Egyptian Government was actively pursuing the liquidation of enemy firms. After nineteen months of hesitation! Nevertheless, to judge by our Cairo Correspondent, Weinrich and Company, almost next door to the thoroughly British Turf Club, continues to sell Austro-German goods, and to display a signboard informing the effendis that he is a purveyor to the dethroned rebel, Abbas Hilmi.

***

A Cairo telegram states that an exhaustive inquiry into the fire which occurred on January 5 at Messrs. Cook's yard, and in which three tourist steamers were burned, has resulted in the outbreak being attributed to accidental causes. The loss is estimated at £44,000.

The Truth About Asia Minor.

German Intrigues, Schemes, and Pretensions.

The current issue of *Blackwood's Magazine* contains an exceptionally well-informed article on "Germany in Asia Minor," by "W. J. C.," of which the following is a summary :—

In the introductory paragraph the author emphasises Germany's present dearth of grain, cotton, copper, and men, and states that the authorities are holding out hopes to the deluded public that, by reason of direct railway communication between Berlin and Constantinople, these commodities (including men, which are only "fodder for cannon") will be placed at the disposal of the Fatherland. The writer analyses the extent to which Germany is justified in expecting to obtain the above raw produce from Asia Minor, and enumerates the products of Asia Minor — vines, oranges, tobacco, rice, sugar-canes. "But," he says, "it is more especially a country of grain crops—of maize and wheat and barley of the best."

Wheat.

"Most of the wheat is the planting of small peasant farmers, who merely scratch the ground with a wooden plough. They know little about manuring. Their rotation of crops is generally the alternation of barley and wheat. They sow broadcast from a wooden bowl, and call 'four fold' a good return. They grow for their own consumption and to pay their annual tax. The tax-farmer takes his portion of the crop, and it is this tithe, or a part of it, which finds its way to the towns and cities and reaches the coast for shipment. With proper cultivation the country would be a granary." Nevertheless, he argues, "one does not see how Germany is to secure any wheat at present from Asia Minor. Wheat is there, but she cannot get it. Samsoun on the Black Sea, 400 miles from Constantinople, is a great wheat port, but is blockaded by the Russians. The grain must go by sea or not at all, for there is no railway within 200 miles. If the Goeben and Breslau had succeeded in controlling the Black Sea, as was intended, more wheat might have been available in Constantinople than now."

Cotton.

Cotton is, however, the crop of Asia Minor at which Germany looks with chief interest. "Perhaps we are inclined to underestimate the amount of cotton grown. The quantity exported before the war is no indication of the quantity grown, for the reason that Asia Minor is a cotton-using country in a peculiar way. Raw cotton is the poor man's wool, which he uses for many purposes. . . . It is cultivated along all the southern and south-western coast for a distance exceeding 800 miles. Most is produced, I believe, on the Cilician plain, where cotton-growing, cleaning, and spinning are the chief industries of the district. Large towns like Adana and Tarsus live by cotton. It is grown also round about Adalia. And when you reach the Ægean coast you are in a country that has long traditions of cotton-growing and prosperity derived therefrom. The valley of the Meander, of the Cayster, Hermus, and Cacus, thickly set with sites bearing famous names, have cotton-growing lands never yet used to the extent they might be. Cotton is grown also on the south side of the Sea of Marmora, but in a half-hearted fashion. The full cotton-growing capacity of Asia Minor is, in fact, much greater than the quantity now produced would cause one to suppose. . . . It is likely that the crop has been commandeered at a normal price. In this way the crops of the larger growers would be secured; but the price would rise to the native consumer, and there would be cotton hiding and smuggling at once. . . .

"Considering these difficulties, and that the cotton area is only partially used, and that much of it is in small scattered districts—some of them not served by rail—the present supply would not be great. It would be no substantial proportion for German requirements for explosives."

Copper.

When it comes to acquiring copper in Asia Minor, "the immediate difficulties are of the same order as for grain and cotton, but even worse. There is much copper in the country, though not exactly available. The mines are widely scattered over the country. On a large map of Asia Minor one sees various places with 'Maden' or 'Madenli' as second name—'mine' or 'place of mines.' They are the sites of lead, silver, or copper mines, these being the minerals best understood in this land. Many of the old mines have been abandoned; seldom, however, from the ore giving out. Water may have come in beyond the power of primitive pumping apparatus to keep down, though as the mines are generally driven into mountain sides this cause is infrequent. More often the royalty payable to the State has been advanced till the margin of profit disappeared. For royalties are not of necessity strictly proportioned to the value of mineral obtained over a long period; they are based rather on the principle of getting as much as possible from the miners. A royalty of a tenth soon becomes one of a seventh if the miners do well. If they still show prosperity, it goes up again till only the equivalent of a bare wage is left them. The most usual cause, however, of a mine being abandoned is the disappearance of forest, for wood is the fuel used in smelting. A large, rich mine long worked clears the country of trees over a wide surrounding area."

The largest copper mine in Asia Minor is that at Arghana, in the east, near to Kharput. "There is another large one twenty or thirty miles inland from Imeboli on the Black Sea, on the way to Kastamouni. There is yet another somewhere behind Trebizond. Scattered over the country, worked, unworked, or only fitfully worked, are many smaller ones. Copper is produced by these mines in driblets, though Arghana might be one of the greatest mines in the world. It is the truth to speak of Asia Minor as a country rich in this mineral. The quantity now produced is only a fraction of that which capital and scientific mining would extract from existing workings; and one often hears of new copper lodes being found.

"'Copper? Yes,' said a mining expert who had just returned from the arduous journey needed to examine one of these deposits. 'But who is to build a hundred miles of mountain road, and a dozen bridges, and drive a couple of tunnels to get it to the coast?'

"That commentary applies to most of the country's agricultural and mineral products at the present time. Both sorts exist; both might be vastly increased. But neither could be moved in any quantity to a railway, and the sea-routes are closed.

Transport.

"For, after all, distances in the fertile territory of Turkey in Asia are respectable. As the crow flies, it is 700 miles from Constantinople to the nearest part of the Russian frontier, and 900 to the Persian. In the same direct way Baghdad is distant from the capital 1,000 miles, and the Persian Gulf 1,500. From the Black Sea to the Mediterranean is a flight of 400 miles. Putting aside Arabia and Syria, the fertile remainder of Turkey in Asia is a great solid block of territory broken by no deep gulfs, and traversed by no navigable river except the Tigris. The Sihon and Jihun, in Cilicia, might be made navigable, but are not. The Kizil Irmak, or Halys, greatest river of Asia Minor, has a precarious boat traffic on its lower seventy miles, but that is all downward.

"It is not generally realized how serious for Turkey, and therefore also for German interests, is Russian control of the Black Sea . . . . . Hostile military descent close to the capital becomes a possibility; the easiest routes for supplying Turkish armies against the Caucasian frontier are barred; large sources of food supply are cut off entirely. . . . . With the Black Sea closed to Turkish supply-ships and transports, Erzeroum becomes extremely inaccessible. The best other route is by rail from Constantinople to Angora, followed by six hundred miles of road. Supplementary routes are served by the Baghdad Railway—such as from Eregli (on the northern slope of Taurus) through Kaisariyeh and Sivas, which involves the same length of road; and from Adana and Aleppo, each giving about a hundred miles less of footwork, but over worse roads and through some frightful country. Beginning somewhere west of Kastamouni, a wide belt of coastal country in Northern Asia Minor, growing deeper as it passes eastward through Sivas, depends entirely upon the sea for sending its products west.

Roads.

Passing on to the question of roads, the writer refers to a peculiarity of the country, namely, that considerable ports and towns "whose annual imports and exports are valued at millions of pounds sterling" are "not only without a yard of railway line, but with only one highway to bring in and take away merchandize." Moreover, "you find also great trade routes from east and west and north and south conveying on a single pass, and making it the only passage between areas of territory great as considerable countries. Such a pass is that of the Cilician Gates, the highway through the Taurus Mountains, and only trade route between east and west and sea and interior for two hundred miles.

"The roads of Asia Minor are seldom metalled. The Baghdad road is paved or metalled from Samsoun to beyond Sirvas, a distance of 300 miles, but that is the greatest length of formed road in the country. The Cilician Gates road is also well graded and metalled where passing through the mountains, but only indifferently so when clear of them. For a few miles out of cities and large towns there is usually an attempt to provide a hard surface of some kind on the main roads; once clear of these stretches, however, the way is merely the track taken by traffic. It turns aside to take fresh ground; it spreads in lines of wheel-ruts for hundreds of yards in width. It is a bog in winter in which vehicles are sometimes left; it is a ploughed-up field in summer whose surface is ground to dust. Efforts have been made lately to improve some of the chief roads, especially in the south, by remaking and rolling with steam-roller. Around Aleppo are long stretches of highway that would be creditable even to Europe.

"Most of the country's merchandize is carried on the backs of camels, horses, and donkeys, which need no road. One of the busy trade routes of the country goes north from the Cilician Gates towards Kaisariyeh by a mere narrow bridle-track no vehicle could follow, yet within sight you may sometimes count three or four hundred loaded animals . . . . They carry grain and flour and paraffin thus as well as silk and carpets. Agricultural produce and minerals cannot be carried far for export when the freight for four days' journey by ox-cart is one pound sterling per ton. . . . There will be no great exportation of grain or anything else until many more railways have been constructed than at present."

Railways.

Apart from its bad roads and bridle paths, Asia Minor possesses about 4,000 miles of railway, the various lines being linked together—or about to be linked together—to form a continuous system. They form an interesting feature. "Not only have the lines of later construction been laid out to serve the political rather than the commercial purposes of the State, but veiled under these purely Turkish aims is something else. These later railways are designed to serve the political ambitions of a foreign State. . . . In one way or another . . . they have been designed to serve pan-German ambitions." In other words, they are German, and not Turkish, strategic lines aimed at Great Britain, as the following examination clearly proves.

"Looking at the earlier railways of the country," says the writer, "motives entirely Turkish are apparent in their construction; they are, indeed, well laid out in every interest of the Turkish Empire. With Haidar Pasha on the Bosphorus as terminus, a main trunk line goes eastward along the northern

Digitized by Google

shore of the Gulf of Ismid, and then turns south to Eskishehr, 150 miles from Constantinople. At this point it divides, and one trunk line, aiming for the Russian frontier in Caucasia, goes due east, and the other continues southward to tap rich districts of the west and south and south-east. The eastward trunk line was taken to Angora, another 150 miles; and there railhead has remained ever since, in spite of good intentions to carry it forward 250 miles to Sivas. The other trunk line, however, had better fortune, and in continuation became the Baghdad Railway. It was first, however, carried still farther south to Afium Karahissar, and there linked with the considerable railway system which has Smyrna for its centre. With lines built and owned by English and French companies, the Smyrna district has long had the best and most extensive railways in the country—commercial railways in every sense. . . .

"In earlier plans for the Baghdad Railway the southern trunk line passing through Afium Karahissar was not intended to be part of the scheme at all. The railway to Baghdad was planned as a continuation of the Angora trunk line. It was to pass through Sivas and Kharput, and thus give comparatively close approach to the Russian frontier. But the Kharput route was not the German route. It lay 250 miles north of the German route, which aimed to pass through Cilicia on the southern coast, and Aleppo, thus holding out a hand to the Syrian railways, and a railway to the Egyptian frontier and Messa. And this southern route, with all its possibilities, was the one eventually adopted.

"So now the Baghdad Railway goes from Constantinople through Konia, the old Seljuk capital, to the Taurus Mountains, and there passes down the historic gorge which has seen the march of so many conquerors and armies. It leaves the Cilician Gates—the narrow cleft followed by the highroad between two precipices, from which the pass takes its name—eight or ten miles upon its right and seeks the Cilician plain by a great tunnel, still incomplete. Then for a hundred miles it traverses this rich plain, passing Adana on the way, and linking with a branch railway to the port of Mersina. At Baghtche it leaves the plain by another great tunnel—likewise incomplete at this time. Thenceforward its way to Baghdad is free of obstructions. The Euphrates is already bridged, and long stretches of the line are completed beyond the river. At Aleppo it connects with the Syrian railways, and so with the line which goes down to the Egyptian frontier near Akaba on the Red Sea, and thence to Medina. The scheme of unbroken communication between Constantinople and Baghdad and the Egyptian frontier is not very far from completion; and yet the work would seem to have fallen much behind the date intended. One can scarcely doubt that for certain of its inner purposes it was to have been ready a year ago.

"Just how much German influence had to do with originating the railway from Damascus to the Holy Cities of Arabia is not easy to guess. The cost of construction was defrayed largely by subscription among Moslems. The line was, however, laid out and the construction supervised by German engineers—to that extent German influence is apparent. It goes east of Jordan and the Dead Sea, as if avoiding Palestine and the Mediterranean coast. Of this railway, the best that can be said is that it is a pilgrim way. It opens up no country of agricultural or mineral value, joins no great cities on the way, and does not even help Palestine.

"The Baghdad line, however, is of another sort. Unquestionably it follows the best and natural route between Constantinople and Baghdad. But for a Turkey not under German influence, cherishing no fantastic ambitions, intending peace with all its might yet keeping a watchful eye upon its hereditary enemy on the Caucasus frontier, the Baghdad Railway would have gone the northern way through Kharput and opened the rich grain country between Angora and Sivas.

Cilician Plain.

"As it is, with the railway passing through the Cilician plain, that district has become the chief field for German capital and industry in the country. Perhaps it holds out more opportunities for the investment of capital than any other area of equal size in Asia Minor. It is extremely fertile, and grows everything from wheat to cotton, and yet is only partially cultivated. . . . Adana stands in the middle of the plain, thirty miles from the sea and fifty from its port, Mersina, to which a branch railway runs that once was English, but now has been acquired by the Baghdad Railway Company.

"The Cilician section of the Baghdad Railway is the most vulnerable to attack of any between Constantinople and Baghdad or Constantinople and Akaba. For fifty miles it runs comparatively near to the sea, across level, open country. At Adana it is only thirty miles from the coast, and the large bridge by which it crosses the Sihon or Sarus is open to aerial attack from the sea. So also is the considerable bridge by which the Jihun or Pyramus is crossed near Missis, twenty miles beyond Adana. And this bridge cannot be more than fifteen or sixteen miles from the head of the Gulf of Alexandretta, with the low hills of Jebul Nur intervening. In fact, the railway for thirty-five miles beyond Missis runs nearer still to the sea, and is only ten or twelve miles from it at Toprak Kale, due north from the Gulf of Alexandretta." A branch line links up Toprak Kale with the port of Alexandretta.

From the foregoing it can easily be concluded that the whole of the Cilician section of the Baghdad Railway must be the scene of much German activity just now. "Not only is it exposed to attack, but the two incomplete tunnels—of the Taurus, and Arslanli Bel, under the Amanus Mountains, a hundred miles east of Adana—are the only gaps in direct communication between Constantinople and Syria, and far on towards Baghdad. The Taurus tunnel had not been begun four years ago. Its course had been decided, and boring was about to begin, when the discovery of rich mineral lodes near by caused a deviation to be made, that they might come within railway land—that, at least, was the local story. At the same time the Amanus tunnel was said to have advanced half a mile from each end. Much tunnelling can be done in four years; and at worst the tunnel is not more than five miles in length. Both tunnels, one thinks, must be very near completion by this time. But while still unfinished, each is turned by a good road, especially that through the Cilician Gates pass in the Taurus. The road distance is considerable, however—as much, perhaps, as forty miles. The road over Arslanli Bel is almost direct, and the break here—if it exists—cannot be more than a dozen miles; and the pass is a low one.

"For present German purposes the whole value of the Baghdad and Syrian railways hangs upon this sensitive length of line between the Taurus and Amanus Mountains—the hundred miles across the Cilician plain. And not only the railway passes through this neck of a bottle. Following the same course is the highway between Asia Minor and Mesopotamia and Syria. The natural features of the country are such that the only alternative road-route lies through Kaisariyeh, a hundred and fifty miles to the north, and thence eastward and southward through the wild mountains of Albistan. Turco-German armies in Mesopotamia and Syria have risks and difficulties behind them as well as in front."

"Cannon Fodder."

The German expectation to draw armies from Asia Minor to bleed to death in the service of the Kaiser is thoroughly examined by "W. J. C.," who comes to the conclusion that "one does not well see how even a million Ottoman troops are to be furnished at this stage. It can be done only by including boys and old men, as well as Greeks and Armenians of doubtful value. It would be no army of the sort hoped for in Germany. It would be, moreover, an army at heart as hostile to its German allies as to the enemy; perhaps more so."

Conclusion.

"Altogether," says the writer, in conclusion, "it is certain that German prospects in Turkey in Asia, whether of aggrandisement, or of gaining immediate supplies, or of finding armies, have not the promise of their outward appearance. Not under such conditions as the present was the political straddle from Berlin to Baghdad to be made. It has to be attempted before its time."

TRADE NOTES.

Egypt.

The Secretary of the Direction Générale des Douanes Egyptiennes, Alexandria, invites tenders for the supply of 250 pairs of boots. Date, March 8.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of equipment, clothing, material, paraffin, milk in tins, etc., necessary for Central Stores for one year from April 1, 1916. Date, March 20.

The Ports and Lights Administration, Alexandria, invite tenders for the supply of petroleum and benzine required for the financial year 1916-1917. Specification may be seen, and all information obtained, at the above office, on any day, Sundays and official holidays excepted, from 9 a.m. to 1 p.m. Date, March 20.

Tenders are invited by the Ministry of Public Works for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-17. Samples shall be submitted at the Roads Service Depot, Sharia Abbas, Cairo, before noon on March 1.

Tenders are invited by the Ministry of Public Works for the supply of 50 tons of natural asphalt required during the financial year 1916-1917. Samples shall be deposited at the Roads Service Depot, Sharia Abbas, Cairo, before noon on February 29.

Tenders are invited by the Director, Technical Schools, Cairo, for the supply of raw materials required for 1916-1917, such as wood, hardware, paints, oils, cement, bricks, building stones, sand, quicklime, etc. Date, February 29.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on February 29, for the supply of timber required by the above Department in 1916.

Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, London, S.W., and from the Agent, Sudan Government Railways, Alexandria.

Malta.

The Crown Agents for the Colonies notify that sealed tenders (in duplicate) will be received by the Treasury, Valletta, Malta, for the supply of stationery for the Government of Malta. Forms of tender and specifications may be obtained and samples of stationery may be inspected at the office of the Crown Agents for the Colonies (Pattern Room), Whitehall Gardens, London, S.W. Date, March 2.

Greece.

The attention of the Board of Trade has been called to a practice on the part of shippers of consigning their goods to his Majesty's Consular officers in Greece and sending to them bills of lading and invoices, for delivery to third parties, and even requesting them to make arrangements for transhipment where necessary. It is impossible for his Majesty's Consular officers, who are already overburdened with other duties, to undertake work of this character; and shippers are accordingly warned not to consign their goods to his Majesty's Consular officers in Greece unless expressly so authorised or directed by his Majesty's Government.

H.M. Consul at Piræus reports that the Greek Government *Gazette* of December 23/January 5, contains a call for tenders by the Harbour Board of Piræus for the construction of works generally in the port of Piræus at the estimated cost of 3,500,000 drachmae (about £140,000 at par).

The "cahier des charges" and all other documents and plans can be inspected at the office of the Harbour Board at Piræus, at which address tenders will be received up to February 21/March 5.

Engineering Notes.

Balkan Rivers.

In addition to his reference to the Danube in the lecture before the Royal Geographical Society on the 7th inst., Mr. H. Charles Woods passed some general remarks on Balkan rivers in general, and said that partly owing to the great difference between the amount of water in most of the rivers after the melting of the snows, and after the dry season, and partly owing to the lack of public works, the rivers of the Balkan Peninsula, except the Danube, the Sava and the Bojana, are not systematically navigated. The Bojana, which constitutes an outlet for Lake Scutari, flows into the Adriatic between the towns of Dulcigno and San Giovanni di Medua. When the river is full, and when there is enough water to get over the bar at its mouth, the river is navigable for small vessels as far as Oboti. Thence to the port of Scutari, there is only sufficient water for small stern-wheeled vessels, or for boats whose owners make their livelihoods by conveying passengers from lake and river vessels to the quay. Small barges or flat-bottomed boats may be seen drifting down the lower reaches of the Maritza, and the rivers of the Rhodope Balkans are utilised for floating logs and trees to the plain which skirts the Ægean Sea; but the rivers have not really been used for the furtherance of trade.

Combined Reaping and Threshing Machine.

Hesiod in his didactic poems on agriculture, from which much of our knowledge of farming operations in ancient times is derived, exhorts his never-do-well brother to "strip to plough, strip to sow, and strip to reap" promptly, and in the proper time, for he warns him that the farmer who neglects to do so "will have to sit or stoop to reap" (meaning, on account of the lowness of the ears, from neglected cultivation). Modern agricultural machines do not require the farmer to strip, for he can now plough and sow and reap by sitting comfortably on a seat, from which by handling a couple of small levers he controls the whole operation. Yet some of the implements described by Hesiod (850 B.C.) are still to be seen in extensive use throughout the East, while farming methods as prescribed in his "Work and Days" are adhered to with only slight alterations. From this it might be inferred that the people are averse to modern methods. Yet that is not the case, for there is ample evidence that they are more eager to adopt new mechanical methods than many people in the West. It is only a natural feeling of incredulity which discourages them, and that feeling American and German manufacturers succeeded in destroying (with good results for themselves) by placing implements and machinery on the spot and demonstrating their operation in a way that won even the most incredulous buyer. Proof of this is the great number of ploughing, sowing, reaping, threshing, and other agricultural machines which are annually imported from America, and, before the war, from Germany and Austria. Reaping and threshing machines are much appreciated by the Oriental agriculturists and farmers, but a machine that could do both operations at the same time would appeal to every farmer and landowner. Such a machine exists, and works, apparently, with great success. It is a combined reaping and threshing machine which also bags the grain. It is made in five sizes, all of which are drawn by horses, but an oil motor can be

fitted in any size for supplying the power to drive all the mechanism of the machine, and in that case only half of the number of horses are required; that is to say, merely for the purpose of pulling the machine through the standing corn. When the machine is in motion, the heads of grain are guided, by a comb fitted at the front, to the beaters, which strip them off (leaving the straw standing) and throw them partly threshed on a broad elevator, which carries them to a threshing drum. The grain and chaff fall from the drum on to riddles; the blast from a fan blows over the chaff, whilst the grain passes through the riddles to elevators, which carry it to a rotary screen. Herein small grain, weed seeds, etc., are separated from the plump grain, each being delivered into distinct boxes, from which they are transferred into bags. In spite of the number of operations involved, one man can drive the team and control all the operations of the machine. The average capacity of the machine is estimated at 2½ acres per foot of comb width per day—that is to say, a 5-ft. machine will harvest 12½ acres (or about 50 stremmata) per day; while a 9-ft. machine will deal with nearly double that acreage. The comb can be raised or lowered to suit the height of the crop that has to be reaped, and it is noteworthy that the driver of the machine sits in a position from which he can watch the whole progress of the grain, from the comb to the grain-box. To an Oriental farmer, the possibility of having his grain reaped and threshed at the same time is of great financial importance, and such a machine will appeal to him.

GERMANY'S ROUMANIAN BLUFF.

More Facts About the Grain Deal.

(From Our Own Correspondent.)

Bucharest, January 25.

The Roumanian agriculturist is beginning to see clearly in the matter of the sale of the 50,000 truckloads of grain to Germany.

Shortage of Trucks.

It will be remembered that the terms of the contract stipulated that Germany should send 250 empty trucks per day into the country for the transport of the cereals, commencing January 1. Accordingly some 4,000 trucks should have entered and left the country up to the present, whereas in reality the number of empty trucks that have arrived has barely reached 600.

Of course, military happenings in the Bukovina may account for some of the shortage, considering that of the 250 daily trucks 80 were to enter Roumania by way of Burdujeni. It is a matter, however, that Germany should have foreseen, and doubtless would have foreseen if she had been really anxious to acquire grain in Roumania. Thus, for instance, she might have insisted on exports viâ the Danube.

But, after all, the *bona-fide* purchase of Roumanian grain, as such, was not, perhaps, the leading motive of Germany's deal. As a matter of fact, two particular motives explain the purchase on the part of Germany. Firstly, the German public were to be reassured by the news that their Government was procuring food for them, small as the amount might be, because it showed that their wants were not being ignored or neglected. Secondly, the news would satisfy the Roumanian agriculturist for the time being, and, until such time as the sale had been completed, would to some degree act as a factor favouring neutrality.

What, on the other hand, was Great Britain's offer? Money down and delivery at leisure. The contrast between the two transactions needs no comment, nor need one insist on the general effect which the sale to England has produced in the country.

Bôche Agents Active.

Now, Austro-German agents are warning agriculturists not to be too hasty in offering their stock of grain to the Central Commission for sale to England, the reason given being that Germany will, without a doubt, shortly offer considerably better prices. Moreover, the Kaiser's agents are going even further. Without wasting any time, they have begun to buy directly from landowner and merchant, offering higher prices. They hope, in this way, to prevent Roumania from carrying out her part of the bargain with Great Britain.

These manœuvres show how hard Germany has been hit. They are ingenious bluff, but the Roumanian Government will never tolerate practices tending to prevent an official institution—such as the Central Commission for the export of grain—a party to a contract, from carrying out the terms of that contract.

The Council of Ministers has, therefore, passed a resolution whereby holders of grain which has not been placed at the disposal of the Central Commission cannot dispose of it except through the Commission in question.

January 24.

(Delayed in transmission.)

Austrian Schemers.

A few days ago it was reported that three Austrians, including the mayor, had been arrested at Ytzcani, on the charge of exporting gold into Roumania. Obtaining from the Wiener Bank Verein large amounts of gold for the alleged purpose of paying the export taxes of grain bought in Roumania (which are payable only in gold), these men introduced the same into this country, changed it into Roumanian *lei*—gaining, of course, by the exchange—and with the *lei* purchased Austrian *kronen*, which stand very low—thus realizing a double profit.

The good faith of the Wiener Bank Verein seems rather remarkable, for purchases of grain can only be effected in Germany (and presumably in Austria, where the German authorities seem to be all-powerful) through a special commisssion possessing a monopoly for this purpose, and presumably payments in gold can in consequence only be made on the authority of this commission.

The accounts given by persons arriving yesterday from Cernowitz indicate that the affair had assumed the proportions of a widespread organization, for they report the arrest of sixty persons in different towns of Bukovina. A banker from Suceava named Binder, reputed to be a multi-millionaire, shot himself when he was on the point of being arrested. Through the frontier ports of Ytzcani and Suceava alone, three million crowns are said to have been exported, the total sum of gold exported amounting to 18 million crowns.

COMMERCE IN TURKEY.

(From Our Special Correspondent.)

Athens, February 3.

The first through train from Berlin arrived at Constantinople on January 17, and left two days later on the return journey. The railway station at Stamboul was decorated for the occasion, and there was a band of music and much rejoicing and bluster. A special delegation was sent to Tchekmedjeh to meet the train, and Talaat and many others awaited its arrival at Stamboul.

The fact of a through train having arrived from Berlin seems to have created the impression amongst the Turks that Constantinople will no longer be deprived of the many necessaries of life, the want of which is being so badly felt. It is highly improbable that the single line through the Balkans will be able to do much more than provide the military with their own requirements. There is evidently some intention of importing coal into Constantinople from Germany, as Parliament has voted a law exempting duty on coal imported from Germany during the war.

Latest reports from Constantinople state that coal stocks had run very low, and very few trains were running on the Anatolian line, but, according to other reports, several vessels laden with coal had succeeded in reaching the Bosphorus from Zunguldak, convoyed by the Goeben and Breslau.

Far from Turkey being able to obtain provisions from the Central Powers as anticipated, the effect of the direct railway communication is more likely to deprive the capital of many things required there. Meat has doubled in price already owing to quantities of beef slightly salted having been exported from Constantinople. What available accommodation the railway can provide will undoubtedly be taken for Germany to suit her own purposes.

Produce Report.

Germany continues to buy mohair, and the price has touched 40 piastres the oke. Austria and Germany are credited with having bought about 60,000 bales during the past twelve months. The demand for this article has enabled the holders of stocks, and others, to reap handsome profits, and even higher prices are likely to be seen, considering that only about 15,000 bales are left in Turkey, and the new clip next May is likely to be below the average.

Canaryseed has also risen in price, and 60 paras per oke is obtainable in Constantinople, but purchases are doubtless being made by speculators with the view of holding stocks until exportation is possible, as this year's crop will evidently be very small, if there is any at all.

Opium is not in much demand, but the price has advanced to 250 piastres per oke. There is a great demand for valonea for Germany, and very high prices are being paid, but owing to difficulty of transport in Asia Minor, and as all traffic in the Marmora is paralysed through fear of submarines, very little valonea finds its way to Constantinople.

Bread has again been scarce in the capital, and is of very inferior quality, and there is evidently some difficulty in keeping the city supplied with the requisite quantity of wheat. Flour is selling at 10 piastres the oke.

Galata Tunnel.

The tunnel train between Galata and Pera has been running for some time with only a single car, owing to the weakness of the cables, but the *Hilal* announces that new cables have now arrived.

Near East Markets.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, January 31.

There has been more rain, accompanied by heavy falls of snow in the hills, which have not only covered the heights, but also many of the lower spurs, reaching villages where it seldom lies. Winds blowing from the heights and from the Great Taurus range on the opposite coast have caused intense cold, which has even had fatal consequences. An unfortunate villager of the Kyrenia district, a mason by trade, who had been working in another part of the island, while returning to his village fell a victim in the early morning to the bitter cold, both he and the donkey he was riding being found dead in the road. There have, however, been plenty of fine sunny days. Wheat sowing has practically ended, and other crops are being put in. The Agricultural Department is encouraging, as far as means permit, the planting of trees and improved methods of grafting.

SUDAN NOTES.

The *Monthly Journal* of the Sudan Chamber of Commerce for January gives the following particulars concerning some of the Sudan's most important export articles:—

Ivory.

There is little business doing, arrivals are small, and the demand is only for large tusks, with prices from £E35 to £E42 for good soft sound tusks.

Cattle.

Market very dull, because of great difficulty in obtaining tonnage and lack of enquiries from Egypt.

Skins and Hides.

Prices for fresh slaughtered skins and hides are very high, and the demand very keen. Fresh sheepskins stand at P.T. 14 per piece and hides at P.T. 4.2 to P.T. 4.5 per oke. Arrivals from the White and Blue Nile of flint dry hides were plentiful and owing to the absence of any enquiry from Italy, and shipping difficulties the prices dropped P.T. 8 per oke unsorted. These qualities are neglected at present, and if any larger arrivals take place, the prices will drop further.

COTTON MARKET.

Liverpool. Thursday Night.

Messrs. Reynolds and Gibson telegraph:—

Egyptian Spot.—There has been a good demand this week, chiefly for export, and a large business has resulted. A big proportion of the bales for export consisted of Uppers, about fully good fair in quality. Quotations are advanced 55 points for Sakellarides and Abassi, 50 points for Upper, and 45 points for other descriptions. Estimated sales, including 170 bales London, are 7,800 bales.

Manchester.

There has been a slightly better demand this week, although the turnover has been unevenly distributed.

THE COTTON PEST.

Greek Expert's Claims.

On January 29, says the *Egyptian Gazette*, Mr. Nicholas Parachimonas, the well-known agricultural expert, read a paper before the Greek scientific society, the Ptolemys, of Alexandria, on the subject of the cotton-worm, all measures so far devised to combat which have proved a failure, and he made the important announcement that he had been successful in producing new varieties of

cotton which ripen before they are liable to be attacked by the pest. Mr. Parachimonas stated that his experiments had extended over many years, and their results had entirely satisfied other experts to whom they had been submitted.

He has given to two of the new varieties of cotton in question the names of Zagora and Pelion, respectively, these being the names of the districts to which some of the most famous Egyptian cotton cultivators—Messrs. Canava, Cartali, Voltos, Zaphirios and Parachimonas—originally belong.

PRODUCE REPORT.

Currants. LONDON, February 17.

The market continues very active, and prices are slightly higher than last week. Large business passed during this past week in all qualities. Pyrgos, 40s. to 42s.; Amalias, 43s. to 44s.; Patras, 43s. to 46s.; Gulph, 47s. to 48s.; Vostizza, 45s. to 50s.; Zante, 41s. to 45s.; and Smalls, 43s. to 50s.

Sultanas.

The demand continues steadily for all available kinds at full prices.

Figs.

There has been a better demand during the week, and prices continue firm.

Dates.

There is a good demand, with prices quoted dearer than last week.

Seeds.

Linseed is very quiet again, and owing to the action of re-sellers slightly cheaper all round. Calcutta to London in any position forward can be had in second-hands at 82s. 6d. February-March is quoted 83s., March-April sold at 83s. La Plata to Hull offered at 77s. Rapeseed, Toria, March to Hull is quoted 74s. Cottonseed, in the absence of offer, is only nominally quoted. Canary seed is quoted 86s. to 110s. per 464 lb.; Lentils 23s. to 26s. 6d. per 100 lb.; mustard 21s. to 26s. cwt; split peas 93s. to 110s. per 504 lb.

Oils.

Linseed oil has been quiet, and business was done at slightly lower prices. Spot pipes £43 5s., month £44, March-April £45 15s., May-August, £45 12s. 6d. Rape oil continues quiet at late quotations.

Oil Cakes.

Linseed cakes.—The market has been very dull this week, with only small business passing for consumptive use. Best London made are still quoted £13 to £13 15s. per ton. Cotton cakes.—Egyptian landed are very scarce, selling at £10 7s. 6d. to £10 10s., while February shipments are offered at £10 2s 6d. to £10 5s. ex ship, at which price a fair amount of business was done. English makes are at £10 5s. to £10 7s. 6d.; and Bombay at £10 per ton.

Greek shippers have been informed by the Minister of Marine that the Straits of Corfu have been closed by two barriers, access to which is prohibited to all boats which are not first inspected by the French guardship, which is distinguished by two large balls in the day time and red lights at night. Navigation by night to the east of the island is forbidden.

ENEMY FIRMS IN EGYPT.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 1.

The campaign with regard to enemy firms in Egypt is being carried on in the local British Press, and there are signs of a hastening up of the liquidation of some of the concerns complained of. One firm, to which reference has been made in my previous notes—Bochme and Anderer—has now advertised the sale of all its plant and stock-in-trade, which latter, by the way, includes a supply of Letts' Diaries for 1916. An English liquidator was yesterday appointed to Hackh's and the Vulcan Coaling Company, and it is to be presumed that other similar appointments will follow suit, including a liquidator for Weinrich and Co., who still display coats of arms announcing to the effendi that they are under the patronage of H.H. the Khedive and H.R.H. the Duke of Connaught!

*** On January 31 the Egyptian *Official Journal* published the following proclamation:—

"All persons of enemy nationality and all Egyptians who are forbidden to return to or reside in Egypt are hereby disqualified from participating in any municipal election either as electors or as candidates."

On January 27, the following notice appeared in the *Official Journal*:—

The Licensing Officer directs the particular attention of all manufacturers and traders concerned to the need for scrupulous care in the transaction of their business abroad, in view of the fact that some traders in some neutral countries are making themselves agents for the supply of goods to and from enemy countries. Especial care should be taken in opening new accounts in neutral countries, and in relation to any orders or inquiries of an abnormal character. In any case of doubt as to particular firms abroad, business should be suspended pending reference to the Office of the Licensing Officer, Ministry of Finance, Cairo.

The proclamations relating to trading with the enemy cover indirect trading with the enemy through neutral agents, and carelessness in transacting neutral business may involve traders in the severe penalties attaching to trading with the enemy.

On February 2, the *Egyptian Gazette* published the following:—

Hugo Hackh.

The licence granted to the firm of Messrs. Hugo Hackh of Cairo and Alexandria, hitherto under the management of Mr. J. Calderon, has been cancelled, and Mr. F. H. Russell, of Gresham House, Sharia Soliman Pasha, Cairo, has been appointed under Arts. 9 and 10 of the Proclamation of January 25, 1915, receiver of the business of the firm, with power to liquidate its affairs.

Vulcan Coal Company.

Mr. E. L. Bristow, manager of the British Coaling Depot, Port Said, and Mr. Richard Prioleau, Barrister-at-Law, Port Said, have been appointed under Arts. 9 and 10 of the Proclamation of January 25, 1915, as joint receivers of the business of the Vulcan Coaling Company at Port Said, with power to take all such measures as may be necessary to liquidate the business of that company in Egypt.

REOPENING THE BOURSES.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 1.

A step nearer the return to a normal state of affairs was registered yesterday, when the Cairo Bourse reopened for the transaction of business on a cash basis. The reopening of the Alexandria Bourse has been delayed, owing to local interested parties declining to agree to the Government's scheme for a resumption of business without any restrictions, safeguards, etc. These folk have enjoyed a moratorium, so to speak, in so far as stock and share transactions are concerned, since the war broke out. That is to say, the banks and financial establishments have not been able to liquidate the dossiers they held for account of these parties; and, not content with that, the latter are standing out for guarantees of postponement of liquidation and what not, if the Alexandria Bourse is allowed to reopen. Their attitude is in the highest degree unreasonable, and there is reason to believe that the Government will very soon find means to bring them to their senses and to ensure the free resumption of business in Alexandria. That there is little to fear from the point of view of a wholesale unloading of shares is proved by the state of affairs in Cairo, where the reopening took place under most promising conditions, buyers being prominent and prices demonstrating a tendency to harden—in many cases the closing prices were higher than those recorded prior to the outbreak of war.

EGYPT'S FINANCES IN NOVEMBER.

(FROM OUR OWN CORRESPONDENTS.)

CAIRO, January 28.

The State accounts for November, published in last night's official journal, show a continuation of the improvement manifested in previous months of the current financial year. The revenue at the end of November amounted to £E11,432,390, and the expenditure to £E10,968,134, as against £E10,464,716 and £E12,527,177 at the same date in 1915. There is thus a surplus of £E464,256 as compared with a deficit of £E2,062,461 at the end of November last year. This has been brought about by an almost all-round improvement in the revenue and a strict exercise of economy in the expenditure, though during the month in question the outlay in certain administrations has undergone a small increase on what has been expended on average during the previous months.

By comparison with 1914 at the end of November, Land and House Tax was up by £E676,024, Customs by £E71,291; Tobacco Dues by £E51,120, Legal Dues by £E29,846, Railway Receipts by £E129,972, Telegraph Receipts by £E18,387, Rent of Government Land by £E27,107, Domains Receipts by £E297,236, but Port Dues were down by £E122,729, Investment of Funds by £E18,811, Military Exemption by £E22,580, and Divers Receipts by £E132,065. During the month Land and House Tax improved by £E141,918, Customs by £E75,398, Tobacco Dues by £E27,966, Legal Dues by £E26,436, Railway Receipts by £E71,834, Domains Receipts by £E82,621, and the only serious decreases were registered under Port Dues £E13,064, and Investment of Funds £E22,597. This is com-

Digitized by Google

pared with November, 1914, so it can be seen that the country is fast recovering from the set-back which it suffered at that date.

The chief items of expenditure during November were National Printing Press £E33,097, Public Health £E38,005, Irrigation Service £E58,997, Railways £E224,189, War Office £E54,500, Public Debt £E1,121,289, Provincial Services £E62,195, Police £E46,016, and Pensions £E52,996.

It is to be noted that the balance to the credit of the Government at the end of November was £E12,640,179, and the amount in the hands of the Public Debt Commission £E2,120,417 (in cash and stock), as compared with £E9,146,053 and £E3,112,293 at the same date in 1914.

An idea of the effect which the war has had on the revenues of the country may be obtained from the following table, which gives the position at the end of November, 1914 and 1915, by comparison with the figures at the same date in 1913.

—	1914.	1915.	Recovery.
	£E.	£E.	£E.
Land and House Tax..	−511,407	+164,617	+676,024
Customs	−382,847	−311,556	+ 71,291
Tobacco dues.....	+ 15,117	+ 66,237	+ 51,120
Port dues.....	− 56,294	−179,023	- 122,729
Legal dues	−140,072	−110,226	+ 29,846
Railway receipts	−482,370	−352,398	+129,972
Telegraph receipts	− 7,629	+ 10,758	+ 18,387
Post Office	− 19,359	− 20,833	− 1,474
Domains receipts.....	− 21,635	+275,601	+297,236
Extraordinary receipts	+109,749	+ 11,751	− 97,998
Rent of Govt. land	− 26,727	+ 380	+ 27,107
Sales of Govt. land	+ 25,899	+ 4,797	—
Investment funds.....	+113,249	− 5,562	− 18,811

From this it can be seen that with the exception of Port Dues, caused by reduction in shipping entering and leaving Egyptian ports, Post Office, Extraordinary Receipts, Sales of Land and Investment of Funds, practically every head of revenue has undergone improvement, in some cases very considerable improvement. An explanation for the increase in the Land Tax collections may perhaps be found in the fact that landowners are in many cases paying in advance, and that last year, i.e., 1914, part of the November instalment was postponed until December and January. The falling-off in Customs and Railway Receipts, though less than in 1914, has the same cause as the continued decrease in Port Dues, viz., trade depression and shortage in freights. The improvement in the Domains Receipts is due to the sale of the cotton carried over from the previous campaign, and that in Tobacco Receipts to the raising of the tariff. The general tone of the accounts goes to prove that that country is in a very much better condition financially and economically than it was a twelvemonth ago.

EGYPT-SUDAN TRADE.

(From Our Own Correspondent.)
Cairo, February 1.

During 1915 there was a total trade turnover between Egypt and the Sudan of £E1,397,016. According to the figures given in the last report of the Sudan Economic Board—the Egyptian Customs only started to publish figures in January, 1915—the turnover in 1913 was £E1,449,834, so that the war has not affected the relations between the two countries very much.

Imports from the Sudan into Egypt, which amounted to £E519,243, included cattle £E142,663, skins and tanned goods £E22,112, ivory £E5,282, maize £E43,249, sesame £E63,266, gum £E19,126, senna £E10,204, cotton £E87,932, and charcoal £E12,969. Exports from Egypt to the Sudan came to £E877,773, and included boots £E10,974, wheat £E13,252, flour £E21,780, sugar £E190,997, coffee £E38,705, cotton tissues £E210,640, sacks £E25,047, common soap £E20,827, and petroleum £E7,834.

The Secretary of the Imperial Merchant Service Guild has received a communication from Captain V. E. Lazzolo, late of the steamer City of Khios, now interned at the Magnesie Camp, Turkey. He states that he has had a communication from Lieutenant-Commander A. D. Cochrane, R.N., mentioning that he and eighteen other officers were well.

ROUMANIA'S EXPORT TAXES.

(From Our Own Correspondent.)
Bucharest, January 25.

The payment of all export taxes in gold, upon which M. Costinesco, Minister of Finance, has insisted with so much firmness, is beginning to show excellent results, permitting the issue of considerable amounts of paper money on the part of the National Bank of Roumania. From April 1 to December 31, 1915, these taxes have brought in over thirty million francs in gold. This sum will be largely added to by the gold derived from the recent wheat sales.

THE GREEK BUDGET.

Reuter reports from Athens that an important Cabinet Council was held on Friday last, the financial situation forming the subject of lengthy deliberations. The principal measures proposed by the Minister of Finance with a view to the equilibrium of the Budget for 1916 include the taxation of extraordinary war profits made by the merchant marine, the suppression of certain posts of doubtful utility, and the reduction by 10 per cent. of official salaries exceeding 200 frs. (£8). The last measure was opposed by other Ministers on the ground that it was unfair to reduce already meagre salaries at the moment when life was so difficult. A decision on this question was postponed. An agreement was reached regarding the taxation of war profits. It is probable that the system employed in England will be applied.

The Cabinet also dealt with foreign policy. The indications of a change of attitude by Roumania are also seriously pre-occupying the Government.

THE TURKISH BUDGET.

Reuter reports from Amsterdam that, according to a telegram from Constantinople, the financial report which Talaat Bey, Minister of Finance, submitted to the Turkish Chamber states that the Budget for the coming financial year presents a deficit of some 14 million Turkish pounds, or 5½ millions more than the deficit in the current financial year. The estimates for the Army and Navy remain almost unchanged. A sum of £1,460,000 is set aside for harbour and railway buildings on account of the Army Administration. Regarding the results in the current financial year, the Minister states that the total expenditure amounts to 62 millions, while the revenue for the first half of the year was about 11 millions. The advances from Austria-Hungary and Germany against the issue of Exchequer bonds realised 14½ millions. With this stock of money the Exchequer could cover war expenditure, and, as far as possible, the cost of the civil administration. The income for the second half-year is estimated at about 12 millions. With this and advances amounting to 20 millions from Germany, which have been authorised by the Chamber, the Exchequer will have sufficient funds to cover all ordinary and extraordinary expenses in the current financial year ending March 13.

*** On Wednesday the Central News reported from Amsterdam that the Budget Committee of the Turkish Chamber announces that since the beginning of the war the Turkish Government has negotiated advances from the Central Powers amounting to £T21,613,816. Within a short period the Government will receive from Germany a further sum of £T21,240,000.

COMPANY RESULTS, &c.

Anglo-Egyptian Oilfields.—Gemsah production for week 28 tons (last week 34 tons); Hurgada production for week 325 tons (last week 341 tons).

Egyptian Guaranteed Three per Cent. Loan.—The dividend due on March 1 next will be paid by Messrs. N. M. Rothschild and Sons on that day, and on each succeeding day between the hours of eleven and two.

European Oilfields.—Week ended 6th inst., 82,900 poods.

Roumanian Consolidated Oilfields.—Production for January, 3,310 tons; production for week ended February 5, 748 tons.

Suez Canal Receipts.—Receipts for the 12th and 13th inst. amounted to 580,000 frs., against 510,000 frs. for the corresponding days last year.

NOTES OF THE WEEK.

The Russians are following up their success at Erzeroum by a general advance of their whole line from the Black Sea to Lake Van. Columns advancing in the coastal region appear, from the brief official reports, to have no difficulty in driving the enemy before them, with the result that they are already threatening Rizeh. Just as the first thrust of the Russians over the Caucasus frontier so completely demoralized the Turks that Erzeroum was not strong enough to provide them with a rallying point, so now the onward sweep of the Grand Duke's army is likely to force them a long way to the west before they can bring themselves to make a fresh stand. It is reported that preparations for the evacuation of Trebizond are in progress; but whether this implies the removal of the civilian population with a view to placing the town in a better state of defence, or the complete abandonment of the town to the Russians, remains to be seen. Farther south the pursuit of the Turks continues, and the hope seems to be entertained in some quarters that the enemy's retreat will be cut off mainly by the columns operating from Mush. The whole of this region is mountainous, and the general direction of the ranges is east and west. Consequently, while there is little to stop the Russians from pursuing the Turks along the routes they must follow, and in many instances overtaking them, it is a difficult matter to carry out a movement for rounding up the fugitive columns owing to the mountainous barriers guarding the valleys along which they are retreating.

No definite news has been received for some time from Persia. The last reports placed Turks and Russians in the Khangevar district, but did not indicate that there had been any real trial of strength between the opposing forces. If the Turco-German authorities in Baghdad have reason to be alarmed by the Russian advance in the north, and have to detach a force to protect the Baghdad Railway route, they will be anxious to achieve some success before withdrawing from their positions east of Kermanshah and in the neighbourhood of Kut. Whatever may have been the object of the Turkish expedition into Persia, it is certain that it will not feel tempted to advance much further from its Baghdad base until the situation in Armenia has improved for the Turks. Its arrest in the Kermanshah region would in all probability give the *coup de grâce* to German propaganda in Persia, which has already been severely hit by the rapid movements of the Russian troops. But Russia and Great Britain cannot rely on moral effect alone to counteract the lawlessness which Turco-German agents have fostered throughout the country. Where the Russian columns have advanced there will have been no difficulty in restoring order and possibly Persian authority in some guise or another. In the south, however, the part of the country in which Great Britain is primarily interested, no Russian and no British columns are operating. On the other hand, British subjects, including Consular officials, are prisoners in the hands of insurrectionaries, and as far as is known no steps are being taken to effect their release.

There may be cogent reasons preventing British military operations in the south as the counterpart of what the Russians are doing in the north. It will be remembered that the occupation of Bushire last year by British troops was of short duration, and that since that time no attempt has been made to support the Persian authorities in these regions against the increasing lawlessness of the tribes. No doubt there is more important work to be done elsewhere. But the course of events both in Southern Persia and in Mesopotamia indicates that the British authorities have not maintained the close touch with the tribesmen of these parts that has been the basis of their successful relations with the peoples of the East. The present war has deprived the Government of the invaluable services of the late Captain Shakespear. Some of his work remains, and the Mesopotamian Expedition has benefited from it. But he stood out almost alone in this part of the world. Men of his type are born rather than made. When, however, they are not forthcoming spontaneously, efforts should be made to create them. In the meantime there are others who know their Middle East, even if their names are not household words among the Arabs; but their services are not always utilised, and when they are employed by the Government it is more likely to be in some other sphere than in the Middle East.

Two incidents during the past week have directed attention to the attitude of Greece to the war. The first is the publication in the *Temps* of a letter written by

Digitized by Google

Prince Nicholas of Greece, the other the visit of General Sarrail, the Commander-in-Chief of the Allied forces at Salonika, to Athens, where he was received in audience by King Constantine. Prince Nicholas points out that, while Greece has remained neutral, she has not declared that she would never at any price depart from her neutrality. Whether this statement is historically accurate it is difficult to say, because we do not know the authority to whom Prince Nicholas refers in the term "Greece." In the pronouncements of Greece's views and intentions which the King of the Hellenes has given to the world through the medium of correspondents we seem to remember an emphatic declaration to the effect that Greece would never abandon her neutrality. But foreign correspondents, although indispensable to every progressive Government nowadays, can be repudiated, if necessary. The actual words used by Prince Nicholas, however, are not so important as the main purpose of his letter, which was clearly to hold out an olive branch from Greece to the Allied Powers.

Whatever may be the political result of General Sarrail's visit to Athens, it provided a fresh occasion for a demonstration of the sympathy of the Greek public with the Allies' cause. In regard to his audience at the Palace, King Constantine is reported to have expressed himself as being delighted with the result of the conference, which, he was thoroughly confident, was the first step towards clearing up the differences between Greece and the Entente. He added that many causes of friction will have been smoothed away. The visit in itself is of the best possible augury, and taken in conjunction with Prince Nicholas' letter must be a matter of satisfaction to the Entente Powers. It is to their interests to maintain good relations with Greece, in order that their military operations should not be hampered by constant friction.

So long as King Constantine was proclaiming to every newspaper correspondent in Athens in turn that the Allies' conduct towards Greece was outrageous, and that they were every whit as bad as the Germans in their treatment of small States, it was manifestly difficult for the Entente to show much regard for Greek feelings. They were prepared to explain the military exigencies which compelled them to act as they did; but the Greek Government would not listen. In the meantime some water has flowed down the Vardar. Greek military experts have been impressed by the strength of the Salonika position in the Allies' hands, the successes of the Central Powers over Serbia and Montenegro have come to an end without carrying them either to the Ægean or to Egypt, Erzeroum has fallen, and the Russian front in Europe can hardly be regarded as broken or even to-day as weakened. There is every reason why Greece should reconsider her position, and the two incidents to which reference has been made are a sign that this process is now taking place.

If Greece should come to a wiser appreciation of her own interests, she will find the Entente Powers ready to welcome her new frame of mind. King Peter of Serbia correctly interpreted their attitude when, in the course of an interview with an American correspondent, he said, speaking for the Serbians: "As for our Ally, Greece, she has understood differently from us her interests in the Balkans; but, apart from her refusal to participate in the war shoulder to shoulder with us, she has in other respects fulfilled the duties of friend and neighbour. To-day we are the guests of the Greek people, and we are grateful for their hospitality." In other words, the betrayal of the Alliance cannot be altogether expunged from the memory, but from now on the best complexion will be placed on all the overtures from Greece, and even the compulsory billeting of the Serbians upon an unwilling country is to be regarded as the acceptance on their part of proffered hospitality. The interest of the Allied Powers in the Balkans remains the same. They wish to see the Peninsula united for peaceful development, and know that, to achieve this end, they must exercise salutary influence upon all the States. If Serbia, conscious that she has stooped to conquer, harbours no ill-will against Greece, the Allies are not likely to be more vindictive. That Greece has recognised that the first move must come from her is all to the good. She is likely to find more difficulty in readjusting her domestic affairs to her altered views on foreign policy than in persuading the Entente Governments to meet her half-way.

The domestic aspect of any change of views that Greece may be contemplating was emphasized in the presentation of an address to King Constantine by the Vice-President of the Chamber. After thanking the King "for having, within the limits of his prerogative, by his intervention in so critical a period of their existence, avoided the imminent danger of Greece being plunged into the European conflagration," the address continued: "Your Majesty, in full harmony with the other constituted authorities of the State, will say when the hour strikes to use the national resources in the national interests. The whole nation once more stands round your Majesty, ready to make any sacrifice; but until the momentous hour arrives it is firmly resolved, in spite of unjustifiable pressure from the Powers, to keep to the path which it is at present following." It is to be feared that this document bears the stamp of the politician rather than of the statesman. The minnows declare their readiness to do anything they are told to do, even to eating their words and reversing their own policy, provided only King Constantine will keep the trout away. It remains to be seen whether King Constantine, after taking counsel with the Entente Powers, will still be of opinion that minnows can quite well perform the trout's work.

A grim report from Bulgaria is published in *Le Journal des Balkans*, a newspaper established in 1913 with the object of promoting the harmony of the Peninsula. Its sympathies are with the Entente Powers, but it has not lost sight of the desirability of reconciling the various interests of the Balkan States. The statement to which the Bucharest organ gives publicity is to the effect that not only have British prisoners in Bulgaria been publicly insulted and exhibited in chains, but after the engagement at Doiran the Bulgarians "were so exasperated by the heavy losses inflicted by the British artillery that they ordered all the British prisoners to be massacred." We cannot invite any credence for these statements until they are confirmed. The Balkans produce an abundant crop of rumours all the year round, most of which are false, many palpably improbable. But the standing of *Le Journal des Balkans* justifies an investigation into the accuracy of the report both in the interests of the British prisoners in Bulgarian hands and in the interests of the Bulgarians. If another report be true, that the Bulgarian Government has prohibited the despatch of any comforts to British prisoners of war from Roumania, it can hardly wonder that sinister reports of the Bulgarian treatment of their prisoners should be current.

On the day that THE NEAR EAST went to press last week a trenchant article from the pen of Sir Arthur Evans on "The Abandonment of Montenegro" appeared in the *Manchester Guardian*. Owing to exigencies of time and space it was only possible to publish a brief extract in these pages. The subject, however, had already been dealt with in the leading article, and we hope that Sir Arthur Evans's criticisms will be widely read in their entirety. They confirm, with the whole weight of his authority, reports already current, and add many uncomfortable details. The criticism, however, is not merely destructive. Unless the facts of the situation are known, unless some attempt is made in governing circles to acquire some knowledge of the inwardness of Near Eastern affairs, there can be no satisfactory solution of the Balkan question after the war. Such a prospect is literally too terrible to be contemplated with equanimity in this country.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 8.

The "Threatened" Canal.

Once again there is nothing to report from the Canal zone. It was not so this time last year, for this was the week in which the attack—which, I suppose, will go down to history as the battle of the Suez Canal—took place, and the unfortunate troops, whom Colonel von Kressenstein and Jemal Pasha had driven across the Sinai, were beaten back to such good purpose that no further attempt was made to follow up what many held to have been intended as merely a reconnaissance in force. Whether the Turkish attack of February 2-4, 1915, was a "dress rehearsal" or not, the fact remains that this was the one and only occasion that the Turks and their Bedouin levies made any real effort to come to close quarters with the defenders of the Canal. They have now allowed the anniversary of their maiden effort to pass by without any attempt to celebrate the occasion in any way whatsoever. True, we really never expected them to do anything of the sort. Yet, considering the fanfarronade with which the German higher command hailed the opening of the way from Belgrade to Constantinople as the prelude to the great venture against Egypt and the Canal, one might have expected that, even if it had not actually got into touch with the defending force, something would by this time have been heard of the approach of the "Army of Egypt," the future exploits of which have been bruited abroad with characteristic Teuton bombast and assurance. It is true that climatic conditions in the Sinai are this year even more favourable than they were last winter, and that, thanks to the transport arrangements, with which Meissner and his staff are reported to have been occupied during the past twelve months, the water question will be less difficult of solution. But although in these circumstances the attack might take place at a somewhat later date, it is noteworthy that there is at present no indication of the materialization of the "redoubtable" army of Egypt. If an attack on this country were really meditated, there would ere this have been some signs of activity in Syria, and the opinion is steadily gaining ground here that nothing will come this year of the invasion of Egypt; that the "advertisement" of the decision to undertake it was made with the object of bluffing us into preparing for it, and once again immobilizing a large force in Egypt; and that even if there had been any serious intention to challenge us on the Canal, the reverses in the Caucasus and the menace in Mesopotamia have forced the German higher command to change their plans. It will probably end in our having to go out to meet the Turkish forces, and I should not be at all surprised to hear soon that we had taken the offensive thus far as concerns the isolated garrisons, such as they are, left by the Turks in the Peninsula.

The Training College for Kadis.

Following in the footsteps of the Law School, the Training College for Kadis is about to be attached to the Ministry of Justice. This college is comparatively a modern institution, having been established in October, 1907. It is said that the idea of giving special instruction to Moslem students to fit them to officiate as Kadis and act as lawyers in the Mahkema Sharia originated with that enlightened Grand Mufti, the late Sheikh Mohammed Abdou. He did not, however, live to put it into execution, and it was left to his great friend Saad Pasha Zaghloul to take up the question, and in spite of the opposition of the ex-Khedive to get promulgated while he was Minister of Education a decree constituting the new college. The latter was placed under the management of a committee on which the Sheikh-el-Azhar, the Grand Mufti, and two representatives of the Ministry of Education sat; and it had accommodation for 200 students, who received instruction in all the subjects taught at Al Azhar and in correlated legal subjects, literature, mathematics, and physical science.

Until 1910 the college remained attached to the Ministry of Education, but in that year, owing to the complaints of the Azharites, that graduates from the college received preference over themselves when appointments came to be made to the Mahkema Sharia, it was detached from the Ministry and made an autonomous section of the University. It has now been decided, as stated, to attach the college to the Ministry of Justice. The decision has aroused the opposition of the Azharites, who see in it an attempt to deprive them of their share of the vacancies in the religious courts. In the course of an interview accorded to the editor of *Al Mokattam*, H.H. the Sultan has explained the situation, and has publicly affirmed that there is no intention of interfering with the privileges of the great University. The college is to be attached to the Ministry of Justice because the latter controls the Mahkema Sharia, and so is better able to direct the course of instruction followed in the college so that it meets the requirements of the courts and gives to the students the style of training best qualifying them for the posts that await them. The college will still nominally form a section of Al Azhar, and will continue to have the Rector as president of its managing committee. And finally, what is of more importance than anything else to the Azharites, the Government has declared that in the matter of appointment of Kadis to the Mahkama Sharia graduates of the Training College and of Al Azhar will receive like treatment. His Highness's statement has been well received by those concerned, and it is not expected that after this clear exposition of policy any further opposition will be offered to the execution of this very sensible reform.

AN HISTORIC BATTLEFIELD.

Often as in the course of centuries the vilayet of Erzeroum has been the scene of memorable battle, it recalls and records none of more interest to the historical student than that which fourteen hundred years ago induced the then Emperor of the East, Theodosius the Younger, to erect there a lasting memorial of one of the very few victories in the field of which his reign could boast. A singularly weak monarch, he fails to arouse wonder that under his feeble rule his empire steadily crumbled into decay. In truth there is no more doubt of his unfitness for the Imperial throne than of his zeal for the true faith. Almost to the end of his reign he was under petticoat government, being subject to the sway of his elder sister, Pulcheria, on whom the proud title of Augusta had with general approval been conferred. She not only managed for him the business of his vast empire, but even the affairs of his own heart; for she chose for him his imperial consort, a maiden of relatively low degree and some years his senior. At first, in the transports of connubial bliss, the royal lover became so careless of State affairs that he signed whatever documents his sister put before him, and at last one which delivered to her care and control the Empress Eudocia herself.

So notorious was his neglect of public business that when the long and sanguinary contest between the Eastern Empire and Persia for supremacy in Armenia ended in favour of the former, and the terms of peace were being discussed between the belligerents, the Roman general solemnly warned the Persians not to awake the slumbering wrath of the great Emperor who, in his palace at Constantinople, remained ignorant that such a struggle as they were then ending had taken place in that distant part of his dominions. But as soon as Theodosius heard of the victory, he was keen to celebrate and consolidate it; and so on the heights hard by the source of the Euphrates, some miles to the east from the site of the present Erzeroum, but overlooking and commanding it, he built a strong fortified city and, becoming its godfather, conferred on it the lustre of his own name, christening it Theodosiopolis.

His romantic love affair and his involuntary surrender of his adored consort to the custody of Pulcheria form the subject of one among the best of Massinger's plays, "The Emperor of the East," wherein the story is told with much of the extravagance and inaccuracy characteristic of the Elizabethan dramatists, yet with less than their wonted disregard of historical fact.

PORT SAID NOTES.

(From Our Own Correspondent.)

Port Said, February 16.

The Situation on the Suez Canal.

The New Year has brought with it a period of general activity in Egypt, and particularly in the Suez Canal zone, which is not without influence on the life of the residents of Port Said and Suez.

A general and steady increase in the price of all comestibles has taken place owing to the extra demands on the country's resources, the increase in the import duty, and the ever-rising freight rates. Despite the heavy carriage charges, imports have increased to such an extent that the Port Said Customs House is badly congested and the bonded stores full to overflowing. It takes several days to get goods landed at the quays into the Customs sheds, and frequently several more to clear them and get them away.

The line to Cairo is groaning under the weight of heavily laden trains, and merchants in the capital, with their stocks rapidly diminishing, frequently have difficulty in keeping pace with the ever-increasing demand, while the urgent appeals to Port Said for the goods they know have arrived, and to London for further supplies, are too frequently met with a double *non possumus*, from the former on account of congestion and from the latter through lack of space in outward steamers.

Coal at over £6 a ton is an unheard-of luxury, and is only used where a substitute is not available, while bunkers for steamers in Port Said have risen with the freight market to the neighbourhood of £5 5s. a ton. As this means for a mail steamer a bill of some four to five thousand pounds, it is not surprising that there will be no reduced rates to England for Anglo-Egyptians this year. The phenomenal increase mentioned may be put down entirely to the freight rates, which for cargoes of coal have risen from 9s. per ton before the war to about 90s., at which collier steamers are now chartered.

Shortage of Paraffin.

There has recently been a temporary shortage of paraffin, which at first caused a minor panic amongst the natives. The usual itinerant street tanks were almost entirely withdrawn, and the few that were available were quickly surrounded by a crowd of natives with their bottles and tins, who in their anxiety to obtain some of the precious fluid were not over-careful in pushing their neighbour and treading on his toes, and the police had frequently to interfere in the inevitable dispute that followed.

Thereafter paraffin was doled out under the surveillance of two earnest, conscientious *showeesh*, and Port Said was treated to the novel sight of a procession consisting of a petroleum tank drawn by a philosophic donkey with a trail of excited cooks and *suffragis* armed with tins and bottles. Arrived at a certain spot, the procession would come to a halt, and the group round the tank would be swelled by servants from neighbouring houses. Minimum quantities and fixed prices were rigidly enforced by the worthy officials, and all would go away (including the donkey drawing the supply tank) quite satisfied. Happily the shortage was only temporary.

Travel Permits.

The recent regulation which necessitates a military permit for all civilians entering or leaving the Canal zone is working smoothly. The permit is not difficult to obtain by those who have a legitimate use for it. The wives of officers who are stationed on the Canal have left, mostly for Cairo, and no ladies are now allowed to disembark permanently here without a Foreign Office permit, which is not easily obtained. Some cases of hardship are certain to occur; it has happened that a lady, whose home and family have been in Egypt for many years, and who had been staying in Switzerland, was not able to embark at Marseilles to return.

Nothing out of the ordinary is happening on the Canal. British carriers predominate, and their passages are performed as in normal times.

A SUDAN KNIGHT.

(From Our Own Correspondent.)

Khartoum, January 31.

An interesting ceremony took place at Khartoum on January 29, when H.E. the Governor-General and Sirdar, by order of H.M. the King, formally presented to Sir Sayed Ali Morghani the insignia of a Knight Commander of the Order of St. Michael and St. George. The members of the Governor-General's Council, the Chief Justice and the Adjutant, supported H.E. in the presentation, which took place in the Ballroom of the Palace before a considerable company of officers and officials, the "ulema," and a few native notables. Upon the introduction of Sir Said Ali into the Ballroom H.E. made an address, and then presented him with the insignia. The address was as follows:—

Sir Sayed Ali El Morghani,

As circumstances have prevented you from being personally invested by his Majesty George the Fifth, King of Great Britain and Ireland, Emperor of India, and Sovereign of the Most Distinguished Order of Saint Michael and Saint George, with the Order of Honorary Knight Commander of the said Most Distinguished Order, I am commanded by his Majesty to deliver to you, in an official and ceremonial manner, the Badge and Insignia of Knight Commander, which the King has been most graciously pleased to confer upon you in recognition of the good and faithful services you have rendered.

In 1885, owing to the disturbance in the country consequent on the Mahdist revolt, you accompanied your revered father, the late El Sayed Mohammed Osman, from the Khatmieh and home of your family at Kassala to Suakin. In this latter town and subsequently in Egypt you were carefully educated under efficient teachers; and when the Sudan was reconquered by Lord Kitchener in 1898 you were able to take up your residence at Khartoum, where you continued to render notable service in connection with many of the reforms which the Government found it necessary to introduce into the administration of this country in order to repair the ill-effects of the misgovernment and anarchy which prevailed there formerly.

Throughout this long period, your family has been distinguished by its firm loyalty to the Government; and your own good name and fame are known throughout the length and breadth of the Sudan.

In the year 1900 it was my pleasant duty to bring your name to the notice of Lord Cromer, who was commanded by the King to present to you the Badge of a Companion of the same Most Distinguished Order in which your continuous valuable service —especially during the present war—has now gained you promotion to the high grade of Knight Commander.

In now obeying the King's Command, I offer you, on behalf of myself, of the Sudan Government, and of all those assembled here to-night in honour of the occasion, most cordial congratulations on becoming the recipient of this high mark of his Majesty's gracious favour; and I trust that you may long be spared to wear this Most Distinguished Decoration, which reflects credit not only on yourself and on the honourable family to which you belong, but also on the whole of the Moslem community in the Sudan, where you are held in universal esteem and regard.

Sir Sayed Ali Morghani is the head of the Moslem sect known as the Khatmia or Maghrania. It is very widely distributed and the most influential sect in the Sudan. It started contemporaneously with the Idrisi sect in Asia and the Sennussi sect in Tripoli, and by the personal efforts of Sir Sayed Ali its activities have been directed in support of the Government, whilst his personal advice and assistance have always been at the disposal of officials needing it.

The decoration has been accepted by the natives of the Sudan with great enthusiasm as an appreciation of their loyalty to the British Government.

In reference to the Exchange telegram from Cairo which we published on February 11, regarding the funeral of Sheikh El Morghani, we learn from the *Sudan Times* that the deceased notable was Sheikh Abdallah En Nur, the maternal uncle of Sir Sayed Ali El Morghani. The deceased, who was one of the leading religious sheikhs in the Sudan, was about fifty-five years of age, and used to be in continual attendance upon Sir Seyid Ali, whom he had accompanied to Kassala upon his last visit there.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of the "NEAR EAST" to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

THE SUDAN IN 1915.

(From Our Own Correspondent.)

Khartoum, January 31.

The year 1915 in the Sudan has shown outwardly little effect of the war. The people remain unmoved by stories of a vague but cruel opponent who shares too much the habits and customs of the worst period of the Khalifa to engage their sympathy.

In the northern half of the Sudan the history of 1915 consists of a continued battle against a series of pests. Cerebro-spinal meningitis appeared in almost every province, and exacted a severe toll, whilst the repeated attacks of locusts from the desert destroyed crop after crop, and also seriously damaged the wild-growing shrubs that form the grazing ground of the camels herded by the nomad Arabs. Cattle disease also reappeared in places.

Notwithstanding these adverse conditions, the returns of various forms of trade chiefly affecting the northern provinces (*i.e.*, north of lat. 12°) show results by no means to be disregarded. Gum heads the list of exports with a total of £312,297 for 11,577 tons, as compared with £312,697 for 12,266 tons in the previous year. In effect the harvest was good and the price better, and this notwithstanding the fact that in the past the gum trade had been largely in the hands of German agents and directed towards Hamburg. It appears, however, that these agents were in the habit of manipulating the market and turning over other people's money to their own advantage in a manner that led to instability in the gum market, which their absence has prevented, and thus enabled the European buyers to obtain their gum and the native to sell it at a price acceptable to both. In cattle, too, the Sudan can show a remarkable increase, the more so that at one time the Sudan was competing at Salonika for the trade which from Salonika had competed with the Sudan in Egypt. The figures show a total of 23,758 cattle and 87,818 sheep exported from the Sudan. The increase amounts to no less than 12,950 cattle. In sheep the figure is approximately the same. Of these cattle some seven thousand were exported to Malta.

The durra trade has also prospered to a very remarkable degree. This is no doubt due to the dearth in the Red Sea ports, and it has enabled those provinces that depend upon the cultivation of durra to recover almost entirely from a succession of bad years. In Dongola, it is true, the locusts ate down the young crops with reiterating persistency, but elsewhere, notwithstanding a serious loss from a noxious form of grasshopper, besides those locusts that managed to escape observation by hiding in the remote desert, a fair average crop has been obtained, which enabled the native to sell his surplus with a calm mind.

In the southern provinces, where trade is still in its primitive stages, there has been, as usual, a number of small incidents of no political significance, but liable to magnification in times when a world war is progressing. These incidents are, or have been, dealt with as they arose in the ordinary course of affairs; and though it is always annoying to the Government to have to deal with such matters, the general tendency is towards a firmer grip, a greater confidence between the native and the Administration, and a surer hold of the future.

The Sudan has also contributed its quota to the service of the Empire, and the record is one of which it may be proud. To speak only of the most recent, the services of Colonel N. M. Smyth, V.C., have been rewarded with a C.B. as Brigadier-General of the Anzacs at Gallipoli. A constant stream of officers and officials has been employed on military anl political work in Egypt, Gallipoli, and the Red Sea, notwithstanding the serious drain from sickness and other casualties that service in such a climate involves.

The various irrigation schemes have inevitably suffered from the occurrence of the war. Still, work is progressing, and wider schemes are afoot to ensure certainty of water for that huge area which some day, cultivated under cotton, will prove the Eldorado of the Sudan.

TURKEY AND THE LEBANON.

(From a Lebanese Correspondent.)

Cairo, February 10.

Arabic papers of New York, which have been received here by the last mail, reproduce the full text of a speech delivered by the new Turkish Governor of the Lebanon, on the occasion of the reading of the Firman announcing his appointment and the denunciation by the Turkish Government of the Organic Law, in so far, at least, as the approval and sanction of such appointment by the Six Protecting Powers is concerned. The declarations made therein have sufficient importance to warrant translation *in extenso*. The new Governor, Ali Munif Bey, after declaring that the Turkish Government had put an end to all foreign interference in the affairs of the Lebanon, went on to say:—

You might infer from the denunciation of the Protocol and the foreign privileges that the Ottoman Government has abolished the prerogatives granted to the Lebanese. Such, however, is not the case, as the Government has no intention to depart in any way from the policy of generosity which it has been conferring on the Lebanese for centuries, without foreign intervention.

The Government does not contemplate the abolition of the privileges directly concerning the inhabitants. For instance, it does not contemplate any addition to the fixed taxes that have hitherto been levied in lieu of the tithes, the *verghu* on property, the *temettu*, etc.; nor the abolition of the arrangement hitherto obtaining in regard to the exemption of the Lebanese from military service. It will, moreover, continue to respect sectarian privileges and traditions.

I presume, however, that the Government will have eventually to introduce certain necessary modifications in the system of administration of The Mountain, with the view of reforming the administrative and judicial departments and the gendarmerie in such a manner as will ensure the security and welfare of its inhabitants, and, by an equitable dispensation of justice, safeguard their rights and liberties within the limits of the Constitution.

The appointment of governors and officials will be made according to personal merit, the Lebanese enjoying, of course, the right of priority.

The Government will furthermore consider new schemes in regard to education, which, so far, has been almost exclusively directed by foreigners, and will devote special attention also to the development of agriculture and industry, and the devising of such means as will tend to the increase of the population's wealth by works of public utility.

Special grants will be made by the Imperial Treasury to cover such deficit as the local budget may present.

And, whoever may be at the helm, whether it be myself or any of the *Mutessarifs*, my successors, it behoves the Lebanese to co-operate with him for the better fulfilment of his duties, with a view to their happiness, and to work hand in hand with the Government for the better attainment of their ends.

It is a matter of deep satisfaction and relief to see in this speech an official confirmation of the reports, repeatedly mentioned in previous correspondence, that the Lebanese have not been, and are not to be, called up for military service. Indeed, the speech strikes a friendly and conciliatory note that was little expected. On the other hand, to those who are familiar with Turkish diplomatic phraseology, and who can read between the lines, some significant deductions may be made. Behind the veil of reassuring declarations the door is left open for the eventual introduction of such changes as may lead to the conversion of the Lebanon into a Turkish province administered on purely Turkish lines; but, as the future of Turkey may be foreseen, whatever the final issue of this war may be, such tactics may be regarded with little apprehension. We cannot, however, but smile at the promises dangled before the eyes of the Lebanese in regard to the reforms with which The Mountain is to be blessed when we contemplate the financial and administrative chaos that has always reigned in Turkey.

THE PUBLISHER

would be obliged if Readers would inform him if they experience any difficulty in obtaining copies of the paper.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, January 30.

Scene in the Harbour.

It is difficult for any vessel to enter the port of Salonika at the present time. Steamers have to thread their way under the guidance of special pilots through the maze of warships, transports, hospital ships, and other craft. The scene from the deck of the incoming vessel is imposing, and awakens in the heart of every Briton a feeling of pride and assurance that Britannia still rules the waves.

What Tommy Thinks of Salonika.

I have been asked by friends at home to tell them what Tommy thinks of this place. Although he has told me over and over again in language that is plain, I hesitate to repeat what he really says, for two reasons: in the first place, the English language as usually found in the dictionary is totally inadequate to express what he thinks and says; and in the second place, even if I did commit to paper those sulphurous words, the editor or the censor would probably cut them out or represent them by a series of meaningless asterisks. What satisfaction would it give to friends in England to know that Private John Brown considered Salonika to be the * * * * * * place he ever struck, and that he wished all the Bulgars were in—well, far, far away? No, all I dare tell you is that he is sick of Salonika, its slush and mud, and its swindling crowds of shopkeepers, cafékeepers, and itinerant vendors. He would much rather go back to France, or even to the Dardanelles. This long and wearisome wait, too, for an enemy that has not the courage to "come on" and fight it out gets on his nerves. But by the time this reaches you it is very probable that fighting will have taken place, as I learn to-night from a high authority that Bulgarians have already crossed the frontier.

A Topographical Menu.

A few nights ago a small party of Englishmen resident in Salonika gave an informal dinner, at which Mr. Wratislaw, the British Consul-General, was the principal guest. One of the most interesting features of this dinner was the original and suggestive wording of the menu, which I reproduce below for the benefit of those who are familiar with local place-names as well as localities of military interest in other theatres of the war:—

Menu.

Potage à la Vardar.
Bar à la Strouma.
Agneau de lait renvoyé de Topsin.
Choux-fleur au gratin Gorizia.
Dindonneau roti à la Bass(é)a-cour.
Salade Russe.
Glace à la Dvina.
Fruits de Macedoine.
Café.

Sunday in Salonika.

Saturday is Sunday in Salonika. As nearly all the shopkeepers are Jews, and as they strictly follow their usual religious observances, they all close their places of business on Saturday, the Jewish Sabbath, and nothing will induce any of them to remain open on that day, although the temptation is at present very strong. A walk through the principal streets therefore on the seventh day of the week constantly suggests to the stranger that it must really be the first, and when the Christian Sunday does come round and he finds all the shops open, with even more than the accustomed activity in the streets, he can scarcely realise that it is the Lord's Day. The Mohammedans, of course, regard Friday as their day of rest, but they never do rest on that day. If they are in business, they continue open every day in the week. The only difference is that on Friday (in Turkish, "Juma'a giun"—that is, Assembly Day) Mohammedans usually pay a visit to the mosque in the morning to say their prayers.

"English as she is Wrote."

I have referred in previous letters to the decidedly original English of the cinematograph programmes at Salonika, but I may be permitted, for the benefit of your Scotch readers in particular, to give one more sample. Recently I witnessed a film described in the French section of the programme as "En famille: scène réaliste en 6 longues parties," by Hector Malot. This was translated as "A dram in 6 parts from Hector Malot"! Considering that a Scotsman's "**dram**" consists of only one wee glass of whisky, he would certainly refuse to accept it in six parts, even "from Hector Malot."

FIGHTING IN EGYPT.

The *Morning Post* (February 22) publishes a most interesting account of an Egyptian frontier fight, from the pen of an officer in the Egyptian Frontier Expeditionary Force. The enemy was estimated to be six thousand strong—mainly composed of troops of Senussi led by German and Turkish officers. Our own forces, about six thousand, included a battalion of South Africans. "And a reliable force it looked, with its lithe Indians, brawny New Zealanders, war-seasoned South Africans, dogged Tommies, care-free Australians, and capable Sudanese camel-drivers. A taut and trim outfit, ready for any old brawl that should happen along." We quote a passage descriptive of the fighting which ensued:—

At 9.30 we were within a few miles of the enemy's camp, and the opposing force could be seen hastily disposing itself to contest our advance. The artillery opened fire at four thousand yards, but despite the accuracy of the artillery fire the enemy refused to be shaken, and could be seen digging himself in. Half an hour later rifle and machine-gun fire was opened upon our cavalry screen. The Sikhs extended and formed a firing line. The South Africans in support suffered rather severely from bullets intended for their dusky comrades in front. A movement towards the right by the enemy was followed by the Springboks, extending on the right of the Sikhs, with the New Zealand boys temporarily in support. The artillery were now in full blast, making splendid practice. Despite their losses the enemy contested the day with the utmost determination. For four hours there was a struggle for supremacy in rifle fire which rivalled in rattle the old Gallipoli days. These native troops carried as many machine-guns as we did, and under German (two of them naval men) and Turkish officers worked them with valour and precision.

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given.

Mrs. Marling, when making her appeal wrote as follows:—

"There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—

"'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; 'we have not had so much as a box of matches from England.'"

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,
25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, February 1.

Extravagance in Bucharest.

Bucharest has always been a showy city, in which few people live according to their means. I suppose there are few capitals whose inhabitants have developed to an equal degree the science of living luxuriously on nothing. Those who have no incomes are dressed in the height of fashion, and others whose means barely admit of a homely, middle-class existence drive to the races in their own motor-cars. In the present circumstances, and in view of the uncertainty of the future, simple folk foresaw some reduction of everyday extravagance, from motives of prudence if not from a sense of decency; and this is exactly what has happened in the old Roumanian families. The change was appreciable last winter, and economy seems to be the dominant note this year in the social life of the aristocracy. In spite of this, there is a marked difference observable in the general life around one between this year and the last, which is due to the development of a certain class—that of the middle-man—which has been called into existence by the unusual opportunities that have arisen for the acquisition of wealth with a minimum output of individual effort.

On the one hand we note that people bearing historical names, possessed of a full share of the good things of life, remain in the country until midwinter, as a means of reducing their expenses; others go about their business on foot, their motors unused, and seek recreation in the homely satisfactions of the family circle. And what do we observe on the other hand? A horde of *nouveaux-riches*, with fortunes built up in a night by means their children will never know; people unaccustomed to the possession of wealth who know not how to use it, and have never heard that it involves responsibilities; loud, uncouth creatures, indulging in extravagances whose vulgarity conveys an impression of debauch.

Too Much Sentimentality.

As in other neutral countries, the German Legation in Bucharest has taken measures for reducing the number of foreigners entering Germany. Every newcomer represents another mouth which has to be fed, and, what is perhaps of greater gravity, he has eyes to see things to which it would be better not to give too much publicity outside the confines of the German Empire. So important, however, is the "extra mouth" question that even in Austria passports for Germany are obtained with difficulty. In connection with this subject the following anecdote is worth relating, for it not only complies with the essential requirement of the anecdote—that of being *ben trovato*—but has the subsidiary merit of being authentic. An Austrian presented himself to the German authorities in Vienna, and asked for a passport enabling him to travel to Berlin. This was first refused, but as he persisted in his object he was asked what reasons he had for wishing to undertake the journey. On his replying that he wished to visit his daughter whom he had not seen for over a year, his interlocutor, becoming purple with indignation, burst out with the rebuke, "Aber mein guter Herr, solche sentimentalität muss man sich doch in kriegszeiten abgewöhnen!"—"My dear sir, how can you indulge in such sentimentality in time of war!"

February 8.

The Reopening of Parliament.

The Roumanian Chambers were reopened on February 2, after an unusually long Christmas recess. During the autumn session the Government had suffered unremitting onslaughts on the part of the Opposition, so it really cannot be blamed for seeking a prolonged respite. As it is, there has been no rest for M. Bratiano, for he has been more than usually harassed by cares of an international character, which have been referred to previously. Without being in possession of definite facts, I am strongly under the impression that the country has recently passed through moments fraught with peril.

The first duty of the Chamber was to establish the validity of the recently elected members. Some interest attaches to the case of one member in particular, whose right to occupy a seat in Parliament was warmly contested on the ground that he did not enjoy Roumanian citizenship. Evidence was produced that he was the natural son of a Roumanian woman, his father being a Bulgarian from Macedonia. This fact alone would confer Roumanian citizenship, the child in such a case taking after the nationality of the mother; but it was argued that the subsequent legal marriage of the parents, whereby, according to Roumanian law, the child was legitimized, had invalidated his claim to Roumanian citizenship. The question being put to the vote, the perplexed member had the satisfaction of seeing his election confirmed by the majority.

The Imperial Spy.

On his return from Nish the Kaiser visited several Danubian ports on the gunboat "Radetzki." Descending the river past Virciorova and Turnu-Severin, the Kaiser, accompanied by the heir to the Austro-Hungarian throne and Generals von Falkenheyn and von Helsen, examined minutely with field-glasses the Roumanian positions at Palota and the strategic works erected there.

Escaped Russian Prisoners.

Thirteen Siberian soldiers who had been made prisoners by the Germans and sent to Bulgaria have contrived to effect their escape by crossing the Danube at Lom Palanka, whence they reached Calafat. They were dressed in German uniforms. They relate that the Bulgarian population suffers indescribable misery, and that all the Danubian ports are powerfully fortified and garrisoned with German troops.

The Death of Prince Yussuf Izzeddin.

The death of Yussuf Izzeddin Effendi is vividly discussed here, the theory of suicide being received with much scepticism. The Sofia correspondent of the *Nationalul* relates that the theory of assassination finds credence there. He adds that it is perfectly established that Prince Yussuf Izzeddin could not have committed suicide in his palace on February 1, as announced, since he had left his residence on the previous day. Further, that, whereas he is reported to have taken his life at 7.30 in the morning, he actually passed through Sofia that same evening in the Balkan express on his way to Berlin. This was confirmed by all the Bulgarian papers. In view of the severe censorship exercised in Bulgaria, we may assume the statement to be accurate, in which case the hypothesis of suicide collapses. The alternative explanation suggested by the correspondent of the *Nationalul* is that Yussuf Izzeddin was assassinated in the train which was bearing him towards Berlin, and that the Ottoman Government has trumped up the theory of a suicide for purposes of its own.

The Earthquake.

A more than usually severe earthquake occurred on January 28, which attained its maximum effect at Curtea-del-Argesh and Campulung. In these and other regions many houses and churches suffered damage. In the town of Campulung the public baths were partially destroyed. A woman died from terror, and numerous panics took place, but beyond this there was no loss of life. Slight repetitions have recurred since, especially in the district of Curtea-del-Argesh.

Reciprocal Compliments.

From Sofia it is announced that the Government is preparing a Bill for making compulsory in the Bulgarian schools instruction in the German language. The German Government has undertaken to supply the necessary number of teachers. We know that measures have been taken in Germany with a view to popularizing the Turkish tongue. Will they return the delicate compliment by making the study of Bulgarian compulsory in Germany?

BULGARIAN NOTES.

(From Our Own Correspondent.)

Bucharest, February 1.

The Sobranje.

It seems that the Sobranje will not be convoked until the middle of March. This decision is probably accounted for by the spirit of dissatisfaction which reigns amid the Parliamentary Opposition. The latter have, it is true, promised to refrain from adding to the difficulties of the Government; but they have resolved at the same time to abstain from all Parliamentary activity, attesting by this means their disapproval of the policy adopted, and repudiating all share in the responsibility it involves. The prorogation of Parliament is looked upon as a precautionary measure against the Opposition "turning nasty" in the event of Bulgaria's successes meeting with a check.

Bulgaria and Her Allies.

In spite of the clamour evoked by their glorious "victories," the grandiloquent speeches and superlative compliments addressed to each other by Kaiser and "Tzar" Ferdinand, it is not conceivable that the former's visit should be the outcome of a simple impulse to embrace his glorious ally. Misunderstandings between Bulgaria and Austria, and perhaps reluctance to participate in the attack on Salonika, probably account for the Imperial visit. With the occupation of Macedonia Bulgaria has attained the object for which she mobilized, and the people consider that their national claims have been satisfied. Having delivered the "coup de pied de l'âne" to the Serbian lion, she hesitates to compromise her present situation by, so to speak, running her head against a wall.

According to a report emanating from Sofia, Bulgaria has, as price of the bargain by which she obtains territorial concessions in Serbia at the expense of Austria, declared null and void that clause of her treaty with the Central Powers which limited her military action to the attack on Serbia. This implies that her military resources are to be placed at the disposal of the Central Powers, and probably that they will be made to play a leading part in the attack on Salonika, Austro-German troops apparently not being available in large numbers for this purpose. Bulgaria has thus placed herself in a position of servitude with regard to Germany. The latter accentuates this relationship by establishing her military headquarters at Sofia and by sprinkling the country with German troops. The latter are especially numerous along the southern bank of the Danube, where they have been placed for the alleged purpose of defending the country against an eventual attack coming from this direction. Bulgarian troops have here been replaced almost entirely by German.

Reports regarding the bad relations existing between Bulgarians and Germans seem to be well founded. Cases of "insubordination" on the part of Bulgarians are frequent, and are due to the excesses of their unwelcome guests. They are summarily dealt with—according to methods with which we have become familiar. Deserters crossing into Roumania state that the native population is simply being terrorized.

Berlin-Constantinople Communications.

The direct train between Berlin and Constantinople now circulates regularly. The distance is 2,421 kilometres, and it is covered in fifty-eight hours. There are two trains a week running each way. They leave Berlin on Wednesdays and Saturdays, and Constantinople on Mondays and Fridays. Numerous formalities have to be satisfied before a would-be passenger can book his ticket, and the number of seats is strictly limited. The cars are said to have been specially made, and are provided with considerable comfort.

The *Balkanska Tribouna* reports the arrival in Sofia of sixty-five deserters from the Roumanian army, all of them being Bulgarians from the Dobruja. Taking advantage of their Christmas leave, they escaped over the frontier, declaring their intention of serving in the Bulgarian army.

A GREAT ROUMANIAN ANNIVERSARY.

(From Our Own Correspondent.)

Bucharest, February 5.

February 5 is the greatest anniversary in the history of Roumania, for on that day of the year 1859 the peoples of Moldavia and Wallachia, running counter to the resolutions of the Great Powers, boldly repudiated the restrictions imposed by the Paris Convention by electing as their common ruler Prince Alexander Cuza, achieving thereby the union of the two principalities.

There is no effect without cause. The sudden change in the régime then existing can only be explained by the assumption that the forces of evolution had been silently at work with this end in view. A child, duly warned by the grown-up people about it, may hesitate long before deciding to place its foot upon the nethermost rung of the forbidden ladder. But the taking of this step is the outward and visible sign of forces that have been unconsciously at work, and is the inevitable resultant of their action. The year 1859 represents to the Roumanian State the first rung in the ladder of its visible evolution. In its further course it has met with many a set-back and risked more than one fatal fall. Up to this moment it has, however, maintained a more or less firm hold. Will it find the helping hand to guide it through the exigencies of the present situation? Can it count on its own strength if the helping hand is not extended? Is that partial union of 1859 but a precursor of a movement that is shortly to unite into a harmonious whole the straggling fragments of the race?

Such are a few of the questions that are uppermost in the public mind on this 5th day of February. Roumania's national question is, after all, only a fragment of a greater problem, for which the enlightened nations of the West must make it their duty to find a solution. The subject cannot be viewed from a standpoint too lofty. All spirit of vindictiveness will have to be quelled. The weeds of superstition and prejudice must be uncompromisingly uprooted if a solution is to be found for what we may call the Great Problem of the Little Nations, with which the future of the Great Nations is intimately bound up, in spite of their more than self-sufficient air of independence.

BULGARIAN CRUELTY TO BRITISH.

Our Bucharest Correspondent forwards us the following extract from the *Journal des Balkans*:—

From Sofia it is reported that the hatred manifested by the Bulgarians towards the English surpasses even that which they entertain for the Serbians. The English prisoners taken to Sofia and Philippopolis were exhibited in public, covered with chains as though they were criminals, and were grossly insulted by the population, which often went so far as to strike them. During the engagements which took place near Doiran the Bulgarian chiefs were so exasperated by the heavy losses inflicted by the British artillery that they ordered all English prisoners to be massacred. They likewise slew all the British wounded. These sentiments of hatred are carefully nurtured by the German officers.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

BAGHDAD: THE STORY OF A GREAT RETREAT.

By J. C. ROOME.

It is a curious coincidence that the British force operating against Baghdad finds itself in the same predicament as the army of the great Khwarazmian Emperor, who nearly seven hundred years ago led an expedition against the capital of the Khalif. In the case of the Khwarazmian army, a very heavy snowfall hampered the operations of the attacking force; in the case of the British Expeditionary Force, rain has made the roads, or what pass for roads, in Lower Mesopotamia, impassable.

The Khwarazmian monarch, Mohammed, was forced, by bad weather, to beat a hasty retreat, and it was with great difficulty that he reached Nishapur with the remnant of his large army. It was as a direct result of this expedition that the Abbaside Khalif, Nasir, then reigning in Baghdad, entered into negotiations with the terrible Chenghiz Khan, "the White Khan of the Mongols," and instigated him to lay waste the fair cities of the Khwarazmian Empire, Bokhara, the Noble, and Samarkand.

The Khalif regarded with envy the growth in power of the Khwarazmian Shah, and while openly profuse in his professions of goodwill towards Mohammed, set about plotting his overthrow. The influence of the Khalif was at the time on the wane, his authority did not extend beyond the confines of Mesopotamia, and even his spiritual power was not acknowledged by many among the Moslems of the day. The Khwarazmian Empire, on the other hand, extended from Irak to the heart of Central Asia, and its cities were busy and prosperous centres of trade in Asia.

The Khalif Nasir fondly believed that he had only to remove Mohammed out of his way to assert once more his spiritual authority over the subjects of the Shah and to make the vast Khwarazmian Empire an appanage of the Khalifate. Nasir, however, knew that it was impossible for him, with his badly equipped and small army, to take the field openly against Mohammed. He decided, therefore, to set the wheels of diplomacy in motion against his rival, and made overtures to Ghias-ud-Din, the Ghori King of Ghazni, to attack the Khwarazmian Empire; but the Ghori, for some reason or other, refused to entertain the suggestion seriously. In his successor, however, the Khalif found a pliant tool. Shahabu'd-Din, the son of Ghias-ud-Din, who succeeded his father on the throne of Ghazni, was led away by the mischievous advice of the Khalif into attacking the powerful Mohammed, with the result that the Khwarazmian army found itself master of Ghazni; and in the archives of that city the Shah found ample evidence of the machinations of the Khalif of Baghdad.

So enraged was Mohammed at the treachery of the Khalif that he vowed to lead an expedition against Baghdad in person, and to divest Nasir of the dignity of the Khalifate. In spite, however, of the wrangle of the sects in Islam, Nasir was not without his supporters, and Mohammed realised that in order to achieve his end it was advisable not to wound the sentimental susceptibilities of his co-religionists. He had given no hint to the Khalif of the discovery of the incriminating documents at Ghazni; but he proposed to leave the Khalif under no misapprehension as to the future relations between Baghdad and Bokhara. On his return from Ghazni, Mohammed made preparations for creating a large army of invasion, and selected Nishapur as the base. Within a short time, an army of thirty thousand men was ready to march against Baghdad.

The Shah then dispatched an envoy to the Khalif, demanding the title of Sultan, and the privilege of appointing his own representative as governor of Baghdad. The envoy had also instructions to ask the Khalif to issue a decree substituting Mohammed's name in place of his own in public prayers in the mosques. As the Shah had foreseen, the Khalif sent back the Khwarazmian envoy unceremoniously, with a curt refusal to all the demands of the Shah.

Mohammed retorted by arraigning the Khalif before the tribunal of the Ulema, the interpreters of Moslem law, on a charge of dereliction of duty as a Khalif. He promulgated a *fetva*, a question of religious law, among the Ulema: "May a monarch whose entire glory consists in exalting God's word and destroying the foes of the true faith, depose a recalcitrant Khalif and replace him by one who is deserving, if the Khalifate belongs by right to the descendants of Ali, and if the Abbasides have usurped it, and if besides they have always omitted one among the first duties, the duty of protecting the boundaries of Islam and waging sacred wars to bring unbelievers to the true faith, or, if they will not accept the true faith, to pay tribute?"

The Ulema returned a verdict in the affirmative, and the Shah published it broadcast, at the same time accusing Nasir of having neglected his duty as Khalif, and undertaking to find a successor to the Khalifate. The successor was found in a descendant of Ali, and Mohammed issued a proclamation erasing the name of Nasir from public prayers.

Steps were taken simultaneously to deprive Nasir of his territorial possessions. Ogalmash, a Turkish general, raised the standard of revolt in Persian Irak. Nasir, on his side, was also not idle. He won over the "Assassins" of Persia to his cause, and they proved powerful allies. They murdered Ogalmash.

On hearing of the outrage, Mohammed hastened his preparations for attacking Baghdad, and in early autumn set out with an army of thirty thousand men towards Helvan. The army met with little or no resistance, and the Shah was so confident of victory that he began granting deeds of assignment of the territories of the Khalif to his generals. Nasir waited for the army of invasion at Baghdad, but he instigated the Turks and the Kurds to harass Mohammed's army whenever possible. These savage warriors were not willing to draw upon themselves the wrath of the Khwarazmian monarch, and did not directly attack the invading force, but they indirectly did everything possible to impede its progress. The Khwarazmian army was, however, held together by discipline, and the advance guard soon found itself at Helvan.

The fall of Baghdad seemed only a question of days, when the army of invasion was called upon to face a foe worse than the bloodthirsty Kurds. Mohammed had planned his expedition for autumn, in order to avoid the rigours of bad weather; but, contrary to all meteorological calculations, his army found itself weather-bound. The vagaries of Nature unexpectedly turned the scales against the Khwarazmian king. Historians record that there was a heavy snowfall for twenty days in succession. The Khwarazmian army found it impossible to advance, and the Turks and the Kurds, who had been waiting for an opportunity to fall upon the invaders, played havoc with the army as it began its retreat. Small bands of the retreating force were ruthlessly cut up, and in cases where the Turks and Kurds acted as guides, they led the soldiers of the Shah into ambuscades and plundered them. It was with only a fraction of his large force that Mohammed found himself at last at Nishapur.

There he also heard of the approach of the Mongols. The first envoys from Chenghiz Khan presented their credentials to him at Bokhara shortly after, offering him in the name of their master a vassalage in the empire of the White Khan. Weakened as was the Khwarazmian Empire by the disastrous Baghdad expedition, Mohammed refused to acknowledge the Mongol as his suzerain, but entered into a treaty with him, which, however, the wily Mongol later turned to account in finding a pretext for attacking and laying waste all the cities of the Khwarazmian Empire. It was then that powerful bands of Mongols overran Russia and penetrated Europe as far as Poland, leaving scenes of desolation in their wake. It was then that the litany in Eastern churches embodied the prayer: "From the fury of the Mongols, good Lord deliver us."

TURKEY AND THE POWERS.

Oliver Bainbridge, lecturing before the Philosophical Institution of Edinburgh last week on "Turkey and the Turks," said: "I taxed Enver Pasha with being pro-German, and he said: 'Well, it is the fault of England and France. I asked them to assume the administration of Turkey, and they refused, so I had no alternative but to appeal to Germany, who promised to assist us, but did not wish to assume the administration *all at once*.'

"I was rather doubtful about this story, and wrote to Sir Edward Grey, asking him if there was any truth in it, and in reply he said: 'There is no foundation for the statement that the Young Turkish Party at any time requested Great Britain to assume the administration of the Ottoman Empire.' I then wrote to the Foreign Minister in France, who said: 'France has never received, directly or indirectly, any proposal of assuming the adminstration of Turkey.' A story was circulated also to the effect that the Turks had been willing to accept an English dictator—Viscount Milner was one of those mentioned—but that was refused. This I found to be another Eastern fable, for Viscount Milner has assured me that he was never, directly or indirectly, approached on the subject by the Turkish authorities."

NEAR EAST BOOKSHELF.

AN APPLE OF DISCORD.*

The natural canals which link the Black Sea with the Mediterranean have been a source of international strife for thirty centuries. To neglect the economic interpretation of history is to plunge into an ocean of turbid rhetoric, and most authorities are now agreed that warfare has its roots in a struggle for food or wealth. Thus the siege of Troy was due to the action of a Greek colony, planted on the Asiatic side of the Dardanelles, in intercepting sea-borne traffic; and the hostile coalition which Trojan tyranny provoked has had many parallels in subsequent history. A glance at the map of Europe reveals the transcendent importance of those straits, athwart which Constantinople stands with a footing on two continents. They are the kernel of the Eastern question, which has perplexed the Old World for centuries, and is apparently as far as ever from solution.

M. Dascovici has wandered far afield in attempting to trace their chequered fortunes. His bulky volume, indeed, reminds one of Martial's epigram on a Roman advocate who surveyed the annals of the imperial city in pleading the cause of a client deprived of his he-goat. It is a nebulous history of south-eastern Europe, rather than an account of secular struggles for access from the Black Sea to the Mediterranean. But we are inclined to pardon many divagations when we find our author rescuing from oblivion an episode which has great significance at the present crisis. During the fifteenth century Francis I. forgot that he was the "Very Christian King" in his fierce rivalry with the Emperor Charles V., and shocked Europe by concluding an alliance with "infidel" Turkey. His policy was vindicated by a report which the French ambassador at Constantinople sent to Charles IX. in 1579, and which contains the following passage:—

> That which interests us in the East is to find a Power capable of counter-balancing the excessive greatness of Germany; and this not only in order to regain our rights, but that we may arrest the expansion of an Empire which threatens to dominate Europe.

M. Dascovici's main contention is that the stupendous *lusus naturæ* which serves as an outlet for the commerce of six European States has always been an apple of discord, and will continue to prove a source of unrest so long as it remains under the dominion of a single Power. As a patriotic Roumanian he protests against the theory that the Bosphorus and Dardanelles should be relegated to Russian control. His country's exports, consisting of cereals, petroleum, salt, and timber—in other words, of bulky commodities, cannot be carried by rail to any market without ruinous loss. Moreover, in normal times Russia exports but 20 per cent. of her agricultural products, as compared with 55 per cent. sent abroad by Roumania. The latter country is, therefore, nearly thrice as deeply interested in securing freedom of navigation as Russia, which, unlike Roumania, has many outlets for her sea-borne commerce.

M. Dascovici's dread of a Russia ensconced in the Straits is based on her action in tearing up certain clauses of the Treaty of Paris (1856), as she virtually did during the throes of the Franco-Prussian war of 1870-1. His view is of some importance because it evidently reflects that of many Rumanian politicians, and perhaps explains King Ferdinand's hesitation to join in what our author styles the "dance of death." But M. Dascovici has not followed the evolution of modern Russia. Her sovereign's morality stands on a far higher plane than that of his grandfather Alexander II., just as M. Sazonoff's diplomacy is superior to that of Prince Gorchakoff. A new Russia will emerge triumphant from the fearful ordeal through which she is passing—a Russia imbued with the sense of human brotherhood which has realised that, all nations being interdependent, any action injurious to others must, sooner or later, recoil on its perpetrator. "The mills of the gods grind slowly, but grind exceeding small," and retribution awaits the brutal selfishness of Germany. Throughout the Tsar's dominions this lesson has sunk deeply into hearts prepared to receive it by the ethical standards of Christianity. Nor would Great Britain, which drew her sword for Belgium, consent to an arrangement injurious to another of those "little nations" for whose rights M. Dascovici is unduly apprehensive. He may rest assured that Rumanian interests will be effectually safeguarded by the re-settlement of Europe, which must follow the return of peace.

F. H. SKRINE.

BOOKS RECEIVED.

On Mahdis and Mahdiism. By D. S. Margoliouth. Reprinted from the Proceedings of the British Academy, Vol. VII., and published for the Academy. (Humphrey Milford. 1s. net.)

Domestic Life in Rumania. By Dorothea Kirke. Illustrated. (The Bodley Head. 5s. net.)

* "La Question du Bosphore et des Dardanelles." By N. Dascovici. Geneva, Georg and Cie, Libraires de l'Université, 1915.

BOOK NOTES.

Messrs. Sidgwick and Jackson have issued a second edition of J. C. Stobart's "The Glory that was Greece." It is well illustrated, and has a useful glossary and index The price is 7s. 6d. net.

Mr. Eveleigh Nash has published "Pleasures and Palaces," by the Princess Lazarovich-Hrebelianovich. The author, before she married the Serbian statesman, was Miss Eleanor Calhoun, and this volume contains her reminiscences of society during her stage days.

The Rev. F. N. Heazell, M.A., organising secretary of the Archbishop's Assyrian Mission, has contributed a Foreword to a pamphlet entitled "Massacres of Syrian (Nestorian) Christians," which Mr. Paul Shimmon, of Urmi, Persia, has written and Messrs. Wells Gardner, Darton and Co. have published. The pamphlet deals with a subject which is only too familiar to our readers, but the horrors it describes cannot be too widely known, and we trust that the appeal of the author for help for his suffering fellows will meet with a generous response in this country.

"SALON'IKA" OR "SALONI'KI?"

To the Editor of THE NEAR EAST.

Sir,—Your versatile contributor "Corsair," whose piratical craft follows such a delightfully erratic course from "Tangier to Teheran," unhindered by German submarines, by Turkish obstructions in the Straits, or even by the solid stretches of *terra firma* beyond the Black Sea and the Caspian, appears to have recently touched at this busy port, and he and his crew—according to your issue of January 7—are in difficulties about the name of this town. As this seems to come within my sphere of influence (but what does a corsair care about other people's interests?) I had better tell him, and them, that they are all right—or all wrong—according to the point of view taken. If you are a Greek you will call it "Thessaloni'ki," if a Turk "Sela'nik," if a Frenchman "Saloni'que," if an American "Saloniki," but if you are an Englishman—or a Scotchman or Irishman, for the matter of that—you will call it "Salon'ika," or, as some people write it, "Salon'ica."

The pronunciation of place-names is entirely a matter of usage. In English we call the French capital Pa'ris, the Germans call it Pari's, and the French themselves Pari' (the "s" being silent). To sum up, I hereby solemnly and sincerely declare that to the best of my knowledge and belief the vast majority of Britishers here and elsewhere call the place Salon'ika—and it is usually safest to follow the majority. Now, Mr. Corsair, you may continue your course, and tackle the Turkish names from Sedd-ul-Bahr to Kavak.—I am, etc.,

YOUR SALONIKA CORRESPONDENT.

Salonika, January 30, 1916.

ORIENTAL PAINTER-ILLUSTRATORS.

Lovers of Oriental art have their special grievance against Germany. Part of the valuable manuscript of Rashid-ud-Din's "Universal History," enriched with the work of Persian artist-illustrators, was sent to Leipzig in 1914 to the Book Exhibition, and there it still remains. Other important and precious manuscripts illustrated by Persian artists of the early Middle Ages have been removed from their usual places in the British Museum to others more safe, but beyond the reach of lovers of this art. When Dr. T. W. Arnold was asked if he would arrange a personally conducted tour of interested hearers who had attended his lecture on "The Persian Paintings of Bihzad and his Predecessors" (given before the National Indian Association on February 10) to see the originals, he replied, "After the war!" He pointed out that the Persian art which survived the Mongol invasion was influenced by Byzantine, Egyptian, and Chinese art, but eventually freed itself from outside influences. The sons of Timur, he said, were the most cultivated princes who ever ruled in Persia. They were patrons of art and encouraged science and learning. The romantic poems of Nizami were favourites among the artists, who devoted their skill to illustrating them. Bihzad was a Court painter of the fifteenth century and the creator of Persian miniature painting; he was a great colourist and draughtsman. Mirut followed in his steps, and became one of the most famous of Persian painters. The illustrations of the works of these artists, shown by lantern slides, aroused the desire on the part of the audience to see the originals—a desire which much be cherished with patience "until after the war."

Colonel T. Holbein Hendley, whose interest in Mogul paintings is so well known, proposed a vote of thanks to Dr. Arnold, which was heartily carried.

PERSONAL & SOCIAL

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Feb.	1916. Feb.		1334. Rabi II.	5676. Adar.
25	12	Friday	20	21
26	13	Saturday.....	21	22
27	14	Sunday	22	23
28	15	Monday	23	24
29	16	Tuesday	24	25
Mar. 1	17	Wednesday	25	26
2	18	Thursday	26	27

To-day is the birthday of Princess Alice, wife of Prince Andrew of Greece, who before her marriage was Princess Alice of Battenberg, and who was born in 1885.

To-morrow is the birthday of Ferdinand, King of Bulgaria, who was born in Vienna in 1861.

Lord Edward Cecil, Financial Adviser to the Egyptian Government, has arrived in London on a special mission.

Lord Loughborough recently returned to Cairo on leave from active service to Shepheard's Hotel, where Lady Loughborough is staying. Her ladyship arrived from Luxor a few days earlier.

Sir Ralph Paget, British Commissioner for Serbia, and Mrs. Carrington Wilde, a member of the Serbian Relief Fund Committee, left London on Wednesday for Paris.

The Archbishop of Belgrade arrived in Paris from Nish at the beginning of the week.

Madame Grouitch was prevented from leaving London for New York as she intended last week, but she left on Wednesday.

H.E. the Serbian Minister was one of the diplomatic callers at the Foreign Office on Tuesday.

Dr. A. Ninchitch, the Serbian Minister of Finance, has arrived in London from Paris.

On receipt of the news of the fall of Erzeroum, the King despatched the following telegram to the Emperor of Russia:—"My heartiest congratulations upon the splendid achievement of your gallant troops in the capture of Erzeroum, after such hard fighting, which I trust will have far-reaching effects." Sir E. Grey also sent a telegram of cordial congratulation to M. Sazonoff on the fall of the fortress.

The following telegrams have passed between Earl Kitchener and the Grand Duke Nicholas:—

Lord Kitchener to his Imperial Highness the Grand Duke Nicholas: "I beg your Imperial Highness to accept the heartiest congratulations of the British Army and myself upon the brilliant feat of arms of our Russian comrades at Erzeroum."

His Imperial Highness the Grand Duke Nicholas to Lord Kitchener: "I beg you, Sir, to accept from me and also kindly to transmit to the brilliant British Army the warmest thanks for the congratulations of our brother comrades."

The death is announced of his Highness the Sultan of Perak, Sir Idris bin Iskander. Raja Idris, who became Sultan in 1888, was a strong ruler and an intelligent advocate of British methods of administration. Upon the outbreak of war he sent an assurance through the Colonial Office to his Majesty King George of his adherence to Great Britain, and added that there would be no trouble in Perak because there was a state of war with Turkey. His Highness was created a K.C.M.G. (Hon.) in 1892, a G.C.M.G. (Hon.) in 1901, and G.C.V.O. (Hon.) in 1913.

In Sir Ian Hamilton's despatch of December 11, which was published on January 29, the name of Major-General the Hon. H. A. Laurence is again mentioned.

Under date of February 16, Reuter's Cairo correspondent reports:—A telegram has been received by the American diplomatic agency in Cairo from the American Minister in Athens stating that the Cree, Whitley, Jones and Bryant families, of Baghdad, are at present at Mosul, all well.

General Sarrail left Athens on Tuesday, on his return to Salonika. He expressed himself as highly satisfied with his audience with King Constantine. He had an interview with M. Skouloudis, the Greek Premier, and paid visits to M. Venizelos and M. Zaimis. He also left cards on the Princes of the Royal Family, and received the members of the French colony in Athens.

Lieutenant-General Sir H. Sclater, K.C.B., who has been appointed General Officer Commanding-in-Chief, the Southern Command, served in Egypt from 1884 to 1890. He took part as a staff officer in the Nile Expedition (1884-85), and was afterwards D.A.A.G. at headquarters. He had been Adjutant-General since April, 1914; and in recognition of his services the King has been pleased to confer upon him the Grand Cross of the Order of the Bath.

Lieutenant-General Sir Pitcairn Campbell, K.C.B., who hands over the Southern Command to Sir Henry Sclater, and is transferred to the Chester command, saw service in the Sudan in 1884-85, when he took part in the Battle of Abu Klea. He also served in the South African War.

A Turkish news agency states that Essad Pasha, "who, without authorisation, undertook the provisional government of Albania and joined the enemy forces," has been deprived of his rank and removed from the army by Imperial Iradeh.

The *Egyptian Mail* reports that by the kindness of Prince Fuad, the Sultan's brother, some 800 wounded and convalescent soldiers and a party of nurses were recently enabled to see, at the Sultania Opera House, a performance similar to that given the previous evening in aid of the International First Aid Society. Prince Fuad had also generously provided tea for them, while on leaving each man was presented with a packet of cigarettes. At the close of the entertainment, General Maxwell stepped on to the stage, and in a short speech mentioned how much the British wounded in Egypt were indebted to his Highness the Sultan, and to his brother, Prince Fuad; the former, said the General, had displayed the greatest interest in the welfare of the wounded, and had visited all the hospitals in Alexandria and Cairo. He would ask the men to give three cheers, first for the Sultan, and then for Prince Fuad. Needless to say, the cheers were most heartily given.

Writing on February 8, our Bucharest Correspondent reports:—M. Victor Antonesco, Minister of Justice, has returned to Bucharest from abroad. The official announcement that a further extension of his leave had been accorded by Royal decree has given rise to speculation regarding the direction and object of his journey, especially since it has been noted that the date of the second announcement coincides with that of his return. It is rumoured that he has been to Paris on business connected with the new loan, and also, perhaps, that his recent journey may have some connection with a somewhat unfriendly attitude recently adopted by a portion of the French Press with respect to Roumania.

The marriage arranged between Captain Robin Otter, Norfolk Regiment (Temporary Major, attached to 26th Royal Fusiliers), and Miss Mary Troubridge, eldest daughter of Rear-Admiral Troubridge, C.B., C.M.G., will take place to-morrow at Christ Church, Chelsea, at half past two o'clock. There will be no reception, but friends are invited to the church.

As a glance at our Roll of Honour will show, Dr. Frank Mackinnon and his three sons are all serving their King and country in the great war, the father as a captain in the R.A.M.C., one son as a captain in the K.A.R., in British East Africa, and the two others as first lieutenants. Mrs. Mackinnon is also engaged in helping in the great struggle, working at Waverley Station, Edinburgh, in connection with the "Hospitality to Soldiers and Sailors" movement. Thus, we have at least one entire family from the Near East doing its best for the good cause in a most practical manner.

We regret to learn that Miss N. Griffiths, who has been editing the Cairo *Sphinx* this winter, is lying seriously ill at the Anglo-American Hospital.

Mr. Norman Brookes, the celebrated Australian lawn-tennis player, now acting as the Australian Red Cross Commissioner in Cairo, is staying at Shepheard's Hotel with his family.

The *London Gazette* announces that Second Lieutenant H. N. Lyster, Royal Fusiliers, has been graded for pay as Staff Lieutenant, Second Class. Lieutenant Lyster is the son of Mr. A. J. Lyster, of Constantinople.

Sergent-Pilote Guynemer, of the French Army, who has been awarded the Médaille Militaire and the Légion d'Honneur, is a member of the Paris office of the Imperial Ottoman Bank.

The death is announced, as taking place at Ealing, of Colonel Augustus Le Mesurier, R.E., who served with the Abyssinian Expedition of 1868.

We regret to announce the death of Mr. Frederick Dodd, one of the oldest Anglo-Egyptians of Alexandria, which occurred in Egypt on the 10th inst. Mr. Dodd, who was the son of Mr. John Dodd, of Bagley, Salop, was in his eighty-first year.

We regret to have to report that Mr. George Alfred Williams, general manager of Messrs. Julius Liepmann and Co.'s Successors, died in Cairo on the 5th inst., age 67 years.

We learn that M. Pierre Nomico, formerly of the Stamboul office of the Imperial Ottoman Bank, was killed in action at Zagora on December 10.

In view of his attitude towards the war, the Central Hackney Liberal Association have passed a resolution stating that they can no longer support Mr. Charles Roden Buxton as the prospective Liberal candidate for the division.

The *Egyptian Gazette* announces that among the recent arrivals in Egypt in the Australian Imperial Forces is J. J. Kelly, the famous wicket-keeper, who kept wicket for Australia regularly between 1896 and 1905. Another Test match player now in Egypt is C. Kelleway, who made a couple of centuries against South Africa in the triangular tournament. He holds a commission in an infantry regiment.

As a result of the Serbian bazaar and entertainment organised by the Women's Volunteer Reserve, at the Portman Rooms, on January 27, a sum of £200 has been handed over to the Serbian Relief Fund, with medical stores to the value of nearly £400, and a large quantity of clothing which is being sent direct to Corfu with a hospital unit.

MRS. FRANK BARKER wishes to recommend MANOLI CORBETTI, 22, Great Chapel Street, Oxford Street, W., to anyone wishing to purchase YAOURT, HALVA, TOMATO PASTE, BLACK OLIVES, ORIENTAL JAMS, or CIGARETTES, all of which he gets direct from Salonika and other parts of Greece.—[Advt.]

Digitized by Google

The marriage of Miss Irene Earle McMahon, younger daughter of Sir Henry and Lady McMahon, and Captain Kenmore Evans Gordon, only son of Colonel Evans Gordon and Mrs. Evans Gordon of Wigan Croft, Northwood, Middlesex, which took place at St. Mary's Church, Cairo, recently, was, in the absence of the Bishop in Jerusalem, conducted by the Rev. C. T. Horan in the presence of a large and distinguished congregation.

The *Egyptian Gazette* announces that there has recently been formed in Cairo, under the direct patronage of the High Commissioner, Lady McMahon, General Maxwell, and Lady Maxwell, an organization known as the "Convalescent Outings" Society, which has for its object the promotion of excursions to the various beauty spots and show-places of Cairo and the neighbourhood, for the benefit of sick and wounded soldiers. The list of patrons includes Bishop MacInnes, Sir Milne and Lady Cheetham, Lord Edward and Lady Cecil, Sir Malcolm and Lady McIlwraith, Sir Ronald and the Hon. Mrs. Graham, Sir Murdoch and Lady MacDonald, Douglas Dunlop, Esq., Surgeon General Ford, C.B., D.S.O., and Mrs. Ford, Sir George Macaulay, K.C.M.G., Judge Halton, Sir David Semple, K.C.M.G., Dr. H. P. Keatinge, C.M.G., Colonel V. C. M. Sellhem, C.B., of the Australian Imperial Forces, Colonel Etherington, of the Canadian Forces, Colonel Parkes, with the New Zealand Contingent, and the joint Commissioners of the Australian Branch of the British Red Cross Society, namely, Mr. Adrian Knox and Mr. Norman E. Brookes.

A correspondent writes:—Napier of Magdala, Roberts of Khandahar, Kitchener of Khartoum, Beresford of Metemmeh. Why not? It is true that history has but little to say of the new peer's association with the Berber town, and few may even remember that it at one time played an important part in the history of the Sudan. Contemporary historians, such as Knight, Burleigh, Steevens, and Villiers may have had little to record in pen or pencil of Lord Charles Beresford's connection with Metemmeh, though a good deal to say about that place itself. Spelled variously, "Metemmeh," "Metemmah," and "Metemma," the town—or what is left of it—lies upon the right bank of the Nile, about four miles from Shendi. In 1884 the place was prominently concerned in the abortive British expeditionary operations in the Sudan. Here were collected the five steamers that had been sent from Khartoum by the anxiously awaiting Gordon in order to bring up the long-expected but most dilatory British force despatched months before to relieve him. The distance is about 290 miles by water from Khartoum, and it was not until the last day of the year (December 31, 1884) that the troops were pronounced ready to start for Metemmeh, upon their errand of succour, across the Bayuda desert, a marching distance of at least 170 miles. When Metemmeh was finally reached, Major-General Sir Herbert Stewart, in command of the relief force consisting of only 1,100 men, spent so much time in establishing a fort and in going back to Korti, in conformity with the instructions of Lord Wolseley, that the whole object of the expedition was frustrated. As a fact, nothing was done to oust the Dervishes until 1885, when the place was made the object of a reconnaissance by the British troops. Later on, the town was the scene of a terrible massacre of Jaalins, some 2,000 of whom were slain by the Dervishes under the bloodthirsty Mahmoud, who was himself taken prisoner several years afterwards at the Battle of the Atbara. The ruins of the once thickly populated town of Metemmeh are still visible. The whole surrounding district consists of depressing desert, a fitting environment of the terrible tragedy which took place there. The fact that Lord Charles Beresford should have chosen its name as part of his title is difficult to appreciate.

The body of Captain Cecil E. H. Morton, Royal Marine Light Infantry, who died on May 18 last at the Deaconess's Hospital, Alexandria, of wounds received in action in Gallipoli, will arrive shortly in England. The interment will take place in Lexden Churchyard, near Colchester.

According to a Reuter's telegram, the Marseilles correspondent of the *Echo de Paris* states that the Serbian Colonel Ungrinovitch has died in the hospital in Marseilles from illness contracted on active service. He was sent in 1913 by King Peter to take charge of the operations against Adrianople, and was the first to enter that town at the head of his troops.

Under date of the 16th inst., the *Times* correspondent in the Balkan Peninsula reports from Bucharest:—I have received a communication from Lady Paget, dated Uskub, the 8th inst. All the members of the Serbian Relief Fund there are well and cheerful, and are looking forward to undertaking the homeward journey soon. Lady Paget has latterly suffered much from overwork and was seriously ill last month, but is now better.

Mr. H. Laxton, superintendent of the Eastern Telegraph Company's station at Port Sudan, has been transferred to Salonika.

For the benefit of the Serbian Relief Fund a morning concert will be given at Steinway Hall to-morrow (Saturday) by Mme. Madelaine Bathurst, Mr. Ivor Foster, Miss Bessie Worrall, and Mr. Stanley Stubbs. Tickets may be obtained from Mme. Bathurst, 103, King Henry's Road; Messrs. Chappell's, Bond Street; or at the hall.

The British Farmers' Red Cross Fund has now arranged to provide a further sum of £65,000 to the British Red Cross Society, of which £5,000 is earmarked for motor ambulances and a steam launch for the sick and wounded Indian soldiers.

The deaths of two Crimean veterans were announced last Friday. Mr. Hamblin Trelany Seale, who was assistant paymaster in the Royal Navy, and was with the Naval Brigade at Sebastopol, has died at Chelsea at the age of eighty-three years. Chief Petty Officer William Carnell, who held the Crimean medal with Sebastopol clasp, has died at the age of seventy-nine years.

In response to a request from the Directeur du Service de Santé, Paris, the number of beds at the hospital at Limoges, maintained by the Wounded Allies' Relief Committee, of Sardinia House, Kingsway, W.C., has been increased from 175 to 225. The hospital staff includes twenty-four English nurses.

The will of Mr. Constantine Constantinidis, who died recently at Alexandria, includes bequests of £1,000 to the Greek Navy, £500 to the Greek hospital at Alexandria, £500 for building a new residence for the site of the Orthodox Greek Patriarchate of Alexandria, £2,000 to the Greek Benevolent Society of Alexandria, the Philoptochos, £1,500 for the construction of his tomb in the Greek Orthodox Cemetery at Alexandria, and £1,000 for the poor, the interest being distributed as alms at Christmas. To his two sons he left a large house in the Greek quarter in Alexandria and a manufactory in the villages. To his sons and daughters he bequeathed a house at Nephisia and also an estate there.

APPOINTMENTS, PROMOTIONS, Etc.

Mr. R. C. Lindsay, Under-Secretary at the Egyptian Ministry of Finance, is acting as Financial Adviser during the absence of Lord Edward Cecil.

Our Bucharest Correspondent reports that M. Michel Sturdza, late Secretary of the Roumanian Legation at Athens, has left Bucharest in order to take up his new post at Berne.

M. Ghermani, First Secretary of Legation, who had been temporarily attached to the Ministry for Foreign Affairs in Bucharest, has returned to his post in Vienna.

M. Filality, the Roumanian Minister in Serbia, has followed the Serbian Government to Corfu, where he continues to fulfil his diplomatic functions.

The King has been pleased to give permission to Mr. Thomas Harry Balding, Instructor to the Cavalry Squadron of the Shereefian Guard at Rabat, Morocco, to wear the Cross of Chevalier of the Legion of Honour, which decoration has been conferred upon him by the President of the French Republic in recognition of valuable services rendered by him.

The Sultan of Egypt has approved the promotion of El Bimbashi W. H. McCowan, Arab Battalion, to be Kaimakam.

The *London Gazette* announces that Captains E. D. F. Gee, R.G.A., and W. F. M. Bagshawe, R.G.A., are promoted to be Majors and are to remain seconded to the Egyptian Army.

The following transfers in the Egyptian Army have been approved as from the dates stated:—El Bimbashi F. G. Peake, 4th Battalion, to Arab Battalion. 14-12-15.

El Bimbashi S. Hutchins, Sudan Government, to Department of Supplies. 21-1-16.

El Bimbashi Hon. Fitz R. Somerset, 9th Sudanese, to Sudan Government. 21-1-16.

El Bimbashi F. W. L. Edwards, Deputy Assistant Adjutant-General and Aide-de-Camp to the Sirdar, has been granted the temporary rank of Kaimakam.

El Bimbashi G. F. Raper, Artillery, has been struck off the strength of the Egyptian Army.

The following appointment is announced:—El Bimbashi C. W. W. Sandes, 12th Sudanese, to be a Deputy Assistant Adjutant-General.

A Berlin telegram received, by way of Amsterdam, last week, states that the German Minister in Sofia, Dr. Michahelles, owing to ill-health, will be replaced by the German Minister at Christiania, Count von Oberndorff. Dr. Michahelles has received the Order of the Red Eagle of the First Class with oak leaves.

Under date of February 21, the Washington correspondent of the *Morning Post* reports:—In all probability the post of Consul-General at Cairo will not be filled by the American Government until the close of the war. The place has been made vacant by the forced resignation of Mr. Olney Arnold, whose marked pro-German sympathies made him distasteful to the British Government, and who was removed when representations were made by the British Government to the Department. Mr. Olney Arnold was accredited to the Turkish Government, but since Turkey's nominal control of Egypt has been broken by the war, the Washington Government would have to recognise the new status, which it prefers to avoid by leaving the post vacant and designating a temporarily-acting Consul General.

SCHOOLS for BOYS & GIRLS.
TUTORS for ARMY & ALL EXAMS.
REFINED HOMES with EDUCATION for children whose parents are abroad.
Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.
The age of the pupil, district preferred, and rough idea of fees should be given.
J. and J. PATON.

ROLL OF HONOUR.

British Subjects from Turkey in H.M.'s Forces.

The Editor of THE NEAR EAST *would be obliged if relatives of former British residents in the Near East who have joined H.M.'s forces would communicate additional names or other particulars for insertion in our Roll of Honour. Biographical details concerning those who have fallen in their country's service would also be appreciated.*

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A., Colchester.
ATKINSON, Gunner T., "A" Co., Royal Field Artillery.
BAKER, Captain A. Warden, 7th Royal Scots Fusiliers.
BARKER, 2nd Lieut. C., Interpreter, British Central European Expeditionary Force.
BARRON, Captain J. B., Worcester Regiment, France.
BATH, Nurse, Sister, Army Hospital, Malta.
BELL, Sister M. J., Edinburgh War Hospital, Bangour.
BINNS, Lieut. C. E., R.M. (Interpreter to Mediterranean Forces).
BINNS, Lieut. Harold H., Royal Naval Division Headquarters, British Mediterranean Expeditionary Force.
BINNS, Lieut. W. Hylton, care of The British Consul, Brindisi.
BLYTH, Captain R. C. P., 1st Gloucestershire Regiment, attd. Egyptian Army. (*Killed in Action.*)
BOLTON, Alfred, Naval Brigade.
BOND, Private H. C., 7th (Reserve) City of London Regt.
BOND, Lieut. Gladwyn J. T., 1/3 West Riding Brigade, R.F.A., Ripon.
BOND, Trooper Sidney, 1779, Royal Horse Guards. (*Wounded.*)
BOND, Corporal R. (41,357), Headquarters Staff, "D" Battery, 79th Brigade, R.F.A., 17th Division, B.E.F., France.
BORRELL, Rifleman Alfred, 7th Service Batt. Rifle Brigade.
BOWMAN, Private Henry J., R.A.M.C., Duke of York's Barracks, Chelsea.
BROOKS, Corporal George, 41356, D. Batt., 78th Brig., R.F.A., 17th Div., B.E.F. France (in hospital with fever).
BURN, E. R., 7th Service Batt. Rifle Brigade.
BURNS, Rifleman Edward, 7th Service Batt. Rifle Brigade. (*Accidentally Killed.*)
CASTELL, Rifleman Henry, 7th Service Batt. Rifle Brigade.
CAUCHI, Act. Corporal Henry (6113), 19th Service Battalion, C. Company, Royal Fusiliers, Epsom, Surrey.
CHARNAUD, Lieut. A., R.N.V.R., Acting Interpreter.
CLEMOW, F. G., M.D., C.M.G., British Red Cross Mission.
CLIFTON, Capt. H., Interpreter, 11th Batt. Durham Light Infantry, 54th Division, Mediterranean Expeditionary Force.
COLES, Dr. D. A., R.A.M.C. (formerly of the English Hospital. Haifa).
COLLEY, Trooper Isaac E., Royal Horse Guards.
CORBETT, Lieut. H. C., M.D., R.A.M.C.
CRAWFORD, Private James, 7th (Reserve) City of London Regiment.
CUMBERBATCH, Lieut. A. Noël, 9th East Yorkshire Regiment, Fulford Barracks, York.
CUMBERBATCH, Captain R. C., 7th Bn., Rifle Brigade, 14th Division, B.E.F., France.
CUMBERBATCH, Lieut. H. D., 6th Bn., "The Buffs," 12the Division, B.E.F., France.
CUMING, Bombardier A. C., No. 38983, R.F.A., B. Battery, 84th Brigade, 18th Division, British Expeditionary Force, France.
DAVIDSON, Bombardier C. T., 266th Battery, 85th Brigade, R.F.A., Colchester.
ELLIOTT, Eric C., 2nd Lieut., Essex Regiment, 11th Battalion.
ELLIOTT, Flight Sub-Lieut. Clifford W., R.N.A.S.
EPPSTEIN, Lieut. W. R., Durham Light Infantry.
FAULKNER, Lieut. M., Admiralty House, Malta.
FROMANT, Private F., Grenadier Guards.
GALLIA, Rifleman M., 7th (8) Batt. Rifle Brigade.
GOODACRE, Miss C., Red Cross, Shoreham.
GOUT, Captain Charles L. Gout, 2/4th K.O.Y.L.I., Lark Hill Camp, Camp No. 10, Salisbury Plain.
GOUT, Rifleman Evelyn, 7th Service Batt. Rifle Brigade.
GOUT, Rifleman Richard, 7th Service Batt. Rifle Brigade.
GRAVES, Captain Philip, Intelligence Department, Mediterranean Expeditionary Force.
HADKINSON, Rifleman Vivian H., "A" Co., 7th Batt. Rifle Brigade, Queen's El Ward, Bed 40, Graylingwell War Hospital, Chichester. (*Wounded.*)
HIGGS, Private J., 6th Dragoon Guards.
HOLMES, 2nd Lieut. Gerald H., 2/5th Batt. Leicestershire Regiment.
HOLTON, Corporal Alfred, Royal Naval Division, Divisional Engineers.
HOLTON, Trooper John, B. Squadron, Essex Yeomanry.
IRELAND, Private D. J. (8346), 15th County of London Regiment.

WRATISLAW, Captain J. C., 8th Leicestershire Regiment, 110 Brigade, 37th Division, B.E.F., France.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Alexandria.
CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. **Full Pension P.T. 50 per day.**
C. AQUILINA, *Proprietor.*
(Late of Messrs. Thos. Cook & Son.)

CYPRUS PALACE HOTEL
NICOSIA, CYPRUS.
Charming position. Beautifully situated the best part of Nicosia.
Most magnificently built and furnished.
FRENCH and ENGLISH CUISINE.
Every Comfort. Moderate Charges.
Special terms for extended visits.
BRANCH OF THE CYPRUS HOTEL CO.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—

ERZEROUM—KUT—BAGHDAD.

Unless all the indications are at fault, the capture of Erzeroum by the Russians marks a turning-point in the war with Turkey. There is no need to indulge in any exaggerated expectations. Erzeroum is not in Europe; its fall is Turkey's trouble, rather than Germany's; and although the Central Powers have as little desire to see disaster overtake either of their vassal States as to incur it themselves, they are probably too conscious of troubles of equal magnitude, though of a different order, nearer home to feel overmuch the loss of a Turkish fortress in Armenia. The significance of the Russian success, therefore, has to be considered in its relation to the military operations in Asia, which is, after all, one of the minor theatres of the war. Its importance in this theatre, however, is quickly revealed. In the first place the fall of Erzeroum implies a grave misconception on the part of the Turco-German military authorities. The despatch of Field-Marshal von der Goltz Pasha to Baghdad with the object of driving the British expedition into the Persian Gulf meant that Mesopotamia had become for the Turks and their German masters on the spot the main sphere of operations. Hither would be sent as many men as could be spared and the bulk of the available munitions. While the latter would be despatched by the Baghdad railway, it is probable that von der Goltz's army would rely largely for reinforcements and some supplies on Anatolia and the Erzeroum district, which furnish some of the best material in the Turkish army. The capture of Erzeroum cuts off the Baghdad command from one of its bases, and threatens its communication with the other and main base, inasmuch as the Russians at Bitlis are barely 150 miles from Nisibin, the present railhead of the Baghdad Railway. The whereabouts of the German Field-Marshal would supply the best clue to the Turco-German view of the situation. If he has found it necessary to return to Constantinople, only one inference can be drawn. If, on the other hand, he is still at Baghdad, then we may expect the Turks to make a determined effort to stay the Russian advance at some point between Mush and the *tracé* of the Baghdad railway, even if it is not challenged directly from the west. The signal success already achieved by the Grand Duke Nicholas must not obscure the fact that his difficulties increase as he proceeds westwards and south-westwards, owing to the necessary lengthening of his front.

So long as Russian troops are in touch with Turkish fugitives the Grand Duke's task is a comparatively easy one, but he will not be able to continue the pursuit beyond a certain point without running the risk of exposing his left flank to the possibility of an attack from the direction of Baghdad. The period that he may require to consolidate his position and bring up reinforcements will in all probability be utilised by the Turks to bring up relief from Constantinople, Aleppo, and Baghdad. The resultant disorganisation of Turco-German plans is to be regarded as by no means the least valuable effect of the capture of Erzeroum. It will tax Turkey's resources to the utmost to interpose an adequate barrier in the way of the Russian advance. If, therefore, the attempt to co-ordinate the military efforts of the Entente Powers has been successful, now is the time for Russia's Allies to come to her assistance in order to enable her to press home her advantage. Among the unfortunate comments that have appeared in the daily Press in connection with the fall of Erzeroum, probably the most misleading is the statement appearing in the *Morning Post* to the effect that the salvation of General Townshend's force at Kut depends upon Russia, that "if we are saved there, we shall be saved by Russia." In the first place, we may hope that the safety of the Kut garrison will already have been practically decided by the arrival of the reinforcements sent to General Lake. If it were merely a question of a dash to extricate General Townshend from a dangerous position, and then to withdraw the joint forces, there would be less need to delay General Aylmer's advance; but the object of the Mesopotamian expedition can only be, in succouring the Kut garrison, to make the place once more the base for a fresh forward movement, this time on an adequate scale. The Russian victory in the north, without doubt, comes at an opportune moment. Coinciding with an improvement in the British position in Mesopotamia, it will probably simplify the advance of the expedition, just as the progress of the British in turn will prevent the Turks from despatching too large a force from Baghdad to check the Russian advance. The British Expeditionary Force and the Grand Duke Nicholas' army are now playing into one another's hands, although the difference in their respective strengths does not allow any comparison between the effects they can produce. Both, however, are in need of further assistance, and sound strategy on the part of the Allies would call for a combined movement, which would threaten Turkey from a different direction and prevent her from devoting her maximum strength to meeting the Russian menace. There are several points on the coast line between the Dardanelles and the Sinai Peninsula which lend themselves to such an object. A landing at one or more of these points would be as valuable to the Grand Duke Nicholas as the strengthening of his army by several divisions.

The British expedition to Mesopotamia has not fulfilled its earlier promise. We have called attention frequently in these pages to the mistakes of the higher command, but we do not hold with those critics who decry the whole enterprise. The very fact that mistakes have been made, that British prestige in these regions has suffered from military reverses, is sufficient reason for profiting by our experience and seeing the thing through to a successful issue. Fortunately, everything points to a determination on the part of the British Government to adopt this plan. It would be a crowning disgrace, if we imposed upon our Allies the additional task of capturing Baghdad. There can be no desire to underestimate the importance of the Russians' successes; but for the moment Baghdad is outside their sphere. Although it makes no difference which of the Allied troops are the first to enter a town or district, the point we would make here is that Great Britain, having put her hand to the Mesopotamian campaign, has to carry it out to the end on her own account, and there must be no encouragement of a *laissez faire* policy, which would cause us to slacken our efforts on the Tigris in the expectation of the Russians doing our work for us. If the military operations in the Near East and Middle East are viewed from their present standpoint, regardless of all that may have gone before, it will be seen that the Allies at Salonika and Erzeroum and on the Tigris are in a strong position to neutralise the efforts of the Central Powers south of the Danube. Provided the Allied War Council, strengthened, it is to be hoped, by the participation of Italy, can give adequate attention to this vast theatre, regarding it as a single sphere, a successful initiative at this juncture must materially and immediately affect the whole course of the war. It is to this satisfactory stage that the fall of Erzeroum has brought the Entente Powers.

JOURNEYINGS IN ASIA MINOR.

By MARY A. POYNTER.

A May and a September journey into Asia Minor, over the same route and in the same year,* enable the traveller to enjoy both the flower and fruit of the land, and to see the country, as the country-lover might say, at both its bests!

There is only one *through* passenger train each day from Constantinople into Asia Minor—that is, through to the town of Eski-shehr, which is at the top of the plateau beyond Ismidt, and some two hundred miles inland. At Eski-shehr the train ties up for the night in order to make a fresh start soon after daybreak the following morning—one part for an all-day journey over a branch line eastward to Angora, and the other part, a longer train, continuing south-east on the Baghdad line proper to Konia. The legend on many of the railway carriages reads "Constantinople-Baghdad," which is an anticipation rather than an accomplished fact. My husband had some special work to do in both Angora and Konia which led us this interesting way, and it added to the journey's interest to know that the railway for the distance we were to travel at least should follow the old caravan route that once led to Baghdad. It is a comparatively new railway through an old, old land—the line to Angora having been finished in 1892, and that to Konia opened in 1896. It now extends far beyond Konia, and this much-discussed German enterprise is being hurriedly pushed forward; but there is a great mountain, a part of the Taurus, still to tunnel, and several sections to be connected before the line is complete and it can reach the city of Haroun-er-Rashid. So slowly do the trains "run," and such long halts do they make, that one can view the country almost from the standpoint of the pedestrian. In this part of the world leisure seems to be the watchword for man, only the seasons hastening to be up-to-date that they may not jostle each other unduly. One train a day is not likely to upset the even tenor of life in the Interior (the Constantinople short for inland Turkey), or to introduce speedily fresh customs to a people quite content with those long familiar to them.

Stamboul, sitting complacently, though at times a bit uneasily, in the seat of once mighty Byzantium, is a true daughter of Asia lent to Europe for a season. This is what the traveller feels as he looks back upon the city from the boat that takes him across the Bosphorus—the Bosphorus at its entrance—to Haidar Pasha, where the railway leading into Asia Minor begins. A tempting view, a haunting, parting memory is this of beauty, perhaps a little dimmed though mellowed by time, full of repose and charm of outline, and framed by a sea and sky that set her apart from all others to be admired—this last of the daughters of Asia to hold court in Europe. And when this daughter is called back to her own country one feels that she will go reluctantly, and will take with her her cypresses, most mournful as they are most decorative of all trees, and that with her will go also the only man now left in Europe who can ride a donkey or can sit cross-legged on a divan and still look the gentleman and the wise man.

The Germans have built a very fine station at Haidar Pasha, finer than there seemed to be any demand for when the road was first constructed, and any Anglo-Saxon can hardly help regretting that this station and the ship- and train-yards connected with it should in any way seem to intrude upon or shut out a part of the view of the English cemetery, which lies to the left and almost immediately adjoining, and where sleep so many of the brave men who lost their lives in the Crimean War. Also near by is the building where that early heroic nurse, Florence Nightingale, cared for so many of the sick and wounded from that war, and won such undying laurels for herself and the profession she so unselfishly established. A little further on to the left is the great cemetery of Scutari, perhaps the greatest cemetery in the world, and unique for the life that goes on above the sleepers, for its thousand cypresses, for the little children and the Turkish women who play or rest within its shade, for the crumbling headstones, set at all angles and bearing in some instances such quaint inscriptions, and lastly for the *tekké* of the Howling Dervishes and for the leper colony set within its midst.

Leaving the sight of the Bosphorus, with all its claims upon the imagination, almost directly the railway runs through a part of old Chalcydon, of which not even its name remains; through several pretty modern towns, with their opulent gardens and vineyards; then comes in sight of and runs for many miles along the eastern shore of the Gulf of Ismidt—through what was once the province of Bithynia—with the red-earthed, pine-crowned Isles of the Princes (Prinkipo) and the distant Bithynian snow-capped Mount Olympus in sight for the first half-hour of the journey. This eastern shore of the Gulf of Ismidt is quite thickly populated, and the fields are well tilled, though the soil, cultivated for long centuries, looks rather poor in patches and in need of some encouragement other than the spade.

The opposite shore is outlined by higher mountains and is heavily wooded to the water's edge. The towns on this side are few and far between, in these days, and are visited only by an occasional small steamer that plies up the Gulf to take on board the infrequent traveller and such produce as this wilder and less accessible shore may be inclined to send to market. Although this western shore lies within distant sight of Constantinople for many miles of its length, there are said to be "mild" and prosperous brigands living here among the less adventurous souls; indeed, we have had certain members of this interesting fraternity pointed out to us when a pleasure boat on which we were sailing has called at some port on this side for provisions, such as chickens and eggs, wherewith to replenish its larder.

The railway side of the Gulf has many old landmarks, and much of historic interest associated with its every mile. Its gardens and vineyards were famous in old Byzantine times; in the year 565 A.D., at the town of Pendik, only sixteen miles from Constantinople, died the great General Belisarius. And a greater general than he—great Hannibal—who was exiled to the province of Bithynia, and ended his term of banishment here by taking poison in 183 B.C., has, according to tradition, his last resting-place on the hillside above Guebzeh, though more scholarly authorities place his tomb at Dil (Libysos), a few miles further on. Such authorities say this tomb at Dil was restored by the Emperor Septimus Severus, but there seems to be no Emperor coming forward these days to do again a like needed service. In the meantime those cypresses that surround the traditional tomb on the hillside at Guebzeh are no mean monuments, and are perhaps in this case, as in many another Near Eastern cemetery, what Byron calls them, "the only constant mourners of the dead." Near Guebzeh, too, is a fine old ruin of a Byzantine fortress, standing out on a cliff above the sea, lone and imposing, embowered in green—a landmark of beauty, though shorn of all strength as a means of defence. Near the station of Heréké, renowned now for its manufacture of carpets, is the site of Ankyron, where Constantine the Great died, and, strangely enough, in this same neighbourhood, though long centuries later, died Mohammed II., the Conqueror of Constantinople.

At the head of the Gulf lie the modern Turkish town of Ismidt and a few old broken walls and ruins that mark it as the site of that once fair capital, Nicomedia. This latter was founded by King Nikomedes in 264 B.C. The Younger Pliny speaks of it in the time of Trajan, and the Emperors Hadrian and Diocletian had courts here—the latter persecuting the Christians so cruelly—and Constantine also did much in his day to adorn the city. But, as one may imagine, this town passed through many and varying vicissitudes before its name was finally changed and it settled down into being the quiet Turkish town of some twenty-five thousand inhabitants it is to-day.* It was plundered by Goths and Persians, it suffered a terrible earthquake in 358 A.D., and though it was rebuilt in the Emperor Justinian's time, it never recovered its former high place among cities. Finally it was taken by the Turks under Sultan Orkan in 1330. Now, nearly six centuries later, though shorn of all suggestion of its former importance, one would call it a picturesque town—that is, from a distance—a town rambling up the hillside, with few public buildings, though with many mosques and white minarets set amid green cypresses to indicate its present ownership.

From Ismidt the railway runs across a plain of almost tropically luxuriant vegetation until Lake Sabanja is reached—Sabanja, famous for its fish and water-fowl, and for the bewitching way it mirrors the blue sky and whatever clouds may come floating over the same. This lake also furnishes a refreshingly cool bathing-place for the hard-working water buffaloes, who at free moments on hot summer days wade out into the water until only their ugly black heads, set with kindly blue eyes, are to be seen above the surface. At the station of Arifié the broad plain of the Sangarius is crossed, and from the railway line is just visible that wonderful bridge built by Justinian in 561 to span the Sangarius river, and bearing a lofty and somewhat pompous inscription in Latin to that effect, though since this inscription was written the Sangarius has cut out for itself another

* That year being, in the writer's case, the interval between the close of the Balkan war and the outbreak of the present war.

* Recently the Turks have had the idea of turning it into a somewhat important ship-building port.

river bed, and flows some two miles away from the bridge that once spanned it! But the bridge remains, a delightful feature in the landscape, its eight arches of about seventy-five feet span still bearing testimony to the beauty and permanence of Roman architecture.

At the station of Lefke one may take an *araba* (native wagon) and drive across the mountains to the right for four hours and find another valley and Lake Ascanius, at the head of which is situated old Nicæa, the Nicæa of the Creed and the capital of more than one empire of old. It has shrunk now to a pitifully small town, fever-stricken, and with little more than its glorious old city walls left to testify to its former high estate. But its recorded story, its situation at the head of the blue lake, and the imposing mountains that encircle it seem to set it apart for all time as a place for sacred pilgrimage.

From Lefke and onward fields of poppies, grown for opium, and the low mulberry tree, grown to feed the silk-worm, illustrate the various industries of the people; up steep inclines where a fruit-tree might hesitate to take root the mulberry flourishes, so that there is little land in this especial region that can be said to run to waste. One passes an occasional ruin, overgrown with ivy, showing that this way came the Crusaders, and that they remained in some places long enough to build castles of defence, if not for settled abodes. When the cañon of the Kara Su, a small but riotous stream, is reached the train goes into a deep shadow even if it be midday, and the ravine is so narrow and the walls of rock so high on either side, and so brightly tinted, that one can almost imagine oneself passing through a Colorado cañon for the moment. Bilejek, once a Byzantine town, is situated in as narrow a ravine as man ever sought to build home in, and the railway, in order to get in and around and over it, seems to execute a series of contortions as it were. At this station smugglers were selling contraband tobacco on one side of the train, whilst soldiers and Customs officials carefully patrolled the other! Newspapers are beginning to be read in this region; for all the small boys of the town were drawn up alongside the train and demanded ours when they saw it, though they only expressed disgust when they found it was printed in the French, not in the Turkish, language.

On our journey we passed many newly placed towns, consisting of tents only. These harboured hundreds of the many thousands of refugees fleeing before the oncoming Bulgar in Thrace. They were really returning to their own country after all, returning hardly any poorer than when they went; for Thrace had done little more for them than to give them shelter. As a rule, scant education and scant comfort had been their lot. Asia in Europe had never felt altogether at home.

The railway at various places changes streams, follows up fresh waterways on its climb to reach the higher plateaux. After the Kara Su the Sorgun Su is one of the obliging streams that lead the way. Travelling up the Gulf of Ismidt, by the Lake Sabandja, and following the little streams through wooded ravines up to the uplands of Asia Minor is like going for a visit to Switzerland so far as change and freshness of air are concerned; though the things you see and the people you will meet make quite another picture on the canvas. The charm of the high Near East is very great indeed. It is an unconscious, unposed, unprepared charm, and if some comforts are lacking on the journey, there is enough novelty to offset any such lack.

On our first journey to the Interior we left the Bosphorus late in May, left that district basking in the first flush of summer, and the shores of the Gulf of Ismidt continued to give the impression of a season well advanced toward maturity. As our train began to climb, the leaves of the calendar began to be turned—in a day we went steadily back to late spring, then to early spring, though never back to winter. At Bilejek the acacia tree, past its fragrant prime on the plain below, was in full creamy blossom, and when the upper plateau was reached this tree was just beginning to put forth its green tassels and make ready to bloom. The mornings and evenings in the higher altitudes are perhaps a bit chill, but the freshness of the landscape and the glory of the midday more than compensate for any slight discomfort from the cold.

As the afternoon wears on and the train, most of its climbing done, reaches the upper level, this level develops into a broad plain. One town here, Bozujuk (old Lamunia), possesses a beautiful mosque, judging from its exterior, built by Kassim Pasha, and there are Byzantine ruins of some importance in its neighbourhood. But now, as a rule, the little towns cling to the far hillside that bounds the plain, and the train stops too far away from them for one to make their acquaintance. They look picturesque and not unprosperous in the distance.

On this plain that leads up to Eski-shehr was fought the great battle of Dorylæum. Here on July 1, 1097, the Crusaders, under Bohemond, Tancred, Robert of Normandy, and Godfrey de Bouillon, defeated Solimon, the Turkish Sultan of Iconium. The city of Dorylæum is lonely enough now; it is simply a mound out on the plain two miles from Eski-shehr. The peasants go to this buried city sometimes for marble or stone for the buildings of Eski-shehr, but no organised excavations have been made as yet by archæologists. The old city holds its secrets still; the soil of the plain has buried the town, just as it has covered the fallen Crusaders and their foes.

In the twilight comes Eski-shehr, situated more than twenty-six hundred feet above the sea we have just left behind. And Madame Tadia's house, which is neither a hotel nor a *han*, but a suggestion of both, receives one very comfortably for the night. She has furnished entertainment for at least two generations of travellers, and has become herself one of the landmarks of the town.

One does not feel like starting out at daybreak the following morning for either Angora or Konia, but would stop over for a day to see what manner of a town is this on the banks of the little, fast-flowing Pursak. Not that Eski-shehr itself is of great interest to the outsider, as it might have been when it was a Byzantine frontier fortress or a Seljukian stronghold. Devastating fires have visited it frequently, as they have visited most Turkish towns. Yet there is the site of Dorylæum to visit, and there are the interesting meerschaum mines near by, from which many things both useful and ornamental are carved, to find their admired way far beyond the confines of Asia Minor. Eski-shehr is now important mainly as a railway centre, and we understand it is building up quite rapidly since it has thus been brought into more speedy touch with the outside world. Its fashions still remain early-Eastern, however, and the town itself, that part of it which lies some distance from the station, while not presuming to indicate great riches or high distinction, is almost as Oriental-looking as Damascus.

The dress of the Turkish women of Eski-shehr is glaringly bright of hue—red and yellow predominating—the *yashmak*, or wrap worn over the head, face, and shoulders, being of red material, with stripes of blue running across it; her skirts are of the divided order, and she presents to the world a figure surely in triumphant colour. She does not shut up all her face and look at the world through one eye, after the fashion of the women of Konia; but goes her way apart, rears her children, and does her work uncomplainingly, as do most of her sisters in Moslem lands. Eski-shehr (Old Town) is not a tourist centre, but, since the tourist has to pass through it on his way to almost anywhere in the Interior up from Constantinople, the day is not lost which is spent in making its acquaintance.

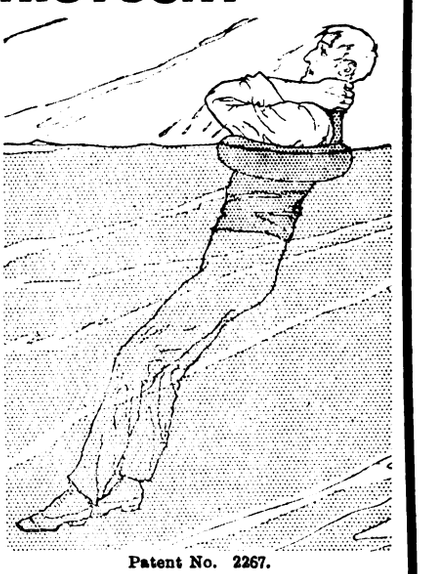
Are you going East—or West?

In either case you must pass through danger zones, and should provide yourself with a

"GIEVE" LIFE-SAVING WAISTCOAT

which can be worn day and night with comfort—being always ready for inflation in case of sudden disaster at sea.

Inflated in a few seconds. Will keep you afloat indefinitely in any sea—head and shoulders clear of water, as illustrated.



THIS WAISTCOAT SAVED LORD MONTAGU'S LIFE.

TANGIER TO TEHERAN.

The declarations of Solomon Effendi, a Turkish journalist, to the correspondent of a French newspaper are really quite pathetic. He has everything mapped out in his mind *so* nicely, and is so refreshingly cheerful as to the prospects of destroying Britain, that it seems almost indecent to thrust at the weak point in his argument. No doubt his assertion that the Turks do not intend the conquest of Egypt will be supremely gratifying to her defenders, but he has a terrible scheme up his sleeve for all that. The Suez Canal is to be occupied, and this done, Solomon Effendi says that the rest is easy. England will be robbed of her connecting link with her colonies—no colonies, no food—exit England! It's an astonishingly simple and effective picture.

***

Now there is in Wales a village named Risca, and if you want to make sure of inflaming one of its inhabitants to the verge of insanity, call him a cuckoo. For tradition has it that once many years ago a notable of the village caught one of these birds alive. The event was of sufficient importance to attract municipal attention, and the village, desiring to preserve to itself a bird so uncommon, walled in an open space, and in the presence of a representative gathering of local magnates the cuckoo was introduced to its new quarters and set free. It flew over the wall. It seems to me that somewhere there is a connecting link between the reasoning of these good gentlemen and Solomon Effendi. Had the former clipped the bird's wings all might have been well; were the latter able to destroy the power of the British Navy all would be well with his scheme, provided, of course, that we have no objection to the Turks occupying the Canal. As matters stand, however, I can't see what's wrong with the old route to our colonies in the very unlikely event of the Canal becoming impassable for a space. No, Solomon Effendi is not well named.

***

I see that Luxor has been converted into a vast convalescent station for British soldiers, and a more ideal spot for such a purpose it would be hard to imagine. The winter climate of this resort is absolutely perfect, and the many well-appointed hotels which the place possesses make ideal convalescent hospitals with little or no alteration. For the first time I am reconciled to the existence of that mammoth affair of luxury, the Winter Palace Hotel, on the river front at Luxor. Thousands of British soldiers will henceforward bless its name, and that is sufficient. In the same spirit I am prepared to condone even the cinematograph entertainment which, I read, forms part of the evening's entertainments. When complete victory is ours it will be an easy matter to propitiate the outraged goddess of the Nile by casting the instrument and films into her deep waters in sacrifice. In the meanwhile, let our watchword be "everything for our heroes"—nothing as usual.

***

A native of Baghdad—described as "a Turk," which, if he really comes from Baghdad, seems to be a misnomer—was last week brought up at the Thames Police Court and remanded on the charge of travelling more than five miles from his registered address without a permit. He had, it was explained, managed to enlist in the 7th London Regiment, and he actually appeared in court in uniform. I am sorry he has got into trouble, for, if he be a genuine Baghdadi, I, for one, should be prepared to believe that his sympathies are with this country, since the Arabs of Baghdad—as I have often remarked before—do not love the Turk, and *do* generally like and respect the British. That being so, he may well have enlisted with the honest desire to "do his bit" for this country, even though it be not his by birth. Moreover, he is reported to have said, when arrested: "I thought as other aliens join I would join," which sounds frank enough. I have been told by one of the British refugees from Constantinople that she herself saw a man whom she recognised as a German in our military uniform. She promptly called a policeman's attention to the fact, and gave him such information as she could; and I trust the Teuton is now out of *that* uniform. But the Baghdadi of the 7th London is probably deserving of sympathy, and, if so, I hope he will not have cause to regret his lack of understanding.

***

Thinking it over, I am inclined to wonder whether it might not have been a good stroke of business to "boom" this poor Baghdadi instead of prosecuting him. Try to imagine—it will be very difficult, I know, but still, try!—what would happen if a Serbian voluntarily offered himself for enlistment in the Kaiser's army. The Germans, I feel sure, would boom the fact for all it was worth. The Press of neutral countries would be inundated with messages headed: "Serbians Adopt Kultur and Fight for the Kaiser," "Serbian Brigade Forming in Berlin," and so forth, and the recruit would, no doubt, receive speedy promotion. So why not, in our case: "Turkish Volunteers for the Trenches," or "Arab Example to Home-Bred Slackers"? I commend the idea to the recruiting authorities.

***

The Times publishes the following extract from a letter written from Salonika, on February 8, by an officer:—

> "Imagine this war. Some of our people went out on a reconnaissance in front of the line, where there were quite a number of Turks. The latter were as courteous as possible, and showed them the best places for geese and helped to stalk them."

The "Turks" referred to are doubtless Greek subjects, but even so, the incident strikes me as one of the most remarkable I have read of in this war. Imagine any Briton—even a pacificist—helping the Boches to stalk geese. But then, of course, there has always been a kind of rivalry between the turkey and the goose.

***

The Germans are certainly leaving no stone unturned in their efforts to bind the Turks and Persians to their chariot wheels. Last week we were informed that the "German-Turkish Union" is going to erect in Constantinople a building to be known as "The House of Friendship," which, it is hoped, will become "the centre of Kultur" in Turkey; and now we learn that a Persian paper, the *Kaveh*, is to be published in Berlin, with a view to increasing popular interest in Persian affairs. If I am not mistaken, a similar paper, printed in Turkish, was founded some months ago in the German capital; but I have yet to learn of a "House of Friendship" being erected in Berlin, to serve as a "centre of (Turkish) Kultur" there. Yet, why should not the Turks return the compliment? The Germans have been loud in their praises of their Oriental Allies. So why not go the "whole hog"? As a matter of fact, the Turk could teach the German many virtues, but the Teuton appears to think that it is only his Ally's vices that are admirable and worthy of adoption.

***

A Roumanian correspondent forwards a story which is far too good to keep to myself; though, unfortunately, the sender cannot vouch for its accuracy. He writes:—"In accordance with an invitation addressed by the French Government to the Russian military authorities, the latter forwarded the names of men whom they judged to be deserving of decoration with the Legion of Honour. Their astonishment was considerable when, on subsequently reviewing the names of the men who had received this distinction, it was remarked that they by no means corresponded with the names originally sent in. A closer investigation of the discrepancy revealed the fact that, through some unaccountable mistake, the French Government had been presented with a list, not necessarily of heroes, but of subjects recommended for vaccination." I like that touch "not necessarily of heroes." But, as a matter of fact, the Russian army does seem to be made up of heroes. The way in which, yesterday, short of ammunition, it stood up to the Boches and held them in check—flesh and blood against guns and gas—and in which to-day it is whipping the Turks in Armenia and overcoming intense cold and truly appalling natural difficulties in its stride, so to say, affords proof of its quality.

***

The splendid feat performed by the Russians in capturing Erzeroum has naturally led to a great deal of writing about that not very attractive city, but, curiously enough, I have observed no reference to the fact that in 1847 it gave its name to a treaty. This Treaty of Erzeroum, which aimed at settling once and for all the vexed question of the frontier between Turkey and Persia, was the outcome of an offer of mediation made by Great Britain and Russia to the two interested parties; and though, owing to the irreconcilable attitude of both Turks and Persians, it did not entirely fulfil the hopes entertained at the time, it certainly did prevent the outbreak of very serious trouble that seemed imminent before the meeting of the Commissioners. Anglo-Russian memories of the place are therefore pleasant ones, and we may feel sure that recent events will do nothing to make them otherwise. It may be of interest to note that the chief British representative on the first Turco-Persian frontier Commission, appointed as a result of the Treaty, was General Sir W. F. Williams, R.A., "the Hero of Kars," who was then only a colonel, and that Loftus, the archæologist, was attached to his staff as geologist. The Russian Commissioner was Colonel Tcherikoff; while Persia and Turkey were represented by Mirza Jaffer Khan and Dervish Pasha respectively.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Future of Constantinople. February 21.

Mr. KING, in commenting upon the statement made by Mr. Asquith in connection with the new Vote of Credit, said that he thought the House ought to have been told more about our advances to our Allies and to neutrals. He went on to ask what were our intentions regarding the future of Constantinople. If this country had sent to Gallipoli a great expedition, which cost probably £200,000,000 or £300,000,000 and 100,000 lives, we ought to know the political object with which the expedition had been undertaken. Dr. Dillon had lately pointed out that the whole object of our Near Eastern policy had been to give Constantinople to Russia. If that was so, then the defection of Greece, the opposition of Bulgaria, and the hesitation of Roumania were all explained at once. If our policy had been clear before the world, and judicious in regard to Constantinople, we could have had all these countries in on our side, fighting against the Central Powers. That was the argument. It seemed to be a plain fact to anybody who had studied the politics of the Near East.

Mr. OUTHWAITE said they had had various statements made in reports of the Greek Chamber and by three successive Greek Prime Ministers, which gave us some clue to the fact that the Dardanelles Expedition was undertaken for the purpose of securing Constantinople for Russia. They knew that, because the Prime Ministers of Greece said that they offered and undertook to come in at the time of the first Dardanelles enterprise, but that Russia opposed that action because she herself desired the conquest of Constantinople, and did not wish to have a rival claim in the operations. The significant thing was that so far as they knew the military operation at the Dardanelles was not undertaken at the advice of, but against the advice of, our highest naval and military authorities. They knew it had not the sanction of our highest naval authorities, and he believed he was right in saying that it was not favourably approved in the first case by Lord Kitchener. It was a diplomatic manœuvre, and we had to back up our diplomacy by force of arms. It seemed a dangerous method to have the House kept in the dark as to our diplomatic activities, our political objects, and our commitments to foreign countries.

The Situation at Salonika.

Mr. LYNCH referred to Salonika, and said if Salonika was meant to be the beginning of an offensive the number of troops sent there was totally insufficient; for what could have been done six months ago by 500,000 men could not be accomplished to-day with two million men. The Germans were nearer their base than the Allies. He looked upon the situation at Salonika not as a military situation, but as one of those Parliamentary situations meant to save the face of the Government and depending on the valour, the courage, and the genius of General Sarrail, one of the best of French generals, but upon whose soldiers he feared too great a task had been imposed. He had nothing but the gravest anxiety for the situation at Salonika, for it presented to the German staff precisely the kind of problem which they loved—a concrete problem where all the factors are known. They knew exactly the force there and the resources of the Allies, and they could calculate the number of guns to bring upon them and the number of troops they must launch to the attack.

Fighting near Aden.

Replying to Major NEWMAN, who asked for information regarding the Turkish report that a reconnoitring detachment had been annihilated near Aden, Mr. CHAMBERLAIN said: The Turkish claim would seem to be founded on an engagement which took place on January 12 between a reconnoitring column of the Aden garrison and a Turkish force, in the neighbourhood of Sheikh Othman. The losses on our side were one British officer and four Indian ranks killed and four British and thirty-five Indian ranks wounded. The enemy's losses were severe, amounting to about 200 killed and wounded. The column was neither annihilated nor defeated, but withdrew when the purpose of the movement was completed.

Constantinople Again. February 22.

Mr. OUTHWAITE asked whether the British Government had entered into a commitment to support Russia's claim to Constantinople, and if so whether it had any bearing on the Dardanelles Expedition and on the present operations in the Near East.

Sir E. GREY said he must refer the hon. member to his reply on May 13 last.

Operations in Egypt.

Colonel YATE asked the Under-Secretary of State for War if he could say when the despatches relating to the operations in Egypt during the past year will be published.

Mr. TENNANT: The hon. and gallant member is presumably referring to the operations which took place in the neighbourhood of the Suez Canal in the early part of last year. These operations were fully described in six long official communiqués issued in February and March, and there is no additional information to be published.

Colonel YATE: Was that information published in the *London Gazette?*

Mr. TENNANT: I think so, but I cannot be certain at this distance of time. It was certainly published in the Press.

Colonel YATE: Will the right hon. gentleman see that the despatches are published in the *London Gazette?*

Mr. TENNANT: I will endeavour to do so, but I cannot give a promise.

Cotton in Egypt.

Mr. THEODORE TAYLOR asked the Foreign Secretary if the Government of Egypt had taken steps to ensure the planting of a full acreage of cotton during the coming season, in view of the need of greater supplies for the industries of this country, and what steps were being taken in the Sudan to increase the growth of cotton there.

Sir E. GREY, in reply, said he would refer the hon. member's question to Cairo for such further information as could be supplied.

The Mediterranean Position.

Mr. HOLT, speaking on the Vote of Credit, said he thought the Government ought to make a frank statement about the naval position in the Mediterranean. It was a very serious matter. Steamship owners, he said, had been given to understand that the Mediterranean was so far unsafe by reason of enemy submarines that it was desirable they should adopt the Cape route. Obviously if the Mediterranean was rendered unsafe by submarines, the whole motive for holding Egypt and the Suez Canal had disappeared. The general impression among shipowners was that the difficulty in the Mediterranean was due to the want of professional competence and skill on the part of the Allied Navies. They ought to be told what the Allies were doing in the way of keeping the Mediterranean reasonably free for the passage of our ships, or whether the Government intended to take any steps at an early date to make the Mediterranean as safe as the neighbourhood of the British Isles at present. They ought to have a very frank statement from the Government on the subject. He also asked for information regarding the expeditions to Salonika and Egypt, and said they were vastly expensive. He wondered if there were many enemies anywhere particularly close to them. From what was going on it looked as if the enemy had induced us to plant our forces in these remote places and had then gone quietly back, leaving us to wait until later on.

Major NEWMAN said if the hon. member had happened to be connected with the expedition to Salonika he would have found that there were enemies round about that place.

February 23.

Mr. BALFOUR, answering Mr. KING, said it would not be advisable to state in detail the organisation of the Allied naval commands in the Mediterranean, but the general command was in the hands of the French Commander-in-Chief, Admiral Fournier. In the Adriatic and its approaches the Italian Commander-in-Chief was the Duke of the Abruzzi, and other local commands were assigned to British officers. The best indication of the work which had been performed by the Allied Fleets in the Mediterranean was the successful transport of large military forces to Salonika, the successful evacuation of the Allied expedition to the Dardanelles, and last but not least the transportation of the Serbian Army from Albania—a result chiefly due to the energy and ability displayed by the Italian Fleet. Beyond that he had no statement to make.

SALONIKA AND CALAIS.

We take the following quotation from an article in the *Globe* (February 21). The writer thinks that the position of Salonika is causing increasing uneasiness to the enemy, and contiues:—

Calais and Salonika are two cardinal points in the general campaign. The attempts hitherto made on the former have been worse than unavailing, for they have only resulted in heavy loss to the Germans. Whether or not another attempt is in contemplation, as seems likely, the result can be predicted with certainty. What Germany fails to accomplish in the first onrush when her best troops were available and the Allies were unprepared in the sense that they now are, she will not succeed in henceforth. It is quite on the cards that there will be a further serious attempt along large sections of the western front before long, and the apparent impregnability of Salonika will give an impetus to this. But nothing that can be done in France and Flanders will relieve the Balkan stalemate in favour of Germany.

THE PRESS ON THE NEAR EAST.

Erzeroum.

The fall of the famous fortress of Erzeroum has naturally been one of the chief subjects of comment in the British Press recently. The magnificent achievement of the Russian troops has been applauded by the Press throughout this country; our first quotation is from a leading article in *The Times* (February 19) on the cause and effect of the victory:—

The *Cologne Gazette*, obviously under official inspiration, has published an article which endeavours to prove that the disaster is all the fault of the Turks. We doubt whether Enver Pasha will quite relish the way in which his new masters cheerfully seek to throw him to the wolves the moment that anything goes wrong. It was always obvious to those who know German methods that Enver would instantly be made the scapegoat by his Prussian friends in the event of reverses, but no one expected to see him treated quite so callously. Moreover, the accusation is manifestly entirely unjust. The real culprits who were the cause of Turkey's loss of Erzeroum were the ultra-clever Prussian officers who now dominate Constantinople, and are leading Turkey to her doom. They were so clever that they entirely forgot the long arm of the Grand Duke Nicholas. They insisted on making a Prussian colonel Governor of Erzeroum, and assumed that all would be well. The great Marshal von der Goltz so miscalculated the situation that even after the Russians began to move he continued to jog on his way to Baghdad.

The various plans for wonderful things that the Germans had advertised for the immediate future are then dealt with, "but the net result of four months of bombastic declarations is that they have lost Erzeroum, the greatest military base in Asia Minor. We hope the Turks, and especially Enver, appreciate this remarkable demonstration of the Prussian mastery of the art of war by advertisement."

The article deprecates any tendency to overrate the value of this victory, remarkable though it was. It concludes:—

On the other hand, it must be recognised that the fall of Erzeroum is of far greater military importance, and is therefore a far bigger material blow to the Turk than the fall of Baghdad would have been. Baghdad, by reason of its ancient fame and its modern association with German ambitions, may enjoy greater prestige both in East and West; but Erzeroum was Turkey's principal fortress beyond the Bosphorus.

The *Manchester Guardian* in a leading article on the victory says:—

It will be objected that victories in these remote hills will not greatly affect the main course of the war, but this is to misunderstand the objects for which Germany plunged Europe into this turmoil. The West with Germany is not the end, but the means to the end; she invaded Belgium because she wanted a bastion in front of industrial Westphalia and France, in order to gain more power for her elbow in dealing with Russia and the East. Her great political object in this war was to obtain for herself the headship of a Central Empire stretching from Hamburg to the Persian Gulf. For all her restlessness in Flanders, a hundred yards advance there is nothing to her except as a means of rooting herself more firmly in the East. Moreover, so long as we keep command of the sea, the danger to the British Empire from Germany is not in Belgium but in Palestine, which menaces Egypt, and Mesopotamia, which if the Germans established themselves firmly there might some day menace India. . . . A victory in front of Kut-el-Amara would be the British counterpart to the Russian capture of Erzeroum, and be the beginning of the end for German political ambitions in the East.

The *Standard*, in a leading article, says:—

The occupation of Baghdad would be a less heavy blow to Turkish sentiment, for Baghdad is Arab and not Turkish, whereas Erzeroum is associated with the first westward advance of the race of Ertogrul, with its palmy days of dominance, and with its stubborn resistance to the conquering Slav. He who holds Erzeroum commands all the roads to Armenia, Mesopotamia, and Persia, and possesses a first-class base for further offensive operations. That the Turks have allowed this great stronghold to fall into their enemy's hands argues either over-confidence in its strength or in the weakness of the attacking force, or a total subservience to Germany. It speaks eloquently of the terms on which Enver Pasha is permitted to play dictator at Constantinople that Turkish army corps are concentrated in Macedonia for the benefit of German or Bulgarian designs when they were badly wanted for the defence of vital Turkish interests in Asia. It remains to be seen whether Germany has really done well for herself in sacrificing her unhappy ally in this way.

The military correspondent of the *Morning Post*, in an article on the fall of this great fortress, writes:—

The signal disaster to the Turkish arms in Armenia, involving both the defeat of their field army and the downfall of their stronghold in that province, cannot fail to react on other spheres of Turkish activities, actual and potential. The blow is not one that can be calmly ignored, and it must be supposed that it will have the effect of drawing troops away from the Balkan theatre and from the Egyptian frontier. The Balkans have been a prolific source of misleading rumours, but there is little doubt that the Turks have been utilised to set free Bulgarian troops for service in Macedonia and Albania, and that they will not now contentedly submit to forces remaining locked up in regions and for purposes in which they have no direct interests. The much advertised attack on Egypt, which is already rather belated, is not likely to materialise; and the flow of reinforcements into Mesopotamia, the quarter which has hitherto caused most anxiety in Constantinople, is likely to be arrested. In Persia, which lies within the more immediate sphere of influence of the Armenian campaign, such enthusiasm as still remained for the German cause should be effectually damped.

Of all the regions affected, the relief will be most appreciated in Mesopotamia, although its full effect cannot be expected to manifest itself for some time.

Bulgaria and Germany.

A special correspondent of the *Morning Post* (February 21), writing from Salonika, says that the reports of Bulgarian deserters who arrive at that town show that relations are becoming increasingly strained between Bulgaria and Germany. According to this authority the German proposal that Bulgarian soldiers should take their place with the Germans and Austrians in Russia and France has had to be abandoned, in view of the resentment it caused among the Bulgarian soldiers who claim that they have already done all that duty requires in the present war.

Less than a fortnight ago a party of men belonging to this deserter's regiment were sent to the village of Trun, near Monastir, to bring back some hay. On arriving there they found that the hay had been requisitioned by the Germans, who had set a guard over it. The Bulgarian officer in command of the party ordered his men to take the hay. Upon this the German guard attempted to prevent them, and again on the command of the officer the Bulgarian artillerymen shot five Germans with their revolvers. Of the 780 horses belonging to this artillery regiment, six batteries strong, 140 have died for want of food, and the rest are in such a poor condition that double teams are necessary to draw the guns. An order for Bulgarian troops to be dressed in German uniforms was countermanded three days after it began to be carried out, and the German officers attached to the 5th Infantry Regiment have been withdrawn.

King Peter's Faith in Victory.

An exceedingly interesting interview has been obtained with King Peter by a correspondent of the Associated Press at Aedipsos, a report of which has been cabled by Reuter's Agency in New York, from which we quote. King Peter is referred to by his interviewer as being "physically broken and virtually blind," but as being in possession of undimmed spirits and unclouded intellect. His Majesty spoke mainly of the splendid assistance given by various bodies of Americans to distressed and wounded Serbians, and went on:—

For those of our Allies who have remained faithful we have no reproach. They came to our aid too late to save us. But they came. They were not organised for war nor ruled over by soldiers. Had they been so organised, so ruled, perhaps they would have been able to save us.

Civilisation cannot be made an engine of war perfected to foresee every contingency. It is inherent in liberty that it acts slowly and clumsily, but this very slowness and clumsiness constitute the strength of free peoples. Their triumph is long coming, but it is none the less sure.

King Peter says that the war is "the supreme, the last effort of feudalism, a fight to the finish between the feudalism of yesterday and the freedom of to-morrow." The Serbians, he says, were desirous of living at peace with Austria, but "it is of the nature of a feudal State that liberty cannot and must not flourish in the same vicinity, and Austria arranged all that in the time of the Obrenovitches. Serbia was made merely a tributary of Austria. She was no longer free at all."

In referring to his antecedents, King Peter spoke with pride of the fact that his grandfather was a peasant. "Crowns are lost, but the pure, clean blood of those who have lived of the earth does not die." Our quotation is from the latter part of the interview, which refers to Serbian relations with Bulgaria and Greece:—

"As for Bulgaria, we have proved that we have no rancour against soldiers who fought side by side with us for the liberty of the Balkans. We agreed to make enormous sacrifices that they might remain our friends. They would not. The obsession of Balkanic hegemony pursues them. Yet, despite everything, I say even now with all my heart, let the Bulgarians live in tranquillity at home. There's room enough for all in the Balkans. All that is required is a little goodwill."

"And Greece, your Majesty?"

For a while the King did not answer, as if unwilling to touch the subject. At length he said:—

"As for our Ally Greece, she has understood differently from us her interests in the Balkans; but apart from her refusal to

Digitized by Google

participate in the war, shoulder to shoulder with us, she has in other respects fulfilled the duties of friend and neighbour. To-day we are the guests of the Greek people, and we are grateful for their hospitality."

The old man fell silent. Evidently the effort to talk had been a severe strain. The doctor made a sign to the correspondent, but King Peter felt it and gathered strength for a final word. With a single gesture he brushed away the tenderly restraining touch of the aide-de-camp. He bent forward, his broad, square, short-fingered, peasant hands clenched to strike sharply the arms of his chair in emphasis, and he shouted the words :—

"I believe in the liberty of Serbia as I believe in God. It was the dream of my youth. It was for that I fought throughout manhood. It has become the faith of the twilight of my life. I only live to see Serbia free. I pray that God may let me live until the day of redemption of my people. On that day I am ready to die, if the Lord wills. I have struggled a great deal in my life, and am tired, bruised, and broken from it, but I will see, I shall see their triumph. I shall not die before the victory of my country."

The Murder of Prince Yussuf.

In a dispatch from Athens to the *Daily Chronicle* (February 19), Mr. Martin H. Donohoe throws further light upon the recent murder of the Turkish Crown Prince. According to a letter from Constantinople which Mr. Donohoe had been shown,

the Prince was found in his palace lying in the corridor between the harem and the bathrooms. A vein was opened in the left arm, and he was allowed to bleed to death. The body was covered with bruises, and everything pointed to his having desperately struggled for life.

He appears to have been waylaid and surprised in the corridor. His cries for assistance were heard by the harem inmates, and also by the palace domestics, but none offered to render him any help.

When overcome by his assassins he was thrown down and bound and gagged with a handkerchief. Several slashes were made in his arm before the murderers succeeded in their enterprise.

It appears that the Prince had been accustomed to go about armed, and it was to his neglect of carrying a revolver when passing along a corridor in the Palace to the bathroom that placed him at the mercy of his assassins. Mr. Donohoe's despatch contiues:—

The letter also says that passers-by outside the palace enclosure heard the Prince's piteous shouts for aid. These cries suddenly ceased, and the marks on his throat show that the assailants half-strangled him in their attempt either to stifle his cries or in the process of gagging their victim.

Although the Government announced that the fatal wound was self-inflicted, on the morning of the discovery of the body the inmates of the harem and the entire staff of domestics were marched off under military escort to an unknown destination.

The enmity between the Prince and Enver Pasha was bitter. In the State Councils the Prince charged Enver with being responsible for the ruin of Turkey by embarking on a disastrous war on the side of Germany. Over and over again he declared himself in favour of a separate peace.

Enver is also a keen hater who, seemingly, would never scruple to remove inconvenient enemies from his path, and the climax was reached a few weeks before the Prince's death when the murdered man said to Enver: "Beware what you are doing. Your hour is approaching when the nation will rise up and exact reparation for its sufferings—its hunger. In the people's hour of vengeance, they will probably hang you all."

It was this outburst that probably sealed the fate of the unhappy Prince, for the tyrant of Turkey would brook no criticism of the policy of his German masters and paymasters.

Balkan Roads.

Mr. H. W. Nevinson, in a dispatch from Salonika to the *Manchester Guardian*, recently gave an interesting account, from which we quote, of the difficulties of road transport in the Balkans.

Our Allied armies are thrown back upon the old-fashioned road for movement, and in the Balkans old fashion is mediæval fashion. Starting from Salonika there are three of these mediæval roads, as there are three railways. One goes about 100 miles to Monastir and is the relic of the Roman Egnatian Way, which led from Durazzo through Ochrida to Salonika and Constantinople. One goes about fifty miles to Seres, crossing the Struma twenty miles south of the demolished railway bridge near Demir Hissar, and one, turning off from the same road less than a mile outside the city walls, runs through wild mountains towards a big village called the Hortiach (where a Roman aqueduct stands), descends steeply to Langaza Lake, and runs along the south side of Beshik Lake and down the Rendina defile to the coast at the Gulf of Orfano. I walked along this last week as far as the Gulf of Orfano (about fifty miles from Salonika) and found the mud almost impassable. It is rather strange that the road beside the main railway up the Vardar to Uskub, Nish, and "Europe," is hardly to be called even a Balkan road so far as I have seen it. One could hardly call it a path even in the Balkans.

According to Mr. Nevinson, our first attempts at improvement, made with the assistance of "native labour, recruited for the most part from among destitute refugees—Serbians, Albanians, Greeks from Thrace, Greeks from Asia Minor, Armenians escaping death, and Turks escaping the army, who practised a Babel of eloquence upon each other, but practised little else, least of all road-mending," were hardly a success. A change for the better has, however, been wrought, thanks to the organisation introduced by a man who "was hanging about in staff offices doing nothing in particular, but called an interpreter." We quote from Mr. Nevinson's further details regarding this road-maker.

There are many Oxford scholars out here in various uniforms, and possessing knowledge from the Stone Age to the birth of Christ, or even later. But the peculiarity of this Oxford scholar was that his knowledge of the Balkans was derived not from history but from insects. From youth he had studied the habits and customs of grasshoppers and earwigs. I believe he has discovered no less than 500 undescribed species of earwig in the world, making 800 in all. And in the course of this peculiar research he has acquired such intimacy with the Balkans that he can discriminate Bulgarians, Roumanians, Serbians, Greeks, and Turks at sight, can address them all in their own language, and make allowances for their different habits and behaviour.

This man set to work about Christmas, and now one finds a perfectly organised camp of labourers, parties of whom go out every sunrise to work upon the roads and return before sunset.

The Super-Cad.

In an article, entitled "The Fatal Balkans," the *Daily Express* (February 19) calls attention to the perverse fate which gives empty successes to Germany while denying her all the fruits of victory.

Her alliance with Bulgaria and the consequent occupation of Serbia were reasonably expected to make her mistress of the Balkans, and to render possible the colonisation of Asia Minor, which has been a principal part of the Pan-German scheme. Serbia was overrun, but the Serbian army remained in being. The Anglo-French forces at Salonika have prevented the Teutonising of the Balkan Peninsula, and the reinforcement of the troops under General Sarrail's command by the veteran Serbians and Montenegrins is a serious threat to Bulgaria, and may well upset Potsdam's calculations. The Russian capture of Erzeroum must have an important effect on the Balkan position. The Ottoman Empire has been struck at its most vital part, and the way to Baghdad is closed.

The writer proceeds to a neat definition of Turk and Teuton.

The Turk is often a fool, but he is nearly always a gentleman. The German is always the super-cad. We, in England, with our long experience of the fine qualities of the Moslem peoples, have sincerely appreciated the chivalrous manliness of the Turk. Even his evil association with the German has not corrupted his good manners, as was proved a dozen times during the struggle in Gallipoli. We are fighting him without a trace of animosity, and we regret the penalty he must pay for listening to the beguiling voice of Germany. Erzeroum will convince the Turk that his rulers have made a fatal blunder. Whispers travel on the wings of the wind in the Near East, and the discontent of the majority of the Turkish people will affect opinion in Bulgaria, where the alliance with Germany against Russia is almost religious sacrilege only to be made tolerable by that immediate and overwhelming success which covers the grossest sin.

Articles to Note.

"Anglo-Egyptian Sudan: Cotton Planting Prospects" (Illustrated), in the *Field* (February 19).

"Churches of Northern Armenia," by Sir Martin Conway, in *Country Life* (February 18).

We are glad to note that the *Athenæum*, which is now published monthly instead of weekly, shows no signs of losing its old friends and admirers, but is, on the contrary, making many new ones. The demand for the January number considerably exceeded the supply, and the February number is so good that it would be not at all surprising if the same story should be repeated. With the new series certain changes have been introduced into the paper. "Notes and News" is a new feature, and, we think, a good one; and the increase of articles will be welcomed by many readers. Rather more space is devoted to Science, Fine Arts, Music, and the Drama; but the reviews of books remain, as they have always been, the principal feature of the paper. It is pleasant to be able to add that they still constitute an invaluable guide to the reader and buyer of books, and that the high reputation that the *Athenæum* has always enjoyed is not likely to suffer in any way by reason of the changes—which are, indeed, in all cases improvements. The current number contains a special article, "The Land of Mazeppa" (Ukraine), which will interest many of our readers, and we notice that an article on "Southern Slavs and Turkey" is to appear in the March number.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

On February 11 we quoted the *Times* Bucharest correspondent as having cabled on February 4 to the effect that "an arrangement had practically been concluded with an Austro-German syndicate for the sale of 1,000,000 tons of maize, 350,000 tons of wheat, 150,000 tons of barley, and 100,000 tons of oats." Elsewhere we publish a letter from our own Correspondent in Bucharest (February 1), which confirms the above message, excepting as regards the quantities of wheat (200,000 tons) and barley (10,000 tons) to be purchased by Germany; further, no mention is made of the purchase of oats.

***

"It is deeply to be regretted," adds our Correspondent in his letter, "that Great Britain did not acquire the whole crop of maize when she made her purchase of wheat." The reason is obvious. The political effects of our transaction have, by the new German deal, "been reduced to a minimum," and besides, we have placed it within Germany's power to purchase 1,000,000 tons of foodstuff which otherwise would not have been available. It looks very much as though someone had blundered, to allow of such a heavy leakage. Besides, by buying the whole maize harvest "we would have succeeded in placing Roumania, once and for all, outside the sphere of German influence," and have crippled that subversive German propaganda so distasteful to all honest and patriotic subjects of King Ferdinand.

***

The *Morning Post's* Buda Pest correspondent, referring to Roumania's deals with Germany and Austria, states that gold is insisted on—and rightly, too, be cause the Boches, as everyone knows, are not to be trusted—in payment for all purchases. All sales, moreover, must be sanctioned by the Government. In this connection the correspondent gives the following graphic picture of how sales between the two parties are concluded:—"No goods can be shipped or loaded in Roumanian carriages," he says, "without a written sanction from the Treasury, and the prices are being checked and often not approved, in which case the permission for shipment is refused. The buyer has to pay the full amount in gold at the Treasury, and only then can the seller apply for a bill of lading, he being paid by the Treasury in Roumanian paper notes. In this way all the gold is being paid into the State coffers, and as a consequence the solidity of the Roumanian lei is firmer than it ever was before. The prohibition of taking gold out of the country into Hungary is strictly enforced, and travellers are searched to their skins before they leave the Roumanian frontier, so as to make it impossible for any gold to return if once it gets into the country."

***

The accounts of the British Chamber of Commerce of Egypt for the year ended December 31 last show a total income for the period of £E819, of which £E505 was derived from subscriptions and £E292 from the advertisements and sale of the Chamber's monthly journal. Interest on investments amounted to £E50. Expenditure exceeded the income by 647 milliemes. Salaries were the chief item, absorbing £E386, while the cost of producing and distributing the monthly journal come to £E237. A donation of £E50 was made to the British Red Cross Fund, and figures in the expenses. The total assets of the Chamber as at December 31 amounted to £E1,685.

***

The Manchester Chamber of Commerce is to be heartily and unreservedly congratulated on having voted down Free Trade. Unfortunately, as a result of the resignation of the directors, the Chamber will not be represented at the conference of the Associated Chambers of Commerce in London next week, but this, as compared with the *coup de grâce* to Cobdenism in its great stronghold, is only of secondary importance. There is no doubt that a wave of public opinion throughout the country is demanding that we should, without loss of time, take the necessary steps to protect ourselves against a dumping of enemy goods into this country as soon as the war is over. The best way to go about this is to erect a protective tariff barrier around our shores, without loopholes for the enemy to enter through, but with broad, open gates for our friends and allies. The conversion of such a strong Free Trader as Lord Cromer to a Preferential Tariff something on the lines suggested is a clear indication of how present circumstances have modified existing principles, and the Manchester vote has succeeded in successfully crystallising public opinion. It only remains for the conference of the Associated Chambers next week to follow suit, thus showing the Boches that not only can we raise the necessary men to smash them on the battlefields of Europe, but that we can, and will, also ruin their industries.

***

The Austro-Boches have started, with a great flourish of trumpets in Vienna, a new journal to be called the *Wirtschaftszeitung der Zentralmaechte*, which is designed to promote closer economic relations between the Central Powers and their allies, and to discuss important questions of industry and agriculture. It will maintain (says a Reuter message from Switzerland) offices in Berlin, Vienna, Buda-Pest, Sofia, and Constantinople. The first number contains an article from the Mayor of Vienna, who says: "When the war is over, the allied enemies will remain in the world-market; they will try to supplant us everywhere, to hinder our economic development, and to weaken us until they become our masters." Not only will we try to do so, but we will succeed. And the Manchester vote is a decided step in the right direction. As for the *Commercial Journal of the Central Powers*—to Anglicize its barbaric name—its Sofia and Constantinople offices are ephemeral, not to say purely nominal, ones, and will exert no influence on the future economic life of Bulgaria or Turkey. So that, at the most, Berlin will be able to communicate only with its satraps Vienna and Buda-Pest in the personal columns of the "W.Z.Z."

***

On Monday last Mr. Charles Carkeet James, M.Inst.C.E., read a paper before the Institution of Civil Engineers on the "Main Drainage of Cairo." Mr. Carkeet James, it will be remembered, was appointed in October, 1906, when engaged in the drainage of Bombay, to prepare a project for the drainage of Cairo, and to supervise the carrying out of the scheme when approved. The result of his labours, together with a description of the drainage scheme, accompanied by numerous plans, is contained in the lecture, to which a lengthy reference will be made in THE NEAR EAST at an early date.

***

The Hungarian Bank of Commerce claims net profits for 1915 amounting to 13,090,991 kronen. The commercial branch yielded 2,264,000 kronen more than in the preceding year, and, while recommending a dividend of 7½ per cent., carrying forward 1,239,738 kronen, the directors place a million kronen to the staff pension fund. The increased profits are claimed to have been principally due to prosperous transactions in the Near East. I leave my readers to guess at the nature of these operations, but in view of what happened in the Balkans during the year 1915, it may safely be assumed that the bank's profits cannot be examined too closely.

***

Significant of the better relations between the Entente Powers and Greece, says the *Financier*, is the fact that Athens has recently been a good buyer of Greek bonds on the Paris market. Thus the quotation of the Five per Cents. of 1884 has risen since the end of January from 275 fr. to 280 fr., the Fours of 1887 from 248 fr. to 256 fr. and the Fives of 1914 from 81 fr. to 85.55 fr. Deals in Greek bonds here are as rare as Zeppelin visits, but the tendency of prices since the end of January has been upwards, the Fives of 1914, which are the best criterion, having risen from 73½ to 75.

***

An Athens correspondent writes:—"According to an official report, the Greek Public Debt amounts to Drs. 1,542,604,826. The budgetary deficit in 1915 amounted to Drs. 358,286,743. In 1906 the Government employed 10,000 officials, whose salaries amounted to Drs. 16,000,000 per annum. To-day the officials number 37,000 and their salaries total Drs. 55,000,000."

***

The Governor-General of the Sudan has issued a Proclamation prohibiting the export of Hessian cloth and Hessian bags, all kinds of jute cloth and jute bags from the Sudan, except to Egypt or to the United Kingdom of Great Britain and Ireland, except with the permission of an officer appointed in that behalf.

***

I am pleased to see that, according to our Cairo Correspondent, the Egyptian Government is proceeding energetically with the liquidation of enemy firms included in "C" Group, and that placards inform the public of the measures which have been imposed. On the other hand, the Board of Trade *Journal* has published the list of the firms in the group in question. With regard to my note last week on this topic, I was made, by a regrettable misprint, to refer to Weinrich and Co. instead of to Boehme and Anderer, as the aggressive firm situate near the Turf Club.

Egypt's Gold-Bar Exports.

A Barometer of Fellah Prosperity.

(From Our Own Correspondent.)

Cairo, January 31.

Without wishing unduly to dwell on the improved economic and financial condition of the country, to which reference has of late so frequently been made in your columns, I should like to draw attention to one feature which speaks more eloquently than anything else of the change for the better that has taken place. I refer to the exports of gold-bar. Tradition has it that the fellah hoards gold in times of prosperity. Undoubtedly he does, but not in the form of sovereigns or napoleons, as is popularly supposed. His hoarding takes the form of gold ornaments with which he overloads his women-folk. The more prosperous the year, the more gold bracelets, anklets, etc., are made by the goldsmiths from the gold coin that the fellahin bring in for the purpose. These gold ornaments constitute the family "nest egg," "stocking," "reserve," call it what you like, and in times of stress or adversity they are the first possessions disposed of in the attempt to tide over the crisis.

Buying Up Gold Hoards.

When shortly after war broke out difficulty began to be experienced in marketing the cotton crop, the fellahin, of course, felt the pinch—not right away, but towards the beginning of October. At that date the heavier instalments of the taxes, rents, etc., began to fall due, and as only devisory prices could be obtained for the crops, and the proceeds by no means sufficed to meet pressing obligations, the fellahin set to and started to sell off their female relations' gold ornaments. Dealers and goldsmiths soon recognised that a unique opportunity for making profits lay before them, and they took advantage of the hard-pressed state of the fellahin to buy up their "hoards" at ridiculously low prices. Indeed, so mercilessly were the latter being robbed that the Government had to issue a circular stating that instead of promiscuously realising their gold ornaments, the fellahin could hand them in in payment of their taxes. Even then for some considerable time the dealers continued their lucrative trade, and as an indication of the low prices which they gave for their purchases, I might mention that at the time it was possible to buy goldware in the Musky at round about 10 per cent. below the value of the metal contained therein.

Melting Down Gold.

There was, of course, no local demand for such ware, and the dealers and goldsmiths found that more profit was to be made by melting the ornaments down into bars and shipping them abroad. Thus during the first five months of the war gold bar to the value of £E227,000, of which all but £E7,000 went between October and December, was exported, as against £E68,000 during the corresponding period in 1913. The traffic went on increasing during the succeeding months, and up to the end of September £E620,000 had been sent out, as compared with £E114,000 in 1914. The totals for the years, however, were £E700,000 and £E330,000 respectively, so that the export during the last three months of 1915 had contracted considerably, £E80,000, as against £E216,000 during the last quarter of 1914.

It may, of course, be objected that, while the ready payment during October and November without any unusual outward signs of monetary stress of nigh on a quarter of a million more in land taxes than during the same months of the previous year may be an indication that the fellah is less hard-pressed for ready money, the marked contraction of gold-bar shipments may also be due to the approaching exhaustion of the fellah's gold hoards. That explanation is untenable, however, for no one who has any knowledge of the fellahin would or could maintain that anything but a portion—and then not a considerable one—of his womenfolk's gold ornaments is represented by the million sterling of gold-bar that has left Egypt since the outbreak of war.

Banks' Exports.

Likewise, the contention that as this gold-bar was shipped almost entirely by the banks it does not necessarily follow that it represents the gold ornaments of the fellahin cannot hold water. In the first place, the banks are the only and the most natural channels through which the dealers can place their gold-bar on the foreign markets. Secondly, the banks, if they keep a gold reserve, keep it in British and French specie, which they would certainly not go the expense of melting down for the purpose of export—if, indeed, they had wanted to export it. Finally, and consequently, if any of the banks did ship gold-bar solely for their own account that gold-bar was undoubtedly acquired by them directly or indirectly from the fellahin, whose ornaments it represented.

Prosperous Fellah.

The deduction which I consider one may legitimately draw from the marked contraction of the export of gold-bar at the very period when heavy tax and rent instalments are falling due is that the fellah is in far easier circumstances, and that there is a ready demand locally for whatever gold is on the market. Confirmation of this is forthcoming in the work done by the Government assayers, Some months back the assay office was reorganised, and the fellahin were informed that they could get their golden articles tested and stamped on demand. During the last four months the provincial and municipal assayers have done more work than was ever known, and the records show that the articles submitted for assay have almost invariably been of very recent purchase. It must not be forgotten that no inconsiderable amount of gold has been brought into Egypt by the troops, and that it has all gone into the general circulation; indeed it is quite astonishing what a quantity of gold one meets with in the districts nowadays. All things considered, there is little doubt that the fellah is fast setting himself to the reconstitution of his "family reserve"—a sure sign that he is prospering, and a further proof that the financial condition of the country, as a whole, is satisfactory.

ENEMY FIRMS IN EGYPT.

(From Our Own Correspondent.)

Cairo, February 8.

Further notices have appeared this week in the local Press to the effect that controllers have been appointed for the liquidation of certain enemy firms, and advising creditors to lodge their claims at near dates. In addition, placards have been placed on all establishments ordered to liquidate, informing the public that the liquidation has been ordered by the military authorities.

THE FUEL QUESTION.

(From Our Own Correspondent.)

Cairo, February 8.

The coal question is as acute as ever, and it is understood that the Financial Adviser, Lord Edward Cecil, who has gone to England will try to make some arrangement that will give relief to the situation out here. As regards the petroleum question, prices have this week advanced a further P.T.1, and the opinion is gaining ground that the authorities have not been sufficiently awake, and that the petroleum companies have succeeded in becoming masters of the situation.

*** The Alexandria correspondent of the *Pall Mall Gazette*, writing on February 8, states that it appears that the coal trouble is being somewhat alleviated. It is reported that the Egyptian Government is expecting 28,000 tons of coal from Japan, and this added to the stock of 62,000 tons will no doubt rationalise the price for the cultivators. Egypt will no doubt become a regular customer of Japan, seeing that her freight charges and insurance rates are less than those of England or the United States, the freight of the latter standing at 115s.

GERMANY AND ROUMANIA

Another Grain Deal.

(From Our Own Correspondent.)

Bucharest, February 2.

The Government has yielded to the political pressure which Germany has been exerting in consequence of the wheat sale to England, and has accepted proposals for another purchase. We are, therefore, about to witness a further sale to this Power.

After satisfying the requirements of the British contract and reserving 5,000 truckloads, which have been asked for by neutral states, Roumania has about 20,000 trucks available for sale to Germany, provided the consent of the agriculturists is obtained. It is quite possible that they will refuse to part with their remaining wheat, for a rise of prices may be expected in the near future, and the price offered now is the same as before, namely, 3,200 fr. per truckload. Germany is further negotiating the purchase, at the price of 3,000 fr., of 100,000 truckloads of maize, of which 60,000 belong to the harvest of 1914, 40,000 forming part of last year's crop. She is further making offers for the available stock of barley of the variety used in the brewing of beer, which amounts to about 1,000 truckloads. The price Germany is disposed to pay for this is 4,000 fr. per truck. Peas and beans are also being asked for, but the available stock is being reserved for exchange into indispensable articles of foreign manufacture.

The terms of the new sale are identical with the previous ones. In a word, the price of the goods has to be paid in Roumanian *lei*, and the export taxes *in gold*. The agreement has not been signed yet, for the German Commission is still negotiating the purchase of lei with the National Bank. The Germans ask that the rate of exchange for the *mark* shall remain unaltered, that is, 1.20; whereas the National Bank, taking into account the depreciation which the German mark has suffered, will not admit a higher rate than 1.10.

It is possible that the negotiations will be broken off, but the chances are in favour of the Germans agreeing to the Roumanian terms.

(Delayed in transmission.)

Bucharest, January 30.

The purchase of 80,000 truckloads of Roumanian wheat by England has been a veritable blow to the Austro-German Commission, which had bought only 50,000 truckloads of wheat, Indian corn, peas and beans, in spite of its having been authorized to acquire 100,000 truckloads. Persuaded that Germany presented the only available market for Roumanian agricultural produce, the Commission tried to take advantage of this fact by buying at a lower price and imposing onerous and humiliating terms on the seller—such as delay of payment until the goods had crossed the frontier—limiting itself to a simple promise with regard to the purchase of the other 50,000 truckloads, and without fixing the price or the remaining conditions of their purchase.

The moment the Germans heard of the proposed British purchase, they offered prices superior to those tendered by England. The Commission for export replied in the sense that they could not entertain overtures for a further sale to Germany until they had concluded their transaction with England.

It is evident that the British purchase has procured for Roumania the advantage of no longer being at the discretion of a single purchaser, a state of affairs which had the double drawback of lowering the market value of her goods and of allowing the Germans to exercise a certain influence of a political character. Thanks to the British purchase, the Roumanian agriculturist has been able to realize a portion of the value of his produce, which enables him to meet current expenses, and since the menace of financial ruin, which was staring him in the face, has been removed, he has acquired, in addition, a greater freedom of judgment in matters of foreign policy. That the Germans grasped the full significance of the sale to England is proved by the criticism which it evoked in German and philo-German circles from the moment the subject was first mooted.

The Baghdad Railway.

Details of Construction.

The following are extracts from an article on the above subject which appeared in *The Engineer* (February 4) :—

"The first section of the line (the Baghdad Railway is of the normal gauge of 1.44 metres = 4 ft. 8½ ins., *i.e.*, the same as that of the Anatolian Railway) from Konieh *viâ* Eregli and Bugurlu was constructed to the length of 124 miles, the railhead being reached some time in 1904, or about five years after the work was begun. The next section taken in hand was shorter, about 105 miles, from Bugurlu to Aleppo. To carry out this portion of the work a separate small company was formed in Switzerland with German capital, the head offices being situated in Glarus. The progress made subsequently was very remarkable, work proceeding simultaneously in three different directions—the first from Adana eastward to Amanus, the second from Adana westward to the Taurus Mountains, and the third from Bugurlu eastward also to the Taurus Mountains. But the section eastward (westward?) from Adana to Bugurlu has since fallen into abeyance, although the original plans called for its construction early in 1909. The greatest engineering difficulty is experienced in this part of the country, and even the surveys have not yet been finally completed. For many months—now running into years—the German engineers and surveyors have been examining the position in all directions, especially around Adana, Yenidje, Missis, and Hamidieh. Up to the time of the outbreak of the war with Turkey it had not been determined whether the line, on leaving Adana, should run directly to Aleppo *viâ* Hamidieh-Osmanieh-Bagtche, a very costly route to follow, or *viâ* Alexandretta. What had been resolved upon, however, was that the line on approaching Adana should meet the Mersina-Tarsus-Adana line at a point called Yenidje, about half an hour's journey from Adana.

Islahie-Radju.

"Notwithstanding the interruption occasioned by the war, construction on a further section of the Baghdad Railway has been proceeding, and, as recently as October last, the section between Islahie and Radju was completed and opened to traffic. Both of these stations are situated east of Amanus and north of Aleppo, and the completion of the section brings the Syrian part of the system nearer to the main tunnel—known as the Bagtche tunnel—by thirty miles. Here, however, there has been a halt, and it looks like being a long one.

"The great Bagtche tunnel will eventually pierce the Amanus Mountains, on the border between Asia Minor and Syria. With its completion the more serious part of the engineering difficulties will have been overcome, and the work of connecting up the many isolated stretches of track will follow. At the point reached shortly before that where the Bagtche tunnel is encountered, the track begins to rise from the plains towards the mountain range at a gradient of some stiffness. The rise begins after leaving Mamoure, the last station in the Cicilian Plain, the slopes being very uneven and irregular, and calling for a great number of retaining walls and masonry culverts. There are numerous deep ravines which have to be spanned by steel bridges, and of the eleven or twelve required only eight have, so far, been completed. There are also seven minor tunnels, with an aggregate length of 6,355 feet.

The Bagtche Tunnel.

Bagtche station is reached at an altitude of 1,745 feet, and after passing this the great tunnel bearing the same name will be entered, the track then passing through two smaller piercings having a respective length of 236 feet and 394 feet, and over one short steel bridge. The Bagtche tunnel, like most of the other openings, is cut out of the solid rock, and much difficulty has been found with the water encountered in some parts. The length of the tunnel is 16,028 feet, and for about 8,000 feet of its length it ascends gradually until it reaches an altitude of 246 feet above the level of the entrance. There is then a gradual descent for a length of 3,000 feet odd, the track finally emerging at the other end at an elevation of 197 feet above the level of the Amanus entrance. Between the point of exit and that of the next station—Islahieh—not as yet completed, there are four other tunnels having an aggregate length of 3,500 feet. From first to last the length of tunnelling which has had to be allowed for in crossing the chain of mountains attains to 26,250 feet.

"The great Bagtche tunnel has been compared for length and engineering difficulties encountered to some of the large Alpine tunnels. The cost is expected to work out at hardly less than something between the cost of the Mont Cenis tunnel, which was about £224 per yard, and that of the St. Gothard, which was £142 per yard. Whereas the gradient in the Simplon tunnel is 1 in 500, that of the Bagtche tunnel is 1 in 394.

"In tackling the Bagtche rock, which is hard quartz, special boring machines had to be constructed. In some parts of the tunnel hydraulic rock drills of the Brandt type and dynamite were used, as in the case of the Simplon tunnel. It is said that some of the expert drillers who were employed upon the Tauern tunnel, in the Austrian Alps, and the Lötschberg tunnel, completed in 1911, have found engagements on the work of the Bagtche tunnel.

Proposed Branch Lines.

"The actual line from Konieh to Baghdad, which is some 900 miles in length, is destined to serve the following towns and districts :—Karaman, Eregli, Kardash-Beli, Adana, Hamidieh, Osmanieh, Bagtche, Kazanali, Killis, Tel-Habesh, Harran, Ras-ul-Ain, Nisibin, Avniat, Mosul, Tekrit, Sadidjeh, Baghdad, Kerbela, Nedjef, Zobeir, and Busra. But, in addition, there are to be the following four branches :—(*a*) From Tel-Habesh to Aleppo; (*b*) from a neighbouring point on the main line—to be agreed upon—to Urfa; (*c*) from Sadidjeh to Khanikin; and (*d*) from Zebeir to a point on the Persian Gulf—to be agreed upon between the Imperial Ottoman Government and the concessionaires. The construction is not destined to stop even here, however, for steps have been taken, and consent has been given, to construct the following further seven branches :—(*e*) Towards Marash, (*f*) towards Aintab, (*g*) towards Birijik, (*h*) towards Mardin, (*i*) towards Erbil, (*j*) from the Diala towards Salakie and Tuz-Kharmati, and (*k*) from El-Badj to Hit.

"By the beginning of June of the year 1915 the following sections of the portion of the railway known as the Aleppo line had been opened and put into operation :—Aleppo, Mouslemie, Akterine, Tchoban Beyi, Akje, Koyounli, Hulmenie Jerablus, Siftek, Ser Arab Pounar, Kharab Nass, Qul Tepe, Tell Abiad, Ghodjar, Touem, Tel-el-Hamoud, and Ras-al-Ain. The journey on this section occupies ordinarily some eleven hours.

"The entire length of line which it is claimed has now been laid down and opened to traffic leaves but a distance of 373 miles between Aleppo and Baghdad. But apart from Aleppo which, it will be remembered, is a branch and not a part of the original Baghdad Railway, the distances to be covered between Konier, Baghdad, and Busra are as follows :—Konieh to Baghdad (roughly) 900 miles, and from Baghdad to Busra, 350 miles. Thus we have a total distance for the track of 1,250 miles."

"W. J. C.," in the article in *Blackwood's Magazine* quoted by us last week, has some pertinent remarks to make anent German intrigues and aspirations in Asia Minor prior to their machinations in connection with the Baghdad railway, and even to-day, in Germany, great interest is evinced in matters pertaining to Asiatic Turkey, as will be seen from the following quotation :—

"For reasons not easy to determine," writes the author, "Asia Minor has had attractions for people of German race during many years." Thus, for instance, "we find German settlements in Asia Minor before the Baghdad Railway fired German imagination and gave definite form to ambitions hitherto vague. In some of the cities, such as Constantinople, Smyrna, Aleppo, and Angora, there have been foreign colonies of merchants, agents, buyers, and the like for centuries, but the German settlements were of another sort. They were composed of people who sought land, and went into country districts to make their homes. They went in the spirit of colonists; settled; prospered in fashion notwithstanding disadvantages; and sometimes intermarried with native races. The largest and best known of these settlements, one that enjoys the special providence of the German Emperor, is that at the foot of Mount Carmel in Syria. There were others, however, earlier and much less ambitious, now almost forgotten. Such was one at Amasia, in Northern Anatolia, founded sixty or seventy years ago, and which by this time has merged completely in the native population. Here and there also you come upon isolated German settlers, or three or four together upon a large farm. They live and work in obscure parts of the country, remote from markets and railways, rather than in any other part of the wide world open to German industry and capital."

Asia Minor a German Hinterland!

The natural deduction to be made is that while this movement lacked a well-defined plan, "the future of Asia Minor was a subject on which the average German, in the Near East at least, had definite views with which he was quite satisfied. His underlying idea was of the Turkish Empire as a natural German hinterland, with enormous capabilities under German development and tutelage. . . . All Germans in the Near East might have belonged to a society for forwarding national aims, and seemed to bring a personal interest to bear on such matters . . . and the work all these German pioneers turn out is thorough. One supposes there is no better built railway of its sort than the Baghdad Railway. It is permanent and heavy all through; with heavy steel sleepers everywhere, and heavier rails than are used on any other line in the world.

"After seeing Germans at work in Asia Minor and what they have done so far, and still more the spirit in which they work, one can have no illusions left about the result. In twenty years of undisturbed activity Asia Minor would become like a Germanised Brazilian province, but without an intervening ocean and Monroe doctrine. That doubtless would have been the way in a time of continued peace, but under the opportunities of war the process is to be a briefer one. Short cuts are to be taken. It is thought that what might have required a generation or more to achieve may be done now in a year or two. Companies are formed to exploit the country. Lectures are given. Maps of fertile areas are printed and distributed. Magazines devoted to the subject of what may be done in Asia Minor are issued. It is discovered that the territory has suddenly become of vital economic importance to Germany, and not less so strategic and political."

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.
Only superior qualities of
Hallawees, Khudrawees, Sayers and Zehdi
are packed.
In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.
SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.
Sole Proprietor :
BAHJET S. FORAGE, BASRAH.

Trade Notes.

Egypt.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of equipment, clothing, material, paraffin, milk in tins, etc., necessary for Central Stores for one year from April 1, 1916, to March 31, 1917. Date, March 20.

Tenders are invited by the Army Finance Department, Ministry of War, Cairo, for the supply of 350 tons of Rangoon rice, No. 3, into the stores of the Egyptian Bonded Warehouses Company, Alexandria. Date, March 14.

The Egyptian State Railways invite tenders for the supply of "53,080 manches en bois" and 500 cannes en jonc de 1 metre et 60 centimetres de long." Date, April 3.

The Secretary of the Direction Générale des Douanes Egyptiennes, Alexandria, invites tenders for the supply of 250 pairs of boots. Date, March 8.

The Ports and Lights Administration, Alexandria, invite tenders for the supply of petroleum and benzine required for the financial year 1916-1917. Date, March 20.

Tenders will be received at the office of the London agent of the Egyptian Government (Sir A. L. Webb, K.C.M.G.) for the supply and delivery to the Egyptian State Railways and Telegraphs Department, of 20,000 oak sleepers, for normal gauge track; 180,000 pine sleepers, for normal gauge track; and 1,300 pine sleepers for turnouts. The sleepers must be of very good quality wood, and preferably of one of the following species: European and Japanese oak, Montenegrin, Swedish and Norwegian and Baltic red pine, or any other species of oak or pine of equal quality. In default, tenders for sleepers of any other quality of wood coming from Japan, America, India or Australia would be taken into consideration. Further particulars may be obtained on application to the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.

Tenders are invited by the Ministry of Public Works for the supply of sundry materials, such as lime, homra, sand and cement tiles, required during the financial year 1916-1917. Samples shall be deposited at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 4.

The Secrétaire Général des Domaines de l'Etat (Service Technique), Cairo, invites tenders for the supply of accessories for workshops, etc. Lists, samples, etc., can be seen at the head offices in Cairo. Date, March 1.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.

On February 2, the following announcement in connection with the above tender appeared in the *Official Journal*:—Owing to the loss of the mail by the s.s. Ville de la Ciotat the date for the reception of tenders which had been fixed for noon on March 1, is postponed until noon on June 1. The latest date for the reception of samples is May 25, 1916.

The Vacuum Oil Company, Cairo, were the successful tenderers recently to the Egyptian Ministry of War for the supply of petroleum.

Sudan

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 22, 1916, for the supply of oils and lubricants required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Agent Sudan Government Railways, Alexandria, or Sir A. L. Webb, K.C.M.G., Queen's Anne's Chambers, Broadway, Westminster, London, S.W.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 29, 1916, for the supply of paraffin and petrol required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, or to the Agents, Sudan Government Railways, Alexandria.

Tenders will be received at the offices of the Assistant Financial Secretary, E. A., Khartoum, and the Governors, Dongola and Berber, up to 12 noon, on March 7, 1916, for the supply of 8,000 straw hats to the War Department, Khartoum North.

Persons wishing to tender for the above can obtain full particulars from either of the above-mentioned offices.

Abyssinia.

The Acting British Consul at Harrar (Major Lawrence) has forwarded a collection of samples of German and Austrian goods formerly imported into the Consular district of Harrar. The samples are all ticketed with the wholesale buying prices, and include a range of textile piece-goods, comprising velvets, satins, broad cloths, Turkey red cloths, brocades, sheetings, etc. There is also included a small range of gold braids, threads and fringes, and a few samples of hardware. These goods are generally purchased c.i.f. Djibouti, with thirty days D/P or D/A, duty not paid. The suppliers draw on the importers through the National Bank of India, Aden branch, or the Bank of Abyssinia.

Malta.

The Crown Agents for the Colonies notify that sealed tenders (in duplicate) will be received by the Treasury, Valetta, Malta, for the supply of stationery for the Government of Malta. Forms of tender and specifications may be obtained and samples of stationery may be inspected at the office of the Crown Agents for the Colonies (Pattern Room), Whitehall Gardens, London, S.W. Date, March 2.

Greece.

H.M. Consul at Piræus reports that the Greek Government *Gazette* of December 23/January 5, contains a call for tenders by the Harbour Board of Piræus for the construction of works generally in the port of Piræus at the estimated cost of 3,500,000 drachmae (about £140,000 at par).

The "cahier des charges" and all other documents and plans can be inspected at the office of the Harbour Board at Piræus, at which address tenders will be received up to February 21/March 5.

Cyprus.

The Public Works Department, Nicosia, invite tenders for the supply of petroleum and petrol for the year ending March 31, 1917, delivered at the Public Works Department Yard, Nicosia, or at the Municipal Store. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Petroleum for Public Works Department," or "Tender for Petrol for Public Works Department," in the left hand top corner of the envelope, and should reach the Office of the Treasurer not later than 11 a.m. on February 18, 1916. All details regarding the articles to be supplied can be obtained from the Office of the Director of Public Works, Nicosia.

The Cyprus Government announces that an agreement has been arrived at whereby for a period of three months commencing January 1, and ending March 31, the maximum freight rate for oil to be charged by the above-mentioned company between Port Said or Alexandria and any port in Cyprus, shall be as follows :—Crude oil, 15s. per ton; and refined petroleum, 1s. per case.

Tenders are invited by the Public Works Department and the Royal Engineers at Limassol for the supply of materials, etc., for the year 1916-17, delivered at the Depot, Limassol, as in Lists numbered I., II., and III., obtainable from the Director of Public Works. Tenders may be made for any one, two, or all three lists at the option of the person tendering. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Materials, Limassol," in the left-hand top corner of the envelope, and should reach the office of the Treasurer not later than 11 a.m. on February 18. All details regarding the articles to be supplied can be obtained from the office of the Divisional Engineer, Limassol.

Tenders are invited by the Public Works Department, Nicosia, for the supply of materials, etc., for the year 1916-17, as per the Lists numbered I. to VII., to be obtained at the P.W.D. Office. Tenders may be made for any or all of the seven lists at the option of the person tendering. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Materials, Nicosia," in the left-hand top corner of the envelope, and should reach the office of the Treasurer not later than 11 a.m. on February 18, 1916.

Morocco.

H.M. Agent and Consul-General at Tangier reports that he has received a complaint from the French Resident-General in Morocco that steamship companies frequently fail to deliver to the Customs authorities the documents required by the regulations in regard to goods not landed which should have been landed, goods landed at a wrong port, goods not loaded which should have been loaded, goods lost at sea, etc., thus making it difficult for the authorities to check the manifests.

Engineering Notes.

Water Supply of Nicosia.

A correspondent writes:—For a long time all has not been well with the water channels that supply the capital, the inhabitants of which for years had reason to complain and call for a remedy. Not only does the supply fall lamentably short in the summer months, but even in the winter great inconvenience and difficulty is caused to many in obtaining the scanty allowance which is allotted to householders. Moreover, there has been constant danger of contamination along the masonry channels that carry the water. Recourse is had in many cases to wells in order to augment the supplies, and from these there is not unfrequently danger of infection—of typhoid and other complaints. Needless to say, many of the numerous gardens of Nicosia also suffer from lack of irrigation. The matter is thus one of urgent importance, but obstacles have stood in the way of remedial action. A dispute between the municipality and the Evkaf Department, as regards the control and administration of the supply, has been the subject of litigation. The District Court pronounced in favour of the municipality, and the Evkaf appealed. The Supreme Court has now given judgment against the appellant. Unless, therefore, the Evkaf should appeal to the Privy Council—a very costly proceeding—the matter of responsibility is now definitely settled. Assuming that this is so, it will now behove the municipal body to lose no time in adopting vigorous measures to deal with a problem which, of course, takes precedence of all others. How to increase the supply is a question for the Nicosia Corporation, as it has been for several other towns of Cyprus. The opening of fresh wells, and the possibility of taking a portion of the copious flow which supplies Kythræa, appear to be alternatives. Expert opinion will be needed, and the question of ways and means may present some difficulty. A loan will presumably be necessary, and application for Government aid will no doubt be made. It is high time that the matter should be resolutely dealt with and placed on a satisfactory footing.

A Combined Sprinkling and Sweeping Machine.

How often have tourists in Near Eastern towns been driven away by the thick clouds of dust which only a moderate summer breeze suffices to raise to great heights? The remedy of sweeping the roads either by ordinary means or sweeping machines is often worse than leaving the dust alone at the mercy of the wind. There are modern methods by which such a scourge can be prevented, but for some reason or other they are very slowly introduced. Possibly the municipal authorities are not properly informed by their responsible engineers as to the merits of the newest mechanical appliances for the purpose. There are towns however, in which modern sweeping machines are being used, and for preventing the raising of dust a sprinkling water-cart precedes it with more or less effective results. A new combined sprinkling and sweeping machine which was noticed in a recent show would, undoubtedly, be of interest to many municipal authorities in the East, now that preparations for the approaching summer are under consideration. The machine is automobile, with a strong and compact frame. The tank is mounted upon bearers, bolted to the frame. The distributing pipe is of cast iron, built up in sections, with machined joints, so that if any part is damaged it can be replaced without the expense of a complete new pipe. The down pipes are connected to the tank and to the distributor by flexible compression joints. The distributor is fitted with a double row of jets placed one above the other, and capable of being used separately or together, at the will of the driver. The top row of jets provides for a fine spray, whilst the lower row gives a medium spray, and the combination of the top and bottom rows, when operated together, produces a very heavy spray. The jets are brought into operation by means of a lever placed in an accessible position on the left side of the driver. A special feature of the machine is that the water issues from two holes, which approach each other at an angle, causing the two streams to impinge one against the other and break into a flat fan-shaped spray of varying degrees of fineness. The sweeping arrangement underneath is very efficient and easily controlled by the driver from his seat.

New Method of Repairing Scored Cylinders.

One of the most serious and embarrassing troubles to the users of gas-engines, especially if they happen to be in localities where repairing shops are not near at hand, is a scored cylinder—that is to say, when grooves have been formed on the walls of a cylinder by a loose piston-pin or other cause. The usual remedy for such damage is to have the cylinder rebored, which means the dismantling of the engine and sending the cylinder or, as it often happens, the whole of the engine, to a repairing shop. By this means considerable expense and loss of time are incurred. A new method of repairing such damage, which is described by a firm in the *American Gas Review*, will, therefore, interest gas-engine, as well as oil-engine, proprietors, because it is both easy and inexpensive. The said firm state that in their works are often being repaired gas-engine cylinders whch have been scored by loose piston-pins, but that they never advise reboring of such cylinders. They have found that the grooves cannot be filled with metal by the oxy-acetylene welding process without involving subsequent reboring, this being made necessary by the distortion that follows local overheating of the scored cylinder wall. Their method of repairing grooved cylinders is to solder the grooves full of soft metal, then scrape the excess down to a true bearing surface. The cylinder to be repaired must first be cleansed of oil by washing with diluted acid, followed by clean water. The cylinder is then heated to temperature preferably near the boiling-point of water or a little higher. The grooves to be filled are then given a coating of the necessary soldering compound, which, when evaporated, leaves a thin plating of copper, to which the solder will readily and permanently adhere. The success of the operation depends mainly on thoroughly plating the part to be soldered with copper, since solder does not readily adhere to cast iron; but if the job is well done, the soft metal will stay in the grooves permanently. One motor thus repaired, the firm assert, has been under observation over two years, and the compression is quite as good in the scored cylinders after repair as in the unscored cylinders. This method has the added merit of being inexpensive.

Near East Markets.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, February 7.

Bitter cold has prevailed during the early part of February and for some days previously. There have been piercing north winds and sharp frosts, and water has been frozen at Nicosia and throughout the plains.

High Prices.

Petroleum is difficult to obtain in many parts, and in the towns the price has risen. At Nicosia the Commissioner and Provost Marshal, Mr. C. S. Cade, has given notice to the public that owing to the shortage in Egypt the supply from that source available for Cyprus is now very limited, and that strict economy should be observed in its use. The price of wheat at Nicosia has reached 85 piastres (9s. 6d.), and barley the excessive price of 40-44 piastres (4s. 11d.) the bushel.

Fresh Flights of Locusts.

Large quantities of dead locusts have been washed ashore on the coast of the Carpas, the long neck of land to the north-east of the island, near Rizo-Carpas. They had evidently succumbed to the strong winds and intense cold which they encountered, and from which they were perhaps endeavouring to escape on the Syrian coast. That there should be locusts in a flying stage at this season so far north appears to be a very unusual circumstance. They are of a reddish colour, and seem to be rather larger than than those which flew to Cyprus in large quantities last autumn. Various other articles, including many barrels of white grapes, have also been washed ashore along this coast, which may point to the sinking of some vessel.

TUNISIAN CROPS.

The U.S. Consul-General reports that while the Tunisian grain crop was a large one, the results were somewhat unsatisfactory, owing to the abnormal proportion of straw and the comparatively small yield of grain. The September and October rains have made it possible to begin the first sowing.

The vineyards suffered from mildew and from an invasion of locusts. As a consequence, the crop was on the whole much below the average. The outlook for the coming year is unpromising, as the vines in their present state need careful treatment, and competent labour is scarce.

PRODUCE REPORT.

London, February 24.

Currants.

There has been a good demand for all grades, and considerable business has been done, particularly in lower and medium kinds, at full prices. The speculation which has been going on for the last two or three weeks, for reasons alluded to in our previous report, had the effect of advancing prices about 2s., and if the existing difficulties in shipping, discharging, delivery, etc., continue, a further advance may be expected. Pyrgos, quoted at 40s. to 43s.; Amalias, 43s. to 45s.; Patras, 44s. to 47s.; Gulph, 47s. to 48s.; Vostizza, 46s. to 50s.; Zante, 43s. to 46s.; and smalls, 44s. to 50s.

Sultanas.

The demand for all available kinds continues steady, with more business being done in Afghan and Indian fruit, whilst Greek, owing to the high prices asked, is selling slowly.

Seeds.

Linseed is nominally steady, although Argentine shippers show willingness to meet the buyers. Calcutta in all forward positions is offered to-day at 83s.; March-April, 83s. 6d., was sold; La Plata, Feb.-March, Hull, 77s. to 78s.

Cotton-seed is very quiet, and nothing doing. Egyptian to London, spot, offered at

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

Digitized by Google

£14 10s., but Feb.-March is held at £14 15s. Rapeseed is also very quiet, and quotations are as last week. Canary-seed in better demand at 85s. to 115s.

Oils.

Linseed oil is firm and with better inquiry for the summer months. Spot pipes £44, barrels £45, month £45, March-April £45 10s,. May-August £46 15s., less ½ per cent. buyers, sellers net; September-December, £47 15s. Cotton oil is steady, but quiet. Crude spot, in pipes, £42 10s.; refined pale pipes, £47 10s.; and barrels, sweet, £51 to £52 as to make. Rape oil is well maintained, but in limited demand. Ordinary brown, naked, spot, £52; English refined, barrels, £54 to £56. Olive oil is in better demand at late rates.

Oilcakes.

Cotton Cakes.—The stocks of Egyptian kinds are rather small, and as it is known that only a limited quantity is now available for shipment, prices are very firm at £10 5s. to £10 7s. 6d., whilst English makes can be bought at £10 to £10 2s. 6d., and Bombay at £9 10s.

Linseed Cakes.—Owing to the restricted demand which has been noticeable during the last two weeks, a certain anxiety prevailed among holders, which had the effect of forcing down the prices 4s. to 6s. per ton. Best London-made is offered at £12 17s. 6d. to £13. Indian seed, pures, at £12 15s. 6d. to £12 17s. 6d. per ton.

BRITISH COINS IN THE SUDAN.

The following notice appeared in the Sudan Government *Gazette* on February 7:—

"In order to meet the present abnormal demands of trade and to prevent a shortage of silver currency, the free circulation of British silver florins and shillings in all towns and districts of the Sudan is hereby authorised at the following rates—viz., one shilling equals P.T. 5; one florin equals P.T. 10.

"So far as supplies are available, British florins and shillings will be issued at the above rates by all Sudan Government Treasuries in exchange for any coin or notes now legally current in the Sudan.

"British florins and shillings will be accepted at the above rate of 5 piastres to a shilling by all Government Treasuries and offices in the Sudan in payment of any taxes or other sums due to Government. This privilege will not be withdrawn until after the expiration of three months' notice, to be published in the Sudan *Gazette*, during which period British florins and shillings will be exchanged for Egyptian coin or notes at the rate of 5 piastres per shilling at all Government Treasuries in the Sudan.

"No British silver other than florins or shillings may be circulated in the Sudan.

"Notwithstanding anything contained in this notice, the importation of British florins and shillings by anyone other than the Financial Secretary to the Sudan Government is strictly prohibited, under the provisions of the Customs Ordinance."

The *Officiel Journal* announces that the exportation of eggs for Egypt to the United Kingdom and to the British Possessions and Protectorates will be permitted during the month of March, but that all exportation during that month shall be prohibited as soon as 10,000,000 eggs have been exported in the said month.

COMPANY MEETING.

EGYPTIAN AND FOREIGN TRUST.

The twelfth ordinary general meeting of the shareholders of the Egyptian and Foreign Trust, Ltd., was held on Friday at Dashwood House, New Broad Street, London, Mr. A. F. P. Roger (Chairman of the company) presiding.

The Secretary (Mr. H. O. King) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—We meet again still under the shadow of the great European war. In Egypt, where the great bulk of our interest lies, industry continues to suffer, and in consequence our revenue is still further reduced to the extent of £723 3s. 8d. On the other hand, we have effected further economies in expenditure to the extent of £247 19s. 7d., making the net decrease in revenue £475 4s. 1d. It is always dangerous to attempt to forecast the future. Personally I can scarcely believe that when we meet at this time next year the war will still be waging. Even if it is, however, I feel that we must have already touched bottom so far as this company is concerned, and that any change will be for the better. Our chances of complete recovery in the years to come are materially altered and postponed through the war, but that is inevitable. Your directors are still of opinion that it is their duty to continue their endeavours to regain as much of the lost and depreciated capital as possible, although, so long as the war continues, there is little which can be done. While we regret the depreciation which has occurred, it should not be forgotten that we are not responsible, as the securities on which that depreciation has arisen were purchased not by us but by our predecessors. An event has occurred within the last day or two which we view with great satisfaction—that is, the fall of Erzerum. I think that may be said to place Egypt further away from a German invasion and to render the road to Baghdad very much more open to attack.

The prosperity of this company depends largely on the prosperity of Egypt, and, as is well known, Egypt has hitherto depended almost entirely on its cotton crop. There was a considerable reduction of the area under cotton last year, but this is not altogether without its advantages. Egypt has depended too much on one crop, and as the land hitherto devoted to the production of cotton is utilised for other crops we may reasonably expect a broadening of the basis of prosperity, with a corresponding stability in commerce and finance. The shortage in the crop has also had the inevitable result of raising prices, and cotton to-day is costing 11½d. per lb. as compared with 5d. at the commencement of the war. While we do not feel optimistic, there are, as I say, advantages and rays of light on the horizon; but, as before, I must ask you to be patient and see what the future may bring forth. We can do nothing more than that, I think, for the moment. That gentlemen, is all I have to say, but if there are any questions you wish answered, I shall be very glad to reply to them to the very best of my ability. I now propose: "That the directors' report and annual statement of accounts for the year ended December 31, 1915, be adopted."

Mr. A. T. Cruickshank seconded the resolution, which was carried unanimously.

On the motion of Mr. Cruickshank, seconded by the Chairman, Major Barré A. H. Goldie was re-elected to his seat on the board, Mr. Cruickshank remarking that Major Goldie was not present, but was better employed elsewhere in the service of his King and country.

The auditors, Messrs. Russell Harris and Co., were re-elected, on the motion of Mr. G. H. Fookes, seconded by Mr. A. H. King.

Mr. Kahn proposed a vote of thanks to the Chairman.

Dr. Moody, in seconding the resolution, remarked that it must be a satisfaction to every shareholder that the company had practically no liabilities. He had no doubt that the directors would sooner or later meet the shareholders with a more cheerful statement than had been received by them on the present occasion.

The vote was unanimously passed.

The Chairman briefly acknowledged the vote, and the proceedings then terminated.

CAIRO COURT FOR AUSTRIANS.

Before his Honour Judge Grain, in his Britannic Majesty's Special Court for Austrians at Cairo, the hearing was commenced on January 24 (says the *Egyptian Gazette*) of the case in which Mr. Antonio Leies de Laimburg, an Austrian subject, belonging to a well-known Irredentist family of Trieste, sued the Reunione Adriatica di Sicurtà for damages for wrongful dismissal and damages for loss of rights in a pension fund.

The case is of considerable interest, as it raised the important question of local usage in matters of dismissal. In addition, questions of Austrian law, applicable under the Proclamation of April 15, 1915, were gone into at some length. The plaintiff was represented by Mr. Reginald Silley, and the defendant by Mr. C. H. Perrott.

His Honour Judge Grain pronounced judgment on Thursday morning in favour of the plaintiff, allowing him twenty-three months' salary as damages, and the return of his pension fund contributions for twelve years, as well as the contributions of the company to the same fund, with 4 per cent. compound interest. Defendants were also condemned to pay costs.

THE JOINT-STOCK DIARY.

Messrs. H. Howes and Co., of Gresham Buildings, Basinghall Street, London, the well-known company printers and stationers, have produced a very handy diary for the present year, which is published at the nominal price of 2s. 6d. Two days of the week are allotted to each page, which gives plenty of room for entries, etc. Of more than usual interest, however, to the many people connected with joint stock companies is a complete encyclopædia of company law and practice which is included in the diary, and which has been compiled by Mr. H. C. Emery, the author of "Company Management" and other similar works. The compendium has been carefully arranged, and embraces all that is really necessary to know in connection with the conduct of public companies, and as it is written in a simple, straightforward manner, it can readily be understood by the most inexperienced. The general utility, therefore, of the diary is much enhanced, and it should find a ready sale, especially considering that the price is so moderate.

A Supplement to the *Board of Trade Journal* (February 17) contains complete alphabetical lists of articles which are at present prohibited to be exported from the United Kingdom and from certain Allied and neutral countries. The latter include Greece and Roumania.

NATIONAL BANK OF GREECE.

GOLDEN DOOR OF ERZEROUM

The Paris correspondent of the *Morning Post* has interviewed a man in Paris who for many years past has been closely familiar with the Erzeroum district. He is a man of considerable commercial experience, and writes:—

"Erzeroum is the centre of a vast caravan trade between the Black Sea, the Persian Gulf, and the Caspian Sea. Railways do not exist in Armenia, and roads are few and far between. Under Sultan Abdul Aziz a road was built between Erzeroum and Trebizond, which is the only one leading to the Black Sea. The principal products are wheat, barley, flax, fruit, and cotton in small quantities. Sheep-farming is cultivated on a large scale, and the wool is highly appreciated for its fine quality. About thirty miles from Erzeroum is the thickly-wooded region of Tortum, where oak, mahogany, walnut, and other valuable woods are found in great profusion. The mineral wealth of Armenia has been only scantily exploited, but the far-seeing Germans must have been fully aware of such possibilities when they cast covetous eyes upon these Eastern lands. Copper, iron, silver, coal, and petroleum have been found in many localities. In the mountains near Erzeroum there is a valley called Ilderim Dersi, where iron has been found in large quantities. At Terjan the merest scraping of the soil has revealed the presence of petroleum. Between Erzeroum and Trebizond, near the town of Gumush Khaneh, there are rich silver deposits. The name alone is explanatory, signifying "locality of silver," and it has been known from time immemorial. There is no doubt that Armenia would have offered a tempting field to the German prospector when the country had been placed on a more stable basis and when mechanical transport had been developed.

"The latent possibilities of the country in trade and its development after the war are very great. The district is naturally extremely rich, and this was no doubt a point considered by the Germans in connection with the Baghdad Railway, for it would have acted as a huge magnet to the trade of the whole country, and their engineers and commercial travellers would in a few years have galvanised its dormant possibilities. From the commercial point of view Armenia is a country well worthy of attention. The Armenians have always been naturally keen business people, and have always represented the banking and moneyed element of the East. Their sympathies have always been with the Allies. When happier and more peaceful times return they would be the first to welcome a closer interchange of trade with the Powers fighting in the cause of justice. All classes of traders and manufacturers would find a big field there. Railway and mechanical transport manufacturers have an unrivalled chance to open up this undeveloped country. There will be a vast demand for agricultural machinery to supplant the ancient methods which are in use to the present day. The mineral wealth of the country, which is greater than people abroad imagine, would furnish an ideal market for mining implements and machinery of all descriptions."

CYPRUS STEAMER SERVICE.

It is announced in the *Cyprus Gazette* that until further notice the contract winter time-table of the Khedivial Mail Steamship and Graving Dock Company will be replaced by the following:—

Alexandria (depart) Saturday, 2 p.m. or any later hour; Port Said (depart) Sunday (*a*), 11 a.m.; Famagusta (arrive) twenty-three hours later; Larnaca (depart) Tuesday, 2 p.m.; Limassol (depart) Tuesday, midnight; Paphos (*b*) (depart) Wednesday, noon; Port Said (arrive) Thursday, 7 a.m.; Alexandria (arrive) Friday, at daylight.

(*a*) Mail steamer to leave Port Said not later than 11 a.m. if the mails are on board; if not, immediately they are.

(*b*) When not calling at Paphos the mail steamer shall leave Limassol Wednesday afternoon, provided that the arrival at Port Said is not later than 7 a.m. on Thursday.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 23 tons; last week, 28 tons. Hurgada production for week, 516 tons; last week, 325 tons.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended January 20 amount to £E7,068, or an increase of £E1,468 over the corresponding period of 1915.

EUROPEAN OILFIELDS.—Production for week ended 13th inst., 85,000 poods.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for week ending February 12, 725 tons.. Moreni well No. 38 flowing when opened.

ROUMANIAN GOVERNMENT FOUR AND A-HALF PER CENT. GOLD LOAN OF 1913.—The Royal Roumanian Finance Ministry announces the numbers of 1,376 bonds, amounting to £49,381 4s., which have been drawn for redemption on April 1, and interest on them will cease from that date.

A CHEAP SUMATRA RUBBER SHARE.

The Rubber share market is full of life and activity, and with the commodity certain to maintain its high level, share prices will continue to rise. Investors on the lookout for a cheap share likely to afford a good yield in the near future may be recommended to purchase the Way Halim (Sumatra), a member of the Lyall Anderson group of companies. This concern has great potentialities. It owns upwards of 6,000 acres in Sumatra. So far considerable of the acreage planted with Hevea rubber, only 322 acres planted in 1909 are in bearing. On an average price of 2s. 6d. per lb., the current year's net profit from rubber alone would amount to £2,100. Including the revenue from coffee, the income on this basis would be sufficient to pay quite 5 per cent. for the year ended March 31 next, and at the higher price realised the company will be in a position to declare a much larger dividend. Under the circumstances the 2s. shares (1s. 8d. paid) at round about 1s. 9d. are obviously undervalued, and it is not surprising to hear from reliable market authorities that they are shortly expected to double in price.

NATIONAL BANK OF EGYPT.

NOTICE IS HEREBY GIVEN that an Ordinary General MEETING of Shareholders of the National Bank of Egypt will be HELD on SATURDAY, the 25th March, 1916, at 4 p.m., at the Head Office of the Bank in Cairo, for the purpose of:—

Receiving the Directors' Report.
Receiving the Auditors' Report.
Submitting the Accounts for the year ended 31st December, 1915.
Declaring a Dividend.
Electing Directors.
Considering the resignation of Directors.
Making a decision in respect to the exclusion of a Director belonging to an Enemy Country.
Electing Auditors for the year 1915 and fixing their remuneration.

All Shareholders holding a minimum of 20 Shares have the right to take part in the General Meeting provided the Shares are deposited under the following conditions at one of the following places, where cards of admission or Proxy Forms will be delivered:—

IN EGYPT—At the latest the 20th March, 1916.
At the Head Office, Cairo.
At the Branch at Alexandria.
At the Agencies of the Bank at Assiout, Assouan, Benha, Beni-Suef, Chibin el Kom, Damanhour, Fayoum, Keneh, Luxor, Mansourah, Minieh, Port Said, Sohag, Tantah, Zagazig and Mousky (Cairo).
At the Office of the Anglo-Egyptian Bank.
Bank of Athens,
Banque Belge pour l'Etranger,
Imperial Ottoman Bank,
Banque d'Orient,
Banco di Roma
Cassa di Sconto e di Rispannio,
Comptoir National d'Escompte de Paris,
Crédit Lyonnais.

IN THE SOUDAN—At the latest the 15th March, 1916, at the Agencies of the National Bank of Egypt at Khartoum, Port Sudan, and Suakim.

IN EUROPE—At the latest the 8th March, 1916.
In Paris, at the Offices of the Société Marseillaise.
In Italy, at the Offices of the Banca Commerciale Italiana.
In London, at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, Governor.

Dated the 24th February, 1916.

NOTES OF THE WEEK.

The coincidence of the lull in other theatres of the war during the fierce struggle before Verdun is discussed elsewhere in this issue. Here we would merely voice the admiration which the heroic resistance of the French has evoked not only from their Allies, but also, we believe, from the whole world, not excepting the enemy, if they have allowed themselves to contemplate this aspect of the episode. There can be no doubt that the Germans expected to win through to Verdun, and that their preparations were made on a scale which appeared to them to have eliminated failure. But against a perfectly attuned combination of French valour and French generalship the German masses have so far broken themselves in vain. The end of the struggle is not yet; but the first rush has spent itself, and any respite must be even more favourable to the French than to the Germans.

The evacuation of Northern Albania by Serbian, Montenegrin, and Albanian troops has been completed, and the Italian troops have also been withdrawn from the same region. They were sent to Durazzo, the port of embarkation, to render the Serbians all the assistance in their power. During the latter stages of the evacuation they acted as a screen to the other troops and the refugees, and held up the Austrian advance as long as it was necessary to do so. An enemy *communiqué* announced that when the Austrians entered Durazzo it was in flames. With the departure of Essad Pasha, who left with the Allied troops and proceeded to Rome, the last vestige of government was removed from the town. The tribesmen hostile to Essad's rule would lose no time in taking advantage of his withdrawal, and reports of the town being looted and fired may well be credited. Thus, apart from the pleasure of issuing picturesque statements of the events leading up to its capture, the Austrians would derive little satisfaction from the occupation of Durazzo.

With Serbia and Montenegro in the enemy's hands, the extent to which Albania is overrun by Austrians and Bulgarians is of small account. The Italians have posted themselves at Valona, and have announced their intention of holding it at all costs. Any attempt to attack the town will prove a very different proposition from the final pursuit of the Serbians across Albania. An Italian statement thanking the British Adriatic Mission for providing materials for the construction of a mole at Valona indicates that steps have been taken to make the port an adequate base, and Italian interests will have prompted the Government to see to its defence. Valona will thus mark, as the Greek frontier does in other directions, the southernmost point of the enemy's thrust. Any strategical merit the port has is naval rather than military, and there is not much ground for hoping that it will be used for an Italian advance co-ordinated with a forward movement of the Franco-British forces at Salonika. We could wish that the part to be played by Italy in the rehabilitation of Serbia and Montenegro had been made clearer. She has rendered yeoman service in bringing relief to the Serbians; but it has to be admitted that her military efforts have so far fallen very short of her interests in the Balkans.

An official Note issued in Rome throws an interesting light on the work imposed on the Allies in bringing such relief to the Serbians as they were capable of giving them. Since the middle of December, runs the statement, 250 steamers have been employed in transporting 260,000 men "and a remarkable number of animals," under the escort of units of the Italian Fleet and Allied ships attached to it. During the same time 200,000 cwts. of material were transported on a hundred steamers. In addition to this work there was the task of conveying frequently between Italy and Albania foreign Ministers and their Sovereigns, as well as political, civil, and military authorities. "The enemy attempted to impede this extensive and complex movement by continual activity in the air, by mining certain sea areas, and often by attempting to bring into action squadrons of torpedo-boat destroyers, supported by scouts or cruisers, and, lastly, by nineteen submarine attacks." But the losses resulting from the enemy's activities were trifling, and not a single Serbian soldier was lost at sea.

News of the fall of Erzeroum will have reached Bulgaria at a moment when probably the last glamour attaching to the German alliance had just faded away.

Digitized by Google

It requires no very intimate knowledge of the country and people to realize something of the Bulgarians' feelings at this stage. They are in their fourth consecutive year of war. Their quarrel has been primarily with the Serbians, and in any case is restricted to the Balkans. It was no doubt flattering to their vanity to be incorporated in the magnificent military machine of the Central Powers, in order to dispose in double-quick time of their hereditary foes. But it was not until they had overwhelmed Serbia that the country as a whole began to realize that German support entails corresponding obligations on Bulgaria's part; that, when their own particular work is finished, they must still undergo all the disabilities and hardships of war, not for their own advantage, but for Germany's benefit. For a people wedded to the soil as the Bulgarians are, who, while perfectly ready for war, consider that the duration of all hostilities should be regulated strictly by the agricultural seasons, it will be particularly galling to have a season wasted by their manhood being kept with the colours in a cause no longer their own.

On the top of these general considerations will come the special hardships which will be associated with Germany and the German Army. If the Germans are exploiting Austria-Hungary for the benefit of their own country, there is little likelihood of their sparing Bulgaria. We may, therefore, place some reliance upon reports of the rise in the prices of commodities of everyday use due in part to the quantities exported to the Central Powers. To add a fresh grievance by making the German depreciated mark a medium of exchange at par is the refinement of cruelty, and will probably be more resented than the dearness of meat and bread. It is at this point that the Bulgarians learn of the Russian victory in the Erzeroum. *Proximus ardet.* The disaster belongs properly to Turkey, but it reflects upon the efficacy of Germany's tutelage. Worse still, it conjures up the old belief in the invincibility of Russia, which had been forcibly exorcised in obedience to German suggestion. In such circumstances the report of the arrest of fifteen members of the Opposition in the Sobranje on a charge of high treason is of considerable interest. Whatever credence may be given to individual accounts of conditions in the enemy countries, we may be fairly confident that the situation in Bulgaria from the German point of view is thoroughly unsatisfactory. Accordingly, the time is ripe for a vigorous offensive on the part of the Allies in the Near East.

A notice in the London Press summoning all Greek subjects of the conscript classes 1892 to 1914 to present themselves at the Greek Consulate-General with a view to their returning to Greece to be enrolled in the army, is an indication that the Greek Government is not contemplating demobilization. On the contrary, the possibility of intervention on the side of the Allies is now openly canvassed. To the symptoms of the changes which Greek public opinion is undergoing, enumerated in these pages last week, may now be added King Constantine's own proposal to visit the Allies' positions at Salonika. The fact that Baron von Schenk should have chosen such a moment to leave Athens is also regarded as symptomatic.

The welcome intelligence of renewed activity on the part of General Aylmer's relief expedition on the Tigris has been received during the past week. Exactly a month after the last attempt to force the enemy's lines, columns advanced up the right bank of the river to bombard his camp and to test the quality of his resistance. The Turks suffered heavily as a result of the bombardment, and the official statement adds that "useful information was obtained by our aeroplanes," but we are left to understand that no final dislodgment of the enemy was effected. The expectation of fresh floods seems to point to a further period of enforced idleness, which will not be wholly wasted, if the expedition continues to receive reinforcements. In the meantime we are invited to revise our conception of General Townshend's position at Kut. He has asked for and received by aeroplane vegetable seeds and gramophone records. If these represent the sum total of his immediate requirements, apart from actual rescue from the enemy's investment, he has made a masterly use of his resources. We can only hope that neither General Aylmer nor the higher military authorities will be led to postpone the relief of the Kut garrison until the seeds are up or the gramophone records worn out.

Fuller details of the capture of Erzeroum are now available, and, if possible, enhance the merit of the Russian success. The assault on the forts and the principal position lasted from February 11 to February 15 inclusive. After the forts on the left flank of the main Turkish line of defence, extending about twenty-nine miles, had been taken, the fate of the forts in the centre and on the right flank, and, after them, of the second line forts, and the principal defensive position was decided on February 16 after short attacks. During the assault on the fortress several Turkish regiments were annihilated or made prisoners with all their officers. The exact number of prisoners taken was only twelve short of 13,000, together with 323 guns. In the pursuit of the retreating Turks the Russians have reached Ashkala, thirty miles west of Erzeroum, while other columns continue to advance on parallel routes between the captured fortress and the Black Sea, and again to the south of it. The weather conditions are still bad. Trebizond, which must be regarded as the main objective of the Russians now, is nearly two hundred miles by road from Erzeroum. To reach it first Turkish reinforcements have much more than twice that distance to traverse from railhead at Angora. The capture of Trebizond will not only mean the complete elimination of the Turks from Eastern Asia Minor, but will also materially simplify the provisioning of the Russian forces operating on this front. Topographical considerations must largely determine the line behind which the Grand Duke Nicholas will decide to consolidate his position. In view of the reports that the Turks are despatching troops in all haste from Constantinople via Angora, he will be more concerned to be prepared for any possible menace from this quarter than merely to extend his conquests in a direction which lacks practical military objectives.

The Russians have added to their successes in the Middle East by the capture of Kermanshah. This town has long been the centre of Turco-German intrigue, and was supposed to have been occupied by a substantial force detached from the Baghdad command. There is nothing in the brief Russian statement to show whether the enemy were in any strength or the character of their resistance. They were dislodged from a series of positions, and so may be supposed to have fought tenaciously. But whether the Russians were opposed by an organised force equipped with artillery is not stated. It may well be that the report of a Turkish expedition to Persia was circulated with a view to intimidating all whom it might concern. If this force does not exist, there is some ground for hoping that the occupation of Kermanshah will complete the discomfiture of Turco-German agents and their propaganda in Persia. The Russians have dealt the insurrectionary movement a series of swift blows, from which it is not likely to recover in the part of the country where Russian troops remain. If on the other hand any large force has escaped at the time of the capture of Kermanshah, the only course open to it will probably be to retire upon Baghdad. There, in due course, if it elects to remain in the city, we may hope to see it dealt with by the British expedition advancing up the Tigris.

The success of this bold stroke of our Ally is bound to have an important bearing upon our own operations in Mesopotamia, but it would be most unwise to conclude that the Turkish defence of Baghdad will necessarily collapse at once as a result. Kermanshah is barely 160 miles from Baghdad in a direct line, but it

Digitized by Google

is nearly 250 miles by road, and the road is by no means an easy one even for a light caravan to travel over. From Kermanshah it trends south-west to Harunabad, thence bears northerly to Kasr-i-Shirin, and then south-westerly again through Kizil-Robat and Bakuba to Baghdad. It traverses one of the wildest parts of Persia, winding between and across high mountains, which offer excellent opportunities for the exercise of guerilla tactics; and at this season of the year it is sure to be rendered more difficult by snow and bitter cold. The Russians, therefore, will find it no easy matter to advance with their heavy artillery, even if the enemy, as seems likely, should have been too well whipped already to make the best of his opportunities. As for any direct advance on Kut, that would seem to be out of the question at this time of the year, even for the marvellous Russian troops; for range after range of mountains lies right across the direct line—and amongst the ranges are the Kabir Kuh, the Siah Kuh, and the Pusht-i-Kuh.

On February 26 by far the most substantial success yet reported over the Tripolitan Arabs in western Egypt was gained at a point some fifty miles from the frontier. The scene of this action is farther west than recent engagements have been, a circumstance which points to the British column having been reinforced and being able to operate at a greater distance from its base at Mersa Matruh. The enemy's column was under the personal command of Nuri Bey (the brother of Enver Pasha), with Jaafar as his principal subordinate. Nuri was killed, and Jaafar was taken prisoner. The enemy left more than 200 killed and wounded on the ground. The composition of the British force adds interest to the engagement. It was under General Lukin, who was through the German South-West Africa campaign, and included South African troops, Yeomanry, and Territorial artillery.

The Cairo correspondent of *The Times* gives a summary of a series of interesting articles on Turkish affairs appearing in the *Mokattam* based on information obtained from "a person who recently arrived from Constantinople." According to this authority the officers of the Turkish Army are divided into two camps, one loyal to the Germans, the other strongly anti-German and anti-war. This division, it is added significantly, has greatly influenced the nature of the recent fighting between the Russians and the Turks, also that between the British and the Turks, and it will continue to have an influence in the near future. The Germans are represented as being under no illusions regarding the state of feeling in Turkey, and the visit of the German Foreign Secretary to Constantinople, followed, as it was, by the hurried trip of the German Ambassador for one day only to Berlin, is cited as evidence of their uneasiness. The statement that Talaat Bey has sent deputations to Switzerland to discuss prospects of peace is confirmed by the *Mokattam's* informant, who points out that the fall of Erzeroum, which "came as a thunderclap to the Ministry," will enhance the anxiety to bring the war to an end. The articles bear the stamp of the genuine impressions formed on the spot by a well-informed observer, and for this reason we are inclined to accept the accuracy of the deductions drawn. "This chronicler states," adds the *Times* correspondent, "that the fall of Erzeroum has impressed the populace, and that, if the British are successful in Mesopotamia and are able to take the offensive and break the Ottoman resistance, as the Russians have done, the Committee will fall from power and another Ministry will succeed them and sue for peace. If the Germans oppose this course of procedure, the Turkish troops will fight and oust the Germans. This the Germans realise."

ZUNGULDAK.

BY HUGH E. POYNTER.

As the name of Zunguldak has appeared in so many of the Russian *communiqués* referring to naval operations against Turkey in the Black Sea a description of this place, which the writer visited in the summer of 1913, may not be out of place.

The little port of Zunguldak is the creation of the French Société Générale d'Heraclée, which exploits the coal mines of Zunguldak and Cozlu. This Zunguldak lies about 120 miles east of the entrance to the Bosphorus, on the southern shore of the Black Sea, and is a more or less regular port of call for coasting steamers and sailing vessels. On the occasion of this visit a steamer of the Paquet line took me there between the hours of 4 p.m. and 5 a.m. the following morning.

The little port lies in a deepish bay surrounded by hills, which are thickly wooded down to the water's edge. The French Company have constructed a modern pier for loading their coal, which a light railway brings down from the mines that are situated up a valley some little distance from the sea, from which they are not visible. The little town itself is partly on the bay and partly in the valley running up from the shore, and is entirely devoid of interest, not possessing even the picturesqueness of most Turkish villages. The town, too, is under the disadvantage common to all towns located in the vicinity of collieries in being covered very freely with coal dust. In fact, the water of the bay, in which I twice indulged in a swim, was covered with a thin film of black! Accommodation is very poor, though the French officials of the company have pleasant homes and are most hospitable. Zunguldak owes all its prosperity to the company, and the company being a French one, it is easy to understand why the Russians were at first reluctant to attempt the destruction of the port and harbour works.

With all other sources of supply cut off, Constantinople was dependent upon Zunguldak for its coal, and the efforts made to keep open communication with that place must have been considerable. Bombardments may have damaged the jetty to a great extent, but they cannot have affected the mines themselves; a landing party would have been necessary for that, and it would require the continual presence of Russian ships of war to prevent small steamers and sailing vessels from running cargoes of coal from Zunguldak to the Bosphorus. In the winter, however, the harbour being much exposed to gales, it sometimes happens that the place is isolated for weeks at a time, as no ships can enter or leave that port.

The coal is of a poor, soft quality, and the mines are scarcely equipped for furnishing all the needs of the Turkish capital, and the occasional visits and bombardments by Russian warships must have considerably impeded the supplying of coal, though it would be practically impossible to cut off entirely supplies from these mines. Moreover, there can be little doubt that land communication between Zunguldak and the Gulf of Ismidt sufficient to allow the transport of coal may be in course of development, and this would render Zunguldak independent for the time being of the sea route to Constantinople. The nearest point by rail is Ada Bazar, the terminus of a branch line from the station of Arifié on the Anatolian railway, beyond Ismidt.

On my return journey the voyage was made in a small Turkish ship, mostly by daylight. The shores of this part of the Black Sea rise in hills thickly covered with woods. A stop was made for a few hours at the little port of Eregli, the site of ancient Heraclea Pontus, which lies a few miles west of Zunguldak, where some ruined walls and towers may be seen, but otherwise it is now only an unimportant fishing village.

The coast at the entrance of the Bosphorus is rugged and austere, and very dangerous for ships in stormy weather. A place called the "False Bosphorus" has often enticed ships to their ruin in foggy or stormy weather. There is a lifeboat station on each shore near the entrance, and, until recently at least, these stations were in charge of Englishmen, who conscientiously performed many difficult and dangerous tasks.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 14.

Marriage of High Commissioner's Daughter.

What would, under normal circumstances, have been a brilliant social event took place quietly this week. I refer to the marriage of Miss Irene Earle McMahon, youngest daughter of Sir Henry and Lady McMahon, and of Captain Kenmore Evans Gordon, only son of Colonel and Mrs. Evans Gordon, which was celebrated at St. Mary's Church on Wednesday, by the Rev. C. T. Horan, who officiated in the absence in the Sudan of the Bishop in Jerusalem. There was a small gathering of prominent British officials in the church, and a reception was afterwards held at the Residency, where the guests included Prince Kamel-ed-Din, Prince Ahmed Fuad, Prince Yussuf Kamel, the Ministers, Generals Maxwell and Murray, the Diplomatic Corps, and the principal Government officials and leading British residents. During the reception, H.H. the Sultan, who the previous evening had given a dinner-party at the Palace in honour of the bridal couple, drove over from Abdin and personally presented his congratulations.

The Mixed Courts.

The Mixed Courts question is still unsettled, but it is generally believed that the British and Egyptian Governments will accede to Italy's request for an extra judge. There is, it is said, another important point at issue, not directly connected with the question; but no official confirmation of this fact or information as to its nature can be obtained. I have, however, every reason to credit this statement, and to believe that no difficulty will be found in reaching a satisfactory settlement. Meanwhile, the delay is giving rise to all manner of discussions in the Press and in judicial circles, and it would appear that considerable difference of opinion exists as to the position of the Mixed Courts *vis-à-vis* Italian litigants. It is held by many people that as the Italian judges have abstained from sitting, the Egyptian Government, whose servants after all they are, should withhold their salaries in virtue of the financial code which regulates their conditions of service. Apart from the fact that such action on the part of Egypt would be somewhat tactless at the present juncture, when diplomatic negotiations in the matter are in progress, the Italian magistrates cannot be held responsible for their abstention, for the simple reason that this took place at the request of the Assembly of the Mixed Court of Appeal.

The Mixed Courts do not, however, seem to have made up their minds as to the procedure to be adopted in cases where Italian subjects are one of the parties. The Mansura Court has struck off all such cases from the cause list provisionally; the Cairo Court has merely set them back. Leading members of the Mixed Bar hold that Italian plaintiffs can continue to sue before the Mixed Courts, although they cannot appear there as defendants, and must be sued before their own Consular Courts. There is an equally strong opinion that so long as Italy does not recognise the extension of the Courts, her subjects cannot appear before them in any capacity. Altogether, the incident bids fair to give rise to a good deal of learned argument in the Courts, both Mixed and Italian, and it will be exceedingly interesting to watch the development and see how the problem will be dealt with locally, pending a settlement of the international difficulty. It is quite conceivable that the two jurisdictions may arrive at conflicting conclusions, as happened once before over a totally different question between the Mixed and the British Consular Courts.

A New Census.

Negotiations are at present in progress for the taking of a census of Egypt next year. The cost will be £E25,000, but although these are times when economy has to be practised, this work is of such great value to the country that there appears to be little fear that the money will not be granted. The last census was taken in 1901—the preceding ones took place in 1887 and 1882—but the forthcoming one should prove to be more reliable and should produce even more valuable statistics, for the Department of State Statistics has during the past three or four years been completely reorganised, and is now conducted on lines that give results that are not purely academic, but are also of practical utility to those responsible for the economic administration of the country. The Department's Statistical Year-Book is a monumental work, packed full of interesting and useful information, and the intelligent manner of its compilation is an earnest of what we may expect of a census conducted under the same auspices.

The New Codes.

The staff of the Ministry of Justice and the other legal luminaries of the country have during the past year had an exceedingly busy time, and the coming months promise to be equally full of work for them. Commissions have been formed and have been occupied principally with the elaboration of the new codes that the change in régime and the contemplated amalgamation of jurisdictions will eventually render necessary. The task falling to these commissions is in itself admittedly a gigantic one, and it can to-day be predicted that it will be several years before it is accomplished, unless the members are relieved of all other duties and permitted to concentrate on the delicate and important work of code-drafting. Such relief cannot, I fear, be afforded them so long as the war lasts; for the present abnormal condition of things necessitates the constitution and holding of divers special courts and inquiries, and the legal experts in the country at present are not numerous enough to carry out the work appertaining to those special courts and inquiries satisfactorily and expeditiously. We can, therefore, say that some considerable time will have to elapse after the declaration of peace, no matter when that takes place, before any cut-and-dried machinery or any complete system of codes, acceptable to all parties interested, is ready to take the place of those at present in operation; and the general public must make up its mind to put up with the old judicial system for several years yet.

Side by side with the study of the new civil codes, destined to take the place of the present complicated system, there is being carried out an examination of the Moslem law of personal status, at present used in the Mahkema Sharia. That law contains many anomalies and many interpretations of Sherei principles that, however correct and adequate they may have been when first propounded, are to-day quite inconsistent with the changed conditions under which the Moslems of Egypt live. Efforts have been made for some time now to raise the moral standard of the people and broaden the trend of Moslem thought. It is obvious that the existence of an antiquated law of this nature, regulating as it does the personal status of those whose condition it is desired to improve, cannot conduce to the success of those efforts. H.H. the Sultan, than whom no more enlightened Oriental Prince lives, has greatly interested himself in the question, and a draft of the proposed reforms has now been submitted to the Ulema and leading Moslem lawyers, who are all agreed in principle on the necessity for some extensive change in the existing law, so as to make it more in keeping with modern conditions.

SUDAN NOTES.

(From a Correspondent.)

Frontier Delimitation.

Captain G. B. Wauhope, Senior Inspector of the Kassala Province, who succeeded Captain G. B. Hobart (who died at Kassala on July 1, 1914), has recently been despatched upon a mission in connection with the delimitation of the frontier between the Italian and the Anglo-Egyptian Sudan. Much of what was formerly the Italian Sudan has been merged into the Anglo-Egyptian Sudan; the Italian possessions in Central Africa now consist mainly of the colony of Eritrea, including the Dahlar Archipelago. Eritrea, literally "the Red Sea," which adjoins the Anglo-Egyptian Sudan, consists of a triangular portion of barren and sandy lowland, situated between 12 deg. and 18 deg. N., containing, in all, a coast-line along the Red Sea of about 700 miles, with a total area of 60,000 square miles, and a population estimated at 280,000, of whom some 3,000 are Europeans.

Kassala Province.

The province of Kassala possesses historical associations of no small interest. The town, bearing the same name, and handed over to the Anglo-Egyptian Sudan by the Italians in 1897, had been in their possession only since 1894. In this province, in 1898, was fought the important battle of Gedaref. Near El Fasher ford, located on the right bank of the Khor Ghash, is the site of the post which was held by a detachment from the Kassala garrison in that year. Just as the Italians are fighting gallantly with us to-day so did they aid us in every way in the early and difficult days of the British Occupation, beginning in 1898-9. Indeed, the Italians extended a most friendly welcome to the Anglo-Egyptian troops at Kassala, Massowah, Asmara, Keren, and Agordat. The commanding officer offered to sell to the British the Krupp guns belonging to the fort, the ammunition and stores, the furniture, and, in fact, everything that might be found useful. Among the many other things placed at their disposal were five hundred camels, several hundred transport mules of Abyssinian breed, and all the necessary saddlery and harness.

No province of the Sudan has been more seriously affected by the general economic depression from which the whole country has latterly been suffering than that of Kassala. And yet there has been no one of the political Departments which has made a braver struggle against such adversity. During the governorships of both Colonel A. Cameron (now the Governor of Sennar) and Captain C. H. Townsend remarkable advances have been made in the general conditions and the well-being of the people of this province, which, in superficial area, ranks with those of Sennar and the Upper Nile, although the population is considerably smaller than that of either. To Captain H. E. Dumbell, now an Inspector of the Repression of Slave Trade Department, but formerly an Inspector of Kassala, may be attributed much of the progress attained.

The results of the wise and intelligent administration may to-day be seen in the improved conditions of the people. Indeed, but for the Sudan's unfortunate financial state, Kassala might almost have realised the best results aimed at. The price of dura, now quoted at about fifty-four piastres per ardeb (an ardeb equals 5.44 bushels), is considered satisfactory, while the crop is proving especially plentiful. Huge quantities of Kassala dura have been purchased for Abyssinia, thus bringing corresponding wealth to the growers. On the other hand, the cattle industry, which has been very carefully fostered and encouraged by the Administration, is flourishing apace. Last year, however, and the year before, cattle-plague wrought a certain amount of destruction, although the nomad Arabs suffered less than other owners. Owing to this fact their tribute was increased, and, moreover, without any difficulty, so that the province enjoyed a higher revenue aided by the revision of the herd lists in some districts. The prices of cattle and sheep are now at a very remunerative level for the breeders. Cotton, likewise, is promising very well, the crop having now commenced to come in. The worst of Kassala cotton, however, is that the cultivators will insist upon mixing the varieties of cotton and thus diminish the value of the yield. Were the communications of the province to be improved—and but for the prevailing circumstances they would have been this year—the cotton industry would flourish.

LETTERS TO THE EDITOR.

ROUMANIA AND THE CENTRAL POWERS

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In a message from your Correspondent in Bucharest, published in your paper a few weeks ago, it was stated that only his advanced age secured M. Carp an undisturbed hearing during the great speech he made recently in the Roumanian Chamber.

May I, for the sake of history and as a new proof of the sentiments which animate the bulk of Roumanian public opinion, correct to some extent the above statement, on the strength of private information I have received from Bucharest?

M. Carp's political career commands the unbounded respect alike of friends and adversaries, and the deputies listened with deference to what he had to say. But their patience was exhausted when in his concluding words M. Carp proceeded to indicate that Roumania's place was by the side of the Central Empires, and interruptions occurred and vituperations were flung from all sides of the House. The feelings roused by his opinions may best be gathered from the reply made by a deputy, when M. Carp's friends were claiming a fair hearing for him: "But he is horrifying us all!"—I am, etc.,

D. Mitrany.

PRISONERS IN BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—While I fully concur with the view expressed in last week's Near East that no credence should be afforded to Balkan rumours until they are substantiated, the judicial calm with which you comment upon the outrages upon British prisoners alleged by *Le Journal des Balkans* strikes me as being rather inadequate to the occasion. An investigation, "both in the interests of British prisoners in Bulgarian hands and in the interests of the Bulgarians," is certainly necessary, but I would add a word to this. If upon investigation it is found that the disgraceful charges alleged by *Le Journal des Balkans* are substantiated, Bulgaria should be warned that such incidents will be marked by the sternest retribution at the end of the war, be that when it may.

The Bulgar may no more hope to escape punishment for outrages against the laws of civilised warfare than may the Boche, and it is surely for you and other patriotic journals to point this out to him in the plainest manner possible.—I am, etc.,

Edward Francis.

London, S.W., February 26, 1916.

SUDAN PERMITS.

The Governor-General of the Sudan has issued a Proclamation amending the "Permits to Enter the Sudan Proclamation, 1915," making Section 2 of the Proclamation read as follows:—

"Except as hereinafter provided, no person may enter the Sudan without a permit. The following persons may enter the Sudan without a permit, namely, officers and soldiers of any military forces serving in the Sudan, officials and employees of the Sudan, Egyptian or British Governments serving in the Sudan or coming to the Sudan on duty, and, when travelling with them, their wives and families resident with them, and their servants accompanying them or their wives and families. Provided that Governors of frontier provinces may exempt from the need to obtain permits any persons or classes of persons being natives of or residents in any neighbouring country for the purpose of enabling them to enter their provinces for temporary purposes."

FRENCH HOSPITALS IN EGYPT.

The *Egyptian Gazette* of February 10 announces:—It has been decided by the French military authorities that Alexandria shall no longer be a hospital centre for French troops, and Commandant Lambelin has addressed a long note of thanks to the many persons who have contributed to the efficiency of these hospitals.

The first French wounded arrived early last May from Kum Kalé and Sedd ul-Bahr, when it was found necessary to find accommodation for more than 2,000 men. General Maxwell requisitioned many important establishments for the French troops. Sick and wounded troops were also received at the San Stefano Hospital and at the Government Hospital, while the Sultan offered the Mansurah Palace for a similar purpose. The French religious institutions also fitted up hospitals, and the European Hospital placed beds at the disposal of the French troops. At Cairo a special annexe was erected at the French Hospital, and the Suez Canal Company gave up an entire wing of its hospital at Ismailia.

Commandant Lambelin expresses his gratitude to the members of the French and other European colonies for their kindness and generosity, as well as to a large number of local doctors and to Père Gaston and various Sisters and Frères for their devotion and self-sacrifice in this cause.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, February 9.

The Chamber.

The principal feature of the reassembling of the Chamber was the admission of deputies from Upper Epirus, to the number of fifteen, as members of the Parliament. The Government regards this event as a great success gained.

The election of the brother of the late M. G. Theotokis as President of the Chamber, as a tribute to the memory of his brother, has disposed of a thorny question on which the members of the Cabinet were divided in opinion and had some difficulty in reaching an agreement. The new President, however, still remains in Corfu and shows no eagerness to come to Athens, and his duties are performed by the Vice-President.

The tone of the protests made to-day in the Chamber by the President of the Council, regarding the occupation of Corfu and of Karaburnu by the Allies, gives the measure of the impression caused in official circles by those acts. What they fail to take into account is that after the occupation of Salonika the occupation of the Karaburna Fort became indispensable for the Allies, in order to secure command of the Gulf of Salonika and the entrance to the harbour. M. Skouloudis also declared that no pressure by the Entente would be able to force Greece into taking action so long as her own interests were not involved.

In the course of the discussion to which these declarations gave rise it was admitted by some members of the Cabinet that the pressure on the part of the Entente, to which the presidential declarations referred, was the result of misunderstandings, and it was well said that the Government really only followed a policy of neutrality in an opportunist sense. One of the Opposition deputies condemned the Government strongly for keeping the troops with the colours for so many months without deciding definitely for war or for peace; and for putting into the mouth of the King the statement that it was the Entente Powers who wished Greece to maintain its mobilization, thus exposing the Crown to a direct denial of this assertion by the four Powers.

The Dangerous Position of Greece.

The *Patris*, taking as basis a statement published in the Turkish *Tanin*, which purports to have learned from an official source that Germany has informed Greece that if she continues to tolerate the presence of the Allies at Salonika and the extension of their fortified works she (Germany) will be compelled to regard Greece as hostile territory, believes that Germany will finally invite Greece to co-operate with her in expelling the Franco-British troops; and that should Greece refuse she would then declare herself to be reluctantly compelled to promise Bulgaria compensations at the expense of Greece in order to obtain Bulgarian co-operation against Salonika. The *Patris* asks whether, faced by the dilemma of losing Salonika or of declaring war on the French and British, it would not be better to lay aside opportunism and co-operate with the 350,000 Allies, in order to settle accounts with Bulgaria.

The Government Press.

The language of the so-called Governmental Press —which is first and foremost the Germanophil Press —is truly extraordinary. It becomes more and more violent; and all sorts of calumnies are launched against the Venizelists in order to compromise them. Especially are they accused of being anti-dynastic. The main objectives of the campaign carried on by these journals are France, the French authorities at Salonika and the French Minister in Athens. Public opinion is thus daily inflamed.

The Italians at Corfu.

The arrival of some Italian carabineers in Corfu—a half-score or so, who, it appears, escorted some Serbian deserters there—has caused a great to-do in Athens. The Government has forbidden news of this to be telegraphed abroad, and has protested energetically to Rome. It is even stated that as a result of a rising of the islanders the carabineers had to withdraw, but this seems hardly credible. The trouble caused by the arrival of these few Italian soldiers in Corfu is, of course, due to the fact that the Italians are always accused by the Greeks of coveting the island because of its proximity to Italy, because it formerly belonged to the Venetian republic, and because a little Italian is still spoken there.

THE GREEK MOVEMENT FOR INDEPENDENCE.

The Hon. W. P. Reeves delivered the third of his course of lectures at the London School of Economics last Monday, his subject being the renaissance of the Greek nation. He said that throughout its career, but especially in the days of its decline, the Turkish Empire was a despotism for all, but a despotism that pressed with especial severity on the Greeks and other Christians. The best treatment the Turk allowed these was a contemptuous toleration; the worst was to kill them if they showed any signs of being troublesome. It was impossible for a Christian to get justice in the courts if the other litigant was a Moslem. If he was a peasant he was the victim of an oppressive system that left him a pittance barely sufficient to maintain life. First of all he was usually a tenant, and had to pay a rent to a landlord of about half his produce, then the Government took a land tax in kind amounting on the average to about one-seventh. He was not allowed to reap or thresh his grain unless the tax-gatherer was present, and thus his agricultural operations might be delayed for two months at a time. In common with other Christians, he had to pay a poll tax, which was rendered more oppressive through the exactions of the tax-farmers who collected it. He was liable to forced labour on public works, for which he received no payment. Finally, when Government officials travelled on public business the villages had to entertain them free. As regards traders, where the Turk would pay import or export duties of, say, 2½ per cent. and the foreign trader resident in Turkey 3 per cent., the native Christian subject of the Sultan would be required to pay 5 per cent. Beyond all this was the bribery of officials, the oppression of pashas and great landlords, who set the law at naught.

The renaissance began with a revival of Greek trading in the eighteenth century. This became possible when the power of the Algerine and other corsairs was broken, and when the Western Powers, having gained privileges from the Sultan, used these illegally to grant licenses to Greeks to trade on the same terms as the foreigner. The Greeks established mercantile houses with branches in various European cities, and became prosperous. The hope of a free and independent Greece arose in their minds. The appearance of Ali Pasha as Governor of Greece delayed the movement, but an attempt was at last made under Prince Ypsilanti. This was a complete failure, but another attempt was made. It was a contest where all the advantages were on the side of the Turkish Government, and at first the Greeks got little or no sympathy from the European Powers; but after the struggle had dragged on for years and the Greeks had achieved a measure of success, the Turks in revenge massacred great numbers of Greeks who were wholly unconcerned with the insurrection. The slaughter of these loyal and peaceable people living far from the scene of turmoil created a revulsion of feeling in Europe, and a cry went up that the Turk was an unspeakable barbarian.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THRE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, February 15.

University Disturbances.

The University of Jassy is closed in consequence of a general "strike" on the part of the students. Those of Bucharest have declared a sympathetic strike, so that the end of this week may see the closure of both universities. The circumstances which have led to this development are of a local character more or less, but not without interest, for they throw light on the sentiments which animate the youth of the nation.

M. Virgil Arion's change of attitude in matters of foreign policy is responsible for the trouble. This gentleman is a professor at the University of Jassy, and was until recently president of the "League for the Cultural Unity of all Roumanians." For reasons which still require explanation, M. Arion, who was known as one of the strongest supporters of the movement in favour of national union, has since the outbreak of the war adopted a friendly attitude towards the Central Powers, which has caused him to be excluded from the society of which he was president, Octavian Goga, the Transylvanian poet and Nationalist, being chosen as his substitute. M. Arion has also become director of the *Moldova*, an organ which has come into being since the commencement of the war, and is run by the Germans. These and other circumstances have given rise to a feeling of deep resentment, especially among the students of Jassy, who had previously looked up to M. Arion as a guide, a warm sympathiser, and one of the most convinced champions of the great cause that lies so near the heart of every patriot.

The cynicism with which he repudiated his previous convictions has created a feeling among the students that they have been cruelly deceived and their confidence betrayed. None the less, M. Arion was allowed to deliver his University lectures unmolested. On the occasion, however, of a public lecture not connected with the work of the University, a number of students, apparently nettled by circumstances of a provocative character, manifested their disapproval by singing patriotic songs, thus obliging M. Arion to retire. M. Stere, the Russophobe Rector of the Jassy University, thereupon adopted an extremely hostile attitude towards the students. It was decided to inflict heavy punishment on twenty-seven of the guilty students, one of the items being the withdrawal of their right to become members of the committees of student clubs for the space of a year. This latter punishment is considered illegal, and has given rise to widespread indignation, extraneous interference in the organisation of these clubs having never previously occurred. The students consider the punishment illegal because they did not manifest as students, but as a section of the general public, the occasion being a public lecture entirely unconnected with the University. They look upon the above measure not only as representing an immediate blow, but a permanent menace, and a precedent which will favour the introduction of party politics into the ranks of the students and the internal organisation of their societies. This apprehension is well founded, as all will admit who know to what extent party politics have infiltrated the social life of the Roumanian nation.

The students have set forth their grievances in a closely argued memorandum, which is remarkable for its form. There is little probability of their capitulating, for they feel themselves supported by a large proportion of the professors in both Universities.

The Jassy students are mostly very poor, many of them holding purses which have been temporarily withheld by the Rector. In view of his pronounced Russophobism and M. Arion's Germanophilism, this procedure is regarded as a reprehensible means of exerting moral pressure.

A Recruit for the Conservatives.

The fact that M. Michel Marghiloman has joined the Conservative Party, presided over by M. Nico Filipescu, is significant. It has the appearance of being a public expression of disapproval of the attitude adopted by his brother, M. Alexander Marghiloman, whose advocacy of the policy of adhesion to the Central Powers led to his losing the leadership of the Conservative Party.

German Corruption.

The Central Commission for Exports assembled a few days ago for the purpose of pronouncing on the subject of a commission of 1½ million francs offered by the German syndicate in connection with the recently effected sale of cereals. The Roumanian Commission, we are glad to record, unanimously refused the German "bakshish."

Roumanian Papers for Bulgaria.

Roumanian newspapers are not allowed to cross the Bulgarian frontier. Exception was made for the *Universul*, which for some time enjoyed the privilege of being read by Bulgarians, but this paper has now been stopped likewise. The rule does not apply, of course, to the *Ziua*, the official organ of the Austrian and German Legations. This journal is, however, nothing but a German paper in disguise.

Bulgarians in Roumania.

During the last few months a number of Bulgarian subjects have been settling in Giurgevo for the alleged purpose of buying grain. The presence of these unwelcome visitors has aroused the curiosity of the authorities, for they are numerous and have no fixed occupations. Apart from this, they are mostly young men, whereas it is well known that the Bulgarian military authorities have forbidden all subjects up to the age of fifty-five from leaving their country.

Certain inhabitants of the Dobruja of Bulgarian origin have declared their intention of offering their crops for sale to the Bulgarian Government. They are reported to have said that if they were not allowed to export their grain into Bulgaria they would keep it until the not very distant time when the Bulgarian Army would enter the Dobruja.

Germany and Bulgaria.

Field-Marshal Mackensen is believed to have made two journeys recently, one to Sofia to discuss with Tsar Ferdinand the conflicts which have arisen between German and Bulgarian officers, and also for the purpose of arranging for the establishment in Bulgaria of a branch of the Krupp works. The object of the other journey was the inspection of the Bulgaro-Roumanian frontier of the Dobruja.

A train is reported to have left Rustchuk a few days ago for Varna, carrying 100 officers, of whom sixty were German and the remainder Bulgarian. The number of German troops now occupying the Dobrujan frontier is considerable, especially about Razgrad and Shumla.

LIFE IN CONSTANTINOPLE.

(From Our Own Correspondent.)

Bucharest, February 15.

The Germans are insinuating themselves more and more into the internal affairs of Turkey, so that there is not a public service which is not at the present time under the control of German officials. There is great misery in the Turkish capital. Flour is bought in Roumania at the price of 61 francs the sack, and resold in Constantinople for three times that sum. Rice cannot be obtained at all. Coffee costs 50 francs and sugar 20 francs the kilogram. The latter is only delivered on presentation of a medical prescription.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, February 7.

The Zeppelin Attack.

After several weeks of comparative calm, not to say dulness, the people of Salonika were rudely awakened from their slumbers a few nights ago by a series of violent explosions. It happened about three o'clock of the morning on an exceptionally dark moonless night. I jumped out of bed, like all others, and gazed heavenward. Nothing was to be seen but the silent stars and occasional flashes of light as the explosions took place. At first it seemed that the fleet was firing heavy guns at another German aeroplane, but it soon became evident that bombs were falling on shore. It was not until the following day that we learned that a Zeppelin had paid us a stealthy visit, causing serious loss of life and damage to property. As in the case of the first aeroplane attack, practically all the loss has fallen on the Greeks. The Allies suffered very little.

Details of this attack and the damage done have already been telegraphed to London; but there are one or two points to which I may be allowed to refer. The local Greek journal *Phos* (Light), the most rabid of the pro-German gang of newspapers, suggests that the damage on land during the Zeppelin raid was caused by shells fired at the visitor by the fleet. It is, however, officially confirmed by the Allies that not a single shell was fired by the warships that night. "And why not?" I fancy I hear my readers exclaim. For the obvious reason that they did not wish to disclose their position in the harbour to the enemy, who would doubtless take advantage of the gun-flashes to drop bombs upon the ships in order to sink or damage some of them. The Zeppelin bombs are exceptionally large and dangerous, as the airship has much greater lifting power than an ordinary aeroplane, whose bombs are few and usually very much smaller. One of these Zeppelin bombs fell quite near my abode, and made a pit in the ground nearly 3 yards wide and about 1½ yards deep. If it had fallen much nearer these weekly letters would probably have come to a sudden and violent end, and the subsequent proceedings would have interested your correspondent no more.

Who Pays the Damage?

The only other point to which I need refer is this: Who is going to pay for the damage, amounting to some four million francs (£160,000), caused by an incendiary bomb to the property of a particular bank? I understand the insurance companies are protected by a special clause in their policies excepting war risks. In the end, of course, the Germans will no doubt have to pay—if they have any money left to satisfy the gigantic bill which they are running up. But, meantime, the question arises whether the Greek Government should claim these damages from Germany or from the Allies. The responsibility of the Allies depends on the obligations which they undertook on installing themselves here. The general impression, however, is that in any case the Allies will pay the damage in the meantime and take their chance of recovering the amount from Germany at the end of the war.

The Captured "Albatross."

All Salonika has visited the captured German "Albatross" aeroplane, which differs considerably in appearance from the "Taube" (pigeon). It was exhibited in one of the widest main streets near the front and opposite the French headquarters. I also made a pilgrimage to the spot and inspected the creature. It did not seem much the worse for its fight with the gallant Frenchmen, who managed to puncture its petrol tank with their mitrailleuse. The first thing that attracts the eye is the series of large black crosses painted on the brute. A closer examination revealed to me the inscription in German, *Gott mit uns* ("God with us"). To that the French aviators may have something to say.

The Case of John Sinnett.

I met him at the "Librairie Française"—the principal book shop in Salonika—which is a place much frequented by Allied officers and men (and where, by the way, The Near East is always on sale). He is a Welshman connected with the Veterinary Department of the British Army, and is about forty-six years of age. There is nothing singular about all that; but, as a matter of fact, his position is very singular, if not unique. He was born of British parents in France in 1869, and had the right on attaining majority to declare whether he would choose British or French nationality. He chose the former, and thus avoided military service in France. Eventually he had a son, also born in France, who had not the same option, and who is now fighting in the 25th Regiment of Chasseurs, while his father is also fighting the same enemy under the British flag. The circumstances are claimed to be unique. In any case it is a remarkable instance not only of the fraternal, but even of the occasional paternal, relations now existing between the soldiers of the two great allied nations.

The German Propaganda.

Baron Schenk, the chief of the German propagandists in Athens, is now so famous—or, rather, notorious—that his name has become a household word, though few people know how to spell it correctly. He is *persona grata* with Ministers and even higher personages, and he rules half the Press of Athens with a rod of iron—or, rather, gold. I may be told that this is as threadbare a topic as the weather, but I am not going to dilate upon the Baron's doings; I am simply going to quote from an official document which gives a curious insight into his methods, and which needs no comment. The document in question is the official report of the proceedings in the Assize Court of Verria on November 14, 1915 (Old Style), in reference to the case of one Hector Georgiou Athanassiadis, and which report is now on file at the Salonika Court of Appeal:—

The judge having invited the accused to state his defence, the latter said:—

"I was engaged as manager of Mr. M. D. Caromilas's newspaper at a salary of 60 francs per month, but I was also interested in the profits, which brought me in from 120 francs to 150 francs per month. At the hotel in which I lived I paid 3 francs per day. My means were sufficient, because, in addition, I had the sums paid to me by Baron Schenk.

"The Baron was employed by the German Embassy to publish in the Greek Press false news as well as telegrams favourable to Germany, and he could also assure to himself the hospitality of the columns of our paper. As I knew French I was engaged to collaborate with Baron Schenk. He paid me on each occasion 20, 30, 40, 50, and even 60 francs, and these payments were repeated on an average four times a month. This work brought me in, therefore, from 80 to 100 francs per month."

A Newspaper Prosecution.

The concoctions of Baron Schenk and his collaborators of course appeared in the German subsidized newspapers of the capital, and although they caused much excitement and aroused much indignation among the majority of the people, no official notice was taken of them. Contrast that attitude with the vindictive proceedings taken in the Criminal Court of Salonika against the leading Ententiste morning paper, *L'Opinion*, and the *Makedonia*. The former is printed in French and the latter in Greek.

It appears that these papers, on what they took to be reliable authority, inserted a paragraph in reference to the supposed incursion of a band of Bulgarian *komitajis* into Greek territory, where they had a severe fight with Greek troops. It seems the news was not true. Here was an opportunity to have a kick at the Entente through their organ, *L'Opinion*, and the prosecution took the utmost advantage of it. On a vague indictment based on a still vaguer "law" both newspapers were found guilty of exciting the minds of the people (as if they had not been much more violently excited by Baron Schenk and his allies), and the responsible editors were condemned to prison for fifteen days. They do not mind this a bit, as the prosecution has given them such an advertisement that they will benefit rather than lose by the publicity given to the proceedings.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, February 9.

King Ferdinand and the Air Peril.

"Tsar" Ferdinand, who is not famed for courage at the best of times, is reported to be in a state of great alarm regarding the chances of an aerial attack, and it is said that he was seized with panic when he learned that a flying corps formed part of the expeditionary force landed at Salonika. At the council of Ministers called to discuss the subject he declared that it was necessary to surround the capital with a patrol of flying machines, and that every Bulgarian aviator should be recalled from the front. The Palace at Sofia has been protected by special roofing, and searchlights are busy all night, and a Zeppelin has been brought from Germany. On the arrival of this monster it was greeted with martial music played by massed bands, and Ferdinand in person welcomed its crew, and bestowed decorations upon the officers.

Germans and Serbs.

The state of the Serbians in Old Serbia is deplorable. The Germans have instituted a reign of terror in that district, just as in Belgium. Serbians are not allowed to pass the Government buildings or the barracks; the inhabitants must not be out after 5 p.m.; nor may they leave their homes before 7 a.m.; and all Serbians must salute German or Austrian officers who cross their path. Any contraventions of these regulations are punished with the utmost severity. The least penalty is a month's imprisonment.

The Germans have arrested Serbs in large numbers, who have been deported into Austria, and many families are thus left without means of subsistence. Bands of Bulgars and Albanians wander at will and without hindrance from village to village. At present there are in Belgrade about 80,000 Serbs, and at Nish nearly 100,000.

"Kultur" for Young Bulgaria.

One result of their intervention which will cost the Bulgarians dear is that the Bulgarian Government, at the "request" of the German authorities, is drafting a law to make the German language obligatory in all Bulgarian schools! The German Government undertakes to despatch to Bulgaria the necessary number of schoolmasters for this purpose.

Brothers in Arms!

According to information received from Macedonia, the tension between the Germans and Bulgarians is becoming very acute. It is stated that near Kavki, outside Monastir, the German soldiers, furious at hearing their Bulgarian fellows-in-arms say that what successes had been gained in the Balkans were due to them, attacked them with their bayonets. A battle royal ensued, which was only brought to an end by the intervention of armed force. Many severe wounds were given and received on both sides.

New Postage Stamps.

The Bulgarian Government are stated to have already issued postage stamps to commemorate the great European War. They bear the effigy of "Tsar" Ferdinand in the costume of a Byzantine Emperor!

Travel Restrictions.

The Bulgarian *Official Gazette* publishes an announcement that, for the better security of the national defence, there will be henceforth only five points at which travellers may enter or leave the country—Rutchuk and Lom Palanka, on the Danube; Oborishte, for Roumania; Kuleli Bourgas, for Turkey; and Ortchitar for Greece. Anyone endeavouring to ignore this notice, and to pass the frontier elsewhere, will be liable to trial by court martial.

The *Dnevnik* announces that the Director of Railways, in accordance with military instructions, refuses to allow railway wagons to be despatched to any destination in the "new territory." On this account the population is suffering from a total lack of certain products which are impossible to forward save by rail; and the "Comité central de prévoyance publique" has intervened at the Army Headquarters, the Council of Ministers, and the Ministry of War in order to obtain permission for a sufficient number of wagons to leave for the districts suffering from a shortage of food.

BABYLONIAN SABBATHS.

"It has," says the *Independent* (New York), "been a debated question among scholars whether the Sabbath was a purely Jewish institution or whether it was known also to the surrounding nations. There is no evidence of an Egyptian Sabbath, for the Egyptians had a week of ten days; nor have we any proof of a Phœnician Sabbath and the evidence of a Babylonian Sabbath has been meagre; but in a volume just published by the Yale University Press, Professor A. T. Clay has made important addition to the proof that in Babylonia a seventh day of worship was recognized."

After referring to the only two inscriptions found before which could be interpreted as referring to the Sabbath, the *Independent* continues: "We now come to Professor Clay's new evidence. In the Yale collection Professor Clay has found a group of twenty-three tablets containing a report of monthly receipts of sheep intended for temple service at Erech, a very ancient city in southern Babylonia. They are dated from the fifth year of Cyrus, 554 B.C., to the sixth year of Cambyses, 523 B.C., inclusive. The tablets are all of the same nature, and after stating that the sheep have been received for sacrifice, a report is made in four columns for each day. Now the important thing is that a note is added to the record for the 7th, 14th, 21st and 28th days stating that an additional sacrifice of a lamb was offered on that day. Here is a definite recognition of a special religious observance celebrated at the temple on those days. The evidence is indubitable that four days which we may call Sabbaths were observed each lunar month seven days apart, and this evidence is of great value for religious history.

"To be sure, these tablets come from a comparatively late period towards the end of the Jewish Babylonian captivity; but taken with other evidence it is clear that no Jewish influence is here to be discovered. And the Babylonian Sabbath was of very little account as compared with that of the Hebrews. It did not enter into the daily life of the people. We have thousands of contract tablets all dated, and they prove conclusively that there was no interference with ordinary business and work. This discovery is of much importance, but much more needs to be learned as to the origin of the observance of the Sabbath, a point on which the text of the Fourth Commandment in Deuteronomy gives a different reason from that in Exodus."

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given

Mrs. Marling, when making her appeal wrote as follows:—

"There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—

"'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; 'we have not had so much as a box of matches from England.'"

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,

25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

Digitized by Google

TANGIER TO TEHERAN.

I am obliged to the Salonika Correspondent of THE NEAR EAST for his letter on the subject of the pronunciation of the name of that port, which, coming from the "scene of action," will probably set at rest doubts that appear to have troubled several readers. I must thank him, too, for his kind reference to myself and his good wishes for my success on what he refers to as my "erratic course." But I beg leave to inform him that I have not the faintest intention of "tackling the Turkish names from Sedd-el-Bahr to Kavak." I have too lively an appreciation of the difficulties and dangers of *those* waters, thank you! Indeed, the pronunciation of place names is almost as difficult a matter as the translation of Oriental words, to which I have referred many times; and just now I feel unequal to grappling with its perils.

***

Apropos of this I have come across a paragraph in *The Times* which evidences the difficulties with which writers on the Near East are confronted:—

> An officer in the Flying Corps in Egypt has carried out an aerial reconnaissance from Daba, the railhead of the Mariut Railway, to El Gara (about sixty miles north-east of the Siwa Oasis) and back, a distance of 400 miles. The airman started early in the morning, reached El Qara at midday, and was back at 4 p.m.

It will be seen that in this paragraph both Gara and Qara are used to designate the same place. Now, if Gara is right, Qara is wrong, and *vice-versâ*, and I should have welcomed an authoritative note on the subject. Personally, I favour the "Q," because it is softer and less ugly than the other form. It was Count Gleichen, I believe, who first introduced the "Q" into official spelling in Egypt, but it does not seem to have been generally adopted even by the Government, although it is, I know, used by the Post Office.

***

Apart from the matter of spelling, the news of itself is extremely interesting. What tremendous and romantic possibilities of exploration lie in the future of the aeroplane and the dirigible! An efficient substitute for petrol and its kindred spirits as driving power is, it seems to me, the one and only weapon necessary to complete our annihilation of distance. Some genius of the future will probably produce a machine that will automatically compress the air in its flight, and, storing it in "batteries" for its own consumption, be independent of petrol or other fuel. When that day comes we may fold the whole earth beneath the shadow of our wings. Who knows what the trackless deserts hold? Who knows the peoples, the civilisation, which may exist in the heart of inhospitable, untrodden ways? Just beyond the spot where the last exploring camel fell or turned may well be hidden new islands of the blest, cities more safe from discovery than any lone island in all the uncharted seas. But when over earth and wave our airships eat up the distance at the rate of more than a mile a minute, what can remain unhid? When the war is over there will come a new era for the explorer, who, riding the air, may pierce the veil of desert mystery.

***

King's Day in the Sudan has become a festival which apparently increases in popularity year by year. The day is set aside for the commemoration of the visit of their Majesties the King and Queen to the Sudan—a visit that was one of the wisest acts of a wise king. I happened to be in the Sudan at the time, and I shall never forget the real enthusiasm of the natives, an enthusiasm which was curiously pleasant because it was so unmistakably spontaneous, and showed such pride of country, too. When his Majesty disembarked at Port Sudan and the news spread through the country that he was actually on land, the whole aspect of the Sudani's life was changed. At one stroke they had become not only subjects of the Crown, but children of the King. I talked to many natives of different tribes at about this time, and in all the dominant feeling was one of intense pride. The Sudan was no longer merely a country with a history—it was a part of the British Empire with a future. Such a feeling would not, of course, have been possible had not the seeds of trust and affection for British methods and institutions been sown by the Administration of the Sudan since the battle of Omdurman, but it is none the less gratifying on that account. This year King's Day appears to have been celebrated with more than ordinary enthusiasm, because the Empire of the King was at war, and the people of the Sudan wished once again to make it abundantly clear that they were part of the Empire and loyal subjects of his Majesty.

***

The gift of tongues appears, as I think I have already pointed out in these notes, to have been bestowed in a most liberal manner upon the people of the Levant. Very few of them speak less than three languages fluently, and more often than not they can converse with ease in half-a-dozen different tongues. I am reminded of this fact by a paragraph in one of the provincial papers concerning the interpreter at the courts of Hull; a certain Signor D. Victor del Bourgo, who already speaks ten languages as fluently as his own and is now on the high road to perfection in three more. This is certainly a remarkable record, but I find that the gifted gentleman, who is the son of an Italian father and a Spanish mother, was born at Port Said, so I marvel no longer. As a child he came by Italian, Spanish, and Arabic naturally from father, mother, and attendants; a little later he accompanied his father to Abyssinia, where he added the language of King Menelik's people to his vocabulary. For ten years he studied Greek, French, and Hebrew in Turkey, and at the age of eighteen he was appointed interpreter to the Greek Police in Canea by Prince George, brother of the Greek King. Subsequently he returned to Egypt, where for some time he held various appointments under the Government, and his later travels included journeys to China, Austria, Germany, and Russia. He married in the latter country, and came to England four days after the declaration of war. Signor del Bourgo is now only thirty years of age, so he should have ample time for further study before him.

***

I have been favoured with a copy of the *Lloyd Ottoman*, a French edition of the *Osmanischer Lloyd*, published in Pera. It is, by the way, rather odd that it should be necessary for the Germans to print their propagandist journals in French for the "benefit" of their Turkish friends. Perhaps the Taskmaster has not yet seen fit to ordain that *all* Turks *must* learn more German than "Hoch der Kaiser!" and "Deutschland, Deutschland über Alles!" But, whatever the reason, the fact remains; and the obliging Teuton provides the French-speaking Young Turk with this enterprising news-sheet. And it *is* enterprising, too, mark you! The number in my possession contains the first mention I have seen of yet another ghastly outrage perpetrated by the brutal French and domineering British upon the long-suffering Hellenes: the news, to wit, of the landing of French and British troops at the Piræus and at Phaleron. At the latter place the ruffians appear to have landed for the express purpose of looting, for the *L.O.* informs its readers that "après y avoir opéré quelques perquisitions, ces troupes se sont rembarquées." After this, it is not surprising to learn that the Greek Government is packing up its traps and preparing for a hasty departure to Larissa, and that the State archives are being transported thither in haste; but it is a little disappointing to read that "les troupes grecques ont observé une attitude passive."

***

The *Lloyd Ottoman*, unlike the Greek troops, is moved to extraordinary indignation by the report of this horrible outrage, which must, of course, strike the invaders of Belgium and the Champions of All Scraps of Paper as unspeakable in its vileness. The writer of what-appears-to-be-intended-as-the-leading article (see how the influence of the Teuton stylist is affecting me!) waxes wroth indeed over the Franco-British violation of "protestations solennelles," and administers a tremendous trouncing to—M. Venizelos! I have found the high moral tone of this article most refreshing; and, if only I were not afraid of getting into trouble for trading with the enemy, I should be tempted to give up *Punch* and take the *Lloyd Ottoman* instead.

***

The same incorruptible journal reproduces many comments from the Turkish Press upon the arrival of the first Berlin-Constantinople train. These I have read with interest, and I gather that the train—drawn by a new engine and decked with flags—was laden with smiling and affable Teutons and good wishes in about equal parts, and that it was greeted on its arrival at Sirkeji station with the "mêmes chaleureuses ovations qui lui ont été faites partout," and with "sentiments et manifestations de joie réciproques." The *Tanin*, the *Terjumani-Hakikat*, the *Ikdam*, and the *Sabah* are all keen on these warm ovations and manifestations of reciprocal joy. They are also all equally keen on pointing out that the arrival synchronises with the good news of the unconditional surrender of Montenegro, which marks the beginning of the end, so to say, and that henceforth great and beneficent Germany will be able to draw all the supplies she may wish from Turkey, and to send to Turkey all—and more than all—the German police, professors, and Under-Secretaries that Turkey may desire. That is not, perhaps, the way the Young Turk journalists word it, but it seems to be the thought they desire to express. Their effusions almost read as if they were inspired from the same source. It is a pity that the news about Montenegro should have proved a wee bit premature after all. Perhaps the wonderful train took away with it on its return journey some of the good luck and high hopes it had brought.

NEAR EAST BOOKSHELF.

RAILWAYS AND WAR.*

The extent to which railways are being used in the present War of the Nations, says the author of the book under review, has taken the world by surprise, and though, with the exception of a careful analysis of the organisation of the railway systems of England, Germany, and France at the outbreak of war, he does not examine their direct influence on actual hostilities, he, nevertheless, shows us the extreme importance of rail-power, both as a means of transport and of strategy. As its title indicates, the book is more or less a historical study of the growth of the world's railways in connection with war and conquest, their evolution from subsidiary agents of transport to factors of vital importance in military campaigns. The study of this process is deeply interesting; and though we are unable to follow its development in the world-war—this, to quote a railwayman's expression, is still a "sealed book"—it is to be hoped that at some future date the author will pen a sequel to the present volume, showing us how campaigns both in the West and in the East were influenced by the presence or absence of railway lines. We can safely predict that the chapters dealing with the Near Eastern campaigns will not be the least instructive. How Austria overran Serbia, thanks to her Bosnian lines; how Germany's campaigns were influenced by the opening and protection of the Berlin-Constantinople line; how the Vardar Valley line was destroyed and rebuilt; how Turkey lost Erzeroum owing to German ambition in Anatolia; and how and why the Baghdad Railway failed to fulfil its great objective—are problems that will have to be carefully studied.

According to the author, the American War of Secession, commonly called the Civil War, was the first of its kind seriously to develop rail-power as a military factor. That was fifty years ago. Since then the military authorities of the various countries have developed their systems and organisation with varying success, and as war succeeded war they learnt from the blunders committed by belligerents and improved on their successes. We do not intend here to pass these wars in review (our readers are referred to the book under notice), but mention can be made of three Near Eastern wars or campaigns which were instrumental in shaping the future of rail-power in war time. The three campaigns in question, and which are ably examined by Mr. Pratt, are the Abyssinian campaign of 1867, the Russo-Turkish War of 1877, and the reconquest of the Sudan in 1896. Regarding the former, we seem to have blundered horribly. The line was to have been built from Annesley Bay to Magdala, but it was never finished; all the necessary plant was to be supplied by the Government of Bombay, but the material supplied lacked uniformity.

> The rails obtained from different railway companies in India were of five different patterns, of odd lengths, and varying in weight from 30 lb. to 65 lb. a yard. Some of them had been in use many years on the harbour works at Karachi, had been taken up and laid down several times, and had also been bent to fit sharp curves or cut to suit the original line. Some single-flanged rails had been fitted in the Government workshops at Bombay with fish-plates and bolts; but the holes in the plates and rails were not at uniform distances, and the bolts fitted the holes so tightly as to allow of no play. Then, when the rails arrived, no spikes came with them, and without spikes they could not be laid. When the spikes followed, it was found that the augers for boring holes in the sleepers had been left at Bombay, to come on by another ship. . . . If the rails gave much trouble—and even when they had been laid it was no unusual thing for them to break between two sleepers and throw the engine off the line—the locomotives and rolling stock caused still more. Six locomotives were shipped from Bombay; but, owing to the great difficulty in landing and the labour involved in putting them together, only four were used. Of these, one was a tank engine which, although just turned out from the railway workshops at Bombay, required new driving wheels after it had been running a fortnight. Another came with worn-out boiler tubes, and these had to be replaced at Zoulla. . . . The sixty wagons sent were ordinary trolleys, having no springs, no spring buffers, and no grease boxes. Their axle-boxes were of cast-iron, and wore out within a fortnight owing to the driving sand. As the railway came into use, every truck was loaded to its fullest capacity, and the combination of this weight with the jarring and oscillation on a very rough line led either to the breaking of the coupling chains or to the coupling bars being pulled from the wagons at starting. When fresh coupling chains were asked for, it was found that the boxes containing them had either been left behind at Bombay or were buried beneath several hundred tons of other supplies on board ship. At least 40 per cent. of the trucks were either constantly under repair or had to be put aside as unfit for use.

Admittedly the attempt as such was a failure, but happily it did not affect the military campaign, which was brought to a successful conclusion—without its railway.

The Sudan campaign of 1896, on the other hand, was, as regards the vital importance of rail-power, a glorious success, and the swift defeat of the Mahdi's troops by Lord (then Sir Herbert) Kitchener was largely due to the rapidity with which a line was constructed to the heart of the Sudan. The first advance of our Army necessitated the construction of a line from Wadi Halfa along the Nile to Kerma, a distance of 216 miles, which was satisfactorily completed in thirteen months. The second stage required a new line across the desert from Wadi Halfa to Abu Hamed, a distance of 232 miles. Work began on May 15, 1897; by the end of July 115 miles had been completed; by October 31 Abu Hamed had been reached.

> The construction of the 232 miles of track had been accomplished in five and a-half months, notwithstanding the fact that the work was carried on during the hottest time of the year. An average length of a mile and a-quarter of line was laid per day, while on one day in October a maximum of three and a-quarter miles was attained. So well, too, had the work been done that trains carrying 200 tons of stores, drawn by engines weighing, without tender, fifty tons, were taken safely across the desert at a speed of twenty-five miles per hour.

The above, though merely a sketch of the first stage in the reconquest of the Sudan, will serve to show how railway construction had improved and the rôle it was bound to play in future wars. Prior to the reconquest of the Sudan—the successful issue of which had depended to such a large extent on the railway from Wadi Halfa to Atbara—the Russians had shown in their war with Turkey that they were fully alive to the necessity of relying to a great extent on railways of communication.

> Under a convention which had been agreed to with Roumania on April 16, 1877, Russia was to have a free passage for her troops through that country. She was also to have the use of the Roumanian railways and of all their transport facilities. But the only line then running through Roumania was one that went from Galatz, on the Russo-Roumanian frontier, to Bucharest, and thence (with a branch to Slatina) to Giurgevo, on the Danube, where it connected with a Bulgarian line from Rustchuk, on the south of the river, to Varna, the Turkish base of supplies on the Black Sea. Not only was the Roumanian railway system thus limited in extent, but the lines had been indifferently constructed, they were badly maintained, and they had an inadequate personnel, together with an insufficiency both of rolling stock and of terminal facilities. . . . The principal lines thus taken in hand were:—1. A line in Russia, from Bender, on the Dniester, to Galatz, establishing direct communication between the Odessa railways and the Roumanian frontier, and affording improved facilities for the sending of reinforcements to the seat of war. 2. A line from Fratesti, on the Bucharest-Giurgevo Railway, to Simnitza, the point on the north bank of the Danube where, on the night of June 26-7, the Russians built the bridge which enabled them to cross the river. 3. A line from Sistova, on the south side of the Danube, to Tirnova (Bulgaria), situate about thirty miles south-east of Plevna, and about twenty-five north of the Shipka Pass. . . .

During the time the war was in progress 229 miles of new railway and the road-bed for another 75 miles were constructed. "The development of the rail-power principle in warfare was carried still further by the construction of a greater length of railways, designed for military use, than had ever been built under like conditions before." (This, be it remembered, was before the Sudan campaign.)

It must not be supposed, however, that Mr. Pratt has devoted his book exclusively to the growth of railway construction in war time. In days of peace, preparations are made for war, administrative measures are adopted, organising forces are co-ordinated, and strategic lines constructed. All these are fully analysed. A most instructive chapter is devoted to German railway ambitions in Africa, and another, of less interest because throwing no new light on the subject, describes German military ambitions in Asia Minor, Mesopotamia, and Syria, the outcome of which has been the Baghdad Railway fiasco and the loss of Erzeroum to the Turks. Appendices dealing with the Indian frontier and Australia bring to a close a most readable book, the value of which is enhanced by a careful bibliography of the leading works bearing on the subject under review.

* "The Rise of Rail Power in War and Conquest" (1833-1914). With a Bibliography by Edwin A. Pratt. P. S. King and Son, London. Price 7s. 6d. net.

BOOKS RECEIVED.

La Germania alla conquista dell' Italia. By Giovanni Preziosi. With introduction and appendix by Prof. Matteo Pantaleoni. (Libreria della Voce, Florence. 2.50 lire.)

A Merry Banker in the Far East (and South America). By Walter H. Young (Tarapacá). Illustrated. (The Bodley Head. 5s. net.)

Moral, the Most Important Factor in the War. By Lieutenant-Colonel W. Shirley. (Sifton, Praed and Co. 6d. net.)

BOOK NOTES.

The Fleming H. Revell Company, of New York and Chicago, have published "Modern Movements among Moslems," by Samuel Graham Wilson, D.D., the author of "Persian Life and Customs." Dr. Wilson, who resided in Persia for more than thirty years, has studied his subject closely, and he shows how the currents of the movements that he describes are exerting, and must continue to exert, a tremendous influence on Islam. Amongst the titles of the chapters are: "The Revival in Islam," "Modernism in Islam," and "Mahdiist Movements."

Mr. Eveleigh Nash has published, at the price of 6s., Mr. Marmaduke Pickthall's "The House of War," a novel with a Turkish background.

General Sir John Nixon had the honour of being received by both the King and the Queen at Buckingham Palace on Tuesday.

Lieutenant-General the Hon. Sir Julian Byng had the honour of being received by the King at Buckingham Palace last Friday.

H.H. the Aga Khan left London on Monday for Monte Carlo. He expects to return to town in April.

H.E. the Serbian Minister, who was last week confined to his room by an attack of influenza, has now recovered, and was able to visit Sir Edward Grey at the Foreign Office on Monday.

Bishop Stileman, formerly Bishop in Persia, has accepted the living of Emmanuel Church, Clifton.

Among the naval officers decorated by the King at Wednesday's Investiture was Commander E. C. Boyle, who received the Victoria Cross for his brilliant submarine exploits in the Sea of Marmora.

Under date of February 27, Reuter's Amsterdam correspondent reports:—According to a telegram from Bucharest the Queen-Dowager of Roumania is ill with influenza, slightly localised in the lungs. Her Majesty's general condition is satisfactory.

A message from Bucharest states that the following bulletin was issued concerning the dowager Queen Elizabeth on Tuesday:—"The affection of the lungs has changed a little. A new centre of inflammation has been observed. The patient has, however, only moderate fever, and the pulse is unchanged." The bulletin on Wednesday stated that the Queen's condition had not improved.

According to a telegram from Vienna, the King of Bulgaria, with both his sons, left there last Friday evening for Coburg to visit his parents' tomb.

According to a telegram from Vienna the King of Bulgaria is confined to his bed with a slight attack of bronchitis.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

A telegram from Sofia states that on the occasion of King Ferdinand's birthday the Crown Prince Boris was appointed a major, Prince Cyril a captain, and Duke Charles Edward of Saxe-Coburg Commander of the Second Bulgarian Regiment and a General of Infantry.

Dr. Alomcilo Nincitch, the Serbian Minister of Finance, left London last Friday for Paris. During his stay in London he had several conferences with the Chancellor of the Exchequer and the Governor of the Bank of England.

Sir Edward Boyle has returned to London from the Near East, where he has been working on behalf of the Serbian refugees.

An engagement is announced between George Francis Blackburne Daniell, Egyptian Civil Service, Lieutenant, 6th Battalion Royal Fusiliers, eldest son of Mr. and Mrs. Blackburne Daniell, and Mary, elder daughter of Mr. and Mrs. Eastwick, of Rogate, Sussex.

Last Friday Mr. Bertram Christian, Chairman of the Serbian Relief Fund, London, received from the Foreign Office a cable dated February 21, transmitted by the Chargé d'Affaires at the American Legation, Sofia, to the American Ambassador in London, stating: "Lady Paget's mission all arrived here. All well. Send greetings." This message indicates that the first stage of the mission's homeward journey has been covered.

Major-General Sir George Frederick Gorringe, K.C.B., C.M.G., D.S.O., who has been wounded in Mesopotamia, is a son of Mr. Hugh Gorringe, Kingston-by-Sea, Brighton, and has had a very distinguished military career. Born in 1868, he was educated at Lees School, Brighton, and Wellington College, and entered the Royal Engineers when he was 20, attaining to his present rank in 1911. His war services include the Dongola Expedition in 1896, the Nile Expedition of the following year, the battles of Atbara and Omdurman, two or three other expeditions in the Sudan, and several other hard-fought engagements. Sir George has also filled official appointments in Egypt, and had charge of the rebuilding of Khartoum after the annihilation of the Mahdi and his followers. For his services he has received many medals and decorations. The D.S.O. he got in 1896, and he was made a K.C.B. last year.

Second-Lieutenant Fred La Fontaine, formerly a private in the 7th Service Battalion, Rifle Brigade, B.E.F., France, has been appointed Interpreter, British Central European Expeditionary Force.

Second-Lieutenant Walter Whittall, formerly a private in the 7th Service Battalion, Rifle Brigade, B.E.F., France, has been appointed Interpreter, British Central European Expeditionary Force.

Mr. S. Hubert La Fontaine, formerly Assistant District Commissioner, Taveta, British East Africa Protectorate, who, until lately, held the temporary rank of Lieutenant, Intelligence Department, Voi, B.E.A.P., has now received his captaincy.

M. Henri Curdier, the French Orientalist, has been elected an honorary member of the Italian Royal Geographical Society.

Our Roumanian Correspondent writes (February 15):—

Roumanians all the world over feel that their nation has suffered irreparable loss in the person of Mgr. Metziano. Since 1899 he had been Archbishop and Metropolitan Primate of the Greco-Oriental Church of Transylvania and Hungary. For over sixty years he had fought tooth and nail against the Magyar system of persecution, organizing and reorganizing with invincible courage the national resistance of the Roumanians. His high character had gained even the respect of the Magyars, so that he had succeeded on more than one occasion in obtaining slight concessions in favour of his conationals. There are few finer figures than that of this indomitable old prelate of 89 years, who sinks into the grave with his withered arm still raised in defence of his flock.

M. Diano, Attaché of the Roumanian Legation at Athens, is now in Bucharest on leave.

M. Camille Blondel, French Minister in Bucharest, has completely recovered from the operation he recently underwent.

M. Trandafiresco, First Secretary of Legation, attached to the Ministry for Foreign Affairs, has left for Paris.

Colonel Andonovitch, Serbian Military Attaché, and Captain Pichon, French Military Attaché, have returned from their journey to Russia.

M. P. P. Carp has returned to Bucharest from Vienna. While abroad he gave a number of interviews to members of the Austrian and Hungarian Press, in which he discussed Roumania's foreign policy. His German sympathies are too well known for his remarks to be accepted as representing anything but a personal opinion.

Bucharest society has lost an interesting figure in the person of Prince Démètre Moruzzi. He was the descendant of an ancient family, which in bygone days has given more than one "hospodar" to the Roumanian principalities. He had been deputy, senator, and on three occasions Prefect of Police for the city of Bucharest. A veteran of the War of Independence of '77, he loved the army passionately, wearing with unveiled satisfaction his uniform of colonel of the reserve whenever there was occasion. At the time of his death he was actually "concentrated," though 68 years of age. He was familiarly known as the "Kneaz"—a princely title conferred upon a Russian ancestor. "Grand seigneur" in the best sense of the word, he held advanced views, and was one of M. Take Jonescu's strong supporters in the ranks of the Conservative-Democrat party. He enjoyed extraordinary popularity among all classes. In private life he was known as a true and generous friend, whose heart and purse were alike at the disposal of the needy. He leaves two sons and two daughters. Of the former, who are both officers, one commands the Roumanian School of Cavalry and the other is fighting in the ranks of the French Army, where he sustained a severe wound some months ago.

I have to announce the death of M. Jean Tancorescu, formerly journalist and deputy. In the early nineties he played a political part of some importance as partizan of the late Lascar Catargi.

A Reuter's telegram states that Essad Pasha arrived at Nice on Tuesday, coming from Rome. He expressed his belief in the final victory of the Allies. Essad Pasha intends to remain there until his presence is needed again in Albania. Madame Essad is also in Nice.

The death is announced of Lieutenant-Colonel Edward Rea Milner Crooke at Southsea, in his sixty-seventh year. He was the eldest son of Mr. E. G. Crooké, of Chorley, and entered the Army in 1866, joining the Royal Marine Artillery. He saw active service in the Sudan Expedition in 1884, and was at the defence of Suakin and took part in the advance on Tamai. He was mentioned in despatches, and received a medal with clasp and the bronze star.

It is announced that Major Edward Campion, 2nd Battalion Seaforth Highlanders, died on February 25 from the effects of gas poisoning. He joined the Seaforths from the militia as second lieutenant in December, 1895, and was promoted lieutenant in June, 1898, captain in March, 1901, and major in October, 1914. For a year from October, 1900, he was temporary A.D.C. to

MRS. FRANK BARKER wishes to recommend MANOLI CORBETTI, 22, Great Chapel Street, Oxford Street, W., to anyone wishing to purchase YAOURT, HALVA, TOMATO PASTE, BLACK OLIVES, ORIENTAL JAMS, or CIGARETTES, all of which he gets direct from Salonika and other parts of Greece.—[Advt.]

Digitized by Google

the major-general commanding Infantry Brigade, Aldershot. He was present at the battles of the Atbara and Khartoum in the Nile Expedition of 1898, and during the South African War, 1901-2, won the Queen's medal with five clasps.

We regret to announce the death of the Hon. Sidney Carr Glyn, a son of the first Baron Wolverton. He was formerly Captain in the Rifle Brigade, and served in the Crimean campaign. From 1880 to 1885 he sat as M.P. for Shaftesbury.

A correspondent writes :—The late Mr. John Gandon, who passed away at Sydenham on February 6 last, in the prime of life, was for many years manager of the Ottoman Gas Company, Ltd., Smyrna, and a leading member of the British colony in that city. His premature death will be deeply lamented by a wide circle of friends, both here and in the East, to whom he had endeared himself by his genial disposition and sterling qualities. He was held in high esteem by his company, and his loss at this juncture will be felt by the board of directors, whose business in Smyrna he directed with conspicuous ability and tact.

Lady Kemball, widow of General Sir Arnold Burrowes Kemball, has died suddenly at her residence in Sussex Square, Brighton. She was the third daughter of the late Mr. A. N Shaw, of New Hali, N.B., and married in 1868 General Sir Arnold Kemball, who was Consul-General at Baghdad, and had also been Military Attaché at Constantinople. He died in 1908.

Lieutenant Ronald John Mortlock Lias, 9th Battalion Royal Sussex Regiment, is reported killed in action on February 23. He was the fifth son of the Rev. J. J. Lias, Chancellor of Llandaff Cathedral, and was Master in Victoria College, Alexandria, 1913-14. He enlisted in the Public Schools Battalion, Middlesex Regiment, in August, 1914, was appointed second lieutenant 10th Battalion Royal Sussex Regiment in November, 1914, and lieutenant 9th (Service) Battalion in the following month.

Mr. Henry Wilsdon, one of the few remaining survivors of the famous charge of the Light Brigade at Balaclava, has died at Oxford, aged ninety-two. He was a native of Woodstock, and enlisted in the 4th Light Dragoons in 1848. Besides being engaged in the charge Wilsdon was also present at the battle of Inkerman. He received two medals and three clasps. He was in the band of the regiment, ten of whom were in the charge; four were killed and four were taken prisoners, while Wilsdon and a comrade escaped. He celebrated his golden wedding six years ago.

The King has granted to Mr. Henry Higgs, C.B., of H.M. Treasury, ex-Inspector-General of Finance to the Egyptian Government, authority to wear the Insignia of Grand Officer of the Order of the Nile, conferred on him by the Sultan of Egypt.

In a statement issued by the War Office, it is announced that Nuri Bey, the brother of Enver Pasha, was killed in recent fighting on the Egyptian frontier. He was at the time of his death personally commanding the enemy force.

Old silver thimbles, broken or worn silver trinkets, bracelets, brooches, chains, cigarette cases, coins, or any old oddments of silver or gold are asked for to provide a motor hospital boat for the Euphrates, to be named the Silver Thimble, No. 5. All contributions or donations should be forwarded to Lady Maud Wilbraham, care of Miss Hope-Clarke, 2, Crescent Road, Wimbledon. Three ambulances, costing £400 each, and a "motor disinfector," costing £1,060, have already been provided. The motor hospital boat has been very specially asked for. Each boat takes nine stretcher cases, and costs £800.

The Committee of the Armenian Refugee Lord Mayor's Fund has received the following telegram from the Central Armenian War Victims' Committee in Tiflis: "Several thousand refugees, mostly women and children, saved in Gines, Erzeroum, and Mush."

After being prisoners of war since November, Dr. Aspland, who was in charge of the hospital in Serbia maintained by the Wounded Allies Relief Committee, of Sardinia House, Kingsway, Mrs. Aspland, Dr. Slater, and the three nurses, Sister Dutton, Sister Millthorpe, and Sister Miller, have arrived in London. The party are all in good health, and speak well of their treatment by the Austrians. On becoming war prisoners in November at Vrnatchka Banja, the party were sent on to Krushevatz, and after remaining there for a month were told that they would be sent home. Leaving on February 11, they were taken to Belgrade in charge of a guard of eight Austrians, and after spending the night there went on to Vienna, where they arrived the next morning, and received every attention from the American Ambassador. They proceeded to Vludenz, in the Austrian Tyrol, and remained there for ten days, after which they were taken on to Feldkirch, on the Swiss frontier, and regained their freedom. Arriving at Zurich the same night, they were kindly received by a representative of the British Consul, who also saw them off later to Paris. Although they were strictly guarded for the most part, there were also times when they were allowed a fair amount of liberty.

With the exception of Orderly Gill, who is suffering from enteric, all the members of the hospital unit under the command of Dr. Banks arrived in England on Tuesday. This unit, which was sent out to Serbia by the British Red Cross Society and the Order of St. John, was captured while working at Vrnatchka Banja, but the personnel, after being sent to Vienna, were released on February 14 and sent to Zurich.

One of the most interesting of the recent gifts to the Red Cross Sale at Christie's is an Arabic letter from General Gordon, which was sent out of Khartoum in a quill.

M. Filipescu, the Roumanian Conservative leader and former Minister of War, left Bucharest last week for Petrograd, on his way to the Russian front.

The following medical appointments are announced :—A. L. Murison, M.R.C.S. Eng., L.R.C.P. Lond., to be District Medical Officer, Cyprus; Lieutenant-Colonel R. H. Whitwell, M.B., M.Ch. Edin., B.Sc., P.H. Edin., I.M.S. (retired), to be District Medical Officer, Cyprus.

Dr. Elsie Inglis and her party of nurses from Serbia have arrived in London.

Admiral Sir Dudley de Chair, the Blockade Minister's new adviser, was present at the bombardment of Alexandria in 1882. After the bombardment he landed with the Naval Brigade, and, going for a ride on horseback, he wandered outside the British lines and lost his way. A party of Arabs dragged him before Arabi Pasha, one of his captors remarking on the way, "I think you hang!" Arabi held him prisoner, but he managed to escape. On the fall of Cairo he was selected by Wolseley to carry the news of the success to Alexandria, a dangerous mission for which he received several decorations.

Reuter's Agency is informed that nothing is known of the fate of Mr. Christian, an inspector of the Indo-European Telegraph Department, who was employed in repairing the telegraph line between Shiraz and Ispahan at the time when his compatriots who were held in captivity at Abram were seized at Shiraz. It is feared that he has suffered the same fate as Mr. Mackerrick, of the same Department, who was shot by the gendarmerie officer Angman with his own hand.

Mrs. J. C. Smith, the wife of a colleague of Mr. Christian, has died as a result of the hardships experienced while being removed by Herr Wassmuss with the rest of the British colony at Shiraz from that place to Bushire.

DOMESTIC ANNOUNCEMENTS

The charge for Announcements under this Heading is 1s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

DEATHS.

GANDON.—On the 6th inst., at Bishopsthorpe Road, Sydenham, John Gandon, A.M.I.C.E., of The Point, Smyrna, eldest son of the late Charles Gandon, M.I.C.E.

PETRICI.—On February 28, at 20, Ladbroke Grove, Hélène Petrici (*née* Lascaridi), in her 69th year.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

Alexandria.
CARLTON HOTEL, Bulkeley.
Just outside Alexandria. Half-way to San Stefano.
Ramleh's Fashionable Hotel.
Patronised by the Elite.
Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. Full Pension P.T. 80 per day.
C. AQUILINA, *Proprietor.*
(Late of Messrs. Thos. Cook & Son.)

CYPRUS PALACE HOTEL
NICOSIA, CYPRUS.
Charming position. Beautifully situated the best part of Nicosia.
Most magnificently built and furnished.
FRENCH and ENGLISH CUISINE.
Every Comfort. Moderate Charges.
Special terms for extended visits.
BRANCH OF THE CYPRUS HOTEL CO.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEB HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najeb Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

Bucharest, Roumania.
GRAND HOTEL DU BOULEVARD.
The Rendezvous Hotel of the Diplomatic World and Distinguished Visitors to Roumania.
Entirely renovated, with all Modern Comfort. Unrivalled Cuisine.
FAMOUS ROUMANIAN BAND.
Admirably situated in the very centre of the Town.
LUCIAN BERTOLA, Proprietor.

OF SET PURPOSE.

A superficial glance at the war to-day might lead to the conclusion that the terrific clash of arms before Verdun had not only monopolised the attention of the world, but had cast its spell also on the belligerent forces elsewhere. Just as the progress of a typhoon is marked by areas of unusual calm immediately outside its wide track, so, it might be argued, the very violence of the struggle in France had produced an inevitable lull in all the other theatres of war. It is true that at a moment when on several fronts expectation of a long-promised offensive runs high the process of marking time remains the order of the day. We are not asked to suppose that at every point commanding officers are emulating the detachment of General Townshend and begging for vegetable seeds and gramophone records; but with the exception of the Russian advance in Armenia and the minor operations in Persia, there is a distinct absence of news regarding the forward movements for which the Allies have waited so long. The explanation is, however, that the offensive initiative is still with the Central Powers. It is Germany who has struck at Verdun, and the Germans with the Austro-Hungarians who compelled the Allies to take up their position at Salonika, and imposed upon the Russians along the Baltic-Bukovina line an enforced period of recuperation. But just as the Turks attacked first in the Caucasus, only in the fulness of time to be rolled back in a disastrous rout that has engulfed Erzeroum and threatens Trebizond, so the moment must come, we believe, when the offensive now with the enemy passes everywhere into the Allies' hands. His intentions in the West are not yet clearly revealed. The bid for Verdun may be the prelude to greater things along the same front, but for the moment it stands alone. If the armies of the Central Powers remain quiescent in other parts, it is solely because they are not equal to any additional strain. Retaining the power of the offensive, they would naturally elect to strike in as many places as possible at one and the same time. The present lull, therefore, away from the western front, in so far as it has any reference to events on the Meuse, is a symptom largely favourable to the Allied Powers.

In some quarters it will be asked why the moment when Germany is concentrating her efforts at one point is not chosen by the Entente Powers for assuming the offensive against her elsewhere. In some circumstances such a course would be most satisfactory; but inasmuch as the enemy's initiative implies his superior preparedness for the war, the Allies do well not to be turned aside from a considered line of action by the enemy's movements. His blows have to be met, and for that reason it was necessary to occupy Salonika and thus to sterilise Turco-German efforts in the Near East and beyond. But to build up an elaborate offensive on Germany's chance preoccupations would imply either the absence of any studied scheme of campaign on the part of the Allies or its hasty abandonment for a plan which must necessarily be inadequately prepared. We need not, therefore, be greatly concerned over the lull in the Near East. It is in the Allies' interests that, when they do strike, they should strike all together. The Central Powers have been able in the past to make full use of their magnificent network of railways in order to deal with each front in turn. Their resources will be far more heavily taxed, if they are pressed simultaneously from all sides. Whatever may be the state of the Allies' preparations in the West and in the East, they can hardly be at their maximum strength yet in the Balkans. The withdrawal of the last remnants of the Serbian and Montenegrin armies from Albania finds the Italians at Valona, but not in a position to give any real help to the Allies in a general advance. Any forward movement from Salonika must synchronize with Roumania's entry into the war, and this in turn, to achieve the maximum effect, is dependent on Russia's progress in Bukovina, which will compel the Austro-Hungarian forces to withdraw from some of their commanding positions on the Roumanian frontier. The feeling that the somewhat anomalous position at Salonika has lasted long enough has prompted the military authorities to sanction the publication of an article from an officially recognized correspondent on the spot on the prospects of an early offensive. Summing up the situation, he states that "failing attack by the enemy, there are three things necessary to bring to an end the present state of military inactivity in the Balkans which everyone in the Allied army feels has lasted long enough. They are reinforcements, such as, indeed, are constantly arriving; more mountain artillery, and the full equipment of the whole force with transport suitable to mountain warfare. The accomplishment of these matters may take a little while yet, but all of them are well under way." Salonika, however, though the pivot of the situation in the Balkans, does not represent the sum total of the military preparations that have to be made, and in spite of the weariness of a long wait, the Allies must not allow themselves to be tempted into a premature effort, either because their troops "are spoiling for a fight" or from over-sensitiveness to public opinion at home.

If the enemy's movements are not to be allowed to distract the Allies from their set purpose, still less should developments favourable to themselves interfere with carefully matured plans. The warning is, perhaps, applicable to the Middle East, where the situation is of necessity somewhat indeterminate. So far the only established factor is that a British force tried to reach Baghdad and failed. The attempt implied a definite objective, which in the circumstances obtaining in this part of the world cannot be abandoned altogether without prejudice to the British position. A signal success has brought Russian arms some distance into Armenia, and has thoroughly disorganized the enemy. But unless the Turco-German forces can be captured or annihilated the Russian advance, though invaluable for the blow it has dealt the Turks, can only with difficulty be linked up with the general plan of campaign. The Grand Duke's forces must needs face west, or with a deflexion on their left flank south-westwards towards the railway at Nisibin. They can hardly hope to sweep right across Asia Minor, and they cannot turn their attention wholly southwards with a view to bringing direct pressure to bear on the Turkish position at Baghdad. Again with regard to the more recent Russian success at Kermanshah, although it is within measurable distance of Baghdad, we need further information of the strength of the forces engaged before we can count upon a Russian advance from this direction upon that city. Reference has been made from time to time to a Turkish force detached from the Baghdad command for service in Persia, but in the light of recent events it would not seem to have attained any considerable proportions, and Russia's success has been gained with the mobile columns equipped mainly for the pursuit of the numerous insurrectionary bands under German, Swedish, or Turkish leadership. The intentions, therefore, which the British Government had in view when allowing General Townshend to be sent on towards Baghdad, must rely for their fulfilment on our own Mesopotamian force. If the position at Kut is not more critical than official optimism represents it, then there is much to be said for a delay in the advance of the relief expedition until it has received enough reinforcements to carry it forward not only to General Townshend's camp, but right on to Baghdad.

THE EGYPTIAN MIXED COURTS AND ITALY.

(From Our Own Correspondent.)

Cairo, February 8.

The exclusion of Italian subjects from the benefit of the Mixed Courts, due to the non-receipt of the assent of Italy to the renewal of the mandate of that jurisdiction, to which I referred in my last week's letter, has not been remedied as yet. The law decreeing the extension of a year was only promulgated at the eleventh hour, so to speak, and when I wrote there had been no time to make satisfactory inquiries. It now transpires that the non-receipt of Italy's assent was not, as the terms of the law led one to believe, unintentional or due to oversight. Italy had made her consent to the renewal of the mandate conditional on the appointment of an additional Italian judge, and the British and Egyptian Governments had refused to accept the imposition of this condition.

It may be asked how it is that, having agreed quite recently—in January, 1915—to a renewal of the Courts' mandate for one year, Italy should suddenly, without any apparent change in the situation of her subjects resident in Egypt, make her assent conditional on the acceptance by the Egyptian Government of the appointment to the "Tribunaux de la Reforme" of another judge. The answer is quite simple.

When war broke out, England, France, Russia, Germany, Italy, Austria, America, Belgium, Portugal, and Greece had each three judges in the Mixed Courts (one in Appeal and two in First Instance), whilst Spain, Norway, Sweden, Denmark, Holland, and Switzerland had each two judges in the Courts of First Instance. Whenever the mandate of the Courts comes up for renewal, those of the judges do also; consequently, when an extension was agreed to in January, 1915, as reported at the time in The Near East, the mandates of the three German and three Austrian judges were, for obvious reasons, not renewed. This created six vacancies—two in Appeal and four in First Instance. During the past year one of the vacancies in the Appeal Court was filled by the promotion from the lower court of one of the Norwegian judges, while of the five vacancies thus left in the First Instance Courts, two were filled by the appointment of Englishmen from the Ministry of Justice, and one by the nomination of one of the French members of the Cairo Mixed Bar. There are, therefore, still three vacant judgeships—one in Appeal and the others in the lower courts—and it is one of these vacancies which Italy now considers should be given to one of her subjects, her contention being that her colony is far larger than that of France, who has been accorded an extra representative—if one can so call the foreign members of these courts, in the Mixed Tribunals.

The attitude which Italy is understood to have taken up is, however, based on a misappreciation of the circumstances. There can be no question of right as regards the filling up of the vacancies left by the disappearance of the German and Austrian members of the Courts. All the Powers have the numerical representation stipulated in the various agreements regulating the constitution of the Mixed Courts; and the filling or non-filling of the vacancies referred to is entirely in the discretion of the British and Egyptian Governments. Moreover, it is doubtful whether Italian interests in this country are, in the aggregate, as important as, for instance, those of France or Belgium; and Greece, on the basis of numerical size of colony, has certainly greater claim for larger representation than Italy.

It might, of course, have been better policy on the part of the British Government if it had offered one of the vacancies to Italy as a recognition of the assistance that country always gave us during the most trying periods of our Occupation, and also in consideration of the fact that she has the second largest colony in this country and is an Ally. But that is another matter. Had Italy been better advised she would never have made her assent to the renewal of the Mixed Courts conditional on the acceptance of her demand, but would have signified her acquiescence in the renewal, at the same time intimating to the British Government her feelings in the matter. The latter would undoubtedly have taken an early opportunity of satisfying its Ally's desires without setting up the precedent, which acceptance of the claim as now made by Rome would most certainly establish, and which it is most desirable for many reasons to avoid. Even to-day there is reason to believe that if the Italian Government would relinquish its "claim" and would agree to the extension unconditionally, as the other Powers have done, London and Cairo would be only too pleased to meet it in regard to extra judges to fill the vacancies still open.

It is to be hoped that the difficulty will speedily be removed, for the situation created by the exclusion of Italians from the benefits of the Mixed Courts may become very serious. Since Italy has not agreed to the renewal of the Mixed Courts and has not made any special arrangement on the subject with the Egyptian Government, as laid down in the conditions agreed upon when the Courts were first created, she returns to the state of affairs that existed prior to the institution of these Courts—i.e., to the Consular Courts. But here a great difficulty at once arises. So long as the Mixed Courts exist, the Consular Courts of the Signatory Powers have no jurisdiction in civil and commercial cases, in which the two parties are not of the same nationality. Consequently, whilst Italians can be proceeded against by persons of other nationalities before the Italian Consular Courts, which, technically speaking, regain their old jurisdiction, they cannot bring actions themselves against such persons, since, in the first place, their country, by refusing to agree to the renewal, debars them from the Mixed Courts; secondly, their own Consular Courts and the Native Courts are not competent, and the only other system open to them, the other party's Consular Court, has, for reasons already stated, no jurisdiction in such matters. The situation may even be aggravated by the fact that the Italian Consular Courts, seeing that their nationals cannot obtain justice in the other Consular Courts, may refuse to hear cases brought against Italians by persons belonging to other nationalities. It is true that the Mixed Courts do admit their competence in cases where one of the parties belongs to a country which has not subscribed to their creation, but the position of the Italians is not quite the same, since their country was at one time a party to the operation of the Mixed jurisdiction and has of its own accord severed its connection with it.

As the foregoing indicates, the situation created will be serious not only for Italians, but also for all the other nationalities. That there will be considerable interference with business goes without saying, and there is, on the other hand, no knowing where the resultant complications will end. Already the Italian judges have ceased to sit, and all cases in which Italians are concerned have been adjourned by the courts *sine die*.

It would be interesting to know why the Egyptian Government went to the extreme of excepting Italians from the application of the decree in question pending the assent of the Italian Government to the extension. Precedent is, in fact, against this action. There have been two occasions since the first institution of the Courts in 1876, when the Powers had not agreed to the extension of the mandate by the time that mandate had to be renewed—in 1884 when Greece consented to the prolongation for five years of the Courts "on the condition that besides the two Judges of First Instance there should be two other Greek judges," and in 1889, when Greece, owing to certain questions still outstanding between her and the Egyptian Government, only agreed to an extension of one year. In the first instance Lord Granville categorically declined "to discuss the question of the increased representation for Greece on the Tribunals in connection with the question of their prolongation," and the powers of the Courts were prolonged for five years by a law which mentioned in the preamble merely "that our Government and the majority of the Powers interested are agreed on the prolongation"; in the second the powers of the Courts were prolonged for five years, the preamble mentioning that Greece had only agreed to one year's extension. (In 1890 the Greek Government ,having settled its differences with Egypt, agreed to the full five years, and a decree announcing this fact was duly issued.) It would appear that all the present pother with its probable complications might have been avoided if the precedent of 1884 had been adopted; but possibly the Egyptian Government had special reasons for ignoring what had gone before and for taking its present action. It is understood that negotiations are being carried on in London, and we may hope for a speedy solution on lines acceptable to all parties of a question which, it appears, was raised by the Italian Government on its own initiative and without any official instigation from the Italian colony here, and which it would surely never have pressed to its present stage if it had realised all the difficulties its delay in agreeing to the extension would entail for its own nationals as well as subjects of other friendly Powers.

THE WAR IN THE BALKANS.

THE SPRING CAMPAIGN.

The past fortnight has been practically devoid of military interest in the Balkan theatre of the war, the extravagant German offensive in the West having monopolised public attention.

Durazzo.

Nevertheless, the situation to the north-east and to the north-west of Peleponnesus has been developing along normal lines. The Austrian advance in Northern Albania, with Durazzo as its immediate objective, was only contested by the Allies as long as the evacuation of the country by the Serbian, Albanian, and Montenegrin forces was in progress. The successful completion of this strategic shortening of our line on the eastern Adriatic shore coincided with the likewise successful withdrawal of all Allied forces from Durazzo, which subsequently fell into Austrian hands. The movement of our embarkation seems to have been admirably carried out under gunfire from the Italian Fleet. Unfortunately, the abandonment of Durazzo gave rise in London to reports to the effect that Italy had decided to evacuate Albania —a report which has since been officially contradicted. As was foreseen in these columns some weeks ago, Valona is an important strategic position standing in close relation to our occupation of Salonika, and, therefore, a point to be held at all costs. The decision to defend it to the utmost has, happily, been taken, and, according to most recent accounts, the Italians are fortifying the place, aided by the French and, according to a telegram from Rome, by the "British Adriatic Mission." In the circumstances we await the Bulgaro-Austrian attack with confidence.

The Spring Campaign.

At the time of writing the position may be summarized as follows:—Northern Albania, to the River Skumbi, is in the hands of the Austrians, and Elbassan, in the Skumbi valley, is in Bulgarian possession. From the above river, therefore, the enemy will make his attack on Southern Albania (or Valona, more properly speaking) from the north and east. A Hungarian military critic (quoted by the Buda Pest correspondent of the *Morning Post*) gives the following outline of the enemy's spring campaign:—

Southern Albania is now the objective of the Austrians, with Valona as the goal. These operations will be carried out jointly with the Bulgarian forces which have already entered Elbassan, and are reported to be also at Berat, in the most south-westerly corner of Albania, as well as the district of the Ochrida and Prespa Lakes, whence a comparatively good road leads to the Santi Quaranta Port, on the seashore just opposite the island of Corfu, where the Serbian and Albanian forces are concentrated.

The plan is to occupy this road as quickly as possible so as to make it impossible for the Serbian troops to use it, and then to get into Valona as speedily as possible for the purpose of separating the Italian and Serbian forces in Corfu from the Entente troops at Salonika. By this strategic move, it is inferred, the co-operation of the enemy groups will be frustrated, and each of them will have to fight their battles separately.

It is not to be supposed, however, that the above plan is of such easy execution as would appear from the foregoing. Austria is incapable, as the present war has shown over and over again, of fighting successfully against anything save a bed-ridden foe, and in the Valona district she will be up against an adversary who is strongly entrenched, admirably supplied with munitions, and backed by a fleet second to none in the Mediterranean.

Salonika.

As regards Salonika, our second base in the Balkans, little need be said here at present. An uneventful fortnight has passed, and if, during this time, the enemy has strengthened his position to the north of the port, it may safely be assumed that we have not been idle. It is difficult to say whether the much-vaunted attack on our position will materialize, or whether the enemy will decide to remain on the defensive in an endeavour to prevent us from reaching the Berlin-Constantinople *couloir*. At the present moment the latter policy seems to be that adopted by the German General Staff, and it is likely that it will be maintained until the fate of Valona has been determined or until Roumania has definitely declared herself. In the meantime, however, we are speedily gathering in Salonika the men and material necessary for the carrying out of our plans, about which the less said the better. Nevertheless, it must not be supposed that if we do advance against the mountains to the north of Salonika our task will be an easy one. Not only are the natural obstacles in our way tremendous, but we may depend upon it that the enemy has, during the past months, feverishly fortified all approaches to his line of defence from the south. So important to him is the Berlin Constantinople *couloir* that he will have left nothing undone to prevent us from penetrating into Central Macedonia.

THE COMMERCIAL INTELLIGENCE OFFICE OF EGYPT

23, Sharia Soliman Pasha, Cairo.

Commercial Information supplied by arrangement to British Firms dealing with Egypt and the Near East. Correspondence invited.

F. W. CUMING & CO., Ltd., General Managers

DIARY OF THE WAR.

The following happenings in the Balkan theatre of the war are from the *Times'* monthly review of the past month:—

February 1.—Salonika raided by enemy aircraft; six soldiers, three of them Greeks, and four civilians killed.

February 2.—Russian offensive in the Bukovina against Czernowitz renewed; fighting at Uscieczko and Rarancze.

February 6.—British cruiser and French torpedo-boat covering the retirement of the Serban Army engage four enemy destroyers in the Adriatic and drive them in the direction of Cattaro.

February 8.—Russians occupy Uscieczko and cross to the western bank of the Dniester. French cruiser Amiral Charner sunk by German submarine off the Syrian coast.

February 29.—French transport Provence II. reported sunk in Mediterranean on February 26. Nearly 1,000 lives lost. Fight at Manheulles, south-east of Verdun.

IN SERBIA LAST SUMMER.

At the Lyceum Club, Piccadilly, last Tuesday, Mrs. Aldridge described her experiences at a dispensary in Serbia last summer and afterwards during the retreat to the coast. She was stationed at a large village, some thirty miles south of Kragujevatz, and lived under canvas with a lady doctor and a nurse. Medical attendance of any kind was rare in Serbia, and people came with their ox-wagons a journey of two or three days over the mountains to get the help the dispensary had to give them. Mrs. Aldridge said she found the Serbs much more Oriental than ourselves, very fond of bright colours in their dress and elsewhere, and given to decorating themselves with flowers. They were a very charming people; but the men were quick-tempered and fierce, and went always armed. The women were great spinners and knitters, and she had been prepared to find things a great deal different from what they were in England by noticing that people shook their heads for "yes" and nodded them for "no," and that women, in knitting stockings, did not begin at the opening, but at the toe.

Her introduction to Serbian society was amusing. She, with the two other English ladies, called on the local Pope; but the little phrase-book from which they were learning Serbian did not contain anything suitable for polite conversation. The best they could find was, "How many dogs have you?" and this question was accordingly asked and answered. Then followed, "How many oxen have you?" etc. When they got to the end of their vocabulary of domestic animals the visitors stood up, cried "Long live Serbia!" and came away. The visit was a great success, and was the beginning of a warm and enduring friendship.

Of the tragic side of recent Serbian life and history Mrs. Aldridge naturally saw a great deal. The first Saturday night after their arrival she and her friends were startled by a strange wailing, rising and falling and echoing weirdly among the hills. It was due to the custom of women visiting the graves of their dead scattered about in groups on the wild mountain-side, and chanting a mournful dirge as they go.

All through the summer there were rumours of the English coming to help the Serbians, rumours which were finally belied. When the last Austrian invasion came the Serbians fought with most determined valour, although they knew they must finally be defeated. Mrs. Aldridge had by then been recalled to the hospital at Kragujevatz, and this was soon so overcrowded that many wounded men had to lie on the bare floor. Then all the men and boys who were able to walk at all had to leave the town; only those who were quite unable to travel were left behind. The wounded men went with the rest, wearily tramping away to the south until the Bulgarians cut them off in that direction; then the fugitives had to retrace their steps and go over the mountains of Albania down to the coast. The journey took Mrs. Aldridge's party seven weeks, and after the first day's march they found scattered all along the road broken-down and abandoned vehicles, dead or dying animals, rifles and equipment that had been cast away, the bodies of men who had died on the way, and starving and exhausted people, whom it was impossible to help.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Near East in the War. Feb. 23.

In the course of the debate regarding peace proposals,

Mr. PONSONBY, who followed the Premier, asked the House to remember that we were not fighting in France and Belgium alone, but at Salonika, Aden, Mesopotamia, and East Africa; indeed, all over the globe. That was a policy which made victory, in the full sense of the word, ten times more difficult.

Mr. WALSH, dealing with the argument that bankruptcy would prevent this kind of war from happening again, said for the last fifty years we had been talking of Turkey as "the sick man of Europe." It never had any credit, yet somehow, in the most mysterious way, the Turkish soldiers had made the most effective fighting men during the last half century, and long before it, and whether fighting on the one side or the other, like the Fuzzy-Wuzzy of the Sudan, they had never been prevented from fighting by their country being in a chronic state of bankruptcy.

Major MURRAY said Germany's plan was to dominate Europe and the Near East, and to seize from Britain the command of the seas.

Mr. OUTHWAITE doubted whether the objects we first had in mind were still the objects we had in view. We knew now that we went to the Dardanelles in the first place at the request of the Russian Government, and we learned from statements in the Russian Press and from a statement made in the Greek Chamber that our excursion into the East had largely been a commitment to aid Russia in the conquest of Constantinople. Dr. Dillon had said that this commitment to Russia was made last April by the Foreign Secretary, and that the result of this commitment had been the alienation of Bulgaria and Greece, and the keeping of Roumania neutral. He could not see that this excursion into the East came anywhere within the objects of war as set out by the Prime Minister. The *Manchester Guardian* of the 17th inst. contained a remarkable article by Dr. Evans regarding the secret negotiations and commitments in connection with the intervention of Italy in the war. He made the statement which he said was known in the Foreign Offices of Europe, but of which we had no information, that Italy's terms for coming in were that Dalmatia should be surrendered to her—areas inhabited by a purely Slav population. Dr. Evans went on in his article to make the charge that this was an absolute departure from the principles laid down by the Prime Minister. It was the handing over of a Slav population to the overlordship of a race of different nationality.

To Mislead Roumania. Feb. 24.

Mr. PETO inquired whether the Government had official information that shortly after the publication by the *Labour Leader* of its intention to agitate against the Military Service Act, the portion of the paper dealing with the proposed campaign was translated into Roumanian and re-issued broadcast in Roumania, with an introduction to the effect that industrial England was in revolt.

Sir E. GREY.—The attention of his Majesty's Government was drawn by the British Minister at Bucharest to the use being made by enemy agents in Roumania of the article from the *Labour Leader*. Steps were at once taken to make it known that the journal was not of the representative character attributed to it by those agents.

Salonika Casualties. Feb. 29.

Mr. TENNANT, answering Mr. King, said that the number of casualties in the Salonika force up to February 20 was:—

Officers	37
Other Ranks	1,439

Generals in Egypt.

Sir A. MARKHAM asked the Under Secretary for War whether there were 117 Generals now in Egypt.

Mr. TENNANT: If there were a large force of troops in Egypt—a subject on which it would not be proper for me to make a statement—it is quite conceivable that the presence of 117 Generals might be necessary.

Lord Kitchener. March 1.

Mr. FORSTER, replying to Mr. Hogge, said the amount issued from public funds as the emolument of the present Secretary of State for War was £6,140 a year, being the salary of Lord Kitchener as Agent-General in Egypt, less the regulated amount issuable to the present High Commissioner.

Mr. COWAN asked for what period Lord Kitchener had been appointed Secretary of State for War.

Mr. FORSTER asked for notice.

The Cairo Residency.

On a Civil Service Supplementary Estimate of £37,330 for the purchase of land adjoining the Residency at Cairo, Mr. HARCOURT, in reply to Mr. Ashley, explained that the additional ground was wanted not for the extension of the Residency, but for office purposes owing to the increasing pressure of work. The land had been in the market for some years, and the price asked was at first £12 a square metre, then £7 to £8. Now it was to be had for £3 10s. a metre, and the Commissioner and the Foreign Office thought it a very good bargain. There were about three acres. If it had not been bought, the land would have passed into other hands, and the Government might have had to pay a much higher price. The Egyptian Government were therefore asked to make the purchase, and the Vote would enable the Government to refund the amount. There was on the site a half-finished house, which might in future be adapted for military purposes, but no money was being spent upon that at present.

Mr. HOGGE described the purchase as a most extravagant proceeding.

Sir F. BANBURY reminded the House that several Cabinet Ministers had gone, at great inconvenience, that afternoon to preach economy. It would be a very good thing if those left in the House would endeavour to follow their example and initiate a little economy

Mr. HARCOURT said that £630,000 had been saved this year on the Vote for the Office of Works.

Sir F. BANBURY: We would like it to be more.

Mr. W. RUTHERFORD sympathised with the Government. He had always been struck with the parsimony of the British Government in its expenditure on their representatives in the capitals of the Middle East. In the eyes of Eastern people especially it was advisable for the British representatives to be as well housed and to have as good an equipage and state as the representatives of other countries.

Lord R. CECIL agreed that the present was a bad time for making expenditure of any kind, and said he was sure that view was shared by the Egyptian Government, who would not have recommended the proposed outlay unless they were convinced that it was an economical operation. The history of our position in Egypt was a very peculiar one. For a long time the only position occupied by our representative there was that of one of the Agents-General. He was a comparatively unimportant diplomatic officer, who lived in Cairo and advised the Egyptian Government. The course of historical events was such that he gradually acquired more influence and a stronger position, and it culminated in the latter part of Lord Cromer's term of office in his being by far the most important person in Egypt, and really he had a degree of authority over an extent of land and a population which made him second only to the very highest official in the British Empire. Those who had seen the British Residency in Cairo would agree that it did not err on the side of extravagance or ostentation. The building was becoming more and more unsatisfactory in respect of accommodation for the very large amount of official work which had to be done in it. The obvious thing to do was to enlarge the existing buildings, and for that purpose the land was bought on exceptionally favourable terms. The Egyptian Government, however, did not propose to start building until after the war.

Mr. MALCOLM protested against the House being placed in so impotent a position as to be asked to sanction a completed transaction, and Mr. M'NEILL asked why the consent of the House of Commons had not been asked before the purchase was made. Mr. DILLON, however, said that on the present occasion, to his amazement, he found himself in warm sympathy with the Government; much of our present troubles in the East were due to allowing ourselves to be outshone by the representatives of other countries.

THE DEATH OF PRINCE YUSSUF.

Under date of February 28, the Cairo correspondent of the *Times* writes that the *Mokattam* is publishing a series of articles giving reliable information about Turkish affairs obtained from a person who recently arrived from Constantinople:—

It states that the late Prince Yussuf, the Turkish Heir-Apparent, who formed a strong party hostile to Enver Pasha, consisting of Arab and Turkish officers and members of both Houses who were daily gaining prestige, continually urged the Sultan to end the relations with the Germans and dismiss the Ministry and alter the present disastrous policy of Turkey. Shortly before his death he persuaded the Sultan to hold a secret council of Prince Yussuf's partisans at the Dolma Bagtche Palace to concert measures. The German Ambassador heard of it and advised Liman von Sanders, who was then in Gallipoli, and who forthwith went to Berlin to consult the Kaiser and explain that Prince Yussuf was a bitter anti-German and a serious enemy. What was then decided is not known, but a few days after Liman von Sanders's return to Constantinople Prince Yussuf's servants seized, gagged, and bound him, a blood-vessel was opened in his arm, and he was left to bleed to death. The statement that the body was taken to Lule Burgas for the purpose of proving to Enver the death of his opponent is untrue, but prominent members of the Committee viewed the body to confirm the death of the Prince.

When the Sultan heard the news his grief was such that he refused to receive Enver or the German Ambassador, or to transact any business. The Ambassador intimated that if he persisted in this attitude he must either abdicate or accept deposition. The Sultan, seeing that it was useless to resist the Germans, gave way and resumed business relations, but everyone in Constantinople is aware that Prince Yussuf did not commit suicide. After his death, the Committee seized nineteen of his party, imprisoned sixteen, and cast three into the Bosphorus.

"THE NEAR EAST."

Digitized by Google

THE PRESS ON THE NEAR EAST.

The Senussi.

We take the following quotations from an interesting contribution to the *Pall Mall Gazette* (February 26):—

The founder of the sect was Sayyid Mohammed Ibn Ali, who came to be called Es Senussi, possibly because he lived near the Senus Mountains, in Algeria; more probably because he adopted the name of a fifteenth-century religious teacher, Mohammed Ibn Yusuf el Semri. He was a sufi, or mystic, and won such a name for unorthodoxy that he was taken to Cairo and handed over to the tender mercies of Ulema. We are spared many details of his stay there, but the story ends tritely enough: "But God delivered him out of their hands."

It would seem that Sayyid Ibn Mohammed Ali was not only guilty of idealising Es Senussi; he came across the Cairena priesthood in precisely the same fashion. He seems to have gone through most of the religious phases which are the peculiar property of king-priests. For some time he favoured the mystic philosophy of Esh Shadhili, a thirteenth-century divine. But, wearying of the elusive theories of the mystics, he, during his wanderings over Algeria and Egypt to Mecca, fell in with the teaching of the Quadarites, Quadaratism being an Oriental expression of the doctrine of free will and a revolt against the predestination theories of Islam.

The future leader of men sat at the feet of the head of the Quadarites at Mecca till the latter's death, when the feet split into two sections, and he became the recognised head of one of them. . . .

Sayyid Mohammed Ibn Ali died in 1859, and his younger son, Senussi Mahdi, in 1902. The mantle of the Order now rests on the shoulders of Sayyid Ahmed esh Sharif.

How his power will be wielded it is difficult to say. The Senussi (by which name the followers of el Senussi were called) are traditionally anti-Turk. But they are a volatile people, troubling all nations, Turk and Italian alike. Though England has had assurances from the Senussi, assurances, under the circumstances, can count for little.

Life in Bucharest.

"An Englishwoman," in an article to the *Daily Mail* (February 25), gives an interesting picture of life in Bucharest to-day.

Bucharest is certainly at the present moment the gayest capital on the Continent.

Amazing as it may seem, the luxury-loving Roumanians are more recklessly extravagant than ever in their pursuit of pleasure.

Theatres, music-halls, ball-rooms, kinemas, and places of amusement of every description are crowded every night. In fashionable and expensive restaurants champagne flows, to the fascinating strains of the delightful gipsy orchestras. In casinos gold is thrown away with a carelessness that makes one gasp; superb cars roll up and down the Calea Victoriei, bearing lovely, laughing women exquisitely dressed.

On every side one sees luxury, dissipation, extravagance, and—indifference.

We foreigners look on with awe and amazement at the spectacle of this joyous crowd dancing madly round the edge of an active volcano.

The writer says that, the fact that their country may at any time be called upon to engage in the deadly struggle, does not appear to trouble the people of the city in the least.

Like other neutral countries, Roumania has been greatly enriched by the war, for her wheat, maize, benzine, petroleum, etc., are in great demand in spite of the very high prices asked and the heavy taxes the Government has put on all exports—taxes which have to be paid in gold.

The buyers are Austria and Germany, and need forces them to pay the price. So long as Roumania has corn to sell the Germans will not be reduced to famine.

She adds the opinion that "If England had bought up long ago all the wheat this country had to dispose of, the blockade would have been more efficacious and our brave men nearer their goal."

It appears that on two separate occasions the windows of the German and Austrian Legations have been smashed by the mob.

The two Ministers seldom appear in public. Their newspapers, of which five are printed in Roumanian and two in German, are boycotted by the public; though large numbers of them are distributed gratis all over the town.

Exasperated by the insolence of the German-edited paper *Ziua*, the students recently turned out in groups and seized all the copies they could lay their hands on and burned them in the open places. This done they marched off, singing patriotic songs and the "Marseillaise," to the publishing offices and demolished everything they could find. . . .

This state of armed neutrality cannot last very much longer, and the Austro-Germans themselves do not try to deceive themselves as to the intentions of Roumania; their violent speeches and threats prove that they are beginning to lose all hope of winning her to their side.

When the time is ripe and the circumstances favourable we shall be able to salute Roumania as one of our most valued Allies.

In German Toils.

Under the above heading the Special Correspondent of *The Times* (February 29) at Salonika gives some interesting sidelights upon the relation of Germany on the one hand, and Bulgaria and Turkey on the other. The first paragraphs of his despatch are illuminating:—

To whatever depths the value of the mark may have fallen in neutral countries, the Germans see to it that it remains at par in Turkey and Bulgaria, which are now being flooded with that discredited medium of exchange. Those who refuse to accept it at face-value are punished by fine and imprisonment.

A neutral traveller who has just arrived from Varna states that one consequence of this imposition is that most of the shops in the various towns have been closed. Meat and bread, which were so cheap and abundant before the opening of the road to Germany, have more than quadrupled in price in three months.

He confirms recent statements with regard to the demoralization of the Bulgarian nation, which now tardily realizes the weakness of Germany as a protector, and sees no issue but disaster from the narrowing toils in which it is entangled. That Greece and Rumania will seek with every chance of success to profit by Bulgarian extremity is looked on as a dismal certainty.

So much for Bulgaria on the date when this portion of the message was written, February 23. The correspondent continues:—

In Turkey a similar situation prevails. There, however, the scarcity and the dearness of foodstuffs have been artificially enhanced by the greed of members of the Committee of Union and Progress, who monopolize the supply of native produce to the cities, requisitioning it or buying it up at their own price, and reselling at a fabulous profit. They also requisition half of all consignments of sugar and other dry provisions coming from Austria, and sell them at the extravagant rates created and sustained by these very requisitions. The members of the committee have thus built up, at the expense of the starving people, colossal fortunes, which they hope some day, if the worst comes to the worst, to enjoy in secure retirement.

The first news received from Belgrade in Serbian circles here is to the effect that no postal communications are permitted with neutral countries by the Austrians throughout the zone occupied by them. In the territory administered by the Bulgarians the exchange of postcards with Greece is allowed. In the Austrian-administered territory hostages have been taken in all the towns as a guarantee for the passivity of the population. From Belgrade all Serbian men, except traders and artisans, have been removed to Austria. The circulation of civilians in the streets is forbidden after 7 p.m. Natives are not allowed to use the trams without a special permit. Numbers of *cafés chantants* have been opened. Most of the Austrian officers have brought their families to Belgrade and have installed them in the houses abandoned by Serbians who have fled.

A postscript to the despatch, dated the 24th, adds:—

As in Turkey, so in Bulgaria it is being sought to stem the rising tide of popular discontent by political arrests. A beginning has been made by the imprisonment of fifteen members of the Opposition in the Sobranye. It is announced in a telegram from Sofia, received here to-day, that the arrested deputies are accused of high treason. It is stated that all belong to the Ghenadieff Party.

West and East.

Colonel F. N. Maude, C.B., writing in the *Sunday Times* (February 27), reviews the situation on both western and eastern fronts. He thinks that, given fair weather, the Cossack should soon be raiding Turkish convoys between Nisibin and Baghdad, and considers that unless orders for the withdrawal of the Baghdad garrison were issued some days ago, it is probably doomed, as a small number of well-mounted men should be sufficient to prevent munitions reaching the city. He thinks that Turkish troops will probably concentrate not further than forty miles away from Constantinople.

How such a concentration would react politically is a question quite by itself, but all the indications point to a probable rising of all the old Turkish party against the tyranny of Enver Pasha's people and the Germans, for under the threat of Russian attacks from the Black Sea, both on the side of Asia Minor and of Europe, the facts could no longer be kept from the people and the old fanatical spirit of the Moslem would then very speedily revive.

Nor must we forget the reaction of these events on the Bulgarians, who already feel themselves deserted by their German allies and are very hard pressed indeed for numbers to meet the Rumanian dangers from the North and the threat of an offensive by the Allies, based on Salonika and the Mediterranean Coast. The "Izzat" of Germany in the Balkans is broken and what that means, those who know the Mediterranean and Eastern world can estimate.

The one fly in the ointment at the present juncture is this, that the attacks of the Russians from the Bukhovina direction achieved such success at the outset in drawing away German reinforcements from the Balkan peninsula that there is very little left for the Allies to hit, and that little is likely to be still further reduced before the final consequences of the Russian advance in this region have been completely developed.

A Battlefield of Egypt.

In view of the recent fighting in the district of Matruh in Egypt the following quotations descriptive of the country, from an article entitled "The North-West Frontier of Egypt," by "F. R. C.," in the *Geographical Journal* (February), will be of interest. The writer deals generally with the region which extends from the Nile Delta westward to Cyrenaica, and from the Mediterranean to the northern border of the Libyan desert. The passages which we quote below follow a description of the oasis of Jarabub and the routes connecting it with the valley of the Nile:—

A brief description of the northern border of the Marmarican plateau will show the advantage this coast route has over the desert route by Siwa. The plateau does not extend without a break in its level to the Mediterranean. Rugged cliffs jut out into the sea, though not to any great distance, and practically the whole coast-line is rock-bound. But there is often a terrace-like descent from the level of the inner plateau, the lower steps of the terrace being covered with a more or less deep layer of loam. There is a nearly continuous strip of level loam-covered limestone along the coast, and a good deal of this level area is cultivated, and maintains a sedentary population. Though water is scarce, it is not entirely absent, and barley of good quality is grown. The villages are usually at places close to the shore, where a break in the coast-line makes a safe harbourage for boats and small sailing vessels. The depth of the plain varies in the western part of Marmarica from a few hundred yards to twelve or more miles; in the east the plateau recedes further from the Mediterranean, leaving for a length of seventy miles an area about twenty miles deep between it and the sea. It is along this level strip that the coast route between Egypt and the Barbary States runs. There is only one place of importance along the route; this is Mersa Matruh, which is about 200 miles west of Alexandria and about 150 miles east of Sollum. It owes its existence to a fairly commodious and sheltered bay, to which access is gained by one of the breaks in the limestone cliffs forming the shore line, the fairway being about 800 ft. wide. The advantages offered by this one decent harbour in a distance of 350 miles were recognised long ago, and in Ptolemaic and Roman times the port of Paraetonium stood on a bay (the entrance to which is now nearly silted up) immediately west of Matruh. The topography of the Matruh region has been studied in some detail, and may be instanced as an example of the character of the northern versant of the Marmarican plateau. An almost straight line of low limestone hills faces the sea. Behind these hills is a strip of sand dunes, scrub, and salt lakes. This is succeeded by a nearly level plateau of loam-covered limestone stretching southward ten to twelve miles, and affording a large area of cultivation. Beyond the plateau rises some 60 ft., and is covered by a thinner layer of loam, and finally the level of the inner tableland is reached.

It is in the district of Matruh that the fighting between the Arabs and the British has taken place. From Sollum and one or two other places further west the garrisons have been withdrawn, though the coast is kept under strict surveillance by warships of the Allied fleets. In view of the disturbed state of Cyrenaica and the dubious attitude of the nomads, this withdrawal was well justified.

The Unselfishness of Russia.

We quote the following tribute to the unselfishness of Russia from an article upon the military achievements of that country which appeared in the *Nation* (February 26). The writer eulogizes the genius of the Grand Duke's strategy, and continues:—

And there is, too, another quality which seems to be the special endowment of Russia. So far as there has been unselfishness in the war, she has most conspicuously exemplified it. The rashly gallant incursion into East Prussia in August, 1914, was her attempt to relieve the pressure in France. She flung her lines over the Carpathians this time last year, courting the attack which she knew must find her weak in the chief requisite of the war—munitions. She has now relieved the pressure upon us at Kut and in Egypt. These things are not to be easily forgotten. They have added to a war marked by a thousand horrors a touch which is rare enough in the interplay of modern States.

Germany and Turkey.

A recent number of the *Times* reproduces a long résumé of an article which appeared in the *Berliner Tageblatt*, with the remark that "since the beginning of the war no such article has appeared in the German Press." Our contemporary includes many quotations from the German paper, most of which reveal a distinct spirit of pessimism. All the way through the article is marked by evident dissatisfaction and disillusionment; on several occasions the writer only thinly veils his sarcasm, as, for instance, when he intimates that it remains to be seen "whether her military achievements will bring in corresponding political and economic fruits." The *Manchester Guardian*, quoting from the same article, says that the writer admits that the position of the Allies is improving in the Near East—especially in Greece. He continues:—

Now the fall of Erzeroum opens Turkish Armenia to the Russians. Thanks to the helpful activities of German officers, Constantinople is not likely to be threatened yet, so far as we can see. But the land the other side the line Salonika-Erzeroum, which passes very, very close to Constantinople, is less secure, and promises to remain so.

In a further portion of his article the writer says:—

We have heard a great deal lately from expert observers of the justifiable self-confidence of a revived and strengthened Turkey: with this in mind, then, we ought to warn against any mention of help to this brave nation, which perhaps does not want it. We could do this all the sooner in the present case, since this perfectly just wish of Turkey's, to support herself, does not at all clash with what we must regard in the future as the lead for our interests. For our Allies' sake the security of Constantinople is a political and vital interest of this war for us.

The *Times* concludes its summary with the quotation from the *Tageblatt*, which we reproduce below:—

We shall be heartily glad if it is true that the Russians will fare with Erzeroum as they did with Przemysl. But in so far as there is a question of German support in the driving-out of the Russians, one would like to recommend caution. We have recently heard much from close observers about the just self-confidence of the revived Turkey. In face of this, we ought really to be cautious in any reference to the possibility of giving a brave people help which it may not want. In the present case we should do this all the more because the just desire of Turkey henceforward to maintain herself by her own strength is by no means contrary to what we shall in future have to recognise as the line upon which to pursue our interests.

The security of Constantinople is for us, for the sake of our Allies, a political vital interest. But if a decision cannot at present be reached in the Eastern Mediterranean, and if after the war the old *status quo* at the Golden Horn, with its glorious and profitable intrigues, were once more to gnaw at the vitals of strengthened Turkey, the question of Erzeroum would remain for us a matter by no means of indifference, but it would assuredly no longer be a vital interest. We should have to put up with it, as we have, and shall have, to put up with quite other things.

Montenegro and the Montenegrins.

The *Asiatic Review* (February) contains an interesting article—prefaced by an autographed portrait of King Nicholas which his Majesty himself presented to the author—under the above head by Mr. Oliver Bainbridge. Mr. Bainbridge uses the fall of Lovtchen and Cettinje as the text of an emphatic appeal for unity and method in the operations forced upon the Allies in the Balkans. The great part of the article is devoted to a study of Montenegro and the Montenegrins. The following quotation, which refers to the personality of the King, is irresistible:—

King Nicholas is a "Liberal," but insists on his subjects being "Conservatives." An English M.P. has given an amusing report of his conversation with this genial autocrat, who speaks French, Italian, and German perfectly. He says:—"Once, when expatiating to me upon the subject of his orthodox Liberalism, I ventured to ask the explanation of what appeared to me a slight inconsistency. How was it that many amongst the most heavily chained prisoners at Cettinje appeared to be in durance because they professed themselves to be Liberals? His Majesty was quite prepared with his explanation.

"'I am a Liberal,' he replied, 'and there is no objection to personal rulers and potentates being Liberals; but all properly conducted subjects should be Conservatives, and I intend that mine shall, at all events.'

"Not altogether in vain, I thought, had he studied the idiosyncrasies of the object of his political admiration.

"All great men have their failings, and King Nicholas's little weakness is that he imagines himself an authority upon British politics. 'Why are you not in favour of Home Rule?' he inquired of me on one occasion; 'I cannot understand anyone objecting to it.' 'You have, sir,' I replied, 'in the Podgoritza district and elsewhere, a large number of Mussulman Albanian subjects. If these people agitated for separation, what would you do?'

"'If they agitated!' exclaimed his Majesty, in a tone of stupefaction—'if any subject of mine agitated for anything at all, I would very soon show him who was master here.'"

Mr. Bainbridge asserts that no monarch of modern times is so worshipped by his people as King Nicholas of Montenegro.

Articles to Note.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The past week has been an active one in trading circles, the meeting of the Associated Chambers of Commerce of the United Kingdom coinciding with the second week of the British Industries Fair (which closes to-day) at the Victoria and Albert Museum. Each event, in its own peculiar way, serves to indicate that the country is at last waking up to realise that if we are to wage a successful trade war we must be up and doing.

***

Turning, in the first place, to the Industries Fair, we must congratulate the Board of Trade on its initiative in this matter. The Fair is, of course, not a patch on the Leipzig Fair, an institution hundreds of years old, but it forms already a respectable embryo of what in due course will grow into a useful exhibit of British-made goods. The majority of exhibitors, I understand, are satisfied with the results obtained, and have—due allowance being made for the war—booked numerous orders. The class of visitors, moreover, was the desired one—namely, business men and travellers. The latter, it must be remembered, made the Leipzig Fair what it really was, and it is to be hoped that in future the British Industries Fair will annually serve as a magnet attracting to London, the world's greatest mart, travellers and selling agents from all over the world.

***

Regarding more particularly the Near Eastern—or, for that matter, the whole Mediterranean—market, it is true that the present Fair will appeal but slightly to travellers and sellers in those districts. The class of goods in general request in the regions under review is of the cheaper kind—an article which can successfully compete with the German and Austrian one. I had hoped to see more of such articles exhibited. Taking two of the most important sections of the Fair—toys and glass (porcelain) ware—we find an exquisite display of all sorts and manners of objects, showing that we can turn out much better articles than the enemy, but what we really want to prove is that we can turn out cheap Austrian glass, Nuremberg toys, etc., at favourable prices. Only by doing this can we hope to avoid the dumping of this market with enemy goods after the war, or compete with him on the Near Eastern market. The same remarks apply to fancy goods—leather, etc.—which, to be commercially successful in the regions quoted, must compare favourably, as regards price, with the Austro-German article.

***

The above remarks certainly do not apply to all the exhibits. Thus, for instance, Messrs. Raphael Tuck have a practical show which will appeal to all classes. But then, their name is well known throughout the Near East, which is a market that has been thoroughly—and therefore successfully—worked by them. An article which, if properly worked in the Mediterranean, would be a selling proposition, is the Besway Patent Knife-Cleaner—a tidy little mechanism which, if not more expensive than the small enemy article, is certain to appeal to the market under review. Messrs. Henry Harvey and Company's exhibit of shell objects and decorations also strikes the right note. Rust's Vitreous Mosaics is another article certain of a Near Eastern success if brought properly to the notice of architects and contractors who work those districts. As a matter of fact, I understand that the firm has, through its exhibit at the Fair, already received a demand from Cairo which I hope will bear fruit. With the drainage scheme on the eve of completion, there will be an early demand for mosaics such as those here referred to. Bucharest and Constantinople are also likely to be buyers of this article at a no distant date.

***

The firms mentioned in the last paragraph by no means exhaust the list of those who are making a bid for the export trade to foreign countries. Enough, however, has been said to show the class of goods that are needed if we are to wage our trade war on Germany and Austria in the Near Eastern market, as well as elsewhere.

***

The meetings of the Associated Chambers of Commerce will be dealt with in next week's issue of THE NEAR EAST.

***

Recently the Buda Pest correspondent of the *Morning Post* drew attention to a matter I have frequently referred to—namely, the efforts being made by Germany to control the navigation of the Danube. He says:—"At a conference which was held at Nürnberg recently, and at which the representatives of German commercial and industrial societies were present, it was decided that the German Government should be asked to make propositions to Austria and Hungary regarding the establishment of a navigation tariff agreement on the Danube, and thus to open a new route for German ambitions to the Balkans and the Black Sea. The Conference decided that the German Government should be asked to put forward propositions regarding this agreement, that it should be concluded before the end of the war, and that a central joint committee should be appointed to decide the tariff questions and insure to the Germans navigation facilities on the Danube. They also proposed to include the other countries lying on the Danube in the agreement."

***

The Danube navigation is an old scheme of the Germans, and the canalisation towards the Danube is one of their dreams which they also wish to realise during the war by taking advantage of the so-called alliance with the Austro-Hungarian Monarchy. They have succeeded in getting Bulgaria within their orbit as far as the lower middle reaches of the river are concerned; but Roumania still holds the trump card in this region, and can rationally be expected to keep a watchful eye on her interests. She will certainly have our tacit approval for opposing German attempts to Teutonise the Danube. That these are more serious than is generally supposed is proved by the eagerness of the Boches to construct a new canal linking up the "German Rhine" with the Danube, via the Main—which, if realised, would place the Rhenish industrial producers in immediate contact with the Near Eastern market. Hence Teuton ambitions on the Lower Danube will have to be closely watched.

***

Our Bucharest Correspondent, referring in a recent letter to our grain deal with Roumania, pointed out that our Boche detractors were exploiting to the utmost the one real drawback which the transaction presents to the seller, "namely, Great Britain's inability to export her purchase, imposing as it does on the farmer the risk attendant on the warehousing of the wheat, and depriving him of the use of his magazines for the new harvest in about five months' time." The same correspondent writes:—"In order to remove this objection, M. Démètre Greceano has suggested that England should build the necessary magazines at her own cost, or in association with the Agricultural Syndicates. The cost of their construction would amount to something like 12-15 million francs, which is not a high figure when it is remembered that the wheat stored is of the value of 362 million francs. Moreover, the Agricultural Syndicates would accept all responsibility for the wheat, so that its ultimate delivery under the best possible conditions would be assured." It is to be hoped that our Government is considering the advisability of accepting this proposal.

***

A Paris contemporary, emphasising the importance of the Greek mercantile marine, gives the following interesting figures:—At the commencement of 1913, Greece had 389 steamers over 30 tons, with a total net measurement of 433,633 tons; at the beginning of 1914 she had 450 of 494,404 tons, and early in 1915 the fleet had increased to 474 vessels of 549,983 tons. All these vessels are engaged in international trade, frequently on account of other countries, especially Italy, to which she brings goods from England, Russia, Roumania, Tunis, and even the United States and Holland. In the case of Italy alone, the commercial movement of the Hellenic fleet in 1914 represented 2,590,022 tons, having more than doubled itself in ten years. It is conceivable (continues our contemporary) that this considerable development of the Greek mercantile marine should not be without influence on our Italian allies, and possibly explains certain tendencies of contemporary Italian politics.

***

The fact that the Sudan Government has imported large quantities of British 1s. and 2s. coins points to a healthy resumption of trade in the interior of the country, where, in view of a steadily increasing commercial movement, a considerable shortage of coins has made itself felt. The value of the shilling coin has been placed at P.T.5, and that of the florin at P.T.10, at which price they will eventually be repurchased by the Sudan Government. As the value of the sovereign remains, as hitherto, at P.T.97½ there is a fractional difference between the intrinsic value of the two new coins and their value as fixed by the Sudan Government—namely, of P.T.2½ per 20s. or ten florin coins. As the measure is a purely local one, it will in no way affect the rate of exchange. Incidentally it may be mentioned that Egypt seems also to be affected by a shortage of coins, because it is announced that Lord Edward Cecil's visit to London is not unconnected with the minting of new Egyptian coins. It is to be hoped that if a new design for Egypt's coinage is to be adopted, it will contain the King's effigy. I understand that among the Sudanese natives the newly-introduced coins have, for this very reason, been particularly acceptable.

Fruit-Growing in Egypt.

A Visit to the Sewage-Farm at Khanka.

CAIRO.

Few people realise that a vast area of desert near Cairo has been transformed into profitable fruit plantations through the utilisation of the city's drainage, the scheme for which, thanks to the English advisers to the Egyptian Ministry, has been most successfully carried out by Mr. Carkeet James, the Controller-General of the Cairo drainage works.

This huge work, which was begun in 1909, arising from the imperative necessity of a proper drainage system for Cairo, will have cost approximately one and a-half million pounds, but it is expected that a part of this outlay will be covered by the proceeds which will eventually accrue from the fruit plantations, covering hundreds of acres, and treated with sewage irrigation.

An inspection of the drainage works, together with the nursery and plantations at Khanka, is an interesting experience, quite aside from its aspect as a highly successful feat in engineering and horticulture.

Let us begin our tour of inspection by leaving the train at the siding called Gebel el Asfar, and take our seat on one of the hand-pushed trolleys, with legs dangling not far from the ground, seated on a stout cushion placed on the rough wooden trolley seat, and set off for the works.

If Fate does not provide a fierce wind blowing from Khanka into the face of the person aspiring to reach his destination, he will quickly go off at a fine pace along the little rails, propelled only by Arab runners, but if the wind is against him, then he will move very sedately and slowly, with an opportunity to breathe in the ozone of the desert, and leisure to ponder the size and desolation of the vast spaces of sand stretching as far as the eye can see on either side.

Arrived at length in the vicinity of the works, we first pass on the right-hand side a sand-plus-cement brick factory, and near it the Ezbet, or Arab village, which is being created ready for labourers later on. Here, if we are not officially due first of all at the houses of the staff, we can dismount and have a look round whilst our Arab pushers rest.

Arab Builders.

Under a shady long shed we see a Greek foreman supervising the Arabs who are making the bricks. One part of Portland cement goes to eight parts of sand in the mixture of mud-pie which is going to be the brick of a few moments hence. This mixture must not be cheapened by adding water instead of Portland cement, and so the Greek foreman must be there to prevent tricks being played in its composition. Under his eye Arabs shovel the right mixture into a simple-looking machine with an energy so European and so wholly extraordinary that we inquire whence this miracle.

They are paid per brick made, so, though the day labourers in the engine-rooms are usually snatching dreams every moment they are not watched or wanted, these brawny fellows work with a will, and we are able to see the bricks made by dozens as we wait. Oh, so simple it seems! And so simple it is when once a master-brain has created the apparently simple machine for shaping the bricks, a machine not costing much over £50, and which can be worked without being destroyed by these labourers, who treat it as they do their donkeys, with slaps and whacks, as they turn cranks and push parts up and down.

To see a beautifully cleanly-cut, partly hollow brick turned out in three minutes, placed on a wooden support, and laid on the ground to dry, and to know that the sun and air will make it solid in a few days' time, is really fascinating. No worry about the process! No expense except the cheap machine, cheap labour, and getting the Portland cement imported!

Then we go to see the two round houses which are for the future inhabitants, made of these same bricks, and find that they cost only about £26 each, although the rooms appeared very large from the standpoint of the usual dimensions of the mud hut.

Here the scaffolding prevented our going over the little streets—or, rather, lanes—between the houses, but we learnt that shops would be built and a mosque, and that half the village would face the other half from a broad street or midan.

An Oasis of Green.

Getting into our trolley again, we are pushed up to the residential quarter of the settlement. Here we find one fine two-storied house, a flat above and a rest house below, standing in a lovely garden, with large green lawns.

Next to this, the most imposing residential structure is the bungalow for the use of the Controller-General, Mr. Carkeet James. This bungalow stands in a green garden, occupied principally by a flagstaff, from which a flag can be seen for many miles when princes pay visits, or to denote official residence. The bungalow has every modern convenience, including two bath-rooms. The approach to these residences is a wide avenue, lined with trees now about three years old, and already flowering and thriving exceedingly.

Other houses are bungalows for the officials in charge, and are quite comfortable, though the rooms are rather small. Some of these are of mud bricks covered with lime-wash; others of white sand bricks of the small kind, not hollow; all have corridors covered with red tiles running round them, and are inwalled in spaces more or less worthy of the name of gardens. Lastly, we see a terrace of small rooms in white brick built not far from these dwellings, and learn that they are the quarters for the domestic servants.

And here, in the desert, we find every comfort and luxury in the homes of the married men, and just as many conveniences as they want in the quarters of the bachelors—only don't think you can tell your servant to run round to the grocer's shop for an addition to a slender ménu! Everything edible comes from Cairo. A special man, a special ass, only specimen of its kind which meets our eye at Khanka—are kept for the commissariat.

Once a day your food supply reaches your door, and your mail comes above your joints, your pickles, and your whiskey, over the knees of the caterers.

Very denuded of beasts is this great beehive of industry, and we felt we should like to take that donkey's opinion of the solitariness of life at Khanka!

The Plantations.

After a short rest at a bungalow we remount our trolleys and go to see the plantations. As we came we noticed a thick belt of eucalyptus trees to our right, but to see them as a promising wood one must ascend to the balcony of the Great House.

This agricultural side of Khanka is one of great interest. It is a part of Mr. Carkeet James' plan to utilise the sewage, after it has been subjected to various filterings and added to pure water, to grow remunerative crops. In an interesting article which appeared in the *Egyptian Gazette* in July of last year the following details regarding the drainage scheme are given, and are well worth quoting here.

Cairo being on a plain and the sewage having to be conveyed a considerable distance to the disposal works, it is unfortunately impossible to drain the city by gravitation only, and the drainage of the entire city and suburbs, therefore, has to be carried out by pumping, with the exception of a portion of Abassia where gravitation is feasible.

The scheme consists of drainage by the sectional and gravitation systems. The sectional system is divided into sixty-six areas, each of which is provided with ejectors for forcing the sewage, by means of compressed air, through sealed sewage mains, into the main collector at Pont Ghamra. The compressed air required at each ejector is supplied through cast-iron pipes laid in circuits to ensure continuous service throughout the city. Eighty kilometres of air and sealed sewage mains are needed for the sectional system.

Cairo Drainage Scheme.

Each ejector station consists of two spherical cast-iron sewage receivers, of the necessary capacity to suit the requirements of each area and contained in a cast-iron casing or tubing. The action of each ejector station is automatic and the method of working is as follows: Sewage from the houses gravitates through street sewage into an inlet or collecting manhole from whence it flows into the sewage receivers. The sewage fills the receivers and raises a float which opens the automatic valve for the supply of compressed air, and at the same time closes the exhaust valve. The compressed air, on being admitted into the receiver, presses on the upper surface of the sewage and forces it through the sealed sewage main to the main collector. As soon as the contents of a receiver have been discharged, the float governing the automatic valve for the supply of the compressed air is pulled down by an attached weight and shuts off the compressed air supply, at the same time opening the exhaust valve which places the inside of the receiver under atmospheric conditions and ready to receive a further supply of sewage by gravity. The whole process is automatic and works with the minimum of supervision.

The gravitation system starts at Pont Ghamra, at which point all the sewage from the sectional system is discharged into a main collector 1.60 metres internal diameter. The main collector then gravitates for a length of thirteen and a-half kilometres to its termination at Kafr el Gamoose, intercepting the gravitation sewers from Abassia, Demerdache, Koubbeh, Heliopolis, Zeitoun and Matarieh at various points along the course. At Kafir el Gamoose the main collector terminates in a screening chamber, where the solid and floating matter from the sewage is removed by means of mechanical screens and transported by Decauville to the sewage farm. The sewage then passes through a culvert into the pump, immediately over which are placed the pumps and engines of 900 h.p., which lift the sewage through a 0.92 metre diameter cast-iron main for a distance of eleven and a-half kilometres to the farm at Gebel el Asfar.

Purification Works.

At the purification works and farm at Gebel el Asfar, the sewage from the rising main will be received in tanks, where it will undergo a process of sedimentation. The effluent from the tanks then passes through filter beds composed of gravel, where it undergoes further treatment before being used for irrigating the farm.

About 200 feddans of land has been levelled and is ready for cultivation, and the tree-belts for protecting the crops are well advanced. The water used for irrigating the belts is obtained from artesian bores, and the levelling has been carried out by convict labour.

The vastness of the sand fields amazes the eye, all divided by roadways on which the trolley lines are laid, so that we are pushed round them at a rattling speed. Let us first get off at the nursery. Here we see an effendi in charge of the workers, and learn that he is a specialist on tree propagation. Under his eye are grown from seed or cuttings thousands of shade trees and fruit trees. The eucalyptus and the Australian wattle are found very suitable for quick culture, the tamarisk shrub is largely used as a wind break, whilst near the houses are thousands of date palms planted in rows, at present only about a foot high, but destined in twenty years or less to be producing valuable dates.

Thousands of orange trees, mandarines and citrons are already planted out, and

acres of grape vines, pomegranates and figs. What a luscious land it will be in our children's heyday.

The Nurseries.

Vegetables of all kinds are grown in a plot adjoining the shaded nursery, and here we peep down a huge well from which water is pumped into a fine tank, from which it is used daily on the nursery grounds. The most perfect arrangement of all the parts of the nursery elicits our admiration. There is something so hopeful, so cheerful about size and perfection in gardening operations that we are led to forget for a moment the many anxieties of the horticulturists.

The need of shelter from fierce desert winds and sun is very great, hence the planting of the eucalyptus groves to shelter the fruit trees in some measure from the blasts of Boreas. It seems marvellous that after the first tender stage all these fruit trees will grow in pure sand, if properly watered, and when the water is mixed with manure their growth will be even more rapid.

Awe-inspiring to an eye accustomed to small orchards are these vast sand fields planted to fruit-bearing trees, and when we hear that as far as the eye can reach the desert will be squared off and planted, we realise that the heads which can plan all these wonders and carry them out successfully are worthy of our deepest respect, and after having visited the tanks, the engine-house, the filtering beds, etc., we feel indeed that Egyptian Days are quite as wonderful as Arabian Nights!

H. POWER.

SHIPPING AND EGYPT.

A telegram received at Alexandria (says the *Egyptian Gazette*) announces that the Italian Government has decided to prohibit Italian vessels of more than a thousand tons burthen from leaving the Mediterranean or to trade in the inland sea with neutral countries, or even with the Allies, except with special permission. This measure will not, however, affect Egypt very much, as the weekly Italian steamers which belong to lines receiving a Government subsidy for their service between Egypt and Italy are not likely to be withdrawn.

With regard to the temporary suppression of the Messageries service, says the same journal, this measure only applies to the Marseilles-Alexandria service. The Far East Messageries steamers will continue to call at Port Said as in the past.

Trade Notes.

Egypt.

The Secretary of the Direction Générale des Douanes Egyptiennes, Alexandria, invites tenders for the supply of 250 pairs of boots. Date, March 8.

Tenders are invited by the Ministry of Public Works for the purchase of the following steamers; (1) Rameses the Great and (2) Tewfik, both damaged by fire at Bulac, Cairo, and (3) Rameses, lying sunk off Messrs. Cook's yard at Bulac.

Separate tenders will be received for each of these steamers, which will be sold as they lie in their present position and condition with boilers, machinery, etc., on board. Tenders should be addressed to the Director-General of the Mechanical Service Ministry of Public Works, Cairo. The Rameses the Great and the Tewfik will have to be removed within three days, and the Rameses within one month of acceptance of tender. No date for the receipt of tenders is mentioned.

A cash deposit of £E10 must accompany each tender.

The Department of Technical, Industrial, and Commercial Education, No. 14, Sharia Abdin, Cairo, invites tenders for the supply of raw materials, pupils' clothing, etc., for Cairo and Assiut Model Workshops and Mansura Trades School. Specifications and all other information can be obtained at the Model Workshops, Bulac, Cairo. Date, March 11.

H.M. the Consul at Cairo has forwarded particulars in connection with a call for tenders by the Egyptian Ministry of Education for the supply of raw materials, manufactured accessory articles, tools, pupils' clothing, etc., required during the year ending March 31, 1917, by the Model Workshops at Bulac (Cairo) and Assiut, and by the Trade School at Mansura. The list of articles required includes metals, piping, brushes, belting, leather, timber, locks, nails, screws, tools, files, emery cloth, paints, cotton yarn, clothing, etc. Copies of the specification, list of articles required, and forms of tender may be obtained from the Model Workshops, Bulac (Cairo), where also samples may be seen. Sealed tenders, on the proper forms, will be received up to noon on March 11 by the Director-General, Department of Technical, Industrial, and Commercial Education, Cairo. A copy of the specification, together with a list of the articles required, may be consulted by United Kingdom manufacturers and exporters at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications, with forms of tender, etc., may be obtained at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo.

Sudan

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 22, 1916, for the supply of oils and lubricants required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Agent Sudan Government Railways, Alexandria, or Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 29, 1916, for the supply of paraffin and petrol required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, or to the Agents, Sudan Government Railways, Alexandria.

ROUMANIAN COMMISSION FOR IMPORTS.

(From Our Own Correspondent.)

Bucharest, February 1.

A commission has been appointed by the Government for the purpose of determining the conditions in which foreign produce may be imported, as well as for regulating the exchange of goods between Roumania and the neighbouring states.

ROUMANIA'S FOREIGN TRADE.

Reuter reported from Bucharest on February 27 that the Central Committee on Imports publishes its latest decisions, which may be summarised as follows:—1. All imports require the authorization of the said Committee. 2. The export of cereals must be authorized by the Central Committee. 3. The export of wines must be authorized by the Wines Committee. 4. The export of other products, now on the prohibition list, including petroleum and all mineral oils, must be authorized by the Imports Committee. 5. The export of products on the prohibition list must be authorized by the Imports Committee. The Government is taking active measures to prevent the smuggling of live stock out of the country.

GREEK ENEMY FIRMS.

The *London Gazette* of February 29 publishes the following list of firms of Greek nationality or association with whom trading is prohibited, except where a general or special licence has been granted. Application for a licence should be made to the Controller, Foreign Trade Department, Lancaster House, St. James, S.W.

Antovich, Pierre, Chios.
Back, Paul, Athens, 13, Rue de l'Université.
Bensussan, D., Piræus.
Block, Eugène, Piræus.
Damas, Constantine, Calamata.
Defner and Edelmann, Athens.

Gromann, George, Athens.
Hampartchoumian, Aran, Athens and Manchester.
Harr, Gustave, St. Theodore Square, Athens.
Heidmann, Hans, Salonika.
Hoffmann, Alfred, Piræus.
Koenig, T. and H., and Co., Athens.
Kouremetis, Michael, Athens and Calymnos.
Kouremetis, Pandelis, Athens and Calymnos.
Kruger, Max, Canea.
Kruger, Richard, Canea.
Michaelides and Milch, Panghion Hotel, Athens and Piræus.
Ornstein, Dr. Otto, Chios.
Schiffel, Helmuth, Volo.
Sufelder and Co., Salonika.
Stringos, George, Piræus.
Weher, Karl, Athens.
Wein, Jacob, Canae.
Zahri, Henry, Calamata.

A PHOTOGRAPHIC FAMINE.

(From Our Own Correspondent.)

Salonika, February 12.

In a previous letter I referred to the enormously increased prices of the necessaries of life in this town. What we usually class as luxuries have undergone a still higher increase. Photographic materials are generally included in this class, but to the army of amateur photographers among the Allies and the representatives of the illustrated journals in particular they have become very necessary. The small stock of such materials obtainable in the town was soon exhausted, and now there is a regular photographic famine. Further supplies have been ordered, but in consequence of the disorganized steamer services they have not yet arrived. As examples of the high prices asked, I may mention that a box of plates 13 x 8 centimetres (7 in. by 5 in.) is usually sold at 12 or 13 frs. (about 10s.). The price in London is about 3s. Again, hyposulphite of soda, which I used to buy at home for 1d. per lb., has cost me as much as a shilling for the same quantity.

Engineering Notes.

Salonika Improvements.

A writer in the *Morning Post* gives the following interesting details of what we have done in Salonika:—When our first supply ships steamed up the Gulf last October there was only one jetty at which their cargoes could be discharged, and but one berth available for them alongside the quays. There was not enough water at the jetty for transports to berth there, so that supplies could only be landed in lighters. Behind the jetty was a tract of waste ground used by the Greeks as a sort of remount depôt for pack ponies—a broad slough of mingled mud and manure. Beyond that lay the rough-paved streets of the town, ending in the two indifferent main roads that go out into the country, neither of them in a condition to stand the traffic of heavy motor-lorries to which they were about to be subjected. In four months, thanks to the labours of the Army Service Corps and the Royal Engineers, the Augean remount lines, cleaned up and floored with tons of stone and gravel, have become our Base Supply Depôt, piled high with tons of foodstuffs; roads now run in places where the first motor-lorries that ventured sank over the axles and had to be towed out with ropes; a long new jetty has been built; a Decauville light railway is being laid, starting from the shore and ending in an aerial cable railway among the hills ten miles away to the north; previously existing highways have been improved in every way, their cavities filled in, their worst stretches re-metalled, and their wooden bridges under-pinned, while at least 100 miles of new roads have been built, so that Greek farmers whose property last harvest-time was five miles from the nearest track negotiable by wheels, already find an excellent motor road passing by their very gates. These, together with the sinking of artesian wells, the draining of marshy soil, and the doubling of the railway tracks, are some of the works that have been undertaken in connection with the revictualling of our force here."

Presses for the East.

Presses for various purposes are extensively used throughout the East, especially in districts where oils, wine, cotton, flax, and other similar fibres, or wool, hides, etc., are produced and exported. In the Near East particularly the possession of a press is regarded as a very valuable asset to the grower, or to the export merchant. But whilst hydraulic and other mechanical presses have been introduced in that region during recent years, their heavy weight is an impediment to their employment in hilly districts where, owing to the lack of proper roads, everything has to be carried on the backs of mules or horses. The possibility, therefore, of being able to transport by such means efficient and powerful presses will be of great interest to many proprietors who are compelled to use wooden presses of an archaic design and local construction. We allude to a press which is made almost entirely of mild rolled steel, only very few parts being cast iron. The risk of breakage is thus reduced to a minimum. The mechanism is very simple, but scientifically designed on the most correct principles to give a gradually but enormously increasing pressure, while keeping the motive power almost constant. The press requires no skilled attention and can be driven by hand power, animal power, or by means of a belt from any prime mover, such as steam, gas, or oil engine, electric motor, or water wheel. The machine is worked by turning a winch close, or attached to it, which winds in a wire rope and pulls a combination of levers together, thereby pressing down the platen. There is a knock-off arrangement which automatically stops the winch directly the platen reaches the required point, and applies a brake that holds it as may be desired. In this type of press there is absolutely no "slipback," as often happens with hydraulic presses. When the pressure is no longer needed the brake is released and the press returns to its initial position automatically. This press is built in a great variety of sizes and capacities to suit all kinds of produce, whilst a noteworthy feature is its portability. If the makers of this type of press adapt it to the requirements of olive growers and oil-mill owners in the Near East they will secure a good market.

A Cold Tire Setter.

Agriculturists and those who use vehicles or implements with wooden wheels are in a position to know the trouble attached to such wheels in hot weather, and the inconvenience experienced when tires become slack and wheelwrights or blacksmiths are not near at hand. It often means suspension of work and loss of time at an important period of the year. All these can be prevented by a compact little machine which was viewed at a recent show. According to those who were using it, the machine is "a very powerful tool," and is much quicker than the old-fashioned style of putting on tires. In addition, the machine is useful when the tires become slack, as they will do in hot weather especially. Instead of rewelding the tire—a method occupying considerable time—all that the operator has to do is to set the wheel in the tire on the machine and tighten it up, a matter of ten minutes or so, which means that it is effecting a considerable saving in labour. It is claimed that two men can put on about fifteen pairs of tires a day. One of the chief advantages of this machine is that it has a key-adjusting device which forces the grip keys against the tire, making them work evenly, and preventing their slipping on the tire. The keys are made fast in the machine with a movement of the hand in forcing the lever down, and the keys are absolutely obliged to work evenly and cannot slip. It is claimed to be the only machine with draw-heads moving on a circle to conform to the circle of the tire, and, in the writer's opinion, a most-needed machine in the East, where there are not many skilled wheelwrights, and many vehicles and implements have to remain idle when needed most through the want of capable men to effect repairs, especially on wheels.

The Edfina Line.

According to the *Egyptian Gazette*, railway traffic on the above line has been suspended. There are only four trains daily on the line from Bussili to Edfina, two up and two down. The rails are all being taken up and removed to another part of Egypt. There is not much trade in that part of the Delta, and it will be possible to communicate with Alexandria by the Delta Light Railway system through Damanhour.

THE DEMAND FOR ZINC.

The large amount of zinc required for war purposes, and the resulting enormously increased demand for the metal, known commercially as spelter, lend special interest to an article in the current number of the *Bulletin of the Imperial Institute* on "The Occurence and Utilisation of Zinc Ores." The chief zinc minerals are described, and a brief account given of the more important occurrences in the United Kingdom, the Colonies, and India.

Zinc ores have been mined in many parts of the United Kingdom, but the most important zinc deposits in the British Empire are those of Broken Hill Mines, New South Wales, the output of which alone is sufficient to supply the entire demands of the United Kingdom for metallic zinc. The Broken Hill ore before the war went mainly to Germany for smelting, but the Australian Government has adopted measures which will prevent this in the future. Zinc is also found in South Australia, Queensland, Tasmania, New Zealand, and Newfoundland. Canada contains a number of workable zinc deposits, particularly in British Columbia, and there is every prospect of Burma becoming an important producer. In Africa there are zinc deposits in Egypt, Nigeria, Rhodesia and the Transvaal, as to which more information is needed.

Twelve barges and steamers, belonging to the Express Nile Steamers Company, have been chartered by the Egyptian authorities for £E2,000 per month.

IMPORTANT PETROL SEIZURE

(From Our Own Correspondent.)

Salonika, February 7.

A short time ago the French authorities at Salonika seized a quantity of petrol (motor-spirit) under circumstances which clearly indicated that it was intended for German submarines or other enemy use. The present Greek Government, whose strong pro-German sympathies are well-known, wished to minimise as much as possible the importance of this seizure, and accordingly an official *communiqué* appeared in the Athens newspapers to the effect that the quantity seized only amounted to 60 litres (about 13 gallons). This *communiqué* having been brought to the notice of the French Headquarters here, they have now issued the following official statement, which shows how much reliance can be placed on *communiqués* from pro-German sources, even when they are official.

"1. The benzine (petrol) was seized on January 22 from the Astra Romana Co., whose premises were closed, the manager, a German, having been arrested on December 31 for espionage, his son and the engineer, Elfer, having fled.

"2. Fifty barrels of petrol were discovered by the gendarmes under planks covered with 20 centimetres (about 8 inches) of earth, in a deep excavation, the earth, which was levelled down, suggesting no suspicion of the existence of this reserve. Other barrels of petrol and oil were seized in the same buildings.

"3. The total quantity seized amounts to 15,962 kilos (about 16 tons) of petrol and 19,204 kilos (about 19 tons) of oil, of which the French authorities have taken possession."

Near East Markets.

SUDAN GUM.

Exports.

One hundred and four thousand seven hundred and eight kilos of gum, valued at £E3,213, were exported viâ Port Sudan, and 2,413 kilos of gum, valued at £E57, were exported viâ Halfa during December, 1915.

The following table shows the value and quantity of gum exported from Port Sudan during the period January 1 to December 31, 1915 :—

	£E.
Australia	6,047
Egypt	23,450
Eritrea	1,033
France	84,825
Great Britain	131,357
Greece	236
Holland	278
Italy	8,681
New Zealand	71
Spain	1,080
U.S.A.	50,169
Japan	5,070
Total value	312,297
Total quantity, tons	11,577

During the same period in 1914 the exports of gum from Port Sudan were 12,266 tons, valued at £E312,697.

TOBACCO FROM CYPRUS.

In former times the tobacco-growing industry in Cyprus was of some importance, but latterly it had practically disappeared. In 1905 the Director of the Imperial Institute, who visited the colony at the request of the Secretary of State for the Colonies, suggested that this industry should be revived. It is satisfactory to note that this suggestion has no wborne fruit. A company was formed in 1913 with the object of reviving the Cyprus industry, and tobacco is now being cultivated at a number of villages, and is also being grown experimentally by the Department of Agriculture. Five samples of Cyprus-grown "Turkish" tobacco have recently been examined at the Imperial Institute, and the reports of British tobacco manufacturers thereon received. The general result of these investigations and reports is satisfactory, and the tobaccos are regarded as distinctly promising for the manufacture of cigarettes of the Turkish and Egyptian types.

Now that the difficulties created by the Turkish suzerainty of Cyprus have been removed and the island has become a British possession, the industry may be expected to make rapid progress.

AMERICAN GRAIN FOR GREECE.

According to Reuter, the Salonika correspondent of the *Echo de Paris* says:—The National Bank of Greece has been instructed by the Minister of the Interior to effect the purchase in America of 35,000 tons of wheat for Government account. The ships required for the transport have already been advised to be in readiness to start for America so soon as the negotiations commenced by the Bank with the American grain firms have been terminated. Immediately the grain arrives in Greece, the Bank will have it stored in different warehouses so that it can be quickly distributed in pursuance of the instructions of the special committee created to that end. The present order will be followed by others on the same conditions.

PERSIAN GUM-TRAGACANTH.

The various species of Astragalus, known in Persia as "kevin," from which gum-tragacanth is obtained, grow on the mountain ranges which surround the Persian plain. The bushes producing the gum grow to a height of two feet. In the spring when the sap rises a part of the branches are cut away, thereby allowing the sap to flow out, which coagulates within a few hours on the surface of the stalk. An American Consular report states that the price of gum-tragacanth has increased 5 to 10 per cent. since the outbreak of hostilities in Europe. The principal Persian markets for gum-tragacanth are

Hamadan, Shiraz, Karman, and Kermanshah. From 150 to 200 tons are exported annually from Hamadan alone. Before August 1, 1914, half of this amount was shipped to Russia and the other half to America and Great Britain; but since that date the amount shipped to Russia has been reduced to one-fifth, the other four-fifths going to America and Great Britain.

PRODUCE REPORT.

Currants. LONDON, March 1.

The market has been active this past week, with considerable business done at more or less higher prices than those quoted last week. Speculation is still going on, and, as mentioned in last report, prices may go higher.

Sultanas.

There is a steady demand without any particular change in prices. Afghan and Indian fruit continue to attract attention, while Greek and Cretan is somewhat neglected.

Figs.

The market is rather quiet and prices unchanged

Dates.

There has been a better demand with business done at late rates.

Seeds.

Linseed is inactive and lower. London-Calcutta spot is quoted 81s., afloat 81s., February-March and March-April 81s. La Plata-Hull February-March and March-April quoted 74s. 6d. Cotton seed is dull. London-Egyptian on spot is offered at £14, and February at £14 10s. per ton. Rapeseed remains very quiet. Toria-Hull, March, 74s.

Oils.

Linseed oil is quiet and easier. Spot pipes landed are offered £44; barrels, ditto, £45; March-April, £44 10s.; May-August, £45 10s.; September-December, £46 10s. Rape oil is steady. Ordinary brown, naked spot, £52; English refined barrels, £54 to £56. Cotton oil is quiet. Crude spot pipes, £42 10s.; refined pale pipes, £47 10s.; and barrels sweet, £51 to £52 as to make.

Oilcakes.

Cotton Cakes.—Only a small quantity of Egyptian is available on spot, for which holders ask £9 17s. 6d. to £10, while there are sellers of afloat shipments at £9 13s. 6d. to £9 15s. 6d. ex ship. English are unaltered, while Bombays £9 5s. per ton is asked. Linseed Cakes.—There has been an improvement in the market with a better consumptive demand, but no speculative inquiry is noticeable. Quotations have a hardening tendency. Best London make is offered at £12 15s. to £13, while fine seedy Calcutta is offered at £13 to £13 5s. per ton.

The Egyptian Ministry of Agriculture has purchased 16,000 ardebs of cotton seeds from Messrs. Carver and Messrs. Benachi, of Alexandria, at the rate of from P.T. 140 to P.T. 145 per ardeb. The price was paid a few days ago through the Alexandria Governorate. The seeds, which are required for the poorer class of the fellahin, have been ordered to be forwarded to the various Merakez, where they are wanted. The goods will be resold there at the rate of P.T. 150 per ardeb for cash and P.T. 168 for delayed payment, including all expenses.

PROSPERITY IN EGYPT.

The many investors interested in Egypt (says the *Observer*) can rest assured that the country is flourishing, as the financial figures show. The fellaheen are doing well with their cereals and sugar crops, and the improvement should continue. As regards cotton, it will be recalled that the Government put the 1915 crop down at 4,863,000 cantars, and as some of the 1914 crop was still held up in the provinces, estimated the total deliveries at the end of the agricultural year as rather higher. Already 4,000,000 cantars have arrived at Alexandria and all but 500,000 cantars have been exported. Stocks are decidedly lower than a year ago. Cotton is still coming into the ginneries, and stocks are still held up. As Egypt is not half-way through the agricultural year, there is every prospect that when August arrives the 1914-1915 crop figure of 6,320,000 cantars may be attained, despite the short 1915 crop. An indication of the altered conditions is seen in the fact that the value of the exports of cotton and cottonseed are greatly in excess of a year ago.

As far as the prospects of the 1916 crop are concerned, it is early to say much. Sowing has commenced in Upper Egypt. But there is a chance that the area will not return to the 1,700,000 feddans level from the 1,186,000 feddans level to which it was reduced by the operation of the 1914 decree. The reasons are that cottonseed is phenomenally dear (P.T. 150 per ardeb, against P.T. 100-110 normally). An ardeb is required for three feddans of land, and the fellah may prefer to stick to his cereals, which have paid him well. Moreover, good cottonseed has been in short supply. The shortage and dearness of coal, which is nearly four times its usual price, are serious, for the fellaheen use a quantity for their irrigation pumps, especially at the cotton sowing period. The Government is taking exceptional measures in regard to raising the water-level in the canals, so that the trouble may be obviated.

DEBTS OF THE EGYPTIAN PEOPLE.

Zakaria Bey Namek, a well-known lawyer of Beni Suef and member of the Legislative Assembly for that province, has compiled a very interesting report on the debts of the Egyptian population. The writer, according to the *Egyptian Gazette*, gives a statement of such debts in 1913 as compared with those in 1906 and 1900. This statement shows that the debts have risen from 140 million frs. in 1900 to 540 millions in 1906 and 1,175 millions in 1913. He criticises the system resorted to by the mortgaging banks of expropriating the mortgaged property when the owners delay the payment of the instalments due, and thinks that owing to the war and the difficult circumstances in which landowners are placed at present the banks should deal with their debtors in a more lenient way, and thus avoid the sale of the mortgaged property at very low prices, as is the case at present.

Namek Bey advises the Government to interfere and to seek a solution in which the interests of both the banks and the proprietors may be guarded. He thinks that this could be executed if sequestors were appointed from among notables and officials to administer such estates for five years, after which they would revert to their normal condition, and the proprietors would thus have their properties saved, while the banks would be able to recover their debts.

NEWS FROM ALL SOURCES.

Reuter reported from Amsterdam on February 29 that a telegram from Constantinople announced that the Turkish Senate, after a short debate, in the course of which Talaat Bey reviewed the financial situation, adopted the Budget, with only one dissentient voice.

The Roumanian Budget for 1916 amounts to 600,000,000 lei, the same as that for 1915.

The Sofia Budget for 1916 allows for 7,874,560 frs. ordinary and 6,445,292 frs. extraordinary expenditure.

In a message from Athens British exporters are advised to discard their fears to make shipments to Greece owing to the uncertainty of the future. It is pointed out that they run the greater risk of seeing the Greek market monopolised by foreign competitors, notably Americans, and that there are hundreds of articles outside the Allied restrictions for which Greece is prepared to pay cash on delivery.

It is announced from Athens that, as the result of Great Britain's refusal to supply the full quantity of sulphate of copper demanded by Greece, the Greek Government has applied to the United States.

During last year the Greek Government paid £10,699 to this country as an instalment of the Greek Loan, leaving £689,402 due.

The Bulgarian Government has prohibited the exportation of soap.

The House of Commons is to be asked to vote £198,019, additional sums required for various branches of the Civil Service, and it includes £37,339 for the purchase of some property adjoining the Residency at Cairo.

COMPANY RESULTS, &c.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the eleven days ended January 31 amounted to £E7,713, as against £E6,304 for the corresponding period of 1915.

GREEK GOVERNMENT 5 PER CENT. LOAN OF 1914.—The coupons which fell due on March 1 should be presented for payment between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, or at the office of Messrs. Emile Erlanger and Co., 8, Crosby Square, E.C., or at the London County and Westminster Bank, Ltd., Lothbury, where lists may be obtained.

PRINCE LINE.—The directors have declared an interim dividend of 5 per cent., payable March 4.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for the week ended 19th ult., 721 tons.

SUEZ CANAL.—Receipts for the 26th and 27th ult. amounted to 290,000 francs., as compared with 510,000 francs for the corresponding days last year.

MONTENEGRIN BANK NOTES.

The Budapest correspondent of the *Morning Post* reports from a Hungarian source that M. Jergovich, a Montenegrin ex-Minister of Finance, told a journalist in an interview that the total debts of Montenegro amount to £4,000,000, and that the financial reorganisation of the country would be a very great task. During the war, the Government issued a loan in the interior of the country amounting to nine million crowns (£360,000). Together with the loan which Montenegro received from England, the whole of the money was spent on the army and equipments, for which they had to pay in gold.

The journalist, who had an interview with M. Jergovich, then says:—"In the streets of Cettinje, one can see everywhere large numbers of bank notes lying on the ground. The children play with them, and some of the most ragged juveniles claim numberless thousands as their possession."

These bank notes had been called in by the Government with the idea of issuing new notes, and the notes were strung on string and piled in great bags in the Treasury building. When the Austrian soldiers entered the capital, these bags were ransacked and thrown out. The new notes have not been issued, and so it came about that the Montenegrin children came into possession of this apparent wealth, which is utterly worthless. Learning that in distant parts of the country these notes are still being circulated, the present Government issued a warning information to the people, saying that they do not accept responsibility for their circulation. No other money was found in the Treasury except the many bags with the notes mentioned. Montenegro was perfectly penniless at the time of the Austrian occupation of the capital.

A Athènes à la Caisse de la Société.
,, Londres chez Messieurs C. J. Hambro et Fils.
,, Berlin à la Nationalbank für Deutschland et chez Monsieur S. Bleichröder.
,, Constantinople chez Monsieur L. Zarifi.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to December 31, 1915 (New Style: January 14, 1915, to January 13, 1916):—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Pirœus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Dec.,	1915	2,423,582	1,553,000
Do. do. do	1914	2,630,367	2,375,605
Estimated Receipts for 12 months (Law of Contrc:)		28,900,000	10,700,000
Actual Receipts, 12 months,	1915	35,308,588	23,344,887
Do. do. do.,	1914	36,193,454	26,894,096
Difference between estimated and actual receipts for 12 months	1915	+ 6,408.588	+12.644,887
	1914	+ 7,293,454	+16,194,096

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Pirœus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate of the month is above par the conversion is made at that average rate.

With reference to the Trading with the Enemy (China, Siam, Persia, and Morocco) Proclamation, 1915, and to the Trading with the Enemy (Liberia and Portuguese East Africa) Proclamation, 1915, it is notified that inquiries as to whether specified firms in Persia and Morocco are desirable as consignees of goods, from the point of view of possible trading with the enemy, may now be made at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

NOTES OF THE WEEK.

To the fall of Erzeroum has now to be added the capture of Bitlis by the Russians, in circumstances which make the feat almost more remarkable than the previous achievement. On March 2 the town was attacked at three o'clock in the morning during a snowstorm at the point of the bayonet, without a shot being fired. After a desperate resistance, the garrison was forced to retire. The position occupied by the Turkish artillery was captured after hand-to-hand fighting, in which all the defenders were killed. Twenty guns of Krupp's latest type, all in good condition, were taken, and in Bitlis itself was found a large depôt of artillery ammunition.

Meanwhile the right wing of the Russian line is driving the enemy before it along the Black Sea littoral. Before the Russian advance on Erzeroum the Turks occupied a strong position at Arkhava, a short distance from the frontier. They were attacked and driven out of this place in the middle of February, but, thanks to the configuration of the country, were able to offer a strenuous resistance in a series of positions separated by only a few miles from one another. The last of these to be held by the Turks was a little to the east of Atina, and rather than risk a frontal attack the Russians on March 4, under cover of the guns of the fleet, landed a force at Atina. From the wording of the official report, which states that, "advancing rapidly south, the Russian troops forced the Turks to evacuate their position," we must infer that the bulk of the force east of Atina made good its escape, as only 200 prisoners were taken on the occasion of the landing. Atina is sixteen miles from Rizeh, and sixty miles from Trebizond. The Russian advance continues in this sector, and Rizeh has also been occupied. It is doubtful, indeed, whether the Turks will be able to offer any formidable resistance east of Trebizond. A second Russian force was reported at Ispir some days before. Between it and Trebizond lies a high range, but the two forces, with the help of the Russian fleet, will probably seal the doom of the Black Sea port before Turkish reinforcements can reach it.

With the Russian line threatening Trebizond and extending south as far as Bitlis, there can be no doubt as to the seriousness of the thrust from the Turkish point of view. The menace, however, is not to Constantinople, but to Baghdad. The Russian successes will have disturbed the equanimity of the Turco-German clique which rules the capital, but they will have rendered the Turkish forces at Baghdad, or based upon it, anxious for their personal safety. If the present rate of the Russian advance be maintained, it cannot be long before the Baghdad line of communications, with its railhead at Nisibin, less than 200 miles south-east of Bitlis, is threatened. Already the route by which a number of troops will have been sent to Mesopotamia is in Russian hands, and east of Bitlis there will probably be a long gap in the Turkish line of defence. To complete the discomfiture of the enemy, it is essential that an immediate attempt should be made to reach Baghdad from the south. The British Mesopotamian force is some 150 miles away, but it has not yet acquired the momentum of the forces which our Allies have launched against the Turks in the north. True, it is operating at a great distance from its base, and unforeseen difficulties have arisen. But a relief expedition which does not relieve introduces a new term into British military phraseology, and one which ought not to be allowed to remain.

The last news from Kut dealt with General Townshend's request for vegetable seeds and gramophone records. As a testimony to the garrison's spirits the request was unexceptionable, but its publication in an official *communiqué* has not altogether relieved the public mind of anxiety for the safety of General Townshend's force. The absence of further news from this front after such a chatty description of life from day to day in beleaguered Kut is naturally commented upon, and surprise is expressed that more practical contributions should not be made to the public knowledge of how things really stand with this British force. The interest in Kut and its gallant garrison is not only personal. It is linked with concern for the future of British prestige in this part of the world. It is just as important that Baghdad should be taken by British troops with the least possible delay as that General Townshend should be relieved. There was recently a

Digitized by Google

show of activity on the part of the relief expedition, but the message stopped somewhat ominously with a reference to the possibility of floods, and the rest is silence.

In Persia the Russians have continued their pursuit of the Turks west of Kermanshah. A further report speaks of the occupation, after an engagement, of the town of Bijar, ninety miles to the north-west of Hamadan. This is the first intimation of the enemy's forces in this part of the country being in two detachments. If the northern force consists of Persian irregulars only they will probably melt into space before the Russian troops. If there should be Turks or Germans among them, it should be possible for the Russians, who have reached Cola, twenty-seven miles west of Kermanshah, to cut off their retreat, whether they try to gain Baghdad or to link up with the Turkish forces which have been dispersed in the neighbourhood of Lake Van.

Apart from the Russian successes west and north-west of Kermanshah, the best news from Persia is contained in some belated information in the *Cologne Gazette*, which seems to indicate that the Germans are beginning to recognise that as far as that country is concerned they can throw up the sponge. A Hungarian deputy, we are told, who was formerly counsellor of legation, was sent out in January, 1915, "to Persia and Afghanistan, where he formerly acted in a diplomatic capacity, with the object of agitating against the Russians and the British." On the way to Afghanistan, however, the praiseworthy mission was rudely interrupted by the would-be agitator, Rakovsky by name, being attacked by Persian tribesmen and barely escaping with his life. This experience caused him to set his face at once in a homeward direction, and, after staying at Mosul and Baghdad, he finally reached Constantinople a few weeks ago. His verdict was that it was no use counting upon Persia, as complete anarchy reigned in the country. A second message to the *Cologne Gazette* reaches it from a Swede, Major Frisch, who was attached to the Persian Gendarmerie as instruction officer. He gives vent to the grievances of the Swedish Gendarmerie officers against one of their number, Major Nyström, who is spoken of as the present commandant of the force. The head and front of Major Nyström's offending appears to have been that he did not fall in with the plan of his brother officers to remove the Shah from Teheran to Ispahan and generally to embroil the Persians with Russia and Great Britain. Major Frisch is as pessimistic as Radovsky, for he ends up his recital by stating that the Swedish officers left behind in Persia are fighting a hopeless struggle, as they are opposed to an army of 40,000 men.

The anomalous position in Greece, where the Government is engaged in building a bridge to accommodate its own withdrawal from an untenable position to that occupied all along by the majority of the nation, finds a curious echo among the Greeks in Egypt. The Hellenic community in Alexandria has been thrown all agog by two incidents which happened almost simultaneously. Last July, at a time when feeling among Greeks ran high owing to the political crisis in Greece, a member of the Greek Club in Alexandria, a strong Venezelist, appears to have declared in that building, in the course of a heated discussion on affairs in the mother country that he was ashamed of being a Greek. Such a statement was held to be a statutory offence, and during February he was tried and sentenced to seven days' imprisonment by the Greek Consular Court. On the top of this trouble the Consul-General, who is held responsible for the harsh treatment of the unfortunate Venezelist, made a speech at a school fête, in which he pointed out that King Constantine's Government was following a line of policy solely dictated by the interests of Greece, and that the policy of the Opposition was against Greek interests. The Government, he is reported to have added, was co-operating with the Allies, there was no other course of action possible, and when the time came about, half a million bayonets would defend the country. On the evidence supplied the impartial observer will have a shrewd suspicion that the Greek Consul-General at Alexandria was offering a humble brick towards the Government's bridge at Athens. But his compatriots on Egyptian soil resent consular politics in any shape or form, and ask, if no other course of action save that of co-operation with the Allies is possible, what becomes of "the Government's cries of indignation against the Allies or the statement that scarcely 20 per cent. of the Greeks want to co-operate with the Allies"? The answer is that the cries and the statement will share the fate of many other winged words, because for the moment bridge-building is the most profitable occupation.

The death of "Carmen Sylva," the gifted Queen Dowager of Roumania, is a loss to Europe as a whole. To the Roumanians she was essentially Elizabeth the Good, for, having come amongst them as a foreigner, she identified herself entirely with her adopted country, devoting both her heart and her talents to Roumania's good. Her world-wide reputation as a poetess was used to make Roumania better known and better understood among the nations; her motherly instincts and orderly mind found expression in the organisation of Red Cross work during the war of 1877-78 and in the promotion of native arts and industries. At the same time her own enthusiasm for the arts and literature helped to foster their pursuit in the young kingdom. The welcome awaiting every true artist or man of knowledge at the Roumanian Court did much to keep Roumania in touch with the Western world of science, art, and literature. The brief summary of her will reflects the trend of her life's devotion. She prays Heaven to bless the Roumanian people, which is gifted with many excellent qualities that reserve for it a brilliant future. She leaves all the properties which she possesses in Roumania for various benefactions. Large sums are left to Queen Marie, to be expended for charitable purposes, and arrangements are made for providing dowries for poor girls and subventions to Roumanian artists studying abroad.

The news from Egypt this week records the reoccupation of Barani, on the western frontier, which had been in the hands of the enemy for three months. This step follows upon the successful engagement of February 27, when the enemy's position was attacked and their leader, Nuri Bey, brother of Enver Pasha, was killed. Other indications point to the fact that the trouble with the Senussi is on the wane. It was engineered by Turco-German agency, and was artificial to the extent that it was based on false hopes of booty rather than on any pronounced enmity towards the Anglo-Egyptian forces. The booty having proved a vain quest, the object of the campaign has gone, and the clearing up of the remains of the trouble should not present great difficulty.

The question of enemy trading has exercised British public opinion in Egypt for some time past, with the result that the Government was at last obliged to take more drastic steps to deal with the matter. Ventilation of the subject has helped to strengthen the hands of the authorities, and there is good reason to suppose that the peculiar difficulties of the political situation having been overcome, the matter is now being dealt with satisfactorily.

There has been a great deal of discussion lately about the stringency of the regulations that prohibit English ladies from going to Egypt. So far as the wives of military officers are concerned, it is clear that the judgment of the military authorities must be regarded as final. It is also conceivable that exceptions in the case of the wives of civil residents might prove undesirable, particularly if they tried to bring with them their sisters, cousins, or aunts. The very stringency of the regulations, in short, is probably the best safeguard against their effectiveness being counteracted. But this does not alter the fact that several cases of real hardship have come to light. The authorities in Egypt have had to deal with a difficult and constantly changing situation, and have treated it with remarkable success. We have no doubt therefore that they will manage to deal with cases of actual hardship on their merits.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 22.

The High Commissioner.

H.E. the High Commissioner, accompanied by Lady McMahon, has just paid a short visit to the Canal zone. Whilst at Ismailia they were the guests of the Count de Serionne, the Superintendent of the Suez Canal Company. His Excellency inspected all the defence works, which have been organised in that zone.

The Fall of Erzeroum.

All things considered, the fall of Erzeroum has had an excellent effect here. Many Egyptians know little about the town, and there is no doubt that they would have been far more impressed if a centre like Baghdad had been captured. All the same, the significance of the Russian victory is generally realised, and it is recognised, even by those who were disposed to credit the Germans and the Turks with serious intentions with regard to Egypt, that the reverse suffered by the latter in the Caucasus has settled all danger of any attack on this country; while at the same time it will considerably weaken the resistance which will be offered to us in Mesopotamia.

The Situation on the Western Frontier.

On the western frontier we have been somewhat active. Small parties of hostile Bedouin have been reported in the Farafra and Beharia oases, and strong reinforcements of troops were hurried to the Fayum and points further to the south, as it was thought that these Bedouin might try to raid the towns and villages on the west bank of the Nile. No fighting has occurred, however, anywhere along the western frontier, and at certain points the hostile bodies have gone off west again.

As a matter of fact there is considerable discord amongst the Bedouin elements who have been co-operating against us in the west. This is due in the first place to the traditional hostility that has always existed between the Tripolitan Arabs and the Aulad Ali, who are the preponderant tribes in the Eastern (*i.e.*, Egyptian) side of the frontier, and in the second place to the behaviour of the Turkish officers who have been directing operations. When the trouble on the frontier first broke out a great many of the Aulad Ali, and of the tribesmen of the neighbouring tribes, seduced from their loyalty to the Egyptian Government by the specious arguments of the Turkish emissaries, overcame their hatred of the Western Arabs, and, crossing over, joined with them in the attacks which were recently made on us. Some of these Eastern Arabs, it is true, were forced by threats and other subterfuges to fight against us, but the majority were undoubtedly tempted from their allegiance by the glowing prospects of booty held out to them. All went well for a time. The Eastern Arabs very soon found, however, that they were being made to do all the dirty work and bear all the brunt of the fighting. During the recent encounters the heaviest loss in life and property has fallen on them, and their protests have only called down upon their heads the harshest of treatment. Those who expressed their disgust at the disappointment of their hopes and at the non-fulfilment of the promises made to them, have been handled in the most disgraceful manner by the Tripolitan Arabs, who, encouraged by the Turkish officers, have been only too pleased to take advantage of their own numerical superiority and maltreat and coerce those of their Eastern neighbours who joined them.

Numbers of these Aulad Ali have managed to escape, and have come in to our lines since the last fight. They report that petitions have been sent to the Grand Sheikh of the Senussi by their tribes protesting against the treatment they have received; but as Sayed Ahmed El Sherif has lost all his influence, their appeal will, it is to be feared, have no effect. It is significant as showing that they realise this fact that the refugees have brought with them a petition from five sheikhs of one of the Aulad Ali tribes invoking the protection of the Anglo-Egyptian authorities against the Tripolitan Arabs.

From the tales of these refugees, who arrived in a pitiable condition, it is evident that the Aulad Ali have had quite enough of their partnership with the Tripolitan Arabs, and that, given the opportunity, all those who went over to them would be only too pleased to come back home again. Every consideration is being shown to the incoming refugees, who, it is recognised, have been the unfortunate victims of Turkish intriguers, and who are being housed and fed by the Anglo-Egyptian authorities in special encampments to the east of Mersa-Metruh. It is probable that the steady secession of the Eastern Arabs, which is continuing, added to the serious losses in life and cattle and property suffered by the Tripolitan Arabs, will cause the latter to withdraw still further to the West. Whether the back of their aggressive movement, such as it was, has been completely broken it is, perhaps, too early to say. The harvest is due at the end of next month, and we must wait until the Tripolitans have garnered in their crops and have their time once more on their hands, before we can tell whether the reverses we have so far inflicted upon them have really cowed them and shown them the folly of their ways. In any case, as I have stated before in this correspondence, nothing more serious than periodical raids and a guerrilla warfare on a small scale is to be anticipated in the West.

The Mixed Courts.

There is still no settlement of the question at issue between the Egyptian and Italian Governments, but it is now more confidently stated that the end is in sight, as it is understood that a formula acceptable to both sides has been found. I should like to take this opportunity of stating that negotiations are being carried on in the most friendly spirit.

Meanwhile, the Italian Consular Courts have received instructions from Rome to deal with all civil and commercial cases brought by foreigners or Egyptians against Italians. All such cases at present in the Mixed Courts cause list and not yet pleaded can be withdrawn from that jurisdiction and be entered before the Italian Consular Courts; but the Italian Government is of opinion that mixed cases in which the plaintiff is Italian can still be dealt with by the Mixed Courts. We shall know at the end of this week whether the latter endorse this view, for the question was raised on Thursday in the Mixed Court of Appeal in Alexandria by counsel for an Italian plaintiff, and the Procureur-Général promised to give his opinion after eight days' consideration.

The Egyptian G.P.O. and the Military Mails.

Reference has on more than one occasion been made in The Near East to the complaints of non-delivery of mails and parcels sent to the troops in Egypt. I gather that the impression is that the Egyptian Post Office is responsible for this state of affairs. This is, however, not the case, and a few words of explanation may, therefore, not be out of place. When the troops started to come to this country over a year ago it was proposed that—as had been arranged in connection with the rail-

ways and other services—the men in charge of the Egyptian Post Office should do the military work as well. The home authorities, however, for reasons best known to themselves, objected, and insisted on appointing and sending out their own staff. As a result, there has been throughout, and there still is in existence in this country, side by side with the Egyptian postal service, a second administration, which deals with and is solely responsible for the military mails, and over which the Egyptian postal officials have no control, although they have to do all the carrying of the mails in question. To all out here, who are aware of the efficiency of the Egyptian postal service, it has been a matter for surprise and deep regret that its valuable co-operation in such an important business as the handling of the military mails should have been dispensed with in this manner, and, considering the circumstances, it is no wonder that complaints have been rife as to the disposal of those mails. That there has been so little friction between the two authorities, and that the Egyptian service itself has suffered so little from the existence of this *imperium in imperio* is, I may add, entirely due to the tact and organising ability of the Egyptian Post Office staff, who have had, and are still having, no enviable strain put upon them.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, February 23.

The Legislative Council.

When the Council meets towards the end of March various draft laws will be introduced, among them one, which is much needed, to amend the law relating to the election of Mukhtars (village headmen). Various provisions in the existing law on the subject undoubtedly stand in need of amendment. For example, the last Annual Report mentioned that the Mukhtar, who is sometimes a moneylender holding judgments for debt against his fellow-villagers, is the authority for the execution of such writs—an obviously undesirable state of affairs.

Fate of a Cypriot Sailing Vessel.

On February 8 a sailing vessel, the Evangelistria, owned by a merchant of Kyrenia, G. Kharzalambou, was sunk by a French cruiser off the Papho coast, a crew of four being landed at Papho, and the skipper being detained. The vessel was returning from Rhodes, to which island it had, with permission of the authorities, taken a cargo. The master, it is said, had received orders to bring back olives, soap, or other non-contraband articles from Rhodes or other Greek islands. Report states that glycerine was found under consignments of soap and olives. According to the papers, the house and office of the owner have been searched, but nothing tending to incriminate him has been found. There can be no doubt that the French vessel had good reason for the action taken. Considerable excitement has been caused by the incident. It is stated that two submarines had been recently seen round the coasts. The matter is being further investigated.

The Convalescent Camp.

A large increase in the number of convalescents is expected. The accommodation has been considerably extended in late months near Limassol. The heat in Upper Egypt will soon render necessary the closing of such camps in those parts, and Cyprus will offer a welcome change. The Cyprus garrison will shortly be relieved by two new companies, one of which will probably be quartered at Nicosia.

A Cypriot Volunteer.

Among the volunteers serving in the Foreign Legion of the French army is a Cypriot from the village of Strovolo. The French Government has sent a first instalment of a generous allowance to his wife through the French Consul at Larnaca, M. Henri Bryois.

An earthquake shock was felt in parts of the island on February 22. Few years pass in Cyprus without tremors, especially in the west of the island, but there have been no serious shocks causing any damage for some time.

The island has again been without mails for a fortnight.

SUDAN NOTES.

(From a Correspondent.)

Land Registration.

Judge G. W. Williamson, of the Land Court and Registry, Khartoum, is now on tour through the Provinces of Sennar and the Blue Nile, and is finding a plenitude of supervision work awaiting his attention. Judge Williamson has been ten years in the service of the Government, and is regarded as a sound authority upon all questions affecting the tenure of land and the benefits attending its agricultural development. The Administration for some time had the assistance of Mr. Ball, who a few years ago—1913—completed the settlement and registration of that part of Geteina District which lies on the east of the White Nile. Owing to the inhospitable character of this district, the work proved of a particularly arduous nature, and Mr. Ball was deemed to have done very well, especially in regard to the demarcation work carried out.

Judge Williamson has brought the work of his Court to a state of great perfection, and there is no question but that the benefits produced by the settlement of agricultural land have been numerous. The most satisfactory result perhaps is that it terminates, it is hoped for all time, the litigation which formerly took up so much of the time both of the landowners and the provincial staff. As an instance it may be mentioned that after the settlement referred to the entire number of land cases heard in Judge Williamson's Court for the year did not exceed five.

That the work of the Land Registration Court is not slight is proved by the fact that during the same period there were no fewer than 3,995 documents registered, representing in fees £E2,375. Of this total, 509 registrations were debited to the Blue Nile Agricultural Lands, while 980 were those of Omdurman. Although Khartoum only registered 372 claims, it paid by far the larger amount in fees—namely, £E1,154 out of the total mentioned, £E2,375. This was, however, only for Khartoum and Khartoum North Lands; the Province Agricultural Lands represented in addition 575 registrations, calling for fees amounting to £E256. At present little or nothing of importance is being recorded in the town or province of Khartoum in regard to land transactions.

Archæological Excavations.

The arrival of Dr. G. A. Reisner at Kerma, in the Dongola Province of the Sudan, indicates that the work on the excavations there, which had been interrupted since the outbreak of the war, is to be renewed. Dr. Reisner is in a peculiarly favourable situation, since the greater part of the funds for the carrying on of his valuable work is contributed by his wealthy University, that of Harvard; while the larger portion of the money necessary to carry on the excavations at Meroë and Napata emanates from the Universities of Liverpool and the Sudan Excavations Committee in the first instance, and from the University of Oxford in the second. It can very easily be understood why neither of the great English Universities at the present moment finds it possible or expedient to find the funds for further exploration work in the Sudan. In the absence of private support, it may be some time yet before either Professor John Garstang or Professor F. Llewellyn Griffith can take up the valuable work at Meroë and Napata where it was temporarily abandoned.

It was originally intended that Dr. Reisner should devote part of his season in 1915 to the number of mounds north of the cemetery of the Hyksos period at Kerma, which still awaited unearthing; it is this most interesting and instructive work that is now being proceeded with. It is believed that the results will enable us to detect that there were garrisons in the Sudan even earlier than that which held the Northern Sudan in the Hyksos period. This garrison, Dr. Reisner tells us, held Kerma during the Middle Empire, and the buildings—five in number—unburied by him had been built or reconstructed during this time.

Dr. Reisner is considered one of the greatest living authorities upon both Egyptian and Sudanese antiquities, and each year until last he passed several months at the excavation camp in Kerma.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, February 20.

The Forces at Salonika.

The growing importance of the concentration of Franco-British troops and of the fortified camp at Salonika, which has now become quite impregnable, taken together with the attitude of the Germans and their allies, who dare not undertake the much-talked-of attack, and with the capture of Erzeroum and the advance of the Russians, has made a great impression upon anti-Ententist circles, especially military circles. The latter, as the Venizelist Press calls to mind, formerly, through the Ministerialist journals, advised the Franco-British troops at Salonika to save themselves ere the Germans arrived to drive them into the sea, and offered the assistance of Greek troops to cover their retreat and embarkation. Then, it was said, it would be impossible for the 200,000 Franco-British troops to resist more than fifteen hours; the German torrent would overwhelm them! Now those who indulged in such prophecies are disillusioned by observing the strength of the Allied force in men and in guns; while the Serbians, whom they (the prophets) regarded as completely demolished, are on the high road to complete recovery, and will form a force of about 200,000 men to be added to the French and British at Salonika, bringing the total strength up to over half a million men.

These facts have utterly disconcerted the anti-Ententists, who dare neither to say nor to write anything further; and now it is beginning to be understood, even in high places, that if Greece had neutralised the action of Bulgaria at the psychological moment the Germans would never have crossed the Danube. It now remains to be seen if the change in the situation, which affords Greece every security, will decide her to take part in the great struggle. Unfortunately, for the moment at least, there are no indications of any change of the kind.

The Visit of General Sarrail.

The abstention in a body of all the members of the Cabinet from the official luncheon given at the Legation in honour of General Sarrail, to which they were invited, was a fresh manifestation against the Entente, and particularly against France, which leads one to think that no such intervention as that referred to above is likely. One thing, however, is certain: there has been a marked improvement in the relations between the Greek military authorities and those of the Allies at Salonika, and it is this which has rendered possible the visit of General Sarrail to Athens, his reception by the King, and the acceptance by the members of the Staff of the invitation to the official luncheon.

The Italians at Corfu.

The landing of Italian carabiniers at Corfu has raised a diplomatic and political question between Italy and Greece, and has stirred up a feeling of strong indignation throughout the country, especially in Corfu, which led to an unfortunate incident in the Chamber. The explanation given, that the presence of the Italians at Corfu has no other aim than to demonstrate the unity of action of the Entente Powers, has not carried conviction to the Greeks, since Italian co-operation has not been forthcoming at Salonika, at Mytilene, at Lemnos, or elsewhere, and Italy has always been suspected of harbouring designs on Corfu. As a matter of fact the Greeks cannot bring themselves to regard Italy in the same light as they regard the three other Powers in the Entente, who have always been the protectors of Greece, and from whom she has nothing to fear. Italy, as a neighbouring country, following an imperialist policy, is here regarded as a natural rival to Greece both in the Balkans and in the Ægean basin, and the Greeks, irrespective of party, will never forgive Italy for having filched the island of Rhodes. For these reasons it is held in certain directions that the other Powers ought not to have allowed Italy to take part in the French occupation of Corfu, and the incident has given rise to much dissatisfaction.

The Incident in the Chamber.

The maladroit attitude of the Government, which has allowed a deputy from Corfu to insult the Italian people, its Army and its King, from the tribune, without saying a single word of disapproval, compelled it afterwards to make the *amende honorable* by inserting in the official report of the sitting a statement that the Corfu deputy had been reprimanded by the President of the Chamber. What is more, M. Skouloudis has had to submit to some very strong remonstrances on the part of the Italian Government. Apropos of this incident the *Patris* recalls that when M. Venizelos foresaw this conflict of interests the Gounaris Government considered that the adhesion of Italy to the Entente would not be at all prejudicial to the interests of Greece.

Greece and Roumania.

A Ministerial journal which is reported to be inspired by M. Gounaris announced that the Roumanian Government has frequently expressed to the Athens Cabinet a desire to enter into closer relations with Greece, and that, as the Greek Government also recognize the desirability of this course, it is not improbable that a *rapprochement* may be reached shortly. This understanding, says the Ministerial journal, would aim, not at joining in the European struggle, but at preventing any excessive aggrandisement of Bulgaria or any other Balkan State to the detriment of Greek or Roumanian interests.

Commenting on these pronouncements, the *Patris* observes that "we must not allow ourselves to be deluded. Roumania understands quite well that after the crushing of Serbia, the Treaty of Bucharest, which constituted the point of contact between herself and Greece, is no longer in existence. Had Greece abandoned her neutrality in February or in August of last year, Roumania would certainly have done likewise; now, if the turn of events in the Balkans should decide her to join in the struggle and to co-operate with the Allies, she will do so without having any need to wait for the adhesion of Greece, who has become a factor of hardly second-rate importance. Greece, no longer able to take the initiative, will then see herself bound, willy-nilly, to follow the course of events in order not to find herself isolated and annihilated.

The Cost of Living in Athens.

The faulty distribution of supplies by the authorities appointed for this purpose has resulted in a lack of the principal provisions, not only in the provinces, but in Athens itself. Thus, incredible though it may seem to some of your readers, the inhabitants of the Greek capital, finding themselves unable to buy sugar, have been driven to replace it by honey. Holders of sugar sell it clandestinely at fabulous prices—2 frs. 50 and 3 frs. the oke (a little over a kilo); and this state of things has compelled the Government to requisition a large quantity of sugar, which will be sold at more or less reasonable prices. But, taken all round, the cost of living has become much higher in Greece than in Germany. Flour costs 90 centimes the oke, rice 1 fr. 50, beans 1 fr. 80, potatoes 80 c., olive oil 2 frs. 20 to 2 frs. 60, and so on.

SALONIKA LETTER.

(From Our Own Correspondent.)

February 12.

The Threatened Attack.

Attack or no attack?—that is the question. It is discussed in all the newspapers, in all the camps, in all the cafés, in every place where men do congregate, and all come to the same conclusion—that the question still remains unsolved. The subsidised pro-German Press tell us the attack is imminent, as they have told us at intervals since last November. With monotonous reiteration they repeat in the form of telegrams, purporting to come from Bucharest, Rome, Paris—any place except their real birthplace, Berlin, or even Salonika itself—the tale that the Germans and their allies are concentrating large forces at Monastir, and that they will advance in ten days, five days, at once! But the Salonikians are not to be moved by these Wolfferies; the Allies here are not alarmed in the least, neither are they. Indeed, the former are now so confident of their strength that, as far as I can learn from conversations with both officers and men, they only pray that the news may be true. They would thoroughly welcome the attack, and they are quite prepared to give the enemy the very warmest reception.

These false cries of "Wolf! wolf!" (should it not now be spelled Wolff?) have been repeated so often that the people of Salonika refuse to be alarmed by them. Therefore, on the inspiration of Baron Schenk's organs in Athens, the local newspapers have gone off on another tack. They declare that Salonika is to undergo a further series of murderous bombardments from Zeppelins and aeroplanes, and advise the inhabitants to abandon the town *en masse*. Some weak souls may have been influenced by these threats; but the people are not going to leave, and that for two reasons. In the first place, they know the Allies have taken such fresh precautions that further serious aerial attacks are extremely unlikely, and, in the second place, they are making so much money out of the Allied troops that even if the enemy were at the very gates they would hesitate to give up such a lucrative business.

Salonika in Darkness.

In a previous letter I referred to the pathetic appeals made by the gas and electric light companies to the public imploring them to economise both these supplies, because of the shortage of coal at the works. The people do not seem to have paid much attention to these appeals. Then, just in the nick of time, the obliging Zeppelin came along, and now the Greek and Allied authorities have enforced an order that all lights in the main streets be extinguished and that interior illumination in the cafés and shops should be greatly reduced after a certain hour in the evening. Some people wickedly suggest that the gas and electric light companies must have been in league with the enemy in order to bring about the result so much desired. In any case, it is a ticklish operation to find one's way home now after 10 o'clock p.m.—for which reason the change is calculated to encourage sobriety. The main streets are then in absolute darkness. And such streets! Narrow and irregular, with here and there a hole or a mud puddle—just as the Turks left them. The belated pedestrian has, nevertheless, to keep his nose high up in the air in order to guide himself as much as possible by the appearance of the sky between the house tops on either side. I have not seen London since the commencement of the war, but it cannot be so bad as this. In any case, the streets there are level and clean underfoot.

British Lady Prisoner in Bulgaria.

Miss Joy Whitehead, a Canadian young lady who joined one of the Red Cross units in Serbia early in the present war, has not been heard of for a long time, and her friends are getting anxious about her. An American newspaper reports that she is now a prisoner in the hands of the Bulgarians. She was connected with one of the hospital units for a time, and acted occasionally as chauffeur (or "chauffeuse"?). She appears to have been a very courageous girl, and always wished to be as near the firing line as possible. Inquiries out here have so far been unsuccessful, but if anyone can give information as to her whereabouts they are requested to be kind enough to communicate with the British Consul at Salonika. No confirmation has been received of the report that she is now a prisoner.

Strike of Refugees.

One would have thought that the crowds of refugees who are employed here by the Allies, and who receive much higher wages than they could get elsewhere in the town, would be only too glad to earn about four francs each per day. But here, as at home, there are agitators who instigate them to demand more, and a few days ago they induced the men to come out on strike. The British authorities refused to increase the rate of pay, and threatened to import more reasonable workers from elsewhere. The ringleaders among the men told their comrades that, as the British were rich, they would pay any wages asked if the men only held out. As the strike produced no such effect, some of the men wished to return to work, but I overheard one of the aforesaid agitators tell them that if they went back now on the old terms they would be beaten. In the end, however, they all returned to work.

These labourers receive tickets or credit notes each day for the amount due to them, and at the end of the week these are paid at the pay office. But there is a crowd of agents or money-changers who waylay the men as they leave their work, and offer to discount these notes at once at considerably less than their face value. Many of the men yield to the temptation, and thus have little or nothing to receive at the end of the week. The money-changers then present the notes they have acquired, and are paid by the British in a lump sum. This is a very bad practice in the interests of the men themselves, and I would strongly suggest that the money should only be paid direct to the workers.

ARMENIANS OF LONDON AND BITLIS.

The capture of Bitlis aroused great enthusiasm at the Armenian celebration of "Vardanantz" at Westbourne Park Institute, Bayswater, on Saturday afternoon. Mr. Karnignian, a journalist, who has just arrived from the Caucasian front, remarked that it is not realized here that the Armenians are rendering invaluable assistance to the cause of the Allies in many ways. Another speaker said: "The Armenians have drunk the cup of sorrows to the bottom, but the days of joy are at hand." Professor Hagopian, who took the chair, and M. Tiratzian, of the Petrograd Opera, gave a historical outline of the celebration. The meeting was organized by the Armenian Literary Society of London.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THRE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, February 20.

Scarcity of Food—

Turkey seems to be not far from the fate to which she was doomed when her unscrupulous rulers dragged her into the European conflict. The latest news from Constantinople likens the situation there to that of a besieged city. The necessaries of life are becoming alarmingly scarce, and it is said that many of the large establishments are laying in stocks of provisions with the view of distribution among their employees later on. The prospect for those who have been unable to make provision of this kind for the future is not pleasant. As predicted in a former letter, the effect of the opening up of through communication with the Central Powers has been to deprive Constantinople of food, rather than to ameliorate the situation.

It is reported that meat is being exported from Constantinople; whether that be so, or whether it is because of the difficulty of bringing sheep to the capital, the fact remains that the price of mutton has more than doubled during the past month. An official notice in the papers states that the butchers are authorised to sell mutton at 17 piastres the oke, but actually much more than that has to be paid. Sugar is only being sold on the production of a doctor's certificate; groceries have almost ceased to exist; bread is obtainable only with more than the usual difficulties; and it is asserted that another two months will see the end of Turkey's wheat. A notice appeared in the papers of the 1st inst., to the effect that as the Anatolian railway was exclusively occupied by the military, no commercial traffic would be allowed, and that on the Oriental Railway the Army's requirements must be satisfied before wagons can be spared for commercial purposes. The announcement further states that the steamers of the Ottoman Navigation Company will carry gratis all foodstuffs from the Marmora ports to the capital. Coffee has quite ceased to exist in the interior, and the characteristic Turkish cup of coffee is no longer to be had. The *Tanin*, in a long article, urges the people to follow the example set in Germany, and to cultivate every bit of available land with some article of food.

—and Money.

The financial situation is likewise worse than ever. On January 31 the Chamber of Deputies passed a law increasing the loan of £T.6,000,000, voted last October, to £T.20,000,000, to be raised in Germany. It is not clear what the object of this loan is unless it is to pay in some form or other Turkey's debts to German creditors. All these loans raised in Germany are shrouded in mystery. Of course, no coin comes into Turkey; in fact, on the same day the Chamber authorised another issue of paper money to the extent of £T.1,340,000. The issue of so much paper of forced currency is naturally a matter of some concern to the banks, who may find themselves loaded with a lot of worthless "scraps of paper" at the end of the war. The mark is depreciated to the extent of about 35 per cent. in Constantinople, the exchange on Berlin being 24 marks to the Turkish pound.

The Death of Prince Yussuf Izzeddin.

The mysterious death of Prince Yussuf Izzeddin at 7.30 a.m. on the 1st inst. is the talk of the day. It has naturally given rise to many rumours, and the verdict of suicide is received with much scepticism. It is stated that the Prince was to have left the following day by the Balkan train. The long medical report, signed by nineteen doctors, states that death was due to hemorrhage caused by opening important veins in the left arm. The *Tanin* stated that the Prince's death did not come as a surprise in view of his well-known disposition to suicide, and that his Highness had suffered for years from an incurable illness. The interment took place on the 2nd inst. in the tomb of Sultan Mahmoud.

The British Cemetery at Scutari.

The British cemetery at Scutari has, it seems, for some time been under military control, with what object is not known. Entrance to the cemetery was only allowed for funerals, and nobody but the relatives of the deceased could attend. Now, however, even burials are not permitted there.

French and British Prisoners.

The batch of Frenchmen with one Englishman who were imprisoned as a reprisal for the arrests of the Consuls at Salonika have been liberated, but Mr. Scudamore continues under arrest at Stamboul. It is reported that he is well treated, and his wife is allowed to visit him twice a week.

The State of Smyrna.

The rumour that the Vali of Smyrna was to be replaced by Bedri Bey has not so far proved correct. There is a greater scarcity of food there than in the capital, and travellers say there is much sickness owing to the bread being evidently made of flour mixed with some other ingredient.

Smyrna, it is reported, has been denuded of its troops.

To what extent the Turks have been impressed by the fall of Erzeroum is not yet known, but there is no doubt that it will come as a great surprise to the people in general, and the effect will probably be to make them place less reliance on the official *communiqués*, which, during the continued advance of the Russians towards Erzeroum, have day after day announced "no change in the situation"!

DISTRESS IN SYRIA.

Writing from Cairo on February 18, an occasional correspondent reports:—

A private letter received recently from a correspondent in Palestine describes the acute economic distress from which the country is now suffering. Hardly any able-bodied men are left in the country; wheat is said to be selling at double the normal price, although it is one of the staple products of the land; while olive oil, which used to be exported in large quantities from Palestine, is now so scarce that it is selling at unprecedented prices. Soap also is being sold at proportionate prices. Although this year was that of a large crop—full and short yields alternate, as is well known, in Syria—yet, owing to the locust invasion, which came at a time when the olive trees were most susceptible to damage, the crop has been almost nil.

According to information which has reached Petrograd 40,000 Armenians in Erzeroum were driven out before the fall of the town and massacred by Kurds, who had been forewarned by the Turks.

Reuter's Athens correspondent telegraphs (March 7):—Advices from Constantinople state that a demonstration organised principally by women against the exorbitant prices of the necessaries of life in consequence of what was described as the unjustified war and the partiality shown for the Germans to the detriment of the natives has resulted in the prohibition of the export of meat to Germany which has been going on since the opening of the Berlin-Constantinople line. A railway wagon carrying preserved meat for Berlin was stopped at Adrianople, where the meat was sold to the population at a reasonable price.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of the "NEAR EAST" to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, February 17.

Disillusionment Beginning?

Travellers arriving from Bulgaria announce that the Bulgarians are moving part of their forces from the Albanian to the Macedonian front. Three Bulgarian divisions are being concentrated on the Ghevgeli line. All the soldiers, it is said, seem to be in very low spirits, and present a most dejected appearance. The provisioning of the army presents great difficulties, and efforts on the part of the staff to overcome these difficulties are generally vain. The construction of roads between Serbia and Bulgaria has been commenced, but the work is rendered very difficult by the intense cold and the lack of appliances and transport.

The insufficiency of food, the failure of the post and communications, and the complete lack of news regarding what is going on in Bulgaria itself are combining to exert an unfavourable influence on the Bulgarian soldier, who does not mind expressing his dissatisfaction openly, and cases of insubordination are of very frequent occurrence. Punishments in the ranks are correspondingly frequent, but they seem to have but small effect.

King Ferdinand's Movements.

The Agence Bulgare announces that King Ferdinand will shortly go to Coburg, and adds that he will appoint a Regent, which seems to indicate that his absence may be a prolonged one. It is asked in Sofia what motives can inspire his Majesty to leave his capital just now, when his presence is so necessary there, and to go so far away. Probably he finds the situation becoming too difficult for him. M. Radoslavoff is not the faithful, devoted Minister in whom the King can put unlimited trust, and Ferdinand knows quite well that he and the other members of the Cabinet would not scruple to leave him the moment that things go against him; and his departure may be due to sheer panic. On the other hand, it is possible that it is merely another of those wily moves for which he is famous—that he deliberately aims at giving his Government an opportunity to come to some arrangement with the Entente Powers, an arrangement for which he could, at need, disclaim all responsibility. Should this be the idea, he and his Government will doubtless find out that it takes two to make a bargain.

German and Bulgar.

It is to be observed that the German Press has lately indulged in some strong criticisms of Bulgaria for declining to press on with the war without further "compensations." This is significant, but even more so is the fact that the Bulgarian Press has quite changed its tone regarding the Quadruple Entente. The *Echo de Bulgarie*, which since the commencement of the war has never ceased to vilify the Allies, has lately moderated its language, and discusses political events calmly. All this seems to indicate that Bulgaro-German relations must really be seriously strained.

Serious anti-German movements are reported both in the army and among the civil population of Bulgaria. This is not surprising, in view of the well-known independence of the Bulgarian people. They refuse to become the vassal of another Power, and are in a state of rebellion against the attempt to make them so. More than one influential person is known to be of opinion that the best solution of the present state of things would be to make a separate peace with the Entente; but perhaps it will be wiser not to be more specific on this subject just now.

"Trophies of War."

More "trophies of war" have arrived at Sofia. These are in the form of agricultural machines of various kinds which have been "captured" in Old Serbia. It is announced that as soon as they have been repaired they will be offered for sale.

It is announced that the Council of Ministers, on the suggestion of M. Radoslavoff, has decided to adopt the Gregorian calendar in lieu of the Orthodox, now in use throughout Bulgaria. A decree will be issued announcing the date on which the change is to take place.

The fire which occurred a few days ago at Rustchuk caused enormous damage. According to particulars published by the Ministry of Finance, 5,000 cases of petroleum and a boat loaded with haricot beans were destroyed, together with a great deal else.

Desertions from the Bulgarian army are still on the increase, and are causing such serious perturbation to the military authorities that it has even been suggested that the relatives of any soldier deserting shall be put under arrest. All reports received here tend to show that the war is intensely unpopular with the rank and file, who are demanding to be informed how much longer they are to be kept under arms. One deserter states that he recently put this question point-blank to a lieutenant, and that the latter replied: "Ask the Germans!" then spat on the ground—an action that will be appreciated at its proper value by those who know their Near East.

THE WAR IN ASIA.

The *New Statesman* recently devoted a long article to a study of the Asiatic theatre of war. After showing how the fate of Erzeroum opened up the way to the control of adjacent country to the north and south of it, the article continues:—

Now, the Russian movements hitherto reported are all on the northern side of the Armenian Taurus. There has, indeed, been a rumour that the Turks are evacuating Bitlis, and if this is followed by its actual capture by the Russians, the position will be somewhat different. Even then, it will be seen, our Allies would have a long way to go and another range to cross before they began to interfere directly with the Turkish line of communications to Mosul and Bagdad. Unless the forces at the Grand Duke's disposal are much larger than it is reasonable to suppose, he is unlikely to adventure far in this direction. It is more probable that he will make his main advances westward, pressing towards Erzingan and Kharput, for in that case his progress and communications are comparatively easy, and the high mountain walls protect his flanks. If the Turks attempted a flank attack with troops brought up from Nisibin, the natural obstacles would tell heavily against them, particularly if the Russians held the Bitlis Pass.

Turkish reinforcements may be summoned from any of three directions—from Constantinople, from the army massed against Egypt, or from Mesopotamia. The hope has been commonly expressed here that they may be withdrawn from Mesopotamia, and so ease the pressure on our forces there. That result of the Russian victory would certainly have its satisfactory features, but it would be still more satisfactory to learn that we have been able so to strengthen our Mesopotamian front as to render a Turkish withdrawal impossible. Presumably, we knew beforehand of the Grand Duke's advance, and took at least some measures to co-operate with it in our sphere. Be that as it may, it is obvious that Marshal von der Goltz's great relief expedition to Bagdad made the Russian victory possible, just as the locking up of the main Turkish army in the Dardanelles prevented the Turkish invasion of the Caucasus last summer. Whatever be the case in other theatres, there is no doubt that in Turkey by far the heaviest brunt of the fighting has fallen on the British armies.

The *New Statesman* does not consider it probable that reinforcements will be hurried to the cold of the Armenian mountains from Syria, as the forces available there are "sure to consist largely of Syrian and Arab elements accustomed to a warm climate." On the other hand, these forces are, in the opinion of the paper, the only ones with any chance of arriving on the scene of operations in time to be of any assistance to the Turks, as reinforcements from Constantinople would have to travel by train to Angora and then be faced by a five-weeks' march to Erzingan.

It seems probable, then, that the Russians will devote their first efforts to overrunning Armenia and consolidating their hold on it; that the Turks will draw most of their reinforcements from Constantinople; and that they will not arrive till Armenia is conquered. What, then, would result from the conquest? Armenia is the "key" to Asia Minor and Syria in the same sense as the Alps and Tyrol are the "key" to Provence and North Italy. It does not follow, above all under the conditions of modern trench warfare, that the districts opened up will be successfully invaded. Still, it will throw Turkey almost entirely on the defensive, and she may have to draw in her horns for that. At a certain point it would be necessary to abandon Mesopotamia, lest in trying to defend it she might lose Syria-Palestine too.

VIRILE ROUMANIA.

(By Our Bucharest Correspondent.)

Statistics for the year 1914 supply us with interesting figures anent the increase in the population of the kingdom of Roumania. Thus in the course of this year 327,345 children were born, which represents a proportion of 42.1 per thousand, about 7½ per cent. being illegitimate. A curious fact is that there is an excess of males over females amounting to a round 10,000.

During the same year there were 182,949 deaths, which figure represents 23.5 per thousand. Infant mortality accounts for no less than 50 per cent. of the total deaths, which shows how much there is still to be done in the way of bettering the social conditions of the peasant class. In spite of this, Roumania holds the record in Europe as regards excess of births over deaths, for this is represented by the figure 144,396, or 19 per thousand.

If we assume an increase of 300,000 in the population during the years 1914-15, and add this to the census of 1913, we find that the kingdom of Roumania can boast to-day of a population of eight million souls.

It is interesting to note that during the year 1914 there were 65,325 weddings and 3,433 divorces, which makes about fifty-three divorces per thousand marriages.

When we come to examine the populations of the Austro-Hungarian provinces inhabited by Roumanians (Bukovina, Transylvania, Maramuresh, Crishana, and Banat of Temesvar) we are met by a series of difficulties, due mainly to the fact that the census taken at different times by the Hungarian authorities has been wilfully perverted by the latter for purposes of their own. This makes a long story, into which we need not enter here; but there is none the less sufficient evidence that the Roumanian race is no less prolific beyond the frontiers of the kingdom.

An official census made by the Austrian Government in 1857 (prior to the establishment of Austro-Hungarian dualism, and therefore at a time when the governing powers had no particular reason for being biased in the matter) determined that the Roumanians inhabiting the country between the River Tisa (Theiss) and the Carpathians numbered 2,641,700.

The surest way of arriving at an approximate estimate of their present number is based on a study of the census of 1910 dealing with the prevalent forms of worship. The Roumanians of the provinces under consideration belong either to the Greco-Oriental or the Greco-Catholic Churches. The Serbs belong to the former, the Ruthenians to the latter. If we deduct the number of Serbs and Ruthenians from the total number of Greco-Catholics and Greco-Orientals, we obtain the number of Roumanians, for the Hungarians are mostly Roman Catholics and, to a less degree, Calvinists. If to the figure thus arrived at we add the number of Roumanians inhabiting the Bukovina, we obtain a round number of three and a-half millions, which is considered by many to be a minimum.

Merutziu, who has made a special study of the question, starts from the official Austrian figures of 1857, and bases his calculations on the fact that the Hungarians themselves own to an increase of 10 per cent. in ten years among the populations of the Roumanian provinces. This must be looked upon as an under-estimate if applied exclusively to the Roumanian element, for mingled with this are other nationalities with much lower birth-rates. Merutziu thus estimates the total number of Roumanians between the Tisa and the Carpathians at the outbreak of the present war at 4,372,444. Deducting the odd hundred thousands as representing emigration to America and the kingdom, we are left with a total of four millions, which is his estimate of the number of Roumanians living under Austro-Hungarian rule.

And now we will produce a few facts and figures illustrating the value of Hungarian statistics:—

Roumanians in Transylvania and adjacent Provinces.

Austrian census, 1857 (reliable)	2,641,700
Hungarian census, 1910	2,949,032

i.e., an increase in 53 years of 11½ per cent.!

Total Number of Hungarians in Austria-Hungary.

Austrian census, 1857	5,400,000
Hungarian census, 1910	10,050,575

i.e., an increase in 53 years of nearly 100 per cent.!

With which the following facts may be contrasted, thereby enabling the reader to draw his own conclusions:—

1. Hungarian writers themselves refer to the Roumanian race as vigorous and prolific.

2. Roumanians have an excess of births over deaths far exceeding that of the Magyars.

3. In the course of forty years Roumanians have attained the numerical majority in 300 communes originally Hungarian, losing during this period only twenty-one to the Hungarians and two to the Saxons ("Magyarorszag," Budapest, 1904, quoted by Merutziu).

4. The *maternal language* was alleged to constitute the basis of the Hungarian census of 1910, whereas in practice the results were made to depend upon the answer to this question: "Which language do you speak in preference?" Pressure and intimidation were resorted to in order to extort a favourable reply. There were entered in the published results as using by choice the Hungarian tongue: Gypsies, Jews, *infants under two years*, and—*the dumb!*

THE SUDAN CIVIL SERVICE AND THE WAR.

(From a Correspondent.)

Although the serious financial situation in the Sudan has compelled the Administration to put a stop temporarily to official promotions and the creation of any new appointments, the members of the *personnel* concerned would seem to have accepted the decision with remarkable coolness and good nature. Nevertheless, it is impossible to doubt that very great disappointment must have been occasioned, and not a little hardship bravely endured. Usually, appointment under the Sudan Government is regarded as distinctly remunerative from the point of view both of salary and of pension. Upon first examination the salary paid is £E240 per annum, and thereafter an appreciably advancing scale of pay, as well as promotion, is enjoyed. At present, however, as indicated, no promotions are being gazetted, although no reduction in the amount of pay has yet been suggested. Indeed, such would prove wholly impracticable, as no official could well live as he should live in the Sudan upon any lower rate of salary.

Under normal conditions the young official, who commences his career as a third inspector (which means that he acts as a magistrate to deal with civil and criminal cases), may rise from third to second and from second to first inspector in a relatively short period—depending upon the ability, assiduity, and opportunities—with a salary increasing according to his class. Thus, a third inspector, who commences at £E240, may soon be earning £E480 or £E540; a second inspector, with £E600, may soon be receiving £E660 or £E720; while a first inspector, who commences at £E780, can rise to £E840 and £E900, according to the class to which he attains.

All Sudan Government officials are eligible for advance from one rate of pay to another in the same class every two years, and a third inspector, after serving for four years as such, stands every chance of being promoted to a second inspectorship and, after a further two years, to a first inspectorship. In order to qualify for an increase of pay or promotion a third inspector must, within two years of the date of his appointment, pass an examination in law and a further examination in Arabic. Mere length of service establishes no claim to either an increase of pay or promotion; everything depends upon the individual officer's abilities, his zeal, and the manner in which he carries out his duties, subject, of course, to the actual vacancies offering. No better test could be applied nor any more convincing proof afforded of the selection of the fittest throughout the Sudan Government service.

The actual financial loss arising to the present *personnel* of the Administration by reason of the unexampled economic stringency now being experienced can be better realised when it is remembered that in ordinary times the liberality of the Government in regard to pay does not end with the actual amount of salary earned. There are generous allowances for travelling expenses, rising in some unfavourable climatic provinces higher than in others; while grants are likewise made for forage and grooms, camel or pony hire, and some other small individual outlays. Officers permanently serving in Cairo, where the living conditions are considered to be somewhat more favourable than in the Sudan, suffer a reduction of 10 per cent. from their salaries.

Notwithstanding the present disappointing conditions, over which the Administration has really no control, and making every allowance for some few other drawbacks which may be allowed to exist in the Sudan Government Service, as in all other careers of this character, it is undoubtedly one of the finest that lie within reach of the educated and hard-working young Englishman. It has its lights and shades, like everything else in this world. Omitting all mention of the usually solid advantages in the way of pay and pension, and the less solid advantages in the opportunities which it gives for making a name, few who are acquainted with the Sudan deny that the Government Service possesses a distinct fascination for the typical English nature, owing to its exceptional powers and responsibilities, and even to its occasional loneliness and dangers.

TANGIER TO TEHERAN.

Here is an interesting extract from a letter received two days ago from a valued correspondent:—

"I never had the honour of meeting the late Queen of Roumania; but by special favour I was admitted to visit her private apartments at Pelesh, in Sinaia. Nearly all the books in her boudoir and private library were English, and her attendants told me that she was a great admirer of our literature. The Minister here had standing instructions to send all notable English works that appeared to Bucharest for her Majesty's delectation.

"But when the war broke out, she discovered . . . . . that 'blood is thicker than water'; and her sympathies were wholly German. . . . It is only fair to add that she never interfered in politics, or endeavoured to influence her adopted son. . . Peace to her ashes!"

Personally, I admired "Carmen Sylva" greatly, as a pattern of wifely devotion and a woman of rare sympathy and unaffected goodness of heart.

***

It is an ill-wind that blows nobody any good, and the occupation of the White Tower at Salonika—or, rather, of its upper portion—by the Allies is going to prove a good thing for that well-known landmark and its subsequent tenants. For the Allies, apparently in grateful recognition of the nice way in which the Greek authorities took the occupation, have been putting the Tower into a state of repair such as it has not known for many a long day. Its interior has been replastered, the steps have been refaced, concrete floors have been laid, drains have been installed, a bath-room has been fitted up, a water supply has been laid on, and the electric lighting has been much improved. And for all this, there will be no bill to pay! Lucky dogs, the Greeks! I almost wish the Allies would occupy part of my residence. There are a few modern improvements that I should like to see installed there. That, however, is by the way. The Greeks still keep a sentry posted at the White Tower—in order, I suppose, to make sure that the Allies do not run off with it bodily—and our men and these sentries, I am glad to learn, are chumming nicely, and swapping Greek and English conversation lessons.

***

A pessimist of the pessimists remarked the other day that, whichever way the war might end—you see he *was* a pessimist!—it was obvious that there would certainly be another war within ten years, and that it would come much more suddenly than this one. His idea was that the first intimation the world would have of it would be the appearance of a vast fleet of "Zeps." over London, which would proceed to wipe the city off the face of the earth; and he proceeded to argue that the only sensible thing for us to do would be to give up building houses, and take to living in dug-outs. This prospect has little attraction for me. I have never sampled a dug-out, but when I was in Turkey I lived for a short time in a house "built" of mud, which, I imagine, was not much unlike the genuine article, inasmuch as it was unpleasantly damp and earthy-smelling, and harboured vermin innumerable; and though my pessimistic friend may, if he sees fit, revert to troglodytism, I think I shall prefer to take my chances above ground. Nevertheless, after reading some notes in the *Architects' and Builders' Journal*, I am prepared to admit that the dug-out may have its advantages, even in times of peace.

***

The writer of the notes referred to is Mr. G. J. Howling, a former member of the *Journal's* staff, who is "now resting his nerves in the quietude of the Libyan desert," after having "experienced the full severity of the campaign at Cape Helles." It interested me greatly to see how his professional instincts stood by the writer, even when he was under fire, and to find him studying the architecture of the Sedd-ul-Bahr fortress and of the village of Krithia—the latter "through a periscope from our firing line"—and finding it uninteresting and lacking "the charm of the English farmhouse." But even more interesting is his description of sand-bag architecture—which, as he justly observes, "has a character all its own"—and of the Gallipoli Dug-out. I, for one, am prepared to take his word for it that "the only drawback" to the sand-bag style of building, as he saw it, is that it is "liable at any moment to be blown sky-high by a shell": that seems to me a sufficient offset to any charm that such buildings may possess. On the subject of the dug-outs Mr. Howling waxes quite enthusiastic, and he thinks that it is likely at least to supplant the wooden shed as an outhouse. "For one thing, it is economical; you dig your hole, roof it in, and the thing is done. The saving in timber is very considerable. A properly constructed dug-out serves all the purposes of an ordinary shed, it offers very little obstruction to the view, and, if planted with shrubs and flowers around it, it might conceivably become an object of no little attraction." There speaks—or writes—the born enthusiast! Mr. Howling should become the pioneer of dug-out architecture in this country, applying at home the knowledge acquired so painfully and pluckily at Gallipoli. Meantime, the *A. and B. Journal* gives plans and sections (but no elevation!) of "The Gallipoli Dug-out," which I commend to the study of would-be builders.

***

Writing from Bucharest on February 8, a correspondent informs me that "King Ferdinand of Bulgaria will on the occasion of his name-day pardon all persons in the prisons capable of bearing arms." My correspondent adds, with what looks like unconscious humour: "In this way a considerable addition will be made to the Bulgarian army."

***

Those of my readers who remember my previous references to the *Exmouth Express* will be glad to learn that that lively journal still flourishes, though, I am sorry to see, an editorial note announces that "owing to illness of the staff, and pressure of work at the printing office," the January number was delayed, and that some contributions "have been unavoidably held over." The war seems to be creating difficulties for journalism even at—well, where the *Exmouth Express* is produced; but it does not appear to have damped the high spirits of the staff, or to have cut off those sources of secret information which must cause heartburnings to stay-at-home editors. As to the value of this information there can be no doubt, and it certainly seems unfair that the British Public should be kept in the dark about matters of such world-wide importance as, *e.g.*, (1) the confiscation of King Constantine's German uniform; (2) the "formation of joint Allio-enemy Commission for the administration" of Salonika, and resultant Greek protest; and (3) the annexation of that town simultaneously by Bulgarians, Austrians, and Turks. Again, why have we not been told by the home Press of Lord Haldane's appointment as Naval Attaché at Bolivia, "with the rank of Lieutenant-Commander, R.N.V.R.," of his being "submarined en route for Bolivia," of his rescue (after the appearance of his obituary notices), and of his resignation (after reading the obituaries) and his application "for admission as a monk in a monastery on Mount Athos"? It is all very well for the editor of the *E.E.* to endeavour to evade the Censor by describing these news items as "Intelligent Anticipations." But I shall be surprised if home editors do not make an outcry about preferential treatment in the matter of cabled news.

***

The most gorgeous feature of this number of the *Exmouth Express* is, however, a poem, "Spiawatha," modestly described as "Way back of Henry W. Longfellow," and signed "U.S." It describes how "Four young braves set forth together," and how, coming to Salonika—

> Forth they fared them through the darkness,
> Through the purlieus of the city
> . . . . . .
> Till a tepee they discovered.
> Very large and strongly guarded.
> 'Twas the tepee of a Paleface.
> Him they summoned to surrender,
> Using threats and yelling war-whoops.

The Paleface (I am hardly surprised to find) "took no notice, and maintained a fearful silence." But the trackers, thanks to "the wily Maxsekewiss making medicine with his lightning," burst into the tepee—

> Now, the first thing they encountered
> Was a Paleface, small and frightened.
> "Sirs, I have not your acquaintance,"
> Twittered he in Frankish accents,
> But they noticed 'neath his nightrail
> Leather mocassins and leggings,
> Most suspicious, very spy-like.
> So they gagged him and they bound him,
> Winding many thongs about him.

***

The poem goes on to tell of the approach of a squaw—

> Very old and very ugly,
> Who protested loudly, shrilly,
> How her innocence was virgin,
> How she had no thoughts of evil.

Modesty forbids that I should quote the description of the search conducted in this luckless lady's apartments. But it resulted in the discovery of—

> . . . . The Spy tribe secret Token,
> Tucked into a little wallet,
> Where she'd cunningly concealed it.

And the end of "both the Spy folk" was swift and terrible indeed:—

> Straightway then to stakes they bound them,
> Stakes they'd driven in the courtyard,
> And they piled great faggots round them,
> And they pierced them with pine needles.
> On their heads a copper brazier,
> Full of burning embers, rested.
> So in light and warmth and comfort
> They were gathered to their fathers.

A fitting end—though an unlikely one—for members of the hateful Spy tribe. The poet's ideas of comfort are, perhaps, peculiar; but his imagination—to adopt a duly critical tone—is clearly of no mean order, and he shows a fitting sense of dramatic justice by consigning "all the household of the Paleface" to captivity (in Salonika) "till they should be brought to judgment."

NEAR EAST BOOKSHELF.

A ROUMANIAN INTERIOR.*

An English nursery governess in the family of a well-to-do Roumanian *avocat* of Jewish race and probably of German extraction should be in a situation to seize traits of character and peculiarities of manners worthy to be known and recorded, provided she has an observing disposition and sufficient literary ability. She might produce a readable book. Such is "Domestic Life in Roumania." The authoress has adopted the epistolary form, the thirty odd letters purporting to be written by Millie Ormonde to her cousin, Edmund Talbot, Squire of Talwood, Devonshire. Indeed, the impression left after perusal is that they are genuine letters with the names of the principal characters disguised and a few other changes, conditions imposed on publicity by a decent reserve.

We are admitted into the privacy of this Judæo-Roumanian household and are introduced to as diversified a collection of housemates as ever were assembled together under one roof, it might well be believed. Besides the head of the family, Dr. Goldschmidt, his wife and four children, there are "Mademoiselle Duval, the French governess, small green-eyed and wicked-looking; Regina, the gentle Austrian housekeeper; the old German cook; the parlourmaid, upper and under-housemaid and kitchen ditto, all Hungarian or Roumanian-Hungarian—I am not sure which—and a handyman called André."

Miss Kirke is at her best when she is describing the minute details of her everyday life in this strange environment and the characters of the people with whom it brings her into contact. She has a knack of delineating character in such a way that it is not easy to forget her portraits, slight though they may be. There is Mademoiselle Duval, the French governess with a past, who loves "black coffee, cigarettes, and male society," reads a novel a day, dresses smartly, and is careful not to offend the "innocence" of her English friend; the housemaid, Amalia, handsome and licentious, in love with Dr. Goldschmidt's secretary, M. Alcalay, who is also one of Mademoiselle Duval's "flames"; and the German widow of the governess class, "suspected of savings," complacently confidential about her engagement to a Roumanian much younger than herself, which gentleman, it turns out, is none other than the fickle M. Alcalay. There is ample matter here for humour, pathos, and tragedy. "La Nurse," as the English lady is called by the family, the French alternatives missing a just description of her position, watches the development of the little drama from a distance until its dénouement, brought about by the elimination of the German widow.

The book is by no means a detailed or comprehensive study of domestic life in Roumania; it is merely an account of an English lady's experiences in a well-to-do middle-class house in Bucharest, though interesting sidelights are thrown on other sections of Roumanian society. It is chiefly the internal affairs of the Goldschmidt *ménage* that hold our attention. Perhaps the pose of a private correspondence is a little tedious, and the colloquial style occasionally descends to the slip-shod and the feebly facetious. But generally the writing is good, and often it is admirable. There are eight good illustrations from photographs.

FOR STUDENTS OF SERBIAN.†

It was a good idea of Messrs. Louis Cahen and Nevill Forbes to write an elementary book for the study of Serbian. The interest in Slavonic languages in general is growing, and a considerable part of this interest is for the Serbian. Of course, the Russian is the most important among these languages, but the Serbian has also a certain importance. It is spoken by about 14 millions, including Slovenes, and, with a knowledge of Serbian, it is possible to travel from Trieste to Salonika. The Serbian is reputed to be the most beautiful of all Slavonic languages. It is, in some way, the key to the rest of these languages, and he who knows Serbian can easily understand Bulgarian and also Russian. At least, "the Serbian"—say the authors of this book—"is much easier for English to learn than the other Slavonic languages."

We presume that the "English-Serbian Phrase Book" is written chiefly for the use of the British soldiers round Salonika, of the British nurses in Serbia, of everyone who comes in contact with Serbians during this war, and of everyone who has some literary interest in this language. It is not a complete grammar, as was that of W. R. Morfill ("Simplified Serbian Grammar," 1887); it gives only the very first notions of the language. We find first the alphabet, then the most important parts of speech: pronouns, nouns, adjectives, adverbs, numerals, and a very small number of useful verbs in their most common forms. We find also the most useful words and phrases, on Serbian money, time, food and drinking, travelling, etc. Some military terms denote the special purpose of the book. There is also a vocabulary at the end. Will this be sufficient? Probably it will be for many people, since the book is intended for elementary use.

The authors are right to give the Serbian language as it is spoken to-day in Serbia. Morfill, on the other hand, in his Grammar, gave the Hertzegovinian dialect. Although the difference between them is very small—in Serbia the letter *e* is pronounced as *e*, and in Hertzegovina as *ije* (je)—it is far better, and for many reasons, to adopt the *e*-pronunciation as the typical Serbian. The authors, however have not been entirely consistent upon this point, and we can find the forms *primjer* (example) and *djevojka* (girl), instead of *primer*, *devojka* (p. 45).

Messrs. Cahen and Forbes have studied the Serbian language very conscientiously, and possess a wide knowledge of it. But it is quite impossible for Englishmen to know all the subtleties of a language so different from their own, and there are some slight inaccuracies in their book which are inevitable. We consider it our duty to point them out, in order that they may be avoided in a new edition of the work. The inaccurate grammatical forms are: *s mojim ocom* (with my father, p. 7), *pola godina* (half a year, 25), *otvori ustu* (open your mouth, 38), *slomao* (broken, 38), *zubovi* (teeth, 39), *to bilo bi* (that would be, 14), *kako se vam dopada* (how do you like, 41), etc. The correct forms would be: s mojim ocem, pola godine, otvori usta, slomio, zubi, to bi bilo, kako vam se dopada. There are also incorrect words: *dockanj* (late, 12), *krumpir* (potato, 30), *prtljaga* (luggage, 32), *prvi klas* (first class, 42), while the correct forms would be: dockan, krompir, prtljag, prva klasa, etc. The accents are not always well given: vójnici (10), nikáko (12), Béograd (28), etc., instead of: vojníci, níkako, Beógrad, etc.

We warmly recommend this useful and cheap book to everyone who is anxious to learn Serbian.

Messrs. Sampson, Low, and Co. have published a new and cheaper edition (4s. 6d.) of "From Memory's Shrine: the Reminiscences of 'Carmen Sylvia,' Queen Elizabeth of Roumania."

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given

Mrs. Marling, when making her appeal wrote as follows:—

"There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—

"'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; 'we have not had so much as a box of matches from England.'"

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,

25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

16	3	Thursday	11	11

Much regret has been caused, not only in Roumania, but throughout the world, by the death of the Dowager Queen of Roumania, better known as "Carmen Sylva." An appreciation will be found on another page.

The following notice was issued on Wednesday from the Lord Chamberlain's Office, St. James's Palace :—

"The King Commands that the Court shall wear Mourning from this day for One Week for her late Majesty Queen Elizabeth of Roumania.

"The Court to go out of Mourning on Wednesday, the 15th instant."

Under date of March 5, Reuter's Bucharest correspondent reports :—The Emperor of Russia, the German Emperor, and the Presidents of the French and Swiss Republics have sent telegrams of condolence to the Roumanian Royal Family. The telegram from the German Emperor was dated from the German Headquarters. The members of the Diplomatic Corps expressed sympathy to the Royal Family on behalf of their respective Governments, and sent a splendid wreath.

The will of the late Queen, dated October 14, 1914, leaves all her property in Roumania to Roumanian charities, and all her property in Germany to the families of Prince William and Prince Victor of Wied.

The Roumanian Court will be in mourning for three months for the Dowager Queen.

By the command of the King, the Hon. Sir Arthur Walsh, Master of the Ceremonies, called on M. Misu, the Roumanian Minister, at the Legation, 4, Cromwell Place, to offer his Majesty's condolences on the death of the Dowager Queen of Roumania. The Minister thanked Sir Arthur for the gracious message, the full text of which was telegraphed by M. Misu to King Ferdinand.

Among other callers at the Roumanian Legation to offer their condolences were the French Ambassador, the Russian Ambassador, the Italian Ambassador, the Japanese Ambassador, the Netherlands, Serbian, Swiss, Belgian, Brazilian, Chinese, Norwegian, Greek, Argentine, Chilian, Portuguese, Cuban, and Colombian Ministers, with the *personnel* of the Embassies and Legations.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

A Reuter's message from Bucharest, dated March 6, states :—After a Funeral Service which was held here yesterday morning in the presence of the Royal Family, the Ministers, and the Diplomatic Body and high dignitaries, the body of the late Queen Elizabeth was conveyed with much ceremony to the monastery at Curtea del Argesh, where the interment took place at four o'clock in the afternoon in the presence of the Royal Family, the Ministers, and high dignitaries. The Diplomatic Corps followed the funeral procession as far as the railway station at Bucharest. The Princesses of Wied, owing to an accident in Hungary to the train preceding theirs, arrived at Bucharest too late to be present at the obsequies. One of the sons of the German Emperor telegraphed that he had been informed of the death too late to be able to attend the funeral.

Reuter's correspondent at Bordeaux telegraphs under date of March 8 :—The King and Queen of Montenegro and the members of the Royal Family arrived here by special train this morning, and were received by the Prefect, the Mayor, and the General Commanding the District with military honours and cheers from the crowd. Their Majesties then proceeded by motor to a chateau at Merignac, where they were warmly received by the Mayor and the inhabitants of the commune.

A telegram received in London on Monday announces that Viscountess Quenington died in Cairo on Saturday. She was the daughter of Mr. Henry Dent Brocklehurst, of Sudeley Castle, Gloucestershire, and married Viscount Quenington in 1909.

H.H. the Aga Khan, who had the honour of being invited to luncheon with the King and Queen at Buckingham Palace last Friday, postponed his departure from London last week. He left for the Continent on Wednesday.

H.E. the Serbian Minister called at the Foreign Office on Monday and saw Sir Edward Grey.

Earl Kitchener visited Mr. Asquith at Downing Street on Monday. He also called at the Foreign Office and conferred with Sir Edward Grey.

Sir Edwin Pears arrived in York, the city of his birth, last Saturday, as the guest of Mr. and Mrs. E. R. Cross, 2, Driffield Terrace, the Mount; and on Monday evening he lectured at the Tempest Anderson Hall on Constantinople.

M. Edmond Carton de Wiart, Directeur de la Société Générale, Brussels, formerly Private Secretary to the late King Leopold, has returned to London from Washington, where he has been on a special mission.

Dr. Ninchitch, the Serbian Minister of Finance, has left Paris for Corfu to meet members of the Serbian Government.

Dr. Herbert Adams Gibbons, whose historical study, "The Foundation of the Ottoman Empire," has recently been published by the Clarendon Press, has been on a visit to Cairo, and has been received by the Sultan. He is leaving Egypt shortly for Greece.

Dr. J. B. Christopherson, Director of the Civil Hospitals at Khartoum and Omdurman, arrived in London recently from Austria. Dr. Christopherson, it will be remembered, left the Sudan early last year on leave of absence in order to help Mr. Berry with his Red Cross in Serbia. Tuesday's *Morning Post* contains an interesting interview with Dr. Christopherson, published under the heading "Life in Budapest and Vienna."

On February 10, at Assiut, the wife of Mr. W. D. L. Roberts, of the Egyptian Irrigation Service, gave birth to a daughter.

On February 16, at Beni Suef, the wife of Mr. J. R. Kinder, Egyptian Irrigation Service, gave birth to a son.

The engagement is announced between Captain Terence Desmond Murray, 1st Leinster Regiment, Salonika Force, son of H.E. Lieutenant-Governor H. P. Murray, of Papua, and Mrs. Murray, and Philippa Chevalier Kitchener, daughter of the late Lieutenant-General Sir Walter Kitchener, K.C.B., and Lady Kitchener.

The engagement is announced between Lieutenant Henry Hamilton Kitchener, R.E. and Royal Flying Corps, B.E.F., son of the late Lieutenant-General Sir Walter Kitchener, K.C.B., and Lady Kitchener, and Winifred Everest Bluck, daughter of the Hon. A. W. Bluck and Mrs. Bluck, of Bermuda.

A marriage has been arranged, and will take place in the autumn, between Ronald Evelyn Leslie Wingate, Indian Civil Service, elder son of General Sir Reginald Wingate, Sirdar of the Egyptian Army and Governor-General of the Sudan, and Lady Wingate, and Mary Harpöth Vinogradoff, daughter of the late Mr. A. Harpöth, of Copenhagen, and of Mrs. Vinogradoff, Court Place, Iffley, Oxford, step-daughter of Dr. Paul Vinogradoff, F.B.A., Professor of Jurisprudence in the University of Oxford.

Our Athens Correspondent writes (February 20): The capture of Erzeroum by the Russians was celebrated here by a dinner given at the Grand International Restaurant by M. Sebastien Hovart, the Correspondent of the *Novoye Vremya*. The correspondents of the Entente Press were present, and toasts and speeches were marked by and received with the greatest enthusiasm.

Mr. G. Bettesworth Piggott, formerly a Judge of H.M. Supreme Court for the Ottoman Dominions, has been appointed a member of the Appeals Tribunal for the County of London.

We regret to learn that Mr. Arthur B. Geary, British Vice-Consul at Alexandria, has been suffering with fever, and has been removed to the Deaconesses' Hospital.

Sir Mortimer Durand, P.C., will preside at a meeting of the Central Asian Society, to be held at 22, Albemarle-street, next Wednesday (March 15), at 4.45 p.m., when Mr. Edgar T. A. Wigram will read a paper entitled "The Ashiret Highlands of Hakkiari (Mesopotamia)." The paper will be illustrated with lantern pictures.

Mr. E. T. A. Wigram is a brother of the Rev. W. A. Wigram, who is now detained in Constantinople, and whose conduct in replacing one of the British who were despatched to the Gallipoli Peninsula by the Turks last year as a "reprisal" aroused so much pride among his countrymen. The brothers are joint authors of "The Cradle of Mankind: Life in Eastern Kurdistan," one of the raciest and at the same time one of the most instructive books of travel in Asiatic Turkey that has appeared within the past ten years. The lecture referred to in the above paragraph is likely, therefore, to prove highly attractive and interesting.

The *Cyprus Gazette* of February 21 announces that his Excellency the High Commissioner has been desired by the Marquess of Lansdowne, in acknowledging the sum of £542 18s. 2d., collected in Cyprus, to convey "to all who helped, either with work or with money, to make this magnificent contribution, the very grateful thanks of the British Red Cross and the Order of St. John for the practical help they have thus received in their work for the sick and wounded."

MRS. FRANK BARKER wishes to recommend MANOLI CORBETTI, 22, Great Chapel Street, Oxford Street, W., to anyone wishing to purchase YAOURT, HALVA, TOMATO PASTE, BLACK OLIVES, ORIENTAL JAMS, or CIGARETTES, all of which he gets direct from Salonika and other parts of Greece.—[Advt.]

Digitized by Google

The same issue of the *Cyprus Gazette* states:—His Excellency the High Commissioner has received with much regret the intelligence of the death on or about November 17, 1915, of Mr. Alexandre Lapierre, Draughtsman and Record Keeper, Public Works Department, who proceeded to France on the outbreak of war for military duty, and fell in the Balkan campaign when serving with the 175th Regiment of French Infantry. His Excellency desires to record his feeling of the loss sustained by the public service in the death of this capable and deserving officer.

The Hon. Richard J. Wilkinson, C.M.G., who has been appointed Governor of Sierra Leone, is a brother of the late Mr. James Wilkinson, formerly U.S.A. Deputy Consul in Smyrna, whose death occurred at Chios last October. The Wilkinson family of Smyrna is one of the best known in the Near and Far East, another brother, Mr. F. Wilkinson, C.M.G., being H.B.M. Consul-General at Foochow, China. Mr. Richard Wilkinson is probably the greatest authority of to-day on the Malay languages, and has published several works on the subject.

The death occurred on Wednesday, at Streatham Hill, of Mr. Robert McGuire, a well-known journalist and special correspondent. He represented the *Daily Telegraph* in the first Balkan war in Montenegro. Mr. McGuire was fifty-six years of age.

The *Sudan Times* of February 16 announces that the death took place on the previous Monday night at the Civil Hospital, Khartoum, of Mr. B. A. Sharland, of the Finance Department. The deceased had a severe attack of typhoid about two months ago, but had recovered and was making satisfactory progress, when he had a relapse to which he succumbed.

According to a telegram from Vienna, which reached London on Sunday, King Ferdinand of Bulgaria was better, although he was still obliged to remain indoors. The symptoms of bronchitis had been reduced to small proportions, and the pulse and temperature were normal.

Sir Edward Boyle has left England for Ajaccio, Corsica.

We regret to announce the death, which took place at Meadi, Cairo, on the 5th inst., of Mr. Reginald Quixano Henriques, who was until recently manager in Egypt of the Egyptian Delta Land and Investment Co., Limited, and a director of the Salt and Soda Co., Limited. Deceased, who was the second son of the late E. M. Henriques, J.P., of Manchester, was in his forty-eighth year, and had been in failing health for some time past, suffering from heart trouble. It was as a consequence of this that he recently resigned his post with the Egyptian Delta Land Co., which he had occupied with success since 1907, taking a keen interest in the development of the company's estates at Meadi. An old resident in Egypt, Mr. Henriques was very popular with all sections of the community. He leaves a widow and one child.

In recognition of the important part played by the Italian Navy in the withdrawal of the Serbian Army from Albania, the French Government has conferred on Admiral Corsi, the Italian Minister of Marine, the Grand Cross of the Legion of Honour.

Dr. James Berry, who has been in charge of an Anglo-Serbian hospital unit since January, 1915, has cabled the following message to the Secretary of the Royal Free Hospital from Buchstgallen: "Free at last. Home in a few days. All well." The unit was captured by the Austrians last November, and, with the exception of Lady Paget's hospital party, which is in Sofia, will be the last of the Anglo-Serbian units to return home.

Information has reached the Serbian Relief Fund in London that an office has been opened by the Vatican, in Rome, by means of which Serbians in exile can enter into correspondence with relatives and friends in Serbia. It is intended that letters shall be sent through the intermediary of the Papal Nuncio, at Vienna.

Sir Thomas Jackson, first Baronet, of Stanstead House, Stanstead, Essex, chairman and director, and late chairman of the Imperial Bank of Persia, and a director of the London County and Westminster Bank, the Union Discount Company, of London, the Royal Exchange Assurance Corporation, and the Yorkshire Penny Bank, who died on December 21 last, aged seventy-four years, has left unsettled estate of the gross value of £121,715.

According to members of the Anglo-Serbian Hospital under Dr. J. Berry, who passed through Vienna on their way to London, Slatin Pasha is now at the head of the war-prisoners department of the Austrian Red Cross.

The death occurred on Wednesday, in Ireland, of Major-General Andrew Smythe Montague Browne, in his eightieth year. He served in the Crimea and was at the siege and fall of Sebastopol, receiving a medal with clasp and a Turkish medal. General Browne was Colonel of the 3rd Dragoon Guards from 1903 to 1905, when he became Colonel of the Royal Scots Greys.

A telegram from the Salonika correspondent of the *Petit Parisien* states that the Jewish Alliance has given a concert there in aid of various charities, at which General Sarrail, General Mahon, and Generals Moschopoulos and Zimbrakakis were present. Three French soldiers—the pianist Schwab, the violist Bentz, and Mazeno, the baritone of the Grand Opéra of Paris, who all three obtained first prizes at the Conservatoire—were among the artists.

A Constantinople message viâ Berlin states that Enver Pasha, accompanied by Djemal Pasha and various high dignitaries, arrived in Medina last Thursday, and paid a visit to the Prophet's Tomb.

At the request of the Serbian authorities, the Wounded Allies Relief Committee, Sardinia House, Kingsway, has this week dispatched a medical mission to the island of Vido, near Corfu, where a number of Serbian soldiers suffering from sickness and wounds are in need of assistance. The *personnel* of the expedition, which is only a preliminary one to find out what is actually needed, consists of an administrator, Mr. Maude, his niece, Dr. Dorothy Maude, and three nurses, and they have taken with them about £1,000 worth of stores in food, clothing, medicines, blankets, tents, etc. The committee has made itself entirely responsible for the upkeep of the mission for a minimum period of six months. Contributions of money and stores for the mission will be gratefully accepted by the committee. Foodstuffs, clothing, etc., should be sent to Sardinia House; cheques and donations should be addressed to the Hon. Treasurer, Mr. T. O. Roberts (manager), London County and Westminster Bank, 217, Strand, W.C.

APPOINTMENTS, PROMOTIONS, Etc.

The *Cyprus Gazette* of February 11 contains the announcement that Mr. H. Antrobus, Chief Computation Officer, Land Registration and Survey Department, Nicosia, has passed the Turkish (Ordinary) Examination.

The Sultan of Egypt has been pleased to confer the Order of the Nile, 3rd Class, upon Miralai G. F. Pridham Bey on his retirement from the Egyptian Army.

The Sultan of Egypt has been pleased to approve the promotion of El Bimbashi (Temporary Kaimakam) P. B. Stafford, 2nd Battalion, to be Kaimakam, and to be O.C. 2nd Battalion.

El Bimbashi B. H. H. Spence, M.B., has been transferred from the Sudan Government to the Medical Corps, Egyptian Army.

El Bimbashi F. W. L. Edwards, Deputy Assistant Adjutant General, Egyptian Army, and Aide-de-Camp to the Sirdar, has been granted the temporary rank of Kaimakam.

El Bimbashi G. F. Raper has been struck off the strength of the Egyptian Army.

The Egyptian *War Office Gazette* of January 30 announces that the appointment of El Bimbashi C. W. W. Sandes, 12th Sudanese, to be a Deputy Assistant Adjutant General is approved.

Captain R. G. Archibald, M.B., Royal Army Medical Corps, has been taken on the strength of the Egyptian Army, with the rank of Kaimakam, and posted to the Sudan Government.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

ALLAN.—On February 15, at Maison Cambassos, Sporting Club, Alexandria, the wife of Mr. Geo. Allan, of a son.

PEARSE.—On February 17, at Tantah, the wife of Geo. H. Pearse, Egyptian State Railways, of a son.

MARRIAGE.

KHATCHADOURIAN—DARNEVILLE.—On March 7, 1916, in London, by special licence, Alexandre B. Khatchadourian, younger son of Mr. and Mrs. B. Khatchadourian, of Cairo, to Mrs. Lucy Darneville, youngest daughter of the late L. Collet de Créquy, of St. Omer, France.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

TURKEY AND THE COMMITTEE.

At no time since Turkey entered the war against the Allied Powers have the affairs of that country been a sealed book to her enemies. The violence done to the popular will by such an act and Turkey's geographical position have alike facilitated the leakage of useful information. In this category there is no idea of including all the reports purporting to describe conditions in Constantinople and elsewhere which have never ceased to find their way into the European Press. It has, indeed, been necessary from time to time to utter a warning note against the undue optimism created in some quarters by these picturesque messages. At best accounts of dubious origin regarding the degree of popular depression in the capital had no bearing on the military operations so long as there was no chance of the feeling reflected gaining a hearing in the war councils of the State. Now, however, a stage has been reached at which there is good reason to suppose that the Turkish Government finds as much cause for anxiety in the internal situation as in the military position. It would be strange if this were not the case. Turkey has been at war for sixteen months. Whatever credence may have been given to the reasons advanced at the time for her entry into the struggle, they have clearly ceased to carry weight with any section of the people. All the inconveniences of war have been suffered without that belief in the justice of its cause which heartens a nation to endure great sacrifices. Even the army, as was proved on Gallipoli Peninsula, fights from a sense of discipline and the instincts of self-preservation rather than with conviction. The war stands revealed as a plot hatched by a governing clique in Constantinople and the Germans, and we shall not be far wrong in supposing that, outside the Committee of Union and Progress, the one subject exercising the minds of thinking Turks is how to deprive that organization of the power which the control of the army mobilised for war gives it. The circumstantial account published of the murder of Prince Yussuf brings out the fact that the late Heir Apparent was regarded by the Committee as a formidable opponent not only of their present schemes, but of their continued existence. Although the subject of his assassination was originally mooted last summer, the fact that the deed was carried out only recently suggests that the Committee realized that it would be folly to allow his hands to be further strengthened by the growing popular distaste for the war.

It is at this point in the fortunes of the Committee that the signal victories of the Russians in Armenia have occurred, and must inevitably add to its embarrassment. The retention of power by Enver Pasha and his colleagues depends on their successful prosecution of the war; for so long as they can justify the German alliance by holding out prospects of ultimate victory, they have a strong argument against those who might be tempted to urge that the game is not worth the candle. While the Franco-British forces remained at the Dardanelles, the steady stream of Turkish casualties prevented the Government from claiming special merit for a successful defence; but the evacuation must necessarily have given them prestige. The fall of Erzeroum will not only have affected that prestige, but will have brought the Turks and their German allies to a parting of the ways. Henceforth their interests lie in different directions: those of the Turks in Asia Minor, those of the Germans in Europe. Nothing will satisfy the former but to throw their whole strength against the Russian advance. If, however, they do that the German position in the Balkans is at once affected, and only a compromise, satisfactory to neither and particularly unsatisfactory to the Turk, can be arranged between the conflicting requirements of the two parties. This clash of interests must ultimately prove the undoing of the Committee. It cannot afford to break with the Germans, who will not hesitate to abandon their dupes as soon as the Turks prove unable to play Germany's game for her; at the same time, the overrunning of Armenia by the Russians, which may eventually lead to the Baghdad lines of communication being cut, is a phase in the war the importance of which cannot be disguised from the Turkish public. The question, What does Turkey stand to gain by the war? is bound to be raised again. At the outbreak of hostilities the Committee of Union and Progress justified its action by asserting that the Allied Powers were in league to destroy the independence of the Ottoman Empire. The statement was shown to be false; in any case, it would not supply a strong enough argument for continuing the struggle indefinitely, as Turkey by her action will have justified the Allied Powers in any course they may decide to adopt. By now the great mass of the Turks must be prepared to pay the price for their senseless adventure, and, if they could, would only ask to be told the extent of the penalty in order that they might take steps to pay it.

There is no reason to suppose that the terms on which the Allied Powers will be willing to make peace with Turkey will grievously disappoint Turkish expectations. That they will be unpalatable to the Committee of Union and Progress goes without saying, but that body has ceased to represent Ottoman opinion. It would strengthen the hands of those in Turkey who have been opposed to the Committee's policy to learn now the fate that is in store for the Empire as the result of yet another unsuccessful war. It is to be hoped, therefore, that while the Allies continue to prosecute the different campaigns as vigorously as ever they will not lose sight of political conditions in Turkey. The task of making good the greater part of the damage done to the world by Germany through this war will devolve upon the Allied Powers, and it is to their interests to curtail, if possible, the extent of the damage in any given country. To the German view that Turkey's whole future, politically and economically, is inseparably bound up with that of the Central Powers we do not subscribe. It is a doctrine which the Germans are careful to inculcate at this time in Constantinople, but with the end of the war it will disappear for obvious reasons. The future of Turkish territory has a greater interest for the Allies than for the Central Powers, and the former can have no wish to see it more impoverished than it has been already. We do not for a moment urge that anything is to be gained by overtures for peace. Such a move would not only be useless, but would defeat its own ends. But we should like to see the Allied Governments overcome their known reluctance to frame conditions of peace for Turkey and Bulgaria while war is still being waged. The fate of these two countries has nothing to do with that of the Central Powers, and the claim of the latter to a voice in regulating the position of Turkey and Bulgaria at the close of hostilities cannot be admitted. The conditions of peace would not be a subject for bargaining, but, like the restoration of Belgian independence, their acceptance would be a necessary antecedent to the cessation of hostilities. Sooner or later the moment must come when the Turks and the Bulgarians will want to know the terms which their abandonment of the struggle will entail. The Allied Governments owe it to their armies in the field to see that their military efforts are not stultified by protracted negotiations over a subject which ought to have been settled long before.

"CARMEN SYLVA."

AN APPRECIATION.

Elizabeth, Princess of Wied, Princess and, since 1881, Queen of Roumania, was born on December 29, 1843, in the ancestral demesne at Neuwied. She belonged to an old-established princely family which had given the German world a series of distinguished clerics, soldiers, artists, and writers. Since the Vienna Congress had divided the principality of Wied between Prussia and the Duchy of Nassau, all courtly splendour had been banished from the family seat of Wied, giving place to the simple atmosphere of the homely fireside, whereat art and science were honoured guests.

In such surroundings were spent the early years of Princess Elizabeth, whose vivid imagination and a liveliness which found picturesque expression in speech and gesture gained her the nickname of "The Whirlwind." Possessed of a great love for Nature, to which the parents allowed free play, the child used to ramble at leisure among the wooded hills overlooking the Rhine, and at so early an age as ten she had already begun to record the impressions she brought back from her walks in imperfect but sincere verse. She received very careful education in classics, science, literature, drawing, painting, and music; while travel in France, Switzerland, Italy, Sweden, Russia, etc., and intercourse with the most brilliant personalities of the time, gave the finishing touch to the shaping of her admirable gifts.

Such was the Princess whom Prince Carol of Roumania chose for consort. They had only met once or twice before in Berlin society, but they knew one another well through their friends, and so well after a short meeting in Cologne as to decide to spend their lives together. The marriage was celebrated with great solemnity on November 15, 1869, in Neuwied, and a few days later the young couple left for Roumania in answer to the call of their high duties. The enthusiastic welcome which all classes of the population gave their new mistress so deeply moved Princess Elizabeth that she wrote in a letter to a cousin: "I have now but one desire more: that when I pass away all the poor shall follow my coffin."

There was one thing above all which the princely couple had in common—namely, an unlimited ardour for work, and for this plentiful opportunity offered in the needs of a young country. From the first day of her arrival Princess Elizabeth entered bravely and unflinchingly upon her difficult apprenticeship as sovereign, visiting hospitals, asylums, and schools, helping everywhere with word and deed, and stimulating everybody by her enthusiasm. The political situation, as well within as without the country, was giving cause for much apprehension, when the birth of a daughter, Maria, in September, 1870, created a happy diversion from the unending worries of politics. The child seemed to have inherited in a remarkable degree the gifts of her parents, and was the delight of all at Court. There was no greater relief for the young Prince from the weariness of rule than to spend an hour in playing with his child on the floor. It can well be imagined, therefore, how terrible was the affliction of the parents when, as a result of a short illness, their only child was borne to the grave in the spring of 1874. The sincere sympathy shown by the mass of the people was their sole consolation. "Though the dearest and most intimate bond of our family circle," wrote Prince Carol to his Prime Minister, "has been severed, a still stronger tie now unites us with our greater family, the Roumanian nation, which joins with us in mourning the loss of our and their child."

Princess Elizabeth henceforth made the constant care of the poor, the orphans, and the maimed her one thought, and columns would be needed to mention all the charitable work in which she engaged. Especially did she devote her attention to institutions for improving the social position and for developing the educational standing of women, whether it were an asylum for children, like the "Elizabeth Crêche" or a school for young girls, like that of "Elizaveta Doamna," or an institution like the society "Furnica" ("The Ant"), founded to maintain and develop the home industry of the peasant population, whose products, the rich and admirably coloured embroideries, are everywhere so greatly admired. The spirit which animated the late Queen is well expressed in one of her own sayings: "One can never be grateful enough to those who accept one's help."

The great heart of this great woman had many an opportunity of showing its qualities in the cloudy hours of Roumanian history, especially during the Roumanian War of Independence (1877-78). Notwithstanding the precarious state of her health, the Queen gave herself courageously and unsparingly to the task of soothing the sufferings of the victims of the war. A look from her kind eyes, a word of sympathy from her did much to alleviate the pains of the wounded. Once, when called to the side of a young soldier who had one of his legs amputated and was in despair at its loss, the Queen sat for half an hour on the side of the bed comforting the patient, who was smiling all the time, but never uttered a sound. When the Queen rose the nurses in charge discovered that she had been sitting all the time on the maimed leg. "But, my poor boy, it must have been agony for you." "I would have stood it for hours if only to listen to your voice." In gratitude for such devotion the wives and widows of officers presented the Queen with a statue, representing her in the act of giving drink to a mortally wounded soldier; and this image of "Muma Ranitilor" ("Mother of the Wounded") will never fade in the memory of the Roumanian people.

With as much justice could Queen Elizabeth have been spoken of as "Mother of the Blind," for in this direction also did she accomplish admirable pioneer work. She founded in Bucharest the "Vatra Luminoasa" ("The Home of Light") as a refuge for the unfortunate blind, wherein they were taught such work as enabled them to lead a comfortable life without depending completely on charity. The results were so satisfactory that the Queen cherished the idea of founding near the royal residence of Sinaia a small city for the blind, with model dwellings, clubs, church, concert hall, etc., where the blind, independent of nationality, creed, or class, might create a life of their own—but will the idea ever take form and being now that the Mother of the Blind has gone?

All through her life did Carmen Sylva's pen give beautiful expression to joy and sorrow, whether these feelings were embodied in a lyric or a tale, in a novel or a play; nor did she leave the domain of philosophy unexplored. Her beautiful "Pensées d'une Reine" found highest recognition, being honoured by the French Academy in 1888 with the Prix Botta; while during a visit paid to the British Isles in 1890 she was acclaimed by the Welsh bards as one of themselves. Though deeply attached to her country of origin, she was a profound admirer of French literature and genius, and often appealed passionately in her writings for the reconciliation of the Latin and Germanic peoples (as, for instance, in "Feldpost," or in the Introduction to her translation of Pierre Lotti's "Pêcheurs d'Islande"). Queen Elizabeth also earned for herself great merit for the stimulus she gave to the revival of Roumanian folk-song, and for the encouragement and assistance which literary men were always sure to meet at her hands. There are no words, however extravagant, that can over-estimate what the

Queen did for the advancement of music in Roumania. "My dream," she wrote, when a young girl, to her brother, "is to have money enough one day to gather round me a circle of artists and scientists," and that dream at least she was able to realise. The musical "At Homes," both at the royal palace in Bucharest and at the "Castel Pelesh" at Sinaia, the summer residence, at which all the best Roumanian and foreign musicians participated, were offerings of the highest kind to the divine art of Music.

Never once did Queen Elizabeth abate her activities until the death of her husband, in the autumn of 1914. According to his last wishes, King Carol was buried in the monastery of Curtea-de-Argesh, the masterpiece of Roumanian architecture; and thither the Queen retired to spend the rest of her days in the solitude of the mountains. There has now peacefully passed away to find rest at the side of her husband one who was a great woman and a great Queen. And many a tear will have been shed for the Mother of the People, and many a Roumanian peasant will have murmured, as of ancient custom, the familiar prayer: "Fie-i tarâna usoara"—"May the earth rest lightly upon her."

D. MITRANY.

PRESS TRIBUTES.

It is almost as difficult to think of "Carmen Sylva" as Elizabeth Queen (and subsequently Queen-Dowager) of Roumania as to think of George Sand as Madame Dudevant. It is also difficult, in the light of recent events, to think of her as a German, though her German origin and associations are understood latterly to have impaired her popularity with the Roumanian people, and made her position in her adopted country embarrassing. Her interests and her friendships were certainly cosmopolitan, and she gave one, for a long time, the impression of belonging to the kingdom of literature rather than to any narrower fatherland.

So far as is known, the Queen of Roumania did not meddle with Roumanian politics, but devoted herself to becoming a good Roumanian and encouraging native arts and industries. She often wore the native costume, which she made *de rigueur* at the Court Balls, and she founded, among other valuable institutions, the "Queen Elizabeth School," where the pupils were taught the old Roumanian industries, including the embroidery for the national costumes, executed in quaint Byzantine patterns of great beauty.—*The Times.*

The death of the Dowager Queen of Roumania removes one of the most gifted of the crowned heads of Europe. Born on December 29, 1843, the eldest child of the mediatised Prince Hermann and Princess Marie zu Wied, in the Castle of Neuwied on the Rhine, the Princess Elizabeth zu Wied grew up amid romantic surroundings, the influence of which was scarcely counteracted by the strict education of a German provincial Court. From earliest infancy she was nourished with stories of the deeds of her ancestors, and her hereditary taste for music, painting, and poetry obtained full play.—*Morning Post.*

To the Western world the Queen of Roumania was little more than a name, but "Carmen Sylva," the poetess and novelist, has been a not undistinguished figure in the republic of letters. Sovereign personages have been no more exempt than other men and women from a craving to win fame outside the Royal occupations to which fate has destined them, but, with hardly an exception, they have been remembered as kings and queens first, and, in the second place, as brilliant amateurs only. With the talented lady who has just passed away the position was reversed. Though she was the consort of the first monarch of a new dynasty, which had been established during one of the great crises of European history, and though she fulfilled her Royal functions with success, her name will probably suggest the woman of literary gifts, who spoke from a full heart to the cultured circles of all lands, rather than the Queen who did much for the civilisation of the little Danubian State.

The Queen of Roumania was often and sorely tried, and, judged by any ordinary standards, her life could not be called a happy one. But it was singularly full of noble and beneficent activity, and blended the practical and the ideal in a union that is all too rare. Her artistic endowment was unusually varied—for though it was her pen which made her famous, she played, sang, and painted with a skill far above the average of the assiduous amateur. Yet she played her part as a Queen truly and well. Moreover, her life was all of a piece. Fine feelings and lofty purposes guided her in the commonplaces of existence, as well as inspiring her writings. The poetess and the woman were one and the same. Like all well-intentioned people she sometimes made mistakes, but no one ever dared to question the purity and disinterestedness of her motives. The good, the true, and the beautiful were ever her beacons, and where she failed it was through seeing things where they were not, and ascribing to others too much of the sublime spirit with which she herself was fired. But some slight remoteness from realities was a small price to pay for the honest merit of her work and the bright example of her character.—*Daily Telegraph.*

The death of Queen Elizabeth of Roumania removes a curiously picturesque figure from the circle of European Royalty. No German born can have had fewer of the narrow German traits than this Wied princess, though latterly her birth had seemed in some measure to alienate the esteem of the Roumanian people. So it is that the innocent are made to suffer for the guilty. As "Carmen Sylva" she was widely known in the literary communities throughout the world. Her poetry and poetical prose, some of which was written in English, had a mild and naive outlook, which was wholly remote from life, especially German or Balkan life. But she had some gift of mystical insight, and for a few her work has a definite and beautiful meaning.—*Pall Mall Gazette.*

The death of "Carmen Sylva" is an incalculable loss to Roumania. Renowned abroad as a talented authoress, she was best known to the people of this country for her whole-hearted devotion to their welfare and for the untiring support she lent to every good work. Many charitable institutions in Roumania owed their origin to her initiative. She was familiar with the minutest details of their organization, and personally superintended their activity. She took a special interest in home industries for the peasantry, and lent her aid to societies formed for the support of cottage industries and for the preservation of the picturesque national costume. Her influence over the pleasure-loving aristocracy of the Roumanian capital was employed in promoting a serious view of life and a sense of responsibility among the upper classes, which gave an impulse to many philanthropic movements, while her highly cultivated appreciation of the fine arts, especially music, set a standard of good taste which is now higher in Bucharest than in any other capital of South-Eastern Europe.—*The Times'* Correspondent in the Balkan Peninsula.

"Carmen Sylva's" marriage with Prince (afterwards King) Charles was celebrated on November 15, 1869. On the way to Bucharest, every town through which she and her husband passed was profusely decorated, and the enthusiasm of the Roumanian peasants appeared to surpass even that with which they had welcomed Prince Charles on his accession. Immediately after her arrival in the capital she began to take an active share in her husband's labours, visiting with him the various charitable and educational establishments. It is told, also, she lost not a moment in setting the Roumanian ladies a strong example in simplicity of dress, equipages, and entertainments; severity of outward decorum; the visiting of the sick and poor, and instruction of the ignorant; the revival of moribund industries; and the founding and supervision of sewing schools and fancy-work classes, in which Roumanian girls of the humbler orders could be gratuitously taught to earn an honest and independent living. It was entirely due to the initiative of her Highness, to her own dexterity with the needle (which she utilised to illustrate her personal teachings), and to the indefatigable pains and inexhaustible cheerfulness with which she encouraged her pupils to persevere in their labours, that the old ornate Roumanian embroidery upon muslin and linen was rescued from oblivion, and resumed its former place in the front rank of decorative hand-work.—*The Scotsman.*

Despite her birth as a German Princess, the Dowager Queen Elizabeth of Roumania, known all over the world as Carmen Sylva, will be widely mourned. The misfortune of her origin, indeed, has of late seemed to alienate the esteem of the Roumanian people, whom she had long and faithfully served in prosperity and adversity. She was, in this respect, made to suffer for faults quite alien to her own nature. . . . To the world she was known as a poet of kindly and gentle, if not very deep, genius, and a writer of popular stories. Her art, however, was undoubtedly handicapped by the unhappy notion that, as the thought springs from the brain, so it must remain, which prevented her from revising her MSS.—*Nottingham Guardian.*

PERSIAN PREMIER RESIGNS.

Under date of March 7, Reuter's Teheran correspondent reports:—Prince Firman Firma has resigned. He has been succeeded by Sipah Salar as Premier and Minister of the Interior, who is a Russophile.

Reuter's Agency is informed by the Persian Legation that his Excellency the Sipah Salar is the well-known statesman hitherto described as the Sipahdar. He has now received the higher title of Sipah Salar, and should be described as the Sipah Salar Azam.

INTERVIEW WITH M. PASHITCH.

M. Pashitch, interviewed at Corfu by a correspondent of the *Russkoye Slovo*, declared that without the treacherous aggression of Bulgaria, Serbia would not have been crushed by the Germans. He recognised that military reasons prevented the Allies from sending reinforcements in time; and, referring to the present situation, said that the condition of Serbia under the yoke of Bulgaria was dreadful.

If the Central Empires triumphed, Bulgaria would become a German province; but if the Quadruple Entente was successful, Bulgaria would be dismembered, but Serbia would live in peace with her neighbours. It was incorrect that the Serbian Army would be directed to any other point than in the Balkans. M. Pashitch expressed the gratitude of Serbia towards the Allies.

According to a Constantinople telegram (says Reuter's Amsterdam correspondent) the Chamber has adopted a Bill extending the time of military service to men of fifty.

NEAR EAST IN PARLIAMENT.

British Prisoners in Bulgaria. March 2.

Sir E. GREY informed Mr. R. Gwynne that the United States Chargé d'Affaires informed the United States Ambassador here by telegram on February 17 that all the British prisoners of war in Bulgaria were to be transferred to Philippopolis, that an American physician had been placed in attendance, and that the present arrangement was very satisfactory. The Chargé d'Affaires has also reported that there are sixty or seventy British prisoners of war in different hospitals in Sofia, and that they are well treated.

Montenegro and the Allies.

Sir W. BULL asked the Prime Minister whether it was the intention of the British Government to include Montenegro in the promise that had been made to Belgium and Serbia.

Mr. LLOYD GEORGE: The hon. member may rest assured that the interests of Montenegro will not be lost sight of by the Allies in the final settlement.

British Prisoners in Turkey.

Mr. TENNANT, answering a question put by Mr. Macmaster, said that British prisoners of war in Turkey were interned at Angora, Afion-Kara-Hissar, and Bozanti. There were also wounded in the hospitals at Constantinople and Smyrna. He understood that the majority, if not the whole, of the prisoners captured by the Turks in Mesopotamia were at Mosul. Letters and parcels could be despatched to the prisoners. They were sent through the Swiss Post Office, and it was believed that the majority of them reached their addresses.

The Danube Commissioners. March 7.

Commander BELLAIRS asked whether the European Commission of the Danube still meets, and, in view of the fact that the commission consists of representatives of seven belligerent powers and one neutral, whether reports indicate that business is harmoniously conducted.

Lord R. CECIL said the answer to the first part of the question was in the affirmative. As regards the second part, it appeared that the business of the Commission was conducted as harmoniously as can be expected in the circumstances.

British Prisoners at Ahram.

Lord R. CECIL informed Colonel YATE that the latest information received, though not from an official source, was that British subjects detained at Ahram were not being so well treated as they were at first. Mrs. Christmas had reached this country, but he had no information as to the whereabouts of Mr. Christmas, of the Indo-European Telegraph Company.

Comforts for the Mesopotamia Force.

Major NEWMAN asked Mr. Chamberlain whether he was in communication with the General Officer Commanding the Mesopotamia Field Force as to the possibility of providing better accommodation and a larger supply of surgeons, nurses, and medical comforts for the wounded who had to be evacuated by boat to Busreh, and whether he had information as to the sufferings of the wounded owing to such deficiency on the road to Busreh.

Mr. TENNANT, who said he had been asked to reply, stated that the Army Council were communicating with the Commander-in-Chief in India on this matter. He might say that all the requests for additional personnel which he had made had been met.

Italian Co-operation in the Balkans.

Lord R. CECIL, in reply to Sir C. Hunter, said his attention had been drawn to certain newspaper articles attacking Italy, and he deplored their inaccuracy and injustice. He was glad to have that opportunity of asserting once again the entire confidence of his Majesty's Government in the loyal co-operation of Italy in the joint efforts of the Allies to bring succour in circumstances of extreme difficulty to Serbia and Montenegro. A warning had been issued to those responsible for the publication of the articles in question.

The Fighting in Mesopotamia. March 8.

Sir J. JARDINE asked the Under-Secretary for War if he was in a position to give an account of the battles of January 14 and February 7, and later battles in which troops belonging to the garrison at Nasriyah on the Euphrates line had been engaged.

Mr. TENNANT replied that information required about an action on January 14 could be obtained from the India Office, who were at that time in control of the operations. With regard to the operations of February 7, information had already been given. A small punitive column set out on February 22, and four miles north of Nasriyah engaged the enemy, who fled, suffering severely, whilst we had no casualties.

Lord Kitchener's Salary.

Mr. LLOYD GEORGE, replying to questions asked by Mr. COWAN and Mr LYNCH, said:—On the outbreak of war Lord Kitchener was in receipt of £6,140 a year, which was the salary drawn by the British Agent and Consul-General in Egypt while on leave. On his acceptance of the post of Secretary of State for War, this salary was continued.

Mr. COWAN: Do I understand that the salary paid to the Secretary for War is guaranteed for the term of the war?

Mr. LLOYD GEORGE: Certainly, as long as Lord Kitchener holds the office.

Replying to Mr. LYNCH, Mr. LLOYD GEORGE said: On Lord Kitchener's departure from Egypt the business of H.M. Agency and Consulate-General was, as is customary, conducted by a Chargé d'Affaires. Subsequently it became necessary, in view of the altered status of Egypt, to appoint a High Commissioner, and Sir Henry McMahon was appointed to this position on December 18, 1914.

The Situation at Aden. March 9.

Mr. CHAMBERLAIN, in a written reply to Major Newman, says the situation at Aden remains unchanged, and since February 21 no operations have taken place except a brush with the Turks on February 24, in which a small flying column inflicted casualties on them.

THE MYSTERY OF YUSSUF IZZEDIN.

Writing on February 29 from Constantinople, a correspondent of the *Nieuwe Rotterdamsche Courant* (according to Reuter) gives some details regarding the death of the heir to the Turkish throne, Prince Yussuf Izzedin. He accepts the official version that the Prince's death was caused by his own hand, and bases his view on the argument that murder would have been unwise because the present heir to the throne, Prince Wahid-Eddin, is even more hostile than was the deceased to the Committee of Union and Progress.

Prince Wahid-Eddin, he says, has never concealed that the meddling of the Committee was not to his liking. Between the present powers that be in Turkey and Wahid-Eddin Effendi there have already been quarrels, in which the Prince always got the worst of it. This never happened in the case of Yussuf Izzedin, who always maintained good relations with the Committee and the men at the head of the Administration. The writer, however, mentions circumstances that seem hardly to accord with the theory of suicide. He says that the Prince was just about to accept an invitation of the Kaiser to visit Berlin, and then to accompany the Kaiser on a tour of the various fronts.

"After long and troublesome preparation, everything was ready for this journey, to which also a certain political importance was attached, and the Prince was to leave Constantinople with his retinue on Tuesday, at five minutes past twelve noon, by the Balkan train. On the morning of the very day fixed for his departure the Prince was found dead in the vestibule of his 'hammam,' having bled to death."

This tragic and sudden occurrence, according to the correspondent, was kept so secret at first that the Balkan train remained a full hour waiting for the exalted traveller, and only when the saloon carriage was uncoupled and information was sent to Nish and Sofia, where formal receptions had been organised, was the news given out that the Prince's journey was "deferred." During the night the diplomatic representatives at Constantinople were informed of the Prince's death. At the same time, there was communicated to the diplomatic body a written declaration, signed by twenty well-known Turkish medical men, that the Prince had met his death by his own hand by the severance with a curved razor of an artery on the left arm. This finding of the medical men was "confirmed" by a *procès verbal* framed by the judicial authorities.

It was known, says the correspondent, that the Prince never was a warm friend of the Committee of Union and Progress, and the rumour was spread that the promising future of the Prince, who was about to emerge from his former seclusion and about to occupy a far more brilliant position than heretofore, was cut short by his enemies.

The correspondent then explains that the Prince's successor is even more hostile to the Committee, and gives the views of the Prince's friends, which practically amount to a declaration that it was "just like the Prince" to take his own life in this dramatic way at such a dramatic moment. The correspondent continues that after Abdul Hamid's deposition, Yussuf Izzedin had cast off to some extent his former reserve and began to take an interest in public and, in particular, military affairs. Owing to his kindness and generosity, he became more and more known and more and more popular. This free and frank disposition, which showed itself also towards opponents of the Young Turk regime, did not, however, suit the Committee, and the Prince was provided by the Young Turks with a household, both civil and military, on whom it was enjoined to watch over the Prince's behaviour. That the relations of the Prince with those set to watch him were not pleasant was apparent from continual changes in the appointments, which were then ascribed to the increasing ill-temper and neurasthenia of the Prince.

The Balkan war, says the correspondent, affected him, and also the menace to Constantinople through the presence of British troops at Gallipoli. When the British departed, the Prince received the news with the greatest joy. The doctors took advantage of this welcome change of disposition to suggest a journey abroad, and the opportunity presented itself in the form of an invitation from the Kaiser. The Prince at first accepted the invitation gladly, but his objection to the idea of official receptions soon reasserted itself. When the journey could, however, no longer be postponed, he appeared to accept the inevitable, and everything was ready for his departure on the Tuesday.

On that day the Prince was found dead. The correspondent says that those closest in touch with the Prince (the correspondent, it should be noted, has already said that the heads of the Prince's household were imposed upon him by the Young Turks) are of opinion that the Prince's objection to the journey became so strong at the last moment that in order to escape it he killed himself. Prince Yussuf Izzedin, adds the writer, was more inclined towards the French and the Italians (with whom he considered the Turks could best get on) than the Germans.

THE PRESS ON THE NEAR EAST.

The Position of Turkey.

British papers of all shades of opinion have devoted considerable attention to the position of Turkey during the past few days, while reports from all sources agree that the internal affairs of that nation show increasing signs of disturbance. The *Manchester Guardian* (March 6), in a leading article entitled "The Rumours About Turkey," says:—

Enver is identified more than anyone, in the eyes of the Turkish people, with the policy that now threatens Constantinople with famine and pestilence and the whole Turkish Empire with dismemberment. He has ruled by terror, and has not scrupled to use the knife. He may well fall by it. But the capture of Bagdad, though likely enough now, can hardly be thought "imminent." But, pressed from several sides, the defenders of the city, unless more heavily reinforced than seems now likely, cannot permanently hold it. Should it be captured, Von der Goltz might well resign, and even an Austrian bodyguard will not save the Sultan from the dread consequences of Young Turk policy. So we may take good cheer from rumour after all.

The *Daily Telegraph* (March 6), in the course of a leading article which deals thoroughly with Turkey's position in the war, says:—

Turkey, on the edge of the precipice, sees her Asiatic dominions disappearing like the baseless fabric of a vision, and her European Empire threatened by sea and land. To such a pass have the insensate ambitions of Enver Pasha and the Young Turk party brought a nation which once could count on the friendship of Great Britain, and ask, not in vain, for sympathetic help from France. It may even be true that she is now asking for peace—unless this interesting rumour only voices the intrigues of competing politicians in Stamboul, among whom Talaat Bey is conspicuous.

Our next quotations are the first and last paragraphs of a leading article in the *Globe* of the same date:—

While there is no single rumour of the crop which comes in from the Near East to which we attach complete credence, we can hardly believe that there can be so much smoke with no fire. The rumours are all irresponsible, and not one of them need be true in itself, but it is a remarkable fact that they all point in the same direction—the repentance of Turkey for having allowed her new masters to use her against her old friends. . . . To the Turks, to whom our Book is of almost equal authority with their own, we commend the saying, "Make terms with thine adversary quickly whiles thou art in the way with him." If Turkey should make peace now some remnants of the Ottoman power may still be left; if she waits until the Russians are at the Sweet Waters and the British at the Gates of Baghdad, not the shadow of a shade will be left.

The *Pall Mall Gazette* (March 6) remarks:—

We are hearing a good deal about the Turks' alleged weariness of the war, and, as it is an agreeable subject from the Allies' point of view, we are, no doubt, destined to hear a good deal more. In taking note of the various stories of mutiny and plotting against Enver and his German friends, we should do well to consider how far the wish is father to the thought. One factor may be relied upon—namely, the unexpected length of the war. There are grounds for believing that those who accepted war in the name of the Turkish people were fully convinced that a few months would see them justified. Disillusion has come in other forms, too, such as the Caucasus *débâcle*, the Mesopotamia offensive, and the unsubstantial backing of Germany. Hence we may conclude that if the Smyrna rumour is too much to credit, the tendencies are, nevertheless, in that direction.

The *Daily Express* (March 6) thinks that much of the responsibility for Turkey's alliance with the Central Empires lies with our diplomatists, and concludes:—

The Turk has fought like a gentleman. He has earned the respect of his opponents, and peace might be made without rancour. The awful massacre of the Armenians is not easy to forget, but the ultimate responsibility for that crime belongs to Germany, its instigator. Peace now would ensure him a continuance of his empire, and it would be a bitter blow to the arch-enemy of Europe. Germany may be safely counted upon to leave nothing undone to counter any Turkish attempt to make terms for herself. The Goeben is still in the Golden Horn, and her guns may force unwilling loyalty from Turkey—until it is too late.

The Serbian Army.

A recent number of the *Manchester Evening News* contains the following tribute to the Serbian Army, and incidentally to the valuable part that Italy played at the time of Serbia's greatest distress.

The heroic Serbians, though driven by overwhelming numbers from their native hills, have retained their original formation, and to-day they number 160,000 men, admirably trained, brave as lions, requiring nothing but rest, re-equipment, and some measure of reorganisation to make them once again a fighting force as formidable as any that can be found anywhere. The Allies will watch with the keenest interest and the highest anticipations the re-entry of the Serbians into the fighting-line. Our enemies, the Bulgarians in particular, will dread the advent of that hour. It should not be forgotten that in the measures which were taken to secure the rejuvenation of the Serbians the Italians played a notable part. Putting aside their old jealousy and choking down inherent prejudices, the Italians, mindful only of the supreme interest of the Allied cause, did invaluable work in transporting the Serbians to their place of rest in Corfu, and their services in this emergency will count heavily when the adjustment of Italian and Serbian claims come to be made after the declaration of peace.

Italy's Part in the Balkans.

The *Fortnightly Review* (March) contains an article on the above subject by Mr. Julius M. Price. The material upon which Mr. Price's article was based has already grown old, where in this war the centre of interest swings with such rapidity from one point of the compass to another, but his principal arguments are as valuable now as they were when they were first written. He shows that the Italian campaign was originally planned to be one of invasion, with Trieste as the objective, in the first or second month of the war, and he thinks that nothing more solid or impressive than the dogged determination of united Italy to see the thing through in the face of disappointment could be seen.

Meanwhile, pending the anxiously awaited advance in the direction of Trieste, the situation is becoming more and more involved in the Balkans, and one has the growing impression that Italy's part in the operations, which are a direct consequence of the loss of Serbia and the surrender of Montenegro, will have considerable influence on the final result.

In reference to the new phase of affairs which was brought about by the surrender of Montenegro, the writer says:—

It is so easy to see now what ought to have been done months ago, and even in Italy it is admitted that had a strong contingent of troops, with heavy artillery, been dispatched at the very beginning of the war to Montenegro, and Austria attacked from that direction, it would have altered the situation completely, and doubtless have relieved the pressure on the Isonzo front; but there is nothing to be gained by "jobbing backwards," to use a Stock Exchange aphorism, and it is realised that now is not the time for repining, but for action.

He shows the natural strength of Austria's position in the Adriatic, where the Austrian coast is endowed with numerous deep-water inlets which provide excellent harbours.

It has been frequently remarked that this coast-line in itself was likely one day to bring about a European war, and there is certainly no gainsaying that its possession is of vital interest not only to Italy, but to the Entente in general. Its passing out of the possession of Austria would mean the final check to all German aspirations in the Adriatic. Of that there cannot be a shadow of a doubt, and every effort should, therefore, be made to accomplish it. A barrier would *ipso facto* be constituted between the western world and any attempt on the part either of Pan-Slavism or Pan-Germanism at dominating the Mediterranean.

The question of the supremacy of the Adriatic, therefore, whilst concerning the interests of all the Allies, affects Great Britain even more particularly, as it means the safeguarding of the Mediterranean as the key of the Empire. In the re-making of the map of Europe Italy's legitimate ambitions with regard to the Dalmatian coast will have to be taken into account, and that they will be very seriously supported by England there can be no doubt. With Italy indisputably mistress of the Adriatic the position on the Mediterranean would be assured. Any other proposition that would in the least tend to weaken Italy by circumscribing her sphere of naval development would sooner or later allow free play to forces which are or might be antagonistic to the British Empire. . . . By lending a strong hand to Italy at this juncture we would not only help to solve the Balkan tangle, but also prepare a real guarantee for our own position in the Mediterranean.

Italy's part in the Balkan operations must necessarily be subordinated to the exigencies of the war she is waging on her own frontier.

Mr. Price attaches great importance to Valona, as will be seen in the following paragraph, quoted from the concluding portion of his article:—

One would not be surprised if Italy's prescience in occupying Valona on her own initiative were to prove an important factor in the settlement of the Balkan side of the war. In any event, the effort she is making to take a serious part in the operations in Southern Albania are an earnest of her steadfast co-operation with the Allies, and her determination *coûte que coûte* to see the war through to a successful finish.

Turkey and Egypt.

We take the following quotation from a dispatch of Mr. George Renwick, special correspondent at Salonika to the *Daily Chronicle* (March 7). After analysing the ability of Turkey to carry out her threat against Egypt, Mr. Renwick thinks that she still possesses a fairly large army to gamble with. He then turns to the question of canal defence:—

A year ago I had several opportunities for seeing the canal

Digitized by Google

defences. They were undeniably very strong then. During the year the defences have undoubtedly been made infinitely stronger, and the forces defending this important part of our Empire's greatest highway have certainly been greatly added to. General Maxwell is not the man to remain idle, and two very important appointments give evidence of his activity.

Sir George Macauley, Under-Secretary of State for Railways, and Sir Murdoch MacDonald, Under-Secretary for Public Works, have been gazetted colonels in the Royal Engineers. That Sir Murdoch MacDonald has been given such a commission is excellent. Few men have such a fine record of work to their credit as that achieved by Sir Murdoch since he has been connected with Egypt. He had a great deal to do with the building of the Assouan Dam, and the enlargement of it is his work. He may be called, indeed, the civilian Kitchener of Egypt.

Meanwhile, with all these factors in the Near Eastern situation, the Salonica Expedition daily increases in importance. Germans, Austrians, and Bulgarians, with the addition of Turks, are, it cannot be denied, a very formidable combination, and the Entente would do well to make General Sarrail's army one which will be able to sweep north to the Danube. That, if the Russians continue their Asia Minor advance, would be the end of Turkey; Bulgaria would quickly collapse, and the presence of a strong army on the Danube, linked up, as it would most likely be, with the Rumanians and Russians, would greatly tighten the grasp we have on the Duplicu.

The Jugoslav Question.

Writing under the above heading in the *Asiatic Review* (February 15), Mr. Francis P. Marchant says that "German *Drang nach Osten*, if unchecked in its progress to the Persian Gulf, would ruthlessly crush out of existence numerous nationalities to whose support the Entente Powers are pledged. . . . Among the victims of the Teutonic sledge-hammer would be the Jugoslavs." The writer proceeds to explain that the Jugoslavs comprise the Serbo-Croatians, Bulgarians, and Slovenes, but as Bulgaria has now estranged herself from her Slav neighbours, he does not in this article concern himself with her fate.

We are left with about ten millions of Jugoslavs subject to Austria, Hungary, Turkey, Serbia, and Montenegro. The creeds professed are Christian, Orthodox, Roman Catholic, Greek Uniate, and Protestant, and Islam. The Cyrillic alphabet is used by Serbs and Bulgars (Orthodox), and the Latin by Croatians and Slovenes (Roman Catholics), while in the Dalmatian islands a Slav-Roman liturgy is still printed in the cumbrous, antiquated Olagolithic signs. . . . The wonderful tenacity of national peculiarities and languages under about four centuries of Oriental sway is remarkable. Though the defeat of Kosovo, aggravated by the capture of Constantinople by Mahomet II. in 1453, was of a decisive character, the memories in Serbia of Dushan, and in Bulgaria of Simeon, were still alive. The Serbs are racially and linguistically less affected by foreign strains than their Bulgar neighbours; but though definite boundaries are indicated on maps, it is not easy to say in some districts where the one begins and the other ends. The name Slav or Slovene was common to all members of the extensive race, but Slovene is the name given to the Slavs of Stajera (Styria), Koroshko (Carinthia), and Krajnsko (Carniola), whose independence was destroyed by Charlemagne. The name Serb belongs to the Serbians and to the so-called Wends of Saxony and Brandenburg. (Little reference to the future of these or the Pomeranian Slavs, long surrounded by Germans, has been made as yet.) The Serb and the Croat (Hrvat) are absolutely identical in race and language, and occupy, broadly, the whole area between Trieste and Salonika, with the long Adriatic littoral from Venetia to Albania, the Danube forming a rough boundary as far as the Bulgarian frontier on the Timok, but a large number of Serbs live in Hungary, whither their ancestors fled from the Turks.

Mr. Marchant thinks that no satisfactory settlement of the Jugoslav question can be carried out except on a basis of compromise, perhaps of several compromises. In his concluding sentences he deals with the claims of Italy in the paragraph which we quote below:—

It must be remembered that a large Italian population has inhabited Trieste and the islands of the Adriatic littoral from the days of the Doges, and that our brave ally Italy has political and economic claims in this territory which must be recognized. The forces of General Cadorna are engaged in an arduous winter campaign against the Austrians in the Julian Alps, and the Italian navy performs valuable services along the whole coastline. The authors of the "Southern Slav Programme" urge that the Eastern Adriatic coast and hinterlands should form part of one and the same State, while admitting that Italy must be compensated for her sacrifices. They fear that a joint possession of the coast would lead to conflict which would afford Germany an opportunity of future southern aggression. However, as they write, "an understanding between Italy and Jugoslavs would obviate this disastrous possibility." It is not practicable for a settlement to be reached which ignores substantial Italian claims.

The General Situation.

The following quotations are taken from a leading article in the *Daily Telegraph* (March 6). This paper is inclined to discredit the story of the attempted assassination of Enver Pasha, but it thinks that there are unmistakable signs that Constantinople is becoming aware of the forlorn state into which it has fallen by alliance with the Central Empires.

Turkey now in her need is asking the Central Powers to send her help in men and munitions, and it is beyond the competence of Berlin or Vienna to accede to her request. How can her allies help her? In the north at Riga, farther south in the Pripet Marshes, farther south still in Bessarabia and Galicia, every man and every gun is wanted to hold the line against the increasing pressure of the great Northern Empire. If Turkey proposes to remove some of her troops from Thrace and Macedonia, she is told that the menace at Salonika is too urgent to admit of any such depletion of force, and that Bulgaria must be supported against an all-too-probable Franco-British initiative.

The truth of the matter is that no appeal, however piteous, from Turkey can be attended to. Germany has her hands full elsewhere. After pointing out that with the capture of Bitlis our Allies have cut the Turkish line, and have gained control over the central plains of Asia Minor, the article concludes:—

By their steady progress in Persia, the Russians have scotched German intrigues in a country which Berlin was attempting to overrun by pacific penetration and other methods; while in Mesopotamia the horizon has cleared, and we may now look forward with some confidence to the junction of General Aylmer and General Townshend and a victorious advance towards Bagdad. But it is especially in their relation to the general situation in the Near East that we must regard the startling events of the last ten days. The capture of Erzeroum gave us the first streak of light in a darkened sky; the stout resistance of the French at Verdun announced the coming dawn. We may be sure that politicians in the Balkan Peninsula are watching the position with the keenest interest. They see that the game is up in Asia Minor; they discover that the German hosts, even in the fiercest of their onsets, are by no means invincible on the Western front; they are learning to suspect that the Central Powers do not possess that enormous reserve of power which can at once protect their allies and win martial triumphs on the stricken field. What will be the effect in Athens, in Bucharest, in Sofia, in Constantinople? . . . If Germany's great strategic move in the Balkan Peninsula is threatened with failure, and German troops, despite costly and desperate attacks, are held up in France, the Entente Allies have every reason for confidence and hope. It may be a long and difficult struggle yet, with alternate success and defeat and many vicissitudes in the arduous campaign. But we can already descry the beginning of the end.

The Problem of Constantinople.

Writing in the *Fortnightly Review* (March) Mr. J. A. R. Marriott gives a very complete and interesting article on the "Factors in the Problem of the Near East: Russia and Turkey." As, however, the article is mainly historical it does not lend itself to quotation for the most part, but we would recommend it to our readers. Mr. Marriott regards our characteristic lack of foresight in diplomatic matters as being more than ever conspicuous in dealing with the Near East. He shows the all important part that Constantinople has played in the Near Eastern history of the past, and concludes with the paragraphs which we quote below:—

The future of Constantinople cannot be determined until the close of the present war. The solution of an historic problem must form part of the general settlement which peace, it is hoped, will bring. Meanwhile, very great mischief has already been wrought in the Near East, and even in the Farther East, by the premature, and apparently gratuitous, announcement as to the destination of the Byzantine capital. It goes without saying that, presuming the victory of the Entente Powers, the claims and wishes of Russia will deserve, and will receive, the most cordial and sympathetic consideration at the hands of her Allies. But Sir Edward Grey's announcement affords one more illustration of the tactlessness, the short-sightedness, the complete lack of perspective or consistency which has from first to last characterised English diplomacy in regard to the problem of the Near East. We counted on the neutrality of Bulgaria; we hoped for the active assistance of Roumania and Greece. Which of these expectations was likely to be furthered by the definite announcement that the custody of the Straits was henceforth to be confided to a powerful commercial competitor and political rival? Russia has sustained her part in the common cause with superb gallantry; if that cause is crowned with victory there is no reward for which Russia may ask to which she is not, by common consent, entitled. But victory is pot yet attained. To attain it we have need not only of irresistible force, but of wise and far-seeing diplomacy. Least of all can we afford to alienate any possible allies. In the meantime, therefore, the less said by responsible statesmen as to the ultimate division of the spoils the sooner we may be in a position to divide them.

Two Salonika Railways.

In the course of his lecture before the Royal Geographical Society on the 7th ult., Mr. H. Charles Woods referred to the Nish-Salonika and Salonika-Monastir lines. He said:—

Nish—Salonika.

Second only in significance to the Belgrade-Sofia line, and even destined now to play a more important *rôle*, is the railway which connects Nish and Salonika. The length of this line is 278 miles. The northern section, that is the section from Nish to Raistovats, was built by the Serbians and opened in the year 1888. Its length is seventy miles. The remaining 208 miles were constructed for the Ottoman Government by Baron Hirsch, the greater part being opened in 1872. The Turkish section, which had no kilometric guarantee, was worked by the Oriental Railway Company until the Balkan wars of 1912-1913. As a result of these wars the Serbians secured, and subsequently took over the working of, the line between Raistovats and Gevgeli—a section which has a length of just over 250 miles. The remainder of this line, that is the part between Gevgeli and Salonika, has been in Greek territory since these wars, but the Hellenic section continued to be worked by the Oriental Railway Company until after the order for Greek mobilization issued at the end of September, 1915.

Salonika—Monastir.

Although it is not, strictly speaking, a main line, its geographical position, partly in Greece and partly in Serbia, makes it convenient here very briefly to refer to the railway which connects Salonika with Monastir. This railway, which has a total length of 136 miles, was opened in the year 1890. It is of considerable importance, because it serves an area of country which would otherwise be far from accessible—the proposed line from Kuprulu (Veles) to Monastir running entirely through Serbian territory has never been constructed—and because for years it has been part of the programme of Balkan railway construction to prolong it through Albania to some point on the Adriatic. Moreover, as it runs through Gida, Verria, and Florina, it will soon provide through communication with Athens by a line which now connects, or soon will connect, Larisa with Gida.

Smaller Lines.

There are only two railways in Serbia which have no connection with the main trunk routes from Belgrade to Constantinople. The first of these is a recently constructed line in the extreme north-western corner of the country. The second is that which runs through the district best known as the Sanjak of Novipazar—that narrow tongue of formerly Turkish territory which up to the time of the Balkan wars separated Serbia from Montenegro.

At Sofia and from the main trunk route a railway branches off in a south-westerly direction, and runs by way of Radomir and Kyustendil to Gyuveshevo absolutely on the Serbo-Bulgarian frontier. Opened by sections, this railway, the length of which is about ninety miles, was only completed in the year 1910. It is important because of the facilities which it gives for a military concentration in this part of Bulgaria, and therefore for a Bulgarian advance upon Uskub, and also because it was intended as the Bulgarian section of line finally to link Sofia with that town and, perhaps, to form part of a great line from the Danube to the Adriatic.

Greek Routes.

There are three principal routes by which Greece maintains communications in and with her new provinces, and between them and the remainder of Europe. To begin with there is a good road about fifty-five miles long from Preveza at the entrance to the Gulf of Arta, and another through Arta to Joannina. The former route was constructed by the Turks at about the same time as that from Santi Quaranta. A new road, some fifty miles long, either has been or is about to be built from Gumenitza, the natural port of Joannina, to that city. Further to the north-east there is a route which connects Kalabaka—a Greek railway terminus—with Joannina by way of Metsovo.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.
Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, 'DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.
Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.
Tanners and Curriers, Leather Goods Manufacturers.
Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.
CONTRACTORS TO GOVERNMENT.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.
Sole Manufacturers of the Famous . .
Dhariwal
Long Life Wool Wear
Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c.. &c.
CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Central News Agency reported from Amsterdam last night that the Ottoman Chamber of Deputies has passed a Bill allowing the free importation, until the end of the war, of a number of necessary articles, including petroleum, sugar, coffee, matches, beans, peas, certain drugs, linen and yarns.

***

A correspondent writing from Athens on February 24, said:—"A local Greek, in touch with Constantinople, has given me a list of prices ruling in the Turkish capital; it may interest your readers." The list, in piastres per oke, is as follows:—Coffee, 100; soap, 40; sugar, 60; paraffin, 90; grease (used as butter), 50; cheese, 50; haricots, 14; biscuits, 40; milk, 6; lemons, 2-3; olives, 12-14; meat, 20-25; alcohol, 120; oil, 20; and paper, 25.

***

Prices in Greece, writes another correspondent, are also higher than last year. Thus, sugar is now 1.90-2.10 drs. per oke, as against 1.15 drs. last April, and bread 0.80 drs.-0.90 drs., as against 0.45 drs. before the war. Matches also are dearer. Some kinds of wood have doubled in price, and are almost unobtainable. Coal is 100 drs. per ton—when it can be got, which is not often, as there is hardly any in the country.

***

The report issued by the Council of the Corporation of Foreign Bondholders, to which reference is made elsewhere, contains tables showing the position, at the commencement of 1916, of the Public Debts of the fifty-two foreign countries and States quoted on the Stock Exchange. These countries are divided into three classes—viz., (1) those paying their obligations in full, by which is meant that the States and countries concerned have made no declaration of any suspension of payment; in the case of those involved in the war no payment is made to enemies, and restrictions are imposed with regard to locality of payment; also, in certain instances, owing to *force majeure* or to difficulties occasioned by the war, it has not been possible to apply the sinking funds. This group comprises the following Near Eastern countries:—Bulgaria, Egypt, Greece, Persia, Roumania, Serbia, and Turkey. (2) Countries and States paying their foreign obligations in part, in which group there appear no countries covered by THE NEAR EAST; and (3) those which have entirely defaulted in the payment of their foreign obligations since the outbreak of the war, among which has been included brave little Montenegro, which has defaulted since (and including) the July, 1915, payment on its debt service. It is to be regretted that no measures were adopted whereby Montenegro could have been placed in the same category as Serbia—and Belgium for that matter.

***

According to a Reuter message from Bucharest on February 29, the Roumanian Government has decided to build at railway stations and ports new warehouses capable of housing 400,000 tons of cereals. This decision has doubtless been taken as a result of our wheat deal with Roumania, one clause of the agreement stating, as has been previously mentioned in these columns, that the buyer has the right to leave the goods in the hands of the seller for a period not exceeding six months after the conclusion of a general peace, or, according to another version, until the Dardanelles are reopened. The effect of this was to incapacitate existing warehouses when required for the next harvest—a circumstance which was naturally fully exploited by the Boche agents in Roumania. In a recent interview granted by M. D. Greceano (*vide* last week's issue of THE NEAR EAST) to our Bucharest Correspondent, the eminent economist suggested that Great Britain, in order to put an effectual stop to Austro-German intrigues, should construct, or have constructed, in Roumania special warehouses for storing the purchased grain; but from the above it would seem that the Roumanian Government has chivalrously forestalled us, and confounded the subversive propaganda of the Huns.

***

I am pleased to see that the Sultan of Egypt strongly advocates the creation of agricultural syndicates after the war, without which, he declared in an interview, the cultivation would never rise. He looked forward to happy days when the fellaheen, no longer weighed down with debts, would become proprietors of the lands they cultivated. This certainly seems to be the most rational scheme that could be adopted if the fellaheen are to reap the full benefits of their labour. In the hands of a strong committee the farmer would be enabled to dispose of his produce to the greatest possible advantage with a minimum of trouble to himself, and backed by the support of its advisers he would always be in the position to obtain speedy financial assistance for the development of his land in case of necessity. The suggestion is by no means a new one in its application to Egypt; the syndical system is known to have been greatly favoured by Lord Kitchener when he was in the country, and his Highness's interest will probably serve to make its adoption general. As long as such syndicates are rigidly safeguarded from the inclusion of unscrupulous members who might be tempted to exploit the ignorance of the fellaheen to their own advantage their formation could be followed by none but good results.

***

I should like to draw the attention of our friends in the Near East to the fact that British £1 notes are circulating freely in Germany—a most suspicious circumstance, considering that our export of said notes is *practically nil*. The conclusion to be arrived at is that they are being forged by the German Government with a view to foisting them, instead of the valueless mark, on friends and neutrals. Roumania, especially, will be well advised to refuse payments offered by the Central Powers, Bulgaria, or Turkey, in British £1 notes.

***

Writing on February 20 from Athens, our Special Correspondent confirms a previous report that the Ottoman Chamber of Deputies has passed a law increasing the loan of £T6,000,000 voted last October to £T20,000,000 to be raised in Germany. It is not clear what the object of this loan is (says our correspondent), unless it is to pay in some form or other Turkey's debts to German creditors. All these loans raised in Germany are shrouded in mystery. Of course, no coin comes into Turkey; in fact, on the same day the Chamber authorised another issue of paper money to the extent of £T1,340.000. The issue of so much paper of forced currency is naturally a matter of some concern to the banks, who may find themselves loaded with a lot of worthless "scraps of paper" at the end of the war. The mark is depreciated to the extent of about 35 per cent. in Constantinople, the exchange on Berlin being 24 marks to the Turkish pound.

***

Last week, in the House of Commons, Colonel Yate asked the Secretary of State for Foreign Affairs whether, in view of the fact that so many British Consuls or Vice-Consuls (in Sweden, Norway, Denmark, and Holland) were aliens "it is now proposed to limit the appointment of British Consuls and Vice-Consuls to men of purely British descent." Sir Edward Grey replied: "All salaried Consular officers in the countries named are of British birth. Of the unsalaried officers the great proportion in the countries named are foreigners. These appointments are made in places where it is a choice between having an unsalaried officer or none at all. In such places where a suitable British candidate is forthcoming he is given the post, but British merchants and shipowners constantly employ foreigners as their agents, and it therefore often happens that there is no one of British birth resident and qualified for the unsalaried post."

***

I wonder if these remarks of our Foreign Secretary apply to all Consular posts in the Near East? For some cities—even capitals—in the Balkans (I exclude Bulgaria, which fell until recently within the jurisdiction of the Levant Service) have no British-born Consuls. They are aliens. Are they salaried or unsalaried? Have they been appointed because no British-born subject was available—this is doubtful—or is it because we do not trade in these countries? The suggestion is fallacious; the Boches did not only appoint Consuls where trade was booming; they wisely appointed them where trade was slack, and, *as a result*, trade boomed. Can we not follow a similar procedure, and thereby get rid of some of our Consular "friends" who write "bush" as though it were spelt "busch." The difference in cost could surely be easily covered by introducing some minor Consular fees (a system of Consular invoices, for instance, as suggested by Colonel Yate), which would bring in several millions.

***

A Proclamation is shortly to be issued prohibiting, as from March 13, the importation into the United Kingdom of canned, bottled, dried and preserved fruit, except currants. This prohibition will not, however, affect fruit of this description the produce of any part of the British Empire. Fresh fruits, it will be observed, are not affected by the proposed measure.

Alexandria Prize Court.

S.S. Proton.

The following are extracts from the judgment delivered by Judge Cator on February 8, 1916, in the Alexandria Prize Court, *in re* s.s. Proton :—

This case raises difficult questions both of law and fact. The Proton is a vessel of about 530 tons burthen, registered at Syra in the name of Kouremetis, a naturalized Greek subject, and entitled to fly the Greek flag. She was captured by H.M.S. Kennet in the Turkish port of Kiuluk on May 16, 1915, while engaged in loading cargo. The Crown asks for her condemnation.

Kouremetis was a Turkish subject of Greek race from the island of Calymnos, one of those Greek-peopled islands in the Ægean which until recently formed part of the Ottoman Dominions, but were seized by Italy in the course of her war against Turkey a few years ago, when, as Kouremetis says, he became an Italian protégé and obtained an Italian passport. For a long time he had carried on business in Hamburg, but he left that city after the war broke out, and, on or about April 15, 1915, obtained naturalization as a Greek subject. On April 17 he purchased the s.s. Proton for the price of 150,000 drachmas, as appears from a Notarial Act which has been produced to the Court. On April 22 the Proton cleared from the Piræus for Adalia in ballast with Kouremetis on board.

According to her log the Proton reached Adalia, on the Turkish coast, on April 25, and proceeded to load cereals and flour for Samos and Piræus. On the 29th she sailed for Samos in the middle of the night, but, owing to rough weather, decided to put in at Calymnos in order to dispose of about ninety cattle which had been taken on at Adalia and were suffering from the effects of the storm. She made Calymnos at 3.30 p.m. on the 30th, and landed the cattle, and the log contains this entry: "The export of goods having been prohibited by the Italian authorities, we were obliged to sell a portion of our cargo of cereals and flour, and commenced unloading."

They proceeded to Leros but could find no local buyers there, and so were allowed by the authorities to sail for Samos, where the balance of the goods were disposed of. According to the log, the ship left Calymnos on May 5, touched at Leros on the 6th, and reached Samos on the 7th. On May 12 they left Samos empty, and reached Kiuluk. On the 14th they began to load cereals, and were so engaged when the ship was seized on the 16th.

The Proton was brought to Alexandria and placed in the hands of the Marshal on or about May 24, 1915. . . .

The Owner.

The questions of fact that I am called upon to determine relate to the ownership of the vessel. Was she really the property of Kouremetis, and, if not, to whom did she belong?

The Crown has produced a series of sworn statements by merchants, ships' captains, and others which seek to prove (1) that Kouremetis was a man of no means, and (2) that he bought the Proton with money supplied to him for the purpose by a third party, and with the intention that she should be employed to carry supplies to Turkish ports.

Testing the evidence of the Crown I am bound to point out that a great deal of it is mere hearsay, and that of a good deal more the means of knowledge of the deponents is not disclosed. But after making due allowance in this direction there remains a substantial substratum of testimony to which no exception can be taken.

The first important fact that I consider to be proved is that a little after the outbreak of war Kouremetis had practically no means, even if he was not actually insolvent, and that in the spring of 1915 he suddenly appeared in Athens with his pockets full of money. Kouremetis himself does not contest the fact that he brought a large sum to Athens in April. He seems even to accept the approximate figures named by witnesses for the Crown, but he claims that the money was his own, and he has given us certain particulars as to how it was acquired. This information is contained in a statement or complaint rated August 14, 1915, addressed by him to the Ministry of Foreign Affairs at Athens. This document is most unsatisfactory. I am asked to believe that Kouremetis, after the outbreak of war, realized in one way or another no less than 192,000 frs. from his business in Hamburg. But, even if his affairs had prospered, which is contrary to all the evidence filed on behalf of the Crown, it is ludicrous to suppose that he could have sold out upon advantageous terms when business in Hamburg had been brought to a standstill. Moreover, he might have had some difficulty in remitting the proceeds to Athens had there been any to remit. Frankly, I do not believe that part of his statement, and, in view of all the circumstances, I am not disposed to accept any other portion of it without corroboration. The statement is not on oath, though I do not attach much importance to that fact. What weighs with me much more heavily is that the claimant has not offered himself for examination. It is true that the Prize Court takes the bulk of its evidence by affidavit, but it can, and does, take oral evidence as well, and in a case like this if the claimant, who is the only person who really knows what has taken place, abstains from going into the box, I think the Court is entitled to presume that he cannot rebut the evidence proffered by the Crown. Moreover, the circumstances under which the Proton was purchased, and the use for which she was intended (as to which I will say something later on) are all factors which may legitimately be considered in weighing the value of the claimant's statement, and the upshot of my examination of the evidence is that I believe Kouremetis had no means when he left Germany on the outbreak of the war, and obtained no considerable sum of money by legitimate methods up to the time of his purchase of the Proton. I accordingly find that the ship was purchased in Kouremetis' name for the account of some other person who furnished the necessary cash.

Germany Suspected.

The next point that I have to consider is whether I may properly infer that the German Government provided the funds. On this point it can hardly be expected that the Crown should be able to produce direct evidence. . . . But there certainly is testimony which tends to connect Kouremetis with the German authorities in Athens, and as he does not deny the allegation I think I may assume it to be true, and bearing that fact in mind I turn to the evidence relating to the purchase of the ship, and her use by Kouremetis to see if any further light can be thrown upon the mystery of her ownership. I find that the purchase treads hard upon the heels of Kouremetis' naturalisation as a Greek subject, and I think I may fairly conclude that the naturalization was effected in order that Kouremetis might purchase the ship. I then examine the object for which she was acquired, and I see that it was to trade with Turkish ports. That is clear from her own log. But I have also come to the conclusion that she had a special mission to convey a particular cargo of oil to the enemy. The ship cleared from Adalia with flour and cereals for Samos, but put in at Calymnos on her way, on the pretext that it was necessary to land some cattle whose condition had been adversely affected by heavy weather met on her voyage. Her arrival in Calymnos coincided with that of a cargo of oil belonging to Kouremetis as to which he observed great secrecy. The evidence indicates pretty clearly that Kouremetis intended to carry on this oil to a Turkish port, and I infer that he had intended to do so in the Proton, and that her first voyage was primarily undertaken with that object, but that in order to conceal his intentions he went first to Adalia and then affected an intention to go from Adalia to Samos. I believe that this proposed voyage was a pretence and the landing of the cattle at Calymnos a mere blind to hide his real intention, which was to pick up the oil at Calymnos and carry it on to a Turkish port. I doubt if the story about the very heavy weather recorded in the log is true. If it were, and the cattle had really suffered, the ship would naturally have put in at Rhodes, and not having done so she could very well have reached Samos, having regard to the improved state of the weather as recorded in the log.

The Crown did not ask me to draw any particular conclusion from the fact that the Proton put in at Calymnos instead of pursuing her voyage to Samos, and it was not until I sat down to examine the evidence in detail that the full significance of the Proton's movements became clear to me. At first, I was in some doubt as to how far I ought to make an inference adverse to the claimant which had not been suggested at the bar, but inasmuch as it was not a question of admitting new evidence, but of appreciating what had actually been produced in Court, I felt that I could not ignore the results of my investigation. At the same time, it seemed only fair that Mr. Booth should have an opportunity of offering explanations, and for this purpose I had the case restored to the list, and recalled the Captain for further examination. The result has been that I am only the more firmly convinced that my inference is correct. The Captain could give no better reason for not putting his cattle ashore at Rhodes than that he passed that island very early in the morning, and he has offered as a further explanation for going to Calymnos that Kouremetis wanted to do a good turn to his fellow islanders by providing them with flour of which they stood in need, which hardly accords with the story about the sale having been forced by the Italian authorities. I have no doubt that the flour was to have made way for the oil, and when the oil could not be loaded there was no further reason for discharging cargo at Calymnos.

Now it may be said that the owner's intention to run a cargo of contraband, an intention which was foiled owing to the action of the Italian authorities, gives the Crown no right to confiscate his ship, and that is perfectly true. But I think this fact is a pertinent one in regard to the question that I have to determine in relation to the ownership of the vessel. I am dealing with circumstantial evidence, and this is a circumstance, which, taken by itself, might have no significance, but in collocation with other facts tends to establish the contention of the Crown.

The purpose for which the vessel was employed, the close relation of Kouremetis with the German Authorities, his unwillingness to testify before this Court, all point in one direction, and after weighing all the evidence to the best of my ability, I make the deduction that the real owner of the Proton was the German Government, and that although Kouremetis may have had some interest in the cargo he had none in the vessel, and was a mere agent for the German Government, whose orders he was bound to obey. I think it follows as a corollary that the Proton falls within either or both the exceptions (2) and (3) of Art. 46 of the Declaration of London, inasmuch as her nominal owner must be considered to be an agent placed on board by the enemy Government, and that she was in reality in its exclusive employment. Consequently, upon the assumption that this case has to be dealt with under the terms of the Declaration of London, I find that the Proton, although technically entitled to fly the Greek flag, is liable to condemnation and confiscation as lawful Prize, and I order her to be sold or delivered to the Crown.

A feature of considerable interest in cotton trade circles during the last few months (says the *Yorkshire Post*) has been the increased takings of the United States in Egyptian cotton. So far this season, that is to say, from August 1 last, the shipments from Alexandria amount to 145,693 bales, against 93,408 bales in the previous year, and 36,718 bales in 1913-14. Recently, the exports from this country to America have been larger, and substantial buying has occurred in the Liverpool market. It is evident from these facts that cotton manufacturers in the United States are spinning yarns of a finer quality. It is said that many concerns are very busy making canvas cloths suitable for motor tyres.

ENEMY FIRMS IN EGYPT.

The *Official Journal* of February 14 publishes the following Proclamation:

1. The licences granted to the firms mentioned in the second column of the list set out below have been modified by the addition of the following clause:—

"(6) The operations of the firm under this licence shall be carried out under the supervision of a Controller appointed under the authority of the General Officer Commanding in Chief, and paid by the firm, the said Controller having power to take all such measures as may be necessary to ensure the speedy liquidation of the business."

The firms in question have been placed under the supervision of the Controllers named in the third column.

Number of Licence.	Name of Firm.	Controller.
26	Bayer, Brüder	Mr. R. E. Moore
29	Boehme and Anderer	Mr. R. E. Moore
31	Brach, Gustav and Co., Succrs.	Mr. C. E. Pheysey
44	The Colloid Wolfram Lamp Co.	Mr. F. H. Russell
47	Cotton Export Co.	Mr. F. H. Russell
74	Fix and David	Mr. R. E. Moore
85	Prima Fabbaica Birra di Graz	Mr. E. D. Joyce
97	Hess and Co.	Messrs. R. and J. Moss and Co.
118	Kortenhaus and Hammerstein	Mr. F. H. Russell
120	Kunzler and Co.	Mr. R. E. Moore
122	Langrebe and Leisching	Mr. R. C. Abdy
132	Lindemann, R. and O.	Mr. H. Bridson
135	Lion, Ludwig	Mr. R. E. Moore
167	Mulhauser and Co.	Messrs. Peel and Co.
182	Pollack and Co., Leopold	Mr. W. B. Delany
190	Protzman, Carl	Messrs. Peel and Co.
234	Schneider and Rothacker.	Mr. E. D. Joyce
235	Seeger, Albert	Messrs. Barker and Co.
236	Seeger Bros. and Co.	Mr. F. H. Russell
239	Siemens-Schuckert	Mr. R. E. Moore
246	S/A pour la Fabrication des Cigarettes Egyptiennes "Hadges Nessim"	Mr. E. D. Joyce
258	Stobbe, Rudolf, G.M.B.H.	Mr. H. Swinglehurst
261	Stross, Brüder	Mr. F. H. Russell
193	Riecken, Georg	Mr. H. Bridson
175	Orenstein & Koppel, Arthur Koppel	Mr. F. H. Russell
254	Steaua Romana	Messrs. Carver Bros. and Co., Ltd.

2. The firms mentioned in the second column of the list set out below have been granted licences to carry on business for the purpose of liquidation only with the additional clause (6) above cited, and the firms in question have been placed under the supervision of the Controller mentioned in the third column of the list.

Number of Licence.	Name of Firm.	Controller.
59	Egyptische Egrenir Fabriken	Mr. H. Bridson, Alexandria
67	Escher Jesumann and Co.	Messrs. Carver Bros. and Co., Ltd., Alexandria

3. The licence No. 75 granted to Mr. F. Flasch has been cancelled and replaced by a licence under the same number for the purpose of liquidation only with the additional clause (6) above cited.

The business has been placed under the supervision of Mr. F. H. Russell, Gresham House, Cairo.

GREEK TRADE WITH EGYPT.

A long report has recently been presented to the Greek Government by Mr. Sachtouris, the Hellenic Consul at Alexandria, on the development of Greek trade with Egypt, prior to the Balkan War of 1912-13. It contains much that is of interest.

It is noted, for instance, that whereas during thirty years the general imports into Egypt have trebled, imports from Greece have increased sevenfold. Exports to Greece have, on the other hand, diminished, mainly owing to the fact that Greece is now growing her own cotton, large quantities of which she formerly took from this country.

It is shown that two-thirds of our imports from Greece consists in tobacco, the balance being represented by oil, olive, cognac, wine, dried and fresh fruits, and chemical preparations for agricultural purposes.

Egypt's Trade in January.

(From Our Own Correspondent.)

Cairo, February 23.

By contrast with the state of affairs that existed a year ago the Egyptian Customs returns for the first month of the current year show a continuation in the improvement in Egyptian trade that has been noticeable for some little time. Imports during January amounted to £E1,695,054 and exports to £E3,248,369, as against £E990,166 and £E2,682,236 respectively twelve months previously—i.e., an improvement in total trade of over 33 1-3 per cent.

The main increases in imports were coffee by £E22,799, or 100 per cent.; construction wood by £E101,638—in January, 1915, only 2,901 cub. metres, worth £E6,198, came in—coal by £E70,589—the change in the market is evident from the fact that the quantity was 15,256 tons less—natural indigo by £E19874—last year none was imported—textiles by £E357,935—cotton tissue jumping from £E148,593 to £E341,124 and sacks from £E23,146 to £E63,988—and worked iron and steel by £E31,305. Decreases were recorded in rice from £E38,011 to £E105, petroleum from £E26,442 to £E841, chemical manures by 90 per cent. to £E7,344, and tobacco by £E1,988.

Under exports the most marked changes were eggs, which increased by £E75,718, though the quantity was only about thirteen million more; cotton, which rose by £E666,025, albeit the exports fell off by 257,746 cantars; cereals, which rose from £E18,445 to £E143,586—the quantities of wheat maize, rice, and beans were in the month several times those recorded for entire years prior to the war—and spirit, which hitherto has been exported in very small lots, and of which £E15,282 was sent abroad in January. Skins and tanned goods fell off by £E12,067, cotton-seed and oil cake by £E113,299, and sugar by £E46,216. The difficulty in securing freights had a great deal to do with the decrease in the export of the two last-named items. Exports of gold and silver bar also dropped from £E138.176 to £E14,250, but this was to be expected in view of the improved financial condition of the people. Cigarettes advanced by £E2,984, the quantity rising from 18 to 22 tons.

Great Britain's share in the imports rose from £E436,786 to £E781,287. She supplied over 60 per cent. of the flour, textiles, and iron and steel, and nearly 90 per cent. of the coal. British Posessions increased from £E110,684 to £E197,508. India just about doubling her share. The latter supplied all the sacks and natural indigo, 30 per cent. of the flour, more than half the cotton threads, whilst with other British Colonies in the East she provided all the tea. The United States have increased their sales to Egypt, skins, flour, mineral oils, coal, and iron and steel being amongst the more important items. France and Italy have both recovered from the first shock of the war and have increased their share by 170 per cent. and 40 per cent. respectively. Italy provided more than half the stone and masonry and a large portion of the stationery. Russia has made a welcome return with £E104,189, as against £E5,803 a year ago; practically all this was construction wood, of which none has come in for some considerable time. Japan, Switzerland, and China also improved their positions, the latter in silk textiles and the second-named in chocolate and machinery.

On the export side Great Britain dropped by £E95,198 to £E1,568,837, mainly in cotton seed; she took all the eggs, and practically all the wool (£E18.619). The United States doubled their purchases, France improved hers from £E29,486 to £E175,776, Italy hers from £E120.004 to £E219.206, Japan hers from £E30,140 to £E164,638, and Russia hers from £E85,404 to £E288,515. Most of these increases were due to cotton, of which 40 per cent. went to Great Britain, 26 per cent. to America, 12 per cent. to Russia, and 6 per cent. each to Japan and Italy. France and Italy between them took nearly all the maize (£E35,975), France all the spirit, Greece all the live stock, and India all the salt.

The Sudan.

In January, 1915, the Egyptian Custom statistics for the first time published details of the exchange of trade between the Sudan and Egypt and we are now able to give comparative figures. Goods to the value of £E73,920 were imported into Egypt from the Sudan in January, as compared with £E14,213 a year previously, and traffic the other way was £E70,575, as against £E53,052.

The chief imports into Egypt were live-stock £E17,812 (£E6,191), sesame £E23,145 (£E1,976), gum £E1,421 (£E353), maize £E5,630 (£E578), senna £E4,331 (£E898), and skins £E1,740 (£E703). Exports were cereals £E2,652 (£E4,307), sugar £E12,668 (£E14,293), cotton tissues £E15,232 (£E10,891), coffee £E2,045 (£E344), and sacks £E3,014 (£E464). The figures in brackets are those of the preceding January, and the comparison shows that the improvement in the economic situation of Egypt is spreading to her southern neighbour.

EGYPT AND MOROCCO.

The following are extracts from two short notes which appeared in the *Egyptian Gazette* recently:—

Sugar.

Of late, during a time of severe stress, Morocco has drawn from Egypt abundant supplies of excellent cane sugar in loaf to make up for the deficiency due to the temporary stoppage of the French refineries and to the total extinction of German overseas trade. This has been entirely due to the enterprise of a London firm of world-wide repute, Messrs. Harrison and Crosfield, whose initiative, backed by capable agents in both countries, deserves hearty recognition.

The exact figures have not yet been published, but they will be well worth examination by all who are concerned in strengthening the commercial links between the two great Protectorates of Northern Africa.

Banking.

A most hopeful event is the establishment at Tangier and Casablanca of branches of the Bank of British West Africa under the management of Mr. Biddulph, a gentleman whose twelve years' work in Egypt, is a guarantee of his realising the requirements and conditions of Egyptian as well as Moroccan commerce.

These, and other indications, all point to the speedy development of business relations between the "Far West" and the "Mid East" of the Anglo-Moslem World, a consummation devoutly to be wished. In this development sea transport will assuredly play a leading part, and it cannot be doubted that with sufficient initial encouragement, the existing steamship lines will rise to the occasion and provide facilities for carrying wares between Alexandria and the principal coast towns of Morocco, giving preference to business centres where there is a British banking establishment, nearly all shipments being now regulated in Morocco under hypothecation of documents.

The Chambers of Commerce of Egypt and Morocco respectively have before them a good opportunity to take time by the forelock and inquire thoroughly into the means of promoting economic relations between the two North African Protectorates—and in so doing strengthening and confirming the friendship between Great Britain and France, which humbly commenced with a diplomatic phrase, and to-day is cemented in the blood of Allies determined to vanquish the common enemy of civilisation and freedom.

Engineering Notes.

Use of Tar-Oil in Diesel Engines.

The difficulties that are often experienced with Diesel engines when tar-oil is used as fuel—as practised in many districts in the East—can, apparently, be overcome by a new method recently described at a meeting of the Manchester Association of Engineers, by Mr. G. E. Windeler. For this purpose an auxiliary pump of special design is employed to inject a small fixed quantity of petroleum oil into the cylinder immediately in advance of the tar-oil; the effect of the "ignition oil," as it is called, being to increase the temperature and ensure immediate ignition and complete combustion of the fuel oil. The ignition oil, which amounts to about 6 per cent. of the total fuel consumption at full load, is delivered through a passage in the fuel-valve casing to the space immediately behind the valve just before the delivery of the fuel-oil takes place, so that when the valve opens the ignition oil enters the cylinder first. Tests have been made, and very satisfactory results have been obtained, with coke-oven tar and tar-oil, blast-furnace tar-oil, and vertical-retort tar, using in each case a small quantity of crude oil for ignition. No difficulty has been experienced with either of these fuels, and equally satisfactory results have been obtained with alcohol, which has proved one of the most difficult fuels to deal with in the ordinary way. According to Mr. Windeler, the exhaust gases were in all cases invisible, and the valves, pistons, and combustion spaces showed a remarkable freedom from deposits after long continuous runs. A very useful feature of this ignition oil apparatus is that it can easily be fitted to existing engines, and the cost of adapting one to an engine for the use of tar-oil would be, according to the inventor's estimate, about £1 per horse power. It is also calculated that, with tar-oil and petroleum at their present prices, the cost of conversion would be recovered in one year's ordinary working from the saving effected in cost of fuel-oil. This new method will be of great interest to Diesel engine users in the East, where tar-oils, from coke-ovens, gas producers, gasworks tar, etc., have recently been introduced and used as fuel. Of equal interest is the assertion that very satisfactory results have been obtained with alcohol, which, in many districts of the Near East, is preferable as fuel.

Linking Up the Greek and European Railway Systems.

According to reports from Athens the new railway line between Gida, on the Salonika-Monastir line, and Pappapuli on the Thessalian frontier will be opened for public use this week or next. The distance is about fifty-six miles, and the line runs along the Vistritza valley and the sea coast to Kraterina and Pappapuli, where it joins the line to Larissa, of the Piræus-Athens-Larissa Railway. The chief importance of this new line running along the coast lies in the fact that it links up the European railways with those of Greece. Thus passengers from Paris or any other continental capital will be able to go by train to Athens in sixty to seventy hours, and thence to Alexandria by boat in forty to forty-four hours. The construction of the new line has been, it must be admitted, rapidly completed. Twenty-new locomotive engines and the rest of the rolling stock have been ordered in America, and are now on the spot. Owing to the war, several iron bridges which had been ordered in France, could not be ready in time, and for that reason temporary wooden bridges have to be constructed where needed.

Beersheba Railhead.

The Suez Canal is a long way from Constantinople, and a still longer way from Berlin, says the special correspondent of the *Times* in Cairo, but recent events in the Balkans have brought them closer together by opening almost through railway communication to the frontier of Egypt, south of Beersheba, the present railhead. The greater part of this line would render great services

to the enemy. Fortunately, it has never been completed, and various gaps and changes of gauge exist between its European terminus at Constantinople and the linehead in Southern Syria. At the Taurus mountains there is a gap of some twenty miles, where the tunnelling has not been completed. Roads, however, connect the two rail ends. A gap of about the same extent exists a little farther to the south, in the immediate region of the Gulf of Alexandretta. From here the line proceeds without a break *viâ* Aleppo and Damascus to Deraa, on the Hedjaz Railway, whence there is a branch *viâ* Jerusalem to Bires-Sepa, or Beersheba, the extreme southern limit of habitable country in Palestine. Here the railway ends, though some preparation has been made to continue it to El-Auja, fifty miles farther on in the desert in the direction of Egypt. Between Beersheba and El-Auja there is practically no water, which will increase the difficulties of laying this portion of the line. It appears that considerable railway stores have been collected at Beersheba, where roads have lately been constructed. It is between Deraa and Beersheba that a change of gauge has to be faced. The total length of the railway from Beersheba to the Canal would be 170 miles. In times of peace, with all the necessary material to hand, the construction of this line would present no very great difficulties, but a considerable period would be required, far longer than the Turks have at their disposal if they desire to attack Egypt within reasonable time.

Alexandria's New Breakwater—Caisson versus Block.

The criticism levelled against the structural system of Alexandria's new breakwater by M. Nicolaou, a local engineer and an exponent of the "caisson" system, has inspired the *Egyptian Gazette* to an examination of the controversial question, with the result that one of its representatives has visited the works and reports as follows:—

"When the breakwater project was first mooted both the system of construction actually adopted and the caisson system were considered. As it was urged that not only was the caisson system more expensive, but it was only of real use when a mole had to be constructed in deep water, whereas the water in the immediate neighbourhood of Fort Kaid Bey is very shallow, the present block system was finally decided upon. The plan adopted was to place rows of forty five-ton blocks symmetrically one upon the other on a special grooving system to a width of 25 metres up to 2 metres 50 cm. above sea level. A wall was then constructed 4 metres 50 cm. high on the inland side, i.e., 7 metres above sea level, and about 2 metres 50 cm. high on the seaward side. The width of the wall is to be 3 metres 50 cm. at the base, 7 metres two metres 50 cm. higher up and 3 metres 50 cm. at the top, leaving a sheltered walk on the land side 2 metres 50 cm. wide, to be used as a promenade. In addition to this already formidable structure, on the outward side there have been thrown out to a distance of eleven metres a great number of forty-five ton blocks, the heaps gradually rising in a gentle incline so that one angle of the bases of the highest blocks rests on a level with the base of the superstructure. By this means, it is impossible for a green sea to strike the base of the mole; on the contrary, meeting with no resistance whatever as the sea face side of this wall is also inclined inwards and upwards, the wave simply slides up the slope of blocks, falling over the wall into the gully beneath. The blocks upon which the superstructure is built are placed on a heaped stone foundation and are so placed as to allow for fifty centimetres of settlement before the superstructure is commenced. Thus, in theory, the breakwater ought to be strong enough to face any storms in this part of the Mediterranean."

Trade Notes.

Egypt.

Tenders are invited by the Ministry of Public Works for the purchase of the following steamers; (1) Rameses the Great and (2) Tewfik, both damaged by fire at Bulac, Cairo, and (3) Rameses, lying sunk off Messrs. Cook's yard at Bulac.

Separate tenders will be received for each of these steamers, which will be sold as they lie in their present position and condition with boilers, machinery, etc., on board. Tenders should be addressed to the Director-General of the Mechanical Service Ministry of Public Works, Cairo. The Rameses the Great and the Tewfik will have to be removed within three days, and the Rameses within one month of acceptance of tender. No date for the receipt of tenders is mentioned.

A cash deposit of £E10 must accompany each tender.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications with forms of tender, etc., may be obtained at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of equipment, clothing, material, paraffin, milk in tins, etc., necessary for Central Stores for one year from April 1, 1916, to March 31, 1917. Date, March 20.

Tenders are invited by the Army Finance Department, Ministry of War, Cairo, for the supply of 350 tons of Rangoon rice, No. 3, into the stores of the Egyptian Bonded Warehouses Company, Alexandria. Date, March 14.

The Egyptian State Railways invite tenders for the supply of "53,080 manches en bois" and 500 cannes en jonc de 1 metre et 60 centimetres de long." Date, April 3.

The Ports and Lights Administration, Alexandria, invite tenders for the supply of petroleum and benzine required for the financial year 1916-1917. Date, March 20.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Sudan

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 22, 1916, for the supply of oils and lubricants required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Agent Sudan Government Railways, Alexandria, or Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 29, 1916, for the supply of paraffin and petrol required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, or to the Agents, Sudan Government Railways, Alexandria.

Cyprus.

Importers are warned that goods which originated in an enemy country, even though they may have left enemy territory and become neutral property before the war, are liable to seizure if imported without the permission of the Government.

Tenders are invited for the supply of boots for the year ending March 31. All boots to be supplied before October 31, 1916. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should reach the Office of the Treasurer not later than 11 a.m. on March 11, 1916.

Greece.

The attention of the Board of Trade has been called to a practice on the part of shippers of consigning their goods to his Majesty's Consular officers in Greece and sending to them bills of lading and invoices for delivery to third parties, and even requesting them to make arrangements for transhipment where necessary. It is impossible for his Majesty's Consular officers, who are already overburdened with other duties, to undertake work of this character, and shippers are accordingly warned not to consign their goods to his Majesty's Consular officers in Greece unless expressly so authorised or directed by his Majesty's Government.

Mail advices from Roumania to *Oil News* state that the production of crude oil during the first half of February was approximately 4,300 tons per day. The demand for the better qualities of crude was very satisfactory up to the 11th of the month, when the railway authorities suspended accepting further consignments of oil products for despatch *viâ* Predeal, Verciorova and Caineni, on the ground that the lines were congested with traffic. Bustenari crude fetched between 41 and 42 fr. per metric ton, and in cases where urgent delivery was required half to one france more was paid.

Greece and Egypt.

Report of the Council of Foreign Bondholders.

The forty-second annual report of the Council of the Corporation of Foreign Bondholders has just been published (price 2s. 6d. net), and is a useful compendium of the loans, etc., of the countries coming within the Corporation's sphere of activities. Near Eastern countries include Egypt, Turkey, and Greece.

Egypt.

Though the report contains few financial items that did not appear in these columns during the course of 1915, their compact publication in book form, together with the history of Egyptian loans, will be found handy for reference. The following table of the external debt is one of the many included under the above heading :—

4% Unified Debt. Issues of 1877 and 1880	£60,958,240	
Less Redeemed to 30th June, 1915	4 986,280	
		£55,971,960
3½% Preference Debt. Issues of 1877, 1880, 1890 and 1901-3	31,681,200	
Less Redeemed to 30th June, 1915	553,420	
		31,127,780
3% Guaranteed Loan of 1885 ..	9,424,000	
Less Redeemed to 30th June, 1915	2,494,900	
		6,929,100
Total		£94,028,840*

NOTE.—In addition to the foregoing, the Egyptian Government has certain direct liabilities with regard to guarantees given in connection with the Nile barrage, the Keneh to Assouan and Port Said to Ismailia Railways, and the service of the Alexandria Municipality Loan. The annual charge on these accounts amounts at present to about £E200,000. The Government also pays an annual sum of about £E665,000 for the service of the Ottoman Loans of 1855, 1891 and 1894, formerly secured on the Egyptian Tribute to Turkey.

There are, besides, sundry contingent liabilities; but the conditions under which these would become effective vary, and, as a matter of fact, the Government has hitherto been practically exempt from having to make any payments in respect of them.

* Including the following Bonds held by the Caisse de la Dette and by the Government for their respective Reserve Funds, etc. :—

4% Unified Debt.....	£3,080,220
3½% Preference Bonds	2,476,000
3% Guaranteed Loan.....	83,600
	£5,639,820

The total amount in actual circulation is therefore £88,389,020.

Of the sum appropriated for the service of the guaranteed loan, there was applied to sinking fund, in respect of the intermediary period, January, February, and March, 1914 (prior to the establishment of a new financial year running from April 1 to March 31), £51,939. For the financial year, April 1, 1914, to March 31, 1915, a further sum of £106,161 was devoted to the same purpose. With the total of £158,100 thus applied, £173,700 bonds were redeemed.

The following statement, revised to date, shows the total amounts received by the Caisse from 1910, the sums required for the debt service, and the surplus remaining :—

Years.	Total Amounts received by the Caisse.	Sums required for Interest, Sinking Fund, and Expenses of Administration.	Surplus.
	£	£	£
1910	3,858,816	3,678,809	180,007
1911	3,707,367	3,679,232	28,135
1912	4,073,887	3,679,222	394,665
1913	4,962,938	4,943,073	19,865
1914 (3 months) ..	175,544	166,472	9,072
*1914-15	4,864,667	4,776,033	88,634

* Fiscal Year altered to 1st April—31st March.

The movement of the general reserve fund (which is entirely at the disposal of the Government) during the financial year 1914-15, was as follows :—

Balance 1st April, 1914	£5,234,409
Expenditure to cover Deficit in 1914-15..	1,505,317
Balance in hand, 31st March, 1915 ..	£3,728,092

Greece.

In the year 1914 the gross receipts from the Monopolies and Piræus Customs assigned under the settlement of 1898 amounted to 63,087,551 dr. as compared with 55,021,654 dr. in 1913, and with 61,763,494 dr. in 1911, which was previously the best on record.

The receipts on which the plus-values are based were 36,193,454 dr., or 7,344,615 dr. more than in 1913, the chief increases being about 5,000,000 dr. from stamps, 4,000,000 dr. from tobacco, and 600,000 fr. from Naxos emery, the last-named being due to the termination of the miners' strike. During the last nine months of 1914, the International Financial Commission also collected 15,148,042 dr. from the Customs of the six ports (outside of the Piræus) and 3,974,339 dr. from the surtax on tobacco assigned to the service of the 5 per cent. loan of 1914, bringing the total sum collected by the Commission up to 82,209,932 dr.

As regards 1915, the receipts from which the plus-values are derived showed a considerable falling off in November and December, and it is expected that for the year they will amount to about 885,000 dr. less than in 1914. On this basis it is probable that the increases payable in 1916 will be, for Group 1, 24 per cent. for interest and 14 for sinking fund, and for groups 2 and 3, 22 per cent. for interest and 16 for sinking fund.

[Group 1, it will be remembered, consists of the 4 per cent. 1887 (Monopoly) Loan and the 5 per cent. 1893 (Funding) Loan; group 2 of the 5 per cent. 1881 Loan, the 5 per cent. 1884 Loan, and the 5 per cent. 1890 (Piræus-Larissa Loan; group 3 embraces only the 4 per cent. 1889 (Rentes) Loan.]

The following is a table of the Greek External Debt outstanding on December 31, 1915 :—

5% Loan of 1881	£3,534,720
5% Loan of 1884	3,082,020
4% Monopoly Loan, 1887	4,669,920
4% Rentes, 1889	5,268,840
5% Loan, Piræus-Larissa Railway, 1890-1....	2,033,910
5% Funding Loan, 1893.....	329,880
2½% Loan of 1898 (guaranteed by the Powers)	4,774,800
4% "Greek Railways Loan" of 1902	2,219,680
5% Greek National Loan of 1907	743,920
4% Loan of 1911	4,279,020
6% Loan of 1913 (repayable in five years)....	2,000,000
5% Greek Government Loan of 1914 (authorised amount, £19,850,000)	13,352,460
Total.....	£46,289,100

Note.—The above table does not include advances made to Greece in the course of the European War of 1914.

The net receipts from all the assigned revenues collected by the International Financial Commission since May, 1910, are given in the annexed table. For the sake of convenience, the receipts in gold from Naxos emery have been converted into drachmæ at the mean rate of exchange for each year.

Year.	Stamps, Tobacco, and Monopolies	Piræus Customs.	Customs of six other Ports and Surtaxes on Tobacco, assigned to the service of the 5 % Loan of 1914	Total.
1910	30,661,702	24,951,891	—	55,613,593
1911	31,997,144	27,148,367	—	59,145,511
1912	30,397,068	24,241,561	—	54,638,630
1913	27,936,169	26,081,042	—	54,017,211
1914	33,302,079	26,803,823	19,071,189	79,177,091

The report contains a list of Greek loans and ample extracts from the 1914 (presumably the most recent) report of the Greek International Finance Commission, from which the following statement is reproduced :—

The total sum required in 1914 for the service of the gold debt, including the plus-values, and of the "Greek Railways" Loan, the 2½ per Cent. Guaranteed Loan of 1898, and the 5 per Cent. Loan of 1914, together with the annuity payable to the Powers in respect of the Guaranteed Loan of 1833, was 33,605,702 fr.

Below we reproduce a table which, giving a summary of the payment, in 1914, of coupons on the gold loans classified according to countries, is of special interest at the present moment.

Turkey.

"Since the entry of Turkey into the European War on the side of the Central Powers," says the Report, "no statistical information of any sort of interest to Turkish bondholders has been available for use in the present Report."

The latter, therefore, merely contains a statement of the external debt outstanding on March 14, 1914, together with a history of Ottoman loans up to and including the 5 per Cent. Loan of 1914. Mention is also made of the £600,000 5½ per Cent. Guaranteed Bonds of the Imperial Ottoman Docks, Arsenals, and Naval Construction Company of 1914, the issuing of which is attributed to the Imperial Ottoman Bank, when in reality they were issued by the National Bank of Turkey. Of these bonds, states the Report, only about one-third have been paid up.

PAYMENT OF 1914 GREEK COUPONS CLASSIFIED ACCORDING TO COUNTRIES.

Loans.	Germany.	England.	France.	Egypt.	Greece.	Total.
	Fr.	Fr.	Fr.	Fr.	Fr.	Fr.
4% Monopoly, 1887	523,506	1,137,094	391 090	—	485,882	2,542,462
5% Funding, 1893	12,181	121,118	14,070	—	31,260	178,629
5% 1881.....	113,506	551,213	307,962	—	933,016	1,905,697
5% 1884.....	372,459	484,771	415,499	—	389,795	1,662,524
5% Piræus-Larissa, 1890 ..	97,398	303,561	223,358	—	377,469	1,001,786

MOROCCAN TRADE.

The December issue of the *Boletin de las Cámaras de Comercio* (Madrid) publishes the following particulars of enemy imports into Moroccan ports previous to the European war, on the authority of the Spanish Consuls at the places concerned :—

Saffi.—The following goods were imported into Saffi from Germany: Tea, sugar, candles, textiles, iron, hardware, and iron goods. Austria-Hungary sent textiles, sugar, ironware, timber and cement.

Mogador.—Before the war the following goods were imported from Germany and Austria-Hungary: Woollen goods, iron goods, enamelled ironware, cutlery, zinc goods, green tea, coffee, sugar loaves, pine timber, wood for egg boxes and shavings, industrial alcohol, syrups for drinks, cement, watches and clocks, and chemical and pharmaceutical products.

Fez.—Many articles which came exclusively from Germany and Austria are now lacking at Fez. For instance, there is a great scarcity of glassware (especially vases). The Spanish Consul states that invitations to Spanish firms to compete in the Fez market have met with the reply that the manufacture of glassware in Spain is not sufficient to meet the needs of the Peninsula itself. The Consul gives the following list of articles imported into Fez from Germany and Austria before the war: Both countries sent sugar, lampware, essences, toys, glassware, steel, enamelled ware, nails, and clocks and watches; Germany alone sent paper and envelopes, packing paper, inks, hardware, soap, mirrors, typewriters, caps, hosiery, fine porcelain utensils, tinplates, ironmongery, etc.; Austria alone sent imitation jewellery, petroleum, furniture, fez caps, razors, medicinal waters, and cloths.

NEAR EAST MARKETS.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, February 15.

Conditions during the last two weeks have been excellent. Rain has alternated with fine sunny days, and reports from all parts of the island—including portions of the central plains and the Carpas, where there had still been anxiety—show that there is good ground for a favourable forecast. The late heavy snowstorms and winds wrought some havoc in the hill villages, especially in the picturesque group belonging to the Nicosia and Limassol districts, called Pitsilia. Here, in places too where locusts last year did no little mischief, heavy damage has been done to fruit trees, including walnuts, almonds, and olives; not a few trees being uprooted by the violence of the gales. The villagers are, consequently, in some distress.

PRODUCE REPORT.

Currants. London, March 9.

Owing to the large speculative business during the last two or three weeks, the market has been more or less quiet this past week, although the expected official notice that the importation of currants was not prohibited has caused some activity, and prices advanced a little. The discouraging reports from Greece that the scarcity of sulphate of copper and of sulphur, which are used against peronosporoes and other vine diseases, combined with the scarcity of labour are causing anxieties as to the prospects of the coming season and a further advance of prices may be quite probable. The stock of currants in London on February 29 was 8,411 tons, against 6,714 in 1915, the same period. The steamers which were meeting with so much difficulty in discharging their cargoes are doing so, now, more freely to the relief of all concerned.

Sultanas.

The demand is moderate, and prices are well maintained. The stock in London at the end of the last month was 2,528 tons, of all kinds of sultanas, against 1,657 tons the same period last year.

Figs.

Only small business is passing at late rates.

Dates.

The market has been firm and dearer this past week; Egyptian 32s. to 37s., and Persian 20s. to 32s.

Seeds.

Linseed is dull and cheaper. London-Calcutta spot is quoted 79s. 6d., afloat, March-April and April-May 79s. 6d.; La Plata Hull, February-March, 74s. 6d.; March-April, ditto. Cottonseed remains very dull. London-Egyptian spot is quoted £14 per ton. Rapeseed is only nominal. Rangoon beans are held at last quotations. Canary seed remains slow, but prices are firm.

Oils.

Linseed oil is quiet and easier, spot pipes £44, barrels ditto £45 landed: March-April, £45; May-August, £46; September-December, £47. Cotton oil is quiet, crude spot in pipes being offered at £42 10s., refined, pipes pale £47 10s., and barrels sweet £51 to £52, as to make.

Egypt's Finances in December.

(From Our Own Correspondent.)

Cairo, February 22.

The State accounts for December, published last night, reveal a most satisfactory situation. The revenue at the end of the month stood at £E13,261,937 and the expenditure at £E11,856,709, as compared with £E11,940,961 and £E13,447,195 respectively at the close of 1914. Thus the revenue is £E1,320,976 better and the expenditure is £E1,590,486 less than at the same date a year ago.

During the month Direct Taxes maintained themselves, £E9,794 more being collected than in December, 1914; Customs improved by £E87,401, Tobacco Dues by £E87,859, Legal Fees by £E10,004, Railway Receipts by £E69,242, Telegraphs by £E5,455, Post Office by £E3,230, Domains Receipts by £E45,305, and Investment of Funds by £E51,643. The sole decrease of any importance was £E12,019 in Port Dues.

It is to be noted that at the end of December Customs receipts were only £E30,408 behind the total estimate for the entire financial year, and that Rent of Government Land, Extraordinary Receipts, and Domains Receipts were respectively £E38,997, £E29,126, and £E3,316 above the sums set down in the Budget for the full twelve months. Most of the other items were also well over their average for the period. On the expenditure side Irrigation, Railways, Buildings, War Office, Interior, and Public Instruction were very much below what they should have stood at according to the estimates. In these circumstances it is not surprising to find that at the end of December the accounts showed a surplus of £E1,405,228. Compared with the position a year previously, when there was a deficit of £E1,506,234, this is highly satisfactory and may be taken as an earnest of what we may expect to find at the end of the financial year three months hence.

Exactly what that position will be it is exceedingly difficult to predict at the present moment. One thing is certain, the deficit foreseen in the estimates last April will be replaced by a surplus, but it must not be taken for granted that that surplus will be based on the excess of revenue over expenditure already recorded at the end of December.

There are many factors affecting the accounts that have specially to be taken into consideration when any attempt at forecast is made at the present juncture. In the first place it will not do to estimate the receipts of the coming three months entirely on the basis of those of the preceding nine. It is not likely that Direct Taxes will increase in the same ratio, for the simple reason that payments have in a great measure been made in advance. Domains, on the other hand, will most probably continue to pile up the receipts owing to the sales of cotton that have still to be made. Railways and Customs depend in a great measure on the shipping facilities afforded to and from abroad, though there is every reason to expect that both heads will be up on the estimates. Tobacco, again, is a very unreliable item. If, however, all these items progress as anticipated—and there is really no reason why they should not—then we may expect the revenue to touch £E16,250,000.

Turning to the other side of the account, the task of forecasting is even more difficult. Expenditure has in the main been kept within its present moderate limits by the restriction of public works. Irrigation alone is £E600,000 down on a programme of £E1,170,000, Railways are £E600,000 below their total budget of £E2,310,000, Buildings and other public works £E164,000 down on theirs of £E430,000. Whilst it is scarcely likely that work will be undertaken during the last quarter of the year for the balances in question it is quite possible that the concluding months will see heavier bills settled than during the other part of the year; for instance, it is probable that the railways will have to foot a big bill for coal. Even allowing for proportionately heavier expenditure during the last three months it is difficult to see how the year's outgoings can much exceed the figure of £E15,000,000. Under these circumstances the minimum surplus that ought to result from the year's working should be in the neighbourhood of £E1,250,000, albeit it would not be at all surprising if the result were round about £E1,500,000.

A BANKING VIEW OF EGYPT.

In his report submitted to the General Assembly in Cairo towards the middle of February, the president of the Credit Foncier Board of Directors dealt with the economic situation of the country after 18 months of war. He stated that although last year's crop was inferior to the average crop of 7,500,000 kantars obtained during the four preceding years, still it has attained the figure of 6,878,000 kantars. The average results per feddan were 3.92 kantars only, namely, half a kantar less than the average obtained during the last four years. This fall is due to the cotton worm. The average price obtained per kantar was 12 dollars against 18½ dollars between 1910 and 1914, and the total price obtained for the crop was £E19,715,000, namely, £E13,000,000 less than the average of the last four years.

This marked fall in the crop and in the prices has naturally affected the receipts of the mortgage banks, as the mortgagees found themselves compelled to pay first either wholly or partially the advances taken for short terms which in ordinary times would have been renewed. The house rents in towns also suffered considerably on account of the many houses becoming vacant owing to the mobilisation. The cost of raising cotton has also increased after the war, and the agriculturists are naturally compelled to settle their expenses first.

The Government, on the other hand, in order to develop the culture of cereals, decided to reduce the cotton growing area for the 1915 season from 1,755,270 to 1,186,004 feddans. The results obtained from the wheat crop were not as good as anticipated, but the crops of rice, maize, barley, and sugar cane were very satisfactory, and the rise of the prices of foodstuffs last summer reacted favourably on the economic situation. The new cotton crop will naturally be affected by the limitation of the area and by the ravage of the cotton worm in certain districts, but the prices ruling have compensated all this.

NATIONAL BANK OF GREECE.

BULGARIAN FINANCES.

(From Our Own Correspondent.)
Bucharest, February 17.

It is stated that during the debate on the Budget in the Sobranje, M. Tontcheff, the Finance Minister, stated that the country's floating debt will amount at the end of the year to 1,640,750,000 fr. This figure includes 200,000,000 fr. which the Bulgarian Government had received from Germany from September 8 to December 8 in monthly instalments of 50,000,000 fr.

In 1916, Bulgaria is to receive a further sum of 300,000,000 fr. as an advance on a new loan of 500,000,000 fr.

The President of the Council referred to a statement made by M. Theodoroff, a former Minister, to the effect that the war of 1912-1913 had increased Bulgaria's indebtedness, including loans and requisitions, by 100,000,000 fr. He argued that the present war would be equally costly.

If these fiures are correct, Bulgaria will find herself at the end of the war saddled with a public debt—consolidated and floating—of 2,446,750,000 fr.

ROUMANIA'S FINANCE.

The hesitation of Roumania to join in the war has had one notable result, says the *Westminster Gazette*. It has enabled the Finance Minister, M. Costinesco, to produce a Budget in which the ordinary expenditure is balanced by the revenue, in spite of the heavy charges against the latter occasioned by the war. As a Bucharest correspondent of the *Temps* points out, the infantry has been increased by eighty battalions; considerable additions have been made to the artillery; several of the State railway lines have been doubled and provided with additional sidings; the State warehouses have been erected to take the grain which cannot be exported to Western Europe, owing to the closing of the Dardanelles. The Customs and stamp duties show a heavy decline; but the price of grain for export has advanced by 150 per cent., and both groups of belligerents have paid for their purchases of it in gold. A tax on war profits and the increased yield of the State monopolies have made good the deficiency in the ordinary revenue; but the floating debt is increasing, and a deficit can hardly be avoided after another year of war.

THE GREEK EXCHANGE.

Advices from Athens state that, in order to prevent speculation in exchange in the form of the presentation of coupons to be cashed in Athens by holders of the Greek Debt who reside abroad, the Greek Minister of Finance has deposited in the Chamber a Bill which will render necessary the presentation of the bonds on every occasion when coupons are offered for payment. The object of this measure is, of course, to prevent holders of the bonds, residing abroad, from obtaining the premium which exists on Greek exchange at the present time. Owing, no doubt, to the presence of the large masses of French and British troops in Salonika and its neighbourhood, the exchange for some time has stood about 24.80, which is a distinct premium, and evidently the Greek Government does not see the force of paying the coupons of its foreign debt held abroad at this premium.

COMPANY RESULTS, &c.

Anglo-Maikop Corporation.—The secretary announces that Mr. W. W. Rutherford, M.P., has not been associated with the Anglo-Maikop Group since 1913, and that the Roumanian Consolidated Oilfields never had any connection with the Anglo-Maikop Corporation.

Egyptian Delta Light Railways.—Receipts for the ten days ended February 10 amounted to £E6,842 as against £E5,702 for the corresponding period of 1915.

Ionian Bank.—A final dividend is announced of 2s. 6d. per share, tax free, for the half-year ended December 31/January 13, making five per cent. per annum for the year 1915.

COMPANY NOTES.

Anglo-Maikop.

The report of the Anglo-Maikop Corporation, Ltd., shows a credit balance on the year's transactions of £8,724, the Russian revenue having been taken at the exchange of 13.3. With the balance brought forward, the sum available is £25,813. After provision for depreciation, etc., the directors propose to carry forward £24,160. The financial position at July 13, 1915, shows an excess of cash assets and sundry debtors over liabilities of £63,154. (This compares with £46,663 at the close of the preceding period.) The total output of crude oil was 113,756 tons, as compared with 72,337. Meeting, 10th instant, at noon, Winchester House, E.C.

Credit Foncier Egyptien.

At the meeting held in Cairo on February 17, the report for the financial year ended October 31, 1915, was adopted, and the following resolutions were passed :—(1) The distribution of a dividend of P.T.75 and 15 m/m per share, to be paid on Coupon No. 42; and (2) the distribution of P.T.1,065 per founder's share on Coupon No. 18.

NEWS FROM ALL SOURCES.

Food riots in Constantinople have resulted in the prohibition of further exports of meat to Germany.

Scarcity of foodstuffs is causing grave anxiety in Syria and the restlessness of the people is increasing daily owing to the menace of famine.

It is stated that the Bulgarian Government has handed over to the German authorities the exploitation of the Serbian Bor copper mines for the duration of the war.

There is a scarcity of footgear in Bulgaria, and the Government is buying for the army hemp sandals in Roumania.

The Turkish Chamber of Deputies has adopted a new general Customs tariff, which comes into force on September 14, 1916, and will remain effective for three years.

M. Radoslavoff, the Bulgarian Prime Minister, accuses Roumania of holding a huge quantity of foodstuffs for Bulgaria which she refuses to allow to be transported.

Berlin reports that the Turkish Government has decided to exploit several deposits of sulphur which have been discovered on Turkish territory.

According to reports from Athens, a powder magazine has exploded at Sivas, in Asia Minor. The explosion was followed by an outbreak of fire.

Two Armenians and a Roumanian have been sentenced at Cairo to various terms of imprisonment or a fine of £60 each for trading with the enemy. These are the first sentences for this offence, which the authorities have determined to stamp out.

Most severe penalties are to be imposed under a proposed Bill on Roumanian merchants found guilty of speculating in foodstuffs. Every merchant will be obliged to furnish the Government with an exact list of his goods, and the Government will have the right to requisition such foodstuffs as it may consider necessary for the needs of the people.

At the end of 1915 the total nominal capital of the oil companies of Roumania was 482,163,237 frs. in shares and 37,356,011 frs. in debentures and other obligations, a total of 519,519,248 frs. The total issued capital was 357,489,932 frs. in ordinary shares, 15,908,949 frs. in preference shares, and 31,258,588 in outstanding debentures and other obligations—a total investment of 404,657,469 frs.—*Oil News*.

NOTES OF THE WEEK.

The Russian pursuit of the Turks along the Black Sea littoral continues. From Rizeh they have pushed on westwards, and thrown the enemy back beyond the River Kalopotamos. This line, reached on March 8, brought our Allies within thirty miles of Trebizond. A preliminary bombardment of the town from the sea revealed no great strength in the defences, and its capture ought not to present any special difficulties to the victorious Russians. Meanwhile the columns advancing from Erzeroum are moving in the direction of Erzinjan, keeping in touch with the retreating Turks. The line Trebizond-Erzinjan, bearing thence south-eastward, will offer a natural halting-place for the Grand Duke Nicholas' forces until the intentions of the enemy are more clearly indicated. At present the Turkish military command is probably engaged in sending as many men as it can spare and can despatch to Angora, the railhead of this region. If circumstances compel the Turks to try to counter the Russian successes by a vigorous offensive, they will be operating at a greater distance from their base than the Russians, at any point east of Sivas. Our Allies, who can hardly hope to serve any practical purpose by continuing their advance westwards indefinitely, will not want to assist the Turks by meeting them at a point which will shorten their lines of communication by one mile. Until, therefore, the chance of a Turkish offensive is finally removed, we need not look for further striking developments in this theatre.

The movements of the Russian forces in Persia, on the other hand, grow in interest daily. An official *communiqué*, issued in Petrograd, announces the occupation of Kerind, "on the way to Baghdad." The Russians have followed the caravan route from Kermanshah, and are thus only 155 miles from the capital of Mesopotamia, with all the natural features of the road favouring the force advancing from the east. From the wording of the Russian statement, it may be inferred that the Russian troops under General Baratoff are regarded as strong enough to deal with any opposition that may be encountered from Baghdad. Whether they are prepared to continue their advance right up to that city regardless of events on the Tigris remains to be seen. It is inconceivable that the Turks should leave fewer troops to defend Baghdad than they have sent to oppose the British advance up the Tigris. Sooner or later, therefore, when the menace to the city from the north-east is fully realized, there must be a rearrangement of the Turkish forces. If, when that moment arrives, General Lake still finds himself unable to force the enemy's position, there can be only one deduction, that the whole expedition has been inadequately equipped for fighting under modern conditions.

On March 8 General Aylmer was reported to have attacked the Es Sinn position, which extends on both sides of the Tigris, about seven miles east of Kut, but to have been unable to dislodge the enemy. The fighting, it appears from a subsequent statement, took place on the right bank at a distance of from seven to eight miles from the river. In consequence of lack of water General Aylmer was obliged to fall back on the river, after having evacuated all his wounded. Two points emerge from this brief account. The first is that the strength of entrenched positions is still inadequately appreciated by the relief expedition; the second, that, in spite of having passed up the river once and occupied the Es Sinn lines, and in spite of two months' enforced idleness less than a score of miles away, the British command is still imperfectly informed regarding the water conditions of the country. The force that attacked the Turks on March 8 apparently ran short of water before twenty-four hours had elapsed. This means that either it was misinformed about wells in this district or it was unable to carry with it a sufficient water supply for one or two days, even with the river only seven miles away. If inadequate provision for water exists, it is not a matter for surprise that the expedition should be short of aeroplanes, bombs, and even hospital requisites.

A later *communiqué* states that on March 11, in consequence of information received that "the Turks had occupied an advanced position on the Tigris," a column was sent out to eject the enemy. The infantry assaulted the position and bayoneted a considerable number of Turks. The column then withdrew, with two officers and fifty men as prisoners. Whether the enemy were "ejected" or not is not stated, nor is any indication given of the locality of the "advanced position." According to a Turkish report, the British Expedition, as a

Digitized by Google

result of its failure to turn the left flank of the Turks on March 8, retired to its old position, twenty-three miles from Kut. To-day is the 100th day of the siege of Kut. We cannot help thinking that if more good will and intelligence were brought to bear on the issue of *communiqués* dealing with the situation in Mesopotamia, greater justice could be done to General Lake's forces, and the British public would be reassured.

Reference is made elsewhere in this issue to the reports of the inadequacy of the medical arrangements in connection with the Mesopotamian Expedition. From an official statement now issued it appears that during the last fortnight the subject has engaged the attention of the Joint Committee of the British Red Cross Society and the Order of St. John, which has placed itself in communication with the authorities concerned, with a view to giving further Red Cross help in Mesopotamia. Large consignments of hospital stores and comforts have now been shipped to Busreh, and no doubt in due course the medical service in that theatre of the war will be improved. There has been a strange fatality attending these Indian expeditions in so far as the medical arrangements have been concerned. In November, 1914, an expedition sailed to East Africa with, we believe, a single doctor to the whole force. When the expedition came to grief at Tanga the German doctors, it is stated, had to lend a hand with our wounded. This experience, it would be thought, would have prevented the authorities concerned from being caught napping again. But the Mesopotamian force has throughout been confronted with a shortage of hospital requisites. In this connection it may be pointed out that a timely admission on the part of the authorities that things were not well with the medical equipment, and that it had been found necessary to concentrate attention on this point, would have avoided the storm of criticism now let loose.

When a force is obviously starved in regard to the most ordinary requisites, there is some ground for uneasiness that its more technical requirements will also have been overlooked. The whole record of the advance up the Tigris points to the intelligence at the disposal of the successive Commanders-in-Chief being utterly inadequate. The Ctesiphon fiasco was due to ignorance of the strength of the Turco-German forces; a mishap near Nasriyah on February 7 implied that the force was not in touch with the so-called friendly tribes; General Aylmer on March 8 pleads ignorance of water conditions seven miles from the river. It would reassure public opinion if the War Office could announce that every possible step had been taken to collect men knowing the country and its inhabitants, in order to place their services at the disposal of the Expedition. The number is not unlimited, but we are by no means satisfied that the material available has been put to the best possible use. As an instance may be quoted the report that one man with a peculiar knowledge of Arabs and their language was for a long time engaged in a map-room of the War Office, where, for all we know, he may be still.

Apart from the immediate requirements of the Mesopotamian Expedition, there is a special reason why as close touch as possible should be kept at this juncture with the Arabs. They play an important rôle in the Ottoman Empire, and in any quarrel between Great Britain and Turkey there was an antecedent probability of their preferring to make common cause with the British against the Turks. But both in Mesopotamia and Arabia they have not lived up to the expectations formed of them. Even in the Yemen, although there is no need to credit the enemy accounts of what has happened in the hinterland of Aden, it is evident that the tribesmen, apart from one or two friendlies, are more inclined to favour the Turks than the British. It may be that the Arabs, being confronted with the Turks on the spot, have had to make the best of the situation. When it is realized that the Turkish sun has begun to set they will be more ready to give play to their predilections. They should then be able to feel sure of British support.

An atmosphere of mystery has suddenly enveloped the person of Enver Pasha. From time to time it has been reported that an attempt on his life had been made, but on the last occasion the report was almost immediately followed by the announcement that, accompanied by Jemal Pasha and various high dignitaries, he had arrived at Medina on March 2 and paid a visit to the Prophet's tomb. The incongruity of the Turkish War Minister choosing such a moment for carrying out a devotional exercise of this nature has naturally given rise to the belief that the statement is intended to conceal his actual whereabouts. If the story of the visit to Medina be not true, there could be only one explanation of such an elaborate falsehood—that Enver is dead and the Turkish Government require a little time before announcing the fact and the name of his successor. If by chance Enver should have gone to Medina, it will not be merely an act of devotion on his part. Either he will have been compelled to give a public exhibition of the genuineness of his Mohammedanism, which has been repeatedly called in question, or he will have gone for a political purpose connected with the Arabs. Speculation on the point may not be very profitable, for at any moment the facts of the case may be known. But if Enver should still be alive, and if it can be shown that he actually went to Medina, his object may well have been to endeavour to stir up one of those military movements among the Arabs which have occasionally swept across Arabia, in the hope of retrieving the fortunes of the Turkish forces that are now in danger of being cut off and surrounded by the Russians and British in the neigbhourhood of Baghdad.

Persia promises to make a rapid recovery from a rather bad attack of German fever. So long as Prince Reuss and his fellow conspirators remained in Teheran to hold up German spectacles before its eyes the Persian Government could not fail to have a distorted view of things in general. The Germans fled, at first as the great leaders of formidable armies waiting to escort the Shah and his Ministry to Ispahan, but presently as fugitives in the midst of a freebooting horde. Their prestige even among their followers did not long survive their discomfiture. Most of the bands have melted away before the vigorous pursuit of the Russians. The main Turco-German strength was concentrated at Kermanshah, but, in spite of stories of reinforcements from Baghdad, it has been unable to offer any effective resistance to the Russian advance. In other parts of the country the Persian irregulars themselves are dealing with the Germans, whose dupes they have been. Meanwhile, the Persian Government is making a fresh start. Prince Firman Firma has resigned the Premiership, and has been succeeded by the Sipahdar, a strong believer in the maintenance of friendly relations with Russia, who is now to be known by the higher title of Sipah Salar. German influence had been instrumental in bringing about the resignation a year ago of M. Heinsens, the Belgian Treasurer-General. He has now been recalled to his post, and will be able to rely on the support he previously lacked in the arduous task of introducing order out of chaos in Persian finances.

The failure of the British authorities to announce that the Aden garrison had had a small skirmish with the enemy in the hinterland has imposed upon them the invidious task of whittling down the Turkish version of the incident. It is typical of Turkish methods that, after maintaining silence on the fall of Erzeroum for some days, and then dismissing it in half-a-dozen lines, they should devote three paragraphs of an official *communiqué* to describing the fighting near Aden on January 12. The British version is that a "reconnaissance was made from Aden to ascertain the strength of the Turkish forces about Sarar and Wáht, and was successfully accomplished." Our casualties on this occasion were five killed and thirty-five wounded. As the Aden garrison is fighting the Empire's battles in the same way as any other British force is, there is no reason why its work should be ignored and pass unchronicled until a particularly mendacious enemy report extracts a denial from the War Office. The garrison is not called upon to undergo a heroic siege or to maintain a terrific

Digitized by Google

struggle in trenches, but it is performing its part, and deserves to have its work brought to the notice of the Empire on its own merits, not merely by way of correcting the enemy's inaccurate reports.

The two engagements in January and February at Mersa Matruh and some fifteen miles south-east of Barani respectively have sufficed to break the back of the Senussi invasion of Egypt. When the Anglo-Egyptian frontier post was withdrawn to Mersa Matruh the invaders followed, swelling their ranks with Bedouin who were attracted with promises of loot and an easy triumph. They secured neither. In a series of fights they received considerable punishment, and, in spite of the artillery and machine-guns with which they were supplied, were unable on any single occasion to make a stand against the British troops opposed to them. The latter have now worked their way back to Sollum, which, after being for four months in the enemy's hands, was occupied on March 14. The Bedouin are reported to be demoralized and suffering greatly from hunger and disappointment, numbers of families flocking to the British lines for food and shelter.

It is announced that an agreement has been reached between the French and Italian Governments by which the latter agrees to renounce for its Consulates, establishments, and subjects in the French zone of Morocco the privilege of the Capitulations. This arrangement is not only of happy augury for the ultimate elimination of the Capitulations in Egypt, but affords an interesting commentary on the hitch in connection with the Mixed Courts in that country. It will be remembered that Italy recently withheld her consent to the renewal of the Mixed Court mandate on the ground that she was entitled to one more representative on the Bench. No grave principle was at stake, as will be readily inferred from Italy's abandonment of her rights in Morocco. Of two ways of doing a thing the wrong one had been chosen, and the Italian Government was left no alternative to a formal protest. The matter is still a subject of negotiation. Possibly the delay in its adjustment is an index of its relative unimportance; but the inability to avail themselves of the Mixed Courts must prove a serious inconvenience to the Italian community in Egypt.

An interesting chapter in an unofficial Bulgarian history of the war could be devoted to the Germans in Bulgaria, and we hope that a staunch patriot is at present collecting material for it. Some of the Bulgarian grievances are already being told in Roumania. A correspondent in Bucharest relates in a letter published on another page two typical stories of the German *régime* in Sofia. There is nothing inherently improbable in either of them, for they are borne out by the evidence of deserters who daily reach Salonika from the Bulgarian lines. It is well that Germany's allies should have this testimony to bear against her, for it will help to convince neutrals of the justice of a fate that eliminates the Prussian system from European civilization. In contradistinction to the Bulgarian laments of German treatment, we may record a recent order issued by the French Commander-in-Chief at Salonika imposing upon the Allied troops the necessity of looking out for and reporting at once any archæological finds that may be made in the course of entrenchment work. The historic custom, adopted throughout the ages and still continued in a modified form to-day, of burying *objets d'art* with the dead renders archæological discoveries possible in any part of Greece. Some appear to have been made already in the neighbourhood of Salonika, and in due course are to find their way to the White Tower. The thoughtfulness of General Sarrail is said to have much impressed the Greeks of Salonika.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 28.

H.H. the Sultan.

It was with much pleasure that everyone heard that the Sultana-Mother was out of danger and on the high road to recovery. Her Highness had been in bad health for some time, and the Sultan had been extremely anxious, so much so that he abstained from holding any ceremonies excepting the most strictly necessary. Now that his mother is improved in health, his Highness has resumed his Court functions. This week he has given several dinners, notably one to the ulema and one to the Diplomatic Corps, and during the coming weeks banquets will be given to notables from the provinces and Government officials.

Anglo-Egypt and the War.

A stupid and profitless correspondence has been going on in the columns of one of your local English contemporaries under the heading "Anglo-Egyptian Slackers." It was started after there had appeared in the local European Press an authoritative notice—all the authorities, however, have since disclaimed the authorship—to the effect that the G.O.C. the British troops in Egypt, in response to the oft-expressed wishes of members of the Anglo-Egyptian community, had decided that special armlets, which should, however, have no validity outside the country, could be worn by all those males of military age who were either regular members of one of the rifle clubs or could produce certificates from their employers that their services were absolutely indispensable for the work which they were carrying out, and that they could not be spared for military service.

It was most unfortunate that this notice should have been allowed to appear, not only because of its tactless wording, but also because it has given rise to a correspondence which should never have been permitted to see the light of day in this country, and which is quite uncalled for. It may be taken as an absolute fact that to-day—nineteen months after the outbreak of war—there is not a single Britisher of military age in this country—be he married or single—who is not doing war-work of some description or another. To the casual observer, and to some of those who have seen fit to "cast stones" indiscriminately in the correspondence above referred to, it may appear that Jones or Smith or Robinson is not doing "war-work," as they understand it, and that he could well throw up his billet and join the Army without any serious loss or inconvenience to this country. It is, however, not for the individual to judge. He or she cannot possibly know in what manner the work that Jones or Smith or Robinson is doing is or is not assisting the authorities. Very often, indeed, the critic would be profoundly astonished if he or she knew the true facts.

Moreover, it must not be forgotten that the British community in Egypt is an exceedingly small one; its members are all marked down, and if they are slacking they could not possibly hide the fact from the military authorities, who are ever on the look-out for "local blood" for one or other of the jobs which have to be undertaken out here for Imperial interests, and who would not hesitate to give the hint to any slacker or to his employers if they wanted his services. The extreme difficulty which was recently experienced in getting recruits for the camel transport is proof positive that there is in Egypt a dearth of men fit and available for active service. The delay in appointing controllers and receivers to all the enemy firms is authoritatively declared to be in a great measure due to the dearth of men; while I know for a fact that more than one civil administration would give anything to find some able-bodied men to carry out important temporary work that it has before it. Slackers might shy at joining camel

transport, but they would surely jump at controllerships and temporary Government billets, since these would give them the claim to exemption from military service which they are accused of trying to avoid.

In THE NEAR EAST of January 28 you published an article wherein were explained the peculiar position in which the Anglo-Egyptian community has been placed and the "war-work" that it is doing.* I commend a perusal of that article to all those who are inclined to think that Anglo-Egypt is not doing its share for the Empire. Any further inquiries which that article may prompt them to make will, I am certain, but confirm the facts stated therein and convince them that the Britishers who are still in Egypt are far from being the "slackers" that some of your contemporary's correspondents declare them to be.

With regard to the notice to which I refer, I would say that Anglo-Egyptians do not yearn to don the khaki, which to so many is the only indication of a man's patriotism, and which, no matter what work they might be doing, would protect them from the criticism of our amateur recruiting agents; neither do they clamour for the "armlet" which will publish from the housetops the fact that they are doing "war-work." They are quite prepared to continue to "carry on" as they have done during the past nineteen months without distinctive badges or such-like paraphernalia, conscious that they are, each in their own way, helping their country to victory, and content to find in the eventual triumph of right over might the recompense for their labours.

THE SEASON IN EGYPT.

(FROM A CORRESPONDENT.)

The outbreak of war made all those in Egypt who depend in any way on the tourist season very pessimistic about their immediate prospects, and caused them to wonder how they would be able to make up the loss which they were bound to suffer. It was not long, however, before one and all realised that, as far as Egypt was concerned, the war was a blessing in disguise; for the arrival of thousands of troops, amongst them Australasians with plenty of money to spend, wrought a complete change in the situation.

Dealers, who had made up their minds that there would be no use opening up for the winter, hastened to take down their shutters; dragomans found that, if there were no tourists to show round and fleece, there was plenty of money to be made either by acting as interpreters to the strange troops or by engaging in one or other of the trades which they had so despised in the days when their gay flowing robes acted as the most effective "open sesame" to the pockets of American tourists; the *arbuggies* and taxi-drivers discovered that the Millennium had arrived, and that a fortune was to be made in taking officers and Australian troopers to and from their camps, the most profitable period of the day being the small hours of the morning, when, owing to their habit of either exceeding or running their leave very fine, the men would pelt back to Mena, Meadi, or Heliopolis at top speed, invariably getting up a race en route with other late birds. The tramway companies, too, have simply coined money owing to the extra traffic brought by the troops; while the hotels, although they have reduced their prices to less than summer rates, have not been idle from the first moment that the new armies landed in the country, and have turned over more money than they ever did during previous seasons, in addition to sub-letting as hospitals and staff quarters those of their hotels that would otherwise have been closed. Wherever you go, too, you find new shops opened, perhaps not in the old flamboyant style that one associates with "season" ventures, but, nevertheless, out to cater for the new class of client that the war has given us; hawkers throng the pavements even more annoyingly than ever, and even the bootblacks and newspaper vendors have increased in number in response to the demand. Cairo, even in its palmiest days, has not known a winter season like the present or its predecessor, and, what is more important, the "season" has not stopped with the advent of the hot weather. The demand for accommodation and for services has continued right through the summer, so that there has been no break, and consequently no need to strain to make all the profits during the six months of the cool weather.

The same has been the case with regard to Alexandria and Port Said. But whilst Cairo and Egypt's twin ports have had nought to complain of—have, in fact, had much to be thankful for—the Upper Egypt resorts have been neglected. Except for occasional visits from those of the troops who could afford the trip and could get the leave of absence, neither Luxor nor Assuan had up to last autumn seen anything of the life that had proved so profitable to their more fortunately situated sisters. This year, however, the former has quite come into her own.

The hospital situation last autumn having been very different from that of the preceding one, when no work worth speaking of had to be done, the military authorities decided to make a convalescent station at Luxor, which, owing to its position, was considered to be just the place for such an establishment. I have just returned from a short visit to that town, and I found it even busier than I had seen it at the height of the tourist seasons of bygone years. All the hotels have been taken over by the military. There is some accommodation left for the general public at the Luxor, but beyond that everything is in military occupation. The Winter Palace, with its magnificent gardens, has been turned into the central hospital; its corridors are now wards, with a row of neat cots down each; the bedrooms are either offices or dormitories for the men; the music-room now serves as a concert hall during the week, and as a chapel on Sundays and feast days. In the front of the hotel has been erected a cinematograph, where performances are given every night to the troops.

In addition to the Winter Palace, the Hotel du Nil, the Karnak, the Grand, and the Savoy have also been requisitioned, but they are used by those officers and men who are not in need of constant medical attention, which is required by practically all those who are at the Winter Palace. But it is not only the hotels that have changed. Cook's office is now the military post office and the Commandant's office, and even the little stores on the front have been transformed to meet the wants of the 2,000 odd officers and men who are quartered in Luxor, one-time booksellers' being converted into tea-rooms, and photographic shops into canteens, etc.

The convalescents seem thoroughly to be enjoying their stay, and, to judge from the remarks of the men to whom I spoke, they are very grateful for the complete change that is being accorded to them. From early morning they throng the river bank, watching either the barques come down from south and unload or the convicts who are engaged in laying out the new esplanade. Out on the road to Karnak they are to be met in groups, whilst almost daily they drive or walk out to visit the temples. All the monuments have been thrown open free to the men, and the resident conservator gives up many hours of his valuable time to take parties round the temples and explain the various sights to the officers and men.

Very few restrictions are imposed on the men who are able to get about by themselves, and they have responded to the confidence reposed in them by conducting themselves in a most exemplary fashion ever since the first batch went up to Luxor. They appear to be on the best terms with the inhabitants, who in many cases have never before seen a British soldier, and who, from my inquiries, I found firmly believed that the striped pyjamas which all wear were the garments in which they fight! It was most entertaining to watch the men during their strolls about the place. They were just like a lot of schoolboys out for a holiday, and they seemed always on the lookout for a chance to play a practical joke on each other or on anyone they met.

The camp is to be broken up at about the end of March, and we may be certain that if the men who have been privileged to stay there this winter will be sorry to come down, the people of the district will bitterly regret the disappearance of this huge station, for it has spelt positive prosperity for them, one and all.

L. M.

MORE HUN ART COLLECTORS.

In a letter, dated February 21, a Bucharest correspondent writes:—The German military authorities in Belgrade have just informed the Bucharest police that a picture painted by the famous Serbian painter Jovanovitch, and valued at 30,000 francs, has disappeared from the museum there. It is thought possible that it may have found its way into Roumania, though it is believed more likely that it is somewhere in Hungary.

The painter Jovanovitch is the leader of the modern Serbian school of painting. His son, who was in Paris at the beginning of the war, volunteered for service with the French Army, and was shot six weeks ago on the Champagne front.

*On page 552 will be found a list of Anglo-Egyptians who have joined H.M. forces since the outbreak of war.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, February 27.

The Government's Changed Attitude.

The change which seems to be coming over the Balkans is making itself felt in Greece also. Encouraged by the great concentration of French and British troops at Salonika and by the Russian victories, Roumania now seems to contemplate participation in the struggle with less misgiving; the reports from Constantinople appear to indicate a rising against the Young Turks and the Germans as becoming more likely day by day; while the Bulgarians are beginning to realize clearly the grave dangers that will menace them if they take part in the attack on Salonika, and are, therefore, greatly embarrassed. In Athens, too, one notices a certain change in the situation since General Sarrail's visit. Without seeming ready to abandon the policy of neutrality which they have pursued for the past five months, governing circles are following developments in the Balkans with much anxiety; and foreseeing—or rather, fearing—that an ineluctable fate may sooner or later compel them to a policy of action, they are taking steps to improve their relations with the Entente in order to prepare the ground. In other words, the Government now seeks to repair the many faults and blunders committed since it has been in power. What seems to cause it the greatest concern—though it seeks to hide its uneasiness—is the possible eventual adhesion of Bulgaria to the Entente in return for "compensations" at the expense of Greece. Yet they fail to see that if there should be any such danger the best way to ward it off would be for Greece to range herself promptly on the side of the Entente.

The Military View.

The *Nea Himera*, which is supposed to reflect the opinions of inner military circles, maintains that Greece cannot decide to co-operate with the Entente against her neighbours — Bulgarians, Turks, and Albanians—while the latter are allied to Austria and Germany; for even should she, with the French and British, vanquish them, she would find herself in a very precarious situation after the conclusion of peace. Then Greece, her Franco-British Allies having withdrawn from Salonika, would be unable to maintain her preponderance in the Balkan Peninsula and to hold her own against her neighbours. What assistance, asks the *Nea Himera*—in order to demonstrate that Greece will always have need of Germany's protection—will Great Britain and France be able to give her then? To this paradoxical argument, which assumes that the aggrandizement of Bulgaria and Turkey is a matter of indifference to Greece, since she will be assured of German protection, the Venizelist Press replies by observing that if Greece co-operated with the Franco-British troops she would rid herself of Turkey, which would cease to exist in Europe, and would be strong enough to have no further fear of Bulgaria, who, on the other hand, would be weakened and reduced.

The *Neon Asty*, the organ of M. Gounaris, Minister of the Interior, who is considered a convinced Germanophil, also maintains that Greece should on no account abandon her neutrality; and, referring to the declarations of M. Sazonoff, recalls the fact that Russia rejected the co-operation of Greece when the advance on Constantinople was in question. From this it goes on to argue that Russia and her Allies are aiming at a reconciliation with Bulgaria.

Germany's Promises.

However, in spite of the tone of these semi-official journals, which represent the fate of Greece as depending entirely upon Germany, it is beginning to be realised, even in these same circles, that Germany's attitude towards Greece up to the present has not been what they expected. Thus one journal, which is in touch with Court circles and has hitherto supported the policy of neutrality based upon German guarantees, writes that, unfortunately, in spite of the formal promises given by Berlin, in which everybody believed, the Bulgarians have occupied not only Monastir, but also Doiran and Ghevgeli, which constitute the key to the Greek frontier; and that they are oppressing the Greek inhabitants, and have even gone so far as to expel the Greek Consul from Monastir. After all this, says the journal referred to, it is not possible to put any faith in assurances and promises, no matter by whom they may be made—meaning the Kaiser; and in these circumstances, if Roumania should decide to throw in her lot with the Entente, Greece should no longer hesitate to do likewise, in order to be in a position to liberate her brethren. In this connection it may be recalled that at the very beginning of the Bulgarian attack M. Venizelos sounded the alarm, and from the Parliamentary tribune advised the Government to occupy Doiran and Ghevgeli with Greek troops without delay. Unfortunately his advice was disregarded.

Greece and Roumania.

It has been noticed that during the past few days the Roumanian Minister has had frequent audiences of the King and interviews with M. Skouloudis, and this has led to the belief that an exchange of views between Greece and Roumania is taking place. In Germanophil circles it was stated yesterday that it had been decided to remain neutral, and that the two countries had agreed that if either should later decide to abandon its neutrality it would let the other know. But this story appears to be an unlikely one, and it is generally believed that if there have been any *pourparlers* they can only have concerned the question of united action against Bulgaria. The result of the attack upon Verdun will certainly have much influence upon these negotiations and upon the course of events in the Balkans generally.

RED CROSS WORK IN MESOPOTAMIA.

The Joint Committee of the British Red Cross Society and the Order of St. John have for the past fortnight been in close touch with the India Office and the War Office as to the best way in which further Red Cross help can be given in Mesopotamia. Large consignments of hospital stores and comforts have already been shipped to Busreh, and more are being despatched this week. Among other goods already sent was an ample supply of cases of surgical dressings, 10,000 square yards of wire mosquito netting (obtained for the purpose from the United States), ice-making machines, etc. The Joint Committee has also sent to the Persian Gulf river boats of shallow draught for the Tigris, and further boats suited to this navigation are being transferred by the Joint Committee from Mediterranean waters to Mesopotamia.

Mr. E. A. Ridsdale, vice-chairman of the British Red Cross Society, who has just returned to England from Salonika, where he has been acting as the Commissioner of the British Red Cross Society and the Order of St. John, left on Thursday as their Commissioner for Mesopotamia, proceeding to India on the P. and O. Kaisar-i-Hind.

The Joint Committee are officially informed that as regards the recent operations the General Officer Commanding has reported that he was extremely satisfied with the arrangements made for the wounded in the field and for their removal from the scene of action. All those wounded in the fighting of March 8 had been collected by the night of the 9th-10th, and all cases which had to be transferred to general or base hospitals were despatched down stream by the 11th.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, February 19.

Situation Steadily Improving.

The political as well as the military situation here is improving every day. The fall of Erzeroum, which was definitely announced here yesterday, has given immense satisfaction to the Allied troops at Salonika, and they are beginning to hope that some really definite move will soon be made here. I have spoken to many British and French soldiers, and they one and all are impatient to get into touch with the enemy. They are equally unanimous in their desire to quit this town. The general feeling is that as the enemy shows no signs of making the much advertised attack on Salonika the Allies will very soon forestall him by advancing to join hands with the Russians and Roumanians. One result of the fall of Erzeroum is that, according to persistent reports here, Turkey now desires to make peace with Russia, and that Mr. Morgenthau, the American Ambassador at Constantinople, has gone to Russia at the request of the Turks to submit their proposals. It is very unlikely, however, that Mr. Morgenthau would leave his post at the present moment; although he would no doubt be willing enough to communicate to the Russian Government the proposals referred to. It is still more unlikely, too, that Russia will listen to any suggestions of a separate peace in view of the solemn agreement already come to between the Allies in regard to any such proposals.

Another outstanding feature of the past week has been the repeated successes of the French aviation corps. They have made two daring raids into Bulgarian territory, causing enormous damage, and in both cases the aerial squadron returned unscathed, with the exception of a slight wound suffered by one of the pilots. In aerial combats with enemy aircraft the French have also shown their superiority, and one indisputable proof thereof is provided by the second German aeroplane captured the other day, which is at this moment on view at the White Tower in Salonika, where large crowds of people gaze upon it with the greatest interest. It differs very little in appearance from the one captured a few weeks ago.

Greeks Becoming More Friendly.

Another feature of the past week has been the arrival of large numbers of additional British and French troops. I must not go into details on this point; but one cannot help noticing for one thing that the Greeks seem to be more and more impressed with the military power here displayed by the Allies, as well as by the continued successes of the Russians. This rapprochement is clearly manifested in the conversations which I have had with leading Greeks as well as by the altered tone of the Government newspapers, which are now turning against their own masters. It is nothing unusual now to find even anti-Entente journals severely criticising the present so-called Government, which the majority of the people undoubtedly believe is leading the country to ruin.

"Music Hath Charms."

Whether or not the Salonicians fully appreciate all the military operations of the Allies, there can be no doubt that they thoroughly enjoy the feast of music which their visitors regularly provide. British and French bands usually play three times a week in the gardens adjoining the famous White Tower. This (Saturday) afternoon the crowd was exceptionally large, as there were no less than three centres of attraction—two British bands and the newly captured German aeroplane, which had only been placed there yesterday afternoon. I visited the brute, as in duty bound, and found it surrounded by a very large crowd. The aeroplane occupied the centre of a large fenced-in space, and at the time of my visit was being inspected by British, French, and Serbian officers, some of whom took photographs of the creature. I also tried to expose a plate, but it was impossible to reach a suitable position.

After listening to one of the bands for a time I moved on to another part of the ground, where the second played an excellent programme to another big crowd. The concluding item consisted of the national airs of Greece, Serbia, France, Russia, and Italy, followed by "God Save the King." It is only during the last few days that the Italian air has been added to the long list of similar airs, and some people consider this significant, as indicating that Italy has at last decided to work in closer union with the other Entente Powers.

"Amerikan Lisaninola Muharrer!"

These words are Turkish, and I find them stamped upon a letter which has just arrived here from Smyrna. What do they mean? Anyone can guess the meaning of the first word, but the complete translation: "Correspondence in the American language," may sound oddly to Englishmen or even to some Americans. This correspondent writes from Turkey in excellent English, and as he is a neutral he is allowed to use his own language. But it would never do for the Turks to recognise the existence of such a barbarous language as English. To them the only real live Western tongue is German, and our language is to them as dead as Latin or Sanskrit. So they get over the difficulty by ignoring English altogether, and pretending that the Americans possess an independent language of their own. I don't think many Americans would like to go so far as that. This reminds me of the notice said to have appeared in a certain Continental shop window: "English spoken, American understood"!

Bulgarian Deserters.

Scarcely a day passes without the appearance in Salonika of Bulgarian deserters brought in from the frontier by Greek soldiers. These men look very miserable and poorly clad, and tell many tales of the hunger and hardships they have had to endure in their own country. They say the war is most unpopular among the people, but that the King and his taskmasters, the Germans, by terrorism, accompanied by numerous executions, manage to enforce obedience. They have tried to stop these desertions by severely punishing the families and relatives of the deserters, but even that is not always effective.

Local Place-names.

Many of the places in and around Salonika still retain their Turkish names, and the transliteration of these into Roman characters varies according to the language in which they are represented. Now the Germans and Austrians, while they were reckoned among the civilised nations, were excellent mapmakers, and they naturally represented the names of the places in accordance with the rules of pronunciation of their own language. When, however, these German names are copied without change into English they sometimes look decidedly queer; and the Englishman, in trying to pronounce them according to his own ideas, makes many blunders. I am told that our own military authorities here are entirely dependent upon the Austrian staff maps of this district, and it is doubtless for that reason that, for example, they write and speak of Hortakioi as Hortakoj, and Jumaya as Djumaja.

This question of the representation of place-names is certainly a difficult one, and although the general rule is to indicate the native pronunciation, there are many exceptions established by usage. In any case, in order to avoid the slightest doubt as to the most appropriate name to apply to this ultra-dirty town, the French soldiers have now christened it *Sale-unique*.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, February 22.

The University Strike.

The strike among the students of both universities continues, and up to the present we detect no signs of slackening. The students' position has been much strengthened by the great sympathy which they find among many of their professors and the general public, and also by the political importance which has been attributed to the movement. The differences, which existed at first only between the Rector of the Jassy University and the student body, have acquired considerable extension. Many professors have written in terms of eulogy concerning the spirit of patriotism and solidarity displayed by the students, and have addressed words of scathing criticism against M. Stere and M. Virgil Arion. The former has retaliated by expressing his regret that he is unable to take measures against the professors who have signed articles supporting the attitude of the students. A manifestation of an orderly character took place in the streets of Jassy on Sunday last, in which a number of professors and politicians participated, together with some seventy students from Bucharest, who had travelled to Jassy for that purpose. The long and short of the matter is that we have before us another flagrant example of the harm which results from the introduction of politics into institutions which ought to be entirely outside its sphere of influence.

The Parliamentary Week.

Interpellations on the subject of the university disturbances have been made in both Houses. MM. Take Jonescu, Greceanu, Cuza, Toma Jonescu, Istrati, and others have called upon M. Duca, Minister of Education, to exert his authority in the matter, and find a speedy solution of the difficulties that have arisen. He has disclaimed any right to interfere, on the ground that the universities are autonomous; but, as there is no prospect of concessions being made on either side, he will in all probability be obliged to assume a responsibility for which he has no taste.

There have been further interpellations with regard to some recent university appointments. It is difficult to see quite clearly in this matter, but it is evident that there are some legal clauses which require revision. There is a lively movement among the younger members of the Medical Faculty, who urge that university appointments shall be made on the basis of competitive examination, a system against which there is a good deal to be said in those States which possess a maturer civilisation.

During discussions which occurred in connection with the subject of cattle export it was stated that the number of head of cattle in the country this year is less to the extent of some 200,000 than in the previous year. This is due in great part to the contraband across the Austro-Hungarian frontier practised in the course of last summer.

Political Leaders' Journeys.

M. Nico Filipescu, most ardent of "Ententistes," President of the Unionist Federation, and leader of the Conservative party, has undertaken a journey into Russia for the purpose of visiting the Russian front, at the express invitation, it is rumoured, of the Tsar's Government. A special train will convey him from Ungheni to Petrograd. M. P. P. Carp, whose sympathy for the Central Powers is well known, has but recently returned from a visit to Vienna, to which great importance was attributed in the German and philo-German Press. Taking into account the fact that these two public men represent views in the matter of foreign policy which are absolutely opposed, one cannot avoid the thought that M. Filipescu's journey, following so closely on that of M. Carp, stands in some sort of relationship to the former.

This Winter's Weather.

The records of the astronomical and meteorological observatory show that the month of December, 1915, was the warmest that has occurred in Roumania during the last twenty-five years. The mean temperature was 4.2 degrees higher than that observed during this month in previous years. At Fokshani and Calafat the temperature rose to 20 degrees Centigrade above zero. The mean snowfall and rainfall for this month was 11 mm., which is 23 mm. less than the normal. Only once before in the last 25 years has the figure fallen so low (1898).

Though we have had no real winter this year, the weather has been unusually fine. In view of the lack of coal this is most fortunate. The comparative dryness has been a godsend to those who have to foot it through the streets of Bucharest, for the fortnight following a thaw in this city is a thing to remember. There has also been but little wind, so that we have been able to enjoy many a bright sunny day without its accompaniment of dust.

Consuls Recalled from Monastir.

There had been some speculation regarding the reasons for the recall of the Roumanian and Greek Consuls at Monastir. It appears that, having exequaturs from the Serbian Government, they could not continue in their functions until fresh exequaturs had been issued by the Bulgarian Government. The Roumanian and Greek Governments apparently preferred to recall their consuls. M. Pitishteanu has accordingly returned to Bucharest. This looks as though the neutral Balkan States do not regard Monastir as having passed definitely into the hands of the Bulgarians.

Converts to Orthodoxy.

Nineteen Mussulman families, pewterers by occupation, who have been settled in the town of Zimnicea for thirty years, have been received into the Orthodox Church. A number of other families are reported to be on the point of embracing the Christian religion.

Sickness in the Bukovina.

The Bukovinean population is ravaged by epidemics. Typhus, small-pox, and scarlatina are claiming hundreds of victims. The mortality is very high on account of the neglected state of the civil population. The sanitary service is devoted almost exclusively to the needs of the Army. The lack of drugs is also making itself felt. This seems to be the case in Bulgaria, too, where the military hospitals have run short of medicines.

ENGLISH DIPLOMACY IN THE BALKANS.

On Monday last the Hon. W. P. Reeves concluded his course of lectures at the London School of Economics by one in which he briefly reviewed events in the Balkan States since the earlier half of the Nineteenth Century. One influence, he said, that had greatly affected the history of those countries had been the diplomacy of the Great Powers. Here the guiding principle of each Power had been either to gain something for itself or to prevent a rival gaining something. To this rule there were exceptions, and during the last twenty years, since England gave up the attempt to bolster up Turkey, the policy of Sir Edward Grey had been mainly directed to the attempt to maintain European peace. The characteristic fault of our diplomacy during the period alluded to had not been that it was always selfish or wrong, but that it was unsuccessful. It had alienated nation after nation, until it could be said that not a single people in the Balkans respected or trusted England. This had been partly through ill-luck, partly because of the great difficulties of the position, and partly because we had let it be seen too plainly that we did not consider anything that might happen in the Balkans was worth going to war about. In the Near East, confronting the Turk on the one hand and the rival Great Powers on the other, if England let it be seen that she would not fight, the chances were that she would have to give way.

As instancing the unsuccessful course of English diplomacy, Dr. Reeves said that when the Balkan War of 1912 broke out Mr. Asquith said that one of the tasks of statesmen would be to prevent the allies being robbed of the fruits of victory. That was bold, and the right thing to say, but it did not conciliate the Turkish Government. Later, when it was evident that Austria and Italy, backed by Germany, were determined to prevent Serbia getting access to the Adriatic, England gave way in the interests of European peace and joined in the opposition to Serbia. This did not conciliate Serbia. When it became evident that Bulgaria was meditating an attack on her late allies we deprecated anything of the sort, but did not join with Russia in preventing it. That did not endear us to Serbia or Greece. When Turkey took advantage of the shattered state of Bulgaria to repossess Adrianople, we ordered the Turks to leave, but when they did not leave we allowed them to remain. That did not recommend us to the Bulgarians. Other things that had offended the Greeks were our allowing Italy to take possession of certain islands in the Ægean, and our deciding, along with the other Powers, that the inhabitants of northern Epirus should not be allowed to remain with Greece, which they regarded as their country, but should be joined to Albania. Sir Edward Grey's desire to subordinate Balkan affairs to the maintenance of good relations with Germany was not a wrong one, but it lost us prestige in the Near East, and did not finally prevent war.

THE COURSE OF EVENTS IN TURKEY.

(From Our Own Correspondent.)

Cairo, February 29.

Your enterprising Arabic contemporary, *Al Mokattam*, is publishing a series of articles giving details of recent Turkish events and of the trend of affairs in Constantinople, as narrated to its editor by a well-known and trustworthy notable who has just arrived here from the Bosphorus. The following summary of his remarks in the two articles published so far will prove interesting:—

The Murder of Prince Yussuf.

Prince Yussuf Izzeddin did not commit suicide; he was murdered, by German orders. It appears that there has always been friction between the late Turkish Heir Apparent and the Unionists. Prince Yussuf had become the centre of all opposition to the latter, and had formed a party which consisted of a large number of Arab and Turkish officers and members of both the Chamber of Deputies and the Senate, and which was daily growing in power and prestige. The Prince was for ever urging the Sultan to put an end to the German *régime*, dismiss the Unionist Cabinet, and appoint another which would completely alter Turkey's present policy and save her from her doom. The Sultan, whose inclination was towards his heir, at last agreed to hold a secret council at Dolma Bagtché Palace to decide on what measures should be taken, and at the meeting there were present the Sultan's secretary, Prince Yussuf, and the prominent members of his party.

The German Ambassador got to hear of this council, and advised Von Sanders, who was at the time in Gallipoli, and who, as soon as he received the news, left for Berlin, where he submitted the matter to the Emperor, and explained to him the serious menace that the Prince constituted. No one knows what was decided upon, but the fact remains that a few days after Von Sanders' return to Constantinople Prince Yussuf was seized, gagged and bound by his servants, who opened a blood-vessel in his arm, and left him to bleed to death.

When the Sultan heard the news he was terribly upset; he refused to receive Enver or the German Ambassador, or to sign any papers, on the plea that he was ill. The Kaiser's representative intervened at once, and informed the Sultan, through his secretary, that if he persisted in his attitude he would have to choose between abdication and deposition. Mohammed V., realising that he was in the power of Enver and the Germans, had to yield, and he resumed the transaction of State business. As soon as Prince Yussuf was dead the Unionists arrested nineteen officers who were of his party, sent sixteen to prison, and threw the rest into the Bosphorus. They also wanted to arrest Ahmed Riza Bey, but Khalil Bey objected, as that would have proved that the Prince was murdered.

Jobbery and Dissatisfaction.

Everyone in Constantinople is aware that Prince Yussuf was made away with, and this fact, combined with the dearth of foodstuffs and the dearness thereof, has considerably added to the public dissatisfaction. The Unionists tried the German ticket system in Constantinople, but it failed hopelessly, as they had no idea of organisation. Recently a society named the "Bakali Gamiati" (Associated Grocers) was founded to regulate the supply and sale of foodstuffs, but as, in addition to leading Unionists, its chief members belonged to the "Dolma," it is not surprising to hear that the net result of their efforts was the cornering of all supplies and the driving up of prices.

The popularity of Enver and Talaat is very much on the wane. The former used leisurely to motor through the city, and the people who would line the streets would acclaim him as the great hero of Turkey. Now he goes in constant fear of assassination and motors at a furious pace, no one bothering to salute him, and people spitting after him when they see him, provided they are sure none of his spies are about. Talaat, who was wont to boast that his life was perfectly safe, and who always used to go out unattended, now takes the very greatest precautions, and only goes out riding with a substantial escort. Recently shots were fired at him, but they missed him, and only killed his secretary, the son of Ismail Hakki Pasha.

Both Enver and Talaat are particularly afraid of their lives because of the large fortunes they have amassed. Talaat's fortune is put at several million marks; that of Enver it is not possible to estimate, but it is known that a very short while ago he removed twenty million marks from a German to an American bank. Is this an indication that he is aware that he has backed the wrong horse?

Talaat's Peace Terms.

Whether that be the true deduction or not, the fact nevertheless remains that the Unionist leaders are far from feeling at ease. Talaat a month ago sent two deputies and a high Government official to Switzerland to discuss with the Allies peace terms that would save Turkey's honour and yet not jeopardise the Unionists. The terms were, of course, refused, but it is interesting to note that they were the following:—

1. Re-establishment of the Khediviate in Egypt, with Prince Said Halim, the present Grand Vizier, as Khedive.
2. Russia to evacuate Armenia, which was to have autonomy, under Russian protection.
3. The evacuation of Mesopotamia by the British.
4. The (inevitable!) loan from the Allies to enable Turkey to carry on her administration.

On the rejection of his terms Talaat sent another deputation to Switzerland and France, with certain concessions, but, as might be expected, they were likewise refused.

Effect of the Fall of Erzeroum.

The fall of Erzeroum was not unexpected, though it came as a terrible shock to the Ministry. In certain circles it was known on January 29 that the town could not hold out for long, and that it would fall about the middle of this month. Abdel Karim Pasha, the Commander-in-Chief of the Turkish forces, had asked for reinforcements, but they were not sent. Enver tried his best to send him help, but the Germans obstructed him. They had removed 60,000 Turkish troops, the flower of the army, from Gallipoli, where there are now 25,000 German troops, and sent them, under Sabri Pasha, to Adrianople, where there are, in addition, 5,000 Germans. A similar number are at Baghdad, whither four new aeroplanes, making ten with those already on the spot, have been sent. Enver wanted to send Abdel Karim Pasha 30,000 men from Sabri Pasha's army in Adrianople, but the Germans would not hear of it, as they said Turkish troops could not possibly leave the Balkans until their enemies had been driven out of them. All Enver has been able to send are about 16,000 men from Jemal Pasha's army in Syria and a few thousand from Smyrna, but the senior officers in Constantinople are convinced that, owing to the lack of proper supplies and the unfavourable climatic conditions, these reinforcements, with any others that Enver has managed to scrape together, will reach Abdel Karim Pasha far too late to be of any use to him.

The fall of Erzeroum has shaken the foundations of the present Government, and has caused Enver to lose the best part of his prestige. If we are only successful in our advance in Mesopotamia next month, and can bring off a brilliant victory like the Russians have done, then the Unionist Government will fall and a different one will succeed it, and will sue for peace and try to save as much of the Empire as it can. The officers in the army are divided more than ever into two camps. The one, consisting chiefly of the Unionists and their friends, is loyal to the Germans; the other, which is growing daily, is strongly anti-German, and desirous of getting rid of them, and of putting an end to the war. This division in the army has counted for much in the resistance which the Turkish troops have put up against the Russians and ourselves.

The Germans Unmasked.

The people also are getting furious with the Unionists and the Germans, and the following incident is illustrative of this growing feeling. At the usual Friday prayers a week or so ago the "Kutba" at the Ain-i-Sophia Mosque was delivered by one Sheikh Hafez. The preacher offered up the customary prayer for the Khalif, and concluded by asking the Almighty to shower His vengeance on the Germans and Unionists, and keep the Khalifate secure from their evil machinations. The Unionist agents in the mosque tried to arrest him, but the Sheikh got clear, and was smuggled out of the country by his friends. That such a prayer should be offered up in the most important mosque is significant of the popular feeling, and there is no doubt that if any more reverses are suffered by Turkey the Government will be overthrown, and that if the Germans try to oppose this the army will rise against them and turn them out.

The Germans realise this, and it is their chief cause of preoccupation. The recent frequent journeys to and from Berlin of prominent Germans—Von Jagow was recently in Constantinople, and barely had he returned to Berlin than the German Ambassador made a flying trip thither by special train and returned one night later to the Turkish capital—are entirely due to their anxiety to prevent any revolution in Turkey, but the situation is becoming far too serious for them to be able to control it.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, February 21.

Plunder.

A Committee, consisting of the directors of the National Library at Sofia, the National Museum, and the Ethnographical Museum, has been formed and entrusted with the opening of the boxes containing the books stolen from the libraries at Belgrade, Nish, and Pirot. The number of boxes is 240. Besides this, M. Jordan Ivanoff, Professor of the University of Sofia, who has just made a journey in Macedonia, has "discovered" several precious historical documents, which he has transported to Sofia.

The Arrogant Teutons.

Since the "occupation" of Bulgaria by the Germans an order has been issued to the effect that when groups of German soldiers are walking in the streets all Bulgarians, military or otherwise, must keep close to the wall, so as to allow full room for the former to pass. This order is enforced with great severity, and nothing must stand in the way of the "conquerors."

On Thursday last, before the Panah Café at Sofia, a large motor wagon, driven by some German soldiers at its fullest speed, came rushing along just as a tram passed. Without hesitation or warning of any kind the motor was let go full tilt into the tram, wrecking it, and severely injuring many of the passengers. It proceeded on its way, no notice being taken of the protests of the bystanders, except that the soldiers called out, "Let them learn not to get in the way of Germans!"

Suppressing the Truth.

In spite of the great vigilance of the military censor, the truth regarding the state of despondent misery reigning in the Bulgarian army sometimes leaks out. Occasionally letters manage to pass the authorities, and these give pitiful pictures of the life which is being endured by the rank and file, whose hearts are so little in the present struggle.

This state of things is not at all relished by the authors of the present military situation in Bulgaria, and further efforts are being made to prevent news of the real state of things reaching the soldiers' friends at home. A communiqué published by the Ministry of War states:—

The Ministry of War is informed that carters returning from the theatre of military operations bring uncensored letters from soldiers. These letters being of a pessimistic nature, orders have been given to the Chiefs of Divisions that all carters shall be searched, and when found carrying uncensored letters they shall be proceeded against in accordance with Par. 10 on Order No. 7 of January 7 in regard to the state of war.

White Bread Prohibited.

The people of Sofia are no longer allowed to eat white bread. The Committee of Public Supply having been informed that certain bakers are in the habit of baking white bread, which they sell to those who are willing to pay a higher price, has published a notice stating that any baker making other than the two qualities decided on by the Committee will be proceeded against.

For some little time, in the greater part of the articles published in the Bulgarian Press, the word "corruption" recurs like a *leitmotif*. It is the Opposition papers which use the word most freely, without, however, indicating precisely to what the expression refers. One constantly finds such phrases as "corruption must be punished," and the like.

Interior politics in Bulgaria are passing just now through a difficult crisis. MM. Daneff and Gueshoff keep in the background. M. Malinoff alone maintains an extremely defiant attitude towards the Government, but he does not refrain from taking an active part in politics. It is to him that the Bulgarians anxiously turn their gaze at present, for the fear of the punishment which Russia reserves for them becomes daily more acute; and M. Malinoff is looked on as the only plank that may lead them to safety.

Deserters' Reports.

Several Bulgarian soldiers, accompanied by a German, from Varna, have just deserted and come into Roumania. They declared to the Roumanian authorities that the Bulgarians are wearied, that they desert in numbers day by day, and that on account of the continued German requisitions famine is seriously threatening Bulgaria.

Both the people and the army demand peace. The number of victims claimed by the war has frightened them. The Germans supply any quantity of ammunition, but the Bulgarian officers want food and—more than all—an end put to the war.

The German deserter also made interesting statements. He said: "I feel I shall go mad if I am sent to the attack once more. I took part in the fighting on the Mazurian Lakes; then I was sent to the French front; then into the Balkans, against the Serbians; and at present we are at Varna, probably to be sent against the Roumanians. But what are we that we fight against all these different peoples? It is enough that the survivors of this remain in such a state: maniacs, infirm, or beggars. Our army has never suffered so much as in the Balkans. I have suffered the most terrible tortures, and yet should not have deserted—for Germans do not desert—if I had not seen madness threatening me. So I preferred flight."

A Significant Incident.

Not a single Bulgarian officer accepted the invitation to attend the inauguration of the German Officers' Club at Sofia, and the municipal and other authorities likewise absented themselves. This significant fact—news of which was not transmitted by the Agence Bulgare—is the subject of considerable comment in German circles at Sofia, where there is fear of some serious move on the part of the Bulgarians.

Soldiers' Rations.

The Sofia correspondent of the *Nationalul* writes that the Bulgarian soldier's daily ration of bread has been reduced to 450 grammes (1 lb.). This is the consequence of the extensive exportation of cereals into Germany. The Sofia papers state that the Government has bought considerable quantities of grain in Roumania. Nothing has been heard of this transaction in the latter country. If true, it would be additional evidence that the Germans have drained their ally of most of her resources.

The Parliamentary Opposition.

The Bulgarian Government has not yet sent in its reply to the speech from the Throne. The Opposition, which was not consulted when Bulgaria went to war, refuses to be represented in the Commission which is to present the reply of the Sobranje to King Ferdinand. The latter had particularly requested that the leaders of the Opposition should not stand aloof in this matter, as proof that the country supported his foreign policy.

Reuter's Cairo correspondent writes that a marble sarcophagus has been found at Mataria, near Cairo, and that, from the inscriptions and other indications, it would appear to date between 2000 to 2500 years B.C. The infiltration of the Nile prevents work for the present, but, with the fall of the river in May, it is thought not unlikely that excavations will reveal an important necropolis. The sarcophagus is thought to contain the body of a powerful steward of one of the ancient Pharaohs.

TANGIER TO TEHERAN.

The occupation of Sollum by General Peyton's force, coming on top of other recent events on the western frontier of Egypt, is eminently satisfactory. We must still wait a little while, as the Cairo Correspondent of THE NEAR EAST reminded us last week, before we can be quite sure whether the Tripolitan Arabs have "had enough"; for when they have got their crops in it is possible that a certain Unmentionable Person may find "some mischief still" for their "idle hands to do." But we may reasonably hope that the back of the trouble is broken; and those who have broken it deserve our hearty congratulations and our best thanks.

***

Whether the unrest simmers a little longer or not, the hammering that the Men of the Desert have received at the hands of the troops—British, Colonial, and Indian—has surely served one purpose: it has pricked the great Senussi Peril bubble. Perhaps it would be fairer to write the Senussi Mystery than the Senussi Peril; for though the Young Turks and their German friends have sedulously cultivated the idea of a terrific force sweeping up from the desert and dealing out death and destruction to all who declined to accept the Enver-*cum*-Wilhelm-Kultur programme, it has always been a little difficult to some of us to respond with suitable creeping of the flesh to these appeals to our fears. We have been told of the great cities of the Senussi far, far away in the trackless desert, of their arsenals stocked with rifles, machine-guns, and ammunition; of their countless hordes of fanatical warriors, longing to die—lately for the benefit of the Turco-Germs; of their courage, their dash, and their invincibility. It has all been very, very pretty, but—well, we have wondered just why the Senussi should be so ready to sacrifice themselves in order to help a lot of suspects like the "Young Turks" and scallywags like the Huns. For, after all, the one well-established fact about them appears to be that they are the great Passive Resisters of the Arab world: a body after the heart of Dr. Clifford and his friends. As Mr. G. F. Andrews wrote in the February number of the *Geographical Journal*, "The Senussiya teaches that no Mohammedan should continue to live in a country ruled by a non-Mohammedan Power. . . . Sheikh el Mahdi sent the call to the faithful, not to revolt, but withdraw into the desert." If that is not passive resistance, what is? For the rest, the "mystery" surrounding the sect appears to me to have been worn decidedly thin of late.

***

A traveller just home from Egypt tells a racy story which I for one am quite prepared to accept as true, for it reminds me of more than one incident that fell within my own experience when I was living amongst the Arabs. It runs thus:—The daughter of a certain Sheikh got married, and not long after the marriage her husband gave her a beating. She, having been a spoilt child, hurried off to her father and complained bitterly. "My husband," said she, "has beaten me severely, and as I am your daughter he has dishonoured your house. It is not meet that the daughter of a Sheikh should be beaten thus. Therefore it is incumbent upon you, oh, my father, to avenge the insult!" The Sheikh sat thoughtful for a while, stroking his beard gravely. Then he rose, took a stick, and gave the astonished bride a second drubbing. "Now," said he, when he had finished the operation and she had dried her tears, "go to your husband and tell him that I am much annoyed with him for smirching the honour of my house by beating my daughter. But add that I have got even with him—and more than even—by beating *his wife*."

***

Another delightful story, equally typical, but this time of a Turk, comes from Mesopotamia. There, as we know, the Arabs have been faithfully following their own old notions of warfare—hanging on the flanks of both armies and "nipping in" on either side whenever they see a chance of securing any plunder without too great risk. These tactics much annoyed the Turkish commander, so he sent a message to the British commander, saying: "I am tired of these Bedouin robbers and their treachery, and you must be so, too. Let us, therefore, make a truce with one another for two or three days, and mete out to these Arabs such punishment as will put an end to their tricks."

***

Some jottings by a submarine officer who has been serving down at the Dardanelles, the Sea of Marmora, and the Bosphorus have found their way into my hands this week. Two incidents which they mention seem to show that even in those placid waters the life of the naval officer is not entirely free from care. On one occasion the submarine was basking quietly in the Golden Horn when a Turkish boatman, anxious to tie up to something and enjoy a quiet snooze, observing her periscope, promptly hitched on to it with a boat-hook. On another day the submarine having touched at a quiet spot undetected, some of the younger members of her happy family took advantage of the occasion to slip ashore and go shopping in the Pera quarter. The Commander was naturally annoyed, fearing that he might be held guilty of encouraging "trading with the enemy." Truly our Navy has its own small worries.

***

The death of Lady Baker last week is an event which will be keenly regretted by all who have ever taken an interest in the Sudan. The part she played in the travels of exploration undertaken by the late Sir Samuel Baker was a very real one, so much so indeed that the regions described in her husband's writings are even yet redolent of her memory. To-day, when we read of the naval fight on the lakes of Central Africa, it is especially interesting to think back to the time when all those regions were as a closed book to the white man. Sir Samuel and Lady Baker were the first white man and woman to set foot in the region of the Albert Nyanza. Not so many years ago, after all—Lady Baker only breathed her last on Saturday—but what changes have been wrought since then. There are few white women, too, who could have survived the hardships which fell to Lady Baker's lot in those days, when the hand of God and man seemed to be against the exploring party. Anyone who has visited the Sudan in recent years, and has seen the naked country from the deck of a comfortable tourist steamer, can judge of travel in the country before the hand of the White Man had been placed upon it. Yet Lady Baker, carried for seven days through torrential rains in a condition that was at first thought to be of death, survived it all, to reap a full benefit of years in civilisation and to die at last in the tranquil setting of her Devonshire home. I hope that her memory will be honoured by a tablet in the Cathedral at Khartoum, for never devoted wife and intrepid pioneer deserved one more.

***

According to a message from Athens this week, the Bulgarians have already been given a joy-day to celebrate the fall of Verdun. In all those towns where there are German garrisons fêtes were held in honour of the glorious "news," manufactured by the most kultured Germans in Berlin for the benefit of their Bulgar allies. There is nothing surprising in this "news" when one considers it. If, for internal reasons, the German high command does not hesitate to report to its own country the wholly fictitious news of the capture of the fort of Vaux, a fort that had not even been attacked when the report announcing its fall was circulated, it is scarcely likely that any consideration of truth should stand in the way of placating restless Bulgarians in case of necessity. That necessity evidently arose a week or more ago, for it was then that this great lie was imposed upon them. Germany will now trust to luck. If, after sacrifices which stagger one's imagination even now when it is so thoroughly tuned to horror, Verdun is captured—an extremely unlikely event in my opinion—the date of its capture can be withheld from Bulgaria; if, on the other hand, the German attack fails utterly, it can be said that the French counter-attacked and recaptured the city. But truly things cannot be very well with the Teutons when they sink to such methods in order to retain the support of their allies.

***

In the meanwhile what of Turkey? Apparently there are only two things quite certain in her regard. The one is that the fate and whereabouts of Enver Pasha remain a matter of mystery; the other, that a Turk captured in Gallipoli wore a belt made from the strap of a London and North-Western Railway carriage. The latter item of news is perhaps unimportant except that it shows how little things strain out to grip one's interest even in the midst of Armageddon, for the fact was recorded in most of the daily newspapers with all the honour of a separate paragraph. The question of Enver Pasha is, however, another matter. The whole future of Turkey may depend upon whether Enver is at the Tomb of the Prophet, as official reports state, or whether he is in a tomb of his own elsewhere. I hope, for the sake of Turkey, that he is dead, but I do not expect we shall know definitely one way or another for some time to come. If, as one London paper asserts, it is true that semi-official reports in Turkey state that he died fighting in Armenia, then it is tolerably certain that he was assassinated in Constantinople, but time alone will show.

NEAR EAST BOOKSHELF.

EGYPT THE WONDERLAND.*

It is not probable that many tourists will enter Egypt this year, but the fascination of Egypt remains. War clouds may burst and threaten to destroy all our carefully nurtured products of civilisation; the Pyramids may echo with the clang of arms and the shout of armed men, the clean face of the desert may run red with blood, but Egypt will remain the unchanged and the unchangeable. "The study of Egyptian history has at least this merit: it teaches us to think not in centuries, but in the longer periods which make the history of dynasties of nations." So wrote Mr. Todd concerning Egypt, and his words are full of truth. What difference, after all, do any of the changes which ruffle the face of civilisation make to Egypt? They are no more to her than the winds that scatter the sands of her deserts, and she treats them with the same indifference. Therein lies her fascination; she is the one country that the newer civilisations may not mould; she is, as it were, a pivot on which history swings. This fact, and Mr. Todd's remarks thereon are peculiarly apropos at the present moment, when Egypt the Eternal has just witnessed scenes of fresh bloodshed, and is placidly awaiting the shock of a "great invasion."

When it was published the book was a decidedly pleasing addition to the long list of books on Egypt, and in saying, as we unhesitatingly do, that it has improved with keeping, we are conscious of giving it high praise. Illustrations such as it contains seldom depreciate, but the same cannot be said of the work of all authors who write on Egypt. The illustrations are exceptionally good, for Miss Du Cane has evidently so steeped herself in the atmosphere of Egypt that any or all aspects of the country come easily to her brush. It is, however, in her treatment of water effects that the artist excels. These are instinct with the soft lights which are so much a part of Egypt that the simple memory of them lightens the fog of a February day in London. Some of her landscapes, too, are much above the average; it is only in dealing with buildings and, rather strangely, with flowers and garden scenes, that her art is seen in a less favourable light. Even here, however, there is no distinctive fault to find. The pictures are undoubtedly good and faithful reproductions of the scenes depicted; but they lack the charm and individuality that are so pronounced in her other work. Many of her pictures of streets and mosques might be signed by other artists well known for their work on Egypt and no one would be a penny the wiser. They are too photographic in setting and in colour, and we look in vain for the imagination which touches her other work. The same thing may perhaps be said of the sketches wherein flowers are the principal subject. You can touch and feel the water and the mists in some of Miss Du Cane's pictures; her flowers are true and beautiful in colour; but they are painted things on paper, not the soft velvety sprays that other work might have led us to expect from her. If we may judge by the generous supply of illustrations with which this book is filled, we would say that the artist's chief and most abiding impression of Egypt was of peace and calm. It is evident in almost all her work. On the few occasions, however, when troubled vision of coming storm assailed her, she has done all that an artist could do in its portrayal. "A Grey Day on the Nile," may be taken as an instance. How often have we seen the same blended tints of the sky scarred by deepening purple as evening draws in, and watched the ripples scurry across the face of the waters, alert and eager for the part they were about to play in the coming storm. Some of these pictures, indeed, lead us into a grievous state of indecision. On the one hand we want to cut them out and frame them; on the other we wish to preserve the book in all its original charm.

It would be interesting to know whether the script was written to the pictures or the pictures painted to the words; or whether author and artist went through the scenes of their work together. It is certain, at all events, that the work of both artist and author combines in a manner that is unusually satisfactory. Mr. Todd has set out with the avowed intention of attempting to lay before the reader an impression of the "outstanding features of the history, or rather, procession of histories, which is passing before him," when he contemplates Egypt. It is certainly the case that visitors to Egypt, and even students of the country, are liable to overlook many of her claims of interest in their enthusiasm for one point. The archæological attraction is of paramount interest to one; the commercial possibilities an absorbing claim to another, and so on. Mr. Todd looks at the country as a prospector looks for coal. Every geological indication is of value to the prospector, but coal does not lie upon the surface. It is hidden beneath the crust of centuries, and until those crusts are removed the mineral will remain untouched. So with Egypt. Mr. Todd attempts to unravel the successive layers of history under which the heart of Egypt beats. To this author the various phases and changes through which the country has passed since those remote times when, "probably centuries before the Garden of Eden," the world's civilisation began, are mere layers of only relative importance to the ultimate destinies of the country. He is obsessed by the wonders which centuries of history have combined to produce, and he has written a book at the promptings of this obsession. That, at least, is the impression which this volume leaves upon the mind of the reviewer.

Professor Todd starts where all books on Egypt should properly start—the Nile. The country exists by its favour; in the old days, before its wilful moods were tamed, the people of Egypt faced alternate plenty and famine at its caprice. There are still in the upper regions of Egypt to be found men and women who place implicit belief in the Spirit of the Nile, a spirit which materialises in the mists about the river towards nightfall, and which rewards its devotees for their belief by whispered warnings of coming danger, or lightening their hearts by presages of joy. It has always seemed to the reviewer that we must look to these things if we want to master the question of Egypt and other lands of the Orient. Professor Todd refers to the fact that the facial characteristics of the ancient Egyptians are to be seen in almost every street in Cairo. Here again is food for thought. Can the spirit of the people have so greatly changed while the physiognomy is left unaltered? We are inclined to think not. Just as in the individuals of Upper Egypt to whom we have referred there remains an abiding faith in an ancient superstition that the world would denounce as pagan to-day, so among the hearts of the people there may still be latent the germs of greatness that carried the country to the front of civilisation ages and ages ago. Occasionally during recent centuries a spark has fluttered here and there, giving promise of a flaming soul, and although so far no light strong enough to battle with the illumination of modern civilisation has appeared, there is no need to despair. It may be, too, that the resurrection of the country will be gradual; that it will be brought about by many influences each working to the one end, and that no giant personality will be directly responsible. It is probable in the nature of things, however, that prosperity, if it comes to Egypt as a settled and certain thing, as a result of closer intimacy with Western ideals, will retard rather than hasten the reincarnation of the spirit that marked the Ancient Egyptians. Reappearing during a period of smug prosperity, it would have to overcome the prevailing tendency to avarice on the part of the Egyptians before any great change could be wrought.

In the concluding pages of his book, Mr. Todd asks, "What is to be the future of Egypt?" and continues in the following paragraph, touched with prophecy in its first phrase:

> A British Protectorate seems the natural answer, but it is no answer at all. Suppose it were that to-morrow, what next? What is to be the final fate of the attempt of one Western nation to rule Eastern nations with whom it can never amalgamate? "Never" is a big word, but here it seems really the only word, for as long as Englishmen will not marry native women, or, still more impossible, allow native Egyptians to marry English women, there can never be any relation between England and Egypt but that of conqueror and conquered. What is to be the end of it all? Civilization has pretty well gone the round of the world now. Is it going to begin again, and where, or is it going to work backwards now from West to East?

This question, persistent during the time the book was published, is even more so now, when civilisation itself is in the melting-pot. At the present moment it is, indeed, almost impossible to predict its future after even the short period of a year. It is quite certain that the civilisation of the early months of 1914 has gone for ever, although it is hard to realise that yet. We hope and believe that this ordeal will leave us strengthened by the elimination of the disordered state of luxury at which we had arrived, and by the reincarnation of the vigorous ideals that led Britain to the forefront of the nations. Should this be the case, we may regard the future, especially our future in the East, with equanimity. The civilisation of the Easterns always found strength in the mystic side of existence. We do not; in other words, East and West apply at different founts for their doles of greatness. As long as this remains the case all should be well. Egypt, for instance, could spring again to heights of civilisation, rivalling all her previous achievements, and yet not cross the path of the West at all. The two are so widely different, there is no reason why they should ever meet except for mutual good; and while we lead, with due regard to the susceptibilities of the Eastern temperament, all should be harmony. Therefore we think that Mr. Todd errs when, in the passage which we have quoted, he sees only the possibility of the strained relations of conqueror and conquered between West and East. In the "Federation of the World," the old world and the new will probably be found to be moving harmoniously side by side with characteristics unchanged, the ideals of each working to the support of the other. This, at least, is the conclusion that we arrive at in probing the questions put by Mr. Todd, in a book which has given us unqualified enjoyment.

23	10	Thursday	18	18

It is reported from Bucharest that Queen Marie of Roumania is ill.

Sir A. K. Muir has returned to Blair Drummond House, Perthshire, from Egypt, and the Eastern Mediterranean. He went there (says the *World*) at the beginning of the year to help with the distribution of the supplies of comforts which his sister, Lady (Ian) Hamilton, collected for the men of the Mediterranean Expeditionary Force.

Essad Pasha returned to Rome from Nice last Thursday.

According to news arriving by way of Amsterdam, King Ferdinand of Bulgaria, after visiting the Emperor Francis Joseph on Wednesday, left for Hungary.

The *Sudan Times* of February 23 reports an interesting ceremony at Khartoum. It says :—"H.E. the Sirdar held his annual prize giving at the Military School on Saturday, 19th inst. The prize giving was held at the back of the Military School, and H.E. presented prizes to those who had done well in the examinations. Many officials, officers, relatives and friends of cadets were present, numbering about 250, amongst whom were El Lewa H. Drake Pasha (Adjutant-General E.A.), El Lewa F. F. Carroll Pasha, Mr. Crowfoot, Mr. Simpson, El Miralai R. Rees Mogg Bey (Military Secretary), and El Kaim. F. W. Edwards Bey."

The Crown Prince of Serbia arrived in Rome yesterday morning. His Royal Highness was received at the station by many Serbs and civic authorities and was cheered by a large crowd. After a short stay in the city the Crown Prince will pay a visit to the King at the front.

Our Bucharest Correspondent writes (February 23) :—

The members of the Russian Sanitary Mission, "Alexandrowskaia," who had been kept prisoners by the Bulgarians, having received permission to quit Sofia, passed through Bucharest a few days ago on their way to Petrograd. The mission was composed of several medical men, with a Pole, Dr. Kurkowski, at its head, and a staff of forty-seven Sisters of Charity. The Roumanian Government authorized the transport of their luggage free of charge on the Roumanian railways.

An Amsterdam telegram announces that Dr. Sven Hedin has arrived in Constantinople.

Colonel Charles J. A. Yates, late of the 28th Bombay Pioneers, who died at Falmouth last week, took part in the Sudan Expedition of 1885, and received the medal with clasp and the bronze star.

22, Great Chapel Street, Oxford Street, W.

Colonel Richard Patrick Ferguson, late of the Royal Army Medical Corps, has died at Southsea, at the age of seventy-six. He joined the Medical Service of the Army in 1862, and served with the Bhootan expedition of 1864-5, for which he had the medal with clasp. He was in the Afghan war of 1878-9 and with the Egyptian expedition of 1882, for both of which he had the medal and for the Egyptian expedition also the bronze star. He retired in 1899.

On Monday evening Mrs. O. M. Aldridge delivered a lecture at the National Liberal Club on "The Retreat from Kragujevatz through Montenegro and Albania."

According to Constantinople rumours current in Athens, Ismail Hakki, Chief of the Commissariat Department, has been appointed Turkish Minister of War in the room of Enver Pasha, who continues to be "reported dead."

H.H. the Sultan of Egypt has been pleased to confer the Order of the Nile, of the Third Class, upon Dr. Llewellin Phillips, Physician to his Highness; Dr. F. B. Brossard Bey, Consulting Physician to his Highness; and Izzet Bey Shukri, Director of the European section of his Highness's Cabinet.

The following announcements are from the *London Gazette* :—

The King has been pleased to give and grant unto Field-Marshal the Right Hon. Horatio Herbert, Earl Kitchener of Khartoum, K.G., K.P., G.C.B., O.M., G.C.S.I., G.C.M.G., G.C.I.E., Secretary of State for War, his Majesty's Royal licence and authority to wear the Grand Cross of the Legion of Honour, which decoration has been conferred by the President of the French Republic, in recognition of valuable services rendered by his Lordship.

The King has been pleased to give and grant unto Captain Ernest Nathaniel Bennett, Territorial Force Reserve, his Majesty's Royal licence and authority to wear the Insignia of Third Class of the Order of the White Eagle, which decoration has been conferred upon him by his Majesty the King of Serbia in recognition of valuable services rendered by him as Commissioner in Serbia of the British Red Cross Society and the Order of St. John of Jerusalem.

The King has been pleased to give and grant unto the undermentioned gentlemen his Majesty's Royal licence and authority to wear decorations (as stated against their respective names) which have been conferred upon them by his Highness the Sultan of Egypt in recognition of valuable services rendered by them :—

Second Class of the Order of the Nile.

Brevet-Colonel Herbert William Jackson, C.B., retired pay, formerly of the Gordon Highlanders (Lieutenant-Colonel Reserve of Officers).

Third Class of the Order of the Nile.

James Brian Christopherson, Esq., M.A., M.D., B.Ch., Sudan Civil Service.

Fourth Class of the Order of the Nile.

Major Hugh Shuckburgh Hearn, Royal Artillery.

Major Charlton Watson Spinks, Royal Artillery.

Major Stanley Edmund Hercules Giles, the Army Service Corps.

Major Cecil Hunter Little, Prince Albert's (Somerset Light Infantry).

Major Roland Charles Greenwood, the Highland Light Infantry.

Major Henry Beaumont, the Lancashire Fusiliers.

Captain Arthur Gordon Cummins, M.B., Royal Army Medical Corps.

Captain Godfrey Henry Patrick Boyle, Seaforth Highlanders (Ross-shire Buffs, the Duke of Albany's); and

Arthur Lennox Butler, Esq., Keith Vivian Gurney, Esq., Cyril Havercroft, Esq., Harold Preece Hewins, Esq., Vincent Sutherland Hodson, Esq., M.V.O., M.B., Harold Alfred MacMichael, Esq., John Godfrey Matthew, Esq., and Charles Armine Willis, Esq., members of the Sudan Civil Service.

Lieutenant H. D. Cumberbatch, 6th Buffs (E. Kent), is reported wounded in the latest casualty lists.

Temporary Sec. Lieutenant Frank M. Stout, attached 20th Hussars, who, with his brother, is well known in Cairo, has been awarded the Military Cross for conspicuous gallantry and resource. When he heard of an enemy working party in the vicinity, he took a corporal and light machine-gun down a sap, mounted the corporal on his back to enable the latter to fire over the parapet, and opened fire. Later, mounted on the corporal's back, Lieutenant Stout opened fire, although by this time they had been discovered. Next morning, fourteen dead enemy were counted and more must have been wounded.

We regret to learn that Lord Edward Cecil, K.C.M.G., D.S.O., Financial Adviser to the Egyptian Government, who is at present in England, is indisposed. His condition, however, gives no cause for anxiety.

The Rome correspondent of the *Morning Post* reports that an interesting exhibition of pictures of leaders and incidents of the Serbian campaign, by the Serbian painter, Vuketich, was opened at Rome a few days ago. Among the portraits are those of Admiral Troubridge and Dr. Ryan.

A sum of £8 2s. 6d. was realized as the result of a whist drive held recently in Derby in aid of the Serbian Relief Fund.

Colonel Robert Baring, of Chapel Street, Belgrave Square, brother of the Earl of Cromer and of the late Lord Revelstoke, who died on November 21, aged eighty-one, left property of the value of £155,210. The testator gives an annuity of £100 and £300 to his servant William Major, and £400 to Isabella Forbes, if still in his service.

Mrs. Grant Duff, President of the Bureau de Secours aux Prisonniers de Guerre, British Section, British Legation, Berne, Switzerland, announces that arrangements have been made to send parcels of food and clothing from Berne to British prisoners of war in Bulgaria and Turkey, thus saving a considerable amount of time in transmission and providing a more certain method of despatch. Particulars can be obtained from the Bureau de Secours or from the Prisoners of War Help Committee, 3 and 7, Southampton Street, Strand, W.C.

The *Egyptian Gazette* announces that both Captain E. T. Peel and Lieutenant C. F. Beyts, members of the Alexandria staff of Messrs. Peel and Company, have been awarded the Military Medal. Bombadier D. Shimmin, also a member of the firm's Alexandria staff, has been awarded the Distinguished Conduct Medal.

The following brief list of some of the articles just sent out by the Wounded Allies Relief Committee, Sardinia House, Kingsway, W.C., to sick and wounded Serbian soldiers at the Island of Vido, near Corfu, may serve as a guide to sympathisers desirous of contributing foodstuffs and clothing to be included with the next consignment of goods despatched by the committee :—The articles sent out with the first mission include two bales of blankets from the New Zealand Government, and from the committee's stores 120 overcoats, 120 body-belts, 200 slippers, 400 day-shirts, 300 cushions, 250 pillows, 200 tins of cocoa, 500 tins of chocolate, 20 dozen assorted vegetable soups, 100 lbs. of dried eggs, 10 cwt. of sugar, 200 lbs. of tea, 12 dozen tins of assorted jams, 20 dozen tins of marmalade, 11 cases of tinned milk, 5 cwt. of assorted biscuits, 54 bags (each 140 lbs.) of flour, and 5 bags (each 2 cwt.) of rice, in addition to coffee, margarine, bacon, and other things.

MRS. FRANK BARKER wishes to recommend MANOLI CORBETTI, 22, Great Chapel Street, Oxford Street, W., to anyone wishing to purchase YAOURT, HALVA, TOMATO PASTE, BLACK OLIVES, ORIENTAL JAMS, or CIGARETTES, all of which he gets direct from Salonika and other parts of Greece.—[Advt.]

APPOINTMENTS, PROMOTIONS, Etc.

Under date of February 22, our Bucharest Correspondent reports:—

M. G. Derussi, the Roumanian Minister in Sofia, who had been in Bucharest on leave, has now returned to his post.

Sabet Bey has taken over his new post as Secretary of the Ottoman Legation in Bucharest.

Colonel Tatarinoff, late Military Attaché of the Russian Legation at Sofia, has been appointed Military Attaché at Bucharest in the place of Colonel Semenoff.

It is officially announced that the King has been pleased to give directions for the appointment of General Sir Charles Monro, K.C.B., to be a Knight Grand Cross of the Order of St. Michael and St. George; and for General the Hon. Sir Julian Byng to be a Knight Commander of the Bath, both for distinguished services in connection with the withdrawal of the Force from Gallipoli.

The appointment has been gazetted of Lieut.-Colonel Sir Percy M. Sykes, K.C.I.E., C.M.G., Supernumerary List, Indian Army, as temporary Brigadier-General while employed on special duty.

The following officers of the Egyptian Army have been promoted from Bimbashi to Kaimakam:—R. S. Worsley, Department of Supplies; P. M. Larken, Sudan Government; C. H. Stigand, Sudan Government; E. Gibbon, M.B., Medical Corps; R. P. Lewis, Sudan Government.

El Bimbashi E. H. M. O'Farrell, 1st Battalion, has been struck off the strength of the Egyptian Army.

The appointment of El Kaimakam R. S. Worsley Bey, Department of Supplies, to be Assistant Director of Supplies, Egyptian Army, has been approved.

The following British officers attached to the Egyptian Army have been promoted to the rank of major:—

Captain Albert C. Hewitt, Royal Fusiliers (City of London Regiment).

Captain G. G. S. Brander, Suffolk Regiment.

Captain W. D. Kenny, Royal Inniskilling Fusiliers.

The *Morning Post* Stockholm correspondent states that the Swedish Minister in Vienna, Count Beck-Friis, who has also been appointed Swedish Minister to Roumania, has left for Bucharest to present his credentials to King Ferdinand.

OBITUARY.

JUDGE SANDARS.

We regret to announce the death, which took place at Alexandria on the 9th inst., at the age of fifty-six years, of his Honour Judge Charles Lionel Sandars, President of the International Court of Appeal in Egypt. The late Judge Sandars was an old resident of Alexandria, where he arrived in the year 1881, when he commenced to practise there as a barrister. He entered into partnership with the late Mr. Chas. Royle, and after the "events" of 1882 took an active part in obtaining indemnities for British subjects whose property had suffered injury. Later he practised on his own account, and, after considerable experience of the British Consular Court, was given a seat on the Mixed Court Bench, a position he occupied with distinction for many years, ultimately being appointed President of the Tribunals. Apart from his profession, Judge Sandars' interests were centred in horticulture. He was one of the most prominent exhibitors at the annual flower show held at San Stefano, the success of which was largely due to his untiring energy and example. He was the second son of the late Thomas Collett Sandars, and was unmarried. His death, at a comparatively early age, will be regretted by a large circle of friends.

SIR CHARLES M. WATSON, K.C.M.G.

The Times yesterday announced the death of Colonel Sir Charles Moore Watson, K.C.M.G., C.B., R.E., the friend of General Gordon, and the captor of the Citadel of Cairo after the battle of Tel-el-Kebir. We extract the following particulars from the *Times'* obituary:—

Born in Dublin on July 10, 1844, he was the son of William Watson, a well-known civil engineer. After distinguishing himself at Trinity College, Dublin, in French, German, and mathematics, he entered Woolwich first in the list in 1863, and passed out in 1865 still at the top. In the next year he took his B.A. degree at Dublin, and was commissioned lieutenant in the Royal Engineers. . . . In 1874 General Gordon, who when commanding at Gravesend had noticed young Watson, invited him to join him in the Sudan for survey work, and the friendship between the two was cemented for life. Watson, however, was unable to bear the climate, and after surveying the White Nile to Gondokoro was invalided home in May, 1875. For the next seven years he was working at the War Office under the Inspector-General of Fortifications.

When the Egyptian Expedition went out in August, 1882, Captain Watson was appointed to the Intelligence Department of the Army with the rank of D.A.Q.M.G. When Sir Garnet Wolseley, immediately after the capture of the lines at Tel-el-Kebir, on September 13, 1882, ordered General Drury Lowe to advance on Cairo, Watson was directed to lead the advance column. He brought them successfully to Bilbeis, where General Lowe and Colonel Herbert Stewart soon joined them, having left the heavy brigade and horse artillery in difficulties with the numerous canals. Without waiting for them General Lowe decided to push on with only 1,200 men. They set out on the thirty mile ride to Cairo early on September 14, and came in sight of the city in the afternoon.

Watson had warned the general and Stewart of the danger that Cairo might be burned, and pointed out the importance of seizing the Citadel that evening. Accordingly, after the amazing scene at Abbasia was over and 10,000 Egyptian troops had laid down their arms before a thousand British cavalry, Colonel Stewart sent Watson in command of scarcely 150 officers and men of the 4th Dragoon Guards and mounted infantry to take the Citadel, which was known to be strongly garrisoned. They set out in the dark and presented themselves by an infrequented road at the Citadel gate. There Watson coolly ordered the officer of the guard to fetch the commandant, and when he came he was told to parade the garrison and march them out to Kasr-en-Nil Barracks. This audacious command was instantly obeyed. The keys were at once surrendered, bugles were soon heard sounding the "Assembly," and while the few English troops were kept in the dark near the upper gate to conceal their scanty numbers, 6,000 Egyptian soldiers marched out of the lower gate.

Next month Watson returned to England with a brevet majority and the Order of the Medjidieh, only to be sent back to Egypt in January, 1883, at the request of Sir Evelyn Wood to assist in creating an Egyptian Army, with the rank of Miralai (colonel) and the office of Surveyor-General. During Wood's absence up the Nile in the campaign of 1884 Watson reluctantly remained at Cairo as Acting-Sirdar. In 1885 he was decorated with the Osmanieh and promoted to be Pasha (major-general) in the Egyptian Army, and in 1886 he was for six months at Suakin as Governor-General of the Red Sea Littoral.

In 1902 he retired from the Army under the age clause, and was made a C.B. Sir Charles was a great supporter of the Royal Geographical Society, the Palestine Exploration Fund, and the Order of St. John, of whose Opthalmic Hospital at Jerusalem he was chairman.

Watson's most important publication was the "Life of Major-General Sir C. M. Wilson," a brother officer and personal friend, in which he gives a reasoned defence of Wilson's conduct of the Gordon Relief Expedition. Watson had been the last to see Gordon off from Cairo in January, 1884. One of Gordon's last letters (December 14, 1885) was addressed to him in Cairo, and the victim of Khartoum had no stauncher friend or advocate.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

HOOPER.—On March 12, at Maplehurst, Witney, the wife of G. H. F. Hooper, Busreh, Persian Gulf, of a son.

ROWNTREE.—On March 10, at 4, Royal Crescent, Scarborough, to Mr. and Mrs. Maurice L. Rowntree—a daughter.

WORRALL.—On March 12, at Richmond Hill Nursing Home, Aberdeen, the wife of Newton Worrall, H.B.M.'s Vice-Consul, British Residency, Bushire, Persian Gulf, of a daughter.

FRIDAY, MARCH 17, 1916.

EN ROUTE TO BAGHDAD.

General Aylmer's force, which has now been three months on the road to the relief of Kut, is reported once more to have reached the Es Sinn position, some seven miles distant. An attack on the Turkish position failed, but no more precise information on the incident has been issued. As on the last occasion, when an official *communiqué* brought the two British forces under General Aylmer and General Townshend respectively within seven miles of one another, only to announce later that they had not been nearer than twenty-three miles, so now we need not imagine the Relief Expedition strongly entrenched at a point seven miles from Kut, with a large Turkish army in between the two British forces. What has probably happened is that General Aylmer has tried to turn the enemy's position on its left flank, where it is protected by marshy ground, and has been unsuccessful. The Turkish troops are, no doubt, based on the Es Sinn lines, but there is no indication, as might be inferred from the official reports, that General Aylmer is only seven miles from his objective. If the two British forces were only that distance apart, General Townshend would have to be very hard pressed and in dire straits to be unable to strike a blow on his own behalf in co-operation with the Relief Expedition. Considerable violence, indeed, is done to the optimism of the official *communiqués* in having to imagine the main Turkish position confronting General Aylmer's advance as so close to Kut, yet not within punishable range of General Townshend's artillery. The whole situation is perplexing, and the transfer of the conduct of the operations from the Indian Government to the War Office has not made for any new light on the subject. The meagre pittance of news doled out from time to time regarding the operations in Mesopotamia must be considered as eloquent of the official attitude towards this theatre of war—an attitude which the British public finds difficulty in understanding. The initial mistake of underestimating the task imposed upon a Mesopotamian expedition was comprehensible and readily condoned. General Barrett, however, made way for General Nixon, and the advance up the Tigris proceeded smoothly. A rude awakening proved to be in store for the expedition at Ctesiphon, and General Townshend had to submit to being shut up at Kut. But two whole months have passed since General Aylmer was able to gauge the strength of the Turkish forces. The interval may not be too long for the transport of large reinforcements, which may only now be coming into action, but there has been ample time to rush to the front, say, a flying squadron and a supply of bombs and grenades, which would at least rescue the expedition from the demoralizing inaction imposed upon it by the Turks' superiority in numbers.

The failure to do the obvious in Mesopotamia is a measure of the lack of driving power behind so many of the British military operations. We have seen what emphasis has been laid by the French on air raids over enemy territory in the Balkans. There cannot be the least doubt that, if General Aylmer had been adequately supplied with this arm, he would have found the Es Sinn position and the whole Turkish resistance far less formidable. As far as official statements are concerned, we are left to infer that such aeroplanes as he has have only been available for dropping packets of vegetable seeds in Kut and not for any searching bombardment of the enemy's lines. The whole expedition has the appearance of having been launched on the principle of "the best we've got," instead of having been equipped for the work that had to be done. This is especially the case, according to recent reports, in regard to the medical arrangements of the expedition. The field hospitals, it is stated, are too few, are badly equipped and inadequately staffed. Doctors and nurses are scarce, medical requisites and comforts are lacking, while the whole service is said to suffer from imperfect organization. There is not sufficient information available to determine where the blame for this regrettable state of affairs rests. No doubt the demands upon both the Royal Army Medical Corps and the Indian Medical Service have taxed their resources to the utmost, but there is clearly something at fault when a big expedition is allowed to get under way with defective medical equipment. It is not the first instance of the mismanagement of the medical services in connection with a special expedition. On a former occasion the trouble arose, as far as could be gathered, from the omission of the military authorities to reveal their plans comprehensively to the medical authorities. Something of the same nature may have occurred in the clash of responsibility for the Mesopotamian operations between the Indian Government and the War Office. It is incredible that either of these authorities should have had knowledge of the defective medical arrangements of the expedition, while they were deliberately refusing offers of service from civilians and retired army surgeons or exasperating numbers of doctors who had volunteered for the war by consigning them to the inaction of training or base camps.

If we emphasize the shortcomings of the Mesopotamian Expedition, it is in the hope that the military authorities will profit by the mistakes made in order to hasten now the successful termination of the campaign. The moment has come for the introduction of the maximum driving power, and it would be a disgrace to the country to learn that, after this long delay, General Lake was still not in a position to push back the Turks and resume the march on Baghdad. We should have been content to see the expedition remain at Busreh or Kurnah, but now that it has made the attempt to reach Baghdad it must see the effort through. The "Queen of Cities" must surrender to a British force, unless Great Britain is prepared to forfeit the respect of the tribes that will be passing under her jurisdiction. It is not a question of prestige in the Mohammedan world, about which there was much uninformed talk in connection with the Gallipoli venture; but we have to fear the effect on the minds of ignorant tribesmen who will be expected to look up to the British after having seen them defeated by Turks and unable to make good by their own unaided efforts. Some help has already been given to the Mesopotamian Expedition by Russia's successes in the North. There ought to be no thought of staying our hand below Kut until the task is made still easier for us. The collapse of the Turco-German movement in Persia has brought a Russian force within 150 miles of Baghdad. Its original purpose cannot have been to attempt the capture of that city, but the knock-out blow dealt to the Turks in Armenia has invested the Russian troops in Persia with an importance beyond their actual strength. They can thus play a large part in the capture of Baghdad, but the real attack ought to be delivered by British forces from the South. We owe it to ourselves to strike this blow; we owe it to our Russian Allies to strike it without delay, in order that their forces in Armenia may derive the maximum benefit from the embarrassment of the Turks in this theatre of war.

THE ROUMANIAN ARMY.

(By Our Bucharest Correspondent.)

On the eve of a possible co-operation with the Allies, it may not be without interest to the British reader to have a few facts regarding the Roumanian Army, which is the most important in South-Eastern Europe. And this the more because most of the statements concerning the effectives of this army have been advanced without control, and some of them are very far from representing the truth.

In competent circles the value of the Roumanian troops is highly appreciated. Their endurance, courage, instruction, and spirit of discipline have been fully recognised. One need but recall the campaign of 1877 and the circumstances in which the little army of that day brought about the victory of the Russians.

Army Corps.

The Roumanian army comprises five army corps, which are doubled in case of mobilisation. These are:—First at Craiova, second at Bucharest, third at Galatz, fourth at Jassy, fifth at Constantza (to which must be added the two fortified regions of Bucharest and Fokshani-Galatz).

Each army corps is composed of two divisions (two brigades of infantry, each composed of two regiments, one battalion of chasseurs, one brigade of artillery, comprising two regiments), one regiment of cavalry, one battalion engineers. In addition, special troops and auxiliaries. Divisions of reserve are also ten in number. Independent divisions of cavalry, two (a third is said to be in process of formation).

With regard to troops of the first line, the Roumanian army is organised as follows:—

Infantry.

Eighty regiments infantry of the line, three battalions to a regiment, four companies, to a battalion, 250 men to a company.

Ten battalions of chasseurs, four companies to the battalion.

Two regiments of Graniceri (frontier guards), three battalions to the regiment.

Armament.—Roumanian Mannlicher, model 1893, calibre 6.5 mm. Machine guns, Maxims.

Artillery.

Twenty-five regiments field artillery, each of six batteries (with four guns), Krupp guns of 75 mm. (1908).

One regiment horse artillery.

Five regiments light howitzers.

Three regiments heavy howitzers (150 mm., three batteries).

One regiment mountain artillery.

One regiment siege artillery, nine batteries to the regiment.

One fortress regiment at Bucharest (twelve batteries), two battalions at Fokshani (eight batteries).

Cavalry.

Eleven regiments of Lancers (Roshiori), four squadrons to the regiment.

Ten regiments of hussars (Calarashi), of five and six squadrons.

One regiment Royal Escort (three squadrons).

Each regiment has attached to it a section of Maxims.

Engineers.

Five battalions pioneers.

One battalion fortress engineers.

One battalion railway engineers.

One battalion "pontonniers."

One battalion "specials" (telegraphy, aerostation, signalling, etc., etc.).

In addition, the aviation service of the army.

Gendarmerie.

Thirty-five companies.

Army Service Corps.

Five groups, each of two squadrons.

All the auxiliary and transport services.

The effective force in peace time numbers 132,000 men (including 5,750 officers and auxiliaries).

With the reserves of the first line, and adding the militia, the army in time of war numbers over 650,000 men.

There are about 15,000 officers, of which number the 11,500 combatants (active and reserve) are distributed as follows:

Infantry, 7,200; artillery, 1,900; cavalry, 1,350; engineers, 560; navy, 150; generals, 105. Non-combatants.—Surgeons and other sanitary services, 1,700; commissariat, 1,400.

The High Command.

There is still a word to be said concerning the high command, which includes many officers of value and tacticians of no mean merit.

King Ferdinand is the supreme head of the army and assumes the chief command in case of war. His sound knowledge of military matters has had a favourable influence on the actual organisation of the army.

In all probability the high commands would be given, in case of war, to Generals Culcer and Yarka (at present army inspectors) and to Lieutenant-General Averescu, formerly Minister of War and Chief of the General Staff, at present commanding the First Army Corps. He is a soldier of great value to whom important reforms are due. At the time of the Bulgarian campaign of 1913 he was Chief of the General Staff, which had its headquarters at Plevna. He has the further advantage of being one of the few ranker-generals of the Roumanian army.

Generals Coanda, Inspector of Cavalry; Georgescu, commanding the Fifth Corps (a great friend of the English); Aslan, commanding the Third Corps; Presan, commanding the Fourth Corps; and Cottescu, commanding the Second Corps, are all officers upon whose ability the nation can rely when the time comes for her to measure her strength with that of her neighbours. Among the cavalry chiefs must be mentioned Major-Generals Popovici, Bodgan, Bassarabescu, etc.

The Chief of the General Staff is Lieutenant-General Zottu, actively seconded by his subordinate, Major-General Cristescu, who enjoys a high military reputation.

To the Minister of War, M. Jean Bratiano, who is at the same time Prime Minister, aided by his general secretary, Major-General Iliescu, is due in large part the credit for having rapidly brought up the army to its present extremely efficient state.

No account of the Roumanian army would be complete without mention of M. Nico Filipescu, who, as Minister of War in the last Conservative Government, devoted remarkable skill and untiring energy to the needs of the army.

Remounts.

I hear from a very reliable source that the Roumanian Government are purchasing some 9,000 remounts in Russia. About 3,000 are said to have arrived up to the present by way of Reni.

TURKEY'S MILITARY STRENGTH.

The military correspondent of *The Times*, in an article entitled "The Caucasus Front," published on Thursday, gives some interesting estimates of the Turkish army strength, based on the best available information, at the time of our evacuation of Gallipoli:—

Between Adrianople, Constantinople, the Dardanelles, and Smyrna	350,000
On the Caucasus front	130,000
In Mesopotamia	50,000
In Syria	60,000
Scattered in garrisons and along coast lines (say)	110,000

The Turks may have raised a million men during the war, and some 300,000 men must be deducted for casualties, leaving probably not more than 700,000.

The commander of the Roumanian guards on the frontier in the region of Korabia, while on a tour of inspection on the Danube (says a Bucharest telegram), was arrested by some Bulgarian guards and taken to Bulgaria. The Roumanian authorities are making inquiries.

Arrangements have been made for five lectures and services on Russian and Serbian religion, to take place in St. Margaret's Church, Westminster. The dates fixed are Thursdays, March 16, 23, 30, and April 6 and 13, and the hour 6 p.m. Mr. Stephen Graham is the lecturer at the first two services, and at the last three Father Nicolai Velimirovic, priest of the Serbian Church, will be the speaker. The object of the services is to promote understanding of the Slav peoples on the deeper level of their thought and feeling. The musical accompaniments will be exceptionally interesting. The hymns, anthems, and devotions which will be used are in most cases part of the ritual of the Eastern Church, and many of them have come down from the early days of Christianity. The service and lecture will in each case last about an hour.

BESIDE THE LAKE.

HADRA-ALEXANDRIA.

After a gale which banished sleep on Monday night and, though abating, endured throughout Tuesday, to be succeeded by cold grey days and lowering skies, this morning ushered in weather comparable with that of England in early June. The shallow waters of the lake were still enough to mirror perfectly the tall palm trees bordering the opposite shore. Allured by the scene, I wended my way through the cultivated land towards the fringe of rushes, and, seating myself upon a cement water-conduit, dangled my feet in the channel, which happened to be dry, and enjoyed the sunshine.

In the middle distance of the lake the water was broken by a long black line of duck, stretching for perhaps four hundred yards. Marvellous judges of distance their sentinels; for occasional reports of shot-guns, remote yet loud in the still air, left them entirely undisturbed. Reconnoitring the duck through field-glasses, two British officers, tall and straight as lances, passed me close by. Presently one of them headed into the reedy margin of the lake. A jacksnipe flew up almost beneath his feet, and then another. Regretting that they had not brought their guns with them, the officers strode away to the right and were soon hidden from view.

A kingfisher flew swiftly by, and was presently swaying in the sunlight on the very tip of a rush. There he remained, waiting for one of the small fish with which the lake abounds to come sufficiently near the surface. Two waterhens emerged, and circled round a small pool amid the rushes. Ricebirds and warblers flitted here and there, and a sparrowhawk crossed the lake going at a great pace towards the Nouzha Gardens.

Lighting my pipe, I basked in the sun, listening and watching.

Unafraid of criticism, for his fellows are too few and far between in this part of the world, a blackbird was trying his voice in a bare fig-tree behind me. Where would he realize his song's possibilities? In some Italian olive grove or Breton orchard? A flock of starlings maintained a noisy discussion in the tops of some neighbouring palms. A wagtail alighted beside a puddle a few yards away. Green and stagnant, the water was, perhaps, too forbidding, for he merely coquetted with his morning draught.

As I retraced my steps towards the house a number of crested larks flew up from among the furrows of some ploughed land. One sees clouds of these birds in the stubble fields at home. When the war is over, perhaps . . .

But the time is not yet!

BOOK NOTES.

Messrs. Smith, Elder and Co. have published quite recently "The Luck of Thirteen," by Mr. and Mrs. Jan Gordon. The book describes "Wanderings and flight through Montenegro and Serbia," and its price is 7s. 6d. net.

Mr. Blackwell, of Oxford, has published this week "Syria as a Roman Province," by E. S. Bouchier. The price of the book is 6s. net.

Amongst Messrs. A. and C. Black's spring announcements we note "The Seven Churches of Asia," by Christopher V. Johnston, LL.D., which is published at 2s. 6d. net. This work contains a short account of each of the seven cities of the Apocalypse based upon the results of recent archæological research. Each account is followed by an exposition of the text of the letter to the particular Church with special reference to the historical allusions therein to the circumstances of the city and the times. The work is illustrated from photographs of the cities or their ruins and sites. The great events which are now transpiring in the East give a special interest to this corner of Asia.

The influence of Arabic poetry upon the Jewish poets of the Middle Ages is one of the subjects dealt with in illuminating fashion in Dr. Buchanan Gray's "Ten Forms of Hebrew Poetry," which is published by Messrs. Hodder and Stoughton, at 7s. 6d. net. Dr. Gray also points out how in certain forms of Hebrew poetry the rhythm "is identical with the rhythm of the Babylonian."

"The Dardanelles: An Epic Told in Pictures" is the title of a volume of reproductions of about a hundred full-page photographs of scenes in the war zone on the Gallipoli Peninsula, printed by Polsue (Limited) and published by the Alfieri Picture Service. The illustrations are supplemented by several pages of letterpress explanatory of the operations of the Australian and New Zealand Forces, together with copious extracts from General Sir Ian Hamilton's despatches. The price of the volume is 2s. 6d.

EARLY DAYS IN MESOPOTAMIA.

Lecturing at the Royal Institution recently on the results of recent excavations in Mesopotamia, Professor L. W. King said that as along the Nile so along the lower Euphrates the nomad adopted the settled life of agriculture and civilization arose. In one respect Babylonia differed essentially from Egypt: that was, that Egypt was so shut in by desert that she was able to work out her long career in comparative isolation, whereas the tragedy of Babylonian history was that no such isolation was possible in her case. To the north, on a fertile plain watered by the Tigris, but too far from lower Mesopotamia to be under the control of Babylonia, there arose Assyria—a late comer who wanted a place in the sun. Not content with the peaceful methods of Babylonia, Assyria sought from the first to acquire wealth by conquest. Her dreams led her to attempt a world domination based on force. Asshur, her tribal god, was a ruthless deity, and no atrocity was too cruel to be perpetrated in his name. During the latter period Assyrian diplomacy became a byword, and no other nation of antiquity showed such a sheer indifference to human suffering. Assyria's methods were portrayed in revolting detail by her own memorials sculptured in the arrogance of victory; and if we turn to the Hebrew prophets we see what one of the smaller nations around her thought of her. Yet Babylon survived her great rival. Though Assyria obtained her ultimate object, the conquest of Egypt, the effort strained her resources to the full, and she herself suffered defeat in turn.

In his second lecture Professor King said that ancient Babylon was a cosmopolitan city of many peoples and languages—Sumerians, Arabs, Kassites, and others.—The Kassites ruled the city for about three centuries. They introduced the horse—previously the ass had been the beast of burden—but made no other change of importance. From Babylon the horse spread westward to the countries around the Mediterranean. The remarkable fertility of the soil under irrigation resulted in the fact that from the first Babylonia produced more corn, dates, and wool than she could consume. She traded her surplus to other nations, and Babylon, lying on the path of one of the world's natural trade routes, became a great centre of exchange. Babylon has been called "the London of antiquity," and from the first her ideals were commercial rather than military, and led to an early respect for and development of law. Compared with other ancient communities woman in Babylonia enjoyed a remarkable degree of freedom. The alluvial soil, which was the basis of the country's fertility, had its natural effect on the city's architecture. The Assyrians further north used stone for the foundations of their walls and for the lining of their temples; but the stone-producing country was many days' journey from Babylon, and all building was in brick, either dried in the sun or burnt in the oven; bitumen brought from Hit being used as a cement. Oven-burned brick cemented with bitumen makes so strong a bond that the work defies the efforts of the quarrymen from neighbouring villages who want the bricks for their own buildings. The Babylonians used sun-dried bricks in their temples except for foundations, for floorings, and for temple towers, as at Borsippa; and such sun-dried bricks are made in the country to this day. In spite of the ruthless treatment of Sennacherib, who sought to blot out the city, traces of the oldest Babylon had been brought to light by the more recent digging, and showed that as early as the second millennium B.C. the main thoroughfares ran in lines parallel to the river with the other streets crossing at right angles. Undoubtedly this was the earliest attempt made at town planning on scientific lines; but no public buildings belonging to that period had been recovered. The Babylon of which considerable remains had been uncovered was that of Nebuchadnezzar. The great successes of the excavators had been the uncovering of the remains of Nebuchadnezzar's palace, of the temple of Marduk, the city god, and of the Gate of Ishtar; but the proposed identification of the Hanging Gardens was apparently a mistake.

Correspondence for the British Mission with the Royal Serbian Army should be addressed as follows:—Name (with rank or title), British Mission with the Royal Serbian Army, c/o General Post Office, London, E.C. The rates of postage are as follows:—Letters, 1d. per oz.; postcards, 1d. each; printed papers (including newspapers), ½d. per oz.; parcels not exceeding 3 lbs., 1s. 6d.; parcels over 3 lbs. and not over 7 lbs., 1s. 10d.

A semi-official denial is given in Rome to the Austrian assertion that Italian forces on the lower Someni river in Albania retreated before the enemy, blowing up the bridges as they retired. It is pointed out that there has been no encounter between Italian and Austrian troops in Albania since the voluntary evacuation of Durazzo in February.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of the "NEAR EAST" to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

NEAR EAST IN PARLIAMENT.

Dardanelles Losses. March 9.

Mr. TENNANT, replying to inquiries by Sir A. Markham, announced that the total number reported missing in the Dardanelles among the British, Colonial, and Indian forces and the Royal Naval Division now stood as follows :—

Officers	333
Other ranks	11,221

The total number of prisoners so far as they could be identified was :—

Officers	32
Other ranks or ratings	470

A large number of names which were difficult to identify owing to very defective descriptions had been found to be duplicated and had been eliminated from the lists rendered by the Turkish Government, but some addition might have to be made for names not yet identified. The totals did not include officers or men who had died as prisoners of war.

The Allies and Bulgaria.

Mr. BOOTH asked whether the Government was in a state of war with Bulgaria, whether Bulgarian subjects were treated in this country as alien enemies, whether it was illegal to trade with Bulgaria or give her support in the present conflict, and whether it was intended to break the power of our enemies in the Balkans and succour our Allies.

Mr. ASQUITH : The answer to the first, second, and third parts of the question is in the affirmative. In the Balkans and elsewhere the policy of the Allies is to take the necessary steps to win the war.

Prisoners in Turkey. March 14.

Sir E. GREY, answering Mr. Malcolm, said that the American Government had taken charge of the interests of British prisoners of war in Bulgaria and Turkey, but he regretted to say that, in spite of pressing representations to the Turkish and the Bulgarian Governments for permission to the United States representatives to visit the prisoners' camps in these countries, such permission had been refused. His Majesty's Government would continue to press the matter.

Mr. TENNANT, who referred to the same subject in the course of his speech in connection with the Army Estimates, said that difficulties had been placed in the way of the American representatives in Turkey and Bulgaria visiting prisoners of war. Negotiations were in progress for the exchange of British prisoners in Turkish hands. The United States Ambassador in Constantinople had urged that we should not take up the question of the prisoners as a whole yet, but should limit our attention to the question of combatants. The latest news from prisoners in the Balkans was that they had been assembled in Philippopolis and American doctors put in medical charge of them. The question of granting posthumous honours was being reconsidered.

The Wounded in Mesopotamia.

Colonel M. LOCKWOOD wished to know what was the real position of our force in Mesopotamia, and referred to disagreeable rumours about the treatment of our wounded there.

General Howell.

Mr. TENNANT, replying to Mr. Booth, who asked if General Howell was at Salonika and was the person who issued a memorandum, dated October 12, 1915, called "Notes on the Balkans," and whether his advocacy of the desertion of Serbia and description of our failures in the Dardanelles and the Balkans was authorised by the War Office, said :—Yes, sir; General Howell is, to the best of my knowledge and belief, at Salonika. I have not seen the memorandum in question, but I believe a confidential note expressing General Howell's personal views was privately circulated. It had no official authority, and no disciplinary action is necessary.

The Egyptian High Commissioner, March 15.

Lord R. CECIL informed Mr. Ginnell that there was no foundation for the statement that the title of the British High Commissioner in Egypt was changed to Representative of the King, and the name of the British Agency to that of House of Protection. The title of his Majesty's representative in Egypt was that of High Commissioner. The name of the former Agency and Consulate-General had been altered to Residency.

The Mesopotamia Wounded.

Mr. LONG said, with regard to Mesopotamia, that nobody could deplore more than the members of the Government that there should have been any suffering in any part of the field of war that could have been avoided. Every effort that could be made, whether by the Government of India or the home Government, was being made to see that everything was done for the unfortunate victims of warfare in that part of the world. He was asked by the Secretary of State for India (Mr. Chamberlain), who was laid up, to say that the Viceroy and the Commander-in-Chief in India decided some weeks ago to send Sir W. Vincent, a distinguished Indian Civil servant, and General Bingley, who had returned from Egypt, to Mesopotamia to conduct an inquiry into the medical arrangements, and to take all necessary steps to remedy deficiencies. The War Office had supplied the Indian Government with two Indian general hospitals, with complete personnel and the personnel of two more Indian general hospitals, and also a British stationary hospital with 400 beds, and one British general hospital, in addition, with 1,040 beds, 100 doctors, and 100 orderlies. He hoped this would satisfy the House that the Government were doing their utmost to see that every possible alleviation was provided for the sufferings of those who were unhappily wounded. The War Office here had offered to meet any demands, and believed they were able to meet any demands, that might be made upon them.

COLONEL YATE : When were these doctors supplied?

Mr. LONG : About a month ago.

THE ASHIRET HIGHLANDS OF HAKKIARI.

On Wednesday last, Mr. Edgar T. A. Wigram read a paper before the Central Asian Society, describing what he had learned and experienced during a three months' sojourn in the wild Ashiret Highlands of Hakkiari. He said the Syrian desert and Mesopotamia were half surrounded by a great circle of mountain plateau, averaging five thousand feet above sea level and seamed all over the mountain ranges rising to ten thousand feet and more. Of this great amphitheatre, the Ashiret Highlands comprised that position included in a triangle formed by Van, Urmia, and Mosul. It is a singularly rugged country, presenting an almost impassable obstacle to a junction of the Russian troops at Bitlis with their British allies. The road consists usually of a track in a gorge strewn with boulders sometimes as large as a house, and the river has to be crossed by a crazy bridge which can only be used by one person at a time. The villages are built on the sides of hills so steep that the flat roof of one house commonly forms a terrace at the front door of another.

Among the inhabitants of this country are the Yezidis or devil worshippers, who have their principal shrine among these mountains. They are a quiet and orderly race, but looked upon by their neighbours, Christian and Moslem alike, as the vilest of outcasts. They believe in a supreme being, but he holds himself aloof from all created things; he has handed over the government of the world to Malek Taus, a fallen spirit who has to be propitiated. The Yezidis think it inconceivable that so great a spirit as Malek Taus should not at some time or other be restored, and they hope that then he will be mindful of those who did honour to him in the days of his disgrace. They worship him under the symbol of a peacock; one such peacock is kept at their great shrine, others are sent round the various villages. There is such a peacock in the British Museum, and Mr. Wigram said it was probably genuine, having been stolen by Kurds. The Yezidis reverence Jesus as another great spirit, whom they call Malek Isa, and who they believe will reign for a thousand years when the reign of Malek Taus is over.

Of the Christians who live in the fastnesses of the Zab gorge, Mr. Wigram said they live a semi-independent life under their hereditary Prince-Bishop, who bears title "Catholicos of the East." Their church is of very ancient origin, but they are not Nestorians. They claim to be descended from the ancient Assyrians, and a photograph which Mr. Wigram threw on the screen showed a striking resemblance. They are not much more law-abiding or peaceful than their Kurd neighbours, and no Kurd liked to meet them on equal terms; but of late years they are supposed to have been disarmed, and often had no better weapon than a flint-lock, whereas the Kurds, as "Government troops," were armed with modern rifles. On the outbreak of the present war they were assailed by a coalition of all the Kurdish tribes, assisted by artillery, and had to retreat over the mountain passes into Persia. The Kurds Mr. Wigram described as a people more pastoral than agricultural, and much given to raiding the villages of the other tribes than lie scattered among their own.

With regard to the country as a whole, even before the war the question of how it should be dealt with was a standing puzzle to the Young Turks. One suggestion as to its disposal after the war, was that its government should be entirely in the hands of European officials, no Turkish officials being allowed there at all.

THE STATE OF CONSTANTINOPLE.

Our Bucharest Correspondent writes (February 22) :—A traveller who has recently returned from Constantinople states that the population is in a great state of excitement on account of the lack of many foodstuffs and the high prices commanded by others. Flour is very scarce, so that the authorities have been forced to limit the sale of black bread to two loaves per family of nine; rice costs 9 frs. the kilogram; a lemon fetches 1 fr.; meat can scarcely be found at all. Reference has already been made to the exorbitant prices charged for coffee and sugar.

Street disturbances are reported to be frequent. At one manifestation Talaat Bey is said to have been hooted and even mishandled by the crowd.

COMFORTS FOR THE WOUNDED.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Mufflers for the wounded on board the hospital ships are urgently needed at present. Nearly every ship asks for 200 or 400 at a time. I shall be very grateful to any of your readers who will be kind enough to send some, or money to buy them with, direct to Mrs. Anderson, Red Cross Hospital, Southampton Docks.—I am, etc.,

MARION LEE.

THE PRESS ON THE NEAR EAST.

Mesopotamia.

The following quotation is taken from a leading article in *The Times* (March 14) on the campaign in Mesopotamia, a subject which is fully dealt with in another part of THE NEAR EAST to-day:—

We fear the later stages of the Mesopotamian operations have in many respects been very badly run. It seems to have been thought at first that the relieving columns advancing towards Kut would have a walk-over. Wrong conclusions were drawn from the swiftly successful actions of last year. Few casualties were expected, and no provision was made for a flood of wounded. Entrenched positions on the open plain were attacked in January without adequate artillery preparation, and the consequences were grave. To-day the transport is insufficient for the requirements of a large force, and the innumerable and ingenious expedients swiftly adopted at Gallipoli seem to find no parallel on the Tigris. Incidentally, we may note that bitter complaints are made about the deficiency of bombs and hand grenades, and also about the defective quality of such of these munitions as are manufactured in India. Our impression is that far too little has been made public about the trials of the Mesopotamian Expeditionary Force.

The Caucasus Front.

The Military Correspondent of *The Times* (March 14), writing under the above heading, deals first with the brilliant winter campaign of the Russian army. He lays stress, too, upon the value of Russian naval work, which "destroyed countless Turkish ships, and restricted their enemy to the long, difficult, and largely railless lines of communication on land." In referring to the Turkish forces in Armenia the writer says:—

It is always futile to apply to a Turkish army the standards and the estimates that we admit for the armies of European States. We cannot take into account the Arabs, Armenians, and Greeks who figure in the population. Much of European Turkey has been lost in recent wars, including Albania, which provided the Sultans with such good material for soldiers. Turkish administration is always bad, and we can usually be confident that execrable roads and an inept utilization of resources will injure Turkish armies more than a lost battle. Finally, the atrocities perpetrated upon the Armenian population deprived the Turkish command of a source which was invaluable for supply, and the nemesis for these outrages has come in the rout at Erzeroum.

Continuing, he gives an estimate, based on the best information available—"and the best is bad"—as to the strength of the Turkish forces to-day. He shows the transport difficulties which must be experienced by an enemy army sent to meet the Russian menace, and describes the effect which this menace has had and is still having upon the Turkish position. The following quotation is from the concluding portion of the article, and deals with the position to-day:—

The Russian right, after a successful landing of reinforcements on the coast at Atina on February 4, is some thirty miles of Trebizond. The Turkish centre is being hunted back towards Erzingan, while on the left the Russians are at Mush and Bitlis, and are making things warm for the Kurds south of Lake Van. At Bitlis the Russians are within 100 miles as the crow flies of the Aleppo-Mosul road, along which the Turks move towards Mesopotamia, and within 165 miles of Ras-el-Ain, which was the railhead of the Baghdad line—excluding the isolated Baghdad section—at the opening of the war. Mush is 500 miles as the crow flies from Kut-el-Amara, and though Yudénitch's stroke may not immediately affect our operations on the Tigris, it must already prove an anxiety to those in control of the Turkish lines of communication, for the Euphrates route is not at all good. The Terek and Kuban Cossacks travel far and fast, and here is one of the few theatres of the war where there is elbow-room, and where horsemen can still do great things.

We know neither the strength nor the plans of the Russian Commander, so it is useless to speculate upon coming events. We should like to believe that his movements in Armenia and ours in Mesopotamia are closely co-ordinated, but the co-ordination of our plans leaves something to be desired. But the Russian campaign is quite capable of standing on its own merits, and that it will tend to ease matters on the great rivers, as well as in Egypt, and was launched partly with that friendly intention, may be accepted as a strong probability. We have, therefore, every reason for gratitude as well as for admiration. As for the future, this depends upon the plans of the Higher Command on the Allied side, and into these it is injudicious to pry. But we can be sure that the Turks will desire to efface the memory of this defeat, and in order to do so they must utilize their railways, a part of which is, unfortunately for them, common to their fronts in Armenia, Mesopotamia, and Syria.

A Tribute to the Turk.

Lord Headley, writing in the *Daily Graphic* (March 11) regarding the conference to be held in Paris to decide upon the economic pressure the Allies should exert against Germany both now and after the cessation of hostilities, thinks that Germany will henceforth be degraded as a nation of "Pariahs and Pirates," and that "we shall soon witness a very decided slump in Teutonic spirits and a still further depreciation in the mark as well as the market on which our enemy depends to so large an extent."

In regard to Turkey, his lordship writes:—

I do not think that our misled and misguided friends the Turks will have any such fears as to the result of the Conference, as we have no quarrel with them and they have never shown any malice or hatred, and have behaved well as warriors in the field. They never engage in wanton cruelty, and are humane in their treatment of prisoners and of the civil population. Where we find cases of cruelty it is in ill-disciplined irregulars of the Bashi-Bazouk type, recruited from criminals and outcasts of many nations. The Turk is a good fellow all round; his trouble has always been that he has been ill-governed.

I make these few remarks anent the Turks because it is highly probable that at an early date the position of Turkey in this war may undergo considerable change, and in the near future the Baghdad line may not be in German hands. The sole reason why the Turk has been alluded to as the "sick man of Europe" is the incapacity and callousness of the Turkish Governments. Official corruption has brought a bad name on a people who are naturally excellent citizens—kindly, good-hearted, and honest.

The Suez Canal.

Mr. W. T. Murrey, who is special correspondent of the London Press in Egypt, considers that "a serious attempt at invasion is becoming very remote." In an article from his pen which appeared in *The Times* (March 10) he describes some of the precautions which we have taken to safeguard the Canal from attack. His conclusions may be summed up in the first part of the following quotation:—

Having seen the defences which thirteen months ago were sufficient to break the effort of 15,000 Turks to cross the Canal, I make bold to say that a quarter of a million of the enemy have less chance to-day. The enemy have not the faintest prospect of sending such an army against us. The Canal and Egypt are perfectly secure. Indeed, it is doubtful whether any part of the European battle front is so safe from the results of attack. If it has been necessary for Great Britain to make a vast expenditure in money and labour to secure the freedom of the waterway connecting the seas of East and West . . . how much greater must be the cost of adequate preparations to the enemy? He has to cross a practically waterless waste with nothing to sustain an army except what he can carry from his base, a hundred miles away.

Prudence prompted our Command to construct numerous light railways on the eastern side of the Canal, and to lay an elaborate system of pipe lines for the water supply. Unless the Turks make similar arrangements over ten times the mileage, they cannot bring an army equal in numbers to that which they have to meet, nor keep them opposite our lines for more than two days, even without a shot being fired at them.

Our preparations are planned to resist the most serious attacks that could in any circumstances be made against Egypt. We have stores carried miles into the desert by rapid little trains, and a hundred miles of metalled roads made for wheeled transport. The hum of the motor is carried far in the desert air, but even the aid of almost every modern appliance for speedy locomotion is not sufficient for our purpose. While long clouds of dust raised on the roads by self-propelled vehicles tell the story of an up-to-date transport service, you see camel trains, moving as in Pharaoh's time, larger perhaps than ever before in history, carrying different loads, but in the same slow, methodical, follow-my-leader way.

Mr. Murrey was much impressed by the splendid temper and condition of the veterans from Gallipoli who are now in Egypt:—

Some had held on to their duties longer than their health warranted, because they wished to see the quality of the reinforcements and impress upon them how vital it was that the Younger Nations should show the Mother Country that their stock was true. They came to Egypt with nerves unshaken, for the Gallipoli ordeals had merely tempered them. But jaundice and other forms of sickness which prey on troops had lowered their systems. After recuperating for three weeks in a desert rest camp they were ready for fresh trials. Indeed, the divisional commander told me that the news that his men were to prepare and occupy the first line gave them intense satisfaction; though the subsequent toil was heavy and the calls upon their cheerfulness and endurance were great, their health remained splendid. Their work for the Empire has acted as a tonic and the rate of sickness among these war-worn heroes has fallen to three per 1,000.

The Balkan Verdun.

Mr. George Renwick, writing from Salonika to the *Daily Chronicle* (March 13), reports that the Allies' position at that town has been greatly strengthened during the past month. His despatch includes the paragraphs which we quote below:—

It is no mere comforting phrase that is used when it is said that the positions are impregnable. During the past ten days

Digitized by Google

or so all the world has watched with admiration how the positions of Verdun have held out against all the military weight thrown against them by Germany. Those positions are very largely the work of the same soldier who has created the Salonika defences—General Sarrail.

The French success in holding back the terrific onslaught of the Germans is regarded in no small degree as due to the skill of General Sarrail, and people here now think of Salonika as the Verdun of the Balkans.

All the indications which come from the other side appear to point to the fact that the enemy is more concerned with plans of defence than attack.

Information coming to hand from Turkey shows that the people regard the Empire as seriously menaced by the advance of the Russians in Asia Minor, and the situation in Constantinople, though it does not justify the alarmist statements which for some time have been current here and elsewhere, is gradually becoming worse. Food is becoming scarcer.

"Secondary Operations."

A recent number of the *Glasgow Herald* contained an interesting examination of the war in its various theatres; the following paragraphs are quoted from a portion of the article headed "Our Task in Asia":—

For some time past we have been hearing significantly less of those diatribes against "secondary campaigns" which a few months ago were so freely indulged in by the more dogmatic among our military "experts." Certainly the present moment is not one to choose for talking too loudly about the futility of secondary campaigns. The almost certain prospect of Turkey's detachment in the near future from the whole theatre of war in Europe is of course the result of purely secondary operations, and there can be no question as to the severity of the blow which this detachment, when fully effected, will have inflicted on Germany. We must not forget, moreover, the interesting revelation made by M. Sazonoff the other day that our expedition to the Dardanelles frustrated an early Turkish offensive against Russia which might have proved at the time extremely inconvenient.

The writer refers to a previous article, in which he dealt with Russo-British operations in Asia, and continues:—

But the present seems an appropriate juncture at which to correct the misleading idea now gaining ground that the work Great Britain has done and is doing in Asia in connection with the war is insignificant compared with Russia's brilliant and far-reaching performances. Our position at Kut-el-Amara may not seem to compare favourably with that of Russia in Asia Minor, illumined as the latter is by the captures of Erzeroum and Bitlis and the advance on Trebizond. But by our timely advance to Kut we prevented the Turks from eventually echeloning great forces down the Tigris, which might have caused the Russians in Northern Persia an infinity of trouble, and merely by "sitting tight" in Egypt we have absorbed a great deal of Teuto-Ottoman energy. From an early stage of the war, moreover, the western and southern coast of Asia Minor and the coast of Syria have been at the mercy of the British Navy, although it has not been necessary to demonstrate the fact at all obtrusively. Just now Russia holds the stage, and is winning all the applause. But Great Britain, too, is a star actor in Asia, and those "in front" may safely look forward to being similarly impressed with our performance when our own particular turn comes, as it soon will do in this "secondary theatre."

The State of Syria.

According to the Alexandria correspondent of the *Morning Post* (March 9), who contributes to his paper an account of the state of Syria given him by a lady recently in Palestine, vast military operations are still proceeding in that country.

The Mount of Olives has been fortified, and is said to have been rendered impregnable. The Turks fully expect the Allies to invade the country. Excellent military roads have been made throughout the country. Meanwhile, the economic situation of the country is deplorable. The American Relief Fund is doing its utmost to cope with the distress, and in Jerusalem alone 40,000 people have daily rations doled out to them by this fund. As it is impossible to export the oranges they have rotted on the trees. The villages are deserted, as the manhood of the country has either been forced to join the army or is at work on the military roads. Public executions are frequent. At Jaffa Aly Hamis, the chief boatman of Cook's and the Kavas of the American Consulate, who is well known to all tourists in Palestine, has been hanged on a charge of espionage for the cause of the British. A similar fate has befallen Mahmoud Effendi, the Mamour of the Passport Office, and formerly in the service of the Khedivial Mail Line, while Mr. Emil Knesevich, the young son of the British Consular Agent at Jaffa, was only saved from a similar fate by the intervention of Dr. Glazebrook, the American Consul at Jerusalem. He was accused of having received letters from his father, a refugee in Egypt.

A French General on Salonika.

General Cherfils, of the French Army, who contributes an interesting article on the general military situation to the *People* (March 12), includes the following reference to the presence of the Allied troops at Salonika:—

Short-sighted people say that if we had not gone to Salonika we should have 200,000 more men to place in line on the western front, and at Verdun if necessary. First of all, we do not need them on the western front, where we have all the men we require for the moment, as the Germans will find out to their cost when the time comes. These critics forget, too, that by occupying Salonika we have annihilated all the German dreams in the east and cut the roads to Egypt and Baghdad. They forget also that by remaining at Salonika we have effectively prevented any possibility of hostile action by Greece and Roumania, thus depriving the enemy of nearly a million additional soldiers, and that, on the other hand, we are hastening the day when this million men will pass to our side.

A truer observation—and one that the British nation will not fail to make—is that, seeing that by the occupation of Salonika the defence of the Suez Canal is assured the British Army in Egypt is free to operate at any other point which the Allied High Command may desire. Erzeroum has completely removed the possibility of any Turkish troops fighting in Europe, and only the saddened, if not wiser, Bulgarians remain in front of Salonika. The Bulgarians may shortly have to go home to defend their own soil. What a magnificent revenge is in preparation for the Serbian army when it lands at Salonika to assist in the reoccupation of invaded Serbia! Our occupation of Salonika was a stroke of genius. Late though it was, it is already bearing fruit.

Turkey and Peace.

The author of "The Anglo-German Problem," writing in *Everyman* (March 10), points out that, as he predicted in his book, written in 1912, the German Alliance has brought nothing but disaster to the Turks. He continues:—

And, if the Turkish Empire is to escape from complete annihilation, the only policy for the successors of Enver Pasha will be to come to terms with the Allies. And there are many indications that they will do so at an early date, if we are to trust what seem to be well-founded reports. Revolution is seething in Constantinople. Enver Pasha's life may not be worth two months' purchase. If Turkey does conclude a separate peace with the Allies the German game is up. Greece and Roumania would come in, the Dardanelles would be opened. Munitions would be poured into Russia, and the armies of the Tsar would again be able to take a triumphant offensive.

The writer's prediction regarding Enver Pasha would almost seem to have been already fulfilled if the persistent reports from Athens are well founded.

The Next Move in the Balkans.

A Budapest correspondent contributes a most interesting article regarding the recent operations in Albania to the *Evening Standard* (March 13), and concludes with the following paragraphs regarding the future of the Balkan campaign:—

The next move in the Balkans will be the advance against Valona, the Italian seaport, which is the next task of General Koevess. This move is expected to be a much more difficult undertaking than was the occupation of Durazzo, or, in fact, of Northern Albania, for the Italians have immensely fortified the place, and it is expected that it will not be such an easy booty as was Durazzo.

The positions around Valona on the heights which surround the city, something in the same way as it is at Salonika, have been fortified most perfectly, and great calibre guns have been put in position to defend them. Besides, Valona is a most favourably situated base, and its defensive lines are much more adapted for resistance than any other position on the Balkans, excepting Salonika.

It would be impossible for the Italians to find a better base for offensive or defensive purposes, especially towards Ochrida and Berat, than Valona. It is considered not to be improbable that even the Italians, after the reorganisation of their Serbian and Montenegrin forces, will begin an offensive move on the Balkans, using Valona as their base, and it is also considered probable that an offensive movement of the Italians from this direction will be carried out in conjunction with a similar movement of the Allies around Salonika.

Articles to Note.

"Military Position of Turkey," by Sir Edwin Pears, in the *Sunday Times* (March 12).

"The German Road to Egypt," by Harold J. Shepstone (illustrated), in the *Millgate Monthly* (March).

"Silence in Serbia," by E. Chivers Davies, in the *Manchester Guardian* (March 11).

"The Need for Closer Organisation," by Dr E. J. Dillon, in the *Fortnightly Review* (March).

THE COMMERCIAL INTELLIGENCE OFFICE OF EGYPT

ANGLO-EGYPT'S ROLL OF HONOUR.

In view of the remarks made by our Cairo Correspondent regarding the position of Britishers of military age in Egypt, we consider it opportune to republish the following list of Anglo-Egyptians who have joined H.M.'s Forces since the outbreak of war. The list was first published in THE NEAR EAST of January 28, and has since received several additions and corrections. It is still, however, necessarily incomplete, and the Editor would be obliged if readers and relatives would assist him in making it a comprehensive and accurate record of the services rendered to King and country by British residents in Egypt.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

In connection with our recent grain deal with Roumania, the British Legation in Bucharest has opened an official Bureau to look after our interests. The personnel has already been organised, and includes a special legal staff, says the *Dimineatza*. The Bureau has been placed in the charge of M. Vasolopol, of the Chrissoveloni Bank.

***

From Reuter's Bucharest message the other day, it seems that the Central Powers' second grain deal with Roumania is now an accomplished fact. There have been so many contradictory reports about this second deal that, until further details of the agreement are known, the less said the better. It would appear, from our Correspondent's letter, that the Roumanian Government has insisted on the delivery of the locomotives and trucks which had been purchased in Germany before the beginning of the war.

***

With regard to Germany's first grain deal with Roumania, it is interesting—though not pleasant—to note that the enemy are in the eleventh hour hastening their imports of grain so as to have it all in the country within schedule time. The state of the Danube has favoured transit by barges, and has come as a godsend to the Boches, who would otherwise have been unable to import their grain by rail. There was a report at one time that the Roumanian Government had prohibited the transit of the grain by river, but either the report was unfounded or the ban must have been removed. It is a pity; but more unfortunate is the circumstance that we have done nothing practical to prevent the purchase by the enemy in Roumania of a further million tons of foodstuff. Surely we could have made a fair bid for a part, if not for the whole, of Roumania's available grain stocks? Did we? I do not know, but I remember that last week in the House, in reply to Mr. Booth, who asked if it is intended "to break the power of our enemies in the Balkans," the Prime Minister asserted that "in the Balkans, as elsewhere, it is the policy of the Allies to take such steps as are necessary to win the war." Surely Mr. Asquith was not thinking at the moment of Germany's purchase in the open Roumanian market of 1,000,000 tons of grain?

***

According to our Bucharest Correspondent, the Orient Railway Company and the Bulgarian Government are in negotiation for the sale by the former to the latter of the railway line to Dedeagatch. This, doubtless, refers to the line from the port up the Maritza Valley running through the territory ceded by Turkey, under German instructions, to Bulgaria last year with a view to induce her treacherously to attack the Serbs. May it do her a lot of good! But why should she wish to buy the railway line? It would surely be a more profitable plan merely to hire it for the duration of the war, as afterwards, when the Allies are at Sofia, it will be of little use to her. Perhaps, however, she has no choice in the matter, the Orient Railway Company being an enemy concern controlled by Austro-German financiers.

Before Lord Justice Swinfen Eady and Lord Justice Bankes, in the Court of Appeal, on Tuesday, the appeal of the Asiatic Petroleum Company (in *re* Asiatic Petroleum Co., Limited, v. Anglo-Persian Oil Co., Limited) against the order of Mr. Justice Scrutton adjourning until the trial the plaintiffs' application for further discovery and inspection of documents was dismissed.

***

Owing to the many requests we have received from readers, we resume this week the publication of prices quoted on the Egyptian share market. In view of the fact, however, that the Alexandria Bourse is still closed, the prices are those quoted on the Cairo Exchange.

***

I read that the Egyptian State Railways have purchased fifteen third-class carriages and ten trucks from the British Prize Courts officials, presumably at Alexandria. The news, as such, conveys little to my mind; but when I read that these vehicles were originally intended for the German Baghdad Railway I cannot help smiling. It is so appropriate that these vehicles should run on Egyptian lines (it was what they were intended for, was it not?) under British control.

***

The Eastern Bank, the youngest of the British banks working in India, is steadily making headway. Its gross profits last year went up £6,600 to £86,900, and the net profits, after deducting expenses of management and directors' and auditors' fees, showed an increase of £8,200 to £45,200. These are the best results achieved during the bank's career, which began in 1909. The dividend is unchanged at 5 per cent., but it requires £29,900, as compared with £23,600 a year ago, because the 50,000 shares issued in 1914 now rank for full dividend. A sum of £15,000 is again set aside for depreciation of investments or other contingencies, and while £6,500 was brought in, as against £8,100, the sum carried forward is a trifle more at £6,600.

***

We announce elsewhere that on April 5 the British Manufacturers' Association, 1915, hold their first annual meeting at the Cannon Street Hotel. The result of the meeting will be awaited with a certain amount of interest, and it is to be hoped that some of the great trade problems—fiscal, banking, and consular—that are preoccupying the public will come up for discussion at the meeting in question.

***

The London Fair and Market has been opened at the Royal Agricultural Hall, and promises to be a success. It is a pity, however, that we should now have in London two spring "Leipzig Fairs." Would it not be better for all interested to join hands and create one huge annual Fair, thus avoiding overlapping and unnecessary expenditure? I shall refer at greater length to this matter next week.

***

Three of the resolutions adopted by the Association of Chambers of Commerce of the United Kingdom are of exceptional interest to-day, as indicating the feeling which, in spite of all Government assertions to the contrary, is spreading over the country. The first of these resolutions deals with "preferential reciprocal trading"—in other words, with the introduction of a preferential tariff. Some people consider that the moment was inopportune for such a resolution, and that the Chambers would have done better to avoid all controversial topics; but, in view of the action of the Manchester Chamber of Commerce, which yesterday, in the election of its new directors—the majority of whom are now anti-Free Traders—confirmed its conversion to preferential trade, it cannot be brought too powerfully to the notice of those who govern us that the country no longer intends to be the happy dumping ground for German trade. In normal times the conversion of Great Britain to Tariff Reform would have plunged us in a war with Germany, so dependent was the latter's industry on our free market. Therefore, let us now take the necessary steps to alter our fiscal policy, so that, when peace is restored, the Central European industries can be happily face to face with a *fait accompli*.

***

The second resolution dealt with banking, a subject frequently mooted in these columns. The resolution expressed "its opinion that it was important that the Government should consider the desirability of facilitating the establishment of a large credit bank, or banks, for the purpose of developing British trade abroad." It is to be hoped that those who govern us will seriously examine this question and do something positive to meet the unanimous wishes of practically all who are directly interested in Great Britain's foreign trade. The formation of the new Anglo-Italian financial combination, reported during the week, is a step in the right direction, though it is not yet clear whether it is intended primarily to promote financial relations between the two countries or whether the furtherance of Anglo-Italian trade is to be the leading feature of the new combine. However, I wish it success, and hope that it will be followed in due time by a proportionally powerful Anglo-Roumanian syndicate or bank, having for prime object the promotion of trade between the two countries.

***

The third resolution deals with the Consular Service and is as follows:—"That the present Consular arrangements are not of an adequate nature, and that steps be taken to reorganise the Consular Service with a view to providing better facilities for the maintenance and expansion of the trade of the Empire." On all sides—including, strange to say, the Treasury Bench—the need for reform is considered urgent, so that one may hope to see some changes introduced, though I am afraid they will be minor rather than major. Last Thursday saw a debate in the House on the subject, led by Colonel Yate and Mr. Pennefather, to which I shall have occasion to refer in an early issue of THE NEAR EAST.

***

On going to press we read a Central News message from Rome to the effect that the Bucharest correspondent of the Agenzia Nazionale telegraphs that Bulgaria has forbidden the passage across the country of all merchandise destined for Roumania, all commercial relations between the two countries having been broken off. I think that this is, if true, a case of cutting off one's nose to spite one's face, as few, if any, goods destined for Roumania can be in transit through Bulgaria—the latter country being assuredly as efficaciously blockaded as Germany!

Enemy Firms in Egypt.

(From Our Own Correspondent.)

Cairo, February 28.

Matters are moving in connection with the control and liquidation of enemy firms still existing in this country. During the last fortnight numerous new controllers have been appointed, and a number of B licences have been cancelled and replaced by one for liquidation only, in each case a controller being also nominated. The firm of Diemer, to which reference was recently made in this correspondence, has now received a licence for liquidation only, and has had a controller appointed. The reason it was not ordered to liquidate earlier was that a petition in bankruptcy had been presented by a creditor. The authorities had already appointed a receiver, but nothing further could be done until the Courts had decided whether they would intervene or not. Their decision having been in the negative, the military and civil authorities proceeded to deal with the firm as stated. Boehme and Anderer have been sold lock, stock, and barrel, to an Italo-Egyptian firm. With these two stationers in the market, it is a wonder that some enterprising British bookseller, paper-maker, or stationer has not stepped in and seized this unique opportunity, and it is to be hoped that we shall not hear that Diemer's also has had to be sold to a foreign firm, owing to the slackness of our home traders.

Methods of Liquidation.

With regard to these liquidations, it is very desirable that if the authorities are going to adopt the policy of selling the assets as a going concern, instead of piecemeal, they should take every precaution to ensure that the new purchaser is not likely to keep the place warm for the original owners against the end of the war. Personally, since we are carrying on a trade war, I should have thought it would have been better to close up the enemy shops, confiscate their assets, and sell them off piecemeal in satisfaction of the allied and neutral creditors, holding any balance for the settlement at the end of the war, than to sell off the concerns as they stand. The trade being carried on on the same site even by a "neutral" or "allied" purchaser preserves the connection, and there is nothing to prevent an enemy trader, not necessarily the original owner, but quite possibly his nominee, after peace has been declared, from buying out the "neutral" or "allied" purchaser, and resuming business. If, on the other hand, the business were broken up, and any new tenants were forbidden to take up the same line, the connection would be broken, and it would become all the more difficult for the enemy trader to pick it up again. Of course, if British traders can be found to buy up the concerns so much the better, for they will then get the reversion of their enemies' connection, and it is not likely that they would eventually allow themselves to be bought out by Teuton competitors. If an allied firm wants to purchase the business, however, it is to be hoped that the most extensive enquiries will be made, and the most rigid conditions re future resale will be imposed before the transfer is permitted; purchase by neutrals should not for one moment be entertained, for it is thanks to them that the Germans have been able to continue to carry on the war, and they would probably not mind acting as "straw-men" and "locum tenens," provided it was made worth their while—and it would be certainly to the interest of, and be possible—through the neutral country concerned—for the Germans to make it worth their while. Similar remarks apply to purchasers of "local nationality," who, in many cases, are not to be trusted where profit-making is concerned.

No doubt the authorities are alive to the possibilities of the situation, and will do their best to cope with it in a manner satisfactory to British Imperial interests. It is just as well, however, that their attention should be drawn to these points and to the fact that no consideration of what Germany may do with our assets on her territory should be allowed to interfere with the terms in which we are waging the trade-war against her throughout the Empire. Germany would make any sacrifice, in so far as our assets situated in her territory are concerned, to regain some of the commercial leeway she has lost in the British Empire, but if, as we hope and intend, we emerge victorious from this war, we shall be able to impose what conditions we like as to the return of our property seized by our enemies. The one point we must bear in mind is that now is our chance, once and for all, to eradicate the Teuton canker that has tainted commercial principles wherever it has entered, and, if it is not possible to replace it by healthy British members of the commercial community, at any rate so to contrive matters that after the war the German and Austrian trade pirates will not be able to resume their pernicious machinations.

The *Official Journal* of February 24 publishes a further list of firms whose licences have been modified by the addition of the freight clause, the terms of which were published in last week's issue of The Near East. The following are the firms in question :—

Number of Licence.	Name of Firm.	Controller.
1	Abel and Schellenberg	Mr. E. C. Widdows
19	Austro-Orientalische H.A.G.	Mr. F. H. Russell
25	Barkowsky, H.	Mr. E. L. Bristow and Mr. R. T. Prioleau
46	Continental Caoutchouc and Gutta Percha Co.	Mr. F. H. Russell
52	Gasmotoren Fabrik Deutz..	Mr. R. E. Moore
76	Flick, H. and C.	Mr. A. E. Mills
84	Ganz, Soc. Anon. d'Electricité	Mr. F. H. Russell
86	Geiger and Co., W.	Mr. E. C. Widdows
100	Holz and Co.	Mr. W. B. Delany
109	Kirchmayer and Co., R.....	Mr. F. H. Russell
130	Lichtenstern, J. M.....	Mr. J. W. Eady
171	Bornstein and Co., L.....	Mr. J. W. Eady
268	Union Export, G.m.b.H. ..	Mr. J. W. Eady
269	Upper Egypt Artesian Boring Co.	J. W. Beasley

A further list gives the names of firms whose original licences have been cancelled and replaced by a licence, under the same number, for the purpose of liquidation only, with the additional effect of Clause 6 :—

Number of Licence.	Name of Firm.	Controller.
162	Mohr and Fenderl, Alexandria	Mr. J. F. Luard
107	Mohr and Fenderl, Chebin el Kanater, Agent: T. D. Kaiopoulos	
256	Mohr and Fenderl, Toukh, Agent: Stellio Mavridis	
185	Poppel and Co., C.	Mr. A. C. Hann
191	Reiser, Lucien	Mr. A. E. Mills
204	Ruelberg, Georg	Mr. A. E. Mills
237	Seidemann, A.	Mr. H. Bridson
260	Stross, A.....	Mr. E. D. Joyce
266	Trapp and Co., W.	Mr. O. J. Finney
282	Werner and Co.	Mr. H. Bridson
318	Mochonoff, E.	Mr. A. E. Mills

The following firms have been granted licences to carry on business for the purpose of liquidation only, with the additional effect of Clause 6 :—

Number of Licence.	Name of Firm.	Controller.
66	Entreprises Foncières et Immobilières, Soc. An. Egyptienne	Mr. R. E. Moore
347	Bindernagel, H.....	Mr. A. C. Hann

The firm of F. Diemer, Finck and Baylaender Succrs., have been granted a licence, No. 53, for the purposes of liquidation only, with the additional effect of Clause 6. The business has been placed under the supervision of Mr. R. E. Moore, Savoy Chambers, Cairo, whose previous appointment as receiver has been cancelled.

On February 28 the *Official Journal* published a notice to the effect that licence No. 29, granted to the firm of Messrs. Boehme and Anderer, Cairo, has been cancelled, and that Mr. R. E. Moore, Savoy Chambers, Cairo, has been appointed receiver of the business of the firm, with power to liquidate the affairs thereof; further, that licence No. 347, granted to the firm of Messrs. H. Bindernagel, Alexandria, has been cancelled, and that Mr. A. C. Hann, National Bank of Egypt, Alexandria, has been appointed receiver of the business of the firm, with power to liquidate the affairs thereof.

**Clause 6 to which frequent reference is made above reads as follows :—

"(6) The operations of the firm under this licence shall be carried out under the supervision of a Controller appointed under the authority of the General Officer Commanding in Chief, and paid by the firm, the said Controller having power to take all such measures as may be necessary to ensure the speedy liquidation of the business."

OTTOMAN PUBLIC DEBT.

Reuter reports from Amsterdam that, according to a Constantinople telegram, an Austrian subject, Herr Philip Arslan, has been appointed Director-General of the Ottoman Public Debt. Mr. Bötzkes, a German, has been appointed Secretary-General and Riza Bey Director.

*** Philip Arslan, the new Director-General, an Armenian by birth, but an Austrian protected subject, is one of the oldest and most capable of the Public Debt officials, having served chiefly in the Inspection since the Administration was founded in 1882. He rose to the rank of Inspector-General, and for the past three years has been the Director. He is a thoroughly able and honest man, and well acquainted with all the details of the Administration. He played a prominent part in the negotiations for the renewal of the Tobacco Régie Concession. He was destined to become Director-General, and has been appointed to that post, which became vacant on the outbreak of war by the departure of Monsieur Abonneau, a Frenchman who, of course, was unable to remain in Turkey when that country went to war with France. No better or more natural choice could have been made under these circumstances.

Mr. Bötzkes, who has been appointed Secretary-General in the place of Monsieur Grasset, a Frenchman who was called to the colours when war broke out, is a man of about thirty-five, who was employed first in Constantinople in the Deutsche Bank. He entered the Debt Administration about four years ago as Secretary to the German Delegate. He was a man of exceptional ability and ambition, and took a deep interest in all the branches of the Administration, and it was felt that he was destined to progress rapidly.

Riza Bey.—It is impossible to identify the Riza Bey in question—there are so many—but he is probably a Bash Mudir of one of the provinces, a Debt official, and his appointment as Director is quite in keeping with Turkish ambition. For many years the appointment of a Turk to this post has been strongly advocated in certain Turkish quarters. He will very likely play quite a subsidiary *rôle*.

It will be seen, therefore, that whilst the posts vacated by Frenchmen, owing to the war, have been filled, naturally enough, by officials of German and Austrian nationality, a good choice has been made, and two capable men have been chosen, the case of Mr. Arslan being, indeed, a right and natural one. Bondholders may be assured, therefore, that, in spite of all adverse conditions in the country, their interests are in the hands of capable and trusty officials.

ALCOHOL REGULATIONS IN EGYPT

The *Egyptian Gazette* understands that the following regulations are to be imposed in order to regulate the sale of alcohol in Egypt:—

Alcohol of 90 to 92 deg., the tariff price of which is fixed in Cairo, will be sold at Alexandria at four piastres per oke, but, in order to avoid any over-buying on the part of perfumers or distillers, the quantity necessary for hospitals or chemists will be sold at the above price by the Alexandria Municipality. The alcohol must be pure and unadulterated.

Roumania's Grain Deals.

(From Our Own Correspondent.)

Bucharest, February 22.

In compliance with the terms of the first sale of wheat to the Austro-Germans, some 4,000 truckloads of wheat have left the country up to the present. At one time we predicted that the Germans would never succeed in removing the stock in time, but they have been favoured to an unexpected degree by the weather. Owing to the Danube having remained navigable, they will be able to export the bulk of the grain by means of barges. Twenty of these have so far arrived. When these have been loaded, about half of the 50,000 truckloads will have been disposed of.

The Second German Purchase.

The contract for the further sale of cereals to Germany is reported to have been signed. The amount is to be in the neighbourhood of 100,000 wagons, but the exact figures will not be determined until the British sale has been completed. One condition insisted upon by the Roumanians, to which the German representatives have agreed, is that the locomotives, railway carriages, and other accessories ordered in Germany before the war shall be delivered. A further clause, signed by both parties, stipulates that the transport of Roumanian goods ordered in neutral countries shall not be impeded. This does not include war material.

Sale of Wheat to British Bureau.

The Central Commission of Export has at last taken steps to remove the objections raised by Roumanian agriculturists in the matter of the sale of 80,000 truckloads of wheat to the British Bureau. The chief of these, it will be remembered, was that concerning the difficulty of finding space for the storage of so large a quantity of grain, in view more especially of the coming harvest, and the question of the responsibility, for the wheat will without a doubt suffer some deterioration, more or less in proportion to the duration of the war.

The following resolutions have now been taken:—

1. The Government will construct additional warehouses in the stations and docks, those available at present having a capacity of only 300,000 tons (30,000 truckloads). The new warehouses are to be ready by the time the next harvest is gathered.

2. Responsibility for the insurance of the wheat falls to the lot of the buyer.

3. The seller will suffer a loss of only 25-30 fr. per truckload. This sum to be deducted from the price at the moment of payment.

4. The wheat sold remains in the care of the seller, who will give it all the solicitude "of a good parent."

5. The seller will not be held responsible for normal diminution in the weight of the wheat (and consequently in the quantity of the goods) and damage provoked by weevils, unless there has been obvious ill-will or culpable negligence on his part.

February 29.

Reserve Sales.

The Central Commission of Export has decided to oblige agriculturists who wish to sell part of the reserve of cereals (40 per cent.) destined for internal consumption to first lay aside 10 per cent. for local use in their district and 10 per cent. for the needs of the army. With this proviso they will be allowed to sell, within the country, the remainder of the grain of which they dispose. Under no circumstances will its exportation be permitted.

The German Purchase.

The contract for the second German sale has not been signed up to the present, the terms of payment not having been completely settled between the contracting parties. There is disagreement with regard to the rate of exchange.

*** Reuter reported from Bucharest on March 6 that a definite agreement had been reached on that day between the Roumanian Central Export Commission and the Austro-German syndicate for the sale to the syndicate of a million tons of cereals on the following terms:—The cereals to be paid for at the rate of 1.17 fr. per paper mark and 1.239 fr. per gold mark. Of the total value of the sale, amounting to £14,400,000, a third is to be deposited in gold, half in a Berlin bank for the account of Roumania, and the other half in the National Bank of Roumania, the remainder of the account to be paid in lei at a fixed rate. Delivery of the cereals is to be made after the execution of the British contract for 800,000 tons of corn.

ROUMANIAN TRADE NOTES.

(From Our Own Correspondent.)

Bucharest, February 29.

The Council of Ministers have appointed a Commission, formed by MM. C. Halauceanu, Dr. N. Lupu, and Engineer Dan Costinescu, who are to visit Italy, England, and France for the purpose of buying materials of first necessity for the industry and commerce of the country to the value of 15 million francs.

Imports.

The recently constituted Commission of Imports has obtained the consent of the German Government for the importation into Roumania of materials of first necessity to the value of 150 million francs. Roumania is to deliver materials of the same value in exchange.

Demand for Brass Utensils.

Householders have been notified that they have to make a declaration concerning the number and nature of brass and copper articles in their possession, with a view probably to their eventual requisition on the part of the military authorities. Since the publication of this regulation individuals have been introducing themselves into the humbler private houses and attempting to persuade owners to part with their goods at a low price, on the ground that they will otherwise be confiscated by the State.

Flax and Hemp Cultivation.

At the instigation of the Minister of Agriculture it has been decided to cultivate flax and hemp on a larger scale. A credit of 800,000 francs has been granted for the purchase of seeds and necessary materials.

Prohibition of Certain Exports.

A project of law has been laid before the Chamber of Deputies for prohibiting the exportation of cereals, vegetables, linseed oil, and colza oil, this project to come into force from the date of its presentation. Exception is made for the sales which have already taken place through the medium of the Central Commission of Export, or have received the approval of this Commission. Exception is likewise made for future sales which may be effectuated through the medium of the Central Commission of Imports as compensation for imported goods. The export taxes are to remain unchanged. The purpose of this project is to guarantee a sufficient quantity of grain for internal consumption.

Speculation.

A crowd numbering 3,000 men and women assembled a few days ago before the mayoralty building of Bucharest to protest against the speculation practised by merchants and others who have acquired large quantities of foodstuffs. The mayor was presented with a memorandum formulating the following demands:—

1. The requisition of sugar and lard and their re-sale through the medium of the communal administration.

2. The requisition of cattle.

3. The importation of colonial produce in exchange for Roumanian produce.

4. The appointment of a delegation for the purpose of controlling the strict application of the maximum tariff.

5. A law in virtue of which all speculators shall be liable to punishment by imprisonment.

The mayor promised to lay before Parliament a legal project for the punishment of speculators by imprisonment and fine.

In connection with this subject we may mention here that it has been decided to requisition a certain proportion of the cattle in the districts adjacent to the frontiers in order to reduce the contraband, which is responsible for the insufficient quantity of meat now making itself felt. The authorities have in view more particularly the New Dobrudja districts, where the Bulgarian population is very assiduous in driving cattle over the frontier, so that the difficulties of provisioning the army there concentrated are much increased.

TRADE NOTES.

Egypt.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications, with forms of tender, etc., may be obtained, at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo. Date, April 22.

The Egyptian State Railways invite tenders for the supply of "53,080 manches en bois" and "500 cannes en jonc de 1 metre et 60 centimetres de long." Date, April 3.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Director of the Police School, Abbassia, for the supply of clothing and accoutrements required for the officer cadets. Date, April 15.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 29, 1916, for the supply of paraffin and petrol required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, or to the Agents, Sudan Government Railways, Alexandria.

Greece.

The Minister of Commerce at Athens has announced a public auction sale of the steamer Macedonia, the award to be made at Athens Tuesday, March 28, 1916.

Persia.

H.M. Vice-Consul at Teheran reports that a firm of merchants in Teheran wishes to get into touch with United Kingdom manufacturers of silks, cottons, woollens, taffetas, satins, hardware, and ironmongery. British firms desirous of doing business in Teheran should send their catalogues (in French) to the firm. United Kingdom manufacturers of the goods mentioned, and exporters of U.K. goods, may obtain the name and address of the firm referred to on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. In making application the reference number (82) should be quoted.

Morocco.

H.M. Consul at Fez suggests that the following hardware line of articles will be in demand shortly in the capital owing to the planned construction of a European suburb :—Portable cooking stoves for burning wood or roots, fire-place suites, register grates, interiors, dog grates, verandahs, balconies, porches, bandstands, shelters, columns, brackets, crestings, friezes, gates and railings, lamp pillars, general constructional ironwork, electric light columns and brackets, section pillars, castings of every description for electrical engineers, garden rollers, seats, vases and pedestals, feeding troughs for cattle, pigs, poultry, etc., portable boilers, umbrella stands, rain-water goods, air bricks, gratings, ventilators, cart bushes, plough castings and fittings and enamelled iron advertising signs.

H.M. Consul adds that as soon as the building projects come to be realized, the makers of these goods who have already studied the market, and have selected suitable agents, will clearly have the best chance of sharing in the trade which will then arise.

The Secretary of the British Chamber of Commerce for Morocco reports that his Committee has received from its members at Fez an application for the names of United Kingdom manufacturers who will supply articles hitherto imported from Germany and Austria. These articles belong to the following classes :—Birmingham goods, brass plates, cheap razors and knives, cheap enamelled ware, packing and sewing needles, ironmongery, cheap glassware, sewing machines, cheap toilet soaps, writing paper and packing paper, imitation gold thread, superfine cloth of various colours, and woollen cloths of inferior and of good quality.

It is stated that in nearly every case, except that of cloth, cheapness even more than quality is desirable. Communications regarding the above should be addressed by United Kingdom manufacturers and exporters of U.K. goods to the Secretary, British Chamber of Commerce for Morocco, Tangier, Morocco.

H.M. Agent and Consul-General at Tangier has forwarded a copy of a Dahir, dated January 3, which appeared in the Cherifian *Bulletin Officiel*, providing for establishing the title of the Makhzen to lands it may claim, and delimitating their area.

The Dahir requires one month's public notice to be given of the Makhzen's claim and a period of three months is allowed within which any person having a claim on the lands in question can make opposition, provided such person resides in the country or has some representative in Morocco in charge of his interests. Absent proprietors, who are unrepresented, will lose their title to the land, as no provision is made for enabling such persons to postpone their claims after the expiration of the term of notice. United Kingdom firms interested may consult the text (in French) of the above-mentioned Dahir on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Engineering Notes.

Trade After the War.

It has been admitted that the preparations for the forthcoming trade war are not quite what might be expected in present circumstances. The dogmatic opinions and criticism which, during the last eighteen months, have appeared in the Press have developed in a way that, whilst, on the one hand, they confuse and procrastinate the advancement of an urgently needed campaign, on the other hand they tend seriously to decry abroad the undisputable efficiency of British science, industry, and commerce. The result is that foreigners who have been traditionally accustomed to recognize the British as endowed by nature with an industrial and commercial spirit of the highest order, and to believe that their supremacy in the world's industry is due to this circumstance and to their scientific training, are undoubtedly puzzled and surprised at such an unwonted admission of faults and shortcomings which, if nothing else, indicate a remarkable lack of self-confidence. Criticism ought, in present circumstances, to be restricted, and British scientists and others, in commending the bombastic German progress in science, should not forget that nearly all the great inventions, discoveries, and engineering achievements are owed to British proficiency in science and technics. In all branches of engineering, in textile machinery, electrical machinery, electric telegraph, shipbuilding, navigation, etc. the British have been and are the pioneers. But to find fault with them because they do not pay sufficient attention to the study of chemistry in its application to commerce, or that manufacturers are not inclined to co-operate with scientists, or that the British workman is lacking in necessary technical education, or that unless these and some other things are done there will be no chance for success in the approaching trade war, is wasting time in academic arguments, while prompt action is needed to organize the campaign and strike before the enemy organizes his own. It is well known that he is already doing that by storing up goods, and especially machinery, to flood the markets as soon as peace is concluded.

Agreement With the Allies.

An idea prevails that the Allies should also co-operate in the forthcoming trade war, and the Italian Chamber of Commerce in London has already signified that it is desirable that the Allied Governments should arrive at an agreement to institute a reciprocal preferential tariff, and in that case all goods imported from countries which are not parties to the agreement should painly indicate their origin. The shipping and railway services between the Allied countries should be improved and extended, the shipping lines subsidized and granted special facilities, including reduced port and dock dues. The principal commercial laws of the Allied countries should be made uniform so as to correspond with the needs of international trade. In regard to all supplies for, and contracts with, the Allied Governments and public bodies, only the Allied countries should be allowed to tender. The scheme is good, but for reasons that cannot be dealt with here, very difficult, if not impossible, to be adopted. Concerning engineering products and contracts, in the Allied countries, as well as in friendly countries, there will be rights and claims which under such a scheme could not be satisfactorily arranged. On the other hand, the Russian Minister at Athens has organized the establishment of a Russo-Hellenic Chamber of Commerce for the extension of commercial relations between Greece and Russia. M. Demmidoff, the Minister, arranged the first meeting at his Embassy, where, a fortnight ago, under the presidency of the ex-Minister of Finance, M. Michalacopulos, several prominent bankers, politicians, and others, after an address from M. Demmidoff, discussed the scope of the new Chamber of Commerce and elected the necessary committees. At the meeting it was mentioned that the imports from Russia into Greece vary, in normal years, from thirty-five to forty million francs, whereas exports are from four to five million. But it was pointed out that Greek shipping gains considerable amounts from Russian commerce. It is evident, therefore, that our Allies are not losing time, but with a keen eye to business, are preparing for the approaching struggle.

CAIRO MAIN DRAINAGE.

In our issue of March 3 we published an article descriptive of a visit to the sewage farm at Khanka, which has arisen in the desert as the result of a carefully prepared scheme for the disposal of sewage under the new system of drainage in Cairo.

At a recent meeting of the Institution of Civil Engineers Mr. Charles Carkeet James, M.Inst.C.E., who is responsible for the inception and carrying through of the Cairo main drainage scheme, read a paper on this most important subject.

Mr. Carkeet James, who was then engaged upon the drainage of Bombay, was appointed by the Egyptian Government to prepare and carry out a scheme for the drainage of Cairo in 1906.

In a résume of the history of the steps taken by the Egyptian Government for the drainage of Cairo from 1885 to the time of his appointment in 1906, Mr. Carkeet James showed that in the former year there were only 8,420 yards of ancient storm-water drains in the city, together with the famous Khalig el Masr, which was an open ditch 7,220 yards long and 9 to 13 yards wide. For a great part of its length it passed between houses, and was used as a dumping-ground for foul matter. For only three months in the year was Nile water available for the flushing of this drain; the "Cutting of the Khalig," which is still celebrated in Cairo, had its origin in the ceremony of which the Nile waters were formerly admitted into the channel. A "Commission d'Assanissement du Caire" was nominated by the Ministry in 1885 to study the various questions relating to the public health and the best means for improving the sanitary conditions of the city, and the recommendations of this Commission resulted in many improvements, among them being the filling in of the historic Khalig. The sewage disposal system was, however, still very defective, and four years later Mr. Baldwin Latham, M.Inst.C.E., was appointed to prepare a scheme for the drainage of Cairo. This resulted in the production of a scheme based upon a population of 500,000, and provided for dealing with 14,400,000 gallons per day, with a capital cost of £E565,700, and the annual working cost, with water obtained from bores, at £E47,680. An International Commission, consisting of one English, one French, and one German engineer, was appointed to consider the scheme, with the result that a much more detailed scheme was required before anything could be done. Mr. Carkeet James points out that this was "hardly to be wondered at, as the period allowed for the submission of the plans was only one month."

The same Commission subsequently recommended a "combined system" by gravitation, with one main pumping station, as the only one suitable for Cairo, and eventually Mr. J. Barois was appointed to prepare the project on the broad lines suggested. Specifications and detailed plans, and estimates amounting to £E1,010,000, were prepared, but for some unnamed reason the whole matter was abandoned at that stage. Then other schemes were prepared in 1898-9 by Mr. (now Sir) William Willcocks, but although one of them was approved, it was also dropped. The next move was in 1902, when the Tanzim Department laid about 870 yards of surface water drains to deal with the flooding of the streets in the better-class quarter of the city. These drains have now been extended, and serve as the basis of the surface-water drainage of Cairo.

The scheme for which Mr. Carkeet James is responsible covers an area of 7,538 acres, and its estimated cost when completed amounts to £E1,971,821, of which about £E1,541,000 has already been spent, leaving £E430,820 to be expended on the completion of 167 miles of sewer reticulation. The work may be delayed on account of the financial stress consequent upon the war, but the detailed plans and estimates necessary to the completion of the work are in the hands of the Government, to be proceeded with when the opportunity occurs. Basing the population as one million, the cost of the work is less than £E2 per head; the maintenance of the scheme, exclusive of interest and amortisation of capital expenditure, is estimated at £E32,440.

Of the 7,538 acres to be treated, 1,704 acres will be dealt with by gravitation into the main collector, and 5,734 acres of the sectional system. Sixty-three ejector stations, in cast-iron tubbings have been erected for the drainage on the sectional system. An air-compressing station has been established in Sharia Abbas; the sewage is discharged at Ghamra, and, after passing through hydrolytic tanks and filters, is used for irrigation purposes on a sewage farm. The four steam-driven compressors which comprise the air-compressing plant are each capable of compressing 1,770 cubic feet of free air per minute to a pressure of from 22 lbs. to 25 lbs. per square inch. The heated sewage mains have been tested to a hydraulic pressure of 50 lbs. per square inch. Mr. Carkeet James describes the construction of the main collector, the plant used, and the pump in operation necessary to unwater the trenches. Approximately one ton of coal was consumed for every 11 cubic yards of excavation, but in the year 1913 unexpected progress was made owing to a reduction in trench floods due to a low Nile.

In dealing with the screening chamber, sewage, and main pumping station at Kafr-el-Garnus, the engineer gave details of their design and working. From this station the sewage is pumped a distance of seven and a-quarter miles to the purification works and power station at Gebel-el-Asfar, where the sewage farm is situated. It is estimated that this farm, which, as we have already said, was described in a previous issue, will eventually yield a net revenue of at least £E30,000 per annum.

NEAR EAST MARKETS.

PRODUCE REPORT.

LONDON, March 16.

Currants.

Only moderate business has been done during this past week, but prices, owing to the continued speculation, are very firm. Provincial, 41s. to 43s. 6d.; Amalias, 44s. to 46s.; Patras, 45s. to 47s.; Gulf, 46s. to 50s.; Vostizza, 44s. to 48s.; smalls, 42s. to 53s.

Sultanas.

The demand continues steady at firmer prices.

Figs.

There is only a moderate demand at more or less steady prices.

Dates.

There has been a good demand this past week, and prices are gradually advancing. Egyptian sell at 32s. to 36s., and Persian at 19s. to 31s.

Seeds.

Linseed has been dull and easier during the week. London Calcutta, spot, quoted, 78s. 6d.; afloat, March-April and April-May, 78s. 3d. La Plata to Hull, March-April, 73s. 6d.; April-May, 74s., whilst February-March was sold at 73s. 6d. to 73s. 3d. Cotton-seed is steady. London Egyptian, spot, is quoted £14 per ton. Rapeseed is rather dull at nominal values.

Oils.

Linseed oil has been quiet. Spot pipes are quoted £44, and barrels, landed, £45. Cotton oil has been also quiet. Crude, spot, pipes, are quoted £42 10s.; refined, pipes, pale, £47 10s., and barrels, sweet, £51 to £52. Rape oil remains steady. Ordinary brown, naked, is only nominal, whilst English refined, barrels, is offered at £55 to £56.

Oilcakes.

Cotton cakes.—The comparatively heavy arrivals of Egyptian had the effect of easing prices slightly, best brands being offered at £9 10s. to £9 12s. 6d. English makes are also easier at £9 12s. 6d. to £9 17s. 6d., and Bombay £9 5s. per ton. Linseed cakes.—There has been only a very moderate demand, and that, more or less, from country consumers, while quotations are more in buyers' favour. Best London-made offered at late rates, £12 12s. 6d. to £12 15s. East Indian seed, pure, sells at £12 15s. to £13 per ton.

Under the auspices of Enver Pasha, the Kaiser and the Sultan, the newly-formed "German-Turkish Union," which is considerably more German than Turkish, will shortly erect in Constantinople a building to be known as "The House of Friendship," which is to be the "centure of Kultur" in Turkey.

ROUMANIAN OIL OUTPUT.

The metric tons of crude oil produced in Roumania for each month during 1915 and 1914 are as follows (December, 1915, figures are estimated) :—

	1915.		1914.
January	168,811	....	139,974
February	138,286	....	132,473
March	162,408	....	161,833
April	150,716	....	147,975
May	149,738	....	147,486
June.....	136,605	....	148,775
July	134,451	....	148,905
August	128,774	....	137,220
September.....	128,755	....	129,517
October	135,051	....	161,247
November	126,025	....	147,884
December	113,000	....	180,658
Total	1,672,620	....	1,783,947

SUDAN COTTON.

The British Cotton-growing Association, in its last monthly meeting, reported as follows concerning the Sudan :—

The natives are not discouraged by the low prices last season; the Government arrangements secured cultivators satisfactory prices, and there was a record crop in the Tokar district. The reduction in the area planted in cotton this season in the Tokar district is merely due to a smaller flood. The Government continues to strongly encourage cotton cultivation. The area planted, apart from Tokar, has increased. The only difficulty is as regards high freights and scarcity of shipping.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

GREEK AGRICULTURAL ASSOCIATIONS.

Duty-Free Imports.

The Board of Trade are in receipt, through the Foreign Office, of translation of a Greek Royal Decree, dated October 18/31 last, which provides that the following articles, when imported into Greece by Agricultural Associations for their own use or for sale or loan to members of the association, shall be exempted from State import duty, and from municipal, communal, harbour, or any other tax :—

Tools, machinery, instruments and utensils of agriculture and the branches of industry connected therewith, viz. :—

1. Ploughs, hoes and mattocks;
2. Harrows, clod-crushers and horse-hoes;
3. Machines for sowing, potato-planting machines, and machines for distributing manures;
4. Harvest machines, *i.e.*, reaping machines, mowing machines, hay-turning machines, hay-gathering machines, machines for digging up potatoes and threshing machines, as well as implements for reaping and threshing;
5. Machines for cleaning and sifting seed, ginning machines, machines for preparing food for animals, hay-pressing, straw-pressing and straw-lifting machines;
6. Implements and machines for combating vegetable and animal parasites;
7. Implements, machines, utensils and tools for wine-making;
8. Implements, machines, utensils and tools for the milk, butter, and cheese industries;
9. Implements, machines , utensils and tools for the olive oil industry.
9. Implements, machines, utensils and tools for agricultural and sericultural industries, poultry farming, viticulture, arboriculture, and for fruit and vegetable packing;
11. Motors of agricultural machines—*i.e.*, motors worked by horse, steam or electric power, crude petroleum and benzine (petrol) motors;
12. Means for the conveyance of motive power—*i.e.*, belts (for machinery), signals, cogged wheels, chains and wire for transmitting electric power;
13. Puhmps.

Articles for agricultural exploitation, viz. :—Seeds for sowing; animals; manures; sulphate of copper, sulphur and other insecticides, or parasite-killing articles and other drugs; and all essences useful for the work of any agricultural association.

TURKISH STRATEGICAL RAILWAYS.

Reuter's reported from Amsterdam on March 14 as follows:

"The Turkish Chamber of Deputies has adopted a Bill whereby the advance of £T5,000,000, at 6 per cent., on the basis of the treaty (?) of February 14, 1915, for the construction of certain strategical railways is increased to £T7,112,000, while the interest is reduced to 5½ per cent. The Chamber and the Senate have further adopted a Bill approving the agreement concluded on November 6, 1915, between Turkey and the Baghdad Railway Company concerning the construction of the sections of the railway in the Taurus and Amanus mountains."

ROUMANIAN FINANCES.

Some interesting information upon the financial situation in Roumania is published in the Paris *Temps* from its Bucharest correspondent. M. Costinesco has admittedly a difficult problem to solve. On the one hand, the ordinary expenditure has risen considerably, for apart from the increased military expenditure, it has been necessary to provide storage accommodation for the accumulation of crops, and to incur extra expenditure on the railway system. On the other hand, the ordinary revenue has diminished owing to a much smaller commercial movement both by land and sea, whilst the revenue from Custom receipts and stamp duties has greatly diminished. The present time has not been considered opportune for the institution of the long-projected tax on incomes, and it has been necessary, therefore, to fall back upon an export tax. It is argued that this tax can readily be borne by the country, having regard to the advance in the price of cereals, the agriculturist getting £120 per waggon for wheat as compared with £48 per waggon previously. and as the tax is payable in gold, there will, it is argued, be a corresponding benefit to the national bank, whose note issue is limited by law to three times its holding of gold. Although the times are troublous, the financial situation of Roumania is declared to be much more satisfactory than might be imagined.

NATIONAL BANK OF ROUMANIA.

According to Reuter's Agency (Bucharest, March 6), the report of the general meeting of the Roumanian National Bank shows that £23,750,000 was lent to the State for the Army, £800,000 was advanced to the banks for the assistance of farmers, £1,980,000 was set apart for the formation of institutions to make advances on the security of the crops, and £398,000 was assigned to the erection of elevators capable of storing 300,000 tons of cereals. The gold reserve of about £6,400,000 was increased during 1915 by about £2,680,000. The services rendered by the State in improving the economic conditions of the country have made an excellent impression.

PERSIAN TREASURER-GENERAL.

A telegram from Teheran states that the Persian Government has reappointed M. Heinsens as Treasurer-General.

M. Heinsens is a Belgian subject. Last March he had to give up this post as the result of the activities of the Germans, who, by their influence, induced the Mejliss and the Ministry, which was at that time Germanophile, to pass a law which deprived M. Heinsens of all power of control. Now the Persian Government, realising that the existing financial chaos cannot be allowed to continue, has requested M. Heinsens to resume his post. M. Heinsens has always declared that the economic situation of the country can easily be ameliorated, provided there is serious control.

Greek shipowners residing in Athens and Piræus have formed a union, the object of which is the protection of the interests of Hellenic shipping, including all those who are engaged in shipping enterprises wherever their centre of business may be. The seat of the Union is Piræus, and Mr. Leonidas Embiricos, Director of the National Greek Navigation Co., has been elected president.

COMPANY NOTES.

"Financial Times."

The directors of the Financial Times, in their report for the year 1915, record, with deep regret, the death last June of Mr. F. M. Bridgewater, chairman and managing director. The profit for the year is £9,486, and, adding £26,061 brought forward, gives a total of £35,547. Debenture interest for the year and managing director's remuneration have been paid, and the directors now recommend payment of the preference dividend for the six months ended December 31, making, with the interim dividend, 5 per cent. for the year. An amount of £2,500 has been set aside as reserve for income-tax, leaving £24,991 to be carried forward. The directors regret that the profits do not justify the recommendation of a dividend on the ordinary shares. While the profit earned during the past year is the smallest in the history of the company, it must be borne in mind that the year has been one of absolute stagnation with regard to financial operations, which has adversely affected the revenue-earning capacity. In the face of the unprecedented conditions it is a matter for congratulation that the company has stood the strain so well, and although the profit is small, all fixed charges have been fully earned and provided for. Adequate allowance has been made in writing off depreciation, plant and maintenance charges, and the necessary redemption of debenture stock has been effected. The directors have every confidence in the future, of the company's operations, and look for a return to normal financial prosperity when the war is over. Mr. William Graham has been appointed a director and chairman of the company in place of the late Mr. F. M. Bridgewater, and Mr. F. F. Bridgewater has been appointed managing director. To fill other vacancies on the board the directors have elected Mr. Thomas Willerson and Mr. H. A. Randall.

Eastern Bank.

The report of the directors states that the gross profits to December 31, including the balance brought forward, amount to £93,384 15s. 11d., and after deducting expenses of management, directors and auditors' fees, there remains a balance of £51,660 13s. 5d. available. Out of this sum the directors propose that £15,000 be set aside to meet any possible further depreciation of investments, or other contingencies, and now recommend the payment of a dividend of 5 per cent. per annum, less income-tax, absorbing £30,000, carrying forward £6,660 13s. 5d. to the next account.

THE FIVE FEDDAN LAW.

The Ministry of Justice has drawn up a draft law modifying the Five Feddans law, and providing for the renewal of mortgage contracts that were drawn up before the promulgation of the Five Feddan law for another five years. This draft law has been submitted to the Mixed Court of Appeal, sitting as Legislative Assembly, by which it has been approved.

The Powers interested have three months to make any objections to the terms of the new law, if they so wish, so that it will not be laid before the Council of Ministers before that period has expired. Should no objection be made the law will apply to both natives and Europeans.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

GREEK EXTERNAL DEBT.

The Council of Foreign Bondholders have received information that the surplus of the revenues assigned to the service of the Greek Debt in respect of the year 1915 will permit of the increase of the minimum rates of interest and sinking fund in 1916 by the following percentages of the original interest:—

Loans of Group I.—Interest, 24 per cent.; Sinking Fund, 14 per cent.
Loans of Group II.—Interest, 22 per cent.; Sinking Fund, 16 per cent.
Loans of Group III.—Interest, 22 per cent.; Sinking Fund, 14 per cent.

With the addition of the above percentages the total interest payable in 1916 in respect of 1915 will be:—

2.68 per cent. on the Four per Cent. Monopoly Loan.
2.80 per cent. on the Five per Cent. Funding Loan.
2.70 per cent. on the Five per. Cent Loans of 1881, 1884, and 1890.
2.16 per cent. on the Four per Cent. Rentes.

The whole of this additional interest is payable on the first coupon falling due after the present date.

The following are the principal figures on which the above results are based:—

Receipts.	Drachmas
The gross receipts in 1916 from the assigned revenues from which the plus values are derived were	35,308,588
As compared with the gross receipts in 1914	36,193,454
Showing a decrease of	884,866

Plus Values.	Drachmas.
The receipts of the assigned revenues, after deduction of 18 per cent. of the plus values for expenses were	34,155,042
And the amount fixed by the law of control being	28,900,000
There was a plus value of	5,255,042
Of which the bondholders are entitled to 60 per cent., equal to	3,153,025

Benefit from Exchange.	
Net profit on exchange, equal to 6,039,630 drachmas, of which the bondholders are entitled to 60 per cent., equal to	3,623,778
Total plus values applicable to the service of the Debt	6,776,803

	Francs.
Of this amount there is available for interest the sum of 3,299,800 drachmas, equal to	3,557,520
Being half the above amount of 6,776,803 drachmas, less a net sum 88,601 drachmas, representing the deficiency, due to the fall in the rate of exchange, in the equivalent in drachmas of the amount assigned by the law of control for the expenses of the Commission, and for the sinking fund, the other half without deduction, viz., 3,388,401 drachmas, equal to	3,653,042
Adding to the above amounts balances brought forward from 1914, and, in the case of the former, interest saved on bonds amortised, the following result is shown for 1915:—	
Total amount available for increase of interest	4,850,362
Total amount available for increase of sinking fund	3,830,021
Carrying forward a balance of	212,402

NEWS FROM ALL SOURCES.

The Bulgarian Minister of Commerce announces that the Government will neither recognise existing nor grant new mining licences in the newly acquired territories for the time being.

The Sultan of Egypt has decreed the Indian rupee to be legal tender in his domain at a fixed rate of 65 milliemes (1s. 4d.) a rupee as a consequence of the presence of Indian troops in that territory.

H.M. Minister at Bucharest telegraphs that the Roumanian moratorium in respect of debts due abroad has been further extended until April 23.

It is stated, says the *Egyptian Gazette* (February 21), that the stock of petrol at Alexandria consists of 4,500 tons, while there are another 2,500 tons at Port Said. In addition to this stock, 9,000 tons are expected to arrive from America at any moment.

Sir John Wolfe Barry, past president, has been elected an hon. member of the Institution of Civil Engineers.

COMPANY RESULTS, &c.

Anglo-Egyptian Oilfields.—Gemsah: Week, 1,106 tons (last week, 321 tons). Hurgada: Week, 625 tons (last week, 600 tons).

British Manufacturers' Association, 1915.—The meeting will be held at the Cannon Street Hotel, on April 5, at 2.30 p.m.

Eastern Bank.—The annual meeting of shareholders will be held on March 30, at 12.30 p.m. at the offices of the bank.

Egyptian Delta Light Railways.—Receipts for the ten days ended February 20 amounted to £E6,090, as against £E5,291 for the corresponding period of last year.

Egyptian Enterprise and Development Company.—The annual meeting of the shareholders will be held in Cairo on the 31st inst.

Financial Times.—The annual meeting of shareholders will be held on the 22nd inst., at noon, 72, Coleman Street, E.C.

Piræus, Athens, and Peloponnesus Railway.—Messrs. R. Raphael and Sons, Austin Friars House, announce the numbers of 4½ per cent. bonds drawn for repayment at par on the 15th prox.

Suez Canal.—Receipts of the Suez Canal for the 2nd and 3rd inst. amounted to 170,000 fr., as compared with 430,000 fr. for the corresponding days last year.

NOTABLE SHARE APPRECIATIONS.

Even in normal times the difficulty experienced by the average investor in anticipating the trend of the market will be readily appreciated. In these strenuous times it is a *sine qua non* that the public should be fortified with the best of inside knowledge. Formed about a year ago and established at 4, Broad Street Place, London, E.C., the London and Provincial Industrial Securities, Ltd., has filled a big void in this respect, and the Managing Director, Mr. R. A. Stewart Hollebone, may be justly complimented upon the success which has attended the undertaking. A large number of investors will have had good reason to be gratified by the consistent upward movement of Johore Rubber Lands and Straker-Squire motor shares, which Mr. Stewart Hollebone has successfully recommended to his numerous clientèle. His lengthy personal connection with Stock Exchange matters before the war peculiarly fits Mr. Hollebone for the rôle which he has taken up with such excellent results. He is now recommending the Way Halim Sumatra Rubber low price share. At the present price of 1s. 7d., they are expected to double in price.

NOTES OF THE WEEK.

The present lull in the Near East betokens, it is to be hoped, the coming storm, in the form of a general advance on the part of the Allies. In the meantime we have the satisfaction of knowing that the period of enforced inaction is proving to our enemies only less embarrassing than a series of military reverses. The constant changes among the German and Bulgarian troops on the Greek frontier, and the desertions from the latter, emphasise the well-known fact that the Bulgarians have no liking for a protracted war. Reports of mutinies in the army are probably exaggerated; but they confirm the evidence of the Bulgarians who escape to the Anglo-French lines that the task of rationing the troops is taxing the resources of the Government to the utmost. Even the Germans who have replaced Bulgarian regiments on the frontier have been compelled to raid the neutral zone in a search for fuel and provisions. Some skirmishes have resulted, but the immediate retreat of the enemy before the French indicated that the incursion was not part of any formal military operations.

Recent reports of the Russian advance in Armenia have dealt mainly with the captures of prisoners. Progress in the direction of Trebizond has necessarily been slow, as the configuration of the hilly country, which here runs north and south, is against the Russians. To the west of Erzeroum the country is more favourable, but the precipitate flight of the Turks, which followed the fall of the fortress, has been checked, and they are able to oppose some resistance to our Allies. The town of Mamakhatun, sixty miles from Erzeroum and between twenty and thirty miles to the south-west of Ashkala, was occupied after an engagement on March 16. This success brings the Grand Duke Nicholas's force halfway to Erzingan from Erzeroum. It is probable that the Turks attempted something more than a rearguard action at Mamakhatun, for their defeat has been followed by a more rapid advance on the part of the Russians. But as these approach Erzizngan they can hardly fail to come into touch with the first Turkish reinforcements, which have had two months within which to accomplish the journey from Constantinople, since the Russians crossed the frontier and threatened Erzeroum.

In Persia the Russian force that occupied Kum on December 21 has now reached Ispahan, which became the centre of Turco-German influence in Central Persia after the German Minister left Teheran. The Germans, however, had abandoned Ispahan several weeks ago, when they finally realised the hopelessness of their position in Persia. Their further capacity for mischief in the country may now be quite limited; but the work of the Russians will not be completed until the individual agents are captured or make good their escape into Turkey. Ispahan, or, rather, a line running through it to Yezd, represents the southern limit of the Russian sphere of influence, as defined in 1907. The Turco-German agitators may make their way to Shiraz in the hope of eluding the Russian troops. Here they would find the tribesmen hostile to the British, and so far enjoying complete immunity from British aggression. If they should make the attempt to try their fortunes anew here, it remains to be seen whether the Persians will lend themselves to the intrigues of people who are clearly discredited, and whether Great Britain would not be compelled to take steps to restore her prestige in this region.

The unsatisfactory state of affairs which has characterised the Mesopotamian operations since November continues. In the House of Commons Mr. Lloyd George, in reply to a question regarding the responsibility "for the failure to supply General Aylmer with sufficient troops for the relief of the British garrison" at Kut, stated that it was undesirable to say more at present than that there had been no failure to supply the relieving force with reinforcements. The fact remains, however, that General Aylmer is still 23 miles from Kut, where the garrison has entered upon the sixteenth week of its siege. Such "liveliness" as the relief expedition has been showing of late, though not productive of any concrete results, points to the gradual arrival of the reinforcements referred to in Mr. Lloyd George's statement. There may have been no failure to send reinforcements; the whole trouble lies in the failure to supply General Townshend with an adequate force for his advance on Baghdad, and again, in the failure to have General Aylmer's force properly equipped

Digitized by Google

before it was dispatched. Reinforcements for a relieving column is a contradiction in terms implying grave mismanagement somewhere.

The operations in Mesopotamia were the subject of what must be regarded in the circumstances as a candid statement by Mr. Austen Chamberlain in the House of Commons on March 22. He admitted that there had been a lamentable breakdown of the hospital arrangements. An abundance of hospital supplies seemed to have been accumulated at Busreh, but there had been an inexcusable shortage above that town. The whole matter was now being investigated, and Mr. Chamberlain quoted a reassuring telegram from General Aylmer expressing extreme satisfaction with the arrangements now being made for the wounded in the field. In regard to the military aspect of the operations, the Secretary of State for India was naturally reticent. He repudiated, however, the suggestion that the advance on Baghdad was ordered in defiance of military opinion as to the sufficiency of the resources with which it was undertaken, and added:—"On the contrary, all the military authorities, the General Officer Commanding in Mesopotamia, the military authorities in India, and the military authorities at home, concurred in the orders for the advance towards Baghdad with the troops which were then at the disposal of the General Officer in command." This is, of course, a most lamentable admission of all-round ignorance, and we are still left wondering whether all these military authorities were in full possession of the facts known in regard to the strength of the Baghdad command in men and munitions.

A picturesque detail in the occupation of Sollum, in Western Egypt, is supplied in an account of the pursuit of the enemy by armoured motor-cars. Overtaking hundreds of the Bedouin fleeing westwards, the cars, under the Duke of Westminster, pressed on until the enemy's main camp was sighted, a mile south of the road. The cars turned and advanced in open line. As they approached, fire was opened upon them with one gun and two machine guns; but the gun teams were shot down while the cars were 400 yards away. The cars dashed into the camp and continued the pursuit of the enemy until there was a danger of the petrol supply failing. By far the most satisfactory feature of this raid is that it enabled our troops to rescue the 91 British prisoners, who formed part of shipwrecked crews landed on the Cyrenaica, who had been seized and detained by the Senussi since last November. The report that Nuri Bey, the brother of Enver Pasha, had been killed during the previous engagement between the tribesmen and General Peyton's force was proved to be untrue, as he was seen leaving the battlefield on March 14.

The presence of three German officers with a Turkish force which attacked a British outpost ten miles from Aden on March 16 indicates how completely the Germans have taken control of affairs in Turkey. It is the more satisfactory to learn that this particular force met with a severe repulse and was pursued for four miles. Seventeen of the enemy were found dead on the field the next day, while the British losses were one Indian soldier killed, one British officer and sixteen rank and file wounded. No doubt the recent activities of the Turks near Aden may be attributed to the stimulus supplied by the German officers. Germany, realizing the advantage to her of having as many British troops as possible kept occupied by the Turks, carries out her schemes so thoroughly that she even detaches officers for the purpose of administering pin-pricks to the Aden Protectorate.

Prince Alexander of Serbia, accompanied by the Serbian Prime Minister, M. Pashitch, has arrived in Paris, and will afterwards come to London. The French public has accorded the representatives of Serbia an enthusiastic welcome, which we have no doubt they will also receive in England. Serbia's fate has not made the same appeal to the British public as the misfortunes of Belgium, partly because the latter country is better known and partly owing to the fact that the common disaster experienced by the two States must fall more heavily on the one which had attained the higher stage of development. But a large number of Britons and Frenchmen have the uncomfortable feeling that, whereas nothing could have saved Belgium on the outbreak of war, something might well have been done fifteen months later to spare Serbia the horrors of the Austro-German invasion. Their desire to make up as far as possible for the Serbian tragedy is only enhanced by the entire absence of any complaining on the part of the Serbians. The Allies one and all recognise that in regard to this matter what is past is done with, and that what they have to do now is to concentrate their efforts on restoring the Serbians to their own country.

The visit of the Crown Prince and the Serbian Prime Minister is believed to be not unconnected with the settlement after the war. As a result of negotiations in Italy it is hoped that some understanding has been reached regarding Italian claims to Dalmatia, which in the form in which they were originally advanced, and indeed admitted by the Powers of the Triple Entente, were most prejudicial to Serbian and Southern Slav interests. If the Serbian Government has any anxiety on the question of Serbia's southern or south-eastern frontier, it is to be hoped that advantage will be taken of the coming visit to settle the matter once and for all time. Neither our admiration for the Serbians nor possible contempt for the existing administration of any other Near Eastern State should cause us to shut our eyes to the supreme necessity of trying to arrive at a settlement of the Balkan question in the interests of the Peninsula as a whole. Much has been wiped off the slate by recent events; but the problem remains very much in its original form, and it is only to be solved by recognising the Near East as a geographical entity which must sooner or later learn to overcome the racial antipathies that bad government has fostered in the past.

Russia has once more struck one of her sledge-hammer blows on the Austrian front, and the particular portion where the blow fell has given way. The thrust across the Dniester at Uscieczka has caused the Austrians to fall back more than ten miles at one stroke, and promises to bring the struggle for the possession of the Bukovina again into prominence No success at any other point in the long Russian line could have so much significance at the present moment. Roumania's military preparations are being pushed on with increased vigour. A telegram from Bucharest announces that all those exempted in previous years from military service, as well as the Roumanian refugees from Transylvania, numbering several thousand, have been summoned to the colours. The lists of officers have been revised, and the War Office has requisitioned all available copper and linen, as the importation of these goods is impossible. Readers of these Notes have been prepared for Roumania's entry into the war as soon as the military situation on the Eastern front justified the action. So long as the Austro-German forces could hold the Russians in comparatively slight strength owing to the latter's shortage of munitions, Roumania single-handed could bring little assistance to the Allied cause; but directly Russia is in a position to advance, and there is no longer any fear of Germany and Austria co-operating to overwhelm Roumania left entirely to her own resources, the support of the Roumanian army becomes an important factor in the war. If Russia's progress in the Bukovina is maintained, the moment for Roumania to strike on her own behalf will have come.

General relief will be felt in this country over the news that Lady Paget and her medical mission have at last been allowed to leave Bulgaria, and are on their way home, through Roumania and Russia. Although not subjected to ill-treatment, the members of the mission were kept for some time under close surveillance, amid conditions that must have made them eager to get away.

Digitized by Google

When finally they reached Sofia, a long delay followed, owing to the attempt made to secure them a passage through Austria. By the time the Austro-Hungarian Government had consented to give the whole mission a safe conduct, the frontier was closed. They are now returning by a longer route, but, judging by the hospitality shown to them in Roumania, a more congenial one.

The proclamation of Prince William of Wied as King of Albania at Durazzo, if it actually took place, belongs to the lighter side of the war. That, with his previous experience behind him, the ex-Mpret should once more return to the scene of his failure and solemnly be re-proclaimed ruler of a geographical expression which has no political existence, proves him to be of the stuff of which kings ought not to be made. The future of Albania may be obscure, but the one thing that may be regarded as tolerably certain is that a German princeling, who has already shown himself to be wholly unfitted for the post, will not be allowed to govern it. When Prince William was first installed as Mpret, certain financial arrangements were entered into, and possibly the Austro-Hungarian Government sees little chance of recovering its money unless its debtor remains in possession. That is an aspect of the question which is not likely to appeal to other Powers anxious to put an end to German influence in the Balkans.

The transfer to Rome of the question of Italy's attitude towards the Egyptian Mixed Courts has speedily led to a satisfactory settlement of the points at issue. According to Reuter's information, the British Government declared that it had always recognised the importance of Italian interests in Egypt, and formally accepted the principle that there should be complete equality in Egypt between the treatment of Italian subjects, colonials, and interests and that of the subjects, colonials, and interests of other Powers. The Italian Government thereupon consented to agree to the eventual abolition of the Capitulations and the transformation of the Mixed Tribunals, if the other Powers also consented. The latter proviso, we hope, is strictly limited in its application, as there can be no question of Great Britain asking for the approval of those who are her enemies in the present struggle, unless the point is made a stipulation in the terms of peace.

It is a matter for regret that the military authorities have not yet seen their way to modify the ill-considered veto imposed on the admission of all ladies into Egypt, unless they are in military service. There may well have been too many visitors to Egypt in the winter of 1914-15, and again in 1915; but the present prohibition affects the wives and daughters of civil servants and residents in the country in a way that can never have been intended. A number of residents are now forced to maintain two establishments, one in Egypt and one elsewhere, because their wives are not allowed to return to the country. Again, the people primarily affected are just those who came to the rescue of the military authorities, when their medical arrangements broke down, and by voluntary work kept hospitals going until there was time for effective organisation. A number of lady residents are being compelled to risk injury to their health by remaining, it may be, a second hot season in Egypt, because they will not face banishment from their husbands or families for the remainder of the war. It is to be hoped that unwillingness to admit that a mistake has been made will not be allowed to perpetuate a manifest injustice. There can be no difficulty in making exceptions to the rule in favour of bona-fide residents.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, March 8.

Bread Difficulties in Nicosia.

The supply of bread to the poorer classes has given much trouble. The Commissioner, Mr. C. S. Cade, has notified all bakers who obtain their wheat from the Government stores that they must conform strictly to regulations recently determined. These include limitation of price, the stamping of loaves with special marks, and inspection of the making and sale of bread by municipal and police agents. After meeting the needs of regular customers, of whom lists have been prepared, all the bread available for sale is collected at appointed places—police-stations—when it is disposed of to purchasers from 6 a.m. at the fixed price of 4d. per oke.

Increased Emigration of Cypriots.

Some hundreds of Greek natives, chiefly young men, have lately left the island, and there is still a noticeable increase in the number of emigrants to Egypt, America, and other parts. Some seventy left the Nicosia district by the last mail steamer for America, and about 200 more are about to follow their example. The local Press regrets this loss to the island community, attributing it to the prevailing depression. Some papers endeavour to throw the blame on the Government on account of "its callousness and neglect of agricultural and industrial development," which offers no openings for young men. The sparseness of population is one of the obstacles to progress in Cyprus, and no doubt it is the poverty of the island which causes such a steady outflow to richer countries, especially, as a rule, to Egypt.

The Court of Administration.

In each of the six districts there is a Court of Administration (*Mejlis Idaré*), which consists of the Commissioner, the Kadi, the Greek Bishop, the Treasury Clerk, and four elected members—two Moslem and two Greek—who sit for two years. The election is now approaching. The village communities choose representatives under the presidency of the mukhtars. These deputies then meet at the Commissioner's office and elect four nominees, of whom two are selected by the High Commissioner. The meeting at the Commissioner's office is fixed for April 13. The same course is pursued in the other districts. Besides these bodies there is a Central Mejlis, to which appeals can be made, both by the people and the Government. It consists of the High Commissioner, the Chief Kadi, the Archbishop, Chief Secretary, Receiver-General, the Controller of Evkaf, and two Moslem and two non-Moslem elected members. The functions of these councils have been largely diminished. Amongst their duties is that of issuing warrants for the compulsory collection of taxes against defaulters.

Collection of Taxes.

There has been a good deal of grumbling in connection with tax collection in many parts of the island. At Nicosia the Commissioner has found it necessary to publish notices reminding defaulters that imprisonment for debt does not operate as a discharge of the defaulter's liability to pay any sum or instalment in respect of which imprisonment was awarded.

The Sinking of the Evangelistria.

The four sailors of the sunken sailing vessel Evangelistria, mentioned in a recent note as landed at Papho, have been released, the owner having deposited a sum of money to cover the expenses of their journey to their homes. There is no official information regarding the circumstances which attended the sinking of the vessel.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 8.

The Western Frontier.

The death of Nuri Bey*, reported in the *communiqués*, and the capture of Gaafar Pasha and of several officers —amongst the latter a cousin of the Grand Sheikh of the Senussi, who was given a commission by the Turks during the Italian War—are bound to have a salutary effect on the future attitude of the Tripolitan and other Arabs who are opposing us on the Western frontier. Nuri Bey, who was the brother of Enver Pasha, and was sent by the latter to Tripoli to stir up the tribes against the Italians and ourselves, has, together with the other Turkish officers, been solely responsible for all the trouble we have had. Certainly if it had not been for their instigation and the supplies brought over by German submarines and other craft these tribes would never have been seduced from their allegiance to the Senussi. The loss of their most important leaders, coming on the top of the serious losses in men and material suffered by them recently, should tend to complete their discouragement and facilitate our task of clearing the enemy out of Egyptian territory and of keeping intact henceforward the Tripoli-Egypt frontier. Already we are in possession of Sidi Barrani, and we may expect at any moment to hear that the advance post at Sollum has been retaken. When this has been done, our frontier force will have crowned its success with a noteworthy achievement; for the retaking of Sollum will mean not only that we have re-established our authority in this region, but also that another German supply station has been closed, for it is undeniable that Sollum has been used by German submarines as a base from which to draw fuel supplies and through which to pass money, officers, and munitions to the Arabs.

The Legislative Assembly on the Canal.

This week the members of the Legislative Assembly accepted an invitation from the military authorities to visit the Suez Canal. The guests, who numbered seventy-seven, and included sixty-nine delegates, the Under-Secretary of State for the Interior, and the Secretary-General of the Legislative Assembly, proceeded by special train to Ismailia. On the way the train slowed down at one spot in order to allow the guests to see the great camp that has been installed there. This camp covers a large rectangle running west to east parallel to the railway line on a length of a little over three miles. At Ismailia the delegates were met by the Governor of the Canal, Heddaya Bey, a British officer specially deputed by Sir Archibald Murray, and several Staff officers. Luncheon was served at the Governorate. Afterwards the guests embarked on anti-submarine boats and proceeded, one-half to the south-east and the other to the east, to two cruisers, which they boarded and over which they were conducted by the officers. They were shown how the guns and turrets were manipulated, and appeared exceedingly interested in the manœuvres. From the warships they proceeded to the house of the G.O.C., where Sir Archibald Murray received them and entertained them at tea. Two incidents that seemed to impress them very much occurred during their visit to the G.O.C. One took place on landing, when two aeroplanes flew over them and dropped a message of welcome in Arabic wrapped in a red and yellow flag; the other was the passage through the Canal of the enormous Cunard liner ———, which presented a very fine sight as she steamed along. After tea the delegates were taken in military motor-cars to the station, and they returned to Cairo by special train. All the guests expressed themselves as greatly touched by the graceful compliment paid them by the invitation, and as delighted at what they had seen and at the manner in which they had been received and conducted over the Canal.

The Mixed Courts.

There is still no settlement of the question pending between the Egyptian and Italian Governments, but since last I wrote there has been a development which may impel the authorities in Rome to fall in with the propositions made by the Anglo-Egyptian Governments. The Procureur-General of the Mixed Court of Appeal has delivered his "conclusions" in the case of Ades *v.* Stagni, in which, as reported at the time, the question of the competence of the Mixed Courts in cases where Italians are one of the parties was raised. The Procureur-General gave it as his opinion that the Mixed Courts have now no jurisdiction over Italian subjects, whether they appear before them as plaintiffs or defendants, and also that the Italian judges have not any longer the right to sit in those Courts. He added that the Egyptian Government would take all the necessary steps to ensure that justice should be done to their subjects and those of other Powers in all cases where Italians are concerned, and that those steps would have been taken already if it had not been thought that the acceptance by Italy of the extension of the mandate of the Mixed Courts would be forthcoming at any moment. The position now is—that Italians cannot sue persons of other nationalities, since the foreign Consular Courts have no jurisdiction in civil and commercial matters, except where both parties are of the same nationality; while anyone can sue Italians before their Consular Courts, which have now been empowered from Rome to deal with all commercial and civil cases where Italians are the defendants. At first glance, it looks as if the Italians alone are being made to suffer; but, as a fact, even in commercial and civil cases against Italians the other communities will suffer as much, if not more; for, in addition to the inconvenience and hardship of having to go before an Italian Consular Court and have their disputes settled according to Italian law, of which they know nothing, they will be forced later on to go before the Ancona Courts, if they or the other party wish to appeal against the decision of the Consular Court in Egypt.

The Publication of Communiques.

The home papers of February 22 contain a *communiqué* from the War Office giving details of an air-raid made east of Suez, in the course of which the Turkish power station at El Hassana was destroyed. This is the first and only official intimation we have had out here of this exploit, and no little surprise has been expressed at this action on the part of the military authorities. Last year, when there was only the eastern frontier to be considered, all official announcements with regard to fighting in that region were made simultaneously in Cairo and London. To-day, when there is fighting on both fronts, we find that what takes place on the far distant western frontier is communicated to us with praiseworthy promptitude, whilst news of the progress of affairs on the eastern and nearer front is solely communicated to London, and we are left to await the arrival of the home papers to obtain our official information therein. We are quite aware—we have had many indications of this of late—that the command in Egypt has been split up, as far as the frontiers are concerned, into two distinct divisions, the western frontier and Egypt with headquarters in Cairo, and the Mediterranean Expeditionary Force, which looks after the eastern frontier, with headquarters at Ismailia; but that is no excuse for this cavalier differentiation of treatment of the local public. The latter is as interested in the trend of events on the eastern as it is on the western frontier—probably more so. When the M.E.F. was engaged in a campaign outside Egypt it was no doubt fitting that its reports should first go home, and be communicated to this country through London. But now that a sequence of events has transformed it from an "expeditionary" into a "local" force a corresponding change in procedure imposes itself, and it is to be hoped that some means will be found whereby the M.E.F., without any loss of dignity, will be able to communicate to the population of Egypt an account of any of its doings that are worthy of record, in a similar way and as promptly as details of the fighting on the western frontier are made public in this country by the authorities responsible for the force engaged there.

* This report has now been contradicted.—[Ed.]

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, February 28.

Influenza Epidemic.

The weather has continued pleasantly cool for an unexpectedly long period, and it is more than six years since the inhabitants of Khartoum enjoyed so long a winter. The result, however, has been not altogether fortunate, owing to the appearance of a lowering form of influenza, which has had a series of victims, one of the first of whom was Colonel E. E. Bernard, C.M.G., the Financial Secretary. Several ladies have also caught the infection.

A few cases of meningitis are still reported from Omdurman.

Earthquake Shocks.

Slight shocks of earthquake are reported to have occurred in Mongalla Province in January; but there was nothing like the shocks of last year, and no damage was done.

Destructive Fire at Talodi.

Talodi, the headquarters of the Nuba Mountains Province, has been practically annihilated by fire. The whole village is built of dry millet straw or dry grass, and the accidental burning of one hut, fanned by the strong north wind, causes a conflagration too sudden and too fierce to be combated. Some loss was incurred by merchants whose stores of goods were destroyed, but no loss of life has been reported.

Cattle and Camel Trade.

The appearance of foot and mouth disease in a mild form in some of the animals in transit north for the Egyptian market, and in the quarantine camp, Khartoum North, caused a temporary setback to the cattle trade. Apart from the inconvenience to individual merchants, whose animals were inevitably delayed, this was not wholly disadvantageous, as the demand for camels in Egypt for Imperial purposes is insistent, and the whole of the rolling stock available could be applied to the transport of camels pending the abolition of disease in the cattle. The supply of camels continues to exceed the capacity for moving them north up to date.

ANIMAL WORSHIP IN ANCIENT EGYPT.

Speaking last Monday in the rooms of the Royal Society at Burlington House, Miss Emily Paterson said that in pre-dynastic times animals had no religious significance in Egypt; they were totems such as are found among primitive peoples at all times and in all parts of the world. Worship of animals did not exist until the gods took a human form—towards the end of the second dynasty. In spite of the human form, it remained an animal that was worshipped, but an animal that had become a god. The animal worship of the ancient Egyptians took two distinct forms; there was, first, the worship of individual animals; and second, the setting aside as sacred of certain species. In the first case, the sacred animal was distinguished from others of the same species by certain marks known to the priests. When found, it had to pass through a special training before being introduced into the temple. The death of the sacred animal did not involve the death of the god incarnate in it; he at once sought incarnation in another animal of the same species. Should a layman kill a sacred animal, even by accident, he was condemned to death. The respect in which whole species of animals were held in different nomes was quite another matter to this. Such animals were not honoured as gods themselves, but respected as being favoured by the gods. It was believed that a certain deity inhabited one animal of a particular species, and the whole species was respected for fear the one animal should meet with any injury.

THE MILITARY GEOGRAPHY OF THE TROAD.

On Monday last Dr. Walter Leaf read an interesting paper before the Royal Geographical Society on the military geography of the Troad, the north-western bastion of Asia Minor. He said that this district possesses an importance out of all proportion to its area and wealth, and due solely to the command it holds over the Dardanelles; for which it forms a natural defence even more formidable than the peninsula of Gallipoli on the European side. It is a rhomboidal mass, in the main a replica on a very small scale of Asia Minor; the proportions being different but the relations of land and sea being similar. In both cases there is a straight southern coast, a somewhat shorter western one, a great outward curve on the north; and on the east the peninsula is joined to a much larger land mass by a wide neck. The mountain structure shows an analogy. As with Asia Minor, we see that the great mass of the interior was once a plateau, with a scarp near the shores on the west and north, and a system of inland drainage. In Asia Minor several large inland basins are still left. With the Troad no internal drainage now remains, but every main river passes in the middle or lower part of its course through a gorge showing where a torrent on the outer scarp has cut its way backwards through the hills and captured a drainage basin in the rear.

Dr. Leaf then went in great detail into the geographical features of the country, showing how they had affected the most famous campaign ever carried on there in historical times—that of Alexander against the Persians. He said that the insignificant little town of Zeleia, which the Persians chose for their headquarters, was exactly the right place for the defence of the one weak point in the natural frontier of the Troad, and, moreover, had the natural advantage of abundant supplies. It covered each of the two roads by which alone the army of Alexander could cross the hills lying between him and the plains of Asia Minor. They were right to await him there; their great mistake was that they never had any conception of the power which their fleet gave them. Memnon, the commander of the Greek mercenaries who formed the best part of their infantry, urged them to retire, luring Alexander on and clearing the country behind them of supplies, while at the same time making an attack by sea on Macedonia. That policy could hardly have failed to foil Alexander. But the Persians were not themselves sailors; they had to depend on their Phœnician subjects, whom they probably mistrusted, and Marathon and Salamis were not encouraging precedents.

In the course of the discussion which followed,

Lord Bryce said that the lecturer had explained the natural features of the Troad not only as related to Alexander more than twenty centuries ago, but also as related to the situation which confronted our own naval and military authorities when they planned an expedition to pass the Dardanelles and open a passage from the Ægean to the Black Sea. He (Lord Bryce) gathered that, great as were the difficulties that had confronted us in Gallipoli, they were not so great as would have been encountered on the other side.

The Chairman, Dr. Freshfield, said it was impossible to discuss the geographical features of any part of the shores of the Dardanelles without thinking of the tragedy of the past year. Two facts stood out clearly as the result of our experience: the first, that the problem of the Dardanelles was incapable of a naval solution; the second, that the peninsula of Gallipoli was a practically impregnable natural fortress. But it appeared to him, from the lecture and photographs, that the difficulties of an advance through the Troad would be much less than those the Russians had faced at Erzeroum. A landing might be made at the head of the Gulf of Adramyttium and a force marched round the coast to Lampsakos.

Dr. Leaf, replying to this point, said that the march would be about 115 miles long, exposed for the first seventy miles to a flank attack from the East, and afterwards to a flank attack from the Sea of Marmora. He did not think any general would take such a risk.

RED CRESCENT SOCIETY IN EGYPT.

The Egyptian *Journal Officiel* of March 6 publishes the following notice, dated March 2, and signed by the General Commanding the Forces in Egypt:—

"I, John Grenfell Maxwell, hereby give notice that, in exercise of the powers vested in me as General Officer Commanding the British Forces in Egypt, I have appointed, with his consent, H.H. Prince Ahmad Fouad, to act as sequestrator and administrator of the Red Crescent Society, with full power to apply the revenues of the said society to the upkeep and maintenance of the hospital for Turkish prisoners established by the society, and that I have further appointed H.H. Prince Youssef Kamal, H.E. Ismail Sidky Pasha, H.E. Mohammed Chafik Pasha, H.E. Ismaïl Hassanein Pasha, El Saïd Abd el Hamid el Bakry, H.E. Gallini Fahmi Pasha, Henri Naus Bey, Dr. Abbas Helmi Bey, Dr. Aly Ibrahim Bey, Dr. Soliman Azmi, to serve as an Advisory Committee for the purposes of the management of the said hospital."

A letter of the same date, addressed to Prince Fouad by General Sir J. G. Maxwell, and also published in the *Journal Officiel*, specifies the powers with which his Highness is invested. It also mentions that the request to act as sequestrator is addressed to H.H. "in view of the difficulties which have arisen in connection with the administration of the Red Crescent Society," with which, it adds, his Highness is acquainted.

ATHENS LETTER.

(From Our Own Correspondent.)
Athens, March 12.

Looking towards Verdun.

The phases of the great struggle in France are followed with the most lively anxiety by the Greeks, who, in spite of the German propaganda and the errors committed by the Entente Powers, still retain their friendship for and their interest in their liberators and benefactors. These feelings, moreover, accord with the natural instinct of an intelligent people, who, notwithstanding all attempts to distort the truth, perceive quite clearly that the triumph of the German arms would mean the triumph of the traditional enemies of Greece—the Turks and the Bulgars. Germanophil circles and their Press organs exert themselves to magnify the smallest German success, and, representing the French resistance as worn out, counsel General Sarrail and his troops to hasten to the relief of Verdun.

The Financial Strain.

The enormous expenses caused by the mobilization have brought about a financial situation that amounts to a deadlock, from which there appears to be no way out. The Minister of Finance, M. Dragoumis, hopes, however, to be able to balance the Budget which he is going to present to the Chamber, and which shows a deficit of sixty-five millions, independent of the deficits of previous years, which amount to 200 or 300 millions. With this object M. Dragoumis is elaborating a series of taxes, described as provisional, and falling principally upon war profits, more particularly those of the shipping world, up to 20 or 30 per cent., with retrospective effect. These shipping profits for 1915 and 1916 being estimated at 520 million frs., M. Dragoumis hopes to obtain from this source and from other taxes which he is going to impose enough not only to meet the deficit of 1916, but also to provide sufficient revenue to secure a loan of about 500 millions required to make good the deficits mentioned and to provide for other requirements, military and otherwise. It remains to be seen whether such a loan can be launched, since the Entente Powers do not seem disposed to grant the present Government any loans in order to enable it to keep up a mobilization which serves only German policy. For the rest, these estimates are considered rather optimistic.

The Venizelist Press regrets the imposition of this taxation, and recalls the fact that M. Venizelos conducted two wars and filled the military depots without any fresh taxation.

The Mobilization and the State of the Army.

The *Patris* has published two articles which, being attributed to General Danglis, formerly Chief of Staff and Minister of War during the Balkan War, have made a deep impression. In these articles General Danglis strongly condemns the Government for the way in which the army has been mobilized for the past five months, which tends to exhaust it, to make it stale, and to demoralise it; and deplores the great expense in which it has involved, and continues to involve, the country. The army corps and the various divisions, he says, are scattered and far from one another, and the troops, badly housed and badly provided for, are left to stagnate, which leads them to believe that they will not be called upon to fight. Moreover, as they lack much in their equipment, they would not be in a position to take action should the need arise. If the present Government prolongs the mobilization in view of the chance of such action—action which the course of events in the Orient, the situation at Salonika, the progress of the Russians and the British in Asia Minor, and the attitude of Roumania will finally impose upon Greece, according to General Danglis—its first duty is to take energetic action by utilising, as Roumania has done, the short time remaining to fill up the gaps in the army, and, by keeping the troops in condition, enabling them to maintain their moral and inspiring them with the belief that they will shortly be called upon to act.

General Danglis concludes by advising the Government to call to the colours without any further delay the classes of 1915 and 1916, and to train them, which will add 60,000 men to the army. Without these measures he considers that it is useless to continue spending 30-40 millions a month on the mobilization, and that it would be far better to disband at least half the troops, so that with the money thus saved what the army lacks would be provided, and the classes referred to above could be trained. Thus the military cooperation of Greece would be more useful to the Entente Powers at the right moment, and therefore more highly rewarded.

In response to these suggestions the *Neon Asty* issues a kind of official *communiqué*, stating that there are reasons, which the Government cannot divulge, that compel it to keep all the troops with the colours; and declares that "if the Liberal Government mobilized the army to make war, the present Government keeps it mobilized in order to avoid war."

Internal Policy.

The internal policy of the Government is hardly any better than its foreign and military policy. Everything is out of gear in the governmental machine; everything is going wrong; and there seems to be a return to the worst state of the days of old party government run mad. The *Hestia* draws a sorry picture of the state of affairs, which it describes as anarchical. "Every branch of the administration," it says, "is paralysed, laws are twisted under the auspices of the Government, and the different authorities indulge in all kinds of abuses. The simoom of corruption rages over the land and desolates it."

The Carnival.

In spite of the circumstances amidst which we are living, the Carnival at Athens this year was extraordinarily lively, owing largely to the presence of many Greeks from Smyrna, Constantinople, and elsewhere who have been residing here since the beginning of the war. The spring weather that we have enjoyed for the past month also contributed to the enjoyment. Athens has never before seen so many *masqués*. They paraded the principal streets and made merry throughout the night. The last day the gaiety took on a character of general jollity, in which all classes joined. Athens, with its wonderful climate, certainly seems to be becoming the Nice of the Orient.

The papers narrate an amusing incident which occurred on the last day of the Carnival, and which shows the result of the German propaganda and of the money it has cost in Greece. The head of this propaganda, the notorious Baron Schenk, entered one of the principal restaurants of the city wearing a mask. But presently he was unwise enough to remove his covering, and then, being quickly recognised, he was greeted with a storm of hootings and hisses from all parts of the restaurant—which was filled by a fashionable crowd—and had to seek safety in flight.

FROM "MPRET" TO "KING."

The *Morning Post's* Rome correspondent reports, in a message dated March 19, that Prince William of Wied has been proclaimed King of Albania at Durazzo, in the presence of German and Austrian representatives. The correspondent adds:—"The Bulgarian Minister was conspicuously absent."

A new weekly journal, the *Kyrix* ("Herald") has been started in Athens. Its policy is Venezelist.

Two Italian corporals, who have escaped to Roumania from Serbia, declare that the Austrians in Serbia forced the prisoners of war to work at fortifications. In the district where they were confined 500 Italian prisoners were employed in the construction of trenches and railways.

M. Skouloudis, the Greek Premier, replying to a question put to him in the Greek Chamber as to the protection of civilians in the event of an attack on Salonika, said the Government could only urge the local authorities to warn the inhabitants to take such measures as they might consider effective for their protection. In the event of the evacuation of Salonika, however, all transport measures had been taken.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, February 26.

Improved Relations with Greece.

In my last letter I indicated that there were signs here of improved relations between the Allies and the Greek military and other authorities, and I am glad to record that my anticipations are now being realized. This sudden turn for the better occurred about the time of General Sarrail's visit to Athens, and all sorts of rumours have been circulated as to the real object of that visit. Everyone assumed that it meant more friendly relations with Greece. Indeed, on Monday last the whole town was in a state of great excitement, as it was persistently reported in many quarters that Greece had at last thrown in her lot with the Entente. One could not help remarking how joyfully this news was received by the people of Salonika. One of my own Greek friends suddenly rushed into my room in the late afternoon of that day, shook hands with me in a most hearty, even violent, manner, and shouted, "Good news for you and me; Greece is going to fight; everyone says so in the town." The rumour was, of course, not confirmed, but ever since that day I have observed a much stronger feeling of *camaraderie* between the Greek and Allied officers and men.

A fortnight ago I dined with a high Greek officer, who is acting as one of the intermediaries between the Greek and British Headquarters on account of his perfect knowledge of English, and it is worth while repeating what he told me. "You may rest assured," he said, "that Greece is coming in, and I expect it will be officially announced within a fortnight. Whatever may have been the feelings of the King and certain sections of his officers some months ago, I am in a position to know that the strength of the Allies at Salonika has now removed all fears as to harm from Germany or her allies. The King has been invited to come to Salonika to inspect the defences, and I am sure he will come. He is a good soldier, and as such he will, upon seeing the strength of these defences, at once announce the intention of Greece to join the Entente. Indeed, I believe he has already made up his mind, and that this formal visit is to be made merely in order to give this momentous decision all the more *éclat*."

Declaration of General Moschopoulos.

What I have stated above is further confirmed by the declarations which have just been made by General Moschopoulos, Commandant of the 3rd Greek Army Corps, now occupying the Salonika district, to a representative of the *Independant*, the leading French evening paper in Salonika. Hitherto the General has been most reticent and careful in giving expression to his own views, and this makes his statements all the more significant. It will be remembered that a short time ago he inspected the defences on the invitation of the Allied military authorities, and that at that time, while expressing admiration of the work done, he by no means thought the position impregnable. Much work has been done since then, and the Greek Commandant, having again visited the fortifications a few days ago, declares his last doubts removed. His words are well worth recording:—"The defence works executed by the Anglo-French are magnificent, surprising," he declares. "The Allied engineers have accomplished marvels, and the work carried out during the past three months around Salonika corresponds to the usual labour of a whole year." The following words are still more significant:—"In my capacity of General of the Greek Army I know the fortified regions well, and *I can now declare that Salonika is safe from all fear of invasion;* and if by any chance the Germano-Bulgarians should undertake an attack against the town they would be hurling themselves against a rampart of iron."

With regard to the relations between Greece and the Allies, the General added:—"I am extremely pleased to see that our relations with the Allies have become more cordial. . . . This recent *rapprochement* between the Powers of the Entente and Greece is a happy augury; it will definitely dissipate all misunderstandings and bind more firmly still the traditional bonds which unite us with the Allies." It is also significant that the General announced the receipt by him of telegraphic instructions from the King to afford the Allies every facility possible, and that he had communicated that telegram officially to the Allied military authorities.

It is well known here that General Moschopoulos is personally very friendly towards the Allies. It is said that for this very reason the Government at Athens, whose sympathies are, or perhaps I should say have been, with the Central Powers, have several times called upon the General to go elsewhere or even resign; but the General has calmly ignored these communications, and gone on with his good work here. He knew very well that his superiors would not insist upon his resignation, for fear of giving offence to the Allies; so he took no notice of the gentle hints conveyed to him, and now that the King himself has sent him the above-mentioned telegram, it may be taken that the General is more secure than ever in his position.

More Aerial Visitors.

Twice during the past week German aeroplanes have attempted to fly over Salonika, and either do damage to the munition stores of the Allies or strike terror into the civil population; but in both instances they were driven off without being able to drop any bombs in the town. The French aviators have now established such a thorough aerial defence that a hostile "Taube" has very little chance of closely approaching the town during the day time. At night, of course, the enemy is more likely to be able to steal through in the darkness—as he did on the occasion of the recent Zeppelin attack. During the past week the moon has assisted in guarding the town and disclosing the presence of any strange aerial visitor, and if any attack is contemplated it will probably occur during some moonless night.

Occasionally an Allied aeroplane may be seen flying at night with a bright light. If it were not for the rapid movement one might imagine it to be a new star. A few nights ago I saw a crowd gazing heavenward at a bright ruddy light not far from the moon. Of course, a "Taube" would have carried no light, so the spectators decided that it was a French aeroplane. It was neither. The object was the planet Mars, which at present shines very brightly out here, and whose ruddy colour was not unlike the usual aeroplane light.

In a place like Salonika, where an aerial bomb attack may take place unexpectedly at any time, the population are naturally alarmed at every explosion they hear. As I write these lines I hear loud and continuous reports like the firing of distant guns, and looking out into the street I see people hurrying into their houses. These reports are not caused by guns of any kind, but by blasting operations outside the town, where the French are busy making new roads. The charges are all fired about the same time, at the end of each day's work.

Musical Talent Among the Tommies.

In a previous letter I referred to the cheerfulness of our Tommies under all circumstances, and their readiness of an evening to give expression to it in song. Sometimes it happens that one of their number has been a professional entertainer, and in that case they take the utmost care of their prize. The best of everything is at his disposal, and during an evening in camp or at a café his comrades group round him in admiration.

The French soldiers also have many talented men among them. On passing some popular café I have more than once seen quite a little crowd outside the door listening to a French singer who was rendering some popular French or Italian air with splendid effect.

But, of course, the talent is not confined to the rank and file. Two nights ago I dined in the large dining saloon of the Roma Hotel, in the Place de la Liberté—a place much frequented by British officers. In an adjoining room was a piano, on which someone occasionally played a few bars. In one corner of the saloon was a group of British officers dining together, one of whom proved to be a musical genius. On finishing their dinner they marched on that piano in a solid body, wheeled it into the saloon, and deposited their musician in front of it. I don't know his name, or I would immortalize it in these pages—they all affectionately called him "Jack"—but I can testify that he was a

Digitized by Google

marvel. The room was crowded with British, French, Greeks, and—perhaps—Germans, and "Jack" entranced them all. They forgot to finish their dessert; they forgot to go home; they forgot everything in listening to the artist's delightful music, both vocal and instrumental. He gave us English, Scotch, and Irish, as well as French and Italian, airs. Some of his brother officers also contributed a few songs, and it was only at an advanced hour that we had the "Marseillaise" and "God Save the King," with "Auld Lang Syne" to wind up the programme. You will thus see that Salonika is not so very dull after all, so long as you come across people like "Jack" to cheer you up.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, February 29.

The Army.

Many senior officers of the Roumanian Army will be pensioned on April 1. They include eight general officers, not less than five of these being generals of division. Among the names mentioned are those of Generals Culcer, Yarca, Boteanu, Nasturel, and Zottu, Chief of the General Staff.

Forty new regiments of infantry are reported to be in process of organisation, and will soon be completed. This will raise the number of infantry regiments from 80 to 120.

Roumanian Orphanage at Sibiu.

It has been decided to raise funds by public subscription for the purpose of founding a Roumanian Orphanage at Sibiu, in Transylvania. The national importance of this step has been quickly grasped, so that the public is responding generously to the appeal. In the course of a few days 30,000 frs. were contributed, the National Bank alone subscribing 20,000 frs. For the last day or two Transylvanian ladies have been selling medals bearing the effigy of Michel the Brave in the streets and public places of Bucharest for the benefit of the orphanage, and they have met with few refusals, even among the poorer classes of the population, such as hospital patients.

Snowfalls in Moldavia.

Heavy snowfalls are announced in the north of Moldavia, where some of the train services have been interrupted in consequence. Several houses have been demolished by the weight of the snow in the district of Botoshani, and a soldier has succumbed to the frost.

A Canine Spy.

For some time the Roumanian frontier guards had observed that a dog, a handsome animal, wearing a jacket, had frequently crossed the frontier at a particular point, invariably returning the same way later on in the day. His suspicions aroused, a soldier placed himself near the point at which the dog habitually crossed the frontier, and at the first opportunity bowled him over with a bullet. A German guard, who had observed the incident, rushed towards the dog, with the object, presumably, of appropriating the correspondence of which he was the bearer. Ignoring a warning to desist, the German likewise received a bullet, which stretched him dead beside the body of the dog.

Propaganda in the New Dobruja.

The Bulgarian population of the Dobrujan territory annexed by Roumania in 1913 continue to display much activity in a certain direction which may ultimately prove a source of danger to Roumania. The society which bears the name of "Dobrogea," and has its headquarters at Sofia, is said to be in lively communication with the Bulgarian inhabitants of the New Dobruja through the medium of the Bulgarian Legation in Bucharest. Manifestoes are distributed which report the Bulgarian "victories" in glowing terms, and refer to the approaching realisation of the idea of a Greater Bulgaria, into which the Dobruja will be incorporated. Many of the Bulgarian officials have not been replaced by Roumanians. These, by their ill-will, not only hamper the work of the Roumanian military by delaying or impeding the transport of materials, and so on, but keep the Bulgarian authorities informed of all that comes to their notice.

Bulgarian Doubts.

Before the Bulgarians had, under the pretext of safeguarding their national interests, committed the act of felony which has drawn on them the wrath of their former benefactors, the Roumanian public had felt some anxiety as to the course which its treacherous neighbour would adopt. This uncertainty on the part of the general public was comprehensible; though, as some responsible people in London and Paris know, the Roumanian Government, like the Serbian, had not the remotest doubts on the subject. The parts are now reversed. The burning question now discussed in the Bulgarian papers is the attitude which Roumania will adopt.

But what events have occurred which lend such importance to the matter at the present juncture? The answer is obscure. Roumania has not changed her official attitude since the beginning of the war. She is, it is true, displaying intense activity in the matter of military preparations; but this activity is not a fresh development either. Her national claims and ambitions have suffered no alteration in the last months—or years, for the matter of that—and they crystallized during the first weeks of the European conflagration into a form which has since undergone no appreciable modification. She is still intensely conscious that, between the victorious Magyars, on the one hand, stamping out the last flicker of life in the Roumanians of Transylvania, "the cradle of the Roumanian nation," and, on the other hand, a Bulgarian Empire, with access to three seas and complete predominance in the Balkan Peninsula, her sovereignty as a free nation would become a thing of the past, and her hopes of territorial and racial unity be reduced to the status of a mediæval myth.

We can only explain the pretended doubts of the Bulgarian Press by assuming that they are intended to hoodwink the public into believing that Roumania's attitude is still in the balance, and therefore not necessarily hostile. But the device is too transparent. The reluctance to commence the attack on Salonika might be explained by uncertainty on the score of Roumania's attitude. The accumulation of German and Bulgarian troops on the Dobrujan frontier, however, proves that our southern neighbours are not overwhelmed with doubts.

VICTIMS OF THE WAR.

(From a Correspondent.)

How moving is the story told by a Russian officer from Bessarabia (and set down in the *Journal des Balkans*) of the events which preceded a hand-to-hand struggle last Christmas between Roumanians, some fighting as Russian soldiers, the others as Austro-Hungarian!

They are facing one another in the newly-dug trenches, when to the ears of the Bessarabian soldiers of the Tsar are borne from the enemy trenches the sweet sounds of an old Roumanian melody. In spite of the imposed order of silence, a plaintive voice is raised in reply, and, others joining in, song answers song throughout that Christmas night across the icy space that separates the trenches. The Russian commanders are perplexed, anticipating but a lukewarm attack under such circumstances, but the Roumanian officers reassure them with a bitter smile, for they know their men. And in the morning, when the order for the attack is given, the Bessarabians charge the enemy trenches with an *élan* that only those of their own blood know how to resist. In a short while the Austrian trenches are taken, but there are few who can call themselves victors. The ground is littered with Austrian and Russian uniforms, which cover the mangled remains of those who, from their childhood, have thought the same thoughts, spoken the same tongue, and gazed with the same wistful look towards their Carpathian mountains, the one from the east, the others from the west.

All war, of course, is fratricidal, but it becomes doubly tragic when kith and kin go forth to slay each other, with nought but brotherly love in their hearts. Italians have done it, Slavs have done it, but none to the same degree as the Roumanians. Over a million of these have been fighting against each other for causes which are not their own, and with a bravery which, in the Habsburg Monarchy at least, has not been equalled.

Six hundred thousand Roumanians from Transylvania have fought alongside their bitterest enemies and implacable persecutors, the Hungarians, against their dearest foes; 300,000 Bessarabians have faced them. Many thousands of Roumanians have been enrolled in Bukovina, Bulgaria, and Turkey to fight for a victory which would spell their national ruin.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, March 12.

Depression in the Capital.

The news from Constantinople is very meagre, and up to the present there is no absolute confirmation of the report of the death of Enver. Nor is it possible to say to what extent the daily rumours of unrest and demonstrations in Constantinople are correct. It is quite conceivable that the advance of the Russians in Asia Minor is having a very disquieting effect, though no mention of the fall of Erzeroum is made in the papers; but what appears to be distressing the people most just now is the prospect of starvation.

The price of everything continues to increase, and there are indications that Turkey's wheat supplies are coming to an end. The authorities have lately requisitioned even canary seed, and the experiment has been tried of grinding this seed into flour for mixture with wheat. In fact, all cereals are being utilized for this purpose, dried beans and even linseed being used for making bread. In many places this diet has produced much sickness, and cases of dysentery and typhus are reported to be numerous in Constantinople.

Turkey is clearly drawing to an end of her available resources. Coal is evidently becoming scarce, as the Electric Company has been obliged to abandon the tramway service between Galata and Pera.

The New Paper Issue.

On February 14 the Senate passed the Bill for a further issue of paper money to the extent of 1,240,000 liras, but, as anticipated, the public are avoiding this paper currency, and according to latest information it had depreciated to the extent of 18 per cent. compared with the gold lira. Landed property, it is said, is going up in price, owing evidently to holders of these "scraps of paper" wishing to invest their holdings in something more secure.

The Situation at Smyrna.

The situation in Smyrna is even more desperate than in the capital, and the whole of the people, Turks and Christians alike, are longing for relief. The Europeans continue to be well treated, but all departures from Vourla are now prohibited.

Considerable damage, it is said, has been done to the forts in the Gulf by the recent bombardments by the Allies, and the general opinion there is that there would be no real resistance if an attempt were made by the Allies to occupy Smyrna.

(From a Correspondent.)

News of British Residents.

Late word from Constantinople says that the city is outwardly quiet, but very discontented underneath. For the present the Germans are in the ascendant, but friction is great. Many English people remain in Constantinople unmolested, though they have had their anxieties. Lady Pears and Miss Pears are well, as are also the Gatheral family, Mr. Frew, Dr. Wigram, of the Memorial Church; Miss Sarell, Mrs. Harry Baker and her mother, Mr. and Mrs. George Baker and their children, and the other remaining members of the English colony.

THE GERMANS IN BULGARIA.

(From Our Own Correspondent.)

Bucharest, February 29.

A Bulgarian student recently in Roumania related some interesting incidents illustrating the relations between Germans and the native population. The Germans are absolute masters. They enter uninvited into private houses, ask for what they want, and are given it without remonstrance by the inhabitants, who have received the order to submit to everything, "for all will be well in the end."

A group of German officers entered a Sofia restaurant and, wishing to have it to themselves, ordered the Bulgarian guests to withdraw. Those who protested were unceremoniously bundled out.

The post and telegraph offices are run by German functionaries. If a telegram is handed in in Bulgarian, the official refuses it on the ground that he understands no Bulgarian. "Nur Deutsch, nur Deutsche," is all the explanation the native gets.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, March 2.

Kingly Precautions.

It is known that every preparation has been made at the Royal palace at Sofia for instant departure should the turn of events lead to a rising against the overbearing Germans, and consequently against the dynasty. Moreover, a suite of rooms in one of the leading hotels in Vienna has been reserved for some weeks now "for a high personage," and at Coburg there have been the preparations that are usual when "Tsar" Ferdinand is expected on a long visit. In short, there can be little doubt that Royalty at Sofia is uneasy, and has taken precautions in case of a hasty flitting becoming advisable.

"Brothers in Arms."

The dissensions between Bulgarian and German officers and between members of the two armies generally are increasing daily. Fearing a plot in the army, the Bulgarian Government has dismissed the Macedonian volunteers, who are accused of sowing the seeds of discord between the soldiers of the two countries. More than 2,000 Macedonian volunteers, who were in garrison at Veles, have been turned out of the army on the pretext that there is not sufficient barrack accommodation for them.

From another source worthy of credence comes news that Bulgarian soldiers fired on the Balkan Express, in which some German officers were travelling, and that some of the officers were shot. It was impossible to hush up this incident, so, knowing what a disastrous effect on the country would be produced by the publication of the truth, the Bulgarian authorities have attributed the attempt to Serbians. Hatred of the Germans has spread right and left, and the high-handed conduct of the Huns does nothing to lessen the feeling they have inspired so quickly in their "allies."

The steady increase of desertion from the Bulgarian army has so perturbed the military authorities that the subject has been discussed at a Council of Ministers in Sofia. It was decided to publish an order of the day warning the troops that any soldier deserting may be the cause of his family's arrest.

The Bulgars at Monastir.

According to news received from Monastir, the Bulgarians continue, with a cruelty which nothing can explain, to persecute the Greek element and even the Roumanian element, not only in the town itself, but in the villages also. A few days ago the Bulgarian authorities arrested the Greek notable Anastasis G. Zalles, librarian and former interpreter to the Russian Consulate, as well as several of his compatriots, who, when the news was forwarded, were still in prison. M. Pinneteu, a Roumanian, and former interpreter to the Italian Consulate, was also arrested and imprisoned on a most trumpery charge.

The *Times* correspondent in the Balkan Peninsula reports, under date of March 18:—The murder of Naum Tufenkchieff, the prominent Macedonian revolutionary, which took place in the open street on the 10th inst., has caused a great sensation in Sofia. Tufenkchieff and his family were among the bitterest opponents of Stamboloff, and were known to have been concerned in the murder of that statesman. After the crime Naum took refuge in Russia, and then proceeded to Macedonia, where he organized revolutionary movements. After the proclamation of the Constitution he associated himself with the Young Turk leaders and became an intimate friend of Enver and Talaat. Last year he played an active part in bringing about the Turco-Bulgarian *rapprochement*. At the same time he made a large fortune by supplying the Turkish Government with bombs like those used by the Macedonian bands.

TANGIER TO TEHERAN.

I am indebted to a correspondent in Salonika for another copy of the *Lloyd Ottoman*, accompanied by a newspaper wrapper which fills me with pure delight. For the address printed on it would, I think, be hard to beat. It is:—

Mrs. Saltiel Frères,
SALONIQUE,
Bulgarie.

This is, indeed, a case of counting your chickens before they are hatched. Or is it merely an example of thrift? Perhaps the Turco-Germs had the wrappers ready for the Great Event and now think it is a pity to waste them. But I wonder what the Greek authorities at Salonika think about it. Possibly, viewing the Allied troops who are making themselves so comfortable in the place, they feel that they can afford to smile.

***

The *Lloyd Ottoman* referred to continues to run *Punch* very hard. Under the heading "La question des vivres," it reprints from the *Tanin* a truly delightful article, recommending the citizens of Constantinople to utilize the gardens attached to the kiosks in the suburbs for the purpose of growing the satisfying potato, the feeding haricot, and the succulent onion. Carried away by enthusiasm at the picture thus conjured up, the scribe proceeds to show how the Government and the schoolchildren between them may help the good work, the former supplying the necessary instructions and seeds, the latter providing the labour. But it will not be only the little scholars who will convert these useless gardens into useful onion beds and potato plots: "Alors dans peu de temps, l'on verra des groupes de cultivateurs citadins, sortant de la ville, a l'aube, en chantant, et nous sommes surs que, parmi ces cultivateurs, seront les gens les plus haut placées de la ville." How truly rural! I would gladly contribute my mite to a fund for purchasing the seeds, if only I might have the privilege of seeing "les gens les plus haut placées de la ville . . . sortant . . . a l'aube, en chantant." The sight of Enver and Talaat striding forth at dawn, hand in hand with H.E. the German Ambassador—who, of course, would be an ardent supporter of so excellent a scheme—singing ("Die Wacht am Rhein"), and followed by a long string of wheezy pashas, each accompanied by his own little schoolboy friend, would, indeed, be worth many packets of radish seed.

***

But it is not only the *Tanin's* scribe's effort that I admire. The *Lloyd Ottoman* itself provides a feast of good things. Its news service is unique—and its cheek is positively phenomenal. In its News of the City it announces, without a flicker of the eyelid, so to say, that the Marquis Pallavicini, Austro-Hungarian Ambassador in Constantinople, "a été chargé d'exprimer au gouvernement ottoman les *condoléances les plus chaleureuses* du gouvernement austro-hongrois . . . à l'occasion du décès du prince-héritier Youssouf Izeddine." The italics are my own. Poor Turkey!

***

I see that the rupee has been proclaimed currency in Egypt until further notice. This innovation may be popular enough in the towns, where unfortunately money has got to be spent, but in the rural districts I can imagine the fellaheen regarding the alien coin with much disgust. It is silver certainly, but that is the best which may be said about it. There is absolutely no fun in burying coins for the benefit of your heirs if a further proclamation may rob them of their face value in a day. And in matters of finance the fellah looks with distrust upon all new-fangled methods of banking, and sticks to the sinking fund of his fathers. If he cannot bury his wealth, however, he has it melted down and converted into bracelets and anklets for his wives. It gratifies the women, and, as the weight of the silver is safe, it pleases all parties—except the banks.

***

An Englishman lately returned from Lyons, whither he went on business connected with the Exhibition, tells of an incident that he witnessed there which reminds me of a passage in Sir Mark Sykes's "Dar-ul-Islam." To the Lyons Exhibition there came, by invitation of the French Government, a Moroccan potentate of truly Oriental magnificence and of a portliness beyond question. Accompanied by his suite and a few select French officials, this distinguished visitor made a round of the exhibition and showed a lively interest in all he saw. The furniture especially interested him; and presently, observing a very fine revolving chair, he walked over to it and sat down upon it. At once there was a crash; the pillar on which the seat revolved snapped off, and the Kaid rolled in the dust. His suite and the officials were horrified, never doubting that the great man was the victim of some fell Anarchist or Hunnish plot. Before they could recover their wits he was on his feet again, shaken and rather startled, but unharmed. But, alas for his dignity! So firmly had his ample form become wedged into the chair that the upper portion still clung to him, reminding the spectators of a snail and its shell. The picture was too much for his usually respectful suite, and even the polite Frenchmen found it necessary to turn away momentarily to hide a smile. For a moment the Kaid looked black. Then he saved the situation, and his own reputation, in the only possible way—by joining in the laugh. But he did not buy the chair.

***

Week by week when I read my copy of THE NEAR EAST I observe correspondents in all parts bewailing the rise in the cost of living. In Constantinople the unlucky citizens have long been in sore straits, and in Salonika, Athens, and other places prices seem to be getting well on to the "famine" mark. I am sorry for all the people who can't get enough sugar, tea, etc., etc. But I am afraid my sympathy, which is genuine and keen, is due in part, at least, to the existence of a more or less similar state of affairs in this country. At any rate, the various correspondents who bewail the present high prices need not think that it is only they who are "doing their bit." We are doing ours, too, and we have the satisfaction of knowing that the enemy is doing *his* also—and doing it with a very ill grace indeed! There may be shortage of supplies at Salonika, and appetites abnormal in Athens, but they are not to be compared with the hunger of the hyena-like Huns or the vast vacuums in Vienna. So we can afford to grin and bear it—and, we hope, the others can't.

***

If I am told that Salonika and Athens, being "neutral," are not interested in the defeat of the Kaiserlichs—well, frankly, I decline to believe it. The Greeks, for reasons of their own, may not be willing to risk a fight against the Central Powers, but they are a long-headed people, and I am perfectly sure that the majority of them are fervently hoping that the German peril that has threatened the peace of Europe so long is going to be crushed utterly once and for all now. So are all the other neutrals. And the Huns are beginning to realise it at last. Hence their fury.

***

There is, I believe, an arrangement in Egypt whereby men called upon to serve in the Army may purchase exemption for the sum of £E20. This sum, or part of it, is devoted to a fund out of which men who have served the period required by the Government receive a bonus when they leave the Army. In this manner the shirkers are forced to assist the workers, and the soldier who is too keen or too poor to claim exemption has the satisfaction of knowing that the eligible slacker is not allowed to escape scot free. Such a scheme was at least contemplated some years ago, and to the best of my belief it was put into effect. It seems to me that it would be an excellent thing to legislate to a similar end in England now. As was to be expected, the Compulsory Service Bill has shown some queer and peculiar wrigglers in its net as it was drawn in. Personally, I quite fail to see what claim some of these people have upon the protection of our civil laws. They are British only in name, and if circumstances compel us to extend our hospitality to them until after the war, let them be made to pay, and pay heavily, for the honour.

***

The Albanians are a brave people, and doubtless possess many admirable qualities, but their sense of proportion hardly appears to be well developed. A few days ago I was shown a letter written by one of them quite recently, in which he suggested that the European Powers should sink their differences and devote their energies to reconstituting an autonomous Albania again. He also hoped that the Allies would do their best to restore the "rightful" ruler, the good Mpret Wilhelm of Wied—who, by the way, has recently been "proclaimed King at Durazzo, in the presence of the German and Austrian representatives." Now, I observe, an Albanian Bey has put forward in Budapest a proposal for terminating the annoying British blockade. This bright idea is thus reported by the Budapest correspondent of the *Morning Post*:—

> The Central Empires should present a note to the Entente Powers declaring that on such and such a date they would cease to supply the population of the occupied territories with foodstuffs unless the blockade were discontinued as far as foodstuffs were concerned, and that they would carry out the threat with all the inhumanity which characterises the blockade itself. He suggests that this would involve the total starvation of at least ten million people in Belgium and in the Balkans, and as many in Russia and Poland, but he is absolutely certain that the note would have the desired effect, and that no world horrors would ensue. "If the British," he said, "are ready to starve a hundred million civilians, the Central Empires can also afford to do the same to twenty millions."

Evidently the worthy man is a thorough-going believer in the Doctrine of Frightfulness. The *Post's* correspondent adds that "the noble Bey is still at large, and even receives certain attention on the part of statesmen of high standing."

NEAR EAST BOOKSHELF.

THE SOUTHERN SLAVS.*

We have before us four useful pamphlets, well printed and very cheap, which are published on behalf of the Southern Slav Committee. The members of this committee, the foremost representatives of the Southern Slav people, are now in London, and are furnishing the British public with information regarding their nation and its aspirations.

They are well advised in doing so. Many prominent Englishmen have already written on Serbia, Montenegro, Bosnia, Dalmatia, Croatia and other Southern Slav countries; among them great statesmen, as Gladstone; philologists, as W. R. Morfill and Nevill Forbes; historians, as E. A. Freeman, G. M. Trevelyan, W. Miller, F. S. Stevenson; poets, as Sir John Bowring and Owen Meredith; archæologists, as Sir Arthur Evans and Sir Thomas Jackson; geographers and travellers, as A. A. Paton and Miss A. P. Irby; and political writers and students of diplomatic history, as R. W. Seton-Watson, Prof. R. M. Burrows, A. H. E. Taylor, H. W. Steed and A. Stead. Their work is by no means insignificant, and it provides very useful material for the English reader. We wish, however, to see the Southern Slavs writing on their own country, to hear their own voice, to know their own opinions, to be acquainted with their aspirations. What are their views and aims, especially in connection with the War? What do they expect from this greatest crisis of the world?

They expect only one thing, viz., to quote their words, "the union of all the branches and all the territory of Southern Slav race into one independent State." Among Southern Slav countries, only Serbia and Montenegro are independent States. The others—Bosnia, Dalmatia, Croatia, Istria, parts of Southern Hungary, Carniola, Carinthia and Styria—are still under the rule of Austria-Hungary. In these countries are living the same people as the Serbians and Montenegrins; and this people, whom the committee really represent, wish to be free from the Austrian yoke and united to their brothers of Serbia and Montenegro in one single State. "Serbia and Montenegro," says the committee, "are the champions of liberation for all Southern Slavs alike, and our helpers in the common task of establishing our national existence in our own united country." With this object in view, the committee will inform the British public opinion "of the actual condition of affairs" in their countries. The four pamphlets are intended to supply such information.

The first pamphlet, "The Southern Slav Programme," contains, as its title denotes, the programme of the Southern Slav people. The first part of the pamphlet explains the aspirations of this people for their unity, the connection between such aspirations and the interests of the Allies, the reason why Austria-Hungary and German Imperialism are opposed to this unity, the geographical and economical interdependence of these countries, which cannot be reasonably separated but are predestined to be united and mutually completed. The second part deals with Italy's intervention, and defends the national rights of the Southern Slavs on the eastern coast of the Adriatic.

The second pamphlet, "The Southern Slavs: Land and People," gives a description of the Southern Slav countries, their geography, population, administration, public instruction, religion, commerce, industry, navigation, etc. The description is accurate, and provided with statistical data. It seems that every country is described by its respective countryman: Bosnia by a Bosnian, Dalmatia by a Dalmatian, Croatia by a Croat, and so on.

The reading of the third pamphlet, "A Sketch of Southern Slav History," creates a feeling of real tragedy. This unfortunate people had in the past their independent States: the Slovenes in the VII. and VIII. centuries, the Croats in the X. and XI. centuries. The kingdom of Serbia was in the fourteenth century a very large State, extending to the Ægean and the Adriatic, and was the most powerful on the Balkan peninsula. The kingdom of Bosnia lasted till the end of the Middle Ages. These States would have probably united in the XV. and XVI. centuries, and become one homogeneous realm, including the whole Southern Slav race, had it not been for the conquest by the Turks, and later by Austria and Venice. But during the centuries of foreign domination, the people resisted stubbornly, and since the beginning of the nineteenth century they have created two independent States, Serbia and Montenegro, and have manifested their strong national spirit in the countries which are not yet free.

That the Southern Slav people were not without culture is clearly shown by the pamphlet "Southern Slav Culture." They have produced many remarkable monuments of literature and art. What a rich literature is the Serbian mediæval literature, and how fine are the architectural monuments, the monasteries founded by the Serbian kings! Nor did we generally know that the Southern Slavs had their Renaissance and their Reformation in Ragusa and in the Slovene lands, and that there flourished amongst them a brilliant poetry and an extensive study of the Bible in the time of Tasso and of Luther. The modern times are also remarkable, and a rich and artistic production is to be noticed in poetry, novels, drama and criticism. To what extent these people are poetically gifted is proved by their splendid well-known ballad poetry.

The "Southern Slav Library" is a very useful compendium. In four small pamphlets the reader can find full and exact information of the geographical, historical, literary and political state of the Southern Slavs. The pamphlets are clear and well written, and they are provided with a good map of Southern Slav territory. This edition is especially recommended for those who have not the time for a more exhaustive study, but desire to be rightly informed upon a subject of such topical interest and such importance in the future.

* The Southern Slav Library. No. I.—IV. (London: Nisbet and Co., Limited.) No. I. "The Southern Slav Programme," pp. 32, 3d. No. II. "The Southern Slavs: Land and People," pp. 64, 3d. No. III. "A Sketch of Southern Slav History," pp. 32, 3d. No. IV. "Southern Slav Culture," pp. 24, 3d.

ARABIAN JOURNALISM IN PARIS.

We have received the two first numbers of *Al-Moustakbil* (The Future), a new Arabic journal published by "Arabs for the Arabs," every Friday at 29, Rue de Liége, Paris. It is very well written and printed, and deserves to be well supported.

In these two numbers it puts the case of Islam and Arabs generally against the Young Turks in its proper light, as a beginning of a long-suppressed indictment, and it deals with the future of Syria, and with German misdeeds in Turkey, in a very able manner. Its special news from Turkey gives the names of several notables lately hanged or imprisoned by the Turks as political opponents of the Enver and Talaat administration. To add to the already unbearable misery of the people under the Young Turks' rule, cholera also seems to have appeared at Aleppo and locusts at Homs.

GERMANS IN THE BALKANS.

A Reuter's message from Athens, dated March 14, and delayed in transmission, states:—According to messages from Florina, the Germans have withdrawn their remaining troops from Serbian Macedonia, and are transferring them to the Western front.

The reduction of the German forces in the Balkans is said to be causing all the more alarm among the Bulgarians, who fear that in the event of an early attack by the Allies they would be unable to repel them single-handed. The attempt of the Bulgarian Government to minimise the fall of Erzeroum is typical of the methods employed to deceive the public. There is every reason to believe that the steady advance of the Russians in Eastern Asia Minor is a source of considerable preoccupation not only to Turkey but to Bulgaria.

A Bucharest telegram reports that, according to a statement made by a diplomatist of a neutral State, Bulgaria has demurred to the request of the German General Staff to march against Salonika, maintaining that Germany and Austria have not fulfilled their pledges.

The India Office on Saturday issued the following:—

A Turkish force, accompanied by three German officers, attacked a British outpost at Imad—about ten miles from Aden—on the 16th instant, suffered a severe repulse, and were pursued for four miles.

Next day seventeen Turkish dead were found on the field. Our losses were: One Indian soldier killed, one British officer and sixteen rank and file wounded.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Mar.	1916. Mar.		1334. Jumada I.	5676. Adar II.
24	11	Friday	19	19
25	12	Saturday.....	20	20
26	13	Sunday	21	21
27	14	Monday	22	22
28	15	Tuesday	23	23
29	16	Wednesday	24	24
30	17	Thursday	25	25

On Wednesday the King and Queen inspected, in the Quadrangle of Buckingham Palace, twenty-five cars of the complete ambulance unit, consisting of fifty ambulances, with transport wagons, repairing car, four motor-cars, and six motor-cycles, which has been presented by the cinematograph trade to the British Red Cross Society and the Order of St. John of Jerusalem in England, for service in Mesopotamia.

On Sunday the War Office issued the following statement:—H.R.H. the Prince of Wales has arrived in Egypt on appointment as Staff-Captain on the Staff of the General Officer Commanding-in-Chief the Mediterranean Expeditionary Force.

Under date of the 18th inst., Reuter's Cairo correspondent reported:—The Prince of Wales has arrived at Ismailia to join the Staff. During a short visit to Cairo, where he stayed at the British Residency, his Royal Highness lunched with the Sultan.

The arrival of his Royal Highness in Egypt will certainly cause much satisfaction not only amongst the Allied troops now stationed there and the British colony, which is famous for its loyalty, but also to a very large number of Egyptians. For though Turco-German propaganda may have had some slight—very slight—success amongst a few of the half-educated class, the bulk of the Egyptian people appreciates the benefits of British rule, and will heartily welcome the opportunity of showing its appreciation that is offered by the presence of the King's eldest son.

Lord Kitchener had an audience of the King on Wednesday evening.

Prince Christopher of Greece, youngest brother of King Constantine, has left Athens for Petrograd.

On Tuesday, the first day of the Persian New Year—the Spring Equinox—H.E. the Persian Minister received the members of the Persian colony and friends at the Legation in the afternoon. Among those present were his Highness Naar-ul-Mulk, late Regent of Persia; the Russian Ambassador, Sir Hugh Barnes, Sir M. M. Bhownaggree, Sir Walter Townley, late British Minister at Teheran; Syed Erfan Ali, Mr. Mohammed Ishaq, Mr. M. J. Ispahani, Lieutenant-Colonel Fox, Mrs. Manvers Moorsom, Mr. B. W. Stainton, Mr. C. W. Wallace, Mr. C. Greenway, Mr. S. A. Kapadia, Mr. Salin, Councillor of the Russian Embassy; Persian students, representatives of the India and Foreign Offices, and members of the Colony. The Persian Minister, on behalf of the Colony, despatched a congratulatory message to the Shah of Persia.

Writing on February 29, our Bucharest Correspondent reports:—Queen Marie has been suffering for some weeks from an attack of phlebitis, from which she has as yet not entirely recovered.

Prince Alexander of Serbia and M. Pashitch left Rome on Saturday night to visit King Victor at the Italian Front. During their short stay in Rome they saw Signor Salandra, the Premier, and Baron Sonnino, the Minister for Foreign Affairs. M. Pashitch was also received by the Pope.

Prince Alexander presented a sum of £120 for distribution among the families of Romans who have been called to the colours.

Lady Paget arrived in Bucharest last Friday from Sofia and met with a most sympathetic reception. The station was crowded with Roumanian ladies and many members of the British colony in the Roumanian capital. Representatives of the Roumanian Government were on the platform to greet her, as were the staffs of the British, Russian, and Serbian Legations, and the Bulgarian Minister, M. Radiff.

On Saturday Lady Paget was received by the Queen of Roumania. On Sunday she lunched at the palace, and in the evening a dinner was given in her honour at the British Legation; while in the afternoon she and her party were entertained at tea by Mme. Take Jonescu. On Sunday night Lady Paget and her party left Bucharest for Petrograd by special train, being accompanied as far as Jassy by M. Marinkovitch, the Serbian Minister.

The *Times'* correspondent in the Balkan Peninsula telegraphed on March 19:—Before leaving Lady Paget expressed great satisfaction at the friendly reception accorded to her here. The members of the mission were the guests of the Government at one of the principal hospitals. Roumanian journals all write in warm appreciation of the heroic conduct of the British Mission, and of their large-minded devotion to the higher duty of humanity, which made no discrimination between friend and foe. The long sojourn of the mission in Sofia was due to the difficulties of arranging for the proposed journey through Austria. The Austrian Government first offered a passage only to the ladies, and subsequently agreed to admit the whole mission; but the closure of the frontier followed. The members of the mission state that they were not treated as prisoners during their stay in Sofia, but enjoyed complete liberty of movement.

M. Chedo Miyatovitch has left New York for Canada.

Vice-Admiral Arthur Limpus had the honour of being received by the King on Wednesday.

Lord Edward Cecil, we are glad to learn, has made a good recovery from his recent operation, and has now returned to town.

Lieutenant-Colonel W. H. Willcox R.A.M.C., M.D., physician to St. Mary's Hospital, has been appointed consulting physician to the Mesopotamia Expeditionary Force, with the rank of Colonel.

Dr. and Mrs. Marcellus Bowen left Constantinople by the Balkan express on February 28, and are now in Geneva, Switzerland, where they expect to remain about three months. Letters will reach them if addressed c/o the American Consul, Geneva. Dr. Bowen, as many of our readers will know, is head of the American Bible House in Stamboul.

Our Khartoum Correspondent writes, under date February 28: Recent visitors to Khartoum include M. Voisin, a Belgian judge; Mr. O. C. Williams, formerly manager of the Bank of Australasia in Tasmania and elsewhere; and Dr. R. J. Pope, also from Australia.

Mr. Frank A. Couché, late Chancellor of the American Legation in Bucharest, has been arrested at Sofia. It transpires that, wishing to get through to Salonika, he had some difficulty in obtaining a permit, but eventually succeeded. According to the Bulgarian version of what subsequently took place, the authorities discovered that he had disbursed a considerable sum in exchange for the permit, and this being a contravention of the military law, he was arrested, and has been sentenced to a year's imprisonment. Mr. Wopicka, the United States Minister in Bucharest, is, we hear, exerting himself to the utmost to obtain his release.

We understand that Lieutenant N. D. Cumberbatch who, as reported in these columns last week, has been wounded, received his injury while leading his men in a charge, being shot in the leg. He is now at the Officers' House at Osborne, where he arrived on the 17th inst., and we are glad to learn that his wound is not regarded as dangerous.

A subscription has been started in Egypt for the purpose of erecting a monument to the late Lieutenant-Colonel Snow Bey, who was killed near Mersa Matrou recently. One hundred and fifty pounds has already been collected.

Lieutenant Norman D. Holbrook, R.N., who was awarded the V.C. for his exploit in his Majesty's submarine B. 11 in the Dardanelles, has received the Cross of a Chevalier of the Legion of Honour, conferred upon him by the President of the French Republic, on the recommendation of the Minister of Marine, in recognition of his achievement.

The French Government has recently conferred the "Croix de Guerre" on Second-Lieutenant Godfrey Barker, R.H.A., in recognition of his services at Cape Helles.

It will be difficult to picture the Scots Guards without Colonel Henry Fludyer, whose retirement is announced after fifty years in the Army, says the *Daily Graphic*. An old Westminster boy and brother of Sir Arthur Fludyer, Bart., he served with the Egyptian Expedition in 1882 and took part in the action at Mahuta and the battle of Tel-el-Kebir. He won another clasp for Suakim in 1885. By 1892 he was in command of the 2nd Battalion Scots Guards, and from 1898 to 1903 he was commanding the Scots Guards and regimental district, enjoying great popularity in Scotland. Colonel Fludyer retired some years ago, but was reappointed to the command on the outbreak of war.

The Spanish Ambassador in Petrograd has obtained the release of Assim Bey, the Ottoman Minister to Persia, who has been a prisoner in the hands of the Russians. Assim Bey is leaving for Switzerland.

The King has been pleased to give permission to Harry de la Rosa Burrard Farnall, Esq., C.B., C.M.G., British Commissioner on the Caisse de la Dette Publique of Egypt, to wear the Grand Cordon of the Order of the Nile, which decoration has been conferred upon him by his Highness the Sultan of Egypt in recognition of valuable services rendered by him.

The *Gazette* announces that the King has been pleased to give the undermentioned gentlemen permission to wear decorations (as stated against their respective names) which have been conferred upon them by his Majesty the King of Serbia in recognition of valuable services rendered by them as members of the British Naval Mission to Serbia:

Third Class of the Order of Saint Sava—

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

Captain (temporary Major) Bertram Nowell Elliot, D.S.O., R.M.L.I.

Fourth Class of the Order of the White Eagle — Lieutenant - Commander Charles Lester Kerr, D.S.O., R.N.

Four motor ambulance launches have been presented to the British Red Cross Society for service on the Tigris with the Mesopotamian Expeditionary Force. They have been subscribed for by the residents of Buckinghamshire, and have been named "Mid-Bucks," "South Bucks," "Wycombe," and "Slough" respectively, the four districts in which the funds were raised. At Romney Lock, Windsor, on Saturday afternoon the Bishop of Buckingham dedicated the boats, which were afterwards named by Princess Alexander of Teck, and formally accepted by her Royal Highness on behalf of the society. The Princess hoped the boats would prove a great comfort and blessing to our brave troops who are fighting in circumstances of great difficulty in Mesopotamia.

Baron Otori, Councillor of the Japanese Embassy in Rome, who is on a mission to Greece, has been received by King Constantine.

The W.A.R.C. is sending out to Corfu, as a gift to Colonel Borisavljevitch, President of the Croix Rouge, Serbia, a motor-car, to take the place of his own that was burnt, together with many other cars, in the retreat from Serbia.

Lieutenant-Colonel M. Yoksimovitch, of the Serbian Legation in London, who has been visiting Paris on a special mission, has returned and resumed his duties.

A telegram has been received from Corfu announcing the safe arrival there of the first medical mission sent out with a large quantity of stores by the Wounded Allies' Relief Committee of Sardinia House, Kingsway, W.C., to help Serbian soldiers suffering from fever and wounds in the island of Vido. More doctors, nurses, and stores in the way of tents, beds, clothing, and food stuffs are urgently needed, and it is the intention of the committee to despatch a second mission with, if possible, all the necessaries asked for, at the earliest possible moment. Contributions for the mission will be gratefully received by the Committee at Sardinia House.

Dr. Elsie Inglis, of the Scottish Women's Hospitals for Foreign Service (N.U.W.S.S.), will address a meeting at the Criterion Theatre on April 4, at three o'clock, on her experiences as a prisoner of war.

We are glad to see that the Egyptian *Journal Officiel* of February 28 publishes the appeal made by the Serbian Minister in London on behalf of his distressed countrymen. Egypt, which has done so well in regard to contributions for sufferers by the War, is sure to respond well to this appeal.

APPOINTMENTS, PROMOTIONS, Etc.

The *Gazette* announces the appointment of Lieutenant-Colonel Claude Tulloch Ducat as His Majesty's Consul at Muskat. Colonel Ducat entered the Army in 1887, and became a captain in the Indian Army eleven years later. He was made major in 1905, and the following year was appointed Consul at Kerman, where he remained until 1909. In 1914 he was reappointed to the same post.

Last Saturday, at Bordeaux, M. Islavm, the new Russian Minister to Montenegro, presented his credentials to King Nicholas.

The King has been pleased to approve M. Marcel Léon Pierre Margarot as Vice-Consul of France at Larnaca for the island of Cyprus.

Our Bucharest Correspondent reports (February 29):—

M. Arion, Secretary of the Roumanian Legation at Petrograd, who was recently in Bucharest, has returned to his post. Lieutenant Tocineanu accompanies him in the quality of Attaché of the Legation.

M. Schainowitch, Director of the Serbian Ministry for Foreign Affairs, arrived a few days ago in Bucharest. He has since left for Russia, together with General Prince Vissolkine.

M. Jean Lahovary, First Secretary of the Roumanian Legation in Paris, who had come to Bucharest on the occasion of the death of his mother, Mme. Simone Lahovary, has now returned to Paris.

The Roumanian Consular Service has had a loss in the person of M. Pierre Mavrogheni, who died a few days ago at Odessa. He had occupied the post of Consul-General in that city for about fifteen years.

The undermentioned officers have been attached to the Egyptian Army as Special Service officers, with the temporary rank of Bimbashi, and attached for duty as under:—

Major R. N. Dobson, the King's Own (Royal Lancaster Regiment), to Cairo District.

Major B. de W. Weldon, the Lancashire Fusiliers, to Cairo District.

Major C. C. Lamb, the Black Watch (Royal Highlanders), to 9th Sudanese.

Major W. C. T. Hibbert, the King's Own (Royal Lancaster Regiment), to Sudan Government.

Captain F. H. Blackwood, D.S.O., the Lincolnshire Regiment, to 13th Sudanese.

Captain B. T. Phillips, the Welsh Regiment, to 12th Sudanese.

Captain A. C. Marsh, the East Lancashire Regiment, to Cairo District.

Captain O. H. Warne, the Prince of Wales's (North Staffordshire Regiment), to Sudan Government.

Captain G. C. Gowlland, Royal Engineers, to Mil. Works Department.

Fathiella Khan has been appointed Secretary to the Persian Legation.

The promotion to the rank of captain of Lieutenants H. W. Stock and C. E. Binns, both of the Royal Marines, has been gazetted.

OBITUARY.

THE LATE M. HENRIQUES.

Our Cairo Correspondent writes (March 8):

The Anglo-Egyptian colony has lost one of its prominent members in the person of Mr. R. Q. Henriques, who died on Saturday evening after a long illness. Mr. Henriques had been associated with Egypt since 1891, when he came out to open a branch of the Manchester house founded by his grandfather. He always took a prominent part in the commercial affairs of the British community, and had been president of the Cairo Committee of the British Chamber of Commerce and director of several important companies, as well as Assessor in the Mixed Courts. The development of Maadi, the new suburb on the road to Helouan, owed much to his energetic efforts as managing director of the Delta Land and Investment Co., Ltd., which owned all the land in and around that flourishing townlet. Mr. Henriques, who belonged to the Jewish faith, a fact of which he was exceedingly proud, was buried on Sunday afternoon in the Israelite Cemetery at Old Cairo, whither a representative gathering of the community and of his friends followed his mortal remains.

No obituary notice of the deceased would be complete without a reference to the charitable side of his character. A keen man of business, who drove a hard bargain and stuck to it, Mr. Henriques was always to the fore when any charitable work was to be done or required assistance. Few knew the extent of his kind-heartedness and of his generosity; those who did respected his love of anonymous or unobtrusive giving, and admired him for it. Many a young fellow has owed his extrication from unfortunate difficulties into which he had got, or a fresh start in life, to this publicity-shunning benefactor, of whose existence he had previously not been aware, and who never sent any deserving case empty away. If Mr. Henriques will be mourned by the Anglo-Egyptian and Jewish communities in general, he will be particularly missed by those responsible for the administration of charitable institutions or for the control of those communities who had become accustomed to turn to him for assistance, and to find in him ready financial support, whenever the need arose.

The *Egyptian Gazette* of March 7 reports: "Mr. Olney Arnold, former United States Diplomatic Agent at Cairo, died at Lisbon on Sunday afternoon last. It is stated that his death may have been hastened through his strenuous duties while in Cairo recently in connection with his various duties and the extensive relief work carried on in Syria." Mr. Olney Arnold, who was born at Rhode Island in 1861, was appointed Agent and Consul-General at Cairo in 1913.

Lieutenant-Colonel H. Maclear, D.S.O., East Lancashire Regiment, commanding 13th Battalion the Royal Scots (Lothian) Regiment, is reported killed in action in France on March 15. For two years (1903-1904) he was employed on Special Service with the Somaliland Field Force, and commanded the 9th Somaliland Camel Corps in East Africa. He saw much service in India.

DOMESTIC ANNOUNCEMENTS

BIRTH.

SEMPLE.—On March 11, at 80, Montpelier Park, Edinburgh, the wife (née Major) of the Rev. S. H. Semple, M.A., C.F., Tiberias, Palestine, of a daughter.

MARRIAGES.

PREECE-DUNCAN.—On the 21st, at Holy Trinity, Sloane Street, John Richard Preece, C.M.G., late H.B.M. Consul-General for Ispahan, to Mary I. S. Duncan, widow of the late G. G. Duncan (née Graham Allardice).

TURNER-HOLMES.—On January 20, at All Saints, Dharwar, India, by the Rev. G. Hewitt, chaplain, Ed. Ellis Turner, Indian Police, to Jeannette Fisher, second daughter of his Honour Judge Holmes and Mrs. Holmes, of Nicosia, Cyprus.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.

MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

CYPRUS PALACE HOTEL
NICOSIA, CYPRUS.
Charming position. Beautifully situated in the best part of Nicosia.
Most magnificently built and furnished.

TURK AND ARAB.

If the German official statement is to be believed, Enver Pasha did actually undertake a tour of inspection in Syria, Palestine and Arabia, as far as Medina, and has now returned to Constantinople. The value of the announcement, whether accurate or not, lies in the fact that it implies that the Teuton-Enver clique is still master of the situation in the Turkish capital. So long as this state of affairs continues, there can be no question of Turkey abandoning her alliance with Germany. There may be, and undoubtedly are, many Turks who would like to see the end of German domination in the Ottoman Empire, and they will find means to make their views known abroad. But with Enver Pasha firmly seated in the saddle and supported by German soldiers and guns, they must remain for the time being a negligible quantity. Their peace overtures, though an interesting commentary on the situation in Turkey, do not constitute any real advance towards the termination of the war. Only when they have shown themselves strong enough to deal with Enver Pasha and the Committee of Union and Progress can they speak for Turkey. On the other hand, it would be a mistake on the part of the Allied Powers not to give a friendly answer to tentative inquiries from Turkish sources regarding peace terms. In view of the garbled nature of all their information, the Turks well-disposed towards the Allies must have difficulty in deciding how the war will ultimately end. Even if they believe in a victory of the Allied Powers, they can have no sure knowledge of the extent to which that victory will be used and whether Turkey is to be freed for ever from German tutelage. It must be conceivable to them that the Central Powers should be beaten in this war, but that the Germans should remain paramount in the Ottoman Empire. In such circumstances, with a wholesome appreciation of Germany's might and the use to which it is put, Turks may well hesitate to attempt the overthrow of the present régime. If it were only a question of settling accounts with another Turkish party, they might be prepared to take their chances and make the attempt. But in their ignorance of all that the war means to Europe and of what Germany has staked in her bid for world-dominion, and must lose, they may feel it better to bear the ills they know than to risk acquaintance with others still worse. It is for this reason that the Allies should seize any opportunity that offers of enlightening the Turks on the progress of the war and on the course that events are likely to take, as far as Turkey is concerned, at the end of the war. The anxiety of most Turks after their experience of the last sixteen months will be concerned far more with the question whether they are to have the Germans always with them than with the penalty they will have to pay for an unsuccessful war.

The Russian advance in Armenia, although remote in point of distance, will have made itself felt in European Turkey, owing to the drain imposed upon the resources of the Empire by the losses incurred in the fighting at the Dardanelles. But the main difficulties of the Turkish Government must be financial and economic, for these in the long run will affect the people more intimately than the fortunes of an army in a distant theatre of war. Turkey, so long as she can obtain munitions on credit, can probably conduct a war more cheaply than any other of the belligerents, but it is this enforced parsimony that helps to kill any popular enthusiasm which the war at the outset may have evoked. If it be true that Enver Pasha has recently paid a visit to Syria, Palestine, and Arabia, it will not have been the tour of a confident Commander-in-Chief inspecting his troops to satisfy himself that all is well preparatory to special demands being made upon them for offence or defence. Enver Pasha's tour took him precisely to those districts where his army is not, and at a time when the fighting forces of the Empire have their work cut out for them on two fronts. The Turkish War Minister's mission was more probably a despairing effort to raise fresh troops, by pressing into service bodies of men who do not feel obliged to aid the Turks, unless they consider it worth their while to do so. A visit to Medina can only have been undertaken with the object of impressing the Arabs, whose services Enver Pasha was no doubt anxious to enlist on behalf of Germany. Their ordinary terms would merely involve pay or substantial expectations of loot, and offers embodying these would not call for a personal visit. Being unable to meet the Arabs' requirements in this way, the Turkish Government may have hoped to revive the spirit of the "holy war," which flickered out quite early in the campaign, by an appeal in person from the Minister of War. A pilgrimage to Medina would make an excellent setting to such an appeal, quite in the manner of German stage-management.

This explanation of Enver Pasha's tour contains at least a basis of probability, and seems to derive some confirmation from the care with which the German official statement speaks of the Arabian population as "showing the greatest attachment to the Khalifate." From the fact that it was held to be necessary to refer to the loyalty of the Arabs, and from the brief stay made by the War Minister we shall, perhaps, be right in inferring that the visit was not a complete success. News has its own way of travelling in the East, and while the Arabs may have noted that the British Expedition in Mesopotamia has not been able to accomplish much, they will have heard how the Senussi have been handsomely defeated, and will know that an attack on Egypt offers no attractions to any force. If they have also learned of the Turkish reverses in Armenia, they will be shrewd enough to connect them with Enver's act of condescension in asking for their military co-operation. It will be as well, however, not to lose sight of the possibility of Arab reinforcements for the Turks in Mesopotamia. A number of tribes must already have made common cause with the Turks, and in spite of the chronic feuds between rival factions, it cannot be out of the question that others should follow their example. To be forewarned is to be forearmed. If the intelligence system at General Lake's disposal is adequate, he will be able to learn from "friendlies" what measure of success attended Enver Pasha's visit to Syria and Arabia, and whether any large body of Arabs is likely to move eastwards. By maintaining close touch with the friendly tribes, our forces in Mesopotamia and Aden should prove useful centres for the dissemination of accurate accounts of the war, which would go far to counteract any enthusiasm among the Arabs that Turkish falsehoods or appeals to their fanaticism have been able to raise.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

JOURNEYINGS IN ASIA MINOR.

By MARY A. POYNTER.

*II.—From Eski-Shehr to Angora.

The passenger train (there are no expresses) starts from Eski-shehr for Angora in the early morning, and, although the journey is many hours long, the plain, or valley, sixteen miles wide, through which the railway runs is so unlike most other plains of the world that one cannot weary of its gentle monotony. On the two occasions we took this journey patches of sunshine dotted the plain, and, shining through the morning mists, gave an effect as of lakes here and there in the vale. The villages cling mostly to the mountain sides, perhaps to escape the malaria that lurks on the plain, notwithstanding the high altitude. Nature basks under cultivation; it seems to enjoy its ownership by man. I fancy two thousand years ago, when all this region was more thickly populated, it had a more salubrious climate, and was not left practically unvisited as it is—for all its railway—to-day.

As one sets forth by train one sees on the left the solitary mound of ancient Dorylæum, and on the right among the hills are the meerschaum mines, showing bare and white where fresh cuttings have been made. Flocks and herds, attended by lone and picturesquely formidable-looking shepherds, give touches of life to the fields between stations. The little Pursak river (the classic Thymbres) that starts out from Eski-shehr with us and flows for a part of the way to Angora, perhaps set the fashion originally for all the winds and curves the railway line was to make. At any rate, a railway line in Asia Minor seems to be laid out with the idea of covering the longest distance between two given points. Of course, one would not like to suggest that, unlike the river, the railway might have some mercenary motives in regard to extending its miles—since a minimum earning per mile is guaranteed to the company by the Turkish Government.

The management was wise enough to plant quick-growing trees like the acacia around each station when in the process of building, and although the railway is hardly a quarter of a century old the trees have grown large enough to lend grateful shade and pleasant bloom in their season. Save these just mentioned and some low green growths that distinguish the windings of the Pursak and one or two other small rivers, there are few trees to be seen on the plains from Eski-shehr to Angora; it is a fertile if almost treeless place, and the trees at the station show how quickly it might become a well-wooded land.

A station without its dogs and acacia trees would be an anomaly. Dogs all along the route run barking after the trains, and at last give up the breathless chase in apparent belief that they have been able to frighten the train away! These country dogs are of the large, tawny, sheep-dog variety, though those gathered at the stations to catch the crumbs thrown from the car windows by indulgent travellers are of the old Constantinople street-dog type—a type familiar to all travellers, and to be met with in Turkish towns from Jerusalem to Adrianople. There is an Asia Minor legend to the effect that originally the jackals inhabited the towns, while the dogs all lived in the country. When the two clans met one day unexpectedly the dogs began extolling the charms of the country, while the jackals dwelt upon the plentiful food and pleasing excitements of the town. It was then arranged that there should be an exchange of abode, that the dogs should be permitted to come into the town and the jackels be allowed to go into the country for a season. This exchange was no sooner accomplished than the jackals, discovering that life in the country was not all they had anticipated, returned to the gates of the town and began wailing: "Gelelim! Gelelim!" ("Let us come! Let us come!") The dogs from within, quite content with their new quarters, uttered a guttural chorus of "Yok! Yok! Yok!" ("No! No! No!"). And to this day the dogs have remained masters of the situation: they have been permitted to dwell in the town, while the jackals have been compelled to find their living as best they could in the country.

In this part of the world the railway station seems to be the local post office; a motley crowd of countrymen (there are few women loiterers about the station, and these few always stand apart to look on) gather around the gendarme as he gravely sorts and distributes a little handful of letters and papers that some way seem slender of bulk, as if the senders had not much to say or had said a good deal very briefly. Not all of the receivers are able to read, and then some more erudite member of the company offers his services and reads aloud, to the edification of the recipient and all the members of the company within hearing.

There is a popular village pump at each station, though in most instances the pump takes the form of a rope and bucket, the same being extremely popular with the third class—a very clean and highly picturesque class—passengers of the train. The train stops leisurely and waits patiently for the slow-moving and dignified East to fill its water jars at these wells; and it is amusing to observe how many whistles, ringing of bells, and "*tamams*" (ready) are necessary before all the refreshment seekers are back again in their seats on the train. Usually the last ones are pushed in, not unkindly, by the guards as the train is quite under way. It is a trustful East, and this railway an adaptable and accommodating public servant.

The people who dwell upon these uplands are poor for the most part, proud only perhaps as to carriage; for the labouring man holds himself upright, perhaps more so than does the soldier about the station—the soldier whose uniform has become ragged, but who looks in most cases what he is—the hardy and, when left to himself, the not unkindly peasant. Men say their prayers in the fields as well as in the mosques, and with as little self-consciousness as they do their work there. It is a part of the day's task that the most humble conscientiously perform. Not even the gentle excitement of the coming of one train a day will cause them to turn from their devotions when once they have begun them.

The houses of the little hamlets on the plain are mostly of sun-dried bricks with thatched roofs, and are so all-of-a-colour with the landscape that one does not see them until one is fairly upon them, unless the eye is attracted at a distance by the single minaret usually attached to each mosque. There is hardly a town that in a large sense can be said to be new; they are nearly all "eski" in the sense of occupying sites of ancient villages; indeed, it is said that three towns out of every four have stones and marbles bearing ancient inscriptions and fragments of bygone, more literate days.

On our September journey to Angora we saw picturesque threshing floors everywhere on the wide, open plain, the oxen treading out the grain, the Turkish women, in the divided skirts almost universally worn by their sex in the interior, directing operations. They seem faithfully to carry out the injunction: "Thou shalt not muzzle the ox that treads out the corn." The crooked stick, with many variations of crook, is still used for tilling the fields of Phrygia and Galatia. There is little gathering into barns, the barns being lacking, so the grain is brought directly to the railway, the great grain cars being there in readiness to receive it and to roll it away to markets by the sea. At Alpikeuy there seemed to be literally acres of threshing floors and enough grain being shipped and in waiting at the station to feed all the Near East.

The time-honoured figure of the scarecrow is seen in the fields where maize is grown, and, strange to say, this figure varies very little in make-up from its prototype that adorns Western cornfields. One unique custom, characteristic of Asia Minor, is the posting of the skulls of animals in conspicuous places in the fields, this being thought to be an inducement to the land to make it more productive.

The September landscape is burned to a rich brown on these high plateaux—not a desolate colour—with pink and purply distances, and it is a sociable landscape, too, with all the flocks and herds that roam over it and call it home. The blue jay flutters bright wings about the fields, though the stork, that grave poseur in the spring and the early summer landscape, has flown to the warm deserts southward before the autumn is even foreshadowed. There is a variety of thistle in Near Eastern meadows that turns a bright steel blue with the coming of autumn, lending touches here and there quite as effective as blossoms. The winter picture probably presents quite a different aspect to the passing traveller. It may be a lonely looking world then.

Midway between Eski-shehr and Angora the hills seem to have detached themselves from the great ranges and to have advanced into the plain in places, taking on curious shapes, like the mesas of the foot-hills of the Rockies; sometimes they have ranged themselves into natural terraces, and along their soft limestone sides the water has hollowed out convenient caves, inviting to man and beast in case of storm or of too ardent sunshine.

Although there are no great impressive ruins left along this route, and the past does not intrude itself as the traveller almost wishes it would do, one never forgets one is travelling over classic ground. At Beylik Akhor the ancient province of Galatia begins, and later the railway winds for a short hour through the upper valley of the Sangarius into which the Pursak—the Pursak that frets its banks with many a curve—flows. Near where these two rivers meet, and near the village of Beylik Kepru, is the site of ancient Gordium. This city was an important station on the once Imperial Persian road from Sardes to Susa; it was also the residence of a Satrap, and was the winter quarters of Alexander the Great in 333 B.C. Little of its glory remains, but history has seen fit to record and to make deathless among its annals the story of the "Gordian Knot," asso-

ciated with this once living city, and which Alexander severed ever so easily when he once put his mind to it!

At last, when the day is near spent, the train runs into the valley of the Engunu Su, and, following this valley, leads on to the railway station of Angora—a station that sits at the feet of that town, as it should—and here, on arriving, one looks up to behold a city set on a hill, a city of goodly aspect and of kindly reputation.

"AU REVOIR" TO GALLIPOLI.

The Melbourne *Age* of February 1 published a description of the withdrawal from Gallipoli, by Dr. W. J. Springthorpe, in the course of which appears "the full text of a letter from one of our units to the Turks." This, says the writer, "is appended as showing the really good feeling that existed and the recognition of the qualities of the Turk as a fighter"; and that it serves the purpose can hardly be denied. The document is as follows:—

Brigade Headquarters,
Australian Imperial Force,
Anzac, December 20, 1915, 2.30 a.m.

To the Commander of the Turkish Forces, Gallipoli, Turkey.

The Brigadier presents his compliments to our worthy Turkish opponents, and offers those who first honour his quarters with their presence such poor hospitality as is in his power to give, regretting that he is unable personally to welcome them. After a pleasant sojourn of seven months in Gallipoli, we propose to take some little relaxation at that period in which we are instructed by a higher power to observe "good will to all men." In bidding *au revoir* to our honourable foes, we Australians desire to express appreciation of the fine soldierly qualities of our Turkish opponents, and the sportsmanlike manner in which they have participated in a contest, honourable, we trust, to both sides. We have been with you, yet a little while and you shall see us not. For us it is a matter of deep regret that the ancient friendship so long existing between the British and Turkish Empires should have been thus disturbed and broken by the insidious machinations of the arch-enemy of humanity. We have left this area and trenches, in which we have taken considerable trouble and pride, clean and in good order, and we would be grateful if they may be so maintained until our return, particular care being asked in regard to matters of sanitation, so vital to the health and well-being of an army.

We hope you will find the wine, coffee, tobacco, cigarettes, and food to your taste, and a supply of fuel has been left in the cupboard to ameliorate in some measure your discomfort during the cold watches of the winter. Our only request is that no member of the nation who was guilty of the inhuman murder of that noble woman Miss Edith Cavell, to whose portrait this message is attached, will be permitted to pollute with his presence the quarters of soldiers who have never yet descended to such barbarous and ruthless methods.

Three Armenians, alleged to be members of the Armenian Revolutionary Committee and to have been in possession of concealed bombs, and a Mohammedan Armenian, of Brusa, who had all been sentenced to death, have been publicly executed in Constantinople.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.
CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.
ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.
PORT SAID. Charles Evans, and on board vessels in the harbour.
KHARTOUM. Sudan Stationery and Bookstore.
CYPRUS. Cababe and Wilson, Nicosia.
SALONIKA. Librairie Française, Rue Sabr Pasha.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Prisoners in Turkey. March 22.

Lord NEWTON, replying to Lord Lamington, said it was true that the conduct of the Turks towards prisoners contrasted favourably with that of some other belligerents, but it would be a mistake to assume that all British prisoners in Turkey were treated in a satisfactory manner. It was, however, extremely difficult to obtain full information on the subject.

HOUSE OF COMMONS.

Correspondence for Egypt. March 21.

Mr. J. A. PEASE informed Major NEWMAN that so far as he was aware there was no undue delay in delivering correspondence to the troops in Egypt.

The Case of Mrs. McAlister.

Mr. CATHCART WASON asked the Secretary of State for Foreign Affairs if he would solicit the good offices of the American Embassy to obtain the release of Mrs. McAlister and her little son, who were now interned at Jerusalem; and if that was not possible, if he would solicit the services of the American Consul to transmit money to the lady and her son.

Sir E. GREY said he had requested the U.S. Ambassador to be good enough to ask the U.S. Chargé d'Affaires at Constantinople to inquire into Mrs. McAlister's case and, if necessary, to advance money to her, at the same time requesting the U.S. Consul at Jerusalem to lend his good offices with a view to facilitating her departure in the event of the Ottoman authorities being now prepared to permit her to leave the country.

Wounded in Mesopotamia.

Sir J. JARDINE asked what description of boat was used for the conveyance of wounded soldiers from Nasriyah on the Euphrates to the base hospital at Busreh, and whether the garrison hospital at Nasriyah had sufficient supplies of instruments, medicines, and other requisite articles for the wounded and the sick.

Mr. TENNANT said he had no doubt that every available boat would be used, but he had received no official report on the matter. As regards the second part of the question, no demands had been made upon the War Office for instruments. He could not definitely state that there had been no shortage of instruments, medicines, etc., without ascertaining by cable; but no report of shortage had been received.

Salary of the High Commissioner for Egypt.

Sir EDWARD GREY informed Mr. COWAN that the salary at present drawn by his Majesty's High Commissioner for Egypt was £6,460 per annum, and was defrayed from Imperial funds. A special grant had also been made which represented a temporary addition to the High Commissioner's salary of £2,000 a year.

The Operations in Mesopotamia. March 22.

Mr. LLOYD GEORGE, replying to a question put by Sir E. CORNWALL, said:—General Townshend's column reached Kut-el-Amarah on December 3, 1915. On the 9th, 10th, and 11th the enemy endeavoured to capture his position by assault, but was driven off and suffered severely. Since that time the garrison has been besieged. As to the health of the troops and the condition of the wounded under General Townshend's command no information has been received. It is undesirable to say more at present than that there has been no failure to supply the relieving force with reinforcements.

In the course of the debate on the Army Estimates, the Mesopotamian campaign and the Gallipoli campaign both came in for some criticism. Captain TRYON, referring to the Army's need of men, said that if we had had the men the position in the Dardanelles and in Mesopotamia would have been very different. Mr. PRINGLE remarked that by the unnecessary expeditions in the Dardanelles and in Mesopotamia some of the best fighting material in the British Army had been wasted. He contended that this policy, undertaken by the Government for diplomatic rather than for military reasons, had weakened us not only from a military point of view, but from a naval point. It had left us without sufficient ships to attack the German Fleet in the North Sea, and it had placed this country under blockade, of which the limitation of imports was one of the results. Sir J. D. REES said with regard to the Mesopotamia operations that he could not understand why we went beyond Busreh. No country was so wet and so dry, so cold and so hot, and in ordinary times the Arabs would let off their guns for the mere pleasure of shooting at someone.

Captives of the Bedouin.

Mr. PETO asked the Under Secretary for Foreign Affairs whether he had been able to take any steps to secure the release of ten members of the crew of the steamship Coquet, which was torpedoed in the Mediterranean. They were taken prisoners by Bedouin Arabs on the coast of Tripoli.

Lord R. CECIL: The Italian Government have, at our request, asked the Governor of Tripoli to make inquiries in regard to this matter: according to the latest information the ten prisoners are at Antelat, about 150 kilometres south-east of Benghazi.

Prisoners in Bulgaria.

Mr. TENNANT stated to Sir J. Lonsdale that the British prisoners in Bulgaria numbered 519, of whom seven were officers.

Digitized by Google

The Mesopotamian Campaign.

Colonel YATE called attention to the Mesopotamian operations, and desired to know how it was that there had been a shortage of munitions. He also asked for information as to the hospital arrangements.

Mr. CHAMBERLAIN said that no phrase could be too strong to express their admiration of what our troops in Mesopotamia had accomplished and endured in the very arduous campaign in which they had been engaged. It was a mistake to suppose that the advance was ordered in defiance of military opinion as to the sufficiency of the resources with which it was undertaken. On the contrary, all the military authorities concurred in the orders for the advance towards Baghdad with the troops then at the disposal of the General Officer Commanding. Colonel Yate seemed to think that there had been a great shortage in supplies of all kinds. He (Mr. Chamberlain) was afraid he had to admit that, in his opinion, there had been a lamentable breakdown of the hospital arrangements. He would not seek to palliate some of the things which he had learned had taken place, but he begged the House to remember that the campaign had been carried on under circumstances of very great difficulty. According to the information in his possession, there had been an abundance of hospital supplies of all kinds at Busreh at all times, but he thought that without doubt there had been a grave shortage of necessary medical supplies above Busreh. This was due in large part to the enormous difficulties of river traffic. It was rather difficult to gather transport for this purpose with any ease. Only particular kinds of river craft were suitable: they had to be of extraordinarily shallow draft, and the Government had swept this country and had had recourse to Egypt and other countries to secure or ascertain if they could secure boats of a suitable character. They had had misfortunes with regard to some of this transport. Some of it was destroyed or lost by perils of the sea en route, and undoubtedly the shortage of river transport accounted for a great deal of what had happened, but he did not think it accounted for all, and neither the Government at home nor the Government of India were satisfied with the state of things which had prevailed. It had already been announced to the House that the Government of India had appointed a distinguished General, General Bingley, and a distinguished Civil Servant, Sir William Vincent, to proceed to Mesopotamia and investigate the medical arrangements there. Of course, they did not desire that any inquiry into the *laches* of the past should interfere with the work which had now to be done, and which it was urgent should be done; but at the same time it was necessary that they should be informed as to the facts, and that they should be in a position to weigh and apportion the responsibility. These gentlemen began their inquiry in Bombay, where they were able to see officers invalided from the front. They had transmitted to this country a series of questions to be addressed to certain officers now here who were also invalided from Mesopotamia, and they themselves had proceeded to Mesopotamia in order to carry their inquiries further on the spot. He hoped that these measures and the attention which had been repeatedly called to the matter by communications from home and from the Government of India had already worked an improvement and would prevent a repetition of those things of which complaint was made. The House would like to know that in regard to the last action in which our troops were engaged he had a telegram sent by the General Officer Commanding to the Chief of the Imperial General Staff in which he reported that Gen. Aylmer stated after the action that he was extremely satisfied with the arrangements made for the wounded, and that all were progressing favourably. He (Mr. Chamberlain) knew the grave anxiety felt by the country in this matter. He could assure hon. members that their anxiety was not greater than his own, and he had been anxious to relieve their minds as to what was now being done.

Mr. HOBHOUSE thanked the right hon. gentleman for his statement. He was astonished to hear that the military authorities at home and in India had agreed to the advance on Ctesiphon, as he had rather hoped that it was a case of the local commander on the spot exceeding his instructions in taking on himself the responsibility of engaging a vastly superior Turkish force. He had some little knowledge of the local conditions, and to have dreamt of taking Baghdad with a force of 12,000 or 14,000 men seemed to him to be almost madness. However, he admitted his criticism could only be partially informed. He thought the whole House would be very sorry to hear the very grave confession of the right hon. gentleman, though they had heard also with satisfaction the clean breast he had made of the unsatisfactory state of things prevailing. That the right hon. gentleman should, in advance of any request from the House, have promised an inquiry was greatly to the credit of himself and the India Office. The right hon. gentleman used the strong word "inexcusable."

Mr. CHAMBERLAIN: If I may interrupt the right hon. gentleman, I spoke without notes and have not in mind the exact words I used. I think I did say—and it is my belief—that according to my present information there were inexcusable deficiencies in the arrangements for the treatment of the wounded, but I beg the House to keep an open mind until we do know. I do not profess to know at the present moment. The House knows how information comes—in a private letter here and a private letter there, with the writer's name, perhaps, given under a seal of secrecy. The House knows the great difficulties there are in getting at the bottom of the facts under these circumstances. I am profoundly dissatisfied with the information which has reached me, but I do not know the truth, and I do not wish to utter any judgment on anyone until such time as I do know the truth, and I beg the House to keep an open mind on the subject.

THE PRESS ON THE NEAR EAST.

Greece's Empty Coffers.

According to Mr. J. M. N. Jeffries, who contributes a long article to the *Daily Mail* (March 20) on the above subject, the Greek Government may be forced to resign if it is unable to raise a loan in England or France immediately:—

The coffers have been exhausted by the continuance of the mobilization, and the Government is even unable to pay its Civil Servants. I know of cases in which employees in a Government office, on going to draw their salaries, have been told by the cashier, "Sorry. I haven't any money. Come next week. I may have some then." Small sums like the pay of telegraph messengers have even been in abeyance.

It is a common sight in Athens to see the wives of men who are with the Colours demonstrating for the small pittance due to them outside Government offices and Ministers' houses. To-day there was a disorderly scene, when 200 women outside the Ministry of the Interior cried, "Give us bread, give us bread!" The police had to be called to disperse them, amid screams and shouting.

Mr. Jeffries states that the Government has already been forced to send to one of the chief banks for the sum of £2,000 for current expenses, and he adds that it is the intention of the Government to "introduce taxes on practically everything that can be taxed and super-taxes on anything prosperous":—

The scheme will come before the Chamber in a couple of days, but its reception will be cold in view of the country's dissatisfaction, and, even if passed, the taxes will take time to collect, and, when collected, they will probably be inadequate.

The Government has made proposals in London for a loan. It is in the highest degree undesirable that we should grant a loan to the present Government. While fighting for her life against Germany pure logic demands that England should not grant a loan to any Cabinet which is not also an enemy of Germany. The refusal of a loan or the offer of one only on unacceptable conditions to the present Ministry would not be misunderstood by our sympathisers here, whose numbers grow daily, the French defence at Verdun having greatly encouraged everybody.

If the present Ministry is forced to resign, M. Zaimis would probably form an interim Ministry. He is pro-Ally and could pave the way for M. Venizelos to return. It is highly improbable that Germany can give the Gounaris-Skouloudis Ministry a loan, as credit from them is useless, and to advance gold is impossible: We therefore hold the winning position. Let us then use it.

This correspondent thinks that the present Greek Ministry have learned little so far, and quotes a disgraceful case of the shadowing and subsequent arrest of an Englishman attached to the British Legation. It is true that the arrest was not persisted in, and—

The policeman acknowledged that he had acted under the orders of a certain Chrysospathis, the chief of the secret police, who is known to be a friend of Baron Schenk. The British Minister, Sir Francis Elliot, immediately demanded an explanation. M. Skouloudis, the Premier, sent an apology, but it does not contain a hint of deprecation of Chrysospathis's action, which is most necessary for British prestige here.

The Fate of Monastir.

The correspondent of the *Morning Post* at Rome, in a despatch to his paper (March 20), includes the passage which we quote below regarding the alleged anxiety of the Serbian Government in regard to Monastir:—

I have good reason to believe that the Serbian Government is anxious lest the British Foreign Office may, after all, reward the Bulgarian prodigal son by allowing him to keep the Serbian fatted calf in the shape of Monastir. Nothing would more injure Great Britain's reputation for honesty than such an act, which would not only lose us Serbian sympathies, but estrange Greece just at the moment when she is gradually gravitating towards the Entente, and would be blazoned by the various branches of the Wolff Bureau throughout the Balkans as Great Britain's breach of faith. A prompt and definite official statement on the lines of the *Morning Post* formula, "Our friends are our friends, and our enemies are our enemies." should be made during Prince Alexander's visit to London; otherwise to Sir Edward Grey's errors in the Balkans another will be added. To abandon an Ally in favour of an enemy is equally dishonest and unpolitic.

The Position of Bulgaria.

Mr. Henry W. Nevinson, in a despatch to the *Glasgow Herald* (March 13) regarding Salonika, says:—

It was the Bulgarians who brought us here; it is the Bulgarians who keep us sitting behind the "impregnable defences," when otherwise we might be using upon some other front all those men and exertions, all this immense amount of money daily lavished away. If Bulgaria had remained neutral, or if we had won her to our side, as might have been possible up to last July, we should now hold the Central Powers hemmed in, and they would not possess Serbia as one of their territorial

Digitized by Google

pawns in any future peace. Bulgaria, far more than Turkey, has been the dominating piece in Germany's Near Eastern game; and when I saw the Bulgarian sentries on the Monastir frontier last week, or looked northward yesterday across the territory so lately acquired by Greece to the jagged and snow-covered mountain barrier beyond which Bulgaria now begins, I naturally wondered what the Bulgarians are thinking of their new allies and their dubious future. If I know them at all, they would like first to drive out from Monastir and other "Bulgarian" districts as many Serbs and Greeks as they decently could, and then go home to sow and reap their harvest. For they are agricultural in habit and domestic.

He goes on to show that the Bulgarians are no longer their own masters—"Had they been they would hardly have allowed our small Allied forces to escape last December." Mr. Nevinson continues:—

Whether their "rogue elephant" of a King had made some agreement to not enter the territory of the Kaiser's brother-in-law we cannot yet know. But the result of hesitation has been that the opportunity has slipped past; every week unused has made the attack less possible, and even the Greek pro-German papers here have ceased to announce the arrival of German-Bulgarian armies within three days. What remains for Bulgaria to do? For an agricultural and domestic people the prospect is not bright. They must prepare defences for their own country against a possible Allied advance, they do not know when. In bitter cold and wet they must entrench their own passes along their mountain frontier, and now that they have probably entrenched them they must sit there. Some of their forces may be ordered here or there by that domineering ally who is reported to have taken the Government of Sofia into his own hands. But the utmost they can really hope to accomplish is to hold a certain amount of Franco-British force immobile in Salonika, and to cause the expenditure of Franco-British funds here too. That would not be a very satisfactory task, especially as their supply is difficult. Their uniforms and equipment are exhausted by two recent wars, the German contingent is reported to keep double rations for itself, and a considerable force has to be maintained somehow across the mountains of Albania, so as to check the bare off-chance of an Italian movement from Valona.

On the top of this rather depressing situation come assaults by Allied aeroplanes upon Bulgarian towns, such as Petrich and Monastir itself; rumours that a large Serb army is being reorganised in Corfu, and will certainly show no mercy to Bulgars in any hour of victory; news that Erzeroum has fallen to Russia (Bulgaria's old "deliverer"), and that little more help can be expected from the Turk (Bulgaria's old persecutor); reports that the much-advertised Turco-German attack upon Egypt has been definitely abandoned, and that the value of Bulgaria's free passage to the East has therefore fallen.

Germany, Egypt and Turkey.

In a leading article on the war situation the *Daily Telegraph* (March 20) refers to General Peyton's success in Egypt as giving a final touch to the situation in that region of the war. After briefly detailing the methods by which the success was achieved the article continues:—

Thus has been dissipated a danger from which much was at one time hoped by the Turks and by their German masters; and, at the same time, all possibility of an attack upon the Canal across the Sinai Peninsula is now, by common consent, at an end. The advancing season and the heavy defeats inflicted by the Grand Duke's armies have removed all anxiety in regard to Egypt, and Berlin now gives the world to understand that no blow at that vital spot was ever contemplated. The practical consideration—and it is one of the highest importance—is that the very numerous force detailed for the defence of Egypt is set free for employment elsewhere; and a glance at the map of the Eastern Mediterranean, which is wholly controlled by the Allied Fleets, will show how wide the possibilities in this connection are. Meanwhile, the Russian advance rolls swiftly westward and south-westward into Asiatic Turkey. Trebizond is immediately threatened. The formidable obstacle of the Taurus Mountains has been forced, and Russian forces are moving on both Mosul and Baghdad. The lines of communication of the Turks now besieging Kut and holding off General Aylmer's relieving force are thus in the gravest danger, and a striking and fortunate development of the situation on the Tigris is well within the possibilities of the next few days.

The Mystery of Enver.

Mr. S. M. Mitra, writing on the mystery of Enver Pasha in the *Sunday Times* (March 19), thinks that "as it is very difficult to ascertain the truth, it is better to be prepared in case he or any other prominent Turk is on his way to either of those Moslem shrines." He considers that the "Holy War" having proved an utter fiasco when undertaken in alliance with unholy Germany—

A shrewd Turk like Enver Pasha, who now in his desperation would stick at nothing, is, therefore, naturally anxious to impress upon the minds of the Sheikhs and Ulemas in and about Mecca that Turkey is no longer in alliance with Germany—even though facts are to the contrary—in order to impart some stability to the Holy War agitation in the eyes of the faithful. If Enver succeeds in convincing the fanatical Moslems of Mecca, Medina, and Baghdad that the Holy War is raised by Turkey alone, it may yet cause trouble.

He thinks that it is a matter of momentous importance that the Moslem Holy War propaganda should be utterly demolished by emphasising the fact that his Highness the Nizam of Hyderabad, the greatest Moslem Prince in India, has sent his cavalry and commander-in-chief to Suez to oppose the Turks. He continues:—

For about thirty years the name of the Nizam has been familiar to the Sharifs because his Highness, at his own expense, has sent hundreds of pilgrims every year to Mecca to return as Hajis. If the fact that his Highness's army with his Moslem Commander-in-Chief is encamped at Suez *to fight the troops of the Khalifa* is well circulated in and near Mecca, one may be absolutely sure of the kind of reception that will await Enver or any other Pasha upon arrival there.

Now that Portugal is at war with Germany, our latest Ally will find it much easier to help the British authorities in protecting India from Turkish agents, and in preventing inflammatory Arabic literature from finding its way there. Since Portugal has broken with Germany all the ports in India without exception, whether British, French, or Portuguese, are hostile to Germany. It will therefore be a much simpler task to exclude Turco-German intrigue whether through agents or through correspondence.

The Sorrows of Turkey.

The *Times* (March 20), in a leading article under the above head, while attaching no importance to the prevailing rumours that Turkey is wearying of the war, and that a growing number of influential Turks would like to make peace with the Allies, concludes in the following paragraph:—

That every sensible Turk bitterly rues the day when Enver and his mad associates led Turkey into her present plight we can well believe. Turkey has derived nothing but misery from the war, and she has lost much. She has lost such freedom of action as she possessed, and has been enslaved. She suffered heavy casualties in the Gallipoli Peninsula. She has lost Armenia and her fortress base of Erzeroum. She has lost Basra and a great part of Mesopotamia. She has had to yield another slice of Thrace to the land-hungry Bulgarians. She has had her coast towns battered, and is on the verge of losing Trebizond. The gifts of German gold have passed into the pockets of the rapacious Committee while her people starve. Not one of the glittering promises made to the Turks by Germany has been fulfilled. That Turkey as a whole is restive and discontented is only natural under all these circumstances, but the suggestion that the Porte is therefore officially hinting at peace should not be credited. There will be no change in the attitude of Turkey except as the result of a movement from within strong enough to deal finally and conclusively with Enver and his Prussian masters.

The Kettle-drum's Secret.

The Rev. Canon Parfit, M.A., writing in the *Daily Chronicle* (March 18), refers to our dash towards Baghdad as a triumph of strategy:—

If our forces in Mesopotamia had been content to remain in the vicinity of Busrah the expedition to Egypt would most probably have been carried out; but the rapid advance up the Tigris that threatened Baghdad was too serious a menace to be ignored, so the troops prepared for Egypt were diverted through Aleppo to Baghdad, and the land of the Pharaohs may see them no more.

Secondly, the capture of Erzeroum is a triumph of the first magnitude, which is likewise due in no small degree to the co-operation of those brave little forces which are now invested at Kut-el-Amara.

I have just returned from a visit to a friend whose son is an officer now shut up in Kut-el-Amara. Before the battle of Ctesiphon he sent home a broken kettle-drum taken from the Turks, which I examined a few days ago. The Turkish inscription upon it confirmed my conviction that the Kurdish troops who ought to have been resisting the Russians in the North had been hurried down to Baghdad to check the advance of our rash little army towards the capital city of Mesopotamia. My friend was greatly cheered when I translated the inscription, when I pointed out on the map the town from whence the kettle-drum came, and explained that he need never regret the invest-

IT COSTS A SMALL PIASTRE.

Digitized by Google

army in Kut, for his son and all the Townshend were true British heroes, who had risked much for kes, and had certainly won the day.

Germans were taken in splendidly, for they proudly ated to the investment of Kut as a proof of the impossibility of the Allies being able to help each other, since the Russians could not save us from being surrounded. In point of fact, it turns out to be one of the clearest proofs we have had of the successful co-operation of the Allied armies, for whilst our enemies were attracted to Ctesiphon by the bait of a small British army the Russians behind their backs were scaling the snow-clad mountains of Armenia, and sprang a surprise upon the depleted forces of the strongest stronghold of Asiatic Turkey.

Belligerents and Neutrals.

Under the above heading the *World's Work* (March) discusses, in an interesting article, the position of the neutral countries towards the belligerents after more than eighteen months of war. In referring to Roumania, the paper says:—

Perhaps the most significant changes of the month among the neutrals on the Continent are to be found in Roumania. She has called to the colours the full strength of her army, and announces to the world at large the maintenance of an armed neutrality. This was the formal explanation given by Bulgaria for her own mobilization. These steps must have been taken both as a result of the bullying methods of German diplomatists and the activity of Russian armies beyond her northern boundaries.

The purchase by the British Government of a large part of the last Roumanian wheat crop was, judged by the fury it aroused in Vienna and Berlin, one of the few successful diplomatic coups in our recent Balkan policy. The wheat was bought, not because we need it, but merely to keep it out of Austria and Germany, where it had long been counted upon to ease the increasing and uncomfortable scarcity of bread.

Mesopotamia.

The following quotation is taken from an article by "A Student of War," which appeared in the *Manchester Guardian* (March 18):—

The turn that events have taken in Mesopotamia is, frankly, disappointing. Our check at Es Sin breaks a long run of Turkish defeats, and prolongs a siege at Kut. It does not mend matters to find the Government admitting, as they have in effect done, that there have been grave defects in the medical organization of the expedition. Nor are we impressed with the general conduct of the expedition. Whatever faults there may have been in the original expedition which won its way nearly to Baghdad, lack of enterprise was not one of them. But after the three months' wait one would have expected something better than the operations described in the scanty official statements that have been issued so far. The operations in Mesopotamia so far from being an irrelevance are as important in a military sense as a gain of a hundred yards in Flanders, and very important to the future of this country as a great Asiatic Power. But, however that may be, we cannot afford, after Gallipoli, any defeat at the hands of the Turks; and, indeed, the bare idea of defeat at their hands is repugnant to British pride. The "entanglement" of Kut prevented us from leaving Mesopotamia alone. But better far leave it alone altogether than attempt the destruction of the Turkish Empire in Asia (for this is what the capture of Baghdad and its railway would mean) with insufficient forces. The country is difficult, and every allowance must be made for the poverty of communications and for the fact that the element of luck in the weather has been against us. Still, there has been mismanagement, and it is unpatriotic to attempt to conceal the fact.

The Bulgarian Press.

A correspondent sends us the following extract from the *Balkanska Tribuna*, of Sofia, regarding the visit of M. Briand to Rome:—

Every day brings fresh news of the pourparlers and interviews of the representatives of the Quadruple Entente. The last act in this tragi-comedy is being played at Rome. Can Italy do more than her sacred egoism permits her?

M. Briand will try to convince his colleagues of the necessity of re-enforcing his action in Albania, as well as to send troops to Salonika.

It appears that Italy has no decided programme as far as her policy in the Balkans is concerned. One day one hears that the Italian troops have been withdrawn from Valona. A little later one will read that the Italians intend defending Valona to the last extremity.

The object of M. Briand's journey is missed by hesitation.

Our correspondent adds that it is with such clap-trap the official journals endeavour to keep up the flagging spirits of the populace.

The Settlement in the Balkans.

Mr. Jan Gordon, writing under the above heading in the *New Witness* (March 16), thinks that after the war the Balkan settlement will be swung between "Serbian desires and Italian fears."

Austria will no longer count, Bulgaria has chosen the wrong path. The installation of a Greater Serbia would no doubt do much to keep the Balkans in repose: Serbia stretching from Uskub to Fiume—Bosnia, Herzegovina, Croatia, and Slavonia all included in her marches. Italy will, of course, demand Trieste and all the Dalmatian littoral, and the Slavonian peasants beneath her rule would probably suffer little. Cattaro and Ragusa would fall to Serbia, while Montenegro would be forced to amalgamate in order to preserve the unity of the Greater Serbian State. There is little doubt that the populations of Southern Austria would benefit enormously by the exchange, for at present the dual Empire has struggled hard to keep the Slavonic part of its population in a servile subjection.

Articles to Note.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

We publish elsewhere a special article on the Consular Service—a topic that is very much to the front just now. I have also perused a letter written towards the end of February by a Briton who was for many years a consular officer in the Near East, and who likewise advocates the appointment in all capitals of a business man to be our Trade Representative (a somewhat similar suggestion was put forward by Mr. Pennefather in the House of Commons two weeks ago). He, in his turn, must be empowered to appoint "sub-representatives or commercial correspondents in whatever towns he may consider necessary," who would be under his control and direction, and would be paid for the work done, said work to consist mainly in gathering required information.

***

The suggestion is one well worthy the attention of the Government, though personally I think it essential that, before we attempt any serious reform of our moss-grown, antediluvian Consular system, we should exact the appointment of a Minister of Commerce competent to deal with trade matters from the trader's point of view and unhampered by nebulous F.O. exactions. If the latter, prior to the war, did not shrink from appointing in Germany, out of a total of thirty-seven unsalaried British Consular officers, no fewer than twenty-nine of German nationality, it is impossible to say what the same department is not capable of doing when at last driven by public opinion to do something. Whatever it is, it will follow the line of least resistance, and what that means we all well know. So let us agitate, in the first place, for a Minister of Commerce, and then let us follow by the appointment of Trade Representatives, on lines similar to those suggested above, responsible to the Minister of Commerce and capable of writing private and confidential reports of more than a merely academic or statistical use to the British trader.

***

My recent reference to the circulation of British banknotes in Germany, and my suggestion that they are being forged—quite a Hunnish proceeding, if history repeat itself—has drawn from a correspondent another suggestion as to the origin of these notes, which, according to him, are possibly quite bonâ-fide. He says: "Any quantity of English and French notes, which have been largely exported to Egypt, Malta, Madras, and Salonika, and which are being bought by the sarrafs and local banks, go to Austria and Germany in payment of imports. These imports comprise articles of small commercial value necessary for the replenishing of shops in the new and old Greek territories, but have no bearing on raw material. If these notes are circulating in Germany, they will find their way out to Scandinavia, Switzerland (and Roumania), in payment of German imports; but personally I doubt their large circulation, because they are more likely to be hoarded by banks in order to have bills on London."

***

The fact (or suggestion) that Greek sarrafs are buying German and Austrian goods comes as another reminder to us that our blockade of the Central Powers is by no means a faultless institution. The leakage in the West has been criticised *ad nauseam*; our impossibility to stop trade between Scandinavia, Switzerland, and Roumania, on the one hand, and the Central Powers on the other, is too obvious to need special mention; and now we have to realise that even the Greek sarraf is in a position to buy from the Boche the wherewithal to replenish his shop windows, and, *vice-versâ*, the Boche can buy certain necessary articles in Greece. Surely this can be stopped, or ought to be stopped. We command the Mediterranean; we are in force at Salonika and Valona, waiting for—surely not the blossoming of the almond trees? It seems to me that the sooner we link up from east and west across Macedonia, the quicker we shall be in a position to forge another link in the isolation of the Central Powers from the outside world; but that until this is done, Greece, at any rate, can trade with impunity (and we cannot blame her) with her Bulgar-Austro-German neighbours.

***

A result of the important income-tax decision last year in "Mitchell *v.* Egyptian Hotels, Limited," is to be found in the report of the recent meeting of the Bombay Electric Supply and Tramways Company. To escape the growing burdens of a double income-tax, that company has now passed resolutions transferring the control of the company's business from London to Bombay, thereby securing the benefit of the House of Lords' decision in the leading case referred to (says the *Morning Post*). In that case, it may be usefully recalled, the profits of the company were exclusively derived from hotels in Egypt, and the articles provided that the control and management of the company's business should be vested in the local directors. As the London board did not participate in or further the business operations in Egypt, the House of Lords held that the business was carried on entirely abroad, and accordingly only those profits remitted to this country were assessable to English tax.

***

From lists and reports which have been published during the past few weeks in THE NEAR EAST, it is apparent that the Egyptian Government was at last brought to realise the nature of the enemy firms which, in spite of the war, had been doing good business in Cairo and Egypt. As a matter of fact, Governmental action against these concerns during the second half of February was marked with such a degree of alacrity that it would almost seem as though some exterior force had been brought to bear on the situation, and I think that THE NEAR EAST'S straightforward remarks on the subject helped to create a state of public opinion, both in this country and in Egypt, which could no longer be ignored by the authorities. So far, so good. Most of the enemy concerns have been rounded up and placed in the hands of controllers. We shall have to watch future actions carefully, however. What we now want is a declaration that the enemy interests in firms like Stein and Company, Mayer and Company, etc., are being *confiscated*, and that there is no prospect of the Deutsche Orient Bank's daughter concerns surviving the end of the war.

***

We reproduce elsewhere a provisional statement of the Sudan's trade in 1915, as compared with 1914. The results are most favourable. For the first time in the history of the country exports and re-exports (£E1,577,991 and £E130,315 respectively) exceed the value of total imports (£E1,704,250). Further, exports are greater than in any previous year (£E1,577,991, as against £E1,376,958 in the record year of 1911). As compared with the year 1914, the value of exports shows an increase of 55 per cent., whereas imports have decreased 10 per cent. It will thus be seen that, everything considered, the situation is exceedingly favourable, our thanks being principally due to the Sudan Government for its great administrative abilities.

***

Since writing last week on the London Fair and Market, I have again visited the exhibition (which, by the way, closes to-day), and, though I much admire the energy and enterprise of the exhibitors, I cannot but repeat what I said before—namely, that it is nonsense to have two "London Fairs" following each other, as the present fair followed that held at the Agricultural Hall a few weeks ago. There are those who swear by the first-named exhibition, and others who are backing the last-named. The latter, we know, has been a success, and I sincerely hope that the London Fair and Market will be one likewise. From assurances given me by exhibitors, I certainly think it will. But this does not modify my argument that one fair instead of two is what we want, and that there ought to be found a formula of compromise between the two organising units whereby their forces could combine with a corresponding decrease in the individual cost to exhibitors.

***

Further, the London Fair, I think, should be restricted to goods of British manufacture. This was a *sine quâ non* of the British Industries Fair, but not, I see, of the London Fair, where foreign goods were exhibited (Tinkertoy, for instance). The object of these Fairs, as I understand it, is to promote British trade, and not to advertise foreign goods because exhibited by British agents. Only goods of British manufacture should be exhibited in the London Fair, and if we lose sight of this first principle, the object of the Fair defeats itself. Moreover, if the firm rule is established from the very beginning, countries friendly to us cannot take it amiss if their goods are barred from the stalls.

***

I am pleased to see that an agreement has been conducted between Italy and Great Britain on the subject of the Mixed Tribunals. Of more than usual interest, however, is the statement by Italy (reported by Reuter from Rome) to the effect that she agrees to the eventual abolition of the Capitulations and the transformation of the Mixed Tribunals "if other Great Powers also consented." I trust that the enemy Powers will never be asked to express an opinion as to whether they agree to the abolition of the Capitulations! Surely they have nothing to do with the measures adopted by us to administer our Colonies and Dependencies! The Allied and friendly Powers stand on a different footing altogether, and they will be consulted, but let us refrain from dragging to the peace conference the questions of the Capitulations and Mixed Tribunals in Egypt. For, politely speaking, they do not concern the enemy one little bit.

COMMENTATOR.

Trade After the War.

British Consular Reforms.

(SPECIAL TO "THE NEAR EAST.")

Whilst the Chambers of Commerce in the different shipping centres are discussing plans for keeping Germany out of the oversea trade after the war, one would like to see some movement on the part of the Foreign Office in regard to the reorganisation of the present Consular Service.

The following remarks, although specially applicable to commerce in the Near East, where Germany was particularly energetic before the war, apply equally well to the rest of the world.

When Germany commenced her great trade war over a decade or so ago, she prepared the ground for her subsequent activities by placing in every port, small and large, business Government representatives as consuls. These men, whilst carrying on their usual consular duties, were also given far-reaching powers to enable them to advance German interests as much as possible, and also the necessary staff to enable them to carry out such work.

It has been said that our enemy modelled her Consular Service on the British plan. This is quite true, but with her quick business instinct she was able to grasp the point that to be really useful her consuls must have a wider field to work in. She selected men who had a thorough business training, paid them well, and gave them full powers to develop German influence. The result was that in a few years the consul in a foreign port was to all intents and purposes the manager of the German business in that port. It is not too much to say that in some cases he was banker as well. If a small German trader was struggling to push a certain line of goods in the market, and was hampered by the want of money, the consul would arrange his finance for him in a satisfactory manner. He was supplied with the necessary machinery to obtain the minutest information regarding the trade of his district, and knew the names of all the foreign correspondents, and the kind of goods required, etc.

German Methods.

The writer was once told by the captain of a cargo steamer that when discharging at a foreign port he discovered that one of the men on the quay who was very busy making notes of the marks, etc., of the cargo, was the German consul himself! If the consul found that a certain country was increasing its business in his sphere he soon started a campaign by advising home the necessity of sending a few good travellers to push German makes of similar articles which were being sent out from, say, England. These men would arrive out with their price-lists printed in the language and coinage of the country. They were ready to meet their clients' wishes in every way and to give them long credit. Whilst English travellers were stumping the country with their old-fashioned price-lists printed in English, attempting to foist a certain make of goods upon their prospective customers, no matter whether the article was exactly what was wanted or not, unable to promise that such and such alterations should be made to meet customers' requirements, their German competitors were obsequiously offering to copy their wares at a cheaper rate and to make any particular article exactly as it was required.

All the time the German Consular Service was flooding the countries with propaganda printed in the language of these countries, and giving a powerful helping hand wherever it was required. Is it to be wondered at that German trade increased by leaps and bounds? At home, the German manufacturer was given every assistance by his Government to meet the ever-increasing demands of his foreign clients. Labour was cheaper than in the United Kingdom, the State railways were prepared to give concessions in rates from inland manufacturing centres to the big ports, and the banks were ready to make the financial part of the matter as easy as possible. So German trade flourished, watched over by business men from the Kaiser downwards.

This article is not intended to cast a slur on our consuls. They are, taken as a whole, a hard-working, underpaid body of men. The fault does not lie with the consuls themselves. Their reports and statistics, in the majority of cases, are carefully and conscientiously prepared, but unfortunately such valuable information is not given sufficient publicity in this country. Every manufacturer and trading house should be supplied periodically with a copy of the consul's report on trade which emanates from the particular country or countries in which he is interested. It is the system that is wrong. The British consul is tied up with red tape, he is but a child in the hands of the Foreign Office, whose laws as to the duties of H.B.M. consuls are as unalterable as those of the Medes and Persians. In nine cases out of ten his actual business experience is a negligible quantity, because he has never had the opportunity of learning business methods.

Ministry of Commerce.

There is talk of the probability of the appointment of a Minister of Commerce. It will be a step in the right direction, and it is hoped that, if such an appointment is made, our Consular Service will be reconstituted. Whilst it might not be advisable to alter the actual duties as at present arranged for our consuls, there is no reason why there should not be attached to each consulate a commercial representative, whose sole duty should be to promote British trade interests. It is believed that the Consular Service is very inexpensive to the country—in fact, the actual sum expended by the Treasury is absurd as compared with the magnitude of British world trade. It would repay the country to double, aye, treble, the annual grant for this branch of the public service and thus enable our consulates to be properly staffed.

We have suffered terribly in the past in competition with Germany, and now is the time to set our house in order. Business men firmly believe that a great trade war will spring up after hostilities cease, and that this country will not only have to fight a bloodless battle with Germany, but with those neutral countries which have benefited so largely by the present war. A strong business Consular Service backed up by a commercial banking system would be the greatest help to the British oversea trader in this coming commercial war.

M.

TRADE OF KHORASAN.

In his annual report on the trade of Khorasan in 1914, H.B.M. Consul-General says that the value of the trade for the year amounted to £2,601,257, as compared with £2,765,543 for the previous year, the decrease being due to the decrease of exports to or through Russia. Goods to the value of £221,242, which is one-twelfth of the total trade value, were carried through the parcel post.

Openings for British Trade.

I am unable to agree in the statement made in recent trade reports to the effect that there is no opening for British trade in Khorasan, and I am inclined to believe that the statement was not intended to convey more than that British trade at present labours under serious disadvantages. These disadvantages will be apparent from a comparison of the Meshed-Ashkabad road, by which Russian goods reach Meshed by wagon within a few days with the Nushki trade route, by which British and Indian goods reach Meshed by pack animals in a period of never less than three and sometimes more than nine months. That there is an opening for British trade is proved by the ever-increasing quantity of British merchandise imported from the north by the costly medium of the post office. This year's statistics show that goods to the value of £25,268 were thus imported from the United Kingdom, but these figures by no means represent the whole of this trade, for British merchants, to save postage, sent goods in bulk to Germany, where they were packed in parcels suitable for despatch by post, so that a large proportion of the goods, amounting in value to £102,146, and shown as imported by post from Russia and other Continental countries, was in fact British. Were communications improved, thread, tissues, tobacco, cigarettes, wearing apparel, sugar, soap, indigo, tanned and untanned hides, manufactured leather, drugs, carpets, mercery, hardware, and other goods from the United Kingdom and India might replace to a great extent the imports from other countries, and practically the whole of the carrying trade in Indian tea, much of which is at present carried by sea from India and enters Persia from the north, would be secured for the Nushki route.

One step towards the improvement of communications would be the establishment of a trustworthy and efficient forwarding agency between Meshed and Nushki. Indian traders complain of existing arrangements, though it is but just to say that some, at least, of the inconvenience which they suffer is attributable as much to their own slipshod and casual methods of doing business as to imperfections in the machinery for forwarding goods. Unfortunately, the traders are incapable of combining to establish an agency, and the only suggestion that they can make is that the Government of India should undertake the task. I believe that the merchants would contribute towards the cost of the establishment of such an agency. An ideal solution of the question would be the establishment of an agency by a respectable British firm, but I know of no firm likely to make the experiment. An obstacle in the way of cheap and regular transport is the great preponderance of imports (£115,863) over exports (£15,260), for even if the bulk of the local carrying trade were captured by returning caravans many would still have to return without loads.

The substitution of wheeled for pack transport along the greater part, if not the whole, of the route would remove another obstacle in the way of the expansion of British trade and should be practicable with slight improvements to the road in places, but I fear that no steps are likely to be taken in this direction until some enterprising firm establishes a carrying agency.

What is most urgently required for the stimulation of British and Indian trade with Khorasan is the extension of the railway to, or at least towards, the frontier. Nushki is twenty stages distant from the frontier, and the road traverses an arid and uninviting tract of country. The elimination of this tedious caravan journey would greatly encourage trade, the steady expansion of which, even under existing conditions, would justify in my opinion the extension of the railway line to Rubat.

Parcel Post.

Imports from India by the parcel post are comparatively insignificant and have fallen 50 per cent. in value—from £1,189 to £599—since last year, but imports from the United Kingdom have risen in value from £15,212 to £25,268 (over 66 per cent.), and those from Russia and other Continental countries from £67,053 to £102,146 (52.33 per cent.). Imports have increased under nearly every head, and will probably continue to do so from year to year, for the parcel post, though costly, is a most convenient channel for the importation of goods not too bulky for conveyance by the post office. A considerable quantity of the goods shown as imported from Russia and other Continental countries are in fact exported from the United Kingdom. Some consternation was caused during the year by persistent rumours to the effect that Russia contemplated the immediate closing of the parcel post route to Meshed vid Ashkabad, and these apprehensions probably stimulated the trade during the year.

SUDAN TRADE IN 1915.

The January Report issued by the Central Economic Board of the Sudan Government contains a summary of Sudan trade in 1915 as compared with 1914 as follows:—

	1915. £E	1914. £E
Imports	1,704,250	1,891,494
Exports	1,577,991	1,020,260
Re-exports	130,315	87,986
Transit (Inwards)	56,267	22,065
Transit (Outwards)	30,008	34,725
Total	£E3,498,831	£E3,056,530

Imports:—

There has been a further decrease in the value of imports as compared with 1914, the respective totals being: 1914, £E1,891,494; 1915, £E1,704,250.

Public imports declined by 3 per cent., Government imports by 30 per cent., the total decrease amounting to 10 per cent.

Public imports were of the value of £E1,359,364, as compared with £E1,400,333 in 1914.

Principal articles imported by the Government were:—

	1915. Value. £E	1914. Value. £E
Coal	75,842	53,440
Clothing, hosiery, and underclothing	24,704	27,321
Explosives	22,284	17,010
Iron and steel, manufactured	21,720	15,085
Timber	20,409	16,389
Military stores	17,899	13,953
Flour	16,695	21,409
Boots and shoes	12,889	8,396
Machinery, all kinds of	7,741	19,895
Ironware	6,502	11,803
Soap	4,387	3,943
Cotton fabrics	3,632	7,034
Blankets, all wool and mixed	3,322	4,095
Mineral oils	2,512	4,451
Cement	2,049	8,658
Linen, hemp and jute	1,985	2,536
All kinds of colours	1,621	3,982

Principal articles imported by the public:—

Articles.	1915.	1914
Cotton fabrics	478,141	336,188
Sugar	225,493	238,701
Coffee	79,201	57,314
Empty sacks	62,455	12,257
Flour	58,477	81,086
Tobacco, tombac, cigars, and cigarettes	42,841	43,857
Tea	34,070	36,017
Soap	20,191	20,732
Electrical and other machinery	13,379	27,430
Spices	11,083	8,201
Jams, preserved fruits in sugar, etc.	10,099	13,245
Rice	9,193	25,986
Wheat	8,363	18,985
Matches	7,350	2,411
Iron and steel manufacture	6,684	9,682
Timber	6,128	8,980
Cotton thread	5,476	3,286
Coal	5,188	22,782
Candles	4,942	6,880
Glass and crystalware	4,745	8,621
Ironware	3,670	8,382
Boots and shoes	2,642	3,939

Exports.

The value of most exports has increased in 1915, as compared with 1914. The increase in the total value is mainly attributable to the following items, the increase in the value of which is as shown:—

Dura dukhn (millet) and maize (increase in value of export), £E270,718; cotton (ginned), £E138,238; cattle, £E70,532; hides, £E43,235; sesame, £E32,243.

The only decrease in the value of any export of any importance is that of ivory (decrease, £E36,473) and Dom Palm nuts (vegetable ivory), £E11,506.

Principal articles of export "Sudan Produce" were:—

Articles.	1915. Value. £E	1914. Value. £E
Gum	313,081	314,919
Cotton ginned	236,793	98,555
Cotton seed	33,376	12,509
Cotton unginned	203	59
Dura and maize	207,156	4,445
Cattle	170,400	99,868
Untanned hides	92,315	49,080
Sheep and goats	89,526	85,975
Sesame	85,142	52,899
Dukhn	68,016	8
Gold	65,553	68,146
Ivory	48,132	84,605
Untanned skins of sheep and goats	30,300	38,427
Dates	24,167	29,372
Senna	23,499	5,912
Charcoal	13,614	586
Galad or sunt pods	7,297	2,570
Sesame oil	5,753	1,206
Dom palm nuts	3,776	15,282
M.O.P. shells	3,580	2,304
Ground nuts	6,077	2,773
Rhino horns and tusks of other animals	1,881	1,208
Horses, donkeys, mules, and camels	1,180	7,266
Ostrich feathers	465	3,999

Trade Notes.

Egypt.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications with forms of tender, etc., may be obtained, at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo. Date, April 22.

The Egyptian State Railways invite tenders for the supply of "53,080 manches en bois" and "500 cannes en jonc de 1 metre et 60 centimetres de long." Date, April 3.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Director of the Police School, Abbassia, for the supply of clothing and accoutrements required for the officer cadets. Date, April 15.

Among the questions submitted to the Council of Ministers on March 7 was that of the appointment of a committee whose duty it would be to combat German trade in Egypt in conformity with the arrangements come to between the Allies on this subject. A committee has been formed under the presidency of Ismail Pasha Sidney, former Minister of Wakfs, and the follow members:—Mohammed Shafik Pasha, Under-Secretary of State for the Ministry of Wakfs; Joseph Aslan Cattaoui Pasha and Talaat Harb Bey, together with three British Officials.

A recent issue of the *Official Journal* announces that the following enemy firms have been granted licences to trade without special restriction, in place of the restricted licences granted to them as stated in Section B of the Notice published in the *Official Journal* of January 13, 1916:—E. Del Mar, Société Anonyme des Drogueries d'Egypte, Sharia Abou el Hassan, Mouski, Cairo, and Messrs. C. M. Salvago and Co., 22, Rue Cherif Pasha, Alexandria.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on March 29, 1916, for the supply of paraffin and petrol required by the above department for 1916. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, or to the Agents, Sudan Government Railways, Alexandria.

Greece.

The Minister of Commerce at Athens has announced a public auction sale of the steamer Macedonia, the award to be made at Athens Tuesday, March 28, 1916.

TRADE WITH RUSSIA.—Firm of Produce Importers and Exporters, desirous of opening branch in Odessa, would like to hear from firms desiring REPRESENTATION, who would be willing to co-operate and share expenses of common office.—Reply to Box M., Publicity, Ltd., 28, Mark Lane, E.C.

Roumania.

The trade in automobiles, motor-lorries and motor-cycles, formerly in the hands of Germany and Italy, and partly France, is reported to be very lively owing to the impossibility of now importing goods, thus rendering the value of existing cars very high. British cars imported have always given satisfactory results. A correspondent says that the best means of successfully pushing a motor-car agency is to keep a permanent stock of cars with accessories and spare parts.

Somaliland.

The Board of Trade have received a copy of "The Customs Amendment Ordinance (No. 5, of 1915)," dated August 16, wherein the following addition is made to the list of articles which may be imported free of duty into any of the ports of the Protectorate:—

Camp equipment imported by officers and officials serving in the Protectorate. The term "Camp Equipment" shall be held to include the following articles:—Camp-bed and bedding; valise, camp tables; waterproof sheets or tent carpets; bath, wash-stand and basin, tents; camp crockery, cutlery and cooking utensils; camp lanterns, saddlery.

Ships and boats; and the apparel pertaining thereto.

Abyssinia.

Writing on January 27, the U.S. Vice-Consul at Aden says:—The railway from Djibouti to Adis Abeba, Abyssinia, is rapidly nearing completion, being within a few miles of Adis Abeba. With its completion there should be a larger market for American goods. Some of the articles for which there should be a demand are the following: Soap, safety matches, hardware, cutlery, cooking utensils, carpenter's tools, simple agricultural implements, saddles, etc., horseshoes, sewing machines, stationery, ink, cotton prints for women, oils for cooking purposes, and religious books in Arabic and English. All goods must be such as would retail cheaply to the native, as the price is of greater consideration than quality at present. Business is largely done through Aden, and the names of the principal Aden merchants doing this business are transmitted (and can be obtained at the Bureau of Foreign and Domestic Commerce and its district officer by referring to file No. 72944).

Morocco.

The Acting British Consul at Casablanca reports the grant of a lighterage concession at the Port of Kenitra to a French company, and has forwarded a copy of the contract, which contains particulars of the charges which may be made for loading, unloading, warehousing, etc. The copy of the contract (in French) above referred to may be consulted by United Kingdom firms interested at the Commercial Intelligence branch of the Board of Trade, 73, Basinghall Street, London, E.C.

ANGLO-GREEK TRADE.

Recently Reuter's Athens correspondent wrote as follows:—

"Judging from letters received here from exporters in England, there would appear to exist a considerable distrust regarding the situation in Greece, and consequently a disinclination to make shipments owing to the uncertainty of the future. I am, however, in a position to state that these fears are exaggerated, if not unwarranted. English exporters would, it is felt, be well advised to reconsider their views on the subject, unless they are prepared to see a considerable part of the import trade of Greece secured by other countries. Already American exporters are profiting from the situation, and many articles formerly obtained in England now reach this country from America. It should be remembered that the restrictions imposed by the Allied Governments in imports to Greece only concern foodstuffs, coal, and certain articles of military value, but do not affect hundreds of articles which Greece is in need of at present, and for which she is prepared to pay cash on delivery. To sum up, therefore, it is generally felt that British exporters have now a splendid opportunity of developing their trade with Greece—a trade which once lost may never again return."

BRITISH CHAMBER OF COMMERCE OF EGYPT.

The annual general meeting of the British Chamber of Commerce of Egypt was held on February 28 at Alexandria, with the President, Mr. R. C. Abdy, in the chair. The accounts and balance-sheet, together with the Committee's report for the year ended December 31, 1915, were unanimously adopted.

The following members of the committee retired in accordance with the articles of constitution, and, being eligible, were re-elected to the Committee:—Messrs. Chas. A. H. Alderson, J. Davies Bryan, V. F. Naggiar, and J. A. Scott.

The following are extracts from the President's speech, as reported by the *Egyptian Gazette*:—

"Shorthanded as our business houses have found themselves owing to all Britons wanting to join the army, we have managed to keep our commerce going, and also to take up German trade.

"The subjects we dealt with this year were, *inter alia*:—

"The formation of the Patriotic League of Britons Overseas. This league will eventually fill a void in our Empire and its life, and be used to appeal to our colony on matters of patriotic interest. They have their own committee and officers.

"We were constantly examining and corresponding with the Government regarding trade with or in the hands of enemy firms, and issued last spring a report in pamphlet form *re* openings for trade here, treating more especially with trade held by our enemies heretofore.

"The bankruptcy deposit, as insisted on by the Mixed Tribunals, was again the subject of communication with the authorities, local traders finding £E12 deposit a deterrent to moving in the case of small failures.

"The Customs Administration, no doubt, in a laudable spirit from a revenue-raising point of view, have been very severe in their manner of fixing values on imports, and we have had many complaints made to us. We have urged the formation of a definite committee of appeal to be established, as on the present system valuation must frequently be arbitrary.

"We pressed the authorities to permit us to help, as far as our limited workshops would permit, in the Imperial manufacture of munitions.

"We also strongly pointed out the objectionable practices some few unimportant firms tried to initiate of showing trade samples, etc., in Egypt under grandiose names, leading the public to imagine they were official British exhibitions.

"We called attention to a dangerous tendency of theatres and other shows to obtain support from the public by offering sometimes a vague percentage of profit to our or other Red Cross funds.

"The question of the Juges Assesseurs at the Mixed Tribunals had our attention, and is now the subject of observation of our Chamber.

"We urged the Government to take liberal steps to assure sufficient 'Tagawi' or cotton-seed for the coming crop, our indication being that the usual channels of sale were likely to be inadequate.

"Our finances were not highly satisfactory, as extra expenses were put on us by our Secretary joining the army, by the issue of the pamphlet I spoke of *re* German trades, and, lastly, a donation we made on your behalf to the 'Our Day' appeal of the British Red Cross. We all felt you would like us to figure in this exceptional national appeal, and ask you to pass a resolution approving our action in this matter. The other side of the financial picture, which is not so bright, is that our funds, as shown in the balance-sheet, being in high-class securities, are heavily depreciated at the moment, and perhaps some £300 lower than at cost to-day.

"There is one final appeal I wish to impress on everyone. It is that all those who are presidents, treasurers, etc., of clubs, charities, funds who have balances at their credit should seek to invest as much as possible in our national war funds; the 5 per cent. Exchequer Bond issue is particularly attractive. Your funds will be liquid, and the Anglo-Egyptian Bank here will gladly help all those who desire to so invest their funds."

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds,
Broadcloths, Coatings, Hosiery, Rugs,
Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.
Army Boot and Equipment Manufacturers.
CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.
THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,

Engineering Notes.

Quenching of Steel.

The process of hardening tools, or other articles made of steel, by quenching has often puzzled engineers as well as metal workers. The results are not always satisfactory, in which case not infrequently the quality of steel or the skilfulness of the operator are questioned; whilst in some places abroad the perfection of Sheffield tools and other hardened articles is attributed to a quenching process which Sheffield manufacturers are keeping secret. It will, therefore, interest those who are puzzled, as well as those who believe in secret process, to hear that the success of hardening depends to a great extent on the quenching liquid. In a lecture which Mr. S. N. Brayshaw recently gave on the quenching of steel, he stated that the age of water had a great deal to do with its quenching powers; also that some waters were more efficient than others, and instanced the water of the River Don, in Sheffield, which is carried away in barrels for quenching purposes, some of it even going to the United States. He did not say, however, what peculiar properties the River Don water possessed, but in discussing the properties which determine the value of any quenching liquid, Mr. Brayshaw pointed out that the main items of consideration were specific gravity, specific heat, boiling point, conductivity, and fluidity. He laid down as the ideal quenching medium one that was fluid from the temperature of 100 degrees C. to 800 degrees C., of fairly high specific gravity and of fairly good specific heat. A quenching bath of this fluid would give a glassy hardness to tools, but the quenching should be carried out at such a temperature that the heat would prevent breakage.

Trade After the War.

At a meeting last Tuesday in Manchester of the British engineering industry, Mr. T. C. Elder (of the British Electrical and Allied Manufacturers' Association) gave an address on "Engineering Industry and Public Policy," which ought to be widely published and read by every man who is concerned with the prospects of British trade after the war. Mr. Elder asked how were we to negotiate a prosperous transition from the arts of war to the arts of peace in the engineering workshops of the country—in the 3,000 Government factories? Where were we going to find a steady flow of revenue to follow the present plentiful distribution of State borrowings? It was recognised that we should need an heroic national effort of reorganisation, or else, even with victory in the field, we should pass on to social and industrial disaster. In business we had had only a mob of unorganised private adventurers in competition with, in Germany, a highly organised and highly disciplined army of industry. Many who knew Germany still wondered why she appealed to the sword, when the office pen was being wielded with such mighty results. Ten years more at the same rate of progress would have, perhaps, achieved her object. By a providential freak of fortune she was tempted to use her other mighty machine, with a "get-rich-quick" motive. But, costly as that had proved, it had not swept away her commercial system. That was working to-day for the future, in spite of the blockade, and the same formula would be again applied. What were we doing to defend ourselves against it? We were passing excellent resolutions. And if the war were to collapse suddenly next week, Germany would be off the mark in the commercial race quicker than any of her competitors. The output capacity of British engineering had been increased during the war by a margin estimated at from 30 to 50 per cent. That of Germany and Austria had also been largely extended, and there had been a marked increase in the United States, Canada, France, Russia, and Japan. There had been throughout the world a forced growth in the plant and buildings required for the production of machinery. We should start our new era of peace with an enormous increase in the visible means of supply. There would also be the return of millions of men to civil employment throughout Europe, and that country would most readily recover which was able to make prompt application of the labour to valuable productive purposes.

All the great countries, with such largely increased engineering equipment, would probably find themselves engaged in desperate competition. One point on which everyone seemed to be agreed was that we could not, after the war, simply go back to business as before. The time had come when we ought to drop for ever the false and fraudulent antithesis between Free Trade and Protection. It was absolutely essential, said Mr. Elder, to our future prosperity and power that Great Britain should be pre-eminent in the engineering and chemical industries. The duty and the responsibility of effective co-operation to this end rested upon the politician, the financier, the manufacturer, and the workman. If the politician came back from the peace congress repeating his old party catchwords, if the financier returned to his former profession of coldly impartial cosmopolitan money-changing, if labour was unprepared to take broad views of the relationship of output and remuneration, if the manufacturers had not learned to work in powerful association, and if the ordinary citizen, when he went to the shop counter or the polling booth, gave no more thought than he did formerly to the interests of national industry—all that would mean that we should only attain wisdom after a more or less prolonged and painful period of further adversity and turmoil. There was no assurance whatever, said Mr. Elder, that the Government contemplated any general reform of our economic policy. All the indications in that quarter suggested that we should reach peace totally unprepared, and enter upon another desperate scramble to make up for the lost time with wrong men and wrong measures, and foolish amateur experiments and much money thrown away. But our enemies were already preparing quietly and systematically. The engineering industry must do all that was humanly possible to help itself, and it would fall far short of what was possible if it did not organise a general association powerful enough to exert collective influence in all foreign markets to offer authoritative counsel to the Government, to stimulate scientific research, and bring it into closer communication with industrial progress.

ERZEROUM ROUTES.

The *Morning Post* gives the following summary of routes to and from Erzeroum :—

From Erzeroum north to the Black Sea there are four roads—one to Rizeh and three to Trebizond. The main road to Trebizond passes by Baiburt and Gumuskhaneh, and is about 200 miles long, or a continuous journey of about 70 hours. A little known but more beautiful way branches off some miles beyond Baiburt, and joins the *chaussée* some fifteen miles to the south of Trebizond. This road takes fully three days to cover. The shortest route leaves the *chaussée* halfway between Baiburt and Gumuskhaneh and joins it at the same point as the second route mentioned. The second and third roads, however, are mule tracks and really summer routes.

From Erzeroum westward the direct road passes through the military station of Erzingan (75 miles), thence over a mountainous country to Sivas (230 miles), a town of great strategic importance, built at an altitude of 4,420 ft., and a centre where seven roads and two rivers meet. Fully 200 miles separate Sivas from Angora, the railhead from Constantinople, which is two days' journey distant, with a break at Eski-Shehr.

There are roads from Erzeroum south-west to Kharput (125 miles), and Diarbekr, on the Tigris (150 miles), and one southward by Khinis, Mush, and Bitlis. In its passage through Bitlis the "infant" Tigris, joined by another stream, breaks into rapids and cataracts. From Bitlis the road continues south to Mosul (180 miles), on the Tigris, which is navigable thence to Baghdad, but there are considerable obstacles in the shape of a great dam and rapids between Mosul and Tekrit, the railhead of the Baghdad railway.

On the Euphrates navigation is impeded above Anah (160 miles north-west of Baghdad) by old dams, rocks, and rapids, but once or twice a year, in the dry season, a small steamer runs to Meskineh, some fifty miles to the south-east of Aleppo. Its main purpose, however, is not commercial, but to control the river tribes.

EGYPT'S LACK OF COAL.

The question of the coal shortage in this country (says the *Egyptian Gazette*) was discussed at a recent meeting of the Advisory Council of the Ministry of Agriculture by Naus Bey, the manager of the Sucreries Company, who brought forward a motion that means should be taken to furnish the coal indispensable for farmers by all possible means. He drew the attention of the Government to the necessity of lowering the Customs dues on imported coal. The dearness of coal, he pointed out, was due to the extraordinary rise in freights, and the Customs ought to be levied on the basis of the prices in vogue in England, increasing these prices by double the amount of the freight, which was the custom before the war, and not by increasing them seven times over, as was now the case.

The Minister of Agriculture, in reply, declared that the Government would not leave a stone unturned in order to find a solution for the problem. He mentioned the fact that he had asked Lord Edward Cecil, who was now in England, to deal directly with the matter. The Minister went on to state that the Government was seriously considering the question of importing coal from India, but here again the lack of ships was a serious hindrance.

Near East Markets.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, February 28.

The general situation continues to be one of commercial activity. The strong demand for grain (millet) has caused the price to rise, but the enhanced price is also due to the determination of the natives not to be caught napping with empty garners, as they were two years ago, when the rains failed. They are, therefore, storing a surplus, which will be retained until the first rains give some earnest of a good season.

The following extracts are from the Monthly Report for January of the Central Economic Board of the Sudan Government:—

Gum.

1,422,000 kilos of gum valued at £E45,168 were exported via Port Sudan, and 29,000 kilos of gum valued at £E1,000 were exported via Halfa during January, 1916.

The Port Sudan exports were directed as follows:—To Great Britain, 723,000 kilos (£E24,361); to France, 620,000 kilos (£E18,286); to the U.S.A., 50,000 kilos (£E1,719); to Japan, 20,000 kilos (£E667); and to New Zealand, 4,000 kilos (£E135).

In January, 1915, 396,819 kilos of gum, valued at £E11,509, were exported from Port Sudan.

Gum continues to come into El Obeid in large quantities for the time of year. 17,381 kantars were sold in El Obeid gum market during January, this constituting a record for the month. The price per kantar ranged from 96 piastres to 120 piastres the kantar (54 kilos).

Cotton.

January cotton reports state:—

Red Sea Province.—The management of the cotton market at Tokar has been handed over to the Inspector of Agriculture.

Hoppers have appeared here and there in the basin, but have been destroyed by prompt measures being taken. Flying locusts passed over the basin twice during the month going towards the sea.

Picking has begun on the earlier grown cotton and it is proposed to open the market on February 10.

A large number of hoppers were reported near Handub. The Inspector Suakin sent out the Sub-Mamur with Police and Takruri labourers who destroyed the whole lot.

Berber Province.—The remarkably sustained cold spell during the month has to some extent held back the cotton, but warmer weather will no doubt bring a recovery.

Sesame.

The trade in sesame still continues to be very brisk and far larger quantities are being exported than was expected, while the price remains excellent.

Sesame to the value of some £E7,000 has been sold in Singa Merada during the month.

3,910 ardebs were put on the market at Singa, and 4,236 ardebs were exported.

Prices were P.60 to P.80 the ardeb of 480 rottles (216 kilos), or P.28 to P.37 per 100 kilos.

Colocynth Pulp.

Included in the above review of the situation is the following report by the Imperial Institute on a sample of the above pulp remitted to it:—

"The Colocynth pulp was forwarded to the Imperial Institute by the Director of the Commercial Intelligence Branch, Central Economic Board, Khartoum, with letter No. 1,186, dated December 30, 1915. The sample consisted of pulp free from seeds and in good condition, but slightly brown in parts and containing some yellowish dust. It was submitted to two firms of merchants in London, who reported on it as follows:—

"(1) One firm considered the sample to be very satisfactory except for the slight colouration referred to above, and stated that there is a good market in London for colocynth pulp in fairly large quantities. The firm pointed out that for a parcel of Sudan colocynth 3s. 3d. per lb. had been asked recently in London, but that buyers were not prepared to pay more than about half that price.

"(2) The second firm also described the sample as of good quality, but added that if the fine dust were removed it would be still better. They valued it at about 1s. 3d. per lb. c.i.f. London. They further stated that they had recently purchased several tons of colocynth pulp from the Sudan at as much as 1s. 6d. per lb., the pulp in question being of extra fine quality, absolutely free from dust, and with all the yellow material taken out."

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, March 9.

The exportation of potatoes has now been prohibited except in special circumstances to be dealt with by the Provost Marshals.

Weather has been favourable. Fresh falls of snow have covered the hills, and the Pedias and other "rivers" have brought much water to the plains. Cereal crops are doing well in all parts of the island.

PRODUCE REPORT.

London, March 23.

Currants.

Speculative business continues, and prices have advanced from 1s. to 2s. since last report.

Sultanas.

The demand continues steady for all kinds, and prices are firm, although Afghanistan and Indian fruit are a little dearer.

Figs.

There is a moderate demand, with small business passing, at late rates.

Dates.

The demand for this fruit is steadily increasing, prices being 25 to 30 per cent. higher than at the commencement of the season. Stocks, however, are reported to be short, and a further advance is very probable.

Seeds.

The linseed market is dull and depressed. London-Calcutta, spot, 76s.; afloat, 75s. 9d.; February-March, March-April, and April-May, 75s. 6d. Bombay to London, April-May, 75s. 9d. La Plata to Hull, spot and afloat, 70s.; February-March, 69s.; March-April, 68s. 9d. Bombay to Hull, April-May, 75s. 6d. Cotton-seed is dull and easier to buy. Egyptia to London, spot, offered at £14; Hull, spot, sold at £13 10s. prompt. Bombay to Hull, spot, £12 5s. Rapeseed nominal. Toria, March, Hull, is quoted 70s. 6d.

Oils.

Linseed oil is steady forward; spot pipes, £41 10s.; spot barrels, £42 5s. waterside; March, £42; April, £42 2s. 6d.; May-August, £43 5s.; and September-December, £44 5s. Cotton-oil is firm; crude pipes, spot, £43 10s.; refined pale pipes, spot, £48 6s.; and sweet barrels, spot, £52 to £53, as to makes. Rape-oil is steady; ordinary brown naked, spot, nominal; English refined barrels, £55 to £56.

Oilcakes.

Cotton cakes: Egyptian are offered sparingly, both in warehouse and for shipment; prices, however, are well maintained; spot parcels selling at £9 12s. 6d. to £9 15s., while for March and April shipments, £9 10s. is asked, with English at £9 15s. 6d. to £9 17s. 6d., and Bombay £9 7s. 6d. per ton. Linseed cakes.—The market is in a depressed condition, owing to the continued absence of demand, although buyers have an opportunity of buying at a decline of fully 5s. per ton. Best London made is offered at £12 5s. 6d. to £12 10s. 6d., with East Indian seed, pures, at £12 10s. to £12 15s. per ton.

Various.

White Rangoon beans, spot, old crop, £23 5s., ex store. Canary seed, Spanish or spot, £5 15s. to £6 10s., ex. store per 464 lbs. Sulphate of copper is firmer, March-April, £48 10s. per ton, f.o.b.

NOTES FROM BULGARIA.

(From Our Own Correspondent.)

Bucharest, March 4.

People arriving from Bulgaria agree as to the deplorable state of that country. A cause of very great suffering is the total want of medicines and drugs, which makes itself felt in the military hospitals, due, it is said, to the fact that the same want is beginning to be noticed in Austria-Hungary and Germany, from whence the requirements of Bulgaria have been supplied.

Shortage of Foodstuffs.

Medicines, however, are not the only articles of which Bulgaria is short. Wheat is becoming uniformly scarce. The German fancy prices have proved so tempting that possessors of wheat disposed of all their available stock. Now a shortage is visible, and the Bulgarian Government has been obliged to import from Roumania. Up to the present 10,000 metric tons of wheat have been bought, and the purchase of a further 20,000 metric tons is being negotiated.

Sugar and rice are both in great demand. The Commission for Requisitions has only been able to place with extreme difficulty at the disposal of the Municipality of Sofia three wagons of rice; while the Committee of Public Supply "hopes" in a short time to supply a wagon of sugar.

Prices are rising daily in the capital and provincial towns, especially for foodstuffs and clothing.

Owing to German intervention, severe orders have been given to the prefects of districts and to the communal authorities not to allow a square foot of ground in Bulgaria to go untilled. All Bulgarian territory which is capable of cultivation must be planted. The rural population of Bulgaria is to be divided into groups of from five to ten families, at the head of each of which a chief will be appointed. This chief will see that all available ground is planted, and he will be personally responsible for the execution of the order. Mayors especially zealous in this matter will be compensated, whilst negligence will be severely punished.

Tobacco Crops.

The tobacco crop in the Gumuldjna district during the past year amounted to about five million kilos. Sales commenced at 4 f. 50 per kilogram. The Uskub district produced annually before the Balkan wars about ten million kilograms of tobacco.

Macedonian Mineral Resources.

The Bulgarian Ministry of Agriculture is shortly sending representatives to the new territories in order to study the question of coal supply, and also to report on the iron and copper mines.

New Macedonian Bridge.

On February 8 a bridge across the river Saishitza, to the west of the town of Kadorishti (Macedonia), was formally opened. The bridge, which is 100 metres long, bears the proud name "Czar Ferdinand."

Czar Ferdinand Making Money.

The economic situation of Bulgaria at the present moment is fully as bad as that of Turkey. Everything that could be taken has been seized by the Germans. As for what remains, it is in the hands of speculators. Most characteristic of the actual régime in Bulgaria is the fact that the so-called Committee of Supply, which should devote itself to supplying the wants of the population, is itself heartily engaged in heavy speculations in foodstuffs, etc. All the members of the Committee are Radoslavists, and naturally protected by the Government. It is known, too, that even King Ferdinand himself has realized considerable profits on some minor deals.

Hungary to the Rescue.

M. Postosky, Director of the National Bank of Hungary, accompanied by Count Zichy, former Hungarian Minister of Education, have passed through Sofia on their way to Constantinople. On their return they will spend a few days in the Bulgarian capital.

Quarantine has been imposed at Athens from the 11th inst. on arrivals from Corfu, owing to an alleged outbreak of cholera.

COMPANY MEETING.

THE FINANCIAL TIMES.

The ordinary general meeting of the Financial Times, Limited, was held on Wednesday at 72, Coleman Street, E.C., Mr. William Graham (the Chairman) presiding. The Secretary (Mr. H. A. Randall, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report, said, *inter alia*: The company during the financial year under review has suffered a great loss by the death of Mr. F. M. Bridgewater, who for several years filled the position of Chairman and Managing Director. Mr. Bridgewater gave the best years of his life to the services of the company, and the trade papers owned by it are in particular a lasting memorial of his life's work. Those papers were in a large measure created by him. "Absolutely trustworthy" is the motto of *The Financial Times*, and, speaking with an intimate knowledge of Mr. Bridgewater's management of your company, I can say emphatically that during his chairmanship and managing directorship *The Financial Times* not only maintained, but materially increased, its reputation for absolute trustworthiness. (Hear, hear.) Upon the nomination of shareholders holding a majority of the ordinary shares in the company and a considerable holding in the preference shares, I have been appointed Chairman in Mr. Bridgewater's place. I have had a long business association with the company, and have its interests much at heart, and will do my best to forward its welfare in every way. Mr. F. F. Bridgewater has been appointed managing director. He has been associated with his late father in the management, and in my opinion the company is fortunate in obtaining his services, and thereby preserving continuity in the business. I regret to say that Mr. Frank Bridgewater is unwell at the moment, and therefore is unable to be present with us to-day. Mr. Thomas Willerson, a gentleman with a wide experience in financial joint stock enterprises, has been elected a director, and we have also elected to a seat on the board Mr. H. A. Randall, who has been with this company some twenty-three years, and has been the secretary for the last thirteen years, a position he will still continue to occupy. Mr. Randall has given very valuable services to the company. He is conversant with its commercial affairs from A to Z, and I say emphatically that he is a valuable addition to the board. The period covered by the directors' report has been one of unprecedented difficulties for financial journalism, and in a less degree for all branches of journalism. . . . Advertisement revenue from prospectuses is very much below the average, but I am happy to be able to inform you that revenue arising from other fields of advertising has been well maintained, and the circulation of *The Financial Times* has, on the whole, kept very steady, and is satisfactory. While there has been a great dearth of new enterprises, there has been a consistent amount of interest in existing companies, and the number of inquiries received by the editorial department, as is shown in the "Answers to Correspondents" column in *The Financial Times*, testifies to the interest taken in joint stock undertakings and the confidence with which a large section of the investing public look to *The Financial Times* for information and guidance. Small papers, as compared with normal times, have been the rule during the past year, but I venture to think that all matters of interest in the financial world have been adequately covered, and the 14-page paper published recently in connection with banking enterprises gives evidence of the position which, even in these days of difficulty, *The Financial Times* has maintained. I say without hesitation that *The Financial Times* has retained its leadership as a daily financial paper during the last year, that its influence has increased, and that the financial results secured have largely surpassed those obtained by any of the other daily financial papers. . . . Turning to the figures in the balance-sheet, you will note that the profit, amounting to £9,485 17s. 5d., adequately provides for all fixed charges as well as for the full preference dividend. The usual amount has been placed to the staff pension fund, and the necessary redemption of the debenture stock has been effected. I am happy to be able to inform you that a profit was made last year in every branch of your business, and that the operations of your company up to date show an improvement in every branch of the business over the corresponding period of last year. The directors recommend the payment of the final dividend on the preference shares, making the full dividend of 5 per cent. for the year. We do not consider the present conditions justify a distribution among the ordinary shareholders. The dividend warrants will be sent out on the 30th instant. . . . The hope expressed last year of the ultimate triumph of the Allies at no distant date has not yet materialized, but there are indications that while the Central Powers have already reached their zenith, and, it is believed, are on the decline, the strength of the Allies is increasing, and that, while the end cannot yet be foreseen, the ultimate result is beyond question. The return of peace conditions should bring prosperity to this company. There must be many concerns which will need to make issues of capital at the earliest opportunity. I am not referring to speculative enterprizes; for them a period of waiting must be anticipated, but the need of capital to repair the ravages of the war will be enormous, and the big concerns of this country will have to appeal for capital to enable this country to do its share—and I hope the giant share—in supplying that which is essential to repair the destruction which has occurred. Furthermore, the issues of capital by railway companies in this country and throughout the world, and by other large concerns engaged in big developments, have been held up for the last eighteen months, and will be during the continuance of the war, and appeals must be made by those concerns for capital. Therefore there is, I think, a good prospect of prosperous times so soon as the war has ended. I beg to move that the report and accounts submitted to this meeting be received and adopted, and I shall ask Mr. Willerson to second that resolution, and thereafter I shall be happy to answer any questions that the shareholders may desire to put.

Mr. Thos. Willerson seconded the motion, which was carried unanimously.

Messrs. Walter W. Davies and Thos. Hinshelwood and Co. were recently the successful tenderers to the Egyptian Government for the supply of general stores required by the Giza and Gezira waterworks.

THE INDIAN RUPEE IN EGYPT.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 7.

The question of silver and nickel coin has always been a vexed one in Egypt. Regularly every autumn the Jews and the Sarafs (money-changers) corner all the small change, just at the time when it is wanted in connection with the subsidiary work of moving the cotton-crop, and they make a profit of anything around 10 per cent. merely in changing gold, and, since the war, bank-notes. Equally regularly every autumn the Egyptian Government imports new coins, either to replace the used coins or to meet the temporary demand, or again, to make good the leakage, which takes place on an annually increasing scale into the Sudan.

Since the outbreak of the war the demand for silver coin has been persistently on the increase, and instead of falling off in the early spring as is usual after the bulk of the cotton-crop has been moved, it has been maintained in a manner that has considerably inconvenienced the financial authorities. The reason is, of course, the presence in this country of such large numbers of troops, who require and retain a very substantial amount of silver coin. To meet this abnormal condition of things, the Egyptian Government steadily increased its orders to the Home mints and, as an illustration of the expansion which the local silver circulation has undergone, I would say that, in 1915, new small coin to the extent of £700,000 was imported, as against £36,000 in 1913, £200,000 in 1912, £300,000 in 1911, £600,000 in 1904 (the previous maximum).

This winter, although it was hoped that the early moving of the cotton-crop would ease the situation, the Egyptian Government maintained the scale of its orders for new silver coin. Unfortunately, not only did the demand not abate, as it was expected to do, but very considerable shipments were lost in the "Persia" and the "Maloja." The situation, therefore, became very acute, and as a certain period of time would have to elapse before the lost shipments could be replaced, the Government had to devise some means of meeting the emergency. A certain amount of English silver was obtained and distributed in pay and allowances to the Imperial troops, but it was quite inadequate, and in the end Egyptian financial authorities had to have recourse to India, which was the only British possession that had any stock of silver coin free.

A substantial amount was requisitioned for the Egyptian Government, and yesterday a Decree was promulgated making the Indian silver rupee legal currency and tender in Egypt. The value of the rupee is fixed at P.T. 6½ or fifteen to the British sovereign of P.T. 97½. It is unfortunate that gold pieces are not in circulation and that bank-notes alone have taken the place of the sovereign and louis d'or, the standard at the Egyptian pound of P.T. 100. Still, the introduction of the rupee meets a great want, and although at first the Egyptians of certain classes objected to accept a coin to which they are not accustomed, I find on inquiry that, all things considered, the innovation has been well received and little difficulty has been experi-

Digitized by Google

enced in putting these, after all, very attractive silver pieces into circulation. Only the silver rupee has been made legal tender; the fractional parts are excluded. Moreover, this measure is only a temporary one, resorted to to meet an emergency, and as soon as the new orders that have been placed for new Egyptian silver coins are received, the rupees will be withdrawn from circulation.

The following is the decree legalising the circulation of the rupee in Egypt, which appeared in the "Official Journal" (in French!) on March 6:—

Nous, Sultan d'Egypte,

Vu l'article 14 du Décret du 14 novembre 1885 relatif aux monnaies égyptiennes;

Considérant qu'en raison des circonstances actuelles et spécialement de la présence de nombreuses troupes dans le pays, la demande de numéraire d'argent augmente constamment pour les besoins des transactions et que, par suite, le stock de monnaie d'argent actuellement en circulation devient manifestement insuffisant;

Considérant aussi qu'une grande quantité de numéraire d'argent destinée à l'Egypte a été perdue en cours de route et qu'il pourrait s'écouler un temps assez long avant qu'on en reçoive d'autre;

Que d'autre part, la frappe de la nouvelle monnaie égyptienne demandera nécessairement un certain temps;

Considérant que, dans ces conditions, il a été jugé indispensable d'alimenter provisoirement la circulation au moyen de la monnaie d'argent du Gouvernement des Indes connue sous le nom de "Roupie," dont un stock assez considérable se trouve à la disposition du Ministère des Finances;

Sur la proposition de Notre Ministre des Finances et l'avis conforme de Notre Conseil des Ministres;

DECRETONS. — Article premier. — Provisoirement et jusqu'à ce qu'il en soit ordonné autrement, la Roupie d'argent indienne aura, au même titre que les monnaies d'argent égyptiennes, cours légal en Egypte.

En conséquence. tous paiements effectués au moyen de la dite monnaie pour quelque cause que se soit seront effectifs et libératoires au même titre et dans la même mesure que s'ils étaient faits en monnaie égyptienne d'argent, nonobstant toutes clauses ou conventions contraires existant ou à intervenir entre les intéressés.

Art. 2.—La valeur de la Roupie est fixée à soixante-cinq millièmes de la Livre Egyptienne (L.E. 0·065 mill.).

Art. 3.—Nos Ministres des Finances et de la Justice sont chargés, chacun en ce qui le concerne, de l'exécution du présent décret qui entrera en vigueur à compter de la date de sa publication au "Journal Officiel."

THE EGYPTIAN BUDGET.

The *Times* Cairo correspondent, cabling on March 20, said:—

"The Egyptian Budget for 1916-1917, compared with that of 1915-1916, shows that the country is fast recovering from the set-back which the war at first caused.

"The estimated revenue for 1916-17 is £E16,530,000, against £E14,756,000 in the previous year. The expenditure is estimated at £E16,630,000, as against £E15,900,000 in 1915-1916. The amount of the deficit, £E100,000, which will be withdrawn from the reserve fund, compares with a budgeted deficit of £E1,144,000 in 1915-1916.

"The improvement in the revenue is chiefly in Customs, railways, and land tax. The increased expenditure is mainly due to the rise in the price of coal and other commodities.

"It is believed that when finally adjusted the accounts for the financial year 1915-1916. instead of the deficit budgeted for, will show a surplus exceeding £E1,000,000. Although part of this surplus is absorbed by the diminution in the value of investments, the result is very satisfactory and reflects great credit on the financial administration."

A Roumanian Customs officer discovered recently at Giurgevo two wagons bound for Turkey with contraband goods from Germany. The wagons were laden with ninety barrels of soft sugar, in which shells of large calibre were concealed. The wagons were confiscated.

COMPANY REPORT.

Ottoman Railway from Smyrna to Aidin.

The council have to report that the Ottoman Government still remains in possession of the railway and its revenues. The accounts now presented are for the half-year to December 31 last, and incorporated therewith are the accounts from Smyrna to August 31, 1914, since which date no further returns have been received. These accounts are subject to adjustment as and when later returns are received. Certificates for the debenture interest for the half-year to December 31 last, amounting to £74,175 4s., have been posted to the 4 per cent. and 5 per cent. debenture stock holders in accordance with the resolutions passed at a special meeting of shareholders held on June 10, 1915. Since the beginning of the war with Turkey most of the leading members of our staff have been in this country and have received an allowance equal to half their previous pay. Some other members of our staff connected with the permanent way, locomotive, stores, telegraph and other departments remain in Smyrna, and the British Government has generously undertaken on behalf of the company to advance pecuniary aid to such of them as are of British and certain other nationalities. The members retiring from the council on this occasion are the Right Hon. Lord Rathmore and Mr. Fredk. Single, who are eligible and offer themselves for re-election.

GREEK FINANCES.

On the 16th inst., Reuter reported from Athens:—

"No agreement has been reached in the Cabinet on the question of the taxation which is projected in order wholly or partly to cover the deficit incurred by mobilization. The Bills connected with this taxation will probably not be laid before Parliament unless the proposed taxation is greatly reduced. The sums required, however, must be found, and if a loan is not forthcoming from the Powers the position will become truly critical. The gravity of the financial problem is a source of general preoccupation."

Three days later the same Agency reported that an agrement had been reached in principle regarding the imposition of new fiscal measures, but no decisions have been taken.

TURKEY AND GERMANY.

According to the *Times* Milan correspondent, the *Neues Wiener Tagblatt* states that the new £20,000,000 German loan to Turkey is to be applied as follows:—£6,000,000 to Roumania for the purchase of flour and petrol; £1,240,000 to the National Defence Fund; £10,150,000 as the basis of the new issue of paper money; £1,000,000 for the issue of five and of 20 piastre notes; the remainder to the Baghdad and Anatolian Railways. The Turkish Parliament has ratified the contract for the construction of the Baghdad Railway in the region of Mount Taurus.

NEWS FROM ALL SOURCES.

The Bulgarian Government has issued orders for the requisitioning of all foodstuffs remaining in private hands throughout the country. It is stated that, after making provision for the needs of each district until the date of the next harvest, the Government will place the residue, if any, at the disposal of Germany and Austria.

Messrs. Sayer and Colley were recently the successful tenderers to the Egyptian Government (Domaines de l'Etat) for the supply of oil for motors.

The correspondent of the Paris *Temps* at Salonika states that with a view to putting an end to speculation in foodstuffs, the Greek and the Anglo-French military authorities have agreed to fix an official tariff printed in the Greek, English, and French languages.

The Turkish Parliament not having approved the project, the adoption of the Gregorian Calendar in Turkey has been postponed *sine die*.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 52 tons (last week, 1,106 tons); Hurgada production for week, 592 tons (last week, 625 tons).

BANQUE EGYPTIENNE DE COMMERCE (IN LIQUIDATION).—Meeting of shareholders in Cairo on March 31.

EASTERN BANK.—The transfer books will be closed from March 23 until April 13, 1916 (both days inclusive).

EUROPEAN OILFIELDS.—Week ended 12th inst., 107,000 poods.

GREEK GUARANTEED £2 10s. PER CENT. GOLD LOAN OF 1898.—The Bank of England are prepared to receive the coupons due the 1st prox. on these bonds. The necessary lists can be procured on application at the Dividend Pay Office.

KHEDIVIAL MAIL STEAMSHIP AND GRAVING DOCK.—On the 31st inst. a dividend at the rate of 5½ per cent. per annum on the cumulative preference shares, less income-tax, for the six months to December 31, 1915, will be paid at Glyn Mills Currie and Co., London, and at the Imperial Ottoman Bank, Alexandria. Transfer books will be closed from 28th to 31st inst.

NEW EGYPTIAN COMPANY.—General meeting of debenture holders will be held on March 30, at 12 noon, at 13, Austin Friars, E.C.

ORIENTAL CARPET MANUFACTURERS.—The seventh annual meeting will be held at the offices of the company, 5, Rue Gretry, Paris, on April 10, at 11 a.m. The meeting will be asked to pass a resolution to the effect that no dividend would be paid for the financial year, ending December, 1914 and 1915.

OTTOMAN RAILWAY FROM SMYRNA TO AIDIN.—The meeting of shareholders will be held at Winchester House on Tuesday, March 28.

ROUMANIAN CONSOLIDATED.—Week ended March 11, 986 tons.

SUEZ CANAL.—The traffic receipts for March 17 and 18 amounted to 420,000 fr., as compared with 350,000 fr. for the corresponding days last year.

NOTES OF THE WEEK.

There will be general disappointment in all the Allied countries if the War Council held this week in Paris does not prove the herald of a great offensive movement on the part of the Grand Alliance. The Council, so runs one of the resolutions adopted, confirms all the measures taken to realise unity of action and unity of front. In this unity, we are told, is included "military unity of action as assured by the agreement concluded between the General Staffs." That unity is already assured by General Joffre's position as Generalissimo of the French and British Armies, and in another sphere by the supreme command of the Franco-British forces in the Balkans being in the hands of General Sarrail. The General Staffs of the Allies, however, did not meet in Paris merely to confirm steps already taken. Rather, we may hope, they were concerned with putting the finishing touches upon plans which have surely been maturing for a long time.

It has been difficult for the onlooker, and still more difficult, we may suppose, for the troops on the spot, not to chafe under the seeming inactivity that has prevailed in the Near East. Everything points to the Allied forces having been for some time numerically superior to the enemy immediately opposed to them, and the call to redress Serbia's wrongs has been insistent. So much seems to hang on a vigorous offensive in this quarter that there is naturally a tendency to regret a day's unnecessary delay. But the value of co-ordinating effort will sooner or later be recognised. The Central Powers, undergoing as they are a siege on a vast scale, have had no other course open to them than to indulge in fierce thrusts—first in one direction, then in another—in the hope of breaking the encircling line. It has been to the Allies' interests to draw the cordon tighter when they could, but the end was not to be brought nearer by irregular indentations of the enemy perimeter. Thus, in spite of the influence which the offensive in the Balkans might have had on Roumania and Greece, it may well prove to have been the wiser course to delay an advance until the whole line from the English Channel by way of Italy, the Balkans, and Russia to the Baltic Sea could be simultaneously contracted.

German anxiety in regard to the position in the Near East is reflected in the Press messages which purport to reveal the intentions of the Allies at Salonika. At one time General Sarrail is represented as having declared that an offensive was equally purposeless for the enemy as for the Franco-British forces. But the picture was overdrawn when the Commander-in-Chief was also made to dilate upon the difficulties of provisioning the troops owing to the distance from France and England and to the presence of German submarines in the Mediterranean. At another time we are told that the terrific German offensive in the West has made it necessary to recall a portion of the French troops at Salonika, and that it may be practically taken for granted that there will be no fighting in the Balkans.

The German version of the Allies' intentions presupposes that a large force, disproportionate to the defensive requirements of Salonika, is to be shut up indefinitely in that town, and to inaugurate a condition of stalemate in the whole of the Near East. It remains to be seen whether the War Council in Paris has not been able to devise a better course than that. If the views of M. Pasitch have prevailed there, we may not have to wait long for interesting developments. In an interview with a representative of the *Matin* the Serbian Prime Minister is reported to have said: "All Serbs call now for 'revanche' by the Allies in the Balkans, for it is now possible that the Austro-German forces there do not exceed three or four army corps. The Bulgarians are weakened, and cannot oppose to us more than five army corps, and I do not believe reinforcements can reach them, inasmuch as Turkey has been obliged to send her troops to the Armenian campaign. . . . An offensive in the Balkans in conjunction with the other sectors of the front will have important consequences, and will be decisive for the neutrals which still hesitate. After two successful battles for us the enemy's moral will exist no longer, and if Germany can be cut off from Turkey the war will be shortened by several months."

Digitized by Google

Meanwhile the fighting on the Greek frontier has subsided. The Germans have been forced to retire over the frontier from all the points occupied by them in Greek territory, and the two opposing armies have settled down again to an exchange of air raids. As on other fronts, the Germans find it easier to drop bombs promiscuously on a town, while the Allies confine their efforts to achieving the maximum amount of military damage. The fact that the civilian population of Salonika provides the victims for the German bombs does not tend to make our enemies more popular in Greece.

In view of the prominence attained by many of the large number of Hellenes who pass their lives outside Greece, it has often been a matter of surprise that these "outer Greeks" have not contrived to be more articulate. They have always been characterised by intense loyalty to the Mother Country, and modern Greece is indebted not a little to the generosity of those who have made their money in foreign lands. The recent course of events in Greece has tended to bring these Hellenes together. The Hellenic Congress, held in Paris last January, as we are reminded by a correspondent in the *Morning Post*, took upon itself to pass certain resolutions which displayed something more than a sentimental interest in Greek affairs. Manifestoes embodying its views were sent to King Constantine and the Greek people; but the Executive Committee of the Congress finds nothing in the situation in Greece to encourage it to abandon the anxiety which prompted those resolutions two months ago. It is a matter for regret to those who wish Greece well that she should have to undergo a trial which threatens to cleave the country into two bitterly hostile camps.

It is evident that Turkish reinforcements have succeeded in reaching the districts threatened by the Russian advance west of Erzeroum. Counter-attacks are now being made on the Russian column moving on Trebizond. They have not been successful, but were indeed repulsed, according to the Russian official statement, with enormous losses. The Russian advance, however, has been compelled to slow down, and the last few miles before the Trebizond-Erzingan line is reached bid fair to prove as difficult as any since the Caucasus frontier was passed. The region of Baiburt, midway between Erzingan and the sea, is particularly favourable to the Turkish defence. On the left wing of the Russian line, which rests on Bitlis, progress has been made in a south-easterly direction. In the Black Sea the fleet continues its activities, and is rewarded from time to time by the capture or destruction of vessels carrying Turkish stores.

It is still a matter for keen disappointment that no progress can be reported in Mesopotamia; but little fault will be found with the decision—which ought to have been acted upon long ago—that no further attempts to advance are to be made until the British forces are suitably equipped for the task in front of them. Medical deficiencies are being made good, and we know that reinforcements have lately been reaching General Lake. One of the mistakes of the past seems to have been the failure to realise that the Mesopotamian Force, if it is to be successful, requires to be equipped with all the latest war inventions just as much as any army operating elsewhere. The idea that it was only going to encounter nomadic Arab tribes has long since been exploded. Whatever may have happened on the original advance, the Turkish resistance is now reaping the advantage of German supervision, and can only be overcome by superiority in numbers and weapons.

The wording of Mr. R. McNeill's question in the House of Commons regarding peace with Bulgaria does not seem to have been felicitous He is reported to have asked the Under-Secretary for Foreign Affairs whether he would give an assurance that Bulgaria would not be admitted to separate negotiations for peace. If by this it was intended that in no circumstances should Bulgaria be detached from the Austro-German orbit until she and the Central Powers conjointly were compelled to sign terms of peace, we venture to think that such a policy might well prove a grave mistake. There is no advantage to be gained by encouraging the idea that Bulgaria's future is for ever linked up with that of the Central Powers. It is a belief that King Ferdinand would like to see gaining ground, but it would not be to the interests of the Balkan Peninsula as a whole. It is to be hoped that sooner or later Bulgaria herself will hold different views. At present the Government finds it necessary to emphasize the contention that the country's interests, not only in war time but in peace, are identical with those of her northern allies. Accordingly she has adopted the Gregorian Calendar in order to spite Russia, and the name of the new cathedral in Sofia is to be changed from St. Alexander Nevsky to SS. Cyril and Methodius. Greater Bulgaria, which comprises most of Old and New Serbia, is now divided into seventeen departments and eighty-six districts, and the civil administration would have to be regarded as fully established on a permanent basis were it not for the fact that considerable uncertainty attaches to the western frontier. Belgrade and its district are wholly excluded from Bulgarian administration, but the Sofia Government cannot reconcile itself to other claims advanced by Austria-Hungary. The policy of the Allies must still be not to lose sight of the interests of the Balkan Peninsula as a whole, and an axiom of that policy is that the claims of Germany to have any word at all in the settlement of the future of the Near East must be rejected.

The withdrawal of Sir John Maxwell from Egypt, after being in charge of the defences of that country from the beginning of the war, was rendered inevitable by the appointment of General Sir Archibald Murray to the supreme command of the Mediterranean Expeditionary Force. This force is based on Egypt, and has become responsible both for the defence of that country and for the British share in the Balkan operations. General Maxwell's command was thus swallowed up in the higher command. It is obviously in the interest of the Expeditionary Force that the operations in this part of the world should be regarded as belonging to a single theatre of the war, in order that the transfer of troops from one part to another, when necessary, should be effected with the least possible delay. General Murray will be in a position to decide whether the situation in the Eastern Mediterranean requires that his forces should permanently resign themselves to the defensive, or whether it is not possible to break up the Turkish concentrations that enable the enemy to make so much of their alleged power of terrorizing Egypt. The air raid on Bir-el-Hassana is a welcome reminder that there are other ways of reaching the Turco-German forces than by marching infantry over the Sinai desert. Many reasons could be cited at this juncture to justify a strong offensive against the Turks.

With all the goodwill in the world, the Allied Powers find it difficult to avoid extending from time to time the sphere of the military action which circumstances have forced upon them in the Eastern Mediterranean. Thus, at Patras the French found it necessary to land a naval picket in order to arrest the captain of an interned German steamer and the German mate of a Swedish schooner. Another party was landed at Hagioi Deka in Crete, but the search for proof that German submarines were obtaining stores from that place was not successful. Both these incidents are normal developments of the situation in Greece. The Greek Government, although it knows well the nature of German intrigues on neutral soil, is not in a position to put a stop to the practices. Accordingly the Franco-British forces, which cannot allow the enemy to carry on his machinations with impunity, are forced to intervene.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 14.

Commission on Trade and Industry.

The Government has taken an important and commendable step this week in connection with the trade relations that this country used to maintain with enemy countries, and with the fostering of local industries. By decision of the Council of Ministers, a Special Commission, called "The Commission on Commerce and Industry," has been constituted with the mandate of examining the extent to which the industries and commerce of the country have been affected by the present war, and of proposing measures with the object of opening new markets for Egyptian products and of replacing articles formerly obtained from enemy countries by articles produced in Egypt or imported from non-enemy countries. The president is Ismail Sidky Pasha, ex-Minister of Wakfs, who makes a welcome return to public affairs, and whose ability and experience of Commission work eminently qualify him for the post; the vice-president is Mr. Sidney H. Wells, who, as Director-General of the Department of Technical, Industrial, and Commercial Education, has done so much during the last ten years to promote and develop local industries and technical education; and the members are Yussuf Cattani Pasha, member of the Legislative Assembly; Mr. J. T. Craig, Controller of the Department of General Statistics, to whose work a tribute was recently paid in this correspondence; Mr. F. Murdoch, a well-known manufacturing engineer, of Mansura; and Amin Yahia Bey and Mohammed Talaat Hari Bey, two local notables.

The Government has been very well advised in its action. The war has undoubtedly affected Egypt's foreign trade, as it has done that of other parts of the Empire. In 1913 Egypt obtained over 20 per cent. of her imports from, and sold a like portion of her exports to, enemy countries. If we eliminate Turkey and Bulgaria, the proportion is 13 per cent. of the imports and 19 per cent. of the exports. In certain categories of the former the actual share of the Central Empires was very considerable. After the war both Germany and Austria will certainly make every effort to regain their trade; but the tariff, which it is understood, will be set up against them by the Entente, and which, it is hoped, will be also adopted in Egypt, should effectively stop all such attempts. In the meantime, however, Egypt must obtain her requirements and unload her surplus products elsewhere, and, in anticipation of the establishment of the aforesaid tariff wall, she must be rendered absolutely independent of enemy markets. There are surely many commodities with which other parts of the Empire or allied countries can supply her. Again, there must be certain articles which, even as at present constituted, she could herself produce and make, and which the local public would readily buy if attention were paid to its peculiar requirements; whilst there may quite possibly be others which, with a little help and encouragement, could be locally produced. Apart from the fact that it will bring Egypt into line with other parts of the Empire, where, since August, 1914, similar steps have been taken, the work which the Commission on Commerce and Industry should be able to do should prove of the utmost value to the country; for while it will tend to eliminate the unhealthy Teuton element from the foreign trade of Egypt, it should at the same time materially assist in the practical development of local industries and give a fillip to the efforts that have for some time past been made in this direction.

In its work of replacing articles which were formerly obtained from enemy countries, and which cannot be produced in Egypt, by articles imported from non-enemy countries the Commission will, it is to be hoped, deal only with Allied countries, except, of course, in cases where neutrals alone can supply what is wanted. The exclusion of the latter is advocated not because "neutrals are responsible for the continuation of the war," but because the non-existence of a tariff barrier in Egypt against such countries may quite conceivably in time lead to the creation of fresh or the re-opening of old markets for the Central Empires or to an expansion of the trade they already do with those countries. Germany and Austria might pass their goods through neutral countries, whence they would be shipped under neutral marks, and indirectly regain their trade with Egypt and other parts of the Empire; or German and Austrian goods might take the place of the stocks exported from neutral countries to the British Empire. So long as the war lasts this danger can be guarded against by means of the emergency machinery that has geen set up; but when peace is restored the same safeguards will not be available, and if we trade extensively with neutrals in the articles which we used to buy from Germany and Austria, the latter will find no difficulty whatsoever in defeating our policy, which is avowedly to circumscribe their foreign trade. The same objection does not, obviously, apply to trade with allied countries, which would all have the same tariff barrier against the Central Empires, who would find that tariff far too costly for indirect, let alone direct, trade.

The Late Judge Sandars.

The Mixed Courts have to mourn the loss of their supreme chief, Mr. Lionel Sandars, President of the Court of Appeal, who died in Alexandria on Thursday last. Judge Sandars had been connected with Egypt since the early days of the Occupation, and had been in the Mixed Courts since 1888, when he was appointed a Judge of First Instance. He was the first English President of the Court of Appeal, having been elected by his colleagues in October, 1914, after the German President had been prevented from returning to Egypt. He was a most valuable member of the Mixed Bench, and during the short term of his Presidency introduced many excellent reforms.

Judge Sandars, who was a keen horticulturist, and contributed in a great measure to the development of horticulture in Egypt, was a very popular member of the British community, in all of whose activities he took a prominent part. The general esteem in which he was held and the deep regret felt at his death were testified to at his funeral, which was attended by representatives of the High Commissioner, of H.H. the Sultan, and of General Maxwell, by the entire Mixed Bench and Bar, and a crowd of leading Europeans and Egyptians; and at which stirring orations were delivered at the graveside by M. de Souza Larcher, Vice-President of the Appeal Court, M. A. Eeman, the Procureur-General, and M. Mercinier, the doyen of the Bar.

The Mixed Courts.

The death of Judge Sandars creates a vacancy in the Courts of First Instance, from which one of the English judges will be moved up. It cannot, however, affect the question pending between the Egyptian and Italian Governments, as the vacancy must be filled by an Englishman. Up to the time of writing no settlement has been arrived at between Rome, London, and Cairo on the matter at issue, and negotiations are understood to be still in progress. With regard to the case pending before the Mixed Court of Appeal, and in which the Procureur-General, as reported last week, gave his opinion that the Mixed Tribunals have no longer any jurisdiction in cases where one of the parties is Italian, judgment has now been delivered. The Court refused to express an opinion on the general question of competence on the ground that that question did not arise

out of the case before it. That case was merely an appeal from the lower Court; consequently the only point it considered itself called upon to decide was whether it was competent to hear an appeal from a judgment delivered prior to the recent extension of the mandate of the Mixed Courts. Its decision was that it was competent, since otherwise there would be a denial of justice, seeing that no other jurisdiction could sit in appeal on such a case, and it would be unfair to force the parties to consider the first judgment as cancelled and recommence proceedings before another jurisdiction. So, although the Procureur-General has expressed his views, we are still uncertain whether the Mixed Courts have jurisdiction in cases brought by Italian plaintiffs since February 1 or in those brought by them, but not heard by the First Instance Courts, prior to that date. The verdict of the Appeal Court came as a surprise to everyone, as it was understood that it would take this opportunity to clear up the uncertainty, and that it would endorse the Procureur-General's views.

CYPRUS NOTES.

(From a Correspondent.)

Extension of Motor Service.

The motor company has decided to run their cars from Nicosia to Kyrenia, and on to Karavas and Lapithos, two of the principal villages of the Kyrenia district. A motor will run once a day for the present and twice during the summer. Kyrenia, which is only sixteen miles from the capital, and is a starting-point for many picturesque expeditions, is a favourite resort for visitors from Nicosia and elsewhere during the heat of the summer, and sea-bathing is one of its attractions. There is a good deal of movement between the places mentioned at all seasons.

A Cypriot Library.

An excellent movement which originated with a group of young Greeks at Nicosia for the establishment of a Cyprus library has not met with the support which it deserved, but it would be a great pity if it fell through owing to want of encouragement. There is a great need of such institutions in the island. The President of the District Court, Mr. C. R. Holmes, *à propos* of a case which recently came before him, gave valuable help to the cause. "This institution," he said, "is the first of its kind in Cyprus, and we must help to place it on firmer foundations, as it may afford many advantages to the community of Nicosia. Every man who works all day feels the need, after his work, of some relaxation, and this he can find in a variety of books. Every individual cannot have his own library at home, and it is desirable on that account that such an institution should be established, and we must congratulate the young men who have undertaken this work." It is to be hoped that it will now receive fresh support. The English Club at Nicosia has a good circulating library, but it may be said that there are no collections accessible to Greeks in the island. Some years ago the offer of a large gift of books, to form the nucleus of a good library, was made in another town, but it was subsequently withdrawn. Mr. A. Carnegie was then approached, in the hope of help, but the response was not favourable.

Help for the Larnaca Poor.

Much relief has been given to the poorest classes by the generous action of the Commissioner, Mr. Clarence Wodehouse, who has established a "common meal" room, in which about forty distressed persons are supplied daily with food, almost entirely at his own expense. They are attended to by Miss Wodehouse, the Commissioner's daughter, helped by Miss Baldassar and Miss Turner, of Larnaca, who—besides thus giving their personal services—carry food daily at noon to the houses of those in need, who are bedridden or cannot by reason of infirmity attend at the mess-room. The house in which the soup-kitchen is established is generously given by a philanthropic citizen of Larnaca, M. A. Prankos, who himself superintends the working of the temporary establishment. The pinch of poverty is largely felt among the classes whose livelihood depends upon shipping, now in a state of inactivity.

SUDAN NOTES.

(From Our Own Correspondent.)

Khartoum, March 14.

The Governor-General's Tour.

H.E. the Governor-General, with the Private Secretary, Major G. S. Symes, D.S.O., and the A.D.C., Major F. Edwards, went by special train to El Obeid on February 29, reaching there early on March 2. H.E. proceeded thence on a tour of inspection in the west, and is not expected to return till about the 21st. He was reported to have arrived at Nahud on March 8. He has with him Ibrahim Bey Dimitri, who, as the confidential secretary of Slatin Pasha, has a wide knowledge of those parts and has invariably accompanied Slatin Pasha on his biennial trip to the west.

Transport in Kordofan.

Major Kennedy, C.M.G., the Director of Public Works, is proceeding to El Obeid shortly. He has been preceded by Mr. Claxton, one of the P.W.D. engineers, and it is said that his object is to make experiments with mechanical transport in the region of Kordofan. Hitherto the soil there has been deemed too soft for motor transport to be able to be used, but it is possible that the difficulties may be overcome or circumvented. Owing to the lack of water in the region west of El Obeid, transport has so far been restricted to camels; but if a cheaper means of moving goods in bulk could be found a considerable additional area of gum forest would become worth tapping. At present the cost of transport to the nearest market on the railway line is prohibitive. The extension of the railway line from Rahad westward would no doubt have the effect of opening up such areas, and presumably cattle also would be a profitable item in the carrying trade of this branch of the rail; but the material necessary for the extension of the line is hardly likely to be obtained at the present moment, and it will probably be some time before capital or material will be available for the purpose.

Major Woodward, who has been Governor of the Upper Nile Province for some years, has reached Khartoum, and is proceeding to Cairo on the expiration of his ten years' service in the Egyptian Army. He is succeeded in his post by Major Bassett, who left El Obeid for Malakal a few weeks ago in order to consult the retiring Governor and see the working principles of the provinces. Major Bassett has been for four years Senior Inspector of Kordofan Province. It is said he will be succeeded in El Obeid by Major Ross, but the latter is at present absent on sick leave, due to acute phlebitis of long standing brought out by the hardships of the Gallipoli campaign.

Horse v. Motor.

An interesting race took place recently at Omdurman between a motor-car and horse. The latter was ridden by the wife of a prominent official; the car was driven by a member of the Judicial Bench. The course was two miles long, approximately, over desert. The horse got away with a considerable start, which was never made up. The car was of 12-horse power only, and the race clearly demonstrated the need of considerable power for use on the desert.

VERDUN AND SYRIA.

The *Egyptian Gazette* translates from the *Ahram* the following interesting paragraph, which to some readers may, perhaps, seem to be a happy omen:—

We would remind people of the Near East, especially the Syrians, that Verdun is the birthplace of Edouard Tefnell, the famous French statesman whose name is associated with the history of the Near East in the middle of last century. It was Edouard Tefnell who organised the French expedition that occupied Syria in 1860. He was at that time Foreign Minister in Paris, and he succeeded, owing to his political abilities and sagacity, in obtaining from the Powers their approval of French policy in connection with the sending of that military expedition, which was one of the numerous good deeds which France has accomplished in the interests of humanity. The zealous interest which that Minister took in the future of the Near East was clearly shown by the instructions he sent during his term of office both as French Ambassador to Constantinople and as Minister for Foreign Affairs in Paris to the French Consuls and Diplomatic Agents in the East.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, March 4.

Salonika Soaked by a Deluge.

Once more I am reluctantly compelled to refer to the weather of Salonika. During the early part of the past week we had a succession of "samples" of almost every possible variety, from a hurricane to the most genial sunshine. Then followed a veritable deluge, converting long stretches of road and street into lakes, large tracts of ground into swamps and quagmires, and soaking through the tents occupied by our soldiers. They have suffered most severely under these abnormal conditions; but everything during these times seems to be abnormal, even the weather. It is quite an interesting sight to see the processions of heavy motor transport wagons tearing through this water and mud. Each vehicle is the centre of a wonderful cascade of these elements, curving gracefully on either side over a stretch of many yards. It is best, however, to admire it from a safe distance, because if you are in the road there is no escaping; you are quickly covered with more "spots" than the leopard could ever boast of. Learned men tell us about the Ice Age, the Stone Age, and other geological periods. We in Salonika are now passing through the Mud Age. That is all I have to say on this familiar topic. What our Tommies have to say on the same subject is quite unprintable!

Allied Aeroplane Raid.

The situation here remains practically unchanged. The attack on the Allied positions seems to have been indefinitely postponed, and many military officers declare it will never take place. Nevertheless, the Allies are strengthening their positions daily, and the French aviators are particularly active. They have recently performed a remarkable feat in flying to Smyrna and dropping a large number of bombs on the Turkish position, with excellent effect. Seven aeroplanes took part in this expedition, and all left Smyrna on the return journey without suffering damage. One of the aeroplanes, however, owing to motor trouble, had to drop into the sea. Fortunately, a British torpedo boat was near, and rescued the pilot, as well as the machine. The others flew back to Salonika.

On two occasions during the past week the approach of enemy aircraft was reported from our lines at the front, and by order of the police and military authorities the electric light company suddenly cut off the current from the whole town. I happened to be at a cinematograph theatre on each occasion, and in the middle of an exciting episode all the lights went out. Candles were brought to enable the audience to disperse with as little discomfort as possible, and passes were given for another evening.

The Verdun Lie.

The military, and, in fact, the whole population, have been following the news from Verdun with intense interest. One Greek newspaper issued a special edition in which the fall of the fortress was announced, and copies of the lying telegram were posted up in several places. This news created a very painful impression not only among the Allies, but among the population generally. In consequence of the publication of this false news, the police and Allied authorities have now forbidden the posting up of any news in this way, and have directed that the newsboys shall call out nothing beyond the names of the papers they sell.

French Troops at Salonika.

In previous letters I have only made occasional references to our Allies, the French, who form such a large proportion of the Entente forces here; but I have often intended to give my impressions of their appearance and their work. To do justice to such an interesting topic I should require much more space than is available in this short letter. I must, therefore, confine myself in the meantime to a very few words.

I have seen French soldiers in France both singly and in large bodies during the annual reviews in the Bois de Boulogne on July 14, and they then gave me the impression of being short of stature compared with the British soldier, and of having little staying power in spite of their acknowledged bravery and intense patriotism. That was many years ago. On coming to Salonika, however, I have had to modify that early impression. Here I found Frenchmen of splendid physique, including many exceptionally tall men, apparently fit to undergo any hardships and to hold their own as long and as steadily as any soldiers in the world.

One day I expressed to a French officer my admiration of the class of men that France had sent out to this place. "*Mais ils ne sont pas choisis,*" he assured me. They were, he said, such ordinary troops as were available from time to time, and included many comparatively fresh young men as well as hardy veterans.

Soldiering seems to come so naturally to them all, and they go about their duties so smoothly and methodically, that one can hardly imagine them out of uniform. This no doubt arises from the universal military training in France. They are also, as a rule, in excellent spirits. Only once, during yesterday's downpour, did I hear one of these jolly and brave but dripping warriors use a sulphurous swear-word. It was about the weather, and I admit his provocation was great; I thoroughly agreed with him. They appear to be always busy—building stores, making roads, setting up telegraph lines, or engaged in some other important military work.

In the streets of an evening they seem to be always making purchases of nick-nacks in the bazaars and elsewhere, and they do their bargaining quite as energetically as I have ever seen it done even in Constantinople.

How Our Soldiers Amuse Themselves.

The great majority of the troops are in their camps several miles outside Salonika, and can only obtain occasional leave to spend an evening in town. But the Army Service Corps men and others who always remain in or near the town find a variety of attractions after their day's work is done. There are three cinematograph theatres, one variety theatre called the "Odeon"—all on the sea front—and innumerable *cafés chantants*, where the young women, in the intervals of their performance, come down among the audience and beguile the Tommies into buying more beer or other liquor and "treating" these fair but thirsty charmers at absurdly high prices. These places are crowded nightly, and are mainly patronised by the French. Of course, there are also innumerable cafés without such entertainers, where the prices are more reasonable. Then during the day we have occasional football and tennis matches, while at least twice a week we have excellent military music. So we are not so badly off, after all; but even all these attractions do not seem to create in anyone a real liking for the place.

Victory Foretold by a "Sorcer."

In case any person should still be in doubt as to which of the belligerent groups is going to win the war, a Salonika entertainer, who calls himself the "King of Sorcers," sets their minds at rest. The English section of his "Programm" is nearly as entertaining as his performance. It states that he "will prove which of the twe parties wlle gain, i.e. between the Entant (allies) an the Central Powers by mean of invisible spirits of the White and Black sorcery." Spirits of the White and Black—or, in other words, "Black and White" spirits, will decide the war. I don't want to give a free advertisement to any particular brand of "spirits," even although they receive occasional notice on your front page, but the words are decidedly suggestive. In any case, considering that a very large portion of the audience come from the very birthplace of the aforesaid spirits, the momentous decision is naturally a foregone conclusion. Then follows the mysterious phrase, "The Tax is in charge of the spectator." After associating a little too freely with the "spirits" referred to I can understand the spectator being taken in charge by something—a taxi or a policeman, for instance—but perhaps the prosaic explanation is that the ticket-holder pays the Government tax thereon.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, March 4.

The Jassy University Trouble.

After lengthy deliberation, the Senate of the Jassy University has decided to withdraw the punishments decreed by the Rector, M. Stere, and has given notice of the reopening of the university. The students of both universities have declared their entire satisfaction with the course adopted, and their willingness to attend the lectures once more. The "strike" may, therefore, be said to have ended in a sense completely favourable to the cause of the students. M. Stere has sent in his resignation, which has been refused, but he states that his decision is irrevocable. It is difficult to see how he can maintain himself in his present office in view of the crushing defeat which he has sustained.

The following incident, otherwise without importance, may be worth recording as illustrating the general spirit of the student class:—One evening a number of students, jovially disposed as a result of the favourable conclusion of the strike, entered a café at Jassy and began to sing patriotic songs, among them "Pereat Austria, Pereat Bulgaria, Vivat Bukovina!" This gave offence to the German and Austrian Consuls, who happened to be drinking beer at a table, and they called upon the landlord to summon the police and have the students turned out, which he refused to do. They themselves then ordered the students to cease their songs; of course without success. Producing paper and pencil, they thereupon demanded the names of the students, with the obvious intention of asking for satisfaction in higher quarters for the injury their dignity had received. This last request meeting with derision, the offended officials decided upon a retreat, which was carried out in good order, to the accompaniment of the "Marseillaise," in which everybody joined.

A Sign of the Times.

General Crainiceanu, the political editor of the *Universul*, has opened a subscription for the widows and children of Roumanian soldiers who will lose their lives in the case of the country participating in the war. General Crainiceanu and the owner of the paper will head the list, the former contributing 25 per cent. of his salary as editor. It is a praiseworthy initiative, which shows foresight and deserves encouragement, but we cannot help thinking that many genuine sympathisers will hold over their subscriptions until such time as Roumania's involvement in the war becomes an accomplished fact.

The "Dobrujan Brotherhood."

The society which is known as the Dobrujan Brotherhood is described by the *Nationalul* as resulting from the fusion of all the Bulgarian Chauvinist secret societies of the Old and New Dobruja, its aim being propaganda against Roumania. It is said to form an annexe of the famous Bulgarian Revolutionary Committee, which organised bands of *Komitajis* for the purpose of attacking Turkey, Serbia, and Greece. All the Bulgarians of the Dobruja are members by right of this society. Its president is Dr. Vaceff, President of the Sobranje, and an intimate friend of the Prime Minister, M. Radoslavoff; its vice-president, M. T. Teodoroff, sub-chief of the National party, and formerly Minister of Finance.

M. Simeon Radeff.

The Roumanian papers continue to be much preoccupied with the espionage practised by Bulgarian inhabitants of the Dobruja, and emphasize the part played by M. Simeon Radeff, the Bulgarian Minister in Bucharest, as an intermediary between the irredentist Bulgarian society Dobrujan Brotherhood and the Bulgarian agents who have chosen that district as their field of activity. There has even been an interpellation on the subject in the Roumanian Chamber of Deputies. M. Radeff is said to have informed some of the Bulgarian inhabitants privately that the whole of the Dobruja will shortly pass into Bulgarian hands, and that he will be appointed Governor-General, just as M. Ciapracicoff. ex-Minister at Nish, was appointed Governor of Serbia.

An important morning paper denies M. Radeff's right to be regarded as a diplomat, and describes him as a simple Macedonian *Komitaji* acting at present as von dem Busche's diplomatic agent, bidding him realize that it is time for him to ask for his own recall.

Transport Difficulties.

The Bulgarian Government continues to place obstacles in the way of the transport of merchandise destined for Roumania, whether it comes from Turkey or from the Ægean ports. The Roumanian Government has retaliated by provisionally prohibiting the despatch of consignments of flour and other foodstuffs to Bulgaria and Turkey.

The Late Queen Elizabeth.

Queen Elizabeth of Roumania, who died in Bucharest on the morning of March 2 from pneumonia complicating an attack of influenza, was born at Neuwied in 1843, being the first child of Prince Herman of Wied and of his wife, Princess Martha of Nassau.

She was given a severe education, not entirely devoid of harshness, being thus deprived of some of the brightness that is childhood's due. Yet there must have been much soundness in the system, for her literary tastes were assiduously cultivated by her father, himself a thinker and the author of several philosophical works. The severity of her upbringing rendered her, sensitive child that she was, somewhat timid, and the traces of this early timidity showed itself in maturer years by a certain touch of hesitation, of uncertainty. In 1869 she married Prince Charles of Roumania, and accompanied him to the latter country. A daughter was born to them the following year; but she died in 1874, prostrating the unhappy mother with grief. They had no further children. During the War of Independence Princess Elizabeth's complete devotion to the wounded won the hearts of all, and caused her to become known as the "Mother of the Wounded." After the conclusion of the war Roumania was proclaimed a kingdom and the princely pair assumed the royal crown.

Queen Elizabeth's life represents an unbroken period of hard work. The fifty odd volumes she has published embrace every form of literary activity—verse, fiction, fairy tales, drama, history, and philosophy. Apart from "Sweet Hours," in English, and "The Thoughts of a Queen," published in French, they were all written in German.

Elizabeth of Wied, a daughter of the Rhine, was too strong a personality ever to repudiate her sentiments for the land in which she was born and bred, and these sentiments remained unchanged until the end. Yet her faculty for sympathy was so great that she found no difficulty in bridging the natural gulf that separated her own people from that of her adoption. From the first she endeared herself to her subjects, simply, naturally, without artifice; and now that she is gone they are conscious of a void that will not easily be filled.

She was sometimes criticized for the exuberance of her sentiments, for a certain indiscrimination with which she distributed the bounty of her heart. But there are few among us who will escape with so light a reproach. None have ever doubted the genuineness of the sentiments with which she was so generous. But she had unlimited reserves to draw upon. Nature had not only lavishly endowed this woman with the rarest gifts, but had bestowed upon her an unusual faculty of expression. Her versatility was quite remarkable. As an authoress she was prolific and imaginative to a degree, but it is not as Carmen Sylva that she will be remembered in Roumania. Her charity was of a particularly warm kind. One felt that her material donations, with all their munificence, were but the outward and visible sign of a yet greater spiritual gift, bestowed without hesitation, without calculation, without afterthought, with a grace that charmed completely and a smile that went to the heart. With those about her she was infinitely con-

siderate, and never gave an order but appeared to ask a boon. The force of her magnetism enveloped those who came into contact with her, evoking feelings of deep devotion and loyalty; but the simple peasant, labouring in his master's field, the humble woman, mourning her child in the cottage, were alike drawn into the sphere of her spiritual influence. Not as a queen will she be remembered when Time draws his hazy shroud around her snow-white figure, nor as a poet, nor even as the woman, the keynote of whose life was duty and service; but rather as the *Mama Regina*, the Mother-Queen, as she loved to be called, or as the Mother of the Wounded, as the people loved to call her, who from the hour she set her foot upon Roumanian soil identified herself with the land of her adoption and dispensed to its children the fullest measure of her motherly love.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, March 4.

The Blessings of Bulgarian Rule.

Much misery exists in the territory occupied by the Bulgarians, and the Government can do nothing to relieve it, as Bulgaria herself is suffering from a shortage of provisions, as a result of the seizure of everything of the kind by the Germans. Unable to respond to the constant and increasing appeals for help from the "liberated" territories, the Government adopts all kinds of subterfuges in order to gain time. Thus, it has just addressed a circular to the administrative authorities of the occupied territory inviting them to proceed in each district to constitute a communal delegation to be sent to Old Bulgaria to purchase provisions for its community. In this way the solution of the problem is postponed indefinitely, as the delegates will find nothing to purchase; and the population in the "new territory" will in all probability literally die of hunger.

The *Makedonia* announces that the secret Bulgarian Committee which met at Monastir has drawn up a list of 800 Greeks whom it is proposed to exterminate. It has also been decided to occupy all empty houses belonging to Greeks.

Bulgaria and the Vatican.

It is announced that the Pope has agreed that Bulgaria shall shortly be represented at the Vatican. It is also said that a representative of his Holiness at Vienna is interesting himself to arrange a marriage between Crown Prince Boris of Bulgaria and an Archduchess of the Hapsburg family.

Robbing the Dead.

The *Dnevnik* announces the arrival at Sofia of a quantity of tombstones and funerary ornaments, which have been brought from the occupied Serbian territory by the Bulgarian authorities, from Serbian graveyards. "The best thing that can be done" (continues the journal) "with these stones is to employ them for the ornamentation of the graves of our national heroes, which are for the greater part in a most deplorable condition." Comment is needless.

The Gregorian Calendar.

The same journal, writing in reference to the introduction of the Gregorian calendar, says that M. Pecheff, Minister of Public Instruction, when interviewed on the subject, said: "The introduction of the Gregorian Calendar has been decided upon by the commission charged with the study of the matter. As to the question of laying before the Chamber the Bill dealing with the subject, the Ministers have so far adopted no resolution. In any case, the use of the Gregorian Calendar will be introduced as early as possible."

Professor Ivanoff has just found the remains of the grave of the Tsar Michael Shishman, who fell in the bloody battle fought on July 30, 1330, at Kustendil against the Serbian King Dushan. The covering stone of the tomb, which the Bulgarian professor has succeeded in finding, bears the following inscription, still perfectly legible: "Here lies the Bulgarian Tsar Michael Shishman," and the date, 1330. The stone has been let into the wall of a church at Kustendil. It has now been transported to Sofia and placed in the Museum.

Bucharest, March 10.

During a visit to the region of Kazanlik, Queen Eleonora inspected the camp of the Serbian prisoners installed at the village of Gornio-Panetchareff. After the inspection, finding the prisoners much in want of underclothing, she gave orders for their needs to be supplied.

From Sofia it is announced that a number of *soi-distant* Albanians established in Bulgaria are about to organize an "Albanian Congress," to which different Bulgarian politicians will be invited. The object, say the Sofia papers, is to choose a committee which will find a means to bring about a rapprochement between the two countries!

Terrorism at Monastir.

According to trustworthy reports received from Monastir, the situation at that town and in the surrounding neighbourhood is becoming insupportable. The care of public security is entrusted entirely to *Komitajis*, who work methodically for the extermination of the Greeks and the Roumanians. Every day sees murders or imprisonments. The priests of the villages of Dobroreni and Brat have been shot; several notables of these two villages have disappeared; and the Abbot of the Monastery of the Prophet Elias has been imprisoned because he was suspected of being a dangerous character.

The Greek Government is taking all possible steps to obtain permission for M. Jossif, the Greek Consul at Monastir, to return to his post.

Relations with the Vatican.

With reference to the reconciliation of Bulgaria with the Vatican, it is now stated from Vienna that the despatch of a Bulgarian Diplomatic Representative to the Vatican has been postponed on account of the state of war existing between Italy and Bulgaria. The exchange of representatives will only take place after the war, and meanwhile communications will be carried on through the agency of Austria-Hungary.

The *Dnevnik* emphasizes the importance of this event for Bulgaria, and points out the fact that the protection of Roman Catholics in Bulgaria will again come under the protection of Austria-Hungary, of which the dynasty has always been so faithful to the Vatican. Apart from this, says the *Dnevnik*, "the only obstacle existing to the future of good relations between Bulgaria and Austria-Hungary will be removed on the occasion of the choice of a bride for the future King of Bulgaria. It will now be possible to choose one of the princesses of the House of Austria, whose religion has heretofore prevented their marriage with a Bulgarian prince as long as the relations of his country with the Vatican remained estranged.

Germans and Serbians.

The Germans continue their pitiless methods in collecting supplies of articles of the first necessity still existing in Serbia. Forms have been delivered to the heads of families, ordering under the severest penalties to declare all they possess. The military authorities do not follow requisition methods, but seize all they require, paying in paper orders.

Throughout the country the misery is indescribable. At Belgrade the municipality has to supply the wants of more than 7,000 persons, and in the interior of the country, where the local authorities have not the same resources, the mortality among children and old people is enormous.

It has been decided to send 15,000 Serbians to Germany to work on the fields. Seven thousand have already left, being taken by force from their families and their occupations. They are to receive but two marks per day, from which they will have to feed themselves, so that their fate will be that of veritable slaves.

FOR PRISONERS IN TURKEY.

The Secretary of the War Office, in a notice forwarded for publication, states that persons who desire to send remittances to British prisoners of war in Turkey should send them by International Money Order through the Post Office. The previous arrangement, by which such remittances were sent through the Prisoners of War Help Committee, has been found to be less speedy in operation, and all such remittances should in future be sent through the Post Office.

MARRIAGES IN THE SUDAN.

(From a Correspondent.)

The publication in a recent *Sudan Government Gazette*, at considerable length, of the amended Sudan Non-Mohammedan Marriage Ordinances recalls the fact that from the beginning of the British administration the most scrupulous care has been exercised to avoid any interference with Mohammedan marriage or other religious laws in the ordinary Courts. Indeed, these Courts hear only suits between Mohammedans which deal with claims for debt or recovery of land; all questions of marriage, divorce or succession are exclusively heard and determined in the Mohammedan Law Courts.

The progress made by these tribunals during the last few years has been remarkably satisfactory, and there can be but little doubt that much of this success is due to the education and training imparted in the Sheikhs' School of the Gordon Memorial College to the young sheikhs from whom the staff of the Mohammedan Law Courts are now recruited. Nor should it be forgotten that this great improvement in dispensing justice to the natives is attributable in a great measure to the zeal, tact and capacity of Sheikh Mohammed Mustafa, the Grand Kadi, who, in the discharge of his duties, is assisted by seventeen Naib Kadis and many subordinate judges and inspectors. Each province has its own Kadi and District Kadis, in addition to whom there is one Mufti.

As intimated, the Mohammedan Law Courts have jurisdiction to deal with all suits between Mohammedans relating to marriage, divorce, guardianship, family relationship, succession, or the constitution of charitable endowments. The ordinary Mohammedan Courts, although forming part of the Anglo-Egyptian Legal Department, are judicially independent of the Executive. Their decisions are nevertheless liable to revision by the High Mohammedan Law Courts, and their work is subject to inspection by the Committee of Supervision. Administratively, the Kadis and officers are subordinate to the Legal Secretary, and he it is who decides all questions of discipline and general administration.

Roughly speaking, there are about 13,000 marriages celebrated in the Sudan between Mohammedans during the course of the year. The proportion of divorces amounts to an average per annum of 60 per cent., the total having attained, upon certain occasions, to 66 per cent. In 1909 and 1910, for instance, it was 60 per cent., in 1911 59 per cent., in 1912 it rose to 61 per cent,. and in 1913 to 66 per cent. The actual number of divorces granted ranged between 7,258 in 1910 and 8,212 in 1912. But even these astonishing figures do not represent the whole of the marriages and divorces between Mohammedans, for registration is purely voluntary; in fact, while amongst sedentary Arabs registration is usual, amongst nomad Arabs it is rare.

It would appear that the high proportion of divorces to marriages and the decrease in the number of marriages which has of late years been noted are the natural result of the Sudanese people not having been so prosperous as in previous years. At least, this is the construction placed upon the matter by the responsible native officials, and they should certainly be in a position to define the real situation.

The Rome correspondent of the *Morning Post* reports (March 29):—The Serbian Government has ordered all the Serbs in Italy between the ages of 18 and 45 to undergo a fresh medical examination next Sunday, with a view to rejoining the army in Corfu, which, according to latest information, numbers 130,000.

GERMANY AND THE NEAR EAST.

Sir Edwin Pears took the chair at a meeting of the Royal Society of Arts on Wednesday, when Dr. R. W. Seton-Watson read a paper, "Pan-German Aspirations in the Near East." The lecturer said that no one who visited Germany frequently before the war or read much German political literature could fail to be aware of the existence of an active Pan-German movement and of a propaganda which often assumed an anti-British complexion. There were three stages in the Pan-German plan: (1) The creation of "Mitteleuropa," a great Central European State-organism of 130 to 150 million inhabitants as an economic and military unit; (2) the realisation of the dream Berlin-Baghdad by the inclusion of the political and economic spheres of influence of the new Zollverein of all the territory lying between the Hungarian frontier and the Persian Gulf; and (3) naval supremacy and world-power. The vital problem of the present war, on the decision of which the whole future of civilisation depended, was whether we were to oppose this programme or to submit to it as inevitable. At such a moment there could be no half measures. In future we must never allow a situation to arise in which we might seem indifferent to events upon land simply because they took place at the other end of Europe. Such indifference was the surest way to alienate our Allies, who realised to the full the close intercommunication of West and East and South-East, and expected us to realise it equally. There were still quite serious and well-meaning people to whom the vast problems of Central and Eastern Europe were a mere blank. They failed to realise that it was no mere accident that had brought Prussia, Hungary Turkey, and Bulgaria into line. All four stood for the same principle of racial hegemony.

Sir E. Pears, in proposing a vote of thanks, said that he had watched the Berlin to Baghdad question for the last thirty years. What had been said in some quarters about Enver Pasha's visit to the Taurus was absolute rubbish. What he went to see there was whether the tunnels on the railway line had been completed; in other words, whether the new and more expeditious route was available for the conveyance of Turkish troops. The railway was being rapidly completed, but it was not going to convert Mesopotamia into a garden, as the Germans appeared to think. The completion of the line would be a good thing for the peasants, because it would enable them to get their produce to market. On the part of the Germans the undertaking was a fair case of peaceful penetration, and no reasonable objection could be taken to it, but the instant it became a question of a railway from Berlin to Baghdad and the destruction of the independence of Macedonia and Turkey we were bound to oppose it. As for German colonies in Palestine, he could say of his own knowledge that none such existed.

MESOPOTAMIA HOSPITAL SUPPLIES.

A written answer was issued last Friday by the Secretary for India to a question put to him by Lord H. Cavendish-Bentinck as follows: "Whether, up to five weeks ago, repeated offers made by several hospital supply depôts to send out large quantities of hospital supplies to Mesopotamia were refused; if so, will he say by whom these offers were refused; and whether he will cause an inquiry to be made into the cause of the breakdown of the hospital arrangements in Mesopotamia?"

Mr. Chamberlain, in his reply, says:—

I have been informed since this question appeared on the paper that the Joint War Committee of the British Red Cross Society and the Order of St. John of Jerusalem, in co-operation with the Indian Soldiers' Fund, offered their general assistance direct to the G.O.C. Mesopotamia in July last, and repeated their offer at later dates; that stores were sent by them to Busreh in September, two motor-boats in August, and another in October. In December I transmitted further offers on their behalf. On January 31 last the following offer was made by the Committee officially to the India Office. They offered to place at my disposal the organisation of the two societies to supplement the provision made by the Indian Government for the care of the sick and wounded in Mesopotamia. The offer was in the widest and most generous terms, but referred in particular to the possibility of help in the supply of stores of clothing, medical comforts, drugs, and luxuries not included in the scheduled Army lists, in the supply of motor-ambulances, barges, and other vehicles for the transport of the sick and wounded, and in the equipment of hospitals and providing personnel to staff and administer such hospitals.

I immediately communicated this generous offer to the Viceroy. Before replying he had to ascertain that it would not conflict with the organisation and arrangements of similar Indian societies; but, on February 17, he informed me that the Indian Council of St. John Ambulance, which from the outset had actively concerned itself with the Mesopotamia Force, would gladly accept assistance. I communicated the Viceroy's reply the same day to the Joint War Committee.

As regards other societies, the Indian Soldiers' Fund in October made inquiry through me of the military authorities in Mesopotamia as to whether clothing and comforts were needed for the troops, and was informed by them, in reply, that for the present the supply from India was sufficient. I understand that the Fund Committee at that time had independent evidence that there were sufficient supplies at the base. In December I received from the fund and transmitted to the Viceroy an offer to supply bandages, surgical dressings, and other medical and hospital comforts. The Viceroy gladly accepted it, and early in January a large consignment of articles, some of which were contributed by the Joint War Committee, was despatched to Mesopotamia.

NEAR EAST BOOKSHELF.

THE TURCO-EGYPTIAN FRONTIER REGION.*

The excellent work done by the Palestine Exploration Fund needs no introduction to readers of THE NEAR EAST, who are aware that the Fund holds a position unique in this country by reason of its good management, its long and honourable record, and the wide measure of steady support afforded it by a public which in the past has shown only a fitful interest in archæological work in other parts of the Near East. This is, of course, easily accounted for: the Holy Land may not produce relics of such artistic merit as either Greece or Egypt, but its associations appeal to a far larger public; and the Fund, we are glad to believe, will long continue to hold the proud position that it has fairly earned for itself by its work in the field in which it was a pioneer, and in which it has laboured so faithfully and so well. While it produces reports of such solid worth as that before us, it will certainly deserve to do so.

The work would be of interest to the archæologist at any time, but at the present moment it is likely to appeal to many people whose interest in archæology—even in Biblical archæology—is not profound. For it covers ground to which for a year or more many of us have been looking for happenings of great importance, ground across which the much-trumpeted Turco-German "advance on Egypt" is—or is not—to take place. And how many of us have any clear idea of what manner of ground this is? Ever since the great advance was first advertised, we have been told this, that, and the other about the Sinai desert; but the events of last year suggest that very few of our would-be instructors have any real knowledge of the subject. Messrs. Woolley and Lawrence, on the other hand, prove that their knowledge is extensive and intimate, and the descriptions, maps, and photographs in this volume are invaluable in helping us to form a clear mental picture of the country which any army advancing from Palestine would have to traverse in order to reach the Suez Canal.

It was in 1913 that Mr. Woolley and Mr. Lawrence, then at Carchemish, on the Euphrates, excavating on behalf of the British Museum, were invited to join the survey party which the War Office had despatched to link up the triangulation of the Egyptian and Palestinian surveys, and which was under the direction of Captain Newcombe, R.E. They accepted the invitation, and lost no time about setting out for Gaza. There they hurriedly got together an outfit, and then pressed on to Beersheba, where they were to join Captain Newcombe. The tribute paid to their leader by Mr. Lawrence, in the Introduction, is worth quoting. It gives a good idea of survey work in such country, and is a pleasing testimony to the ability of a fine officer:—

> We had with us only a scratch outfit raked up in Gaza. Yet he welcomed us, stripped himself of what he called his "luxuries" for us (and he was already living in the barest way), got us camels, and in Khalasa fed us till our stores arrived. Living with him we got a clear insight into his methods. He had five parties under him, and yet in this unmapped wilderness always knew exactly where each party was, and how its work was going on. He established a regular post, and supply caravans from El Arish, Gaza, and Beersheba to feed his men and animals. He was ambassador for all of us to Arab tribes and to Turkish officials, and managed both, leaving behind him a reputation which will smooth the way of any future English traveller in the desert. This labour of organization would have been enough for most men, living as roughly and uncomfortably as Newcombe did; yet in addition he contrived to map a larger district than any of his assistants. Off by dawn with guides and instruments, he would return to camp at dark, and work perhaps till midnight, arranging and calculating and recording for the benefit of the other parties. He was the prime begetter of the Survey, and thanks to his elaborate camel-contract, his skilful handling of his transport and supply columns, and the Spartan simplicity of life, to which he also converted his subordinates, the expedition, in economy of money and time, beat all records of similar surveys in the East.

At the present time this testimony will inevitably lead many readers to hope that such organising ability is not being lost to the country.

From Gaza to Kossaima the authors kept together, but at the latter point they separated, Mr. Lawrence striking south to Akaba, which he reached in spite of Turkish opposition, and then on to Petra and Ma'an; while Mr. Woolley turned off to investigate the Byzantine ruins at Abda, Esbeita, Khalasa, and Kurnub. Their prime object was, of course, archæological exploration, and what they write about their "finds" is of much interest. Indeed, in normal times their account of the Byzantine remains and of the discovery at Abda, underneath the ruins of Byzantine monastic buildings, of a great temple, which Mr. Woolley ascribes to the second or third century B.C., would undoubtedly constitute the chief interest of the volume. The ruins and antiquities are well described, and are illustrated by means of excellent photographs, sketches, and plans. But for the time being our interest in such things sinks into insignificance in comparison with our interest in the physical features of the country. Fortunately, these are described in considerable detail, and the particulars given regarding the Darb-el-Shur, the ancient inland caravan route from central Palestine to Egypt, are particularly valuable. The map of the country along the Turco-Egyptian boundary line (Rafa to Akaba) and of the region in the Rafa-Akaba-Dead Sea triangle is quite invaluable.

To the ordinary traveller the country dealt with can have very few attractions. Here is a passage describing part of the road traversed by Mr. Lawrence on his way to Akaba:—

> The landscape is only an exaggeration of the northern country. There are the same great stretches of flaky limestone, so overlaid with brown flints, sand polished, that the whiteness only shows through on slopes too steep to hold the flint; and rising out of these flats and bounding them are ridges and mounds of the same limestone, capped with a harder layer, as smooth as a table-top and strewn with the everlasting flints. The straightness and regularity of these formations are curious. . . .
>
> To the east of the road the prospect is always mountainous. . . . On the west side are some hills, but for the greater part the country is almost flat into the distance.

"The way down" from the edge of the plateau to Akaba is, however, "very splendid":—

> In the hill-sides all sorts of rocks are mingled in confusion; grey-green limestone cliffs run down sheer for hundreds of feet, in tremendous ravines whose faces are a medley of colours wherever crags of black porphyry and diorite jut out, or where soft sandstone, washed down, has left long pink and red smudges on the lighter colours.

The water supply is, of course, of the scantiest; though it would appear that in some parts, in the north especially, water is to be found quite close to the surface. Mr. Woolley, for instance, records how at one spot, in the neighbourhood of Tel Rakhama, where there had been no rain for a twelve-month, he came across a woman filling her pitchers at a hole less than two feet deep which she had dug in the sandy bed of a wady.

> Sinai to-day [we are told elsewhere] gets a heavy rainfall in winter, usually quite enough, were it only distributed over a larger period, to ensure a satisfactory crop. The fault from the farmer's point of view lies not so much in the quantity of rain that falls as in its limitation to the coldest months of the year.

The authors decline to accept Professor Huntington's theory "that in this part of the Near East there has been throughout history an alternation of irregular periods of comparative moisture and of drought"; and they consider that "there is no evidence of a Stone Age" in this region. The prosperity of the Byzantine Age they attribute entirely to "the conservation of the normal water supply and to improved agricultural methods," of which many traces, in the form of terracing, still remain. They support their views by the citation of evidence collected on the spot, and the arguments they deduce therefrom appear to be perfectly sound. The region's period of prosperity—such as it was—was of short duration. Before the Arab power the cities of the south melted away, the farm-works of the husbandmen fell into neglect, and the entire region rapidly drifted back into the state of an abandoned wilderness. In recent times attempts have been made in a half-hearted way to reclaim spots here and there, but they have not been successful. At El Auja, for example, the Turkish Government, in a sudden fit of energy—was it prompted by visions of the great "invasion of Egypt"?—"cleared out one of the lower wells and found plentiful water at the old Greek level. They were so pleased with the discovery that they brought a steam-engine to pump it up, characteristically ignoring the fact that an engine requires fuel." The result, we are hardly surprised to learn, was the failure of the experiment.

In spite of its drawbacks—or, perhaps, because of them—the region was one that badly required exploration. That fact is apparent after reading this very interesting volume. The Palestine Exploration Fund is therefore deserving of our thanks for undertaking the work, and it is to be congratulated upon having been able to secure the services of two such enthusiastic and well-equipped observers to carry it on. The report of the work, it must be added, has been edited by Mr. D. G. Hogarth; the Greek inscriptions found are dealt with in a chapter contributed by Mr. M. N. Tod; and Professor Margoliouth has translated an Arabic inscription found near Akaba.

* "The Wilderness of Zin (Archæological Report)." By C. Leonard Woolley and T. E. Lawrence. (The Palestine Exploration Fund, 2, Hinde Street, Manchester Square. 45s.)

BOOK NOTES.

"The Story of Lord Kitchener," by Harold Wheeler, is announced as a forthcoming addition to the "Heroes of the Ages" series.

Messrs. Stanford have issued a new map showing the theatre of war in the Balkans, with a scale of eighteen miles to the inch. The price is 5s.

The Council for the Study of International Relations has published this week "Serbia's Place in Human History," by the Rev. Nicholas Velimirovitch, and "The Problem of Small Nations in the European Crisis," by Professor T. G. Masaryk. The pamphlets are priced at 3d. each.

TANGIER TO TEHERAN.

Having been ignored by the Public and by the Paid Politicians as long as all went well with it, the Mesopotamian Expeditionary Force has suddenly been dragged into the limelight, and as a result, Public, Politicians, and Press appear to be inclined to demand somebody's head—quite characteristically, they do not seem to know whose—on a charger. I deplore the circumstances that have brought about this state of affairs, but if the awakening leads to a juster appreciation of what the men of the gallant force have been doing it will at least accomplish some good. THE NEAR EAST has consistently endeavoured to keep the importance of these operations to the fore, and these columns I have tried over and over again to emphasize the hardships with which our troops have had to contend. I am not going over the ground again, for other and abler pens than mine are now dealing with the subject. But I cannot refrain from quoting a passage in a letter I received last week from the relative of an officer with the Force:—

They are all awfully sick at the way they have been treated in the matter of rewards and recognition. Some of them have been mentioned three or four times in despatches, and yet only one meagre list has been published during the whole campaign. Considering that the Persian Gulf has been the most consistently successful of all the "shows," and has been carried out under conditions that beggar description, and that—according to men who have been through both—are far worse than the worst in France, this is, indeed, very shabby treatment, and it is no wonder that one and all are disgusted at the neglect. One wonders at them sticking to their task so pluckily.

***

That is not exactly pleasant reading, is it? But it gives the views of the men who are entitled to be heard: the men who have been facing "conditions that beggar description." I know from personal experience what conditions *can* be like in Lower Mesopotamia, and I have no hesitation in accepting the opinion of those competent observers referred to by the writer, "men who have been through both," that they are far worse than the worst in France. The trouble is that so few people in this country know anything about that region. Were it otherwise the men of the Mesopotamian Expeditionary Force would surely have no grounds of complaint in regard to appreciation of their fine service.

***

The more one hears of the evacuation of Anzac and Suvla the more wonderful does the feat appear. At Anzac there was only one pier, and, as an officer who saw the embarkation says, "the crowd round that pier was something marvellous. It is almost incredible that the Turks did not have some sort of inkling of what was going on. They must have known *something* was up from the shipping in Suvla Bay; perhaps they fancied we were going to attack." Owing possibly to cloudy weather the enemy aviators were inactive at the time, though as a matter of fact they could have been of very little service, since, I am told, "all they could have seen would be the shipping in Suvla Bay, which they could see from their own lines." Perhaps it was even more fortunate for them than for us that such was the case, for arrangements had been made to deal with them if they did seek to make themselves obnoxious.

***

This reminds me that our withdrawal from Gallipoli has added considerably to the risks of our flying men in that part of the world. Formerly there were so many of our ships about that, in case of engine trouble, any of our aviators could choose his ship and make reasonably certain of alighting close to it and being picked up. Now the chances are not quite so good. Still, our men are quite cheerful and happy in their work; which is more than the Hun aviators appear to be. I was shown lately a letter written by one of our flying officers. He writes very casually of his work, but what he does write serves to show that the enemy aircraft are not scoring any successes, and that our own people are perfectly satisfied with what they themselves are doing. More than that it would be indiscreet to say. I may, however, quote a few short sentences from the letter:—"We had quite a good Christmas. It was a perfect day, and the Huns came over twice and dropped bombs. They made quite good shots for our machines, but did not succeed in doing any damage." And then the writer goes on to rejoice at having "raised some turkeys from somewhere." As I have said before, if that is how the men who are doing the things that matter just now feel about it all, the least we can do is to "keep smiling."

***

Fortunately our fighting men do manage to keep their spirits up in the most wonderful way. Since I wrote the above paragraphs I have received a letter from a naval officer serving "somewhere in the Mediterranean," and have had a long talk with another who is somewhere nearer Home, and both of them are full of cheerfulness and quiet confidence. The former writes:—"Don't let folks at home get downhearted. We are full of buck here—but would be much happier if only we had an opportunity of killing the Dogeaters. I rather like the new name—Dogeaters—for the Huns. It is insulting, contemptuous, and true. It should spread." Personally, I had not heard of the name before, but if it is applicable, by all means let us adopt it; I, for one, am rather tired of "Huns" and "Boches" as synonyms for "Germans." As to what my second naval friend told me, I had better say nothing save this: It very nearly made me feel sorry for the "Dogeaters" for the first time since the war began.

***

In a review of a book on Egypt, which appeared two weeks ago in this paper, I notice a reference to the spirit of the Nile, and to the effect which such spirits, or, rather, the belief in them, has upon the Egyptian people. I am pleased to see that the writer treated the subject seriously, because it always seems to me that while we ignore the power of this influence we cannot give the people upon whom it operates the full benefit of our sympathy. We recognise the mystic and psychic tendencies of the Oriental mind in the Middle East, but, possibly because it is less aggressive, we overlook it on the bank of the Nile. As a matter of fact, belief in the supernatural plays an absorbing part in the life of rural and desert Egypt. Several instances which came under my personal observation proved it to be stronger than any other consideration on earth, not excluding the lure of personal gain. The *afrit* has, for instance, frequently and without question proved an effectual barrier to exploration.

***

During my wanderings on the Libyan desert I became friendly with a Bedouin sheikh, and over the camp fire at night he would tell me weird tales of desert life and death; of caravans lost in *khamsin;* of caravans destroyed by nomad Arabs, and so on. Then when I came to know him better he told me the story of a haunted city set in the waste of sand a few days' marches away. He always spoke of this place with awe, though he had never been to the city himself, but a friend of his had accomplished the journey, leaving stone landmarks as he went, to ensure his safe return. Behind him, however, and all unseen, had crept an *afrit*, carefully destroying the landmarks as they were set up. Then when he had reached his goal he had been tantalised by haunting visions of feminine beauty ere the male spirits set about him and well-nigh buffeted the life out of his body. Dazed and lost, he made his way out into the open desert again, to strike the caravan route by the merest chance, and then only when he was in the last stages of exhaustion. Such was the tale, and, constantly reiterated, I began to think that there was something in it.

***

A few weeks later I met a wealthy Englishman long resident in Egypt, and to him I recounted the sheikh's tale. His interest flattered and excited me. He firmly believed in the existence of such cities; the difficulty, it seemed, was to induce any native to tell of them. Would I care to go further and try to secure sufficient details of direction, etc., to justify an expedition? Of course, I jumped at the suggestion, and, starting at once, my troubles began. I saw the sheikh; his friend was in the Sudan. Well, money was no object; we would send for him. Two days later the sheikh received an aerial message—there were no other means of communication—to say that his friend was dead. I told him plainly that I did not believe it. He protested for some time, but eventually produced the man, saying that he had lied only to guard against giving me offence, but no power on earth would induce him to give further particulars than were included in a wave of the hand to the west indicating the direction of the city.

***

My English friend made the best of a bad job, and to the west an expedition started. It did not find the city, but although only three days out, it was not without discovery. A watering base of an ancient caravan route, for centuries disused, was found, with Roman water-jars stacked ready to load on the camels, which for some mysterious reason evidently never came. Sand-driven and worn to the thickness of a cigarette paper, they could not be removed, but they were photographed, and I saw the film developed. Still on an unknown track, the expedition was pushing ahead, when one of its members thought he saw a spirit, and after that there was no further progress. Not a native would advance a step, although, according to contract, they stood to gain ten pounds each if they reached the city, and to lose their wages if they disobeyed orders. And so the affair ended, so far at least, as that expedition was concerned, but it showed how firm a hold superstition has upon the native mind. The man who realizes this and who meets the Arab and the fellaheen in a spirit which evinces sympathy for his frequently half-ashamed beliefs will learn more of the people in six months than his more material and intolerant brother would learn in an equal number of years.

5	23	Wednesday	1	2
6	24	Thursday	2	3

To-day is the birthday of Prince Henry, third son of the King and Queen, who was born at Sandringham in 1900.

The Prince of Wales, who is on the Headquarters Staff of Sir Archibald Murray in Egypt, has found time, Reuter's correspondent states in a special telegram, for several visits to the front in the desert, and in the course of his rides on the eastern side of the Canal has seen a good deal of the work of the Army. His Royal Highness lives in the simplest manner, much as would any other young Staff officer, a fact which has enhanced his popularity with the British and Dominion forces of the Dardanelles Army, who value his presence all the more on account of the unaffected and unceremonious nature of his appearances among them.

A Reuter's message states that General Sir Bryan Mahon, commanding the British forces at Salonika, arrived in Athens yesterday morning, and will have an interview with King Constantine.

Crown Prince Alexander of Serbia is expected to arrive in London either to-day or to-morrow. His Royal Highness will be accompanied by M. Pashitch, the Serbian Prime Minister, and the Under Secretary of State for Foreign Affairs.

The Egyptian Press announces that the Sultan will go to Alexandria for the summer in the first fortnight of May. The repairs which are being made at Ras el Tin are expected to be completed by the end of next month.

Under date of March 27, Reuter's Nice correspondent reports:—The death of Prince Bahram of Persia, son of Zill-es-Sultan, who lives in Nice, is announced. Prince Bahram was on board the Sussex when the ship was torpedoed, and, in spite of all their efforts, the family have had no news since. There is however, no official confirmation as yet of the Prince's death.

Sir J. D. Rees has given notice to ask the Secretary for Forfeign Affairs whether any inquiry has been made as to the fate of Prince Bahram of Persia, who is believed to have been a passenger in the Sussex, and, if so, with what result.

Egyptian papers received by the last mail report that Sir Reginald Wingate, accompanied by Lady Wingate and his staff, was expected to leave Khartoum this week to take up summer quarters at Erkowit.

Sir Henry and Lady Bax-Ironside have arrived at 23, Grosvenor Place, which in future will be their town residence.

Lady Paget and her party of over fifty doctors and nurses from Serbia arrived in Petrograd on Sunday *en route* for England.

The *Morning Post's* Stockholm correspondent reports under date of March 29:—Lady Paget's ambulance party arrived here this morning from Petrograd via Haparanda. The party, consisting of eight surgeons and ninety nurses, travelled from Serbia through Russia, and several bore signs of the hardships endured. The voyage will be continued to-morrow via Christiania to England.

A Reuter's message from Stockholm, dated yesterday, says: Lady Paget and her British Red Cross party arrived here yesterday from Serbia and Petrograd. The party consists of eight doctors and about 100 nurses, besides two British wounded. Lady Paget is the guest of the Crown Princess. The party will leave to-day for Christiania in specially reserved railway carriages.

The Secretary of the War Office issued the following announcement last Friday:—The military position in Egypt being satisfactory, owing to the failure of the attempts by the Turks on the West Frontier, a reorganisation of the Forces in that country has been effected and General Sir A. Murray, K.C.B., K.C.M.G., C.V.O., D.S.O., has assumed the sole command in that country. General Sir J. G. Maxwell, K.C.B., K.C.M.G., C.V.O., D.S.O., left for England to-day.

Before he left Cairo, General Sir John Maxwell was entertained at a farewell reception at the Continental Hotel, at which Prince Ahmed Fuad read an address of appreciation. The arrangements were in the hands of a committee of Egyptian notables, and all classes and communities were represented at the gathering; while large crowds of natives gathered outside the hotel and loudly acclaimed General Maxwell as he drove away.

The General, in a short speech in which he expressed his thanks, said that he hoped the Egyptians had now got over the bad year of 1914. Please God, there would be a good year this year and he trusted it would be the harbinger of many prosperous years to come. "You have everything in your favour," said General Maxwell in conclusion. "You must be loyal to yourselves, loyal to your august ruler, and may God favour the country as He has always favoured it. I thank you most heartily. Lady Maxwell and I will take away with us gratifying remembrances of the kindness of our friends in Egypt."

Count de Salis (His Majesty's Envoy Extraordinary and Minister Plenipotentiary to Montenegro) was received in audience by the King on Wednesday, when his Majesty conferred upon him the honour of knighthood, the insignia of a Knight Commander of the Most Distinguished Order of St. Michael and St. George having been handed to him in 1913.

Major the Hon. M. G. Talbot has arrived at Khartoum from England, and it is stated that his services have been lent to the Sudan Government. He was Director-General of Sudan Surveys from 1900 to 1905, when he retired from service in the Sudan.

The marriage arranged between Geoffrey F. de Teissier, Captain, Scots Guards, and Katharine, eldest daughter of the late Theodore Seligman, of New York, and Lady Waldstein, and step-daughter of Sir Charles Waldstein, will take place quietly at St. Margaret's Church, Westminster, on Wednesday, April 19.

Captain Yovan W. Yovanovitch, of the Serbian Intelligence Department of the Headquarters Staff, arrived in London on Monday from Corfu.

The marriage of Miss Bolton, only daughter of the Commissioner of Limassol, Major Bolton, with Major Bagshaw, R.A.M.C., was celebrated at Limassol recently.

Our Bucharest Correspondent writes (March 4):—

M. Gueshoff, the Bulgarian ex-Prime Minister, is at present in Bucharest, where he is said to have a banking business. His visit does not seem to be of a political character.

Colonel Semenoff, the Russian Military Attaché in Bucharest, has been promoted to the rank of general, and will shortly return to Russia. He has made himself very popular during his two years' residence in the Roumanian capital. General Ibesco, the General Secretary at the Ministry of War, has recently given a dinner in his honour.

M. S. Lupashco, Roumanian Commercial Attaché at Marseilles, has arrived in Bucharest.

Captain A. Paltineano, of the General Staff, has been sent abroad on special mission by the Ministry of War.

Reuter's Salonika correspondent reports that on Monday General Sarrail presented the Croix de Guerre to Lord French's sister as President of the Scottish Red Cross Society. Afterwards General Sarrail and General Mahon were present at a concert.

We are glad to learn, from the *Egyptian Gazette*, that Mr. Arthur B. Geary, British Vice-Consul at Alexandria, who has been ill for the past month with paratyphoid fever and jaundice, is making most satisfactory progress and expects to leave the Deaconesses' Hospital, where he has been under treatment, before long.

Mr. Bertram Christian, Chairman of the Serbian Relief Fund, London, last week received a telegram from Lady Barclay, wife of the British Minister in Bucharest, in which she states that there are 30,000 Serbian prisoners in Bulgaria in great distress. She asks for the means of affording them relief. In response the Committee of the Serbian Relief Fund have taken immediate steps to deal with the situation.

M. Petrovitch, who was formerly connected with the Serbian Diplomatic Service, left London for New York last week.

M. Panas, the Greek Minister in Petrograd, passed through Bucharest on Tuesday last week.

An Alexandria correspondent writes:—"During the last week in February the Rev. H. Tristram Valentine, M.A., was presented with a gold wristlet watch, suitably engraved, and a cheque which had been subscribed for by a number of his personal friends among the congregation of All Saints' Church, Ramleh, on the termination of his chaplaincy, which he had held during four years. The Rev. Valentine has not entirely severed his connection with Alexandria, having been appointed temporary Chaplain to the Forces."

It is announced in the *London Gazette* that his Majesty the King has been graciously pleased to confer the undermentioned rewards for gallantry and distinguished service in the field, in connection with the engagement at Sollum, Egypt, March 14 to 17, 1916:—

To be a Companion of the Distinguished Service Order: Major Hugh Richard Arthur, Duke of Westminster, G.C.V.O., Cheshire Yeomanry, Territorial Force.

Awarded the Military Cross: Lieutenant Cuthbert Roger Rowden, Worcestershire Regiment and Royal Flying Corps.

The *Egyptian Gazette* reports:—The appointment of Judge Herbert Walsh Halton, acting President of the Cairo Mixed Tribunal, as President of the Mixed Court of Appeal in succession to the late Judge Sandars, was approved by the Council of Ministers at its meeting on March 14.

Vice-Admiral Sir John de Robeck has presented the port light and steering indicator of the steamship River Clyde to the 2nd Battalion Hampshire Regiment in memory of the landing of the 29th Division in Gallipoli on April 25, 1915, from this vessel. It was on the bridge that the officer commanding the battalion, Colonel H. Carington Smith, was killed.

The *London Gazette* announces that the King has been pleased to grant permission to Lieut.-Col. Henry Edward Manning Douglas, V.C., C.M.G., D.S.O., R.A.M.C., Deputy Assistant Director of Medical Services, to wear the Insignia of the Third Class of the Order of Saint Sava, which decoration has been conferred upon him by the King of Serbia, in recognition of valuable services rendered.

Ten English and Australian officers, invalided from the Dardanelles, arrived last week at the Villa Medici, at Fiesole, from Malta, convalescent. They were received on their arrival by Lady Sybil Cutting and Mrs. Strong, and were warmly greeted. They expect to remain at Fiesole about three weeks.

Jaafar Pasha, the Turkish commander who was recently captured at Barrani, has been allowed to keep his sword.

Lady Murray, president of the Mediterranean Expeditionary Force Fund, would be very grateful if ladies having knitting machines would kindly knit some socks for her. The fund will supply the wool. Communications should be addressed to the hon. secretary, M.E.F.F., 24a, Hill Street, Knightsbridge, S.W.

The Agent-General for Victoria, Australia (Sir Peter McBride), has received authority to make the payment of £1,000 to the Serbian Minister, being a further contribution from the Lord Mayor of Melbourne's Serbian Relief Fund.

A Serbian *matinée* organised by the British Empire Union in aid of the Serbian refugees and other patriotic objects will be given at the London Pavilion this afternoon. Many leading artists will contribute to the programme, and during the afternoon there will be addresses by Sir George Makgill and Mr. Leo Maxse. Tickets may be obtained at the Pavilion box-office.

The Hon. B. R. Wise, K.C., Agent-General for New South Wales, acting under instructions received from the Government in Sydney, has handed to the Serbian Relief Fund in London a further sum of £6,300 for relief in Serbia, and to Lady (Roper) Parkington, Honorary Treasurer of the Montenegrin Red Cross and Relief Fund, a further amount of £1,500 for relief of Montenegrin refugees. The total of £7,800 in question represents a contribution of £7,000 from the "Allies Day" Funds Committee and also an additional amount of £800 from funds contributed by various citizens of New South Wales.

Baron von dem Bussche-Haddenhausen, the German Minister to Roumania, has returned to Bucharest from Berlin. On the day following his arrival he had an interview with the Minister for Foreign Affairs.

The British Muslim Society announces, for the benefit of Muslims and others living in or passing through London, that public services are held at 1 p.m. on Fridays, at 39, Upper Bedford Place, W.C., and at 3.15 p.m. on Sundays at the Mosque, Woking.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

The eleventh report of the Women's Armenian Relief Fund, recently issued, states that since Turkey proclaimed war against Russia it has been practically impossible for the Committee to communicate with Van and its province, and they have therefore been helping various other agencies, such as the Lord Mayor's Armenian Refugees' Fund and the Serbian Relief Fund, but they are now enabled to transmit money for relief of distress in the Caucasus to certain American missionaries appointed by the Boston Board of Foreign Missions. They therefore appeal to their supporters and friends to help in saving a remnant of the unhappy Armenian people. Donations will be acknowledged and remitted to Tiflis by Mrs. Madeleine Cole, Hon. Treasurer, Women's Armenian Relief Fund, Danehurst, Putney.

Sir Clements Robert Markham, K.C.B., the famous geographer and explorer, of 21, Eccleston Square, S.W., and the Athenæum Club, President of the Hakluyt Society, 1890, and of the Royal Geographical Society, 1893-1905, who died on January 30, aged 85, left property of the value of £7,740, the net personalty being £7,431.

General Sir Charles Monro has sent to the Mayor of Burnley the following translation of an order issued to his troops by General d'Urbal, commanding the 10th French Army Corps, telling them how gallantly Second Lieutenant A. V. Smith, V.C., 5th East Lancashire Regiment, and son of the Chief Constable of Burnley, sacrificed his life in the Dardanelles:—"A good example of devotion has been shown by an officer of the British Army in Second Lieutenant Alfred Victor Smith, East Lancashire Regiment. This officer dropped a grenade in the trenches, and cried out in alarm to the other officers and men to make themselves safe, but knowing that it was too late, dropped himself on the grenade. He was killed from the explosion, but saved the lives of his comrades. The General Commander of the 10th Army Corps thinks that this act of bravery on the part of one of the officers of the brave Allies should be known by every one.—V. D'URBAL."

Sir Thomas Fowell Buxton, 3rd Bt., G.C.M.G., of Princes Gate, S.W., Warlies, Waltham Abbey, and Colne House, Cromer, who died on October 28 last, aged seventy-eight, has left unsettled estate of the gross value of £420,976, the net personalty amounting to £88,427. Probate of his will dated June 12, 1912, with seven codicils, has been granted to his three sons, Sir Thomas Fowell Victor Buxton, Bt., Noel Edward Buxton, M.P., and Charles Roden Buxton. The whole of the property, with the exception of some legacies to servants, is divided among members of the family, in varying amounts, all real and leasehold property going to Sir Thomas Fowell Victor Buxton, the present baronet.

Al-Mokattam reports that a follower of Abbas Effendi, head of the Bahais, who lives in Alexandria, has received a telegram from Chicago stating that according to news from Syria Abbas Effendi is enjoying full freedom. It was reported that the Turkish authorities had imprisoned him.

The *Egyptian Gazette* announces that Ras Mikhail, King of Tagria and father of the present Negus of Abyssinia, intends to pay a visit to Cairo shortly, and will stay with the Orthodox Coptic Patriarch, who will anoint him as King. The King of Tagria only recently became a monarch, as hitherto he has been a religious chief.

M. V. Antonievitch, of the Serbian Legation, attended the rooms of the League of the Empire in Buckingham Gate yesterday, and opened an exhibition of Serbian children's national dress, comprising about 400 garments made by various working parties for Serbian orphans who are homeless in different countries. The exhibition also included many interesting war relics.

About 100 Serbian officers and 38 N.C.O.'s and men from Corfu arrived in London on Wednesday. Some of them visited the Houses of Parliament during the afternoon.

APPOINTMENTS, PROMOTIONS, Etc.

At its meeting on March 14 the Egyptian Council of Ministers approved the retention of Sir David Semple, Director-General of the Public Health Department, in that post for a further two years as from April 6 next after his attaining the age of 60, which is the maximum age limit under the pension regulations.

It is considered probable, says the *Egyptian Gazette*, that Mr. Williams, Inspector-General of Irrigation, who is retiring at the end of this month, will be succeeded by Mr. A. P. Tottenham, Inspector-General of Irrigation, Lower Egypt, who, in turn, will be succeeded by Mr. Adam, Inspector of the First Circle of Irrigation. Mr. O'Sullivan, Inspector of the Zifta Circle, will succeed Mr. Adams as Inspector of the First Circle.

A Sudan correspondent writes:—

Captain C. H. Stigand, formerly Second Inspector of the Province of Mongalla, has been transferred to the Province of the Upper Nile, where he is stationed at Nasser. This new headquarters of the province, one out of eight Mamurias, was only established in 1913, and the inspector in charge of the district deals solely with the troublesome Nuer tribe, the Dinka districts of Abwong, Khor Attar, and Dunjol forming likewise a new inspectorate with the headquarters at Abwong. Captain Stigand has been in the service of the Sudan Government since March of 1910, and he is regarded as a very smart and reliable official, quite suited, both by experience and temperament, to assume the responsibilities attaching to his new command.

Mr. O. Bentley, formerly Second Inspector in the Red Sea Province, and who was transferred to the Nuba Mountains Province at the end of last year, is now located at Talodi. This is the chief town of the province, which was only created as a separate administrative area in 1914. Mr. Bentley has seen over two years' service with the Sudan Government.

Mr. J. H. Goldsmith, formerly an Inspector in the Survey Department, has been appointed to a Third Inspectorship in the Red Sea Province, being stationed at Port Sudan.

Captain C. Kennedy Cranford Stuart, D.S.O., Indian Army, and Captain H. Burges-Watson, Infantry, have been taken on the strength of the Egyptian Army as Special Service Officers, with the rank of Bimbashi, their services being placed at the disposal of the Sudan Government.

Mr. H. A. Macmichael, of the Sudan Civil Service (Temp. Captain, British Army) has been granted the temporary rank of Kaimakam.

The Cyprus *Gazette* of March 10 announces that the following gentlemen have been elected members of the Museum Committee for a term of two years:—Mr. L. Z. Pierides, Mr. D. Severis, Mr. N. Paschalis, Hon. A. Liassides, M.L.C., and Dr. A. Theodotou.

The *Sudan Times* of March 4 reproduces an official notification from a Special War Office *Gazette* of February 26 a list of rewards in recognition of services in the operations "against the Mandal-Sabai Hills, 1914." Included in the list are four British officers, who receive the Order of the Nile:—Lewa F. F. Carrol Pasha, M.B., Medical Corps, who receives the Third Class; and Kaimakams C. E. Vickerey Bey, D.S.O., late Sudan Government; T. G. Anderson Bey, late Assistant Adjutant-General, and J. A. Pollock Bey, Officer Commanding 11th Sudanese, who all receive the Fourth Class.

The following officers have been struck off the strength of the Egyptian Army:—

El Kaimakam G. H. P. Boyle Bey, Instructor of Signalling;

El Kaimakam W. B. Gibbs Bey, Officer Commanding 15th Sudanese;

El Kaimakam R. Micklem Bey, Sudan Government;

El Bimbashi A. J. Reynolds, Cavalry and M.I.

Mr. Capsambellis, Greek Vice-Consul at Alexandria, has been appointed Secretary to the Ministry for Foreign Affairs at Athens.

ROLL OF HONOUR.
British Subjects from Turkey in H.M.'s Forces.

The Editor of THE NEAR EAST *would be obliged if relatives of former British residents in the Near East who have joined H.M.'s forces would communicate additional names or other particulars for insertion in our Roll of Honour. Biographical details concerning those who have fallen in their country's service would also be appreciated.*

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A., Colchester.
ATKINSON, Gunner T., "A" Co., Royal Field Artillery.
BAKER, Captain A. Warden, 7th Royal Scots Fusiliers.
BARKER, 2nd Lieut. C., Interpreter, British Central European Expeditionary Force.
BARRON, Captain J. B., Worcester Regiment, France.
BATH, Nurse, Sister, Army Hospital, Malta.
BELL, Sister M. J., Edinburgh War Hospital, Bangour.
BINNING, Sergt. G. A., South Wales Borderers B.E.F., France.
BINNS, Capt. C. E., R.M. (Interpreter to Mediterranean Forces).
BINNS, Lieut. Harold H., Royal Naval Division Headquarters, British Mediterranean Expeditionary Force.
BINNS, Miss Hilda B., V.A.D., Q.A.I.M.N.S.R., H.M.H.S "Aquitania"
BINNS, Lieut. W. Hylton, care of The British Consul, Brindisi.
BLYTH, Captain R. C. P., 1st Gloucestershire Regiment, attd. Egyptian Army. (*Killed in Action.*)
BOLTON, Alfred, Naval Brigade.
BOND, Private H. C., 7th (Reserve) City of London Regt.
BOND, Lieut. Gladwyn J. T., 1/8 West Riding Brigade, R.F.A., Ripon.
BOND, 2nd Lieut. Sidney, Royal Horse Guards, Interpreter, Salonica.
BOND, Corporal R. (41,357), Headquarters Staff, "D" Battery, 79th Brigade, R.F.A., 17th Division, B.E.F., France.
BORRELL, Rifleman Alfred, 7th Service Batt. Rifle Brigade.
BOWMAN, Corporal Henry J. (2424), R.A.M.C., British Mediterranean Expeditionary Force.
BROOKS, Corporal George, 41356, D. Batt., 78th Brig., R.F.A., 17th Div., B.E.F. France (in hospital with fever).
BURN, E. R., 7th Service Batt. Rifle Brigade.
BURNS, Rifleman Edward, 7th Service Batt. Rifle Brigade. (*Accidentally Killed.*)
CASTELL, Rifleman Henry, 7th Service Batt. Rifle Brigade.
CAUCHI, Act. Corporal Henry (6113), 19th Service Battalion, C. Company, Royal Fusiliers, Epsom, Surrey.
CHARNAUD, Lieut. A., R.N.V.R., Acting Interpreter.

FRIDAY, MARCH 31, 1916.

THE MESOPOTAMIAN CAMPAIGN.

The disclosures regarding the medical arrangements of the Mesopotamian campaign have come as a shock to the British public. When the Expedition first reached Amara it is probable that the inadequacy of the medical provision originally made for the force was already revealed; but the difficulty of obtaining further supplies in a hurry and the optimism which must have prevailed in certain quarters on the subject of the opposition likely to be encountered in the advance on Baghdad caused the General Officer in Command to push on without waiting for fresh hospital equipment. After the battle of Ctesiphon what was before a shortage of medical requirements became a complete breakdown of the whole medical service. General Townshend, as far as is known, was able to pass all his wounded down the river; but for the great majority of them transport alone—and that in the main unsuitable or worse—without medical attention was provided. It is unnecessary to attempt to depict the sufferings of these unfortunate men or to speculate on the number of lives lost which with proper care might have been saved. All that the medical authorities in Mesopotamia appear to have been able to do was to despatch as many of the wounded as possible in all haste to India. Mr. Chamberlain spoke of information—for the accuracy of which he was not in a position absolutely to vouch—to the effect that there had been an abundance of hospital supplies of all kinds at Busreh at all times. If such were the case, the situation would become still more obscure, for there is evidence to show that the shortage of supplies extended to the ships conveying the wounded back to India. At Kut we may suppose General Townshend entered upon the siege with comparatively few wounded on his hands. He was, however, uncertain as to his capacity for holding out against the enemy, and we must infer that his earlier messages to headquarters were not couched in the optimistic terms which he is credited with having used two months later. Be that as it may, General Nixon, and in turn General Lake, felt compelled to despatch immediately a force for his relief. General Aylmer's column not only suffered from the general lack of medical supplies, but appears to have started without waiting for adequate provisions. His discomfiture was completed by the appearance of floods, which rendered it still more difficult to replenish his stores. Under the impression that General Townshend could not hold out much longer, the relief column lost no time in launching an attack on the Turkish position. The attack failed, and once more there were heavy casualties with a wholly inadequate medical service to cope with them.

The story of this lamentable breakdown is aggravated by a number of details. For the moment we may ignore the statement that there was all the time an abundance of hospital supplies at Busreh. But it is an established fact that offers of general assistance were made direct to the General Officer in Command in Mesopotamia in July, 1915, and repeated at later dates by the Joint War Committee of the British Red Cross Society and the Order of St. John of Jerusalem in co-operation with the Indian Soldiers' Fund. Some stores were sent out from England in September; but the Joint Committee do not appear to have been satisfied with the reports from Mesopotamia, for further offers were made in December and again on January 31. This last offer was accepted on February 17, a month after the disastrous engagement at Sheikh Sa'ad. The offers made in December, we are left to conclude, were refused by General Nixon, and the India Office also adopted the attitude that nothing was wanted in the way of medical supplies. This question of the medical arrangements is now the subject of an official investigation; but the shortage of hospital supplies does not cover the whole extent of the failure to see that the Mesopotamian forces were adequately equipped before they were sent up the Tigris. An official *communiqué* announced that one of General Aylmer's columns operating only seven miles from the river on his right flank was compelled to fall back on the river, because it lacked water. Not only was it unprovided with water transport, but there was no provision even for filtering the river water. "We are drinking Tigris untreated at the present moment, just allowing the mud to settle and then using it," writes an officer on February 10. Little wonder that the whole Expeditionary Force feels that it has not received the attention to which it was entitled.

In the circumstances, the British public must derive what consolation it can from the reflection that the disclosures have been made in time to remedy the defects. It is too late to mitigate the suffering of the victims of the "lamentable breakdown" or to save the lives that have been lost, but the Expedition can be saved from the final failure which must have overwhelmed it, if official cognisance had not been taken of its lack of adequate equipment. Already the shortage of medical supplies and hospitals has been, or is being, made good. No less important is the transfer of the control of the Expedition from the Indian Government to the War Office, which was effected on February 17. It was obviously beyond the powers of the former to cope with a force which had so completely outgrown its original proportions. We can only hope that the War Office will be fired by remorse for the unnecessary privations suffered by the Mesopotamian Expedition in the past to resolve that it shall have everything in abundance for the future. The whole task of the Expedition still lies before it. Of the spirit of the men, in spite of all that has happened, there is no doubt. They ask for nothing better than to be allowed to "make good." But to this end they need not merely the minimum equipment of the Army Medical Service, but a larger supply of men, guns, flying machines, and everything else that makes for victory in this war.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

JOURNEYINGS IN ASIA MINOR.

By MARY A. POYNTER.

III.—Angora.

So great a man as the Phrygian King Midas stands sponsor for Angora. He founded the city in the seventh century B.C., and anyone visiting the place in this the twentieth century A.D., must acknowledge that it was founded wisely and well; that it would be difficult to find another site in all that region at once so pleasantly commanding and so calculated to go down the ages and remain attractive, if not invulnerable, to the end.

But perhaps its having been so desirable a site and city has laid Angora more than ordinarily open to conquest by outside nations and to attack by marauders who came out of farther Asia to destroy, or to have for the moment all the good things they could lay violent hands on, and with no wish to hold the country as a permanent possession. This Angora (old Ancyra) has been occupied or held by various peoples: it is recorded that Alexander the Great was here for a time; the Romans have left some fine monuments as the result of their long stay; it once lay within the boundaries of the empire of Zenobia, Queen of Palmyra; it was sacked by Haroun-er-Rashid in 806, and after the battle of Dorylæum, in 1097, it remained for some time in the hands of the Crusaders. The Seljuks took the city in 1213, and the Ottomans took it, to hold more or less permanently, in 1360. Then, in 1402, came Tamerlane, with his Mongol hosts, to lay Angora waste, after first defeating and taking prisoner Bayazid I., and this victory opened the way for the great outlaw to go on his further destructive march to the Ægean. History is not unpleasant to dwell upon after it becomes many years old; but in the making and in those early days it must have been a serious business for the peoples of Angora, just as it has been a serious business for many other fair cities and states which have had to suffer like indignities. One likes to think that Angora and Galatia in general did not have to suffer "so many things in vain." The profane and the sacred history of these lands make very different reading. St. Paul is mentioned in The Acts as having gone over "all the country of Galatia and Phrygia in order, strengthening all the disciples." And in another place it is mentioned that he "had gone throughout Phrygia and the region of Galatia," and would "go into Bithynia, but the spirit suffered them not."

Angora, though a capital of a vilayet, has now only about 30,000 inhabitants within and without its walls, and is not the important city that it must have been when this old part of the inhabited world was young. It seems in some way a very remote and out-of-the-way town at the present time; but in those earlier days it lay in the direct path of travel eastward and in all directions; it was a great centre from which caravan roads (probably in much better condition than they are to-day) led off into Persia, Syria, and Armenia.

And present-day Angora is not exactly prepared to receive visitors, though its attitude is not inimical toward strangers, and it treats them kindly when they come, allowing them to wander freely about its streets and to peer into its walls and among its ruins, as they may be inclined. There are no hotels in the proper sense, save the primitive and rather fever-haunted one at the station on the plain below, and the visitor does not like to stay there, where he can only look at, and not be in and a part of, the town. It was the house of Madame Marie that gave us hospitable shelter in Angora, both when we arrived in May and in September,—Madame Marie, who calls herself a Frenchwoman, either by marriage or by descent from long ago, who is clean and kind and attentive, but who speaks and understands not a word of the French language. I fancy Western blood like hers is to be found throughout Turkey-in-Asia—descendants of the people left over when the waves of some Western advance receded, and who keep only a memory, a tradition as it were, though a prized one, of their ancestors' nationality.

Angora is builded on the slopes and on the top of a hill situated in the centre of a plain, and commands a view of all below and very much beyond, even to far blue mountains. From a distance it looks not unlike an Italian town—indeed, it seems like an Eastern Ancona, a little fuller of colour and maybe a little less clean than its Western namesake; at any rate, they are alike insomuch as both stand for "anchors." Perhaps from its Phrygian-Greek ancestry one looks for a resemblance to some classic town in Greece; on one side of Angora's "sightly citadel" there is a sheer drop into a deep ravine, through which the Tabbak Hané Su flows, and across this ravine rises a sharp hill that reminds one of the Lycabettos at Athens, only this Eastern Lycabettos is not crowned by a monastery, and a rambling Turkish cemetery is laid out up its steep sides, where even the fleecy-coated goats seem to find trouble in keeping a footing.

Angora's citadel is most picturesquely encircled by a wall, a wall that was restored by the Emperor Caracalla; then, after a lapse of some centuries, restored by the Sultan Alaeddin, and so lately as in 1833 by Ibrahim Pasha, of Egypt. These fortifications are again more or less in ruins, but the towers and battlements are still impressive, built up as they are of the stones and bricks of all periods. The later workmen used whatever they found at hand in restoring these walls, and thus all sorts of sculptures, capitals, and marbles bearing ancient inscriptions both in Greek and Latin are found "built in" without regard to their former history or dignity! These bits of "former greatness" may seem to fit but ill in the crevices of the present walls, some of them being placed upside-down and others at all angles, but they at least excite a passing curiosity, and the walls as a whole are good to look at and, for anyone with any imagination, have more than a momentary interest. The rock on which the citadel is built seems to be a sort of porphyritic stone, reddish, at any rate, and hard and sprinkled with grey lichens, that makes it a very pleasing as well as firm foundation. The view from the "white tower" that crowns the hill is one that no visitor should miss; there is no prospect from that point that does not please, nothing intrudes, and at the same time nothing is reserved that could add to the beauty of this Near Eastern landscape.

The most interesting monument of former days left in Angora, and one that archæologists take great account of, is the temple of Rome and Augustus. Quite a part of the temple itself remains, together with many of its fine decorative details, enough to show that the Romans builded here, afar from their mother capital, a temple with no slighting hand either as regards its architecture or the grace of its ornamentation. There is a marble tablet on the inner wall of the temple bearing an important inscription both in Latin and Greek called the "testament" of Augustus, which has been translated by several scholars and is valuable as a memorial of that period. In the fourth century this temple was turned into a church, of which some traces still remain; later it was injured by earthquake, and was then further despoiled by furnishing material for the building of the adjoining mosque of Hajji Bairam. This imposing mosque, that joins walls, so to speak, with the Roman temple, was built in the fourteenth century by Sinan, that master architect of mosques, employed by the Turks in the prosperous days of Sultan Suleiman. Its varying red and green bricks give the exterior a charming bit of colour, and its minaret is as graceful as those spires of Moslem places of worship are almost always wont to be. There are two fine sculptured lions standing, or, rather, reclining, before this mosque, obviously not their original site, and some parts of capitals are also to be seen lying about; while a little distance away, near the main street entering the town, there is at least one ancient column standing upright on the spot, doubtless where it was originally designed to stand. There are also some remaining parts of a Byzantine church—a church resembling one of the early churches of Nicæa—and there are several Greek and Armenian churches, a Catholic institution, and, at times, a Protestant mission, to show that the present population of Angora is divided in faith, though the Moslem element now predominates. If there is not very much left intact from early times, there is nothing that looks really new in the Angora of to-day.

The streets of the town are narrow and winding, mostly up an incline, and bits of the unstudied architecture of the houses recall Genoese influence. If the Roman came to the Near East, so also did the Italian, that Roman by another name, and it is curious how strong those old Italian cities were in the Middle Ages, and what gifts they possessed for colonizing and for spreading their culture

far beyond their own borders! The first stories of the houses are generally of stone—or marble, if some temple of old chanced once to occupy that site—the upper story being of wood and jutting out over the street or lane. Some brick is used in the more pretentious buildings, and in the minarets this is made quite effective by the layers being of different colouring, often one layer being of green and the alternating layer of orange or red brick. There are mud-brick houses, too, with straw for roofing instead of rosy tiles, and, they tell us, these simply constructed houses are successful in keeping out the cold—for sometimes the snows lie deep and the winters are long on these table-lands of Asia Minor. Dainty embroideries are worked, web-like laces are fashioned, and exquisitely fine fabrics are woven on simple hand-looms within some of these mud-brick houses, that do not always suggest such graces of domestic life.

The bazaars are interesting, as are most bazaars in Eastern cities, though those of Angora are arranged more for native patronage than to catch the eye of the chance traveller; the wares offered are largely those intended to supply household needs rather than those dear to the heart of the curio-hunter or the antiquarian. The sites of the many cities (one wonders how large those cities were in their day and how they looked!) on those plains are prolific places for the finding of antique coins. Alexander the Great was not backward in having coins struck in the various places and cities he occupied. He had reason to be proud of his august appearance on these coins, of his fine sculptured profile with a lion-skin adornment, and of the reverse of his coin as well, where mighty Zeus sits with outstretched hand, upon which is perched the emblematic bird. These coins continued to be minted many years after Alexander's death, and so to this day they are not rare, comparatively speaking; and, together with many coins of a later period, they are easy to pick up, for a price, in the bazaars of Angora.

The street dog of Angora is still ubiquitous, and he is very like his one-time numerous brothers of Constantinople, possibly a little larger and disporting a better air of well-being in general, doubtless on account of being treated with more concern. For the people of the town are kindly disposed toward each other (which is not always a marked characteristic of peoples of different nationality and religion living side by side in the East), and kindly disposed toward beast as well. It is interesting to watch the cows coming in from the fields at evening time, climbing the steep streets of the town, and each recognising and stopping before his master's door. Almost every well-to-do householder owns his cow, and living in the city seems to be no hindrance to the convenience of ownership. In winter the town house, which rarely has a stable attached thereto, furnishes shelter for beast as well as for his master. It is all very primitive, without the squalor that might be imagined, or the discomfort that would seem inseparable from so close a companionship with the domestic animals. The homes, indeed, look clean and inviting more often than otherwise.

On one of our rambles through the narrow, unevenly paved streets (through only a few of them can a carriage be driven) we saw a door open and a lady—a real Arab lady—come daintily down the marble steps of the house. Perfectly groomed was she, from high-bred inflated nostrils to flowing tail, not a hair of her glistening satin-white coat out of place; and though she tossed her crinkly main once or twice rather coquettishly as she set her shiny black hoofs carefully down from step to step, one knew she was also trustworthy from the look in her kind, bronze-brown eyes, that seemed to include all the world in her confidence. The groom, himself clad in a much-embroidered jacket and baggy trousers, proudly gave us leave to speak to the Arab lady in his charge, who was both gaily saddled and bridled; and a little later a pasha of the old school followed her down the steps, smiled at our appreciation of his choice property, and, taking the reins in his hand, rode with great dignity away. Thus the horse in Turkey is, or, at least, was until recently, a prized member of the family.

Other experiences had we with domestic friends in Angora. Pussy-cats, dogs, goats, and the beasties in general seem to run to long hair in this district. On our first morning there a white Angora pussy looked in at our upstairs window and had quite bright blue eyes with which to do the looking. Later these long-haired favourites peeped at us from all sides, and came down from high walls to be stroked and told they were the most beautiful creatures of their kind. Alas, not all of them looked sleek and well-fed. They were of all colours and conditions; but most of them had long hair, and occasionally one would be met with having its two eyes of different colour—one quite blue, while the other would be an unmistakable brown. We intended to take a real Angora kitten back to Constantinople with us, being told that they are in such demand they will soon become difficult to find in the home of their origin; but when our good landlady, Madame Marie, offered us a kitten—quite the longest-haired, prettiest, and most talkative of her kind—the little creature seemed so shy and so affectionately and playfully dependent upon her pussy mother that we did not have the heart to take her away.

But we did not allow any feeling of sentiment to prevent our taking one or two choice skins of the Angora goat home with us, and the amusement we had in bargaining for these at our little hostelry—bargaining with several keen vendors at a time—made our purchases all the more desirable. During this bargaining we were given so much unsolicited information as to colour, quality, and attributes of Angora goats and goat skins in general that if later we did not set ourselves up to be authorities it was not through any lack of opportunity to study the subject on the spot! But now I only remember that the animals all seemed gentle and not at all fearsome, neither the cows one met in numbers in the street, nor the Arab horses, nor the curly-haired goats, nor the particularly woolly lamb who is more fortunate than the goat in having to lose only its fleece, and not necessarily its skin, for the benefit of the outside world.

If Angora is not a large or especially important town in these days one has a right to call it a place flowing with bread and milk and honey; for the bread for lightness and good quality is not equalled elsewhere in all this region, the cow comes obligingly to your door to be milked and the honey is so prized, so a part of the family, that when the residents move in summer to some point higher up among the mountains to get out of reach of the air of the feverish plains, they take their hives of bees with them. It is all a very simple, even primitive, life—the little calf that strayed into our dining room at Madame Marie's, and, being a little shy, took refuge under the piano and looked on enviously at the fluffy-haired cats and dogs sporting about with all freedom, shows how simple it is. Yet at the table in that dining-room we have heard a half-dozen different languages spoken by one person, have been taught the latest game of "Patience," have heard ancient philosophies discussed, and have made friends and formed friendships that we should not like to lose or forget.

The city is possessed of many mosques, and these, especially their minarets, help to give it an Eastern aspect, and we discovered on our drive below and around the town that from whichever side we might view it, Angora, with its walled citadel, made a picture, was good, and—in the soft twilight—even beautiful to look upon. Many little streams flow around it on the plain, and there are drives near and afar over somewhat "shaky" roads that leave the impression of a rather deserted countryside as regards human life. There is a "model farm" near by that one drives out to see—a farm that is run, so far as it has yet learned to go, on Western lines; and there is the Armenian monastery that one must visit for the sake of its venerable age, for its chapel, and some rather interesting books and pictures that are shown, and for the fact that this building occupies the site of an old temple that became the place of early Christian worship. Tradition says St. Paul was entertained here. Lastly, one should pause for a glimpse of the cemetery attached to this monastery, where, among strangers, and in a strange land, sleep a number of the members of the Anglo-Saxon race. These graves are mostly those of early British traders—traders belonging to the old Levant Company—and their families. There are the names of some, one of them a bride, who died pathetically early. Many of the headstones are made from the classic marbles, broken columns, and sarcophagi found on the spot; the inscriptions on the earlier ones are in Latin, as, for example, the following, that we happened to take down at random: "Hic jacet interatus Guilielmus Black Mercator Angelus obiit 20 Julius Ao 1684."

These few quiet sleepers in the old Armenian cemetery were the only representatives of Great Britain that we found on our visit to Angora two years and a-half ago.

One memorable drive we took before leaving Angora was to visit friends having a summer home on the mountain-side only a few miles from the city. The way was crooked and cramped and stony but it led along out of the town by a merry stream and, when it began to ascend, the backward views were so enchanting we forgot to grumble at being so unceremoniously tossed about. I remember when we met a vehicle on its way down, both had to stop, and there was a long parley in fluent Turkish, as well as many gestures, and there were dangerous inclines of both carriages before the passing was safely accomplished. Once arrived at our friend's door we found the little summer settlement consisted of scattered houses situated in gardens. While our supper was spread on a table in the open, and a number of pleasant folk gathered around the well-provided board, our friends' donkey partook of his feast, and evidently enjoyed it—for his cry was not a plaintive one—from a room on the first floor within. The date of this excursion happened to fall on St. John's Day, and, as the community here was mostly Christian, we saw many signs of rejoicing, and a triumphal arch of flowers and evergreens

Digitized by Google

had been erected across the road; and when evening and moonrise came, and we set forth on our drive back to Angora, there were beacon fires burning on many of the surrounding heights in honour of the day.

We met many people of different nationalities during our two visits to Angora, and their warm Eastern hospitality was so great that it did not stop with invitations to their homes, but followed us to the station when we went away, filled our little compartment with the flower and fruit of their gardens (and this was all the more generous of them as gardens in the town are few and small); anything that we had ever admired—even to a carved native walking-stick the *Mudir* carried—was thrust upon us, together with warm handshakes, salaams, smiles, and last au revoirs as the train pulled, reluctantly it seemed to us, out of the station. My little note-book of that time says: "We shall leave Angora with a feeling of great friendliness toward the people—the people of all sorts, so kindly, so simple, and so friendly themselves."

We have read of late, since this far-reaching war began, strange things of Angora, that perhaps more than one of our friends there—that is among the Christian population—have suffered grievous wrong and harm. It is hard to credit it, and still harder and more difficult, if we *must* believe, to understand it in the light of our own so-different experience.

Again, we are told there are a number of Anglo-Saxons in Angora, but this time they are there—a few British civilians and soldiers and sailors—as prisoners of war. We can only hope they will be kindly treated, that they will be "interned," not imprisoned, for a Turkish prison, from all accounts, is anything but a comfortable abode. One thing is certain, the people of Angora, *if left to themselves*, will not deal unkindly with their enforced guests. It is the few in high military authority who have forgotten or who wish to ignore what England has done for Turkey in the past who would now have any desire to be brutal to those temporarily within their power as well as to many of their own subjects in that land.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Mesopotamia Campaign. March 23.

Mr. TENNANT, replying to Mr. Fell, said that medical arrangements in Mesopotamia were primarily under the control of the military authorities in India, but the Commander-in-Chief in India had been informed that the Army Council would render him any assistance in medical personnel and equipment. All demands had been met without delay. One hundred and twenty medical officers, including 40 from Egypt and 205 other ranks R.A.M.C., had arrived or were on their way. In addition, one British General Hospital of 1,040 beds and one British Stationary Hospital of 400 beds had been sent from Egypt. Both these units were fully equipped. Four Indian General Hospitals of 500 beds each which were in this country had also been sent. Two of these were fully equipped, and the remaining two consisted of personnel only. From France, the Lahore Indian Stationary Hospital of 200 beds and 33 medical officers were under orders. A motor-ambulance convoy—fifty cars with complete personnel—was nearly ready, and would leave for Mesopotamia early next month.

Replying to Mr. Malcolm, Mr. TENNANT said the new arrangements for the control of operations in Mesopotamia came into force from February 16, 1916. The Commander-in-Chief in India received instructions with regard to the military operations in Mesopotamia from the Chief of the Imperial General Staff in exactly the same manner as the Commander-in-Chief in other theatres, but India remained the main base of the force in Mesopotamia, which was administered by the Commander-in-Chief in India. Such requirements of the force as India could not meet were supplied by the War Office from other parts of the Empire so far as considerations of general policy did not render that impracticable.

Colonel LOCKWOOD asked whether any public notice was to be taken of the speech of General Aylmer to the 5th Buffs Territorial Regiment in Mesopotamia, and what were the losses in officers and men on January 7 and 19?

Mr. TENNANT said neither the War Office nor the India Office had yet seen the speech referred to.

The Gallipoli Operations. March 23.

Mr. GRANT asked when the papers relating to the last weeks of the operations in Gallipoli would be published, and if a further list of honours in connection with these operations and the withdrawal might be expected.

Mr. TENNANT said he could not name a date for the publication of the papers. The list of honours had already been published.

An Eye on Bulgaria. March 28.

Mr. R. M'NEILL asked the Under-Secretary for Foreign Affairs whether he would give an assurance that Bulgaria would not be admitted to separate negotiations for peace, and would not in any event be permitted to acquire territory or other advantage at the expense of any people who had fought or might hereafter during the present war fight on the side of the Allies.

Lord R. CECIL: The declaration of September 5, 1914, ensures only that no peace will be made with any of our common enemies without a previous agreement having been come to between the parties to that Declaration. By that Declaration each of the Allies is precluded from making a separate peace and from demanding conditions of peace without the consent of each of the others. To make such a statement as my hon. friend suggests in the second part of his question without discussion with our Allies would be in the opinion of the Government inconsistent with the spirit of the Declaration, and I do not think that at present any such discussion would be opportune.

For the Wounded in Mesopotamia.

Mr. RUPERT GWYNNE wished to know whether, when the shortage of doctors, nurses, and hospital equipment for our forces in Mesopotamia was realised, any endeavour was made to transfer hospital equipment from Egypt to Mesopotamia.

Mr. TENNANT: Yes, sir; aid was offered as soon as it was realised that aid was wanted.

Egyptian Cotton.

Answering Mr. Ginnell, Lord R. CECIL said the market price on the Liverpool Exchange of fully good fair brown cotton in the middle of July, 1914, was 9.10d. per lb., and the price on March 23, 1916, 11.13d. per lb. The price of middling American cotton was 7.35d. in July, 1914, and 7.78d. per lb. on March 23, 1916. Egyptian exports were treated on precisely the same principles as those on which Great Britain treated her own exports. Such restrictions on the export of Egyptian cotton as existed had been imposed in the interests of the successful prosecution of the war by the appropriate legislative machinery of the Egyptian Government. As the figures already given show, Egyptian cotton growers had benefited by the increase in the price of cotton.

Mr. GINNELL: Will the noble Lord say what it is he calls the appropriate legislative power, seeing that the Assembly has not been convened since the war began?

Lord R. CECIL: I do not think that I could answer that question without notice.

Freedom of the Press in Egypt.

Mr. GINNELL asked whether it was by direction of the Foreign Office that no free newspaper is permitted to exist in Egypt now; whether it is by the same direction articles copied from *The Times* and other English newspapers into *El Ahram* are deleted partially or wholly by the Censor, and that paper forced to appear with large portions of its space blank; and with their Press and Legislative Assembly suppressed, how the rights, wants, and opinions of the Egyptian people are ascertained and secured?

Lord R. CECIL: The reply to the first two parts of the question is in the negative. As regards the third part, neither the Egyptian Legislative Assembly nor the Egyptian Press has been suppressed.

Hospital Equipment for Mesopotamia.

Mr. GWYNNE having asked to what extent Sir William Meyer was responsible for the transport of hospital equipment for the forces in Mesopotamia, Mr. CHAMBERLAIN, in a written reply, says:—Sir W. Meyer is the Finance Member of the Government of India. He has no responsibility for the transport of hospital equipment for Mesopotamia except such as may be held to attach to every member of the Government. The Government of India are responsible for the equipment of all forces coming from India, the War Office for those coming from Europe. Supply is arranged for by the Government of India in communication with the India Office or the War Office, according to the nature of the supply. Asked if those in charge of these arrangements still occupied responsible positions, Mr. Chamberlain says the answer is in the affirmative.

Mr. ROCH asked who was responsible for the medical arrangements in connection with the Expeditionary Force in Mesopotamia. Mr. CHAMBERLAIN, in reply, refers the hon. member to Mr. Tennant's reply of March 23, and adds that the arrangements are primarily under the control of the military authorities in India, but if they are in want of medical personnel and equipment they apply for assistance to the War Office.

Correspondence for General Aylmer's Force.

In answer to Mr. GWYNNE, Mr. JOSEPH PEASE states that correspondence for units with General Aylmer's force in Mesopotamia should for the present be addressed "Expeditionary Forces," the usual details as to rank and unit being included. The question of giving a distinctive address to this force is under consideration. The rates of postage for letters and parcels are the same as for India.

Persian Gulf and Mesopotamia. March 29.

Mr. TENNANT informed Sir J. Jardine that it was hoped to publish shortly a further despatch with regard to operations in the Persian Gulf and Mesopotamia. This would cover events up to the end of September.

After the Russian occupation of Kermanshah, Count von Kanitz, late military attaché at the German Legation at Teheran, committed suicide. He was one of the leading men on Prince Reuss's staff and largely responsible for German propaganda. In consequence of the improved condition of the country the Imperial Bank of Persia has reopened its branches at Hamadan, Sultanabad, and Kermanshah.

According to an official report received from Petrograd last week, the Russian occupation of Ispahan, in Persia, was effected after a fight with the insurgents. The population, exhausted by the looting carried on by the Germans and their mercenaries, welcomed the Russians with enthusiasm. The Persian Governor-General and authorities, who had previously fled, have returned to Ispahan.

THE PRESS ON THE NEAR EAST.

The Military Position.

The *Spectator* (March 25) publishes a long article under the above head, beginning with the statement that with the battle of Verdun we have at length passed the dead point of war:—

If one imagines the military operations as a great steam engine fantastically slow in action, we have an illustration of what has just happened. Some engineers doubted whether there was enough steam in the boiler to make the huge crank turn over the dead point. We have all watched the crank labouring up to the critical moment where it must have a margin of impulse to turn it over that dead point. We have looked on holding our breath. But the point is passed; the crank swings smoothly on in a fresh stride; the new steam that was being got up was not too late. The dead point was safely passed at Verdun.

Developing its argument, the paper shows how the other theatres of war are affected:—

Already the star of the Germanophil party in Roumania is dropping in the sky. We may yet see it set for ever. At Salonika the position continually improves. Germany and Bulgaria never had more sound reasons for attacking a place than they have had for attacking Salonika. Evidently they had not enough strength, or they hesitated too long. Now it is too late. Salonika lies impregnably on the flank of the cherished German line of advance to the East. But that is not all. While the Allies' Army at Salonika grows in strength and confidence, the German and Bulgarian troops have plenty of leisure to develop their debilitating mistrust of each other. The Bulgarians, in particular, are bound to deteriorate. This is what always happens when the great army of a small State is kept in the field for a comparatively long time. A balance between the fighting strength and the industrial productivity of such a country never existed from the beginning. The great army of the little State must make war rapidly or fail. The Bulgarians are already seized with misgivings, and more and more they will lay their distresses and anxieties at the door of their overbearing German taskmasters. Very different is the moral atmosphere at Salonika, where the goodwill of the Greeks responds sensitively to the changing military situation, and where the Allied Army will soon be increased by the restored, rested, and re-equipped Serbian Army of well over one hundred thousand men—soldiers incited by an unquenchable thirst to be up and at the hated and treacherous Bulgars. The time is at hand when there will be a revolution of the military situation in the Balkans. The balance of military power there will be turned finally to the advantage of the Allies.

The danger to Egypt has virtually vanished.

The article, after dealing with the loss to Germany of her colonies and with the events of the Russian and Italian fronts, concludes:—

The one dark spot in the picture is the campaign in Mesopotamia. The difficulties were underestimated; the transport scheme broke down and failed to convey the stores from Basra to the front; the Government of India had shouldered a heavier burden than they could carry, or, at least, than they had made preparations to carry. In any case, General Townshend may be relied upon to hold out at Kut till the last possible minute. It was not by accident that he greatly distinguished himself at Chitral. His spirits cannot be quenched. The advance of the Russians has been so rapid that it seems possible, after all, that relief may come from them. But in any event the bungle in Mesopotamia, whether retrieved or not, cannot affect the situation as a whole.

Persia and the Allies.

In the *Contemporary Review* (March), Dr. E. J. Dillon prefaces an article on the above subject with the remark that "mention of Persia conjures up in the minds of political students a repellent picture of psychological misconceptions and diplomatic blunders."

In referring to the common line of action agreed upon between Russia and Britain in 1907 as the result of the policy inspired by the late King Edward, the writer points out that the introduction of Parliamentary Government and other devices of democratic countries, together with the creation of British and Russian "spheres of influence," were bound to lead to an incongruous position, as the Parliamentary method of government inevitably leads to the formation of a Nationalist party which wars against the intrusion of foreign influence. He continues:—

From the view-point of British interests two other capital errors were perpetrated—a neutral zone dividing the Russian from the British sphere was established, and the territory earmarked by our Government was insufficient. During the negotiations between the two Cabinets, the Russian Minister proposed a really large slice of land to his colleague, which would have had the effect of equalising the shares and leaving no neutral zone. This reasonable offer was declined on two inadequate grounds. Great Britain had always in her dealings with Russia upheld the principle of a buffer in some shape or form between the two Empires. But as in this case a buffer State was out of the question, the only other way of keeping the two Empires from becoming neighbours was to divide them by a No-man's land, as though there was no pirate nation on the look-out for unclaimed territory.

Dr. Dillon, after showing how our Indian interests were affected by our shortsightedness in this agreement, proceeds:—

When, subsequently, we in this country prided ourselves on having imposed our constitution on Iran, the Persians pertinently asked whether we had not also ear-marked a portion of their territory for ourselves, and whether this division of the kingdom into three zones could have any logical conclusion other than a formal partition. And when M. Izvolsky complacently told his countrymen that the Persian problem was at last settled definitively, many of them inquired whether the House of Equity which he had called into being did not contain a lever by which the Russians would ultimately be ousted out of Persia altogether. The new Parliament deposed the Shah and condemned the work of the two Empires, the boy monarch sank to the level of a mere symbol, the Chamber became a sort of Donnybrook Fair, Cabinet succeeded Cabinet, and the ground was made ready for German and Turkish intrigue, which was rife when the European War broke out.

The writer thinks that Russia behaved with scrupulous honesty in regard to a compact which necessarily forced her to abandon any designs upon the integrity and independence of Persia. His description of German intrigues in the country make very interesting reading.

Between German diplomacy and German hostility to the Allies there was no line of demarcation. Consuls, consular agents, military attachés were all toiling and moiling conscientiously to fan the embers of religious, racial, and tribal fanaticism into a consuming flame, and to levy war on the cheap against the patient Powers of the Entente, who nobly persevered throughout in their resolve to consider all these agitators and armed enemies as diplomatic or consular representatives. The Persian Cabinets, too, which came and went while anarchy remained and flourished, were all treated with a high degree of deference by Great Britain and Russia.

Our next quotation deals with some of the results of German efforts on the one hand and weakness on the other.

The condition of the country, superlatively bad before the war broke out, has grown desperate during the nineteen months that have elapsed since then. Persia has become the happy hunting-ground of a lawless soldiery, of roving brigands, savage highwaymen, German sergeants, and native despots whose name is legion. With the exception of a few towns administered by strong local officials or policed by Russian troops, there is no security for life, liberty, or property anywhere. All checks and restraints, human and divine, have been swept away by wild passions, the fury of which only machine-guns and rifles can abate. Turkish irregulars under Halil Bey played havoc with the country around Urmia, the Kurds indulged in fiendish atrocities wherever they encountered Armenians, German Consuls distributed money and arms to the rebels whom they enlisted in their service, and whom they led not only against the armed forces of the Russians, but also against the Consuls of Russia and Britain, while the "Democrats" of the House of Equity encouraged the Teutons by every means in their power. It was the Germans who instigated the attack on the British patrol at Bushire; it was they who stirred up and organised the insurrectionary movement at Fars; it was they who egged on the frontier tribes to rise against the Emir of Afghanistan. . . . The intrigues and machinations which were carried on by the Germans in Kermanshah after the departure of the Russian Consul surpass belief. Hundreds of outspoken anarchists were enlisted in the service of the Germans, whose general staff worked unceasingly in the consulate, while the Central Government smiled approvingly. Meanwhile, Great Britain and Russia, struck by the difficult position in which the Shah's Ministers were placed rather than by the equivocal part they were playing, wrote Notes but did nothing.

The latter portion of Dr. Dillon's article dealing with the time when the whole future of the country hung in the balance as the young Shah hesitated between departure to the enemy in a carriage already drawn up outside the Palace, and remaining where he was according to the advice of Britain and Russia, contains all the elements of real drama.

The Balkan States.

The correspondent of the *Daily Telegraph* at Milan, Mr. A. Beaumont, in a recent despatch to his paper, says that although it is impossible to learn the truth of the reports that Bulgaria is about to sue for peace, "something is certainly brewing." Friction between Teuton and Bulgar is reported to be acute, and "the attitude of the peasants is becoming distinctly hostile to the Germans, who, on account of their drastic methods of requisitioning and their insolence, are detested." Mr. Beaumont adds:—

Roumania's attitude further causes concern. It is now known that Roumania has called out so many men that her entire active army is mobilized and on a war footing along the Bulgarian and Hungarian frontiers. Under these conditions the best policy for Bulgaria is assumed to be an offer to negotiate, with the hope of retaining as many as possible of the advantages acquired by

Digitized by Google

the recent campaign. There is even a suggestion that Bulgaria is willing to throw herself entirely into the arms of the Allies, but such an idea is too preposterous as long as Ferdinand remains on the throne.

If things are bad in Bulgaria they are reported to be still worse in Turkey, where a week ago when a fire broke out in the Hungarian hospital at Constantinople its inmates, amounting to nearly 2,000, got into a panic, thinking the Russians were already at the gates of the Turkish capital. This is the measure of terror caused by the Grand Duke Nicholas's advance in Armenia and Anatolia.

Naby Bey is said to pay frequent visits to Geneva and Berlin, and he has been joined by another Turkish delegate, Rizaat Pasha, formerly Ambassador in Paris. It is not yet known what proposals the Turkish delegates are making, but the feeling is that none of their demands will even be entertained by the Allies, and that the Russian advance in Asia Minor will certainly not be suspended on their account.

Germany, Egypt and the Sudan.

The *Field* (March 25) contains a full-page article of exceptional interest on German intrigues in Egypt and the Sudan. In the first place, the writer traces the growth of German ambition in the East back to the time when Bismarck referred to the Suez Canal as the spinal cord connecting the backbone with the brain of England. In coming down to more recent times, the following reference is made to a German agent who has frequently been referred to in this paper, and to other inflammatory agents scarcely less notorious:—

For a long while the chief agent in stirring up disaffection was a Baron Max von Oppenheim, who held the rank of Councillor to the German agency at Cairo. He, like other distinguished Germans, visited Port Sudan in the course of his propaganda. It was much more difficult to approach the Arab Sheikhs in the Sudan than to corrupt the highly inflammable minds of the Young Egypt party, but there was useful information to be gathered at the Red Sea port. Oppenheim had the privilege of corresponding direct with the Emperor William, from whom he received marked favours.

In his anti-British work Oppenheim was, however, outdone by Prince Hatzfeldt, who became German Agent and Consul-General at Cairo in 1910, and by the prince's Oriental secretary, Dr. Curt Prüfer, scholar, antiquarian, and conspirator. Prüfer was the confidant and colleague of the notorious Sheikh Shawash, the organiser of various plots against the Egyptian Government, if not personally responsible for the plot formed in 1912 to murder Lord Kitchener. Prüfer found it convenient to repair to Constantinople in the middle of 1914, and in September of that year we have a pleasing picture of the Sheikh Shawash sitting with Prüfer in the latter's room at the Hotel Germania, copying in Arabic a recipe for making bombs, bombs intended to be used in destroying public works in Egypt. Prüfer also engaged in the congenial task of seducing European officials of the Egyptian Government. Bands of malefactors, Bedouin and others, were also being got together to commit outrages in every district of Egypt, and specially to destroy the property of British subjects. All this while Turkey and Great Britain were still at peace. When war came in the November following all disguise was thrown off. Numerous agents were sent to Egypt, but to the chagrin of the Germans the Egyptians remained loyal.

The writer points out that German propaganda was rendered more difficult in the Sudan owing to the strict control which the Sudan Government exercises over visitors to the country:—

Then, in contrast with the situation in Egypt, all the European officials in the Sudan were, with one exception, British. The exception was Slatin Pasha, an Austrian. To the Germans Slatin Pasha was useless, for he was absolutely loyal to the Government, and we take this opportunity explicitly to exempt him from any suspicion of engaging in intrigues. Sir Rudolph von Slatin has rendered valuable service to the Empire and to the Sudan. When the war began he returned to Austria in fulfilment of his duty to the country of his birth, retaining the respect of all his friends in England and Africa. There were, however, living in the Sudan Levantines who could be bought, and a few persons of German nationality. Among them one was found willing and able to do the dirty work required. This was an adventurer named Neufeld, who had gone originally into the Sudan on a fool's errand, had been a prisoner of the Khalifa, and was found, heavily chained, when the British entered Omdurman in 1898. There was always a suspicion that Neufeld was not quite the innocent victim of the Khalifa he represented himself to be, but the Government allowed him to remain in the Sudan. He lived at Omdurman, a place where gather representatives of all the races of the Sudan, and, knowing Arabic and the peculiarities of the various tribes, he was able to play the part of *agent provocateur* for his German paymasters. The nature of his activities being discovered, at long length, he was expelled from the Sudan. He then went to Egypt, where he continued to spread reports as to the harshness of British rule, and to depict the Kaiser as the deliverer of Islam. At an opportune moment he returned to Europe, and his hand may be traced as a stage-manager of the Arab Day recently celebrated in Berlin.

Why an agitator so notorious as this should have been allowed to leave the country when war was declared has already been asked in THE NEAR EAST. The writer continues:—

Considering the excitable character of the Sudanese Arabs and the ease with which their fanaticism has been aroused in the past, the peaceful state of the country is a wonderful tribute to the eighteen years' hard work of the Sirdar (Sir Reginald Wingate) and his assistants. The Sudan Government has been imbued throughout with the determination not only to maintain law and order, to protect the lives and property of the people, and to encourage the development of trade and industry, but it has ever shown a marked solicitude to respect the religion and the social laws of the Arabs. It now reaps its reward. It is, however, only right to recognise that its efforts have been rendered easier by the loyal co-operation of the heads of the Moslem fraternities in the Sudan.

The article concludes with the following reference to the King's visit to the country on his return from India:—

That the King should come himself to see them, that he talked to each of the great chieftains, stirred the imagination of the people. They had seen "the great Sultan himself"—they served no longer a government but a king; henceforth they were his men. Such were the sentiments of many of the chiefs who were at Sinkat, and the anniversary of the day is kept as a public holiday throughout the Sudan.

The Sudanese understand personal rule, and King George, by going to Sinkat, did much to strengthen the bonds between the government and the governed. The Prince of Wales is now in Egypt; it would be a happy circumstance if arrangements could be made for his Royal Highness to visit the Sudan. Such a visit would be fruitful of good. It would strengthen the ties attaching the Sudanese to their rulers, and counteract any tendency to give credence to the lying representations of the Turco-Germans that the British contemplate interference with their religion and their freedom.

The Arab Irregular.

Apropos of the story regarding Arab irregulars which was told by "Corsair" in a recent number of this paper, the following extracts from an article contributed by "Eye-Witness" to that interesting paper, the *Mussalman* in regard to these forces will be of interest. The contributor, who writes from Sheikh Saad in January, begins:—

The mobility of the Arab cavalry, who ride light and are unsparing of their horses, is something outside experience. On approaching a Turkish position to reconnoitre, our scouts will often see a horde of Arabs emerge from the dark masses and spreak in a fanlike movement over the whole horizon. These irregulars are eternally sweeping about for no apparent reason, unless it be bravado or the instinct of the kite. Drop a shell in front of them and they will swerve like a flight of teal, make a wide detour at full gallop and appear on the other flank. The atmosphere is most deceptive, and in the haze or mirage it is difficult to tell if the enemy are on horseback or on foot, or to make any estimate of their numbers. Everything is magnified.

He shows the advantages which these raiders secure from the changing light, and continues:—

The Arabs fire from the saddle for choice and employ no dismounting tactics. Each man holds his own horse and stands or kneels when firing. Their tactics are always to surround a smaller force, shoot the horses, and close in; or to lead our cavalry on to an infantry ambuscade. They fear ambuscades themselves, and are chary of following us up. They are naturally more formidable in a retirement, when they wait until our cavalry are mounting and get in their fire before they take up another position. They will only attack small bodies when the odds are five or six to one. They have cut up a patrol or two, but have never got in on a troop or squadron, much less on a regiment, and are not encouraged by their superior numbers, which are, indeed, discounted by our guns. The skirmish at Barjidiyeh wood, near Shaiba, is, I think, the only occasion on which they have charged. They believed they had taken us in an ambuscade and at a disadvantage in the deep mud. We had 450 cavalry with two sections of horse artillery and were vastly outnumbered. We had no time to close in the ranks and crumple them up, but wheeled on to them in extended order. We were interlocked. For a minute it was sword and lance. Then they gave. As they retired they came under our infantry fire, which did bloody execution. It was the best fight they have put up.

The point of "Corsair's" story lay in the easy divergence of the Arab's warlike attentions from one side to another. "Eye-Witness," in concluding his article, says:—

He is not out for casualties, but loot. He follows no cause, though it is natural that the accident of a common creed should count a little in his wavering predilections. For the Turk he has no love, and there is hardly a tribe in Mesopotamia which has not been in a state of rebellion against him. In his own inter-tribal affairs honour, or the appetite for blood, is very easily satisfied. Two or three dead or wounded, and the survivors separate to fight again. These holocausts of ours art not to their liking. . . As an ally the Arab is a very fluctuating quantity. A sheikh and his tribe will join the Turks, become discontented in a week, through shortness of rations or some other passing cause, bring his complaint in the night, and be off in the

Digitized by Google

morning. Then another sheikh will come in. It is difficult to know sometimes whom we have against us.

Russia and Turkey.

Under the heading of "Our Brightening Hopes of Victory," the *Nation* (March 25) takes as its text the Battle of Verdun, and, continuing with an examination of the military situation on the various fronts, shows that the prospects of the Allies were never brighter than they are to-day. After detailing the achievements of the Russian armies against Turkey, the *Nation* says:—

Surely if Russian statesmanship were as sure as her strategy Turkey might be written off the list of our enemies, and such an achievement would at once set free the large army of Egypt, and would almost certainly drive Roumania to our side, even if it did not also induce Bulgaria to discover the bankruptcy of the concern with which she has placed her investments. There has been much poor statesmanship on the part of the Allies. But we ought to look now for a little practical intuition, which would almost certainly bring victory within sight.

Salonika stands between these far removed spheres. It is difficult to see what purpose the forces there serve, except to spend Bulgaria's money. With Austria installed in northern Albania, any advance from Salonika is threatened with a flank attack such as we threaten against Germany's communications with Turkey. If Italy could deal with the threat from northern Albania, there might still be some hope of an offensive from Salonika. Certainly every small front upon which the Allies advance, provided they advance together, adds to the general crippling of the enemy.

Turkey and Peace.

The *Daily Graphic* (March 25), in the course of a leading article on Turkey and the rumours which are still current that she is putting forward tentative proposals for peace, says:—

But whatever happens Turkey cannot win. An Austro-German victory would inevitably mean the complete destruction of Turkish independence. Germany is not fighting to defend the liberties of Islam; she is fighting to create an Empire for herself that will stretch from the North Sea to the Persian Gulf. No terms of peace that the Entente Powers are likely to propose will involve such a complete humiliation for Turkey as a German victory must involve. In this country it is certain that there will be every desire to mitigate for Turkey the consequences of her own blunder. In the fierce fighting in Gallipoli and Mesopotamia our soldiers have learnt to respect the Turk. He is a bad ruler and a bad organiser, and his record is stained with hideous atrocities. But in fighting he displays the instincts of a gentleman and a better understanding of the Christian rules of conduct than the nominal Christians with whom he is allied.

Articles to Note.

"Ægean Days.—I.," by R. G. Burton, and "Communications in Asia Minor," by H. Charles Woods (illustrated), in the *Field* (March 25).

"Frontier of Egypt," in the *Daily Telegraph* (March 24).

"A Separate Peace with Turkey," letter by Jean Longuet (Member of the Chamber of Deputies), in the *Nation* (March 9).

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

CONTRACTORS TO GOVERNMENT

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.

Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.

Tanners and Curriers, Leather Goods Manufacturers.

Saddlery and Harness of every description. Travelling Requisites, Bags, Trunks, &c.

CONTRACTORS TO GOVERNMENT.

New Egerton Woollen Mills Co., Ltd.
DHARIWAL, PUNJAB, INDIA.

Sole Manufacturers of the Famous . .

Dhariwal
Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c.. &c.

CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Our Cairo Correspondent has cabled to us to the effect that the Egyptian Budget was approved by the Ministers on Friday last. A summary account of the Budget figures (estimated revenue £E16,530,000 and expenditure £E16,630,000) appeared in last week's issue of THE NEAR EAST.

***

An interesting suggestion was made at Tuesday's meeting of the shareholders of the Ottoman Railway from Smyrna to Aidin, a full report of which is published elsewhere. Mr. Dyson Weston, seconding the vote of thanks to the directors, suggested that "if the Baghdad Railway goes a-begging the company should endeavour to get it instead of receiving an indemnity in cash." I am pleased to see that the chairman promised to bear the suggestion carefully in mind. It is full of possibilities of a vast nature, but I do not think that the time has yet arrived to discuss them at any length. Still, they must not be lost sight of.

***

Telegrams from Persia announce, says Reuter, that in consequence of the improved condition of the country the Imperial Bank of Persia has re-opened its branches at Hamadan, Sultanabad, and Kermanshah, which had to be closed in consequence of the situation occasioned by the German propaganda. Advices received from other quarters show that the position of affairs in Teheran has greatly improved. The Ahwaz-Ispahan road has been reopened for European traffic.

***

I read that one of the Greek Vice-Consuls at Alexandria has been despatched on a mission to Abyssinia. The object of his journey is stated to be to consider what steps should be taken with a view to establishing Greek Consulates in that country, which has a considerable Greek population. From information obtained in the Greek colony in London it would seem that this desire on the part of the Hellenes in Abyssinia to overrun the kingdom with their Consuls is purely sentimental, without political bias of any kind or description. It is to be hoped that this is so.

***

The *Sudan Times* of Wednesday, March 1, publishes a "London official summary of news for the week ending February 26." After giving a succinct review of the war news, this "official" summary proceeds as follows:—"Interesting signs England shaken free trade position illustrated by letter of Lord Cromer to *Spectator* praising protectionist utterance and vote of Manchester Chamber of Commerce to reconsider question." I am pleased to see that our officialdom has taken two good resolutions, the first being to issue official periodical summaries of news, and the second being the recognition by Government circles of "interesting signs" that England is dropping her Free Trade fallacies. Those of us who have always upheld that the introduction of a preferential tariff is vital to British economic interests will welcome this new departure. It is an interesting sign of the times.

***

The same official summary gives such a promising picture of Egypt that it is to be regretted it was not largely circulated in this country as well as in Egypt, where the news it contained could hardly have come as a revelation. The message in question says:—"War-time business in Egypt fully compensates for losses sustained by native merchants in earlier crisis. Flour and grain merchants reaping rich harvests out of Army needs, and milk dealers doing well, while tobacco merchants have done such good business that many are forced to close shops pending renewal of stock."

***

Our Cairo Correspondent refers in highly favourable terms to the appointment of the "Commission on Trade and Industry," the object of which is "to examine the extent to which the industries and commerce of Egypt have been affected by the war, and to propose measures with the object of opening new markets for Egyptian products and of replacing articles formerly obtained from enemy countries by articles produced in Egypt or imported from non-enemy countries." He considers that the Government has been very well advised in its action, and continues by saying that after the war "both Germany and Austria will certainly make every effort to regain their trade, but the tariff which, it is understood, will be set up against them by the Entente, and which, it is hoped, will be also adopted in Egypt, should effectively stop all such attempts." Here we have another inkling of that great change in our fiscal policy which is being so openly advocated throughout our Empire that the Government can no longer pretend to be deaf to the insistent demand. That Egypt will be included in the tariff when (or if) it is introduced seems to me to be a foregone conclusion; otherwise the enemy will recapture its trade and continue its nefarious intrigues in the country where neither are wanted and can only thrive to our great disadvantage.

***

Mail news to hand from Bucharest this week is dated March 4, and therefore is unable to corroborate Reuter's cabled message of March 6 to the effect that a definite agreement had been signed between the Roumanian Central Export Commission and the Austro-German Syndicate for the sale to the latter of 1,000,000 tons of cereals. Our Correspondent, writing on March 4, said that the agreement had not been signed at the time of writing, both parties continuing to haggle over the matter of payment, particularly the rate of exchange. The German representatives stipulated that the rate of exchange should be 1.22 lei per mark, whereas the National Bank of Roumania would not entertain anything above 1.20 lei (the normal rate is 1.235). Reuter stated in the message alluded to above that the following rate was agreed to:—1.17 lei for paper and 1.239 lei for gold mark. Further, our Correspondent tells us that, continuing the previous reports, the subject of the deal consists exclusively of maize forming part of the harvest of 1914, and amounting to a total of 100,000 wagons, 35,000 of which are in the hands of grain merchants, the remainder in the possession of the agriculturists. This maize, it will be remembered, might easily—so easily—have been bought by the Allies if we had only realised what we were about at the time. Instead of which, they have since passed into the hands of the enemy to feed his soldiers (see THE NEAR EAST of March 17).

***

According to the *Morning Post's* Budapest correspondent, the German and Austrian Governments have been buying up the remaining Roumanian wheat and other cereal stocks, through the intermediary of a concern called the Berlin Zentral Einkaufs Gesellschaft. This leads me to suspect that Vienna, under Berlin orders, is paying twice for her grain—once to the Roumanian seller and once to the Berlin intermediary! Not surprising, is it, that Berlin should take exceeding advantage of her Hapsburg vassal?

***

I see that the Cyprus Motor Company has decided to run cars to Kyrenia, which is only 16 miles distant from the capital, and is a starting point for picturesque expeditions, and likewise a sea-bathing resort of considerable merit. The company is to be congratulated on its initiative, which ought to prove lucrative considering that many residents in Egypt will be unable to come to England this summer, and will, therefore, turn their steps gladly in the direction of Cyprus. In the circumstances the Cyprus summer season is likely to be an attractive one, and Kyrenia, linked up with the capital by motor-car, ought to become quite a fashionable centre.

***

A Continental Exchange has telegraphed from Cairo that Cardiff and Newcastle coal are now £7 11s. and £7 9s. a ton respectively. There are scarcely any arrivals. According to the same message, quoted by *Page's Weekly*, the Egyptian Government has requested that some of the German ships recently seized by the Portuguese Government should be permitted to bring coal to Egypt. No answer has yet been received to this request, but I trust that if the demand has been made it will be granted. It is essential for irrigation as well as for other purposes that Egypt should be given as plentiful a supply of coal as is materially possible.

***

Schenkers, Ltd., a new company which has been registered with a capital of £1,000 to carry on business as merchants, carriers, forwarding agents, etc., is, I have been informed, a British company, quite independent of the great Continental firm of forwarding agents of the same name. Both directors and capital are, I understand, British. At present, naturally, the undertaking is quiescent, and the capital seems to me to be purely nominal. Doubtless it is intended to increase it at some later date, but, I am assured, the concern will continue to be purely and solely British.

***

Mot de fin. The following story, which I take verbatim from *Reynolds' Weekly Newspaper*—which paper must bear the responsibility for its accuracy—will no doubt interest many of my readers. According to the yarn, a supply officer started from Alexandria in charge of a column of 454 horses and 16 mules. When he arrived at his destination he had 452 horses and 18 mules. It is said that the General Staff has since been trying to find out how the two horses were changed into mules.

Sudan Trade During 1915.

Satisfactory Development.

(From Our Own Correspondent.)

Cairo, March 14.

The Sudan statistics for the last quarter of 1915, which are just available, reveal a most satisfactory state of affairs in so far as the development of the foreign trade of that country since the outbreak of war is concerned. Imports during the year amounted to £E1,704,250 and exports to £E1,577,991, as against £E1,891,494 and £E1,020,260 respectively a year previously. That is to say, the total turnover has improved by over 10 per cent., imports falling off by £E187,244, but exports improving by £E557,731. It is to be noted in this connection that, taking into account the re-exports, which in 1915 amounted to £E130,315, the balance of trade has swung over in favour of the Sudan—the first time that such a feature has been recorded since the re-conquest.

Imports.

Imports, of course, fell off owing to the dearth of shipping, but principally owing to the fact that while the dura crop, which is the staple food of the population, was a bumper one in 1915 it was hopelessly inadequate in 1914 consequent upon the failure of the rains, and necessitated the importation of dura to the value of over £E214,000. A further reason for the falling off lies in the fact that the Government had reduced its works to the minimum, as is seen by the detailed figures; whilst public imports fell off by 3 per cent. those made on behalf of the Government decreased by over 30 per cent. The chief decreases were cereals by £E277,404 to £E145,044, refined sugar by £E12,820 to £E226,256, spirits by 30 per cent., iron and steel-work by 50 per cent., and stone and glass ware by 60 per cent. On the other hand, textiles increased by £E177,617 to £E604,412 (the chief items in this category being cotton fabrics and sacks) and coal by £E4,808, though, of course, as in the case of Egypt, the quantity of the latter was considerably less.

Exports.

It is, however, with regard to the exports that the greatest interest is always evinced, for the future of the Sudan depends entirely on its being able to develop its agricultural resources and find suitable markets for its products abroad. The year 1915 will certainly be a landmark in the country's trade annals in this respect, but a comparison with 1914 will not convey a true impression of the progress made, seeing that the war broke out during its course and its figures were necessarily affected by the consequent paralysis which seized upon the world's trade and characterised commerce generally for some little time afterwards. Far better is it to compare the results of the past year with those of more normal ones, and the following table will do more than any amount of words to give an accurate idea of the position of the Sudan one year after the outbreak of hostilities and of the real progress made during that period.

Year.	Exports. £E.
1906	264,096
1907	449,329
1908	515,938
1909	673,902
1910	977,621
1911	1,376,958
1912	1,373,119
1913	1,185,186
1914	1,020,260
1915	1,577,991

From the foregoing figures we see that compared with the last normal year prior to the outbreak of hostilities, *i.e.*, 1913, the export trade of the Sudan has improved by £E392,805, or 33 per cent., and that even compared with the best year previously recorded, *i.e.*, 1911, it has increased by £E201,033, or about 15 per cent. Whilst this speaks volumes for the ability with which those responsible for the economic development of the country have carried out their task of fostering local industry and of finding markets for the local products abroad despite the difficulties of the shipping situation and the dislocation of credit, it at the same time affords ground for the most optimistic hopes as to the future of the Sudan.

The following table will indicate the direction in which the export trade of the Sudan has been developed during the past five years:—

	1911. £E.	1913. £E.	1915. £E.
Cattle	129,375	74,664	170,400
Sheep and goats	86,606	97,059	89,526
Untanned hides	7,347	22,821	92,315
Untanned skins	31,630	31,906	30,300
Ivory	73,932	113,236	48,133
Durra	86,657	21,716	207,156
Dukhan	—	89	68,016
Cotton seed	31,583	21,097	33,376
Sesame	71,563	104,939	85,142
Dates	42,754	31,872	24,167
Butter	8,294	10,896	16,533
Dom and ground nuts	29,216	17,180	9,853
Gum	435,622	371,528	313,081
Sesame oil	461	688	5,753
Charcoal	355	1,286	13,614
Tinctorial materials	125	1,883	7,338
Senna	11,073	9,647	23,499
Ginned cotton	195,272	152,110	236,793
Gold	26,719	43,802	65,553

From this table it appears that the only appreciable diminutions have been in gum, dom, and ground nuts, ivory and dates, whilst an expansion is evident in practically every other category, especially in livestock, untanned hides, cereals, cotton, gold and chemical and tinctorial products. In this connection, it is interesting to note that the Sudan has benefited from the general rise in prices on the world's markets, for, even where the quantity of a commodity exported has fallen off, in almost every case the proportionate value has increased. As a matter of fact there is every reason to believe that the total exports would have been considerably larger if there had not at the outset been the great difficulty of finding bottoms. A reference to this great problem, and to the manner in which it had been overcome, was recently made in these columns, and the fact that over 50 per cent. of the export trade of the Sudan is done oversea, and that, nevertheless, an expansion of 33 per cent. has been recorded since 1913 is, I think, sufficient proof that the tribute then paid to the responsible authorities was not exaggerated.

The Sudan's Customers.

Turning now to the countries with which the Sudan has traded during the past year, we find that Egypt is naturally her best customer, as regards both exports and imports, and that Great Britain comes next, only a good way behind. Imports from Egypt rose from £E813,422 to £E925,611, and exports to her from £E404,709 to £E653,106. It is clear that the war has brought these two neighbours into closer commercial touch with one another, to their mutual advantage. Certainly Egypt has benefited by the stocks of livestock and cereals which the Sudan had available just at the time when she was most in need of supplies. Of the former Egypt took 92 per cent, and of the latter 32 per cent.; whilst 75 per cent. of the gold exported went to her. Great Britain took the balance of the gold, 40 per cent. of the gum, and 60 per cent. of the cotton—practically all the rest of the textile went to Egypt—whilst half the coal and 40 per cent. of the manufactured textiles came from England. Since, however, half of the textile imports of the Sudan come from Egypt, it is permissible to deduce that Great Britain's real share of this branch of trade is considerably more than the 40 per cent. recorded against her. Incidentally, it may be pointed out that the reason why so much gold and cotton went to Egypt was that shipping facilities at Port Sudan were at the time very bad, and that it was easier to forward by the old Nile route. Consequently, the real exports to Great Britain were larger than recorded, and those to Egypt correspondingly smaller, for most of those shipments were en route to British ports. Exports to Malta increased threefold: this is due to the new trade in livestock that has grown up since the war, though it is quite possible that marked falling off will be noticeable after peace is declared, seeing that most of the consignments to the island have been destined to the naval and military forces. Trade with India and Aden fell off considerably, the imports suffering most being cereals and textiles. On the other hand, commercial intercourse with Eritrea has expanded, imports (coffee and textiles) having increased from £E5,289 to £E12,329, and exports (hides and cereals) from £E12,105 to £E137,541.

Germany and Austria, as might be expected, do not figure in the statistics, and Belgium, for obvious reasons, has also dropped out. German and Austrian imports into the Sudan in 1914 amounted to £E23,855 and £E44,846, respectively—refined sugar, which has to a great extent now been replaced by Egyptian sugar, machinery, beer, glassware, and crockery. (The advance which German and Austrian trade was making in the Sudan may be gauged from the fact that the imports in 1913 were £E20,166 and £E35,196, respectively, and that in 1914 the trade was confined to the first eight months of the year.) Exports to those countries came to £E60,227 and £E12,386, respectively, and consisted principally of untanned hides and skins, sesame, and gum.

Transit Trade.

The Sudan, from its geographical position, is, like Egypt, called upon to serve as a transit house for the countries adjacent to it. It acts in this respect for the Congo and for Abyssinia, with the latter of which it in addition carries on quite a respectable ordinary trade in coffee. It is interesting to note that whereas in 1914 goods to the value of £E56,790 passed in transit through the Sudan to and from those countries, last year the total had risen to £E82,973, which is far more than has ever been recorded. Since this transit trade means increased earnings to the railways and steamers, and extra profit to the middle-men and all those who have in any capacity to handle the traffic, every expansion of this branch of commerce must be for the general good of the country, and its progress is consequently interesting to watch.

DAIRA OF PRINCE HILMY PASHA.

A supplement to the *Official Journal of* March 9 contains the following:—

"Notice is hereby given that the General Officer Commanding-in-Chief His Britannic Majesty's Forces in Egypt has appointed Mr. F. H. Russell to be Controller of the Daira of Prince Ibrahim Pasha Hilmy, with instructions to assure himself that no payment of any kind is, during the continuance of the war, made out of the revenues or other receipts of the said Daira for the benefit of any person resident in enemy territory, or otherwise in contravention of any proclamation issued or to be issued by the General Officer Commanding-in-Chief. His Britannic Majesty's Forces in Egypt during the war."

AGENCY!

THE IDEAL FILM RENTING CO., LTD., who specialise in the production of the greatest British plays in association with the greatest British players, desire first-class REPRESENTATION in the NEAR EAST.

Negotiations will be conducted only with substantial business men with capital. Bank references required. Where advisable, arrangements will be made for the establishment of a general renting business on the same lines as that conducted by The Ideal F.R. Co., Ltd., in the British Isles, adapted to local requirements and conditions. Address all communications to Mr. H. Rowson, Managing Director, Ideal Film Renting Co., Ltd., 76-78, Wardour Street, London. Bankers: London County and Westminster Bank, Caxton House, London.

Trade Notes.

Egypt.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications, with forms of tender, etc., may be obtained, at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo. Date, April 22.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Director of the Police School, Abbassia, for the supply of clothing and accoutrements required for the officer cadets. Date, April 15.

Messrs. J. Compton and Sons and Mr. Walter W. Davies were recently among the successful tenderers to the Egyptian Government (Ports and Lighthouses Administration) for the supply of uniforms, etc.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on May 10, 1916, for the supply of stores and material required by the above Department during the current year. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, the Agent, Sudan Government Railways, Alexandria, or to Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W.

By a proclamation published in the Sudan *Government Gazette* of February 22, the Governor-General prohibits the export from the Sudan, except to Egypt or to the United Kingdom of Great Britain and Ireland and except with the permission of an officer appointed in that behalf, of senna (cassia acutifolia) or any other species of senna; henbane (hyoscyamus muticus); and datura sthamonium or any other species of datura.

The following notice to exporters has been issued by the Sudan Government:—

The particular attention of all manufacturers and traders concerned is directed to the need for scrupulous care in the transaction of their business abroad, in view of the fact that some traders in neutral countries are making themselves agents for the supply of goods to and from enemy countries. Especial care should be taken in opening new accounts in neutral countries, and in relation to any orders or inquiries of an abnormal character. In any case of doubt as to particular firms abroad, business should be suspended pending reference to the Office of the Director, Commercial Intelligence Branch, Central Economic Board, Khartoum.

The proclamations relating to the trading with the enemy cover indirect trading with the enemy through neutral agents, and carelessness in transacting neutral business may involve traders in the severe penalties attaching to trading with the enemy.

Wholesale, of Hanson's, London, England.

ENEMY FIRMS IN EGYPT.

The Mixed Court of Appeal, Alexandria, has delivered judgment in a case of great public interest.

Messrs. Gattiker and Fenstein, Swiss citizens, attorneys of the Cairo branch of the firm of Siemens Schuckert, whose head office is in Vienna, brought an action against Mr. Alexandre Abaskaroun in respect of a bill of exchange for electric remittances amounting to £E418. The bill, dated July 30, 1913, to the branch's order, matured on March, 1915, and was duly protested. The Cairo Court refused the claim in respect of the bill, as the society's agent, Mr. Weissman, was in Malta, to where he had been sent by the military authorities. The judgment of the Appeal Court points out that the branch of a firm established in an enemy country is not allowed to continue its operations in Egypt unless its manager is residing there. Mr. Weissman was, therefore, no longer entitled after he had been expelled from Egypt to appoint a successor as the head of a branch of such doubtful status. The Court upheld the contention of the firm that since a branch may be considered as having a distinct existence from the head office, it cannot be confused with the branch's manager. As to the objection with regard to the power of attorney being unduly given, the Appeal Court declared that it did not hold good in face of the facts that the Italian Consulate then charged with the protection of Austrian subjects had acknowledged the validity of such a transfer, and that the branch in question was managed by the appellants since November, 1914, with the agreement of the military authorities. The case was therefore sent to the Cairo Mixed Court for a fresh hearing.

KARACHI-BUSHIRE TRADE.

It is probable that the trade between Karachi and Bushire will be largely increased in the future, says the U. S. Consul at Karachi. Bushire has a population of 18,000 to 20,000, chiefly Persians and Arabs, although the Persian population is diminishing. The inhabitants are mostly merchants, brokers, small shopkeepers, and coolie labourers. There are forty European residents.

The importance of Bushire, commercially, lies in the fact that it is the sea terminus of the great caravan route through the middle of Persia via Shiraz and Isfahan, to Teheran, the capital of Persia. Karachi merchants state that large quantities of cotton piece goods are bought here and shipped to Bushire for the caravan trade. Frequent steamship sailings between Karachi and Bushire facilitate this trade.

The prosperity of the port depends largely upon the prosperity of up-country districts. Recent disturbances have curtailed the caravan shipments, and the Karachi-Bushire trade has suffered accordingly.

The Kazarun route from Bushire to Shiraz was open in 1913-14. Traffic was stopped for two short periods, but it was not found necessary to close the trail and send goods by another route, as has been necessary several times in late years. Last February British firms in Kazarun suffered losses of about £5,000. Owing to these disturbances, and also partly to a condition of stagnation in North-West India, the volume of Bushire trade for 1913-14 decreased by about £126,000, compared with the previous year. The drop in cotton piece goods alone was 38 per cent. This drop was felt rather severely by several Karachi exporters.

PERSIAN ENEMY FIRMS.

The following list is published of firms in Persia with whom trading is prohibited, except where a general and special licence has been granted. Application for a licence should be made to the Controller, Foreign Trade Department, Lancaster House, St. James, S.W.

SERBIAN DYES.

Lecturing in Edinburgh last week, Mr. Oliver Bainbridge referred to the dye question and to the belief prevalent that only Germany could supply dyes, and said we did not require to depend on Germany in this matter. In the town of Pirot, in Serbia, they had long had the most beautiful dyes, which chemists had pronounced as equal to, and even better than, the German dyes. The lecturer had been trying to interest chambers of commerce to take this matter up. After the war it would be a gracious thing for us to enter into business relations with the Serbians for dyes.

TRADE WITH RUSSIA.—Firm of Produce Importers and Exporters, desirous of opening branch in Odessa, would like to hear from firms desiring REPRESENTATION, who would be willing to co-operate and share expenses of common office.—Reply to Box M., Publicity, Ltd., 28, Mark Lane, E.C.

Engineering Notes.

Wireless Telegraphy.

Owing to the increased perils with which shipping is surrounded at the present time, it is natural that shipowners, and especially neutrals, should be anxious to have their ships equipped with wireless telegraphy. In many cases, however, want of space on board the ship, consideration of expenses, or other technical reasons, are embarrassing questions which delay or prevent an equipment. In such cases expert advice should be asked for by shipowners. It may be suggested here, however, that a suitable system is the quenched spark system, which possesses many advantages. With the quenched spark system of wireless telegraphy (which is known abroad as the Telefunken system), no sound-proof cabin is necessary—an important point to be considered—because until recently shipowners were obliged to provide a specially-made sound-insulated cabinet to contain the spark gap, the noise of which is considerable and objectionable. With the quenched spark installations the working, even with large stations, is practically noiseless, and a shipowner fitting up an installation upon this system has no additional expense necessitated in building a special cabin. Any suitably-situated cabin is able to accommodate the apparatus. Another important advantage is that with all coupled transmitters, such as are now universally used, it is necessary to take into account the existence of not one wave but two, one being due to the electrical energy oscillating in the autennæ, and one to that in the excitation circuit. Unless the oscillation excitation circuit can be rapidly quenched, as in the quenched spark installation, the component wave obtained from the aerial and excitation circuit waves is irregular, and has no musical tone. With the quenched spark installation, however, after a few oscillations the vibration of the excitation circuit is quenched, and all the resulting energy is radiated by the aerial in the form of practically an undamped wave. The advantage of this is that double the energy is radiated by a quenched spark as compared to an open spark. Moreover, with these quenched spark radiators the electrical oscillations, on conversation to sound waves in the receiving station, give rise to a musical note, the pitch of which can be varied. This note being musical, it can be heard over natural electric discharges, or "atmospherics," even when these are as much as ten to fifteen times as intense as the incoming signs. It may be mentioned here that many British vessels are equipped with this system of wireless telegraphy.

Device for Finding Internal Defects in Iron and Steel.

An electrical device has been invented by which, it is said, any internal defects that may exist in iron or steel castings and forgings, rails, ingots, and the like, can be found and located. The value of such an instrument to engineer-manufacturers, Government engineer inspectors, superintendents of iron structures, architects and others, is obvious. The device consists of two small horseshoe magnets, each magnet having a primary winding, which is energised from the secondary coil of a transformer, the primary of which is fed by an alternating current generator. The two primary windings of the magnets are connected with the terminals of two electro-magnets of a sound-producing device or buzzer. The two buzzer armatures are tuned so that, in harmony with similar currents in the windings of the magnets, they will produce sounds of substantially the same character. Adjacent to each buzzer armature is a transmitter similar to that of an ordinary telephone. A small magnetic current is induced through the product to be tested, the magnets being moved along its surface. As long as the metal adjacent to each magnet is of uniform character and density, approxi-

mately the same number of magnetic lines of force will pass between the two poles of each magnet, and sounds of corresponding character will be produced at the two sound-producing instruments. If there is a defect, such as a blow-hole or pipe, the magnetic field of the magnet will be weakened to such an extent that less current will be induced into secondary winding, thereby causing the sound-producing instrument connected with this winding to produce a sound of different character from that of the other instrument, thus enabling the operator to locate the defect. The inventor is an American of Pittsburg, and, it is reported, numerous tests of the apparatus have been made with successful results.

Sudan Notes.

During December and January, according to the *Monthly Report* issued by the Central Economic Board of the Sudan Government, the following work on roads and communications was competed:—Bahr el Ghazal Province.—December—The bridge at Meshra was rebuilt and made ready for wheeled traffic. The ferry over the Raga River on the Kaboluza road was completed. The Bore ferry at Said Buldas was repaired. Nuba Mount Province.—Repairs and bridging on the Talodi-Kadugli section were put in hand with local labour. Work is being completed on the El Eddaya well (Dilling District). The Army transport carts were working on the Kadugli-Talodi road, which has been put in a fairly good state of repair.

SERBIA'S MINERAL WEALTH.

Serbia is especially rich in copper, but before the recent Austro-German invasion only two mining companies were actually working. One of these was the French Compagnie des Mines de Bor. The company has extensive works, and since 1906 large quantities of copper have been produced. The refined metal averaged 99.62 per cent. of copper, and yielded from 24 to 30 gr. of gold and from 96 to 120 gr. of silver per ton. The output rose from 1,220 tons in the first year of working to 7,600 tons in the year 1912-13. It is stated that a profit amounting to three-fifths of the share capital has been made annually in the last two years. The company's principal mine is that of Cuka-Dulkan. A railway from the mines to the Danube port of Radujevatz was planned when the war broke out. The works and plant were badly wrecked by the Serbians in their retreat. Bor owes its rise to the excellent quality of its ores, which have a very large copper content. The ores separated by hand contain 6 per cent. of copper, and the deposits are very similar to those of Butte in Montana.

The second important Serbian copper mine is that of Majdanpek, the history of which is closely interwoven with the political history of Serbia. After the decay of mediæval mining in Serbia the industry had a brief period of revival during the Austrian occupation from 1719 to 1738, and in 1848 Kara George, Prince of Serbia, engaged the services of an Austrian mining engineer, who reopened the mines. Since then they have been worked spasmodically up to 1903, the output being unimportant, but in that year they were reopened on modern lines, and in 1904 the copper output of Serbia, which in 1901 amounted to fifty-nine tons, increased to 1,164 tons. The mines of Majdanpek, however, are of no great value so far as their copper yield is concerned. They are chiefly noted for their iron ore and pyrites. The content of copper is small: seldom more than 1.5 per cent.

In West Serbia, in the Polye district, and near Rebelj and Wisch, there are also copper-ore deposits. In 1903 3,820 tons of copper ore were mined at Wisch, out of which 151 tons of black copper were produced. The mine of Rebelj is at present owned by a Frenchman named Schweitzer. There are many other copper mines in the country which have not yet reached the producing stage.

Antimony is found in various parts of Serbia, notably in the Podrinje Hills in the west, near Kostajnik, as well as in the mines of Zajaca, which have been exploited by a French company since 1898. The antimony content of the ore is 54 to 63 per cent.

In 1910 the output of antimony was 326 tons, of a value of 1,888,000 fr.—*Ironmonger.*

OIL FIELDS OF HUNGARY.

The rich potential oil fields of Transylvania, Hungary, south of the Carpathian Mountains, have been promised to the Deutsche Bank group to develop with German capital. This was not done without patriotic protests in the Hungarian Parliament; and across the frontier Roumania is watching the progress of events with great hopes that, when the war terminates in favour of the Quadruple Entente, part of that rich territory will be transferred to her. The *Morning Post* correspondent, writing from Budapest, the Hungarian capital, thus describes matters:—

"Transylvania has again been placed in the foreground of events by a heated debate in Parliament lasting for three days. This time the subject of discussion was the Transylvanian oil fields, a natural treasure, quite unexploited as yet, of incalculable value. These oil springs were discovered three years ago, in two different places in Transylvania, on a territory of some twenty square kilometres, gushing up from the earth in a quantity enough to supply the whole of Central Europe with not only lighting gas, but also with gas for industrial purposes.

"This unexploited wealth the Germans want to lay hands on as a part of their policy to exploit Hungary's economic resources as much as possible, and the Deutsche Bank asked the Hungarian Government to hand over the oil fields, promising to supply £1,000,000 for the necessary works, and also suggesting that Hungarian banking houses should supply £500,000 for the same object.

"This affair being another instance of those favours which are sought from Count Tisza by his master, the German Emperor, the former, of course, was only too anxious to complete the business as soon as possible, and brought the matter before the House at this session. The Independence Party raised the usual opposition to the Germanizing schemes of the Premier, and some vehement speeches were delivered against the idea of handing over Hungarian treasures of unlimited greatness and allowing the Germans to take possession of the Transylvanian oil fields, by which Hungarians hoped to build up a great industry.

"The Independence Party urged that the oil fields should be exploited and organized by the State in order that they should serve as a national source of wealth, and thus replace the dear coal mostly imported from Germany.

"This will now fall to the Germans, who will take care that the gas will not be any cheaper than coal, so as not to compete with their own coal industry.

"The *Nepszava* quotes the Premier as saying that the transaction is necessary because Hungary has not enough money to develop the oil fields, and that German capital was necessary. The journal indignantly remarks that if Hungary has thousands of millions of kronen for the carrying on of the war, a couple of millions ought to be found to make use of the greatest natural riches ever offered to a nation by good fortune, and, this being the case, the explanations of the Premier cannot stand, and are only destined to veil his insane partiality for the Germans, and his determination to hand over to them all that Hungary possesses.

"In addition to the oil fields, interest in Transylvania is also centred on the political situation created owing to the rapid development of the Roumanian Irredentists, and the growing agitation in Roumania in favour of intervention, no doubt greatly augmented by the question of the great natural treasures discussed so vehemently in Parliament, which discussions the Roumanian Press have reported extensively. The two Transylvanian exiles, M. Octavian Goga and M. Pater Lucaciu (the latter still a member of the Hungarian Parliament), are carrying on a vigorous agitation in Roumania, which is giving rise to considerable anxiety in Hungary."

With reference to a previous notice, relative to the lighter service at Casablanca, it is notified that a copy of the Official Tariff (in French) of the charges established under the new system, which came into force on March 1, may be consulted by United Kingdom firms interested in the Commercial Intelligence Branch.

E.S.R. IN 1915.

Fall in Traffic Receipts.

Last year's traffic returns of the Egyptian State Railways show a decrease as compared with previous years. Traffic of all kinds fell away to a considerable extent, the total traffic receipts amounting to only £E3,138,555, whereas in 1913 the total was £E3,819,492, in 1912 £E3,916,211, in 1911 £E3,691,179, and in 1910 £E3,400,066.

The total number of passengers carried was 23,424,000, as compared with 28,574,000 in the preceding year, the receipts from that source amounting to £E1,280,529, as compared with £E1,562,560. The total receipts from goods and live stock traffic were £E1,597,009, as compared with £E1,949,711.

Cotton consignments sent over the railways totalled 429,000 tons, the total for the four preceding years being 501,000, 633,000, 477,000, and 472,000 tons respectively. Every other chief item of merchandise similarly declined with the exception of cereals, the shipments of which amounted to 341,000 tons, as against 336,000 in 1913.

Expenditure was reduced from the total of the preceding year by £E120,000 odd, that is to say, from £E2,190,308 to £E2,070,077, but calculated on the basis of proportion to receipts, they were higher than in 1914 and in the three years previous to that, working out at £E66 for every £E100 of receipts. In 1913 the figure was £E57, in 1912 £E59, in 1911 £E55, and in 1910 £E58. The expenses per train kilometre showed an increase from £E128 in 1913 to £E141.

NEAR EAST MARKETS.

BULGARIAN NOTES.

(From Our Own Correspondent.)

Bucharest, March 10.

According to reports from the Ministry of Agriculture grain sowing continues everywhere, and the surface planted exceeds that of last year. As to the state of the crops, no actual information is to hand, but it does not appear to be too satisfactory. Mobilization has affected the crops in general, in spite of the fact that, as is known from previous wars, the womenkind of Bulgaria can do marvels in the fields when their men folk are away.

Plant Beet!

The Ministry of Agriculture has issued the following notice:—"Peasants, plant beet! The culture of beet is most remunerative. It gives the planter profit in coin, it gives food for cattle, and enriches the soil. Bulgaria cannot import sugar now. She must make it. Therefore, you should plant beet in larger quantities. Peasants, sugar is as necessary for the army as for the population. Plant beet!"

PRODUCE REPORT.

London, March 30.

Currants.

The market is quiet, with only moderate business passing at late rates.

Sultanas.

Only few sales have taken place this past week at unchanged prices, Indian fruit being in fair demand.

Figs.

There has been a better demand, and prices are steadier.

Dates.

The demand continues, with business done at full prices.

Seeds.

Linseed is firmer, with more doing; London-Calcutta, spot, quoted 70s. 6d.; afloat, 70s. 6d.; March-April, sold 70s. to 70s. 3d.; April-May, 69s. 6d.; La Plata-Hull, March-April, 65s. 6d.; April-May, ditto. Cotton-seed nominal to London-Egyptian spot. Hull is quoted £13 per ton. Rapeseed is very dull; Torier, March-April, 65s.

Oils.

Linseed-oil is firmer; spot pipes landed £39, barrels ditto, £40. Rape-oil: Ordinary brown naked nominal; English refined barrels, £55 to £56. Cotton-oil remains firm; crude spot pipes, £43 10s.; refined pale pipes, £48 10s.; and barrels sweet, £52 to £53, as to makes.

MOROCCAN FORESTS.

H.M. Agent and Consul-General at Tangier reports, under date January 15, that at the Council held on December 29 last, M. Boudy, Chef du Service des Eaux et Forêts, gave a résumé of the work of his Department since its institution and explained the system that was being followed for preserving and exploiting the important forests existing in the French Zone, dealing more especially with the extensive cork-oak forests of Mamora, covering more than 500 square miles of ground between Rabat and Mequinez.

In 1913 a thorough examination was made of the Mamora forest area, and in the following year steps were adopted for its protection against wood-cutters, charcoal-burners, and cork and tan gatherers, who were rapidly destroying the trees over large tracts of the country. A number of foresters were brought from France and the management of the whole forest was taken over, the natives who had previously earned their living in the forest being guided and instructed in forestry and employed for this purpose. Broad paths were cleared at intervals through the forest, protecting it against fires, and what was until lately one of the most dangerous districts of the country is now comparatively safe for travellers. It is expected that this forest alone will produce a revenue of some £160,000 within five or six years.

COMPANY REPORTS.

Barramia Mining and Exploration.

The report of the Barramia Mining and Exploration, Limited, states that 5,870 tons of quartz were milled during the year, from which were extracted 4,698 oz. of bar gold, or 3,914,859 standard ounces, of a realised value of £15,230. £306 became payable to the Egyptian Government as royalty upon that amount, leaving £14,924. Sundry receipts, comprising transfer fees, interest on deposit account, etc., brought up the total income to £15,057. The expenditure upon revenue account was £11,510, and the profit resulting £3,546. From 1914 a balance at the credit of profit and loss account on £2,775 was brought forward. On March 25, 1915, a dividend at the rate of 10 per cent. per annum upon the non-cumulative preference shares, amounting to £2,700, less income-tax of £208, or £2,491 net, was paid, and, adding to that the remuneration of £270 due to the directors and managers upon such dividend, £13 remained to the credit of 1915. That, with the profit now shown of £3,546, leaves a disposable balance of £3,559. From such sum have been deducted:—Depreciation of buildings, machinery and plant, furniture, and live stock, £406; income-tax, £571; donation to British Red Cross Fund, £10. In respect of the £2,571 thus available a dividend of 7½ per cent. for the year 1915 on the 10 per cent. non-cumulative preference shares was declared on the 22nd inst., payable on April 5, and £546 is carried forward.

Egyptian Bonded Warehouses Company.

At the recent meeting of the above company, says the *Egyptian Gazette*, Messrs. Percy W. Carver and Robert S. Rolo were elected as directors; Mr. M. S. Wellhoff was also re-elected.

***The report of the Administrative Council for last year shows profits of £E21,156, of which £E1,037 has been set aside for the amortization of real estate, £E2,636 for preference share interest and amortization, and £E1,486 for depreciation, leaving a profit of £E15,996, 5 per cent. of which, £E799, is to be deducted for the Council of Administration. This leaves a net profit of £E15,196, which, together with the amount of £E13,378 brought forward, leaves an amount of £E28,575 to be disposed of. Out of this amount the Council proposes to put aside £E6,000 for the extraordinary reserve fund, raising it to £E10,000, and to pay a dividend of 8 per cent. and carry forward £E14,775. The tonnage entered in the warehouse during the year was 375,268 tons, as against 522,162 in 1914. The decrease, however, was compensated by the retarded redemption of stored goods and by the development of certain other branches of business.

Constantinople Land and Building Company.

The directors report that no accounts have been received from Constantinople for the year 1915, and the profit and loss account for the year only shows the transactions in London. The credit balance for 1915 is £33 4s. 3d., which, added to the balance of £5,673 brought forward from 1914, makes £5,706 4s. 3d. to be carried forward to the credit of next year's account. The net assets in Constantinople are stated in the 1915 balance-sheet at the figures which appeared in the balance-sheet of December 31, 1914. So long as the war with Turkey lasts it will be impossible to render full accounts or pay any dividend on the shares of the company.

New Egyptian Company.

A general meeting of the holders of debentures was held at the registered offices of the company yesterday, when the appointment of Victor Naggiar, of Alexandria, and Joseph Cattani Pasha, of Cairo, as trustees of the trust deed of February 23, 1909, was confirmed in place of Leon Carton de Wiart and Reginald Henriques, deceased.

Orders have been made by the Board of Trade requiring the undermentioned business to be wound up:—The Persian Carpet Company, Limited, of 65-66, Houndsditch, London, E.C. Dealers in rugs and carpets. Controller: A. Dangerfield, 56, Cannon Street, E.C. Date: March 20, 1916.

PUBLIC COMPANIES IN EGYPT.

The Egyptian Ministry of Finance has published the statistics relating to the limited liability companies existing in Egypt at the end of 1913. These companies, without including the Suez Canal Company, numbered 158, of which 102 were Egyptian, 33 English, 16 Belgian, and 7 French.

They represented a total capital of £E113,342,654, divided among them as follows:—

1.—Eleven mortgage banks having a total capital of £E52,607,647. Four of these banks were Egyptian, with a total capital of £E44,704,826; two were English, with a capital of £E3,894,638; two Belgian, with a capital of £E2,445,895; and three French with a capital of £E562,288.

2.—Six banks with a total capital of £E4,583,123, the only English bank among them—the Anglo-Egyptian—having a capital of £E487,500.

3.—Eight financial societies with a total capital of £E1,084,419.

4.—Sixteen rural land companies, total capital £E8,010,465.

5.—Twenty-one building companies, total capital, £E3,401,688.

6.—Sixteen urban and rural land and building companies, total capital £E5,234,990.

7.—Eight public transport companies, total capital £E4,896,203.

8.—Five steamship companies, total capital £E748,147.

9.—Two canal companies, total capital £E14,344,571.

10.—Three water companies, total capital £E1,169,116.

11.—Three irrigation companies, total capital £E462,552.

12.—Eight ginning, pressing, and refining companies, total capital £E4,676,354.

13.—Nine industrial building companies, total capital £E415,661.

14.—Six salt and brewery companies, total capital £E1,396,119.

15.—Fourteen other companies (ice, light and power, cigarettes, telephone, etc.), total capital, £E1,723,316.

16.—Ten commercial companies, total capital £E944,938.

17.—Ten hotel companies, total capital £E1,694,481.

18.—Two mining companies, total capital £E350,786.

19.—Three other companies (including the Cairo Electric Railways and Heliopolis Oasis Company), total capital £E2,598,168.

COMPANY RESULTS, &c.

Agricultural Bank of Egypt.—The thirteenth ordinary meeting will be held at the head office of the bank in Cairo on Thursday, April 20, at 4 p.m.

Greek Government Four Per Cent. Loan of 1910.—The coupons falling due on April 1, 1916, should be presented for payment between the hours of 11 and 2, at the office of Messrs. C. J. Hambro and Son, 70, Old Broad Street, or of Messrs. Emile Erlanger and Co., 8, Crosby Square, E.C., where lists may be obtained. Coupons must be left three clear days for examination.

National Bank of Egypt.—The National Bank of Egypt has declared a dividend of 8s. per share, payable to-day, for the year 1915.

Ottoman Four Per Cent Loan on the Egyptian Tribute.—The half-yearly coupons for interest due April 10 will be paid on or after that date at the banking house of Messrs. Glyn, Mills, Currie, and Co., 67, Lombard Street, E.C.

Suez Canal.—Receipts for the 25th and 26th inst. amounted to 570,000 fr., as compared with 520,000 fr. for the corresponding days last year.

The Board of Agriculture has received the following information from the International Agricultural Institute:—The area sown with winter wheat in Roumania is estimated at 4,862,000 acres, or 1.2 per cent. more than the corresponding area sown last season.

COMPANY MEETINGS.

EASTERN BANK.

The annual meeting of the shareholders of the Eastern Bank, Limited, was held yesterday at the offices of the bank, the chairman of the board of directors, Lord Balfour of Burleigh, presiding. After the meeting had been convened by the Secretary,

The Chairman said : For the sixth year in succession it is my privilege to present to you the annual report and balance sheet on this occasion for the year ended December 31, 1915. Looking backward and bearing in mind the different crises through which we have guided the bank, and that for the whole of the year under review we have been in the throes of a world-wide war, we are of opinion that the result is as good as could be hoped for, and we trust that it may lead you to feel that our policy has not been unsuccessful. Before making reference to the working for the year and explaining how the war has affected our business I will, with your permission, refer briefly to the accounts. Our net profits for the year, including £6,477 9s. 6d. brought forward from last year, amount to £51,660 13s. 5d. We propose to pay a dividend to the shareholders of 5 per cent. per annum, less income-tax, as was done last year, which will absorb £30,000, to place to a reserve fund for contingencies £15,000, and to carry forward a sum of £6,660 13s. 5d. Turning now to the balance sheet you will see that there is still a small amount due on account of unpaid calls—viz., £140 4s. 2d., but this figure last year stood at £1,347. As previously explained to you, we have a few Belgian shareholders, and your directors have avoided any harsh action, which under nomal circumstances might have been justified. The greater part of the amount in question is due from an estate which is now being realised and will no doubt be paid shortly. The reserve fund remains at £55,000. Compared with last year's figures, current accounts show an increase of £425,000 and fixed deposits £94,000. Bills payable an increase of £233,000. Acceptances on account of customers are about £20,000 lower. Loans payable against bills and securities are £239,000 higher. The profit and loss account I have already dealt with. Turning to the credit side, our cash on hand shows an increase of just over £300,000, present conditions rendering it advisable to err on the safe side with regard to liquid assets. Bullion shows a decrease of £88,000. Our investment account, at £274,650, shows a slight increase. Had it not been for our subscription to the Four and a-Half per Cent. War Loan the figures would have been considerably reduced owing to investments maturing and being disposed of. The War Loan is taken at cost price, while the other securities, when officially quoted, have been written down to prices current on December 31. To effect this the amount provided for further contingencies last year has had to be drawn upon. You will, no doubt, have observed that India Three and a-Half per Cent Sterling Certificates for the face value of £25,000 are now held by the Bank of England on behalf of the Government of India, a corollary to our being entrusted with the Government of India's accounts at Basra. On loans receivable and advances we see an increase of nearly half a million, and I should like to repeat that this amount represents liquid assets which have been subjected to the most careful scrutiny on the part of your directors. A large portion consists of advances sterling against documentary bills of exchange on India which are continually maturing and might almost be placed under the heading of bills discounted. Technically, however, we only make an *advance* against the bills and documents, and they, therefore, appear where they do. The trade of the world has been handicapped in many ways, and naturally we as foreign bankers have suffered. You will remember at our last meeting I told you that the outlook in India was good, and that the amount of surplus wheat available for export from that country was likely to be very large. Unfortunately for our business, the Indian Government prohibited the export of wheat, and took into their own hands the buying, shipping, and selling of the crop, employing for this purpose the merchant firms of India who had previously conducted similar business. The financing of the shipments, the operation in which we are particularly interested, was taken over by the Government, who treated the wheat as remittances to the Secretary of State for India. The conditions in India during the year under review were not conducive to large profits. Money was only in very moderate demand, and no signs of improvement were shown until almost the end of the year. The local bank rates averaged just over 5½ per cent. The monsoon was very irregular, and the weather gave every appearance that the rains had finished in early September. Fortunately, however, storms brought up rain in October very beneficial to the cotton crop, which is much larger than was at one time anticipated. In common with other ports, both Bombay and Calcutta exports have been handicapped by the requisitioning of steamers by the Government for the transport of troops and other purposes. In the absence of carrying vessels, merchants have had to restrict their operations, and this state of affairs has been reflected in the decreased turnover of the bank. As notified in the Press, a branch of the bank was opened in Basra at the end of September last, and we are pleased to say that we have been entrusted with the Government of India's accounts at that port. Your directors are of opinion that the trade of Basra will increase under British rule, and hope that in the course of a short time the branch will be upon a paying basis. It will also be of great assistance to our Bagdad branch when we reopen there. I will conclude with a short reference to Bagdad. The position, as explained to you at our last general meeting, is unchanged, and we have had no communication with the branch since our European staff there was deported. The manager of the branch is now stationed at Basra, and directly conditions admit of his so doing, he will proceed to Bagdad to look after our interests there. In the meantime we can only exercise patience. I cannot close without an expression of regret at the loss we have recently suffered in the untimely death of our Calcutta manager, Mr. Harvey Jones. His furlough was almost due, but owing to illness, he left Calcutta with his wife and family towards the end of January last, and we were deeply grieved to receive news of his death at sea. He was a loyal and devoted servant to the bank, and his loss is greatly to be deplored.

The chairman formally moved the adoption of the report and balance-sheet, and the motion having been seconded by Mr. J. S. Haskell was unanimously adopted. The chairman proposed that a dividend of 5 per cent. be paid, which was duly passed. The re-election of the retiring directors, Sir Jacob E. Sassoon, Bart., and Mr. E. Francqui was agreed to. The auditors were re-elected, and a vote of thanks to the chairman and the staff was carried unanimously.

OTTOMAN RAILWAY FROM SMYRNA TO AIDIN.

The half-yearly ordinary general meeting of the shareholders was held on Tuesday, Lord Rathmore, President of the Company, presiding. The following are extracts from the report of the proceedings :—

The Chairman, moving the adoption of the report of the Council, said, *inter alia* :—

The railway and its revenues remain in the possession of the Turkish Government, and we are still without any means of obtaining official information from Smyrna as to the present condition of the permanent way and rolling stock, but, as I have on a former occasion suggested to you, I think we may reasonably hope that no malicious injury has been done to our property by the Turkish authorities, nor has it, so far as we know, suffered from the military operations that have been carried out in the neighbourhood of the line. Our general manager, when he was forcibly compelled to hand over his control to the representatives of the Turkish Government, obtained from them an acknowledgment that the railway was in a state of complete working efficiency and when we recover possession of it we shall undoubtedly be entitled to claim full compensation for any damage it may have sustained, as well as for all the other serious losses which we have meanwhile suffered by the entirely unjustifiable appropriation of our property.

The accounts now presented to you are in the same form as last time, and are, of course, subject to adjustment when later returns are received. They do not include any traffic receipts on revenue account, and you will have seen that certificates for the debenture interest for the half-year to December 31 last, amounting to £74,175 4s. have been posted to the 4 per cent. and 5 per cent. stockholders in accordance with the scheme which was, as you know, approved at a special meeting of shareholders held on June 10 of last year, with the general result that there is a debit balance to be carried forward of £113,495 15s. 6d.

There is really nothing else, I think, in the report to which I need call your attention, except that, while we have continued to the leading members of our staff who have been in this country since the beginning of the war with Turkey an allowance equal to half their previous pay, we have also the pleasure of informing you that the British Government has generously undertaken on behalf of the company to advance pecuniary aid to some other members of our staff connected with the permanent way, the telegraph and other departments who remain in Smyrna or its neighbourhood. I have no such accurate or authentic information as would justify me in attempting to predict at what date we may be permitted to resume the control of this railway, in which so much English money has been invested, and which—as we may honestly claim—has conferred such great benefits upon

NATIONAL BANK OF GREECE.

Digitized by Google

large portions of the Turkish Empire. But, speaking generally, from what one reads in the newspapers and from such reports as reach us through private channels from Smyrna, I think there can be no doubt that the Turkish people are getting every day more and more thoroughly sick of the awful war, which the majority of them never desired to enter upon, which has brought them losses of territory, and losses of brave soldiers by tens of thousands, and which now threatens them with utter financial ruin, and in some parts of the country, notably in Constantinople, it would seem with absolute starvation. I think we may reasonably anticipate that such a deplorable and desperate state of affairs will not long be suffered to continue, and that in one way or another means will be found for the overthrow and the banishment from the power of doing further mischief of those sinister influences which forced the nation into this ill-starred enterprise and which is responsible for all its direful consequences. So far as we are concerned, I have the satisfaction of believing that when that happier day for Turkey arrives, the restoration to our company of the management of it own affairs and the renewal of its useful labours will be heartily welcomed by all classes of the people.

A Shareholder: I should like to ask a question in respect of the reserve fund investments. I wish to know whether the value was taken at cost, or whether they were re-valued a short time ago, and the market price entered on the balance-sheet?

Mr. G. S. Oldfield: They are entered at cost price, but on the left-hand side the value is £94,000, which was taken later, and that is taken as their value to-day. So far as account No. 15 is concerned, the investments were taken at their market-price on December 31, 1913, as the shareholder will see if he will look at the bottom of the same account; but so that you may understand their value to-day, you will see that their nominal market value is £11,298.

The resolution was carried unanimously.

The Right. Hon. Lord Rathmore and Mr. Frederick Single were re-elected members of the Council.

Mr. G. S. Oldfield, in proposing a vote of thanks to the President and Council, said:—"It seems to me, with regard to the war, that things look better, both in a military and economic sense, than they did six months ago. Our Russian Allies have made great progress in Persia and Asia Minor, and have, in fact, crept up to the southern shores of the Black Sea. They have, moreover, done a great deal towards breaking the power of the Turk, which is of immense value to us owning a railway in Asia Minor. . . . As to the economic position, the value of the German mark is constantly falling on all the exchanges of Europe, and its purchasing power is constantly growing less." Mr. Dyson Weston, seconding the motion, suggested that if the Bagdad Railway goes abegging, the company should endeavour to get it instead of receiving an indemnity in cash, to which the President replied that the suggestion would be carefully borne in mind.

EGYPT AND LEVANT STEAMSHIP COMPANY.

At an extraordinary general meeting of this company, held at Athens at the temporary Head Office, 34, Stadium Street, on March 10, the following resolution was proposed as an extraordinary resolution:—That the Articles of Association be altered in the following manner:—(1) By substituting in Article 33 the figures "76" for the figures "79"; (2) by cancelling Article 79; and (3) by substituting in Article 76 for the words "Votes may be given either personally or by proxy" the words "Votes may be given either personally or by proxy, but holders of share warrants shall be entitled to vote by proxy only in respect of the shares or stock included in such warrants as shall have been deposited, together with a statement in accordance with the conditions of Article 33 (n) and at any general meeting and any adjournment thereof which may be held during the period during which their share warrants shall remain so deposited." The resolution having been passed by the required majority it will be submitted for confirmation as a special resolution to a second extraordinary meeting.

AUSTRO-BULGARIAN FINANCE.

(From Our Own Correspondent.)

Bucharest, March 10.

It is announced from Budapest that financial circles are occupied with the creation of an Austro-Hungarian-Bulgarian Bank, to deal principally in trade between the two countries. The capital is to be ten million francs, and the head office is to be at Sofia, with branches at Vienna, Budapest and Berlin. The proposed title is the Industrial Bank of Central Europe.

To ease the financial pressure, long leave is to be granted in the proportion of 30 per cent. to all classes with the Greek colours. The Reservists of the 1912 and 1913 classes, who have served a longer term than the rest, will be granted leave in the proportion of 50 per cent.

NATIONAL BANK OF EGYPT.—At the General Meeting of the National Bank of Egypt, held in Cairo on the 25th March, 1916, a DIVIDEND of 8s. per share was DECLARED PAYABLE on the 28th March, 1916, for the year ended 31st December, 1915. Coupon No. 22 will, therefore, be payable on and after 28th March, 1916. Coupons must be listed on forms to be obtained at the National Bank of Egypt, 6 and 7, King William Street, London, E.C.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that the THIRTEENTH ORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Thursday, the 20th April, 1916, at 4 o'clock p.m., for the purpose, among other things, of:—

Receiving the Directors' Report;
Receiving the Auditors' Report;
Approving the Accounts for the period ended 31st January, 1916;
Declaration of Dividends;
Election of Directors;
Election of Auditors and fixing their remuneration;
And the transaction of the general business of the Ordinary General Meeting.

Every shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 5th April, 1916), when Cards of Admission and Proxy forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
In London—At the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, President.

NOTES OF THE WEEK.

The arrival of the Prince Regent of Serbia in London last week was the occasion of a remarkable public demonstration, which reflected the admiration felt throughout the British Empire for the heroic struggle of the Serbians against the common enemy. This is not the time for mere formal visits of courtesy. Prince Alexander and his Prime Minister have come to London on business bent, and beyond the official welcome at the railway station no attempt has been made to invest the stay of our Serbian visitors with anything in the nature of a State character. But in the warmth of the welcome the representatives of Serbia received from the London public the nation, we hope, will draw the best augury for the realization of the aspirations to which it has clung through storm and stress, through evil and good repute.

The spontaneous welcome of the British public found striking support in the well-chosen words of the deputation of prominent public men which waited on the Prince Regent last Wednesday to express their admiration of and sympathy with Serbia. Its spokesmen were the Archbishop of Canterbury and the Lord Mayor of London. It had been hoped that a welcome might be extended to Prince Alexander in a more official way at the Mansion House, but in view of the private nature of his visit the Prince was unable to accept the Lord Mayor's invitation. The picturesqueness of a Mansion House function was lost, but the numbers and representative character of the deputation, the eloquence and sincerity of the speeches amply made up for it.

Although deprived of their country, the Serbians have not given up the struggle. An army, generally estimated at 150,000 men, remains in being, and is now recuperating with a view to participating afresh in the war under more favourable conditions than when it was left to bear single-handed the whole weight of the Austro-German frontal attack and the Bulgarian stab in the back. But a nation in the plight in which the Serbians find themselves needs to be buoyed up by very definite hopes, if it is to put forth its best effort. The present interlude in Serbia's struggle provides a fitting opportunity for an exchange of views between the Allies, which their preoccupations in the past, particularly those of the Serbian Government, have rendered difficult. General assurances regarding the restoration of Serbian integrity and independence have been given often enough; but what is required is a more definite understanding regarding the future of Serbia after the war.

The object of the visit of Prince Alexander and M. Pashitch to London is to continue the negotiations already begun in Rome and transferred to Paris on the question of the creation of a Southern Slav State. With the final victory of the Allies, the Serbians and the Serbs, Croatians, and Slovenes of Austria-Hungary look for union in a single Jugo-Slav State, which alone can satisfy the aspirations of their race. They urge, and with some justice, that the formation of such a State is an essential condition of the liberty of Europe. But difficulties arise in connection with the delimitation of the new frontiers, for a Greater Serbia must reach to the Adriatic, and if it were to obtain too large a portion of the coast-line, Italy would feel that her supremacy in that sea were challenged. In order to forestall the Serbians, the Italian Government made it a condition of Italy's participation in the war that certain districts should be ceded to her in the event of the Allies' victory. The Italian demands, which would naturally not err on the side of moderation, were apparently agreed to without discussion; certainly no attempt was made to reconcile them with Southern Slav aspirations. With a fuller knowledge of the Near Eastern question the Allied Governments have come to appreciate the justice of the Serbians' request for a more equitable settlement than was provided for in the agreement with Italy. It remains, therefore, to express in concrete form the "second thoughts" of the Allies on this subject, which Italy, we are glad to note, also shares.

In view of the failure of the Allies to save Serbia from sharing Belgium's fate, it is to be hoped that the light of the good work done by the British Adriatic Mission will not be permanently hidden under the official bushel. That Mission has now finished its labours and returned to England. It was despatched with the object of succouring Serbian refugees, but it soon found that its real task was to enable the Serbian Army to make good its escape from the overwhelming numbers of the Austro-German and Bulgarian forces. Instead of a mere distributing medium it became an emergency corps of engineers to the Serbian Army, charged with all manner of duties from the maintenance of lines of communication for the retreating troops to the building of bridges and landing stages. It was thus instrumental in the saving of the Serbian Army. Its record, if told in full, will afford a striking contrast between the energy and

Digitized by Google

resourcefulness of a small unit, and the paralysis in high quarters that was responsible for the delay in the despatch of Allied troops to the succour of Serbia.

The pen of the interviewer is clearly a more favourite weapon with King Constantine of Greece than the sword. Not long ago he called in an American correspondent to fight his battles against the Allies, and took the opportunity of informing the world that he regarded their treatment of Greece as on a par with Germany's treatment of Belgium. This outburst was treated by the Allies at its proper value, and in due course his Majesty expressed a desire not only to converse but even to entertain at dinner the terrible arch-Huns of Salonika in the persons of the French Commander-in-Chief and the General Officer Commanding the British forces. Protests against any action the Allies are reluctantly obliged to take on Greek soil now reach them through the proper diplomatic channels. But Palace interviews are still the order of the day, and a German correspondent has recently been employed by the warrior King for the purpose of a bout with his ex-Premier, M. Venizelos. In the course of a conversation with a representative of the *Berliner Tageblatt* King Constantine is reported to have said that "in political matters Venizelos is often a visionary. When Sir Edward Grey showed him from afar part of the Asiatic littoral as a reward for Greece's co-operation, he at once declared in the Chamber that we should get the whole western part of Asia Minor as far as Afiun Karahissar, and he conjured up visions of meadows and flocks of sheep."

M. Venizelos has not known how to treat King Constantine's weakness for interviews with the indifference meted out to them by the Allies. After challenging the Greek Government to repudiate the words put into the King's mouth, without eliciting any denial of them, he has returned to the charge in a Press article. King Constantine's statement is not only declared to be inaccurate, but it is urged that such assertions are prejudicial to the national interests and calculated to diminish the authority with which the post-revolutionary régime has invested the person of the Sovereign. No such statement as that attributed to him by the King was made by M. Venizelos in the Chamber or elsewhere. The article then proceeds to give M. Venizelos' version of the Greek Government's negotiations with the Allied Powers. The participation of Turkey in the war opened up the possibility of the extermination of the Greek elements in Asia Minor, while her defeat and dismemberment might transfer these elements to the dominion of other Powers. As Greece could not hope to obtain an extension of territory in the Balkans equivalent to the prospective gains of Bulgaria, M. Venizelos secured from the Entente recognition of Hellenic national aspirations in Asia Minor. This recognition was conveyed in a communication from Sir Edward Grey, dated January 24, 1915, in which the British Foreign Secretary declared that any proposal by M. Venizelos would be favourably considered. It was impossible at that time for Greece to take part in the war without Bulgarian support, and M. Venizelos endeavoured to secure the co-operation of Bulgaria by proposing to King Constantine that Greece should cede to her Kavalla and Drama, in order to secure the valuable compensations which were in prospect elsewhere.

The suggestion that Greece, in view of her inability to expand in Europe, should seek her future in Asia Minor, where her people are already settled in such large numbers, was vetoed by King Constantine from fear of Germany and Bulgaria. The opponents of M. Venizelos cite the course of the war as proof of the soundness of their attitude. But M. Venizelos makes a strong point when he asks what would have happened if in 1912, when Turkey was considered to be stronger than the Balkan States, King George had vetoed his war policy. Turkey, by transferring her forces from Asia Minor to Thrace, might well have beaten Serbia and Bulgaria, and certain Greeks would have at once acclaimed the soundness of the policy which had saved Greece from a catastrophe; whereas the result would have proved to be the aggrandisement of Turkey and the ruin of the Balkan States and of their aspirations. So now, M. Venizelos urges, the normal result of Greece's present policy may be to raise up a greater Bulgaria in the face of a smaller Greece. There are, however, forces at work which tend to counteract the results of the Greek Government's policy. Territorially, Greece may not suffer; but she will have sacrificed her reputation for statesmanship if the far-sighted administration of M. Venizelos is to be permanently abandoned for a policy that reduces the Government to a cipher and makes Royal Press interviews the main factor in home and foreign affairs.

There can be little doubt that if General Townshend's force is to be relieved at all, it must be within a very short period now. It is, therefore, no surprise to learn that General Lake has at last started a fresh move towards Kut. On April 5 the Turkish entrenched position at Umm-el-Hannah, which was unsuccessfully attacked on January 21 and again on March 8, was once more assaulted, and this time carried. The operations, it is added, are proceeding satisfactorily. Thus the opening move has been successful, and it is to be hoped that the floods will not cheat the British artillery of their due. The news will go far to relieve the public anxiety, which has increased with the gradual realization of the fact that General Townshend could not be expected to hold out indefinitely. It was not calculated to stifle comment that the Government should choose the present moment to publish, more than six weeks after its despatch, the message sent by King George to General Townshend on February 14. "I, together with all your fellow-countrymen," ran this message, "continue to follow with admiration the gallant fighting of the troops under your command against great odds. Every possible effort is being made to support your splendid resistance." The message, like the hospital arrangements, may have been overlooked, or it may have been intended to coincide with a period of the siege which was expected in the middle of February, but is only now occurring at the end of the first week of April.

It is inevitable that the tragedy of the Mesopotamian Expedition should give rise to severe criticism at home. There must always be a temptation to burke uncomfortable inquiries by pleading national interests as a reason for secrecy; but on this point the Government is on its own ground, and the public, whether accepting the excuse or dubbing it "the apotheosis of nonsense," has no other course open to it than to acquiesce. An unfortunate breach of the policy of secrecy occurs when something resembling an organized campaign to blacken General Townshend's reputation raises its head. Such a move would have been obviated by the earlier publication of the King's message. The aspersions cast on General Townshend's leadership are undoubtedly responsible for the categoric assertions made by *The Times* that the advance on Baghdad was ordered in the face of his strong objections that he had not a sufficient force for the enterprise, and that his warnings were fully and repeatedly expressed to Sir John Nixon, then in chief command in Mesopotamia.

As the fact that General Townshend was ordered to advance upon Baghdad with an inadequate force cannot be gainsaid, it would seem possible that too much is being made of the prejudice that would be done to national interests by an inquiry into the circumstances leading up to the despatch of his column from Kut. There would be no need to publish any information that could be of use to the enemy. What an inquiry would seek to establish—with a view to avoiding similar mistakes elsewhere—would be the various stages in the civil and military hierarchy through which the question of an advance on Baghdad passed, from General Townshend's objection to the final order telling him to start. It will be remembered that the Imperial Government has taken credit to itself for the fact that the advance was approved of by the military authorities in Mesopotamia, India, and England, by the India Government, and the British Government. The impressive recital of this array of master minds has been shorn of much of its effect by Lord Islington's subsequent admission that "if any representations were made by General Townshend prior to his attempted advance on Ctesiphon they would have

Digitized by Google

been addressed to Sir John Nixon, but no such recommendation or representation had been reported home." In other words, all the higher military authorities enumerated above concurred in a step under conditions of which they were entirely ignorant without asking for the opinion of the man on the spot. General Nixon has relinquished his command. It would at least be interesting to know whether his view of the whole matter could be expressed in the words, "They asked for another 'gamble,' and I gave them one."

In Armenia the Russians continue to make steady, if slow, progress. As already explained in these pages, the lie of the country in the neighbourhood of Trebizond is against an advance from the east; great spurs from the mountain ranges run north and south, offering a succession of strongholds for the Turkish defence. The enemy's reinforcements are now in touch with the Russians, and the work of clearing these mountainous districts must necessarily prove arduous. On the Russian left flank, however, the Turks appear to have been less successful in organizing resistance, and for this circumstance the Russians may have reason to be grateful to the British pressure on the south, which compels the Turks to keep as strong a force as possible at Baghdad. The columns based on Bitlis, advancing south, have reached Khizan, more than half way to Sert, which is itself only a few marches from the upper waters of the Tigris, and the Turks are relying more on natural obstacles than their own strength to delay the Russians. In western Persia a fortress held by the Turks has also fallen after an engagement lasting four hours, and again the enemy, in falling back, showed no inclination for rearguard actions, but was actuated by the one desire to place as much ground as possible between him and the Russian force.

The sinking in broad daylight of the Russian hospital ship Portugal in the Black Sea by a German submarine adds another to the long list of senseless outrages for which the Germans are responsible. The crime was aggravated by a variety of circumstances: the Portugal was at anchor, she carried all the distinctive marks of a hospital ship, and had been recognized as such by the Turkish Government; the submarine circled round the vessel and then fired two torpedoes point-blank at her. Of the 273 persons on board only 158 were saved. The utmost indignation has been caused by this outrage in Russia, where public opinion is less accustomed to German methods of waging war on sea.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Necsamulli and Company, 12, Rue Secostris; Librairie Calebotte, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 21.

H.R.H. the Prince of Wales.

Two important events have to be chronicled this week: The first is the presence in this country of H.R.H. the Prince of Wales. H.R.H., who has come out in order to join Sir Archibald Murray's staff, arrived in Cairo on Thursday and proceeded to the Residency, where he stayed the night. Next day he lunched with H.H. the Sultan after visiting several of the sights, and left again in the afternoon for Ismailia, where General Murray has his headquarters. The secret of his arrival was very well kept. Only a very privileged few were aware of his presence, and it was not until he had left for Ismailia that it was generally known that he had been in Cairo.

The Departure of General Maxwell.

The other important event—and one which one records with the deepest regret—is General Maxwell's relinquishment of the command of the forces in Egypt and his departure for England. The news came as a thunderbolt to everyone. The reason for his departure is not known, though it is not difficult to guess at the causes underlying his resignation and the motives that prompted the acceptance thereof. Feeling runs very high out here regarding his departure, especially amongst the Egyptians, who frankly regard it in the light of a calamity.

General Maxwell knew the Egyptians, and the Egyptians knew and trusted General Maxwell, who had first come amongst them some thirty years ago. He had spent the best part of his military career in their midst, and they had grown to love and respect him. It was these factors, the confidence he inspired, and his deep knowledge of Egyptian affairs that were the main arguments brought forward in his favour when the position of G.O.C. in Egypt fell vacant in October, 1914.

Since he assumed the military control of Egypt on November 2, 1914, General Maxwell has had a most difficult task to perform. Few people realize what a position of that nature in such a cosmopolitan country as Egypt means: what an abundance of detail work is entailed; what conflicting interests have to be conciliated, in spite of the exempting existence of martial law; what lurking dangers have to be guarded against. It required a man of no mean administrative ability and experience successfully to cope with such a situation as existed in Egypt in the autumn of 1914, and the various communities frankly considered themselves exceedingly fortunate that the crisis which broke over their heads at that period found such a man as General Maxwell in supreme control.

That his administration has been a conspicuous success no one out here would for one moment dream of disputing. We have lived for the past sixteen months under the *régime* of martial law, but there have been,

and are still, few outward signs of its existence. There has been a total absence of friction with the civil authorities, through whom most of the interior administration has been done, and of untoward incidents, which, given the elements to hand and the almost frantic efforts made by our enemies to stir up trouble for us in all our colonies inhabited by Moslems, the unfortunate course of events in the Balkans since April last might quite easily have called into being.

The comparatively uneventful history of the country during the past sixteen months and its present eminently satisfactory political and economic condition speak eloquently in justification of the wise selection made in the autumn of 1914, and in praise of General Maxwell's administration. The secret of his success has been that the sentiments underlying his tactful proclamations in November and December, 1914, have continued to be the guiding line of his policy, that he has kept in close touch with all elements of the population by his accessibility at all times, that he has been able to bring to bear his own personal experience on the multifarious questions that under martial law had perforce to be submitted to him, and that he has known when to be firm and when to concede a point.

I have said that feeling is strong out here with regard to his resignation. There is the keenest resentment that things should have ever got to such a pass that he should have felt impelled to resign a position that he has filled so conspicuously well. It is generally admitted that someone has blundered again, and the liveliest sympathy is openly expressed with our late G.O.C., who for his services during a most critical period deserved far better treatment at the hands of his chiefs, and who, if only he had been left undisturbed, would have asked for nothing better than to be allowed to continue to administer Egypt until peace automatically brought the military *régime* to a close.

The one consolation—and it must assuredly be a precious one—which General Maxwell can perhaps derive from his resignation, is that it has evoked from all communities the liveliest expressions of sympathy and of appreciation of his efforts. The local Press has contained numerous articles on the subject. H.H. the Sultan gave a farewell banquet in his honour at Abdin on Saturday evening, when genuinely affected speeches were exchanged between host and guest. The Mohammed Ali Club also gave a dinner in his honour on Sunday, and if time had permitted the other local institutions would similarly have fêted him.

The most significant tribute has, however, undoubtedly come from the Egyptian community, which was so moved by the news of the General's imminent departure that it decided to give expression to its feelings by a *thé d'honneur*, which was held at the Continental Hotel yesterday afternoon, and over which H.H. Prince Fuad, the Sultan's brother, presided. The large dining-rooms and the terrace were packed with several thousand Egyptians, ministers, ex-ministers, pashas, beys, ulema, the heads of the various religious communities, notables from the far distant provinces, and Bedouin sheikhs, with whom, it may be added, were prominent members of the European communities. It was indeed a notable farewell, and the pleasing feature about it was that it was an absolutely spontaneous demonstration. Farewell receptions have before now been given in Cairo to departing statesmen and generals, but they have always been more or less organised by one or other official body. Yesterday's event was, however, a purely personal effort on the part of the Egyptian community, and as such it is all the more a compliment to General Maxwell.

The Mixed Courts.

The difficulty to which reference has been made in recent letters is now at an end, as Italy has signified her unconditional acquiescence in the extension of the powers of the Mixed Courts, which took place on February 1. The Italian judges will now resume their seats, and all the adjourned cases will come on the cause list again.

The vacancy left in the Mixed Court of Appeal by the death of Judge Sandars has been filled by the promotion of Mr. H. W. Halton, President of the Cairo Court of First Instance. Mr. Halton, who was first associated with the Ministry of Justice in 1897, and was promoted from the Native Court of Appeal to the Mixed Courts in 1909, has done much valuable work in this country. He is very popular on the Bench, and was elected, by the vote of his colleagues, first Vice-President in 1913 and then in 1914 President of the Cairo Mixed Court. His promotion has been well received. It is as yet not known who will be chosen to fill the vacant English judgeship in the lower court.

CYPRUS NOTES.

(From a Correspondent.)

Poverty and Unemployment.

Want of work and money continues to be felt in many parts, and sympathy is felt with those who live by work at the roadsteads. At Larnaca, for example, where in time of peace several lines of steamers call regularly, many have been thrown out of employment. The mail steamer touches only once a week, and remains but a few hours. Exports, too, have been steadily decreasing from this district. It is hoped that some relief work may be provided by Government. The municipality and people have applied for it, and it is suggested that it should be found in carrying out improvements on the sea-front.

Judicial Appointments and Transfers.

The Government has decided to equalise the emoluments of the native judges, whose salaries will henceforth be £250 a year, except that of the Nicosia judge, which is fixed at £275. In each of the six districts there is a British President, and there are two native judges (Turkish and Greek). Numerous transfers are being carried out, to date from April 1. It is also stated that in future these judges will not serve for more than five years in any one district, except at Nicosia, where vacancies, as they occur, will be filled according to seniority. There are also various changes among the registrars of the courts.

Warning to Emigrants.

The Greek Press is strongly urging Cypriots, who in increasing numbers have been preparing to emigrate to America, to exercise more caution. The *Phoné Tes Kyprou* ("Voice of Cyprus") says that American papers, it is true, have stated that there is employment for thousands on the railways of Illinois, Ohio, Indiana, and Pennsylvania, in mines, and on the quays of New York, wages averaging 4s. a day. But probably vacant places have already been filled up. Amongst others, hundreds of Greeks from Hellas have rushed to the United States on the strength of the reports and notices referred to; but, according to papers from Athens, 170 of them, finding no employment, have returned to their homes, sadder and wiser. The paper, while deploring the depletion of the small island population, urges more prudence. Emigration to these distant places should not be made except on trustworthy assurance of friends already settled there that suitable employment can be at once provided. The agent for a Greek national steamship service advertizes passages, including food, at 275 francs (£11) from Piræus to New York; and fares at moderate rates are also offered from Alexandria to the States.

Union of Greek Ladies.

For years past ladies of the Greek community have taken a far more active part than formerly in organising local movements for charity, education, hospital visiting, and other good objects. A society, formed under the above title, with the object of promoting progress among the fair sex, is taking fresh steps to carry out its aims. At a late meeting of its council it has been decided to send one of the most promising pupils of the Nicosia schools to Athens to perfect herself in various kinds of skilled handiwork, and to qualify herself to hold classes on her return for the instruction of Cypriot girls. The decision is to be commended, as there is much room for an advance in various directions. From other towns some years ago girls were sent to learn hospital nursing, with excellent results. The funds at the disposal of this society, as in the case of others in Cyprus, are very limited, and more support is needed to carry out its objects.

Church Conflagration.

At the picturesque village of Pharmakas, in the Nicosia district, the principal church was destroyed by fire some five years ago, and the rebuilding has not been quite completed. A portion of the edifice in which such church properties as had been saved were kept, and which had served temporarily as a village church, has now been burned down. The ikon of St. Irene only was saved. The fire was due to the carelessness of a servant of the church, who had left a taper burning in its wooden receptacle. Pharmakas is well worthy of a visit by any one who is in the neighbourhood. Close to it is a fine shady plantation of walnut trees, and in spring, when it is full of nightingales, it is a very attractive spot.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, March 24.

An Unhappy Menage.

As so often happens in the case of *ménages* that find themselves in difficulties, and for similar reasons, dissensions and bickerings have taken place in the Cabinet, the ill-assorted members of which have never been in perfect harmony, especially since the death of M. Theotokis. As I intimated in my last letter, the Finance Minister, M. Dragoumis, had intended placing before the Chamber this week a long list of new and heavy taxes, some of which were of a vexatious character, and were to be made retrospective. These imposts, from which M. Dragoumis hoped to obtain a round hundred million drachmai to balance this year's Budget, would have had the effect, among other things, of making the cost of living even higher than it is, and, especially for the poorer classes, almost impossible. Consequently, the announcement of these taxes and the publication of details have given rise to a storm of protests and considerable dissatisfaction. Even the Ministerial organs, fearful of becoming unpopular by adopting any other course, have strongly condemned the proposed new taxes. The *Nea Himera*, which is the principal organ of the Cabinet, and particularly of M. Gounaris, points out that the transitory character of the present Ministry does not permit of its undertaking such radical financial reforms, and adds quite frankly that if there are among the Ministers any who insist on the taxes they should be told to go. A noisy demonstration, organised by a crowd of women—wives, sisters, and mothers of men who have been mobilized—has taken place in front of the Ministry of the Interior, where M. Gounaris was besought to pay the monthly allowances that are overdue. The Government is naturally concerned at such incidents, and thus such members of it as wish to retain their popularity, especially the leader of the majority, M. Gounaris, have strongly opposed the fiscal measures proposed by M. Dragoumis, who, according to the same Ministerial journals, has had to abandon them almost entirely. It appears that he has confined himself to a small tax on the war profits of the mercantile marine and flour merchants, as well as a tax on men who have not served in the army, and several other small imposts, the yield of which will go to the families of those who are with the Colours.

Partial Demobilization.

As the proposed taxation has thus failed, and as, moreover, the negotiations recently undertaken in Paris to obtain a loan of 150 millions have, for political reasons that are obvious, no chance of success, the Government is faced with the necessity of effecting a partial demobilization of the army by granting long leaves, which will reduce the number of men with the Colours by about 200,000. This will, of course, greatly ease the economic situation; but the cost of maintaining the other two-thirds of the army in the field will, nevertheless, be very considerable, and one wonders how the expenditure is to be met. One may be permitted to point out the fact that the present Government would not have been placed in such economic difficulties if, as soon as the Allies had fortified themselves at Salonika, and when consequently there was no further danger of a sudden invasion by Bulgaria, it had taken the precaution to demobilize, leaving sufficient troops to guard the remainder of the frontier, *i.e.*, the eastern portion of Macedonia (Kavalla), making provision for calling up in a few days, if necessary, the remainder of the reserves.

The Mobilization Secret.

The Ministerial organs, egged on by the Venizelist Press, which daily asks, why, since there is no intention of taking action, the army is not demobilized, declare again that there is a secret reason, known also to M. Venizelos, which necessitates the maintenance of the mobilization. The *Patris*, however, retorts, evidently on behalf of M. Venizelos, that there is absolutely no secret, and challenges the Governmental Press to declare openly what the supposed mysterious reason is. Another Ministerial paper states that the mobilization of the troops is being upheld with a view to defeat the schemes of those who are endeavouring to drag Greece into the war.

The Government's Precarious Position.

These new difficulties having been added to those already existing, the political situation is of a necessity very precarious, and in many circles it is believed that the life of the Government is drawing to its end. The paper *Athenai*, commenting on the situation, states that the Government is in a "state of decomposition." Nevertheless, its life can be prolonged indefinitely owing to the difficulty of finding its successor. Considering that a Cabinet presided over by M. Gounaris, leader of the majority, would be worse off than the present Cabinet, it has been suggested, during the past few days in some quarters, that a Ministry presided over by M. Rallis should be formed. This does not seem likely, however. The general opinion is that the only possible combination is a Zaïmis Cabinet, which could, to a certain extent, rely on the financial support of the Entente Powers.

Electoral Scandals.

The decision of the Court of Appeal against the late Prefect of Salonika, M. Goudas, for his scandalous intrigues with the Turks, in favour of the Gounaris Party during the elections last May has created a deplorable impression in Athens, more particularly the facts contained in an official document to the effect that M. Goudas promised the Turks that Greece would not declare war on Turkey, that their compatriots who had left would be reinstated in their possessions—in spite of the fact that these properties had been handed over to Greeks who had been driven out of Turkey—and, finally, that they would be allowed to wear the fez. As a matter of fact, this latter privilege had already been accorded to them when Parliament was sitting, in which, thanks to M. Goudas, about fifteen Turkish deputies had their seats.

THE CROWN PRINCE OF SERBIA AT A LECTURE BY MRS. STOBART.

On Wednesday the Crown Prince of Serbia was present at the St. James's Theatre, when Mrs. St. Clair Stobart delivered an address describing the experiences of herself and the hospital unit she organised to assist the Serbian army. Sir George and Lady Alexander, with several other distinguished people, received the Prince on his arrival, and Sir George subsequently formally introduced Mrs. Stobart to the audience.

Mrs. Stobart said that when she opened her dispensary at Kragujevatz so great was the need of medical assistance that within a few weeks no less than 12,000 people had attended. Seeing the urgent necessity there was, she wrote home to the Serbian Relief Fund, who sent out material and *personnel* for six more dispensaries, which were established. In September came the invasion, and she with her unit accompanied the Serbian army first in its advance to meet the enemy, and then in the retreat southwards and across the Albanian mountains to the coast. During three months of retreat her party never once entered a town that was not either already deserted or about to be evacuated by the people fleeing from the approaching enemy, and during this time they were without letters or news from home. With the Serbian army went many thousands of old men, women, and children, taking their household goods. The greatest hardships were experienced in crossing the Albanian mountains. These were impassable to the four-wheeled ox-wagons; so the wagons of Mrs. Stobart's party were cut in half, the fore part becoming thus a two-wheeled cart, while the after-part was abandoned. Whatever could not be carried in the reduced space was left behind. Later, even the two-wheeled carts could go no farther, and only such things as could be carried on the backs of ponies could be taken with the party. Food was scarce, and shelter for the night could not usually be obtained—sometimes not even a piece of level ground on which to lie down. On such occasions, having scraped away the snow, the members of the party would lie down with their heads on the higher part of the slope and with logs at their feet to prevent them slipping downwards while asleep. At Scutari Mrs. Stobart surrendered the command of her little column, after having brought it intact through a journey of, altogether, about 800 miles.

After the lecture a collection was taken up in aid of Serbian hospitals.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, March 11.

Stagnation at Salonika.

We are at present passing through a period of almost complete stagnation at Salonika. Men and munitions continue to arrive, and the military movements in and around the town follow their normal course without hindrance from the enemy. The chief enemy that our men have to contend against during these days is the weather. I hesitate to mention the subject again, but I must record that we have been visited during the past week by another deluge which surpassed that of the previous week in violence and duration. The roads are almost impassable, and the Army Service Corps horses and mules look as if they had been rolling in the mud. In the neighbourhood of the French headquarters there is quite a large lake near the seashore, and a local newspaper suggests that a good lookout should be kept in case a German submarine sails right up and torpedoes the building.

Our sailors are supposed to be used to the water, but when they come ashore they expect to find dry land. During the last few days, however, they could find none. The other night, when returning home at a somewhat late hour, I found one of our tars wading aimlessly along through a veritable lake near the railway station, while the rain poured on his unprotected head. I hailed him, and suggested he should choose a less liquid path. "That doesn't matter," he said, "I'm as wet as I can be. I'm trying to find the sea and my pier, but here I seem to be afloat already, and I've quite lost my bearings." I indicated the direction in which the water was salt, and he trudged away towards his own element. Our soldiers generally have suffered much inconvenience during the past week, and the language they use about this place is more sulphurous than ever.

Control of Local Supplies.

A "Mixed Commission" has been created by the Allies in conjunction with the Greek authorities to regulate the sale or transport of supplies for the civil population throughout this part of Greece. As I indicated in a previous letter, a considerable quantity of petroleum and other goods have been finding their way over the frontier, and as no amount of moral suasion will prevent Greeks and others from engaging in contraband traffic, it has been decided to form this Commission. I learn that it will consist of the British Consul-General (Mr. Wratislaw), a French officer, and the Greek Prefect. They will control the supply of goods by sea and land to certain points, and will also limit these supplies strictly to the actual needs and usual consumption of the places in question. The Commission has not yet held any public sittings, and meantime supplies are being held up, so that there is quite a famine in some districts as far as petroleum and some other necessaries are concerned. The restrictions are very severe, and, of course, result from the recent decision to tighten the cord which is strangling Germany and her allies.

German Sentinel Captured.

A French patrol consisting of seven Chasseurs d'Afrique, while making their rounds last Wednesday night near our advanced lines here, observed a German sentinel a short distance away with his head resting on his rifle, and apparently half asleep. The chasseurs at once dismounted and carefully "stalked" the *Boche*. Creeping around by a long circuitous route they succeeded in suddenly covering the sentinel's head with a sack and binding him fast. They eventually conveyed him in a motor-car to the French lines. Two of his captors were Alsatians, and in order to mislead their prize talked in German during the journey, pretending that they were Germans, who, finding the sentry asleep at his post, were taking him before his superior officer.

One can imagine his surprise when, after being relieved of the sack over his head, he found himself facing the French General Frotié and a squad of French chasseurs.

The prisoner was brought to Salonika, where he explained that he belonged to the 71st Regiment of Landwehr (Militia), forming part of the 113th Division. He declared that his division was at present between Ghevgeli and Doiran. He confirmed the rumours as to friction between the Germans and Bulgarians, and added that large quantities of ammunition were being hurried to the Balkan front. This seems to indicate an early attack; but, of course, one cannot entirely rely on the word of such an informant. Curiously enough, another German was captured yesterday. He is a deserter, and corroborates a good deal of the information given by the other prisoner, as well as that learned by the French aviators.

German Submarines at Porto Lagos.

I give the following entertaining story, from a Greek source, for what it is worth. At the time of the recent elections in Greece the mayor of a Greek town near the Bulgarian frontier, who was known to be Venezelist, had to give place to a Gounarist, and therefore pro-German, official, who would be more likely to see that the Gounarist candidate received every possible assistance. The Gounarist had already been appointed, but had not yet taken over his duties. He was to do so the following day. Meantime a Bulgarian officer arrived in town to confer with the Gounarist mayor on certain confidential matters. He called at the mayor's offices, and assuming that he was talking to the sympathetic Gounarist he opened his heart to the Venezelist. Among other things he told him that German submarines had been sent down in sections to Porto Lagos, where they were being put together in order to attack the Allied ships. The Venezelist ex-mayor left next day, and on reaching Athens communicated what he had learned to the proper authorities, who, disbelieving it, took no action. Later on submarines, which had apparently come from the quarter indicated, did appear on the scene, and it is believed they are still in this vicinity. I cannot vouch for the truth of all this, but it seems worth recording.

DR. ELSIE INGLIS ON THE SERBS.

Speaking last Tuesday at the Criterion Theatre at a meeting over which the Earl of Selborne presided, Dr. Elsie Inglis gave an interesting account of experiences in Serbia. Of the people themselves she spoke in very high terms. As a doctor she had naturally been struck by the wonderful recuperative power of the individual Serb when under her care. Men with a temperature overnight of 106° F. would be well in the morning. The nation as a whole had the same capacity for rebound and recovery. She had never fully realised what a fine race they were until the enemy took the country and she had the opportunity of comparing its inhabitants with some Russian prisoners. Then she saw that while the Russian of the peasant class had a peasant's hand, the hand and foot of the Serb of the same class were beautifully formed; this, as every doctor knew, indicated a well-developed nervous system. Dr. Inglis praised the Serbs for their well-known courage and fidelity, and said their principal fault was their laziness. Another characteristic that seemed strange to us was their indifference to money.

Of the Germans she said that it was a great mistake to regard them as a beaten foe. Their soldiers, as she had seen them in Serbia, were still confident of victory, and extremely boastful of what they would yet do. One of them told her that the German Fleet intended to seize Gibraltar and close the Mediterranean. She replied by asking whether it would come to the Mediterranean overland. Another lady doctor, a friend of hers, had found an even more effective answer to this sort of brag. Once when a boastful German was talking of what his nation had accomplished she replied, "That is all very true, but you see we English have only just begun." This retort was so successful that it was repeated when opportunity arose on a number of occasions, and never failed to reduce the confidence, the arrogance, and conceit of the persons to whom it was addressed.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, March 19.

The National Ideal.

M. Alexandre Marghiloman opened on Sunday last, at Ploeshti, the new headquarters of what, for want of a better term, we must call the Conservative-Marghiloman Club. It will be remembered that M. Marghiloman had not long been leader of the Conservative Party when a violent disruption occurred in consequence of the majority disagreeing with his somewhat equivocal views on the subject of the country's foreign policy. This led to a reconstitution of the party under M. Nico Filipesco's leadership. The new formation is, however, not recognised by the minority, who remained faithful to M. Marghiloman, and who therefore persist in considering themselves the Conservative Party, and look upon M. Filipesco as a usurper.

On the occasion of the opening of the new headquarters M. Marghiloman made a speech which still forms a subject of comment on the part of Press and public. He started by referring to the Crown Council held at Sinaia in the early days of August, 1914, and its decision to adopt provisionally a policy of neutrality, and to take measures for the defence of Roumania's frontiers against any violation of her neutrality. He deplored that such measures have only been taken on the Western and Southern frontiers, the fact apparently escaping him that the country has only been menaced from these directions. Further, the decisions of the Crown Council are not necessarily binding to the end of the war, and its authority is not such as to impose upon the Government the obligation of establishing expensive and useless defences on a long front which is immune from attack, for the mere purpose of keeping up a ridiculous show of impartiality.

M. Marghiloman then proceeded to criticise those who would realise a part of their ideals of national and territorial union at the expense of the other, and proclaimed his conviction that Roumania's "aspirations" can be realised in their entirety, and condemned the policy which would imply a renunciation of any part of the national ideal.

So far, good. No patriot can carp at this attitude, for there is no Roumanian but desires that Bessarabia may one day become part of a greater Roumania. M. Marghiloman, however, was, unfortunately, not content with this statement, but proceeded to give himself away by adding that Roumania could very well turn her glances towards the East, while obtaining privileges and concessions for the Roumanians of the West. Here again his argument breaks down, for the modest concessions so often solicited in vain would certainly not be granted to her natural enemy by a victorious Hungarian nation puffed up with the pride of conquest.

A Swedish Legation in Bucharest.

Baron de Beck Früs, the Swedish Minister in Vienna, has been accredited in the same capacity to the court of Bucharest. On March 18th he was received, together with the Swedish Military Attaché, M. Oscar de Ström, by King Ferdinand, to whom he presented his credentials, in the presence of M. Bratiano, President of the Council, and of M. Porambaru, Minister for Foreign Affairs. Great importance is said to be attached in Stockholm to the creation of a Swedish Legation in Bucharest. The fact of a diplomatic minister occupying at one and the same time, under present circumstances, the posts of Vienna and Bucharest, gives food for reflection. . . . Baron de Früs' situation may prove to be no easy one, and will call for the display of considerable tact.

The Death of a Spy.

A short time ago the guards of the munitions depôt of Bukovatz noticed a man wandering about in the neighbourhood of the depôt. Summoned to stop, ht took to flight. The guards fired upon him, but he escaped, apparently unhit. It was only some hours later that his body was found in some bushes, where he had succumbed as a result of several bullet-wounds. Papers proving his nationality to have been Hungarian were found upon him, together with a number of bombs.

Allied Prisoners in Bulgaria.

It is said that Mr. Einstein, the United States diplomatic agent at Sofia, and the Dutch Minister, have received permission to visit the Allied prisoners in Bulgaria. They are to be accompanied by Dr. Russeff, the Director of the Sanitary Service. Let us hope that this step will lead without delay to the betterment of our prisoners' situation.

Local War News.

People arriving in Jassy from Russia report that the large mass of troops gathered at Kisener has been directed towards the frontier of Bukovina.

The *Journal des Balkans* states that it has positive information to the effect that the German and Austrian troops have been withdrawn from Hungary and the parts adjacent to the Roumanian frontier, and conveyed to the Western theatre of war.

Among the war materials brought from Germany by way of the Danube and deposited at the Rustchuk arsenal was a large number of mines. During the last few days two Austro-Hungarian minelayers have also arrived at this spot, and have commenced to take soundings. This is looked upon as a preliminary to mining operations on the river.

THE "ROMANUL."

(From a Correspondent.)

Bucharest, March 20.

The Magyars, not content with nearly half a century's persecution of the Roumanian subjects of Francis-Ferdinand, have awakened to the fact that, with all the Roumanians capable of bearing arms at the front, there has arisen a golden opportunity for pressing on their work of denationalisation upon the population left behind. For twenty months the Roumanians of Transylvania and Bukovina have been fighting for the Habsburg monarchy with a gallantry that has aroused the grudging admiration of even the Hungarians. And against whom? Against their co-nationals of Bessarabia! For the Roumanians this war has been nothing short of compulsory fratricide. But the Magyars' hatred for the small people that will not let itself be stamped out has not been mitigated even by this sacrifice. They have now suspended for an indefinite period the *Românul*, the organ of the Roumanian National party, published at Arad in Transylvania. This would have created a painful impression had people not the hope that the Roumanian people, together with the other oppressed nations of the Dual Monarchy, will be relieved from the heavy burden that weighs upon them when this war, this "travail of the nations," has come to an end, and the new era of justice and freedom is inaugurated.

According to the Athens correspondent of *Le Petit Marseillais*, more than 30,000 Bosnians have offered themselves at the various Serbian Consulates in the United States for service with the Serbian army. Quite 11,000 presented themselves at New York alone.

In answer to observations that they were really not Serbian subjects, Bosnia now forming part of Austria, and that the mobilisation notice did not concern them, they affirmed that they considered themselves Serbians by heart and by blood, and intended to contribute under this head in defence of the common Fatherland.

THE STATE OF TURKEY.

(From Our Own Correspondent.)

Salonika, March 11.

I have interviewed travellers who have arrived here from Constantinople within the last few days, and they all tell the same tale: the Turks are groaning under the German yoke, and most of the people realise that their only hope is in making an early peace with England and her Allies. I am assured that the news regarding the attempt on Enver Pasha is true, but that it is believed he has only been wounded. The *Courier de Salonique*—a pro-German sheet printed in French, but which people here persist in calling *Der Kurier von Salonik*—reports that Enver Pasha and Jemal Pasha are at present on a pilgrimage to Mecca; but this seems to be another item of the "Wolff" variety, as it is very unlikely that the Turkish Minister of War would leave his post at such a critical time.

The Turkish police are still seen in the streets, but they have been largely reinforced by Germans, who seem to dominate everywhere.

Bills have been posted up denouncing Enver Pasha as the murderer of the Heir Apparent, and disturbances have taken place not only in the capital, but also at Smyrna, Broussa, and elsewhere. It is also reported, on what is declared to be the best authority, that a monster petition has been signed by about 70,000 Turks from the vilayets of Aidin, Broussa, and Konia, and addressed to the new Heir Apparent, begging him to induce the Sultan to dismiss the present Government and conclude an immediate peace with England and France. Particulars of this petition and other important matters were brought here by a person who carried the document containing them between the soles of his boot. The petition also demands the expulsion of the Germans, the dissolution of the Chamber, and other things, otherwise a revolution is threatened.

The latest news from Turkey received here this morning indicates grave happenings in that unhappy country, and a revolution seems to be nearer than people think. It is reported that the Turks have just appealed to the Bulgarians to send troops into Turkey to help to stifle a revolution, as even part of the Turkish army seems to be involved in the movement. I hear that the ammunition which the Turks had sent up to the Balkan frontier has now been returned to Constantinople in view of troubles there and farther south.

We are indebted to the kindness of a correspondent for permission to publish the following extract from a letter received on March 27, and written from Constantinople. It is of particular interest as giving definite news of the condition of some of our countrymen who have had the misfortune to be made prisoners of war. Fortunately, their lot appears to be not unbearable, and once again it is a pleasure to note how much the Americans in Turkey are doing for the prisoners:—

Mr. —— was going to see an —— Secretary away the other day viâ Haidar Pasha, Smyrna, Vola, Greek Islands, ——, when he saw on board the boat some of our men who were recovered from their wounds, and were being sent to Afion Kara Hissar. There were two officers in the saloon, and after some little trouble he got leave to speak to them. One was English—Goodwin—a flying man, and the other a French count, also a flying man. Both had lost their machines and had had their pilots killed, one in Suez and the other at the Dardanelles. Mr. —— had a shake-hands, and asked them to write to him if they wanted anything. As to the men—about twenty-five of them—he managed to shake hands with several, who told him they had nothing to complain about, but that they had no cash. They were dressed in clothes bought by the fund and sent them by the Americans. All the rest of the boys have been moved to the Harbié.

The American Red Cross have closed up and sent their things far and near. There is a talk of their next place being Syria. There are only *very* sick men coming in.

Our own British Seaman's Hospital is very likely to go, but the ladies are hanging on by a thread, as it were. They have moved most of their foodstuffs—so precious these days—and are just waiting the last two weeks for the final word.

Some of the prices at present are:—Macaroni, 27 Pts. per oke; rice, 18 Pts. per oke; flour, 16 Pts. per oke; peas, lentils, and dried broad beans, 12 Pts. per oke; candles, 5 Pts. each. We have to bake our own bread, and we are glad to do it, as we know it is clean. The black bread, as sold, is past looking at. Many people are paying 8 to 9 liras for a sack of flour.

We "hope on." "They also serve who only stand and wait." Sometimes, though, the waiting is hard.

KHARTOUM MILITARY SCHOOL.

(From a Correspondent.)

The annual prize distribution which was held recently at the Khartoum Military School reminds one of the fact that this admirable institution was established at the suggestion of the Governor-General himself after he had observed the detrimental effect that the climate of Cairo produced upon the Sudanese cadets, who formerly had to attend to receive their military training. The school is commanded by a British officer, and the cadets are recruited among the black pupils of the Gordon College. The number of pupils averages between forty and fifty, a proportion being of Arab descent, and belonging to the Jaalin, Shukria, Rizeigat, and other tribes. The majority comprise pure-blooded negroes. Cadetships are open to boys from the Gordon Memorial College, boys recommended by their headmasters through the governors of provinces, and to certain non-commissioned officers of the Sudanese battalions of the Egyptian Army. In the first two classes candidates are required to pass a simple examination in order to test their educational capabilities, after which they are medically examined and retained for a brief period in the establishment, so that it may be further ascertained whether they are likely to become suitable candidates for a military career.

The fees demanded are merely nominal, and in the majority of instances candidates succeed in being placed upon the non-paying list as a result of their parents petitioning the Sirdar for this privilege, which is very seldom refused. Of the total number of the cadets now at the Military School most are Gordon College boys, while a few are N.C.O.'s from the Sudanese battalions. There are about twenty cadets upon the paying list, for each of whom the sum of £E8 1s paid; ranker cadets are not expected to pay any fees. All cadets are boarded and lodged in the establishment, while their clothing, equipment, and books are also found for them by the Government.

The period of instruction extends over three years in the case of the Gordon College cadets, and over a period of between eighteen months and two years in the case of ranker cadets. The average time devoted to work in each week amounts to 32½ hours, and the average working-day hours are as follows: 6.30 a.m. to 7.30 a.m., and from 8.15 a.m. to 9 a.m., outdoor work; 9 a.m. to 12.30 p.m., indoor work.

The ranker cadets are selected specially after having proved themselves to be good instructors and disciplinarians in their units; and are attached to the school in order to improve their military education. It would seem, judging by the eulogium passed upon them year by year on the occasion of the distribution of prizes, that "their behaviour is excellent, and reflects great credit on their battalions." There is no doubt that the Sirdar's high praise—not easily secured—coupled with the method of promotion which is in force, acts as a strong impetus to the cadets, causing them to vie eagerly with one another in attaining to a state of efficiency. In this connection it is worthy of remark that Sir Reginald Wingate makes a point of addressing the lads in Arabic, of which he has a perfect command, both writing and conversing in this somewhat difficult language with complete ease.

In regard to the cadets' shooting, it may be added that they prove themselves, as a rule, very keen in the musketry course. The eyesight of these young fellows is found to be excellent. When Yacoub Pasha Artin, formerly Minister of Education at Cairo, visited the Khartoum Military School in the year 1908 he seemed to have observed particularly the precision of the cadets' firing, the majority, he tells us, "hitting the bull's eye once out of five shots, and one young fellow struck it five times out of five."

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, March 21.

Espionage ?

Several members of Dr. Daneff's party have been arrested on a charge of espionage on behalf of Russia. There can be no doubt that the whole business is in reality due to spite on the part of King Ferdinand against Dr. Daneff, who is the only statesman who has dared to match himself against the King, and who, rather than write what his royal master wished, has suspended the publication of his paper *Bulgaria*. An attempt is therefore to be made to force him into submission, as has been done with MM. Malinoff and Ghenadieff.

The persons arrested, it is important to observe, are accused of spying in Turkey, not in Bulgaria, and this, too, before Bulgaria entered into the war. Moreover, the case of one of the accused, Prutkine, the captain of a merchant vessel, shows how the whole affair has been trumped up. For Prutkine is accused of having sold plans of the minefields of Varna, but the witness on whose evidence the charge rests, a pilot, stands discredited already, as it is proved by Prutkine's log-book that on the day when he is supposed to have asked for information about the mine plans he was not even in Varna. Apart from this, there is the fact that he had previously brought his ship into Varna unaided, thus showing that he, like other nautical men, had no need of any chart of the minefields, even if he had wished to sell them.

Aliens to be Enrolled.

A large number of aliens residing in Bulgaria, especially Armenians and Jews, have hitherto escaped military service on the grounds of being Turkish or Persian subjects. Now, however, an order of the Ministry of War orders all those between the age of twenty and forty-six years to perform military service in Bulgaria; otherwise they risk being expelled.

The Gregorian Calendar.

The Bill for the introduction of the Gregorian calendar is now before the Sobranje, and if it passes, as seems probable, the change will come into force on April 14. The Bill contains nine clauses, and provides for religious festivals, etc., being reckoned according to the changed calendar. It is interesting to recall that some ten years ago a proposal for altering the calendar was discussed by the Governments of the Balkan countries, but had to be abandoned on account of objections raised by the clergy. To-day it looks as if the steam-roller policy of the Germans in Bulgaria will force the change.

Persecution of Greeks.

Reports continue to arrive of the persecution by the Bulgarians of the Greek population in the occupied Serbian territory. The *Komitajis*, especially, encouraged by the Bulgarian officers, have commenced a ferocious campaign in order to "Bulgarize" the territory.

At the beginning of the occupation the Bulgarians behaved quite well, but lately they have commenced what looks like an attempt to exterminate the Greeks. They ill-treat the women, rob the men, and generally inspire so much terror that the luckless Greeks are flying the country *en masse*. According to trustworthy information, out of 300 Greek families at Ghevgeli not one remains; from Bogdanitza, too, the Greek element has entirely disappeared; at Valandovo the Bulgarians have occupied 150 Greek houses by force; and at Doiran the Greeks are treated in similar fashion.

NEAR EAST BOOKSHELF.

A NEW EDITION.*

It is always a pleasure to meet an old friend decked up in the finery which tells of prosperity, and the work of the Hon. Robert Curzon, jun., is an old friend indeed. The new edition which has reached us is made more than ordinarily attractive by the inclusion of an introduction by Mr. D. G. Hogarth, which opens with the following comparison :—

> It is a tiresome commonplace of reviewers to liken books of Near Eastern travel to "Eothen," however little they may have in common with it. But Robert Curzon's "Visits to Monasteries in the Levant," a product of the same epoch, similar conditions of travel, and a mind formed much as Kinglake's was formed, can be compared very appropriately (as, indeed, it often has been compared) with that famous Essay on the Near East, which preceded it by five years.

Mr. Hogarth does not claim for the "Monasteries" the same level of art as characterised the work of Kinglake, although he considers that when the recollection of an incident excited him Curzon could put into his description an art hardly inferior to that of the other writer.

> With the same selective instinct as Kinglake's, Curzon aimed much more than his predecessor at narrating fully his chosen episodes. Therefore, while "Eothen" is an Essay on the Near East, shot through and through with illustrative experiences, Curzon's "Monasteries" is a proper travel-book, perhaps the best yet written on that region.

The first edition of this work was published by the house of Murray in the earlier part of last century (a facsimile of the original title page is included in the present volume); its re-appearance in its present attractive form after a lapse of over fifty years may be taken by people who are unfamiliar with Robert Curzon's style as sufficient evidence of its excellence and popularity. Anything in the nature of an ordinary review on such a work is unnecessary, but we cannot forbear quoting the following paragraph from the writer's chapter on Cairo in 1833 :—

> So long as there were no hotels in Egypt the process of fleecing the unwary traveller was conducted on different principles from those followed in Europe. As he seldom understands the language, he requires an interpreter, or dragoman, who, as a matter of course, manages all his pecuniary affairs. The newly arrived European eats and drinks whatever his dragoman chooses to give him; sees through his dragoman's eyes; hears through his ears; and, although he thinks himself master, is, in fact, only a part of the property of this Eastern servant, to be used by him as he thinks fit, and turned to the best account, like any other real or personal estate.

Cairo has altered much since that time, but the characteristics of the dragomans appear to be little changed.

As a collector of monastic manuscripts Curzon was, of course, famous, but here again he was fleeced unmercifully by the monks, who sold him required volumes from the rubbish heaps of the monasteries with great advantage to themselves. An instance of the author's gift of humour may be taken from his preface of 1865 when he refers to these transactions: "The British Museum," he writes, "though cheated by the monks according to their gifts (that is, as far as a total want of principle and understanding enabled them to direct), acquired the ancient Syriac library of the Natron Lakes at a far less cost than what I had paid to those same monks and others for the ancient books which were of no use to them."

But as we have said, the work of Curzon needs no review. It is scarcely too much to say that his records have taken their place among the classics, and we welcome this new and charmingly compact volume which provides their latest edition. One does not judge a book by its covers, but the binding of this one should go a long way towards ensuring to it a justly deserved popularity. It is illustrated by numerous woodcuts after sketches by the author.

BOOKS RECEIVED.

Messrs. Simpkin have just published in a shilling edition a book entitled "Twenty Years in Baghdad and Syria," by Canon J. T. Parfit, who has recently been contributing an interesting series of articles on the Near East to a London evening journal.

The House of War. By Marmaduke Pickthall. (Eveleigh Nash. 6s.)

Sheikh Haroun Abdullah: a Turkish Poet and His Poetry. By Henri M. Léon. (Published for La Société Internationale de Philologie, Sciences, et Beaux-Arts by G. Toulmin and Sons, Blackburn. 2s. 6d. net.)

The Armenians. By C. F. Dixon-Johnson. (Toulmin and Sons, Blackburn. 6d.)

The Agricultural Journal of Egypt. Vol. V., Parts I. and II. (Cairo: Government Press. P.T.S.)

* "Visits to Monasteries in the Levant." By the Hon. Robert Curzon, jun. With an introduction by D. G. Hogarth. (London: Mr. Humphrey Milford. 2s. 6d. net.)

TANGIER TO TEHERAN.

The message sent by the King to General Townshend at Kut gives eloquent expression to the feelings with which all of us have been following the course of events on the Tigris for more weeks than we care to remember. As to the effect it will have had upon the brave garrison at Kut there can be no doubt whatever. It will have put fresh heart into them indeed, and will have stiffened their resistance as a message from no other source could have done; and if the attacking Turks and Arabs had never before heard a British cheer, I warrant they heard one when the message was made known to the troops. It seems to me that his Majesty has once more shown that he has a juster appreciation of human nature than have some of his responsible advisers; and as one of his loyal subjects who have friends in the beleaguered town I am intensely grateful to him. I should like to know why the message was not made public until seven weeks after it was despatched. But I hope we may regard its publication now as a favourable omen—an indication that the powers that be are of opinion that General Townshend is on the point of being relieved.

***

The sinking of the Russian Red Cross hospital ship, the Portugal, last week adds yet one more to the long list of abominable crimes perpetrated by the German apostles of Kultur; and the fact that the dastardly deed was perpetrated in Turkish waters must make the Turks more ashamed than ever of their uncivilised allies. As to the report that they sank the boat themselves, I flatly decline to believe it. For the Turk has throughout this war shown real respect for hospital ships, and he will appraise at its true value the act of the submarine pirates. At the Dardanelles, I am told by trustworthy witnesses, the Turkish gunners scrupulously respected our hospital ships, and on one occasion when one of these boats happened to anchor in such a position as to afford shelter to a fighting ship, the Turks sent off a message: "If you anchor there we shall be unable to avoid hitting you. Please move."

***

Mr. G. Ward Price, I observe, has been drawing a pleasing picture of life in Salonika "when the clouds take a holiday"; and has pointed out that the open-air existence, the hard training and good food "must have put five years on the life of most of the troops" out there. This is probably no exaggeration, and the comparison he draws between the life of the soldiers at Salonika and that of the worker in the stuffy office, the gloomy warehouse, the mill and the mine in this country might with advantage be studied by the "slacker." But the parts of this particular article which interest me most are the descriptions of the concerts provided by our military bands, and of the present state of the famous White Town. As to the concerts I notice that Mr. Ward Price, greatly daring, actually mentions that "a Scottish regiment often sends its pipers" to play at them. Is not this information calculated to be of use to the enemy? Or does the Censor imagine that the Bulgaro-Huns will imagine that the Scottish regiment referred to "sends its pipers" all the way from Scotland? To my minds it looks as if Jove had been caught nodding.

***

Then, too, as to the White Tower. Mr. Ward Price tells us about the installation of the electric light and the laying on of a water supply. This is very right and proper, and I have no fault to find with the facts or with their publication. Indeed, I have already mentioned them in these columns. But when I read *in print* that the battlements of the Tower "are used by our sailors for a signal station," and that they (the sailors, not the battlements) "have built a hen-run on the top and laid out a flower garden with earth carried up bucketful by bucketful"—well, I trembled for the writer! Has he *no* fear of the Censor? Surely after our gallant sailors have been at such pains to disguise the Tower as a model poultry farm, in order to deceive the Fokkers, the Taubes and the Zepps., it is a bit rough on them that their labours should be rendered useless in such a fashion. For, you see, all that the enemy aviators have to do now is to hover over the town until they hear that joyous cackle with which the conscientious hen proclaims the fact that she has fulfilled the purpose for which she was designed by Nature, and then ——. But, perhaps, after all, Mr. Ward Price and the Censor are not quite so guileless as I have been thinking. They may craftily have reckoned that the Hunnish aviators, being uncivilised ruffians and unlikely to possess any true ear for music, will not be able to distinguish between the jubilant "domestic announcements" of the hens and the proud skirl of the Hieland pipes, and that, as a consequence, they will lose their bearings and fall easy victims to our anti-aircraft guns.

***

Mention of Salonika reminds me that a correspondent in that town has sent me two programmes of cinematograph entertainments which he has (presumably) attended. Both are printed in Greek, "French," "English" and Hebrew. One announces:—

OLYMPIA'S MOVING PICTURES
GALA PROGRAMM
From to-day
A Fine Programm with two master pieces
THE ADVENTURER
A Social and powerful drama in 5 ACTS
Very well interpreted by the best artists of the French Theater
TO APPEAR WITHOUT BEEING SHOWING
A Fine Comedy in 2 ACTS

I admire the penultimate line immensely. The other announces: "The Fatal Grotte, drama in two parts; The Allied Troup in Salonica; Actuality; The Marchand of Flours," and "One Comical." Only one? My correspondent has been kind enough to explain: "Grotte" means "Grotto"; "Troup," "Troops"; and "The Marchand of Flours," "The Little Flower Girl." But, with the prices of foodstuffs what they are in Salonika, I am not sure that a seller of "flours" would not prove quite as big a draw as the most charming "petite marchande de Fleurs."

***

Sixty years ago on March 30 a peace treaty was signed, and the Crimean War came to an end There were but seven nations signatory to that little affair; as things stand, there are thirteen countries at war to-day, and the end is not yet. If peace were to be declared to-morrow, I wonder how many of the warring nations would know exactly what they want. Some of our Serbian Allies at least know what they think, for one of the banners carried in the Slav procession to Claridge's last Sunday bore the simple and straightforward legend: "Austria has no right to exist."

***

Illustrations have appeared in various papers this week showing a new type of helmet used by German snipers, and once more I am reminded how in many ways this war is taking us back to the good old days again. A few years ago the suggestion of armour for modern soldiers would have been ridiculed, yet now we are gradually adopting its use. But I wonder whether the stuff of the twentieth century will prove as lasting as the wonderful chain armour of the Crusaders? Last time I was in the Sudan I was present at an assembly of sheikhs and chieftains in the El Obeid district, and three at least of these notables wore chain armour which undoubtedly dated back to the time of the Crusades. Unfortunately for the collector, this armour is greatly prized by its native owners, and I personally know of a sheikh who refused the offer of a sum running well into three figures for a chain tunic.

***

It is curious to think back on those days in the Sudan now when the map tells me that steel rails connect El Obeid with Khartoum. The journey from the river to El Obeid was formerly rather an arduous one—at least, to anyone unaccustomed to camel riding. It is curious, too, to think of the Sudan as an oasis of peace in a desert of war and carnage, and of the followers of the Mahdi as law-abiding gentlemen in comparison to the followers of modern Attila. When one considers it, I often think it strange that Englishmen should make such successful colonizers when they belong to a nation so conservative. Hating change, we graft it upon countries to the uttermost end of the earth, and then regard our accomplishment with a mixture of regret and pride. The fact is, I suppose, that the pride of nation is stronger within us than the love of self, and, excepting those few among us who count personal conviction as being sufficient to release us from all obligation to humanity, we would lay our all at the feet of our mother.

***

At the last Arabic examination for British officials, held at Khartoum, Mr. G. U. Young, one of the four Inspectors of Forests, successfully passed the lower standard, and he has been duly gazetted. This examination in the vernacular is of great importance, and, indeed, the candidate for employment in the Sudan Government Service soon finds that the results of his Arabic studies really determine his advancement and seniority. So high is the *esprit de corps* among the younger members in the Sudan Civil Service that they are not satisfied to "scrape through" their first examination,—the majority endeavour to pass with honours. Even the handsome cash bonus of £E100 which has hitherto been presented to the successful competitor in the Advanced Arabic Examination (whether the same arrangement continues under the present restricted resources of the Finance Department I cannot say) is of less moment than the distinction which the achievement brings to the Department, and which, incidentally, bears upon the young official's own future promotion. The gaining of this high distinction is rare, there having been but four successful competitors up till now, among whom is the present Governor of the Blue Nile Province—formerly Governor of the Halfa Province—Mr. G. E. Iles

11	29	Tuesday	7	8
12	30	Wednesday	8	9
13	31	Thursday	9	10

To-morrow is the birthday of H.M. the King of the Belgians.

Prince Christian of Greece visited the King at Buckingham Palace on Saturday morning.

Prince Christopher is the youngest son of the late King George, and a great favourite with his brother, King Constantine. He will leave for Petrograd very shortly to visit her Majesty the Queen-Dowager, who is a Grand Duchess of Russia.

A Reuter's message from Athens dated March 30 reports:—The audience which General Sir Bryan Mahon, the British Commander-in-Chief at Salonika, had of the King was the longest of all the recent audiences granted to the Allied generals, lasting upwards of an hour. Sir Bryan was highly satisfied with his cordial reception. He was much impressed by the King's soldierly bearing and frank manner. Sir Bryan's conversation with the King turned upon general subjects, and thorny questions such as the German bombing of Salonika seem to have been avoided. The General was accompanied to the Palace by Lord Granard and a suite composed of Colonels Cunliffe Owen and Fairholme, who remains as military attaché, succeeding Major Sir Thomas Cuninghame and Captain Thellusson.

General Sir John Maxwell had the honour of being received by the King at Buckingham Palace on Tuesday, when his Majesty invested him with the insignia of a Knight Commander of the Order of St. Michael and St. George.

Lord Kitchener had an audience of the King at Buckingham Palace on Monday evening.

Prince G. Troubetskoi, formerly Russian Minister in Belgrade, left London on Sunday for Petrograd.

A message received in London on Monday states that Sir William Vincent and Major-General Bingley have left India for Busreh in connection with their mission to examine and report on the difficulties experienced in the transport and treatment of wounded on the line of communications in Mesopotamia.

General Ivanoff, the famous Bulgarian, who has been commanding the south-western group of Russian armies, has retired from that command owing to ill-health. The Tsar has addressed a flattering rescript to him on the occasion, says Reuter's Petrograd correspondent.

Essad Pasha, who arrived in Paris last Friday, was on Monday received by M. Briand, the French Premier, who warmly congratulated him on his loyal attitude towards the Allies. To a representative of the Paris *Journal* Essad Pasha has declared his intention of spending a few days in England, "that great country whose noble part in this war I so much admire."

M. Filipescu, the Roumanian Senator and ex-Minister of War, has just returned to Bucharest from the Russian front. He states that he has been impressed by both the numbers and quality of the Russian troops.

Our Bucharest Correspondent writes (March 21):—

Captain Troianescu, the Roumanian Military Attaché at Sofia, has arrived in Bucharest.

M. Mortzun, Minister of the Interior, has recently been confined to his bed in consequence of an attack of emphysema, which caused no little anxiety to those around him.

M. Trandafiresco, Secretary of Legation, who was travelling from Paris with the diplomatic bag, was held up for over ten days at Brashov by the Hungarian authorities. Exact information is wanting, but the Ministry of Foreign Affairs is said to have intervened in the matter. M. Trandafiresco has now arrived in the country, but the diplomatic correspondence of which he was the bearer is reported to have been retained at Brashov.

M. Guranesco, Secretary of Legation, at present attached to the Roumanian Legation in Sofia, has arrived in Bucharest.

A marriage has been arranged, and will take place in July, between Hugh Mullins, Finance Department, Sudan Government, younger son of Mr. A. G. Mullins, of Lympstone, Devon (late of Cape Town), and Marjory, elder daughter of the late Mr. A. H. Etherington, of Bentham House, Purton, and Mrs. Etherington, Brooklyn, Reading.

A Cyprus correspondent writes:—Mr. Porter, who was for some time President of the District Court of Papho, and has since acted at Nicosia and elsewhere, was entertained at dinner on March 9, at N. Houri's Hotel, by the Greek members of the Bar of Nicosia. Mr. Porter, who is leaving the island shortly, has been very popular. The King's Advocate, the President of the Nicosia District Court, Greek judges and registrars were also invited. The health of the chief guest was proposed by the King's Advocate, and Mr. Porter replied in an admirable speech. Mr. J. R. Holmes, P.D.C., Nicosia, acknowledged the toast to his health, proposed by the Hon. Mr. Theodotou, M.L.C., and supported by the Hon. Mr. Artemis, M.L.C.

Archdeacon Beresford Potter (Archdeacon in Cyprus and Syria) is acting as Hon. Chaplain to the Volunteer Training Corps (Godalming Company).

Mr. Alexander Devine, Headmaster of Clayesmore School, Winchester, a member of the council of the Montenegrin Red Cross and Refugee Relief Fund, has left London as Commissioner to visit the Continent for the purpose of making inquiries as to the condition and needs of the refugees and to report to the Montenegrin Committee on his return.

The Crown Prince of Serbia was the principal guest at a reception held on Monday evening by Lady Cowdray at 16, Carlton House Terrace, to welcome Dr. Elsie Inglis, of the London units of the Scottish Women's Hospitals, on her return from experiences in Serbia. The Crown Prince was attended by Colonel Nikolaievitch, Military Attaché at the Serbian Legation; Captain Petronievitch, M. Antonievitch, and Professor Popovitch, of the University of Belgrade. Other guests were the Duke and Duchess of Somerset, the Earl and Countess of Lindsey, and Lady Muriel Bertie, Lord and Lady Sydenham, Lady Emmott, Lord and Lady Edmund Talbot, Lady Matheson, Sir Frederick and Lady Pollock, Sir Gilbert and Lady Parker, Miss Balfour, Mrs. Anstruther, Mr. Bertram Christian, Lady Grogan, Lady Gibb, Miss Margaret Kinnell (Mlle. Nika), Mrs. and Miss Ismay, the Hon. Mrs. Lyttelton, the Hon. Mrs. Harold Pearson, Captain the Hon. Clive Pearson and Mrs. Pearson, Mr. and Mrs. de la Rue, Mr. and Mrs. Seton-Watson, and Commander and Mrs. Cunninghame Graham.

Sir Mortimer Durand will preside at a meeting of the Central Asian Society to be held next Wednesday afternoon at 22, Albemarle Street, at which Mr. W. J. Childs will read a paper on "Asia Minor and the War."

According to arrangements existing as we go to press, a party of trained relief workers and nurses, headed by the Rev. Harold Buxton, hon. secretary of the American Refugees (Lord Mayor's) Fund, 96, Victoria Street, S.W., was to leave London on Thursday for Russian Armenia. The mission, which has the approval of the British Foreign Office and of the Russian authorities, and the British Red Cross Society, will distribute relief to the million refugees still in Russian territory.

A Reuter's message from Athens, dated April 4, reports that the arrests of M. Ghenadieff, the leader of the Stambolonist Party, his brother-in-law, and six other persons are reported from Sofia. The message adds:—"The charge against them is not known, but it is believed to be that of intriguing against the Government." The fact doubtless is that M. Ghenadieff's sympathies with the Entente have given offence to "Tsar" Ferdinand. On his return from Rome last year it was reported that M. Ghenadieff had been arrested on the charge of plotting a bomb outrage in Sofia Cathedral. The report, which was believed to emanate from German sources, was afterwards denied.

A Reuter's message from Amsterdam, dated March 5, reports:—According to a telegram from Sofia of yesterday's date, Prince August Wilhelm of Prussia, the German Emperor's fourth son, and the Duke of Saxe-Coburg-Gotha have arrived there as guests of King Ferdinand.

Presumably the Duke of Saxe-Coburg has gone to Sofia to inspect the Bulgarian regiment of which he is honorary colonel.

Lady Paget, with fifty-four members of the Serbian Relief Fund Unit, arrived in London on Monday afternoon. Sir Ralph Paget met Lady Paget at Newcastle, and returned with her to London.

Our Bucharest Correspondent writes:—

Lady Paget and the members of her hospital staff have come and gone, and if they have carried away a recollection of their short stay in the Roumanian capital but half as pleasant as that which they have left, we who remain behind may be well satisfied.

They arrived in Bucharest on Friday night, March 17, from Sofia, where Lady Paget had been the guest of Queen Eleonore. She drove to the station in a court carriage, accompanied by the principal lady-in-waiting. At Rustchuk the party had been met by M. Radeff, the Bulgarian Minister, who accompanied them to Bucharest in accordance with orders from Queen Eleonore. Descending at the station, they were received by the British, Russian, and Serbian Ministers, M. Také Jonescu, M. Corbescu, the Prefect of Police, and numerous other sympathisers. An apartment had been reserved for Lady Paget at the Athenée Palace Hotel, the staff of nurses finding hospitality at the Brancoveanu Hospital, than which, they say, they have seen no finer.

The following day Lady Paget partook of a luncheon given in her honour by Mr. James Bourchier and Colonel Thomson, the British Military Attaché, was received by her Majesty Queen Marie in the afternoon, and dined at the British Legation the same evening. Her staff had meanwhile visited the town, and found much to interest them in the well-organised hospitals. Here they were heartily welcomed, and, in return, created the best of impressions, expressions such as *Foarte simpatici*, *Englezi*, being audible on all sides.

On Sunday, Lady Paget had the honour of lunching with the King and Queen at Cotroceni Palace, and in the afternoon Mr. and Mrs. Také Jonescu opened their hospitable doors to the entire party and to a large number of friends and sympathisers—British, Roumanian, and Allied—tea being served to the sounds of "Tipperary." On the ears of their kind hostess must have fallen pleasantly the regrets expressed by both doctors and nurses regarding the shortness of their stay in Bucharest. At night the party left for the Russian frontier en route for Petrograd. They were seen off at the station by many members of the diplomatic corps and a large crowd of admirers. M. Marinkovitch, the Serbian Minister, travelled with them to the frontier.

Digitized by Google

APPOINTMENTS, PROMOTIONS, Etc

The *London Gazette* of Monday notifies the appointment of Major-General the Hon. Sir Julian H. G. Byng, K.C.B., K.C.M.G., M.V.O., to be temporary Lieutenant-General. Dated February 27, 1916.

Signor Falqui Cao has been nominated by the Sultan of Egypt to be a Judge of the Mixed Tribunals. Signor Falqui Cao has hitherto been the Italian Consular Judge in Cairo.

The *London Gazette* of Tuesday announces that the King has been pleased to confer the undermentioned rewards for gallantry and distinguished service in the field during the engagement on February 26, 1916, at Agagia, Egypt :—

To be a Companion of the Distinguished Service Order.

Major (temporary Lieutenant-Colonel) Hugh Maurice Wellesley Souter, 14th Murray's Jat Lancers, Commanding Dorset Yeomanry, Territorial Force.

Awarded the Military Cross.

Second Lieutenant John Hoffham Blaksley, Dorset Yeomanry, Territorial Force.

Awarded the Distinguished Conduct Medal.

No. 846 Private William Brown, 1/1 Dorset Yeomanry, Territorial Force.

The King has also conferred the Military Cross upon the undermentioned officers in recognition of their distinguished service in the field from April to June, 1915, during the operations against Jebel Miri, Kadugli District, Nuba Mountains Province of the Sudan :—

Captain (now Major) Clement Leslie Smith, V.C., Duke of Cornwall's Light Infantry, and Commanding the Camel Corps.

El Saghkolaghasi (Adjutant-Major) Mohammed Effendi Fuad El Seyufi, Camel Corps.

Reuter's Bucharest correspondent reports that a list of several hundred promotions in the Roumanian army was published last Saturday. Among them are three promotions to the rank of General of Division and ten to that of General of Brigade. General Coanda, Inspector-General of Artillery, has been promoted to the command of an Army Corps. His promotion has produced an excellent impression.

The Roumanian Government is putting into effect its policy of appointing younger men to high commands. Five generals of divisions have been placed on the retired list from the 14th inst. Among them are General Zottu, Chief of the General Staff, and Generals Calcer and Jarca, Inspector-Generals of Armies. The two latter are replaced by Generals Averesco and Cottesco, hitherto commanding the First and Second Army Corps.

The *Morning Post* recalls that General Coanda, who was Chief of the Roumanian Staff at the time of the second Balkan war, was able to facilitate the passage of the Treaty of Bucharest by adjusting the boundary claims of Greece and Bulgaria. The Bulgarians wanted to bring their line as near to Kavalla as possible. M. Venizelos resisted their proposals, and General Coanda, who was called in as arbiter, suggested an intermediate line.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY & ALL EXAMS.

REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

THE CROWN PRINCE OF SERBIA.

Visit to England.

The Crown Prince Alexander of Serbia arrived in London last Friday morning and had a reception which can have left no doubt in his mind as to the popularity of Serbia in this country. And wherever he has appeared since his arrival in our midst he has been the object of respectful demonstrations of the same character.

On reaching Folkestone from Paris, accompanied by M. Pashitch, the Serbian Prime Minister, his Highness was met by M. Boshkovitch, the Serbian Minister in London; Colonel Nikolaïevitch, Military Attaché at the Serbian Legation; Colonel Harrison, formerly British Military Attaché at Belgrade; and Admiral Troubridge, who was recently in Serbia in command of the British contingent. At Charing Cross, whither the party travelled by special train, Prince Albert greeted the Royal visitor on behalf of the King. Sir Edward Grey, Viscount French, and Mr. Lloyd George were also present; and a guard of honour was supplied by the Scots Guards, whose band was also in attendance.

Prince Albert cordially shook hands with the Crown Prince on his arrival, and afterwards presented to him Lord French, Sir Edward Grey, and Mr. Lloyd George. The Crown Prince next introduced M. Pashitch and the members of his suite to Prince Albert. Royal carriages—semi-State landaus—were drawn up in the roadway opposite the platform. Prince Albert and the Crown Prince took their seats in the first one, and drove off to Claridge's Hotel, where the Crown Prince has been staying during his visit. M. Pashitch was in the second carriage, with M. Yovan Yovanovitch, Minister Plenipotentiary; in a third carriage were the Prince's suite, who, like the Prince himself, were attired in the grey uniform of the Serbian Army.

Amongst others present on the platform to greet his Royal Highness were:—Major-General Sir Francis Lloyd, General Sir Arthur Paget, Sir Ralph Paget, Captain Godfrey-Faussett (in attendance on Prince Albert), the Earl of Desart, Sir Roper Parkington, Sir Arthur Walsh (the King's Master of the Ceremonies), Sir Henry Bax-Ironside, Lady Grogan, Sir Arthur Evans, Mrs. Carrington Wilde (Hon. Secretary, Serbian Relief Fund), Mr. and Mrs. Seton-Watson, the Principal of King's College and Mrs. Burrows, Sir Francis Gore, and the Lord Mayor of London (Sir C. Wakefield).

His Royal Highness spent a quiet day on Friday. On Saturday he was entertained at luncheon at Buckingham Palace by the King and Queen. Prince Albert and Princess Mary were present, and the following had the honour of being invited:—M. Pashitch, M. Boshkovitch, M. Y. Yovanovitch, M. Dragomir Yankovitch, Colonel Milivio Nicolaievitch (Serbian Military Attaché), Colonel Ostojitch (Marshal to the Royal Court and Acting First A.D.C. to the King of Serbia), Colonel Dr. Tchedo Mihajlovitch, Lieut.-Colonel Pavle Yourichitch (A.D.C. to the Crown Prince), M. Yankovitch (Secretary to the Foreign Office), Admiral Troubridge and Lieut.-Colonel A. P. B. Harrison (specially attached to his Royal Highness), the Marquess and Marchioness of Crewe, Viscount French, Sir Edward Grey, the Right Hon. A. J. Balfour, the Countess of Airlie and the Lady Mary Trefusis (Ladies-in-Waiting), the Lord Farquhar (Lord Steward), the Viscount Valentia (Lord-in-Waiting), Lieut.-Colonel the Right Hon. Sir Frederick Ponsonby (Keeper of the Privy Purse), the Master of the Household, the Hon. Sir Arthur Walsh (Master of the Ceremonies), and Captain B. Godfrey-Faussett, R.N. (Equerry-in-Waiting).

In the afternoon the Crown Prince, with M. Pashitch and Admiral Troubridge, visited Queen Alexandra at Marlborough House, Princess Christian at Schomberg House, Prince and Princess Arthur of Connaught, and the Princess Royal.

The callers at Claridge's Hotel included Sir Edward Grey, Mr. Balfour, and Mr. W. H. Long, the Russian and Spanish Ambassadors, the Belgian, Roumanian, Portuguese and Greek Ministers, the Marquis and Marchioness of Lincolnshire, the Earl and Countess of Chesterfield, Earl Howe, Sir Ralph Paget, Sir Arthur Nicolson, Sir Henry and Lady Bax-Ironside, and Mme. Olga Novikoff.

On Sunday Prince Alexander paid a visit to Woolwich Arsenal. During the day he personally conferred the Order of St. Sava on Mrs. Troubridge, the wife of Admiral Troubridge, in recognition of her services to the hospitals in Serbia; and conferred a similar Order on Mrs. Harrison, the wife of Lieutenant-Colonel A. P. B. Harrison, who is specially attached to his suite.

In the afternoon a demonstration of Serbs, Croats, Slovenes, and Czechs was held in honour of the Prince's visit. The processionists, about 500 in number, started from Air Street, Regent Street, and marched to Claridge's Hotel, where the leader and Father Nicholas, the well-known Serbian monk and Priest-in-Waiting to King Peter, entered the hotel, and caused to be conveyed to his Royal Highness a message expressing the cordiality of the Serbians in London in welcoming Prince Alexander to England. Outside cheers were given for King Peter, the Crown Prince, and Dr. Pashitch, the Serbian Premier. Speeches were delivered in the Serbian language, and the Serbian National Hymn was sung, and the procession then proceeded to Hyde Park.

On Monday morning the Prince visited Princess Henry of Battenberg. He was afterwards the guest of the Serbian Minister at luncheon at the Ritz Hotel, when among the guests invited to meet him were the Marquess of Crewe, Sir Edward Grey, Earl Kitchener, Mr. Bonar Law, Mr. Austen Chamberlain, the Russian Ambassador, the Japanese Ambassador, the French Chargé d'Affaires, the Italian Chargé d'Affaires, the Belgian Minister, the Portuguese Minister, Sir Arthur Nicolson, Sir H. Bax-Ironside, the Lord Chamberlain, Sir Derek Keppel, General Sir Arthur Paget, Admiral Troubridge, Lieut.-Colonel A. P. B. Harrison, and the Lord Mayor.

In the afternoon the Prince called upon Sir Edward Grey and other Ministers, and in the evening he dined with Lord Kitchener at York House. Among the guests were Prince Albert, Sir Edward Grey, the Earl of Derby, Mr. Walter Long, M. Pashitch, the Serbian Minister, and the suite of the Crown Prince. His Royal Highness afterwards attended a reception given by Lady Cowdray at Carlton House Terrace.

On Wednesday, the Prince received a deputation of prominent public men who wished to express their admiration of and sympathy with Serbia. The deputation was headed by the Archbishop of Canterbury and the Lord Mayor of London, and amongst its members were :—Lord Milner, Lord Southwark, Lord Aberconway, Lord Eversley, Lord Burnham, Sir Ivor Herbert, Sir John Jardine, Sir E. Beauchamp, Sir Arthur Markham, Sir Charles Nicholson, Sir Henry Dalziel, Mr. G. G. Greenwood, Sir Frederick Cawley, Sir Edward Carson, the Hon. Arthur Stanley, Mr. Ronald M'Neill, Sir Philip Magnus, Colonel Yate, Admiral Sir Hedworth Meux, Mr. C. Stuart-Wortley, Lord Henry Cavendish-Bentinck, Sir Henry Craik, Sir John Lonsdale, Colonel J. Craig, Mr. E. Cecil, Mr. R. Prothero, Commander C. Bellairs, Sir George Younger, Captain L. S. Amery, Mr. H. E. Duke, Mr. W. Crooks, Sir Donald Mackenzie Wallace, Sir Arthur Evans, Sir Alfred Pearce Gould, Dr. R. M. Burrows, Professors Dandy, Wilson, Jameson, Gollancz, Carr, and Platt, Mr. Harold Cox, Mr. G. W. Prothero, Mr. G. P. Gooch, Mr. L. J. Maxse, Canon Carnegie, the Rev. H. J. Fynes-Clinton (Anglican and Eastern Association), Mr. Sidney Lowe, Mr. Walter Leaf, Sir Montague Turner, and Sir Algernon Firth.

The Primate, in introducing the deputation, said they believed that with the wholehearted aid of the Allied forces and in the providence of God the cloud would be rolled back and the cause of freedom be won.

The Crown Prince, replying in French, acknowledged the many proofs of sympathy for Serbia on the part of the King and the Royal Family, the British Government, and the citizens of the capital, which represented the British people.

Earlier in the day the Crown Prince received a smaller deputation of representatives of the Serbian Relief Fund, as well as representatives of the British Red Cross Society and other bodies which have despatched hospitals to Serbia; and, accompanied by M. Pashitch and the members of his suite, visited the general offices of the Serbian Relief Fund at 5, Cromwell Road, where he was received by the heads of the departments.

Digitized by Google

He was also present during the afternoon at an illustrated lecture in St. James's Theatre in aid of the Serbian Hospitals, by Mrs. St. Clair Stobart.

In the evening Mr. Harcourt, on behalf of his Majesty's Government, entertained the Crown Prince of Serbia at a dinner at Lancaster House.

His Royal Highness had arranged to leave England yesterday, but deferred his departure until to-day in consequence of engagements, one of which was an invitation to tea with the King and Queen at Buckingham Palace.

The Lord Mayor has received a letter from the Serbian Minister, in which he says the Crown Prince has directed him to convey through his Lordship to the people of London his Royal Highness's grateful appreciation of the warm and sympathetic reception which he has met with on all hands during his stay in the Metropolis. The Crown Prince greatly regretted that official duties and engagements had not permitted him to accept the cordial invitation of the Lord Mayor to visit the City of London as the guest of the Corporation.

Frances Anna Lady Kemball, of Sussex Square, Brighton, who died on February 25 last, widow of General Sir Arnold Kemball, formerly Consul-General at Baghdad and Military Attaché at Constantinople, left £10,886. The bequests include £100 to the Commanding Officer of Royal Artillery stationed at Woolwich for Royal Artillery charities in memory of her husband.

The Wounded Allies Relief Committee, of Sardinia House, Kingsway, W.C., is sending out further medical aid to the sick and wounded Serbian soldiers in Corfu. The first unit despatched by the committee, and consisting of a doctor and three nurses, under an administrator, arrived in Corfu a fortnight ago, and this unit is now, owing to the urgent need of the Serbians, about to be strengthened by the addition of one more doctor and seven more nurses, who will take with them large consignments of hospital stores, clothes, and food.

About two hundred soldiers of the British Adriatic Mission passing through Genoa received a warm welcome from the population and the British colony. The mission left for France on Monday, and their departure was the occasion of an enthusiastic demonstration.

The Crown Prince-Regent of Serbia has conferred the Order of St. Sava upon Mr. Vandyk, Court photographer.

OBITUARY.

SIR GERARD LOWTHER, G.C.M.G.

We much regret to announce the death of the Right Hon. Sir Gerard Augustus Lowther, G.C.M.G., C.B., formerly Ambassador at Constantinople, which took place on Wednesday morning at Sandwich. He had been ill for a considerable time, and his friends were aware that his illness was of a serious character.

Sir Gerard Lowther, who was born in February, 1858, was the youngest son of the Hon. William Lowther, and brother of the Speaker of the House of Commons. Educated at Harrow, he entered the Diplomatic Service in 1879, and was appointed to Madrid at the close of that year. The list of important posts that he held thereafter tells its own tale of a successful and honourable career. From Madrid he was transferred to Paris (1881), and thence was promoted to be Second Secretary at Constantinople (1884). In 1885 he was granted an allowance for knowledge of Turkish, and in March of the following year he was appointed Superintendent of Student Interpreters at Ortakeui. In 1891 he was transferred to Vienna, and during the latter half of that year he acted as Chargé d'Affaires at Bucharest; while the following summer found him at Sofia, acting as Agent and Consul-General. In 1894 his connection with the Near East was severed for a time by his transfer to Tokio, as Secretary of Legation; and though he returned to familiar ground in 1898, as Consul-General for Hungary, with residence at Budapest, he was soon off to fresh fields—this time in the New World. The new move carried promotion with it, for he became Secretary of Embassy at Washington (1899); and after two and a-half years there he was appointed Envoy Extraordinary and Minister Plenipotentiary to the Republic of Chile.

From Chile he returned to the East once more, being appointed Minister at Tangier and Consul-General in Morocco at the beginning of 1905. At that time the events that led up to the Treaty of Algeciras (signed in April, 1906) were unforeseen; but Sir Gerard's position was no sinecure, and, indeed, for a great part of the time he was constantly working at high pressure, and had to be continually on the watch. With Sir Arthur Nicolson he represented this country at the Algeciras Conference, and after the signing of the Treaty he returned to his post at Tangier. In 1907 he was made a K.C.M.G.

When, in 1908, on the death of Sir Nicholas O'Conor, he was appointed to Constantinople as Ambassador, the appointment was regarded here as a very natural one. He received an enthusiastic welcome also from the Young Turks, and for a short time it looked as if a new era had really dawned for Turkey, and as if the British Ambassador would be able to play a leading part in helping the "rejuvenated" Ottoman Empire along the path of progress. Unfortunately, such hopes were not justified. But the fault did not lie with Sir Gerard Lowther, but with the self-appointed leaders of Turkey, who speedily fell under the influence of that extraordinarily able man, Baron Marschall von Bieberstein, the German Ambassador, who, backed by his own Government in a way that no other Minister in Constantinople has ever been backed, succeeded in turning the sympathies of the Turkish governing party entirely into German channels.

This is not the place, nor is this the time, to review events from 1908 to 1913, the year in which Sir Gerard was forced by ill-health to retire from the Diplomatic Service. It must suffice to say that he laboured loyally for his country, in circumstances of great difficulty; and through his refusal to lend himself to the unworthy intrigues of the Enver-Talaat clique led to a loss of popularity with many Turks, he was always held in real regard by the sincerest reformers and truest patriots in the country. With the Europeans and Americans in Turkey also he was deservedly popular, and his retirement was much regretted by them. News of that retirement reached London in May, 1913, a few weeks before his five years' term of office would have expired, and he and Lady Lowther left Constantinople for Marienbad at the end of June amidst demonstrations of warm sympathy and regret. Unfortunately, the reports of the unsatisfactory state of Sir Gerard's health proved only too true. He never really recovered his full strength, and though he was tended with the greatest care by Lady Lowther he was unable to rally as his friends hoped, though hardly daring to hope, that he might.

Very sincere sympathy will be felt with Lady Lowther, not only in this country, but also in the Near East, where she is much beloved, having won the gratitude of the Turkish people by her work for the sufferers in the two Balkan wars. She was married to Sir Gerard in 1905, and before her marriage was Miss Alice Blight, of Philadelphia.

We regret to announce the death of Sir John Eldon Gorst, which occurred in London on Monday, as the result of an attack of influenza. Sir John, who had a distinguished career in politics, was the father of the late Sir Eldon Gorst, who was Agent and Consul-General in Egypt after Lord Cromer, and of Lady Mark Sykes.

We regret to announce the death of Lady Drummond Wolff, widow of the Rt. Hon. Sir Henry Drummond Wolff, which occurred last Friday, at Hampton Court, after a brief illness. Lady Wolff, who married in 1852, accompanied her husband to Constantinople, to Teheran, and to other capitals to which he was sent on diplomatic missions. The ex-Sultan, Abdul Hamid, bestowed upon her the Order of the Shefakal.

Colonel Francis Dalrymple Walters has died at Ryde, Isle of Wight, aged seventy-nine years. Soon after entering the Army he saw active service in the Crimea, being at the siege and fall of Sebastopol, and was awarded the medal, with clasp, and the Turkish medal. Colonel Walters also served in the China War.

We regret to learn that Captain Edward Lambton, Pembroke Yeomanry and Director of Public Works (Irrigation, Assiut), Egypt, died on March 28 of pneumonia in a Red Cross hospital. He was the fifth son of Lieutenant-Colonel Francis Lambton and the late Lady Victoria Lambton, and was thirty-nine years old. Born in February, 1877, he was educated at Wellington and Coopers Hill. Before the war he was permitted to do his drills with the Cavalry in Egypt and his yearly training when on leave in England. For his services in the Public Works he was decorated with the Order of the Osmanieh.

DOMESTIC ANNOUNCEMENTS.

BIRTHS.

BIGGER.—On April 2, at Cairo, the wife of W. K. Bigger, Lieutenant, R.A.M.C. (*née* Dorothy Vigers), of a son.

CROSS.—On March 28, at Alexandria, the wife of M. E. Cross, Egyptian Ministry of Education, of a daughter.

LUMSDEN.—On March 7, at Ghezira House, Cairo, the wife of Lieut.-Colonel P. J. Lumsden, I.M.S., of a daughter.

MANZALAONI.—On April 1, at 88, Marine Parade, Brighton, to Mr. and Mrs. H. S. Manzalaoni, of Alexandria, Egypt—a son.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

CYPRUS PALACE HOTEL
NICOSIA, CYPRUS.
Charming position. Beautifully situated in the best part of Nicosia.
Most magnificently built and furnished.
FRENCH and ENGLISH CUISINE.
Every Comfort. Moderate Charges.
Special terms for extended visits.
BRANCH OF THE CYPRUS HOTEL CO.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).

SERBIA AND THE ENTENTE.

The arrival of Prince Alexander of Serbia and M. Pashitch in London has set the hall-mark on a new era in the relations between Great Britain and Serbia. Two years have not yet passed since the British Minister in Petrograd could inform the Russian Government, with the expressed approval of the Secretary of State for Foreign Affairs, that "direct British interests in Serbia were nil." The Russian Foreign Minister replied that the Serbian question was part of the general European question, and that Great Britain could not afford to efface herself from the problems at issue in the Austro-Serbian controversy. Within a few days the truth of this political axiom had been appreciated by the British Government, and Great Britain was engaged in a war sprung, indeed, from a small occasion, but from great causes. If public opinion could have been canvassed at the time when the British Government cited it as a reason for remaining aloof from the quarrel between the Central Powers and Serbia most probably it would have supported Sir Edward Grey's contention. But until "democratic control" of our foreign policy reaches the stage at which war and treaties are made exclusively on Tower Hill or in Trafalgar Square the nation has the right to look to its rulers for a profounder knowledge of foreign affairs than is possessed by the man in the street. To both Government and public wisdom has come with the war, and there is no need now to lay stress on the fact that the Serbian or Near Eastern question has a direct interest for Great Britain. Our Serbian visitors are said to have been at once surprised and delighted by the warmth of the popular reception accorded to them on their arrival in London. They will regard their welcome, we may hope, as an honest acknowledgment of a mistaken policy in the past, and as an earnest of a wiser one to be pursued in the future. From it they can gauge something of the national concern which has been evoked by Serbia's tragedy and the genuine good will which has prompted such measures as were possible to mitigate the suffering of the Serbian people. Great Britain's own interests have in the long run compelled her to make the Serbian cause her own; but the enthusiasm which greeted the arrival of the Prince Regent and his Prime Minister in our midst testified to the powerful hold which the valiant efforts of the Serbians in self-defence against overwhelming odds have established on the mind of the British public. There was nothing to impair the spontaneity of their welcome. It proclaimed the popular recognition of the fact that Serbia has done all that can be claimed of her for the Allied cause, and bespoke a determination to see that ultimately all that is needed shall be done for her in turn by the Allies.

The visit of Prince Alexander and M. Pashitch to London follows upon similar visits to the Italian and French capitals. As a result of this exchange of views with the Allied Powers the Serbian Government hopes to arrive at an understanding which will safeguard the future of Serbian interests in the Near East. It argues nothing untoward in the relations between the Allies that such negotiations should be taking place at this stage of the war. Although the unity of purpose of the Grand Alliance has never been called in question, it is only recently that an attempt has been made to secure unification of the military and political direction of the Alliance. At the outbreak of war the different Powers were drawn into the struggle on different grounds; Russia had to protect Serbia, France stood by Russia, Great Britain took the part of France and Belgium. Only as the war progressed did the Allies come to recognize fully the nature of the common menace that threatened them all. When Italy joined the Alliance there was still inadequate appreciation of the complete community of interests binding the constituent parts together. Thus Italy was allowed to make her terms with the Entente Powers without reference to the interests of Serbia, who might seem to have had all possible claims met when her future integrity and independence were guaranteed. The very nature of the struggle with the Central Powers has emphasized the necessity of absolute justice in all international relations. An arrangement which appeared good enough when Italian co-operation was at stake wears a different complexion when problems of a permanent settlement in Europe come to be considered. At the time Serbia could do no more than register a caveat against the reported bearing of negotiations to which she was not a party. Her attention, as well as that of the Allies as a whole, was absorbed by the military situation. The threatened blow has since fallen: Serbia has been overrun by the enemy and the Government has taken refuge in France. Not only has it become necessary for Serbia to have her position more clearly defined, but the Allies find it to their interest to draw more closely together the bonds uniting them.

From the satisfaction which the Serbian Prime Minister has expressed with the results of his exchange of views with the Italian Government we may infer that the progress of the war has convinced the latter that it is possible to drive a bargain which will sacrifice the real interests of a country to the prospects of the moment. But the agreement between Italy and the Entente Powers holds good until it has been replaced by an instrument more in keeping with the interests of the Grand Alliance as a whole. The Serbian Government has to satisfy its Allies that it speaks to-day not only for Serbia and the Serbians, but also for all the Southern Slavs, whose ultimate emancipation from the Austrian yoke and incorporation in a Southern Slav State has formed the most cherished tradition of this race. The realization of these hopes will produce one of the most vital changes that we may expect to see as a result of the war, for it will set up an entirely new factor in Southern Europe. If the principle of nationality is to influence the settlement after the war, it is difficult to dispute the claims of the Serbians to champion all those of their kinsfolk who are now for the most part inarticulate under Austro-Hungarian rule. The interests of the Allies which spurred them collectively to give battle for the integrity and independence of Serbia must now prompt them to pave the way for a united Jugoslav State, which will be able to play an adequate part in the defence of liberty and justice in Europe. We look to the negotiations now being continued in London by Prince Alexander and M. Pashitch to place the seal on the understanding between the Allies, which shall not only give justice to Serbia but also promote lasting peace in the Near East. The welcome given to our Serbian visitors proves that nowhere would such an issue to the war meet with warmer approval than in Great Britain.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

FALL OF ERZEROUM.

BY M. PHILIPS PRICE.

With the Russian Army on the Caucasus Front, March 8, 1916.

The day after the fall of Erzeroum I accompanied a party of Russian journalists on a visit to the scenes of the great struggle. During our journey I obtained a full story and had many first-hand impressions of what took place, and I am able to give the following account of what happened. First, however, let me remind your readers of the surroundings of Erzeroum.

The city lies in an amphitheatre of mountains, of which the highest and least accessible are on the north and south, while on the east lies the more easily traversable Deve Boyun, on which the Turks have made two powerful chains of forts. These forts protected all access from the east, while the mountains by their inaccessibility appear to protect the city from the north and south. But that is just where the mountains failed the Turks, for they had not reckoned with the Russian Caucasian Army, tempered and steeled by frost and snow, ready to go for days without food, for nights without sleep, and to cross apparently impenetrable snowfields and jagged ridges to attain their strategic ends. The Russian army attempted the impossible—and accomplished it, by cutting through the Turkish line of forts at the point where the Deve Boyun joins the Karga Bazar, to the north-east of Erzeroum. Whole divisions of Russian troops toiled for days exposed to icy winds on 10,000 ft. snowfields and crags, till at last they succeeded in surrounding the northern end of the Deve Boyun forts, and so caused the retirement of the whole 3rd Turkish Army, to save itself from capture.

Ever since the autumn of last year, when the Germans succeeded in establishing direct communication with Turkey, the idea had been prevalent on these eastern fronts that a considerable Turkish force would be liberated from the western theatres of war for operations against either the Caucasus, Egypt, or Mesopotamia. In December it was thought that Khalil Bey would attempt another flanking movement through north-west Persia.

Rumours of new Turkish army corps marching eastwards, commanded by German officers, received wide circulation, and everyone expected a further attempt at an Eastern drive. But the results have shown that the Turks have been carrying out a great scheme of bluff on this front, and instead of strengthening have been gradually weakening all the time. Not only have they failed to keep their wedge into Persia, but they have now lost the greatest stragetic point on the eastern front, and by the fall of Erzeroum the Russians are in possession of the roads leading into Mesopotamia and Asia Minor, whereby they can threaten the lines of communication between Constantinople and Baghdad. The 3rd Turkish Army in Armenia evidently received no reinforcements in the early winter, as was supposed; but, on the other hand, were weakened by the withdrawal of the 3rd and 5th composite divisions from the Bitlis area, which were sent to Baghdad to operate against the British. It has also come to knowledge recently that the Turkish general staff, believing that the Russians would not dare to risk an advance during the rigours of a Caucasian winter, actually gave leave of absence to many officers last December. And so they were caught napping.

On the surrounding of the British force at Kut-el-Amarah the Russian staff began to prepare for an advance on the Caucasian front in order to relieve the pressure in Mesopotamia. At first the capture of Erzeroum was not contemplated; but, as events developed and the weakness of the Turks became clear, it was included in the plan. The attack on the Azap Keui and Olti positions was worked out, and on January 11 the advance along the whole Caucasus front began. The plan was to advance in three columns, one south and two north of the Araxes in the Jilligol, north of the Passan plain. This difficult operation in the mountains was entrusted to the 4th Division, who had to get round the Turkish left, while the Turkestans had to advance from Olti and converge over the mountains of the Geydag.

These operations met with brilliant success, and the Turks, after several days' fighting, withdrew on Hassan Kale. Usually the Turks fight with great stubbornness up to a point, but when once their line is broken their spirit droops, and they can hardly ever be successfully rallied; and so it was in this case.

The 9th and 11th Army Corps, converging in retreat on Keupru Keui, lost a large part of their artillery, and in the panic which followed could not be rallied till the Erzeroum forts were reached. On January 23 General Eudenitch decided to make use of this success to attempt the capture of Erzeroum. Information came to him that the demoralization of the Turkish army was widespread, and a telegram from the Turkish commander Abdul Kerim, to Enver Pasha, which fell into Russian hands, stated:—"The condition of the Turkish army is very serious; help must come at once, or Erzeroum cannot be held." On January 31 a demonstration in force was made from Hassan Kale by the Russians against the outer Dede Boyun forts, to test the force of the Turks. The bombardment continued all day, and by evening it was seen that the Turks had poured water down the slopes in front of the forts, which, freezing, covered the mountain sides with icy sheets. According to some accounts, as the sun was setting that evening there appeared in the clouds of white smoke which accompanied the bombardment and lay over the forts the Sign of the Cross, which was seen from the Russian lines.

Next day the Russian dispositions were made and developed with extraordinary skill. Paskevitch, in 1828, when he captured Erzeroum, made his demonstration on the south of the Dede Boyun, and struck his main blow in the north. This time General Eudenitch demonstrated practically all along the line, but struck his main blow in the mountainous country of the Karga Bazar, with the object of breaking through the line between Forts Chaban Dede and Tufta in the weak spot. For this purpose the left wing of the 39th Division demonstrated against Forts Kabugar and Ortayuk, while the right wing engaged Fort Chaban Dede.

Further to the north the 4th Division and the Turkestans were to advance across the mountainous country of the Dumlu Dagh and the Karga Bazar, join up with the left wing of the 39th Division before Fort Chaban Dede, and so break through the 3rd Turkish Army and descend into the plains of the Euphrates. The stupendous difficulties of these operations can, perhaps, be conceived when I say that to accomplish this task the 4th Division had to haul its artillery from the Passan Valley 10,000 ft. up on to the Karga Bazar over snowfields and frozen slopes. Each gun had to be taken to pieces and each piece carried separately on the backs of soldiers. The transport took twelve days, but the Turks never got wind of it.

On February 11 the Russians commenced their general advance.

The two northern forts of the Dede Boyun, Chaban Dede and Dolangyoz, were attacked by the Elisavetpol and Baku regiments respectively. The latter fort is situated on a little knoll which juts out into the great Passan Plain, and is, as it were, the advance guard of the outer claim. By 5.0 a.m. on the morning of the 12th Dolangyoz was surrounded, but the battalion of Turks holding the fort managed to escape to the Uzun Ahmet.

On that night the right wing of the Russian centre was ordered to make a frontal attack on Chaban Dede. The Bakintsis, who had taken Dolan Gyoz, now went north and joined the Elisavetpols, and together they advanced from the village of Buyuk Tuy up the rocky valley of that name to the towering cliffs on which Chaban Dede rested. The Russian soldiers were clad in white coats so that in the darkness and against the snow they were invisible.

Silently creeping up the rocky slopes to the fort they got to within 250 yards of it before the Turkish search-lights discovered them, and then a murderous cross-fire from the Uzun Ahmet and Chaban Dede was poured upon them, which in two hours caused them to lose one-third of their number. The Turks on the Olugli, a mountain mass lying north of Chaban Dede, and separated from the Karga Bazar by the narrow valley of the Tuy, now began to counter-attack, and descended into the valley outflanking the Elisavetpols on the right. There was no sign of the 4th Division appearing on the Karga Bazar, and so there was nothing to be done but to retire. Chaban Dede had been all but won, but had slipped from the grasp at the critical moment, and the famous key to the Dede Boyun forts still thundered with the roar of Turkish artillery and the splutter of their rifles.

All day the Elisavetpols and the Bakintsis waited in the defiles of the Tuy Valley still exposed to the fire of the forts.

Towards evening it was clear that something must be done or the whole plan of attack abandoned. As a last resort the Derbentsi Regiment, which had hitherto been in reserve, was called up, and by nightfall was ordered to advance on the extreme left wing. Crossing the Tuy Valley it ascended the narrow defile on the snow-fields of the Olugli. With the utmost difficulty they toiled over deep snowdrifts, making no more than ten yards in half an hour. The difficulty in keeping their chain formation under such conditions may well be imagined, but such was the brilliance of the manœuvre that when morning broke through the grey mists that covered the snowbound plateau the Turks saw the Russian chain slowly closing in on them as the dark outlines of the soldiers laboured slowly across the snow-fields. The Turks, taken completely by surprise, abandoned their position on the Olugli and retired to the trenches surrounding the Chaban Dede forts. The battle had been half won, but the Turks were still in the fort and were keeping up a murderous fire on the Elisavetpols in the valley below them.

At last the *Deus ex machina* appeared. Away to the north-east the 4th Division and the Turkestans, for the sight of whom the hard-pressed Elisavetpols and Bakintsis had been pining, began to show on the skyline. The critical question now was: Could they break the Turkish chain which still held like iron between Forts Chaban Dede and Tufta? On the previous day the 4th Division had actually completed the Herculean task of hauling up field artillery on to the very summit of the Karga Bazar, from whence they could shell the Turks on the Grobovoy heights. On the morning of February 14 the infantry of the 4th Division descended the western slopes of the Karga Bazar, sliding down the snow on their coats to the upper part of the valley of the Tuy. From here they pushed north and reached the foot of the Grobovoy Mountains, which dominated Fort Tufta.

Here the right wing of the Turkish 10th Army was extended.

The attack was delivered by the 4th Division from the south and by the Turkestans from the north, and it was planned to take place at exactly the same time. Again the Turks, attacked at both sides, were taken by surprise. As they stood in their snow trenches on the slopes of the Grobovoy they could see the infantry of the 4th Division and the Turkestans converging upon them from the north and from the east, and not all the fire of their rifles or of their artillery could hold them back. By 3.0 p.m. on February 14 the heights of Kuni Tape were in the hands of the 4th Division, and the Turks on the Grobovoy, fearing they would be surrounded, retired down the western slopes into the plain of Erzeroum. At once it was observed from the Russian artillery observation posts at Kechk that the evacuation of Fort Tufta was beginning. A great explosion followed.

The Turks had blown up the magazine and were seen streaming away to the west for Erzeroum, but, fearing that their retreat would be cut off, followed the road to Erzinjan. At last the chain of forts was broken and Erzeroum was won. So certain were the Turks that the fall of Tufta meant the fall of Erzeroum, that by the evening of February 14, one day before the Russians occupied Chaban Dede, and two days before they entered Erzeroum, the evacuation of the whole of the garrison city was begun. Explosions followed in forts Kaburga, Uzun Ahmet, and Shivishli, and by 4.0 p.m. the whole of the Dede Boyun forts were in the hands of the Russians without another shot being fired. Next morning early, by the Kars Gate, the Kuban Cossacks entered Erzeroum; and so the famous fortress fell as the result of the masterly strategy of General Eudenitch, which by evolutions in the mountains north of the Dede Beyun had caused the 3rd Turkish Army to evacuate the forts in order to save itself from capture.

The condition of the 3rd Turkish Army is now as follows:—

The 9th and 10th Army Corps are probably fairly intact as far as infantry and rifles are concerned. The greater part of the artillery, however, are irreparably lost, together with the ammunition which was blown up in the forts before evacuation. The 11th Army Corps has suffered most severely. It has lost one-third of its number in prisoners, besides a considerable loss in killed and wounded, and all its artillery has been captured. In the Black Sea region one division and a-half with irregular cavalry of Lazis and Adjars have been attempting to defend Trebizond from the Russian columns advancing from Batoum. In the Bitlis region a portion of the 12th Baghdad Army Corps (probably a division and a-half) has been hurried from Mosul, but not in time to protect Bitlis. For the rest, information seems to point to a regrouping of the whole of the Ottoman forces in the empire. The 1st, 2nd, and 5th Armies in the Constantinople, Thrace, and Dardanelles areas are probably sending a division each to the Caucasus front via Sivas and Erzinjan.

The 6th Army in Mesopotamia has sent a portion of the 12th Corps to Mosul, and the 4th Army under Jemal Pasha in Syria is being held in reserve in case of further disaster in the north. In any case it is probably safe to assume that all this regrouping will take time, and that it will be long before the Turkish 3rd Army can be reorganized and make any serious attempt to recover what it has lost. Besides, it has now lost the most important strategical centre along the whole of the east front.

COSTUMES FOR SERBIAN CHILDREN.

Last week there was an exhibition of Serbian national costumes at the League of the Empire's Club premises in Buckingham Gate, to which brief reference was made in our last issue. The garments had been made by members of the League and their friends, to patterns supplied by the Serbian Relief Fund. These patterns had been sent all over the country, and most of the garments were the production of small working parties in out-of-the-way places. They are mostly for children, and will be given to people rendered destitute by the war. The general effect of the rooms, hung round with all these gaily coloured clothes, was very bright and pleasing; and, incidentally, an educational purpose was served, for garments which offended against the canons of Serbian taste were "skied" in the manner of the less meritorious pictures at the Academy, while those that were correct in all details were hung upon the line. The Serbian costume is simple. For a girl or woman it consists of a sleeved tunic or chemise made of some warm and stout material, a skirt short enough for the lower part of the chemise to be seen; a sleeveless jacket or bolero, and sometimes an apron. All the garments are brightly coloured and embroidered, or otherwise ornamented. The bolero should be made of a different colour to the skirt; stripes are objectionable, and green should be but sparingly used. The London County Council is now taking the matter up and distributing patterns to its schools, so that the pupils may assist in making other garments. At a less serious time this might very well be the beginning of a new fashion here, and dresses for English children might be made according to some of these picturesque Serbian models. Besides the garments mentioned, the exhibition contained two or three handsome Serbian costumes very richly embroidered, some painting, and photographs illustrating Serbian scenery, and some finely modelled pottery showing men drawing a wagon, a Serbian outpost, etc., by Miss Nell Fry.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

The Responsibility for Kut. March 30.

Lord BERESFORD asked whether the General Officer Commanding the British forces now besieged at Kut-el-Amarah had recommended, or was responsible for, the decision to advance on Ctesiphon, or whether in carrying out that advance he was only acting under the direct orders of the General Officer Commanding the forces in Mesopotamia. He had, he said, been informed that General Townshend started with less than a division, when he ought to have had three divisions. No despatches had been published since last April, though there had been three battles, two of a tremendous and terrible character. The troops had fought desperately for three days while short of water, and had added to the traditions of the British and Indian Armies. The method of the retreat had been of the highest military character, for General Townshend succeeded in getting back ninety miles to the river without the loss of a gun or prisoner. They had heard it officially stated in the House of Commons that the provision of medical necessities was "shocking," but they had not yet heard anything regarding the military necessities, except that the Government were anxiously considering the position which was caused by their own folly—by their own want of knowledge of war—by the political and civilian element controlling the war, instead of paying attention to policy, and turning over policy, when decided upon, to the soldier or sailor, for him to dictate what forces were necessary to make it a success.

Lord ISLINGTON said that if General Townshend had made any representations prior to the advance he would, of course, have done so to the General Officer Commanding, who was at that time Sir John Nixon. No such recommendation or representation had been reported home. The responsibility for the advance did not rest with General Townshend. The advance was authorised by his Majesty's Government on the advice of the General Officer Commanding in Mesopotamia. As to whether General Townshend was consulted by the General Officer Commanding he was not in a position to say. The Government had no information as to what might have taken place in consultation between General Townshend and Sir J. Nixon prior to the advance. At present, when the campaign was actually proceeding, it would be in the highest degree injurious to the public interest to publish anything of a detailed character either in regard to the past or the present. He wished to re-echo what had been said with regard to the forces in Mesopotamia. The troops, both British and Indian, taking part in the operations had displayed courage and endurance which would compare favourably with that shown in any other part of the world.

The Marquess of CREWE said that he would like to say categorically that there had been no instance in the war, in any single place in which military operations had taken place, in which either a naval or a military commander had been asked by the civil power to undertake an operation of any kind with a force which he had declared to be insufficient for the purpose. That was a statement which he made without the smallest reserve.

Mesopotamia Again. April 5.

Lord ISLINGTON said he wished to refer briefly to the debate which took place last week with regard to the campaign in Mesopotamia. When he stated on that occasion that, before consenting to despatches referring to the earlier operations in Mesopotamia being published, he should consult the Departments concerned, he did not mean to imply that the publication of the despatches would be injurious to the public interest. In certain quarters it had been inferred that his remarks tended in that direction. He was now in a position to announce that a despatch had been under consideration between the several Departments concerned for some time, and would be published in the *Gazette* that evening. A further despatch was also under consideration, which would take the history of the campaign up to the date when General Nixon relinquished the command. This second despatch included the action at Ctesiphon and subsequent events, but as it related to the basis of operations still proceeding in Mesopotamia its publication at the present moment would not be consistent with the public interest.

HOUSE OF COMMONS.

Consular Captives. March 30.

Lord R. CECIL informed Colonel Yate that the German Consul at Salonika, who was deported from that town, had been detained by the French Government at our request pending the release of the British Consul at Shiraz.

The Mesopotamia Hospital Inquiry.

Mr. CHAMBERLAIN, replying to Mr. MALCOLM, stated that the inquiry which had been ordered would be confined to the medical and hospital arrangements of the Mesopotamian campaign. He assumed that it would embrace all matters relative to the sufficiency or otherwise of the provision made in India and Mesopotamia for medical, personnel, stores, and appliances, also as to the organisation of medical relief and the arrangements for dealing with the sick and wounded in the field, at the base, and in transit to the base. He had issued instructions that the Commission should fearlessly ascertain and assign the responsibility for the breakdown of the relief, whether individuals or the system were to blame. Until the Commission had reported he could not say whether a further inquiry would be needed. The Viceroy had informed him that he had invited Mr. E. A. Ridsdale, Red Cross Commissioner, now *en route* from this country to Mesopotamia, to join the Commission as a member.

The Fate of Prince Bahram. April 4.

Sir J. D. REES asked the Foreign Secretary whether any inquiry had been made as to the fate of Prince Bahram of Persia, who was believed to have been a passenger in the s.s. Sussex, and if so, with what result?

Sir E. GREY said that every possible inquiry had been made, and he regretted to say that there was practically no hope that the Prince was a survivor.

Russia and Constantinople.

Mr. OUTHWAITE asked whether the Foreign Secretary's attention had been called to the recent speech of M. Miliukoff in the Russian Duma, in which he stated that Russia's sole war problem was an outlet to the sea, and that an agreement had been reached by the Allies in April last as to the future of Constantinople; and whether he could state the nature of the agreement referred to.

Sir E. GREY stated that he could add nothing to the replies he had given on May 18 of last year and February 25 this year.

Mr. OUTHWAITE: May I ask the right hon. gentleman whether he is aware that this has no relation to a question asked before, and are we not entitled to know the facts disclosed to the Russian Duma by leaders of the Opposition?

Sir E. GREY: I do not see that the statement made by M. Miliukoff in Russia affects the question as to official statements made here.

The Mesopotamian Campaign.

Col. YATE asked the Secretary of State for India whether he had seen a published letter from General Sir Alfred Turner referring to operations in Mesopotamia, and whether he would make a statement on it.

Mr. CHAMBERLAIN: I have seen General Sir Alfred Turner's letter published this morning, and I have read it with great regret. It suggests that an advance was ordererd by ignorant politicians at home against the advice of the General Officer Commanding in Chief in Mesopotamia. To that suggestion I give an unqualified contradiction. There is no foundation for it.

Col. YATE: Are we to understand from that reply that the advance to Baghdad was made on the advice of the General Officer Commanding in Chief in Mesopotamia?

Mr. CHAMBERLAIN: Yes.

The Advance on Baghdad. April 5.

Major ASTOR asked whether the Government, when they determined on or authorised the advance on Baghdad by General Townshend, had before them any documentary evidence that he favoured such an advance with the forces then available.

Mr. CHAMBERLAIN: The answer is in the negative whether by the word "Government" my hon. and gallant friend means the Government of India or his Majesty's Government. Our correspondence, in accordance with recognised military practice, was conducted with the General Officer Commanding the Mesopotamian Field Force.

The new Paris Arabic journal *Al-Moustakbil*, referred to in our issue of March 19 last, has a leading article in its fourth number with the following headings:—"For What Gain do the Turks Fight? Can the Minor, the Imbecile, or the Spendthrift be Lawfully Made a Trustee or a Treasurer? Do the Arabs Hate the Turks or Simply Turkish Administration and Mismanagement?" The article deals with these topics in an exhaustive, straightforward style. Space does not allow us to give a full translation of the well-put arguments, the upshot of which is that the Turk has had plenty of time and opportunity to learn the proper way of administering and governing the country, that he has proved himself incapable as well as thoroughly unscrupulous in his methods towards subject races, including the Moslem Arabs, and that Europe must no longer be beguiled by his false promises to repent and mend his ways.

An effective Raemaekers poster has been issued by the National Committee of Relief for Belgium in aid of their society's funds. It represents a Belgian woman holding a child to her breast, and is boldly and convincingly handled. Anyone can obtain a copy of the poster by applying to the committee, Trafalgar Buildings, Trafalgar Square, W.C.

THE PRESS ON THE NEAR EAST.

Prince and Premier.

We take the following quotation concerning the Crown Prince of Serbia and his Prime Minister from an article by Mr. Alfred Stead in the *Daily Chronicle* (April 1):—

Prince Alexander, for all his Royal position, is simply a Serbian citizen, a Serbian patriot, and in that his success and hold on his people lies. . . .

Against Bulgar as against Turk, Prince Alexander proved himself a good general, and, above all, a good Serb, capable of understanding his people. The war ended, he threw himself with enthusiasm into the work of reorganising the army, a work only half completed when the European war broke out. Since then he has been incessantly in the field with the General Staff. During the first two Austrian invasions of Serbia he played a leading part in military operations. Especially valuable were his services as a medium of co-operation and co-ordination between the civil and military authorities—in numberless cases his tact, his ability smoothed over differences between the General Staff and the Serbian Government. During the recent hopeless struggle against Germans, Austrians, and Bulgarians he was ever with his soldiers, encouraging them to hope, as he hoped, that help would come, and when the last hope was gone, keeping the remnants of the army together and leading his starving and dispirited but never defeated troops to the coast, when they could gain breathing space to begin again.

After commenting on this noteworthy and magnificent effort of the young Prince, Mr. Stead turns to the Premier, whom he refers to as "a living history of his country's progress":—

With the advent of the Karageorge dynasty to the throne, M. Pashitch became the predominant power in his country. None understand better the psychology of the Serbian peasant, and in Serbia all the population is peasant at heart, and thus he was able to weld together a strong and dominating political party, which, with rare exceptions, held the reins of power incessantly. The quiet determination and courage of M. Pashitch achieved what more showy and flashing qualities in others were unable to do. Year by year his services became more indispensable to his country, until finally the great war of to-day found him in practically supreme control.

Serbia is the most democratically constitutional country. The rights of the minority in Parliament outweigh the privileges of the majority, and hence national progress is exposed to terrible and prolonged delays. To steer a national policy through Parliamentary shoals required tremendous perseverance, patience, and courage. To see M. Pashitch in the national Assembly was a revelation in Parliamentary statecraft. Without undue or apparent effort the Serbian Prime Minister brought about reconciliation with Great Britain, broke away the commercial dependence upon Austria, doubled the area of Serbia, and raised Serbia into the comity of nations.

And to-day this young old man, after all the hardships of the war, is the most optimistic of all the Prime Ministers of the Allies. He has seen war, he has suffered privation more than any other Prime Minister, and he is the most confident of ultimate victory.

Serbia.

Most of the principal papers of England have marked their sympathy with the Serbian Crown and country by the publication of leading articles on the arrival of the Crown Prince in London. *The Times* (March 31) says:—

While the peoples of Great Britain and of the Oversea Dominions have done and are still doing much to alleviate the sufferings of the Serbian nation, they cannot rid themselves of deep regret that the measures tardily taken to render effective military help to Serbia should have come too late to be of practical avail. They feel that if Serbia, disappointed, crushed, and ruined, had lent her ear to the specious Austro-German offers of peace, she would have been entitled to plead extenuating circumstances. All the more do they admire her steadfastness in misfortune and the unquenchable confidence with which she and the remnant of her Army contemplate the future.

The Times refers to Mr. Asquith's declarations regarding our duty to Serbia, and continues:—

Serbia will be born again, and will recover "all and more than all" she has lost. Her renascence will not, indeed, be complete, nor her future assured, until she becomes united, on a basis of freedom and of political and religious equality, with the other branches of the Southern Slav race. Beyond her former frontiers—in Bosnia-Herzegovina, Croatia, Slavonia, Dalmatia, parts of Istria, and Slovenia—live, under the Austro-Hungarian yoke, many millions of Southern Slavs whose aspirations towards union with Serbia proper form the sanction of the Southern Slav unitary movement. Serbia reborn will be no longer merely Serbia, but a United States of Yugoslavia, a polity at once European and Balkan, Western and Eastern, embracing some twelve million souls, one in language and race, though hitherto politically divided. To the realisation of this ideal, to the liberation of his whole race, Prince Alexander is entitled to look forward. In his endeavour to achieve it he may count upon the support of all that is best in British, French, Russian, and Italian opinion.

The *Daily Chronicle* (April 1) concludes its leading article in the following paragraph:—

Our visitors are exiles; they come to us at a time when they and their country's army have been driven from their country's soil. But we do not welcome them as exiles merely, or celebrate merely the heroism of their defeat; we celebrate the time for which our own nation is pledged to work, when Serbia, like Belgium, "shall recover all and more than all that she has lost," and when Serbia's Victor Emmanuel and Cavour shall have seen their confidence in us and our Allies splendidly vindicated. No one is without deep regret for the catastrophe which last autumn overwhelmed the Serb Army after its wonderful displays of patriotism and valour; but it is at least something that the French, the Italians, and ourselves should together have saved so much of it from the wreck to take part in the coming campaign of redemption. The war is one, and all its fronts are really one; nevertheless, when movement begins on all the fronts, that on the Balkan front may not prove the least important.

Blame Turkey!

Mr. Percival Gibbon, correspondent of the *Daily Chronicle* at Petrograd, concludes a despatch to his paper (April 4) with the paragraph in reference to the sinking of the hospital ship Portugal which we quote below:—

The whole event takes special significance in the light of recent news from Turkey, where since the Erzeroum anti-German party have been gaining ground rapidly the possibilities of something in the nature of a Turkish surrender or separate peace are daily increasing.

Attempts have actually been made to open secret conversations both with Russia and the Western Powers. One delegate appointed for this purpose is stated to be still in Switzerland. Therefore there is strong suspicion in official circles that this deliberate crime was undertaken by German high command for no other purpose than to embitter Russia and render the defection of Turkey impossible, in precisely the same manner as the Wolff Bureau was recently ordered to cease the circulation of various certificates of Bulgarian humanity in Macedonia.

Pro-Bulgar Intrigues.

M. J. Coudurier De Chassaigne, writing in the *Sunday Times* (April 2), says that "there are some people who cannot abandon their fads, and who still refuse to admit the most patent evidence that Bulgaria as a whole, from the King downwards to the ordinary soldiers and civilians, is united in a common hatred of the Serbian race, and that to satisfy this animosity they will stick at nothing."

This he naturally regards as dangerous and as manifestly unfair to our Serbian Allies, and he proceeds to a statement of the grasping policy which, he alleges, animates Bulgaria even yet. He continues:—

Nobody in his senses can therefore admit even a vague possibility of any understanding with the Bulgarians at the present time. As long as they are victorious they will never give back of their own free will what they are pleased to call Bulgarian Macedonia, and their evacuation of this part of the Balkans will be one of the first conditions of any peace treaty between them and the Allies.

The Prime Minister of England has pledged his word and promised to give back to Serbia all she has lost and even more. This solemn undertaking ought to have stopped long ago the nefarious activity of those who aspired to buy Bulgaria with the spoils of Serbia. The time is past for any compromise between the Allies and those who have betrayed their best friend, Russia, with an impudence and cynicism without parallel in the history of the world.

One cannot repeat too often that if peace is to reign in the Balkans the hegemony of Bulgaria must be definitely broken. No equilibrium will be stable in this part of Europe unless Bulgaria is reduced to the frontiers assigned to her by the Bucharest Treaty of 1913.

Greece, Serbia, and Roumania must all of them be stronger than Bulgaria, so as to be able to crush at a moment's notice any renewed menace from the Balkanic bully.

The *Irish Times* (April 1) concludes a leading article on the Balkans, in which the possible intervention of Roumania and Greece are discussed, on the same note:—

The chief obstacle, perhaps, to their adherence to the Allied cause is their deeply-rooted suspicion that British diplomacy still cherishes a sneaking affection for Bulgaria. This suspicion is grounded in British diplomatic policy before Bulgaria's intervention, which went so far as to restrain Serbia from attacking her while there was yet time, and it persists tenaciously. Nothing can dispel it but a definite reassurance of Great Britain's intentions. Lord Robert Cecil was invited in Parliament on Tuesday to declare on behalf of the Government that Bulgaria would not be admitted to overtures for a separate peace, and would not, in any case, be permitted to acquire territory or other advantage "at the expense of any people who had fought, or might hereafter during the present war fight, on the side of the Allies." His reply was of that shuffling and evasive character which has made our diplomacy profoundly suspect in the Balkans. The mere fact that the Government, for no intelligible reason, will not give this simple and straightforward declaration strengthens

Digitized by Google

in their aloofness those Balkan peoples to whom Bulgaria stands for the same odious principles for which Prussia stands to us.

Near East and the War.

Mr. Lovat Fraser contributes an article to the *Daily Mail* (April 3) the main purpose of which is to show that, although the ultimate victory of the Allies seems more certain and inevitable than it was a year ago, there is not one sure or safe sign that the war is anywhere near a close. His emphasises the conclusion that, whatever may happen in other theatres, the war on land will be decided in the West. We quote from the concluding portion of his article:—

We do not know, nor would it perhaps be prudent to speculate about, the intentions of the Allies regarding the powerful army of French, British, and Serbians concentrated at and within reach of Salonika. However much opinions may differ about the occupation of Salonika, it must be admitted that it has served one profoundly useful purpose. It has steadied the military position in the Balkans. Whether it may grow into a more active design is quite another matter. The northward routes into the Balkans are not favourable to modern armies, for the difficulties of transport are enormous. Half a million men would be needed, with large additional reserves. Salonika will probably wait upon events elsewhere.

Egypt has passed out of the picture for the time being. Our defences beyond the Suez Canal are now elaborate, and have reached the point to which they should have been brought a year ago. The Turks are evidently war-weary, but while Enver Pasha lives and remains obedient to his German masters we should not pay much heed to the rumours of Turkish overtures for peace. The same considerations apply to Bulgaria.

The Grand Duke Nicholas continues to work wonders beyond Erzeroum, but we must not expect to see him marching on Constantinople. His resources are governed by Russia's needs in Europe, and his hard and valiant troops are mostly second-line. He has to a great extent settled the Persian trouble for us, and for that we owe him our gratitude. The Mesopotamian campaign has small relation to the larger military issues. We shall have to settle accounts about it in due season, and we should all like to seen General Townshend rescued speedily, but his beleaguered force cannot affect the decisive areas one way or the other. The swing of the pendulum is just now making the European issues paramount, and Asia recedes into the background. One notices that the German papers have ceased to grow ecstatic about the Stamboul Express.

The Problem of the Straits.

The *Nation* (April 1) devotes a leading article to the above subject. Pointing out that the opening of the Straits and the attainment of an absolute guarantee for their unrestricted use in war as in peace is the one positive object of the war on which Russian opinion is immovably and solidly fixed, the paper debates the methods by which such an end could be obtained. It inclines to an acceptance of the suggestion made by Sir Edwin Pears, that the city of Constantinople and both shores of the Straits should become a neutralized international State governed by a European Commission:—

Turkey would herself prefer this solution to a Russian annexation, if she were *in extremis*, for it would allow her to keep Asia Minor. Its great merit is that it would have safeguarded the independence of all the Balkan States, and had it been adopted in 1914 as the Allied policy it might have turned the scale and rallied all of them to our side. It ought not to be dismissed from consideration now or at any future stage of the war. But one merit it does not possess. It would not tempt the Turks, as yet, to a separate peace. They will fight on for Constantinople until the eleventh hour, and that hour has not yet struck. There remains a more modest proposal. It is that, while the Turks still retained political control of their capital, the Straits should be neutralized on the analogy of the Suez and Panama Canals. The conventions which govern them provide that they "shall always be free and open, in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag." The right of blockade is expressly excluded, and a variety of provisions remove the risk of hostilities within the zone of the canal.

The paper points out that under this method Russia would secure nearly all she requires:—

The only case for which it would not provide would be the case of a war between Turkey and Russia. Then the Sultan might, and would, close the Straits, and the exception seems at a first glance serious. The withdrawal of Turkey from the war would, however, mean at the same time her definite withdrawal from the German system. She would be forced to lean on the Entente, and would not be formidable if she stood alone. In proportion, moreover, as the peace is a good settlement, all war risks would be diminished. Turkey is no longer involved in the Slav question. Any tolerable peace must settle also the Armenian question, and the standing dispute over the Baghdad Railway. If a future war between Turkey and Russia were made highly improbable, this solution would come very near to giving Russia her full demand. It would, in short, be a good and adequate solution, if we hope that this war will inaugurate an era of settled confidence and peace. It would be a weak solution only if we expect a return to the bad old days of the armed peace, competitive armaments, and recurrent wars.

Salonika.

"A Military Correspondent," writing in the *Asiatic Review* (April), starts his article on Salonika with a reference to Wellington's advance from Torres Vedras, and says that the general opinion prior to that advance was that Wellington had admitted his inability to attack, and that a parallel is to be found to-day in the present position of the Allies at Salonika:—

Just as in the Penisular campaign the ports were not altogether abandoned, so the Balkan adventure was not altogether abandoned, but a base was retained which should form a threat against the enemy. If, in the first days of the retention of Salonika, the enemy had struck swiftly and hard, if he had followed up the successes farther north in true German fashion, then Salonika would have been no more than Cape Helles, the grave of an unfortunate enterprise. But difficulties of communication, and lack of the men who might have turned tactical victory into strategic success, hampered the Central Powers, and shifty Ferdinand would not where his Allies could not. So, gradually, the port of Salonika was ringed round with defences; men and guns were put ashore to languish in this flea-bitten town—to what end?

The writer answers the question of keeping in mind the parallel of Torres Vedras, and looks upon the retention of the port as a secondary business "*so far as the present combatants are concerned.*" He refers to the efforts of Germany to draw in other neutral States by impressing them with a sense of Teutonic might, and continues:—

But the Allied occupation of Salonika stands as a gibe at the supposed strength of the Central Powers. If it were possible to shift out the Allies, Austro-German statesmen could point to the feat as a final proof of their invulnerability, and their ability to work their will in the Balkans and elsewhere; as it is, to all their assurances there is the retort—Salonika! And the retort is unanswerable. An undefended port has been turned into a stronghold, and, more, has been made a menace to the Austro-German domination of Bulgaria and Turkey; and no Roumanian can foresee the result of that menace, when the weather shall admit of free action in the passes of Southern Serbia and along the valley of the Vardar.

Here in England, untouched by the possibility of invasion, and immune for centuries, we cannot realise to the full the effect of such a threat as is the occupation of this port. It is of little use to tell an Englishman that the occupation of Salonika is a threat against Uskub, against Nish, against Sofia, and against Belgrade, until the threat becomes translated into action. To the average man the occupation of Salonika is a waste of men; but we may be certain that it is not seen in this light by the directors of the war at Berlin and at Constantinople.

He thinks also that the occupation of the port will prove to be valuable as "a threat to Balkan malcontents" when we come to the great reckoning with Germany, and concludes:—

The enemy threat to the safety of Egypt may be considered practically nullified by the recent events of the Caucasus campaign, but such possibility of enemy attack on Egypt as remains is vitally affected by the occupation of Salonika. The enemy has but the one line of rail from Constantinople through Asia Minor for the transport of troops and supplies to the vicinity of the Suez Canal, and the possession of Salonika and Alexandria give to the Allies the advantage of acting on interior lines against this railway, which for a large part of its course is vulnerable from the sea. By a blow struck, with naval co-operation, from Salonika, any force sent against Egypt by means of this railway could be cut off and starved of munitions and food, if the sending of such a force were still possible for the enemy, which is doubtful now.

Thus it may be said that the Allied occupation of Salonika is no ill-considered gamble, no waste of men, but is a wedge jammed into the mechanism of the enemy's military machine, rendering inutile certain parts of that machine, and thus affecting the working of the whole.

Roumania and Greece.

Writing in *Reynolds' Weekly* (April 2), Mr. T. P. O'Connor says that with the fall of Erzeroum Germany's dream of the East began to fade. He points to the rumours that Turkey is anxious for a separate peace as being possibly without much foundation as yet, but "they are straws which show how the wind blows, and indicate that Turkey's power for mischief is coming to an end." He continues:—

This, again, involves many other satisfactory results. I have little doubt as to the choice which Roumania will ultimately make, but we must not be too anxious or too fidgety. Roumania will not stir. Roumania, in my opinion, ought not to stir till the beginning of the great Russian advance secures her from a pounce by Germany, and perhaps the same disastrous lot as has fallen to Belgium, Serbia, and every other place where German brutality has been left to display its hideous possibilities. I regard the news from Greece as growing daily more satisfact-

Digitized by Google

tory. Here, again, I would strongly counsel a spirit of self-confident patience. My friends in Greece—and as one of the oldest of the Philhellenes I have many friends in Greece—and the Greeks who are outside Greece in various countries have always said to me that time must be allowed to do its work, and that time was on the side of the Greeks, who, following the lead of M. Venizelos, see no hope for Greece except in alliance with the Allied Powers. The enemies of M. Venizelos are daily losing their hold. Indeed, at this moment there are possibilities in Greece which may threaten the dynasty, and though he does not yet realise it, the best friends of the King are those who press upon him a national Greek policy, and stand between him and the disapproval of the overwhelming majority of his subjects against the support of his odious brother-in-law, the German Kaiser.

In regard to our occupation of Salonika Mr. O'Connor says:—

I regard our occupation of Salonika as, next to the capture of Erzeroum, the most important factor in producing the great change in the Near East which everybody can see to-day. Without that expedition, our cause in the East would have been prejudiced, if not lost. Roumania might have gone; Greece might have gone from us; and if the armies these two Powers could put into the field had been added to the German, Austrian, Bulgarian, and Turkish forces, it is evident that with all her splendid forces Russia might have found her task almost impossible. As it is, we may regard as probable that Russia will find these forces on our side which otherwise might have been against us, and I need not dwell on the difference this will make when at last Russia begins her steady, and I hope overwhelming, descent on the decimated ranks of our enemies. Without Salonika we might well be charged with treason and desertion by our Russian Allies.

ALBANIAN PROVERBS.

(From a Correspondent.)

A Greek writer, who makes a speciality of the customs of the peoples of the Balkans, has just published a collection of Albanian proverbs which give a real insight into the character of this folk. The following are among the most characteristic:—

A well-thought-out lie is better than a truth which is stupid.

A sack of flour and a full purse—these are the best friends.

The cat and dog are made to bite each other; but if you see they are friendly, look out for yourself.

He who has never seen a hare run must not speak of what fear is.

He who harnesses an ass to his cart must suffer the vagaries of that animal.

He who does not get drunk on Sunday does not deserve to be shaken hands with on Monday.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,
CAWNPORE, INDIA.

Army Boot and Equipment Manufacturers.

CONTRACTORS TO THE INDIAN, EGYPTIAN AND OTHER GOVERNMENTS.

THE LARGEST CONCERN OF ITS KIND IN THE WORLD.

The NORTH-WEST TANNERY CO., Ltd.,
CAWNPORE, INDIA.

Tanners and Curriers, Leather Goods Manufacturers.

Saddlery and Harness of every description.
Travelling Requisites, Bags, Trunks, &c.

CONTRACTORS TO GOVERNMENT.

The ELGIN MILLS Co. Ltd.
CAWNPORE, INDIA.

Spinners, Weavers, Bleachers, Dyers, and makers of every description of Cotton Goods such as TENTS, DURRIES (Cotton Carpets), and other Floor Coverings, Dusters, Towels, Bed & Table Linen, &c., &c.

Contractors to various Government Departments for Uniforms, Tents, Camp Equipment, &c.

New Egerton Woollen Mills Co.,Ltd.
DHARIWAL, PUNJAB, INDIA.

Sole Manufacturers of the Famous . .

Dhariwal
Long Life Wool Wear

Costume and Suiting Materials, Blankets, Rugs, Lohis, Hosiery, Puttees, Uniforms, Liveries, &c.. &c.

CONTRACTORS TO GOVERNMENT.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Paris papers report that Greece is attempting to raise a loan in Berlin. Personally, I am inclined to think that there is very little foundation for the rumour. German loans to Near Eastern countries have never been a success, as far as the countries themselves were concerned, and have always led to a gross self-assertion on the part of the Teuton. The rattling sabre of the Pomeranian grenadier always accompanied the clinking of Berlin gold. Surely, we do not love Greece so little that we would let her be bought by the Huns, and thus endanger her very existence? The thought alone is preposterous. Besides, what money can Germany have to lend? It would be paper, and what will the value of that paper be after the conclusion of the war? No doubt it would suit Germany's cards extremely well to export paper now for redemption in gold at a later date, but such an operation cannot suit Greece.

***

In connection with the above, it is interesting to see how German payments are made in conquered Bulgaria. Our Bucharest Correspondent quotes the Sofia paper *Narodna Prava* as expressing satisfaction that the Germans are paying on the spot for all articles requisitioned. "It does not, for obvious reasons" (continues our Correspondent) "state that all these payments are only in paper money, the actual value of which is falling daily. This notwithstanding, the unfortunate persons from whom goods are 'requisitioned' have to take it at its face value. At Sofia alone, during four months (October-January), goods have been 'requisitioned' to the value of 7,654,085 fr., at Rustchuk 3,227,009, at Sistoff 2,655,437, at Philippopolis 1,262,259, at Plevna 1,460,444, at Sliveni 1,140,307, at Jamboli 2,614,402, at Guinardjine 1,140,203, at Lom 1,511,128, at Karnobat 2,385,163, at Gabrovo 2,566,322, at Tchervenoreg 1,273,278 fr. Thus in four months Bulgaria has been flooded with German paper to the value of over seventy-three million francs. This is causing universal dismay in commercial circles, where the tragic fall of the mark is only too well known." I feel sorry for the Bulgarian peasant robbed thus on a wholesale scale by Boche swindlers, but, after all, he has only himself to thank. I sincerely hope, however, that the Greek peasant will never be obliged to submit to such a Hunnish system of exploitation.

***

Another matter of interest reported by our Bucharest Correspondent is the statement made in German papers to the effect that Germany is extracting daily 70 tons of copper out of the Serbian copper mines. According to our Correspondent, this is a gross exaggeration. The Bor mines (which practically monopolised Serbia's output), at their best, he argues, never produced more than 30 tons a day, "because the quartz required a special treatment by means of a secret process." Moreover, the plant was effectually destroyed by the Serbs before their retreat, and the mines rendered useless for months to come. Our Correspondent concludes by suggesting that the German figures have been grossly and intentionally exaggerated, with a view to making the Allies believe that there is no further copper shortage and that, therefore, the continuation of the war is useless. There may be a bit of truth in this suggestion, but, on the other hand, the most significant fact is that, whether with a high or low output, the Germans have succeeded in re-opening one (or more) of Serbia's copper mines.

***

The meeting of the British Manufacturers' Association, held on Wednesday afternoon at the Cannon Street Hotel, was a revelation. It was well attended, the speeches were practical and to the point, and the enthusiasm of a kind that promises well. There is no doubt, there can be no doubt, that the association means well, but it has a long, long way to go, and there will be serious obstacles in its path. The chief of these is Governmental apathy—euphemistically called conservatism—which is as stubborn as a brick wall, and can only be broken down when the weight of public opinion grows too strong for it. Hence the Manufacturers' Association must continue to organise its forces, draw out all its resources, and *drive* the Government to do its duty towards them and recognise that they are the nation's mainstay and its chief asset. We do not want to have an industrial war at home after this other war is over, but, unless we look out, it will fall ruthlessly upon us. The manufacturers realise this, and if they in their own interests want to avoid it they must join the association and lend it the weight of their name and influence in order that it may fulfil its objects, namely, the protection of British industry, the fostering of British Imperial trade, and the reorganisation of our economic forces.

***

I am pleased to read that the Board of Trade have decided to hold the British Industries Fair in London next year from Monday, February 26, to Friday, March 9, inclusive. Full particulars regarding the Fair and the building in which it is to be held will be announced in due course. Having regard to the satisfactory results achieved by the two British Industries Fairs already held, the Board of Trade propose to organise the 1917 Fair on similar lines. Participation in the Fair will again therefore be confined to manufacturers, and admission, which will be by invitation of the Board, will be restricted to wholesale buyers.

***

Owing to the almost complete reversal of the economic situation in the Sudan, consequent upon the disastrous European war and other misfortunes, the Government is constantly turning its attention to fresh sources of revenue, or increasing, by all means in its power, the facilities for the conduct of already existing trade and commerce, writes a correspondent. Thus, recently, in order to place trade between the Sudan and South-West Abyssinia, *via* Gambela, upon a more secure footing, an entirely new scale of rates was adopted between Gambela and Khartoum and Port Sudan respectively. So far, it is understood, the innovation has proved encouraging, and the prospects of bringing up the interchange of trade to substantial proportions are decidedly bright.

***

The current issue of *Kelly's Monthly Trade Review* contains a general informative article on "The Sudan and Raw Material" that will help to bring the wonderful natural resources of that country to public notice. Incidentally it may be pointed out that the Sudan Government Railways and Steamers have their own bureau in London, where all information, trade and otherwise, concerning the country can be obtained. It is situate at 5, Northumberland Avenue, and should be visited by those interested in our great African possession. However, the attention of prospective traders may likewise be drawn to the useful samples of Sudanese products exhibited in the galleries of the Imperial Institute.

***

Cabling from Salonika on March 25, Mr. G. Renwick, the special correspondent of the *Daily Chronicle*, gives a graphic picture of life at Constantinople. from which the following extracts are taken:—The difficulty of feeding the population is becoming so great that the newspapers are advising people to leave the capital and go to Asia Minor, where provisions are said to be more plentiful. The journal *Tanin* says that the people in the capital are literally dying of hunger. Black misery, it says, is the only term which can be used to describe the condition of affairs at Constantinople, Broussa, Angora, and Smyrna. On the one hand, so runs another comment on the situation by the same journal, we are becoming exhausted in a military sense, in the face of our redoubtable enemies On the other hand we see the menacing spectre of famine. There is no petrol, coffee, sugar, or rice. The people have to fight in order to get bread. It is simply impossible to supply the people of Constantinople with provisions.

***

The already complex finances of the Baghdad Railway have been rendered more intricate than ever, says the *Daily Telegraph*, by some recent manœuvring in the Turkish Parliament. A semi-official telegram from Constantinople, published in the *Kölnische Zeitung* and one or two other German papers, says: "The Chamber has passed the measure already adopted by the Senate, according to which the £T5,000,000 advanced at 6 per cent. for the construction of certain strategic railways is to be increased to £T7,112,000 and the interest reduced to 5½ per cent. Further, both Chamber and Senate have adopted a second bill, whereby the agreement concluded on November 6, 1915, between the Turkish Government and the Baghdad Railway Company, is approved. This agreement provides that the extra £T2,112,000 advanced by Germany to the Turkish Government shall be placed at the disposal of the Baghdad Railway Company. Of this sum £T1,936,000 is to be regarded as a loan from the Turkish Government to the company at 3 per cent., while the balance of £T176,000 is to rank as compensation for the extra expenses of construction imposed on the railway company on account of the war. If, however, the war comes to an end before the work of construction has been completed, the company is not to receive the whole amount of £T176,000, but only 10 per cent. of its total expenditure. The payment of interest on the 3 per cent. loan is to begin when the sections of the line now being completed are opened. If the loan is not paid back within five years, the rate of interest payable is to be raised.

The Egyptian Budget.

(From Our Own Correspondent.)

Cairo, March 21.

This afternoon the Council of Ministers approved the Budget for the coming financial year, which starts on April 1 next. The situation to-day is very different to what it was twelve months ago, and the following table gives an interesting comparison between the figures for the two war-year Budgets and those of the last one prior to the war:—

	Budget for 1916-17. £E.	Budget for 1915-16. £E.	Budget for 1914-15. £E.
Revenue	16,350,000	14,756,000	17,588,000
Expenditure..	16,639,000	15,900,000	18,162,000
Draft on the Reserve ..	100,000	1,144,000	574,000

Thus, although last year the revenue was estimated at over two and three-quarter millions less than that set down for the preceding one, the situation of the country has so improved that it has been found possible to Budget for a revenue that is barely one million less than that of two years ago. Expenditure has also been reduced by over a million and a-half compared with 1914-15, so that the Budget position this year is actually half a million better than it was prior to the outbreak of war. Of course, this has entailed cutting down public works, which is very regrettable.

Finance Committee's Notes.

The Finance Committee's note which accompanies the Budget states:—"That although the war continues, the pessimistic anticipations of a year ago have not been realised. The cotton markets of Europe have gradually recovered, and the price of cotton has risen to an exceptional level. It is true that as a result of the measures adopted by the Government the area under cotton was less than usual, but cotton has given place to other products, from which such good crops have resulted that the country has found itself in possession of a surplus over its own requirements, which has gone towards increasing its exports. The presence in Egypt of a great number of British troops has provided work for the local population, the while it has created an immediate demand for articles of local production. All these circumstances have contributed to counteract the pernicious effects of the war, as regards at least the immediate prosperity of the Egyptians. It should, however, be pointed out that, despite the general improvement and the resultant increase in State receipts, the purchasing power of the people has evidently not regained its normal level, whilst the receipts of the Government still remain much below the figure at which they stood before the war."

The Committee, however, considers that the revenue, compared with the estimates for the previous year, is satisfactory. The land tax has been collected without difficulty. The Customs receipts will be considerably above the estimates. The tobacco dues will show an increase, partly due to the raising of the tariff. There has been more activity in the Courts, producing as a natural result higher receipts. The railways, telegraphs, and the Post Office have benefited not only by the improvement in commercial affairs generally, but also by the presence of the British troops, which are a source of profit to them all. The sole item in the accounts for the financial year which closes on the 31st inst. which will fall below the estimate will be port dues. This is due to the growing needs of the Allies as regards shipping and the consequent difficulty in finding freights for ordinary commerce. "This state of affairs has already created difficulties for Egypt, and may one day become a menace to its prosperity."

Economy.

As far as concerns the expenditure of the current year, important economies have been realised on the Budget credits, owing to the care taken by the various administrations to limit their outgoings and to the difficulty in obtaining material from Europe for the new works sanctioned. As a result of this, the accounts will close with an important surplus, which the Committee estimates at well over a million. "This surplus would have sufficed almost to restore the reserve to the figure at which it stood before the war if the diminution in share values in the world had not brought about a serious depreciation in the value of those in which the reserve is invested."

Increased Revenues.

Turning now to the Budget which is the subject of this article, we find that the principal increases in revenue compared with the estimates of the previous year are:—Direct taxes, £E130,000; Customs, £E900,000; railways, £E494,000; Post Office, £E62,000; legal fees, £E71,000; domains, £E36,000; and divers receipts, £E128,000. A decrease in port dues of £E40,000 and one of £E10,000 in military exemption fees are provided for.

No arrears of land tax are foreseen, and an increase is expected in the general collections of direct taxes, in spite of the fact that taxation to the extent of about £E70,000 will have to be remitted on certain lands that were left unirrigated, owing to the insufficient flood of 1915, and that the house tax has diminished on account of the numbers of houses that have remained untenanted and the revision of rates that has taken place in the case of certain properties.

The increase in Customs receipts is due to improvement in commerce and to the raising of the export dues to 12 per cent., which will bring in an extra £E200,000. It is pointed out that this increased tariff is only a temporary measure, and that it will come to an end when the war finishes. It has been found possible to raise the estimates for legal fees, owing to an improvement that has been noticeable in the receipts of the Mixed Court during the last few months and to the marked increase in the work done by the native tribunals.

The increase in railway receipts is put down to the very active traffic caused by the amelioration in the commercial situation and by military exigencies. The extension of the cotton area is also expected to bring about an increase in traffic. As regards the Post Office, the extra £E62,000 budgeted for is expected to come from the larger sale of stamps and increased activity in other services caused by the improved economic and commercial situation.

Domains.

The increase in Domains receipts is in reality more than the £E36,000 put down in the Budget, as last year the estimate was raised on account of the large portion of the 1914 cotton crop which had not been sold, and was to be disposed of during 1915. This stock has now been sold off, and the improvement in the Domains receipts comes from the fact that a larger area of the estates has been put under cotton, and that better prices are expected from the sale of the resultant crop. As regards divers receipts, a considerable increase is expected from the investment of funds and from the share accruing to the Government from the profit made by the National Bank on the bank note issue. In addition a profit of £E100,000 is anticipated from the new coinage, a large quantity of which will have to be struck.

Expenditure.

With regard to the expenditure, the increase of £E666,294 is due as to over £E400,000 to the rise in the price of coal and the balance to the higher cost of material which has to be imported from abroad and the increased cost of maintenance. The Civil List of the Sultan receives an additional £E19,951, bringing the total, including the Palace staff, to £E338,810. Railways bulk largest amongst the increases with an extra £E501,562, of which £E332,000 is due to increased coal charges. Maintenance and renewal of material take an extra £E91,000, and new rolling-stock £E75,000.

The Post Office receives an addition of £E29,510, part of which is for the transport expenses on consignments for the troops. An amount of £E10,000 is allowed for arrears of 1914 on transit charges, which have to be settled through the International Bureau at Berne. An increase of £E50,764 is allowed for the War Office, owing to the steady rise in the cost of munitions and of equipment. Pensions and Indemnities absorb a further £E52,835 this year, bringing the cost to the State to £E732,335. Of the increase, £E15,500 is due to the payments made to the families of men who have joined the Army. It is to be noted that the amount received by the State from its officials towards pension is £E132,000 per annum.

It has been found impossible to provide any further amounts for any of the important improvement works that had been started. The only new works for which anything has been granted are canal improvements and work on the Rayah Behera, for each of which £E22,000 has been set aside. It is to be presumed—and hoped—that when the current financial year is closed part of the surplus will be set aside for the continuation of the projects which had to be suspended on the outbreak of the war.

Provision is made in the Budget for the preliminary expenses of the decennial census, which takes place next year, and a sum of £E18,000 is set down for the extension of the cotton area of the State domains and for the increase of the area of those estates under direct cultivation (the area is now 34,500 feddans). Considerable economies have been effected in the Public Instruction Budget owing to posts left vacant by men who have gone to the front not being filled up, and to the suppression of the Primary certificate examinations. This has enabled the creation of a new girls' school in Cairo, a teachers' school in Alexandria, and an elementary higher school to be made without any addition to the Budget for education.

The Public Health receives an additional £E14,100, due partly to the opening of an ophthalmic hospital in the Fayum and to the extension of the infectious diseases hospital at Abbassia. The other changes in the budgetary items are mainly due to transfers of services from one administration to another, whilst the increase of £E5,120 in the charge of the Public Debt is represented by £E4,133 for the annuity on the Cairo-Helwan line, and about £E1,000 for that on the dredging of the Suez Pass, payable to the Suez Canal Company.

Adviser's Note.

Usually concurrently with the publication of the Budget and the Finance Committee's Note there is published the annual Note by the Financial Adviser. Owing to the absence of Lord Edward Cecil in England—he has been detained through illness—his review of the situation will not be made public until later, probably towards the end of the month. In view of the peculiar conditions still existing it will be awaited with great interest.

ENEMY FIRMS IN EGYPT.

The *Official Journal* just issued contains the following notice in reference to the Proclamation of August 16, 1916:—

Notice is hereby given that the following firm has been granted a licence to trade without special restrictions, in place of the restricted licence granted to it as stated in Section B of the notice published in the *Official Journal* of January 13, 1916, No. 4 *bis*:—

Picciotto Bros. and Co., Rue Matrah *ex* Okelle Dumreicher, Alexandria.

The following firms have been granted licences to trade in Egypt with the British Empire and with Allies of Great Britain, in accordance with the terms of the same section of the notice:—

Grun, Bernard. P.O. Box 600, Cairo.

Maria, Haddad and Co., 29, Boulevard de Ramleh, Alexandria.

Klat and Co., Hector, 27, Rue Mosquée Attarine, Alexandria.

The following firms have been granted licences to trade for the purposes of liquidation only, in accordance with the terms stated in Section C of the notice:—

Sterzing, Otto, 45, Rue Abdine, Cairo.

Blumenthal Frères, H. and J., Sharia Bosta el Kadima, Cairo.

TRADE WITH RUSSIA.—Firm of Produce Importers and Exporters, desirous of opening branch in Odessa, would like to hear from firms desiring REPRESENTATION, who would be willing to co-operate and share expenses of common office.—Reply to Box M., Publicity, Ltd., 28, Mark Lane, E.C.

Egyptian Irrigation.

Sir Murdoch Macdonald's Report.

(From Our Own Correspondent.)

Cairo, March 14.

The outbreak of war necessarily arrested the progress of public works in Egypt and the Sudan, but the absence of the undertaking of new enterprises and the suspension of the execution of those already embarked upon do not detract from the interest attaching to the report by Sir Murdoch Macdonald, Under-Secretary of State for Public Works, which has just been published and which deals with the period from January 1, 1914, to March 31, 1915. On the contrary, this report possesses an unusual attraction in that it contains a very candid discussion of the various projects, which have to be undertaken, if both Egypt and the Sudan are to be given the water which they require for their full development and the security from water fatalities which is equally vital to their welfare.

Water Problems.

In the introduction Sir Murdoch gives some interesting details of the water problems which confront the irrigation authorities of those two countries and incidentally throws a new light on the motives which underlie the undertaking of the great works contemplated. The ancient system known as the "basin system," under which the country was divided into large basins which the waters of the Nile entered as soon as the flood had risen, and on the bed of which the seed was sown after the retirement of the flood, has been replaced by perennial irrigation, whereby two crops instead of one are now grown. The country is to a very great extent protected against the famine which, under the old regime, was inevitable, if by any chance the flood failed. To-day the perennial system has been so extended that only a fifth of the cultivated area of the country, all situated in Upper Egypt, remains to be converted.

Reclamation of Uncultivated Land.

Of new works remaining to be done the largest is the reclamation of uncultivated land to satisfy the requirements of a population which continues to multiply with increasing rapidity, such reclamation to be supplemented by the extension of perennial irrigation to the yet unconverted areas of Upper Egypt For these works more water is required in summer, and to secure that, further control of the Nile becomes necessary. Further control of the Nile is also necessary to satisfy certain immediate requirements apart from all consideration of what may be wanted in the future. Sir Murdoch points out that although the Nile is one of the most regular rivers in its seasonal variations of volume, these variations are marked by minor irregularities which continue deeply to influence the well-being of the Egyptians. He gives some illustrations of these irregularities, and adds: "The Nile banks require to be further protected, and, finally, there is a most urgent need for better drainage in the Delta."

With regard to the protection of the Nile banks he explains that the passing of the flood water safely down to the sea is one of the most serious duties of the Irrigation Service. The river banks along which the flood flows high above the level of the adjoining land, were made in very early times, and are composed of such friable material that they are constantly being denuded by the action of wind and traffic, and so require continual repair. An additional danger is that the flood levels are tending to rise partly because less water is now taken from the crest for basins, and partly because the two branches of the river in the Delta appear to be silting up. In olden times the authorities had little reason to fear the effects of abnormally high flood. The river might break its banks—it often did—and inundate the country, but little real damage was done, and these "breaches formed convenient exits by which the water might pass into the middle and lower zones of the Delta, then little cultivated." But to-day the Delta is so thickly populated and so widely cultivated that grave injury may result from any such breaching of the banks. Strengthening them will, however, not completely remove the danger, for there is the fear that a continuance of high levels may render the banks sodden and cause them, notwithstanding, to slip and breach, "and here the design for improvement makes a wide cast from Lower Egypt, where the danger is greatest to the Sudan, where the only source of permanent security can be found and where the regulation of the Blue and White Niles will at once diminish the flood and increase the supply of summer water."

Delta Drainage.

With regard to the question of the drainage of the Delta Sir Murdoch explains that this is a new work only in relation to the extension of the treatment to new areas. The Central Gharbia and Western Behera or Mariut schemes, each comprising some 500,000 acres, which were started in 1912 and on which up to March 31, 1915, about £E900,000 had been expended, would by now have been within measurable distance of completion but for the interruption of expenditure caused by the war. Sir Murdoch gives an interesting explanation of the manner in which the need for drainage originated. "The great increase of population was accompanied by reclamation of a considerable area of waste land in Lower Egypt, and, though not enough was reclaimed to keep pace with the demand, yet the process proceeded faster than the efficacy of drainage and irrigation allowed and was accelerated by a kind of excess in development, produced by the Aswah Dam. In particular, irrigation outstripped drainage with the result that land reclaimed stands arrested in its development, and certain areas in the middle zone of the Delta have actually deteriorated rather than become fertile. As this deterioration is likely to increase unless steps are taken to prevent it, the provision of adequate drainage claims immediate consideration in any projected improvement of the country. At the same time the still increasing population demands wider treatment of the question than before, and a combination of improvement with new development. In 1882 the proportion of crop to each head of population was nine-tenths of an acre, but has since fallen to three-quarters, threatening a state of congestion in the near future if no new land were available for cultivation."

Taxation.

An explanation of the principle adopted by the Government in its drainage schemes follows, and we see that the problem has been no easy one for the irrigation authorities to solve. The drainage undertakings may be costly but they promise large returns. This can be gauged from the land tax which near the apex of the Delta varies between P.T. 100 and P.T. 150 per feddan, but which in the lower areas still only partly cultivated is only P.T. 40, or even less. Three or four years after water has become sufficiently available, when proper drains are in existence and all the salt has been washed out, the areas in the North will be able to bear a tax approaching those first mentioned. When these drainage projects have been completed "1,000,000 acres, only half irrigated at present, will have been furnished with deep drainage and efficient irrigation, and 1,800,000 acres of entirely new land, properly watered and drained, will have been provided to satisfy a growing population. This result it is proposed to obtain by treating the Delta area by area and providing sufficient land just ahead of what requirements may reasonably be expected to be."

Nothing will for the present be done to Lake Menzala, for although it would no doubt pay to reclaim the land lying under its shallow waters, yet that is for the future, and there are far more pressing works of immediate necessity to be tackled before. However great their ultimate benefits may be it would not now be the moment to discuss projects only affecting the future and from the drainage of the Delta to the regulation of the Nile in the Sudan all undertakings at present proposed though they may be designed to satisfy the future, too, will primarily serve immediate needs. Thus we can take it for granted that no undertakings will be put in hand for some good time yet that do not have a direct bearing on the present position. This is as it should be, for otherwise this would mean taxing the present generation for the benefit of posterity with the added injury that in order to provide funds for works which would only bear fruit years hence the present generation would be deprived of the wherewithal to deal with the troubles which afflict it to-day and the neglect of which might react unfavourably on posterity.

"Fully to protect cultivation against the risk of disaster from invasion by the flood through breaches in the river banks is the immediate object of proposed works in the Sudan. Strengthening of the banks has been mentioned as the direct preventative of danger; the larger method of protection to be carried out in the Sudan is intended by some means or other to diminish the height and endurance of the flood itself."

Flood Water.

The flood water has, however, such peculiar qualities and the movements of the river at the only place where interference is possible are so singular that such action is somewhat complicated. The soil of Egypt has owed, and still owes, its great fertility to the silt which is annually brought down by the flood or "red" water. "To reduce the supply of this red water would be undesirable, partly because of the value of the water to Egypt and partly because any reservoir intended to store such water would be liable to rapid obliteration by the silt it would collect." Since, however, this silt comes from the Blue Nile and the White Nile is comparatively clear—most people who have been at Khartoum during the flood will remember the phenomenon that is produced at the junction of those two rivers which flow side by side for some distance the different colour of the Blue Nile water distinguishing it from that of the White Nile—there can be no doubt that the White Nile is the part of the river where such a reservoir may be created.

White Nile Dam.

Sir Murdoch is of opinion that, during the rise of the flood wave in the Blue Nile, and until it slows down as it nears its crest, or, if rising quickly, until the crest is reached, all or most of the water of the White Nile is probably held up and stored in the natural reservoir formed by the valley through which it flows. If, therefore, any works were to be carried out in or beyond the sudd region for the purpose of reducing the supply entering the lower reaches of the White Nile, it is quite possible that part of the Blue Nile discharge at Khartoum would turn and flow southward to an extent equivalent to the extent of that reduction. Similarly the holding up of the river in the sudd region to obtain more summer water might bring down more water in flood just at the time when the Blue Nile might be abnormally high. "This detrimental possibility and the resulting objection to any such works would, however, disappear with the construction of a dam on the lower portion of the White Nile." This dam could be used for protection at the period when the flow of the Blue Nile begins to slow down and the river falls. At that time the waters of the White Nile being released pass into the main river. If the dam were to be used so as to reduce the following waters, by the time the latter reached Egypt the crest would be so thinned that it would constitute no danger. The water thus held up could "be released later on as demand arose, and the dam would thus fulfil its second function of storing water against the time of shortage."

Quite conceivably there might be one disadvantage from the construction of a dam. This might arise if it were used to form a reservoir for annual storage not only in years of excessive flood but also in ordinary or low years, for the diminution which it would cause in the supply reaching Egypt might be such as to increase the risk of land being

Digitized by Google

left unwatered in basin areas in Upper Egypt. As a corollary to the use of this dam as a storage reservoir. Sir Murdoch thinks that a barrage might be constructed at Nag Hamadi or that pumping concessions might be encouraged so as to counteract any such risk. A barrage at Nag Hamadi "might be also used as a summer feeder to a system of canals extended to meet the new conditions," and the area between Baliana and Deirut—the area of Upper Egypt still under basin irrigation falls into two divisions, Aswan to Baliana and Baliana to Deirut which represents half the total area still awaiting perennial irrigation, might be converted by means of this barrage.

"Further control of the flood wave beyond that to be provided by the dam on the White Nile might be obtained by the construction of a dam or weir at some point on the Blue Nile where the flood is not yet charged with the silt it eventually carries." Whilst such a work might lower those quick rises which the proposed dam on the White Nile would merely flatten, it would be unable to reduce prolonged floods in a corresponding manner. "It would, however, increase security against excessive floods and might be used to store a large quantity of water partly for Egypt and partly for the ultimate requirements of the Gezira district in the Sudan."

Sennar Weir.

Preparatory work has already been started on a weir on the Blue Nile at Sennar, where the site was approved by Lord Kitchener and Sir R. Wingate in January, 1914. This weir is part of what is known as the Blue Nile project, and is intended to provide water for the Gezira. This is the tract of land extending from Khartoum to the rainfall region and lying between the White and Blue Niles. "It is in shape and extent singularly like an inverted Egyptian delta and similar also to the irrigation of the delta is the proposed irrigation by which it will be brought under cotton cultivation, though separated as they are by a thousand miles the two regions will be differentiated by exactly opposite seasons of production."

The Gezira has a very irregular rainfall, mostly in the early autumn. Its population, such as it is, avails itself of this scanty supply of water to grow grain in patches, and it was this fact that first gave rise to the impression that grain was the only product for which the soil was fitted. But the experiments of the past ten years have shown that a large portion of the district is admirably suited to cotton cultivation and an experimental pumping station at Wad Medani watering 2,000 feddans "has proved that cotton can be successfully cultivated as a winter crop in contradistinction to its summer growth in Egypt. This different time of growth has a most important bearing on the subject of development, for, if both crops grew and took water at the same time in the Sudan and Egypt, difficulty would arise in the distribution of the summer discharge of the Nile, which in some years even at present does not suffice for Egypt alone." Of the total area of the Gezira 2,000,000 feddans can certainly be cultivated with cotton, and of these a block of 120,000 feddans has already been chosen for treatment. The outbreak of war has of course affected the progress of this work, but it has not completely stopped and the digging of the main canal which is to conduct the water over the area to be irrigated has been continued by convict labour. This weir "from the very nature of its site, however, has no real storage capacity, and indeed is intended only to feed the main canal in the Gezira." It will therefore not meet the case cited by Sir Murdoch, so it is to be assumed that another weir may later on be constructed further up the Blue Nile if a suitable site can be found.

Demands of Increased Population.

With regard to the requirements of Egypt Sir Murdoch says that "the present future conditions in Egypt which call for the provision of more summer water by a dam on the White Nile and other works are that the summer supply is frequently insufficient for existing cultivation and is quite inadequate for its future extension. The Aswan Dam has encouraged development to ask for more than it can give, and the growing prosperity of the country demands that one success shall be followed by others. In 1914 the river was so low that the more important summer crops were only harvested by sacrificing the cultivation of rice and increasing demands would, if no measures were taken to meet them, cause similar loss even in much better years. Up to the present population has increased faster than cultivation or cultivable land. The area cultivated has increased by 43 per cent., and drop has increased by 62 per cent., but the increase per cent. in population is 92. . . . During the past thirty years an annual average of 30,000 acres of entirely new land have been added to the taxable soil of the country and now produce two crops a year. . . . The future is principally concerned with continuation of . . . . these developments and new land should be provided at the rate of 50,000 acres a year."

A table annexed to the report gives some interesting figures of the existing cultivation and possible extension. The total area at present fully cultivated is 4,100,000 feddans, plus 1,200,000 feddans, producing only one crop annually; this gives a total annual crop area of 9,400,000 feddans, as some of the areas give two crops per annum. The cultivated area could be extended by another 3,600,000 feddans, making in all 7,700,000 feddans, and as each of these would then give two crops annually the total crop area would then be 15,400,000 feddans. It is estimated that to satisfy the needs of the country when fully developed to the aforementioned extent an additional storage of 8,000,000,000 cubic metres of water will be required "extending approximately to 9,555,000,000 cubic metres for a summer failure like that of 1914." As a guide to what these figures mean and the stupendous task before the irrigation engineers, it is mentioned that the storage capacity of the Aswan Dam is 2,400,000,000 cubic metres. The White Nile reservoir might supply an extra 3,000,000,000 cubic metres; "more water might be obtained from works on the Blue Nile and the training of the river in the Sudd region and regulation of one or more of the Great Lakes might complete the work."

Sudd Region.

With regard to the Sudd region, Sir Murdoch has some new remarks to make. At one time it was believed that the cutting of a canal alongside this region or the training of one of the main river channels passing through it would enable the entire summer-water requirements to flow down and so relieve Egypt from dependence on the variable supply of different years. But new data has since become available, and "it has been found that irregularities in volume occur on the other side of the Sudd to an even greater extent than on the side towards Egypt, and it results that if either of the above works . . . . . were executed otherwise than as a supplementary undertaking to the other works of control its only effect would be to reproduce on the downstream side of the Sudd the irregularities that occur upstream of it." Regulation above the Sudd could be obtained by building a small dam at the exit from Lake Albert, which would have an enormous storage capacity. This, combined with all the other works proposed and with possible works in the Sudd, "would ensure sufficient water to meet the ultimate requirements of Egypt under the fullest cultivation."

Conclusion.

Sir Murdoch concludes an able and lucid exposition of the situation by the following summary and the policy that is to be followed as follows:—"Further protection is required against excessively high floods. This it is proposed to obtain partly by heightening and strengthening the banks of the river, partly by stopping a portion of the flood wave in the Sudan. The water abstracted from the flood will be allowed to flow back into the river when the levels are lower and water runs short. A dam on the White Nile is the principal work proposed for the double purpose of reducing the flood and increasing the summer supply. More summer water is wanted both to ensure the present area of cultivation against the all too frequent seasons of poor supply and also to provide for further extension. It is also proposed to continue the conversion of the remaining basin lands to perennial irrigation either by building a barrage or by extending the right to pump water from the Nile, and it is intended to reclaim large areas of uncultivated land in Lower Egypt partly as an accompaniment to the drainage of the delta. . . . There appears to be no single project which will satisfy the ultimate demand for water when reclamation and development are complete. The White Nile's capacity for storage may suffice to meet demands for a number of years, and other works may be undertaken to supplement it, but, eventually, it will be necessary to regulate one or more of the Great Lakes."

There can be no possible doubt as to the importance of providing the country with adequate water and the great utility of the irrigation works already established, and the experience of the irrigation seasons of the period under review emphasizes this point. The country had the most limited spring and summer supply since the Aswan Dam was constructed, and there took place the most extraordinary failure of the Nile that has ever been authentically recorded. If it had not been for the Aswan Reservoir and the barrages at Assiut and Esna—and, be it added, the great vigilance and skill displayed by the irrigation authorities—the winter crops would have suffered, cotton in June and July would have been insufficiently watered, and the maize crops would have been seriously endangered by undue postponement of sowing. A further proof of the great value of the irrigation improvements introduced since the occupation is afforded by the statement that whereas formerly the average area that went without water from the flood each year was about 90,000 acres, nowadays the average is not more than 1,000 acres, whilst more striking evidence is forthcoming in the fact that albeit the maximum levels for 1884 and 1914 were identical, only 2,600 acres went unwatered in the latter year, as compared with 110,000 acres in 1884.

ENGINEERING NOTES.

Automobile Ploughs.

Self-propelled ploughs seem to have found a ready market, and, according to a manufacturer's statement, the demand is such that deliveries to new buyers cannot be promised this year. We described in previous notes the efficiency and great adaptability of these little machines, but many improvements have since been made, which increase their efficiency, and, at the same time, place them within the means of the average smallholder. One of the latest improvements is of considerable interest. It is on a double-ended machine with a new type of driving and steering mechanism. This plough consists of a long horizontal frame, with driving mechanism attached at the centre, and plough-shares at each end. The drive is transmitted to the ground by means of two side chains, each running over two large sprocket wheels and carrying supporting plates which press directly on the ground. The chains are driven by further small sprockets on the end of a cross-shaft, which receives power from a motor mounted in the centre of the plough. It is intended that the one chain shall run in a furrow and the other on unploughed ground, so that it is necessary that the two chains should be of different heights. To this end the large sprocket wheels of each chain are carried on two swinging links pivoted on the plough-frame, extended above their pivots and coupled together by an operating rod. The rod is screw-threaded and passes through a nut which works in a bracket on the frame, so that by rotating the nut the rod can be moved lengthwise and thus swings the links, so that the sprocket wheels are raised and lowered together. Tension of the chain may be adjusted by means of a screwed connection between one of the links and the coupling-rod, and the parts are so proportioned that the tension is maintained in all positions of the links. The usual plough-share moving tackle is provided.

Government Support.

We can mention here that the Scottish Board of Agriculture in order to assist local associations of farmers to acquire such automobile ploughs proposed to supply the associations with machines on the following terms: The first cost of the plough must be repaid, together with interest at the rate of 3 per cent. per annum, over a term of seven years; the local farmers must themselves provide all maintenance and supplies; the charge for the hiring-out of the plough must be on a sufficient basis per acre to ensure covering the sinking-fund, interest, running

Digitized by Google

expenses and maintenance. The above terms are very reasonable and will prove of great assistance to small farmers who will thus have at their disposal up-to-date mechanical appliances for the cultivation of their land. A similar disposition, to supply farmers with implements on easy terms, has recently been shown by Governments and responsible agricultural societies in the Near East, and the merits of the British automobile plough ought to be made known to them.

Heating by Chemical Action.

With the increased price of coal and other fuels, many hitherto "handy" conveniences in domestic life, as well as in small industries, have been considerably affected. Any method, therefore, for obtaining heat by means other than ordinary fuel, especially if such means cost less than the latter, is of general interest at the present time. A recent American invention, which has already been patented, seems to embrace the above qualities, for it is an easily prepared mixture for producing heat by chemical action with water. The mixture consists of a caustic alkali in solid form, such as potassium or sodium hydrate, with an oxidisable substance, such as oxalic or tartaric acid, and an oxidising agent, such as a persulphate. The mixture may be used for warming food or other substances in an airtight can. It can also be used as a disinfectant and for cleaning sewers and sanitary appliances. Suitable proportions are 15 grammes of sodium hydroxide, 5 grammes of oxalic acid crystals, and 5 grammes of potassium persulphate, to which half a gramme of potassium nitrate and 3 grammes of tartaric acid may be added, and, in order to produce greater heat, half a gramme of finely-divided or granulated aluminium. When it is to be used as a disinfectant, three-tenths of a gramme of bichloride of mercury may be added, together with vanilla, musk, or camphor.

Trade Notes.

Egypt.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications, with forms of tender, etc., may be obtained, at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo. Date, April 22.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Director of the Police School, Abbassia, for the supply of clothing and accoutrements required for the officer cadets. Date, April 15.

Messrs. Thomas Hinshelwood and Co., Walter W. Davies, Frederick Cree, and Thomas W. Petersen and Co. were recently among the successful tenderers to the Ports and Lighthouses Administration.

Messrs. J. Compton and Sons, Thomas Hinshelwood and Co., Kannreuther and Co., Commercial and Agency Co. of Egypt, Walter W. Davies, Frederick Cree and Co., Ltd., Frederick Cree, Vacuum Oil Co., Alexandria Engineering Works, and Vulcanite, Ltd., were recently among the successful tenderers to the Coast Guards Administration.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on May 10, 1916, for the supply of stores and material required by the above Department during the current year. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, the Agent, Sudan Government Railways, Alexandria, or to Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W.

Somaliland.

The Board of Trade have received a copy of "The Customs Amendment Ordinance (No. 5, of 1915)," dated August 16, wherein the following addition is made to the list of articles which may be imported free of duty into any of the ports of the Protectorate:—

Camp equipment imported by officers and officials serving in the Protectorate. The term "Camp Equipment" shall be held to include the following articles:—Camp-bed and bedding; valise, camp tables; waterproof sheets or tent carpets; bath, wash-stand and basin, tents; camp crockery, cutlery and cooking utensils; camp lanterns, saddlery.

Ships and boats; and the apparel pertaining thereto.

Abyssinia.

Writing on January 27, the U.S. Vice-Consul at Aden says:—The railway from Djibouti to Adis Abeba, Abyssinia, is rapidly nearing completion, being within a few miles of Adis Abeba. With its completion there should be a larger market for American goods. Some of the articles for which there should be a demand are the following: Soap, safety matches, hardware, cutlery, cooking utensils, carpenter's tools, simple agricultural implements, saddles, etc., horseshoes, sewing machines, stationery, ink, cotton prints for women, oils for cooking purposes, and religious books in Arabic and English. All goods must be such as would retail cheaply to the native, as the price is of greater consideration than quality at present.

Roumania.

The trade in automobiles, motor-lorries and motor-cycles, formerly in the hands of Germany and Italy, and partly France, is reported to be very lively owing to the impossibility of now importing goods, thus rendering the value of existing cars very high. British cars imported have always given satisfactory results. A correspondent says that the best means of successfully pushing a motor-car agency is to keep a permanent stock of cars with accessories and spare parts.

Greece.

An agent draws our attention (says *Kelly's Monthly Trade Review*) to the great need of dress-fasteners, needles and pins, garters and suspenders, scissors of all sizes, buttons of metal and bone, hosiery, and thread for sewing, crocheting and lace making in Athens.

Morocco.

The Acting British Consul at Casablanca reports the grant of a lighterage concession at the Port of Kenitra to a French company, and has forwarded a copy of the contract, which contains particulars of the charges which may be made for loading, unloading, warehousing, etc. The copy of the contract (in French) above referred to may be consulted by United Kingdom firms interested at the Commercial Intelligence branch of the Board of Trade, 73, Basinghall Street, London, E.C.

BRITISH CHAMBER OF COMMERCE OF EGYPT.

The annual general meeting of members of the Cairo Committee of the British Chamber of Commerce was held, says the *Egyptian Gazette*, on March 8 for the election of officers to fill the vacancies on the Cairo committee. After reading the minutes there was an adjournment for a short time in memory of the late Mr. R. Q. Henriques.

The retiring members, Messrs. H. K. Baynes, E. Crewe, and Major Adams, who were eligible, were re-elected, and Messrs A. H. Williams and C. E. Jeffes were elected to fill the two vacancies.

Mr. Kingsford, who presided, mentioned the great loss experienced by the Chamber in the deaths of Mr. R. Q. Henriques and Mr. G. A. Williams, both old members of the Committee. Mr. Henriques was the originator of the Cairo committee, on which he had done invaluable work in its early stages as honorary secretary and in more recent years as president.

In referring to the work done by the committee, more especially in connection with the movement for the promotion of British trade interests in Egypt, and the special report printed and issued on this subject, Mr. Kingsford expressed a hope that members would take an increasing and helpful interest in this question by rendering what information and assistance they could to their Committee and by obtaining new British members. He also referred to the trade conference in London and Paris and to the keen interest now evinced in the United Kingdom and the Colonies for the promotion of the commercial interests of the Allies and the Empire. He felt that the promotion of these interests was a patriotic duty incumbent on all British residents in Egypt, whether commercially engaged or otherwise, and that special efforts should be made in this direction now, as of greater importance and serving a more useful purpose than the consideration of small local and personal commercial interests which might be temporarily and disadvantageously affected due to present conditions.

Near East Markets.

CYPRUS NOTES.

(From a Cyprus Correspondent.)

Although cereal crops can hold out for a short time, rain is again needed. There has been a dry interval, and the critical period is at hand. Should rain fall in the coming week, the harvests are assured, and their quality and extent will depend on the amount and distribution of the rainfall. Peasants are everywhere anxiously watching the skies. With regard to locusts, the greatest vigilance will be required, and the year should be one of peculiar interest, in view, not only of the island swarms, but also of any hatching out of eggs of the fresh flights which invaded the island from Syria last autumn and winter. Great responsibility lies on the Mukhtars in the matter of giving early intimation to Government as to the appearance of young locusts.

PRODUCE REPORT.

London, April 6.

Currants.

The market has been quiet, with only few sales having been made during the week at recent prices. Holders, however, are firm in their quotations, expecting a better demand soon to follow. There is a scarcity of the cheaper kinds of currants, but generally prices remain unchanged and steady.

Sultanas.

The market continues quiet, but values remain very firm for all available fruit.

Figs.

There has been only a small demand during the week, but prices are well maintained.

Dates.

The demand is moderate, small business, however, passing at full prices, as recent report.

Seeds.

Linseed is firmer, with Calcutta to London, spot, afloat, March-April and April-May, at 69s. Bombay ordinary, April-May, was sold 69s. 6d. La Plata to Hull, April-May, is quoted 65s. Rapeseed is dull: Toria, March, Hull, 65s. Cotton-seed is rather quiet; Egyption to London, April, is quoted £13 7s. 6d. per ton. Mustard-seed, owing to the very restricted stocks, is held for higher prices.

Oils.

Linseed oil is firmer for forward position; spot pipes are quoted £38 15s. barrels, £39 15s. landed. Cotton oil is very steady; crude spot, in pipes, £43 10s.; refined, pale, pipes, £48 10s.; and barrels, sweet, £52 to £53, as to make. Rape oil remains quiet; ordinary brown naked spot, nominal; English refined, barrels, £55 to £56.

Oil Cakes.

Cotton cakes: Egyptian are offered sparingly, spot parcels at £9 10s. to £9 12s. 6d., while afloat, parcels are quoted £9 5s. to £9 7s. 6d., ex ship. English are offered at £9 12s. 6d. to £9 15s., with Bombay at £9 5s. per ton. Linseed cakes are very quiet, and prices easier. Best London made are selling at £11 10s. to £11 15s. East Indian seed, pures, are offered at £11 7s. 6d. to £11 10s., to arrive. Fine seedy Calcuttas, afloat, are quoted £11 17s. 6d. to £12 per ton.

Various.

Egyptian onions: Some 30,000 bags, new, that have arrived met with a good demand, all being sold at good prices. Egyptian eggs are in moderate demand at 12s. to 13s. 6d. Lentils, 24s. to 27s., 100 lbs. Split peas, 100s. to 110s., 504 lbs. Beeswax, £6 to £9 10s., cwt. Cream of tartar (Greek), 192s. to 195s.

THREE CROPS A YEAR.

The following is extracted from the December report of the Governor of Mongalla Province, Sudan:—"Several villages were growing their third crop of dura, and it was very extraordinary to see this dura fresh and green among the sun-dried country around it and without any irrigation. I can only account for the dura retaining its freshness and greenness to the fact of a layer of soil remaining damp for some time below the surface, the rain water being prevented from sinking or drying up quickly by a lower layer of clay. The Mamur tells me the Dinkas can always get a third crop of dura in this way even though the whole country appears dried up and burnt. In other districts of the province it is impossible to cultivate after October except with irrigation."

COST OF LIVING IN GREECE.

The U.S. Consul-General in Athens, writing on January 26, says:—

Prices of foodstuffs in Greece since the beginning of the European war have continued to increase. The following figures, prepared after personal inquiry at various foodstuffs dealers in Athens, are believed to represent accurately the price of food to the small householders of Eastern Greece on January 15, 1916, compared with the same date in 1915. (Prices are given per pound, unless otherwise stated, and in American dollars):—

Commodity.	January, 1915.	January, 1916.
Apples	$0·082	$0·139
Bread	·034	·048

THE PRIZE COURT.

S.S. Pontoporos.

On Monday judgment was delivered by Sir Samuel Evans in an action brought by Captain Henry Lake Cochrane and the officers and crew of H.M.S. Yarmouth to recover remuneration for the salvage and recapture of the Greek steamship Pontoporos, off the north coast of Sumatra. His Lordship awarded one-sixth of the value of the vessel—£7,333.

On September 10, 1914, the Pontoporos, while on a voyage from Calcutta to Karachi with a cargo of coal belonging to British merchants, was captured by the German cruiser Emden. The Pontoporos was a steamship of 4,049 tons gross and 2,603 tons net register. On October 12, while coal was being transferred from the Pontoporos to the Markomannia, which was acting as supply ship to the Emden, the Pontoporos was recaptured by H.M.S. Yarmouth, a light cruiser of 5,250 tons, and the Markomannia was sunk. Prize proceedings instituted in the Colonial Court of Admiralty of the Straits Settlements resulted in the restoration of the Pontoporos to her owners and the proceeds of the sale of her cargo were ordered to be paid out to the British cargo claimants, less one-eighth deducted (under the provisions of the Naval Prize Act) as salvage.

NEWS FROM ALL SOURCES.

Replying to a question by Sir J. D. Rees in the House of Commons on Tuesday, Sir E. Grey said the introduction of the rupee into Egypt was of a temporary character.

The *Petit Parisien* is informed from Athens that the Greek Government is negotiating with a German-American syndicate for a loan of 150,000,000 francs (£6,000,000). The financial situation is now so grave that the salaries of Greek civil servants have been suspended.

In view of the increasing dearness of food the municipality of Bucharest has fixed maximum prices for meat and other provisions.

As a result of the general mobilization the coal mines at Plakalnitza, Bulgaria, have ceased work. Measures are being taken for a certain number of soldiers, coal-miners by occupation, to be allowed to return to the mines.

COMPANY REPORTS.

National Bank of Egypt.

The *Official Journal* of the Egyptian Government of March 27 contains the following balance sheet and profit and loss account of the bank for the year ending December 31, as presented to the shareholders by the directors at the annual meeting held recently:—

The gross profit, after providing for rebate of discount on bills not yet due, amounts to		£407,478 14 4
After deducting from this sum:		
Directors' fees	£7,650 0 0	
Current expenses	157,615 2 2	
		£165,265 2 2
There remains		£242,213 12 2
Your directors propose to allocate:		
For depreciation of securities	£27,863 10 1	
For depreciation of securities deposited as guarantee of the note issue	94,350 2 1	
		£122,213 12 2
Leaving a balance of		£120,000 0 0
For the payment of a dividend of 4 per cent. on the share capital in conformity with article 49 of the statutes.		

Each share will thus be entitled to a dividend of 8s., equivalent to 4 per cent. on the share capital.

BALANCE-SHEET, DECEMBER 31, 1915.

	397,291 751

Beciu (Roumanian) Oil Fields.

The report states that the loss for the year is £41, without taking into account any allowance for depreciation. This is accounted for by the low prices ruling for oil in Roumania during the period under review. The total production of crude oil for the year to September 30, 1915, was 4,900 tons, and the average net price realised was approximately £1 10s. 4d. per ton, as against 4,752 tons, averaging £2 5s. 6d. per ton, in the previous year. Six wells have been in production for varying periods during the year. Owing to the low price of crude oil in Roumania and the increased cost of boring, development work has been reduced to a minimum. With the help of the rotary plant the company is now well equipped for an active development programme as soon as prices of crude oil recover and the political situation becomes more settled.

Egyptian Bonded Warehouses.

The report of the Administrative Council for last year shows profits of £E21,156, of which £E1,037 has been set aside for the amortisation of real estate, £E2,636 for preference share interest and amortisation, and £E1,486 for depreciation, leaving a profit of £E15,996, 5 per cent. of which—£E799—is to be deducted for the Council of Administration. This leaves a net profit of £E15,196, which, together with the amount of £E13,378 brought forward, leaves an amount of £E28,575 to be disposed of. Out of this amount the Council proposes to put aside £E6,000 for the extraordinary reserve fund, raising it to £E10,000, and to pay a dividend of 8 per cent., and carry forward £E14,775. The tonnage entered in the warehouse during the year was 375,268 tons, as against 522,162 in 1914. The decrease, however, was compensated by the retarded redemption of stored goods, and by the development of certain other branches of business. At the meeting, Messrs. Percy W. Carver and Robert S. Rolo were elected as directors, and Mr. M. S. Wellhoff was re-elected.

Sudan Gold Field.

At Tuesday's meeting of the above company, the chairman said *inter alia*, that the total production of gold last year was 14,263 ozs., realising £49,041. Gross revenue amounted to £49,721. The balance to be carried forward is £7,367. On capital account £8,318 were spent during the year in connection with the extension of machinery and plant. Both in respect of the position underground and financial results, the company is in a sound condition, and there is no reason why it should not continue to make a good profit and to give a steady yield of interest. At one time it was hoped that it would be possible to pay a rather better dividend than 1s. per share in respect of 1915, and, indeed, in normal times the profit made would have admitted of a larger distribution; but the company's position in the matter of a possible claim for excess profits duty is one which cannot be ignored.

Barramia Mining and Exploration.

At the meeting, on Tuesday, the chairman said *inter alia* that during last year 5,870 tons of quartz were crushed, from which 4,598 ozs. of gold were obtained, which realised £15,230. The carry forward to 1916 is £546. As compared with 1914, 670 tons more ore were crushed, but the gold recovered 659 ozs. less, and the realised value was also less. At the Semna Mine operations were continued until June last, when it was decided that before proceeding further with the development of the property it would be desirable to have a bulk crushing of the ore disclosed (which the superintendent estimates to be some 8,000 tons). This test will be carried out during the present month. Mr. Henry Taylor, referring to the situation at Barramia, said that the past year's development work had been restricted to 310 ft., principally owing to the disappointing results obtained in the deeper workings on the main and new counter lodes. There is a difficulty in estimating the reserves of the mine. So far as can be judged, there are still some 10,000 tons available, and this is due principally to the stoping having produced more than was expected. About one-half of this tonnage should give results approximating those of the past year, while the rest is of a lower grade. Excluding exceptionally rich ore, the grade treated in the mill was about the same as in the previous

Digitized by Google

year—namely, 11 dwts. (bar gold). On the main lode the small amount of work done at and about the 500 ft. level has produced no change in the prospects, but has rather confirmed the previous conclusions that the lode at this horizon is poor. At adit level, however, a fair quantity of ore was obtained in the stopes on the south and parallel branches, and some of this was of good grade. On Taylor's reef a pocket containing 618 ozs. of gold was discovered above the 130 ft. level, and at the adit some ore assaying 17 dwts. was opened up and is expected to extend below that level. Below the 370 ft. level the conditions are not favourable, as this reef junctions with a branch of the main lode, and impoverishment occurs over the whole length of the bottom stope for 75 ft.

Alexandria Engineering Works.

The ninth annual meeting was held at the company's offices on the 21st ult., when the accounts and reports were read and passed. A dividend of P.T.50 per share was declared.

CYPRUS GOVERNMENT SAVINGS BANK.

Report for the Year 1915.

According to the report just issued, showing the working of the Government Savings Bank for the year ended December 31, 1915, the year commenced with 187 and ended with 206 open accounts, 56 having been opened and 37 closed during the course of the year. The balance of deposits on December 31, 1915 (£5,043 1s. 6d.), was invested as under:—

	£	s.	cp.
Cost price of £4,088 12s. 10d. Transvaal Three per cent. Stock	4,000	0	0

COMPANY RESULTS, Etc.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for the week 14 tons (last week 22 tons). Hurgada production for the week 567 tons (last week 565 tons).

BARRAMIA MINING AND EXPLORATION.—The following cablegram has been received from the superintendent at the mine, dated the 31st ultimo: March Returns: 615 tons, 343 oz.

EGYPTIAN DELTA LAND AND INVESTMENT.—A dividend of 4d. per share has been declared by the Board for the year ended December 31 last.

The annual ordinary general meeting will be held at the offices of the company in Cairo on April 12.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended March 10 amounted to £E5,418, as against £E4,555 for the corresponding period of last year.

EGYPTIAN PREFERENCE BONDS.—The Bank of England are prepared to receive the coupons due the 15th inst. on Egyptian Preference Bonds: the necessary lists can be procured on application at the Dividend Pay Office.

SUEZ CANAL.—Receipts for the 3rd inst. amounted to 180,000 fr., as compared with 200,000 fr. for the corresponding day last year.

NATIONAL BANK OF ROUMANIA.

(FROM OUR OWN CORRESPONDENT.)

BUCHAREST, March 4.

The stock of gold in the vaults of the National Bank of Roumania now amounts to 320,220,000, and continues to rise in consequence partly of the voluntary deposits made by the public in exchange for receipts in the form of diplomas.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to January 31, 1916 (New Style: January 14 to February 13, 1916):—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Jan.,	1916	3,615,870	1,832,000
Do. do. do	1915	4,413,745	2,151,537
Estimated Receipts for 1 month (Law of Contrc:)		2,408,333	891,666
Difference between estimated and actual receipts for 1 month	1916	+ 1,207.537	+ 940,333
	1915	+ 2,005,412	+ 1,259,870

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

At the annual meeting of the International Sponge Importers, held recently in London, the chairman stated that the supply of good quality Mediterranean sponges will be much less in 1916, owing to the mobilization of the Greek army and navy, which has taken away many of the men who at other times are engaged on the sponge fisheries, and a large part of the best fisheries will be closed during the continuance of the war.

NOTES OF THE WEEK.

The forward movement of the British force destined for the relief of Kut, which began on April 5 with the capture of the first Turkish line at Umm-el-Hannah, was continued the same evening, when the second line of trenches at Falahiyeh was also taken. Both these positions are on the left or north bank of the Tigris. No serious effort was made by the Turks to defend the first, but at Falahiyeh they were strongly entrenched. Meanwhile an advance had been made on the right bank, and the enemy's trenches opposite Falahiyeh were occupied. The Turks fell back to the position of Sanna-i-Yat, and the next two days were devoted to a "close reconnaissance" of the defences. On April 9 General Gorringe, who has succeeded General Aylmer in command of the relief column, launched an attack on Sanna-i-Yat, but failed to pierce the enemy's lines. Last week we expressed the hope that the floods, which are liable to be at their worst at this time, would not deprive the relief column of the success which it now has some right to expect. The reports of the Commander-in-Chief, however, reveal anxiety on this score. Not only are the operations much hampered, but the actual attack has to be delivered on a shorter front, much to the advantage of the defending force.

Since April 9 no message from General Lake has been published. The British version that the attack "failed to get through the enemy's line" has now been amplified by a Turkish *communiqué*, which represents the failure as a regular Verdun repulse. The truth must lie somewhere between the two; but we believe the British public would have preferred to learn a little more regarding the fighting on the 9th from its own Government. As things are, the fact that the repulse has been followed by the absence of further news for four or five days must inevitably give rise to increased anxiety. Even a vague reference to the casualties suffered by the British force, stating whether they were slight or heavy, would have been better than allowing varying estimates of the losses to be based on the enemy's statement that 3,000 killed were left in front of the Turkish trenches.

All the reports from Mesopotamia bear witness to the able manner in which the Turkish defence is being directed. Well supported by field guns and machine guns, the Turk can put up a stiff fight in entrenched positions, which have had the advantage of being selected by German officers and strengthened with all the devices evolved by their experience in Europe. What the enemy has accomplished below Kut he will be able to repeat between Kut and Baghdad; and his present resistance is a measure of the difficulties the Mesopotamian Expedition has to overcome before it can reach its goal. For the moment all its efforts are being directed towards the relief of General Townshend's force at Kut, but it stands committed to a bigger enterprise, and we hope that its reinforcements are being planned on a big scale and not on the hand-to-mouth principle that appears to have been adopted at one time. Whatever the origin of the decision to advance on Baghdad—it is surmised in many quarters that it was taken from a well-meant but ill-informed desire to retrieve the failure of the Gallipoli venture—Great Britain must see the thing through now, as a duty to herself and to the Russians who are making such a vigorous effort in the North.

The Russian advance in Armenia is no longer a rapid pursuit of retreating Turks, but has resolved itself into a case, as an official *communiqué* expresses it, of wresting ground from the enemy. A possible explanation of the altered conditions is that Turkish reinforcements have reached Trebizond by sea, under convoy of the Breslau, which again figures in Turkish official despatches. Progress, however, continues to be made, both along the Black Sea littoral and farther south between Erzeroum and Erzinjan. On April 7 the Turks were dislodged by a surprise attack from the right bank of the Kara Dere, which brings the Caucasus Army within twenty miles of Trebizond. A counter-attack was attempted by the enemy the following night, but was repulsed by the Russians by means of rifle fire and hand grenades. Climatic conditions as well as the physical features of the country help to retard the Russian movements. In the Upper Chorok basin, which lies between the coast and Erzeroum, severe frost and snowstorms are still encountered. Until the operations of the British and Russian forces in the Middle East are brought somewhat nearer together big results are not to be expected. It is all to the good that practically the whole of Turkey's attention has to be concentrated upon Armenia and Mesopotamia.

A very striking letter has been addressed by Prince Nicholas of Greece to Lord Burnham, and is published in the *Daily Telegraph*, where it occupies nearly two columns. In calm and dispassionate language, Prince Nicholas sets out the Greek case against the Allies, and on many points he is able to press home his argument with wonderful cogency. The gravamen of his charges falls under two heads—the alleged attitude of the British nation towards Greece and her ruler, and the actions of the naval and military authorities in carrying

Digitized by Google

out their operations in Greek waters and on Greek soil. On Prince Nicholas' showing, the Allies have not displayed an excess of tact in dealing with Greece or much consideration for her susceptibilities. The right of searching Greek ships, he asserts, was carried out in a peculiarly high-handed manner and in such a way as to impose the maximum of inconvenience and annoyance on the Greeks. He repudiates entirely the assertion that German submarines have made use of the Greek coast as shelters or for obtaining supplies, basing his contention on the failure of the Allies to discover any submarine base and on the unlikelihood of any Greek playing the German game in the face of the British reward of £2,000 for information regarding the whereabouts of submarines. As an instance of the lengths to which the Allies proceed, Prince Nicholas cites "an incident of special gravity" which occurred near Nauplia. A detachment of marines were landed, and, "without giving any notice to the local authorities, proceeded to destroy a depôt of petroleum made by the State for the requirements of the agricultural station of Tiryns. Those responsible for this act have since had to recognise that this petroleum could not be of any use to the German submarines, as it was 'denatured' petroleum, which could only serve for the destruction of locusts."

No doubt the Allies have been able to offer some explanation of any mistakes made, and in any case will have provided ample compensation. These and similar incidents bulk largely in Prince Nicholas' letter, but we shall probably be right in supposing that the main grievance he seeks to ventilate is the failure of the British public to approve of Greece's neutrality. "The Greek nation," he says, "are under the painful impression that full justice has not been done to them. They feel that little account has been taken of the many and valuable services rendered by them; they are very sensitive to the difference of treatment applied respectively to Bulgaria and their own country; they resent still more the accusations constantly made against Greece of not having kept the Greco-Serbian Treaty, and, furthermore, of fostering hostile intentions towards the Entente, and more especially to the Allied armies landed in Macedonia." It is perhaps unfortunate that these grievances should be combined in a general plaint with the more legitimate protests against definite acts on the part of the Allies. Both King Constantine and Prince Nicholas must reconcile themselves to being "misunderstood" for all time in regard to the Greco-Serbian Treaty. No amount of appeals to dictionaries for the meaning of words and no amount of quibbling will shake the conviction of the British public that the only honourable course open to Greece was to stand by Serbia, even at the risk of "disaster." Greece deliberately rejected that course, and a number of Greeks are satisfied that they adopted the right course. There the matter should be left. They can congratulate themselves on a clear conscience, without insisting upon other people sharing their views.

We should like also to try to clear up the Greek misconception in regard to Bulgaria, to which Prince Nicholas refers. Unfortunately, it is not possible to dispute the fact that the peculiar methods of Allied diplomacy at a certain stage in the war lent colour to the belief that Bulgaria was the special object of the Allies' solicitation. But nowhere have the mistakes of that diplomacy been more roundly denounced than in Great Britain. Its faults were due to ignorance and want of thought, not to any predilection for Bulgaria over Greece. What Prince Nicholas and many of the Hellenes fail to recognize is that no member of the Triple Entente is going to accept as a permanent factor in Near Eastern politics the bitterness of feeling that Greeks and Bulgarians cherish towards one another. The three Powers can only look upon the Balkans as potentially a single political factor. That the individual States should be at daggers drawn is a regrettable feature, but not one to be encouraged by the Triple Entente, whose sole object must be to work for permanent harmony in the Near East. Thus while Bulgaria talks about her inalienable rights to this or that district, and Greece speaks of "a purely Greek province which had recently been won back to the Mother Country at such great sacrifices," the Entente Powers must remain equally unmoved, and aim only at calling upon the different States to make each the minimum sacrifice required in the interests of them all. This attitude can hardly constitute, *pace* Prince Nicholas, a grave crime; for a great Greek, to whom his country and the Sovereign on the throne owe a personal debt they can never adequately repay, was himself in favour of Greece surrendering Kavalla. There is, no doubt, room for a difference of opinion on the subject; but one thing is certain, that if M. Venizelos had had his way, the King of the Hellenes would not have had to utter the many laments which his own policy has wrung from him.

Of the many attempts made in Greece to put the Greek case, or rather the case of King Constantine and his present Government, before the Allied countries and neutrals, we entirely prefer Prince Nicholas's letter. It is temperate and a manly production. Incidentally, it declares the alleged telegram from the German Emperor to Queen Sophie, which was said to have concluded with a reference to "Tino," as apocryphal. We could wish that he had also been able to repudiate the interviews at which King Constantine is reported to have said that the Allies' conduct in Greece was on a par with that of the Germans in Belgium, and to have dubbed M. Venizelos a visionary, attributing to him statements that he never made. The British public has come to accept the Balkan situation as it is, and has ceased to speculate on what would have happened, if Greece had stood by her ally. But it is continually being reminded in a most unpleasant fashion of the cleavage in Greek opinion on the whole subject by journalistic interviews in the Palace at Athens. The British public is nothing if not constitutionally minded, and the spectacle of the Greek Government always in the background, while Greek diplomacy is carried on by means of foreign correspondents, offends its sense of the fitness of things, and forces it to take sides in what is primarily a domestic concern of the Greeks.

It is a matter for regret that, immediately after the publication of the letter in which Prince Nicholas ridicules the anxiety of the Allies over the revictualling of German submarines in Greek waters, the British and French Ministers should have to communicate to the Greek Premier the decision of their Governments to create naval bases at certain points in the Ionian Islands and in the Ægean. In spite of the declaration that the measure, which is dictated by urgent necessity, will in no wise infringe the sovereign rights or the territorial integrity of Greece, it is obvious that the Greek Government will regard the step as a violation of Greek neutrality. The inevitable protest will follow, but as Greece distinctly disclaims the charge of being Germanophil, the protest will merely be of the formal kind. Wherever these temporary occupations have taken place the Greek populace has lost no time in showing their appreciation of the presence of the Allied troops among them. Nor does Greece as a whole fail to benefit from them. The Greek General Staff may have known more about the impracticability of the attempt to force the Dardanelles, but it has learnt from the Allies how to render Salonika impregnable, and is no doubt pleased with a prospect of a reversionary interest in the Allies' defence works.

Many and varied accounts are published of the internal situation in Bulgaria, but they agree in representing the position as one that calls for the increased vigilance of the Government. The arrest of M. Ghennadieff and other prominent members of the Opposition reflects the fears entertained in high quarters of an attempted *coup d'état*. The absence of any understanding between Roumania and Bulgaria would be sufficient justification for the despatch of Bulgarian troops to the Roumanian frontier; but in the present instance the movement is associated in the Roumanian mind with a desire to provide the Bulgarian soldier with a more agreeable prospect than a campaign against the British and French. It is, however, uncertain whether the troops on the Dobruja frontier are German or Bulgarian.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, March 28.

All Saints' Church.

On Thursday the annual general meeting of the Anglican community was held at the Residency, under the presidency of the High Commissioner. His Excellency announced that a special meeting would be convened towards the end of April for the consideration of the question of the erection of a new church, to take the place of the one now in use. Sir Henry McMahon gave it as his personal opinion that, in fairness to the great Church to which it belonged, the Anglican community in Cairo could not continue to worship under the present conditions. All Saints' however well it may have answered the purpose in the past, was no longer a fitting representative of the Anglican Church. Not only was it put to shame by all the other places of worship belonging to other communities, but it was inadequate to meet the needs of the present congregation. It was the latter's duty to its Church and to the Protectorate to see that the necessary steps were taken to remedy this without delay. The present site was unsuitable in every respect, and a new one would have to be found. Although his Excellency emphasized the fact that these were merely his personal views, there is no doubt that his sentiments will be echoed by all those who are acquainted with the facts and the situation of the Anglican community in Egypt. It is to be hoped that when the special meeting is convened next month no time will be lost in appointing the necessary committee for the purpose of selecting a site and the most suitable design. As Sir Henry pointed out, although the present is not a propitious moment for appealing to the Anglican communities of the world for the sum of money required —the Cairo community alone could not bear the entire cost—there is no reason why the preliminaries, such as selecting the site and preparing the design, should be delayed any longer. Indeed, the present is probably the best time to purchase a site at good terms, since urban land values, owing to the war, are very low; and, although the community may not be able now to subscribe any substantial amount towards the execution of the entire project, there should be no difficulty in making some financial arrangement for the purchase of the site, if a suitable one can be found, pending the issue of an appeal and the subsequent provision of the funds.

The Wakfs Scandals.

What is known as the Wakfs Scandal is still unsettled. As may be remembered, Ahmed Khairy Pasha, former Director of the Khedivial Wakfs, and Hussein Pasha Moharrem, one-time Curator of the Seif-ed-Dine Daira, were accused of misappropriation of funds, and were condemned to three and ten months' imprisonment respectively, with the benefit of the First Offenders Act. Both Pashas appealed, and have now been acquitted, the Court holding that they could not be held guilty of the offences imputed to them, as they had been committed at the instigation of the ex-Khedive, whose influence over them was at the time too strong for them to disregard his orders. The Parquet has now appealed, on a question of law, to the Court of Cassation, and the appeal will be heard within the next few days.

The Bomb Outrage.

Some while back it was announced in the local Press, and the information was cabled to London by Reuter, that the men implicated in the bomb outrage on H.H. the Sultan would be brought to trial before a military court early in February. So far there is no sign of any trial, and considerable comment has been expressed at this great delay. The attempt was made on July 9, so that we are now nearing the end of the ninth month since the inquiry started. Even allowing for the fact that there may have been a conspiracy requiring extensive probing, nine months seems an unduly long time for the process, and the delay scarcely squares with the traditions for expeditious work usually associated with the régime of martial law.

Well-merited French Honours.

At the dinner which he gave in honour of General Sir J. G. Maxwell before his departure, M. Defrance, the French Agent, announced that the President had conferred on him the Grand Croix de la Legion d'Honneur. At the same time Lieutenant-Colonel S. F. Clayton, C.M.G., has received the Officier, and Major S. F. Newcombe, R.E., Captain Lawrence, and Lieutenant Walford have been made Chevaliers of the same Order. All three officers have well merited this honour. Colonel Clayton is, of course, the Director of Intelligence at Headquarters in Cairo, and it was in recognition of his invaluable services in that capacity that he was recently awarded the C.M.G. With the Directorship of Intelligence Colonel Clayton combines the work of Sudan Agent, and in both capacities he displays the same marked ability and tact.

The State of Affairs in Darfur.

The *communiqué* of last Friday, announcing the movement of a mixed force of all arms of the Egyptian Army to Nahud and the occupation of two important points just within the Darfur border, did not come altogether as a surprise here. For some time there had been persistent rumours that a strong patrol had been sent to keep Ali Dinar in order, and it was well known that that Sultan had of late shown signs of defiance, and had in his correspondence with Khartoum displayed marked disrespect for the Sudan authorities.

In well-informed circles not much anxiety is expressed with regard to the result of this concentration of troops on and within the Darfur boundary, and the step is generally considered to be a very wise and prudent one. Undoubtedly there are in close touch with Ali Dinar enemy political agents, who are responsible for his more recent marked change of attitude. It is extremely improbable, however, that the Sultan would, in obedience to the incitement of those agents, progress from defiance to active hostility towards the suzerain Government. His own throne is very uncertain; he is always having internal troubles; and to the south there are tribes who are extremely friendly to us, and who, moreover, would have an additional incentive to assist us in repressing any aggressive acts of this Darfurite potentate, in that they are his sworn enemies and have long waited for a chance to try a fall with him. Of this Ali Dinar is fully aware, and he further knows that on his western frontier are the French, who have got Wadai completely under control, and would give him short shrift if he were forced through defeat in his own country to seek refuge across the Wadai border. The sending of a strong force to the Darfur frontier is, therefore, wise and prudent, because it shows the Sultan that we are on the *qui-vive*, and so should dissuade him from any acts of aggression—if, indeed, he ever contemplated any real activity in that direction. He is shrewd enough to know that he could not with safety try conclusions with such a force, and that any reverse at its hands would sound the death-knell of his power and prestige in his own country; and it is consequently believed that the firmness shown by the Sudan Government will have an entirely tranquillising effect.

The Western Frontier.

The brilliant operations in the Sollum area, details of which have, of course, reached you by cable long

NORTH BRITISH AND MERCANTILE INSURANCE CO.

ere this, seem to have broken completely the back of the Arab resistance in the North. The great part played therein by the Duke of Westminster and those who accompanied him in his armoured cars cannot be overrated. The *élan* and courage with which they charged the enemy and put his guns out of action contributed largely to his discomfiture, whilst their rescue of the survivors of the s.s. Tara and Moorina was an exploit that savours more of mediæval knight-errantry than of twentieth-century warfare. Bedouin are reported in the oases area to the South, and it is possible that a forward movement may be undertaken to clear them out, but little real trouble is anticipated now anywhere along the western frontier.

The Mixed Tribunals.

The General Assembly of the Mixed Court of Appeal met this week and elected M. Albert de Souza Larcher, the Portuguese judge, President of that Court is succession to the late Judge Lionel Sandars. The Cairo Court of First Instance has elected M. Karl Kraft President in succession to Mr. H. W. Halton, who, as already reported, has been promoted to the higher court. M. Dideric Nyholm becomes Vice-President. Both these judges are Danes.

As soon as the decree announcing Italy's acceptance of the renewal of the mandate of the Mixed Courts was published, the Italian judges resumed their seats. The occasion afforded an opportunity to their colleagues to give expression to the pleasure which they felt at their return to work, and to testify to the high esteem in which they are generally held.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, March 21.

Meeting of the Legislative Council.

The session will be opened by Sir John Clauson to-day (March 21) at 2.30 p.m. with the usual formalities. It will be a short one, for, as in 1915, only a few Bills will be considered. Two fresh draft laws are published in the *Official Gazette* which relate to the protection of girls, and an amendment of the municipal law. That another session should pass without much legislation will cause no grumbling in Cyprus.

Nicosia Municipality.

The Municipal Council of Nicosia—and for that matter of several other towns—has much useful work to accomplish before it can claim to have arrived at the state which citizens might now reasonably look for. The backward condition of things, which is the heritage of centuries of neglect, cannot be made good in a day; but there is certainly need for increased activity in various directions. The establishment of a poorhouse and workhouse on a good foundation is a pressing need. It would also put a stop to public begging, as has been done at Limassol. In order to raise the necessary fund for this purpose the council has now decided to impose a rate, subject to the High Commissioner's sanction. It is to be congratulated on having screwed up its courage to this point. Municipalities are very loth to exercise their powers in this respect, on account of the unpopularity which any demand on the purse involves.

The Greek Archbishop.

Although the Greek Primate, Kyrillos, has not yet recovered from the illness which has long troubled him, he has been able to attend to business, and has presided at various committee meetings to deal with educational and other matters. He has summoned a meeting of the Holy Synod, which is to assemble at Nicosia for the consideration of various ecclesiastical questions that press for attention.

TERRORISM IN BULGARIA.

A Reuter's message from Bucharest, dated April 4, and delayed in transmission, states:—The situation at Sofia is one of extreme gravity. The policy of Dr. Radoslavoff is meeting with a vigorous and widespread opposition, and King Ferdinand, fearing a revolutionary movement, has given the Premier complete freedom of action to stop any attempt at opposition that may manifest itself against the foreign policy inaugurated by him in accordance with his Majesty's views. The arrests of M. Ghenadieff and other ex-Ministers and Opposition leaders on charges of high treason have produced such an extraordinarily strong feeling that there is a general expectation of a revolution, and the garrison of the capital has been reinforced.

A VETERAN ENGINEER.

Sir Colin Scott-Moncrieff, K.C.S.I., K.C.M.G.

The death of Colonel Sir Colin Scott-Moncrieff, K.C.S.I., K.C.M.G., late Royal Engineers, on the 6th instant, removes a familiar landmark in the irrigation history of Egypt and Northern India. The whole irrigated area of Egypt is considerably less than that of a single province of India, the Punjab; Sir Colin was some twenty-seven years in India, and he was nine years in Egypt; nevertheless, his work in Egypt is the better known of the two, and his administration there may be said to have been the most successful of all the achievements of his long and honourable career.

Sir Colin, born in 1836, went out to India in 1856 as a second-lieutenant in the Bengal Engineers, and retired from the Indian Public Works Department and the Army in 1883. The greater part of this time was spent in the irrigation service, and Sir Colin may be fairly said to have been an irrigation enthusiast. But his heart was always in philanthropy, and he had intended to devote his remaining years to philanthropic work in Ireland or Canada. On his way home, however, he received a message at Suez asking him to go to Cairo and see Lord Dufferin, who was then endeavouring to evolve order out of the chaos of Egyptian finance. As the result of this interview he was offered and accepted the appointment of Under-Secretary in the Public Works Department.

It was a post of extreme difficulty; the condition of the department was deplorable; there was need of sweeping reforms in every direction; Sir Colin was the first British Under-Secretary; he was opposed in all directions; and a venomous Press was always ready to misinterpret his every action. But with unfailing tact and patience, with immense industry and unconquerable courage he surmounted all obstacles, and ultimately succeeded in reorganising the whole irrigation service of the country. He recognised from the first that an efficient staff was essential, and he obtained from India the services of the engineers, Major Ross, Captain Hanbury Brown, and Messrs. Garstin, Willcocks, and Foster. With their aid he carried out many reforms and improvements of far-reaching importance; but the main features of his administration, features which will always stand out in history, were the restoration of the Delta Barrage and the abolition of the *corvée*.

The Delta Barrage, as he found it, was no barrage at all, it did not hold up water for distribution by gravitation, and it was the confident opinion of the local engineers, and of the eminent engineers of France and England who were consulted, that no barrage was practicable. But Sir Colin was of another opinion, he was as sanguine of the success of the barrage as ever was Lesseps of the success of the Suez Canal, and in the teeth of all opposition, against the formidable array of expert advice, he imported two first-rate construction engineers from India, Colonel Western, R.E., and the late Mr. A. G. Reid, and that they accomplished what had been held to be an impossible feat is now a matter of history.

The barrage was a question of engineering; the abolition of the *corvée*, or the forced labour system of the country, was an administrative reform, and possibly a still more difficult task. The system was liable to much abuse, it entailed hardship and cruelty to the people, it was against the British sense of justice, and its abolition naturally appealed to the philanthropic side of Sir Colin's character. It meant, however, money; and the Commissioners of the Public Debt, an international body in general opposition to all British reforms, were specially opposed to the grant of funds for any purpose of this kind. The barrage they could understand, it meant, if it were successful, increase of revenue—improvements of that nature were not easy to resist; but the abolition of the *corvée* was mere sentiment, and a needless expense. Sir Colin was, however, insistent. The kindliness of his disposition had the counterpoise of great firmness when he knew he was in the right, and it says much for the earnestness be brought to bear on every subject with which he had to deal that he was able to wring a grant of £150,000 a year from the Commissioners for this purpose.

Sir Colin left Egypt in 1892, when he was offered the appointment of Under-Secretary for Scotland, and he left the country with regret. He had been heart and soul in his work, but he was then fifty-six years of age, the past nine years had been a time of ceaseless labour, and no doubt he felt he could appropriately relinquish his post at that particular date. The *corvée* had been abolished; the Delta Barrage was completed; Sir William Willcocks' reservoir surveys, the final outcome of which was the Assuan Dam, were likely to occupy some years; corruption and oppression had ceased, and the prosperity of Egypt was assured. His life's work was not finished, he was to labour for another eleven years in his country's service; but of that long and arduous career of forty-seven years of active work, the nine years of toil in Egypt stand out as a monument of quite unusual achievement.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, March 13.

Movement of Troops in Hungary.

The train service through Hungary has again been interrupted, in consequence, probably, of the displacement of troops. Many Roumanian travellers are thus detained in Austria and Hungary, and Hungarian papers have ceased to arrive. The Berlin and Vienna papers have suffered no appreciable delay, the service through Virciorova and Burdujeni not having been affected.

A Revolt Among Refugees.

A revolt broke out a few evenings ago among the deserters from belligerent armies interned at Tshalnitza, near Craiova. They refused to return to their barracks, insisting that they should be allowed to circulate freely in the town. A free fight commenced when the guards offered opposition. Taking advantage of the scuffle and the darkness, some thirty-five prisoners succeeded in reaching the outside of the camp. The guards then brought their firearms into use, with the result that one man, a Pole, was killed, and seven others wounded. In the course of the night twenty-three of the twenty-seven refugees who made good their escape returned of their own free will; the other four, who are Austro-Hungarian infantrymen, were arrested as vagabonds a day or two later, when they volunteered information regarding their identity. The Prime Minister has ordered a careful inquiry to be made into the causes of the revolt.

A River Incident.

On March 6 the steamer Hedwig, flying the Roumanian flag, was passing up the Danube with a barge in tow, on its way from Galatz. Opposite Flamanda an Austro-Hungarian monitor called upon the captain of the Hedwig to stop and show his papers, threatening to confiscate the barge in case of refusal. The captain answered by steaming quickly towards the Roumanian bank, pursued by the monitor. As the latter approached the shore the commander of the frontier guards stationed here called upon it to withdraw. The order was repeated but disregarded. Firearms were then discharged on both sides, but it is difficult to ascertain upon whom the responsibility falls for the first shot fired. The monitor then withdrew to the Bulgarian bank, where the crew landed a Maxim and commenced to fire across the river. After a time the monitor steamed away towards Rustchuk. There was no loss of life among the Roumanians.

It is interesting to hear that the barge was loaded with Roumanian cereals destined for Germany, these cereals forming part of the first German purchase of 50,000 wagonloads! The Roumanian Government is said to have demanded explanations at Sofia and Vienna.

Forty railway wagons containing materials for the Roumanian Ministry of War arrived a few days ago in the station of Jassy from Russia.

Magyar Work?

A powerful detonation took place near Bushteni on the Sinaia-Predeal line on March 8. Investigation discovered numerous fragments of metal and a piece of wire. The explosion seems to have been incomplete in consequence of the existing moisture, the railway line suffering no damage. There is strong suspicion that it is the work of Austro-German agents.

Roumanian Refugees.

The Austrian Consulate in Bucharest has been making every effort to persuade Roumanian refugees from Transylvania and Bukovina to return to the land of their birth, where, of course, they are immediately enrolled in the army. The "League for the Cultural Union of all Roumanians," being informed of what is taking place at the Austro-Hungarian Consulate, has issued a manifesto counselling Roumanian refugees to pay no attention to the wiles or menaces of the K.K. Consul, and exhorting them to remain where they are until their real country calls upon them to make the supreme sacrifice.

ROUMANIAN AID FOR BRITISH PRISONERS

(From Our Own Correspondent.)

Bucharest, March 13.

Friends and relations of British prisoners in Bulgaria will be glad to hear that the plum-puddings made by Mrs. Take Jonescu, and the blankets and razors sent by her Majesty Queen Marie, have reached their destination.

Measures have been taken to alleviate the sufferings of British prisoners all the world over, even in far Mesopotamia; none the less, one has the impression that, for some reason or other, our prisoners in Bulgaria have not had quite as much done for them as elsewhere. They and their friends would be relieved to know that the matter is receiving adequate attention in the right quarters; for, even if we neglect the odd bits of unfavourable information that come to our notice, it is only too patent that in a country where the natives themselves are suffering no inconsiderable hardships there will not be any little comforts for their prisoners. We may take it that the Serbian prisoners receive such attention as is just about necessary to keep body and soul together. Will this minimum suffice for our men, who are used to a far higher standard of living? It is useless to collect funds, clothes, and provisions for our men unless the means of their conveyance and distribution are ensured. In Roumania alone the French colony have collected, we understand, about £5,000 in money, as well as a large quantity of provisions, for the Allied prisoners in Bulgaria. But the prisoners have so far derived practically no advantage from this because of the difficulties of conveyance. The Dutch Minister has taken a small quantity with him as a trial, but we do not know as yet whether he will obtain permission to distribute it. The Bulgarian authorities have not offered even the usual facilities for the transmission and distribution of provisions to prisoners. That is certain. But there is more than a suspicion that they even offer opposition to any attempts which the authorities, who have undertaken to represent British and French interests in Bulgaria, might make to put themselves in touch with our prisoners. Such obstacles can only be overcome by an energetic attitude and a full measure of *savoir faire*.

No doubt Mrs. Take Jonescu had some of these difficulties in mind when she resolved to collect money and provisions, and to arrange for their conveyance and distribution by private enterprise. Pending the official distribution of the large stock of things collected by the French, there is much that may be done privately on a smaller scale.

Mrs. Take Jonescu has shown indefatigable energy in the collecting of funds, clothes, books, tobacco, etc., so that up to the present the sum of 13,000 frs. has been realised. What gives more immediate satisfaction is to know that many useful articles are already on their way to our prisoners, and that there is every hope of their being reached. Thus there have been despatched about eight-five linen bags, each one containing the following articles:—Two shirts, two socks, two handkerchiefs, soap and shaving brush, hairbrush and comb, packet of chocolate, tobacco, pencil and paper, enamelled plate, towel. A case of books is being sent separately.

I should like to emphasise the fact that this undertaking is of a private character, organised by Mrs. Take Jonescu as a Roumanian subject rather than as an Englishwoman, the contributions coming almost entirely from Roumanian sources.

Under date of the 11th inst., the Amsterdam correspondent of the *Morning Post* telegraphs:—The Petrograd correspondent of the *Telegraaf* reports that, notwithstanding the efforts of the Dutch Minister in Sofia, Bulgaria refuses to allow neutral representatives of the Red Cross to visit the camps for Serbian prisoners of war.

Our Bucharest Correspondent writes (March 13):—The American Red Cross continues to send food, clothes, and boots to the Serbians through the United States Legation in Bucharest. The latter has received permission to export ten wagons of flour for the Serbians.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, March 19.

Renewed Excitement.

After the dulness of the past few weeks it was almost a relief to learn that at last the Allied troops had come into contact with the Germans on the Macedonian frontier. This, however, now turns out to have been only an unimportant affair between patrols. Particulars have already been cabled to London, so that I need not go into details. I may, however, refer to what General Sarrail told me last night in the course of an interview. A company belonging to the 103rd German Division seems to have come down to the Greek villages of Mitsokovo, Mayadagh, and some others in the neutral zone, merely on a "prowling" expedition, to seize food and other supplies, but without any desire to fight. On the appearance of French patrols they retired, but later on returned in greater strength. This time they were more bellicose, and a short engagement took place, which resulted in the enemy being driven back over the frontier, with only a few casualties on each side. The French occupied the villages, but did not pursue the Germans. General Sarrail does not want his hand forced, but will choose his own time for an advance if that is resolved upon.

Further excitement has been caused by an attempt on the part of a Zeppelin to reach Salonika. Having crossed the Allied lines during the night, it advanced as far as Vateluk, but on being bombarded and attacked by French aircraft thought discretion the better part of valour and turned back. Yesterday, again, two enemy aeroplanes flew over the city at a great height, and the crowds who were listening to the British band and the pipers at the famous White Tower witnessed a heavy bombardment from anti-aircraft guns. No damage appears to have been done. Attempts are made almost daily to fly to Salonika, but here, as elsewhere, the French aviators have established their superiority, and we are well protected by them. Our visitors of yesterday flew French colours, and hoped to pass for French aeroplanes. It was soon ascertained, however, that no French aircraft were at that moment in the air. Accordingly one of the warships gave the usual warning signal, and then shrapnel began to burst all round the enemy, who retired in haste.

Our Local Press.

In a previous letter I made some remarks about the Press of Salonika. Since then some changes have taken place in the newspapers referred to, and three "little strangers" have been born, of which one is alleged to be in the English language. The *Balkan News* has been born again. The military authorities, for reasons which the intelligent reader could readily appreciate, took over the paper, and it is now edited by a thoroughly competent officer, with the assistance of another officer as sub-editor. It is now declared to be a paper for the Army produced by the Army—which expression also includes the Navy. In its new dress the *Balkan News* is quite interesting and up to date, and one noticeable feature is the variety of excellent contributions by members of both services.

Of the new publications the English rival of the *Balkan News* is an evening paper called the *Evening Post*, which presents us with some extraordinary examples of English "as she is wrote." Perhaps, in the absence of *Punch*, our Tommies enjoy it—printers' errors and all; but the paper is a long way behind the re-born *Balkan News*. Two new French papers have also appeared: a morning journal called *La Dépêche* and an evening sheet named *L'Information*, both friendly to the Allies. Among the Greek papers the *Makedonia* and the *Ellas* appear to be the best informed. The editor of the latter, Mr. Avyeris, used to be assistant editor of the *Embros* of Athens, but he did not agree with its anti-Entente policy, so founded the *Ellas* here as an Ententist organ.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, March 27.

It has become extremely difficult to obtain any trustworthy information of what is really happening in Constantinople and in Turkey generally. There is practically no telegraphic communication, and the postal service is most irregular; in fact, the mails to and from Constantinople have recently been seized by the Allied Fleet, so even newspapers arrive with considerable delay.

There are very few arrivals from Constantinople. The "man in the street" who occasionally comes through can only report what he has himself seen and the gossip he has heard; and the various accounts in the newspapers of riots, demonstrations, and other incidents must be taken with many grains of salt.

Exaggerated Reports.

Foodstuffs are doubtless extremely scarce, and it is quite probable that there are frequent scenes in front of the bakers' shops, but the reports of serious riots in Constantinople are certainly exaggerated. In any case, incidents of this nature can hardly affect the political situation so long as those who are ruling Turkey have the Army with them. Amongst the civil population throughout Turkey the misery and distress are evidently very great, and there is no doubt much discontent in the Army also; but there seems to be no element strong enough to create a movement which would lead to a successful revolution, however much this may be desired. The country is at present under the control of the Germans, and only a strong revolt in the Army against them is likely to effect a radical change. The "Turkish" Government exists in name only. In fact, it is doubtful whether the actual members of the Cabinet have much initiative at the present moment.

Enver-Talaat Mystery.

The two most prominent men, Enver and Talaat, are little heard of to-day. Talaat was reported to have gone to Switzerland, but according to the newspapers he was in Constantinople on the 11th inst., and the fate of Enver is still a mystery. The *Hilal*, of March 3, gave an account of his visit to Jerusalem in company with Jemal Pasha, to visit the Mosque of Omar. Some say it was there that he was assassinated, others that it was at Angora. In any case, there is so far no confirmation of his death, but neither is his presence reported at any place or his name mentioned in the newspapers recently received here.

There appears to be some truth in the report that the mines in the Dardanelles were being removed or destroyed, but the object was evidently to prepare a passage for some of the new German super-submarines which are said to be making their way to the Black Sea.

THE DARDANELLES SICK FUND.

Sir Francis Elliott, in a letter to *The Times*, gives an account of the work of the Dardanelles Sick and Wounded Fund, of which he is chairman. As our readers will recall, the fund grew out of a collection started among British residents in Athens by Lady Montgomery Cuninghame and Mrs. Kerr to supply luxuries to the hospitals at Mudros. The effort was so much appreciated that a committee was formed, under the chairmanship of Sir Francis Elliott, which has since carried on the work. A constant supply of vegetables, fruit, honey, sweets, and, latterly, when dysentery and enteric became prevalent, eggs haave been despatched weekly to Mudros, and the committee have received from the medical officers most gratifying testimony to the utility of their organization.

Since the withdrawal of the troops from the Peninsula there is no need for further subscriptions. The fund has, however, a substantial balance available, and it is proposed to apply this to the medical needs that still exist at Mudros until such time as they cease, when the committee will decide as to the best further use which could be made of any balance then remaining.

THE COMMITTEE OF UNION AND PROGRESS AT HOME.

In view of the recent reports of dissension in the ranks of the Committee of Union and Progress, the account of an interview which Dr. Alfred Nossig had with the members of the Inner Council of that body, appearing in a recent number of *Der Tag*, is of no little interest. Dr. Nossig is essentially a picturesque writer.

Stamboul, he begins, also has its Wilhelmstrasse (Downing Street, or, rather, Whitehall). The Sublime Porte, together with the Grand Vizierate, the Ministry of the Interior, the Ministry of Foreign Affairs, as well as most of the other Ministries, are to be found in the Bab-Ali Jadessi. If one turns from this noisy, crowded street to the right one enters a small turning known as the Nour Osmanieh. A modest one-storied Khan, with a door always open, at once attracts attention. It is in this small, unimposing house that the heart of Turkey beats. Here is the headquarters of the Inner Council of the Young Turkish Committee of Union and Progress. One searches in vain in the history of ancient and modern peoples for a political institution on all fours in constitution, activity, and significance with the Young Turkish Committee. The Young Turks themselves, who, during their exile in Paris, cast their eyes much more in the direction of the political life of England than in that of the French Republic, compare the organisation of their Jemietti with the English party system. But, in spite of any similarity between the two, the Committee of Union and Progress, on closer inspection, proves itself to be an original and interesting political institution, thoroughly typical of the national peculiarities and the historical development of the Turkish people. In its origin and in its statutes the Committee is merely the organisation of the Young Turkey party. In all the most important parts of the Empire the party has its clubs and district committees, who are at the head of the members living in the whole of the vilayet. The district committees send their representatives to the Central Committee, which meets once a month in Constantinople, under the presidency of Talaat Bey. Over this Central Committee in Constantinople there is a standing Inner Council, which one must regard as the business management of the organisation. When one refers briefly to "the Committee," the reference is always to this Inner Council, which is responsible for all current business, and to-day, in very truth, directs the destinies of Turkey. At the head of this Council stands Midhat Shukri Bey, as General Secretary and President of its discussions. It is in its character of an organisation of the ruling circles of the ruling people of the Ottoman Empire that the Committee draws up its programme. The subjects of discussion have nothing to do with the interests of the Young Turks as a party. It is a Turkish national programme—one might even call it simply a Government programme. In regard to the great questions, the political, administrative, and economic consolidation of Turkey, it is here that the guiding principles are decided upon which the Turkish Government proceeds to carry out. The improvement of the national standard by the extension of education, emancipation from the Capitulations, reform of the whole Administration, separation between State and Church, development of Turkish agriculture and industry; these are the chief items in the programme.

Two questions at once force themselves upon one: On what principles is Turkey ruled by its national organisation, and who are the men who stand at the head of this national Administration which forms a Higher Court to the Government? In answering the second question—far more interesting than the first—one is brought at once in conflict with the principles of the Committee; for the foremost and most strictly observed principle of the Jemietti is "The Committee is impersonal. Its members must on no account become prominent." An outsider, however, may be allowed a breach of this Catonian rule. There are rooms in this House of Secrets in the Nour Osmanieh into which no foreigner ever penetrates, and men sit in these Holiest of Holies who have little intercourse with foreigners. One of these is Zia, the enthusiast so rich in ideas, the spiritual father of "Turkism," that movement which aims at making the Turkish national conscience independent of Islam and at forming a pure Turkish language freed from Arabic and Persian elements. There is also a group at the head of which stands Kemal Bey, which devotes itself to certain economic and Inner Turkish questions.

The Committee, however, also has certain important representatives who, on the one side, hold in their hands the threads of Government business and, on the other side, know how to practise the art of entertainment in a most attractive way.

Passing through a moderate-sized room, decorated with photographs in gilt frames, one comes to a small office. It is the exceedingly modest kingdom of Midhat Shukri Bey. Why the members of the Committee have chosen Midhat Shukri as their General Secretary is recognised at once. He is the embodiment of goodness and friendliness, possessed of liberal discretion, which finds expression in perfect equanimity and humour.

The other members of the triumvirate which presides over the Committee are Nazim Bey and Beha-ed-Din Shakir—both doctors, we are reminded by Dr. Nossig, who have given up their practices "in order to become physicians of their Fatherland." Nazim Bey is regarded as the strongest man in the Committee. His is a very different temperament from that of Midhat Shukri Bey. He lacks the latter's "sunny smile"; he is an earnest and passionate politician, of penetrating acumen. He is wonderfully *au fait* with the constitutional, socio-political, and economic questions of all civilized States, and thoroughly independent in judgment. He directs the policy of Turkey along the lines of a conscious realism and of a nationalism bent above all on furthering its own interests. Nazim Bey's great influence rests on the fact that he is the sworn enemy of all place-hunting and nepotism. He refuses lucrative posts for himself, and bestows no "favours" on his nearest relatives, in this respect setting an example which may well help to cure Turkey of an hereditary evil. Dr. Beha-ed-Din Shakir's characteristics are a fiery eloquence and an attractive *bonhomie;* he is more a man of the world than his two colleagues, and his sympathetic personality is one of the great assets of the Committee.

Having thus prepared the ground, Dr. Nossig gives his readers the burden of the dialogue of which the Committee leaders delivered themselves for his benefit—or was it for the benefit of Enver Pasha and Talaat Bey?

Nazim Bey: "The Committee exists through its principles and not through persons. Certain fundamental rules have to be established in keeping with the present condition of our nation and its intellectual peculiarities. Our first rule runs: 'The Committee is impersonal. It exists only as a corporation, and discourages individualism.' This circumstance that the members keep themselves in the background has given rise to the supposition that Young Turkish circles, with the exception of the few prominent Ministers, have no men capable of playing a leading part. That is a great mistake."

Beha-ed-Din Shakir: "The number of able people with a talent for organisation who are to-day distributed through the country, whom we could at any time quite confidently entrust with Ministerial positions, is at least two hundred."

Nazim Bey: "The fact that several persons have made themselves particularly prominent rests also on one of the fundamental rules of the Committee. It is its will that every Department of State should be entrusted to a single man, and that this man should have strong, almost autocratic, power. There are many reasons for this. Our people is so constituted that it requires a strong hand for its guidance. Moreover, we wish our rulers to have a firm and lasting position, so that they should not be so easily deposed as the French party leaders are. A stability in administrative conditions, such as obtains in Germany, is much more suited to our country. Finally, we are of opinion that two leading personalities in one sphere are more likely to be harmful than useful. Friction would be inevitable, and there would be two antagonistic groups. For this reason we insist that, when once we have bestowed our confidence on our rulers and given them power, all other men of similar attainments must give way. For instance, if there should be a second Enver, we should, without hesitation, send him abroad as Military Attaché. In the same way, a second Talaat would receive an Ambassadorial appointment."

Beha-ed-Din Shakir: "But now comes our third principle. All members of the Committee, even the members of the Government, must submit to the principles and the authority of the Committee. Even the most influential Ministers come to this house in order to discuss and prepare with their colleagues of the Committee all important Government measures."

Dr. Nossig having ventured to remark that in this way they guarded against a Dictatorship or *coup d'état*, Nazim Bey returned to the charge:

"Most certainly. No usurpation of authority menaces us. The power of the Government rests solely on the power of the Committee. The very moment any one of them tried to raise himself above the authority of the Committee he would lose all force, for he would remain entirely isolated. The basis of our whole form of Government requires a strong organisation of the Committee. The Committee is a force so uniform and compact, derived from so many heads and energies, that it can withstand every attack. For this reason it is also wrong to suppose that, if the two 'strong men' no longer existed, the whole Young Turkey edifice would fall to the ground. The Committee has already overcome successfully the most difficult situations, including the loss of Mahmud Shevket, who was regarded

Digitized by Google

as irreplaceable, and yet has been so replaced that we are stronger than we were before."

A reference to the elections and the electoral system which forms part of Turkey's "political hygiene," a reminder that, in spite of the emphasis laid on principles, men were still required to give life and effect to those principles, and an explanation of the gilt-framed photographs of "the heroes of the movement for freedom," to whom death alone gave the privilege of this memorial in the Committee's sanctum, brought the interview to an end.

Only two points seem to have been overlooked by the Committee leaders—the *de jure* head of Turkey, the Sultan, and the *de facto* rulers, the Germans.

TANGIER TO TEHERAN.

The attempts made by the German propagandists in Moslem lands to represent Germany as Moslem at heart, and the Kaiser as a kind of zealous Salah-ed-Din Secundus, are, of course, fairly familiar to all of us by now. But Bishop Stileman, who lately resigned the bishopric in Persia, has been calling attention to a point that had escaped my notice: to wit, that these propagandists had actually gone so far as to assert that the Hohenzollerns are descended from a sister of Mohammed! If such were indeed the case, the upstart Hohenzollerns would have at least one family connection to boast about; but, fortunately for all admirers of the Founder of Islam, it is *not* the case. Even Gotha makes no attempt to carry the family pedigree back to those days; and the Arabs, who know at least as much about the family tree of their Prophet as the German propagandists referred to, are not likely to have paid any attention to the impudent invention.

***

What value may be set upon Germany's protestations of regard for Islam is clearly shown by a document found among the German Government archives captured at Moshi. This is a circular addressed by Dr. Schnee, the Governor of German East Africa, to all military stations, and it begins by asking, "What can be done by means of Government servants and Government teachers effectively to counteract the spread of Islamic propaganda?" Then Schnee goes on to ask whether it will be possible to prohibit Islam altogether; he mentions that "the encouragement of pig breeding among natives is recommended by experts"—Germans, of course—"as an effective means of stopping the spread of Islam"; and asks that the point may receive the careful consideration of the authorities addressed. There we have the true German spirit. How does it square with the lies that have been ladled out so freely in Persia, Turkey, and other Moslem lands? It seems to me that it would be worth the while of our Government to have this German *official* document fac-similed, translated, and circulated broadcast amongst the people whom the German agitators have been doing their best to mislead. There are plenty of them capable of appreciating such evidence, and it might be useful in helping them to make up their mind how to treat the Huns in their midst to-day and others who may seek to beguile them in the future. A comparison between this deliberate, if characteristically underhanded, attempt of a German Imperial Governor to outrage Moslem feeling on the one hand and British respect for the same feeling on the other hand can hardly fail to disabuse the mind of any Moslem of all Germanophil sentiment.

***

Since writing the above paragraph I have learnt that THE NEAR EAST has arranged to publish an Arabic translation of the Schnee circular. This is good news, and I trust that readers will lose no opportunity of directing attention to the treachery of Germany's protestations of "friendship" for Islam. It is one thing to show respect for other people's religious beliefs and convictions, as Great Britain does and always has done with regard to Islam. It is quite another thing to profess fervent admiration for a religion in one part of the world, in order to persuade people to fight for you, as Germany has done in Persia, Turkey, India, and Arabia, and at the same time to endeavour to suppress the same religion elsewhere, as Germany has done in East Africa.

***

At the "Writers on the East" dinner given at the Lyceum Club on Monday Sir Edwin Pears told some amusing stories, which served to show that when the Turk sets himself to the work of censoring he can run certain rivals, who shall be nameless, very close indeed. Thus, a Turkish version of the Lord's Prayer was prohibited because the censor objected to the words "Thy kingdom come," in in which he scented an attempt to undermine the prerogatives of the Sultan. Again, that popular hymn, "Shall we gather at the river?" was banned because the watchful one, for reasons best known to himself, decided that the river in question was the Maritza, and that the hymn hinted at an invasion of Turkish territory. After this it surely is time for the Captains *and* the Kings to depart!

***

Another speaker at the same dinner, Mrs. W. D. Stebbing, put forward—or, rather, revived—a proposal which has much to recommend it. Speaking from personal acquaintance with Cyprus, where, I understand, her husband holds a prominent official position, she suggested that it might well be made a health resort for Egypt. The Cairo Correspondent of THE NEAR EAST not long ago sang the praises of the forest-clad slopes of the island; and Mrs. Stebbing fully bore out all that he wrote about their charms and their health-giving air. Moreover, she suggested that some of our disabled soldiers might find it possible to take up fruit-growing in the island, exporting the fruit to Egypt and this country. Why not? We have now taken Cyprus over, and it is obvious that in the future we shall do well to keep it in our hands; and what better colonists could we have than our soldiers? Many of them have good reason to like the island, having been sent there from Gallipoli to get back their health and strength; and I should think that, given a little Government support and encouragement, the scheme might prove feasible, and advantageous in many ways.

***

Such news of Sofia as filters through to this country shows that a veritable reign of terror exists in the Bulgarian capital. Ferdinand of Coburg apparently begins to realise that he has put his money on the wrong horse this time, and as a result he is clearly in a state of sheer funk. Radoslavoff, for his part, can hardly be feeling much happier, but he is at least keeping his head sufficiently to turn his Royal master's fear to his own advantage by securing the arrest of his most formidable—because most honest—political opponents. MM. Malinoff, Ghenadieff, and Halacheff are all reported to have been arrested on charges that are clearly trumped up. The first two of these, at least, are far-seeing enough to estimate the Germans at their true worth, and remained undazzled by the initial victories and undismayed by the early brutalities of the Dogeaters. Now they appear to have fallen victims to the spite of the clique of little men who are endeavouring to run Bulgaria in the interests of the Kaiser and themselves. We shall see how far the cowardly King and his willing tool will dare go. But I suggest that the Entente Powers should give M. Radoslavoff to understand quite clearly that when the day of reckoning comes *his* activities will not be forgotten.

***

The arrest of M. Ghenadieff, it is reported, led to "serious incidents" in Sofia. If this be true, I am glad of it, for it shows that all the Bulgarians have not allowed themselves to be cowed or cajoled by the Coburger and his venal Ministers. Moreover, the "serious incidents" included one item which affords me peculiar satisfaction: The citizens of Sofia, disgusted by the treatment meted out to them by their German "allies," and of being regarded as dirt by the "conquerors," turned on one of the offenders, an officer, and gave him a very bad time indeed. He sought refuge in an hotel, but was promptly dragged forth by the exasperated crowd and man-handled in a way that can hardly have been flattering to the dignity of an officer of the Kaiser, until the arrival of a cavalry patrol put an end to his humiliation. It is not a very pretty story; but it is the sort of thing that everybody—except the Huns themselves, apparently—felt sure would happen sooner or later. It is, too, in all probability only the forerunner of many similar incidents in Bulgaria and Turkey.

***

Looking for comfort in the place of hideous gloom that the last days of winter made of London, I strolled along the Thames side at Putney the other morning. My search was to a certain extent successful, because the gloom there was soft and mysterious as it touched the face of the icy waters, and, trembling, slurred to mist. The boat-houses were locked and silent, distances were exaggerated in the uncertain light, there was not another soul on the river front as far as the eye could see. For a few moments I walked by an enchanted river, then a vivid splash of colour crept out of the morning grey and resolved itself into a motor-launch, newly painted, trim and beautiful from stem to stern. Instinctively my mind turned to the crowded days of summer when the river is full of such craft as this and all the world is glad. A man approached me as I stood watching. "Pretty little thing, a'int she, sir? She's for 'orspital work in Mesopotamia." Mesopotamia! There is no release from the war.

CORSAIR.

NEAR EAST BOOKSHELF.

THE ART AND CRAFT OF THE EXCAVATOR.*

In his account of the American excavations at Nippur Professor Hilprecht refers, with the enthusiasm of a fellow-student, to "Nabonidos . . . the royal archæologist on the throne of Shumer and Akkad," and to those of his subjects who "began to interest themselves in archæological work"; and tells us of at least one of these early collectors who took excellent squeezes of inscriptions of Sargon of Agade from originals which he must "have obtained . . . by purchase or through personal excavations carried on in the ruined buildings of Bel's city." This would seem to show that the archæological excavator is not so entirely a product of modern times as is generally believed. For the expert maker of "squeezes" referred to flourished in the Sixth Century B.C., and his work, which is illustrated in Professor Hilprecht's book, shows that he was no bungler. Some of those who followed in his footsteps in more recent days, however, lacked his skill, if not his enthusiasm, and though digging for relics of the past has been for many years a popular calling, it is to be feared that it has too seldom been pursued in that strictly scientific spirit which alone can give the best results. Even when there has been a great parade of thoroughness, and when tangible results, in the way of spoils for the museums, have been forthcoming in large quantities, many a good site has been ruined by gross bungling, or by over-anxiety to get the work done—after a fashion—speedily: for too often an admiring public has been spoon-fed with far-fetched theories instead of being firmly given only well-established facts; and not a few reputations have been built up by methods which have been, to say the least, hardly honest. Happily, with the spread of knowledge and the increasing interest displayed in the subject by the public, these things are becoming rarer. The excavator of to-day is usually a highly trained man, a specialist in one or two branches of his work; he recognises that it is his first duty to ascertain and record facts; and if he indulges in theorising at all, he does so with some discretion.

The appearance of such a book as the one under notice is itself evidence of the increase in the number of "diggers" who deserve the title of "scientific excavators." It is a volume that should certainly be read by anyone who contemplates taking up the calling seriously; and it would be no bad thing if certain amateur spoilers of good sites could be made to commit it to memory before they were allowed to scratch the surface of a single mound. They would then, perhaps, realise the responsibility attaching to such work, and would either refrain from undertaking it at all or else undertake it with the care it demands. Then, though they might still make mistakes—for the best and most careful of excavators cannot, alas! avoid mistakes entirely—the harm they did might possibly be repaired to some extent. In the past much harm has been done that can never be repaired. Schliemann himself, one fancies, was not entirely free from fault, despite the place on Clio's roll of honour ascribed to him in Mr. Droop's Introduction.

The author's experience of excavating has been gained chiefly in Greece, but he has worked also in Egypt; and it may be observed that most of his hints and advice may be studied with profit by those whose lot it may be to dig in other parts of the Near East. Much of that advice is technical, and it would be out of place to refer to it at length in THE NEAR EAST. The essay will, however, be found quite interesting, not only by the professional excavator, but also by any reader who desires to know how the crude material is obtained which has enabled the historian to build up so rapidly—and, upon the whole, so satisfactorily—our knowledge of the civilizations of ancient Egypt, Babylonia, Assyria, Persia, and other lands of which little or nothing was really known a few generations ago. Moreover, the human interest of the little book is strong. The excavator has to be a student of that very living man, his workman, as well as of the long-dead peoples whose homes, or graves, he unearths. How is he to "eliminate all unnecessary smashes"? A piece of pottery, let us say, that has been buried for some centuries, is probably extremely fragile; the workman may be over-keen, or merely careless; and—the result is sometimes tragical. The question, "How to avoid breakages?" is indeed a delicate one. Punishment may lead the workman "to suppress in future all traces of his victim." Mr. Droop believes in appeals to the man's better nature, combined with a carefully-thought-out system of backsheesh. It is interesting to learn that whereas in Egypt pilfering by the workmen is very common, in Greece it is rarely met with—this state of affairs being due to the comparative ease with which antiquities can be sold in open market, so to say, in Egypt, and the difficulty attending such sales in Greece.

What Mr. Droop writes about the absolute necessity of having a capable man constantly in charge of the digging, and of avoiding working over an area larger than can be supervised properly, is very sound. So, too, are his remarks upon the folly of understaffing and overworking—causes which have contributed to the failure of many excavations. His advocacy of digging trenches rather than pits, again, is sure to meet with approval from all who have had opportunities of comparing both methods of work. The latter, indeed, is worthy only of the "grubber" who is out for spoils regardless of the havoc his blind burrowing may work. Then, too, his remarks of the evil effects produced upon the morals of the excavator by the rapid growth of dump-heaps are certainly worth careful note:—

> I would [he writes] rather see my work held up slightly while I arranged for increased facilities to meet the proved demands of the site, than have my means of dumping greater than necessary, for there is, I think, in that case a danger not wholly fanciful of a subtle change in the excavator's point of view—of his coming to regard the dumping cars as voracious monsters that must be fed, and the amount of soil moved as the standard of his achievements.

The danger is assuredly "not wholly fanciful." Many an excavator appears to take great pride in the mere shifting of so many cubic metres of earth from one part of a site to another; which is, to say the least, hardly scientific.

As to the question of publishing the results of the "dig" quickly, Mr. Droop is refreshingly direct. He contends that the excavator's duty is—

> To publish his facts as quickly as is consistent with thorough study that all the world may be at liberty to spin theories, for the sooner new facts are presented for general study the better served is the cause of History. In the past, facts have often been held up too long that their discoverer might himself publish with them their explanation.

The first duty, then, of the excavator is to ascertain facts, facts, facts—not to hold theories, and his next duty is to make those facts available to the world as quickly as may be. It seems a simple programme; and though experience proves that it is not quite so simple as it looks, it is, on the other hand, not nearly so difficult as a certain class of excavator would have us believe. The work has its pitfalls, its difficulties, and, sometimes, its dangers; but its fascination is undeniable, and the digger's calling is probably one of the pleasantest in the world. If he desires to excel, however, he must equip himself for the work as he would for any other serious undertaking. The day of haphazard exploration is—or should be—past. Mr. Droop's little book shows how the work should be done.

* "Archæological Excavation." By J. P. Droop, M.A. (Cambridge University Press. 4s. net.)

BOOK NOTES.

Messrs. Hodder and Stoughton are issuing a new edition of Sir W. M. Ramsay's "Impressions of Turkey," which was first published nearly twenty years ago. The book remains a standard work on the country dealt with, and Sir William Ramsay is a sound judge, and withal an impartial one, of the people he writes about.

From the Egyptian papers we learn that a good map of Northern Egypt, showing the entire extent of North-Western Ægypt up to the frontier of Cyrenaica, has been published in Alexandria by Mr. Foros, 6, Ramleh Boulevard, at the price of P.T.5.

Messrs. Hutchinson and Co. will publish immediately a book entitled "With the Zionists in Gallipoli," by Lieut.-Col. J. H. Patterson, D.S.O., author of "The Man-Eaters of Tsavo." The Zion Mule Corps, composed entirely of Jews, having been raised in Egypt for service in Gallipoli, Col. Patterson was placed in command, and his book is a record of the work of the corps there: it also describes the fighting on the Peninsula generally. The book should make a special appeal because it is the first time for over two thousand years that an entirely Jewish corps has taken an active part in a campaign.

BOOKS RECEIVED.

Paris Reborn: A Study in Civic Psychology. By Herbert Adams Gibbons. Illustrated. (New York: The Century Co. $2.00 net.)

Twenty Years in Baghdad and Syria. By Canon J. T. Parfit. (Simpkin, Marshall, and Co. 1s.)

Ferdinand of Bulgaria. By the Author of "The Real Kaiser." (Melrose. 2s. net.)

Report on the First Two Years' Working of the Plant Protection Law (Law No. 5 of 1913). By G. Storey, B.A., F.E.S., Entomologist to the Ministry of Agriculture. (Cairo: Government Press. P.T.2.)

The Nature of the Damage Done by the Pink Boll Worm. By Lewis Gough, Ph.D., F.E.S., etc., Director of the Entomological Section, Ministry of Agriculture. (Cairo: Government Press. P.T.1.)

Monday is the birthday of Prince Mirko of Montenegro, second son of King Nicholas. H.R.H., who is Grand Voyvode of Grahovo and of Zeta, was born at Cettigne in 1879.

Prince Mirko, who remained in Montenegro with a remnant of the Montenegrin Army, and was captured by the Austrians, is at present in Vienna, where he is reported to be undergoing treatment in a sanatorium.

Monday is also the birthday of Prince Arsène Kara-Georgevitch, the brother of King Peter of Serbia.

Tuesday is the birthday of Princess Marguerite of Greece, eldest daughter of Prince Andrew and Princess Alice, who was born at Athens in 1905.

Prince Christopher of Greece arrived at Stockholm on Tuesday on his way to Petrograd.

The Crown Prince of Serbia left London last Friday. On the previous afternoon H.R.H. visited the King and Queen at Buckingham Palace, and took leave of their Majesties, and also bade farewell to Lord Kitchener at the War Office.

Prince Albert, attended by Captain B. Godfrey-Faussett, R.N., was present at Victoria Station on Friday morning, and, on behalf of the King, took leave of his Royal Highness the Crown Prince of Serbia on his departure from England.

During his visit to this country the Crown Prince personally conferred the Order of St. Sava on the Hon. Mrs. Rochfort Maguire, in recognition of her services as President and Chairman of the Committee of the British Eastern Auxiliary Hospital at Belgrade.

His Royal Highness also bestowed the Order of St. Sava (3rd Class) upon Lord Swaythling, the Chairman, and Dr. G. B. Clark, the Medical Director, of the Wounded Allies' Relief Committee.

In writing to Mr. Handel Booth, M.P., Chairman of the Executive Committee of the W.A.R.C., to announce the honour conferred on Lord Swaythling and Dr. Clark, the Serbian Minister, M. Boshkovitch, added an expression of his own thanks "to all members of your Committee and of your units who have taken part and interest in your work for our country."

Lady Paget had the honour of being received by the King and Queen, at Buckingham Palace, last Friday, on her return from Serbia.

22, Great Chapel Street, Oxford Street, W.

Lieutenant-Colonel Sir Mark Sykes, M.P., was received by the King at Buckingham Palace on Wednesday.

An interesting and impressive ceremony took place at Salonika on Wednesday, when (says a Reuter's message) General Sir Bryan Mahon, the British Commander-in-Chief, handed to General Sarrail, the Commander-in-Chief of the Allied Forces, the insignia of the G.C.M.G., conferred upon the latter by the King. A brigade paraded and was inspected by the two Generals, the regiments afterwards marching past. The men presented a splendid appearance, and, notwithstanding the fact that they had been for over eighteen months on active service, looked very smart and efficient. A large number of superior officers of both British and French Armies witnessed the ceremony.

Lieutenant-General Sir Archibald Murray, Commander-in-Chief in Egypt, on Monday afternoon, at Alexandria, reviewed the South African battalions which have done such fine work on the western frontier. He congratulated several of the men individually.

Prince Bibesco, of the Roumanian Legation, who left London for Paris last week, has returned and has resumed his diplomatic duties.

Lord Edward Cecil, the Egyptian Financial Adviser, has returned to Egypt.

It is officially announced that his Majesty the King-Emperor has been graciously pleased to sanction the grant of a salute of eleven guns and the rank and status of a First-Class Chief of the Bombay Presidency for life to his Highness Aga Sultan Sir Mahomed Shah, Aga Khan, G.C.S.I., G.C.I.E.

In the *London Gazette* of April 3, under the heading of Royal Military Academy (Woolwich) we are glad to notice that Captain G. B. Pears, R.E., is temporarily appointed Chief Instructor (G.S.O.) at the Academy, and to be temporary major while so employed.

Referring to General Sir John Nixon's report in respect to the operations in Mesopotamia (Amara, May 31 to June 4) we notice that amongst the officers recommended in despatches under "General Headquarters Staff" figures the name of Captain George E. Whittall. Captain Whittall is still doing excellent work for King and country "somewhere in the East."

We are informed that General Ivanoff, whose resignation of his command was referred to in these columns last week, is not a Bulgarian, as stated.

Essad Pasha, after visiting the French front, has thanked M. Briand for the privilege of seeing the French Army in action.

M. Malinoff, a former Minister of Finance, and five other Bulgarian deputies are reported to have been arrested.

The Sultan of Egypt's Civil List and the salaries of his household have been increased to £E338,810 in the budget for this year, as compared with £E318,859 last year, a total increase of £E19,951.

H.E. the Hellenic Minister and Madame Gennadius were present at the Greek Church, Moscow Road, Bayswater, last Sunday, when a Te Deum was sung on the occasion of Greek Independence Day.

A marriage has been arranged, and will very shortly take place, between Lord St. Davids and Miss Betty Rawdon-Hastings, second daughter of Lady Maud Rawdon-Hastings and the late Hon. Paulyn Rawdon-Hastings, of the Manor House, Ashby-de-la-Zouch.

The marriage took place on Monday at St. Paul's, Onslow Square, of John Percival Droop, M.A., younger son of the late Henry Richmond Droop, Barrister-at-law, of Lincoln's Inn, and Mrs. Droop, of 11, Cleveland Gardens, to Ita Bride, elder daughter of the late Michael Molony, Barrister-at-law, of the Middle Temple, and Ada Molony. The bridegroom, who is the author of "Archæological Excavation"—a review of which appears on another page—was formerly a student of the British School at Athens, and has taken part in important excavations both in Greece and in Egypt.

Lieutenant-General Sir George Frederick Gorringe, who is conducting the operations for the relief of Kut, had a lot of Near Eastern service to his credit before his present campaign. He joined the Headquarters Staff in Egypt five years after joining the Royal Engineers, and subsequently gained distinction with the Dongola and Khartoum Expeditions. Attached to the Gedaref relief column, he commanded the irregulars at Abu Adel and Umm Debrikat, and later acted as A.D.C. to Lord Kitchener. After serving in the South African War, where his services brought him the award of the C.M.G., he returned to the Sudan, and for some time acted as Mudir in the Blue Nile Province, where his administration was marked by unusual success. General Gorringe served for nearly three years as Director of Movements and Quarterings at the War Office prior to being transferred to India, where, since 1912, he has commanded a Brigade. His early services in the present war included the very successful advance from Kurnah against Nasriyah last year, when he secured to the British the junction of the Shatt-el-Hai and the Euphrates.

Colonel Sir Colin Scott-Moncrieff, K.C.S.I., who was Under-Secretary for Public Works in Egypt from 1883 to 1892, died on Thursday of last week in his eightieth year, at his residence in Cheyne Walk, Chelsea. An appreciation of Sir Colin and an account of his work in Egypt will be found on another page.

The death occurred last week, at Lancaster, of Major Charles James Holmes. The youngest son of Mr. John Holmes, Athlunkard, County Clare, he was born in 1857, and received a medical education at Queen's College, Cork. He joined the Army Medical Service in 1882, and served in the Egyptian Campaign in that year, for which he was given the medal. He was also with the Sudan Expedition in 1885 and with the Expedition to Dongola in 1896, and received the medals for both.

Colonel George John Charles Whittington, who died last week at his residence, Codham Hall, Great Warley, Essex, aged seventy-nine, saw service in the Egyptian War of 1882, and was awarded the medal and bronze star. He also served in the South African War, and was mentioned in despatches.

The funeral of the Right Hon. Sir Gerard Lowther took place on Saturday afternoon in the churchyard of Campsea Ashe, Suffolk. The service was a very quiet one, only the family and a few friends being present. The coffin was borne to the grave by employees on the Speaker's estate. The mourners were Lady Lowther and her two daughters, the Speaker and Mrs. Lowther, General Cecil Lowther, Mr. Harold Lowther, and Mrs. Christopher Lowther. Wreaths were received from the family, Lady Margaret Jenkins, the Duke and Duchess of Roxburghe, Lady Herbert, Lady Slade and daughter, the Chilian Minister, Lord Rendlesham, Mr. Arthur and Lady Gertrude Monckton, Mrs. Whitelaw Reid, Mrs. John Ward, and the Committee of the British Red Crescent Society.

At the same hour as the funeral, a memorial service was held at St. Paul's Church, Knightsbridge, which was attended by many friends of the late Ambassador. The Hon. Theo. Russell represented Sir Edward Grey and amongst others in the congregation were: The Right Hon. Ameer Ali, Lord and Lady Newton, Lord and Lady Hilton, the Hon. Lady Herbert, Sir Henry Bax-Ironside, Sir Maurice de Bunsen, Mr. Arthur Nias, Mr. H. G. Cumberbatch, Mr. Adrian Hope, and Captain and Mrs. Makins.

A memorial service for Sir John Gorst was held on Saturday at St. Margaret's, Westminster, amongst those present being Viscount Bryce, Colonel Sir Mark Sykes, M.P., and Colonel Yate, M.P. The funeral took place at Castle Combe, Wiltshire.

Mr. Q. S. Hazzopulo, for many years Greek Consul at Manchester, a position from which he retired eighteen months ago, died last Friday. Mr. Hazzopulo, who was a merchant, was also Persian Consul, a position he held at the time of his death.

The death is announced, as having taken place at Kentish Town, of Mr. Joannides, who was for many years Greek Consul in London. He was eighty-five years old.

A Reuter's message from New York, dated April 12, announces the death of Mr. Richard Harding Davis, the well-known American writer, who served as correspondent of *The Times* in the Greco-Turkish war.

Sir Owen Seaman has promised to read a selection of his poems at a concert in aid of Serbian prisoners of war, to be given by the Independent Music Club, at the Kingsway Hall, Holborn, on Saturday afternoon, at 2.30.

On Tuesday evening, at St. George's Hall, Liverpool, Mr. David Mitrany delivered a highly interesting lecture on Roumania.

The Crown Prince of Serbia before his departure left with the Serbian Minister a sum of £200 with the request that it should be handed to the Lord Mayor for a charitable institution in connection with the war. The Lord Mayor has forwarded the cheque to the War Seal Foundation.

The Cercle Serbe was "at home" on Wednesday afternoon at the Cavendish Hotel, Jermyn Street. Among those present were the Marchioness Inouye, M. Yovanovitch, Lady White, Lady Grogan, Lady Primrose, Major-General Sir Alfred Turner, and M.G. de Wesselitsky.

At a meeting of the Balkan Committee, held on Wednesday at the House of Commons, with Sir Arthur Evans in the chair, the following resolution was passed: "That this Committee welcomes the public declaration of the Crown Prince of Serbia adopting the programme of Jugo-Slav unity."

Prince Alexander of Serbia on Monday evening received in Paris the members of the Jugoslav Committee, when the President, M. Trumbic, expressed the Committtee's sentiments of affection and devotion to the Prince and the Karageorgevitch Dynasty.

Dr. Frank J. Mackinnon has been appointed medical officer to the Hamrem Hospital, in Malta.

Since the reoccupation of Ispahan by the Russians, the British Minister has given leave to the missionaries to return to that city.

"CARMEN SYLVA'S" FUNERAL.

Our Bucharest Correspondent writes :—

The funeral procession of the late Queen Elizabeth left the Royal Palace on Sunday morning, March 5, and proceeded to the station through streets lined with soldiers. Following the coffin on foot were King Ferdinand with his sons, the Princes Carol and Nicolas, on either side, and behind these the Diplomatic Corps and many prominent civil and military authorities. The coffin was covered with a purple cloth upon which rested the Royal Crown, further in front being placed a casket containing the earthly remains of the late Sovereign's only child, the little Princess Maria, who was born in 1870 and died three and a-half years later, leaving her parents heartbroken. Her body had been buried in the park of Cotroceni, but was exhumed after the death of Queen Elizabeth, the latter having desired that her child might be laid beside her. The funeral train left for Curtea de Argesh at midday, closely followed by another train reserved for the chief dignitaries.

King Charles was buried in the beautiful church of Curtea de Argesh, and now his gentle Queen has been laid in the crypt beside him, their daughter finding her last resting-place in a niche in the partition that separates the two crypts.

The Diplomatic Corps constituted two rows in the procession, each of these representing one of the belligerent groups. It was noted with satisfaction that the Greek Minister had taken his place among the Ententists. Sir George Barclay walked between his Greek and Serbian colleagues.

In the group represented by the Ministers of the Central Powers was, of course, also M. Simion Radeff, the Bulgarian Minister, who attracted attention from the fact that he was the only diplomat who was not in uniform. He wore a frock coat and white gloves. Commenting on this fact, the *Nationalul* quotes the special correspondent of the *Corriere della Sera* who was present at the opening of Parliament: "Of a sudden I observe in the bench occupied by the representatives of the Central Powers M. S. Radeff, whom I had known in Bulgaria as a *Komitaji*. It must be admitted that M. Radeff has a sense of proportion; he is aware that the change from the dress of a *Komitaji* to the uniform of a diplomat would be too striking, so he has compromised by adopting the frock coat."

APPOINTMENTS, PROMOTIONS, Etc.

M. Dragoumis, the Greek Minister of Finance, has resigned, and has been succeeded by M. Rallis, who in turn is succeeded as Minister of Justice by M. Chatzakos, the Public Prosecutor.

A Sudan correspondent writes :—

Mr. W. R. G. Bond, formerly Second Inspector in the White Nile Province, and later First Inspector of the Dongola Province, is now promoted to a Senior Inspectorship in the last-named Province, replacing Captain Jackson, who retired comparatively recently (1914) from the Government service. Mr. Bond will be stationed at Dongola, where there is an additional (Second) Inspector in the person of Mr. A. W. Skrine. Mr. Bond joined the Province Government of the White Nile in 1910 vice Mr. Ball, and was stationed at Kosti.

Captain S. Hutchins, formerly a Second Inspector of the Mongalla Province, stationed at Bor, has now been re-transferred to the Army. He was one of the most popular of the younger officials in the Sudan Government service, and during the short while that he was in Mongalla he thoroughly justified the high opinion of his capabilities which his superiors had formed.

Mr. P. Ball, Third Inspector of the White Nile Province, has been appointed a First Class Magistrate under the Code of Criminal Procedure. Mr. Ball joined the Sudan Government Service in September of 1913.

Our Cyprus Correspondent informs us that Mr. Wilson, Inspector of Police at Kyrenia, has been transferred to Nicosia, to relieve Jemal Effendi, who is moved to Famagusta.

Under date of March 13, our Bucharest Correspondent reports :—

M. Alfred Mendl has received his exequatur as Norwegian Vice-Consul at Braila, in place of the late M. Achille Mendl.

M. G. Derussi, Roumanian Minister at Sofia, has returned to his post from Bucharest.

M. Langa Rashcanu has been moved to Sofia as Councillor of Legation.

The resignation of M. Stere, the Germanophile, or rather Russophobe, rector of the University of Jassy, has at last been accepted by M. Duca, the Minister of Education.

El Miralai C. H. Whittingham Bey, of the Egyptian Ministry of Interior, has been granted the temporary rank of Lewa in the Egyptian Army, whilst holding a special appointment.

El Bimbashi J. M. C. Scott has been transferred to the Egyptian Camel Corps.

Captain W. N. Hill, Northamptonshire Yeomanry, has been attached to the Egyptian Army, as a special service officer, and granted the temporary rank of Bimbashi.

DOMESTIC ANNOUNCEMENTS.

FRIDAY, APRIL 14, 1916.

GERMANY AND ISLAM.

When in 1898 the German Emperor went to Damascus and there proclaimed himself the friend and protector of the Moslem world, it was obvious that his sudden adoption of a new rôle was intended to serve a special and a German purpose. Not a single Moslem owed him allegiance; but Turkey was essential to the consummation of German plans in the East, and the Damascus pose appealed to William II. as a suitable method of bestowing Imperial patronage. Two years previously it is probable that the Emperor shared the views of his Pan-German League, which in 1896 regarded the dissolution of the Ottoman Empire as imminent, and was anxious to establish a claim to a portion of its territories. The Emperor's second visit to the Near East inaugurated a new policy. Instead of taking possession of a part of Turkey, Germany decided that she required the whole of it for the realization of her destiny in the world. The partition of the Ottoman Empire would mean that Asia Minor would have to be shared with other Powers, whereas the maintenance of the integrity of Turkey as a result of Germany's good offices would not only place the whole of the Empire at Germany's disposal, but give her the benefit of its fighting strength as well. The bargain ratified between William II. and Turkey has been well kept, according to the lights of the contracting parties. Abdul Hamid and the Young Turks in turn secured a respite from the reforming influences of the Concert of Europe by means of Germany's passive resistance to the proposals of the other Powers, and were flattered by the attentions of their masterful patron. Germany proceeded to strengthen her economic and political hold on the Ottoman Empire, until on the outbreak of the war she was able to compel the Turks to stake their all in a conflict to which they were not a party, solely in her interests. To cover up the tracks of the Constantinople clique which had bartered away their country's future for German gold, the device of proclaiming a *jehad* throughout the Moslem world was tried. Neither the solemn adjurations of the Sheikh-ul-Islam nor the circulation of the report that the German Emperor had become a convert to Islam brought success to the appeal. The Moslem world remained unmistakably indifferent to the command to range itself under German officers for a holy war, in this respect proving more faithful to its religion than the atheistic group of adventurers who had usurped power in Constantinople.

So long as German designs upon the Ottoman Empire remained unfilled, we should have expected to find the Germans making at least a practice of tolerance towards the Moslem faith. The German in Persia who claimed admission to Islam in order to carry on his intrigues the more easily against Great Britain imagined that he was flattering *more Teutonico* the Moslem world, and was doubtless surprised and pained to find that unsophisticated Mohammedans regarded his duplicity as an outrage on their faith. But there is no loophole for misunderstanding in the attempt to suppress the Mohammedan religion throughout Germany's African colonies which was made in conformity with the deliberate policy of the German Government. In the archives recently captured by the British forces at Moshi in German East Africa was a circular signed by Dr. Schnee, the Imperial Governor, calling upon all military stations for a report "stating what can be done by means of Government servants and Government teachers to counteract effectively the spread of Islamic propaganda." Officials are asked to state whether they "consider it possible to make a regulation prohibiting Islam altogether." The encouragement of pig-breeding among natives, adds the circular, "is recommended by experts as an effective means of stopping the spread of Islam." District commissioners had to consider and report upon this latter point as well, but the procedure which commended itself to the Government of the colony was indicated in the following terms:—I. Prohibition of all Government officials from following the Mussulman faith. II. The preparation of a register in every district of all mosques. III. Prohibition of the performance of the rite of circumcision by any but persons licensed by the Government, who must submit, when applying for such a licence, to an examination by a German official. This circular, it is to be noted, was sent out in October, 1913; the reports called for were to be submitted three months later. It was not a question of an inquiry into the effect of the Moslem faith on the native mind; the Government had already decided upon a policy of suppression, and merely consulted the district officials on the subject of the best methods of carrying the policy into effect.

If Germany's effort to pose at the outbreak of war as the champion of Islam deceived anyone, it was the Turks alone. Believing the only information they were allowed to receive, a certain number of them will have been under the impression that the Entente Powers cherished designs upon Turkish territory, and that Germany was prepared to throw her whole strength into the breach on their behalf. They will have had no clearer conception than the rest of the world before the war of the part Germany intended to make the absorption of the Ottoman Empire play in her scheme for the domination of Europe; and they will have regarded it as natural that the *rôle* of protector of Turkey should carry with it a special friendliness towards Moslems in general. The incidence of war, however, has revealed Germany in her true colours. While rendering lip-homage to Islam, she is committed to a deliberate policy of suppressing the Mohammedan faith wherever it is in her power to do so. There is in this nothing incongruous with the German character. By its conduct of the war the German Government has shown that it refuses to be bound by any moral considerations in the pursuit of what it considers to be the country's interests. It served its purpose to pose as a friend of Islam while it was engaged in the process of absorbing the Ottoman Empire. If, however, at the same time the spread of the Mussulman faith into a German colony threatened to interfere in any way with Germany's methods of dealing with subject races, then Mohammedanism must be ruthlessly suppressed. No compunction for Turkish susceptibilities, no sense of honour, would deter the Germans from the execution of their resolve. It is thus that all the world, with the sole exception of Turkey, knows Germany now. In the circular issued by the Imperial Governor of German East Africa the Turks, if they have not sufficient object-lessons in Turkey to-day, may read the true German character. From it they can draw their own conclusions as to the fate in store for them, if Germany should be victorious in the war and elect to retain her hold on the Ottoman Empire. Their next step, we may hope, will be to ask themselves why they are continuing the struggle. They embarked on war to serve no interests of their own; for, as the Entente Powers had formally guaranteed the integrity of Turkey, it was not true that they had designs on Turkish territory. A chivalrous desire to stand by those who had befriended them might justify their taking the field, but when their ally is shown to have been guilty of treachery to what is to them dearer than their own lives—their religion—they need to take stock of their position and to give heed to their future interests.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

ON THE ROAD TO ERZEROUM.

BY M. PHILIPS PRICE.

With the Russian Army on the Caucasus Front, March 9.

On the day after the fall of Erzeroum I was on the road leading from Sarikamish to the old Russian frontier. The land was snow-bound in the grip of a winter which only those who have travelled in Armenia and the Trans-Caucasus can realise. The plateau of Kars looked like an ocean of white from which protruded islands of rocky eminences. Here and there patches of black dots broke the great white sheet—all that was to be seen of the native villages. Tartars, Georgians, Armenians, Greeks and Turks, and all the many races that inhabit the plateau of Trans-Caucasus had retired underground like troglodytes for the winter, and only an occasional human form standing outside a black hole in the white hillside, which signified a door, gave any sign of the presence of life in this Arctic scene. With the military transport bound for the front I walked along the winding road past the scattered forests that cover the hills along the Russo-Turkish frontier to the edge of the wide Passan plain, which has been the scene of such great events during the last two months.

Between Zanzak and Asap Keui the rolling hills of the Jelli Gel were scarred with lines of trenches and barbed wire. Here the Turks had made their positions last summer, and here for eight months they had remained facing the Russians, with scarcely an incident to break the monotony of the soldier's life. Now suddenly all was changed. Five days' terrific fighting in the first week of January, during which the Russians with great skill succeeded in surrounding the Turkish left in the mountain country of the Jelli Gel, forced the Turks to precipitate an hasty retreat on Erzeroum. Many signs of the Turkish retreat we saw on the way. Through the snow on the roadside protruded a number of objects: camels' humps, horses' legs, buffaloes' horns, befezzed men's faces, with little black beards on their chins, smiling at us the smile of death, their countenances frozen as hard as the snow around them. That is all that is left of the "Drang nach Osten."

After two days the famous old bridge of Kupru Keui appeared before us, across which the armies of the Mongols, Tamerlane, and Shah Abbas passed many centuries ago. To-day the invader of Asia Minor comes not from the East but from the North, and once again the great highway of nations resounds with the tramp of armies and the cry of the refugee and the dying.

For three days we continued our journey south-west across the plain, spending the nights in the little posts of the Russian Red Cross, or in deserted Turkish villages. Every morning at sunrise there would start an endless stream of transport wagons, groaning along the line of ruts and cart tracks that calls itself a Turkish road. But already the Russians had got to work, and gangs of Persians and Tartars, jabbering loudly all the time, were hard at work under the supervision of a Cossack in getting these so-called roads into some sort of order. At last the outline of the Deve Boyun peered through the wintry mist. First forts Kaburga, then Ortajuk, then Uzun Ahmet could be discerned, crowning the rocky eminences on which they stood. Here we could see where the advanced Russian trenches had been—mounds of snow behind which the troops could hide and not be seen from the forts. Beyond them were the Turkish barbed wire entanglements, which threaded across the plain to the foot of the fortress hills. As the mist lifted the whole of the great Deve Boyun chain, with its famous forts, opened before our eyes. We were reaching the scene of the great struggle. As we crossed the neck of hills by the road leading down to the Euphrates plain the sound of firing came to our ears. A few shrapnel in the distance crackled and shone for a second like sparks against a bank of mist. It was the tail-end of the Turkish Third Army fighting a rearguard action on its retreat to the West; and across the plain we could see column after column in long dark lines moving forward. They were the Cossacks in pursuit. As we continued along the road the corpses of the camels, horses, and men grew more and more numerous. If I threw a stone along the road it would be sure to strike half-a-dozen of these silent monuments of war. The pariah dogs were already beginning; for they had been starving all winter, and now was a time of plenty for them.

Before long the famous Kars Gate of Erzeroum, with its pyramidal Seljuk tomb, hove in sight. We passed through tunnels and fortress mounds, past rickety old Turkish sentry-boxes with the Star and Crescent painted on them. But now they were inhabited not by black-eyed, thick-nosed *askars*, but by little, round-faced men with grey eyes and flaxen hair. The grey-coated legions from the North had come. Inside there were scarcely any signs of war. There were a few empty houses, part of the bazaars were closed, and sugar was at very high prices. The first thing I noticed in the streets was a number of men in baggy trousers and fezzes. 25,000 of the poorer class of Turks had remained behind when the Russians entered. With characteristic fatalism they were going about their business as if nothing had happened. "Allah had given Erzeroum to the Uruss; Allah gives and takes away, and Allah is great." Nowhere could the philosophy of the East be more plainly exhibited than in the calm and dignified faces of those Turkish civilians who went on with business in Erzeroum as if it were days of peace.

On the door of a house I saw written up in Russian: "Here we take in prisoners." Just to show how simple and honourable the Turkish soldier is, I saw standing outside a whole row of *askars* asking to give up their rifles. They had failed to escape with the rest of Kiamil Pasha's army, and had hidden in the houses when the Russians entered. But when they saw that no harm was going to befall them they came out and asked to be taken prisoners. "*Tufenk vererim; nerde alajak,*" I heard several of them say. The relations between Russian soldiers and the Turks were splendid. Several Turks with whom I talked said that outside Constantinople circles everyone was heartily sick of the war, and had no inclination to continue struggling with Russia, against whom they showed not the slightest sign of animosity. On the other hand, Russian soldiers would tell me what they thought of the Turks. "*Chestny dobry narod*" (honourable good people) came from the lips of many, and they expressed regret that the needs of "politica" had forced them to fight with each other. Those who know the East are aware what an intuitive sense of simple wisdom both Russian and Turkish peasants have, and so these few remarks that I heard at Erzeroum are probably a good indication of what the silent masses are thinking.

In the old British Consulate, where I had stayed four years ago, I found now the Russian Staff. Across the way lived the American missionary, Mr. Stapleton, who, for all these many months, had been locked up in Erzeroum with his wife and family, and had bravely worked against fever and sickness, which decimated the Turkish Army last winter. He and his wife had also done all they could to relieve the sufferings of the Armenians when they were condemned to exile last summer, and they used all their influence with the Turkish officials to lighten their lot. Such was the respect in which all parties held Mr. Stapleton that when the Turks left the Vali called him and gave him a message for the Russians, promising that if they looked after the Moslems of Erzeroum he would personally do all that he could for the Christian exiles in Mesopotamia.

The story of the Erzeroum Armenians was as follows: The relations between the native Turks and Armenians have always been good, and even during the worst time of the recent massacre the local Turks protested to the Vali against the measures meted out to the Armenians. This mutual understanding, based on trade relations, was, unfortunately, damaged by some of the revolutionary leaders among the Armenians, and by the Chauvinists among the local Young Turk Committee. At the commencement of the war between Russia and Turkey it became known that the Armenians in the Caucasus had already formed volunteer corps to fight against Turkey. This fact seems to have had a great effect on the local Turkish officials in Erzeroum, and various measures were taken to separate Armenian from Turkish soldiers, and put the former, under special observation, to work on the roads. On May 19 the first massacre took place at Hunus, perpetrated by the Kurds in their retreat from Van, and such was the effect of the loss of Van on the Turks that on June 1 an order was issued that all Armenians must be ready to leave within three days for an unknown destination. 15,000 Armenian peasants from the Erzeroum plain were collected and sent off to Mamehattun. On reaching here the local head of the Chettahs, or Turkish volunteers, informed them that he must have 800 liras from them for safe conduct along the road to Mesopotamia. This sum

was paid; but within a few miles of the town all were massacred by an ambush of Chettahs, except one, who escaped to tell the tale. On June 16 the first lot left Erzeroum city and went in the direction of Kharput, but has never been heard of since. On June 19 a second lot left for Erzinjan, viâ Baiburt. The Vali of Erzeroum took 1,000 liras from them by way of poll tax for safe passage. At Kemash, however, their *arabas* were seized, and they were left to continue their journey on foot to Malatia and Mosul. Many died on the way, but some have reached their destination in safety, for the American missionary has received letters from them from Rakka, in Mesopotamia. It is probably true, however, that over 50 per cent. of the Armenians in the Erzeroum vilayet have perished in one way or another. It is interesting to note that a month after the order for exile was issued the German Consul at Erzeroum received an order from his Government, which was apparently becoming frightened regarding the effect which the ill-treatment of Armenians would have on public opinion in Western Europe, to assist the exiles with food and clothing on their journey.

In September a commission of Turkish officials from Constantinople, on which Beha-ed Din Shekir Bey sat, reached Erzeroum, having been given the task of collecting the property of the Armenians and transferring it to them in Mesopotamia. How much of this property reached its owners the readers of THE NEAR EAST can be left to imagine.

All through the winter the Turkish Third Army in the Erzeroum region remained inactive. Several batteries of field guns were sent down to Mesopotamia to take part in the advance against the British. Nothing was done to strengthen the Third Army, which has never really recovered from the blow it received at Sarakamish in January, 1915. A Turk with whom I talked in Erzeroum told me that the unexpected attack of the Russians in January took the Turkish Staff completely by surprise, and as soon as the Russians occupied Hassan Kale preparations for the evacuation of Erzeroum were begun. The operations which led to its final fall I have already described.

With a party of officers, the day after our arrival we rode up on to the hills which contain the inner chain of forts, and first visited Shivishli, the centre from which the Turks supplied the forts of the outer chain. Very little signs of fighting could be seen here. The stonework and parapets were in perfect condition, and the Turks had left without even blowing up the guns.

After a long ride over rocky ledges and winding paths in the teeth of a terrible wind we rose up on to the plateau and snowfields on which was situated Fort Chaban Dede, the key to the whole Deve Boyun forts. Who holds this fort can command both the inner and outer chain. On the summit we found the earthworks, with deep trenches and gun positions, on the very edge of a yawning precipice, beneath which lay the valley of the Tuy. To the south a magnificent panorama opened out to us. It was now evening. The wind had dropped, and the scuds of snow had cleared away. The sky had a pale blue Arctic tint, and the sun was sinking down behind the dark hills that bordered the sources of the Euphrates. As it sank it struck the landscape at our feet with slanting rays, turning the rocks into a glowing gold and the snowfields into dazzling silver. On the south the great white wall of the Palan Tepe range broke the horizon. On the east lay the level plain of the Araxes, and on the west the frozen marshes in which the Euphrates rises. Between these two plains lay the rounded hills of the Deve Boyun, covered in deep snow like silvery billows in a sea. Each rounded knoll was capped by a mound, or a circular ring; these were the forts, which seemed as it were to connect these frozen waves with a chain of dark beads. Looking to the north, I could see a perfect wilderness of rock and snowfield, out of which towered the peaks and the Karga Bazar. Could it be possible, I asked my companions, that a Russian Army could cross this country at 10,000 ft.? My question was answered next day when I went to see the actual place where the 4th Division and the right wing of the 39th crossed the Tuy defile and surrounded the Olugli heights.

After sleeping in Fort Chaban Dede at night in an old Turkish blockhouse, we set off next day across snowfields and crags, picking our way gingerly to avoid falling into snowdrifts. Yes, it was true. In the snow before my eyes I could see the tracks of an army which had been marching westwards. Through the defile of Tuy, in narrow files, they had gone. I could see where the guns which had been carried on the shoulders had been left in the snow for a few minutes while the soldiers rested.

On the snowfields the tracks widened out; open order was formed; machine guns and mountain batteries had hastily been laid under a cover of snow while the Turks on the Olugli were engaged.

A little further on I saw recent bloodstains in the snow, and then a dead Russian soldier half buried in a drift, his face turning upwards. Further on were some Turks, and all the signs of a precipitate Turkish retreat. The whole of the snowfields were covered with human relics of Russian and Turk who had fought and died together on these desolate heights; and the desolation wrought by Nature combined with that wrought by man. Here had been fought the great struggle for the Olugli heights, the plateau that lay between Forts Chaban Dede and Tufta. The Turks had contested every inch of this ground with a stubbornness and bravery which is characteristic of their race; but they had been outnumbered and overcome, and the Russians, after days of endurance and physical hardship, which seems almost impossible to contemplate even after one has visited the spot, broke through the chain of defences that held between the two forts. On this historic battleground, at 10,000 ft. in rock and snow, the fate of Erzeroum and of Turkish Armenia was decided on February 15, 1916.

GERMANY AND ISLAM.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

A Question of Economy.

April 11.

Mr. ASHLEY asked the Financial Secretary to the War Office whether last year the large steamship Arragon, lying off Mudros, was used for many months as the headquarters of the General Officer Commanding-in-Chief Mediterranean Expeditionary Force, or for portions of his staff; whether, while used for that purpose, the cost to the public represented by the ship and her running expenses was at least £50,000 a month; and whether, in the interests of economy and in view of the needs of tonnage, he would take steps to prevent a similar occurrence in the future.

Mr. FORSTER said that the answer to the first part of the question was in the affirmative. The total amount spent on hire and running expenses was only a fraction of the amount suggested. With regard to the latter part, he doubted whether a similar situation was likely to arise again.—Replying to a further question put by Mr. Ashley, Mr. Forster said it was not, in his opinion, desirable to state the amount of the "fraction."

The Mesopotamian Operations.

Mr. MALCOLM asked whether the Secretary for India would state what was the effect of the new arrangements for the control of operations in Mesopotamia on the position and responsibility of the Government of India and the Secretary for India respectively.

Mr. CHAMBERLAIN: Broadly speaking, the effect of the new arrangement is to leave unchanged the duties and responsibilities of the Indian authorities. But the Chief of the Imperial General Staff is substituted for the Secretary of State for India in all communications dealing with these operations, and, as stated by the Parliamentary Under-Secretary of the War Office on March 23, the Chief of the Imperial General Staff issues instructions when necessary to the Commander-in-Chief in India in regard to Mesopotamia in exactly the same manner as to Commanders-in-Chief in other theatres of war. Questions in regard to the operations should now be addressed to the representative of the War Office.

The State of Serbia.

April 12.

Mr. RONALD M'NEILL asked whether the Foreign Secretary had any information regarding the treatment of the Serbian civil population by the enemy occupying the country; whether the reports of massacres and of starvation of the Serbians were confirmed from official sources; and, if so, whether representations on the subject had been made to neutral Governments, and whether steps were being taken to alleviate distress in Serbia.

Lord R. CECIL replied that, as Serbia was in the occupation of the enemy, no official information could be received as to conditions in the country. From unofficial information which had been received it would appear that the civil population had not been maltreated by Austrian troops, though isolated outrages on the part of Bulgarian irregulars might possibly have occurred. The material in the Government's possession was too slight to justify representations to neutral Governments. With respect to the relief of distress in Serbia, his Majesty's Government were anxious to do anything possible consistent with paramount military considerations; but they desired to state emphatically that it was the duty of the occupying Power to provide for the well-being of the population in the occupied country; and they must protest against the callousness of those who, by deliberately starving populations under their control, attempted to blackmail us and our Allies into replenishing supplies which ought never to have been taken from the country.

Mr. M'NEILL: Granting that it is the duty of the occupying power to do this, still is it possible for the Allies to do anything to alleviate distress if it exists?

Lord ROBERT CECIL: We have had various proposals submitted to us, but so far none which, in our view, could possibly be applied without serious military disadvantage. The matter is a very difficult one.

Germany and Islam.

Mr. CHAMBERLAIN, answering a question put by Sir Philip Magnus, said that the substance of the orders issued by the German Government to their resident officers in East Africa forbidding the practice of some of the essential tenets of Mohammedanism with a view to the restriction of the observance of their religion by the natives were telegraphed to India, and had a broadcast circulation.

Prisoners at Philippopolis.

Mr. TENNANT, replying to Sir J. Lonsdale, said that telegraphic information had recently been received that the prisoners of war in hospital at Philippopolis were well treated, but no recent report had reached the Government of the condition of the bulk of the prisoners there. He understood that parcels were reaching them. The American Chargé d'Affaires was doing everything to supply the men with such things as were most needed, and his Majesty's Government were most grateful for his efforts. He was informed that four men of the Royal Irish Fusiliers were prisoners of war in Bulgaria, but could not say whether they were at Philippopolis.

Our Bucharest Correspondent reports that it has been decided to add a dental department to the Roumanian Army Sanitary Service. The new department will probably be organised on the French plan. This is another proof of the activity which has been displayed in all branches of the army since the outbreak of the war.

OF TURKISH POETRY.

A small gathering of literary people assembled last Monday at the rooms of the Société Internationale de Philologie, Sciences et Beaux-arts, to hear Dr. Henri M. Léon lecture on Turkish poetry. The lecture was preceded by some Eastern music, rendered by Mr. Walter Yélin.

Dr. Léon said that the first Turkish poet appeared about the end of the reign of Osman, and was a shepherd, who used to compose little poems while tending his sheep. From that time until to-day poetry had continued in vogue. Its votaries were found not only among peasants and literary men; of the thirty-five Ottoman Sovereigns not less than twenty-seven had been poets, and some of them poets of no mean order. Mohammed the Conqueror was a great poet, and Murad, the immediate predecessor of Abdul Hamid, wrote exquisite verses while in prison. The choice of subjects for Turkish poetry was limited; except for epics, running sometimes to considerable length, it nearly always dealt with love. Although the Turks were so warlike a nation, they had but few good military poems. One of these was written by a man who was of the first party of eighty who crossed the Bosphorus on a raft to attack the Greek shore, and he wrote it while recrossing on the raft with some prisoners. Another dealt with the incident of Ertogruhl's coming, with his band, to the aid of the Seljukian Sultan, without even knowing whom he was assisting. Besides its merit this poem was remarkable in another way. The writer had been banished for a previous poem, but "The Coming of Ertogruhl" so pleased the Sultan that its author was recalled. There are mines of literary gold in Turkish poetry, said Dr. Léon, but unfortunately it has not been studied by Western scholars as it might have been. He illustrated his remarks by reading a number of English translations, chiefly his own. Of the two poems which follow, which were among those read, the first is remarkable as being a work of Abdul Hamid, while the other is a translation of a poem centuries old made by Dr. Léon only a few days ago.

THE WINDS.

Cold blows the North wind,
Thickly falls the snow,
Would that it were my shroud,
If my love loves me no;
Pure as snow, yet, oh! so cold!
Why reject my love untold?

Bleak blows the East wind,
Piercing is its blast;
Blacker still for me all seems,
Sky dark and overcast.
For my love does not relent:
To my plans will not consent.

Damp comes the West wind,
Bringing with it rain;
All the tears I've shed for thee,
The sea could not contain.
But after rain comes sunshine:
May that pleasure yet be mine!

Warm comes the South wind,
Sunshine follows shower;
Melt her heart and make it kind:
Oh! let it feel love's power.
Kindle there love's burning flame,
South wind thus maintain thy fame.

ZAHIR ISHARET. THE MANIFEST SIGN.

Throughout the Universe, one mighty sign is shown;
Allah, Ahad, the One, who all the worlds doth own;
At his mighty command, each sun and star hath grown,
And countless worlds beyond, as yet to man unknown:
No one hath these worlds seen, neither of *jinn* or men,
No chart doth them contain, recorded by no pen,
This world knows naught of them, nor shall know until when
The will of Allah 'tis, they come within its ken:
The mind of man alone, can not conceive such land,
Nor those, who dwell therein, happy angelic band;
No tongues can faintly lisp a theme so high, so grand,
E'en voice doth fail of those, who in Al Jannat stand.
The power of Allah 'tis, to fashion and create:
None hath such power but He, the Mighty, Incarnate.
No trouble 'tis to Him, Qadir, Zorlu, Elate,
Khallak, Amil, Banna, the Monarch, He, of fate;
Kayim, Azaliyat, For ever, without end.
On sekiz binalem, the universe transcend,
To Him are but a grain, for 'tis His power to send,
A thousand thousand more, in number without end.

THE PRESS ON THE NEAR EAST.

The Mesopotamian Muddle.

In one of the strongest leading articles of the war, written admittedly at "the risk of being shut down," the *Morning Post* (April 6) returned to the Mesopotamian campaign. After referring to the capture of the Turkish position at Umm-el-Hannah, the article says that the attempt of the politicians' Press in England to shift responsibility is ominous. The *Post* itself is of opinion that Mr. Winston Churchill was in the first place responsible for the despatch of the expedition, and continues:—

If a motive for the mad and sorry business might be suggested it would, no doubt, be found in an attempt to divert the Turks from the Gallipoli Expedition. So true it is in war as in other things that one mistake leads to another. Upon the whole, the responsibility seems, like most things, rather mixed. Sir John Nixon advised; the Imperial Government assented; the Indian Government directed; General Townshend conducted the expedition. We have heard that General Townshend is an excellent officer, and that he protested upon the inadequacy of his strength to the undertaking. But the protest was overruled. And we would like to know what data the Imperial Government possessed that they should presume to sanction such an expedition over the head of the Indian Government. Did they know the local conditions or the strength of the Turks or the equipment and condition of the Expeditionary Force? Or did they simply seize upon any chance, however wild, of retrieving the ghastly blunder of Gallipoli?

However that may be, and willingly or unwillingly, the Indian Government were immediately responsible, and the Imperial Government "ultimately" or "finally" responsible for an expedition which is reported to have been as badly supported in men and material as anything we have done in this war—which is saying a good deal.

The article continues with a formidable array of questions as to the truth or otherwise of various rumours to the discredit of those responsible for the expedition.

An Indian View.

A short article on the same subject from an Indian point of view appears in the *Indiaman* (April 7) under the signature of "Observer." We take the following extracts from the pen of this writer, who thinks that until we know all the facts it is only fair to suspend judgment:—

The military authorities in India are primarily responsible for its defence and tranquillity within its own borders. These alone are no light matter. But in response to Imperial needs large numbers of Indian troops were sent beyond the seas to other fronts. On the top of this, military activities in the neighbourhood of the Persian Gulf had to be undertaken by the Government of India. So successful at first were the relative operations that a more ambitious project—a penetration, in short, inland to Mesopotamia—was forced on the Indian authorities. In the earlier stages of this campaign no complaints were heard of the hospital and medical supply arrangements, which were, in fact, all that could be desired. But as time went on more and more troops were required, and were contributed from Egypt and other bases besides India. The relative auxiliary services were also sent, India meantime having contributed all the doctors and medical supplies that she had available, and the fact that some of these arrived later than the troops for whom they were required is one that need cause no surprise to anyone who is familiar with the enormous shipping and transport difficulties that have attended the whole campaign.

Serbia's Future.

In the *Sunday Times* (April 9) M. J. Condurier De Chassaigne recounts the gist of a conversation with M. Pashitch, with whom, as with the Crown Prince of Serbia, M. De Chassaigne had the privilege of a private interview in London last week. Of his conversation with the Crown Prince the writer only records his Royal Highness' expression of admiration for the French Premier. The following quotation is taken from that part of his article which deals with the writer's talk with M. Pashitch:—

Like the Prince Regent, he protested against any idea of an interview, but as he asked me to give expression to some important points of his Government's policy in view of the reconstruction of the Balkanic equilibrium, I cannot do so without mentioning my authority for quoting the following outlines of his programme.

During our discussion of the political situation in the Near East M. Pachitch made two statements which once for all discredit the perfidious efforts of those pro-Bulgarians who continue to spread false reports concerning the methods of the Serbian Government in Macedonia up to the time of the last Bulgarian invasion. Accusations of cruelty have appeared in print against Serbians, who are supposed to have treated the population as a conquered race. We have also been told that a part of Macedonia was inhabited by genuine Bulgarians. In answer to these allegations, M. Pachitch made the following declaration:—

"The truth is that there exists a small pro-Bulgarian party, purely political, but it is to my mind of such little importance from a national point of view that, even in the case of a plébiscite, the great majority of the population would pronounce itself in favour of a complete union with Serbia.

"These pseudo-Bulgarians would, therefore, by a free vote, prove my contention.

"I, for one, am quite content to abide by their choice," said M. Pachitch, and, with a smile in his clear eyes, he added, "*and I have no doubt as to their decision.*"

Could there be a more liberal or more statesmanlike proposition?

The same spirit of true Liberalism inspires the other statement made by M. Pachitch with regard to the creation of a great Southern Slav Federation, which should result from the victory of the Allies.

M. Venizelos on Greek Policy.

The *Morning Post* (April 11) publishes long extracts from the Greek newspaper *Kyrix*, in which M. Venizelos replies to the statements contained in the alleged interview with King Constantine recently published in the *Berliner Tageblatt*. M. Venizelos says that the "conservative" policy of neutrality exposed Greece not only to the danger of becoming a field of battle by reason of an Austro-German attack upon the Allies at Salonika, but also to the danger of having to resort to arms in the end in order to drive the enemy out. He continues:—

We ought to have remained loyal to our alliance with Serbia (the more so since we failed to secure an alliance with Roumania), and we ought not to have allowed the Serbians to be crushed by Bulgaria. In all probability Bulgaria would not have dared to draw the sword if she had not been certain that Greece would remain neutral.

But even if Bulgaria had none the less attacked Serbia, we ought to have allied ourselves to the Entente Powers and to have helped Serbia, since these Powers guaranteed the integrity of our territory and offered us, in the event of victory, Thrace and part of Asia Minor, while Great Britain was prepared to cede Cyprus to us at once, quite independently of what the war might bring forth.

If the combined Serbian, Greek, and Anglo-French forces had fallen back, almost intact, into Greek territory, they would have represented an army of 750,000 men, with over half-a-million bayonets. Against such an army it would have been impossible for the enemy to array superior or even equal forces, even if the troops had been available on other fronts, owing to the absence of means of transport and supply.

Thus Greek territory would have been secured against all hostile invasion, a result that the present policy of neutrality has not been able to assure to Greece.

If Greece had been able to crush Bulgaria, the defeat of the latter would shortly have involved the defeat of Turkey, since the Turks, too, would not have been able to obtain fresh ammunition from Germany.

If the Central Powers are beaten, as I am convinced they will be, Greece, by the adoption of my policy, would have laid the foundations of a prosperous and powerful State.

In the contrary event, we were assured of a seat at the peace conference, supported by five Great Powers (two of whom, Great Britain and Japan, can never be beaten); we risked no loss of territory; we should have gained the valuable possession of Cyprus; and we should have avoided any economic crisis, since the Powers would have advanced our war expenditure and would have guaranteed us their financial support for the future.

But, blind that we were, we have chosen to violate the Constitution and to follow a path that has led to disastrous results.

The *Birmingham Post*, in a leading article, says that "Greece must advance now, or decline hereafter; she cannot stand still."

The Balkan Kaleidoscope.

The *Globe* (April 8) discusses the position of Germany's Balkan allies, and anticipates kaleidoscopic changes in the Balkans, "where the unexpected always happens":—

With Russia confident and aggressive on the Eastern front, Italy active and persevering on the Southern, and France and Britain determinedly and grimly pushing back the Huns all along the line in the West, the German administrative grip in the Balkans and in Turkey will slacken, if it is not thrown off in open revolt by both Bulgar and Turk in a very few weeks' time. Unless Germany gains great victories and can keep up subsidies her misguided allies will fail her in her sorest need. Germany, however, cannot now show superiority in arms or afford to be lavish with money. That is fatal to her influence in the Balkans. The condition of Bulgaria is said to be appalling. Poverty and disease are everywhere, and Bulgaria begins to doubt the value of her victories. She is learning she has been befooled, and opinion in Turkey is marching in the same direction. When the "rats" desert the German ship we may be sure it is doomed.

Article to Note.

"The Prolongation of the War." By Cecil Battine, in the *Fortnightly Review* (April).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Cyprus estimates for 1916-17 are now available. The revenue is calculated at £389,810, as compared with £392,190 for 1915; and expenditure at £388,687, as against £372,744. The Cyprus share of the Ottoman debt stands at £92,800, and this burden on the island resources, needless to say, gives rise to discontented comment. Complaint is made, as in late years, that so little is done to encourage agriculture. The agricultural vote remains unaltered, except that the salary of the inspector (whose office is now vacant), formerly £300, is reduced to £200, rising by yearly increments to £300. In the Forest Department there is an increase, for felling and transport of forest produce, from £5,500 to £10,000. As to Public Works, provision is made, *inter alia*, for the construction and improvement of various sections of main roads.

***

The price of wines, from the manufacture of which so many Cypriots derive a living, has always been subject to great fluctuation. Happily, the peasants are obtaining comparatively good prices at present. Wine in Cyprus is sold by the vintage manufacturers by the "load" of 128 okes (i.e., the load of two donkeys or mules). Red wines, called "black" (*mavro*), which form the bulk of the output, in bad years fetch as low a price as 8s. or 10s. the load—hardly covering the cost of production and transport. At present the villager is obtaining from 45s. to 50s. the load, and the year is therefore a good one as regards disposal of the last vintage. The sweet *commanderia* wines, the manufacture of which has very largely decreased, comes into the market later in the year.

***

News from Roumania this week is of little consequence and scarce. According to a belated message from Bucharest, the debate on the Budget has been opened, but no further details of the Finance Minister's statement are to hand, save his interesting proposal to impose a tax on games of chance at the watering-places of Constantza and Sinaia, the said tax to be one of 50 per cent. on the gross receipts in addition to the temporary tax of 20 per cent. applicable to all clubs. The introduction of this measure, from purely fiscal and not prohibitive motives, has been before the Roumanian Government for years, and ought to prove a productive tax—gambling at Constantza and Sinaia has always proved lucrative to the concessionaires of gaming-tables, and in view of the wealth now accumulating in Roumania, it is not likely to have been hit hard by the war.

***

If definite news from Roumania is sparse, rumours of philandering between that country and the Central Powers are as numerous as they are naïve. One report says that Germany and Roumania signed on April 7 an agreement mutually to export their surplus products—a statement so vague as to be incomprehensive. I do not think it at all likely that Roumania is going to bind herself to the Kaiser's chariot, and, if not, the supposed agreement is worthless. Reuter's Agency, on the other hand, reported from Bucharest on April 6 (delayed in transmission), the day previous to the supposed signing of the agreement, that "the concessions made by Germany to Roumania in return for the conclusion of the recent contract for the sale of cereals have been finally settled, and Germany will send Roumania £6,000,000 worth of raw materials. She has also agreed to send drugs and to permit the transport of sixty truckloads of drugs bought in Switzerland, and will forward thirty-five locomotives ordered in Germany before the war the delivery of which had been stopped." Part of this message—namely, that relating to the importation by Roumania of German products and the final acquisition of the locomotives, was foreshadowed by our Correspondent some weeks ago. Doubtless, the truth of the matter is that Germany, not possessing the gold necessary for the purchase of the cereals, has come to an arrangement whereby she pays for them in manufactured articles. The moral of the affair is this: if we had seized the bull by the horns when the opportunity offered, and had bought up the whole or the major part of Roumania's available cereal stocks, Germany would not have been in a position to buy them. We hesitated, and the Hun did not. The old, old story modernised in August, 1914. Incidentally it may be pointed out that the *Morning Post* (on what authority is not stated) asserts that "sales under the later Austro-German contract are to be delayed until deliveries to Great Britain are completed." Later developments seem to negative that report.

***

Reuter's correspondent, alluded to above, states that the British bureau looking after our purchase some months ago of grain in Roumania has obtained "from the competent authorities permission to store in all available railway warehouses up to 30,000 truckloads. A large number of warehouses will be specially built." It will be noticed that no mention is made as to who is building the warehouses—a matter previously discussed at some length in these columns. For further particulars of the conditions of the sale and storage of the grain, see previous issues of THE NEAR EAST.

***

The following further messages were received during the week. Paris (Central News) reports that the Roumanian Government is believed to be about to "introduce legislation in the Chamber with a view to the strict regulation of the exportation of cereals. All exports of this kind will be prohibited except those in respect of which transactions have already been concluded or those for which export licences may be issued." Reuter's Agency, on the other hand, states that "the Central Committee of Importation is displaying great activity with a view to assuring the supply of raw materials for industry and merchandise for commerce. Special commissions have been sent to Russia, Switzerland, and Holland for this purpose. An arrangement has been made with Germany for the establishment in Berlin of a special bureau to receive and execute Roumanian orders. This lattter is, I think, devoid of any political significance. If, in return for her cereals, Roumania has to content herself with German goods instead of with German gold, it stands to reason that someone must be on the spot to prevent the Prussians dumping worthless stuff—as is their custom—on the Roumanian market. No one can place their trust in the Huns: they have to be continually watched.

***

The Turkish Mission which has been visiting Bucharest was reported to have had as object the conclusion of a separate peace with Russia. This has been flatly denied by the Russian Legation. Reuter's Bucharest correspondent states that the purpose of the Mission is to discuss economic questions. After the signing of the recent contract with the Central Exportation Commission for the purchase of 100,000 wagon loads of cereals, the Central Powers ceded 20,000 wagon loads to Turkey. Kiazim Bey, an official of the Turkish Ministry of Finance, has come to Bucharest to sign the said agreement. In spite of Turkey's urgent needs, the agreement has created a very bad impression in Constantinople, for the Germans have taken the revictualling of Turkey entirely into their own hands, and thus deprived numerous merchants of their profits.

***

The Board of Trade direct the particular attention of all manufacturers and traders concerned to the need for scrupulous care in the transaction of their business abroad, in view of the fact that some traders in some neutral countries are making themselves agents for the supply of goods to and from enemy countries. Especial care should be taken in opening new accounts in neutral countries and in relation to any orders or inquiries of an abnormal character. In any case of doubt as to particular firms abroad, business should be suspended pending reference as regards firms in foreign countries outside Europe to the Controller, Foreign Trade Department, Lancaster House, St. James's, London, S.W.; and as regards firms in Europe, to the Chairman, War Trade Intelligence Department, Broadway House, Tothill Street, Westminster, London, S.W.

***

The dividends of the Egyptian banks have now been published. The National Bank, a report of whose meeting is published elsewhere, is paying a dividend of 4 per cent.; this is the same as in 1914, but prior to the war shareholders were accustomed to 8 per cent., so that we are still behind pre-war times. However, this set-back does not really reflect the economic situation in Egypt, net profits this year (£242,213) being higher than last year (£206,404), which tends to show that the country is recuperating. The real cause of this year's low dividend is a provision of £122,213 which has had to be made for "depreciation of securities," leaving £120,000, or 4 per cent. on the share capital, for distribution. After all, the fall in securities is a matter entirely beyond the control of the National Bank, which on all other accounts has done well.

***

The Agricultural Bank has likewise done well, thus proving again that the position of the Egyptian fellaheen is not at all unsatisfactory. Whereas a year ago the dividend was down to 2 per cent. on the ordinary, it has now been restored to the 6 per cent. which was the rate for 1913-14. The deferred dividend is £15, against £2 10s., but is still below the £20 for 1913-14. The report of the Board has not been published up to the present in this country, but it is eagerly awaited. The meeting is to be held in Cairo within the next few days.

Alexandria Prize Court.

S.S. Lutzow (Cargo ex).

On Thursday, March 2, the following judgment (extracts) was delivered in the Alexandria Prize Court, by Judge Cator (Presiding), *in re* the claims of the American Trading Company :—

This is a claim made by a company called the American Trading Company for the release of goods bought by a branch in Hamburg and transmitted to another branch at Kobe, in Japan. The company is incorporated in the State of Maine, and has its head office in New York, but does business in all parts of the world. It claims on two grounds, first, that the Hamburg branch merely acted as "buying agents" for the company or its Kobe house, and, secondly, that on the outbreak of war the company at once took steps to close that branch, that it engaged in no new business in Germany, and only remained there long enough to wind up its affairs.

I confess that I no more appreciate what is meant by a "buying agency" as a distinct form of commercial activity than Sir Wm. Scott could understand the term "nominal firm" in the Jonge Klassina. If it means a commission agency, or an agency which merely arranges purchases between third parties without the handling of goods, it is clear that the claimant's business in Hamburg was not a "mere buying agency." For to take the example now before us, the branch had bought the goods itself from German vendors. It had shipped the goods itself, and had itself drawn a long-dated bill on the Kobe branch to finance the transaction. The property in the goods was indubitably at one time in the Hamburg branch, and I think the property remained there at the time of capture. I think that a branch of a company must be treated on the same footing as any other commercial house, and that in respect of the business a company transacts abroad each of its branches has a separate entity as a house of trade, and that in relation to other branches it must be governed by the same rule relating to the transfer of property as would apply if the different houses had no connection with each other. I have no doubt whatever that at the time of capture the ownership of these goods was still in the Hamburg branch, and they must be treated prima facie as belonging to an enemy on the well-known principle that property attributable to a business carried on in the enemy country is to be deemed enemy property, even though the business should be that of a national, of the captor State or of a neutral.

There is no controversy about this rule, but there has been great discussion as to what indulgence, if any, should be shown to a non-enemy who severs his connection with the hostile country on the outbreak of war. That some indulgence was due to him was, I think, conceded in theory from a very early date, but the question was complicated by the fact that the theory appeared to conflict with the strict rule which forbids a British subject to trade with the enemy, and, as a consequence of this conflict, an idea seems to prevail that the rule may be invoked for the benefit of neutrals, but not for that of British subjects.

I have come to the conclusion that this idea is erroneous, and that whatever may in practice have been the hardship to individuals, no such distinction has ever been formulated by the Prize Court. That a great distinction between neutrals and the subjects of a belligerent Power in regard to matters of trade does, in fact, exist cannot be gainsaid. For a neutral who has no house of business in the hostile territory is at perfect liberty to trade with the enemy provided he does not contravene the rules about contraband and blockade, whereas a British subject is prohibited by the laws of his country from holding any intercourse whatever with the enemy except under special licence from the Crown and at times the rules respecting non-intercourse have been pressed with astonishing severity against British subjects.

[There follows a lengthy study of some cases bearing on the subject (s.s. Hoop, February 13, 1799; s.s. Vigilantia, November 6, 1798; s.s. Madonna delle Gracie, February, 1802; s.s. Dree Gebroeders, March, 1802; s.s. Ocean, January 27, 1804; s.s. Diana, January, 1804; s.s. Juffrow Catharina, March 13, 1804; s.s. Venus, 8 Cranch 253, Scott's Cases, 591; and s.s. Rapid, Scott 557.]

I have been at some pains to illustrate from decided cases what I conceive to be the principles upon which the Prize Court acted more than a century ago, but it is no less important to consider whether those principles still maintain their old force. For I have to ask myself whether time has brought about any changes in methods of trade or in the world's attitude towards warfare of which the Court ought to take account. . . The whole tendency of the past fifty years has been towards a relaxation of the severity of the laws of war. Even those who scoff at idealists dreaming of its abolition have concurred in seeking to rob it of some of its horrors to individuals. And if some of our enemies have not acted up to their professions there is no reason for us to follow their example. These efforts have found expression in international conventions familiar to us all, and one of them appears to me to bear directly on the principle which I have been discussing in this case.

I allude to the VIth Convention of the Hague Peace Conference of 1907, which recommends that on the outbreak of war all enemy ships and goods found in the harbours of a belligerent should be granted a reasonable time within which to leave the country. What a change in sentiment from the days when, if relations became strained, it was customary to place an embargo on all the vessels of a possible enemy with a view to their confiscation in the event of hostilities being subsequently declared! To this convention we were parties, and in the present war we acted on it, and it would be a topsy-turvy world indeed if, in deference to sentiments of humanity, we should allow the property of our enemies to be withdrawn from our harbours and at the same time confiscate that of neutrals and British subjects because it may be tainted with an enemy origin.

Moreover, the doctrine has quite recently been recognised in the case of partnerships both in this Court and in England. In the Manningtry (1 Trehern 497) Sir Samuel Evans discusses the rule and treats it as settled in favour of foreign partners in an enemy firm. He was not called upon to do more, but he certainly shows no disapprobation of the wider rule contended for by Chief Justice Marshall.

But I am glad to think that the old rule, as I read it, expounded by Lord Stowell himself, is sufficient to protect all individuals who may have been overtaken by the hurricane of war. No one can wish to inflict needless hardship on British subjects or on neutrals, and if on the outbreak of war a non-enemy, be he neutral or British, resident or non-resident, promptly closes his business and merely takes the steps necessary to remove his own property from the enemy country I think he is entitled to do so. He gives no aid to the enemy by his action, but rather the reverse, and I think he should receive every consideration from the Court provided no attempt be made by a British subject to evade the rule against illicit trading with the enemy. But naturally the burden of proof must rest on the shoulders of the claimant, and until he discharges that burden his goods will be in jeopardy.

In this case we have only to deal with a neutral claimant domiciled in a neutral country. For, whether the domicil of a trading company is to be considered that of the place from which its affairs are directed, or of the place where it is incorporated, the American Trading Company must be judged to be neutral. Unless, indeed, as may possibly be the case, the phrase "trade domicil" is at bottom merely a convenient term for expressing the possession of a house of trade in a given country irrespective of actual residence, so that a man may have a trade domicil in two countries simultaneously. But I need not pursue this speculation, for if it is really the underlying principle of the old cases we should only have to ascertain where the principal house is situate, and in this case it is clearly in the neutral State.

The directors of the company say that immediately on the outbreak of war they decided to close their house in Germany, and I have no reason to doubt their statement, though the evidence at present before the Court does not justify me in releasing their goods. I will grant time for further proof, and if the claimants satisfy the Procurator that they can bring themselves within the protection of the rule which I have enunciated, there will be no need for me to consider the matter further.

SUEZ CANAL TRAFFIC.

The number of ships passing through the Suez Canal last year was 3,708, or 1,094 fewer than in 1914 and 1,377 fewer than in 1913, according to a statement in Messrs. Worms and Co.'s Shipping List. The gross tonnage last year was 21,027,457, being 5,838,883 less than in 1914 and 6,709,723 less than in 1913.

Of the total tonnage last year 76 per cent. was British, 8.8 per cent. Dutch, 4.7 per cent. French, 3.7 per cent. Japanese, 2.4 per cent. Italian, and 1.1 per cent. Danish.

The proportion of tonnage owned by other nations was in each case less than 1 per cent.

SUEZ CANAL PILOTS.

Mr. Basil Peto, M.P., chairman of the Imperial Merchant Guild Parliamentary Committee, who has been making inquiries at the Foreign Office regarding the employment of persons of Austrian nationality as pilots on the Suez Canal, has received a letter from Sir E. Grey stating that the matter was fully considered by the General Officer Commanding in Egypt and the Suez Canal authorities at the outbreak of war, and that his Majesty's High Commissioner at Cairo also inquired very thoroughly into the question at the time when the steamship Teiresias was mined in the Canal. This letter proceeds :—

"Nothing was, however, proved against the Austrian pilots, who were largely the sons of men who held the same posts before them, and the Canal Administration at the beginning of the war decided not to dispense with their services, whilst referring any final decision to the military authorities, who considered this arrangement to be satisfactory. In Sir H. McMahon's opinion all the employees on the canal are trustworthy men. Most of them have passed many years in their present posts, have large pensions to look forward to, and are far from likely to jeopardise them. All the employees of the canal company against whom there were any grounds of suspicion were removed at an early stage of the war. It is difficult to find trustworthy and capable pilots, and those now employed have given evidence of their loyalty and reliability. I would add that a number of the pilots of Austrian nationality have received certificates entitling them to protection by the Russian or Italian authorities for the duration of the war."

During the second half of February, says *Oil News*, the crude oil in Roumania remained steady at about 4,250 tons per day. Exports, however, were at a standstill, as it was not until the 26th of the month that the railway authorities resumed accepting tank wagons

EGYPT'S TRADE RETURNS.

(From Our Own Correspondent.)
Cairo, March 21.

The Custom returns for February, just published, show that trade is beginning to pick up, in imports as well as exports. During the month imports amounted to £E2,254,517, and exports to £E4,763,071, as against £E1,165,174 and £E3,037,881 in February, 1915. The figures for 1914 were, it may be noted, £E2,068,936 and £E2,817,249.

Imports.

The principal imports were skins and tanned goods, £E19,275; barley, mostly for the troops, £E23,777; potatoes, to make up for the short local crop, £E11,881; flour, £E67,138; coffee, £E53,990; jams and preserves, mostly for the Army, £E36,935; beer, £E40,541; petroleum, all from the United States, £E42,814; construction wood, £E87,307; coal, £E211,115—the effect of the high freights can be seen from the fact that whilst the value of the imports has gone up by £E26,335, the quantity has dropped by 66,185 tons; indigo, all from India, £E26,477; chemical manures, £E70,725; textiles, £E733,013—considerably more than what came in in February, 1,914; and worked iron and steel, £E60,925.

Exports.

Under exports the chief items are eggs, £E104,998 (about 25 per cent. more than last year); skins, £E17,369; cereals, £E146,214 (just about ten times what went out in February, 1914); cotton seed, £E139,321; oilcake, £E34,205; sugar, £E10,723 (the exports were seriously affected by the dearth of shipping); cotton, £E4,162,883 (but although the amount was £E1,899,466 more than last year, the quantity was 134,204 cantars less, so that the country is benefiting by the rise in the market); wool £E21,555; and gold and silver bar, £E13,444 (about 20 per cent. of what went out last year during the month in question).

With regard to the countries participating in the trade of Egypt Great Britain and her Mediterranean possessions sent half the imports, whilst a further £E131,000 came from the British possessions in the East, mostly flour, coffee, and textiles; and Canada sent £E30,052, all but £E2,052 of which was construction wood. This is the first time that Canada figures for such a large amount in the statistics, and it is to be hoped that the interruption of the wood imports from Austria and Turkey will turn to the profit of our North American dependency. France, the United States, and Italy considerably increased their sales, the latter country trebling hers to £E236,596. In exports the British Empire took 50 per cent., of which £E1,803,864 was cotton; the United States quadrupled their share and Japan trebled hers, all being cotton. All the eggs went to England, as also 65 per cent. of the cereals, of which 25 per cent., mostly maize, also went to France. The latter doubled her share, whilst Italy and Russia showed a slight increase. It is noticeable that again Switzerland showed a very marked falling off in her purchases, her share during February dropping to £E30,546 from £E468,722 a year ago.

The Sudan.

Trade with the Sudan underwent considerable expansion during February, imports into Egypt rising to £E81,654, as against £E19,946 the previous year, and exports to the Sudan to £E94,680, as against £E54,078. Sales of livestock by the Sudan rose slightly, but the more important items were skins, £E3,980; maize, £E17,767; sesame, £E27,023; gum, £E2,500; and senna, £E2,707. These commodities figured for very small amounts in the returns of last February. Of exports to the Sudan the more important were refined sugar, £E18,987; coffee, £E8,281; biscuits, £E2,574; cotton tissues, £E20,305; and arms, £E4,076. All these articles account for the advance in the export trade of Egypt with the Sudan.

Numerous Bulgarian municipalities have petitioned the Government to stop the exportation of all foodstuffs in order to save the population from hunger.

SUDAN AND ABYSSINIA.

Continual Trade Improvements.

(From a Correspondent.)

Eleven years ago the first trading steamer left Khartoum for Gambela. The distance of the steamer transport is about 880 miles, and up till now the number of voyages between Khartoum and the Abyssinian trading port of Gambela have averaged seven or eight per annum. Thus, in 1911, there were seven voyages, each averaging in value £E444, making a total for that year of £E3,108. The next year saw a decided increase both in the number of voyages and the value of the trading done. There were nine voyages, each averaging in value £E1,100, or, say, a total for the season of £E8,165. The year 1913 recorded fewer voyages but considerably better results, for while there were but five journeys they each averaged in value £E2,433, or a total of £E12,165. The increase in the amount of trading between the two points from £E3,108 to £E12,165—or about 400 per cent. in the space of two years—must have proved most inspiriting to the Government, and, no doubt, intensified their wishes, not only to maintain, but to increase this promising market. To support this trade and to offer every legitimate encouragement, the Administration decided last year (1915) to still further modify the freight rates. It was only in the month of May, 1914, that special rates had been introduced, but as from May 1, 1915, these were abolished, and an entirely new and more favourable scale of charges adopted. The goods carried from the Sudan to Abyssinia are divided into four categories, each category being charged at difference rates; thus, wines and spirits pay the highest, while flour, cement, building materials, and agricultural implements pay the lowest. Arms, matches, clocks and watches, chemicals, china and porcelain are in a class of their own, as are the most largely dealt in articles such as silk and cotton goods, tobacco, tea, machinery, furniture, provisions, blankets, soap, candles, and aerated waters. The hope that the reduction in the freight charges would result in improved trade, as already indicated, has been realized.

Transit and Re-Export.

The trade with Abyssinia is mainly transit and re-export, and most of it is carried on viâ Gambela. Of the total of such trade conducted in the Sudan in 1914, and amounting to £E144,776, no less than £E64,365 went to Abyssinia. The whole value of the trade done with Abyssinia for the same period came to £E117,780, which, if rather less than that done in the previous year—£E139,242—was, nevertheless, deemed satisfactory. The imports from Abyssinia, consisting mainly of such commodities as beeswax, ivory, coffee, hides and skins, are also marking an advance—slow, but steady. Rubber has not been included, however, in such advance, the quantity as well as the quality showing distinct signs of falling off.

While the outlook for Sudan trade viâ Gambela with Abyssinia is very cheering, the Administration is doing what it can to promote it additionally by way of both Gallabat and Roseires.

NEWS FROM ALL SOURCES.

It is reported from Teheran that the British Vice-Consul at Lingah (on the Persian Gulf) and his two brothers have been murdered by German partisans. The murdered men were Persians.

During the last two months big consignments of tobacco were imported at Alexandria from Greece (says the *Egyptian Gazette*). During February the imports were to the value of about £E120,000, and during this month about £E90,000. Greece alone is supplying Egypt with tobacco just now.

It has been decided by the Odessa branch of the Anglo-Russian Chamber of Commerce to open an exhibition of Russian goods in London and an exhibition of British goods in Odessa. It has also decided to consider questions bearing upon the revision of the Anglo-Russian commercial treaty.

EGYPTIAN TRADE.

Appeal to Merchants.

At a recent meeting of the Commission on Trade and Industry, the President, Ismail Sidky Pasha, said that the Government had given the Commission wide powers to deal with two matters especially. The first was the discovery of suitable means for removing the obstacles in the way of union among merchants and manufacturers arising from the general disorganisation and international changes caused by the War; and the second was to take steps to improve Egyptian commerce and industry after the War so that the country would be less dependent on foreign markets. While both these problems were important, Sidky Pasha said that he thought that for the present the Commission's energies should be primarily directed towards the first.

The Commission adopted Mr. Craig's proposal to institute relations with the British Board of Trade, under whose auspices a similar Commission had been established in England.

The Commission makes an urgent appeal to merchants and manufacturers to assist in its work by pointing out what local products have lost the whole or part of their usual outlet owing to the War; what manufactured articles or raw materials required in their industry have had this importation cut off or considerably reduced by the War; what difficulties they have encountered because of the lack, scarcity, or high price of these materials, and finally, what steps they have themselves taken and in what way they think the Commission can be of assistance in minimising as far as possible the difficulties arising from the present exceptional circumstances. The Commission hopes for the help and support of all interested in the matter, and will be glad to receive any information that is likely to be of use in its investigations. All communications should be addressed to the Commission at the Offices of the Department of Technical, Industrial, and Commercial Education, No. 14, Sharia Abdin.

ENEMY FIRMS IN EGYPT.

The *Official Journal* of March 23 contains the following notices :—

Notice is hereby given that the Licence No. 246, granted to the Socété Anonyme pour la Fabrication des Cigarettes Egyptiennes marque "Hadges Nessim," has been cancelled, and that Mr. E. D. Joyce, Imperial Ottoman Bank, Alexandria, has been appointed by the General Officer Commanding in Chief the Forces in Egypt receiver of the business of the said company, with power to liquidate the affairs thereof in Egypt.

Notice is hereby given that the following firm has been granted a licence to trade without special restrictions, in place of the restricted licence granted to it as stated in Section *B* of the Notice published in the *Journal Officiel* of January 13, 1916, No. 4 *bis* (*vide* Near East, February 4, 1916) :—

No. 181, Picciotto Bros. and Co., Rue Matrah, *ex* Okelle Dumreicher, Alexandria.

The following firms have been granted licences to trade in Egypt with the British Empire and with Allies of Great Britain, in accordance with the terms stated in Section *B* of the Notice published in the *Journal Officiel* above-mentioned :—

No. 349, Grun, Bernard. P.O. Box 600, Cairo.

No. 350, Maria, Haddad and Co. 29, Boulevard de Ramleh, Alexandria.

No. 351, Klat and Co., Hector. 27, Rue Mosquée Attarine, Alexandria.

The following firms have been granted licences to trade for the purposes of liquidation only, in accordance with the terms stated in Section *C* of the Notice published in the *Journal Officiel* above-mentioned :—

No. 257, Sterzing, Otto. 45, Rue Abdine, Cairo.

No. 348, Blumenthal Freres, H. and J. Sharia Bosta el Kadima, Cairo.

TRADE NOTES.

Egypt.

The Commercial Intelligence Branch of the Board of Trade is in receipt from the Egyptian Ministry of the Interior of copies of the statement of conditions, etc., in connection with a call for tenders for the supply of Ghafir clothing required by the Stores Department during 1916, including blue drill belts, drawers, and qamis. Two metres of cloth of the kinds which the tenderer intends to use must be submitted to the Director of Stores, Bulac, Cairo, at least ten days before the adjudication. Copies of the specifications, with forms of tender, etc., may be obtained at a cost of 2s. per copy, from the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W., where also sealed samples of the articles required may be inspected. Sealed tenders, on the proper form, will be received, up to noon on April 22, by the Under-Secretary of State (Personnel and Equipment Department), Ministry of the Interior, Cairo. Date, April 22.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Tenders are invited by the Director, Bulâq Technical School, Cairo, for the supply of 560 sets of workshop overalls (jackets and trousers) required for the students during the session 1916-1917. Specification may be seen and all information obtained at the school. Date, April 29.

The Commercial and Agency Company, Limited, were recently the successful tenderers to the Customs Department for the supply of shoes.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on May 10, 1916, for the supply of stores and material required by the above Department during the current year. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, the Agent, Sudan Government Railways, Alexandria, or to Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W.

Greece.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that a Greek Ministerial Order was published in the official *Gazette* of March 3 prohibiting the exportation of the following articles from Greece, viz.:—Bladders, entrails, casings and skins of sausages; bones of all shapes, whole or in pieces, and bone ash; caseine; cork and cork dust; soap; and vegetable fibres and tissues made thereof.

U.S. DRAFTS IN GREECE.

The U.S. Consul-General at Athens writes:—

Since the outbreak of the European war Greek banks have paid more for American drafts or bank notes than for American gold. This is principally due to the prohibition of exportation of gold by the Greek Government. Even were this not the case, it is probable that gold would still be less in demand here at the moment than paper, owing to the excessive freight rates and insurance premiums throughout the world and to the relative bulk of gold. Bank notes, therefore, bring better prices, and drafts still more. This is due to the ease with which bank notes and drafts can be sent to the United States; the latter can be sent by registered mail.

A prominent local bank buys $100 in gold at 5.14 drachmas to the dollar, bank notes at 5.18 drachmas, and drafts at 5.21 drachmas.

MOROCCAN TRADE.

The complete disarrangement of Moroccan trade (says Kelly's *Monthly Trade Review*) caused by the war and badly felt up till May, 1915, gave way during the latter part of last year. However, economic conditions have been aggravated by the fact that large sums have been employed in real estate speculations. The rate of exchange in Morocco is always a prominent feature in all commercial transactions, the Hassani-Native currency being subject to almost barometric fluctuations. Thus, in the summer, if the crops are considered satisfactory, the value is relatively higher, and when the harvest is well got under roof the reaction sets in. Also, the Hassani exchange is subject to hourly variations arising from a multitude of circumstances, but chiefly from local speculation. The French administrative authorities in the French zone of Morocco have imposed further limitations on the export trade from that zone. The combined trade of Germany and Austria-Hungary in 1913 represented 24 per cent. of the export and 14 per cent. of the import trade of Morocco, and as the German-Austrian transactions in normal times amount to some £1,031,250 in import and some £412,500 in export, it is obvious that this portion of the enemy trade should now fall into other hands. We are glad to hear that a British Chamber of Commerce has been instituted in Tangier, and likewise that a British bank has established a branch office, contemplating likewise establishing branches in various coast towns. A continual stream of commercial travellers pass through the country, and a new line of Dutch steamers has been instituted to acquire the carrying trade, formerly held by German and Austrian steam services to a very large extent. Manufacturers interested, or likely to take interest, in the Morocco markets should remember that prices must be quoted c.i.f. Tangier, or other Moroccan ports, and that transactions under terms for cash against shipping documents must be regulated in Morocco, as the merchants are very much adverse to place funds when giving the orders.

The State Bank of Morocco is a very up-to-date institution, undertaking transactions of all kinds. It is important for a manufacturer who desires to develop this market to secure reliable local agents, because one of the chief elements of success in trading with Morocco is the *personal* contact with the client, and a customer once found should be periodically called upon by the representative or traveller, and it can safely be assumed that 50 per cent. of any business transaction is in connection with courtesy in the way of manipulating a client. To illustrate the special advantages of such methods of propaganda and to indicate the peculiarities of the Moroccan market, it should be pointed out, for instance, with reference to cotton prints, one of the principal imports, that each port of entry along the Atlantic seaboard is a distributing centre of materials for certain sections of the interior, through which the demand varies as to colour, dimensions of materials, length of piece, etc. Goods answering the requirements of one district are practically unsaleable in other districts of the country, because the Moor is a fastidious customer, and invariably rejects all merchandise that does not strictly conform with the traditional habits of *his* tribe or locality. If he is accustomed to buy a certain class of goods in brown wrapping-paper he would certainly refuse next time to receive it in blue wrapping-paper, and so on. In view of the very special features of the Moroccan market resulting from the mixture of languages, the diversity of customs, and the difficulties of transport, there is little or no chance of success in doing business here unless a well-known *local* agent is engaged for the purpose. This agent should not be forced or asked to purchase goods on his own account; his function should simply be to propagate business and obtain orders on a commission basis. We observe lately some neutral countries have been flooding the country with advertising literature. This is, to say the least, a silly method in view of the existing conditions, owing to the very undeveloped state of the country.

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, March 13.

I referred on a previous occasion to the contraband of gold which had been smuggled into Roumania across the Bucovinean frontier, and mentioned that some sixty arrests had been made. I now learn that the legal proceedings which were to be taken against the persons arrested have been adjourned *sine die*, with the object, no doubt, of shelving the affair, since it has been discovered that some of the highest representatives of Austrian finance are involved. It will be remembered that the gold had been supplied to the contrabandists by the Wiener Bank Verein, the Hypotheken Bank, and other well-known financial institutions.

Austrian War Funds.

The Austrian Monarchy must be in an advanced state of financial embarrassment, for it has recourse to the most varied expedients for the purpose of obtaining war funds. The peasants are forced to contribute to the war loan and, in Bukovina, at least, the methods of coercion used are ingenious, if not honourable. Thus on every twenty crown note which the peasant changes, two crowns are deducted for the war fund. On every 100-Crown note changed not less than fifteen crowns are retained. And in order to force the people to change the notes in their possession the authorities have simply withdrawn from circulation the major part of the small coin.

LAC INDUSTRY IN EGYPT.

The Entomological Section of the Ministry of Agriculture has for some years been studying the possibility of introducing a lac industry into Egypt.

Shellac is a substance formed by the scale insect, and at present is produced only in India. In Egypt the difficulty has been to find a suitable host plant to grow it on. In India one of the best qualities are grown on Butea frondos trees, and the Ministry's original importation of breeding material was seed lac from Butea trees, sent by the Imperial Indian Government. For some reason, although there appears to be only one species of insect from which shellac is produced, there are many races each of which can grow only on one kind of plant. The breeding material grew without difficulty on a Butea tree in Cairo, and from seed lac raised on that tree transplantation was tried on other trees. The trees experimented on include Ficus nitida, Albizzia lebbek, Acacia nilotica, Zizyphus jujuba, Erythrina sp., all being trees readily available in Egypt. None of these trees were suitable, and even where larvæ had settled and started growing no lac insects matured. Two generations mature yearly in Cairo, the winter brood in December-January, the summer brood in July-August.

Last January experiments were made to transfer the lac on to Indian pigeon peas, Cajanus sp.; the larvæ settled and throve on this plant, and although belonging to a Butea frondosa inhabiting race, they have matured and reproduced by the beginning of August, lac insects of the second generation now being found on the Cajanus. It is hoped to be able to get this race thoroughly established on pigeon peas, and acclimatized to Egyptian conditions.

The lac industry is an extremely valuable one, the supply rarely equalling the demand, and it would be well worth extending. The Indian lac exported from India in 1905-1906 is stated to have reached the value of 33,139,786 rupees, or approximately £E2,209,000.

JUTE-GROWING IN EGYPT.

At a recent meeting of the Egyptian Commission on Trade and Industry, Cattaoui Pasha announced that jute should be cultivated in Egypt, as it could be used in the manufacture of sacks of which Egypt used a large quantity; moreover, they formed a very remunerative article for export purposes. Cattaoui Pasha said that a supply of jute seeds had been ordered from India and when they arrived experimental sowings would be made on the land of the Agricultural Society.

Engineering Notes.

Tread Attachment for Tyres.

The difficulties which surround the travelling of motor vehicles over sand or mud are too well known to be emphasised. They are, as a rule, the cause of annoying delays, breakdowns, and often abandonment of the journey. Several devices have been invented to overcome these difficulties, but one of the latest to be patented will particularly interest, at the present time, motor-car users in sandy and muddy districts in the East, owing to its simplicity and great adaptability. It is an auxiliary attachment for tyres which provides side extensions to the tread of the wheel, consisting of flat metal, fabric bands, or metal chains supported by a number of steel saddle members on the tyre. The extension rim, which can be quickly attached to or detached from the ordinary wheel rim, does not, even if left on the wheel, interfere in any way with the usual working of the car.

Cephalonia, the Naval Base.

The announcement that the Allies had decided to land forces in Cephalonia, one of the largest of the Ionian Islands belonging to Greece, and use the port of Argostoli as a naval base, created considerable interest, and several descriptions of the island have since appeared in the press. Some of them, however, are not correct, and although in these notes it is intended to refer only to some natural curiosities that exist in the island, and over which engineers and scientists have often been interested, it may be mentioned, *en passant*, that the inference that Cephalonia is called Samos by Homer in Odyssey is not quite correct, because he also calls its inhabitants elsewhere Cephaloneans, whom he describes as the subjects of Ulysses. He probably used the name Samos or Sami as referring to the name of the largest and most populous of the cities of Cephalonia situate near the shore, on the strait opposite Ithaka, the island of Ulysses. Some very interesting ruins of Samos still exist, overgrown with ivy and wild flowers. The harbour of Samos is well sheltered, and owing to its position on the channel between Cephalonia and Ithaka, offers the most direct communication between the Adriatic and the Corinthian Gulf, but Argostoli was preferred by the Venetians, its harbour being used by them as a naval station, and the seaport of the fortified town of St. George, the capital of Cephalonia. Later, in about the middle of the eighteenth century, they began to build the town of Argostoli, which at present is the capital of the island. The town extends along the shore and partly on the overlooking hill. It has an excellent quay, wide streets, and in a large square there is a statue of Maitland, one of the British High Commissioners of the Ionian Islands.

Natural Curiosities.

Outside the town of Argostoli and near the entrance of the harbour a strange phenomenon is to be perceived, the water of the sea flowing into the land in currents or rivulets, which are lost in the bowels of the earth, at a place where the shore is low and cavernous. The descending streams of salt water flow with such rapidity that, while the Ionian Islands were under the protection of England, an enterprising Englishman erected a water-wheel on one of them by which he obtained sufficient power to work a pair of flour mills. Several engineers and scientists visited, and continue to visit, the place, and much money was spent by the British authorities to find out where the water goes to, but without result. During a short examination of the cavernous shore some years ago the writer calculated that considerable power could be obtained by the construction of a single deep canal which would concentrate and, at the same time, increase the volume and fall of the sea water which now falls into the abyss in small and irregular streams. Such a power might be used for the production of electricity or any industrial purpose. Another similarly curious phenomenon occurs in the Bay of Samos, previously mentioned, a stream of fresh water rising in the sea about half a-mile from the shore; on a very calm day it may be seen gushing up at least a foot above the surface, while near the shore at this point there is a subterranean lake, or abyss, open at the top, the circumference of which is about 180 to 200 yards.

THE OIL FIELDS OF MESOPOTAMIA.

Oil News reproduces the following article by Otto Debatin, which appeared recently in the *Frankfurter Zeitung* :—

The Mesopotamia oil deposits appear, from the most recent investigations, to form the western limit of the vast system of petroliferous strata which extend from the Apsheron Peninsula (Baku and neighbourhood) on the Caspian Sea to the mountainous frontiers of Persia and to Baluchistan. The Ahwaz wells are situate in the neighbourhood of the Persian Gulf, and their oil has been most acceptable to the British Navy because of its splendid qualities as a liquid fuel. Turkey was bound, therefore, to secure possession of this Ahwaz oil territory.

The most productive areas of Mesopotamia are found at Mendeli, of which the oil has a similar, and not inferior, composition to that of Baku. The deposit of Hit, on the Euphrates, is noted for its numerous and good bituminous springs, which rival the asphalts of Trinidad. The springs of Mendeli and Hit, and those of Romadi and Nafata, also on the banks of the Euphrates, belong to the Vilayet of Baghdad and to that of Mossul, situate to the north-east of the first-named. Here also are the still richer springs of Kerkuk, where the oil appears on the surface, as well as those of Tuz-Charmati, Kifri, Gahara and Nimrud. At Kerkuk the oil is obtained in many places from hand-dug wells three or four metres deep.

The total production, of a value of 30,000 to 40,000 piastres, is at present sent into Kurdistan. At Kerkuk is the celebrated spring mentioned by Strabo, the source of the "eternal fires" worshipped by the Arabs. At Sulphur Mountain, Kifri, where there are the ruins of an ancient Sassanide castle, about half-a-dozen rich oil springs flow. Generally in this region the oil sources are found in the faults of gypsum beds; the oil above salt springs, and the local Arabs utilize both the salt and the oil, sending all to Baghdad. Except the petroliferous area of Tuz Charmati, all the fields above mentioned are the property of the Turkish Civil List.

Contrary to the conclusions, not very encouraging, of the commission sent to Mesopotamia in 1905 by the Deutsche Bank, there was published last year a favourable report by the German explorer Piper, who made a complete investigation of the Mesopotamia deposits, not only on their productivity but on their considerable extent and the richness of their oil in all products. The development of these deposits has hitherto been on an exceedingly modest scale, limited to satisfying the local demand, and with no relation to the international market. It is true that the Sultan Abdul Hamid had the intention of developing on his personal account all the discovered sources, but the project was not carried into effect. Before the war, French and English syndicates had made all possible efforts to obtain charters for developing oil in the oil lands of Turkey; there was even a question of a Turkish syndicate. The Turkish Government, on the other hand, had the idea of a State monopoly for the development of its lands on a large scale, but none of these plans was realised.

A rational development of the oilfields of Mesopotamia is always severely handicapped, first of all by the great difficulties of transport; but as the British have shown at Ahwaz, the difficulties can be surmounted by money and determination. The above-named deposits are situate partly in the neighbourhood of the Baghdad railway, whence branch lines could easily be constructed. The rich oil deposits of Gahara are even crossed by this line. There being no cheap coal, the locomotives of this line and its branches (of which that of Tuz Charmati is projected) could with great advantage burn oil fuel. The most valuable fields, as in America and Roumania, could also be connected by pipe line with the Mediterranean coast. The great length of line would not be an obstacle. Steamers below Baghdad already use oil fuel. A further use for the oil would be for light oil engines for irrigating the low plains near the oilfields.

Germany's Object.

Germany would be glad to turn to profit her intimate associations with Turkey to rid her markets of the domination of American and Russian oil. It is not England that Germany fears in Mesopotamia, but the omnipotent Standard of the United States, which has already laid hands on the oil deposits adjacent to the Dead Sea. The Standard has already prepared in this region considerable means of communication, and it will not be long before American derricks will be erected in the Holy Land. The Germans, then, are of opinion that it is high time to negotiate with their Turkish allies to secure at least the oil deposits of Mesopotamia.

BUYERS' GUIDE.

CHRISTMAS CARDS, POST CARDS, &c.
Raphael Tuck and Sons, Ltd., Moorfields, London, E.C.

ENGINE AND HYDRAULIC PACKING MANUFACTURERS.
Attwater and Sons (Manufacturers of Metallic Flax, Asbestos Cotton, Steam Engine and Hydraulic Packings), Preston.

NEAR EAST MARKETS.

PRODUCE REPORT.

LONDON, April 13.

Currants.

The market continues quiet, a state which may safely be attributed to the large sales that have recently taken place; prices, however, remain very firm, and without any sign of possibility for reduction on the part of the holders. Provincials are quoted 42s. to 43s. 6d., Amalias 44s. to 46s., Patras 46s. to 49s., Gulf 48s. to 53s., Vostizza 48s. to 55s., and Smalls 43s. to 55s. The stocks of currants in London on March 31 were 8,393 tons, against 5,563 tons the same period last year.

Sultanas.

Only very small business has been done during the week at unchanged rates. The stocks in London at the end of last month were 2,242 tons, against 2,083 tons the same period last year.

Figs.

The market has generally been very quiet for this article the last few weeks, but prices are well maintained.

(Note.—It may be reminded here that the prices quoted above do not include duty, which on currants is 2s., and on sultanas and figs 10s. 6d. per cwt.).

Dates.

There has been only a moderate demand, but prices remain very firm.

Seeds.

Linseed is firm, with a fair demand at higher prices. Calcutta to London, spot 96s. paid, whilst afloat and March-April 69s. 6d. is asked, and April-May 69s. 6d. paid. Bombay to London, April-May and May-June, 71s. is asked; and Bombay to Hull, March-April, 70s. 6d. Cottonseed is steady, although in very moderate request. Egyptian to London, spot, £13 and April £12 15s. Bombay to Hull, spot, £11 is asked. Rapeseed, dull.

SUDAN COTTON.

The following extract is from the report of the April meeting of the British Cotton Growing Association:—

The crop on the experimental stations at Barakat, Tayiba, and Zeidab is likely to be a normal one, although it was feared at one time that the cotton had suffered from the cold weather which prevailed during January. During the month of January the temperature was the lowest ever recorded in the Sudan, and in Egypt the month of January was the coldest for the last forty years; there was a great improvement in the weather early in February, and the outlook for the cotton crop in the Sudan has improved considerably.

A letter from the Director of the Department of Agriculture and Forests, Sudan Government, was read, with regard to a small consignment of cotton which has been made to the Association. This cotton is all of the American type and has been grown without irrigation. The cotton from the Upper Nile Province was grown by the natives on the White Nile in the region between Renk and Tewfikia, from whom it was purchased by the Department in the absence of any dealers in this class of produce. The seed used was derived from the Nyasaland variety, originally obtained from the Association. The cotton from Sennar was grown on the Department's demonstration plots in that province, and was mostly produced on what is known as "gerf" land, which are really the berms of the Blue Nile. These in years of good flood are inundated for a short time, and even when the river does not rise to a sufficient level to actually flood the land, percolation from the river supplies a sufficiency of moisture to mature the crop, provided sufficient rain falls to germinate the seed and start the plants. Beside the "gerf" lands there are certain areas known locally as "maias," which are depressions in the country behind the river banks, and which fill with water when the Blue Nile is in flood and gradually drain back as the river falls.

It is expected that this part of the country will prove a future source of supply of cotton of the American type sufficient to assist materially in the development and prosperity of the Sudan.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.
MANUFACTURERS OF
"LALIMLI" WOOL WEAR
Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .
CONTRACTORS TO GOVERNMENT

COOPER, ALLEN & Co., Ltd.,

COMPANY MEETING.

NATIONAL BANK OF EGYPT.

The sixteenth annual general meeting of the shareholders was held on March 25, at the Head Office of the Bank in Cairo, Mr. F. T. Rowlatt, the Governor, presiding.

The Chairman said:—Gentlemen, we beg to lay before you the balance-sheet and profit and loss account* for the year 1915, a year which has been so full of stirring events. The net profits after deducting expenses amount to £242,213 12s. 2d., which compare with £206,404 7s. 5d. the preceding year, but we again have to provide a large sum for depreciation of securities—namely, £122,213 12s. 2d. —which just leaves us £120,000, equal to 4 per cent. on the share capital of the bank, available for distribution. This depreciation, which brings the valuation of our securities to the middle market quotation on December 31, 1915, is almost entirely on Government securities, and to the extent of £94,000 on those securities deposited in guarantee of the note issue, whereas last year we also had to depreciate heavily the shares we hold in the Agricultural Bank of Egypt. As to whether we shall have to depreciate securities again at the end of 1916, I shall not venture to predict.

Our profits, I think, can be considered quite satisfactory, and it is regrettable that we have to write them down for depreciation on securities. It is interesting to notice in connection with this subject that our annual profits are increased by the interest on the provisions set aside for depreciation. Of the £94,000 by which the securities deposited in the note issue safe are depreciated £45,000 are secured by sinking funds on British and Egyptian Government securities for their redemption at their nominal value. As the nominal value of these particular securities is £670,000 and their value in our books is £538,000, you will see that we have a profit of £132,000 to come in. As to the £49,000—the balance of the above sum of £94,000—this amount represents depreciation during the last year on £378,000 nominal of Egyptian preference and unified bonds, which stand in our books at £260,000. The depreciation of £27,000 on the bank's ordinary holding of securities is represented as to £4,000 on Egyptian preference and unified bonds and £21,000 on other Government securities, the reimbursement of which at par is provided for annually.

The striking feature of our balance-sheet this year is again the increased amount of the bank-note issue—namely, £E11,550,000, as compared with £E8,250,000 on December 31, 1914. As arranged at the commencement of the war, our notes continue to be legal tender throughout Egypt and the Sudan and at the bank. It was natural for the Egyptian Government to expect a return for this advantage, so we have discounted their Treasury bills on particularly favourable terms—namely, 1 per cent. These Treasury bills form part of the securities held in guarantee of the note issue. We venture to say the notes have proved themselves to be a satisfactory medium of exchange. Against deposit of gold and securities either here or with the Bank of England, the Government Commissioners and the National Bank of Egypt have been able quickly to expand the issue to meet the demand for currency and to contract it again as notes return, releasing the equivalent in gold and securities. By this facility the rate of exchange on London has been kept steady. It is sincerely to be hoped that a general use of notes has come to stay and that the yearly burden of importing and exporting millions of gold will cease for good. The rates of exchange in Egypt for bills on the Continent of Europe have, of course, remained at an abnormally low figure, but that is beyond our control and is governed by the exchange between London and the Continent. It may interest you to know the amounts of the various denominations of notes in circulation on February 1, 1916, in comparison with the amounts at the same date last year. The maximum was touched on that date of this year:—

—	1916.	1915.
£E.	£E.	£E.
½ Notes	1,438,956	839,865
1 ,, ...	1,977,900	560,296
5 ,, ...	2,227,265	1,569,770
10 ,, ...	2,526,380	1,690,470
50 ,, ...	1,238,850	1,229,300
100 ,, ...	2,099,600	1,926,300
Total	11,508,951	7,816,001

The minimum circulation in 1915 was £E5,521,521 on July 24.

It has always been our custom at the Bank to consider the Egyptian commercial year from September 1 to August 31, to coincide with the Egyptian Cotton Statistics, and as the war began in August, 1914, it gives us also a comparison between a year of peace and a year of war. For the year ended on August 31, 1915, Egypt exported £E22,642,000 worth of merchandise, and imported merchandise for £E15,327,000, in both cases less than the preceding year by respectively £E10,000,000 and £E13,000,000. The balance of trade in favour of Egypt was therefore £E7,000,000, and since the end of August last this balance has further increased by £E5,000,000, the exports up to the end of January, 1916, having been £E14,696,000, against imports of £E9,754,000. The figures for the corresponding period of the previous year were £E9,726,000 of exports and £E4,868,000 of imports. This shows a satisfactory improvement. Although the cotton crop of 1915 is estimated at only C.4,800,000 owing to the restriction of the area planted, yet the increased price brings its value to approximately the same figure as that realised for the C.6,500,000 of 1914. We have, however, already shipped most of the 1915 crop, so it is not likely that this rate of export will continue in the immediate future, but if the present price of about £4 per cantar is maintained, and the crop of 1916 turns out to be an average one of, say, C.6,500,000, the country's trade should assume large figures again next autumn.

The import trade has not only been affected by reduced exports, but also by difficulties of obtaining delivery and high freights. This accounts to a considerable extent for the increased trade balance in favour of Egypt. This trade balance, augmented by the enormous expenditure of the British Army in Egypt, accounts for the extended currency as indicated by the note circulation, while the prosperity of a large section of the community is also shown by the increased deposits with the banks. You will see in the balance-sheet that at the end of 1915 the "Deposits and other accounts" at our bank alone amounted to £6,224,000, against £3,146,000 on December 31, 1914. I am informed that the same is the experience of the other banks in Egypt.

The recent improvement we have seen in the local Stock Exchanges indicates the investment of profits. The commercial position therefore appears to be thoroughly healthy, and the more so as a system of cash against goods has been forced upon the country by the general situation. The fact, however, remains that a very low price was realized for the 1914 cotton crop, and that the 1915 crop, although prices were good, was necessarily very short in quantity. For these reasons many of those engaged in agriculture have to practise strict economy, and must receive a certain amount of consideration from their creditors, but, on the other hand, it is not unreasonable to expect for next autumn a good price and a fair crop of cotton.

Turning again to the figures of the balance-sheet, you will see that "Government Securities" figure at £2,190,000. At the end of the preceding year the figure was £447,000. The increase is due to the investment of our spare funds in British Treasury bills and short-dated Exchequer Bonds. The "Advances on Securities" have diminished during the year from £2,154,000 to £1,616,000. As I stated above, the market seems to be in a healthy state. You will see it noted in the balance-sheet that £604,000 is to our credit with banks in enemy countries. This includes bills and Treasury Bonds mentioned last year, and which have since matured and been encashed to our credit by our correspondents. We are glad to see that in spite of continued heavy work during 1915, the "General Expenses" only show an insignificant increase. If it had not been for increased expenses connected with the development of the Note issue, and other unavoidable increased expenditure, the general expenses would have shown a decrease in comparison with 1914.

As I stated last year, the "Advances otherwise secured" are guaranteed by mortgages, bills, contracts, Government guarantees, personal guarantees, etc. The "Current Accounts" consist of loans without any special security to important companies and estates of undoubted credit. The "Bills of Exchange," £3,351,000, are first-class bankers' acceptances, negotiable on the London market, almost entirely cotton bills. The "Money at Call and Short Notice," £1,160,000, is placed on the London money market against the usual first-class security. I do not think, gentlemen, that there is anything further in the figures of the balance-sheet that I need call your attention to.

Our work in the Sudan goes on regularly and satisfactorily in spite of the war. We have to note that during 1915 the exports from the Sudan reached a record figure of £1,570,000, against £1,020,000 in 1914 and £1,185,000 in 1913. The rains and Nile were very satisfactory, and the energy shown by the Sudan Government in finding new markets for produce has had its reward. We see a remarkable increase in the exports of cattle, butter, hides, millet, senna, and cotton. The imports into the Sudan for 1915 were £1,704,000, for 1914 £1,870,000, and for 1913 £2,109,000. The decrease in imports is due to the dearth of shipping, and to the fact that in 1914, owing to the failure of the millet crop, which is the staple food of the population, millet to the value of £214,000 had to

* The balance-sheet and profit and loss account were published in last week's issue of THE NEAR EAST.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

be imported in order to avert famine. On the other hand, the millet crop in 1915 was a bumper one, and was exported to the value of £207,009.

Fifty-seven members of our staff in Egypt and the Sudan are fighting in the Allied Armies. We have to mourn the loss of Mr. H. L. Dallemagne, a French member of our Cairo office staff, who was killed in action. From our London agency of the permanent staff of twenty-nine males, fifteen have joined the British Army. It is with difficulty that we have been able to keep from the colours those members of the superior staff who cannot possibly be spared. In remaining at their posts they are performing an essential duty, but they would rather be at the front. Owing to the reduced staff there has been a great deal of hard work and practically no leave. Our thanks are due to the sub-governor and staff for the capable and zealous way they have carried out their duties. The retiring directors this year are H. E. Victor Harari Pasha, C.M.G., Baron Jacques de Menasce, Mr. E. W. P. Foster, C.M.G., and the Hon. Sidney Peel, who offer themselves for re-election with the exception of Baron Jacques de Menasce, who has decided not to do so. We have also received the resignation of H.E. Maurice de Cattaui Pasha. We cannot but appreciate the spirit in which the resignations of Baron Jacques de Menasce and H.E. Maurice de Cattaui Pasha have been made, and it is with sincere regret that we see them leave the board, where we have had their valuable collaboration since the bank was founded in 1898. At the same time, on account of his nationality, we must propose to you the annulment of Mr. Wilhelm Pelizaeus's directorship, and we cannot but feel the parting from a colleague who has worked with us so long and well.

COMPANY RESULTS, Etc.

AGRICULTURAL BANK OF EGYPT.—The Board have decided to recommend the following dividends for the year ended January 31, 1916 :—Ordinary shares, 6s. per share; deferred shares, £15 per share.

ANGLO-EGYPTIAN LAND ALLOTMENT COMPANY.—Coupon No. 7 of the ordinary shares is payable at the Anglo-Egyptian Bank, Ltd., 27, Clement's Lane, E.C., at piastres 12 per share at 97½ rate of exchange, less income-tax.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for the week 20 tons (last week 14 tons); Hurgada production for the week 488 tons (last week 567 tons).

EUROPEAN OIL COMPANY.—Week ended 2nd inst., 103,200 poods.

GREEK GUARANTEED TWO AND A-HALF PER CENT. GOLD LOAN OF 1898.—The numbers are announced of 661 bonds purchased for the Sinking Fund.

LAND AND MORTGAGE COMPANY OF EGYPT.—The numbers are announced of ninety-eight bonds of the Five per Cent. Debentures for £300,000, amounting to £165,000, which have been drawn at the offices of the company and will be paid off at par on May 15.

OTTOMAN THREE-AND-A-HALF PER CENT. LOAN OF 1894 (secured by the Egyptian Tribute).—Messrs. Dent, Palmer, and Co. give notice that the half-yearly dividend due on the 15th inst., on the outstanding bonds of the above loan will be paid at their offices, No. 1, Gresham House, London, E.C., on and after the 15th inst.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.—The directors of the Penisular and Oriental Steam Navigation announce a dividend at the rate of 5 per cent. per annum on the preferred stock (less tax), and an interim dividend at the rate of 12 per cent. per annum on the deferred stock (free of tax) for the half-year ended March 31 last.

PIRÆUS, ATHENS, AND PELOPONNESUS RAILWAY FOUR AND A-HALF PER CENT. BONDS.—The coupons and drawn bonds, due on the 15th inst., will be paid on and after that date at the offices of Messrs. R. Raphael and Sons.

COMPANY REPORTS.

North British and Mercantile.

This company (says the *Financier* in its Insurance Supplement published on Wednesday), is an example of the large composite offices whose records constitute such a standing tribute to the sterling qualities of British insurance companies as a whole. Over 100 years old—having been established in 1809—its progress has been steady and persistent. The office was formed originally to underwrite fire insurance risks, but in 1823 it commenced to develop a life department, whilst within the past few years it has acquired important interests which enable it to undertake a considerable volume of business in marine and accident insurance. In 1908 it acquired the share capital of the Ocean Marine Insurance Co., Ltd., and in 1910 it obtained control of the Railway Passengers Assurance Company. When war broke out and a slight set-back was experienced in the life department and the loss ratio on fire account was well above the normal, the accident branch contributed towards restoring the situation. The company's total funds existing as security to policy-holders reached an aggregate, at the date of the last balance-sheet, of over 25½ millions sterling.

City Life Insurance Company.

This company, said the *Financial Times* in its recent Insurance Supplement, is responsible for an excellent war policy, suitable for men joining the forces. Provided that the premium for whole of life assurances is not less than 35s. per cent. per annum, and for endowment assurances not less than £3 per cent. per annum, the directors are prepared to grant policies on eligible lives whereby the full sum assured will become payable until such time as the assured leaves the United Kingdom on foreign, military or auxiliary service, or enters the aviation or naval service, when the liability of the company would be reduced by only a percentage of the sum assured being payable, though this proportion increases with each year that the assured is on service until the full amount is reached. Until such time as any of the war risks are incurred the assured will, subject to satisfactory medical examination, receive life cover for the full sum. Policies issued under with profit tables are entitled to share in any bonus distribution which may be declared upon the full sum assured before war risk is incurred, but no interim bonus will attach to the policy in the event of a claim arising as a result of the war. After the declaration of peace the assured can exercise any of several options dealing with his policy provided he does not continue in any branch of the forces.

New Grosny Oilfields.

Under the above title a company was registered on March 31 with a capital of £360,000, in 10s. shares. The company is to adopt an agreement with the Fanieff Oil Syndicate, Limited, to acquire any petroleum, asphalte, naphthaline, or oil-bearing lands in the Russian Empire or elsewhere, and to carry on the business of refiners and dealers in petroleum and other mineral oils, natural gas, etc. The seven signatories include R. H. Wheeler, 17, Gracechurch Street, E.C., merchant; N. J. Kampers, 34, Gray's Inn Road, W.C., mining engineer; and F. H. Bennett, 51, Horsham Avenue, North Finchley, insurance broker (who each take one share).

NOTES OF THE WEEK.

Once more the Russian army in Asia Minor has surprised the world by the rapidity and unerring precision with which its major blows are dealt. On April 6 the column advancing along the Black Sea littoral found its progress barred by a Turkish force on the east bank of the Kara Dere, twenty miles from Trebizond. The Turks were driven across the river; but the arrival of fresh reinforcements brought up from Constantinople added considerable strength to the enemy's position on the west bank, and for nine days the Russian advance was held up. On April 15 the Turks were once more routed, and the pursuit had brought the Russians within twelve miles of Trebizond. Even then, in view of the reports that the town had been strongly garrisoned, it seemed reasonable to suppose that the Grand Duke would require time to develop his attack. He is, however, a firm believer in keeping the enemy on the move. As in the case of Erzeroum, his army, following up an initial advantage, pressed close on the heels of the retreating Turks, and on April 18 Trebizond itself was taken.

The importance of Trebizond lies in the fact that it is the chief Turkish port east of the Bosphorus, and is the main avenue of supply for the Turkish army in eastern Asia Minor. Its capture by the Russians will not only throw out of gear the greater part of the organization on which the enemy has relied for the defence of this region, but it will also give the Russians a more than proportionate advantage in equipping their own forces in the field. With the Russian fleet in command of the Black Sea—its co-operation has contributed in no small measure to the fall of Trebizond—this port will play a larger rôle in the future operations of the Russians than it did while the Turks could only count on irregular communication with it. Our Allies in the meantime are pressing forward at other points in the sweeping movement which began early in the year from the Caucasus frontier. The column operating along the Upper Chorok Valley has had the most serious natural obstacles to overcome, but should now be within measurable distance of Baiburt. Farther to the south each Russian force has in turn been confronted with Turkish reinforcements recently arrived from Constantinople; but invariably the Turkish resistance has been broken. It would seem that the enemy is finding it easier to rush troops to the front than to ensure that they are adequately equipped and supported when they arrive there.

The relief of Kut is proving a hard nut to crack. As the days and weeks pass, bringing many fluctuations in the progress of General Gorringe's expedition, the anxiety lest the help for the beleaguered garrison arrive too late of necessity increases. Last week we had to record a British check at Sanna-i-Yat after the forcing of the Turkish lines at Umm-el-Hannah and Felahieh. The official *communiqué* was restricted to the bald statement that the attack had failed. An enemy report that the British had left 3,000 dead before the Turkish trenches elicited the tardy and not very comforting information that the total casualties in killed and wounded were "much below this figure." This week's record is a repetition of last week's. Finding himself held on the north bank of the Tigris, General Gorringe attacked the enemy on the south bank, and as a result of two engagements, on April 12 and 15, his left wing was able to advance some three miles to a position that would enable it to enfilade the Turkish trenches on the north bank. This success was challenged by the Turks in a series of heavy counter-attacks on the night of April 17-18, as a result of which the British lines were forced back in places some 500 to 800 yards.

In itself this check may not be serious, but it means much when days, and possibly hours, are of vital importance to General Townshend's force. Even when the Sanna-i-Yat position has been captured, there remains what may well prove to be a still more formidable barrier at Es Sinn. The Turks are making the most of the advantages that the ground offers. They are also assisted by the elements. The wet weather has greatly extended the marsh ground on either side of the Tigris, and the British column is compelled to attack on an ever-diminishing front. If it were not that transport considerations keep the relief expedition to the Tigris, the policy of trying to force the bottle-neck position which the Turks have had ample time to fortify might be open to criticism. Any other strategy, however, would have entailed operations on a bigger scale, and little inclination has been shown to attempt more than the minimum which the situation demanded.

The air raid on Constantinople, carried out by three naval aeroplanes on the evening of April 14, will have served to remind the Turks in the capital that the withdrawal from Gallipoli has not necessarily rid them of all danger from British attacks. According to the official statement, bombs were dropped on the Zeitunlik powder factory and the aeroplane hangars. The flight from the Dardanelles to Constantinople and back

Digitized by Google

measured over three hundred miles, and, although fine weather prevailed at the start, we are told, adverse conditions supervened, with wind, rain, and thunderstorms. British aviators are not going to reproduce German practices in Turkey by dropping bombs indiscriminately on towns, so that an air raid of this nature is not calculated to produce a panic in Constantinople. It had a definite military objective, and for that reason is the more likely to cause misgivings in the minds of the Ottoman authorities. By penetrating as far as Constantinople—a simultaneous attack was made by a single aeroplane on the Adrianople railway station—our airmen have shown that they can reach all the vulnerable spots in European Turkey. Among the eventualities, therefore, which the Turks have now to face is the destruction of some vital link in the single line of railway that connects them with Germany.

A logical development of the new order in Egypt, introduced by Lord Kitchener on the occasion of his hurried visit to the Eastern Mediterranean last year, has been witnessed in the recent attack on Turkish camps in the Sinai Peninsula. For practically a year, both before and after the Turkish advance in February, 1915, the military authorities in Egypt were content to have the Canal as their first line of defence, with the result that there was always the danger of the enemy being able to interrupt the navigation of the Canal, while the pursuit of his forces after they had been repulsed from the banks was rendered difficult. Lord Kitchener, it is understood, changed all that. The first-line defences of Egypt were removed from the Canal to a point many miles to the east of it, and they were strengthened to a degree quite unknown to the earlier lines on the west bank. The promised second attack on Egypt has not materialized, for the Turks have had other matters to engage their attention. But the Egyptian line of defence is now able to serve as a base for an attack on the enemy who, since the outbreak of war, has been allowed to regard the Sinai Peninsula as Turkish territory. A successful air raid was recently carried out on El Hassana, where the Turkish camp was bombed. On April 13 a column of Australian troops attacked the camp at Jifjaffa, some sixty miles east of Ismailia, on the middle road of the Turkish advance in 1915. The camp was occupied, and among the thirty-four prisoners taken was an Austrian engineer-lieutenant. Katia, an oasis about thirty miles to the north-east of Kantara, has also been occupied by British troops. The ground thus gained has a sentimental rather than a military value; for while it is desirable that the Turks should not be able to boast that they have been left in undisputed possession of Egyptian territory, there can be little need to undertake on a large scale a land campaign against them starting from Egypt.

The troubles of the Greek Government show no signs of ending. To the encroachments of the Franco-British forces have now to be added certain inconvenient inquiries on the part of the Russian Government regarding a number of sacks belonging to it which had been left stored in Salonika. On the strength of statements contained in a cipher telegram, said to have been sent on November 8, 1915, by M. Passaroff, the Bulgarian Minister at Athens, to the Bulgarian Premier, the Greek Government, and more particularly M. Gounaris, as the Minister concerned, are accused of having handed over these sacks to the Bulgarian authorities for military purposes. The telegram is explicit on this point. M. Passaroff met the charge by declaring the document a forgery; but as the Allies are able to produce proof of its authenticity, his statement may be dismissed as coloured by too close association with Germans. M. Skouloudis, the Greek Prime Minister, repudiates all responsibility for the contents of the despatch which incriminates M. Gounaris, a member of his Government, and declares that the sacks in question, having been stored in the name of a Greek subject, were requisitioned by the Greek military authorities, and are now in use in the Greek military depôts at Salonika and the Piræus. It looks as if the deal between M. Gounaris and M. Passaroff did not come off; but M. Skouloudis would be in a stronger position if he produced the elusive sacks and recommended M. Passaroff for another sphere of usefulness.

A further difficulty has arisen owing to the decision of the Allied Powers to despatch the bulk of the Serbian army by rail across Greece instead of round by sea in ships, which might attract the attention of German submarines. The Greek Government finds itself unable to consent to the proposal, on account, as far as can be judged from the utterances of the Germanized Press in Greece, of its desire to keep in the good books of the Central Powers. As reasons for its refusal it is pointed out that the railways and rolling stock are inadequate for the purpose and that the transportation of so many troops would take too long on a single track. The excuses are supposed to disguise the anxiety of the Government not to appear to acquiesce willingly in any of the Allies' demands. A leading Venizelist paper, however, reduces the controversy to its proper proportions. There can be no question, it points out, of the action constituting a violation of Greece's neutrality or sovereignty in view of the fact that Greece has already officially recognised the presence of the Allied troops at Salonika and that Greece is still the ally of Serbia. On the other hand, if there are any *bonâ-fide* objections to the scheme, such as a suggestion that the Serbian troops may be still in the least tainted with cholera or typhus, or if the Serbians propose to encamp along the route during their transportation, then the proposal must most certainly be refused. We could wish, and we have little doubt that the Allied Governments wish also, that a *modus vivendi* could be reached between themselves and the Greek Government which would obviate the constant friction. Better things were expected of M. Skouloudis, the Prime Minister, but it is unlikely that he is master in his own house.

The situation in Greece, it is to be feared, is not improved by the pointed criticism in which M. Venizelos indulges through his organs in the Press. Compared with him the Ministers of the day are mere tyros in the art of administration, and his advantage over them is used to the full. Two questions that he has put to his opponents remain unanswered; the first is how Greece is to meet her liabilities if the army is to be kept mobilized indefinitely and she is unable to count upon the good will of the Allies for a loan? The second is, how will Greece fare if the Allies suddenly abandon Macedonia and leave a Greater Bulgaria master of the situation? The answer to these questions would entail looking ahead, and, therefore, cannot be given by a Government which is content to live from hand to mouth. As far as can be gathered, the Greek people remain for the most part aloof from the strange pass to which politics in Greece has been reduced. Certain it is that they do not share the Government's objection to the presence of Allied troops. Wherever these come, they are welcomed as valuable assets by the local population.

In his speech delivered at the opening of the new session of the Cyprus Legislative Council the High Commissioner was able to announce that the expenditure during 1915-16 is expected to show a saving on the original estimate, in spite of increases in cost of material and supplies and some new calls for war expenditure. Referring to the gift of two thousand tons of wood fuel for the troops in Egypt, made by the island, he announced that Cyprus sailing vessels were delivering it as quickly as possible. Another result of the war on which his Excellency touched was the influx of refugees and the use of the island as a convalescent station for our soldiers. The number of refugees, he stated, had been limited to between two and three hundred British subjects, maintained at the cost of his Majesty's Government; but the value of the island as a convalescent station was being increasingly recognised. For the rest, he expressed his confidence that whenever opportunities occurred of rendering assistance "to the great and just cause in which we are engaged" he could rely on the support of the Legislative Council.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 4.

The Mixed Courts.

At the last Council of Ministers H.H. the Sultan signed a decree appointing Signor Falqui-Cao and M. Constantine Vryakos judges of the Mixed Court of First Instance. The first-named has for several years been judge in the Italian Consular Court, and his appointment to the new judgeship accorded to Italy in the Mixed Courts has been received with widespread approval. M. Vryakos is also an excellent choice. He is an eminent Greek advocate, and is Procureur-General at Athens. He will fill the judgeship left vacant by the death of the Greek judge, M. Demetriades.

So far no one has been appointed to succeed Mr. H. W. Halton, who has been promoted to the Mixed Court of Appeal to fill the vacancy created there by the recent death of Mr. L. Sandars, and it has been stated that the British Government has decided not to appoint another Englishman, but to substitute the extra Italian judge for the English one, thereby reducing the British representation in the Mixed Courts to four, the same number as that now accorded to both France and Italy. That statement, which was published by one of your local English contemporaries, is, I have the best authority for saying, absolutely incorrect, and its publication is all the more regrettable, since it could only tend to create unnecessary irritation in British and Italian circles.

Italy has at no moment either prior to or during the recent negotiations complained of the extra representation enjoyed since the outbreak of war by Great Britain, as the above-mentioned statement would naturally lead one to infer. Far from that, Rome expressly stated that it admitted Great Britain's position on the Mixed Courts bench, and that its claim for an extra judgeship was merely based on the fact that it considered that Italy should have representation equal to that of France, to whom an extra judge had been accorded. The Egyptian Government has now conceded the point to Italy, and the incident is satisfactorily closed. The non-appointment of an Englishman to fill the vacant English judgeship is solely due to the fact that there are but three more months to the close of the judicial year, and as certain of the Englishmen must have leave, which has already been too long delayed for them, and some transfers are to take place in the autumn, the Egyptian Government prefers to wait until later on in the year before making its selection. Similarly we must not expect a successor to be appointed for the present to Mr. D'Alpoim, the Portuguese judge of the Alexandria Court of First Instance, who died the other day.

It is a matter for general satisfaction that our Foreign Office took the opportunity of the Mixed Courts negotiations with Italy to come to a further understanding with Rome on the question of the future judicial and administrative reforms to be introduced in Egypt. Italy had already, in 1904, recognised the British Occupation, and had given us a freer hand to deal with Egyptian affairs: but as we had simultaneously declared our intention not to alter the political status of Egypt our declaration of a Protectorate had somewhat altered the situation. The understanding now come to readjusts matters. Italy agrees to the essential abolition of the Capitulations and the reform of the judicial administration, provided the other Great Powers similarly give their consent. And this amounts to a recognition of our Protectorate over Egypt.

The Egyptian High Commissioner.

From the latest home papers we learn that Lord Robert Cecil, replying in the House of Commons to Mr. Ginnell, declared that there is no foundation for the statement that the title of the British High Commissioner in Egypt had been changed to Representative of the King, and the name of the British Agency to that of House of Protection. Unfortunately for Lord Robert, although Egypt's latest champion at Westminster may have penned his question wrongly, there is some very good foundation for the statement referred to, seeing that the official Arabic translation of the title of H.B.M.'s representative at Cairo is "Naib el Melik" (Representative of the King), and that of his residence "Dar-el-Himaiya" (House of Protection). Since the Under-Secretary for Foreign Affairs in his reply added the gratuitous information that the title of his Majesty's representative in Egypt was that of High Commissioner, and that the name of the former Agency and Consulate General had been altered to Residency, he might quite easily at the same time have given some further explanation of the matter, instead of delivering such a categorical denial. It is to be presumed that he did not make any local inquiries, or that, if he did, he did not consider it necessary to divulge the information which Cairo must certainly have given him. Cabinet Ministers and their Under-Secretaries would, however, be well advised when framing their replies to questions in the House, to bear in mind the fact that when these questions deal with matters concerning Imperial dependencies their replies are read, not only by the British public, but also by the inhabitants of those dependencies. In the case in question Lord Robert Cecil's reply conveys to the Egyptians the altogether erroneous impression that the home Government does not approve of or recognise the Arabic title by which the High Commissioner and his residence have been officially known in Egypt since the new régime was instituted a little over a year ago. This particular case may not appear of very great importance, but it certainly serves to point the moral.

The Ministry of Wakfs.

An interesting innovation, and one of which it is impossible not to approve, has just been made by the Government. Hitherto, although there have been one or two isolated exceptions where foreign Christians have been appointed to special posts, notably Herz Pasha, who held the position of Chief Engineer of Arab Monuments, appointments to the Ministry of Wakfs have been restricted to Moslems. Ibrahim Pasha Fathy, the able Minister of Wakfs, has quite rightly come to the conclusion that, in order to be able to carry out in the most satisfactory manner the administration of the vast property committed to his charge, he must have reliable and fully qualified assistants to his hand. Since there are no Moslems sufficiently capable or experienced to fill the post of head of the mechanical service, Fathy Pasha has selected an Englishman, Mr. B. P. Greenwood, whose record in and outside the Government service eminently qualifies him for the position, and who is about to be transferred from the Public Works. This appointment must not, however, be regarded as heralding any wholesale introduction of a foreign or non-Moslem element into this essentially Moslem administration. The latter's religious, charitable, and educational activities will still continue to be carried on by Moslems; and it will only be in purely technical matters that the co-operation of non-Moslems, in every case Englishmen, will be sought.

The Anzac Hostel.

This week there took place the inauguration of the Anzac Hostel, which the Australian and New Zealand authorities have decided to establish for the use of their troops in Cairo. The Bourse building has been secured for the purpose, and has in an incredibly short space of time been converted into what is a combination of club, hostel, and house of entertainment. General Sir W. Birdwood was to have performed the opening

ceremony, but owing to his sudden departure for an "unknown destination" that duty fell upon Major-General Sir A. Godley, who made a very happy speech in the course of the concert with which the hostel was inaugurated. The object of the Australian and New Zealand military authorities, who will run the "hostel" themselves, is to provide the men who come up to Cairo periodically on duty or on leave with some place where they can get a decent bed and bath and wholesome food at moderate prices, and where they can find healthy entertainment. The Bourse, which, even in better financial times, was always a very bare building, has been entirely transformed and well fitted up to answer the purpose for which it is intended; and to judge from the alacrity with which the rank and file have patronised it in the short time that has elapsed since its opening the Anzac Hostel meets a very great want and is assured of success.

The Gezira Racing Season.

On Saturday the last race meeting of the Cairo season was held at Gezira, and from next week onwards racing will be carried on at Alexandria. The season that has just closed has comprised sixteen meetings, somewhat more than in normal years, and the Gezira Sporting Club are to be congratulated on the success which, from both a sporting and a financial point of view, has crowned their efforts. There are many who are of the opinion that race meetings are out of place at the present juncture, when as a nation we are fighting for our existence. Circumstances, however, alter cases, and there can be little doubt that the G.S.C. committee were very well advised to extend rather than restrict their activities in this respect. The race meetings that have been held in Cairo have afforded interesting and healthful entertainment for the many thousand troops who have been stationed in Egypt this winter, and that fact alone fully justifies the extension given to the normal racing season in Cairo and the reopening of the Alexandria one, which is about to take place.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, March 26.

The new members of the Cyprus Museum Committee have been elected. An additional sum of £100 has been allotted in the Estimates towards the fund which was established for its support. Many of the leading Cypriots have taken great interest in the Museum and in the preservation of the island monuments. They have regarded with great and not unjustifiable jealousy the acquisition of Cypriot "antiquities" by individuals and museums outside the island; and it was largely owing to the strong movement made by them to prevent their exportation that in 1905 a law was passed to supersede the old Turkish Act of A.H. 1291, under which General de Cesnola, Mr. Hamilton Lang, and others carried out their highly profitable excavations of tombs and temples. No antiquities can now be exported without the permission in writing of the High Commissioner. All objects belonging to the Museum are held by the Government "in trust and for the benefit of the inhabitants of Cyprus." Antiquities in Cyprus comprise all architectural memorials and sculpture, or works of art in general, from the most ancient times up to the Turkish conquest of the island; and include statues, reliefs, statuettes, inscriptions, paintings, mosaics, vases, arms, ornaments, gems for rings, coins, and, indeed, all objects of antiquarian interest. The only objects excepted are coins of Byzantine, Lusignan, and Venetian times. Whether it will be possible to conduct any excavations this year is not yet known. There are no doubt still many localities in which work could be usefully carried out in the interests of the Museum and of Cypriot history; but the need of money is one of the standing obstacles.

The Estimates have been passed without discussion, as was the case last year.

Locusts have appeared in the Famagusta, Larnaca, and Nicosia districts in several localities, and the menace will have to be met with energy.

With a view to the creation of a public garden, Mr. L. Z. Pierides recently presented a plot of land to the municipality of Larnaca. The Government has now presented another piece of adjacent land for this purpose. It is time that the town should possess such a pleasure ground. It would be well if it could also raise a good band. At Limasol quite a good band was formed by local effort some years ago, and plays weekly in the Public Garden and on other occasions.

MOSQUES OF THE SUDAN.

(From a Correspondent.)

The solemn assurance given to the people of the Sudan by Lord Cromer at the time of the British Occupation—"there will be no interference whatever in your religion"—has not only been faithfully kept, but the Administration has, upon numerous occasions, taken pains to manifest its deep sympathy with the Moslem population, and to encourage their religious observances. Thus we find that the provision of mosques throughout the country has received much practical assistance in the form of donations of money and the granting of building sites. One of the latest acts of this description has been a public meeting under official patronage in Nahud for the purpose of collecting money to erect a mosque worthy of the town and its importance as a great trade centre. Thanks to the encouragement thus afforded, the very substantial amount of £E150 was obtained at the meeting.

There exist about six hundred mosques in the Sudan, and the number is being continually added to. These buildings—mostly simple and unadorned—are distributed in Khartoum and throughout the provinces. The greater number are public, while the remainder are private, buildings. The most numerous edifices of this kind are to be found in the province of Dongola, and the more handsome of the constructions in Khartoum town. In regard to the Upper Nile, the Bahr-el-Ghazal and Mongalla, no mosques existed before 1906; to-day there have been erected some makeshift buildings at Renk and at Kodok, in the first-named province; but they are only used by the local Jaalin and Dongalawi merchants. At Wau, in the Bahr-el-Ghazal, there is now one stone-built mosque and another small one at Rega; while at Mongalla the few Mohammedans are still without a regular place of worship. At El Obeid, in Kordofan, a handsome new building, composed of concrete blocks, is in course of erection, but, the available funds having run out, it seems as if the faithful must pray in an uncompleted edifice, without either windows or roof. The Government of the Kassala Province has assisted financially to provide two small mosques for the towns of Gedaref and Gallabat, while at Berber as many as six small buildings were run up during 1911. The worshippers at El Damer mosque have been able to add a minaret, and also to improve considerably the interior of their building. The present structure is of mud brick, but there is hope of a stone edifice being commenced at no distant date.

Next to the handsome building in Khartoum town, the finest mosque will be found at Port Sudan, when the construction is finally completed. The Government in this case again proved liberal, contributing a sum of £E150 towards the cost, which will ultimately run into some two or three thousand pounds. There are at Suakin several small mosques, although the majority of them stand in sad need of restoration. So bad is the condition of the oldest of the buildings that it has now been abandoned. In 1913 there were altogether seven new public mosques and four private mosques opened in the Sudan, a number not very likely to be exceeded during 1915-16.

With regard to the construction—or, rather, reconstruction—of one mosque at Berber, which was commenced in February, 1912, work was stopped a few months afterwards (August) owing to complaints of the quality of the work and material, and civil proceedings resulted. The Atbara mosque is a small but handsome building, much of the labour in erecting it being given free of charge by Moslem railwaymen and others in their spare time. At Monagil, in the Blue Nile Province, there is a mosque of stone and brick, with a roof of jack arches and steel girders, forming, on the whole, quite an imposing building. The Wad Medani mosque has also been re-roofed with jack arches and steel girders. In the Nuba Mountains Province there are, as yet, no permanently built mosques; but at Kosti, in the White Nile Province, there is a very nice mosque just completed, which will add considerably to the appearance of the town. The design was drawn by Mr. Baskett, when acting as District Engineer in that province. It is a substantial building, the foundations being upon inverted arches. The sum of £E1.697 had already been subscribed by natives before the building was far advanced, while the Government subscribed £E300 to meet the deficiency, or part of the same.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, March 26.

Germano-Bulgars in Greek Territory.

Some misguided Greeks were long under the delusion that their old enemies the Bulgarians would refrain from entering Greek territory. This delusion has now been dispelled by the occupation of several Greek villages on the Macedonian frontier, where the Bulgarians and their taskmasters, the Germans, are making themselves quite at home, and where they exercise their customary occupation of pillaging the inhabitants under the very noses of the Greek troops. The invaders are even seizing telegraph and telephone apparatus and other Government property without any protest being made. The Greek soldiery, acting, presumably, under orders from higher quarters, meekly retire, and the soil which the Greek Press and so many political personages declared must never be desecrated by the feet of their quondam enemies is evacuated by its rightful owners on the first approach of their so-called foes.

This attitude of the Greek military and the reported declarations of the King to a correspondent of the *Berliner Tageblatt* have created a painful impression upon the Allies here, and the relations between them and the Greeks have again become strained. It is even reported that Greek officers friendly to the Allies are being recalled from Macedonia.

Operations at the Front.

For more than a week past the Allied and enemy forces have been almost daily in touch—mainly in the direction of Ghevgeli. The operations at present are almost entirely confined to the artillery, but in one or two places the troops have come into contact, and a few casualties are recorded. There have been several aerial combats, in which the Germans have had the worst of it, but they have brought down two French aeroplanes within the last few days. The first was hit by a shot from the enemy's aircraft guns, and fell into Lake Doiran, the aviator and observer being drowned, and the second, which was only slightly damaged, was able to descend in safety within the French lines, the aviators being uninjured.

About a dozen German prisoners have been taken and conducted here, where they have been transferred to a warship.

Zeppelin Visits.

On several occasions during the past few days Zeppelins and other aircraft have crossed the Allied lines and attempted to reach Salonika, but all the Zeppelins and most of the aeroplanes have been quickly driven back by the French aviators or aircraft guns. When such visits are signalled the electric light current is always cut off from the town. Cinema shows have then to close and the cafés must use gas or the humble wax candle.

General Sarrail and the Correspondents.

All the foreign correspondents are charmed with the courtesy and consideration with which they are treated by General Sarrail. About 7 o'clock every evening we meet in an antechamber adjoining the General's own room at the French headquarters. Here we find colleagues representing most of the leading European newspapers and make the acquaintance of many well-known writers. We are, by the way, not all Press men; there is one Press woman, representing a Swiss paper, who attends with great regularity. Then the General himself comes into the room, gives us the news of the day within the sphere of operations of the Allies, and hands over the messages he has received regarding the operations in other theatres of the war. After giving all necessary explanations in the most charming manner, he invites questions from his auditors, who form a circle round his tall and striking form. Then we cross-examine and "heckle" him without mercy. But the General is wary; he tells us as much as he thinks is good for us, and to other questions he shrugs his shoulders and smiles in a meaning manner.

Another Newspaper Prosecution.

In a former letter I referred to the prosecution of *L'Opinion* and the *Makedonia*—both pro-Entente papers (the former being printed in French and the latter in Greek)—when the editors were condemned to fifteen days' imprisonment for "exciting the public mind." This time the *Makedonia* was prosecuted alone for "insulting the Government" in the course of some remarks made regarding the activities of German submarines in Greek waters. The jury this time acquitted the editor, but the proceedings show how bitter against the friends of the Allies are the "powers that be" in Greece.

British Trench Theatre.

After the arduous duties of the day on the Macedonian front our soldiers, who are usually in a cheerful mood notwithstanding the hardships they have often to endure, devise all sorts of means of amusing themselves. The most ambitious attempt is at a certain spot in close proximity to the defending guns, where our men have fitted up a regular theatre, large enough to accommodate 400 spectators. There is plenty of talent among them, and here they have really excellent entertainments. The "orchestra" is a little off the usual lines: it consists of one pianist, two guitarists, and no less than fifteen mandolinists. I hear that similar places of entertainment have been established at other points.

THE STATE OF SYRIA.

(From an Occasional Correspondent.)

Cairo, March 29.

The recent rumours about the alleged attempt on Enver Pasha's life have evidently been meant as a blind. While they were being persistently spread, Enver was touring the Arab provinces trying to win over Arab opinion both in Syria and Arabia proper. The Russian successes in Armenia must have considerably alarmed the Young Turks as to their probable effect on Arab opinion, already deeply agitated by the former's insane excesses. It is known that some of the Arab leaders in the capital were worked up to help in the tardy campaign of reconciliation, and that considerable sums had been sent for distribution among unscrupulous leaders in Syria and Arabia in order to pave the way for Enver's tour.

Although Enver has ordered a general amnesty for political offenders and the liberation both of those who had been detained and of those exiled to distant parts of the Empire, and although fair promises have been made to the Arabs regarding their national aspirations, yet it seems very doubtful whether any real success has been achieved. At best the Arabs will bide their time. If they are at all human they will not forget the wrongs to which they have been subjected, the wholesale hangings of their intellectuals, the sacrifice of their best manhood on the altar of the Young Turks' inordinate ambitions, and the hundred and one ways in which their country has been devastated by a war that was none of their seeking. Nor will they be tricked any more by the Turks' promises, when these have been treacherously broken over and over again, and after the Young Turks have been foolish enough to preach openly their German-inspired creed of racial domination, even at the expense of the Moslem faith. Besides, what value can such promises have in the eyes of the Arabs of Syria, when misery prevails in the land, when famine is beginning to rear its head, and when they can see the Turks plunging headlong into the suicidal abyss?

Recent accounts depict the economic condition of the country in black colours. If the last locust invasion had taken place a couple of months earlier, when the grain crops were still green, these, which constitute the life-blood of the country, would have been completely destroyed. As it is, the fruit trees and the vines have suffered most seriously; and it is said that the grape crop, which in Damascus alone is estimated at about £100,000, was destroyed.

What aggravated the situation was the calling up to the colours of all able-bodied men, and the effect may be imagined when it is known that over 80,000 of Syria's men have been taken from their agricultural occupations, and about 20,000 deserters are scattered in the wilds of the Lebanon. The effect of calling to the colours men up to the age of 50 can be nothing short of disastrous.

It is said that in certain parts the sowing of dari-seed was delayed about two months, while that of other grains, such as lentils, peas, beans, etc., was altogether neglected. So far the Government has been withholding the seed corn from the population.

The Lebanon in general, and such coast towns as Beyrout, have been deprived, at times, of their bare needs of grain. Although the means of transport have been seriously interfered with by the war, yet it is still sufficient to meet adequately the actual necessities of the population without interfering with military exigencies, and the arrivals could have been so regulated as to leave no surplus which might eventually be seized by an enemy expeditionary force. The only explanation, therefore, is that the Government meant to keep in a state of famished submission the population of districts known to be at heart distinctly antagonistic to Turkish rule.

A Salonika telegram reports that in the course of a fight between Germans and Bulgarians for the possession of a telegraph office in a village west of Lake Ochrida four men were killed, and several wounded on both sides.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, March 30.

Army Changes.

Notable changes are about to take place in the Roumanian Army. A large number of promotions will be made, which will result in an increase of the total number of officers as follows:—Infantry: Ten colonels, thirty-four majors, thirty-eight captains, and 408 sub-lieutenants. Artillery: Eleven colonels, three lieutenant-colonels, and eighty-four sub-lieutenants. No less than seven generals who have attained the age limit will be passed into the reserve. Among these we find General Zottu, Chief of the General Staff. In all probability General Christesco, who is one of the most promising officers of Roumanian Army, will be appointed in General Zottu's place.

On the Bulgarian Frontier.

The *Nationalist* writes as follows:—"From a well-informed source we hear that the measures taken by the Bulgarians on our frontier are becoming of a more and more aggressive nature. The Bulgars have here accumulated troops whose number exceed 120,000, and all their preparations bear an eminently offensive character."

The same journal informs us that visitors will not be admitted this summer to the well-known resorts of Bushteni, Azuga, and Predeal, these localities being regarded as forming part of the zone of military operations.

Recent Legal Measures.

The Chamber of Deputies has been doing rather more useful work than usual. On March 21 its members voted a law prohibiting every kind of export except through the channel of the Central Commission of Exports. On March 25 two other laws were voted, one empowering the Government to requisition alimentary products according to the needs of the population, the other to requisition the mills. This law also makes provision for the punishment of speculators my means of fines amounting to £200 and terms of imprisonment up to six months.

The purpose of these various measures is, of course, to reduce the speculation brought into play by the high prices offered. It is this speculation which is responsible for the exorbitant cost of living and the shortage of foodstuffs in a country whose granaries are bursting with their contents. A similar state of affairs obtains in Russia, where there are two harvests that have not been exported, and which have been purchased by speculators at absurdly low prices with a view to speculation after the war.

The Parliamentary session has again been prolonged, so that the presumptive date of its closure is now April 1. There is, however, reason for anticipating a further adjournment when that date is reached, to be followed possibly by others.

Magyar Gratitude.

The Near East has more than once referred to the persecutions to which the Roumanian subjects of Austria-Hungary have to submit, and mentioned in a recent issue the suppression of the Roumanian Nationalist organ, the *Românul*. The Magyars have now had the satyrical bad taste to reproduce at the National Theatre of Budapest a piece by Victor Rakosi named "The Silent Bells," in which the Roumanian element, it is said, is held up to ridicule and insult. This is the way in which they express their gratitude for the hundreds of thousands who have sacrificed their lives for the further glory of their Mongol persecutors.

But it is not only the Roumanians *de dincolo*—"from over there," as those from Transylvania are called—who have cause for complaint. The Roumanians of the Kingdom, though, of course, not exposed to persecution in the same sense, are subjected to considerable vexations in the course of their travels through Hungary. I have referred to these before, but since then they have become even more accentuated, so much so that the Minister for Foreign Affairs was recently requested in the Senate to make representations in the right quarter with a view to obtaining more consideration for the Roumanian passport and rather more civilised treatment for its bearers. A political personage recently returned from a journey through Austria-Hungary made the remark that you have merely to show a Roumanian passport in that country in order to be literally maltreated.

The New Rector of Jassy University.

The retirement of M. Stere had left the University of Jassy without a rector. Three gentlemen have qualified for the vacant post as a result of the recent University elections; and from among these M. Jean Duca, the Minister of Education, has selected M. Mathew Cantacuzino, who thus becomes rector for a period of three years. He is a professor of law at the University and a prominent Liberal, having passed over recently from the Conservative party.

M. Stere has also resigned the presidency of the Liberal Club at Jassy.

They are Nine.

The "babe" are nine in number, and each *baba* is an old woman who stands for one of the first nine days (Russian style) of the month of March. One *baba* will smile, another will weep, a third will scold, a fourth will show a dour, mournful face, but it is the last of the nine who gives you the keynote of the year's weather. She is lazy, she comes a day late in the spring season, and she explains not the why and the wherefore of her predecessors. But tradition has no patience with punctilious pedagogism and abhors our pretensions to reason. So we will humour her, and be content with the last *baba*, who this year speeds the season on its course with gentle words and smiling face.

ROUMANIA THROUGH GERMAN SPECTACLES.

Reuter's Amsterdam correspondent reports that the *Berliner Tageblatt* has published a long report from Dr. Lederer, its Bucharest correspondent, on feeling in Roumania, which he summarises as follows:—My impression of the situation is that: first, Roumania will undertake nothing against the Central Powers, who are her Allies, so long as the armies of Austria-Hungary are victorious, and so long as the Entente armies achieve no considerable success in the East or the West or before Salonika, and no new States of decisive weight join the Entente. Secondly, Roumania still cherishes a slight hope that developments will allow her to join the Entente in order to realise her national aspirations in Transylvania and the Bukovina, without, on the other hand, flatly renouncing the idea of co-operation with the Central Powers. Thirdly, Roumania, yielding to circumstances, no longer offers that passive resistance to the extension of her economic relations with the Central Powers which we still had to encounter a few weeks ago.

TO OUR READERS.

The Near East is published on Friday, and copies are obtainable at any London bookstall early on the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post The Near East for delivery on Friday morning, to any address, on the following terms, post free:—

12 months, £1; 6 months, 11s.; 3 months, 6s.

Abroad The Near East is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Necamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiades and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

THE OCCUPATION OF ISPAHAN.

(From a Correspondent.)

Ispahan, March 21.

By the middle of last September, German gold and propaganda had excited the local Press, the mollahs, and a gang of the roughest ruffians to a high pitch of frenzy against the Russians and British. Bands of Germans and Austrians kept arriving from the Turkish frontier bringing with them large supplies of small arms and larger supplies of gold (Turkish and English pounds), till about the middle of September things seemed to be critical. The British Consul was fired upon by an armed ruffian and wounded in the hand, while his Indian sowar was killed. Bands of armed tribesmen—German hirelings, of course—galloped about the town showering all the abuse Oriental imagination could conceive upon the Russians and English. The Persian gendarmerie had rebelled and refused to obey the orders of the Government as to keeping neutrality. The Governor of Ispahan was either unable to restore order or he had received some of the gold referred to above.—It turned out afterwards to be the latter.

The Russian and British consuls then decided to abandon all British and Russian concerns and leave for Teheran and Ahwaz, and by September 20 the Germans had the field to themselves. They openly occupied the gendarmerie barracks and organised bands of armed tribesmen, which, as soon as they were ready, left Ispahan to "fight" the Russians, who were now near Kum. The population cheered them and decked them with flowers, and exacted promises that they would kill the last Russian on earth and bring in every Russian woman as a slave. On November 19 an armed band invaded the office of the Indo-European Telegraph Company —the only British establishment left open—which was in charge of an Armenian officer—a sergeant of the R.E. They seized the office, and the Armenian officer had to flee from Ispahan for his life. The revolted gendarmerie then took possession of the Telegraph and the Post Office, and censorship of the wildest and most exaggerated form began. The Russians had now occupied Kum, which had hitherto been the headquarters of the Germans and so-called "Democrats" and "Nationalists," who began to pour into Ispahan several thousands strong, accompanied by the Turkish Chargé d'Affaires and others.

The stock of German gold seemed to have run low by now; so it was decided to declare "war" on funds forcibly collected from the public. Armed ruffians exacted heavy sums at the point of the revolver, and many respectable merchants were grossly insulted for not paying specified sums. An amount quite out of proportion to their number was demanded from the Armenians of the town, which, if not paid, would "prove that they were in sympathy with the Russians and British."

"Touch the pocket, feel the heart." The inhabitants of Ispahan began to sing a different song now; they were tired of "war and *Allegmanees*," although not a soul dared to say this openly. The Germans saw this would not do, so the evacuated English Bank was broken into and looted. Most of the bank's valuables, however, seemed to have been in a strong steel safe, which they could not break. They hammered at it, pounded at it, and fired volleys at it; but it remained closed, so it was given up as a bad job and left lying in the bank compound.

Ever since the commencement of the war the Armenian quarter had been in momentary danger of a raid and massacre, on account of its pro-Russian and pro-English sympathies; but thanks to the kind efforts of a few leading *ulema*, nothing serious had happened.

The Russians had now reached Kashan, and about a fortnight ago news reached here that they had started for Ispahan, and would be here in a week. The Germans and all their hirelings left *en masse*, taking the precaution, however, to blow up the stock of ammunition they had. Even the Bakhtiari Governor of Ispahan left, giving the town into the charge of a deputy-governor, and for the next ten or twelve days the town seemed as calm and serene as before the war. The Russians were timed to arrive some time between Friday, 17th, and Sunday, and all preparations were made to receive them quietly and peacefully. Several notables went out a day's journey to meet them, and pitched tents for their reception. Suddenly, about noon on Friday, a band of some three hundred armed Bakhtiaris entered Ispahan, occupied the houses and gardens on the main road, and fortified them with sandbags, etc. Their chief (Reza Khan, a highway bandit) proclaimed himself the Governor of Ispahan, and demanded several thousand tomans to "repulse the Russians." They looted the tents and the effects of the officials, and things seemed to look serious again. The Russians were now about four miles from the city, and on Saturday morning a Russian (evidently a despatch rider) was captured by Bakhtiaris, shot, stripped naked, and cast down in the market square of Ispahan. The Bakhtiaris were busy fortifying themselves all Saturday. On Sunday, about 1 p.m., the Russian guns boomed out. Everybody knew that fighting had commenced; and everybody rushed to the roofs of the houses, from which a long string of some 300 horsemen could be seen galloping full speed on the road back to their native district; they had fled after the first Russian shot. One Russian was killed and one wounded, not including the despatch rider killed the previous night. The Bakhtiaris had about ten killed. While they were fleeing the Persian guards of the revenue office (from whom the Bakhtiari thieves had exacted a receipt for five thousand tomans on the previous day) took revenge, and fired a volley among them, killing three or four more.

The Russians arrived here about 3 p.m. on the same Sunday afternoon, and now all is well. As I write this (Tuesday afternoon), batches of Cossacks are passing singing. They have left their rifles at their barracks, as the town is quiet, and there is no necessity to carry arms.

In conclusion, it may be remarked that great credit is due to the Persian Government for having preserved neutrality in face of such overwhelming propaganda; and still greater credit is due to the honest and quiet population of Ispahan, who with great tact and determination preserved order in spite of the great number of roughs and rowdies collected together by "Kultur."

Sonorous.

SUDAN SURVEYS.

(From a Correspondent.)

The return to the Sudan—after an absence of nearly eleven years—of Major M. G. Talbot, who acted as Director-General of Sudan Surveys between 1900 and 1905, means that the Government does not intend to allow any slackening in its efforts to bring the topographical and survey section of the Administration to a state of complete efficiency. An immense amount of useful work has been accomplished of late years, and Major Talbot will find his old department in a state of thorough maturity. In this connection it is interesting to recall that there is in existence a well-preserved Egyptian tomb-plan dating back fully 3,000 years, and also a map, probably produced about 1370 B.C., showing the situation of alluvial gold mines in what is now the Sudan.

Among other officials who have at various periods assisted in mapping the Anglo-Egyptian Sudan and helping to bring up its triangulation to a stage of completeness have been Captain Coningham, who, some five years ago, accomplished some excellent work, enabling the Administration to issue a reliable—and up to that time the only—map of every inhabited portion of the country, and Lieutenant McNeill, who rendered great assistance in regard to the systematic survey of the more important areas. He mapped the Nuba Mountains Province at the time that it was being separated politically from Kordofan, the scale of his work being 1/125,000, contour lines being shown at 100 ft. vertical intervals.

The triangulation of the Sudan is not considered to be difficult, but up till recently the European officials have not been particularly successful in their efforts to employ natives of the country upon purely topographical work. The survey of the Nuba Mountains Province, which alone was expected to take six years to complete, is now practically finished. But this province represents but a very small portion of the million square miles for the maps of which Major Hugh D. Pearson, the Director of Surveys, is responsible.

Mr. Lubbock, Captain Thwaites, Mr. Shakerley (of the Irrigation Department), Captain Kelly, R.E.—who, during his ten years' service with the Sudan Government performed a prodigious amount of work on his expedition from Nimule eastward towards Lake Rudolf, and northwards to the Boma plateau—Mr. A. W. Fraser, Captain Davenport, Captain Logan, Captain Crawford, Captain Hutton—all three of the last-named have worked in the Sobat-Pibor country—Captain Marshall (in the Nuer-Dinka country), Captain Wauchope (in the country lying between the Zeraf and the Bahr-el-Jebel), and Mr. R. A. Bence-Pembroke (now a Second Inspector in the Khartoum Province, but located at Nahud, in Kordofan) are among those who have contributed materially to the services of the Survey Department.

A Bucharest message received in Amsterdam states that the Roumanian Chamber has adopted a Bill calling to the Colours the 1917 class.

TANGIER TO TEHERAN.

The fate of the fine painting of Mohammed the Conqueror, which was one of the gems of the collection of pictures formed by Sir Henry Layard in Venice, is still undecided. Thanks to the energetic action of Sir Rennell Rodd and the friendly attitude of the Italian Government, the pictures have reached this country safely; but some of them now form the subject of an action in the Appeal Court. The case is still *sub judice*, and of course I do not purpose entering into any discussion of it. But I may be permitted to pass on a strange story told to the Court by Sir Robert Finlay, who appeared for the trustees of the National Gallery. Bellini, the painter of the portrait in question, had (said Sir Robert) painted for his patron, Mohammed, a picture of Herodias, in which figured the head of John the Baptist on a charger. The Sultan boggled over the appearance of this accessory, and asked Bellini whether he thought it should be shown. The artist replied in the affirmative; whereupon the Sultan clapped his hands. A slave entered, and the Conqueror at once struck off his head. "There," said he to the artist, "do you really like it?" Where Sir Robert got the tale from I do not know. It hardly seems to me to square with what we know of Mohammed's character; but it is a grim little story, and must have caused a not unpleasant thrill in the musty Courts of Law. Moreover, the whole case will add yet another page to the interesting history of this famous painting.

***

I am glad to see that Ivan Mestrovic's "Mother and Child," which has recently been exhibited at South Kensington, is to be secured for the nation. I am not sure whether the requisite £1,000 has already been subscribed, but there is little doubt that the committee, of which Mr. John Lavery is the head, will have no difficulty in raising the sum quickly. Art being the medium by which the intellectual life of a nation finds expression, we should miss no chance of securing as far as possible the best that our Allies have to give in this respect, for a full understanding is the soundest basis of lasting friendship. I should, indeed, like to see translations of the works of Serbia's poets placed before the British public, especially those which lay bare the fighting spirit of our comrades. Where the bard holds the soul of a people, it does not know defeat. And the Serbian people to-day, bereft of almost all that spells life to the free-born, are still unconquered because of the tradition that is in them.

***

Apropos of the impudent attempt of the German propagandists to represent that the Hohenzollerns are descended from a sister of Mohammed, I have been looking up facts and making inquiries, and the result is that I am more amazed than ever at the unblushing cheek of the claim. The facts, as far as known, are summed up as follows by a valued correspondent, who is a fine Arabic scholar and has consulted the best sources:—"Mohammed had no brothers or sisters. According to Moslem accounts of his life, his father, Abdullah, died at the age of eighteen, before the infant was born. His mother, Aminah, died when he was six years of age; and none of his children survived him except Fatima, wife of his first cousin, Ali, the fourth Khalif, and mother of the unfortunate Hassan and Hussein, the victims of Moawya and his son Bayazid. According to Abulfaraj's account, Abdullah, the father, died two years after the Prophet's birth. This, however, is certainly incorrect. For in Mohammed's mother's account of his birth she says that she was alone when he was born, his grandfather, Abd-ul-Muttalib, being in the Temple at Mecca; and she makes no mention of his father." But, of course, such trifling things as facts do not trouble the Supermen. They have proved—to their own satisfaction, at least—that Shakespeare was a good German; they announced the capture of Verdun weeks ago; and they still persist in telling the world—or such part of it as will listen to their nonsense—that the British Fleet "won't come out." With such liars what *are* you to do?

***

In the interesting account of Dr. Léon's lecture on Turkish poetry, which appeared in last week's NEAR EAST, I notice that the lecturer's reference to the popularity of the "tender passion" as a subject for the poet is duly reported. But the advice given by the old poet to his younger confrère in regard to the choice of subject is not reproduced. It was:—

Birinji, Sevgu; Ikinji, Mahabbet; Utchinji, Ashq; soura, Sevgu; hepsi, Ashq.

Firstly, Love; secondly, Love; thirdly, Love; afterwards, Love; always, Love.

Such a choice of synonyms is calculated to turn our own poets green with envy. In the English language "love" is surely one of the hardest-worked and most used of words. And, incidentally, not a few of our novelists' ideas of what the word means are enough to nauseate any self-respecting man.

***

A German newspaper has been good enough to explain to the world the reason why the Egyptians have remained loyal to Britain. According to this paper, it appears that the scales fell from the eyes of the people too late; when they were bound hand and foot by financial bonds to the oppressors who had also prevented them from arming themselves indiscriminately. If these be the only reasons which hold the Egyptians to loyalty, it does not say much for Oppenheim and Hatzfeld, who laboured so consistently to educate the people to revolt. It is small wonder that the Germans are bitter. They sunk thousands of pounds in Egypt, confident that the day would come when they would redeem the cash with interest. That hope, feeble enough some months ago, is now for ever dead. News travels swiftly in the East, and when the perfidy of the Arch-Humbug of Potsdam regarding Mohammedanism becomes fully known there is not a Moslem in Egypt but will thirst for German blood. The Kaiser has proved himself to the Moslem world as false and as blasphemous as he had previously proved himself to be to the Christian. The meanest donkey-boy of Cairo has higher notions of honour and of the sanctity of religion than William of Germany.

***

I hear that Alexandria has been taken by storm by a troupe of pierrots who style themselves "The Empties." At first sight the name does not appear to be particularly happy, but, as the advertisements say, "There's a reason." The troupe is composed of members of the Mechanical Transport branch of the A.S.C. This branch of the service is known as the M.T. This suggested the designation referred to. Much of the success which the troupe has met with—it cleared £100 at a charity performance at the Alhambra—is probably due to the fact that an enterprising officer took the town by storm with advertisement. A thousand posters were displayed announcing that the EMPTIES would perform on such-and-such a night, and seven native sandwichmen paraded the streets, each one bearing one of the above letters. As none of the bearers could spell, and as they were frequently called upon to talk with admiring and inquiring friends, the letters became much mixed at first, but after careful drilling each fully entered into the spirit of the thing, and marched in order with all the self-conscious dignity of a provincial mayor on a State occasion. Nothing, of course, could keep them silent, however, but at least they succeeded in the desired object of attracting attention—indeed, on several occasions ordinary traffic was in peril of suspension, so great were the crowds which thronged to gaze at and comment upon the unusual sight.

***

I see that, according to Reuter's special correspondent on the Greek-Bulgarian frontier, British cavalrymen have broken through the prejudice of ages and have added frogs' legs to their menu. Thousands of Englishmen have, consciously or unconsciously, eaten frogs' legs before this, but for some reason or another we had a sort of national dislike of the idea for all that. Now, however, Tommy has altered this, and, armed with a piece of meat fastened to the end of a string, he goes out to catch his savoury with as much ardour as any Frenchman who ever breathed. No more will the lusty bull-frog be able to cast with impunity his base defiance at the weary but sleepless Englishman, lest he goad his victim too far and be marked down for breakfast. Personally I have always been a conscientious objector where frogs are concerned, although I was sorely tempted to kill on one occasion. It was up-country in the Sudan, and at dinner the first night I entertained an uninvited host of ants and other crawling things which had swarmed up the legs of my table. The following night all went well for some time, as the legs were placed in broad, deep tins of water, and greedy ones hurrying to the feast were drowned. Suddenly, however, the table shook beneath me, and I turned hastily for my rifle, as the atmosphere vibrated to a most terrific roar. I have always hoped that my servant mistook the jump for my rifle as a piece of realistic acting and nothing more, for he calmly drew my attention to the tins of water, and there, upon my word, was a portly, croaking bull-frog in each.

NEAR EAST BOOKSHELF.

GERMANY'S "DRANG NACH OSTEN."*

We know of no more masterly analysis, in a short compass, of the trend of German policy during the last half-century, which gradually and inevitably led to the present war, than this pamphlet. Dr. Prothero marshals his theme in the following order:—First, he analyses the ideas and principles, the ambitions and motives, which have produced in Germany a state of mind favourable to war; he then summarises the historical events and the economic and political conditions which have contributed to strengthen the warlike tendency thus aroused; and, finally, he deals with the course of international politics during recent years, which have made an armed conflict very difficult to avoid, if not inevitable. Special attention may be directed to the interesting theory developed in the pamphlet to account for the readiness with which the German Socialists abandoned their former attitude and placed themselves at the disposal of the Government. "German industrial and financial expansion has been built up on a vast system of credit. The result is a huge and growing accumulation of debt. The necessity of securing the capital already involved and the payment of interest necessitate a larger output, and therefore an increased outlay, the capital for which can only be obtained by an increase of indebtedness. . . . Thus in order to secure the progress made and to avoid collapse, the pace has ever to become faster, the output larger—and this in the face of gorged markets, and markets which show a tendency to be more and more closed to foreign goods." If Germany were suddenly to find herself confronted with a Customs Union between France and Russia, or a Tariff League embracing the British Empire, or a great rise of tariffs in the United States, involving such restrictions as would practically stop the sale of foreign products in those countries, collapse must result from the fact that she is so deep in debt. Her need for fresh and unrestricted markets is vital, and there was little chance of her obtaining fresh colonial or other reservoirs, or even of making sure of those that exist, except by war or by diplomatic efforts backed by military force. In the pressure to the East Dr. Prothero finds the master key to German foreign policy, and if any further confirmation of this view were required it would be supplied by yet another pronouncement of Dr. Paul Rohrbach, the German publicist, as recently as March 5. In an address before such a peaceful audience as that of the General Evangelical Protestant Mission Association, Dr. Rohrbach elaborated his contention that Germany's future lay in a complete understanding with Turkey, which would enable her to exercise pressure on Russia, and, by making Syria a military base with railway communication and fortresses, to close the Suez Canal if Great Britain at any time threatened Germany's interests. "Everything depends on making the East an assured member of the Alliance." Fortunately for Great Britain, Germany's plans have miscarried. Instead of being able to develop her plans in her own time, she has been forced to reveal her hand, and the Powers she hoped to deal with piecemeal she has united in an unshakable determination to eliminate the standing menace to the tranquillity of Europe

The April number of the Palestine Exploration Fund's "Quarterly Statement" contains a good portrait of the late Chairman of the Fund's Executive Committee, Sir Charles M. Watson. Dr. Masterman and Professor Macalister contribute several more interesting "Tales of Welys and Dervishes." Mr. E. J. Pilcher writes on "Hebrew Weights in the Book of Samuel"; there is a further instalment of "The Immovable East"; and Mr. Joseph Offord, besides contributing "Archæological Notes," writes on "Babylonian and Theophoric Names."

ITALY AND MONTENEGRO.

Under date of April 17, Reuter's Rome correspondent reports: In the course of his speech in the Chamber yesterday upon foreign affairs Baron Sonnino remarked that it had been said that Italy ought to have sent a military expedition to Montenegro for its protection, but this theory would not hold water for an instant. King Nicholas preferred exile to signing a separate peace, having confidence that the final victory of the Allies would restore the independence and territorial integrity of his country. The occupation of Durazzo had the temporary object of safeguarding the Serbian Army when the latter was attacked. The Italian land forces were concentrated at Valona. The embarking of the troops at Durazzo was accomplished in particularly difficult circumstances, and the operation reflected great credit on the quality of the Italian forces. The total losses were 307 men, a small figure when compared with the much greater losses inflicted on the enemy.

As regards the legal position in North Epirus following recent events, he was assured that the Greek Government had formally recognised that the occupation of this region was of a purely temporary character and for purposes of policing and not of conquest. Greece recognised to-day the decisions of the Ambassadorial Conference in London relative to Albania.

LETTERS AND PARCELS FOR TROOPS IN EGYPT.

An official notice issued on Monday evening states:—

In consequence of a revision of the arrangements for delivering letters, etc., to troops in Egypt, correspondence and parcels for such troops should not in future be addressed to any particular place; but the final words of the address should be "Egyptian Expeditionary Force." This arrangement applies to all troops in Egypt, including the troops forming the Force hitherto known as the Mediterranean Expeditionary Force, as well as those forming the Force in Egypt (late Army of Occupation).

The regulations of the postal service are shown in the leaflet entitled "Letters and Parcels for the Mediterranean Expeditionary Force and for the Salonika Force," copies of which are obtainable on application at the larger post offices.

COMFORTS FOR THE WOUNDED.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Will you kindly allow Mrs. Anderson and myself to offer our most grateful thanks to those of your readers who have so generously responded to the appeal for mufflers for the wounded, as a sufficient number has been received?

I shall be very thankful for further contributions to my Eau-de-Cologne Fund, as I have not much money in hand at present, and this little luxury is deeply appreciated by the poor sufferers. As the weather gets warmer it will be more needed than ever.

The eau-de-Cologne sent is of good British make.—I am, etc.,

MARION LEE.

19, The Paragon, Bath, April 9.

A Corfu telegram, received last week, reports that the Serbian Press Bureau declares that a reign of terror exists in the Doiran district and other places from which reports have been received. Komitaji bands are murdering and robbing merchants, gold being chiefly exacted. Twenty citizens of Resan have been taken to Sofia, where, it is reported, they have been put to death.

A semi-official statement, issued by the Serbian Press Bureau in Corfu, says that the Bulgarians are meeting with no success in endeavouring to recruit Albanians for their army. Owing to outrages against Albanian women, the inhabitants of some districts, notably Pishkopeia, have taken up arms against the Invaders.

Prince Mirko of Montenegro has been examined by Professor Ortner and a number of specialists in Vienna. He is suffering from under-nourishment.

Prince Alexander of Serbia left Rome on Sunday morning. Before leaving he expressed to the Rome correspondent of the *Morning Post* his great satisfaction at his reception in London.

Under date of April 17, Reuter's Corfu correspondent reports:—Prince Alexander of Serbia on his arrival here at five o'clock this evening was received by Ministers, members of the Diplomatic Corps, chief officials, members of the various Missions, and representatives of the Allied Armies. French and Serbian guards of honour, with their bands and flags, were in attendance, and an immense crowd filled the streets. After inspecting the guards of honour, Prince Alexander went to the Esplanade, where the Serbian troops marched past. The review was an imposing spectacle, the troops having the appearance of a young army full of dash and enthusiasm, and completely recovered from the stress of the recent campaign. The Prince expressed his lively satisfaction, and the crowd cheered frantically both Prince Alexander and the Serbian Army.

The *Egyptian Gazette* of March 28 reports: Lord Chelmsford, the new Viceroy of India, has arrived at Cairo and was entertained by the Sultan at a banquet at Abdin Palace on Saturday evening. Among the other guests were Lady Chelmsford, the Ministers, M. Albert Defrance, the French Diplomatic Agent, M. Alexander Smirnow, the Russian Diplomatic Agent, Sir Ronald and Lady Graham, Sir Milne and Lady Cheetham, and the Hon. Mr. R. Lindsay.

Lord and Lady Chelmsford, during their brief stay in Egypt, were the guests of the High Commissioner and Lady McMahon. On their departure the High Commissioner accompanied them as far as Suez, and on the morning of March 27, accompanied by the Commander-in-Chief, Sir Archibald Murray, rode out to Moses Well, and from there made a tour of the outer defences of Suez, returning that night to Cairo.

Sir Ralph Paget left London for Scotland on Tuesday.

Sir Afsun ul Mulk has arrived in Cairo, and is staying at Shepheard's Hotel.

The marriage arranged between Lord St. Davids and Miss Betty Rawdon-Hastings will take place at St. Margaret's, Westminster, at 2.15 next Thursday.

The Crown Prince of Serbia has conferred the Order of the White Eagle, Class V., on Dr. Elsie Inglis, Commissioner of the Scottish Women's Hospitals for Foreign Service, in recognition of the work which she did in Serbia. Dr. Inglis, on whom was bestowed the Order of St. Sava III., is the first woman to be decorated with the Order of the White Eagle, which is the highest order in Serbia.

On Thursday of last week Lady Paget attended a meeting of the Serbian Relief Fund Committee, and gave a preliminary report of her experiences with her hospital during the retreat of the Serbian Army and the subsequent occupation of Skoplje by the Bulgarian and German troops. The Committee expressed its deep appreciation of Lady Paget's fortitude and of her narrative.

We learn from a correspondent that Messrs. Tod, T. D. Cree, and J. L. Battey, who are shut up in Kut with General Townshend, were all well a fortnight ago.

The marriage took place on the 11th inst., at St. George's Church, Campden Hill, Kensington, of Lieut.-Colonel Lindsay Sherwood Newmarch to Mrs. Rose, widow of Capt. J. C. Rose, New Zealand Artillery. The Rev. J. R. Robbins officiated. Colonel Newmarch was from 1902 to 1903 Acting Consul-General at Baghdad. In the latter year his appointment as Consul-General was confirmed, and he held the position till 1906, when he returned to India.

Efforts are said to have been made to interest Prince Boris in securing the release of Dr. Gennadieff, the Bulgarian ex-Minister, who was recently arrested. Later reports state that he has been set at liberty, and paid a visit on Tuesday to M. Radoslavoff.

Our Bucharest Correspondent writes (March 30):—

George Enesco, the great violinist, has been very seriously ill with mumps. His numerous admirers all the world over will be glad to hear that he has now completely recovered, and will shortly recommence his concerts.

M. Stanoevitch, Secretary of the Serbian Legation, left Bucharest on March 20 for Corfu, being seen off at the station by numerous friends and colleagues.

M. C. Dissesco, who is one of Roumania's leading politicians and a brilliant orator, has been suffering for some years from his throat. His ailment has necessitated repeated operations, of which the last was carried out a few days ago by Professor Gluck.

Herr von dem Busche, the German Minister, who has recently spent a few days in Berlin, has now returned to Bucharest.

The *Gazette* announces that the King has been pleased to grant permission to Lieut.-Colonel (temporary Brig.-General) Francis Pitt Stewart Taylor, C.M.G., Army Service Corps, to wear the Insignia of First Class of the Order of the White Eagle, conferred upon him by the King of Serbia in recognition of valuable services rendered.

Many readers of THE NEAR EAST will have read with much pleasure the announcement in the *London Gazette* that "the King has been pleased to give and grant unto Lieut.-Colonel Henry Philip Picot, late Indian Army, formerly Military Attaché to his Majesty's Legation at Berne, his Majesty's Royal licence and authority to wear the Insignia of Officer of the Legion of Honour, which decoration has been conferred upon him by the President of the French Republic in recognition of valuable services rendered by him." Colonel Picot was at one time Military Attaché at Teheran, and for two years was also Oriental Secretary to the Legation. He is a recognised authority on the Near East, and has many important interests in that part of the world. On the death of Mr. H. F. B. Lynch, M.P., he succeeded to the latter's interests in the Euphrates and Tigris Steam Navigation Company, and he took an active part in securing the control of the oilfields of Southern Persia for this country. During his service with the Indian Army he took part in several campaigns and was frequently mentioned in despatches.

The Sultan of Egypt has conferred the Order of the Nile, third class, upon El Miralai J. Powell Bey, M.B., of the Medical Corps, on his retirement from service in the Egyptian Army.

The King has been pleased to grant permission to Mr. Kenneth Peel Birley, ex-President of the British Chamber of Commerce at Alexandria, to wear the Insignia of the Second Class of the Order of the Nile conferred upon him by the Sultan of Egypt in recognition of valuable services rendered.

Speaking at the luncheon given at the Mansion House last Friday in connection with the annual meeting of the Association of Municipal Corporations, the Lord Mayor referred to the story that an ancestor of Lord Derby was once offered the Throne of Greece. Lord Derby, in reply, said that he had never been able to get to the truth of the story, but he rather believed that his father's elder brother was approached on the matter. Had he accepted the offer, added Lord Derby, there would have been no question of Greek neutrality to-day.

The Rev. John Hilton Molesworth, lately chaplain of All Saints' Church, Cairo, has been appointed by the Lord Chancellor to the living of Feltwell, in Norfolk, about twelve miles from Ely, where he hopes to commence work at the end of May.

Mr. E. B. Norton, formerly of the Egyptian Public Works Department, is at present Commandant of the Al Hayat Depôt, Helouan, with the rank of Major.

The death took place last Friday at Hove of Mrs. Wallis, widow of Mr. John Edward Wallis, Judge in the Mixed Tribunals of Egypt. Mrs. Wallis was eighty-four years old.

The death is announced of Mr. Charles Alfred Cooper, a former editor of the *Scotsman*, and the author of "Seeking the Sun," a series of letters from Egypt. He was 87 years old.

It is announced that Lieutenant-Colonel Richard C. B. Throckmorton, Royal Welsh Fusiliers, attached Wiltshire Regt., has been killed in action. He served at Malta from 1894 to 1896, and at Aden from 1896 to 1897, and afterwards took part in the South African War.

It is officially announced that Major Oswald Head Lawson (Indian Army) has died of wounds. He took part in the expedition to Dongola in 1896, and received the Egyptian medal. Afterwards he fought in the Tirah Campaign (1897-98) and took part in the Tibet Expedition.

Lieutenant Louis Latham Baird, R.F.A., who died of wounds on April 11, aged 33, was the elder son of the late Peter Baird, of Muiravonside, Stirlingshire, and grandson of George Latham, M.Inst.C.E., who in 1862 surveyed the route from Basra to Alexandretta. Lieutenant Baird was a mining engineer in Jalisco, Mexico, where he had spent fourteen years. Some months before the war he was taken prisoner, and held to ransom, by the Mexican rebels under Villa. On the outbreak of war he wound up his affairs at Jalisco and returned to this country, and at once received a commission in the R.F.A. He served all through the Dardanelles fighting.

The death is reported of Mr. Arthur Roy Alderson, youngest son of Mr. George B. Alderson, of Alexandria, who was killed in action in France, after having just returned from leave in England, where he leaves a widow and one child, a son, born in October last. Mr. A. R. Alderson, who was the sub-manager at Cairo of the firm of Messrs. Allen, Alderson and Co., had been in Flanders since May, 1915. He joined the Army in October, 1914, and held a commission in the Royal Engineers.

The death took place last Saturday of Mr. A. M. Broadley, who was senior counsel for Arabi Pasha at his trial in Cairo in 1882. He figures largely in Mr. Wilfrid Blunt's "Secret History of the English Occupation of Egypt" and "Gordon at Khartoum."

The Gold Medal of the Royal Asiatic Society, annually offered for competition in the Public Schools, has this year been awarded to J. R. Hassell, of Denstone College, for his essay on "The Emperor Baber."

In response to letters received from officers serving in Mesopotamia deploring the absence of comforts for the men in our forces, especially the wounded, Lady Reid is sending by the most expeditious route such comforts as

Digitized by Google

are possible. Subscriptions or gifts can be sent to 1, Melbury Road, Kensington. The things most desired are goggles, tinned fruit, chocolate, Bovril, cocoa tabloids, jelly tablets, tobacco, Virginia cigarettes, light pyjamas, socks, cotton vests, medical bandages, aspirin, and disinfectants.

Our Bucharest Correspondent writes (April 4):—

M. Alexander Xenopol, the well-known professor of History at the University of Jassy, has been seriously ill with double pneumonia. We are glad to hear that he is now out of danger.

Baron de Beak-Friis, the Swedish Minister in Vienna, who recently presented his credentials to King Ferdinand, has returned to Vienna. The Swedish Military Attaché, Major de Ström, who accompanied him to Bucharest, has likewise left.

M. Padeanu, Roumanian Consul at Rustchuk, is for the moment in Bucharest.

Noury Zia-Bey, Secretary of the Ottoman Legation at Bucharest, has been transferred to the Turkish Embassy at Vienna.

The Inquiry Department of the British Red Cross Society and the Order of St. John continues to make inquiries concerning British prisoners of war in Turkey and Bulgaria. All inquiries should be addressed to the Secretary, Inquiry Department, British Red Cross, 18, Carlton House Terrace. It is necessary to give the name, number, rank, company, and battalion of the man to be inquired for, together with the nature and date of the casualty.

Next Tuesday will be the first anniversary of the landing of the Australian and New Zealand soldiers in Gallipoli, and arrangements have been made to commemorate the occasion. In the morning the King and Queen will be present at a memorial service for the Australasian soldiers who fell in Gallipoli to be held in Westminster Abbey. About 2,000 members of the Australian and New Zealand Imperial Forces will march through London to the Abbey, where most of the space will be reserved for them.

After the service a luncheon will be given to the Australians at the Hotel Cecil. In the afternoon a concert, organised by the High Commissioner for Australia and the Agents-General, will be given at His Majesty's Theatre, which has been lent for the purpose by Sir H. Tree. Mr. Hughes, the Prime Minister of the Commonwealth, will give an address. Over 1,500 members of the Australian Imperial Force, mostly wounded and convalescent men, will be present. A limited number of seats are available for the public at prices from 2s. 6d. to 10s. 6d. Application should be made to the Australian Military Office, 130, Horseferry Road, S.W.

The Lord Mayor, President, Viscount Bryce, Vice-President, Mr. Aneurin Williams, Chairman of Committee, and the Rev. Harold Buxton, Hon. Secretary, in an appeal on behalf of the Armenian Refugees (Lord Mayor's) Fund state that about £40,000 had been collected up to March 1 last. As rapidly as the funds had been received they have been telegraphed to the Russian Caucasus, through reliable intermediaries, including H.M. Consul-General at Moscow, the Mayor of Tiflis, the Catholicos of the Armenian Church, the Central War Victims Relief Committee in Tiflis, and the American missionaries who are engaged in relief work. Money has also been telegraphed to H.M. Consul in Tabriz for the Syrians and the other refugees who have fled to Persia. Cheques should be sent to the Hon. Secretary, Armenian Refugees (Lord Mayor's) Fund, at the office of the fund, 96, Victoria Street, Westminster, S.W.

Mr. A. O. Lamplough, whose pictures of Egypt are so well known, is again visiting the Nile, and is expected in Cairo shortly.

The *Egyptian Gazette* reports the death by drowning in the Nile of the only daughter of Mr. and Mrs. Carrick, of Luxor.

The Serbian Relief Fund is already in touch with upwards of 16,000 Serbian prisoners of war in various camps in Germany and Austria-Hungary, and has been able to send supplies of food direct to these camps, through the Russian organisation at The Hague. Shirts, socks, and underclothing are being sent from the Serbian Relief Fund Depot, at 5, Cromwell Road, S.W.

The Sultan of Egypt is having a series painted of all the rulers of that country from Mohammed Ali to the Khedive Tewfik. These pictures will be among the new decorations of Ras-el-Tin Palace. The portrait of the Sultan will head the series.

Sir George Hugh Wyndham, K.C.M.G., C.B., of Rogate Lodge, Petersfield, a former Secretary of Legation at Athens, Petrograd, and Constantinople, and afterwards Minister to Serbia and Roumania, has left unsettled property of the value of £9,549.

APPOINTMENTS, PROMOTIONS, Etc.

Captain Rhys Williams, D.S.O., K.C., has been appointed Acting Military Attaché to the British Legation at Teheran.

The Governor-General of the Sudan has appointed Captain E. C. Midwinter, C.B., C.M.G., D.S.O., General Manager, Sudan Government Railways; and Captain M. R. Kennedy, C.M.G., D.S.O., Director of Works, Sudan Government, as additional members of the Governor-General's Council.

Mr. Hargraves, Inspector Egyptian Ministry of Finance, has been definitely appointed Director of the Public Health Department Accounts, and Mr. Emile Cassab, as Director of the Tanzim Department Accounts.

El Bimbashi (temporary Kaimakam) C. R. K. Bacon, of the 15th Sudanese, has been promoted to the rank of Kaimakam, and appointed Officer Commanding 15th Sudanese.

El Bimbashi H. M. Craigie-Halkett, of the Blue Nile District, has retired from service in the Egyptian Army.

Captain Avendell F. C. Martyn, Royal Army Medical Corps, has been taken on the strength of the Egyptian Army, with the rank of Bimbashi, vice El Miralai J. Powell Bey, M.B., struck off. This officer is posted to the Medical Corps.

Captain H. C. E. Jebb, and Lieutenant H. B. H. White, having reported their arrival in Egypt from England, have been attached to the Egyptian Army as Special Service Officers and granted the temporary rank of Bimbashi. Captain Jebb has been posted to the 12th Sudanese and Lieutenant White to the 1st Battalion.

Miralai Woodward Bey, D.S.O., Governor of Upper Nile Province, Sudan, has reverted to the British Army on completion of ten years' service with Egyptian Army. Before his departure, the officers, employees, merchants and notables of the Upper Nile Province expressed to him their regret at his severing connection with them and their best wishes for success in his future career.

A number of the engineers and officials of the Egyptian Public Works Ministry have made a subscription for a presentation to Mr. Williams, Inspector-General of Irrigation on the occasion of his retirement from the service on April 1.

Major C. C. Lamb, the Black Watch (Royal Highlanders) has ceased to be attached to the Egyptian Army as special service officer with effect from April 1, 1916.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

GORDON—On March 26, at Alexandria, the wife of Stanley I. Gordon, of a son.

GRAY.—On March 24, to Mr. and Mrs. R. W. Gray, Teheran—a son.

MARRIAGE.

NEVILL—LE BAS.—On January 4, 1916, at the British Consulate and the Church of the Epiphany, Port Said, Egypt, Cuthbert St. John Nevill, of B Battery H.A.C., elder son of Sir Walter and Lady Nevill, of St. Bernard's, Highbury New Park, London, to Eunice May, daughter of the late Philip and Mrs. Le Bas, of St. Andrew's, Guernsey.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

CYPRUS PALACE HOTEL
NICOSIA, CYPRUS.
Charming position. Beautifully situated in the best part of Nicosia.
Most magnificently built and furnished.
FRENCH and ENGLISH CUISINE.
Every Comfort. Moderate Charges.
Special terms for extended visits.
BRANCH OF THE CYPRUS HOTEL CO.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJEB HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najeb Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.
All arrangements for Transport by Carriages, etc. are made by the above Firm.

SCHOOLS for BOYS & GIRLS.
TUTORS for ARMY & ALL EXAMS.
REFINED HOMES with EDUCATION for children whose parents are abroad.
Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.
The age of the pupil, district preferred, and rough idea of fees should be given.
J. and J. PATON.

FRIDAY, APRIL 21, 1916.

THE LULL IN THE NEAR EAST.

The threat of big things in the Near East has not materialized. On the one hand, the attack on Salonika, which was to round off the successful thrust of the Germans and their allies through Serbia, has not been undertaken; on the other hand, it is open to the enemy to taunt the Allies that on the only occasion on which they have not sent, as the saying is, a boy on a man's errand, they are reduced to impotence. There can be little doubt that the Franco-British force at Salonika is not yet "pulling its weight" in the Allied boat. It has kept the enemy out of Greece, and to this extent has thwarted his plans; it is preventing a certain number of German and Austrian troops from being employed elsewhere; but in the general scheme of things it cannot be said that so far the results of the landing at Salonika have been proportionate to the effort. This is, however, not to say that the expedition ought never to have been despatched. It was, as we know, too late to achieve its primary object—the protection of Serbia—and from the date of its arrival it has remained, through no fault of its own, more or less in the air. The presence of a Franco-British force at Salonika to be effective required the co-ordination of several other military movements. If the Serbians could not remain long enough in Serbia to enable it to bring them help, it was out of the question that this force should unaided carry on the war in the Balkans. What was required when the expedition arrived too late to save Serbia was the immediate correlation of every effort that the Allies could put forth in this theatre. An understanding with the Roumanians would have sufficed to set in motion both the Salonika force and the Roumanian army. Together they represent a factor that at any time would be decisive in the Balkans, and only bad business management has kept the two idle for so long. There is no desire to overlook the difficulties in the situation. Roumania's participation in the war is dependent on the fulfilment of certain conditions, and unfortunately the absence of a single driving power in the Allies' conduct of the war has prevented these conditions from being fulfilled. An advance from Salonika presupposes an entirely new form of transport, and unless there could be an adequate mobilization of effort to provide that transport, the absence of it constituted a sufficient argument against an advance. Again, the absence of a single driving power among the Allies, which, having decided upon the landing at Salonika, would naturally see it carried out to its logical conclusion, is responsible for an unbusinesslike waste of so much potential war energy.

Whether even now the most is to be made of the Allies' opportunities in the Balkans cannot be stated with certainty. Counsels, it is known, have been divided on the subject. One school of thought is strongly opposed to any dissipation of strength, and advocates that Serbia and the Balkans should be left for all time to themselves, while the two main armies continue to confront one another in parallel lines of trenches on the western front. This line of argument, if pressed, would compel the French Commander-in-Chief to concentrate his forces, say, at Verdun and Ypres, while leaving other parts of the line, from the Channel to Switzerland, undefended. There seems to be as much reason in challenging the enemy's advance in the Balkans as there is in holding him now on the Franco-Belgian frontier. A serious defeat at any one point in the western line must affect the position along the whole length of it. A similar reverse in the Balkans may not result in the killing of so many Germans, but it will affect no less materially the whole strategic outlook for the enemy. If Bulgaria could be detached from the alliance which King Ferdinand and his bribed Government contracted with the Central Powers, Turkey's resistance would come to an end at once. The Allies and Roumania could invade Hungary and threaten the enemy at a vital spot. To enable Bulgaria to break with her present allies, whose presence in the country is resented by the mass of Bulgarians, it may only be necessary to deal one or two decisive blows on the army in the field. The far-reaching objects to be attained are at least worthy of the attempt. What immediate prospects there are of the Allies breaking the German line in the west we have no means of knowing. The effort will at least have a better chance of success, and must prove far less costly, if it is launched when the Central Powers have to defend themselves on yet another front in the Banat. A vigorous thrust in the Balkans, not necessarily confined to the difficult mountain tracks that lead from the Salonika district into the interior, is the one preliminary step needed.

Those who believe that the duration of the war can be materially shortened by military action in the Near East will perhaps allow their hopes to be raised by the negotiations now in progress between the Allies and the Greek Government regarding the transportation of the Serbian army over Greek railways. If the Franco-British force at Salonika is to remain at its present strength, and is to be reinforced by the whole Serbian army, it is difficult to believe that the offensive is not shortly to be taken against the Bulgarians. In the long run the problem resolves itself into a question of men, and for that reason the ultimate decision may depend more on the solution of the recruiting question in Great Britain than on General Sarrail's estimate of the difficulties of the undertaking. On both sides, therefore, the lull in the Near East has reflected to some extent the exhaustion of the belligerents. In the case of the enemy, we hope and believe that the exhaustion represents a permanent factor—with the Germans and Austrians an exhaustion of fighting strength which cannot be replaced; with the Bulgarians an exhaustion of moral and of the enthusiasm which impelled the army against the Serbians, but fails it when it is called upon to drag out the campaign against the Entente Powers. As far as Great Britain is concerned, there can fortunately be no question of her resources being used up at this stage; but we may trust that at last the policy of uncertainty and *laissez faire* has been exhausted. General Sarrail at Salonika may well hesitate to advance until he is satisfied that a steady flow of reinforcements is assured. No such promise is likely to have been given him so long as the demands allowed on the British Army were to be subordinated to an inadequate supply in preference to a policy which would open the doors of supply to the widest limits in order that all possible demands should be instantly met. When the sounder course is adopted the period of marking time in the Balkans should come to an end.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

JOURNEYINGS IN ASIA MINOR.

By MARY A. POYNTER.

IV.—From Eski-shehr to Konia.

The railway line from Eski-shehr to Konia seems to be laid out with more direct intention than that from Eski-shehr to Angora, the former it would seem being impressed with its ultimate destination—Baghdad. When the line from Constantinople viâ Eski-shehr and Konia to Baghdad is completed, the journey must be made in seventy-two hours, so that calls at the stations must be hasty ones instead of the pleasant and many minute visits the train makes at each town and hamlet it passes through to-day. This latter way of travelling is more agreeable, especially if one is not in any particular hurry, and also has the desire to get acquainted with the country and its people. Even getting up to take a five o'clock train of a spring morning is not a laborious undertaking, since it does not involve bustling through a restful old landscape at express speed, or any other exciting experience out of keeping with the country's environment.

And here I would say a word relative to the exigencies of the present situation in this part of the world. From our comparatively recent experience with railway travel in Asia Minor, it seems rather difficult to imagine how these one-track lines, running most leisurely up hill and down dale, and even over high mountains as they do, lines not too well laid and with limited equipment, short also of men and material in this time of war, are going to transport great armies and at the same time to carry even the necessary food supplies to Constantinople and its neighbourhood. All this, to say nothing of their attempting to supply the Balkan States and Austria and Germany with the provisions of which Turkey so sorely stands in need herself, since all communication has been cut off with Black Sea ports and with the Mediterranean. It looks very much as if the Germanic Powers had been counting spoils that could not be delivered.

On starting out from Eski-shehr we took the precaution to provide ourselves with provisions for the whole day's journey, for the wayside stations do not provide refreshment stands, though they offer plenty of quiet entertainment otherwise. A pair of gay saddle-bags, which we, as outsiders, unfortunately did not possess, is the Asia Minor equivalent for a Gladstone bag or a smart dress-suit case. As on the Eski-shehr-Angora line there is a fountain, a well, at every station, and the Faithful, with common clay jug (often of antique pattern), with pitcher and bucket, rush from the train for a cooling draught. If it chances to be one of the five appointed hours for daily prayer, the men will say their *namaz* on the station platform, or will go into the adjoining fields that offer more room, though scarcely more privacy. When the train is ready to start, it sometimes happens that the men engaged with their prayers are oblivious to the usual summons, and the motley crowd at the well takes no heed until the gendarme cries "Haidé! haidé!" and the train shows symptoms of getting under way. Then there is a great scrambling towards the third-class carriages, and jeers from the onlookers at the station as some poor elderly *baba* almost succeeds in being left behind. The great proportion of passenger traffic—indeed nearly all—is third-class, as tourist travel can hardly yet be said to have begun in this part of Asia Minor.

The railway along this route follows at first up the valley of the Pursak—the same Pursak that joins the Sangarius river midway between Eski-shehr and Angora—winding for some miles among the limestone hills, crossing and recrossing the river, rumbling through tunnels and narrow cuttings, glimpsing many weird rock formations and artificial caves, doubtless once the habitations of man, until Alayund, a station on the eastern edge of the great plain of Kutahia, is reached. Here there is a branch line running up to Kutahia, some eight miles away. Kutahia (old Kotyäon), which lies at the foot of a mountain, was in its day surrounded by fine walls, and was the seat of the Sultans of Karaman until it came under Ottoman sway in the time of Mohammed the Conqueror. In the nineteenth century it offered refuge to many Polish and Hungarian refugees, even to so distinguished a fugitive as Louis Kossuth. Kutahia was a centre also where art—at least in pottery—was encouraged, and flourished to a really notable degree. Its wonderful old work in faience—after Persian methods—sometimes so good that it has been confused with Rhodian ware, has decreased in output and degenerated in quality; though occasional specimens that are offered for sale at the station of Alayund and elsewhere show a pleasing, if rather glaring, colouring, and the persistence of some of the old forms and patterns indicate that the art is not completely lost.

After Alayund the railway runs in a south-westerly direction along a river valley called the Tchai Su until it reaches another broad upland plain. This plain opens the way to many interesting districts. On a spur of the mountains some twenty-five miles to the left of the railway station of Duver the traveller with an inquiring mind may find the site of the chief city of the old Phrygian kingdom; here also are the rock tombs, comparatively recently discovered, of the old Phrygian kings. Some of these royal tombs are wonderfully sculptured and ornamented, and one of them records that it is the tomb of King Midas, or one of his kingly descendants. But the Midas touch that turned all things to gold has ceased for long centuries to perform such function. The inhabitants of Phrygia to-day see little gold, though much hard labour falls to their share. The mountains here are wooded dense and deep in places, and the air is gloriously pure and exhilarating and not too cold during the summer months. Already there have been one or two expeditions, "camping out" parties, in the neighbourhood of the Phrygian tombs, and delightful stories are told of camp life among the pines and of the wonders to be seen among these mountains.

The villages on the great plains leading down, or rather up from Eski-shehr to Konia seem to be better built and look a trifle more prosperous than those on the plains leading on to Angora; and the carriage roads—perhaps it would be more accurate to say cart roads—may present fewer bumps and inequalities than those in some parts of Asia Minor, or Anatolia, as this part of the world is more frequently called at the present time. One of the most interesting survivals of a past going back into the dawn of history is the Phrygian cart with its two solid wooden wheels revolving on a wooden axle. This cart is seen to more æsthetic and quite beautiful effect on a frieze of the classic sarcophagus called "The Weepers," now in the museum at Constantinople. But it is seen in modern life, and most interestingly, as it goes creaking over the Phrygian plains to-day, carrying not too heavy loads and drawn by placid white oxen or the kindly, though ugly, black water buffaloes, who never seem to hurry with their burden. During the heat of the summer much of this sort of travel goes on at night, and a friend who was camping out in this region one season asked the driver of one of these carts why he did not oil his wheels to keep them from creaking. "Aman, aman," he answered, "it keeps the oxen awake!" And so they go creaking down the centuries, creaking so loudly in their leisurely progress that sometimes they can be heard even above the roar of the train.

Before the railway came the only really long-distance burden bearers were the camels, and caravans of these wind solemnly through the landscape still, led or preceded as usual by the donkey—this custom being an affront which the camel, on one of the occasions when he has been credited with the gift of speech, said he would never forgive!

Dark-visaged Kurdish soldiers and their hardy mounts were seen at some stations on their way homeward-bound from the war. I think they felt, as they looked, rather foreign among the peaceful-looking population of these particular plains. The dogs of the whole countryside have learnt to know what time each train is due, and are waiting in numbers for its arrival; and very persistent beggars they are beneath the windows of those who are taking their lunches on the train. The favourite feeding-grounds of the storks are the occasional marshy places on the plains, and there seems to be enough food for them and to spare, for during the stork and frog season there is a continuous chorus throughout the day as well as during the night from these happy feeding-grounds. The stork stands in the shallow pools in dozens, posing on one leg with a grave, meditative air, and it is not often one can catch him losing his dignity enough to grasp crudely for the dinner that is croaking at his feet.

On our visit to Konia, Spring's armistice with Winter was over, peace had been signed, and full Summer was at hand. The yellow iris was growing luxuriantly in the moist places, and all over the plains there were bright patches of colour of the different flowers known to Phrygia. Anyone travelling through these places at the end of May, as we did, perhaps might hardly recognise them two months later, burned as they would be by the sun that shines so hotly during the summer days. But everywhere we stopped on these highlands we were told of winters many months long and of snows that lie deep and winds that blow exceeding chill. So the traveller who visits this part of Asia Minor for pleasure, business, or in the interests of archæology usually chooses the five mild months for his journey. The site at least of almost every modern town was chosen centuries back by a people who left temples and written records in marble and who bore names more impressive than those borne by the poor people who now occupy these places. But the ancients who chose to build their cities here must have been a hardy race—as are the people who continue the succession, though not the old traditions, to-day.

We came to the important town of Afium Kara Hissar about mid-day on our journey, and its striking appearance commanded immediate attention. A great rock rises precipi-

Digitized by Google

tously about eight hundred feet above the plain and the fortress or citadel built upon its top by Ala-eddin seems to crown a sheer height—from the railway one can see no road or a place for a road that would seem to lead to the summit. The town itself lies at the base of this impressive rock and against a gently-sloping hillside behind. In ancient times it was called Akro Enos, and doubtless it has always been an important place, unique certainly as to situation, and important in earlier days as a station on the old caravan road that led south and eastward. Now Afium Kara Hissar is the home of some 20,000 people, mostly Turkish, and is the junction where the railway from Smyrna joins this, the Anatolian railway proper. Its carpets and inlaid woodwork are in demand, and the opium it exports is said to be the best in the world. The poppy fields spread out in all directions, a mass of mauve and white blossoms in the early summer, and the broad plain is fertile and produces many crops other than that grown for the production of opium. The special interest that this town has for us here in England at this moment is that a number of British and French prisoners of war are now confined there, of whom we hear not too uncomfortable reports occasionally through the newspapers.

From Afium Kara Hissar a three hours' drive to the westward will bring one to the wonderful marble mountain of Synnada—wonderful for the varied and many beautiful marbles it furnished to the classic world, though all unworked to-day. In the long ago Synnada was one of the chief cities of Central Phrygia. Strabo speaks of it and its marbles, and says: "Although the distance from the sea is so great, this forms no obstacle to the export to Rome of pillars and tables of immense size and of surprising beauty." Cicero refers to the town of Synnadensius, which he passed on his way from Ephesus to Cilicia. The old town is gone, but its marbles endure. Rome and other parts of Italy have beautiful and extensive samples of them,* but perhaps they are seen to most beautiful advantage of all in the decoration of the inner walls of Santa Sophia at Constantinople. Paulus Silentiarius, the royal poet, who sang the praises of this church—perhaps Justinian's greatest achievement—says, in the year 563 A.D.: "Yet who, even in the measures of Homer, shall sing the marble pastures gathered in the lofty walls and spreading pavement of the mighty church? . . . the many coloured marbles from the Phrygian range in which a rosy blush mingles with white, or it shines bright with flowers of deep red and silver . . ."; and again this poet tells that "Some of the fair columns that the masons have set up are from the Phrygian land towards the Mygdonian heights, hewn with strong axes; and looking on these flowers of stone one would say that white lilies mingled with rose cups or the soft petals of the short-lived anemone. Here . . . . is abundance of red and a mere tinge of white; there . . . thin sinews mix with the veins which dye the columns deep red as with drops from the Laconian shell." It is suggested that the famous so-called Alexander the Great sarcophagus and the other royal sarcophagi found at Sidon late in the last century were sculptured from this same Synnadic marble. The friend—since passed away—who gave me much data and many interesting accounts of this ancient marble storehouse said of his visit there: "We wandered over the mountain day after day, each day feeling the more one's incapacity to express the extent and the richness of the marble treasures here exposed to view. We visited twenty-five of the principal old quarries, which were all we could examine in the time at our disposal, . . . but truly their number is best expressed by the Oriental figure of one thousand and one. The largest quarry, known to the peasants as the 'great beehive,' is stupendous. As one climbs up the adjoining hill, made of marble chips, it suddenly bursts upon the sight, and the view of its extent, length, breadth, and depth has a most startling effect on the beholder. It looks like the end of a world, a scene of ruin and confusion, and the wonder increases when one reflects that all this has been wrought, not by convulsion of Nature, but by the puny hand of man, indicating what the toil of armies of slaves during untold ages has accomplished. A valley has simply been hewn out of the solid mountain; the clear-cut, precipitous sides stand sheer up on either side two hundred feet above present levels, . . . while at either end are peaks of hills of chippings." My friend further speaks of the wonderful variety and rich colourings of the marbles, and of one great quarry where the marble "was almost entirely of the purest and finest statuary marble." And adds that, "although man has worked these quarries for probably 3,000 years, he as yet has done nothing more than nibble at their treasures." Phrygian, Roman, Greek, and Byzantine mined here in their day, but these peoples and nations underwent great changes, and in course of time even the Roman road to Ephesus by which they carried their marbles to the sea became, through disuse, lost to man as a thoroughfare.

* As a single example, take the interior pillars of St. Paul's. Outside the Walls at Rome, pillars originally a part of Hadrian's tomb.

The plain onward from Afium Kara Hissar is bounded by quite high mountains, one of them, Sultan Dagh, reaching a commanding height, as its name would indicate. There are long stops at many small towns, as, for example, at Tchai (of old, Julia Ipsos), a place of importance in early days and also during the First Crusade; to-day it possesses the ruins of a Seljuklan *kan* and a *medresseh* that are worth inspecting for the beauty of their tiles and general ornamentation.

The great swampy lake of Ak Shehr is seen on the left for some time before the town of Ak Shehr is reached. This lake furnishes an abundance of fish, and, since there is no river of any size on this plain, it performs a very useful mission, and offers a good excuse for covering so large an extent of territory. Ak Shehr (formerly old Philomelion in Pisidia) is a town of distinct interest even to-day. It possesses some buildings, notably the Tash medresseh, with its beautiful gateway built in the thirteenth century, whose tiles, carvings, and other ornamentation show that the Seljuks had an art, borrowed perhaps in the first instance from Persia and Arabia, but in the end made quite distinct and, so to speak, their own. Here also is the tomb of Nasr-eddin Hodja, that humorist, fool, pious and wise man combined, who lived in the beginning of the fifteenth century, and whose tales and sayings, though so truly Turkish, are "relished by the best of men" far beyond Turkish borders. Even many modern tales and sayings of the Near East are attached to his name, which seems to have magic in it, and always ensures them a hearing. Nasr-eddin's tomb is a favourite place of Moslem pilgrimage, and to its lattices are attached many bits of garments, cloths, etc., put there by those in sore need and with the hope that some of the Hodja's accredited powers of healing may adhere thereto. The tomb has a gateway, but no surrounding wall or railing which would be the reason for having the said gateway. Perhaps this was done with a view of perpetuating the inconsistencies of the oracle himself, according to his sprightly and sometimes—though not always—subtle tales.

We were greatly tempted to step off at Ak Shehr on our journey to Konia, and go on horseback or take one of the comfortable-looking, gaily covered *talekas*, always in wait at the station, across the high hills to the right to a point where Sir William and Lady Ramsay had just pitched their summer tent—the former to carry on his work of excavations at the little village of Yalovatch that occupies the site of old Antioch-in-Pisidia. We had been asked to visit this camp, but, as this would involve the expenditure of more free days than we could then command, we reluctantly gave up that side expedition. Sir William Ramsay's name is a password throughout Asia Minor, and his work in connection with his discovery of the sites of Derbe and Lystra and of some of the Phrygian tombs, as well as his researches in all this region of St. Paul's labours, has been recorded in permanent and deeply interesting book form. Here in Antioch-in-Pisidia he has discovered one of the last of the old pagan temples, and has found therein inscriptions bearing record of Christians recanting (doubtless under pressure), and has made many other discoveries relative to this town of old, where, to hear Paul and Barnabas preach, "almost the whole city gathered" on a certain Sabbath, and where, "though many believed," the Jews stirred up trouble and persecuted them, so that "they shook off the dust of their feet against them, and came unto Iconium."

The train after leaving Ak Shehr (white city) soon skirts a great salt desert with hardly a tree in sight, then wanders through another valley, and comes to the town of Ilghin, near a lake bearing the same name. At this town, in a year something more than 500 B.C., Æsop, of the many fables, was born. Here also are medicinal springs, probably better known and more frequented in former times than they are to-day. Near Maidan the railway reaches its highest point, some 4,335 ft. above sea-level; then it descends into the great plain, a great amphitheatre as it were, of Konia. It was nightfall when we descended into this plain, but not too late to be greeted by a vesper chorus from skylarks, although, when the city of Konia itself was finally reached, it was time for each bird's head to be under its wing and too dark for us to see any of the sights of the town.

MAILS FOR EGYPT.

Beginning this week the mails for Egypt (by British packet) and India and for the Far East generally and Australia, *via* Suez, will be dispatched earlier from London, and the latest posting times for letters will be:—At the General Post Office, London, up to 2 a.m. on Friday without late fee; up to 3 a.m. on Friday with late fee of 1d.; at other offices in London, in time for the night mails on Thursday; in the provinces, corresponding times to ensure arrival at the General Post Office, London, before 7 p.m. on Thursday.

Newspapers and other printed matter should be posted, as at present, to reach the General Post Office, London, before midnight on Tuesday.

THE PRESS ON THE NEAR EAST.

Trebizond.

The news of the fall of Trebizond has naturally been received with the greatest satisfaction in England, and most of the London papers publish it together with leading articles on the great Russian success. *The Times* (April 19) discusses the effect which it will have upon the general campaign, and concludes:—

But details about the position of the Russian forces in this campaign are relatively unimportant in comparison with the actual and prospective advantages of their possession of Trebizond. It enables them to make full use of their command of the sea; it secures to them the fruit of their capture of Erzeroum; and it sets its seal upon their remarkably rapid and effective advance from the Caucasian frontier. The fall of Trebizond will be known in Constantinople before long, as the fall of Erzeroum became known, for all the attempts of Enver and his colleagues to suppress the news. Its moral effect must be great, though little evidence of it may reach the outside world for some time to come. Great Britain watches with strained attention and quick appreciation these swift and crushing blows struck by the Grand Duke against the Turk. They quicken our recognition of his military qualities, and heighten, if that is possible, our admiration of the gallant troops whom he commands.

The *Daily Chronicle* (April 19) says:—

The Russian capture of the great Black Sea port of Trebizond is the most important event that has occurred outside Europe since the capture of Erzeroum. . . The immediate military effect is, that the invading Russian armies in Asia have cleared and secured their right flank. Their centre can now act freely against Erzingian, the main Turkish inland concentration point in Western Armenia. When this is captured, as it may be before very long, Armenia north of the Taurus will be all in their hands. Thus held, the country would be for them a natural fortress, from which there is small risk of their ever being dislodged.

The *Morning Post* (April 19) appends to the news of the fall of the port a despatch from its Petrograd correspondent, from which the following passages are quoted:—

Communications over the whole front are to-day what they were when Alexander the Great fought across the same regions, and must be reckoned in terms of marching men. In other words, the modern machinery of warfare is required to operate under natural conditions which obtained over two thousand years ago. The Turks have on their side all the advantages of superior communications laterally along their strategic front. But these have been discounted by the strategic combinations of the Russians. The steady pressure upon the Turkish centre has been maintained for two months past, during which several advances to secure tactical advantages have been made. The Russians then delivered a heavy attack upon the Turkish left, which caused a diversion of one or two army corps in that direction. Apparently the Turks had been encouraged to hope for success in the direction of Bitlis-Mush, where the Russians are now marking time and repulsing hopeful attacks of the reinforced Ottoman armies. . . . Trebizond has fallen easily, thanks no doubt to attacks from sea and land. On the east, whence the Russians came, it is dominated by a high hill, Boz Tepe, which was no doubt strongly fortified, and to the north of it, at Kalmek Point, the Gasel Serai forts face the sea. Two rivers, the Iskele Boz and Kazghin, flow through the town, entering the sea at the Old Port.

The Defence of Egypt.

The *Morning Post* (April 17) published an interesting article on the above subject from a correspondent who wrote from Eastern Egypt on the 4th inst. The writer thinks that even the misguided Turk must now regard the scheme of holding up traffic on the Suez Canal as a hopeless adventure:—

His preparations continue in a half-hearted fashion; perhaps his pride prevents an open acknowledgment of inevitable failure; but whenever he does anything substantial the energy, the resource, and the bombs of our airmen—an invincible combination—scatter the results of his labours to the four winds. The Turk has not the remotest prospect of success. Probably he appreciates the impossibility of damaging the Canal, but to keep some Bedouins with him, and, what is more important for German policy, to endeavour to influence the Arab population of Asia and Africa, he may pursue a campaign of pinpricks in the shape of affairs of patrols. Anything in the nature of a serious attack on Egypt during the summer months is absolutely out of the question.

The writer goes on to say that our works have been developed at a speed "highly creditable to our troops," and that the Turk will be denied a reasonable chance of ever casting his eyes upon the waterway. A general description of the military works it is, of course, impossible to give, but the writer concludes with the description of the point which we quote below:—

Gebel Murr stands some ten miles north of Musa, a gaunt, stern sentinel guarding the approaches to the Canal on a far-flung line. It is the Gibraltar of the southern end of the zone, a mass of red stone as hard as granite, and with a surface polished by the sands drifted across it through the ages. With the assistance of fifty blasts a day arranged by skilful English miners and quarrymen, Indian soldiers have prepared that inhospitable top, and their officers are satisfied the fortress will stand the tests of war. An enemy marching westward must come through one of two passes, from which he would debouch in full view of Gebel Murr, who rears a head nearly 400 ft. above the sand, yet looks low and unimposing compared with the jagged ridges of Gebel Raha away to the west. Gebel Murr will take toll of any column that issues from the passes, and would welcome as soft music the bursting of high explosives against its face as a preparation for infantry attack. "Will he come?" Do not say he will not to anyone on Gebel Murr, or the monotony of months spent in carving rooms and underground passages in the toughest stone will be unrelieved by a hope which has almost become the prayer of the patriot.

The Position of Turkey.

Captain H. M. Johnstone, in his monthly War Notes contributed to the *United Services Magazine* (April), naturally devotes the greater portion of his space to a consideration of the battle of Verdun and its bearing upon the other fields of war. We quote the concluding paragraph of his notes, which follows a brief description of the Turkish positions against the British and Russian armies:—

We are expecting too much in the immediate present from our Russian Ally's successes. He is doing great things, but the exits from the Erzerum plateau are very troublesome at this season. His most promising moves from our point of view are the capture of Bitlis and the work he has done towards Kermanshah and Kirind, where he is said to be only 130 miles short of Baghdad. But the occupation of Kirind is almost certainly only by a mounted party of no great size, far ahead of the main body, and there are formidable passes, and he is operating in a country where his lines of supply to the rear of his columns are both long and difficult. The end of the Turkish resistance in Mesopotamia no doubt is beginning to show above the horizon, but the horizon is still some distance off. Meantime, General Townshend's situation seems to be pretty happy.

An American Opinion.

The *Christian Science Monitor* (March 30), of Boston, Mass., contains an interesting study of the present position in the Near East. After commenting upon the fact that the armies of the Central Empires and Bulgaria "have almost worked themselves to a standstill," while, on the other hand, the Allies, reinforced by the reconstituted Serbian army, have large and powerful forces at their disposal, the writer continues:—

Everything points, in fact, to a thorough-going offensive in Macedonia of some considerable importance. The Anglo-French contingencies now at Salonica are considerably stronger than is necessary for the mere defence of that port, and, when they are properly equipped for mountain warfare, there is no reason why, with the aid of the Serbian army, a forward movement should not be made with every hope of success. The object of the movement would, of course, be to threaten the flank of the German communications with Constantinople, and also to commence the work of the liberation of Serbia. The only thing which is likely to cause serious inconvenience is the absence of roads and railways in a country which is distinguished by its mountainous character. Against this, it must be taken into account that they could move forward simultaneously from three bases—namely, Salonica, Kavalla and Santiquaranta.

In regard to the possibilities of an offensive by our enemies, the writer thinks that this danger is past:—

The Austrian and German troops are urgently needed elsewhere, and, as far as is known, some of them have been transported into Bulgaria and others into Galicia. On their part, the Bulgars have done all that they bargained for, and are disinclined to battle themselves to pieces against the defences of Salonica unless they are assured of some adequate recompense for the sacrifices involved. This would entail the cession to them of either Kavalla or Salonica, or perhaps both, and as such payment would herald the entry of the Greek army, it is not practicable for the Germans to go so far in present circumstances. In short, the military operations of the Central Empires in the Balkans have led them into a cul-de-sac, although it must be admitted that their main object—*i.e.*, that of opening up communications with the Turks—has been successfully accomplished.

By order of General Sarrail, a Salonika newspaper has been suspended for publishing information regarding movements of Allied troops.

THE WORLD-FAMOUS
YAGHOURT
may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Locoums, Bamias, &c

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Turkish Reports. April 13.

Lord STRACHIE referred to the Turkish *communiqué*, published in the morning papers, announcing a British defeat on the Tigris on April 9. In the evening papers this was amplified by a statement that on the previous Sunday the Turks counted 3,000 dead in front of their trenches. As a result of this being published without any correct British statement accompanying it, friends and relatives of our men had been needlessly distressed. As we had at the present moment such a strict censorship of the Press, and nothing was supposed to be published which was inconvenient or against public policy, surely it would have been right to censor such statements as this, about the truth of which the Government knew nothing.

Lord SANDHURST: With reference to the Turkish report that some 3,000 British dead were collected in front of the Turkish trenches after the attack of the 9th, Sir Percy Lake reports that our total casualties in killed and wounded are much below this figure. He has satisfied himself by personal inspection and from inquiry amongst the wounded themselves that the medical arrangements generally have been satisfactory.

HOUSE OF COMMONS.

The Advance on Baghdad. April 10.

Mr. CHAMBERLAIN informed Mr. Bryce that the proposal to advance on Baghdad after the battle of Kut-el-Amarah was made neither by the Government of India nor by his Majesty's Government, but by the Commander-in-Chief of the Forces in Mesopotamia. General Townshend was under the command of General Sir John Nixon, and he did not communicate either with the Government of India or with his Majesty's Government.

Message from General Townshend.

Mr. ASQUITH, replying to a question put by Mr. Malcolm, said:—The King has graciously permitted me to read to the House the following telegram from Sir Percy Lake, dated February 17, 1916:—

"General Townshend has asked me to kindly communicate the following message to the King-Emperor:—'It is hard for me to express by words how profoundly touched and inspirited all ranks of my command have been by his Majesty's personal message. On their behalf and my own, I desire to express to his Majesty that the knowledge that we have gained the praise of our beloved Sovereign will be our sheet-anchor in this defence. —GENERAL TOWNSHEND.'"

Germany and Islam.

Lord ROBERT CECIL informed Mr. R. M'Neill that the contents of the papers recently captured in East Africa revealing the German attitude towards Islam were at once telegraphed to the British authorities in Egypt in order that the widest publicity might be given to them in Egypt and the Sudan, and copies of the papers were sent to the French and Italian Ambassadors in London. The French and Italian Governments had doubtless considered how they might best be used. Steps were being taken to obtain photographic facsimiles of the original documents, and these would be made available in the same way for circulation in Moslem countries.

A Suppressed Telegram.

Lord ROBERT CECIL informed Sir A. Markham that the telegram of the Tsar to the Kaiser, dated July 29, 1914, stating that it would be right to give over the Austro-Serbian problem to The Hague Tribunal was omitted from the German White-book. He understood that after its publication in the Russian Press the telegram was published in Germany with an unconvincing explanation as to its omission.

Consular "Hostages."

Lord R. CECIL, replying to Col. YATE, said information had been conveyed to the German Government that the German Consul at Salonika was being held prisoner by the French Government at the request of his Majesty's Government pending the release of the British Consul at Shiraz, in Persia. The intimation was made to the German Government on January 21. No fixed time was named within which the exchange was to be effected.

Germans in Persia.

Lord R. CECIL, answering Col. YATE, said information had been received to the effect that the Persian authorities had recently arrested certain German officers in Southern Persia, and his Majesty's Minister at Teheran had been instructed to ask, if this was the case, that the persons in question might be detained pending the release of the British prisoners at Ahram.

General Townshend's Position.

Mr. PETO asked the Under-Secretary for War whether the fact that, owing to the course that the operations in Mesopotamia had taken, General Townshend had been passed over for promotion had been considered; and whether he could undertake that, if and when he was relieved, the fact that the forces under his command had been besieged for the past four months would not be a factor which would operate to deprive him of rank which, under other circumstances, he might have been given.

Mr. TENNANT: I am informed that Major-General Townshend is forty-ninth on the list of major-generals, and that he has not been superseded. I cannot give any undertaking in the sense mentioned in the latter part of the question, but the House may be well assured that none of the circumstances attending General Townshend's skilful and gallant defence of Kut and his conduct of the operations connected therewith will fail to receive adequate and sympathetic consideration.

Greece and the Allies. April 18.

Mr. OUTHWAITE asked the Secretary for Foreign Affairs whether any protest had been made by the Greek Government in connection with the recent occupation of Greek territory by the forces of the Allies; and, if so, could he make any statement on the subject.

Sir E. GREY replied that certain protests regarding the measures the Allied Governments have been obliged to take on Greek territory and in Greek territorial waters had been received from the Hellenic Government. The circumstances which rendered such measures necessary were as follows:—The French and British Governments originally decided to dispatch troops to Salonika on the invitation of the then Greek Prime Minister. Shortly afterwards there was a change in the Greek Government, accompanied by a change of policy on the part of Greece, but the Allies could not recede from the undertaking they had given. Serbian territory was overrun by hostile forces, and the Allies had to take the Serbians to the nearest available place of refuge. The presence of the Allied forces at Salonika and the Serbian forces at Corfu had led to the Allies taking certain naval measures and precautions in Greek islands and waters to provide for the safety of the forces themselves, and the shipping employed in keeping the forces supplied. The reason for these measures was apparent: it was due to the action in the Ægean of enemy submarines using Greek islands as bases of operation. Any steps of this nature which the Allies might take followed as a natural consequence on the decision to send an expedition to the help of Serbia, a decision which was come to in the first instance at the request of Greece herself.

The Future of Constantinople.

Mr. OUTHWAITE asked whether the Foreign Secretary's attention had been called to a statement by M. Longuet, of the French Chamber of Deputies, to the effect that the Socialist Parliamentary Party had called on its representatives in the Government to urge that the Russian Government should be invited to forgo its claim to Constantinople in order to make possible the withdrawal of Turkey from alliance with the Central Powers, and to the further statement that this proposal had been favourably considered by the Foreign Affairs Committee of the French Parliament, and would he give consideration to the subject.

Sir E. GREY: I know nothing of this statement.

Prisoners in Turkey and Bulgaria.

Sir E. GREY informed Mr. MALCOLM that reports had been received from the representatives of the United States Government upon the treatment of British prisoners of war interned in Bulgaria and Turkey. The Porte agreed last January to the inspection of camps where British prisoners were interned. A strong protest had been made against the attitude now adopted, which was more inexcusable in view of the excellent treatment that the prisoners of war in our hands received. In reply to a further question, he aded that he could not promise to publish a report on the British prisoners in Bulgaria.

Later, replying to Mr. MALCOLM, Mr. FORSTER said that he had not yet obtained information as to the way in which the Bulgarian and Ottoman Governments were treating and lodging British prisoners of war. He had asked the Foreign Office to ascertain the facts through the American Government.

The Suvla Bay Landing.

Mr. HOHLER asked the Under-Secretary of State for War whether any report had been received from Sir Frederick Stopford on the subject of the operations under his command at Suvla Bay, would he state when it was received, and would he cause it to be published seeing that the reports of Sir Ian Hamilton and General Monro had been published.

Mr. TENNANT replied that dispatches had been received from Sir Ian Hamilton and Sir C. C. Monro, and it was customary to publish only the dispatches of the Commanders-in-Chief.

Sir E. CARSON inquired whether Sir F. Stopford had asked for an inquiry.

Mr. TENNANT: I believe that to be so.

Mr. HOHLER: Does the right hon. gentleman remember the case of Sir C. Warren and Sir R. Buller, whose reports were both published, and will he say why the case of Sir Frederick Stopford should not be put before the country as well as that of Sir Ian Hamilton?

Mr. TENNANT: I cannot recall at the moment whether the dispatches to which the hon. gentleman refers were, in fact, published before the conclusion of the war. I think not, but I would not be sure.

Egypt or England?

Mr. CATHCART WASON asked the Under-Secretary for War if orders had been issued that New Zealanders who might be wounded on the Western front must be sent to Egypt; and, in view of the fact that there was ample room in the hospitals in and around London, and that there were many objections, heat, flies, dysentery, infected soil, to sending wounded to Egypt, he would reconsider the matter.

Mr. TENNANT: The whole matter is now under consideration.

For Troops in Irak.

Mr. MALCOLM asked whether the Under-Secretary for War could inform the House what arrangements had been made for shutting the British and Indian troops on the Lower Tigris during the coming hot weather.

Mr. TENNANT was glad to be able to say that provision for proper accommodation was being pushed on.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Secretary of State for Foreign Affairs is informed by the United States Ambassador that an arrangement has now been concluded between the Bulgarian Government and the Swiss Postal Administration for the transmission of all postal packets addressed to British Prisoners of War interned in Bulgaria. Under this arrangement the Swiss Postal Administration undertakes the delivery of the packets to the Bulgarian Post Office at Sofia, which will be responsible for the subsequent distribution to the addressees.

***

Our Bucharest Correspondent's interesting account of the second German deal in Roumania throws some further light on a most remarkable operation. The grain deal has gone through at terms favourable for the Roumanians, though they are not less so for the Germans. As a matter of fact, if, on paper, Germany has to pay gold for her grain purchases, Roumania becomes her debtor for the new locomotives, and for the delivery of materials of first necessity to the value of £6,000,000, so that, in reality, the Huns are paying partly in kind, which is regrettable, though, after all, one cannot blame Roumania. A hopeful sign of the times, however, is the fact that Roumania has insisted on the return of her property —twenty-one engines—which the Germans ruthlessly took from her at the beginning of the war. It shows that neutrals are beginning to understand the unscrupulous business methods of the Huns, and are taking due precautions. If ever the day should dawn when a foreign country can say to us: "Give us back the goods you stole from us, or we shall have nothing to do with you"—then it will be time for Britannia to abdicate.

***

According to the German papers, the grain bought by them in their second deal amounted to 140,000 (not 100,000) trucks, as follows: 30,000 wagons of wheat and rye (i.e., all available stocks held in the country after the British deal, exclusive of 40 per cent. kept for home consumption), 100,000 wagons of maize, and 10,000 wagons of barley, beans, and peas.

***

The following further announcements have been received from Roumania during the week. One message reports the arrival from Germany of stocks and gold to the value of £2,500,000 for the part payment of cereals. It is now reported that, as a result of the institution in Berlin of a branch of the Roumanian Importation Commission—referred to in these columns last week—the Germans are organising a similar bureau in Bucharest. Further, Reuter reported on April 14 (delayed in transmission) that the Exports Commission "has intimated to corn merchants in Roumania that at the last meeting of the Commission it was decided that dealers who have offered 40 per cent. of wheat for home consumption may register at the British bureau for the sale of 30 per cent. of their stock."

***

The Roumanian Government has decided on an internal loan of £6,000,000, redeemable in forty years. At a meeting on the 17th inst., at Bucharest, of the nine principal banks (says the *Times* correspondent in the Balkan Peninsula), it was decided to guarantee this loan, to be issued at 84 with commission at 1½ per cent. The interest will probably be 5 per cent. It is expected (adds Reuter) that the amount will be easily raised, which, from what I know of Roumania, seems to me more than likely.

***

With reference to the Egyptian cigarette industry in February, the *Egyptian Gazette* of April 4 quotes from the *Monthly Journal* of the British Chamber of Commerce of Egypt for March (page 57) to the following effect: "The most noticeable increase (in the exports of cigarettes) was to Holland, which took £E4,451 worth, as against £E1,818 last January, although this was probably not for home consumption. It seems a pity that the Government cannot see its way to allowing the exportation of Egyptian cigarettes to Germany through neutral countries. If we can get good gold from the enemy and give them nothing in return but smoke, surely it is not such a bad exchange."

***

Strange to say, the *Daily Chronicle* yesterday, in an editorial article on "Fighting the Blockade," referred to tobacco. It said: "The blockade can never deprive the German Army of tobacco, as the Central Empires are considerable producers of tobacco themselves, while they can draw upon the Balkan States and Turkey. If Germany likes to waste her money in buying and importing such an article of luxury as tobacco, for the sake of the civilian population, there is no special reason why we should complain, unless she is paying for the tobacco in goods."

***

In the above case, the difference between payment in kind and gold is practically nil. The real difference lies between right and wrong, between trading with the enemy and not trading with the enemy. In the case of Egypt, there is, on the surface, no reason why as many cigarettes as possible should not be exported, considering that the industry is the staple one of the country. But beneath the surface there are many reasons why Germany should obtain *nothing* from Egypt. One exception to this law will create another, and, therefore, it is better that there should be no exception at all. In any case, it does seem extraordinary that the official journal of the British Chamber of Commerce of Egypt should have suggested —if the *Gazette's* quotation is accurate— that the local cigarette manufacturers should be allowed to trade with the enemy.

***

The capture of Trebizond by the Russians is the best news we have heard for many a day. The principal Turkish port in the Black Sea, with 60,000 inhabitants, an import trade of nearly £3,000,000, and an export trade scarcely less valuable, the maritime importance of Trebizond is due to its being the terminus of the great trade route from Persia and Central Asia to Europe. In any other but Turkish hands, it would have kept pace with the progress of the world; but, as the *Morning Post* Petrograd correspondent pointed out in a recent despatch dealing with the Russian advance, "it is only half protected from the treacherous winds of the Euxine, and Turkish improvements have been confined to a single mole, badly placed and worse executed, and not more than half-a-dozen modern steamships of medium tonnage can find shelter at one time." Incidentally it may be mentioned that before the war broke out an agreement had been signed between the Turkish Government and Messrs. Sir John Jackson, Ltd., for the construction of the port of Trebizond.

***

An amusing eagerness, says the *Daily Chronicle*, is being displayed in the leading commercial cities of Germany to establish trading companies having for their objective the Levant and the Near and Middle East. The most recent company founded with this object is the "Berlin Central for Furthering German Economic Interests in the Orient." The company's programme deals with the Balkan States, Greece, Turkey, and Persia, and announces the formation of an ancillary organisation which will have as its objects "Study and Propaganda." There are to be bureaux established in the countries to be exploited, and these offices are to be manned by a competent staff of experts. Unfortunately all these various organisations are at loggerheads, and all are jealous of one another. The "B.C.F.G.E.I.O." is bitterly attacked in a leading journal for arrogating to itself claims to which it has no right, and for trenching on the peculiar province of the "German-Turkish Union," the "German Austrian Economic League," the "Balkan-Orient Association," and several other companies with equally sonorous titles and equally unsubstantial claims to the support of the public. In reading the prospectuses and schemes of these noisy promoters, one receives the impression of a number of wily persons engaged in exploiting the prevailing enthusiasm for the Near East and the prevailing ignorance as to what the Near East can do for Germany.

***

Which reminds me that recently the *Frankfurter Zeitung* published a note booming the German Asia Minor Society for all it was worth. It was founded in 1906, and has now decided to extend its Asiatic sphere of propaganda to Bulgaria —surely an undeserved compliment for the Bulgars—by organising a system of cinematograph lectures in every village and hamlet and town in Bulgaria, illustrating German kultur—exclusive of Namur and Liège—and industry. According to the paper quoted, the G.A.M.S. is the only association of its kind that can promote Teuton interests in the Near East —an assertion which, I feel sure, will be roundly condemned by the B.C.F.G.E.I.O. and its kindred circuses.

***

According to a Bill published in the *Cyprus Gazette* on March 24, the exportation of timber, charcoal, and firewood, being the produce of Cyprus, and of bark, tar, pitch, and resin, is to be allowed, provided that the High Commissioner grants special permission for said purpose. Prior to the publication of the Bill, the exportation of the above articles was strictly forbidden in any and all cases.

***

A supplement to the *Board of Trade Journal* (April 13) gives a list of Prohibitions of Export in force in, *inter alia*, Egypt, Malta, and Cyprus. The information given supersedes that given in the Supplement of January 13, 1916.

COMMENTATOR.

Cyprus Shipping Dues.

The following Bill, revising the method of levying shipping dues, including port, health, and light dues, appears in the *Cyprus Gazette* of March 24 :—

Dues shall be paid in respect of every ship arriving in any port (Larnaca, Limassol, Famagusta, Boghaz, Kyrenia, Lefka, Paphos, and Latzi) in Cyprus from a foreign port at the following rate, namely :—

(*a*) Ships not exceeding a registered tonnage of 1,500 tons.—For every ton up to 800 tons, 2 cp.; for every ton exceeding 800 tons, 1 cp.

(*b*) Ships exceeding a registered tonnage of 1,500 tons.—For every ton up to 2,500 tons, 30 paras; for every ton in excess of 2,500 tons, free.

When the above-mentioned dues have been paid in full at a port in Cyprus in respect of a ship and such ship proceeds to a second or third port in Cyprus, without between her calls at any of such ports having called at a foreign port, there shall be paid in respect of her call at such second or third port dues at half the above rates.

When the above-mentioned dues have been paid in full at the first, second, and third ports in Cyprus in respect of a ship, and such ship proceeds to a fourth or subsequent port, in Cyprus, without between her calls at any such ports having called at a foreign port, no dues shall be payable in respect of her calls at such fourth or subsequent port provided such calls at such fourth or subsequent ports take place within four weeks from the date of leaving the third port.

Subject to the provisions of this law there shall be paid in respect of every ship of whatever tonnage arriving at any port in Cyprus from a foreign port or from another port in Cyprus and leaving such port in Cyprus without having taken cargo, and (*a*) being in ballast, or, (*b*) having on board, empty barrels or empty cases only and discharging such empty barrels or empty cases and no other cargo, dues at following rate: For every ton of registered tonnage, 1 cp.

Provided that the amount of dues payable under the provisions of this section shall not be in excess of the amount of dues which would be payable under the provisions of previous sections.

Dues payable in respect of any ship, other than a steamer, may be compounded for by the payment in advance of one shilling for each ton of the ship's registered tonnage for every half-year. A half-year shall be deemed to be any period between January 1 and June 30 or between July 1 and December 31 in any year. Dues shall not be leviable in respect of a ship for which they have been compounded, during any half-year for which they have been so compounded.

When any ship shall be compelled to call at any port for the sole purpose of performing quarantine for another port in Cyprus and shall not there discharge or receive cargo, the dues mentioned above shall not be payable in respect of such call, and such call shall otherwise for the purpose of this law be treated as though it had not been made.

The above-mentioned dues shall not be payable in respect of the following ships :—

Ships of war.

Transports in His Majesty's service.

Ships hired or chartered by His Majesty's Government for the conveyance of troops or stores for His Majesty's service, and flying the Admiralty transport flag.

Yachts belonging to recognised yacht clubs and wholly in ballast.

Ships which, having entered a port under stress of weather or for obtaining provisions or water, shall leave it without having effected any commercial transaction.

Steam tugs employed solely in towing and not having goods or passengers on board.

Ships which have entered a port for the purpose of loading or discharging cargo and which are prevented, through stress of weather or quarantine restrictions, from loading or discharging any cargo.

Boats licensed under the Boats Regulation Law, 1884.

Ships under ten tons registered tonnage owned by persons domiciled in Cyprus.

PRIZE COURT APPEALS.

S.S. "Concadoro."

On Friday in Judicial Committee the Privy Council gave judgment in the appeal of the master and owner of the Austrian steamship "Concadoro" from a judgment of the Supreme Court of Egypt, condemning her as good and lawful prize.

On August 1, 1914, the "Concadoro" left Cardiff with a cargo of patent fuel for Port Sudan. She arrived at Port Said on August 18, the master being till then ignorant of the fact that war had been declared between Great Britain and Austria-Hungary. The vessel remained at Port Said, and on September 22 the master received the following letter from the captain of the port :—

Sir,—I am instructed to inform you as follows: The coal cargo of the "Concadoro" being required at Port Sudan, you are requested to proceed to that port and discharge it to the consignees' order. If you will agree to do so the Egyptian Government is authorised by the British Foreign Office to grant you a safe conduct to the said port, and from thence to the Port of Basra, a neutral port, on the following conditions :—

1. The "Concadoro" must leave port Said on or before September 27, and must proceed direct to Port Sudan, arriving there not later than six days from date of departure from Port Said.

2. She must discharge without delay the 1,900 tons of patent fuel to the consignees, Messrs. Contomichalos, Darke, and Co., and forty-eight hours after completion must leave Port Sudan for the neutral port named above.

3. The "Concadoro" will be liable to capture in the event of any infringement of the foregoing conditions.

You are requested to give me a written answer to this letter as soon as possible, and in the event of your acceptance of the conditions named you will be good enough to apply to this office for the safe conduct referred to, at the same time informing me of the date and time you propose to enter the canal.—I am, etc., C. E. TRELAWNY, Captain of the Port.

The master, being without funds to continue his voyage, believing that Port Said was a neutral port, and fearing capture by a British man-of-war if he put out to sea, decided to remain in the harbour. On October 15 Egyptian officials were put on board, and eventually the ship was taken out to sea and seized by his Majesty's ship "Warrior." She was thence removed to Alexandria, where the Admiralty Court declared her a good and lawful prize. From this judgment the present appeal was instituted, the appellants alleging that under The Hague Convention the ship was entitled to an absolutely safe conduct, and not one clogged with the conditions laid down in the port captain's letter. The vessel being in ignorance of the war when she sailed, and until she arrived in Egypt, was entitled to the protection laid down by the Convention. In any case, she was liable to detention only, and not to condemnation or confiscation. The Crown, on the other hand, contended that the ship was always free to leave Port Said, but, in consequence of the outbreak of the war, never intended to do so, and continued there at her own risk.

Lord Parmoor, in delivering their lordships' judgment, said the claim of the master not to prosecute his voyage to Port Sudan before the end of hostilities was virtually a claim to treat and use Port Said as a port of refuge. The master urged that he was entitled to a wholly unconditional pass direct to the port of destination, or other place, and not a "safe conduct" to which conditions were attached. Their lordships agreed with Mr. Justice Grain, that the conditions were eminently reasonable, and did not invalidate the pass. They also rejected the condition that, being in want of funds to prosecute the voyage, the ship was detained by *force majeure*. They would advise his Majesty that the appeal should be dismissed, with costs.

S.S. "Panariellos" (ex cargo).

Last Thursday, before Lord Penton, Lord Sumner, Lord Parmoor, Lord Wrenbury, and Sir Arthur Channell, sitting as the Judicial Committee of the Privy Council, the appeal was dismissed against a recent decree of the Prize Court, pronouncing 1,020 tons of silver lead, part of the cargo of the Greek steamship Panariellos, to have belonged at the time of the seizure to the Compagnie Française des Mines de Laurium, trading with enemies of the Allies, and condemning the proceeds of the sale, after confiscation, as good and lawful prize and as "droits and perquisites" of his Majesty in his office of Admiralty.

Lord Sumner, in delivering their Lordships' judgment, said that on August 11, 1914, the Panariellos left Ergasteria for Belgium and the United Kingdom with a cargo of minerals belonging to the French company. The cargo consisted of about 1,020 tons of lead stowed in the bottom of the ship, and 3,500 tons of calamine and 600 of speiss stowed above the lead. There were three bills of lading—one for the entire cargo, one for half the lead, another for the other half. Each bill expressed that the cargo was consigned to the appellants themselves. The lead was made deliverable at Newcastle; the bill for the entire cargo made it deliverable at Antwerp and Newcastle, but the calamine, at any rate, was in fact to be discharged at Antwerp. The bills of lading incorporated a voyage charter, dated July 18, 1914, for Antwerp and Tyne below bridges. It gave a lien for freight and demurrage.

The loading of this cargo began on July 29, 1914, and finished on August 10. The appellants, whose *siège social* was in Paris with an office at Laurium, where they exploited mines, had not contested that at all material times they were aware of the outbreak of war between Great Britain and France and Germany. The appellants had long been in commercial relations with the firm of Beer, Sondheimer, and Co., of Frankfurt-on-the-Main, who traded in metallic ores.

Their Lordships being of opinion that the ore was so shipped as to be engaged in commercial intercourse with the enemy, the burden was upon the claimants to establish that subsequently such events happened or such a course was taken as effectually relieved it from liability to forfeiture.

His Lordship read from the affidavit of the collector of Customs at Swansea and examined the appellants' contention that at the time of the seizure all trading with the enemy had ceased. Continuing, he said that in the circumstances of the case the alteration of the port of delivery certainly did not constitute an abandonment of the old voyage and an undertaking of a new one. Not as an exercise of dominion over the goods, so as to change their character, but largely at the instance and for the safety of the ship, a Bristol Channel port was substituted for a North-East Coast port. If the destination of the ore was for enemy hands and enemy control, that change did not affect it. Their Lordships were of opinion that on these facts the appellants had failed to discharge their obligation to show that the engagement of the ore in enemy trading had been abandoned in time.

Their Lordships would therefore humbly advise his Majesty that this appeal should be dismissed, but, as the Procurator-General made no submission that costs should be allowed, without costs.

Trade Notes.

Egypt.

H.M. Consul at Cairo has forwarded conditions of contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply of stationery articles required for the use of the various Government Administrations during the year 1916-17, including pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc.

Copies of the conditions and form of tender may be obtained from the "Economat Central, Ministère des Finances," Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on June 1.

Sealed tenders, on the proper forms, will be received, up to April 29, by the Director of the Technical School, Bulac, Cairo, for the supply of 560 sets of blue linen overalls (jackets and trousers) required for the school during the year 1916-17. Copies of the cahier des charges and form of tender may be obtained from the Model Workshops, Bulac (Cairo), where also samples may be seen. A copy of the cahier des charges, together with particulars of the overalls required, may be consulted at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., by firms in the United Kingdom.

Tenders are invited by the Ministry of War for the supply of (1) forty tons of coco-nut oil and (2) 100 tons arachis oil into the War Department Stores, Tura. Date, May 16.

Sudan.

In an article on the Sudan published in the current issue of *Kelly's Monthly Trade Review*, the following appears :—

Khartoum and Omdurman, being the general emporia, take all kinds of goods, but there is a specially active demand for foods and articles of luxury required by the ruling and professional classes, merchants, wealthy natives and visitors. Alert agents, carrying supplies as well as samples, are needed.

In Dongola Province there is an opening for active-minded merchants. The people are well-to-do, and purchase fairly freely foods, perfumes, cottons, crockery, cutlery, hardware, and even appreciate agricultural implements.

In Kordofan there is a demand for foods, including sugar and salt, metal ware (including hoes and axes), blue, white, and coloured cotton goods and muslins with open-work designs, but all with fast colours.

Darfur (which exports ivory, ostrich feathers, rhinoceros horn, pepper and tobacco) imports largely tea, sugar, and cotton goods.

The Commercial Agent of the Department of Commerce, United States of America, reports that "a good business might be built up in cotton planters, ploughs, cultivators, and harrows." He also considers that there is room for crude oil engines of from 20 to 100 horse-power, suitable for pumping and grinding mills, as well as for builders' ironware and sundries.

As regards cotton goods, it is somewhat characteristic that while importers have a preference for medium bales containing from 125 to 150 pieces, we send them well-packed bales containing from 200 to 300 pieces. The Italian bales contain 25 pieces, a fault on the right side when camel and donkey transport has to be faced.

Various small points of this kind require to be studied on the spot. This is also true of all sundries intended for natives in the far provinces. For instance, along the Sobat coloured fancy cottons are in favour. There is a demand for brass wire suitable for manufacturing into jewellery and other articles. For barter small blue and white beads, the size of a pin's head, are used. But other beads are also sought after, including ambers, large and small opaque whites, and black beads with small white spots. On the other hand, the Dinkas, to the south of the Sobat, prefer black beads with red and white spots. Forty of these make a necklace and will purchase a sheep; five will buy a hen or five eggs. Barter is also carried on among them with brass wire. There are changes of fashion, of course, but novelties must be introduced discreetly, or trade may be very bad. To a large percentage of the population, especially south and far west of Khartoum, money has no value, makes no appeal, so barter is the rule, and for this purpose small articles of practical use (knives, hand tools, saws, coffee-grinders, mortars, cheap picture-frames, glass bottles and glassware, coloured pencils, pins and needles, scissors, tobacco pipes and pouches, carpets (small sizes), pomades and cheap perfumery, soap, buttons, and similar goods) enjoying local currency must be employed. What is wanted is trade established on the basis of what the Germans call "Handels-Niederlassung"—stations whereto products are brought by the natives in exchange for manufactures such as mentioned. Such stations proved of great value to the Germans in Cameroon, Togoland, and elsewhere.

Morocco.

H. M. Agent and Consul-General at Tangier reports that the prospects for trade in Morocco in 1916 are not very brilliant. The continuation of the war and the consequent requisitioning by the French Government of all stocks of wheat and barley, and the restrictions on the shipments of many of the principal articles of export, necessarily have a very serious effect on the commerce of the country; but it is a remarkable fact that the import trade of Morocco in the year 1915 reached considerable dimensions, and when statistics are available it will probably be found that the value of articles imported in 1915 exceeded that in 1914.

With the making of roads, a demand for motor cars, motor lorries, motor cycles, etc., has sprung up, especially in the French zone, the total value imported during 1914 amounting to £94,258. The cheaper makes suitable for rough roads have been most in request so far, but with the improvements in roads better class cars will doubtless be introduced in greater numbers.

There should be a good opening in Morocco for British cement now that supplies from Germany are cut off. There should also be an opening for British trade in hardware; the principal items under this heading are tools, cutlery, etc., household utensils, nails, locks, and bedsteads.

The Board of Trade are in receipt, through the Foreign Office, of copy of an Order of the General Commander in Chief in the French Zone in Morocco, dated February 2 and published in the *Bulletin Officiel* for March 6, which increases the maximum quantities of maize and chickpeas which may be allowed to be exported from the ports of the French Zone to French, Allied, or neutral ports in virtue of Article 4 of the Decree of October 18, 1915, from 5,000 to 10,000 metric tons in the case of maize, and from 6,000 to 7,000 metric tons in the case of chickpeas.

The Board are also in receipt, through the same channel, of copy of an Order of the General Commander in Chief, dated March 2, and published in the *Bulletin Officiel* for March 6, which prohibits the exportation and re-exportation from the French Zone in Morocco of wools known as "aboudia," "zekrouia," "ourdigha" and the like; and authorises the export from the ports of the Zone to French, Allied and neutral ports (under conditions prescribed in the Order) of wools known as "beldia" and the like which are not required by the "Intendance." The Order also authorises the shipping of wool coastwise between one port of the French Zone to another, subject to special conditions.

ENEMY FIRMS IN EGYPT.

The *Official Gazette* of March 28 publishes the following notice relative to the Proclamation of August 16, 1915 :—

Notice is hereby given that the following firm has been granted a licence to trade without special restrictions :—

Padova and Co., Giulio, Rue Hoche Issa, Cairo.

The following firms have been granted licences to trade in Egypt, with the British Empire and with Allies of Great Britain :—

Mergler, Samuel, 25, Rue Abou Dardar, Alexandria.

Meutemadian Frères, Zagazig.

Meutemedian, Iskender, Zagazig.

Van der Zee, W. F., 3, Rue Gare de Ramleh, Alexandria.

The licence granted to George Meinecke, Suez, No. 150, has been modified. The business has been placed under the supervision of Mr. J. M. Norman, Port Tewfik, as Controller.

MOROCCO AND EGYPTIAN SUGAR.

A correspondent writes to the *Morning Post* from Mogador :—

Such home readers as are concerned in the stiffening up of British seaborne commerce will be interested to learn that the effort made last year by certain London and Manchester firms of world-wide repute to introduce Egyptian sugar into Morocco has achieved brilliant success. Nobody at all acquainted with this country need be told that green tea is the national beverage, and holds the same position here as does coffee among the people of the Mid East. Now green tea, to suit the critical palate of Moorish critics, must be very strongly sweetened. But for nearly half a century Morocco has been fed up with the beetroot substitute, very largely made in Germany. With the first arrival of cane sugar, shipped from Alexandria, Morocco made a discovery. Here at last was the real thing, at about the price of the imitation, and vastly more economical, inasmuch as ½ lb. of the Egyptian article goes as far as ¾ lb. of the German substitute. In one month of the year 1915 this seaport alone imported 18,000 sacks from Alexandria, valued at something over a million francs, or £40,000.

The shipments covered by this very respectable sum were solely for account of one London firm, which has also to be credited with a like amount supplied to other Moroccan ports, so, including shipments made by other firms about which I have so far no definite figures to quote, the total importation for 1915 may be safely estimated at about £120,000. And Morocco is still asking for more. It is no breach of confidence to say that a small group of British merchants in this country, on the initiative of the Patriotic League of Britons Overseas, is interesting itself in strengthening this new economic link between the Mid East and this far-Western realm of Islam. With a very little encouragement from the Egyptian refiners we may look forward to Morocco supplying herself for many a year almost entirely from Nile Land, for cash against delivery of shipping documents, and the only other question worth consideration is how to benefit the British mercantile marine. By the present outlook it seems that the first English steamer company which approaches the refiners with a reasonable freight tariff will have but little difficulty in securing the contract for transport, Alexandria to Tangier, and any other Moroccan port where the Bank of British West Africa may have a branch.

BUYERS' GUIDE.

Motor-Cars in Turkey.

Trade After the War.

The following extracts from a report from the U.S. Consul-General in Constantinople (January 5, 1916) and published in the U.S. Consular Reports will, though intended to give sound advice to American manufacturers, interest our own exporters of cars who wish to extend their market after the war is over :—

The first automobile was seen in Constantinople in 1908—a small 8-9 horse-power one-cylinder French car that had great difficulty in travelling over the narrow, encumbered, ill-paved streets of the Ottoman capital, and could not venture on any road outside the city. Conditions have steadily improved since then. Following the example of the Constantinople municipality, all the larger towns of the empire adopted a programme of public improvements. Streets were widened, paved, and extended, while the Central Government let large contracts for the building of public highways. With better driving possibilities, better cars were imported, and to-day the most up-to-date type of motor vehicles can be seen on the streets of Constantinople. Still, their number is insignificant compared with what it certainly will be in the near future.

Motoring in Turkey.

That motoring in Turkey is yet in its infancy is shown by the absence of effective municipal regulations relative to number plates, speed, lights, etc., and by the lack of skilled chauffeurs. At present a yearly tax of about £6 is collected on each pleasure car. It is understood, however, that a new schedule of taxation based on horse-power is being elaborated, and the large number of men trained in the military automobile school since the beginning of the war will raise the average of efficiency among chauffeurs to a higher level.

Garages in Constantinople are far in advance of motoring. There are several well-equipped garages, able to hold many more cars than they do. The builders anticipated a considerable growth, and developments have more than justified their hopes and predictions. It is now conceded that, no matter what the issue of the present war may be, Turkey will begin reaping the benefits of its natural riches, and the automobile business will flourish.

On account of the relative backwardness of the people in automobile matters Turkey's needs have not shaped themselves into any definite form or direction. The market demands one thing to-day and is apt to prefer something else to-morrow. Therefore, in order to obtain a correct idea of conditions, the observations that follow should be read in the light of this constant evolution.

When the first cars were sold the buyer paid attention to appearance and low price exclusively. He ignored the construction, and thought that all cars had to run equally well. Little by little he found out the points that did not suit him. So, for instance, he does not want a leather-faced cone clutch. Their mechanical knowledge being scant, chauffeurs dislike features that may require the replacing of worn-out parts like the leather face. They prefer the multiple-disc clutch. They know the Bosch high-tension magneto system, and favour it at the expense of other good systems and makes. The popular carburettors are the Zenith and Claudel, both of French manufacture and of the metal-float system. In view of the important part carburisation plays in the proper running of automobiles one may imagine how easily the motor may be blamed for defects due to a faulty handling of the carburettor if the system is not known to the driver, and this also applies to other parts of the mechanism.

Such was the experience with a number of American cars which were in operation for a few months, and then ceased to give satisfaction. It was claimed that the carburettor and the ignition system were too complicated and of a type not known here, and further that the design of the body was not elaborate enough, and that several parts, like gears, valves, and springs, were wearing out very quickly. If the agent is not in position to keep a stock of spare parts on reasonable terms, because the factory will not deviate from its custom, it is easily perceived how such a representative is handicapped in selling cars. Service after the sale (*i.e.*, advice and help by the dealer) is of capital importance, and is expected by the buyer.

Up to the present vertical four-cylinder motors cast *en bloc* have given better satisfaction than six-cylinder motors. The latter, being heavier and more intricate, require a degree of skill that is lacking among native chauffeurs. Right drive, with side control, as found in European cars, is regarded as essential.

As already mentioned, both city streets and country roads are susceptible of improvement. The paving in Constantinople consists either of cobblestones or of macadam, considerably in need of repairs. Asphalt is confined to the sidewalks pending completion of the sewer system and the electric and gas installations. Constantinople, with its steep hills, requires not only an engine with enough reserve power, but also a powerful rear structure to pull the car. A native buyer will seldom inquire into the type of transmission box, but will firmly insist on shaft drive for better appearance. He requires, although he may not ask for them, high-grade transmission gears when of the selective sliding type, a very strong rear axle, and a rigid chassis. Brakes acting on metal parts, like the shaft, will be welcome, as they eliminate the trouble and expense of replacing the drum lining on rear wheel brakes. The jolting roads make a three-point suspension of the motor and high clearance imperative, high springs and reasonably small wheels being popular for economy's sake. The rough highways also render the gas tank under the driver's seat necessary.

Type of Car.

Clincher tyres and auxiliary wheels are commonly used, while demountable rims so far have enjoyed but scant success. It cannot be doubted, however, that they will come into favour as soon as country driving is taken up on a larger scale. Wheels should be of the usual artillery type. Bicycle steel spokes are considered less resistant, because they do not look as sturdy, although they are more elastic.

Concerning the body of the car it should be noted that closed types, chiefly landaulets, have been mainly in demand, torpedo shape being always insisted upon. The colour is a rather important question, and it is essential to offer a number of colours to select from. Usually the pleasure cars imported vary between 15 and 30 European horse-power, the low-powered cars being more numerous. All these conditions must, however, be considered as a stage in the motor education of the public, and will undergo continuous changes.

Trucks are even less advanced in commercial circles than pleasure cars are among the general public. Twenty to forty horse-power trucks of heavy structure with double rear wheels, solid tyres, and a simple engine under the hood are preferred. In the way of lighter cars, the Post Office Department operates in the capital a number of 18-22 horse-power mail wagons. The service has been satisfactory, and it is contemplated to increase the number of vehicles after the war and instal similar services in the interior. In general it may be said that, outside of Government deliveries in Constantinople, the majority of trucks will be sold for service in the interior, where the lack of railways will make rapid transit dependent on motor vehicles. As soon as proper warehouses are built in Constantinople, trucks will come into general use also in the capital. The question is, however, what effect the many steep inclines will have in the supplanting of animal traction. It is generally conceded that motor trucks will pay best for heavy hauls on long distance—*i.e.*, where the excess of power they can develop over teams may be fully utilised. Constantinople spreads along lengthy shores and numerous hills, which latter are very hard on horses in summer, and, further, there are no powerful horses in Turkey. A team of native Anatolian horses hauls about one-half ton only, so that conditions of transportation appear to be highly favourable to mechanical traction.

While proper taxicab service is lacking in Constantinople, the local autobus company up to the beginning of the war seemed to be making progress in spite of financial difficulties. Seven up-to-date British sixty horse-power buses, with a seating capacity of eighteen persons each, were put in service early in 1914. The excellent riding qualities of their valveless engines were immediately appreciated, but in the long run the engines proved to be too fine a mechanism to withstand the tampering of unskilled chauffeurs and the jolts and jars on the poor pavement. Further, the automobile trade here is not very exacting in the choice of gasoline and lubricants. Baumé 64/66° naphtha is commonly used, but valveless engines require the finest grades in order to ensure proper operation of the sleeves. The Société Anonyme Ottomane d'Autobus de Constantinople was formed in 1909 by native capital amounting to £26,400. It is thought that a (American) group could, with comparatively small investment, buy out this company and profitably combine a well-organised system of motor-buses and taxicabs. The present means of conveyance in the city of Constantinople, as well as in other towns in the empire, are inadequate.

Credits.

From several inquiries received at this office, as well as from correspondence, local dealers have had, it is evident that in order to do business in Turkey and throughout the Levant American manufacturers must modify their attitude with regard to credits. French and German dealers send cars on consignment against proper guaranties and allow several months' time for payment. The Peugeot, de Dion Bouton, and Benz works have done considerable business in Turkey by virtue of their policy of accommodation. Generally speaking, no car can be sold from catalogues. (A point not to be disregarded when catalogues are used is the language in which they are printed. So far French has been indispensable.) In the case of Government business the purchasing commission is bound by an ironclad rule; experts must test the car or the truck before the particular type is adopted.

The Fiat, Isotta-Faschini, and Bianchi works (Italian) have promoted the Société Générale d'Automobiles pour le Commerce en Orient, which company acts as their agent. The organisation has been particularly successful with the Fiat cars, among which the Fiat "Zero" has found the most buyers—all of whom are greatly pleased with the low gas consumption of the 10-15 horse-power four-cylinder motor. The fuel and tyre economy, combined with the luxurious appearance and the comparatively high speed attainable, won the hearts of many who did not care to invest more than £286, the retail price of the car. The cost to the dealer is about £170 c.i.f. Constantinople.

The tariff Bill now before the Ottoman Parliament specifies the following import duty per 220 pounds on motor vehicles, to take effect March 14, 1916: Commercial or agricultural vehicles, complete, 16.50 dollars; motor omnibuses, 30.80 dollars; chassis of commercial and agricultural vehicles or motor omnibuses, 16.50 dollars; tools and spare parts for the foregoing, 30 dollars; pleasure cars—complete 29.70 dollars, chassis 15.40 dollars, tools and spare parts 39.60 dollars. In the average, these rates should work out to much less than the present 30 per cent. ad valorem duty.

The price of motor spirit before the war was about 2.75 dollars, and that of lubricating oil 7.50 dollars per ten gallons. These prices are expected to drop as soon as the native oil deposits are exploited.

It is manifest that coming conditions in this country are distinctly in favour of the development of the trade in power-propelled vehicles.

Engineering Notes.

Launching Seaplanes from Warships.

Mr. Pemberton-Billing is not, apparently, a great admirer of the seaplane, and in one of his recent speeches suggested that the floats of many in service should be knocked off and the machines, lightened as they will be, used as ordinary aeroplanes with better and more effective results. Yet, the seaplane, as a naval scout, is very valuable, and its usefulness on many critical occasions has been proved. The drawback, however, is that it cannot get a start from rough waters, and the arrangements made or adopted up to now by various navies to launch a seaplane from a warship have not been always quite satisfactory. This drawback and other difficulties can apparently be surmounted by a device invented by an officer of the United States Navy. This officer realised that a fighting ship cannot afford to be encumbered with long launching platforms, such as have been, and still are, used in some navies. He knew that space must be economised and the sweep of guns uninterrupted. Therefore, he conceived a short-run catapulting railway that could be quickly erected and just as rapidly dismantled and stowed away. In principle, according to the *Scientific American*, the launching device consists fundamentally of a car propelled along a narrow-gauge track. Upon this car rests the seaplane, and the aircraft is secured to the vehicle until the latter reaches the end of the run-way. When the car stops the seaplane is automatically released, and the acquired inertia suffices to sustain the flying machine until its propellers are able to provide the necessary propulsive effort. As a rule, however, the aircraft's motors will be speeded up to this point by the time the end of the track is reached. The method of operating is as follows:—The plane is lifted on to the car and secured to it, then the motors are set going, but not at full speed. This is accelerated after the catapulting begins. The aviator takes his seat in his craft, and when everything is in readiness the car, with its load, is drawn along the track at an increasing rate. This gathering momentum is so nicely controlled that a velocity of about fifty miles an hour is attained by the time the aeroplane is cast loose from the car. The car is brought to a standstill a very few seconds later. Originally, the track was sent overboard at the end of its run, but in service aboard a ship under way at sea this would be undesirable, because it would be necessary either to stop or slacken speed in order to haul the car aboard, even if it were held by a line. Clearly it would be impracticable to abandon the track and to hold in reserve any number of them. The motive power employed for moving and speeding up the catapult car is compressed air. By means of a throttle worked by a cam the air impulse is progressively increased upon the operative piston or plunger, which functions the wire rope purchase by which the truck is pulled during its comparatively short run of something less than fifty feet. The actual stroke of the piston is in the neighbourhood of one inch for each foot of advance on the part of the truck; the turns of the wire rope over pulleys serving to produce this multiplication of movement. The air required by the catapult is supplied from the torpedo air service of the cruiser, and at a pressure of something like 300 pounds per square inch. The run-way is made up of light steel angle iron and raised only three feet or so above the ship's deck, to which the structure is secured by attachments that can be quickly released when it is desired to dismount the apparatus. The only sensation on the part of the pilot at the final catapulting is like that due to a sudden blast of air in the face. The new device has been tried on board the North Carolina, steaming along a cruising speed. It is interesting to note that a scout cruiser is capable of covering a visual front of but twenty miles under favourable atmospheric conditions. An air scout 4,000 ft. aloft can observe ships seventy miles away. There is no need, therefore, of elaborating upon the strategic advantage obtained by the use of scouting seaplanes. It is just this widened field of observation which the aeroplane catapult makes possible.

Construction of Large Oil-Engined Ships.

It is evident that the great difficulties experienced at the present time throughout the world in the supply of coal are responsible for the remarkable increase in the construction of ships fitted with oil-engines; and it is noticeable that there is also a parallel increase in the size of such ships. It has been reported from Copenhagen that the East Asiatic Company has ordered there six ships of 12,800 tons, fitted with oil-engines, to be completed between 1918 and 1920, six similar ships of 11,800 tons to be finished between September, 1917, and January, 1920, and six of 10,000 tons to be completed between 1918 and 1920. The largest ships are 530 ft. in length, and in each of them two engines of 2,650 h.p. are to be installed, whilst in the rest two of 2,000 h.p. Several other oil-engined ships are also being built now in Denmark.

One Film on Two Screens.

The difficulty of providing a greater number of, if not all, the spectators in a cinematograph theatre with "good" seats from which the moving pictures can be seen to the full advantage as regards distance, etc., has apparently been solved by an American contrivance which has recently been patented. By a simple, yet ingenious, arrangement one moving picture apparatus may be made to serve two audiences. In one wing of an "L" shaped hall the picture is shown on a screen as usual, while the audience in the other wing views the reflected picture on a mirror placed behind the fabric curtain and at an angle of 45 degrees.

VERMIN EXTERMINATION.

New Fumigating Process.

The following account (from the *Agricultural Journal of Egypt*) of a process employed successfully in Cairo to cope with the vermin (bed-bug) pest in barracks will interest many householders in Oriental countries which are infested with the disgusting insect:—

Experience in South Africa during the Boer War showed that the only satisfactory method of dealing with these objectionable visitors when they get firmly established in a building is fumigation with hydrocyanic acid gas (prussic acid). Accordingly, as a stock of nearly half a ton of sodium cyanide was remaining over from last year's orchard-fumigation campaign, the method was given a trial in that part of the Old 'Abbassîa barracks which was occupied by the South Notts Hussars.

The method employed was as follows:—All windows had a strip of paper pasted down the central line where the two halves meet, and were then unbolted so that a vigorous push from the outside would burst them open. Where the windows on one side of a building were inaccessible from the outside, ropes were attached to some of them on the inside and carried across to the doors opposite, so that they could be opened and a through draught could be obtained after fumigation without entering the room. All broken panes were, of course, pasted over, and ventilators were covered with fumigation sheets. All kit-boxes were opened, and bedding and other materials were spread about to assist the penetration of the gas to every point.

When the room was thus made ready the fumigants were prepared. The doses were reckoned according to the South African formula of one ounce of cyanide and one ounce of sulphuric acid in two ounces of water for every 100 cubic feet of space. For practical purposes the cyanide was weighed out in 3-lb. lots, which were wrapped up in muslin bags, and corresponding quantities of sulphuric acid and water were mixed in empty paraffin tins. The requisite number of tins of acid and bags of cyanide were then distributed to the different rooms.

When all the rooms had been started sentries were posted to prevent anyone going in or near the buildings. The necessity for this precaution was emphasised by the fact that as many as seven sparrows, in one case, fell dead in the verandah outside the rooms that were being fumigated before any of the doors or windows had been opened. The gas was given four hours to act, and then as many windows and doors as possible were opened without entering the rooms. The latter generally became inhabitable again after about two hours, more or less according to the amount of wind blowing and the arrangement of the rooms in question.

The rooms occupied by one squadron were done each day, and required very nearly one hundredweight of cyanide. The maximum dose given for a single room was 40 lbs.

After the operation was finished vast quantities of bugs were to be found lying dead. In one room one or two are said to have been found still showing signs of life, but this was certainly an exception. The military authorities were so satisfied with the results that further requests for similar treatment were soon received. The Egyptian Army Artillery barracks, near Heliopolis, were the next to be done in preparation for being converted into a hospital. They were followed by several blocks of buildings at the Citadel which were being used as a convalescent hospital. When these were finished the stock of cyanide was practically exhausted and the work had to be abandoned, although several urgent requests were on hand. As soon as the three tons of cyanide arrive, which at the time of writing are on order from England, the work will be resumed on a large scale.

In conclusion, it might be well to add a few words on the construction and fitting of barracks with a view to the prevention of the necessity for fumigation. In the first place, all wooden ceilings, floors, and stairs should be absolutely forbidden. All other wooden fittings should be reduced to a minimum, and the wooden kit-boxes at present in use should certainly be replaced by metal ones. Folding metal bedsteads of the type at present employed are very unsuitable, as they contain far too many cracks and joints in which the bugs congregate, as is shown by the fact that no less than forty bugs were counted in one case as having fallen out of the joints round a single leg of a bed. A more suitable type with fewer resting-places for bugs could certainly be found, and might be improved by having a rim round the base which could be filled with vaseline, which would prevent bugs climbing on to the bed from the floor. The wicker crates which have been so largely used in the hospitals as temporary beds are about the worst possible things to use from the present point of view, being one mass of holes and cracks, in which the bugs find ideal shelters. More than 500 have been seen to fall from a single one of these temporary bedsteads as a result of fumigation. Where their use is unavoidable they should certainly be fumigated at regular intervals.

NEAR EAST MARKETS.

PRODUCE REPORT.

LONDON, April 20.

Currants.

Owing to the approaching holidays very little business has been done this past week; the market, however, is very firm, holders being confident of higher prices in the very near future.

Sultanas.

There is only a small demand, with small business passing, mostly in Afghan and Indian fruit at unchanged rates.

Figs.

There has been better demand, and prices are well maintained.

Dates.

The market has been quiet for this kind of fruit these last two or three weeks, but values have been well maintained, and a better demand is expected.

Seeds.

Linseed has been active and dearer this week; London-Calcutta spot is quoted at 72s. 6d., afloat and March-April ditto. Bombay ordinary, May-June 72s. 9d., small ditto 72s. 1½d. La Plata-Hull, March-April 69s. 6d. Rape-seed has been firmer, Toria, April, Hull, is quoted at 64s. 6d. Cotton-seed is steady but quiet, London Egyptian spot is quoted at £13 per ton. Canary-seed, 85s. to 110s. per 464 lbs. Lentils, 23s. to 26s. 100 lbs.; and mustard, 28s. to 36s. per cwt.

Oils.

Linseed oil has been firmer: Spot pipes landed £38 10s., barrels ditto £39 10s. Rape oil is quiet, ordinary brown, naked, nominal; English refined, barrels, £55 to £56. Cotton oil remains firm. Crude spot pipes £43 10s., refined pipes, pale, £48 10s., and barrels, sweet, £53 to £54, as to make.

Oil Cakes.

Egyptian cotton cakes are firmly held on spot at full prices of £9 5s. to £9 7s. 6d., although there are some sellers of April shipments at £8 15s. to £9 ex-steamer. English makes are unchanged at £9 7s. 6d. to £9 10s.; and Bombay at £9 per ton.

Linseed cakes: There has been only a moderate demand, with small business passing at late rates; the market, however, remains somewhat steadier. Best London made are quoted at £11 to £11 7s. 6d. East India seed pure, £11 ex-ship. Fine seedy Calcutta are quoted £11 10s. to £11 15s. afloat.

The Egyptian Ports and Lights Administration has made a proposal to the Customs Administration, after consulting the Ministry of Finance, to place under the control of the latter the quays of the Western harbour (Alexandria), the harbour dues, and the tax on shipping tonnage.

LIFE IN CONSTANTINOPLE.

The *Morning Post* Budapest correspondent writes on April 2:—

"M. Abel Barabas, a Hungarian journalist living in Constantinople, writing under date March 27, says that, compared with the difficulties the Turks have to put up with as regards the prices of food and everyday necessities, life in Germany and Hungary must be a paradise. According to M. Barabas, sugar in Constantinople costs about 3s. per lb., coffee 6s. 10d., potatoes 5d., bread 4d., rice, 1s. 6d., butter 3s. 6d., petroleum 2s. 6d. per quart, and coal 10s. per cwt. A small box of matches costs 2d. and a short tallow candle 5d.

"Although the majority of the stock is very inferior, one can only get it, says M. Barabas, with considerable trouble. In most families honey is used instead of sugar, and coal has been dispensed with during the winter. 'It was fortunate,' the writer adds, 'for the Turks that the winter was this year a very mild one, otherwise the poor would have perished of cold.'

"M. Barabas also complains of the disastrous condition of the Austro-Hungarian exchange in Turkey, where during the winter Austro-Hungarian money depreciated 60 per cent. Since then serious representations have been made, and the exchange has improved somewhat, but even now for £T1, 33 kronen are asked, whereas in peace times the rate was 21 kronen for £T1."

Prominent Industries of India

ROUMANIAN BUDGET.

(From Our Own Correspondent.)
Bucharest, April 1.

The Minister of Finance will shortly frame the Budget for the financial year 1916-17.

The estimate for revenue is placed at 645,719,300 lei, or an increase of about 45,000,000 lei over the two preceding years.

The chief sources of income are:—

	Lei.
Direct taxation	57,235,000
Indirect taxation	134,600,000
State monopolies	101,185,000
Ministry of Finance	81,023,400
Public services	156,015,000

Expenditure is estimated at 640,266,838 lei, or an increase of about 43,000,000 lei over last year's expenditure.

The surplus of about 5,500,000 lei is to be added to the general reserve for supplementary and extraordinary credits.

The War Budget for 1916-17 calls for special attention: It includes expenditure to the amount of 85 million lei, distributed as follows:—

	Lei.
Officers' salaries	50,000,000
Soldiers' upkeep	25,000,000
Equipments, etc.	10,000,000

These figures represent an increase of expenditure of nearly 17,000,000 lei on that of the preceding year. In the year 1906-7 the War Budget amounted to 44,000,000 lei.

ROUMANIA AND GERMANY.

(From Our Own Correspondent.)
Bucharest, April 1.

The signature of the contract for the last sale of cereals to Germany—the sale which, to distinguish it from the others, is known as that of the 100,000 wagons—was announced to have taken place some time back, but, as a matter of fact, the agreement in its definite form was only signed on March 21.

The signatories for the Commission of Exports were MM. Constantinesco, the Minister of Domains, Démètre Greceano, and Fotin Enesco. The total quantity of grain in the country left over from the previous sales—apart from that reserved for internal consumption—is sold to the Germans. Only a rough estimate of the amount can be made at the present stage. It will include in all probability about 100,000 truckloads of Indian corn, at most 5,000 of peas and beans, and a little barley. There will probably be no wheat left over from the British deal. Exports are to begin next month, and to be terminated by the end of September, the greater part being conveyed by way of the Danube.

As in the previous deals, the National Bank of Roumania has had its own way in so far as the terms of payment are concerned. The total sum is payable in gold—one-half to be paid at the National Bank of Roumania, the other half to be deposited at the Imperial Bank of Berlin in the name of the National Bank. The rate of exchange for the mark in gold has been fixed at 1.17.

But the transaction has another aspect which merits some attention. The Roumanian Government has formulated a series of demands which the Germans have agreed to satisfy. These are:—

(1) The delivery on the part of Germany of 38 new locomotives ordered in that country before the outbreak of the war, as well as of 21 Roumanian machines which had been sent there for repair, and have been retained in Germany up to the present.

(2) The delivery of several truckloads of drugs which had been ordered in Germany and *paid for*.

(3) The transit through Austria-Hungary of 60 truckloads of drugs, etc., recently purchased in Switzerland.

(4) The delivery in Roumania of materials of first necessity to the value of 150 million francs.

COST OF LIVING IN CYPRUS.

(From a Correspondent.)

Prices differ very considerably in the different districts. Limassol has always, even in Turkish times, had the unenviable distinction of being the dearest part of the island—the cost of living there being about 30 per cent. higher than at the capital. Next to Nicosia, Larnaca and Famagusta are comparatively cheap. Pepho is after Limassol, the dearest. To show how all classes, but especially the poor, are affected, a statement of present prices of some of the chief articles of food, as compared with *ante-bekum* prices, may be of interest. They are those of the dearer parts of the island, and are given in piastres (at 9 to the shilling), except where otherwise mentioned:—

Before the War.	Present prices.
Flour, 21s. to 23s.	50s. to 52s. the sack
Sugar, 3½—4	9½
Potatoes, 1½	3
Beans, 3—4	11—12
Onions 1—2	3
Olives, 7—9	20
Olive oil, 16	54
Native cheese, 6—7	24—26

Wheat now fetches 9s. to 11s., and barley 5s. to 6s. the bushel. Mutton and lamb are cheap, as prices now rule, being sold at 12-15 piastres the oke. For some years there has been a large exportation of this meat to Egypt. Beef is scarce, and the price of poultry has risen considerably. Altogether the cost of living in Cyprus is different to what it was in the early years of the occupation.

CYPRUS FINANCES.

The *Cyprus Gazette* of March 24 contains a Bill for the appropriation of a sum not exceeding £247,396 to the service of the island for the twelve months ending March 31, 1917. The schedule of appropriation is as follows:—

	£
Pensions	8,246
His Excellency the High Commissioner	336
The Legislature	768
Chief Secretary's Office	3,457
Government Printing Office	2,217
District Administration	9,046
Treasury	17,508
Customs Department	11,478
Land Registration and Survey Department	23,223
Audit Department	1,884
Legal Departments	4,124
Police Department	37,724
Prisons Department	8,499
Medical Department	12,432
Quarantine Department	869
Education Department	10,897
Postal Department	12,527
Agricultural Department	10,692
Forest Department	20,284
Railway—Evrychou extension	1,997
Public Works Department	4,219
Public Works Annually Recurrent	18,305
Public Works Extraordinary	21,100
Miscellaneous Services	5,564
	£247,396

COMPANY REPORTS.

Ionian Bank.

The directors, in submitting to the proprietors the accounts for the year ending December 31, 1915 (old style) or January 13, 1916, have to report that the net profit, after payment of all expenses and making provision for all bad and doubtful debts, amounts to £25,594 9s. 4d., to which has to be added the balance of £4,237 13s. 10d. brought forward from 1914, making a total of £29,832 3s. 2d., out of which an interim dividend at the rate of 5 per cent. per annum, free of income-tax, absorbing £12,139 10s., was paid on September 7. There remains a balance of £17,692 13s. 2d. to be dealt with, and the directors recommend the payment of a final dividend at the rate of 5 per cent. per annum, free of income-tax (making a total distribution for the year of 5 per cent.), which, as shown by the accounts, will absorb £12,139 10s., leaving £5,553 3s. 2d. to be carried forward. The dividend, if agreed to, will be payable on and after Wednesday, May 3. During the year the sub-branch of the bank at Bouche, in Egypt, has been transferred to Beni-Suef, and a branch has been opened at Salonika. The directors have appointed Mr. Warrington Laing a director of the bank, and he will be proposed for re-election. They also appointed his Excellency, Dr. E. Politi, for many years chairman of the local board at Corfu, a director, but with deep regret they have to announce his death on January 13, 1916. They further have to report, with regret, the resignation of their colleague, Mr. N. P. Calogeropoulos, of Athens. The directors retiring at this meeting are Messrs. Falconer Larkworthy and John E. Hubbard, who, being eligible, offer themselves for re-election.

Royal Exchange Assurance.

The report of the actuary of the Royal Exchange Assurance on the quinquennial valuation December 31, 1915, shows that new business for the period 1911-15 comprised 9,580 policies, assuring a sum of £4,286,724, representing £173,232 in single and annual premiums. Net assurances in force numbered at December 31 last 23,655 policies for £11,150,254, the premiums amounting to £356,962. The premium income during the quinquennium shows an increase of £373,997 over that for the preceding five years. Death claims—the sum paid in the period showed an increase of £104,647 over the preceding five years, of which increase £64,678 arose in respect of war claims. Life assurance fund has increased by £584,331 in the last five years, notwithstanding that sums amounting to £172,000 in all have been written off for depreciation on investments. Of the surplus shown in the valuation balance-sheet—that is, £373,383—it is proposed that £45,383 shall be carried forward to the next division of profits and that the balance—that is, £328,000—shall be distributed as to (a) £40,527 to the stockholders, being a one-seventh share, less the sum of £6,330 already carried in respect of certain profit brought forward; and (b) £287,473 to the participating policyholders. It is also proposed that the sum last named shall be applied in granting to all policies sharing in profits at December 31, 1915, and effected at full profit rates, a reversionary bonus of 28s. per annum for each £100 assured, increasing with the duration of the policy after it has been ten years in force. The total net new

annuity business was 717 deeds, for purchase money of £417,005, the annuity secured being £44,759. Annuities in force (including deferred annuities) number 1,562, the net annuity payable being £107,021.

Aboukir Company.

The directors, in presenting their report for 1915, record the great loss the company has sustained by the death in action on August 21 of Lieut.-Colonel Samuel Gurney Sheppard, D.S.O., an esteemed member of the board, and also, on September 25, of Mr. H. C. L. Keable, of the staff in Egypt. There were no sales during the year. The total sales of land in previous years are as follows:—4,090.6 23-24 feddans sold for cash, £73,909 5s. 2d.; 15,287.8 22-24 feddans sold on deferred payments, £498,601 0s. 3d.; or a total of 19,377.15 21-24 feddans for £572,510 5s. 5d. Reclamation was again retarded owing to scarcity of water. The rent roll for the three Aboukir divisions and Bourlos Estate for 1916, as compared with 1915, shows a reduction on Mandara and Bahari divisions, and an increase on Wastani and Bourlos. The net decrease, of about £E.1,000, is due chiefly to the bad supply of summer water. There was a further reduction in the average cotton yield per feddan. The damage done by insect pest was less severe, but the scarcity of summer water again caused considerable damage. The price obtained was £4 9s. 6d. per kantar, as against £2 18s. last year. An additional 40 rooms of burnt brick have been built to provide further accommodation for the tenants, bringing the total of rooms built to date to 2,125 on Aboukir Estate, and 243 on Bourlos Estate. Arrears of instalments due by purchasers on December 31 last amounted to £9,599 7s. 5d., of which £1,420 3s. 11d. has since been paid. The profit and loss account, after transferring the sum of £1,250 to an insurance fund, shows a credit balance of £6,036 4s. 2d., which, with the balance brought forward from the previous year of £144 11s. 4d., makes a total of £6,180 15s. 6d. There has been added to the reserve fund the sum of £6,000, leaving a balance to be carried forward of £180 15s. 6d. The directors much regret being unable to recommend the payment of a dividend for the past year. They consider the interests of the shareholders will be better served by placing the profit earned to the reserve fund. Mr. Robert Leonard Carter has been elected a director to fill the vacancy caused by the death of Lieut.-Col. Sheppard, and now offers himself for re-election.

Cairo Water Company.

The ordinary general meeting of the Cairo Water Company took place in Cairo on March 27, Sir Joseph Saba Pasha in the chair. The accounts, the board's report, and several proposals were all passed, and a dividend of 5 fr. for each "action de jouissance" and 72 fr. for each founder's share was decided upon. The year's receipts amounted to £E223,755 against £E222,770 in 1914, an increase of £E985. The expenditure amounted to £E73,881 against £E80,254 in 1914, a decrease of £E6,373. The report points out that the decrease in the amount of water supplied to the public in the latter part of 1914 continued during 1915, but the supply of water to the troops was on the other hand exceptionally large.

COMPANY RESULTS, Etc.

ABOUKIR COMPANY.—The twenty-ninth ordinary meeting of the shareholders will be held at the company's offices, 134, Palmerston House, E.C., on April 27, at 12 noon.

ANGLO-EGYPTIAN OILFIELDS.—Yemsah production for the week, 21 tons (last week 20 tons); Hurgada production for the week, 555 tons (last week 488 tons).

THOS. COOK AND SON (EGYPT).—The coupon due 1st prox. on the Five per Cent. First Mortgage Debentures will be paid by the London County and Westminster Bank, Temple Bar Branch, on and after that date, between the hours of ten and two (Saturdays excepted). The coupons must be left three clear days for examination.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended March 20 amount to £E4,985, or an increase of £E943 over the corresponding period of last year.

EGYPTIAN UNIFIED BONDS.—The Bank of England are prepared to receive the coupons due the 1st proximo. The necessary lists can be procured on application at the Dividend Pay Office.

IONIAN BANK.—The annual ordinary general meeting of the proprietors will be held at the offices of the company, 25, Abchurch Lane, E.C., on Tuesday, May 2, at 11 a.m.

INDO-EUROPEAN TELEGRAPH COMPANY.—The board of directors have declared an interim dividend in respect of the year ending December 31, 1915, at the rate of £2 12s, 6d. per share, free of income-tax, payable on and after May 1 next. Coupons (No. 92) of shares to bearer are payable on and after that date at the company's bankers, Messrs. Barclay and Co., Limited, 54, Lombard Street, London, E.C.

ROYAL ROUMANIAN GOVERNMENT FOUR AND A-HALF PER CENT. REDEEMABLE GOLD BONDS, 1913.—Messrs. J. Henry Schröder and Co. beg to announce that they have now received the necessary funds for the payment of the coupon and drawn bonds of the above issue due on the 1st inst. Coupons and bonds can now be lodged at their counting-house between the hours of eleven and two o'clock, and must be left for examination three clear days before application is made for payment.

SUEZ CANAL.—Receipts for the 12th inst. amounted to 200,000 fr., as compared with 190,000 fr. for the corresponding day last year.

TELEPHONE COMPANY OF EGYPT.—Dividend of 6 per cent., free of tax, on preferred and deferred shares, making 10 per cent. for the year; £7,965 for directors' additional remuneration; £193,469 forward.

IONIAN BANK, LIMITED.

Notice is hereby given that the ORDINARY GENERAL MEETING of the Proprietors will be held at the Offices of the Company, No. 25, Abchurch Lane, E.C., on Tuesday, the 2nd May, at 11 o'clock a.m. precisely, to receive the Report of the Directors and the audited Accounts for the year ending the 31st December, 1915 (O.S.), or 13th January, 1916, to consider the dividend as recommended by the Directors, to elect Directors, to appoint Auditors, and for general purposes.

The Transfer Books will be closed from the 20th April to 3rd May, both days inclusive.

By Order of the Court of Directors,
JOHN LINDSEY, Acting Secretary.
25, Abchurch Lane, London, E.C.,
17th April, 1916.

NOTES OF THE WEEK.

The garrison in Kut has now been besieged for twenty weeks. If it succeeds in holding out until it is relieved, it will have performed a miracle of endurance. For three weeks General Gorringe has been hammering away at the Turkish positions which separate him from Kut, but his force has only been able to advance in all some nine miles. The first attack on Sanna-i-Yat was delivered on April 9. On the 20th and 21st the enemy's position was systematically bombarded, and a fresh attack was made on the 23rd, only to be repulsed. By this time the floods had increased to such an extent that a single brigade alone could attack over a very contracted front. In these circumstances it could hardly be expected to win through. But the enemy's first and second lines were penetrated, and some of our troops even reached the third line. The brigade, however, was not able to maintain itself under the Turkish counter-attacks, and other brigades, pushed up on the right and left to reinforce the attack, were unable to reach their objectives across flooded and boggy ground under heavy machine-gun fire.

It is impossible to read the official accounts of these unsuccessful attempts to reach Kut without regretting the hard fate which compels General Gorringe to storm impossible positions instead of trying to turn the Turkish flank or take the enemy in the rear. The flood season is not yet at its zenith, and may well continue for several weeks. But the urgency of the task entrusted to General Gorringe has apparently left him no time to embark on entirely fresh strategy. Two or three months ago, when some idea of the strength of the Turkish positions could be formed, and with the knowledge that floods must be expected in April and May, prudence should have dictated an alternative line of advance. The occupation of Nasriyah and occasional liveliness in that direction held out hopes that such a course was being adopted. But expectations have not been realized. The accumulated experience of this war has all gone for nought, and General Gorringe is still expected to hurl his forces against an enemy strongly entrenched and amply supplied with machine guns, artillery, and reinforcements. That the Turks fare no better than the British when they launch an attack is small consolation. For them an attack is a luxury, for the British it is a pressing necessity. It is learned now that the counter-attacks of April 17-18 were launched under the impression that the British force operating on the south bank had become isolated by floods from the main column. As it happened, supports were being moved up at the moment when the Turks advanced. The enemy found our troops well prepared, and lost 3,000 men killed out of the 10,000 who took part in the attack.

The easy capture of Trebizond is now explained by the fact that, after the Russian victory at the Kara Dere, fourteen miles to the east, the Turks decided to abandon the town. Rearguards were left to delay the Russian advance, but the main forces of the enemy had proceeded in a southerly direction nearly two whole days before the Russians entered Trebizond. The landing of a Russian force at Platana, to the west of the town, may also have contributed to the Turkish decision. It will, in any case, assist the further operations of the Russians. The present position is that the enemy hold the road leading from Trebizond to Ardasa at a point a few miles to the south of the former town. From here their line extends in a south-easterly direction to Baiburt, opposing the Russian advance along the Chorok Valley and again holding Baiburt against the columns advancing from Erzeroum. Until this important position is captured, it will be difficult for the Russians to approach Erzinjan, unless the enemy disposes of so few reinforcements that they are encouraged to attempt a bold stroke, the cutting off of the retreat of the force holding Baiburt by taking the position in the rear from the north and south.

There is little news of Russian operations in Persia; but a recent telegram to Petrograd from Teheran announces that "the Persian Government is informed that the chief of one of the loyal tribes, Nazir Ali Khan, has captured near Burujird the principal leaders of the Turco-German faction in Persia. Among the prisoners mentioned are Herr Schönemann, German Consul at Kermanshah, who instigated an attack on the Russian and British Consuls at Kangavar; Major Chillander, a Swede attached to the Gendarmerie, and two German agents. If this news be correct, and the prisoners are placed in the safe custody of the Russians, the pacification of Persia has a better chance of proceeding on smooth lines. There may be other Turco-German agents at large, but the bulk of them will have tried to flee the country before the last of the Turkish forces evacuated it.

Attention has been called in Parliament to the case of Major O'Connor, the British Consul at Shiraz, who

Digitized by Google

was taken prisoner by insurgents, and with the rest of the British community in that town remains in their hands. Unless our information is at fault, there can be little doubt not only that Major O'Connor was well enough informed of conditions in Persia to realize that a revolt of the Gendarmerie was to be expected, but that a few days before the *coup d'état* which deprived him of his liberty he applied to the Home and Indian authorities for leave to withdraw the British community at Shiraz. Unfortunately, the information of the British Legation at Teheran did not tally with Major O'Connor's; he was assured that things were improving, and was instructed to hold on. Within two days the Consulate at Shiraz was surrounded by the insurgent Gendarmerie. Organized resistance might well have resulted in the massacre of the whole British community, and Major O'Connor surrendered at discretion. The impression has been created that his case has already been prejudged. We can but hope that this is a mistake; for clearly no opinion ought to be formed on the incident until Major O'Connor's statement has been submitted.

Certainly there was nothing in the whole course of British policy in Southern Persia to encourage a British Consul in Shiraz to put up a game fight in the expectation that, if things came to the worst, a relief expedition would be sent to his aid. It must be remembered that an attitude of studied neglect of British interests in a given region, of resort to every possible and impossible device rather than a straightforward acceptance of British responsibilities, does not act as a stimulus to quixotic heroism on the part of British representatives, official or unofficial. The fate of Corfield of Somaliland, it is to be feared, closed the door for ever on the old feeling of confidence that prompted officials in outposts of the Empire to go ahead in the certainty that, come what might, the Government would see them through, whether alive or dead.

It would seem that the enemy, in spite of his preoccupations elsewhere, has no intention at present of abandoning the Sinai Peninsula without a struggle. Whether the forward movements to Katia and Jifjaffa, recorded in these columns last week, merely forestalled a Turco-German advance or directly provoked a counter-attack is not yet established. But British troops had not occupied their new positions for more than a week when they were subjected to a determined effort on the part of the enemy to oust them. The attack was launched on April 23 simultaneously at Katia and Duweidar, on the northern or El Arish route across the Peninsula. The enemy force at Katia is said to have comprised a thousand Germans as well as picked Turkish infantry mounted on camels. They completely outnumbered the British troops, who were compelled to fall back, fighting a rearguard action. The Worcestershire Yeomanry, the official report states, made a determined stand, but owing to their horses being put out of action by shell fire they were unable to time their retirement so as to co-operate with the other regiments, and a number of them were captured.

The attack on Duweidar, fifteen miles west of Katia, was less successful for the enemy. Aerial reconnaissance had reported the presence of hostile parties in the neighbourhood, and when these attacked in the early morning there was time, thanks to the stand by one company of the Royal Scots, to bring up reinforcements. The enemy were not only driven off with substantial casualties, but were pursued by a regiment of Australian Horse and by aeroplanes, which inflicted further losses upon them in their retreat. As a result of these operations the Turks appear to have withdrawn from the whole district, Katia included, and have now no force nearer the Canal than Bir-el-Abd, which is forty-four miles distant. Their camp at this place, and another at Bir-el-Bayud, eight miles to the south, have been attacked by British aeroplanes. The Turks, or the Germans with them, have replied by dropping bombs on Port Said, but apparently without doing any damage.

When it was announced that British troops had been sent forward to Katia and Jifjaffa it was hoped in many quarters that the movement was a prelude to some decisive action in the East. This is not the season for desert operations, but there would be no reason for confining our activities in the Eastern Mediterranean to the Sinai Peninsula. It cannot be overlooked that, so far, since the declaration of war against Turkey, British forces have placed no conspicuous achievement to their credit. The attack on the Dardanelles was a bold conception, but it failed; the occupation of Baghdad would have created an immense impression throughout the East, but instead of bringing off the *coup* we have allowed the Mesopotamian Expedition to cut a sorry figure amid the Tigris swamps; Egypt has been successfully defended, but the achievement is a negative one. There can be no wish to subordinate military operations to political requirements; but in the East the two are inextricably dovetailed, and ought to be considered together. Although Germany remains, and must remain, the real objective, it is well that Great Britain should bear in mind the importance of the East in the scheme of Empire.

Egypt is to have a new Governorate on the western frontier. The territory comprises the scenes of the recent successful fighting against Senussi and Bedouin marauders—Mersa Matru, Sidi Barrani, and Siwa, in the north, as well as the oases of Farafra, Dakhla, and Kharga, in the south—and the step thus taken should have the effect of placing Egypt in a better position to deal with future menaces from across the border.

In the Balkans air raids are the order of the day and night with both belligerents. The record for long-distance raids, which was won on April 14 by British airmen with a flight from the Dardanelles to Constantinople and back, has again passed to the French, who despatched on April 20 a single aeroplane from Salonika to Sofia and back, a distance of 350 miles. From the point of view of actual results achieved, the French have been more successful in their short-distance raids on the enemy's positions just across the frontier. For four nights in succession they appear to have reached their objectives with remarkable precision—enemy camps at Nigorsi and Bogoroditza, the barracks at Ghevgeli and Garen, hangars at Nitorsi, the camp at Padagessi, and the station at Strumnitza. In the absence of a forward movement from Salonika, the persistence of these attacks is the most welcome feature in the situation.

It must be the wish of King George and of the Prince of Wales himself that during a war of the desperate character of the present struggle the movements of the Heir to the Throne should be made the subject of special reference as little as possible. His Royal Highness for the time being is a soldier, and, as is well known, takes his profession seriously. At the front, therefore, he is engaged in carrying out his military duties, and he cannot desire that any attempt should be made to differentiate his work from that of any other officer of his rank and position on the Staff. An exception, however, must be made in the case of the visit which the Prince paid to the Sudan at the beginning of April. It was impossible on such an occasion that he should divest himself of his Royal prerogatives, nor would it be right that he should attempt to do so. In making the visit a State one the Prince of Wales showed that the Royal interest in the country and its people, which received such notable expression when the King and Queen visited it four years ago, is not only maintained, but has not unnaturally been enhanced by the splendid record of the Sudan during the war. The Prince's visit was the occasion for fresh enthusiastic demonstrations of loyalty, and was in every way a great success.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, April 11.

The Western Frontier.

The recent success on the western frontier, culminating in the re-occupation of Sollum, has been followed by the creation of a new administrative district to be known as the Western Governorate. This district will comprise all the reconquered area from Mersa-Matrah to the frontier, and will extend to the south to include the oases of Siwa, Bahria, Farafra, Dakhla, and Kharga. This new district, like the one created in the Sinai some few years ago, will depend directly from the Ministry of War, and will be directed by Lewa G. Hunter Pasha, who, whilst exercising the powers of military governor, will continue to act as Director-General of the Coastguards. Hitherto the oases of Dakhla and Kharga have been administered by the Mudiria of Assiut, that of Farafra by the Mudiria of Minia, and that of Siwa by the Mudiria of Behera, which also had under it certain parts of the area now reconquered. This division of responsibility was bound to prove unsatisfactory in the long run, especially as the entire area is desert; and the new measure is certainly a wise one, bringing, as it does, this vast frontier region directly under the control of the Coastguards Administration, which is theoretically responsible for the preservation of the land as well as the sea frontiers of Egypt.

The Assay Laws.

Apropos of the recent note that appeared in your columns with regard to "gold exports" and the reference made therein to the work done by the Government Assay Office, a curious case has just occurred here. Although gold sold in the country need not be stamped, any fraudulent stamping is severely punished. Some little while back some jewellery was sent to the office for verification by the purchasers. It was found to be inferior to the stamp on it, and the merchant was prosecuted, the Assay Office report being used as evidence against him. The merchant contested the accuracy of the Assay Office statements, and set up the defence that the standards fixed by that office were merely its own and were based on a law which had never been recognised by the courts. As proof of this he produced the Government Statistical Annual, which put on record the fact that no trace of the original laws of 1846, 1848, and 1849, in which the present regulations are based, could be found, and that consequently the Courts had refused to recognise those laws, which, therefore remained without effect. In the face of these facts, the Court ordered a new assay of the articles in dispute to be carried out by the Assay Office in conjunction with an expert proposed by the accused merchant.

Before the order could be carried out a curious and most fortunate discovery was made. Some sacks arrived at the Assay Office from the Government Archives, who had no idea of the nature of their contents, except that they appeared to concern the Assay Office, and had sent them over, as that office had some time before asked for all papers which in any way referred to it to be handed to it for filing in its own archives. The sacks were, of course, examined, and at the bottom were found the original copies of the laws as they had been received from the Diwan, which at that period represented the present Council of Ministers. These documents supported in every respect the regulations which are to-day in operation. The sacks also yielded up another curious document, a petition from the Gold Merchants' Guild, presented in 1893, praying that they should be treated in accordance with the terms of these old laws, one of the signatories to this petition being the father of the merchant accused in this case!

This accidental, but opportune, discovery of such important State documents causes one to wonder what other valuable papers that have been lost to sight, or of the existence of which no one is aware, lie hidden beneath the "waste paper" of the past century, which has evidently accumulated and been left unindexed in the State Archives. With this striking instance before it, might it not be worth the Egyptian Government's while to have a thorough examination made of all such papers? The "Assay" sacks can surely not be an isolated case, and it is highly probable that a very little outlay in staff and files would result in the bringing to light of old State documents of great value, not only by reason of their bearing on the administration of the country, but also from the historical point of view.

The Commission of Industry and Commerce.

The Commission of Industry and Commerce, the creation of which was noted in this correspondence some few weeks ago, continues to be very active in its inspections and its deliberations. From what I can gather, great things are expected in Egyptian circles from its efforts; but it is sincerely to be hoped that the Commission will not be led to map out too ambitious a programme for itself and the country. The main reasons why Egyptians have failed in all commercial and industrial enterprises hitherto have been that they have aspired too high, and have not been content with modest beginnings, and also that once they have got their enterprise started they have shown such a lack of administrative ability and ordinary foresight that their ventures have been foredoomed to failure. In particular they have at times jeopardised the future of promising industrial undertakings by failure to overhaul their machinery and keep it up to date.

The Egyptians must remember that the great industries of the West and Far East all had modest beginnings, and that they have only succeeded in turning out their present-day high-class articles with profit because their founders and their successors contented themselves at the outset with being able to produce the lowest-grade articles: only as they gained in experience and skill did they gradually improve their production until they attained their modern high standard. Also they must not forget that those industries have progressed and become prosperous because their workers have moved with the times, and have by their own individual efforts forestalled or met outside competition whenever it presented itself in any potential form.

In the direction of founding new local industries, or of encouraging existing ones, the work of the new Commission should be mainly educative. It is out of the question for Egypt to think of being able to-day, or in the very near future, to compete with any of the better-class foreign-made articles which she at present imports; and she must confine herself to trying to produce the lower-grade goods, into the price of which freight and other expenses enter in such a large proportion, and which her notoriously cheap, though comparatively unskilled, labour may enable her to produce at a cost that will compare favourably with that of the foreign manufacturer. The Commission's efforts should certainly be concentrated in this direction; and if it can devise a scheme whereby, whilst producing their low-grade articles, the Egyptians can be afforded an opportunity to train themselves along the lines that alone can lead to the success and the better things towards which they must naturally aspire, it will have deserved well of the country.

Another Commission, called the "Commission of Agricultural Commerce," has now been created for the express purpose of watching over the development of the agricultural products of the country from the commercial point of view. It will deal with them in the same manner as the Commission of Industry and

Commerce will handle the question of local industries, viz., it will find new markets abroad, and will endeavour to substitute home-grown products, or products from British Allies and neutral countries, for those hitherto imported from enemy countries.

Coal in Egypt?

The local and especially the vernacular Press has during the past week given much publicity to the statement that coal had been found at Edfu, and numerous articles have appeared pointing to the obvious benefit that would accrue to Egypt from the working of local coal mines. Nothing definite is, however, known about this discovery. The geological conditions in the region have always led mining specialists to suspect the existence of coal of sorts. It is, indeed, an old question, which has no doubt been reopened owing to the coal crisis through which Egypt is passing. But even if the experts who are now carrying out investigations report that coal exists at Edfu it would be foolish to jump to the conclusion that Egypt's salvation in the matter of fuel is at hand. Much depends on the position and nature of the coal strata and whether they can be worked as a business proposition. Many people doubt whether coal does really exist at Edfu, or indeed anywhere in Egypt. We must await, first, the report of the geological experts, and then if their verdict is favourable the last word will still remain with the engineers, who will have to decide whether the coal could be worked profitably. It is obvious, however, that the present crisis cannot be affected by the discovery of coal in Egypt.

CYPRUS NOTES.

(From a Correspondent.)

The Legislative Council.

The session of 1916 was formally opened on March 21. The High Commissioner was received by the Chief Justice, the Puisne Judge, and the Chief Secretary. Sir John Clauson in his speech dealt at some length with the financial situation, and referred to the Estimates for the coming year. The forest revenue has been increased, owing to the closing of foreign ports. The quality of the island timber is superior to that of Austria and Anatolia, which has been generally imported to a considerable extent. The Vote for Public Works will be devoted almost entirely to roads throughout the island. This, besides meeting one of the principal needs, will provide work which is widely called for. Very few legislative measures will be introduced. The war, as was anticipated, has affected the island. Owing to its position, it has been a place of refuge for many in trouble. The High Commissioner's speech was duly translated into Turkish and Greek. A sub-committee, consisting of the Chief Secretary, the Commissioner of Nicosia, one Turkish and three Greek elected members, was appointed to draft the reply to the High Commissioner.

The High Commissioner and the Council.

The Greek members of Council abstained from any criticism of the Budget, on the ground that the present period is only one of transition; but they asked for an interview with Sir John Clauson, in order that they might informally submit certain complaints and proposals. His Excellency received them in a body, and they submitted the following requests:—(1) That relief works should be carried out throughout the island on a liberal scale; (2) that in the locust campaign the system of spraying with poison should be abandoned in favour of the old method of purchase by weight, as being far more effective; (3) that the export of wheat and vetches should be absolutely prohibited, and also that of barley if it should be shown that the whole yield of the coming harvest will be required for the needs of the island; (4) that the Government should provide, in the interests of commerce, for the regular and uninterrupted export of Cypriot products, by improved steam service, as may be deemed best. The High Commissioner listened with interest to the proposals, and promised that they should meet with full and serious consideration.

News Items.

A Turk named Hussein Saleh has been sentenced to six months' imprisonment at Nicosia for using language tending to a disturbance of the peace.

A letter published in the Greek paper *Kloio*, in Egypt, gives further warnings to would-be emigrants to the United States, setting forth the difficulties that are to be encountered.

The Holy Synod is now sitting at Nicosia under the presidency of the Greek Archbishop.

THE PRINCE OF WALES IN THE SUDAN.

H.R.H. the Prince of Wales arrived at Port Sudan from Cairo on April 3 and proceeded to Khartoum, where he was received with every sign of welcome and appreciation. The visit was apparently a surprise to most people in the Sudan, but it was evidently a very pleasant one, and it will undoubtedly do much to strengthen the loyalty of the country. In chronicling the event, the *Sudan Times* (April 5) says:—

It is now a little over four years since the Sudan was rejoicing on the occasion of the visit of their Majesties King George and Queen Mary to this country. The occasion was such a great and important one that ever since January 17 has been observed as a national feast throughout the Sudan. The rejoicings of the inhabitants of the Sudan are now renewed on the occasion of the visit of his Royal Highness the Prince of Wales. Just as the visit of their Majesties four years ago was highly appreciated by all in the Sudan, as a mark of Royal favour and as a sign of the great interest which his Majesty takes in the welfare of the Sudan, so the present visit of his Royal Highness the Prince of Wales is gratefully appreciated by all classes of the population as a new mark of Royal favour and of continued interest in the country and its people.

The following details of H.R.H.'s visit are taken from the same source:—

The Prince, who was accompanied by Colonel Murray, Colonel Watson, and Captain Lord Claude Hamilton, was met at Port Sudan by Colonel Wilson, the Governor of the Red Sea Province, the officials of the province, and Colonel Carroll, P.M.O., E.A., and Mr. Willis, the Assistant Director of Intelligence. The Royal party left Port Sudan at 8.30 a.m. by special train for Khartoum, stopping at Sinkat for a short time en route, where the Prince visited the tree planted by the King on his Majesty's visit there in 1912.

At Khartoum his Royal Highness was met by the Governor-General, Sir Reginald Wingate, who was attended by his A.D.C., Major Edwards, and the following officers and officials—Colonel the Honourable M. Talbot, C.B.; Mr. E. Bonham Carter, C.M.G.; Colonel E. E. Bernard, C.M.G.; Colonel Drake, C.M.G.; Lieutenant-Colonel Purdon, O.C., of the Royal Warwickshire Regiment; Captain M. R. Kennedy, C.M.G., D.S.O.; Mr. R. E. More, Governor of Khartoum; and Major L. K. Smith, the Officer Commanding Khartoum District. A guard of honour of the 5th Battalion E.A. was drawn up at the station with its band, and a saluting battery of the Egyptian Artillery was posted near the station; while the route from the station to the Palace was lined by troops of the 6th and 7th Battalions of the Egyptian Army and the Khartoum Police.

As his Royal Highness descended from the train a salute of twenty-one guns was fired, and the band struck up the National Anthem. After inspecting the guard of honour, and having presented to him those who were in attendance, the Prince drove with the Governor-General to the Palace. Here were assembled a number of British and Egyptian officers of the British garrison and the Egyptian Army, and of senior officials of the Sudan Government, Ulema, and religious chiefs and notables, who had the honour of being presented to his Royal Highness.

In the afternoon the Prince rode through the city with the Sirdar and suite, inspecting the Fort, the British Camel Corps, and Gordon College, where he witnessed some physical drill by the boys.

The streets through which the Prince passed were lined with British troops, under Major MacDermott, and by the City Police force. The whole ride from beginning to end was marked by enthusiastic demonstrations of loyalty by the population, the Prince being everywhere met with hearty acclamations. His Royal Highness was evidently very appreciative of the loyal and enthusiastic manner in which he was received.

On the following morning the Prince rode through the streets of Omdurman, where he was greeted by similar manifestations of loyalty from the immense crowds that thronged the streets.

A reception was held at the Palace in the evening.

Please

HELP SUFFERING ARMENIA!

Armenian Refugees in the Caucasus are dying of typhus, spotted fever, and want. Relief pay is less than 4d. per head per day, while food is at famine prices. The following cablegram is dated Tiflis, February 23rd, 1916: Condition of Refugees pitiable in the extreme. We are giving clothing, bedding, soap, sugar, tea, petroleum and fuel to 20,000, but there are 180,000 no better off than these we are helping. Funds in hand permit us to do no more.

Donations, large or small, will be thankfully received and acknowledged by the Hon. Secretary and Treasurer of the Armenian Red Cross and Refugee Fund, Miss E. J. Robinson, 35a, Elsham Road, Kensington, London, W.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, April 7.

The Government's Difficulties.

The position of the Government becomes daily more insecure, as is admitted even by its own journals, which advise it to be more united. In point of fact, besides the external difficulties, due to the lack of tact of its President, the internal economy of the Governmental régime is completely paralysed. The quarrels and incidents that have arisen lately prove their incapacity to govern and the lack of harmony between them and the Chamber, which is a veritable bear-garden. The Minister of Finances, while seeking to create fresh sources of revenue, by means of an amendment inadvertently introduced, in connection with the tax on alcohol, created a deficit of six millions. When he saw his error he sought to withdraw the amendment, but, the Chamber having threatened to overturn the Government, he had to give way. This blunder, and the scandal imputed to him of having made a present of 25,000,000 to the Mussulman landowners, having seriously shaken the Cabinet, M. Dragoumis found himself compelled to resign. But as that would just suit M. Gounaris, who would ask nothing better than to replace him by his old Minister of Finances—the only man who could take charge of the Department of Finances at the present time—and thus begin to reform the Cabinet step by step with men of his own party, the other Ministers, especially M. Rallis, oppose the withdrawal of M. Dragoumis. In these circumstances the life of the Government begins to be problematical, more particularly by reason of financial difficulties, which seem likely to become insurmountable. Lately they have again applied to Paris for a loan, but have been left without any reply.

Upper Epirus.

The ill-advised declarations which M. Skouloudis made recently to the Chamber to the effect that the northern portion of Upper Epirus might be considered henceforth as constituting an integral part of the Greek Kingdom, have compelled the Entente Powers to address to him an identical Note, asking courteously for explanations regarding the elections in Upper Epirus and the admission of the elected deputies to the Chamber; also regarding the substitution of civil for military authorities. The four Powers, describing these measures as arbitrary, reminded the Government that they have only recognised Greece's right to proceed to a military occupation of the district, since the Conference of London gave no definite ruling on the question; and that the final fate of the region will be decided after the war, at the peace conference. The Hellenic Government replied to this Note, but the Ministers of the Powers notified M. Skouloudis that the explanations given were inadequate; and he was compelled to give further assurances, by which the Government renewed its former declarations that the steps taken were imposed by administrative necessity, and will not affect the ultimate fate of the region, which will be decided by the Powers at the peace conference.

"Benevolent Neutrality."

The Ministerial journals, taking as their text the recent arrests effected by the Allies at Patras, Corfu, and elsewhere, and their naval perquisitions at various points on the Greek coast, contends that if the Entente Powers abuse the Government in this fashion, and subject it to such humiliations, they do so because they are encouraged to it by the Venezelists. The Government will not understand that it is its own attitude which inspires mistrust. In order to convince it that such is the case, the *Patris* recalls the fact that M. Zaimis's Government also followed a policy of neutrality, and that the Entente Powers, nevertheless, avoided any act that might wound national susceptibilities while he was in power. The fact is that M. Zaimis maintained a really benevolent policy towards the Entente; while it is impossible to say as much for the present Government, in spite of the promise of a "very benevolent" attitude made by the President when he came into power.

Soldiers' Wives.

A short time ago the Ministry of the Interior was invaded by the wives of men who have been mobilized, who demanded the subsidy voted for them by the Chamber, which, it seems, they had not received since December. Now, these poor women, unable to obtain anything, have been demonstrating in large numbers before the Parliament, with their children, crying out that they have no bread. Driven away by the police, they made their way to the Royal Palace, where they renewed their demonstration. The Venezelist journals ask how it is that the Government can pay the salaries of civil servants in full and cannot retain a part of them to pay the modest sum allowed to the families of those who are serving their country. It seems that the Government has now promised to devote five millions to the payment of these arrears.

A Scandal.

For the past three or four days the Ministers of the Entente Powers have been having lengthy interviews with M. Skouloudis every day. As the strictest secrecy regarding these interviews was, at the request of the Hellenic Government, observed by both sides, it was generally thought that some question of high policy was involved. But the mystery with which the Government sought to invest the subject has been exposed in all its details to-day by the *Patris*; and it transpires that it concerns a new scandal. The Russian Government had deposited a large number of sacks in the Greek Custom House at Salonika, which had given a formal receipt for them. After the Serbo-Bulgarian declaration of war last year, the Bulgarian Government, having need of sacks, and knowing of this stock at Salonika, made representations to a Minister, a member of the Cabinet—evidently M. Gounaris is indicated—and obtained the use of these sacks, which were forwarded in the wagons then sent to Bulgaria to transport the wheat which she had agreed to let Greece have. The receipt and forwarding of these sacks was attended to by the Bulgarian Consul at Salonika, to whom M. Radoslavoff sent a telegram informing him of the Greek Government's action in the matter.

This telegram having been discovered in the archives of the Bulgarian Consulate, which were seized by the Allies two months ago, the Russian Minister in Athens called the other day upon M. Skouloudis and, producing the receipt for the sacks, demanded their prompt delivery. M. Skouloudis replied that the sacks were not available, and that he did not know what had become of them; whereupon M. Demidoff took from his pocket and showed to him M. Radoslavoff's telegram to the Bulgarian Consul at Salonika. The President of the Council expressed surprise, and promised to inquire into the matter. But the next day all the other Ministers of the Entente Powers collectively made representations to him on the subject, pointing out that this action was prejudicial to the interests of the Allies, since the sacks in question were the property of Russia and that they were material of war, inasmuch as they were useful as shelters. The Ministers having asked for satisfaction, M. Skouloudis replied that in three days he would be in a position to give them an answer. We shall see how he extricates himself.

General Mahon's Visit.

General Sir Bryan Mahon's visit to Athens was sudden and brief. His long interview with the King, however, was in connection with very important questions. Sir Francis and Lady Elliot gave a dinner at the Legation in his honour, and this was followed by a reception.

A large part of the Legation is now occupied by the commercial section, to which more than twenty officials have been attached. This section is under the direction of Mr. Waugh, who has, as one of his helpers, Mr. Dawkins, Director of the British School of Archæology, who has offered his services voluntarily, and other well-known Englishmen. On one side there is an annexe, which is also given up to the commercial service and the intelligence department. The Legation has taken on the aspect of a ministry which, in spite of its great responsibilities, works admirably, thanks to the tireless energy of Sir Francis Elliot, who himself attends to every detail.

SALONIKA LETTER.

(From an Occasional Correspondent.)

Salonika, April 2.

The Recent Aeroplane Raid.

Particulars of the latest aeroplane attack by the Huns on the civil population of this city have already been telegraphed to London, and I will therefore refrain from going into details. I wish, however, to call attention to one or two points of special interest and significance. This has been the most murderous bombardment to which Salonika has been subjected since the arrival of the Allies. If the attack had been confined to Allied positions and depots at the front, or even on the outskirts of the town, the enemy might perhaps have been justified in doing all the damage he could; but the fact is that most of the bombs were dropped on parts of the town far removed from the stores or encampments of the Allies, and occupied only by the peaceful civil population. This is proved by the fact that the victims of German barbarism were largely women and children. Besides, most of those killed were Jews, who are credited with strong sympathies towards our enemies. Some Greek soldiers were also killed.

If the Germans had decided to estrange all their friends here and elsewhere in Greece, they could not have chosen more effective means than this massacre. The resentment which has been aroused among all classes of the population is intense. Many thousands, consisting mainly of Jews and Greeks, attended the funerals of the victims, shouting in the streets, "Down with the German and Bulgarian murderers." The people of Athens are also greatly excited; but the present pro-German Government of M. Skouloudis is doing its utmost to crush any open expression of the people's resentment. Even the most peaceful protest meetings are prevented by the police under orders from headquarters—two attempts have been made to hold harmless meetings at the White Tower here, but the first was forcibly dispersed by mounted and other police, while the other was prevented by the same authorities. M. Skouloudis contents himself with a half-hearted protest, to which the German savages reply in characteristic lying fashion by declaring that the bombs were only dropped on Allied positions to the north of the town and on the ships in the harbour!

I myself have special and painful reasons for remembering this attack, because I still bear the marks of a slight injury received. I was awakened at daybreak by the detonations, and jumping out of bed I approached the window to look out, when a terrific explosion took place quite near. The window of my room, which opens inwards, was violently flung back by the concussion, and the framework struck me on the head, knocking me down. It seemed as if the house was tumbling to pieces, and I thought the end of all things had come, so far as I was concerned. I soon found, however, that the injury was not serious, and these letters will therefore continue for the present.

The Languages of Salonika.

It has been said that for every language a man knows he is so many more times a man. If this were true as applied to the people of Salonika, they should represent the concentrated manly qualities of many individuals, seeing that they usually speak several languages besides their own mother-tongue. I am afraid, however, that this would be too flattering an estimate of the qualifications of the natives of this place. At all events, the characteristics concentrated in these people are not always the most desirable in the various personalities which they are supposed to represent. The chief end of man as understood by the people of Salonika is to "do" the stranger within his gates. The question of language is to a large extent connected with the fleecing process. If you speak English only, you must be prepared to pay the highest price for everything, as there is a rooted conviction among the people of the Levant that all Englishmen are rich, and can afford to pay more than anyone else. The shopkeeper's English, too, is usually very limited, and you cannot argue with him to advantage. If you speak French and do not wear an English uniform you may get the goods a little cheaper, because the French are reputed to drive a hard bargain, and, as most shopkeepers know French well, the price can be adequately discussed, and you may not be recognised as a British Crœsus. The man who speaks Greek or Turkish has a further advantage, because the vendor knows very well that no one can speak these languages fluently unless he has resided a considerable time in the Near East. The shopkeeper also realizes that his customer is familiar with the "tricks of the trade." But the very best bargain is secured by the person who speaks Judæo-Spanish. It is an "open sesame" to the Jew's heart, and, as the customer in nine cases out of ten is a Jew also, he secures the best bargain available, although even in that case it may take some argument to fix the price.

Spanish, then, is the principal language, although French is widely spoken for business purposes. Turkish comes next, then Greek and various Western languages which the natives speak in addition to their own tongue. But for variety of languages Salonika must yield first place to Constantinople. It has been said that if you stood on the Galata Bridge, spanning the Golden Horn, for half-an-hour listening to the passers-by you would hear about twenty languages spoken by people of as many nationalities. In Salonika you might hear half that number.

A HINT.

The following passages are extracted from a letter written by a soldier serving in Mesopotamia, and published in *The Times* (of April 22):—

At present we are resting after our first ten days in the trenches, where we had a spell of wet weather and had to work and bustle round practically the whole time, sleeping when convenient, which was seldom. It was my first taste of trench warfare, and I must say I don't like it. Bullets and shells don't matter much—one gets used to them—but mud and wet and dirt are decidedly not nice, and these I shall never get used to.

Mails are very scarce here. For eight weeks after leaving you we had no letters at all, and even now we have had only a few. Tobacco and cigarettes—that is, smokable ones—are conspicuous by their absence. . . . There is one thing that I think you might do, if you have the time—that is, write a letter to the Press for us, drawing the attention of one of the societies for distributing comforts to the troops to the fact that British troops are also fighting in Mesopotamia. Our poor Tommies here have not had a single comfort distributed to them, and considering the discomfort of this awful country it is really pitiable. It is not like France; there are no billets, nothing but tents, and fresh food is very rarely to be seen. Sweets and decent cigarettes cannot be bought, and writing paper and envelopes are as rare as precious stones.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha, and Vafiadee and Co.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

ROUMANIAN LETTER.

(From Our Own Correspondent.)
Bucharest, April 4.

The Cost of Living.

The public and the Press have for a long time been raising loud protests against the high prices current in all parts of the country. Many of the most elementary things, such as articles of food and accessories of the kitchen, are either lacking entirely or command prices which preclude their purchase by the lower and middle classes. The authorities have so far not found the means of coping with the difficulty, in spite of resolutions and promises. This state of affairs is the more exasperating for the reason that in many cases the articles in question exist in abundant quantity. One example among many will suffice to illustrate the point. The maximum price has been fixed for the produce of the State Fisheries, which has a shop and stalls of its own in the market places of Bucharest. But a visit to the latter reveals the fact that the Government stall presents empty benches for one's inspection, while the neighbouring ones are provided with an ample supply of fish, for which impossible prices are asked. The explanation is that the fishmongers, having bought up the whole available stock early in the day through the medium of individuals, pretending, for example, to purchase large quantities for restaurants, are enabled to demand arbitrary prices and thus defeat the good intentions of the Government. This state of affairs has led to violent altercations in the market-places between salesmen and would-be buyers, not infrequently necessitating the interference of the police.

Disturbances at Ploeshti.

On March 30 the workmen of Ploeshti, to the number of several thousand, went out into the streets to protest against the apathetic attitude of the authorities in connection with the high price of living and the speculation in articles of food. Violent speeches were delivered in different parts of the town, but the crowd was held in check by three regiments of infantry and a squadron of cavalry, so that it ultimately dispersed without any serious disturbance having occurred. The workmen's syndicates announced another gathering for Sunday, April 2, and threatened a general strike in the event of suitable measures not having been taken by that date. The strike has not yet taken place, but the population was in a state of considerable agitation on Sunday, which the presence of infantry, artillery, and cavalry did much to calm. A number of political personages who mingled with the crowd finally persuaded the people to return quietly to their homes on the ground that the law against speculation would very shortly become effective.

An Explanation.

This war has affected Roumania more widely than people generally realise, but it is not sufficient to spend a week in a Bucharest hotel, to drive on the Chaussée, and to stroll up and down the Calea Victoriei, in order to gauge the extent of the war's influence upon the social and economic life of the country. Observers who note that "Roumanians are more recklessly extravagant than ever in their pursuit of pleasure," and who see only a "joyous crowd dancing madly round the edge of an active volcano," have gazed upon but one small corner of the picture which represents the Roumania of to-day. They describe what they see fairly accurately, perhaps, but they see too little. In my letter of February 1 I insisted upon the fact that much of the "luxury, dissipation, extravagance—and indifference"—to borrow a second time the words of "An Englishwoman"—with which the population of Bucharest has been taxed, was the appanage of middle-men, or "samsars" as they are here called—a class which has gained numerous recruits, not always children of the soil, since the war has been in progress. But these people are not the exclusive produce of the Roumanian capital; they are parasites who thrive on any favourable medium. In the same letter I tried to emphasise the contrast—inadequately, I fear, according to a fair reader whose qualities of heart and mind lend special significance to her opinions—between the showy extravagance of this class and the correct, but to a superficial observer necessarily less apparent, attitude of those whose traditions and interests bind them down to the Roumanian soil, and who may in consequence be regarded as the most representative elements of the nation.

Roumanian Orphanage at Sibiu.

There are at present in Austria-Hungary at least half a million Roumanian children whose fathers have either lost their lives in the war or have remained permanently disabled and unable to earn a livelihood. The project for the establishment of an orphanage at Sibiu in Transylvania, therefore, corresponds with a very great need. For this purpose a subscription was opened a few weeks ago, and it is pleasant to note that the Roumanian public has shown no reluctance to making material sacrifices for an object not only humane, but eminently patriotic. In Roumania alone 200,000 francs have already been collected, and an equal sum has been subscribed in Transylvania. The Roumanians of Bukovina, who have been terribly tried by this war, have also decided to collect funds for the purpose of founding a local orphanage.

One example among many suffices to illustrate the extent of the losses suffered by the Roumanians "from over there." The 2nd Regiment of Infantry, with headquarters at Brashov, the bulk of which is made up by Roumanians, has enrolled since the beginning of the war 28,000 men. At the present moment it numbers no more than 4,000 men.

M. Radeff's Machinations.

A week or two ago the *Nationalul*, which is carrying on a strenuous campaign against the Bulgarians in general and against M. Radeff, the Bulgarian Minister in Bucharest, in particular, brought to light the fact that this gentleman had added a note in Bulgarian to the passport of a Roumanian subject wishing to visit Bulgaria for family reasons, to the effect that the bearer should not be allowed to return before the end of the war. The Bulgarian Legation published an emphatic denial, declaring that the statement was a calumny. The paragraph in the *Nationalul* had meanwhile come to the notice of the Roumanian authorities, the passport was confiscated, and the bearer prevented from leaving the country. There seems to be strong evidence in favour of the correctness of the *Nationalul's* allegations.

But M. Radeff's activity is far-reaching. A number of Bulgarians have been expelled on the charge of espionage, and they all seem to have been in direct communication with the Bulgarian Legation, some of them being related to the Legation servants. Some fifty young Bulgarians, Roumanian subjects, who were recognised as fit for military service, have deserted into Bulgaria at the instigation, it is said, of members of the "Dobruja Society," with which the Bulgarian Minister is known to have close connections.

The *Nationalul* persistently urges that this state of affairs cannot be allowed to continue, and demands the recall of M. Radeff.

OUTRAGE ON ROUMANIAN DIPLOMAT.

Under date of April 25, Reuter's Bucharest correspondent reports:—The Roumanian Military Attaché at the Legation in Berlin, while carrying a diplomatic case to Bucharest, was arrested on Friday at Brashov by the Austro-Hungarian authorities, who subjected him to a thorough search, and even wished to compel him to open the case. This the Attaché refused to do, and demanded permission to telegraph to his Government; but this was not allowed. Finally, he obtained permission to continue his journey, but had to leave his case behind. As soon as he arrived at Bucharest the Government made a *démarche* through the Foreign Minister to the Austrian Minister, who had the case returned intact.

The incident has produced a painful impression in Roumania, and the severity of the Austro-Hungarian authorities to a diplomatic courier is not understood.

Forty thousand Roumanian soldiers have been sent on leave to do agricultural work.

The Germans have given it out that the Russians at Marseilles are really Serbians in disguise.

A Copenhagen message says that four Swedish officers in Persia have been made prisoners by the Russians near Shiraz.

Notice is given by the Serbian Legation in London that by order of the Serbian Government all Serbian subjects between 18 and 45 years of age inclusive, also those who have been for various reasons exempted from performing their military service with the Serbian Army, are to present themselves within ten days at the Serbian Legation in London or at the nearest Consulate, with a view to communicating to them the order concerning their military duties.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, April 3.

The Change in the Calendar.

The proposals for the reform of the calendar in Bulgaria have been approved by the Sobranje, with a large majority. Before being passed, however, the Bill was modified in a way which takes from the reform the character that King Ferdinand desired it to have. Article 6 provided that in future all religious feasts should be celebrated on the same date, but according to the modern calendar; by which means they would coincide with those of the Catholic Church, and thus a big step would have been taken towards a religious *rapprochement* with Austria-Hungary and towards separation from Russia. This attempt has failed. In face of vigorous opposition in Parliament and signs of strong agitation in the country, the Government has beaten a retreat; Article 6 has been struck out, and the religious feasts will remain on the dates of the old calendar.

Loot!

It is reported from Sofia that every day sees the arrival of trainloads of furniture of all sorts and articles of value in iron and copper which have been stolen in Serbia. Apparently the greater part of this loot comes from the Morava region. A special commission receives the spoils and distributes them amongst Government functionaries. It is stated that some eighty pianos alone, "the property of officers," are awaiting purchasers at Sofia station. Agricultural and other machinery is taken to the Sofia Arsenal, where it is overhauled and repaired. The agricultural machines are to be made over to the larger agricultural proprietors and peasant associations.

From Belgrade comes the news that the Austro-Hungarian military authorities have ordered the requisition of all draught and farm animals still remaining in Serbia. This order applies not only to horses and cattle, but also to swine, dogs, and even fowls and geese! The luckless inhabitants are generously permitted to retain one-tenth of their fowls and geese. Any person concealing any of his property is, of course, threatened with the direst penalties.

Lies About Verdun.

A traveller recently arrived from Philippopolis gives the following description of the situation in that town:—"Eight days ago public criers announced that Verdun had fallen to the Germans, and the people of Philippopolis were forced to celebrate the event with great *éclat*. Immediately shops were shut, and the flags of the Central Powers were hoisted over public buildings and the barracks, and at night the town was illuminated and torchlight tattoos took place. The next day the troops marched past the Commandant and Germano-Bulgarian officers in parade order, and the school-children were given a holiday. As far as Philippopolis is concerned, Verdun has already fallen.

"Flour being so short, the Bulgarian authorities have adopted the German bread-ticket system.

"At the police-station there are now two offices, one for Bulgarians and the other for Germans, and nothing can be done without the authorisation of both—one controlling and counter-signing any permit issued by the other. It was only with great difficulty that I was able to get away from Philippopolis. Everywhere there was most minute inspection of papers and of baggage, and the slightest ground for suspicion led to endless interrogations."

We regret that, owing to a misunderstanding, a notice of an Essay read before the Royal Historical Society by Dr. G. W. Prothero, which is about to be published in pamphlet form under the title "German Policy Before the War," was inserted prematurely in our issue last week. The Essay in the form in which it reached us was being circulated privately by the Society. A little time may elapse before it is published by Mr. Murray.

Reports from Czernowitz to German newspapers say that 6,600 horses for the Roumanian cavalry have passed through Bessarabia.

Part 88 of *The Times* "History and Encyclopædia of the War," which has just been issued, is devoted to the Tragedy of Serbia.

NEAR EAST BOOKSHELF.

AN INJUDICIOUS EFFORT.*

When we take up a new book by Mr. Pickthall we always hope it may prove a bookshelf companion to "Saïd the Fisherman." Unfortunately "The House of War" disappoints that hope. As in "Saïd" and "The Valley of the Kings," the scene is laid in Syria, but the new story is far more reminiscent of the second than of the first of the others mentioned. Europeans figure largely in it, and we have once more the native scheming to obtain a kind of proprietorship, so to say, over a European, and plotting desperately, now with and now against other natives, to that end. We have also a good deal about missions, "mission ladies," and native Christians—of which and of whom Mr. Pickthall, obviously, does not approve. But in the new story the Europeans are even more in evidence than they are in "The Valley of the Kings," and as a result we find it less satisfactory; for, though Mr. Pickthall can write with sympathy of his own people in their own country—as witness some of his "Tales from Five Chimneys"—he seems to find it difficult to see any good at all in them when they set foot in his—and our—beloved East.

Briefly, the story is that of a young English lady, Elsie Wilding, with sincere "convictions," but narrow views, and a profound lack of both experience and tact, who, finding herself in the East, sets out to "convert" it, with a great deal more zeal than discretion. The people of the native Christian village in which she takes up her residence are prepared to put up with her eccentricities, if not to tolerate them, in the hope of securing certain substantial benefits for themselves; and they persuade their priest to suffer her presence in their midst—at a price. She, however, develops more independence than Jemileh, her self-appointed mentor, had anticipated, and insists on holding open-air services in a neighbouring Moslem village. By something like a miracle she misses securing the martyrdom to which her crude insults—unintentional, be it understood—of the Moslem faith would richly entitle her, and in the end learns a little wisdom. The *dénouement* it would be unfair to disclose. It is probably as satisfactory as it could be with such an unsatisfactory heroine.

The subject, it will be seen, is a difficult one to handle, and, owing to the cause indicated above, Mr. Pickthall has, we fear, failed to handle it successfully. Sharing his views of the relative merits of the "Native Christian" and the Moslem, and of the inadvisability of trying to convert the latter, or of lending too ready an ear to the complaints of the former, we feel that "The House of War" is an honest attempt to put certain facts forward in their true light and perspective. But it seems to us to fail. Mr. Pickthall's method is too severely objective. It serves well to show up the petty intrigues of Jemileh and of "Barsi," but it breaks down badly when applied to the description of Elsie's attempt at missionary preaching, which surely calls for a more psychological handling. Admitted that the young woman's confusion between *qalb* and *kelb* is ludicrous, and that her whole course of action is as unwise and obstinate as could be, yet her motives, one gathers, were sincere and disinterested; and for the sake of fairness, as well as of art, we should have liked to have had the point emphasized. The villagers of Aïneyn, we feel, rose to the occasion more worthily than has the author, who appears to us to have missed a fine opportunity.

Unhappily none of the characters in the book stands out with the vividness of "Saïd," or appeals to us even as did Iskender in "The Valley of the Kings." Elsie herself is lamentably unreal; the hero is a very shadowy, sketchy kind of person; and the rest of the Europeans, with the possible exception of the two mission ladies and the Consul, strike us as mere caricatures. The natives are more satisfactory. Amin, the professional murderer, who yearns for a quiet and respectable life, and deprecates violence of any kind, even in conversation, is an excellent bit of portraiture. We like, too, Hasan Pasha, the Governor, and Sheykh Bakîr; while Abbas, the doorkeeper at the mission house; Antun, the parish priest of Deyr Amun; and Abu Fâris are all worthy of Mr. Pickthall's art. The egregious Barsi (Percy), with his veneer of Americanism, is a faithful, if rather merciless, bit of character drawing, as is his scripture-reading papa, the Khawajah Yusuf; and Jemileh, the arch-schemer, is so admirably delineated that we dislike her intensely from the first page to the last. There are many delightful human touches in the book—such as the description of Elsie given by the sheykh of the village: "By the blessing of the Highest, she is wealthy and of small intelligence. She gives away her money easily." And the descriptions of scenery and of native life are entirely enjoyable. But we still wait for a second "Saïd."

---

* "The House of War." By Marmaduke Pickthall. (Eveleigh Nash. 6s.)

THE STATE OF SYRIA.

(From Our Own Correspondent.)

Cairo, April 3.

After a silence that has lasted several months, we have now received some first-hand information of the state of affairs in Syria. Two Syrian refugees have recently arrived in Cairo. One came here by a comparatively direct route; the other had a most adventurous trip across country from Beyrout, down the Euphrates to Busreh, whence, after a short rest, he came on to Egypt. I had a long conversation with the second refugee the other day, and although his information dated three months back, it was most interesting. *Al Mokattam* has just published a series of articles recording the experiences and impressions of the other refugee, and I propose to summarise those articles, supplementing them in certain parts by additional details given me by my own informant.

Few people can picture to themselves the terrible sufferings which Syria has had to endure and is still enduring. Turkish persecution, famine, and disease have brought about a state of affairs beside which the terrors of 1860 pale into insignificance. The striking feature of the present crisis through which that country is passing is that all classes and all sects of its population are suffering in the same manner.

One is at once on arrival struck with the great change that has come over the land. At Beyrout all the people one meets look pale and emaciated. The bazaars, where luxuries used to be sold, and which were formerly thronged with people, are now vacant; most of the shops are closed; those that remain open are rarely frequented, for the simple reason that there is little to sell and few have any money to spend. The import of foreign-made goods has, of course, stopped, and so prices of clothing, metal-work, and woodwork have risen considerably. Even people who were previously well off do not buy any but the barest necessaries, and it is the rarest thing to see anyone in new clothes.

The most serious feature is the lack of provisions, and the resultant exceedingly high prices which the existing stocks command. Bread has become very scarce, and the Unionists, imitating their German masters, have ordered that everyone should receive a ration. This has been fixed at two okias, roughly 1 lb. per head per diem, and can only be obtained by means of a ticket. The price is seven and a-half Turkish piastres per oke; but the bread is exceedingly bad, and differs widely from the sweet white bread for which Beyrout is renowned. So great is the distress that if a well-to-do man purchases a sack of flour he has to take it to his house in the dark of the night; otherwise he will be attacked and the flour stolen from him, as has happened on more than one occasion; whilst if one gets to a restaurant one finds the doors besieged by a hungry mass of men, women, and children, who fight for the scraps that may be thrown out to them.

The locust invasion last summer did a good deal of harm, and has accounted for the dearth of flour and cereals. But an important contributory factor in the enormous rise that prices have undergone has been the paper money which the Turkish authorities have put into circulation. This consists of notes for £T50, 5, 1, ½, and ¼; the two latter series have not been issued yet, but the one-pound notes are cut in half and used as £T½ notes. The notes are signed by Talaat and Jahid, ex-director of the *Tanin* and now vice-president of the Chamber of Deputies and member of the Public Debt Commission. There is no gold reserve against this note issue. Certain bankers and other Syrians managed to send some of these notes secretly to Europe, and had their suspicions speedily confirmed, for not even the German banks would accept them. This fact soon got about; old people told the younger generation how, fifty years ago, they had accepted Government paper in large quantities, and had lost all their fortunes, as the paper proved worthless. As a result, people hesitated to accept the notes, but the Government forced them into circulation by arresting all who discredited or refused them; some were executed, and others were sentenced to from seven to fifteen years' imprisonment. These tactics have not, however, prevented the notes from depreciating by 25 per cent. in value, and shopkeepers, if they find a customer is going to pay in paper, increase their prices enormously, if they cannot find a suitable excuse for crying off the deal. Gold is very rarely to be met with, and the Government has spies who watch for everyone who pays out any yellow coin, and he is at once arrested and has all that he possesses taken from him and exchanged for notes. The only foreign coins that are allowed to circulate in the country are the German silver and nickel ones.

Government paper and the locusts are, therefore, responsible for the present state of famine, but my informant told me that a great clearance of local stocks was made just previous to the expected arrival of the Germans last autumn at Constantinople, whither all the cereals that the authorities could lay their hands on were sent for shipment to Germany. The poor pick up and feed on orange and lemon peel and also chewed pieces of sugar-cane, and when the rains stopped the women and children went out into the fields and picked the weeds and other green stuff that sprouted up, in a desperate endeavour to keep body and soul together. There is no coffee, and the few cafés that are open sell "hourmos" (pea) and "tormos" (lupin) coffee, but even then the price is such that only the richer few can afford. Sweets, for which Beyrout was once famous, are also scarce, and cost 2 mejidias an oke.

Forage has become very expensive, and there is a great lack of horses and mules, owing to their nearly all having been requisitioned by the Government. Carriage hire has quadrupled, and as much as £12 has been paid for a drive from Beyrout to Tripoli.

Things in Beyrout are, however, in no way to be compared with the state of affairs in other parts of the country, especially the Lebanon, where positive famine exists. Between Beyrout and the Mount one meets crowds of starving men, women, and children, many of whom die on the roadside. Grain is still to be obtained in Aleppo, Homs, and Damascus, where a ton fetches two thousand Turkish piastres, but it must be transported to the Lebanon and other districts, owing to the lack of vehicles, etc. The train service was at one time entirely stopped, but now one train runs every week between Beyrout and Damascus. The tickets are printed in Turkish and German, there being no Arabic on them at all now. Owing to the lack of coal, wood has had to be used on a large scale, and deforestation has resulted.

The climax was reached in the sufferings of this unfortunate country when typhus broke out. It has spread in a most alarming manner, and is raging in Aleppo, Homs, Hama, Tripoli, and has now reached Damascus. It is to be feared that it will attain most serious proportions, for there are no drugs or medicines left in the pharmacies, and all the able-bodied doctors have been sent to the war zone. The only doctors left are the staff of the American College and a few old Syrians, who were unfit for military service. Eight thousand persons have died in Aleppo vilayet, and sixty cases have been reported in Tripoli.

The monasteries have done valiant work in relieving and assisting the people. So also have the Americans, who obtained from the States large subscriptions for the purpose. But the Turkish authorities intervened and refused to allow any relief to be given. From the replies they gave to those who remonstrated, it is evident that those in control of the country want to see the inhabitants die off. "These Arabs wish to get rid of us and side with our enemies," said one high officer, "but we will get rid of them first" —and they are doing their best to bring this about.

A reign of terror has been introduced by the court-martial that has been sitting at Aleih. The original members refused to inflict sentences to order, and were quickly replaced by less scrupulous men. Innocent men have been sentenced wholesale to death, exile, and penal servitude. In Aleppo there are at present 240 prisoners, 180 of whom are so-called political offenders, and include prominent Moslem and Christian residents, ex-deputies, and *ulema*. One and all are most shamefully treated. The Greek Catholic Bishop has been deported to Amasia, in spite of his ill-health, his colleague of Baalbek has been sent to Konia, and the Greek Orthodox Bishop of Beyrout has been forced to resign and enter a monastery, where he is kept close prisoner. One of the Maronite Bishops only with difficulty succeeded in clearing himself of a charge of treason. The numerous public executions that were taking place were beginning to have a bad effect on the people, so the authorities stopped them and continued their work of extermination in private. As a result of this general state of affairs, crime has increased all over Syria, and the Lebanon, which was one of the most peaceful and orderly districts, is now a hot-bed.

So great is the distress and so desperate have the people become that every time any Allied warships are sighted a rush takes place to the beach, and frantic efforts are made to row out to the ships, so as to escape the further horrors and privations that await them on land. The authorities have tried to prevent these escapes by securing the boats by chains to the shore, by scuttling a good number, and by only allowing a very few fishing boats to continue to ply their trade. But whilst these measures have, on the one hand, merely served to reduce the quantity of fish on which the coastal population might feed, they have, on the other hand, not had any far-reaching effect on attempts to get away from the country. Daily the people try to swim over to the island of Ruad, where the French have a base. Some succeed in the attempt, but a large number are drowned on the way or are killed by the coastguards, who have strict orders to shoot anyone who tries to get away by swimming.

3	20	Wednesday	29	30
			Rejeb.	Iyar.
4	21	Thursday	1	1

To-day is the birthday of Prince Paul Kara-Georgevitch, son of Prince Arsène Kara-Georgevitch, the brother of King Peter of Serbia.

Wednesday is the birthday of H.R.H. Princess Helen of Greece, eldest daughter of King Constantine, who was born in Athens on April 20, 1896 (O.S.).

Thursday is the birthday of H.R.H. Princess Catherine of Greece, the youngest daughter of King Constantine, who was born in Athens in 1913.

The King honoured General Sir Archibald Hunter (Commander Aldershot Training Centre) and Lady Hunter with his presence at luncheon at Government House, Farnborough, on Wednesday.

The Queen has presented to the Cairo Empire Nurses' Red Cross Club a large box of books and games for the use of the members.

General Sir William Birdwood was received by Queen Alexandra at Marlborough House on Saturday.

King Constantine has paid a signal compliment to the British Naval Mission to Greece by acting as sponsor in person at the christening of the son of Admiral Cardale, the second-in-command of the mission, which took place in the British Church in Athens yesterday morning.

Our Bucharest Correspondent writes:—"In accordance with a religious custom, a Requiem service for the soul of the late Queen Elizabeth was celebrated at the Monastery of Curtea-de-Argesh on April 8, this being the fortieth day after her death. The whole Royal Family took part in this service, as well as the President of the Council, M. Bratiano, and several members of the Cabinet."

General Sir John Maxwell left London yesterday afternoon for Ireland. Mr. Asquith announced in the House of Commons that the General has been given plenary powers over the whole of the country, and the Irish Executive have placed themselves at his disposal to carry out his wishes.

Lord and Lady Oranmore and Browne left town for Castle Macgarrett, Claremorris, Co. Mayo, for Easter, and will probably remain there a fortnight longer.

The Earl and Countess of Bessborough spent Easter at Port Eliot, St. Germans, Cornwall, as the guests of the Earl and Countess of St. Germans.

Sir Reginald Wingate and Lady Wingate left Khartoum for Erkowit for the summer at the beginning of this month.

Lady Maxwell, who recently returned from Cairo to 7, Grosvenor Place, underwent a severe operation on Saturday, and is progressing as favourably as can be expected.

Lieutenant-Colonel Sir Hutcheson Poë, Bart., has arrived in England from Luxor, Upper Egypt.

Lady Grogan has received the Order of St. Sava (third class), which has been forwarded to her by the Serbian Minister, M. M. Boshkovitch.

At the annual service of the Order of St. Michael and St. George, which will be held on May 4, at noon, in the Chapel of the Order in St. Paul's Cathedral, the banner of the late Sir Charles Rivers-Wilson will be removed and laid on the altar.

An unconfirmed report reaches us that Mr. Morgenthau, who is at present in America on leave, has tendered his resignation of the post of United States Ambassador to Turkey. We can only hope that this report is incorrect, for Mr. Morgenthau has worthily upheld the traditions of his service and his country in Constantinople. Since Turkey joined in the war he has looked after the interests of British subjects in the Turkish Empire with a tireless energy and courage that have earned him the sincere gratitude of all our countrymen.

M. Pashitch, the Serbian Prime Minister, and M. Jankovitch arrived at Stockholm on Wednesday on their way to Petrograd.

H.E. the Roumanian Minister and H.E. the Serbian Minister attended a midnight service at the Russian Church, Welbeck Street, on Saturday, Easter Eve.

In celebration of the Russian Easter, the Russian Ambassador and Countess Benckendorff entertained a number of guests at supper in the early hours of Sunday morning. Among those present were the Greek, Roumanian, and Serbian Ministers, with their staffs.

The Crown Prince of Serbia has conferred on Sir Francis Gore the Order of St. Sava (fourth class) in recognition of his services in connection with the Serbian Relief Fund.

The Crown Prince has conferred the Order of St. Sava (second class) on Sir Edward Boyle, of the Serbian Relief Fund.

The Sultan of Egypt has conferred the Order of the Nile (third class) on Miralai F. W. Woodward Bey, D.S.O., late Governor of Upper Nile Province, and Miralai N. W. Gardner Bey, Officer Commanding the Arab Battalion.

King Ferdinand of Roumania has given the sum of 1,250,000 fr. to be distributed in aid of the population of Bucharest, who are suffering from the dearness of food. The Queen of Roumania and the princesses will personally distribute a portion of the gift. The King's letter, addressed to M. Bratiano, the Premier, announcing the gift, has produced an excellent impression.

Essad Pasha, who is now on a visit to this country, is staying at the Savoy Hotel.

Mr. B. Christian has received, through the Serbian Legation in London, the Order of St. Sava (second class) for his services to the Serbian Relief Fund.

The Serbian Order of St. Sava has been conferred on Miss Gorse, of the Scottish Women's Hospital.

In a telegram dated April 22 a special correspondent of the *Times* states that, "according to a report from Smyrna, Abdul Hamid is interned under a strong guard at Magnesia, which is said to be the only town in Asia Minor still loyal to the Young Turks."

M. Voyslav M. Yovanovitch, formerly director of the Serbian Press Bureau at Nish, has arrived in London on a special mission.

A Reuter's message from Simla, dated April 21, reports that Mr. O. Hughes, Acting Political Agent and Commandant of the Mekran Levy Corps, and also Second Lieutenant G. P. Horst, a Reserve officer, recently attached to the corps, were shot dead at Mand by two tribesmen, brothers of a well-known outlaw. The levies promptly killed the two assassins.

The Hon. Arthur Stanley, M.P., of the British Red Cross Society, has received from the Serbian Minister in London the Order of St. Sava (third class), awarded to him in recognition of his services to Serbia.

Brigadier-General George Darell Jeffreys, Grenadier Guards, who was last week reported wounded, received his brigade command early in this year. He entered the Grenadier Guards in 1897, and within thirteen years received his majority, and a few months later he was appointed Commandant of the Guards' Depôt at Caterham. He took part in the Nile Expedition of 1898, when he fought in the battle of Omdurman, and served in the last two years of the South African War.

Major Stewart Francis Newcombe, D.S.O., R.E., who is reported wounded, had been employed with the Egyptian Army for some time before the war, and was in charge of the surveying party which in 1913-1914 was employed in connecting the triangulation of the Egyptian and Palestinian surveys. To the value of that work and to the exceptional ability which Major (then Captain) Newcombe displayed in carrying it on, Mr. T. E. Lawrence paid a glowing tribute in the "Annual" of the Palestine Exploration Fund, 1914-15. The passage referred to was reproduced in a recent number of THE NEAR EAST, in which the P.E.F. "Annual" was reviewed, and the hope was then expressed that Major Newcombe's talent for organisation was not being lost to the country. Major Newcombe served in the South African War, taking part in the fighting at Paardeburg and at Dreifontein, and he holds the Queen's South African medal and two Egyptian orders. He received the D.S.O. for conspicuous gallantry and devotion to duty near Anzac, Gallipoli Peninsula, on October 29, 1915, when he entered a mine tunnel soon after the first casualties were reported; and, although suffering from the effects of fumes, continued to lead rescue parties till he was completely disabled by the gas.

Miralai C. H. Townsend Bey, Governor Kassala Province, passed through Cairo recently on his way from the Sudan to England on leave

In a recent order, published in Cairo, the Commander-in-Chief records the gallantry of Lieutenant W. A. C. Perry, Royal Engineers, who attempted unsuccessfully to rescue two soldiers from drowning in the Lock at Belbeis. It was dark at the time, and Lieutenant Perry jumped into strong current from a height of 20 ft.

Miss B. Hunter has been awarded the Cross of the Misericorde by the Crown Prince of Serbia in recognition of her services to the Serbian sick and wounded.

Anzac Day was celebrated in London by an impressive service in Westminster Abbey, which was attended by the King and Queen, who came up from Windsor to be present, by many Ministers of State, and by some 2,000 Australian and New Zealand soldiers. General Sir John Maxwell, General Sir Ian Hamilton and Lady Hamilton, General Sir William Birdwood and Lady Birdwood, Sir George Reid, M.P., and Lady Reid were amongst the congregation.

The High Commissioner (Mr. Fisher) entertained a thousand soldiers at luncheon at the Hotel Cecil. At this a noteworthy feature was a speech by General Sir William Birdwood, who was loudly called for by the soldiers, and who finally consented to give "a private talk," which was received with signs of unmistakable enthusiasm. There was also a special performance at His Majesty's Theatre for the Australian troops, while the New Zealanders now in training in this country were reviewed "somewhere out of London."

In Cairo the day was celebrated by a memorial service at the Anzac Hostel, at which telegrams from the New Zealand Minister of Defence, the Australian Prime Minister and Minister of Defence, and the Australian divisional generals were read.

One of the most remarkable events of the present war has been the large number of British commanding officers with the British troops who, previously having distinguished themselves in the Sudan during the operations of 1898-9, have likewise attracted favourable attention in the present hostilities. Among these soldiers of the higher command has been General Gorringe, whose operations in Mesopotamia are being watched with an intense and sympathetic interest by his former brother officers in the Sudan, some among whom are still serving there. General Gorringe, who is now but forty-eight, was still a very young man when he was entrusted by his chief, Lord Kitchener, with the task of re-constructing the town of Khartoum. Previously he had taken a prominent part in the campaign, having been present at the action of Abu Hamed and the Battle of the Atbara. Gorringe was barely five and twenty years old when he found himself entrusted with the responsible duties of D.A.A.G. of the Headquarters Staff of the Egyptian Army, to which he was attached. It was he who was associated with Sir Reginald Wingate in the pursuit of the Khalifa Abdullahi bin Sayd Mohammed (of the Taaisha section of the Baggara tribe) after the battle of Om Debrikat, and with his subsequent death (at the hands of General Wingate) on November 24, 1899.

The winning back of Khartoum, which for thirteen years had been in the hands of the frightful Mahdists, gave Gorringe a further opportunity of showing his administrative ability, and well did he come out of the test. He found the condition of things in the town of Khartoum in even worse state than he could have imagined. The hideous straits to which the unhappy wretches living there were reduced to obtain food wrung even his heart, and no one who knows Gorringe would accuse him of being either a sensitive or a sentimental man. During one of his official rides on the outskirts of the town he noticed the native camelry being followed for miles upon the road by starving women and little children, who scrambled for the noxious excreta dropped by, perhaps, the most filthy animal living. This foul substance was collected in baskets, and, having been dried in the sun, was crushed into a powder, after which the digested portion of the grain (*dura*) was separated and ravenously eaten.

Among other of the Mahdists' prisoners who were released at this time was a German named Charles Neufeld, who had been in their clutches for over twelve years. This Neufeld, still a tall, handsome man, with a patriarchal white beard and plentiful snow-white hair, had suffered much cruel ill-treatment as a prisoner. He would at all times thereafter talk freely of his bitter experiences to anyone interested, and tell of the joyful hour experienced when the British troops, led by Kitchener and Wingate, entered Omdurman and struck from his maimed and bleeding wrists the heavy iron manacles which he had worn for so many years. And this typical German manifested his deep appreciation of the kindness then shown to him by the British troops by lending his immediate and willing aid as *agent provocateur* of the German Government at the outbreak of the present war—endeavouring by every dishonest means in his power to stir up strife and rebellion against the authorities in Egypt and the Sudan.

APPOINTMENTS, PROMOTIONS, Etc.

The *Patris* last week announced the recall of M. Passaroff, the Bulgarian Minister at Athens. M. Passaroff, however, officially denied this statement in the *Hesperini*.

Miralai Woodward Bey has been struck off the strength of the Egyptian Army, with effect from March 23.

The Egyptian papers report a rumour that Judge Bond, Vice-President of the Egyptian Native Court of Appeal, intends coming to England on leave shortly and retiring from the service on pension at the expiration of his leave

The *Temps* announces that M. Kyriakos Venizelos, the eldest son of the great Greek statesman, has arrived in Paris, having been appointed an Attaché at the Greek Legation in that capital.

OBITUARY.

Major Sir Henry Paulet St. John Mildmay, Bart., late Grenadier Guards, whose death took place three days ago at Dogmersfield Park, saw service in the Egyptian War of 1882, for which he held the medal with clasp and the Khedive's Star, and in the Suakin Expedition in 1885, during which he was mentioned in despatches and received the brevet rank of major.

Brigade Commander (temporary Brigadier-General) Augustus de Ségur McKerrell, C.B., died suddenly on Tuesday night in his quarters at Dundee. From 1893 to 1903 he was employed with the Egyptian Army, and did good service in the operations in the Sudan and in the Dongola and Nile Expeditions, obtaining his brevet lieutenant-colonelcy and the Medjidieh and Osmanieh Orders. Afterwards he was successively Governor of Dongola and Berber, and he commanded the 2nd Battalion Cameron Highlanders from 1910 to 1912. He was created C.B. in 1908.

We regret to announce the death, which occurred on Tuesday last, from wounds received at the Front, of Captain Ian Ross, son of Mr. and Mrs. John Ross, of Alexandria. Born in 1892, the late Captain Ross was educated at Loretto, and on leaving school entered a firm of cotton brokers in Liverpool. A few days after the outbreak of war he joined the King's Liverpool Regiment and was gazetted lieutenant in March of last year. Promotion followed rapidly, as on the following day he was made temporary captain, and was gazetted captain on December 18, 1915. Captain Ross saw a good deal of fighting in France, having taken part in the engagements of Neuve Chapelle, Ypres, Rue du Bois, Festubert, etc., and on more than one occasion distinguished himself by his gallantry. Once, while under fire, he went to the rescue of a Gurkha officer who had been wounded. He was himself struck down by a trench bomb and died at the base hospital an hour or two afterwards. Captain Ross was of a very genial disposition, and was extremely popular with the men of his battalion. He returned to France from sick leave only last month.

News was received in London last Friday that Field-Marshal von der Goltz, often known as "the reorganizer of the Turkish Army," died of spotted fever on April 19, after ten days' illness, at Turkish headquarters. It is suggested in certain quarters that his death was really due to assassination. It was in 1883, when he was forty years of age, that von der Goltz went to Turkey, at the invitation of Sultan Abdul Hamid, to undertake the reorganization of the Turkish Army. Though confronted by many difficulties, including much suspicion on the part of Abdul Hamid, he accomplished solid work, and in 1895, when he left Turkey, the country possessed an army very much better equipped, armed, and trained than it had when he arrived. He revisited Turkey in 1908, in 1909, and 1910, and continued to advise and assist the Young Turks in military matters; and though the defeat of Turkey by the Balkan Allies certainly shook his reputation, he still retained the confidence of many leading Turks, and his influence undoubtedly did much to bring Turkey into the present war on Germany's side. In the early stages of the war he was for a time Governor of Brussels, but when Turkey joined the fray he returned to Constantinople; and it is understood that he had lately been to Erzeroum and to Baghdad, when he probably took a considerable part in the direction of the military operations. Apparently his death took place at Baghdad. It was on his advice that the Turks made their unsuccessful attempt to invade Egypt; but against that failure we must, in fairness, set his good work on the Gallipoli Peninsula and in Mesopotamia.

The Indian Soldiers' Fund has sent to Mesopotamia two large motor-boats, to be used for conveying up the Tigris supplies which the fund sends to Indian troops at the front. One of the motor-boats has been fitted to accommodate a number of wounded men on the return journey down the stream.

DOMESTIC ANNOUNCEMENTS.

DEATH.

Ross.—Died of wounds, on the 25th inst., Captain Ian Ross, King's Liverpool Regiment, only son of Mr. and Mrs. John Ross, of Alexandria, and 57, St. James's Court, S.W., aged 23.

IN MEMORIAM.

Doughty-Wylie. — Lieut.-Colonel Charles Hotham Montagu Doughty-Wylie, V.C., C.B., C.M.G., who gave his life for his country at Sedd-el-Bahr, April 26, 1915.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GREECE, BULGARIA, AND THE ENTENTE.

In a series of articles written by M. Venizelos, or under his inspiration, the new official organ of the Greek Liberal Party has contrived to throw no little light on the Balkan negotiations which preceded Bulgaria's entry into the war. Though primarily intended for the enlightenment of the Greek nation, these articles are of special interest to British readers, for they state very clearly, and, we must infer, accurately, the part played by Great Britain at the time in question. According to M. Venizelos; the Greek Government, of which he was then the head, secured from the British Government in September, 1914, an assurance that the Powers would not ask Greece to make any territorial concessions to Bulgaria. The further assurance was given that neither from Serbia would any considerable concessions to Bulgaria be expected. Greece, for her part, pledged herself not to accept territorial compensation in any part of Southern Albania that was not inhabited by Greeks. This arrangement was prompted by the knowledge that "there remained both in England and in Russia various people who urged that Greece should cede Kavalla to Bulgaria." Taking advantage of the presence in Athens of representatives of this school of thought, M. Venizelos discussed the question with them and put forward the suggestion that the time had come for Greece to realize her national aspirations in Asia Minor. In due course concessions on a large scale in that region were offered by Sir Edward Grey. On a former occasion M. Venizelos stated that the British Foreign Secretary's communication was dated January 24, 1915, and that the latter declared that any proposal by the Greek Government would be favourably considered. Even then there was no suggestion that Greece should make any return to Bulgaria, but it was stipulated that she should withdraw her objection to concessions by Serbia to Bulgaria, her main *quid pro quo* being, presumably, military co-operation with the Powers of the Entente. Greece, however, did not feel justified in taking part in the war without Bulgarian support, or at least an understanding with Bulgaria; and it was the desire to secure one or the other that led M. Venizelos to propose to King Constantine that Bulgaria's aid should be purchased by the cession of Kavalla. His proposal was rejected, and he resigned.

In the opinion of M. Venizelos, the course of events in Greece caused the British Government to abandon all hope of Greek co-operation, and it set about at once to try to gain Bulgaria's support. Kavalla once more was to be the price offered. Greece was to be induced to exchange Kavalla for concessions in Asia Minor, and negotiations to this end were opened at Sofia and Athens. M. Venizelos continues:—"Unhappily, the Entente committed the grievous error of making this offer without having discovered beforehand whether Bulgaria would accept. Thus the Greeks were gratuitously offended, and their co-operation was rendered problematic, even after the return of M. Venizelos to power." When this latter event did take place in August, or, we may suppose, about a month later when Bulgaria's purpose was revealed, M. Venizelos "secured from the Entente Powers the withdrawal of the promises made to Bulgaria, and their assent to the proposal that Greece should have Thrace, if she took part in the war against Bulgaria, who would then be driven back from the Ægean." But Greece was not to be moved from her neutrality, and the painful story of Great Britain, hat in hand, begging at every Balkan door in turn comes to an end. Not so the Balkan question, which, thanks to the British Government's vacillation, remains as much of an unsolved problem as before. Its interest for the Allied Powers, however, has not changed. The one desideratum from the point of view of Europe as a whole is that there should be permanent peace in the Balkans. How do the Allies propose to achieve it? By confining Bulgaria for ever in the prison house of unrealized national aspirations, with Serbia and Greece as head gaolers, or by settling once and for all differences which estrange the Balkan States? There is no third course, and the measure of peace attained by the first would certainly not be permanent. Sooner or later the question has to be faced. The policy to be adopted by the Allied Powers ought to be decided now; but if the hand-to-mouth diplomacy which resulted in such a tragic fiasco in 1915 is still in vogue, we may expect a crude settlement gratifying to the resentments of the moment, but assuredly laying up a heritage of fresh trouble for the future.

The main cause of the discomfiture of the Allies' diplomacy in the Balkans was their failure to have a policy of their own. As far as the British Government was concerned, its guiding principle in dealing with the Near East appears to have been to say "Yea and Amen" to M. Venizelos. We yield to none in our estimation of M. Venizelos, and would gladly have seen him more strongly supported by the Allies, but this attitude ought not to prevent realization of the fact that he is working solely in the interests of Greece. When he is able to say that in September, 1914, he secured from the British Government an assurance that the Powers would not ask Greece to make any territorial cessions to Bulgaria, he testifies to the personal influence he had established over the British Government, but he pays a sorry tribute to British diplomacy. No such undertaking ought ever to have been given to Greece, for the reason that only these territorial concessions by Greece and Serbia could secure permanent peace in the Balkans. Months later the British Government learnt this elementary fact, known from the beginning to anyone with the most superficial acquaintance with Balkan affairs, and proceeded to offer territorial concessions to everybody in every direction. It was, of course, too late. The subsequent march of events in the Near East, the sacrifice of Gallipoli included, represents the penalty paid by the Empire for this particular piece of ignorance. Greece, however, is a sufferer, too, and the object of M. Venizelos's disclosures is to bring home to his countrymen the parlous plight in which they are placed. As things stand now, Greece is left without a friend in the world with the certain prospect of Bulgaria waiting for the moment when she can turn and rend her. If the Central Powers win the war, Bulgaria's opportunity will come at once. If the Allied Powers are victorious, Greece has done nothing to earn either their favour or respect, and ought not to be able to count on their support against the Bulgarians. Meanwhile the Greek Government keeps the army mobilized for no reason that can be justified by its present policy, and threatens to plunge the country in economic ruin. If only for the fact that the interests of the Central Powers in the Near East are diametrically opposed to those of the Balkan States themselves, while the interests of the Allied Powers require these States to be strong and united, Greece ought not to have hesitated to take sides in the war.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

A NIGHTMARE JOURNEY.

(Further Experiences in the Balkans of Dr. Lauwens, of the Wounded Allies' Relief Committee.)

On Thursday, July 29, I woke at three o'clock in the morning, to find it was very cold, with the moon and stars shining in a clear sky of deep blue. At four o'clock I was fully dressed and my baggage ready, and when Mikovitch, the interpreter who was to accompany me, came to call me, he was astonished at my opening the door to him myself. As we had been told that we should not be able to procure anything on the journey, I went out to get a few provisions to take with us. At five o'clock four horses were waiting in front of the inn for us: miserable-looking beasts, covered with sores, and with their bones sticking out painfully. I tried to comfort myself with the hope that they were better than they looked, trusting to the promise made me to give me good beasts. We were to be escorted also by a guide and a Montenegrin soldier, armed to the teeth. Our luggage was loaded on to two of the horses, while Mikovitch and I mounted the two other animals. Such saddles! The greater part of the harness was replaced by old string.

At last we were off!

We soon left the town behind, and immediately entered the valley, which rapidly becomes narrower as it approaches a narrow gorge, the entrance to the defile that leads to the Tcharok Pass. On the left we passed an Orthodox monastery, dating from the fifteenth century, and very soon we began to meet caravans returning "light" from Old Montenegro. After a very little way along the mule-path which took the place of the road, my horse began to shown signs of fatigue, and, in order to spare the poor beast, I decided to walk a part of the way. This was at half-past five in the morning, and from that hour I did not remount my horse.

The path, which was only a few feet wide, ran at first beside a torrent which roared and foamed along a bed of rocks fallen from above. The scenery was wild beyond description, without the smallest sign of vegetation. Presently the valley widened out a little, and tufts of shrubbery began to cover the ground, which still rose precipitately each side of us. We travelled slowly, and were passed by Arnauts, men and women, riding little horses that climbed the path with wonderful agility.

Nearly all the time our path lay along a precipice, and our horses particularly affected the dangerous side. I suppose it is a habit with them, to prevent the loads they are accustomed to carrying from knocking against the rocks on the other side of the path. The heat was very trying. Numerous small streams flowed across the path into the torrent below, and in some spots the ground had become soft and yielding. Great care was, therefore, necessary, as a false step might prove fatal.

After three and a-half hours' walking the valley widened a little, and we reached a plain, the name of which I have forgotten, but which is of evil fame. During that period of anarchy representing the Turkish régime a band of brigands infested this spot, massacring and holding travellers to ransom. It now boasts an inn, where beasts of burden may be refreshed, and where travellers, returning from Old Montenegro, arriving at nightfall and not desirous of continuing their journey immediately, may pass a night.

We took some Turkish coffee, while the horses were supplied with hay and oats; but both our mounts and the packhorses refused to eat—a bad sign. Indeed, we had hardly started off again when the packhorse collapsed completely. We were obliged to unload him and leave him behind on the road, with the conductor and my mount. I do not know what became of them. In continuing on our way, it was easy to see that this road was a veritable Calvary for beasts of burden, for it was literally strewn with the carcases of dead horses. It must be remembered that since the beginning of the war these poor beasts have been incredibly overburdened.

Our path ascended the mountain-side. The landscape changed gradually, beginning to resemble Alpine scenery, groups of tall pines covering some of the peaks, while higher still the snow of the Albanian Alps sparkled in the sun. About mid-day we stopped to lunch, off a box of preserves and some eggs, at a relay called Kueista. Two Albanians came and looked at us curiously. One of them was nearly blind, and wanted me to cure him when he learned that I was a doctor.

Our halt lasted only twenty-five minutes, and we started off again. My meal did not seem to have fortified me much. I began to feel very tired, and soon could only drag myself along with difficulty, wondering the while if I should be able to continue. Luckily we arrived at Bielouja, a place of three houses and a mill beside the torrent, and at one of the houses we obtained some coffee, which quite restored me. We were told that it would take us three hours to reach the crest (of Tcharok) and four hours to get to Andrievitza. Here, too, the news that I was a doctor drew the few inhabitants of the place, who pestered me with questions and detailed all their woes and maladies. I did the best I could for them all, and continued on my way quite cheered up.

About four o'clock we reached the peak of Tcharok, and the interminable descent commenced. Here and there were little Montenegrin houses. Rich vegetation and forests of fir-trees and oaks covered both sides of the valley. The heat was overpowering. Happily, the streams did not fail us, and we did not suffer from thirst. We passed numerous caravans with donkeys and little horses, returning unladen towards Ipek, driven for the most part by fierce-looking Albanians. At last, at seven o'clock in the evening, we reached the bottom of the valley.

We waded across a very wide river, along the banks of which stand the houses and farms forming the village of Velika. I got my interpreter to ask how far we were from Andrievitza, and we were told that it was a walk of from five to six hours. This completely discouraged us, for the end of our journey seemed to become farther off. We now followed the right bank of the river along an easy little path, walking quickly, in spite of the fourteen hours we had already done. The sun was sinking rapidly behind the mountains, and I began to get anxious. The valley seemed to be thickly populated, and there were a great many soldiers. At eight o'clock night fell. We were questioned by a peasant, and on replying that we were going to Andrievitza, he said that we were going the wrong way, that we must return and cross the river by a big wooden bridge and follow the left bank. I was furious, for the Montenegrin soldier was supposed to have acted also as guide. Through the intermediary of the interpreter I told him what I thought of him, and he confessed that he had never been to Andrievitza. That is just like a Montenegrin! The incident showed me that I had only myself to rely on.

We were now following the left bank of the river, in absolute darkness; there was no moon, the path was hardly discernible, and we were continually passing through little woods where we could no more see than if we were blind. Soon it was quite impossible to know where we were going, or if we were following the path at all. I took the course of making the horses walk before us. They, at least, guided by their instinct, would find the right path. The Montenegrin soldier could barely follow us any longer. He grumbled and groaned, and said that it would be better to sleep on the road. "Very well," I replied, "you may stay here, but you will stay alone," which forced him to drag along after us. We passed through swamps where we sank nearly up to the knees, and over rocky places where we stumbled at each step. The poor beasts were nearly done; but Mikovitch urged them forward with the help of a stick he had cut from a tree.

To add to our misery, the valley became narrower and the path again began to ascend and descend continually. No more houses. It was ten o'clock. In the darkness we passed a soldier on horseback. "Another hour," he told us. We summoned all our remaining energy. The valley twisted in and out in an incredible way and became narrower at each step. We were walking between jutting rocks and a precipice, at the bottom of which roared a torrent. At last the valley widened, and we saw lights shine in the distance. It was Andrievitza. Another spurt and we were there. It was eleven o'clock at night; we had been walking for seventeen hours, and had covered nearly seventy kilometres. Exhausted, we presented ourselves at the only inn in the place and asked for lodging. "Néma," replied the host. I asked for a glass of wine. "Néma," he replied again. A glass of water. "Néma," said he, shaking his head calmly. I became exasperated. . . .

An Italian took pity on me. He went knocking from door to door, and brought me back a litre of wine, which was comforting. He also found me a room in a little house at the bottom of the village. He spoke French correctly, and asked me if I were really Dr. Lauwens, of the English Mission. He had been waiting here two days for me with an automobile. We arranged to leave the next day at eight o'clock. At last, about midnight, I threw myself, fully dressed, on an old bed in a cottage and slept profoundly.

A Corfu telegram reports that a proclamation has been read at Elbasan from Prince William of Wied in which he calls upon the people to submit and show their loyalty, laying down their arms and enlisting in the Albanian Army.

For having welcomed the Serbians when they broke across the Hungarian frontier and entered Semlin in September, 1914, a chemist's widow, Bela Jenkov, and her three daughters have been sentenced by an Austrian court-martial to thirteen years' imprisonment of the severest kind. The women accompanied the Serbian soldiers when they returned to Serbia, and were lately captured in the interior by Austrian troops.

There was a scene of great enthusiasm at Holyhead on Sunday night on the arrival home of nine officers and forty members of the crew of the s.s. "Tara." Thousands of people had gathered in and around the railway station, and the men made their appearance to the accompaniment of frantic cheering. As the train steamed in, a choir assembled on the platform sang Welsh hymns and patriotic airs, but the music was drowned by the cheering.

TANGIER TO TEHERAN.

The Turk has not yet lost his knack of doing humorous things in a quite unconscious way. So much is clear from the message sent by Reuter's Copenhagen correspondent, who has been reading Turkish newspapers received there recently. These papers, he reports, "contain lists of names of prominent Arabs who have been hanged for treason or for absenting themselves from military service," and "overleaf is another list of well-known Arabs living in Great Britain and the British Colonies, who are cordially invited to return without delay." The only improvement on this that I can suggest would be to have the two lists printed in adjoining columns.

***

Some weeks ago I commented upon the number of aliens who have since become famous for their Hunnishness that it had been my ill fate to meet in Egypt and the Sudan. But, on the other hand, the same countries gave me acquaintances of quite another calibre, men whom it is a pride to know. Mahon was one, the genial Irishman who makes war with both gloves off, and a friend of every subordinate. Gorringe another—George Frederick Gorringe—one of our youngest generals and world-famous now as he batters against the Turkish lines which encircle Townshend at Kut. In the days when I first knew him he was a colonel in the Army, and was holding the administrative rank of Mudir in the Blue Nile Province. He had worked wonders even in those days, for during a comparatively short tenure of office he had almost doubled the revenue of his province. As a soldier and an administrator the natives stood greatly in awe of him, although this in no way interfered with his general popularity. There is, indeed, no man whom the Sudanese admires more than the one who knows his own mind and, given a position of authority, sees that he gets what he wants. I have frequently heard the kindly but rather weak official referred to as *magnoon* (insane) by the very people he has tried his hardest to befriend.

***

General Gorringe is only forty-eight, and twenty-eight years of his life have been passed in the Army; for he joined the Royal Engineers when he was twenty, and his career generally has been sufficiently successful to augur well for the result of his present enterprise. Both he and his younger brother Leonard, who was in the Slavery Repression Department of the Government, proved themselves to be keen sportsmen while they were in the Sudan, and they both held specimens of the most-sought-after heads when they left the country. In his rare intervals of leave in England General Gorringe resides at Southwick, close to his father's place, where he himself was born. The manner in which he obtained his present residence was characteristic of the man. Returning home after a protracted absence, he found a couple of large semi-detached houses built on some property adjacent to Mr. Gorringe's estate. He was furious, but within a week or so he had purchased the place lock, stock, and barrel, had knocked the two houses into one for his own use, and was building stables at the back and laying out a tennis court in the grounds. I fancy that if the worst happens and Kut falls, the fault will not lie at the door of George Frederick Gorringe.

***

I could find it in my heart to wish that newspaper correspondents would be more sparing in their references to the former might and achievements of Greece in these sad days. For the appeal of those times when Greece was the pivot of the world is a very real thing to those who have walked over battlefields and visited the districts that are hallowed for all time by the memory of her heroes and her gods. It has taken me a long time to put aside the conviction that one day the spirit of the past would touch the heart of Greece and drive her people irresistibly up the blood-stained pathways to adventure and liberty. But I have done so now, and I had rather forget the rest. King Constantine may yet lead his people to the fray, but it would be in obedience to the call of expediency coldly analysed, with only a touch of the ancient fire here and there, sparks unnoticed in the general conflagration. At a time when half the world is immersed in Medea's cauldron Greece stands chilly and aloof. Subsequently in the councils of the war-regenerated nations she will have no place. West and east and south and north of her she will see new-born peoples working their way on to new-born heights of national accomplishment, while her slackening pulse beats on to the tune of memories dulled by the murmur of lost opportunities.

***

In one way at least the Greeks should be grateful to us for our occupation of Salonika. Excavations for trenches and dug-outs have resulted in the finding of innumerable relics of the past, and, according to Mr. George Renwick, of the *Daily Chronicle*, quite an interesting little museum has already been formed, under the supervision of the Allied authorities. I cannot forbear quoting the inscription on one of the latest finds, a marble slab, which describes what Mr. Renwick calls the "ideal army contractor," it is so singularly apropos to events of the moment:—

The City (honours) Manius Salarius Sabinus, the Gymnasiarch and benefactor, who, in times of scarcity, often supplied grain at a price far below the current one; and at the passage of the troops of the Emperor supplied 600 measures of wheat, 100 measures of barley, 60 measures of beans, and 100 measures of wine at far below current prices; and gave 370 denarii for the repair of the Gymnasium, and at the festivals gave contributions for the tables of the senators and ex-magistrates and the citizens who were entertained with them, and in the needs of the city proved himself a useful citizen. The work was carried out under the direction of Pereitas, the son of Philas, also called Biesios, and Herod, the son of Beithys.

Year 269.

Our advertisements of the present day, while often no less emphatic, are, I hope, destined to be far less lasting.

***

In writing the above I forgot to mention that the inscription is, of course, in Greek, and this reminds me how often a thrilling story may be robbed of its point by a slight error in its telling. I remember during the time of the Boer War, when our French neighbours were not so enthusiastically our Allies as they are to-day, a man returned to the Sudan from home, and was eagerly assailed with questions as to the feeling in Paris, through which he had passed. "Awful," he said. "You can't get served at a decent restaurant, and when I went at last to a small place near the Gare St. Lazare, the proprietress glared at me and said: 'Khollo Ingleese, zay zift,' to my face." Now, the above phrase is Arabic, and not French, for "All English are like pitch" (*i.e.*, black—horrible). It was a slight slip, but enough to destroy his story, for we then remembered that he could neither speak nor understand a word of French.

***

In spite of all drawbacks, the spirits of our troops in Mesopotamia are wonderful. The *Morning Post* published a few days ago a letter from an officer which seems to me a little masterpiece of description. The writer says:—

I have rejoined the Brigade again now, and at the moment am on a sort of steam sardine tin with two other smaller sardine tins lashed alongside; the men are the sardines, and the so-called engine supplies the oil, and the whole outfit was built some time B.C. In this machine we are lurching and grinding our way up the ancient river of Tigris with many stops, owing to the fact of the skipper being in a continual state of inebriety, and so finding steering difficult; also the ancient kettle which is doing duty as a boiler frequently goes off the boil, and we have to stop to get it hot again. Everything passes us, including sailing barges, and about half an hour ago the Major came by in a contraption pushed from behind by a sort of millwheel at a most giddy speed. Our journey is supposed to last about five days, but at our present rate five years would be nearer the mark.

He goes on to poke fun at everything he sees, from Ezra's tomb, which he likens to "a dilapidated brick kiln, with a pair of piebald crows sitting on the top," to the famous Garden of Eden—the Kurnah one—itself, which is "all Eden and no garden." Even the dreaded mosquitoes afford him the chance of a smile, for, with a touch that Mark Twain himself might surely have envied, he refers to them airily as being "as big as starlings." As a matter of fact, I found the mosquitoes in Mesopotamia far less ferocious, persistent, and generally annoying than the common so-called "house fly." The mosquito stings and flies away (when he can); the "house-fly" (which seems to flourish anywhere) stings and *crawls* away, just far enough to escape your savage slap. He judges his distance, too, to the hundredth part of an inch, and displays an insolence in his leisurely crawl which is the last word in exasperation. Perhaps the letter writer I have quoted has never met this particular plague yet. On the other hand, he may have done so, and may feel that such a beast is no joking matter even to one who can write so flippantly of the progress of "the Major."

***

By a slip of the pen, a ridiculous error crept into my note, published last week, on the German claim that the Hohenzollerns are "descended from a sister of Mohammed." In transcribing my correspondent's remarks regarding the descendants of the Prophet, I wrote that the unfortunate Hassan and Hussein were "the victims of Moawya and his son Bayazid," whereas the last name should, of course, have been Yazid (or Yezid).

THE PRESS ON THE NEAR EAST.

The Pan-German Plan.

Under the heading of "The Pan-German Plan and its Antidote," Mr. R. W. Seton-Watson, writing in the *Contemporary Review* (April), says that the Balkan campaign conducted by the Central Powers last autumn laid bare the "vast designs which underlie Germany's military operations."

Serbia is the gate of the East, and its warders had to be dispossessed, if Germany was to assure her command of Constantinople and the decaying Turkish heritage. There are three stages in the Pan-German plan—first, the creation of "Mitteleuropa," a great central European state-organism of 130-150,000,000 inhabitants—as an economic and military unit; second, the realisation of the dream of "Berlin-Bagdad," by the inclusion within the political and economic sphere of influence of the new Zollverein of all the territory lying between the Hungarian frontier and the Persian Gulf; and third, the achievement of naval supremacy and world-power. Britain is faced by the alternative of opposing this programme or accepting it as inevitable. There can be no half-measures in such a struggle: the answer must be "Yes" or "No."

He shows that no victory in the West would be sufficient to destroy the plans of our enemies if it were unaccompanied by the destruction of their designs in the East.

Prussia, Hungary, Turkey, and Bulgaria—each stands for racial domination in varying degrees of crudeness. The policy of Germanisation in Posen, and Magyarisation among the unhappy Slovaks and Rumanians, the Young Turkish policy of repression and extermination in Armenia, and the dream of Bulgarian hegemony in the Balkans on the most approved Prussian lines—all are based upon the same principle of brute force as the determining factor in human progress, and all stand or fall together. . . . In one of its main aspects this war is the decisive struggle of Slav and German, and upon it depends the final settlement of the Balkan and Austrian problems. On the manner of this settlement and on its completeness depends, in turn, the question whether this war is to be followed by stable peace in Europe or by the creation of an armed camp. Stated in another form, the main task which faces the Allies is that of releasing 35 million Slavs and Latins whom Germany is to-day ruthlessly exploiting as *Kanonenfutter*, and who are compelled to shed their blood in a quarrel which is not theirs, and against their closest friends and kinsmen. It is only by their emancipation that an effectual obstacle to the German *Drang nach Osten* can be created, and Germany restricted to those natural limits within which she would cease to be a danger to the peace of Europe.

Mr. Seton-Watson writes scathingly of the few Englishmen who have shown a tendency to coquet with Bulgaria at the expense of our Serbian Allies. Naming them traitors, he continues:—

If honour and good feeling mean nothing to them, they might at least realise that this country is tired of the feeble and disastrous policy of wooing our enemies at the expense of our friends, and that our interests demand unqualified support for Serbia as an Ally, and for Roumania and Greece as essentially loyal and friendly nations, whose friendship has survived the repeated blunders of our diplomacy.

The article concludes:—

The twentieth century is the century of the Slav, and it is one of the main tasks of the war to emancipate the hitherto despised, unknown, or forgotten Slavonic democracies of Central and Southern Europe. If the Poles, the Czecho-Slovaks, and the Jugoslavs succeed in reasserting their right to independent national development, and to that close and cordial intercourse with the West to which they have always aspired, they will become so many links between the West and their Russian kinsmen, and will restore to Europe that idealism which Prussian materialist doctrine was rapidly crushing out. Establish one nation supreme over the Continent, controlling the destinies of a whole group of its neighbours, and you must surely inaugurate a new era of armaments and racial strife, accentuated tenfold by revolution, bankruptcy, and social upheaval. The theory of racial domination, whether it be Prussian, Magyar, Turk, or Bulgarian, must be replaced by a programme of free and untrammelled development for every race. The supernation must follow the superman into the limbo of history.

A Plea for Turkey.

The following quotations are taken from an article entitled "Distracted Turkey," by Sir Edwin Pears, in the *Review of Reviews* (April). Sir Edwin, after analysing the men and circumstances which forced Turkey into war, expresses confidence that there will be a general desire to treat her with humanity as well as justice when the time comes for dictating the terms of peace. He concludes:—

Armenia must, of course, be lost to her. She has proved her incapacity to rule subject races, but that is no reason why we should treat the Turks with injustice. When the great issues of the war have been settled east and west of Germany, all the great schemes of the Kaiser of an Empire extending from Berlin to Bagdad will vanish into thin air. A number of questions will arise which it would be premature to treat now, but as indications point to the weakening of the Central Powers while those of their enemies are strengthening, men naturally discuss what shall be done when the greater issues have been decided. In such discussions I would plead for a fair and considerate treatment of the Turkish people. There is a large progressive element in its population which is worth cultivating, and which it will be just to protect. Turkey as the oppressor of Christian races will disappear; Turkey as a Mohammedan country working out its own salvation according to its own faith and the ideas of the knot of reformers who endeavoured to save the country in July, 1908, may yet become a valuable factor amongst the nations of the world.

Ireland and Serbia.

In a recent number of the *Tuam Herald*, Mr. R. J. Kelly, K.C., has an interesting article, "Ireland and the Serbian People." The writer shows how in many ways the Irish and Serbian characteristics are similar, and how the Serbian cause is Ireland's to-day.

The Irish soldiers will be with the Serbs in this holy cause for vengeance, and not many weeks will elapse before Europe will ring with the deathless deeds that will signalise their success. Serbia will be avenged and Ireland will have helped her and glory in having been privileged to strike a blow for not only Serbian but endangered European democratic freedom. To withhold praise from such efforts, to deny sympathy to such a glorious struggle would be to be cravens to our past, to forfeit our claim and privilege to be considered a freedom-loving people.

The writer then gives a brief historical outline of Serbia's history up to and including the time that she was overrun by the modern Huns. He concludes:—

Nothing can drive out of their minds the curse and infamy of this treatment, and well will they avenge the wrongs done to their cherished womenfolk. These are the brave, religious, moral, democratic, liberty-loving people we, Irish, with the Allied races are fighting to protect and to avenge, and as sure as God in His own good time will bring retribution and see His justice prevail, so surely will the sacred cause of liberty triumph and Serbia be free.

The National Idea.

Under the above heading the *Contemporary Review* (March) published an interesting article by Mr. J. Holland Rose, from which the following quotation is taken. Mr. Rose refers to the commercial ambition of the Central Empires, but thinks that in the final settlement commercial development will play far from a predominant part. He continues:—

What I wish to dwell upon is the necessity of solving the great national questions of Europe before there is a fair chance of handling successfully the social problems of the age. As to the importance of the latter there can be no doubt. On them turns the future of the race. But the political groupings of the nations touch instincts that are more primitive and fundamental. Racial feeling belongs to the savage side of human nature; and until it receives due satisfaction, mankind is always apt to reel back into the beast. No amount of reasoning will persuade an Albanian to obey a Serb, or a Greek a Bulgar. It was a fundamental error of the Young Turks (reared in Comtist traditions) to seek to Ottomanise all their Christian subjects. "We have passed a law" (said a Young Turk to Miss Edith Durham), "and now all the subjects of the empire are Ottomans." To which she replied, "You may pass a law that all cats are dogs, but they will remain cats."

There is, however, this much of difference in the human species. The more you leave the races alone, to be worked upon by trade and other uniting agencies, the more those races will assimilate. The sure way of perpetuating racial differences is to subject one race to another. Even if the Central Empires prevailed in this war, they would fail to Teutonise and Magyarise the Belgians, Poles, Letts, Serbs, and other Slavonic peoples. Only in the mad dreams of 1912-14, concerning the Teutonic

super-race, could such an enterprise be attempted. And it concerns the future of mankind that such an attempt be rendered impossible. For, until it has failed, racial strife will persist in Europe; and experience shows that, while those strifes continue, no efforts for social betterment will have fair play.

In a later part of his article he expresses the opinion that "in the Balkans nationalism has displayed its incapacity to solve a political problem, and its capacity to entangle that problem almost past hope. But, as the excess of an evil brings a cure, we may hope that the present mad orgy of that sentiment will everywhere provoke a sense of disgust."

Montenegro.

To a recent issue of the *Western Press* the Consul-General for Montenegro, Sir J. Roper Parkington, contributed an interesting article on the characteristics and the sufferings of the Montenegrin people:—

Montenegro fought the Allies' battles with all its manhood, and, indeed, with all its womanhood, but, as all the world knows, their heroic stand with that of their neighbours, the Serbians, at last gave way before the might of Germany, Austria, Bulgaria, and Turkey. The Montenegrins deserve well of the goodwill of Europe, for their history is one unbroken story of heroic self-sacrifice.

The greater part of the article is historical and descriptive; the following quotations are from its latter portion:—

The Montenegrins had neither the time nor the money to prepare for war after the manner of the great nations that go to war. They had their own modest Red Cross organisation, it is true; but when the battle was over that tiny society of Montenegrin women was overwhelmed. Then, in their hour of misery, they turned their face towards the West, looking across to England for doctors and nurses and the medical comforts without which all Montenegro must become a land of mourning. They are poor, these Montenegrins, who for 500 years have had to shed their blood to keep the alien flag from their mountain home, and, in their uncomplaining, mute poverty, the noblest example of fortitude in Europe. . . . The poor of Montenegro to-day are very poor, so poor that they have not enough to eat. England sent them cargoes of maize, but that is soon exhausted, and to-morrow finds the same want in the land. With the cry for medical necessaries is linked the cry for bread, and the cry comes West to England as to a land that never turns a deaf ear to the voice of suffering.

Jews in Egypt.

The *Jewish Chronicle* (April 14) publishes an interview with Mr. D. Levontin, who before the war had succeeded in raising to a high level the credit of the Zionist financial institution in the Holy Land. Mr. Levontin is extremely grateful to the manner in which Jewish refugees have been treated in Egypt, and our quotation is from the portion of his interview which deals with this subject:—

The part played by the Egyptian Government has hitherto not received adequate recognition. The reception which they accorded to the refugees was most sympathetic, and deserves the grateful acknowledgment of the Jewish people all over the world. At the start, when the number of refugees was comparatively small, money for their assistance was collected locally. But when the number grew the Government was approached, and assumed responsibility for the care of the refugees; it established a camp for them in Alexandria, provided them with Kosher food and medical attendance, and helped to establish schools for the education of their children. . . . .

"Alexandria received altogether about 11,500 fugitives from Palestine. Of these, about 5,000 eventually remained, and 3,500 of them are in receipt of assistance. Of these, 2,500 are in the Government settlement, and the remainder are cared for by the Committee. The Committee has established special synagogues, a Yeshiva, and a Talmud Torah. It has also set up a Kosher kitchen. In short, everything has been done to satisfy the communal and religious needs of the refugees, who highly appreciate the care that has been bestowed on them."

The Tragedy of Serbia.

An article by Miss Elsie Inglis, which appears under the above heading in the *Englishwoman* (April) deals principally with the work of British hospital units in Serbia, and should be read without abridgment, for, interesting though it is, it does not lend itself to general quotation. The following paragraphs, however, taken from the concluding portion of the article, which tells of the time when the nurses and patients were no longer free, give a very gratifying picture of our Allies:—

It was the good fortune of some of us that we were able to work for Serbs in a Serbian hospital, as long as there were Serbs to work for. Others of us, who desired only the same lot, were fated to spend dreary weeks as prisoners in Austria.

If we had learnt to love the Serbs during the quiet summer days for their gentleness and courtesy, for their generosity towards us, and their idealism, in those hard, dark times that followed, we came to admire them still more for their grit and their pluck and their wonderful power of rebound. They have their very obvious faults—the faults of any people who have spent five hundred years under Turkish domination. But remember, during all those five hundred years, each year they kept as a fast day the anniversary of the Battle of Kossovo—that day on which they lost their independence. And when at last they threw off the Turkish yoke that day was still observed, no longer now with fasting, but with feasting. A people with such a vivid sense of nationality, with such unquestioned courage behind it, must ultimately win through. "What we are fighting for," they used to tell us, "is for liberty. Six millions of us are free now, but thirteen millions are not, and all Serbs must be free."

The Position in Mesopotamia. April 26.

Lord ISLINGTON, replying to a question by Lord Strachie, said that in the absence of the representative of the War Office he had been asked to read the following statement:—"The position in Mesopotamia has been the subject of frequent communiqués issued to the Press, and there is nothing further in the present situation or probable future developments which can be fittingly made public at the present moment."

HOUSE OF COMMONS.

Mails for Mesopotamian Forces. April 19.

Mr. NIELD asked the Postmaster-General whether any special difficulties had been experienced in the delivery of letters and small parcels to the British Expeditionary Force in Mesopotamia, and whether he had received any complaints of the miscarriage or loss of mails to this force, and, if so, whether he could give an explanation with reference to the subject or make any statement.

Mr. PEASE said letters and parcels for the force in Mesopotamia were being sent out with the same regularity as the civil mails for India, and, apart from losses which had occurred through the sinking of ships on the Eastern mail service, he was not aware that any mails to the force had been lost or miscarried. Some complaints had been received about the non-delivery of correspondence for units recently sent out, but there must always be some unavoidable delay when units were being moved.

Prisoners in Bulgaria. April 25.

Mr. MALCOLM asked whether the Foreign Office was aware that information from various private sources had reached this country concerning the bad treatment of British prisoners of war in Bulgaria.

Lord R. CECIL said the reply to the first part of the question was in the affirmative. A suggestion that the American Government should be requested to publish the report on this subject recently received from the United States Minister at Sofia would not be overlooked.

No Peace Negotiations with Bulgaria. April 27.

Mr. RONALD MCNEILL asked if the Foreign Secretary's attention had been called to rumours which continue to be circulated in Rome of semi-official British negotiations with Bulgaria which were creating suspicion of Great Britain; whether he had any reason to believe that such rumours were circulated by German agencies; and whether he would make a declaration that no official or semi-official negotiations had been or would be entered into with Bulgaria by or with the approval of his Majesty's Government without the full knowledge and concurrence of all Allied Governments.

Lord ROBERT CECIL said the answer to the first part of the question was in the negative. It was possible that rumours of the notice referred to had been circulated by German agents throughout the neutral countries. In reply to the last part of the question, he thought it was quite clear that his Majesty's Government were precluded by the Declaration of September 5, 1914, from entering upon any peace negotiations with any of our common enemies without the consent of the other parties to the declaration.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

According to our Cairo Correspondent, coal is reported to have been found near Edfou. The Egyptian Press to hand states that the coal is said to be of good quality. Until the engineers who have been sent to report on the discovery have published their finding, no opinion can be expressed as to the value of the deposit. It is to be hoped that the field contains coal and not lignite, in which it would differ from many other sensational finds that have been chronicled in the land of the Pharaohs, and which have turned out to be unworkable. As I have frequently stated, a coal mine in Egypt would be a gold mine; it would be of the utmost economic importance to the country, so let us hope that the Edfou rumour will materialise.

***

A message from Athens last Thursday stated that the postponed Budget will be introduced immediately on the reassembling of the Chamber. The newspapers estimate a deficit of 380,000,000 fr., the heavy cost of mobilisation (900,000 fr. per day) being largely responsible for this. Apart from this, it appears that a Greek internal loan has been definitely decided on.

***

Money seems to be plentiful in Roumania, judging by the Bucharest correspondent of the *Morning Post*, who says that there is a shortage of everything except money, which seems to be a superfluity, for everything has a value there except money. "It has lost its purchasing power, for the things one wants to buy with it are not to be had." In other words, there is a tremendous shortage of manufactured goods—collars even costing 3s. each. According to the statement of the National Bank of Roumania, issued on April 8, the metallic reserves amount to 400,170,272 lei. The issue of paper money has increased by 14,000,000 lei, bringing the total in circulation up to 880,171,785 lei. The Treasury has withdrawn from the bank 363,142,000 lei of the 400,000,000 loan, and it has therefore been compelled to consider a new internal loan, as referred to in last week's issue of THE NEAR EAST. The Chamber has since passed a Bill authorising a loan of 150,000,000 lei. The conditions are: The loan, guaranteed by the Customs, will be issued at 84, the rate of interest being 5 per cent, and coupons payable in April and October. Shares may be paid up on date of issue or payment be extended to September of this year. The loan is redeemable in forty years by six-monthly drawings of lots. Subscriptions will remain open for fifteen days, beginning on May 4, and it is expected that it will be over-subscribed by about 150,000,000 lei.

***

The Judicial Committee of the Privy Council has been busy with appeals from the Prize Court in Egypt. All decisions have now been given, a characteristic one having been published in THE NEAR EAST of last week. In practically all cases the main argument of the enemy owners has been that owing to Ottoman suzerainty Egyptian waters were neutral in the months of war before Turkey united her fortunes to those of the Central Powers. That contention has not been upheld, because our military occupation of the country negatived the idea of neutrality. Reliance was also placed by the enemy owners on the immunity given to the Suez Canal by international convention, but the Judicial Committee has affirmed the view of the Prize Court in Egypt that the right of undisturbed passage did not carry with it the right to use the waterway as a place of refuge. The change that has taken place by the declaration of the Protectorate in Egypt modifies the actual situation there, says the *Glasgow Herald*, although the decisions, as they affect the doctrine of neutrality, have a permanent importance in our case law on the subject.

***

"W. J. C.," in *Blackwood's Magazine* (April), writes a picturesque article on the Black Sea coast, Asia Minor. "It is a seaboard of high mountains," he writes, "rising abruptly from the water, in latitude 41° N.—the same latitude as Sardinia and Southern Italy. On a sea voyage from the Bosphorus to Batoum, Ineboli is the first place of call. "It is a little town in the seaward opening of a narrow valley. There is no harbour. The mole of a former port has been washed away, and all that remains are a few half-submerged blocks. . . . A hundred miles beyond Ineboli comes Sinope, a decayed town, with no visible reminders of its long history as a Greek city, or that once it was mistress of the Euxine. It possesses the only good harbour between the Bosphorus and Batoum, an endowment to which it owed much of its earlier importance. A bold peninsula, rising several hundred feet, juts out here and there a few miles, and forms the anchorage. . . .

***

"In the days of Sinope's greatness a rival came into being a hundred miles to the east. This was Amisus. . . . While Sinope declined, Amisus rose, became a great and wealthy city. . . . A few fragments on the hillside and some walls of the old harbour are all that remain of Amisus now. But hard by its site has risen Samsoun, a modern town, to which has fallen the same commercial importance that Amisus took from Sinope, and for the same reasons"—namely, that the road into the interior from Sinope and Amisus is more difficult than it is from Samsoun, which is the "port of all the rich country up to and around Sivas." A railway is being built from Samsoun to Sivas, which will traverse this district and also serve the extensive coal-area, fifty miles inland, "where seams ten feet thick may be seen in mountain sides, and coal is excavated like clay. A harbour, also, is projected, which shall make Samsoun a port in more than name. In a few years the town will be no longer the haunt of picturesque caravans, but the only possible outlet of a rich district, greater in area than Ireland; a city with quays and coal-shoots and heavy goods trains. This change will come, whoever the future rulers of the country may be."

***

The eastern side of Samsoun Bay is formed by the triangular delta of the Yeshil Irmak, after which the sea-board grows finer. "Hitherto the coastal ranges has not exceeded 5,000 to 6,000 ft.; but now it rises, and becomes more irregular, and at the same time its main ridges draw away a little from the sea and allow greater diversity of coast line. . . . . Three small seaport towns come in the two hundred miles between Samsoun and Trebizond; they are idyllic places seen from afar, but less so on a visit. . . ." Unieh is the first. "From it, as from Samsoun, a road goes to Siras and thence to Erzeroum. Ondu comes next, forty or fifty miles away, and here is another road by which Erzinjan and Erzeroum may be reached. Kerasund is the last of these small ports, and the most important and interesting. It has two roads to Erzinjan and Erzeroum. The town still has fortifications belonging to Byzantine times.

***

"Trebizond, which is five or six hours' steaming beyond Kerasund, has no equal in beauty or historical interest among cities on the Black Sea. It stands, with Constantinople, Smyrna, and Amasia, as one of the four cities in the Turkish Empire most favoured by nature." It has no harbour, and "therein lies one of its disadvantages as a commercial city. But a harbour is predicted, and, as at Samsoun, was to have been constructed by a British company. Some say Trebizond is the western port of Persia, and so in a sense it is, but with comparatively little traffic resulting. . . . Unlike Samsoun, there is no great fertile region behind Trebizond. Geographically, it is not only the port of Western Persia, but of wide areas in Eastern Asia Minor as well: the greater part, however, consists of mountains and highland capable of producing little. The future of Trebizond is not to be judged by the extent of country it serves."

***

I have passed Kut some four or five times when travelling between Busreh and Baghdad (says a writer in the *Church Family Newspaper*). It is a place of no importance, except as a stopping-place for the river steamers that ply between Busreh and Baghdad. In the small maps in the daily papers of the Mesopotamia operations, a liquorice factory is marked; the liquorice root is collected at the Kut depôt, and I believe subjected to compression by machinery preparatory to packing and exportation to Eurpoe and America. The name of the firm is McAndrews, Forbes and Co.: the representatives of the firm are mostly Scotch gentlemen. The population of Kut in ordinary times would be probably about 3,000. Many of the small towns and villages on the Euphrates and Tigris present a picturesque appearance from the presence of palm groves. Kut lacks even that charm—it is a most unattractive place from the river.

COMMENTATOR.

MINISTRY OF AGRICULTURE, CAIRO.

With reference to the communication originally made to the Press in September, 1914, the MINISTRY OF AGRICULTURE, Cairo, continues to FURNISH INFORMATION connected with EGYPTIAN AGRICULTURAL PRODUCTS for EXPORT, and with reference to markets for imported products, acting as an intermediary between the producer and consumer. Samples of produce are prepared for submission to inquirers in all parts of the world, and information is supplied to producers, to enable them to prepare their produce in a manner suitable for foreign markets. All correspondence should be addressed to The BUREAU OF COMMERCIAL INTELLIGENCE, Ministry of Agriculture, Cairo.

Sudan Notes.

CHAMBER OF COMMERCE.

On the occasion of the anniversary of the visit of his Majesty the King and her Majesty the Queen to the Sudan, the Committee of the Sudan Chamber of Commerce considered it a fitting opportunity for an expression of the loyalty of the Chamber, and the following letter was addressed to the Governor-General :—

"We have the honour to inform your Excellency that at a meeting of the Sudan Chamber of Commerce held on the 8th inst., the following resolution was passed :—

"'The Sudan Chamber of Commerce, on the occasion of the anniversary of the visit of his Majesty the King and her Majesty the Queen, to the Sudan, wishes respectfully to tender to their Majesties, through his Excellency the Governor-General, humble expressions of its loyalty and of its earnest desire for the speedy victory of the Allied cause in the European war.'

"We beg that your Excellency will kindly see fit to submit to their Majesties the sentiments expressed in the above resolution, on the occasion named."

The message was forwarded to Lord Stamfordham, from whom the following reply was received :—

"I have laid before the King and Queen the resolution passed by the Sudan Chamber of Commerce at their meeting on January 8, and forwarded by your Excellency on the 17th of that month.

"In reply I am commanded to ask you to convey to the members of that body the high appreciation with which their Majesties have received the loyal sentiments to which this communication gives expression."

*** The seventh annual general meeting of the Sudan Chamber of Commerce was held at the National Bank of Egypt on Friday, March 24, and was fairly well attended.

The President welcomed the members present and made interesting report on the work of the Chamber for the year, expressing thanks for the consideration shown by the Government to any question brought forward by the Chamber, and giving details of the trade of the country for the past year.

After reading his report the President informed members that the accounts were at their disposal for examination, and pointed out the satisfactory financial position of the Chamber, having a balance of cash in hand of £E81,831 m/ms., or an excess over last year of £E46,543.

Votes of thanks were then passed to the honorary secretary and honorary treasurer for their services during the past year, and also to Mr. C. P. Lea Birch, who kindly audited the accounts.

Mr. H. S. Job then informed the meeting that in accordance with the statutes the committee retired, and it was necessary to appoint a new committee.

Before, however, proceeding to the election of the committee, Mr. Job informed the meeting that he had decided not to offer himself for re-election. He pointed out that he deeply appreciated the honour of having been elected president over a period of four and a-quarter years, but felt that having so little time to spare and being frequently absent from Khartoum, he would be unable to do justice to a place on the committee in the coming year.

The Honorary Treasurer and Honorary Secretary expressed deep regret at the decision Mr. Job had come to, pointing out the keen interest he had always taken in the Chamber and the services he had rendered, and as it would be difficult to replace him it was hoped that he would reconsider his decision.

To the regret of the meeting, however, Mr. Job could not see his way to change his decision, but hoped that his absence from the Chamber might only be temporary, and he would always follow with interest the work of the Chamber. He also stated that although he was not offering himself for re-election, the National Bank of Egypt would still remain eligible for election, and should the bank be elected Mr. Norton would serve on the committee.

Mr. Job also stated that as in the past he would be pleased to place a room of the bank at the disposal of the Chamber for its meetings.

After the result of the voting was announced the meeting was brought to a close with a very hearty vote of thanks to Mr. Job for his many services to the Chamber and for so ably conducting te meeting, and expressions of regret were passed that the Chamber would not have the benefit of his services during the ensuing year.

EFFECTS OF THE WAR.

The current issue of *The African World* contains an article on "Business in the Sudan To-Day," by its special correspondent in Wad Medani, from which the ensuing extracts are reproduced :—

It would be interesting to know what has been the position of the Sudan since the outbreak of the European War, what has been the effect of this world-wide struggle on the country's economic situation, and to what extent its trade has been affected. The Sudan having been found at the outbreak of the European crisis at the very start of its economic development, every one would have expected it to undergo the sharpest crisis and to fall back into a period of commercial stagnation and social poverty. But it has, unlike many other countries, been favoured with exceptional conditions ever since the beginning of the war.

Ghezira Irrigation.

If there is a business, however, where the Sudan and its future have felt the detrimental influence of this war, this will undoubtedly be found in the abrupt suspension, almost a few days after the starting of hostilities in Europe, of the just started big dam and canalisation works in the Ghezira. These works had been projected for years, and everyone will remember the anxiety with which its various stages were followed both in technical and political circles until its financing in England under the guarantee of the British Government was finally voted in the House of Commons. The completion of this scheme was calculated to store sufficient quantities of water in a dam on the Blue Nile to irrigate the Ghezira Plain for cotton-growing purposes. It would have been the beginning of a brighter future for this colony, where trade had already begun to feel a gradual improvement. Unfortunately, owing to the very dark outlook which prevailed in the early days of the war, it was decided to postpone the grandiose operation.

Durra.

To a great extent the present favourable position of the country is due to the excellent crop of durra harvested in the year 1914-15, which is considered by the natives to have been one ot the best ever had. The effects of the crop on trade can be readily understood if it be stated that for over a year and a-half now the export of the durra to Arabia, Eritea and Malta has been unceasing, and that the stocks existing even now are far from being exhausted. The native is thus enabled to purchase better food and to increase his various supplies of clothing and house utensils ; hence the satisfactory position of the import trade, both wholesale and retail.

Gum.

Th gum trade, which in the early days of the British Government in the Sudan was in the hands of a few Greek and Syrian merchants, most of whom were established in the country ever since the time of the Mahdi, has almost entirely passed into the hands of German firms during the past seven or eight years. The export of gum to Germany increased in extraordinary proportion during the last decade, and this fact had induced a great number of German merchants and agents to establish themselves in the Sudan and to take up the business of supplying the much-demanded product to their own countrymen in Germany. In these circumstances it had been feared at the declaration of war, and later, when the deportation of German subjects from Egypt and Sudan had been decided, that the gum trade would have to suffer irreparably from the abrupt disestablishment of the German firms and the consequent absence of organised buyers. Fortunately, events proved that fear to have been wrong. Other firms of other nationalities took the place of the Germans that left, and new markets automatically replaced those of Germany and Austria, with the ultimate effect that the whole crop has been advantageously disposed of up to the last ton.

Sesame, Skins, etc.

Sesame and skins have likewise been in great demand. The U.K. markets have been very busy buying a great part of the skins and hides exported, as also Italy and the U.S. There is still a great demand for all sorts of skins produced in the various localities of the Sudan. On the other hand, the ivory and ostrich feather, as also the rhino horn trades have since the beginning of the crisis been hopelessly slack. Prices have gone down considerably, and in certain markets, such as Bahr-el-Ghazal and El Obeid, has caused considerable uneasiness. It is not even expected that the market for these three articles is likely to improve during the present state of affairs in Europe.

Cotton.

The cotton grown last season in the Sudan, though on a comparatively small scale has, however, been excellent, both as regards yield and quality. At first it had been seriously feared that the native cultivators in the Red Sea cotton fields would suffer fatally through the absence of buyers, but, as has been the case with the gum crop, arrangements were speedily made by the Government and local firms for the immediate financing of the crop in the Tokar district, and a serious local crisis has thus been averted. As to the other cotton crops of the Sudan, Zeidab, and the Blue Nile farms, which are run by the Sudan Plantations Syndicate, these have promptly been disposed of in Liverpool by the growers themselves. The best results were obtained from the experimental farms in Tayiba (fourth year) and Barakat (first year), on the Blue Nile. On a cultivated area of about 3,000 feddans an average of 5 kantars per feddan (about an acre) was obtained, the total of bales exported from these two stations being 3,940.

Shipping.

Two or three months after the outbreak of war, and still later, the Sudan met with a severe shipping difficulty, including scarcity of sailings from Port Sudan, both homewards and outwards. Huge quantities of various produce have been lying at Port Sudan awaiting shipment, while great difficulty was likewise experienced in re-stocking the import markets, some of which had nearly been exhausted. The state of affairs has, however, greatly improved through the steps taken by the Government in co-operation with local shipping agents. An adequate number of sailings took place in the past six months, relieving to a great extent the exporters. There is every reason to believe that a sufficient number of sailings will be provided for the next crops, which will mean a continuity to the favourable economic situation prevailing up to now in the Sudan.

Cyprus and the War.

TRADE IN 1915.

The following trade returns for Cyprus imports and exports during the quarter ended December 31, 1915, are published in the *Cyprus Gazette* of March 24:—

Imports.

Total imports for the quarter amounted to £213,719 (including specie to the value of £3,346), as against £109,459 (£17,912 specie) for the corresponding period of last year.

Principal articles of import were:—

GREEK LOTTERY.

The Kingdom of Greece (says the *Daily Graphic*) finds in the lottery a valuable means for augmenting public and semi-public funds. According to the official report recently issued, the Government received £645,000 from this source during the ten years 1905-1914.

The lottery is known as the Royal Greek Naval Lottery, and its gains are divided between the Greek Navy Department and the Grecian Archæological Society, the navy receiving 70 per cent. In the decade under review the lottery distributed £243,000 in prizes, and turned over to the navy £256,000 and to the Archæological Society £104,000. The lottery tickets, which are hawked about the streets by boys and men, are bought outright from the Government before being sold to individual purchasers.

TRADE NOTES.

Egypt.

The Superintendent of Stores, Ministry of Education, invites tenders for the supply of clothing for the pupils of the Elementary Training Colleges for women teachers for the school year 1917. Date, May 27.

H.M. Consul at Cairo has forwarded conditions of contract in connection with a call for tenders by the Egyptian Ministry of Finance for the supply of stationery articles required for the use of the various Government Administrations during the year 1916-17, including pencils, penholders, pen wipers, pins, gum, paper clips, sealing wax, ink, etc. Copies of the conditions and form of tender may be obtained from the "Economat Central, Ministère des Finances," Cairo, at which address also sealed tenders, made out on the proper form and accompanied by samples (in duplicate) of the goods it is proposed to supply, will be received up to noon on June 1.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, June 1.

Sealed tenders, on the proper forms, will be received, up to April 29, by the Director of the Technical School, Bulac, Cairo, for the supply of 560 sets of blue linen overalls (jackets and trousers) required for the school during the year 1916-17. Copies of the cahier des charges and form of tender may be obtained from the Model Workshops, Bulac, Cairo, where also samples may be seen. A copy of the cahier des charges, together with particulars of the overalls required, may be consulted at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C., by firms in the United Kingdom.

Tenders are invited by the Ministry of War for the supply of (1) forty tons of coco-nut oil and (2) 100 tons arachis oil into the War Department Stores, Tura. Date, May 16.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on May 10, 1916, for the supply of stores and material required by the above Department during the current year. Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, the Agent, Sudan Government Railways, Alexandria, or to Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, London, S.W.

Morocco.

H.M. Agent and Consul-General at Tangier reports a recent official announcement of the establishment of a parcel post service between the French Zone of Morocco and France, Corsica, Algeria, Tunis, French colonies and protectorates, and foreign countries which are parties to the International Convention of Rome of May 26, 1906. A system of telegraphic money orders between the post-offices of the French Zone and those of France and Algeria and the French post-office at Tangier has also been introduced.

We have received a copy of the *Agricultural Journal of Egypt* (Vol. V., Parts I. and II.), 1916, containing, among other articles, the following:—"Distribution of Cotton Seed," by A. Sydney Merton, Director of the Cotton Seed Section; "Cotton Breeding Report for 1914," by B. G. C. Bolland, Botanist to the Ministry of Agriculture; and "The Sheep in Egypt," by G. C. Dudgeon, Consulting Agriculturist, and Mohammad Askar Eff, Inspector, Veterinary Section, Ministry of Agriculture.

The Egyptian Market.

The *Outfitter* publishes an interview with Mr. J. H. Perliman, of Messrs. Morum Brothers, on the above subject, from which the following extracts are reproduced :—

Though millions of pounds of British capital has been spent in the country, Mr. J. H. Perliman thinks it is a shame to see that out of nearly £30,000,000 imports of recent years the United Kingdom claims only about £8,000,000, and if the value of coal and proprietary articles is deducted, one can see how little the ordinary English manufacturer has participated towards the general import into the country, and if, after allowing the shares held by France, Italy, Russia, U.S.A., and Japan, a good portion of the import trade was in the hands of Germany and Austria.

The requirements of the natives were keenly studied by our enemies, by linguist travellers sent to the country, and supplied at prices and terms to suit the market. As a matter of fact, very few, if any, British manufacturers sought to compete. The duty on general goods being 8½ per cent. ad valorem, it was a very easy task for the Austro-German manufacturer to produce the articles at the prices to enable retailers to supply their customers with such articles and at such prices as to appeal to the native, who, after all, is the principal element with whom the bulk of the trade is done. Granted that the British manufacturers never enjoyed the same financial facilities from the banks as the Germans and Austrians have, which accounts to a great extent for their not having been able to fall in with the terms and ways of business in Egypt which could be secured before the war, how many firms are there who need not have recourse to financial assistance to extend their trade who have made the attempt?

The native, one must say, has always been an admirer of English-made goods, and the good-class natives are people who do not mind the expense so long as they get a good article.

However, under the present state of affairs, and the prohibition of imports from enemy countries, restrictions on imports from neutral countries, the field is entirely open to the Allies. France, unfortunately, on account of her industrial territory being invaded, can do little. Italy is exporting to the limit of her possibilities. There is therefore a vast opening for the British manufacturers. The merchant in Egypt, not being able to obtain the terms and cheaply produced articles he was accustomed to get so far, is compelled to have recourse to our goods and our terms, to which he seems gradually to adapt himself.

The gentlemen's clothing branch is very important, and the bulk of it was imported from Austria ; it is now entirely in our hands, and when one considers that one firm alone placed orders in this market with the manufacturing clothiers in England—who had hardly done a stroke of business in Egypt—for over £50,000 in the course of nine months, it is a certain proof that Egypt is a market worth cultivating systematically. The same firm also placed orders for general goods, such as shirts, collars, boots, shoes, ladies' wear, gentlemen's wear of all descriptions, leather goods, piece goods of all descriptions, etc., to the extent of over £100,000 during the same period.

The British manufacturers are, therefore, placed in that good position as to be able to sell the actual class of a good-made article and on the terms suitable to them.

DEVELOPING EGYPTIAN INDUSTRY.

New Commission.

The Egyptian Ministry of Agriculture issues the following communiqués—

(1) The Ministry of Agriculture has decided to form a commission to be known as the "Commission of Agricultural Commerce," to study problems and advise the Ministry in connection with the creation of new markets for Egyptian agricultural produce, and more particularly the substitution of home-grown products or at least products coming from British, Allied and neutral countries for those previously imported from enemy countries.

The Commission is to consist of the following members :—

Messrs. G. C. Dudgeon, president, H. Naus Bey, Victor Mosséri, Bushra Hanna Bey, Mohamed Abul-Futuh Bey, H. E. Neguib Mansur Shakur Pasha, and Messrs. W. E. Kingsford and Pierre Arminjon.

Commercial Bureau.

(2) With reference to the communication originally made to the Press in September, 1914, the Ministry of Agriculture, continues to furnish information connected with Egyptian agricultural products for export, and with reference to markets for imported products, acting as an intermediary between the producer and consumer. Samples of produce are prepared for submission to inquirers in all parts of the world, and information is supplied to producers, to enable them to prepare their produce in a manner suitable for foreign markets. All correspondence should be addressed to the Bureau of Commercial Intelligence, Ministry of Agriculture, Cairo.

Engineering Notes.

Deficiency of American Submarines.

The critical situation between the United States and Germany has stirred up again a serious discussion among experts in America, as well as here, regarding the efficiency of the existing type of American-built submarines now in service, and the type that should be adopted in the future. It appears that at present only thirty submarines are ready for service, whilst some ten or twelve others are undergoing repairs, and will not be ready before the lapse of four or five months. Last February the chief of the Submarine Department of the United States Navy, Rear-Admiral Grant, submitted to the Government a plan for fleet and coast defence submarine operation in the Atlantic and Pacific, embracing 188 submarines or submersibles of all types. According to this plan thirty divisions should be formed of six submarines each, three divisions to cruise with the Atlantic fleet and three with the Pacific fleet, the remainder working on shore bases distributed along the coast. Admiral Grant emphasised that no boats of less than 750 or 800 tons surface displacement should be built in the future, saying that he was certain that German boats from "U 39" to "U 58" inclusive claim 800 tons on the surface as against 450 tons of the "K" boats of the American Navy, which are at present the largest in service. He also stated that a few 1,200-ton boats are building in Europe, but he did not know whether any had been put into commission. Of interest also was the statement that three "U" boats, costing 2½ million dollars, are as effective as twenty-two "K" boats (the American type), costing 7,000,000 dollars. He was, however, strongly of opinion that no additional submarines of the 1,200-ton type should be built until the "Schley" had been tried out. At present, beside the number of submarines referred to at the beginning of these notes as ready for service, there are under construction or authorized thirty-five more, including three large ones of the fleet-cruising type, the completion of which is being hastened.

Treatment of Sewage.

Some account of the modern treatment of sewage has been given in these notes on previous occasions, and we are glad to hear that certain suggestions put forward have helped a municipal corporation in the East in its decision as to the system that should be adopted in that district. In cases, however, when our notes are of interest to municipal authorities or contractors, we shall be glad to receive inquiries for more particulars than those we briefly give in these notes, and shall put them in communication, when desired, with patentees, chemical manufacturers, or trustworthy contractors. The most common and, perhaps, the earliest method of treating sewage consisted in distributing it over an area of land upon which various root crops were grown, the assumption being that the roots of the growing plants had a special purifying effect. This method may be quite efficient if the required area of suitable land is available, and many towns still continue to treat their sewage in this way. But with the extension of the town and increase of population, such a system cannot be continued without being injurious. Then, again, when the soil is frozen it does not absorb the liquid, and in the case of a long spell of severe weather the consequences can be very serious. To overcome these difficulties chemical treatment was introduced, the aim being to precipitate the solids and to sterilize the effluent, the latter being filtered through a small area of land as a final precaution.

Chemical Treatment.

This system is adopted by a number of corporations, but the objections to it are the cost of the chemicals, the large amount of solid matter to be dealt with, and the quality of the effluent, which latter often carries in solution the most offensive portion of the crude sewage, and is liable to putrefaction after it has been discharged into a stream. The solid matter or sludge precipitated by the action of the chemicals is sometimes compressed into cakes, which were at first thought to possess a considerable value as manure, but, owing to the carrying off of the more important fertilising constituents in the effluent, this product commands a very low price. However, in spite of the before-mentioned drawbacks, the system may prove quite suitable and efficient where others have failed. At the same time, much depends on the knowledge and capabilities of the engineers in charge, and of this we were reminded the other day by Mr. Reginald Brown, M.Inst.C.E., M.I.Mech.E., who read a paper before the Society of Engineers entitled, "Sewage and its Precipitation: Facts and Fallacies from Laboratory and Practical Tests." Taking three of the best-known chemicals in general use—viz., ferric sulphate, sulphate of alumina, and lime—he pointed out that engineers had to be fully acquainted with the value of precipitants, and warned them not to expect that a precipitant which was suitable and economic for one sewage must be equally effective and economic for another, or under different working conditions. Mr. Brown laid down as an axiom that to compare the value of precipitants the purification figure for suspended solids should be calculated on settled sewage, and not on crude sewage, as was generally done, because some of these solids would deposit themselves by reason of their specific gravity, and did not absolutely require chemicals for precipitation when tanks of sufficient extent are provided.

DELTA SALINE DRAINAGE.

Towards the end of March M. Emile Catseflis, a well-known agricultural engineer, delivered a lecture before the Sultanieh Society of Political Economy (Cairo) on the drainage of saline waters in the Delta.

There are in Egypt, he said, about one million feddans of land, fitted with nearly all requirements of agriculture, but the yield of which is hardly sufficient to cover their expense. Large portions of these lands are, in addition, mortgaged at different banks at interest varying between 6 and 7 per cent., when their yield does not amount to 1 or 2 per cent. If, however, their condition is improved their yield will increase by eight or nine million pounds annually, which would serve to free them from their debts and increase the wealth of the country annually by this amount.

These lands contain an abundant quantity of humidity and salt owing to the fact that the layer of underground artificial water is near the surface, and the land consequently absorbs much of it. In order to remedy this state of things artificial open drains (masrafs) had been created in different places, but they have proved absolutely insufficient, as they were found to improve only a small portion of the land immediately close to them, leaving the rest of the land unaffected. Besides this, these masrafs cover a fairly large part of the land and render it unavailable for cultivation, and require in addition an average of 20 to 25 piastres per feddan annually for upkeep, which, taken together, mean a loss of 95 or 100 piastres per feddan annually.

A better process, however, for clearing the salty water would be to use covered underground sloping drains at a distance of 7 to 12 metres from the surface, and fit them with tubes made of pottery 5 to 10 cm. in diameter. These tubes would be connected together and fitted in such a way as to pour into a main tube of sufficient depth to allow all the water of the different drains to pour into it. The water thus collected would either be disposed of by absorption in the deep layers, or, if the nature of the land underground is not suitable for absorption, pumps could be erected for the purpose.

The advantages which this system offers are numerous. It allows the utilization of the whole surface of the land for agriculture, and then enables one to make these drains on a more general scale than would have been possible with the open masrafs, as in the latter case the parts of the lands used for the masrafs cannot be utilized.

By this system also the water filters into the drains perpendicularly, causing fissures in the land, and thus rendering it open for ventilation, which is very useful. It is used in all countries of Europe on a large scale, and the State Domains Administration in Egypt have lately carried out an experiment on a plot of 82 feddans at Bishbish (Gharbieh) by dividing it into three equal parts, one of which they left without any drains at all, the second with open masrafs, and the third with these covered underground pottery drains. The results were as follows:—

1. No yield at all.
2. Yielded ½ a kantar per feddan.
3. Yielded 4½ kantars per feddan.

Mr. Catseflis also tried the system himself at Surembay, in Behera, on a plot of land which was altogether unsuitable for cultivation. The results were excellent, and the land yielded last year a good crop of durrah which made the cultivators offer an annual rent of P.T.650 for it. This system costs about £7 per feddan, which, taking into account the fact that the annual cost of P.T.100 per feddan in the open drain system, means an interest of 14 per cent.—*Egyptian Gazette.*

ROUMANIAN OIL PRODUCTION.

The production of crude oil in Roumania during the latter half of March was estimated at about 4,000 tons per day, says *Oil News.* Prices for crude were extremely firm, and at the end of the month as much as 67 to 70 frs. per ton was paid by some refiners. Exports were on a fair scale, but the lack of tank wagons is being increasingly felt, as only those registered on the Roumanian railways are being returned, wagons owned in Germany being retained there after their arrival from Roumania.

CYPRUS NOTES.

(From a Correspondent.)

The Locust War.

Gloomy forecasts are made in the Greek papers of the damage likely to be caused by swarms which have appeared in many places. While the Government has pinned its faith on the system of destruction by poisonous solutions, the natives persist in advocating a return to that of purchasing locusts by weight. They argue that the latter method, besides being far more effective, has the advantage of providing a much wider field for labour, now so much depressed. Numerous petitions from village communities have been submitted, asking for adoption of this mode of attack, and alleging that their bees as well as livestock, especially sheep, have died from the effects of sprayed vegetation. The Press as well as leading men strongly urge this course, advocating an exhaustive campaign, regardless of cost, in view of the extent and gravity of the danger. Government is no doubt in possession of records and figures which should furnish a basis for deciding which plan of action is most expedient. The official reports of recent years have left little doubt that destruction by poison has been both the cheapest and the best.

New Cheese Making Industry.

Amongst the signs of awakening enterprise may be mentioned the establishment of a cheese factory at Morphou, started by a Greek firm. It is under the direction of an expert manufacturer, and it is hoped that the products will compete with imported kinds. It has been inspected by the Director of Agriculture, Mr. W. Bevan, and the Greek overseer, M. Symeonides, who have promised support to the undertaking. Cyprus native cheese made from goat and sheep's milk, is chiefly of two kinds, one flat and much salted, the other in small cylinders. Both kinds are largely consumed in the island. It is hoped that the innovation will be successful.

General Outlook.

Weather conditions continue to be favourable, and harvest prospects are good in all districts. The barley crops are considered to be practically secured, and wheat should do equally well should there be rain on one or two more days. A recent rainfall in the Famagusta district has been remarkably heavy for this season.

The Neuchatel Asphalt Company were recently the successful tenderers to the Cairo Tanzim Department for the supply of fifty tons of natural asphalt.

PRODUCE REPORT.

London, April 27.

Currants.

Owing to the holidays, the market has been very quiet, whilst the few transactions that have taken place are hardly worth mentioning. The high rates of freight and insurance are evidently preventing shipments, and any prospects of new arrivals are at present doubtful. In the meantime, prices are fully maintained for Provincial, 41s. to 43s.; Amalias, 44s. to 46s.; Gulf, 48s. to 52s.; Patras, 46s. to 48s.; Vostizza, 48s. to 54s.; Islands, 44s. to 48s.; and Smalls, 44s. to 54s.

Sultanas.

There has been only a small demand, with little business done in Afghanistan fruit at full prices; whilst holders of other grades seem not inclined to sell, expecting a further advance in prices. Greeks are quoted 90s. to 110s.; other sultanas, 84s. to 102s.

Figs.

A steady demand continued, and a fair amount of business has taken place this week, principally in Greek fruit, a good selection of which is in the market. Prices are unchanged.

Seeds.

Linseed is firmer, Calcutta-London, spot, May-June and June-July, quoted 75s. 6d.; Bombay ordinary, May-June, 76s. 9d.; small grain, 75s. 9d.; La Plata, Hull, May-June,

72s. Rapeseed is firm; Toria, April-May, Hull, 65s. Cotton-seed is firmer, London-Egyptian spot, £14 7s. 6d.

Oils.

Linseed oil is firm; spot pipes landed, sold at £39 10s.; barrels ditto, £40 10s. Rape-oil is rather quiet, ordinary brown naked offered at £49; English refined barrels, £54 to £55. Cotton-oil is firm, crude spot pipes selling at £44 10s.; refined pale pipes, £48 10s.; barrels, sweet, £53 to £54, as to make.

Various.

Egyptian onions are sparingly offered at sales, owing to the limited quantities that are discharged each time, but satisfactory prices are realised. Egyptian eggs are in better demand at 9s. 6d. to 10s. 6d. Beeswax, £6 5s. to £9 per cwt.; East Indian yellow, £6 to £6 10s.; and white, £8s. 17s. 6d. to £9 5s. Cream of Tartar, Greek, £9 15s.

AMERICAN FLOUR IN JERUSALEM.

The U.S. Consul in Jerusalem, writing on December 1, said:—

"Although Palestine is an agricultural country chiefly devoted to the cultivation of cereals, there has been an annual importation from Roumania, Bulgaria, France, and Russia. This importation has varied from year to year, as it was affected by the success of the crops. It must be said, however, that even in abundant years flour has not failed to be imported, which fact is accounted for by the exportation of the superior local hard grain against the cheaper flour imported.

"A few years ago, owing to the failure of the barley crop, a wheat shortage occurred, and as supplies could not then be obtained in the customary markets, new sources had to be sought. Australia solved the problem by establishing an entrepôt at Port Said, Egypt, as a central distributing point. This plan of distribution was laudable in many ways; it afforded the merchant of the East opportunity to examine the goods before purchase, permitted him to buy in quantities suited to his means, and saved both correspondence and expense.

"Conditions consequent upon the present war opened the way for the introduction of American flour. On account of the almost complete paralysis of all means of support, the people of Palestine were reduced to such a state of poverty as to make them worthy objects of charity. Relatives and friends in the United States sent a shipload of foodstuffs, principally American flour, to relieve the situation. The relief boat left the United States in the early part of 1915, arriving at Jaffa in April. The flour must have been milled in December, 1914, or January, 1915, and by the time it was landed and transported to the places of destination in Palestine—which transportation had to be made on mule and camel back—and ultimate distribution made among the needy, many months had elapsed.

"Consumers at first were ignorant of the way of preparing the flour on account of its fine grind, but before long they acquired the art, although the majority preferred to mix it with the coarser native flour. The quantity distributed per capita was enough to provide this entire community with flour for one month. A number of the very poor, in order to buy the native flour to mix with the fine American article, or to provide for other wants of their household, had to sell a portion of their supply, the prices obtained being 20 to 25 per cent. higher than for native flour."

EGYPTIAN TEXTILES.

Modern Egypt is going to make a big bid for the British Empire market after the war, says the *Draper*. Two large blocks have just been secured for Egyptian exhibits at the forthcoming Industries of the Empire Fair, which is to be held in London after the termination of the war. Cotton will, of course, figure prominently in the display, and especial interest will be taken in the show of woven materials. There will be an exceptionally fine exhibit of carpets, shawls, straw and reed mats and chairs, artistic wood and brass work, and specimens of many other native industries with which the British public are as yet comparatively unfamiliar.

It is interesting to note that the space secured for Egypt at the Industries of the Empire Fair has been taken by the Egyptian Government, as representing the trade of the country. Hitherto the State-supported German trader has had a tremendous advantage in competition with our own manufacturers and merchants, and it is evident that there must be a more intimate relationship between our own Government and British trade if we are to oust our resourceful and organised Teutonic rival in the struggle for trade supremacy. The fact that the Ministry of Education in Egypt has taken this step shows that in that far-off land of romance the Government is alive to the importance of backing the country's industries.

NEWS FROM ALL SOURCES.

The Ministry of Finance has decided to open a credit of £E56,000 for completing the drainage system of Cairo.

Five barges laden with lard and cheese for Germany arrived recently from Bulgaria in the port of Orshova. The cargo is said to consist of 300,000 kilos of lard and 100,000 kilos of cheese. This throws some light on the German economic situation, but is rather hard on the Bulgarians, who are already on the verge of starvation, says our Bucharest correspondent.

Messrs. Shohet, Selim David and Co., of Persia, are on the new list of firms in neutral countries with whom trade is prohibited.

Forty thousand Roumanian soldiers have been sent on leave to do agricultural work.

A Copenhagen message says that four Swedish officers in Persia have been made prisoners by the Russians near Shiraz.

Reports from Czernowitz to German newspapers say that 6,600 horses for the Roumanian cavalry have passed through Bessarabia.

Some forty prisoners from the Canal have arrived at Cairo. They are sturdy men, presenting the appearance of Regulars, and dressed in khaki.

According to a Constantinople message received in Amsterdam the Turkish *Official Gazette* has published the text of a Bill introducing a new Customs tariff and specifying the various duties. The new measure will come into operation on September 14, and will remain in force for three years.

EGYPTIAN FINANCES FOR JANUARY.

(From Our Own Correspondent.)

Cairo, April 11.

The State accounts for January, published last night, show a further improvement in the position. The revenue during the month amounted to £E1,278,081, as against £E1,227,791 a year ago, and the expenditure to £E811,517, as against £E985,609. The total revenue for the ten months comes to £E14,540,018, and the total expenditure to £E12,668,226, as compared with £E13,168,752 and £E14,432,804 at the end of January, 1915. There is thus a surplus of £E1,871,792 instead of the deficit of £E1,264,052, which we had to face a year ago.

During the month the chief increases in revenue were, Customs, £E76,567; tobacco, £E19,888; railways, £E110,889; telegraphs, £E9,185; domains receipts, £E18,405; whilst direct taxes showed a diminution of £E180,495, and port dues one of £E15,950. The principal increases in expenditure were the Sultan's Civil List and Cabinet, £E8,766; Mecca caravan, £E23,507; public health, £E8,185; and War Office, £E7,208; but reductions were made in the central service of the Ministry of Finance of £E10,762, mixed courts of £E8,599, and railways of £E152,593,

It is to be noted that several heads of revenue have already exceeded the estimates. Thus Customs receipts show an excess of £E134,454, railways one of £E40,935, domains one of £E47,784, rent of land one of £E44,444, and extraordinary receipts, which include sale of land, one of £E36,345. It would appear that the final results will exceed very much the more recent expectations of the authorities, but a great deal will depend on the manner in which the expenditure has expanded during the two last months of the financial year. It is highly probable that the extra surplus that may be obtained will be found to coincide with a reduction in stock carried over the year end. For example, the railways must have had on the 1st inst. a much smaller stock of coal than usual, due not so much to the need for economy as to the difficulty in obtaining freights from abroad. Consequently, that extra surplus will in part be compensated by a corresponding increase in expenditure during the early part of the new financial year.

ENEMY PROPAGANDA IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, April 11.

In order to realize the full advantages of the clause in the agreement of the last sale of grain to Germany, whereby the latter provides Roumania with merchandise to the value of 150 million francs, the Central Commission of Imports has decided to found a special bureau in Berlin for the purpose of buying directly the articles of first necessity required by the Roumanian merchants and industrials.

Enemy Propaganda.

This very simple and reasonable arrangement has been wrongly regarded in some of the local papers as a commercial transaction of grave political importance, and interpreted

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

Digitized by Google

as evidence that Roumania will not abandon her state of neutrality for a long time to come. Supplementary to this it was immediately reported by the Germanophile Press that the Russians had stopped all exports into Roumania. In order to remove erroneous impressions, M. Greceano asked for information in the Chamber. The Minister of Finance replied that there was not a shadow of truth in the rumour, and that the best proof of the truth of his declaration was that the Russian authorities were at present exporting into Roumania a large consignment of coal.

The exportation of the following goods is prohibited to all foreign countries in Europe and on the Mediterranean and Black Seas, other than France, Russia (except through Baltic ports), Italy, Spain, and Portugal: Asphalt and solid or liquid bitumen; fishing gear, except tackle for fishing by rod and line; petroleum and its products not already specifically prohibited; and soap, hard, containing 1 per cent. and less of glycerine.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to February 29, 1916 (New Style: January 14 to March 13, 1916):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Pirœus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Feb.,	1916	3,027,076	1,999,000
Do. do. do	1915	2,645,914	2,555,520
Estimated Receipts for 2 months (Law of Control)		4,816,666	1,783,333
Actual do. do.	1916	6,642,947	3,822,000
Do. do. do.	1915	7,059,660	4,707,057
Difference between estimated and actual receipts for 2 months	1916	+ 1,826,281	+ 2,038,666
	1915	+ 2,242,999	+ 2,923,724

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Pirœus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate of the month is above par the conversion is made at that average rate.

COMPANY RESULTS, Etc.

AGRICULTURAL BANK OF EGYPT.—The number of shares required to pass the resolution at the meeting held in Cairo on April 20 having been insufficient, the adjourned meeting will be held in Cairo on May 9.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for the week, 387 tons (last week 21 tons). Hurgada production for the week, 517 tons (last week 547 tons).

EUROPEAN OILFIELDS CORPORATION.—Production for week ended 23rd inst., 109,900 poods.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the eleven days ended March 31 amount to £E5,376, as against £E4,698 for the same period of last year. Total receipts for the year:—March 31, 1915, to April 1, 1916, amount to £E187,735, as against £E188,992 for the year ended April 1, 1915, or a decrease of £E1,257.

SUEZ CANAL.—Receipts for the 20th, 21st, 22nd, and 23rd inst. amounted to 1,070,000 fr., as compared with 1,130,000 fr. for the corresponding days last year.

THE AGRICULTURAL BANK OF EGYPT.

The necessary number of Shares required to pass the Resolutions at the Thirteenth Ordinary General Meeting of the Agricultural Bank of Egypt held in Cairo on Thursday, the 20th April, 1916, not having been represented thereat, notice is hereby given that the THIRTEENTH (ADJOURNED) ORDINARY GENERAL MEETING of the said Bank will be HELD at the Head Office of the Bank in Cairo on Tuesday, the 9th May, 1916, at 4 o'clock p.m., for the purpose among other things of:—

Receiving the Directors' Report;
Receiving the Auditors' Report;
Approving the Accounts for the period ended 31st January, 1916;
Declaration of Dividends;
Election of Directors;
Election of Auditors and fixing their remuneration;
And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the shares in London is the 27th April, 1916) when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt.—At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
In London.—At the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, President.

Cairo, 25th April, 1916.
