There would appear to be little doubt that Dr. Levi's view of the situation and of the future is fully justified, and I cannot help thinking that the General Manager of the Caisse Hypothecaire, who is, as a rule, so moderate in his assertions, has been carried away by a desire to prevent undue optimism and so has evinced a pessimism that in reality cannot be substantiated, and is certainly not shared by the bulk of local financial authorities. In conclusion it is interesting to note that the views of the situation of Egypt expounded by Dr. Levi coincide almost exactly with those expressed by me in your columns repeatedly since the beginning of the current Egyptian financial year.

Near East Markets.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, December 4.

Mohair appears to be still in demand for Germany in Constantinople, as prices have risen to 35 piastres per oke for good quality, but there is practically nothing available and very little now comes down from the interior owing to want of transport. In the interior higher prices are also now being asked.

There is a little more demand for opium, but prices remain at about 210 piastres the oke.

Canary seed is also dearer, in spite of the fact that the export of the article is not possible. In Constantinople buyers are offering 68 to 70 paras per oke, doubtless as a speculation.

Beans are quoted at 80 paras, but without buyers, and 105 paras is being asked for linseed.

Hazelnuts can be obtained at 3½ piastres the oke.

All imported articles are increasing in price steadily.

From Smyrna it is reported that large quantities of figs have been prepared and packed in bags, and await an opportunity for export.

COTTON MARKET.

(From Our Own Correspondent.)

Liverpool. December 23.

Messrs. Reynolds and Gibson report:—There has been a continued fair demand for cotton this week, and good business has been done, at hardening prices. Quotations show an advance of ten points for Upper and five points for other descriptions. Sales, which include 200 bales of Sudan cotton, are estimated at 4,100 bales, against 4,700 last week.

Manchester.

In spite of Christmas week, we can report quite a good business. The turnover in cloth, and especially in light fabrics, has been considerable.

PRODUCE REPORT.

Currants.

London, December 23.

Owing to advices from Greece, the market has been firm this past week, but the demand was only moderate. It is expected, however, that after the holidays there will be more activity in this as well as in the Liverpool market.

Sultanas.

Owing to the approaching holidays and the very limited supplies that are available the market has been very quiet this week, but prices are well maintained.

Figs.

There has been no demand this week.

Dates.

Only a few transactions have taken place. Persians are quoted 15s. 6d. to 22s., and Egyptians 38s. to 40s.

Seeds.

Linseed is very firm and dearer, owing to scanty offers and a good demand for oil. Calcutta to London, December, was to-day sold at 75s., with further sellers asking 76s. La Plata to Hull, January-February, sold 68s. 6d. Cottonseed is firm at late prices, but in view of several vessels on the way to London buyers are pausing. Rapeseed is also firm, but quiet. Ferozepore, December-January, is quoted 61s. 9d.; brown Cawnpore, ditto, 61s. 3d.; and Guzerat, 57s. 6d.

Oils.

Linseed oil is strong, especially for near positions, which are in demand at 5s. to 10s. advance. Spot pipes, £38; barrels, £39; month sold at £38 10s. January-April sold at £40, and May-August offered at £41. Rape oil keeps firm. Ordinary brown naked spot, £43; English refined barrels, £46.

Oilcakes.

Linseed Cakes.—There has been only a moderate demand during this past week. Best London-made sells at £12 7s. 6d. to £12 10s.; East India seed pures are offered at £11 17s.6d. to £12; and Bombays in bags at £12 2s. 6d. to £12 5s. per ton ex quay. Cotton Cakes.—All that has recently arrived from Egypt is sold, and present nearest values are £9 7s. 6d. to £9 10s. ex ship. The same price is asked for December-January dispatch, while English makes are offered at £9 10s. to £9 12s. 6d., and Bombay at £9 per ton.

Locust Beans.

The scarcity continues, and quotations are only nominal.

ILLEGAL OPIUM TRADE.

At the Mansion House on Wednesday, before Alderman Sir William Dunn, Mr. Alfred Lavino and Mr. George Benjamin Edward Keun, of Fenchurch Street, were summoned at the instance of the Director of Public Prosecutions for having on May 13 offered and proposed to trade in opium coming from an enemy country. The case for the prosecution was that the defendant, who carried on business in Fenchurch Street, had been in correspondence with a firm having offices at Constantinople and Salonika, with a view to obtaining quotations for opium of Turkish origin to be sent to Japan, via Marseilles. No business, however, resulted from the alleged proposal. The defendants, who pleaded "Not Guilty," were committed for trial, being admitted to bail in their own recognisances in £100.

The report of the Humphrey Pump Co., Limited, for the year ended September 30 last states that the company's claims in connection with the large pumping contract at Mex, Egypt, have not yet been finally settled.

Engineering Notes.

Conduit System for Electric Wiring

The use of light steel, or iron, tubes as conduits for electric wiring purposes has increased during the last few years, and is an indication of the success of the system. As a rule in using these tubes the wires have to be either threaded, or drawn through. "Threaded" means that where the erection and wiring are carried out in conjunction, the wires are threaded through the tube-conduit at the same time as the latter is being fixed in position; and "drawn through" means that the wires are drawn through the complete system of conduits subsequent to erection. In either method there is risk of the insulation of the wires being damaged, especially where many sharp bends and elbows have to be negotiated, because, as the wires are concealed in the tube conduit, any damage done in the process of "drawing" in cannot be detected.

New System.

A metal conduit which seems to be on the principle of tube conduits, and which avoids the risks mentioned above, is a new system which apparently meets with growing favour. The most important feature of this system is that the wires are laid in the conduit and not drawn in. This metal conduit is divided into two circular sections, each section being slightly greater than a semi-circle. The troughing or bottom section is screwed to the wall, ceiling or other support through counter-sunk holes punched in the bottom of the troughing, one screw only being required at each point of support. Wires are then laid in this bottom section, and the cover, or upper section, is sprung over the troughing, the combined sections constituting a complete circular conduit, similar in appearance to an ordinary brazed, welded or solid drawn conduit. A feature of this system is its water-tightness. When steel conduits are subjected to variations of temperature it has been found that systems, apparently watertight, are liable to accumulate quantities of water owing to condensation. Experience has shown that the best method of dealing with this difficulty is to provide for free evaporation of the moisture. The new system in question does this most effectually; at the same time the overlap of the cover entirely prevents direct access of water. Additional wires may be laid in this conduit without disturbing existing wires. The troublesome process of fixing patrasses and screwing fittings, ceiling roses, etc., to the same can be avoided by this system. All fittings are attached by means of standard nipples to steel clips, which latter may be sprung directly on to the conduit at any point. If it is desired at any time to alter the position of the fitting, this can be very simply done by removing a short length of the cover and shifting the fitting to the position required. There are many other advantages which, with the above mentioned, prove the new system one of the most efficient metal-tube conduits for electric wiring purposes.

Egyptian State Railways.

The *Official Journal* of the Egyptian Government contains a proclamation by the G.O.C., in which it is stated that "whereas it has for military reasons been decided to proceed immediately with the doubling of the State Railway line between Zagazig and Ismailia," the State Railway Department "is authorised to take immediate possession of any lands required for the purpose of doubling the said State Railway line between Zagazig and Ismailia." So far as the price of lands so taken shall hereafter be fixed under the provisions of the Laws as to the expropriation of land for purposes of public utility, "the Mudir or Governor of the Court is authorized and required to include in the price so fixed

THE BAGHDAD RAILWAY.

An article on the completion of the Baghdad Railway to Aleppo appeared recently in the *Berliner Tageblatt*, from which the following extracts (translation by the *Manchester Guardian*) are reproduced.

According to the article in question, there remains between Constantinople and Aleppo but a single gap of eighteen miles on the south side of the Taurus. The last news of the progress of the railway was the announcement of the opening on October 20 of a section of about twenty-nine miles south of Islahie. At that time some twenty miles of line between Islahie and Bagtche was unfinished, although the great tunnel through the Amanus mountains had been pierced. It may be added that beyond Aleppo the railway has been completed to some point no great distance east of the Euphrates, the bridge over that river having been opened last April.

The writer, Herr Ludwig, begins his article by quoting the words of Talaat Bey, "Where should we have been in this war without the railway?" but says that military reasons forbid him to discuss the strategical importance of the line. There were two breaks between Constantinople and Aleppo last spring, but one has been joined up now and the other soon will be.

The old line from the capital to Konia is the Anatolian Railway, and thence to Aleppo is the Baghdad Railway. The first break is in the Taurus, a thousand kilometres from Constantinople. There is still a cutting, over eighteen miles long, to be made in the southern slopes of the mountains, but for the present, and for the duration of the war, the old pass-road through the Cilician Gates has been made into a huge automobile highway, connecting Bosanti with Tarsus.

Then comes another stretch of railway, Mersina-Tarsus-Adana; then (beyond Bagtche) comes another break, which, however, says Herr Ludwig, will be finished by now. From Aleppo a new railway to Jerusalem has been finished since war began, so that the journey from Constantinople to Jerusalem will soon only take five days.

Herr Ludwig cannot refrain from gloating over what all this will mean to Germany. "Since the Serbian resistance has been overcome and the Danube been cleared of Serbian mines and artillery, goods for Germany can come from Asia Minor to the Danube and then up-stream as far as necessary. Important things can be sent from this wealthy Asia Minor, more easily, cheaper, and in greater quantity than before. Especially wool from the Mæanderplain and other parts, not first-class wool, it is true, but still eminently useful for the needs of our campaigns. The cotton from the Adana district, copper from the Euphrates mines, and, finally, opium from the poppyfields of Asia Minor."

Herr Ludwig says that the inmost prayer of the Allies with regard to this railway is for the scarcity of coal, but he asserts that Asia Minor has plenty of coal mines, especially in the west, and if those failed, there are stores of wood-fuel enough to last for ten years.

The Turkish Government, at German instigation, contemplates the construction of new railways in central and north-eastern Asia Minor. The *Frankfurter Zeitung* gives a map showing lines planned from Angora and the Taurus to Sivas, from Sivas north to Samsun, from Sivas east to Erzerum, and a short line north from Erzerum to the Black Sea.

When the history of the war in the Near East comes to be written (says the *Railway Gazette*), not the least interesting chapter will be that dealing with the attitude of the Turkish authorities towards the railways in the Ottoman Empire. Already, in November, 1914, within a week of Turkey's declaration of war, the Ottoman Government not only took over the working of the railways, which it had a perfect right to do under the terms of their *concessions*, but also interfered with their administration and finances. The French manager of one railway was thus bluntly asked to resign in favour of the manager of the Hedjaz Railway, a German, and the Government also determined to seize the sum of 1,000,000 frs. which the French manager had on his departure deposited with the Ottoman Bank at Beyrouth. In order to overcome the legal difficulties in the way of this theft, a special law was passed empowering the seizure of funds deposited with banks by companies carying on their business under *concessions*, and this million was then used in the construction of military lines. In dealing with another foreign-owned railway, the Smyrna-Cassaba, the Ottoman Government displayed the same disregard for commercial agreements as German diplomats for "scraps of paper." In support of this attitude, the Government put forward the very "slim" excuse that they were not dealing with a company, but with the French Government.

EGYPTIAN COAL CONTRACT.

On Cardiff Coal Exchange on Friday last, it was announced that the Egyptian State Railway authorities have completed arrangements for the 50,000 tons of coal for which they asked tenders a few days ago, the delivery of this quantity of large steams extending up to the end of March. The business, which is on f.o.b. basis, had been placed with Messrs. William Milburn, who have 30,000 tons, and Messrs. H. C. Vivian and Co., who supply 20,000 tons. The price is not divulged, but it is understood to leave a fair margin of profit on the price of their contract coals with collieries.

It is expected (says the Budapest correspondent of the *Morning Post*, writing on December 10) that the railway route from Berlin direct to Constantinople will be open in three weeks' time. The bridge at Semlin is nearing completion; and for the present trains are crossing over specially-built pontoons.

TRADE NOTES.

Cyprus.

The Government of Cyprus has for sale about 266 Cyprus okes of harpoon-fished sponges, good quality, and 29 okes skarta from Cyprus waters this year; also 748 okes of machine-fished sponges, good quality, and 89 okes skarta. Tenders for the purchase of same will be received by the Inspector of Fisheries up to 12 noon on January 29, 1916. The sponges may be seen on application to the Collector of Customs, Limassal, and full information obtained by application at the office of the Inspector of Fisheries, Nicosia.

A correspondent writes:—

"Sponges of good quality are taken annually in Cyprus waters, the industry being in the hands of Greek islanders, who visit Cyprus with their own boats. They are taken both by harpoon, or dragging system, and by divers. The sponges belonging to the Government are advertised for sale by the Inspector of Fisheries, as above."

Sudan.

The general manager, Sudan Government Railways, is prepared to receive tenders for the supply of the following timber:—

100,000 ft. run of Swedish pine in sizes varying from ¾-inch by 9 in. to 2 in. by 9 in.
2,500 ft. run of 3 in. by 3 in. by 13 ft.
1,500 ft. run of 4 in. by 4 in. by 13 ft.
25,000 ft. run of pitch pine in sizes varying from 1 in. by 9 in. to 4 in. by 12 in.
6 pitch pine baulks, 9 in. by 9 in. by 36 in.
6 pitch pine baulks, 9 in. by 12 in. by 20 ft.
12 pitch pine baulks, 12 in. by 12 in. by 20 ft.

Tenders, which should state prices and possible date of delivery of timber, may be sent to any of the following:—

Sir A. L. Webb, Queen Anne's Chambers, London, S.W., quoting price f.o.b. London.

Agent, Sudan Government Railways, Alexandria, quoting price for delivery in Alexandria.

General Manager, Sudan Government Railways, Atbara, quoting price c.i.f. Port Sudan or for local delivery.

From all of whom also tender forms and fuller information as to the sizes of timber required may be obtained. Tenders, which should be enclosed in sealed envelopes, plainly marked on the outside "Tender for Timber," must reach any of the above addresses by not later than noon of February 1, 1916.

FRENCH LINER SUNK OFF MALTA.

Reuter reports from Marseilles that the Compagnie de Navigation Mixte has just been officially informed of the loss of the steamer Djurjura (1,852 tons), which was reported to have sunk after collision with a British vessel on the night of December 14. The steamer was on her way from Athens, with a number of passengers on board, bound for Malta and Marseilles. At the time of the collision she was off Malta, with all her lights extinguished. All on board except two persons were saved. Among the rescued was Mme. Guillemin, wife of the French Minister at Athens.

JAPANESE LINER SUNK.

The Yasaka Maru, a Japanese liner, running between Japan and Europe, was torpedoed off Malta on Wednesday and sunk in fifty minutes, says the Central News. The passengers, numbering 120, and the crew of 260 were all saved.

The sinking of the Yasaka Maru is described by the Marine Insurance correspondent of the *Telegraph* as the biggest war loss that has fallen on the market since the war began. She was 10,932 tons, and was built only last year for her owners, the Nippon Yusen Kabushiki Kaisha. She had a long list of passengers and a very valuable cargo. This loss may easily amount to £1,000,000 for ship and cargo. This will all fall on the insurance market. As our Government War Risk Office insures only British vessels or their cargoes, the whole value of the cargo had to be done in the marine insurance market. She was bound from London to Japan.

COMPANY REPORTS.

Egyptian Salt and Soda.

The report of the directors of the Egyptian Salt and Soda Company, Limited, states that the gross profits earned during the past year are £E106,050,096. From this sum has to be deducted general administration expenses £E2,839,691, interest on debentures £E3,726,125—£E6,565,816, leaving a net profit before writing off depreciation of £E99,484,280, from which sum the directors have set aside for ordinary depreciation of the various factories, £E11,677,895; extraordinary depreciation on above, £E21,000; for creating a reserve, for renewal of steam plant at Alexandria factory, £E7,000; for depreciation written off patent rights in connection with new oil processes, £E2,000; for creating a reserve against payments made on account of machinery ordered in Germany, £E5,479,500; for amount transferred to reserve for bad and doubtful debts, £E3,500; for writing down the value of holding in Egyptian Unified stock to 82, £E517,920, leaving a balance of profit of £E48,308,965. The profit and loss account stands, therefore, as follows:—Balance carried forward, £E51,649,603; balance profit for the twelve months to August 31, £E48,308,965; total, £E99,958,568. Out of this sum the directors propose that a sum of £E38,827,776 shall be utilised for the payment of a dividend representing 8 per cent. on the share capital, and that the balance of £E61,130,792 shall be carried forward. The salt business, though suffering slightly at the commencement of the year under review, due to general depression in the country, has recovered again during the past few months and nearly reached its normal figures.

Mines de Bor.

The *Ironmonger*, referring to the property of the Compagnie Française des Mines de Bor (near Zaitchar, Serbia), the plant of which is said to have been utterly destroyed by the Serbians before their retreat, says:—The company's shares are quoted on the Geneva Exchange, and it is interesting to follow their fluctuations since the beginning of the war:

Face-value of the shares	100 fr.
Dividend paid for 1913/14	36½%
" 1914/15	nil
Price immediately before the war (July 25, 1914) per share	1,390 fr.
Price on October 29, 1915	580 fr.
Price on November 30, 1915	595 to 605 fr.

The Roumanian Government has prolonged the moratorium till April 23, 1916.

SERBIAN CURRENCY

Not the least interesting problem in connection with the occupation of Serbia by three different armies (says the *Morning Post* Budapest correspondent) is the economic and financial question presented by the dinar. The dinar is worth in times of peace something like 9½d. To-day the Germans decline to recognise it as of any value whatever. Austro-Hungarians accept it at a reduction of 50 per cent., that is, they give 4½d. for it if presented in the form of silver coin, and if nickel or copper they only accept it at its value in metal. The Germans in Serbia are prohibited from taking it in any form. Up till lately the Bulgarians accepted the paper notes also at 50 per cent. discount, but to-day they will not take the notes at all, and only the Serbian silver and nickel coins are circulating in Bulgaria at half their original value.

The Bulgarian Parliament decided not to allow Serbian paper money to flood Bulgaria, for the following reasons. The Serbian Government took away the gold deposit of 61 million dinars, and if the Serbian Government failed to redeem the notes in circulation, representing 380 millions, the Bulgarians would be heavy losers by accepting them even at a discount of 50 per cent. Serbian notes have thus passed out of existence everywhere except in Austria-Hungary, where for the time being they are still worth half their face value.

COMPANY MEETINGS.

KHEDIVIAL MAIL STEAMSHIP.

The eighteenth ordinary general meeting of the Khedivial Mail Steamship and Graving Dock Company, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Lord Ernest Hamilton (the Chairman) presiding.

The Secretary (Mr. G. R. Branch) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The statement that I have to lay before you this year will be a very brief one. Many of our ships have been requisitioned by the Government for the services of the country, and with regard to these it is obvious that I am not in a position to give you any information; in fact, we are not ourselves in possession of any definite information. With regard to the remainder of the fleet—that is to say, such ships as we are still trading with—I do not think that you would wish me to go into details as to the manner in which each ship has been occupied. I may briefly put the position as follows:—Up to the time when Turkey declared war on this country we continued our services along the Syrian coast under certain precautions which the commander of each vessel was instructed to take. As a result of these precautions, we were in a position at the moment of the declaration of war to withdraw all our ships trading in Turkish waters with safety to Alexandria or Suez, as the case might be. Since that date we have continued such Red Sea services as were not in connection with Turkish ports, and these services have, as a matter of fact, proved more profitable than they have done during recent years. Other units of our fleet had of necessity to remain in Egyptian waters by reason of our contract with the Egyptian Government. It was, of course, impossible for us to carry out the terms of our contract in full, but our obligations to the Egyptian Government compelled us to run such services as they required. These services were from time to time altered as the political situation changed. All the ships except such as were required for the purposes above named were brought over to the United Kingdom, where there were obviously better opportunities of profitable employment than there were in the Mediterranean.

The opportunity of finding these ships of ours in British waters was taken advantage of in order to effect certain repairs which were very badly needed. The overhaul and repair of these boats proved a more expensive matter than was originally anticipated, but the Board felt, and indeed still feel very strongly, that their action in making these boats thoroughly seaworthy, and in making such additions and alterations as would have the effect of prolonging their lives for several years, was fully justified by the circumstances. I feel sure that the shareholders as a body will fully endorse this action on the part of the Board. I think it is a matter for congratulation that, in spite of the very considerable sums required to carry out these repairs, all of which, as you know, have to come out of the revenue, the Board have still been able to recommend the payment of a 5 per cent. dividend on the ordinary shares. You will have read in the report that we have lost three ships, one by torpedo and two which have been requisitioned and purchased by the Government for their own purposes. As regards these three ships, I do not think I need add much more. The s.s. "Saidieh" was insured for a sum which more than covered her book value; the other two were taken over by the Government at their own valuation. The net result, therefore, is that we have a fleet reduced in numbers by three, and with certain other units considerably strengthened and improved structurally. I think this is in the main satisfactory. There is another point which I may mention, and which I think should be of distinct interest to shareholders, and that is that within a few days we shall have paid off the last instalment owing to the Egyptian Government on the s.s. "Osmanieh." It will be within the knowledge of most of you that we have now for many years past—in fact, ever since the purchase of the "Osmanieh"—been paying for her at the rate of £9,400 a year, capital and interest. The ship will within the next few days be completely paid for, and the annual cash position of the company should, therefore, benefit to this extent. During the first six months of the present year the course of events has been on very similar lines to those of the preceding six months. With regard to the future, it is, of course, impossible for me to say anything, nor do I think you would wish me to venture predictions.

You will be pleased to hear that during the year under review Mr. C. C. Curwen, who during a probationary term of six months acted as general manager, has now notified his willingness to remain with the company. The directors, for their part, are ouly too glad to be able to inform you that he has formed his decision. Mr. Curwen has had a very difficult task to perform. The ordinary routine services, which have run more or less smoothly and automatically since the inception of the company, have been entirely dislocated by the political disturbances, and fresh problems have presented themselves to the management at every turn. I think that our new manager has met these problems with great judgment and skill, ably assisted by the staff in Alexandria. While on this subject, I should like to draw the attention of the shareholders to the admirable work performed by the office staff at home, under conditions which were entirely new to them. Our Secretary, Mr. Branch, has proved himself an extremely valuable servant to the company—(hear, hear)—and I think we are undoubtedly under great obligations to Mr. Charles Holland for the continuous energy which he has shown in pushing the interests of the company. (Applause.) That is all I have to say, gentlemen. You will, of course, ask any questions presently that you may think fit. In the meanwhile I beg formally to move:—"That the report of the directors, together with the attached statement of the company's accounts as on June 30, 1915, duly audited by Messrs. Edwin Guthrie and Co., be and they are hereby adopted."

Mr. Francis Allen seconded the resolution, which was at once put to the meeting and carried unanimously.

Mr. Hugh Reeves said he wished as a shareholder who had been somewhat prominent in criticising the directors to congratulate them on the report they had been able to lay before the meeting. The result seemed to be due both to the management in Egypt, where they appeared to have a satisfactory official, namely, Mr. Curwen, and to the excellent handling of the business on this side, for which chief credit was apparently due to Mr. Charles Holland. As he (the speaker) was the shareholder who put forward Mr. Holland in the first place, supported by Mr. Parsons and other gentlemen who were present, that was peculiarly gratifying to them. They were very pleased indeed that the directors had found a colleague who, from his expert knowledge, capacity and energy, had been of the greatest value to the company. A little later he would like to move, on behalf of the shareholders, that some slight appreciation in the way of some extra emolument or director's fee should be given to Mr. Holland for his services. It occurred to him that some such figure as 250 guineas might be a small mark of appreciation for the services which Mr. Holland had rendered to the company.

There was one other point on which he wished to make a suggestion, and that was that in view of the very much improved financial position they were probably within sight of a steady dividend on the ordinary shares. It took only £5,000 to pay 5 per cent., and he observed that they were carrying forward something like £12,000, after picking up some three half-years' arrears of preference dividend. That should make it perfectly feasible for the directors in the near future to consider the payment of another dixidend. If he might make a suggestion, perhaps, in the month of June, when the Board had seen how the year had closed for all practical purposes they could let the shareholders have an interim dividend. Five per cent. was a small return on a shipping enterprise, and although they were quite thankful to receive it they would certainly like 5 per cent. next June if the directors could see their way to pay it.

Mr. E. P. Parsons said he wished to say a few words, more especially with regard to the services rendered by Mr. Holland. He did not know that all the shareholders realised the amount of work Mr. Holland had done, but having been personally in fairly close contact with the company, he could say that Mr. Holland's work had been of inestimable value to the whole Board, and especially to the shareholders. He hoped, therefore, that all the shareholders would agree in voting the suggested extra remuneration.

Mr. Vere Herbert Smith said that some time ago he recommended very near members of his family to invest in the company's debentures, and there was one question which he should like to ask. They had one ship torpedoed during the past year, and had sold two ships to the Government. On the other hand, he understood the Chairman to say that they were building one new ship. He wished to ask how the reduction in the number of ships would affect the debenture holders—if there was a debenture trust deed and the directors had to hand the proceeds of these ships to the trustees, or how they dealt with the money received for ships sold, because he took it that by selling ships they were reducing the security of the debenture holders somewhat, while, on the other hand, they were receiving cash for the ships.

The Chairman, replying to Mr. Vere Smith, said that there was a trust deed, and the debenture holders had a direct charge on certain of the ships. There were others that were free of that charge, but on which the debenture holders had what was called a floating charge. The "Minieh" was one of the ships directly hypothecated to the debenture holders, and the proceeds of the sale of that ship had, therefore, to be handed over to the trustees for the debenture holders, by whom they had been invested. The other two ships, the "Saidieh" and the "Assouan," were free; they were not directly charged to the debenture holders. The Board felt that the security of the debenture holders ought not to be reduced by the amount which accrued from the underwriters and from the Government in respect of those ships. He wished, however, to point out that the increase in the fleet over and above the ships originally hypothecated to the debenture holders had been met entirely out of revenue from time to time, and that, therefore, the Board was absolutely entitled, when such ships were sunk or sold, to use the proceeds for ordinary purposes. However, in the case of the "Saidieh" the Board invested the money received in the War Loan, which action, he thought, would be satisfactory to the bulk of the shareholders.

The Chairman then moved:—"That a dividend of 5 per cent. be and is hereby declared on the ordinary shares of the company for the year ended June 30, 1915, payable on December 31, 1915."

Mr. Allen seconded the motion, which was unanimously agreed to.

The Chairman next proposed the re-election of Mr. S. Wellhoff and Mr. Francis Allen, the retiring directors, remarking that these gentlemen were very valuable members of the Board.

Mr. H. B. Henley seconded the motion, which was adopted.

Mr. Reeves then moved:—"That an extra remuneration of 250 guineas be voted to Mr. Charles Holland in respect of the special services he has rendered this company during the year covered by the accounts for the period under review."

Mr. Parsons seconded the resolution.

The Chairman said that he was in absolute sympathy with the motion made by Mr. Reeves and Mr. Parsons. He could not ex-

press in words the value that Mr. Holland had been to the company. During the latter half of the last year under consideration there was a certain period of extreme pressure and strain, and if they had not had the services of Mr. Holland on the Board he thought they would have been in a very bad position indeed. His firm, Messrs. Arthur Holland and Co., were appointed the company's agents at a fee which, he believed, was the recognised fee in such cases, but he could say without any hesitation that he did not believe for a moment that any other firm would have served the company nearly as well as Messrs. Arthur Holland and Co. had done in the circumstances. He was quite prepared to recognise that Messrs. Arthur Holland and Co. were at the present moment doing work for the company which was quite unremunerative to them, but his feeling was that that situaton should be met by a revision of the terms of the contract with Messrs. Arthur Holland and Co. if necessary. That was a matter into which the Board was prepared to go, but he did not think it should be met in the future by additional sums voted at a general meeting. In conclusion, he was absolutely in sympathy with the motion of Mr. Reeves and Mr. Parsons, and he was quite sure that the money had never been better earned that in this case.

Mr. Allen said he believed they were all practically in sympathy with the suggestion which had been brought forward. They all valued very much Mr. Holland's able assistance, and realised how valuable he had been to the company. At the same time, he wished to point out that the directors had not drawn the whole amount of fees to which they were entitled—namely, £2,000, and although they were quite in accord with the general principle of the suggestion, some of them perhaps would like to see it done in a slightly different way.

The proposal of Mr. Reeves was then put to the meeting, and carried unanimously.

Mr. Charles F. Holland said he would like to thank Mr. Reeves and Mr. Parsons very much for the kind words they had uttered about the work he had done in connection with the company, and also the shareholders for the manner in which they had shown their appreciation of such work. It was no exaggeration to say that the work of the first six months of the year was very hard indeed. A good many of the Alexandria boats came over to this side and demanded constant attention. It was quite impossible for him to consult his colleagues on the Board, as early decisions had to be come to, and he wished to take this opportunity of thanking his colleagues, especially as he was a new member of the Board, for giving him a free hand in dealing with the ships.

Mr. F. R. Troughton expressed the hope that the Board would bear in mind the suggestion of Mr. Reeves with regard to the payment of an interim dividend.

The Chairman said the shareholders would quite understand his reluctance to make a definite promise. He did not think it was possible for him to do so, but naturally if it was within the power of the Board to pay an interim dividend it would be their duty to do so.

Mr. Parsons said that before the shareholders separated he would like to propose a vote of thanks to the Chairman and the board of directors for their services, and also to the Secretary, Mr. Branch, who worked very hard and had done a great deal of new work, and done it very well. After the criticisms which had been passed in previous years, it was very gratifying to be able to pass a hearty vote of thanks to the Board for all the good work they had done and for having presented such a favourable report. He only hoped that the next report would be as favourable, or a little better, and that perhaps they would have an interim dividend. The balance-sheet was a much stronger one than any which had been presented since he remembered the company, and the payment of an interim dividend should not give the directors very much anxiety.

Mr. Vere H. Smith, in seconding the motion, said he entirely agreed with the views which had been expressed with regard to the non-advisability of making it a precedent to pay an increased fee to a director; it was a most dangerous thing to do.

The vote was unanimously accorded.

The Chairman briefly acknowledged the compliment, and remarked that the Secretary, Mr. Branch, had come forward under rather trying circumstances in a manner which had astonished all the directors. He had proved not only a most zealous servant of the company, but an admirable one, and absolutely competent to grasp every detail of the company's business. He had been of inestimable value to them, not only in his capacity as Secretary, but since Mr. Geoffrey Head had retired from his duties as a director on account of military duties he had proved of very great value in the company's insurance business, which was an extremely complicated and difficult one. He thought that the shareholders would like to know that in their Secretary they had an extremely valuable servant.

The proceedings then terminated.

ANGLO-PERSIAN OIL.

The sixth ordinary general meeting of the Anglo-Persian Oil Co., Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. C. Greenway (chairman and managing director) presiding.

The Secretary (Mr. F. Macindoe) having read the notice convening the meeting and the auditors' report,

The Chairman said:—As usual, I will begin my remarks by making a few explanations in regard to the accounts, the delay in the presentation of which, it is needless to say, has been due to the interruption of work consequent upon military operations in the Persian Gulf and to the shortage of our staff. Starting with the balance-sheet, you will see on the liabilities side that the amount of paid-up capital stands at £2,750,000, as compared with £1,900,000 in the previous year, this augmentation of £850,000 being represented by £751,000 received from His Majesty's Government on account of the 2,000,000 ordinary shares and 1,000 preference shares subscribed for by them, and by £99,000 received from the Burmah Oil Co., Limited, in payment for the 99,000 preference shares issued to that company. The balance of capital remaining available was £1,449,000—that is, £1,250,000 in respect of the 2,000,000 ordinary shares I have just referred to and £199,000 in respect of the debentures, which are to be subscribed for by the Government as and when required. The only other item on the liabilities side of the account to which any reference need be made is, I think, that of bills payable. The amount of £70,489 1s. 7d. includes £46,450 for bills accepted in part payment for the fleet of tankers which is being built for the transport of our oil, but as a separate Tanker Company has since been formed to work the fleet, this liability has since been transferred to that company. As the whole of the ordinary shares in the Tanker Co. will be held by the Anglo-Persian Co., it is perhaps advisable that I should take this opportunity of contradicting some of the wild statements which were made some time ago in the Press and in Parliament with reference to the cost of the boats which have been contracted for. You will be pleased to learn that the prices at which we were fortunate enough to secure these boats are very little in excess of the average of pre-war prices, and that they are relatively fully £80,000 per boat lower than prices which we have recently had quoted to us for similar boats to be built in the United States. Moreover, the figure mentioned in a Parliamentary question as representing the total cost of these boats was some hundreds of thousands of pounds in excess of the actual sum. In view of the very high rates now ruling for tanker tonnage, and the probability that they will, for obvious reasons, continue abnormal for some time after the conclusion of the war, we have every reason to congratulate ourselves on having contracted for these boats, and can, I think, look forward with every confidence to our shares in the Tanker Co. proving a most remunerative investment. As to the necessity for possessing such a fleet, instead of being dependent upon the open market, I scarcely think any explanations are required, because it must be apparent to everyone acquainted with the oil trade how dangerous it would be for a company situated as ours is, and requiring so much tonnage, as we shall do after our extensions are completed, to rely upon the chances of securing freight at reasonable rates in a market so restricted as that for oil tankers. It will suffice to say that even before the outbreak of war, and with our then comparatively small requirements of tonnage, the cost of our transport was fully 50 per cent. more than it would have been had we been running boats of our own, and that during the war we have had to pay freight equivalent to as much as four or five times the actual running cost.

Turning now to the assets side of the account, the first item calling for remark is purchase price for concessions, etc. The addition to this item during the year has been £103,253 19s. 9d., representing almost entirely further shares taken up in the Bakhtiari Oil Co., Ltd. Under the next heading, refinery, tank installations, pipe-lines, etc., you will see that we have again, owing to the difficulty of correctly allocating expenditure while so much work is in progress, reverted to the system of incorporating various items of expenditure which last year were shown separately. The new expenditure for the year under this more comprehensive heading was £431,631 16s. 1d., which amount it is perhaps needless to remark almost entirely represents outlay in connection with the new programme of extensions now being carried out; £40,000 has been deducted for depreciation, this amount being, in the opinion of the board, a sufficient sum to write off in view of all the circumstances. The next item calling for notice is that of sundry debtors and debit balances, which stands at £291,041 19s. 1d., as against £94,382 11s. 4d. in the previous year's account. The large increase in this amount is chiefly due to larger accrued dividends from the producing companies and to larger outstandings in respect of products sold. As regards the next heading, preliminary expenses, you will see that the amount standing at the debit of this account has been augmented during the year by about £6,000, this representing the registration fees and legal expenses connected with the last increase of capital. I regret that we have not, as we should have done had it not been necessary to provide for certain contingencies, to which I shall refer later on, seen our way to writing off any portion of the sum standing at the debit of this account; but we shall, of course, deal with it at the earliest possible date.

I will now ask you to turn to the profit and loss account. The balance of our trading account, as you will see, is £171,083 7s. 4d. This amount would have been about £74,000 greater had we included in it the amounts due to us by the Turkish and Persian Governments; but although we have every reason for anticipating that the greater part, if not the whole, of these outstandings will sooner or later be realised, we have decided not to take credit for them in the meantime. The amount due by the Persian Government is, of course, a perfectly good asset, since there is no doubt that it will eventually be forthcoming. So far as regards the amount due by the Turkish Government, the manner in which this may be recovered is, of course, as yet uncertain; but, inasmuch as the debt is chiefly in respect of goods which were formerly requisitioned from our agents at Baghdad, and for which receipts were given, I think we may look forward with confidence to its ultimate recovery from whichever Power may, when the war comes to an end, assume the responsibilities of the Turkish Government in that part of the world. After making allowance for these outstandings—which may be regarded as purely adventitious—we have, I think, every reason to be satisfied with the results of the year under review. The balance of the trading account would have been about £245,000, and omitting the loss of £26,711 3s. 10d., carried forward from the previous year, since it will not be a recurring item, there would, after paying debenture interest and home charges, have been a balance of about £200,000 available to meet depreciation and further payment of dividends. This may, I think, in all the circumstances, be regarded as quite a satisfactory showing, and an earnest of what we may look forward to in the future when our present programme of developments has been completed. I would like, however, to point out that had we been in a position to transport and market our benzine and kerosine products ourselves, instead of being dependent, as we are at present, in markets outside of the Persian Gulf, on the distributing organisation of another company, our profits for the year would have been very considerably enhanced. What the result

Digitized by Google

may be for the current year it is still too early to prognosticate with any certainty in the present unsettled condition of Southern Persia. But, notwithstanding the diminution of revenue resulting from our pipe-line having been out of use for two and a-half months of the present financial year, we may, I think, failing, of course, the happening of any untoward event, count upon being able to present at least as good a result as that now before you in our next annual accounts.

Now that I have finished my remarks on the accounts you will doubtless like to hear something of the disturbances which occurred in the early part of the year in the part of Persia in which we are operating, and of the present situation there so far as it affects the welfare of this company. As mentioned in the report, our pipe-line was cut by some Persian tribesmen on February 5 last. This damage was perpetrated by a small tribe who inhabit a district which is traversed by our line for a distance of about twelve miles, and the damage was limited to the destruction of a few sections of pipe within this length of line. The tribe in question was undoubtedly incited to this act of rebellion against their Government by some of the German agents who have been so actively endeavouring to destroy the neutrality of Persia during the past twelve months. The Persian Government were then, and, unfortunately, still are unable to control the activity of these political buccaneers, who, in a neutral country, are at the moment utterly disregarding the authority of the ruler and Government of that country and are in some of the chief cities exercising all the powers and authority of the Government itself. This is a most extraordinary position, and one that cannot be allowed to continue. The situation is receiving the closest attention of the British and Russian Governments, and I think we may be assured that the steps which they are taking will ere long reduce these lawless Germans to a proper recognition of their obligations as residents in a neutral country, and thus enable Persia not only to maintain its neutrality, but also its independence, which at present is gravely imperilled by the actions of Prince Reuss and his tag-rag and bobtail following of military adventurers and of irresponsible Persian rebels, who care nothing for the fate of their country so long as their cupidity is fed with German gold. Although the Persian Government, under the terms of our concession, are bound "to take all and any necessary means for the safety and the carrying out of the objects of the concession, of the plant, and of the apparatuses . . . . and to protect the agents' representatives and servants of the company," they were quite unable themselves to cope with the situation created by their rebellious tribesmen, as they had no troops in that part of Persia available for the purpose. Fortunately, however, the General Officer Commanding the Indian Expeditionary Force had already sent up to Ahwaz, which is some distance south of the district in which the rising took place, a small force to ward off a threatened attack by the Turks upon his flank, and he was, consequently, in a position to readily lend to the Persian Government the requisite military assistance and to settle the whole trouble within a few days. It took some time to repair the damage to the line, owing to the unsettled state of the country and to the whole of our transport being required for the military operations; but it was restored to full working order by the middle of June, and since then has been worked continuously.

The amount of excess oil which had to be burnt, owing to lack of sufficient storage tanks and to avoid pollution of rivers, in the four and a-half months during which we suffered from this enforced shut down was, I am sorry to say, about 36,000,000 gallons, or 144,000 tons, but, as you will have gathered from the terms of the concession which I have just quoted, the Persian Government are liable to make good to us and to the producing companies the whole of the losses consequent upon the destruction of this large quantity of oil, and also for the extra expenditure to which we shall be put in consequence of the general interruption to our work which has been caused by this act of folly on the part of Persian subjects. The quantity of oil I have just mentioned as having been disposed of by burning was, I should explain, in excess of the large quantity which we ordinarily have to dispose of in the same manner owing to our present pipe-line not being of sufficient capacity to carry the full quantity of oil produced from our flowing wells, and for which, of course, we have no claim on the Persian Government. Apart from this unfortunate contretemps, and from the scarcity of transport consequent upon the operations of the British Forces, there has, you will be pleased to learn, been no interruption of any kind to our refining operations, nor to the extensive work which we are carrying out in connection with our scheme of extensions. Whether or not this comparative immunity from trouble will continue it is, of course, impossible to say, in view of the continued activities of German agents in Southern Persia and of the present inability of the Persian Government to themselves suppress their lawless acts, but it will be reassuring to you to know that the Bakhtiari Chiefs, from whose territories we are now obtaining our supplies of crude oil, have firmly resisted the efforts of the Germans to draw them into the rebellion which they have been endeavouring to create, and that these Chiefs, as well as our staunch supporter, the Sheikh of Mohammerah, still remain friendly to us and loyal to H.I.M. the Shah and his Government, and that the whole situation in Persia, as it affects this company, is receiving the closest possible attention, not only of your board, but also of his Majesty's Government and of General Sir John Nixon, who is commanding the troops on the Tigris.

Now that I have dealt with the political aspects of our affairs, I will give the usual explanations in regard to our working operations. Dealing, in the first place, with the present refinery, I am pleased to report that it continues to give satisfactory working results, the throughput for the quarterly periods preceding the cutting of our pipe-line having averaged as follows:—

	Gallons.	
For the 3 months ended June, 1914,	4,911,000	monthly
" " " Sept., 1914,	4,287,000	"
" " " Dec., 1914,	7,051,200	"

whilst for the month of January it was 6,852,000 gallons. Since the pipe-line was restored, it has averaged about 7,000,000 gallons monthly, and should there be no further shut down, the total for the current year will be little short of that of the year now under review. The slight falling off of 200,000 to 300,000 gallons monthly since the quarter of September, 1914, is, I should explain, not due to any reduction in the working power of the plant, but to the fact that we have latterly been increasing our production of fully-refined oils, which means the employment of more stills. The work on the refinery extensions is making good progress, and will probably be completed well before the new pipe-line is ready.

With regard to the latter, I regret very much to say that there has been considerable delay, partly owing to the disturbances to which I have already referred, but chiefly to the grave difficulties which we are experiencing in getting the pipes transported to the various points at which they are required for laying. Nearly the whole of the craft usually available on the River Karun for such transport has been requisitioned for the purposes of the military operations on the Tigris, and, consequently, we have been quite unable to remove the pipes at the rate required to keep our men fully employed. It is needless to say that we are doing everything that is possible to overcome this difficulty, but I am afraid that the completion will be delayed by fully twelve months beyond the date which was originally estimated. A further disadvantage arising from the war is that the cost of our extensions will be considerably enhanced by the much higher freights which we have had to pay for the transport of our plant and other material, and by the higher costs of all plant not contracted for before the outbreak of war. In this we have, of course, only suffered in common with all other shippers and purchasers of plant; but it will be gratifying to you to know that our loss in respect of freight has been materially lessened by the fact that our Tanker Co. anticipated the great advance which has taken place by making several advantageous charters, and by purchasing a steamer, which, apart from giving us freight at actual cost for our own outward cargo, has been returning handsome profits on its outward and homeward carryings for other shippers. In connection with our refinery, you will be pleased to learn that it has been the means of rendering to the Expeditionary Force a great amount of very valuable assistance in connection with the military operations on the Tigris. At Abadan we possess the largest and most up-to-date engineering workshops, and also the largest and most competent staff of engineers existing in that part of the world, and it is no exaggeration to say that the services which have been rendered by the company and by its staff, and which have from time to time been suitably acknowledged by the Viceroy of India and by the general officers commanding, have been of inestimable value to the nation.

As regards the operations of the producing companies there is little change to report since I last addressed you. Owing to the delay in the completion of our new pipe-line they have deemed it advisable to suspend the further drilling for reserve production, to which I referred last year. As you are aware, they have now a large number of wells drilled, either into, or nearly into, the oilsands, all of which can be quickly brought into production, and until the new pipe-line has arrived nearer to the point of completion it is inadvisable to push on too rapidly with further drilling, because there is always the danger that the oilsands may be accidentally pierced, and that great loss of oil may be incurred, owing to the impossibility of capping wells with safety, when the pressure is so great as that experienced in this phenomenally rich oilfield. The well No. 7 F., to which I referred last year, still maintains the production then indicated by me—viz., about 7,500 barrels daily, though shut down to a pressure of 280 lbs. per square inch, and the fact that this and our other wells hold up their production and pressure in such a remarkably steady manner, without any indication of water troubles, is, I think, conclusive evidence of the great value and richness of the field from which we are at present obtaining our supplies of crude. As regards the test wells in the three new fields referred to by me last year, you will be pleased to learn that at one of these the oil horizon was reached, and the well successfully capped in March last, which adds another considerable area to that of our already-proved oil territory. At the other two work was temporarily suspended, but has now been resumed on one. These three test wells are in the territories of the Bakhtiari Oil Co., Ltd. The Anglo-Persian Oil Co., Ltd., has, apart from these, started two other test wells in other parts of its concession, but operations on these are for the time being suspended, owing to the political conditions.

Before I conclude my remarks, I would like to draw your attention to the splendid services which have been rendered to us by every member of our staff in Persia in the trying circumstances which they have experienced during the past twelve months. (Hear, hear.) One of them—Captain Dyer—whose services were lent to us by the Government of India as a transport officer, I regret to say lost his life in an attack in which he was unfortunately mistaken for a Persian, with whom the assailants had a blood feud. Other members of our staff also have at times met with very trying experiences, in which they have displayed great devotion to the company's interests. But where all have done so well, it would be invidious to discriminate, and I am sure you will join with the board in expressing to all the members of our Persian staff our very great appreciation of their services to the company and in echoing the words expressed by Sir John Nixon recently when he was thanking our Abadan staff for the services rendered by them to the expeditionary force. After explaining to them that the fuel oil and other products which we are supplying to the Navy and Army are national necessities in this great war, Sir John said: "A man who is employed . . . in furnishing the requirements of the Navy or of the Army is doing his country just as much service as the men employed in the first line, either afloat or on shore, and I am sure that you will . . . set your teeth and do your utmost in the work that is lying to your hand here, and set the example incumbent on all of us who take up the white man's burdens in foreign countries." These words will express, I think, the feelings of all of us towards the members of our staff who have considered it their duty to remain at their posts, rather than volunteer-

Digitized by Google

for service in the fighting line, as, of course, many have done. (Applause.)

I now beg to propose: "That the report of the directors and balance-sheet and profit and loss account for the financial year ended March 31, 1915, be received, approved, and adopted," and I will ask Mr. Cargill to kindly second the motion.

Mr. John T. Cargill seconded the motion.

The Chairman: Gentlemen, before putting the motion to the meeting I shall be glad to answer to the best of my ability any questions which shareholders may desire to put.

No questions being asked the Chairman put the motion, and it was carried unanimously.

The Chairman: The next business of the meeting is to elect directors, and I now beg to propose the re-election of Sir Treverdyn R. Wynne and Mr. H. E. Nichols, who have been elected to seats on the board during the past year, and who, under Clause 84 of the articles of association, now retire, and need to be re-elected, and also of Mr. John T. Cargill, Mr. W. Knox D'Arcy, and Sir Campbell K. Finlay, all of whom retire by rotation and are eligible for re-election. Sir Treverdyn R. Wynne was, as you will have seen from the report, elected to fill the vacancy caused by the resignation on account of ill-health of Mr. Wallace, and I should like to take this opportunity of expressing the very great regret that all of us feel at the break-down in his health which has caused the loss of that gentleman's valuable services. Mr. Wallace was for many years a director of the Burmah Oil Co., Limited, and, as many of you are aware, he, from their earliest inception, took a very considerable part in the affairs of this company and of the syndicate which preceded it. It has been my good fortune to have been associated with him in business for a period of nearly forty years, and no one knows better than myself how great a loss we have suffered in being deprived of the benefit of his sound judgment and valuable aid and counsel. We have, however, been very fortunate indeed in securing as his successor such an able colleague as Sir Treverdyn Wynne. This gentleman was for many years the agent of the Bengal-Nagpur Railway, of which he is now the managing director, and was for some years the Director-General of Railways in India; in fact, his name has been a great one in the annals of the railway world and in India for the past thirty years. When I tell you that he is an ardent advocate of the merits of oil as a fuel, and that he has now gone to India on a mission which will include some useful work for this company, you will appreciate the advantages which the board will derive from his co-operation. Mr. Nicholls has been associated with the company since its incorporation, and with the concession and the work connected with it from the date when the concession was first obtained by Mr. D'Arcy, and as he has done extremely good work for the company, the board would like you to confirm their appreciation of his services by electing him as a director. The services of the three colleagues who are retiring by rotation are so well known to you that they need no reference on my part.

Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., seconded the resolution, which was agreed to.

The Chairman: The next business of the meeting is to elect the auditors, and I shall be obliged if two of the shareholders will kindly propose and second the re-election of Messrs. Brown, Fleming and Murray, chartered accountants. As their work has been very largely increased during the past year the board recommend that their remuneration should be increased to £200 per annum, and I feel sure that you will agree with us that this is a reasonable fee to pay in view of the large amount of work involved in an audit of so extensive a character as that of ours.

The re-election of Messrs. Brown, Fleming and Murray, C.A., was agreed to on the motion of Mr. E .H. Taylor, seconded by Dr. H. A. Powell.

Mr. E. H. Taylor proposed a vote of thanks to the chairman, which was seconded by Dr. H. A. Powell and carried unanimously.

ROUMANIAN CONSOLIDATED OILFIELDS.

Mr. W. Watson Rutherford, M.P., Chairman of the company, presided at the annual general meeting of the Roumanian Consolidated Oilfields, Ltd., held on December 15, at the Cannon Street Hotel, London, E.C.

He observed that they held extensive areas of oil land and two refineries, and they operated over 175 kilometres of pipeline and over 50,000 tons of storage. Their petroleum output was 103,920 tons, as against 66,232 last year, an increase of 50 per cent. The gross Roumanian profit was £172,515, against £147,541 last year. The year's net available balance of profit (subject to exchange) was £105,616, adding £93,866 brought forward (being the net result of the two first years); the balance to credit of profit and loss account was £199,482. This was after writing off ample depreciation, £46,861, and after taking stocks at cost. They then raised the general reserve fund from £60,000 to £100,000. After making other reservations, including over £26,000 for the difference in exchange, they proposed to carry forward £113,451. The increased production and the satisfactory financial results had been achieved in spite of all the difficulties arising out of the war. Having made a running commentary of the accounts, he observed, in regard to the future and immediate prospects of the company, that Roumania was a rich, self-contained, well-governed country with an industrious population. Its wheat and other grain products were second to none. The Roumanian petroleum output had steadily increased year by year, and now exceeded 2,000,000 tons per annum. It occupied a commanding position for supplying the ever-increasing demand of the Mediterranean littoral with light, fuel, and motive power. He believed the company had now attained such a position that with the return of normal conditions it might be relied upon as an established dividend-paying concern. In Roumania they had a capable energetic staff in which there were a number of young Englishmen, and they had been the pioneers of the most improved machinery and the pioneers of practical geological investigations, including the discovery of the most important oil deposit previously unknown, and he did not know any other undertaking in Roumania which, under these war conditions, had increased its output by 50 per cent. In regard to the immediate outlook he took an optimistic view. Roumania's leading statesmen were both able and patriotic. The sympathy of the nation was undoubtedly with us and our Allies. Under great provocation and most difficult conditions Roumania had so far managed to preserve its neutrality. He believed that if Roumania joined in the war at all it would eventually join us at the time and under the conditions when it would be most advantageous both for them and for us that they should do so. They had a splendid national army, well equipped and thoroughly loyal, and when they did join their forces with us and our Allies, it would be the beginning of the end of this great war. In regard to the safety of the oil wells, his own opinion was that, in any event, such safety was assured. They were too valuable to be destroyed by either side, and, moreover, they were protected by being under the shadow of the highest portions of the Carpathian Mountains, only penetrated by four or five passes, each of which he believed had been recently made impregnable. Finally, he remarked that, in London, out of their office staff no less than seven, as well as his colleague Captain Barnett, had been serving their country. Two had been killed, one was interned in Holland, and four were still in the forces. He moved the adoption of the report, which was carried unanimously.

COMPANY RESULTS, &c.

EGYPTIAN LAND AND GENERAL TRUST.—The ninth ordinary meeting of shareholders will be held at the office of the company, Winchester House, Old Broad Street, on Thursday next at 4 o'clock.

SOCIETE PRIVILEGIEE POUR FAVORISER LA PRODUCTION ET LA COMMERCE DU RAISIN DE CORINTH.—Profits on re-sales of retention currants in 1914-1915 were £88,005; carry-over, £4,074; dividend, 15 drachmas per share, or 6 per cent.

SUEZ CANAL.—Receipts for the 15th inst. amounted to 370,000 fr., as compared with 240,000 fr. for the corresponding day last year.

THE AGRICULTURAL BANK OF EGYPT.

Notice is hereby given that an EXTRAORDINARY GENERAL MEETING of the Agricultural Bank of Egypt will be held on Tuesday, the 11th day of January, 1916, at Four o'clock in the afternoon, at the Head Office of the Bank in Cairo, for the purpose of modifying the Statutes in the following way:

(1) To substitute the word "Avril" for the word "Mars" in the first paragraph of Article 31.

(2) To eliminate the words "au profit de fonds social" in the third paragraph of Article 42, and to substitute therefor the words "Le paiement pourra en être refusé et le montant passé au profit du fonds social."

A print of the Statutes can be inspected at the Offices of Messrs. Norton, Rose, Barrington, and Co., 57½, Old Broad Street, London, E.C., between the hours of eleven and three (except Saturdays).

Every Shareholder holding a minimum of five Shares has the right to attend the above Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in Egypt is the 6th January, 1916, and the last day for depositing the Shares in London is the 30th December, 1915), when Cards of Admission and Forms of Proxy will be handed to them at one of the following places:—

IN EGYPT,
At the NATIONAL BANK OF EGYPT, Cairo.
At the NATIONAL BANK OF EGYPT, Alexandria.
IN LONDON,
At the NATIONAL BANK OF EGYPT, 6 and 7, King William Street, E.C.

F. T. ROWLATT, President.

Cairo, 15th December, 1915.

CITY OF ALEXANDRIA FOUR PER CENT. LOAN REDEMPTION.

Notice is hereby given, in accordance with the Special Conditions regulating drawings, that the NINTH DRAWING in connection with the Redemption of 27 BONDS of the Municipal Loan of the 1st January, 1902, took place at a public meeting held on the 2nd December, 1915, at 11 a.m., at the offices of the Municipality at Alexandria.

The following numbers were drawn:—

(1) Nos. 65 and 232 of the Bonds of £500.

(2) Nos. 477, 689, 781, 1018, 1111, 1267, 1345, 1566, 1606, 1720, 1740, 1766, 1776, 1803, 1970, 2097, 2179, 2428, 2496, 2686, 2781, 2900, 3174, 3185, 3456, of the Bonds of £100.

These Bonds are redeemable at par on the 1st January, 1916 at the offices of the National Bank of Egypt, in Alexandria, Cairo, and London (6 and 7, King William Street, E.C.).

The Administrator.
(Signed) A. GRANVILLE.

Alexandria, 2nd December, 1915.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

NOTES OF THE WEEK.

The Austro-German and Bulgarian forces still remain outside Greek territory, and speculation is rife concerning the causes which have led to the postponement of the attack upon Salonika. Among the variety of explanations any one may be right or all may be wrong. It can only be noted that Germany is far more likely to be influenced by practical considerations than by mere sentiment. The facts of the situation are that the enemy has allowed the Anglo-French force to make an orderly withdrawal, and has given it time to put Salonika into a satisfactory state of defence. As the opportunity for a surprise has passed, Germany is not likely to risk an attack until she has collected a sufficient force to leave her still strong enough to put up a defence in the event of failure. Whether the destruction of the railway by the retreating Allies or the hesitation of the Bulgarians is interfering with her plans must remain an open question. It is by no means improbable that the Bulgarians, having experienced heavy losses in the course of the short campaign, are chary of exposing their army to further diminution for an object not contemplated in the original programme. If the Allies were established at Kavalla, there would be some point in attempting to take possession of the place. There is none in trying to storm their entrenched positions before Salonika.

General Castelnau, Chief of Staff of the French Armies, has paid a visit to Salonika, and is reported to have expressed his entire approval of the Allies' military arrangements. If the statement attributed to him represents the facts of the case, it is a matter for satisfaction to learn that the Anglo-French forces are well placed to receive the enemy's attacks. We cannot forget, however, that the Allies have not gone to Salonika in order to face the Austro-German and Bulgarian forces in parallel lines of trenches. They are there to turn the enemy's line in the west, and it may be in the east, by a flank attack. It is true that the invasion of Serbia supplied the occasion, and that they hoped to bring support to the Serbians. But their present object—the one which they must keep continually before them—is to threaten Germany so seriously in this new theatre that she will be compelled to weaken her other fronts to a point at which they become comparatively easy to break. What is not wanted is that a mere handful of Germans should be able, with the help of the Bulgarians, and possibly a few Turks, to hold up a very considerable Anglo-French force. General Castelnau's visit, therefore, ought to have been—and perhaps was—more concerned with the preparations for an Allied advance than with the defences of Salonika.

There was good reason to discredit the reports current last week of a Russian landing at Varna after a successful bombardment of the town. A naval engagement of modest dimensions did take place, and the Russians may have succeeded in interfering with the mine field protecting Varna, but the day of a Russian offensive on Bulgarian soil is not yet. All these activities, particularly the concentration of troops in Bessarabia, play an important part, and cannot but increase the unwillingness of the Bulgarians to sacrifice themselves for purposes which do not find a place in the national aims.

The Greek Premier made a very notable declaration last week to a correspondent of the *Daily Chronicle*, but was unfortunate in having his message buried in a mass of journalistic verbiage. By picking up the thread of the negotiations between the Entente Powers and Greece at a point where it first came into his hands and ignoring all the antecedent circumstances except a few telling in Greece's favour, M. Skouloudis was able to make out a bad case for the diplomacy of the Allies. An impartial review of all that has happened would have to take note of the exasperation caused by Greece's policy before M. Skouloudis became the fifth Premier in the year 1915. Above all it would have to insist upon the fatal betrayal of the Allied Powers by Greece, when her treaty obligations with Serbia were repudiated. When M. Skouloudis blames Entente diplomacy in the Near East, public opinion in the United Kingdom will support him; but it will not accept the inference which he seems desirous of drawing, that Greece was altogether free from blame.

M. Skouloudis' main indictment against the Entente Powers was contained in the following sentences:—"The Allies have flouted and angered Greece instead

Digitized by Google

of placating us; instead of dealing with us frankly they coquetted with Bulgaria, while treating us disdainfully. . . . If the Allies had come frankly to Greece—if they had said, 'Come in with us, we want your aid, you may count on clearly defined recompenses at the end of the struggle,' Greece, I affirm, would not have hesitated for a single minute—with this or any other Government in power. Instead of this England and France began by demanding sacrifices from Greece. We were asked to co-operate with the Allies in the Dardanelles; and at the same time we were asked to relinquish Kavalla and Seres to our bitterest foes—to give up, in fact, those, our richest, provinces, which have been won by Greek blood. We were free to shed our blood in the attempt to force the Dardanelles; but we were warned that on no account were we to dream of marching to Constantinople in the event of an Allied success. In fact, it was expressly forbidden for the Greeks to show their national flag within fifty miles of the ancient Byzantine capital. . . . Greece's friendship has been repaid in a singular way—an embargo laid upon our commerce, our ships held up, people friendly to the Entente within an ace of being starved for want of bread."

Two other interesting details were mentioned by the Greek Premier. "When you embarked on the Dardanelles expedition," he said, "we warned you of its difficulties and dangers; we emphasised the improbability of success on the lines you had chosen. We did more. The Greek General Staff long ago had worked out a perfected scheme of operations to be utilised in the event of war between ourselves and Turkey. We still believe you would have succeeded, if you had been wise enough to adopt it. . . . The other day one of the Entente Ministers came here and insolently told me that the Government had broken promises made by our King. It was untrue, and I felt that his language was an insult. I told him so, and flung his written protest back. Further, my indignation went to the length of communicating officially with Sir Edward Grey and M. Briand, telling them in plain undiplomatic language my opinion of the protest." In regard to the Dardanelles operations, the Greeks were not alone in prophesying their failure. The Japanese had learned from their experience at Tsingtao that a naval bombardment unsupported by land forces could not in the circumstances achieve its object. As for the episode at Athens, it is to be hoped that further light will be shed upon this somewhat piquant diplomatic incident by the Allied Governments concerned. We have grown accustomed to such diplomatic amenities as a Turkish kavass attached to the British Legation at Sofia during the First Balkan War; but it is news that the diplomacy of the Allied Governments exposes itself to having written protests "flung back" and such action followed up by an expression of the recipient's opinion in "plain undiplomatic language."

A further success scored by an enemy submarine in the Mediterranean—the victim this time being a Japanese vessel, the Yasaka Maru—indicates that the submarine menace in these waters, though scotched, has not been killed. It would seem as if there was inequality in the patrol work done in these waters. We have no means of knowing how the Mediterranean is divided for purposes of patrolling between the Allied fleets, but it would be worth while to learn whether the enemy submarines rely on the Turkish or the Greek coast for replenishing their supplies. On whichever coast there is reason to suppose they are based steps should be taken to double or treble the watch kept in those waters. The difficulties of the work are apparent. On shore there are a multitude of agents in German pay, who seem to command unlimited facilities for supplying the enemy submarines with water, food, and oil; at sea it is wintry weather, and night patrolling must be far from pleasant. There can be little doubt, however, that if a free hand is gained for the British fleet to operate in the suspect waters, the final disappearance of the submarine menace is only a question of time.

A fresh engagement with Tripolitan Arabs took place on Christmas Day near Mersa Matrouh, the scene of the two previous conflicts. This time the enemy's strength was estimated at 3,000. Located a little to the west of Jebel Medwa, he was attacked by a British force composed of New Zealanders and Sikhs, and was driven back to the west of Wadi Mejid. The Arabs left over 200 dead on the field; the British casualties are reported to have been slight. It is to be hoped that the Egyptian authorities will leave no means untried, in addition to military measures, to put an end to Arab hostilities. The British have no quarrel with the Arabs, but the latter are obviously bribed to play Germany's game for her. It is evident from the gradually increasing numbers of the raiding forces that the small checks so far administered have not served to discourage them. As there can be no wish to rouse the Arab population in these parts, diplomatic methods of bringing them to reason ought to be employed assiduously.

Mr. Ginnell, the Nationalist member for North Westmeath, has constituted himself in the House of Commons questioner-in-ordinary on the subject of Egypt. He casts a very wide net, and disdains nothing that comes into it. What purpose his questions are intended to serve it is often difficult to say, for they range from the subject of donkeys eating bank notes to inquiries for military information which can be of no concern to Mr. Ginnell or his constituents, but would be of particular value to the King's enemies. At times this member's indefatigable search for knowledge regarding matters Egyptian resembles nothing so much as, let us say, what might be the lucubrations in Egypt of a Nationalist agitator in the pay of the late Khedive. At other times he lapses into what a native Egyptian paper —the *Ahram*—unkindly dubs "silly questions," so that it would seem that Mr. Ginnell is not really studying Egyptian interests—at least, not in a manner recognisable by the native mind. The *Ahram* is goaded to the following comment:—"Mr. Ginnell might have put some useful questions, even on the same subject, if he had been desirous of assisting the Egyptians; but the questions he put can only be regarded as unnecessarily abusive to us." We cannot help thinking that the member for North Westmeath has been labouring under a delusion regarding the usefulness of his questions from an Egyptian point of view.

The threatened Turco-German expedition against Egypt, like many other plans in connection with the war, finds itself dependent on the course of events in other spheres. There can be little doubt that the Turks were at one time buoyed up with the expectation that, as soon as through communication was opened up between Berlin and Constantinople, a German force would co-operate with them in an attack on Egypt. Germany's heavy losses elsewhere, her inability to send even an adequate force against the Allies in Serbia, and the indeterminate situation in the Balkans make the realisation of this scheme impossible. So long as the Anglo-French force at Salonika, to say nothing of potential Russo-Roumanian activities, threatens the Balkan lines of communication, Germany must remain unwilling to risk any large force in Asia Minor or beyond. Her object at present, therefore, must be to persuade the Turks to accept a fresh supply of German officers and German munitions in lieu of a German army. As it is to Germany's interest to use Turkey to the utmost against the Entente, and as she is taking characteristic steps at this stage to strengthen her hold in Constantinople and Sofia, there is a strong probability of the Turks being compelled to sacrifice themselves for Germany's benefit, despite Jemal Pasha, who is said to be unwilling to advance on Egypt, unless the Germans send an army of 25,000 men to co-operate in the expedition. The promised attack on the Suez Canal may, therefore, materialise in due course. Fortunately the Egyptian authorities are fully alive to the possibility, and seem inclined to act on the principle that the defences cannot be made too sure. The work of doubling the railway line from Zagazig to Ismailia, which is being carried

Digitized by Google

out without interruption day and night, is making, as might be expected, wonderful progress. If the Turks should attack Egypt again, the British public will expect something more than a successful defence. It will look for a decisive engagement, which will free the country once and for all from a menace that has been hanging over it for nearly a year.

The urgency with which the doubling of the Zagazig-Ismailia line is being undertaken may be gauged from a Proclamation issued on December 4 dealing with the question of the expropriation of land. It is pointed out that, while the Government is preparing the measures necessary for the expropriation of the lands to be used in due form of law, it is impossible to complete such measures prior to the date at which possession of such lands is required. For the most part, or, as it is stated, "save in exceptional cases," the action of the Government has already been accepted by the landowners concerned, but the Proclamation regularises the procedure.

The offensive still rests with the Turkish forces in Mesopotamia, thanks to their evident superiority in gun-power. After a preliminary bombardment of the British position at Kut-el-Amarah on the night of December 23, which was continued the following morning, a determined attack was launched during the day on a fort on the Turkish right. The Turks succeeded in effecting an entrance, but were driven out. They renewed the attack during the night, and again effected a lodgment in the northern bastion. Once more they were driven out, but coming on again, occupied the bastion a third time, only to vacate it on Christmas morning, when they retired past their first line of trenches to others from 400 to 900 yards in the rear. As the enemy were attacking a fortified position, the disparity between the casualties, 700 Turkish and 190 British, is not as great as would be expected. The British task in this theatre of war is still formidable. We have yet to learn how it was that the expedition was allowed to advance without adequate artillery in the face of reports which reached the War Office last January that heavy guns were being sent to Baghdad.

The Russians continue their remarkable sweeping movement in Persia. There is nothing surprising in the fact that the hordes collected by Turco-German agents should melt away at the first appearance of a disciplined force, but the rate at which the Russian forces are covering the ground is remarkable. When a few weeks ago we suggested that only a movement of this nature could adequately cope with the situation, we had little hope that it could be carried out. But the Russians have risen to the occasion. While one force is operating in the Hamadan district, another has reached Kashan and is marching on Ispahan, and a third is able to strike a blow from Teheran and disperse a band of a thousand horsemen under a well-known *fedai*. What we miss in the reports is the announcement of any important captures. It is satisfactory that the insurgents should be harried from pillar to post; but to free Persia it will be necessary to dispose of the individual Turkish and German agents who are perambulating the country and stirring up the tribesmen. It is to be feared that Prince Henry XXXI. of Reuss has managed to escape from Persia and to make his way to Baghdad. His name will have to be added to that already formidable list of highly placed Germans who will presumably not be allowed to set foot on anything but German soil after the war.

Last week we published an account of what the Y.M.C.A. has been doing in Egypt and at the Dardanelles. Few people can be ignorant at this stage of the war of the good work done by the association; but we would take this opportunity of urging the special claims of its Near Eastern activities on readers of these pages. Egypt, in addition to having to provide for its own defence, has become, owing to its geographical position, a clearing-house for military operations in the Eastern Mediterranean and in part in Mesopotamia. Its needs in regard to the gaps which the Y.M.C.A. undertake to fill are, therefore, great. Subscriptions for the "Egypt" fund may be sent to THE NEAR EAST or to the London offices of the Association, 13, Russell Square, W.C.

WINTER IN THE BALKANS.

THE NEAR EAST has already drawn attention to winter conditions in the Balkans. In this connection the following extracts from a valuable letter published in the *Daily Chronicle* are of much interest. The writer is Mr. H. M. Wallis, of Reading, whose name is familiar to many of our readers as that of one of the most successful workers amongst the sufferers by the late Balkan War:—

The climate of the Ægean littoral is far milder than that of the hinterland. Even a comparatively short distance up country one is exposed to the rigours of a Continental winter. Nor are these cold snaps always short and sharp, like the one which cost us an army in the Crimea sixty years ago; they are apt to stay, or to recur. Even as far south as Adrianople the night temperature in early December is such as we seldom experience in England, and demands exceptional precautions in the matter of clothing.

Farther north among the Rhodopes, and at Sofia, which stands about 1,500 ft. above sea, one gets extreme cold. After preliminary snowfalls and blizzards, the weather settles down. For weeks on end the sun rises and rides all day without a breath of wind or a cloud, and sinks to glorious sunsets and starlit nights of down-to-zero cold. The glare off the ground is trying to the eyes. The snow is a dry powder and does not ball. It shifts off the fields into hollow roads and off causeways into the fields, so that within a few miles wheel traction and sledges are alternately useless.

This weather is enjoyed by the Bulgarians, who double their window-sashes and dress in puttees of thick blanketing, heavy knickers, wadded shirts, and thick tunics, with a cosaque, or sleeveless waistcoat, made of sheepskin-in-the-wool, worn over all. In very severe weather this cosaque is doubled, or a long, heavy overcoat, also lined with sheepskin, is worn over all. This has a stand-up collar and hood. The sheepskin cap has ear-lappets, and a long comforter is usually carried over the crown and envelops the mouth, chin, and ears. Lined gloves are essential, and oversized boots to admit a very thick sock.

. . . No native plays with such weather, for a wind-frost upon the plains knows no mercy. Our quartermasters must bear in mind that they are unlikely to find much shelter for our troops when once committed to an advance. The villages are chiefly of post-and-pan, with thatched roofs, and will be burnt as the enemy retire. The Bulgarian infantry house themselves in shacks made of a dozen saplings tied together at their extremities; the earth dug out within is thrown up around the butts to exclude snow, and the sides walled with maize-straw, or reeds in trusses. The result is a conical affair which will keep out any weather.

Fuel will be a difficulty. Almost all the coal in Bulgaria lies in the Balkans far north of anywhere we are likely to reach before the spring. The forests of the Rhodopes, such as the Rilo and the Kostenetz valley, are in our enemy's hands; and . . . . the plains of Thrace, and, I believe, Western Macedonia, are ill-provided with trees, as are also those districts between the Rhodopes and the Balkans.

This weather may last three to three and a-half months. The spring ploughing does not begin until mid-March, and there are occasionally heavy falls in April. One should remember that the Bulgarian State railways have, as a rule, insufficient sidings. . . . The highways are usually good and reasonably graded, except among the mountains, where one encounters sheep and tortuous tracks overhung and enfiladed at every turn. The route from Kustendil to Sofia is a limestone gorge, reminding one of Cheddar, but much narrower. The Kostenetz and Chepino glens are nearly as bad and much deeper. To turn the Rhodopes by the east a long detour is needful; one finds easy country at Philippopolis. Speaking generally, the Maritza valley is good travelling, but the river is not navigable.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 13.

The Western Frontier.

As yesterday's *communiqué* showed, there has again been some activity on the Western front, but evidently we had no difficulty in beating back the raiders. The opinion seems to be that, at most, the Tripoli Arabs will resort to raiding in more or less large parties. It will probably be found that the motive prompting their aggression is neither fanatical nor anti-British, but purely a lust for booty. After all, they come of a marauding stock, and provided we deal with the early raids as summarily as we have dealt with this one, there should be little fear of this lawlessness spreading and becoming a really serious menace.

Exhibition of Industrial Arts.

The Ministry of Education has just opened an exhibition of the products of the Technical Schools of Egypt. In many ways the show is a vast improvement upon its predecessors. In the carpet-weaving section, which comprised the more important exhibits, there were some really excellent carpets, those made from natural undyed wools eliciting general admiration, especially from H.H. the Sultan and the High Commissioner, both of whom gave orders for specimens when they visited the show. The furniture and brass and iron section by no means showed the same originality, and it must be admitted that in many cases the exhibits, although well made, displayed a tendency to European style and a disregard for the decorative advantages of the Egyptian. Altogether, however, this exhibition indicates that the Department of Technical Education is making great progress, and if only it can guard by some means against the aforementioned tendency, and can discourage the process of Europeanization, which the country is unfortunately undergoing in the matter of decorative art, it will have an indisputable claim on the gratitude of all those who take an interest in such subjects.

Linguistic Medium of Instruction.

An *arrêté* issued by the Ministry of Justice this week announces that owing to the restricted numbers of candidates the first year section of the French side of the School of Law is henceforward suppressed. This is a distinct sign of the times, and shows that British influence is steadily gaining a hold over young Egypt, at any rate in so far as the linguistic medium of instruction is concerned. Time was when French was predominant; in 1895 only 44 per cent. of the pupils in Government schools chose English as their subject, whilst in 1899, when that percentage had risen to sixty-nine, in the School of Law it was only eighteen—1899 being the first year when an English side was created at that school. The policy followed throughout has been what Lord Cromer calls "linguistic free trade" in the matter of medium of instruction. There has at no time been any coercion, but it has been interesting to note that in proportion as the British Occupation has assumed a more permanent aspect so the tendency of Egyptian parents to enter their children on the English side has become more apparent. The professional colleges, being at the top of the educational ladder, are, of course, the last to display the symptoms which may have already attained development in the inferior institutions, and the suppression of the first year of the French side of the School of Law may be taken as a forerunner of other steps in the same direction.

Arabic is, quite rightly, already being adopted as the chief medium of instruction in most subjects in Government schools. An attempt has recently been made to teach science in that language, but it is very much to be feared that that well-intentioned effort is foredoomed to failure; for however rich in expression the Arabic language may be it has no facility for translating lucidly and succinctly scientific terms which are for the most part of Western origin or fabrication. Indeed, it can safely be predicted that the Egyptian Government will meet with the same experience as did the Beyrout College, and that if any real advance in scientific subjects is desired recourse will again have to be had to a European language as medium of instruction. By that time it is pretty certain that English will be the only foreign language recognised by the Egyptian Government schools as the medium of instruction for those subjects for which the vernacular has proved unsuited.

U BOATS IN MEDITERRANEAN.

(From Our Own Correspondent.)

Port Said, December 12.

The latest German submarines to arrive in the Mediterranean waters have commenced to make their presence felt on our main commercial route to the East. The British India Company's steamer Umeta was sunk recently by gun-fire about one hundred miles east of Malta. The submarine opened fire on the vessel, and the officers and crew, seeing that resistance was hopeless and flight impossible, took to the boats, and the steamer quickly settled down under the enemy's fire. The chief officer, fourth engineer, and Marconi operator, together with twenty-three Indian natives of the crew, were picked up after a three-days' cruise by the Swedish steamer Nippon, and landed here. The officers have been sent home by the British Consul, who is also repatriating the native crew. The remainder of the ship's company were in three boats, two of which were sighted, and the occupants rescued, by a Dutch steamer proceeding in a westerly direction, and the fourth boat, in which the captain, fifth engineer, and about twenty natives had embarked, was sighted by the Nippon abandoned and empty; but as the boat's gear was intact, it is thought that the occupants had been rescued.

One native lost his life by going below at the last moment to fetch his money, when it is feared he was struck by a shell.

It is considered here that these new arrivals will not be long in following their predecessors into the British Navy's capacious bag.

WOUNDED FROM THE BALKANS.

About 100 sick and wounded from Serbia were landed from a well-equipped hospital ship in time to have their Christmas Day's dinner in the Plymouth and Devon Hospital (says the *Morning Post*). Officers and men of the Royal Navy, as well as representatives of a number of regiments, were included in the contingent of invalids.

Many of the arrivals had seen fighting in Gallipoli before being sent to Salonika, and thence to Macedonia. The Bulgarians, they say, displayed a reckless disregard for life, and with desperate valour came on in close formation, being mown down in thousands by machine-guns and rifle fire. Their numbers, however, and the sacrifices they made enabled them in some cases to overwhelm the British and the Allies. It was simply force of numbers that told, but the nature of the country also favoured the enemy. Some of the arrivals stated that the Bulgarians, thanks to the cover of the dense fog that frequently prevailed, crept quite close to the British positions, and the fighting that ensued was always of a desperate character. The Bulgarians made great use of the bayonet.

One of the soldiers who belonged to a machine-gun section told of the heroic death of one of his officers in a grapple with the Bulgarians. Finding he could not work his machine-gun with the effect that he desired to check the onrush of the enemy, who were attempting to storm the British line in close order, the officer had the position of the gun changed. Then from the top of the parapet of a trench, fully exposed to the enemy, he fired 6,000 rounds before he fell riddled with forty bullets from a machine-gun that the enemy had brought to bear on his position.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, December 15.

Financial Juggling.

The Budget for the Turkish financial year 1332 (March 14, 1916, to March 13, 1917), which has recently been presented to the Ottoman Parliament, must have taxed the ingenuity of Ottoman financiers in its preparation. The estimated expenditure is L.T.36,800,000 and the receipts L.T.22,960,000, leaving a deficit of L.T.13,855,000. The deficit on the previous year's Budget was L.T.8,820,000, which added to the estimated deficit of the coming year amounts to L.T.22,675,000. There is, however, every probability that next year's deficit will be greater than the above figure, as the Minister of Finance estimates a lesser revenue in 1332 of only L.T.3,874,700, which is undoubtedly too low a figure considering the state of the country.

The Minister of Finance states that three loans have been raised in the course of the past year. First, that for L.T.6,500,000, which has been placed in circulation by notes of one and five liras guaranteed by the Administration of the Public Debt, particulars of which appeared in The Near East last May. It may here be remarked that these notes are largely in circulation in Constantinople, and that gold is not much seen. Secondly, a loan of L.T.2,000,000, which was raised in Germany by the Turkish Treasury bonds; and thirdly, L.T.6,000,000 raised quite recently. Particulars of this loan have not yet been made public, but it is evidently proposed to issue notes as previously, but redeemable one year, instead of six months, after the signing of peace. The counter value is to be deposited, it is stated, in the name of the Ottoman Public Debt, and the notes will be guaranteed by that Administration. Under these conditions there will be in circulation Turkish Government Notes to the extent of about twelve million pounds. What they will be worth when the war is over is problematical. The Budget also states that the Ottoman Government authorised the Imperial Ottoman Bank to increase the number of its notes in circulation to the extent of L.T.1,600,000.

Life in the Capital.

The latest news from Constantinople is that the weather has turned cold and rainy, which makes everyone more despondent, while the scarcity of fuel deprives one of even the comfort of a fire. The economical condition of the capital is certainly worse than it has ever been. There is evidently some anxiety about obtaining sufficient wheat from the interior, as it is reported that Ismail Hakki Pasha, the head of the Turkish Commissariat Department, has gone to Anatolia to see what can be done to accelerate sendings. All transport, such as horses and carts, having been requisitioned by the Government, the peasants are without any means of conveying their grain from the different towns and villages to the railway line.

Apparently sugar can only be obtained on a doctor's certificate, but the papers announce that a supply will soon be coming from Austria. Petroleum is being sold at 140 piastres the tin.

Now that communication is being opened between Constantinople and Austria and Germany, many natives are going in for trade, and are sending goods direct per parcels post, by which means such articles as opium, figs, raisins, etc., are being forwarded. This will have a tendency to make eatables still more expensive, since Constantinople is not likely to obtain any foodstuffs of which she is in need from the Central Powers.

Talaat Bey has gone to Angora and Konia, but for what purpose has not been made known.

Wounded soldiers continue to arrive in Constantinople from the Dardanelles. Von der Goltz is said to have left for Persia, and from there will go on to Afghanistan.

The Turks appear to have a mania for schools just now. Many private houses have been taken for the purpose; amongst others taken at Kadikeuy is that of Mr. Kenny Whittall.

British Residents in Turkey.

It is reported from Smyrna that there was some idea of again concentrating the enemy subjects there.

There is news from Baghdad to the effect that all the British residents there are well, with the exception of Mr., Mrs., and Miss Levack, Mr. and Mrs. Walker and their two children, all of whom left Baghdad on November 7 in the direction of Mosul, their destination being unknown. Neither is it known whether they left of their own free will or were exiled.

DR. SETON-WATSON ON MACEDONIA AND THE YOUNG TURKS.

Last week Dr. Seton-Watson concluded the series of lectures dealing with the Balkan peoples that he has been delivering at King's College. Speaking of the Macedonian problem, he said the people of that country have always been unruly and irrepressible from the beginning of history, and that there has always been an ever-varying racial problem there. To-day it is peopled by a mixture of Turks, Albanians, Jews, Greeks, Bulgars, Serbs, Vlachs, and others. The Vlach element is much larger than is commonly supposed. Bulgar and Serb have wrangled indefinitely over the province, the plain fact being that no human being can draw a line and say that on one side the people are predominantly Serb, and on the other side chiefly Bulgar. This amorphous population, ground for centuries beneath Turkish tyranny and misrule, has within the last fifty years or more been the victim of various political propaganda. At first the Greeks held the field, afterwards came the Bulgars, then the Serbs, and, most recently, the Vlachs. Schools and churches were the chief weapons employed, and rival agitators competed and sometimes paid for the children. You might find a father, himself a Vlach, with one son a Greek, the second a Bulgar, and the third a Serb. Again and again you found people changing their name, or children being transferred from one school to another, because they got into the hands of a rival propaganda—sometimes by peaceful means, sometimes because a band of brigands arrived in the village and imposed a change.

Of the Young Turkish Revolution he said that no other movement had ever been so much misunderstood. It had originated in Salonika, and hardly any of its leaders were full-blooded Turks. They had nearly all lived in exile, where they had been less affected by the true culture of the West than by the wilder spirits of the French revolution. In the first days of the Young Turkish revolution all races and religions had embraced one another in the streets, but the reign of fraternisation was soon over. The Young Turks had begun with a genuine desire to impose reforms from within rather than have them forced upon the country by the European Powers, but their policy had developed into one of Turkification and Jingoism. Skilled observers on the spot had detected from the first the affinity that existed between the Young Turkish leaders and the Prussian system, and had predicted that the German tendency would in time become even more pronounced than it had been under the old régime.

A ROUMANIAN RACING STORY.

A Bucharest correspondent writes as follows regarding an amusing incident in connection with the local Jockey Club :—

"M. Marghiloman, whose pro-German inclinations are well-known, was some time ago hooted on the racecourse by certain Transylvanian Roumanians. Apparently, in revenge for this, he changed the name of one of the autumn races from Prix Transylvanie to Prix St. Jules. Prince G. Moruzzi voices the public indignation in a letter which he has addressed to M. Marghiloman on the subject, and of which the text is as follows :—

'Monsieur le Vice-Président,—J'ai l'honneur de vous informer que, pour ne plus faire une note discordante parmi mes collègues, je ne prendrai plus part aux séances du comité et que je résigne mes fonctions de commissaire des courses; toutefois au cas où une 12me journée serait organisée, je vous recommande de donner à la course principale le nom de Graf Tisza Istvan Dij.—Veuillez agréer, etc., G. Moruzzi.'

"It is curious to note that the Prix St. Jules was won by a horse the property of an Ottoman Prince."

NEWS FROM SYRIA.

(From a Correspondent.)

Port Said, December 15.

A person who, by an extraordinary combination of fortunate circumstances, was able to leave Beyrout a few days ago, has afforded me the opportunity of eliciting the following information, which, besides forming the only recent news about Syria and the Lebanon, may be considered to be entirely reliable.

Turkish "Frightfulness."

The present Vali of Beyrout, Azmy Bey, ex-Chief of Police of Constantinople, is ruling his province with an iron hand. Besides the eleven persons whose execution has already been reported, eight more have been hanged, and fifteen others were expected to meet the same fate about the time of my informant's departure, on the charge of political treason. The policy of terrorism, once initiated, could not but be continued with the utmost rigour, because the first eleven victims consisted partly of the Moslem intellectual *élite* and partly of members of well-known and influential families. The manner of their hanging in the public square has caused a wave of horror and suppressed rage to sweep over the whole Moslem population, so that now, apart from a negligible quantity of unprincipled political adventurers in the pay of the Government, all the inhabitants, Christians and Moslems alike, may be considered to be imbued with the same revengeful spirit towards the Government. There is no more room for conciliation. The gulf is unbridgeable, and the Turks, being in the same desperate plight as their German masters, are, like them, carrying on their policy entirely on the lines of brute force. If any Arabs are left in the forces allotted for the defence of Syria, or for offensive purposes on the Egyptian frontier, it is as likely as not that wholesale desertions will take place among them on the first contact with the Allied troops.

The Coming Attack on Egypt.

Jemal Pasha is, however, said to be no meek listener to German orders, and to be carrying matters much in his own way. He is said to have declared that he will not attempt another attack on Egypt unless the invading army should include at least 25,000 German soldiers. Having realised the dangers and hardships that attended his first tentative attack he would like now to give the Germans a taste of these when they are likely to be aggravated by the increase in numbers and more extensive measures of defence on the part of the enemy.

Consideration for Lebanese.

So far there has been no interference with the privileges of the Lebanon, save in the fact that the ex-Armenian Governor has been replaced by a Turkish Mutessarif. The Kaimakams have practically all been retained in their posts. Indeed, the Maronite Patriarch, on the occasion of his last visit to Jemal Pasha at Beyrout, was received with signal honours. Not only have the inhabitants of the Lebanon not been called upon to perform military service or, failing that, to pay the exoneration tax, but even the Lebanese established in business at Beyrout have been exempted on condition that, while carrying on their business in the town they shall have their dwelling place on Lebanese territory —a fact that implies a full recognition of Lebanese prerogatives. The members of the Administrative Council of the Lebanon, who had been exiled to Jerusalem, have lately been allowed to return. The same relaxed treatment is said to have been extended also to the dragomans of the Allied Consulates at Beyrout; and as this is said to have been done by order of Jemal Pasha, some credence may be attached to the rumour of the survival of his old pro-French sympathies.

The Economic Situation.

My informant confirms the recent reports of economic distress in the country. Even flour is allowed to come down to Beyrout only in driblets. The Turks, being always haunted with the fear of a surprise landing, are careful to leave no provisions along the coast that might prove of immediate assistance to the enemy. The price of the rotl is now about 8 piastres, i.e., about double the normal price. The electric tramway is still running in Beyrout, and the railway service, although much curtailed, is still working.

Treatment of British Prisoners.

As regards the Allied subjects who have been sent over to Urfa, they were at first interned in a special building guarded by gendarmes, but were later allowed to live in houses or hotels of their choice in the town, on the condition that they reported themselves to the police at regular intervals. According to the last report, however, they have been re-interned in the original Government building. A monthly allowance of £4 per person was at first received by the detained through the American consular representative at Urfa; but, later on, the Turkish authorities insisted on these allowances being distributed by them, and according as they judged was strictly required by the needs of each person. The motives underlying this insistence may well be guessed. The degree of rigour marking the measures taken by the Turkish authorities seemed to vary with the political barometer. Owing, presumably, to the recent Balkan successes of the Austro-Germans, and the expected triumphal entry of the latter into Constantinople, Turkish arrogance has reached its maximum, and it is said that even female American subjects were lately refused permission to leave the country.

CONDITIONS IN JAFFA.

A number of refugees from Jaffa arrived at Alexandria on the 5th inst. They consisted mostly of nuns. Those among them who could give any account of the political situation of the country were debarred by the existence of martial law from forming any just appreciation of passing events. According to the *Egyptian Gazette*, however, the newcomers stated that the economical situation was steadily growing worse, owing to the suspension of communications between Syria and foreign countries and the difficulty of communication within the provinces. Petroleum and coffee were no longer to be obtained in Palestine, and people were using olive oil lamps with one wick. Flour was being sold in Jaffa at the rate of P.T.10½ per rotl (two okes); meat at the rate of P.T.2 per ounce (66 dirhams); while eggs were 2 metaliks (about a small piastre) each. Tea was also very dear.

Public security remains very satisfactory everywhere in Palestine, according to the newcomers, and the authorities in Jerusalem are anxious to introduce some reforms into the town, where they are broadening some of the narrow streets.

The Turkish Government has warned the Italian Jews that unless they adopt Ottoman nationality within a fixed period they will be expelled from the country.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, December 15.

The collective *démarche* which has had to be undertaken by the Entente Powers, backed by the embargo placed on Greek vessels in all Allied ports, has resulted in the acceptance of nearly the whole of the demands made in their previous communications providing for the turning of Salonika into an entrenched camp for the Allies. The Greek Government has been forced to agree, under protest, to the withdrawal of two of the three divisions of Greek troops in Salonika, to place conditionally at the disposal of the Allies the military trains, and to authorise them to construct the necessary fortifications. The Government refused only to hand over the Karabournou fort.

The retreat of the Allies to Greek territory having drawn the German and Bulgarian troops as far as the Greek frontier, a very critical situation has arisen. People are asking with painful anxiety whether the Germans and Austrians, and especially the Bulgarians, will penetrate Greek territory, and what the attitude of the Greek Government would be in such an eventuality. It is true that the King, in the audience which he granted to the representative of the American Press, Mr. Hibberd, stated that, in such a contingency, the Greek Army would withdraw, and would leave the belligerents a free field to fight; he even added that Greece would demobilize. Still, in the case of the Bulgarians it is unthinkable that the Greek Army and people should tolerate and view passively their presence in Greek territory, and especially in Salonika, whence the Bulgars, who have already been there once, would not easily be ejected. Everything leads to the belief, however, that they will not be prevailed upon, even by the Germans, to commit such an act of folly, as they would assuredly be foiled by the Greek Army. Besides, the participation of the Bulgar Army would not even suit Germany, as, besides being of no use against the Allies, as it would easily be crushed by the Hellenic forces, it would not be able to take part in any further development of the Balkan campaign.

The Neutral Zone.

In the circumstances, the establishment of a neutral zone between the Greek and Serbian frontiers, from Lake Doiran to Albania, which will avert the danger of a conflict between the two armies, is a measure of precaution that is likely to benefit Germany rather than Greece. The public here are generally pleased at a conflict with Bulgaria having thus been avoided. At the same time, the present is an excellent opportunity, the last perhaps that Greece will ever have, of defeating Bulgaria with the aid of the Allies, if not at once, at any rate when the latter have completed the concentration of all the troops that are expected at Salonika shortly. Greece would thus remove the Bulgar danger, which, with Serbia annihilated, will become a nightmare to her. Unfortunately, however, the public is hypnotised under the influence of Germanophil and Germanophobe circles, and one can only hope that the awakening from the present torpor will not come too late.

The Bulgar Menace.

According to the *Gazette d'Athenes*, which is a German organ, Germany will call upon Greece to disarm the Allies, and as Greece cannot possibly do this, the Central Powers will declare that in these circumstances they also must enter Greek territory. The supporters of M. Venizelos in the Press point out with pain that his pessimistic forecasts have been realised. Doiran-Ghevgheli, that triangle which is considered as the key of the Greek frontier, is in the hands of the Bulgarians, as is Monastir, where they have removed the Greek flag from the schools and station and replaced it by the Bulgarian. M. Passaroff assured some pressmen the other day that Bulgaria would leave Doiran and Ghevgheli to Greece. To-day he even asserted that Bulgaria would respect Greece's neutrality. But we know quite well what weight to attach to the words of M. Passaroff, who, it will be remembered, persisted that Bulgaria would never abandon her neutrality. The Venizelist papers believe that, were it not for the presence of the Allied troops, the Bulgarians would not hesitate to invade Salonika, and the Germans would give them a free hand, just as in Monastir. In support of this contention, the *Patris* recalls the fine promises of the Germanophil Press, according to which Greek neutrality would be rewarded by concessions in the continent, by the cession of Monastir, Doiran, and Ghevgheli, the Dodecanesse, and a part of Albania. "But even supposing," says the *Hestia*, "that the Bulgarians do not enter Macedonia, the presence of Austrian troops cannot be considered less disquieting to Greece in view of the designs which Austria has always had on Salonika and the fact that only quite recently it asked for privileged treatment for its trade, with the right to hoist its flag."

Greece is thus placed in a cruel predicament: the more cruel when one reflects that if the Governments which succeeded M. Venizelos had continued to hold Bulgaria in check by declaring, like him, if only as a bluff, that Greece would not allow her to attack Serbia, instead of stating openly, as they did, that they would remain neutral, the present impasse would have been avoided.

CYPRUS NOTES.

(From a Correspondent.)

The hope of more rain has not been realised, and, although the sowing of corn continues, there is now considerable anxiety in some districts, including parts of the great central plain.

Maximum Prices Fixed.

The steps taken to ascertain what stores of wheat and barley were being held in the town and district of Nicosia have been completed, and the Commissioner has notified the farmers and merchants concerned that he will proceed to seize and sell on their behalf two-thirds of the quantities held—wheat at 60 piastres (6s. 8d.) the bushel and barley at 30p. (3s. 4d.) The Government action is regarded with general satisfaction, as is also the fixing of prices for meat and certain other articles of consumption. The prices fixed for the present are as follows:—Mutton, 14 piastres (about 1s. 6½d.) the oke; beef, 10p. (1s. 1d.); pork, 12p. (1s. 4d.); olive oil, 50p. (5s. 6½d.) the litre. It is hoped that prices of vegetables and other articles will be similarly regulated. In the early days prices were fixed weekly by the urban municipalities, but this custom was soon abolished under British rule.

Copper Mining.

So far there is little further information regarding the prospects of the American venture in copper mining at Skouriotissa, where a considerable number of labourers are employed. Dr. K. Pantázes has been appointed as physician to those employed in the operations.

Cypriot Greeks and the War.

War and Greek politics occupy the chief part of the Greek papers, which devote numerous articles to the serious and perplexing position of Hellas. Their tenor indicates strongly that Hellenic interests demand that the country should, and must eventually, take her stand on the side of the Entente Powers. Another feature that stamps many of the articles is the spirit of deep-rooted and unconcealed hatred of Bulgaria. Space is also devoted to the reproduction of the views of the British Press regarding the Island; and it is observed, with a note of disappointment, that almost without exception papers express satisfaction that the offer made to Greece was not accepted.

ALLIES' NEW BASE OF OPERATIONS.

Athens, December 30.

The evening papers announce that the Hellenic Government has been informed that detachments of French troops have landed on the island of Castellorizo, in order to facilitate Allied action against Adalia. The Hellenic Government has protested.—Reuter.

Athens, Later.

It appears that the Greek Government was informed by the British authorities that French troops had landed yesterday at Castellorizo with a view to using the island as a base for eventual new operations against Adalia.—Reuter.

THE WAR IN THE BALKANS.

CLEARING THE RING.

To all intents and purposes the situation in the Balkans remains unchanged since we last wrote. There has been some severe fighting in the Montenegrin sector, the enemy having been repulsed and severely punished in the battle of Lepenatz on December 23. According to a Reuter message from Cettinje on December 27 this battle was a greater success than at first announced:—"Five hundred bodies were found on the right wing of the contingent which was operating against us, but the Austrian losses in this affair have increased to more than 2,000 killed and wounded. King Nicholas has sent his congratulations to General Vassoievitch, commanding the brigade. An Austrian airplane on the 27th inst. threw several bombs on Podgoritza, killing two Austrian prisoners."

On the other hand, attempts have also been made by the enemy to turn the Montenegrin defence in the direction of Mount Lovchen, the possession of which, it will be remembered, has always been one of Austria's most pronounced objectives in the Balkans. The strategic importance of the mount, overlooking and controlling the Gulf of Cattaro, one of the finest natural harbours in the Adriatic, is enormous, and it is to be hoped that Italy, with her fleet, will come to the aid of its defenders should their defensive position be imperilled. At present this does not seem to be the case, as the following official Montenegrin communiqué received in Paris on Wednesday seems to indicate:—

On our front at Mount Lovchen the Austrians opened artillery fire from their forts and several units of their fleet against Raskovagora, where we maintained ourselves. In fifteen hours they fired 2,000 shells from their big guns, at the same time making fierce attacks with infantry, which were all repulsed. Despite the intensity of the Austrian fire we had only two killed and two wounded, which shows the poorness of the enemy's shooting.

Albania.

In Albania the situation is obscure. Reuter's Agency reports from Paris that, according to a telegram from Salonika, a traveller who has arrived there from Santi Quaranta says that detachments of the Italian Army which landed at Avlona are approaching the frontier of Epirus at certain points. On the other hand, the following French official communication was published yesterday:—

According to information received from Albania the Serbians are being hard pressed by the Bulgarians in the region of Elbasan. The enemy, who disposes of mountain artillery, is gaining territory in that neighbourhood, but, according to the latest advices, has not yet been able to capture the town itself. A certain number of German and Austrian officers, disguised as civilians, have passed through Yanina. They are going towards the centre of Albania to hire and equip bands of mountaineers.

Bukovina and Bessarabia.

The only report to hand of fighting in this region is one emanating from Vienna, and which, of course, attributes to Austrian arms successes which are as yet unconfirmed. The region of the fighting lies between the Dniester and the Pruth, to the north of Czernowitz (north-west of Roumania). We append the Austrian communiqués (Wireless Press) more for the sake of the light they throw on the operations than because their optimism is to be trusted:—

December 28.—On the Bessarabian front and on the Dniester, north-east of Zaleszczyki, repeated attacks made by strong Russian forces were sanguinarily repulsed. The enemy made especial efforts against the sector between the Pruth and the wooded zone to the north of Toporoutz (a few miles from the Bessarabian frontier, between the Pruth and the Dniester). After artillery preparation five infantry attacks were made. All were repulsed. Attacks were made in masses from fifteen to sixteen rows deep, but they broke down under our artillery fire, with very severe enemy loss. An enemy attack north of the Dniester met with the same fate. Our losses are small.

December 29.—On the Bessarabian frontier the enemy repeated yesterday his attacks, which had been proceeded by strong artillery fire. His attacking columns broke down everywhere, at certain places close before our entanglements. To the east of Burkanow (further north, on the Strypa, in Galicia) we withdrew a few advanced guard divisions closer towards our main positions before strong Russian forces.

Operations in this field will be watched with peculiar interest, both on account of their military and their political results. It would surprise no one if, as rumour has it, General Ivanoff is to be opposed by Mackensen, the "hero" (sic) of the Serbian campaign, and the struggle between the two generals will be anxiously followed. The effect of the campaign on Roumania may prove to be one of the decisive factors in all the Near Eastern campaigns.

Salonika.

Glimpses of the situation at Salonika have been revealed to the public during the past week, as the following despatches show. Cabling on December 27 from the British Headquarters in Macedonia, Reuter's correspondent, who had just visited the British lines round Salonika, says:—

Roughly speaking, the Allies' lines extend in a wide semi-circle from the River Vardar to the Gulf of Orphanos (Rendina), making a sweep of about fifty miles, whereof nearly half is naturally defended by the lakes of Langaza and Beshik. The whole of this arc is surrounded by a broad valley, very marshy in some parts, and offering little or no cover to any advancing foe. To the north the ground rises slowly into rolling hills. To the south a girdle of hills guards the approaches to Salonika, two passes affording easy and sheltered means of communication. The hills furnish admirable emplacements for guns, and command the whole length and breadth of the valley. Our trenches would satisfy the most critical expert. They are deep and narrow, with traverses at regular intervals, shelter pits, and communication trenches. The whole system of defence might serve as a model for exhibition purposes. The men seem in excellent health, and are all most eager that the enemy should make an attempt to advance. The valley is really an ideal ground for machine-gun fire, and from the trenches all the assailants' movements would be visible for miles.—Reuter.

Mr. S. Ward Price, the special correspondent of the London Press at Headquarters, in a despatch from Salonika dated December 28, gives the following further particulars concerning the situation:—

The line which we now hold, ten to fifteen miles from Salonika, has, in front of it, a broad and absolutely open field of fire across a bare plain rolling up at intervals of five or six miles into hills that are thoroughly suitable for artillery positions. Moreover, these new works of ours are not linked with our base at Salonika, as were the Irish Division's old lines, by a disjointed line of supply, made up of train, motor-wagon, horse transport, and muleback. Instead, quite a good road runs straight out from Salonika to a central point in the line. Others of more dubious quality branch off to the remoter parts of the front, and motley gangs of Greek labourers are now engaged almost wherever you look in building new roads or repairing the old.

Our trenches guard the northern slope of one of the lines of hills that rib the plain. Our principal trenches lie deep, well sandbagged, and invisible from the front. Three hundred yards after you have passed them, and look back, there is nothing but the blue smoke of camp fires behind them, mingling with the mists that rise from the clayey soil to mark the line on which they lie. Further on across the brown flats that stretch in unbroken treeless monotony to where the next hill ridge rises, six or seven miles away, there are more earthworks, outposts, and advanced posts, covering possible lines of approach along the folds of ground, with machine-guns and trenches buried so flush with the surface that even the sun cannot find enough disturbance in the earth to cast a shadow. It is a most shelterless plain, but its very flatness and absence of cover make it a stout stronghold to maintain on the defensive.

One effect that our retirement, combined with the moving of most of the Greek troops from the neighbourhood of Salonika, has produced is yet another curious problem arising out of the close proximity of the two armies. When the greater part of the Greek garrison left Salonika one section of it was transferred to Seres, near the Bulgarian frontier, and it lies there between us and our enemy. The present position is that the Greeks have withdrawn on both flanks, and left the ground free for the fight between the principal combatants.

General Castelnau is reported to have stated that "Salonika is impregnable," and that "he had full confidence in the final victory of the Allied arms, which was a mathematical certainty"—an assertion the accuracy of which we have never doubted. The questions arise: what force is opposing ours, and when is the struggle between us and the enemy to begin? As regards the last question, the general opinion (to quote *The Times*) in French military circles is that for the moment a German attack is not to be expected. "Mackensen's army has been considerably weakened and is not in sufficient numbers to take action, and for it to detach troops against the French front is absolutely impossible. Thus the Allies look forward to passing the winter in the trenches until the spring, when, having received reinforcements, they will be able to take the offensive."

Clearing the Ring.

Regarding the forces opposed to the Allies on the Greek frontier, they amount, it is assumed, to about 250,000, of which three-fifths are Bulgars and two-fifths Austro-Germans. What forces have we at our disposal to combat this heterogeneous army? Happily it is not known, but in the *Vossische Zeitung* (Berlin) there appeared on December 27 an article from a special correspondent who had been in Salonika on December 19 and 20, and he stated that the Allies numbered 210,000 men, of whom 90,000 were British. He gives some further particulars in the course of a precise sketch which prove conclusively that he has been able (as a mediocre spy) to penetrate to within a few yards of our trenches. This inexplicable circumstance gives rise to two considerations, the first of which is that, if the German spy's figures are accurate, we ought to increase our forces in Salonika. Sportsmen will say that 210,000 Anglo-French troops are a match for any 250,000 enemy troops, but in a world war like this we can take no gambling risks in the last moment, and more depends on the ultimate issue of the Balkan campaign than is generally recognised. Our forces should not be under 300,000, as a minimum.

The second consideration is an even more pertinent one. How is it that a German, or any enemy subject, can be allowed to prowl at his will and ease in the vicinity of our trenches, and then proceed to advertise his success in the Berlin press? The situation at Salonika, politically speaking, is a very obscure and unsatisfactory one, but from the military point of view it should be cleansed, as far as spying is concerned. Admittedly, the matter published in the *Vossische Zeitung* is ridiculously insignificant, but it is hardly likely that all the spy's information found its way to the printer's desk. We must, at any and every cost, guard against the spy-danger in Salonika. In other words, the ring must be cleared of all who are not recognised as combatants, and this must be done to ensure the safety of our own men. Precaution was never so much needed as it is at

Digitized by Google

present in Salonika, a hot-bed of international intrigue and the happy hunting ground for enemy spies.

***As we go to press Reuter's Agency quotes a Paris naval communiqué as saying "An Austrian naval division having come out of Cattaro with the intention of bombarding Durazzo, Allied flotillas steamed out to meet it. The Austrian destroyer "Lika" struck a mine, and was blown up. The "Triglav," a sister vessel, was destroyed by the Allied flotillas. Other enemy vessels were chased, and fled towards their base." In this connection we refer our readers to our previous remarks anent the situation in Albania.

The "Lika" and "Triglav" were two of the latest Austrian destroyers, and belonged to a group of six built between 1911-1913. They had a displacement of 800 tons and a speed of 32 knots. They carried two 4-in. and six lighter guns and four torpedo tubes. Their complement was about ninety men. The class had the reputation of being good sea boats, and all did their designed speed or more.

TANGIER TO TEHERAN.

I wonder what Cairo will say to the order which places much difficulty in the way of intending lady visitors to Egypt? I have only had the opportunity of discussing the question with one Anglo-Egyptian, and he was somewhat lacking in gallantry, having contracted a wife in that country for no other reason than that a chance bar of music made him feel lonely at a psychological moment. "Quite right, too," he said, referring to the order; "if the Germans are to be the ninth plague of Egypt, there is every reason why we should remove the eighth at least." And this crabbed disgrace to humanity was referring to women. However, I do not think that this opinion will be held by the majority of British officers during the winter evenings, much as they may rejoice at having the field thoroughly clear in which to meet the Germans, when, and if, they arrive.

***

Few visitors to the Near East will forget the droves of jaded turkeys which make their dejected way from street to street, from village to village, under the guidance of their owner in search of purchasers. I am reminded of them this year because I understand that in Salonika our habit of Christmas diet drove the prices of these birds higher than they had ever been in the past, and placed their lucky owners on the high road to fortune. Even the more hardy and sinuous of these winged pedestrians were selling on Christmas Eve for sums never less than a pound sterling! Half-a-crown is considered a good average price in normal times. On Christmas morning not a turkey was left alive of all the flocks that converged on Salonika. It is an ill wind, indeed, that blows no good at all, and many a Greek returned to his homestead the happier because of the fact of war.

***

I see that the 3rd Battalion, the London Regiment (Royal Fusiliers), has given to Khartoum a new journal. It is published fortnightly, and is known as the *Fusilier Whisper*. I have not yet seen a copy of the paper, and am unprepared to say where the "whisper" comes in; but I can vouch for the fact that it does not enter the sanctum where the editor writes his notes. Rather might we call it a trumpet. Listen. The first issue of the paper was published at 5 mms., the second at 10. Thus the modest editor in the second number:—

> Owing to our meagre acquaintance with Egyptian coinage, and doubtless also to the fact that the literary mind is above such sordid things, we find we have been giving away a piastre's worth of talent for half a piastre. Think of it, and cherish your first number of the *Fusilier Whisper* as an investment at 100 per cent. profit. . . . In this country we look upon half a piastre as a halfpenny (except on pay days!). Let it never be said that we have edited, and the members of the regiment subscribed to, a halfpenny regimental paper. No! We will have a penny paper, even if we have to pay a piastre for it.

I could find it in my heart to pay the one piastre cheerfully could I get hold of a copy of this paper which pats itself on the back so fearlessly in its second number. In proud days yet to come it may be able to come out with brave headlines on days of popular excitement as the "Paper that Consistently Foretold its Worth."

***

In a short note on "Blue-Water Journalism" a writer in the *Morning Post* says:—

> Several numbers of the *Exmouth Express* are also excellent reading. The latest number shows that H.M.S. Exmouth is not content with bombarding the Huns with her batteries, but must take a hand in other adventures. A clever parody of Ingoldsby's "Jackdaw of Rheims" presents Tino in a just and repentant mood, prepared "to join on the side of the Allies or bust." A dose of British sea-power would, no doubt, have that salutary effect in the long run.

I should much like to read the "pome," for the "Jackdaw" is a very old friend of mine. And I have a shrewd suspicion that if the parodist's name were published it might be not unknown to readers of THE NEAR EAST.

***

Some confusion seems to have arisen over the names of the two "towns" on the Tigris, Amarah and Koot-el-Amarah, or, as it is now generally called, Koot. A friend of mine who knows Irak Arabi well reminded me a few days ago that no European in that part of the world ever dreamed of calling Koot "Koot-el-Amarah." Plain "Koot" is good enough for the autochthones, and it ought, therefore, he argued, to be good enough for us. And, being learned in Arabic, he went on to tell me the meaning of the two names. Amarah, he said, is derived from *amarat*—a built thing, that is to say, a thing built of brick or stone; while *Koot* means simply "an enclosure," and owes its use to the fact that the Arabs when settling down for any time at a particular spot like to "enclose" it in some way—usually by a low wall or embankment of mud. I must confess that I do not remember noticing this feature in any of the villages or encampments I came across in Lower Mesopotamia; but my friend has a much longer acquaintance with the country than I have, and is, moreover, as already remarked, something of an Arabic scholar. It is perhaps worth adding that there are dozens of places called Koot in that region. But to-day the untidy little place which has been the centre of so much stiff fighting is emphatically *the* Koot.

***

I was once in the company of two archæologists, both well known in the Near East, when, in discussing the tricks of native diggers and the wiles of antiquity dealers, they drifted into an argument concerning the value of circumstantial evidence, and one of them told the following curious story. I admit that at the time I regarded it as of the *ben trovato* type, but I heard it again recently, and I am now inclined to believe it. Some years ago a foreign prince who is an ardent numismatist was visiting this country as the guest of our Sovereign, and one day he paid a quite informal visit to the British Museum and asked to be shown a particular coin, a great rarity, which was, indeed, believed to be the only specimen of its kind extant. It was, if I remember aright, a coin minted in one of the cities of Northern Syria about the third century B.C. The curator took his distinguished caller to his own room, and there produced the coin for his inspection. Then, while the prince was examining it, he turned his back for an instant, and at that moment the visitor uttered an exclamation and there was the sound of a coin falling to the ground. His Highness apologised for his carelessness with such a treasure, and joined the curator in the search for it. But it was not to be found.

***

Despite his visitor's rank, the curator could not avoid feeling suspicious, and the prince's obvious agitation, which increased rapidly, only served to confirm his suspicions. When the prince finally announced that he must go, as he had an important appointment, suspicion became practically certainty. "I fear that I cannot——" he began, and hesitated. "Cannot let me go?" said the prince, more agitated than ever. The luckless curator was on the point of saying "Yes," when suddenly his eye fell on the coin standing on edge against the skirting of the room. He pounced on it at once, of course. The prince heaved a sigh of frank relief. "Consider my feelings, my dear sir!" he said excitedly. "You thought yours was the only coin of its kind in the world—you have told me so—but see!" And he produced from his pocket the fellow to the "unique specimen." "I acquired it lately," he explained, "and I said nothing about it because I wished to compare it with your specimen, and if it proved similar, to surprise you. But when the accident occurred I realised at once what you might think; and when I pictured you demanding that I should be searched—as I should certainly have done in your place, and as you would have been perfectly justified in doing—well, you may imagine my sensations!" Of course, the curator protested; and he and his caller parted on the best of terms. But if the coin had *not* turned up at the moment it did, what, I wonder, would have happened?

CORSAIR.

Sir J. Roper Parkington, Consul-General for Montenegro, has received the following official telegram:—

"On the 26th instant our troops in the Sandjak district continued their offensive operations. After a fierce struggle, which lasted all day, we succeeded in retaking several villages which had fallen into the hands of the enemy, notably Gadouche, Donevo, and Dobrido. The Austrians suffered heavy losses. Artillery duels continue on other fronts."

NEAR EAST BOOKSHELF.

THE UNEARTHING OF BABYLON.*

In its early days the honourable work of excavation and exploration amongst the ruin-mounds of Babylonia and Assyria was largely in the hands of Englishmen. It was James Claudius Rich, the East India Company's Resident at Baghdad, who made the first systematic surveys of Nineveh and of Babylon, nearly a century ago; and his work was followed up by Mignan, Fraser, Ainsworth, Loftus, Taylor and Layard—to name but a few of our countrymen who laboured in one way or another in the field of archæological research. In recent years, however, we have strangely neglected this work, probably because the Nile Valley has proved a greater attraction to our professional excavators; and though the British Museum has done some digging in the north, the south has been left almost entirely to the Americans, the French and the Germans, who have all spent considerable sums on excavations here, and have all obtained notable results. Babylonia, in fact, in spite of its strong claims on our interest, has been scandalously deserted by our "diggers," and the Assyriologist has fallen from the proud position he held in this country in the days of Layard and Smith into a kind of scientific Cinderella. The operations of our Mesopotamian Expeditionary Force having served to draw attention to the region once more, it is to be hoped that we may, in the near future, witness a marked change in this state of affairs. THE NEAR EAST has on more than one occasion pointed out how excavation and exploitation have gone hand in hand in Turkey in the past, and how, in the case of the Germans at least, the "scientific explorer" has often proved a valuable assistant to the political schemer. The Emperor of Germany, it is worth noting, is a patron of the excavations carried on at Babylon by Dr. Koldewey and his assistants; and unless the present reviewer is much mistaken, H.I.M. subscribed handsomely to the cost of the work in its early stages. Moreover, it is not without significance that the Germans first became active in the matter of excavations in this region at the time when the Baghdad Railway project began to materialize.

It must not be inferred from these remarks that Dr. Koldewey and his assistants are wolves in sheep's clothing. That the knowledge of the country they have gained during their residence in it and their journeys through it has been of service to the German—and even to the Turkish—military authorities is more than likely; but that is not to their discredit, of course, and Germany is not alone in benefiting by information gleaned by her archæologists. Certainly no one who has met Dr. Koldewey would be inclined to suspect him of any dishonourable act, or to regard him as a deliberate maker of mischief. He is a genial giant, with a genuine enthusiasm for his work and a keen appreciation of his good fortune in being given the chance to unearth one of the most important and most interesting sites that the heart of any digger could desire. And this imposing record of what has been already achieved suffices to show how well qualified he is to make the best use of his opportunity.

The book is, on the whole, commendably free from theorising; and though it is not an entirely easy one to read—partly, perhaps, because the translation of technical terms and phrases in a work of this character is always a matter of great difficulty—it will well repay reading, not only by the student of Babylonian history and the student of early architecture and art, but also by the general reader. In spite of the fact just hinted at, and of certain passages here and there which, one is inclined to think, might have been rendered more happily, Mrs. Johns is to be congratulated on making the work accessible to the English reader; while the publishers have, both with regard to letterpress and illustrations, fully maintained their reputation for excellent productions. Perhaps the most irritating feature of the book in its Englished form is the retention of the abominable and utterly unnecessary (in an English rendering) "dj" in such Arabic words as "djird" (for *jird*, or, better, *churd*) and "Djumdjumma" (for *Jumjumma*). Another small alteration which should certainly be made in future editions is the substitution of the word "hoes" for "axes" in the sentence—on page 24—in which we are told that the workmen "carry away the earth in baskets which are filled by three men with broad axes." Unless the Germans have made a radical change in their methods since the present writer had the pleasure of visiting the excavations, the implements here referred to are the short-handled, triangular-bladed Arab hoes (*fasses*). Any axe, however carefully wielded, would certainly play havoc with the mud ruins!

Dr. Koldewey believes that Babylon existed in prehistoric times, and though he hardly adduces sufficient evidence on the point, he is probably not mistaken; but the lower levels of the site cannot be thoroughly investigated, owing to the presence of water, and "the earliest accessible ruins belong to the time of the first Babylonian kings (Hammurabi, *circa* 2500 B.C.)." Even so, the site was occupied up to the third or fourth century A.D., probably later; and this fact will suffice to show the reader how impossible it would be to give within the scope of any ordinary review even a sketch of the history of the city as far as the excavations already carried out have served to reveal it. It makes quite fascinating reading as set out by the author, for it deals with many subjects that have been in one sense familiar to most of us from childhood's days, and have yet been at the same time matter for conjecture and speculation. Thus we have described for us "the scene of Belshazzar's eventful banquet," and a building which Dr. Koldewey believes—though here again we find his arguments not quite convincing—to have been the famous "hanging gardens"; while buildings of Nebuchadnezzar, Sargon, Nabonidus, and many other great rulers are described in detail, and illustrated with plans, sections and photographs. There are, too, descriptions and many illustrations of smaller objects brought to light in the course of the excavations—such as lamps, statuettes and figurines, vases, tablets, beads and jewellery—all of which help us to picture for ourselves the life that once went on its way in this great city that has for centuries been buried in its own ruins. Many of these minor objects are extremely artistic, both in conception and in execution, though few of them have the charm of Egyptian relics of the same age and class.

The student of architecture will find much to interest him in the book. The Babylonian builders laboured under great disadvantages as compared with their rivals in the Nile Valley: they had no good stone available, and, the entire plain being formed of silt deposited by the two great rivers, the problem of providing a satisfactory foundation for any large building must always have been a difficult one to solve. Their great gateways, for instance, which were of a particularly massive character, must always have had a greater tendency to settle, or sink, than the walls which they pierced. Dr. Koldewey shows how this difficulty was met and overcome; and his explanation, which is novel and original, demonstrates the skill of the builders. His theory regarding the probable use of certain narrow chambers, the existence of which in Baylonian buildings has puzzled many people, is probably a sound one: he suggests that they may have been occupied by stairs, giving access to the upper stories, or the flat roofs, as the case might be.

But the most artistic feature of the buildings of old Babylon—and one that will appeal to the "man in the street," as well as to the architect—was the employment of very fine enamelled bricks in the decoration of some of the gateways and portions of the city walls. These bricks are illustrated by means of coloured plates, and a detailed description of the method of their manufacture and of their building up to form the design is given. Dr. Koldewey is justifiably proud of them; for, prior to his excavations, "no example of the plastic art of the time of Nebuchadnezzar was known," and they are undoubtedly a discovery which any excavator would rejoice over. He is to be heartily congratulated upon the find and on the manner in which he has turned it to account in illustrating the glyptic art of the period. It is only fair to add that he and his co-workers have deserved all the success they have achieved here and elsewhere on the site. For, as this book shows, they have worked systematically, methodically and patiently—in a manner worthy of the site. More than that could hardly be said.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

FOR OUR TROOPS IN PERSIA AND IRAK.

To the Editor of THE NEAR EAST.

Sir,—I beg the hospitality of your pages to make known to your readers the existence of a fund instituted by Mrs. Marling (wife of his Majesty's Minister at Teheran) for the providing of comforts to the troops in the Persian Gulf and Mesopotamia.

Subscriptions in Persia and amongst friends at home have reached a total of £1,400, but as the fund has not been advertised at all it is not improbable that there are many readers of your journal who have interests in the Near and Middle East who have not heard of the fund and who would willingly subscribe on becoming aware of its existence.

It is superfluous to dilate on the splendid achievements of our troops in Mesopotamia, and no words can do justice to the magnificent courage they have always displayed under excessively trying climatic conditions.

Subscriptions will be received and acknowledged by the Imperial Bank of Persia, Abchurch Lane, E.C.—I am, etc.,

Teheran, November 29, 1915. M.

THE CYPRUS TRIBUTE.

To the Editor of THE NEAR EAST.

Sir,—This is a question of such overwhelming importance to the island that, in consequence, I crave your permission to state the case in as few words as possible.

The cardinal mistake, made almost from the first, was the designation "tribute." In the Convention of June 4, 1878, the Sultan assigns the island of Cyprus to be occupied and administered by England. At that date the cession was unconditional. But on July 1 an annexe was agreed to, under which the excess revenue was to be paid by England to the Porte. Henceforth all Blue Books and Parliamentary returns were headed "Surplus Revenue." Who, then, first used the term "tribute"? A Blue Book, Turkey No. 7 (1881), bearing the title "Surplus Revenue of Cyprus," throws light on this point. In the despatches the term "surplus revenue" is used, with one exception—that of Earl Granville to Mr. Goschen, dated Foreign Office, March 3, 1881. In this despatch his Lordship alludes incidentally to the Egyptian tribute, and then discusses the payment of the Cyprus "tribute." From that time onward the word tribute has been freely used by all sorts and conditions of men. But is the term correct? Egypt pays, or used to pay, £72,000 a year to Turkey in return for the grant of self-government. That payment is quite correctly called a tribute. But how about Cyprus? In the "Handbook of Cyprus," edited by two Government officials and containing information supplied by other heads of departments, I find these words: "The annual payment amounts to £92,000, which is commonly called the 'tribute.'"

It is curious how most of those who write or speak about the island shy off when they mention the "tribute." A magazine article lately written by a banker for years resident in the island dismisses the subject in a few words, and in an address delivered last month at the Royal Colonial Institute the speaker, when enumerating the chief obstacles to progress, mentioned amongst others "the burden of the tribute, fixed on a questionable basis, which has drained the island and deprived it of many advantages." And there he left it

It would be easy to quote writers and speakers who have drawn attention to the injustice of the impost placed on the necks of the inhabitants for the long period of thirty-six years; but one must suffice. On May 25, 1881, Sir William Harcourt, in the House of Commons, used these words: "The Secretary to the Treasury had altogether failed to appreciate the point. It was not a question whether the money was paid into the Treasury, but whether it was taken from Cyprus. Cyprus was the only dependency of England that he knew in which we took money out of the country and devoted it to other purposes. The money was taken out of an extremely poor country, and that, in his opinion, was a most unsatisfactory state of things." The financial year ends on March 31, so that there is not much time left if the injustice is to be put an end to. A temporary measure of relief might easily be resorted to. The Egyptian tribute is not to be paid this year, so I infer from the statement made by Sir Edward Grey in the House of Commons on November 11. Sir Edward said: "The Egyptian Government have, I understand, decided that, in view of the various issues involved, it will be desirable to defer the question of the tribute, formerly payable from Egypt to Turkey, for consideration after the conclusion of the war." The British Government should follow a like course.

To enable your readers to grasp the financial position of the island the following statement may suffice:—On March 31, 1912,

The tribute payments amounted to £3,069,139
The grants in aid amounted to 1,097,085

So that the island has been bled to the tune of £1,972,054

That was in the year 1912. Since then further sums have been taken, from a population dependent solely on agriculture. And seemingly the process is to be repeated this year; for in the Estimates for the year appears the following:—"Share of Cyprus of the Turkish Debt charge: Estimate for 1915-1916, £92,800.—C. W. ORR. February 10, 1915." The island is now a British colony. The taxpayers appeal to Britain for redress.—I am, etc.,

GEORGE L. HOUSTOUN.

Kyrenia, Cyprus, December 11.

GREECE AND THE ENTENTE.

London Greek Views.

On Thursday evening of last week a special meeting of the Hellenic community in London was held in the crypt of the Greek Church, Bayswater, for the purpose of electing delegates to represent them at the Congress to be held in Paris on January 8 with the object of safeguarding the interests of Hellenism. Mr. L. Messinesi presided. It was explained that on December 15 the Paris Congress, being fixed at the time for three days later, a telegram was despatched regretting that insufficiency of time would prevent the community in London sending delegates, but expressing the community's strong conviction that the interests of Hellenism were wholly bound up with the cause of the Entente, and that they viewed with grave concern and alarm the turn events had taken. The date of holding the Congress was subsequently, at the request of the American and other Hellenic communities, postponed until January 8. The meeting expressed gratification at the fact that the altered date of holding the Congress would enable delegates to be sent, unanimously approved of the sentiment conveyed in the telegram, and elected two delegates to represent the London community in Paris on January 8.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1915. Dec. 31	1915. Dec. 18	Friday	1334. Safar. 23	5676. Tebet. 24
1916. Jan. 1	19	Saturday.....	24	25
2	20	Sunday	25	26
3	21	Monday	26	27
4	22	Tuesday	27	28
5	23	Wednesday	28	29
6	24	Thursday	29	Shebat. 1

To-day is the birthday of H.R.H. Victoria Adelaide, Duchess of Saxe-Coburg and Gotha.

Monday is the birthday of H.R.H. Prince Mircea of Roumania, third son of King Ferdinand and Queen Marie, who was born in Bucharest on December 21, 1912 (Old Style).

Wednesday is the birthday of H.R.H. Princess Ileana of Roumania, who was born in Bucharest on December 23, 1908 (Old Style).

Sir J. Roper Parkington, Consul-General for Montenegro, has received the following official telegram:—A formal denial is given from Cettinje to the report, published in certain newspapers, that the Royal Family of Montenegro has left for Italy.

Reuter's Cairo correspondent telegraphs that Major-General Sir John Maxwell, commanding the British forces in Egypt, has sent the following reply to King George's Christmas message to his forces:—"The officers and men of your armies in Egypt, both in the ranks and in hospitals, drawn from the United Kingdom, the Dominions, and India, unite in humble thanks for your Majesty's gracious and inspiring greetings. We are proud of the confidence placed in us and in this share we are taking in the fight for victory. We offer your Majesties and the Royal Family our humble and heartfelt greetings."

Lady (Arthur) Paget is naturally delighted at the safe arrival from Serbia of her daughter, Lady Paget, who has been doing such heroic Red Cross work and is married to her cousin, Sir Ralph Paget, until lately the British Minister at Belgrade, says the *Sunday Times*. The ex-Minister, as he must be described for the present, returns with his wife to London.

The British Red Cross Society announced last Friday that all their Montenegrin units under Dr. Clemow had arrived safely in England.

Major Josiah Wedgwood, M.P., left England last week, to resume active service.

A Cyprus correspondent writes:—
The Greek Archbishop, Kyrillos, has been laid up. His malady, though painful, is not of a serious character, and it is hoped that he will soon be able to resume his duties.
The new Greek Consul, M. Parasakevópoulos, has been at the capital and has paid a visit to the High Commissioner.

On December 21, in Cairo, the wife of Mr. Frederic H. Teall, of the Egyptian Police, gave birth to a son.

On Christmas Day at Maison Antoniou, Giza, Egypt, the wife of Mr. M. Keith Rice-Oxley, A.M.I.C.E., gave birth to a daughter.

The marriage of Lieutenant M. C. Albright, Worcestershire Yeomanry, and Miss Barbara Strickland will take place at Cairo on January 3, at a quarter-past two o'clock.

The marriage has taken place of Lieutenant A. W. Strickland, Gloucestershire Yeomanry, son of Mr. and Mrs. Algernon Strickland, and Lady Mary Charteris, second daughter of the Earl and Countess of Wemyss, at St. Mary's Church, Cairo. The bride was given away by Sir Ronald Graham, and the bridegroom was attended by Lieutenant Martin C. Albright. Dr. R. MacInnes, the Bishop in Jerusalem and the East, performed the rite. After the ceremony Lady Elcho gave a reception at 8, Zamalek, Gezira.

The Press Association is informed that the marriage took place in Cairo on Monday of Lord Loughborough, eldest son of the Earl of Rosslyn, to Miss Sheila Chisholm. The engagement was announced in July last. Lord Loughborough is the son of the Earl and his first wife, who was a daughter of that well-known sportsman, Mr. R. C. de Grey Vyner, of Gautby Hall, who left a fortune of nearly a million. The lady is now the wife of Mr. Charles Jarrott, of motoring fame. Lord Loughborough came of age about two years ago.

The death of Mohammed Zuhri Pasha, Under-Secretary of State for War, is announced at Cairo.

News has been received at Alexandria of the death of the Baroness M. de Menasce, sister of the late Padoa Bey.

It is reported from Fareham that Colonel Charles Jolliffe has died there at the age of eighty-six years. He received his commission in the Royal Marine Artillery in 1848, and saw service in the Crimean Campaign in 1854. At Balaclava he commanded a battery, and was attached to the Royal Artillery siege train at the bombardment and fall of Sevastopol, and was present at the bombardment and surrender of Kinbourn. He received a medal with clasp, and was made a Knight of the Legion of Honour. In 1874 he retired with the honorary rank of Colonel.

The funeral of Sir Thomas Jackson, Chairman of the Imperial Bank of Persia, took place at St. Mary's Parish Church, Stansted, Essex, last Friday. Immediately behind the coffin walked Captain Julius Jackson, 60th King's Royal Rifles (second son), and Mrs. Julius Jackson. Other mourners were Lieutenant Russell Jackson, R.G.A. (third son), Major A. M. Tabor, 3rd Hussars, and Mrs. Tabor (daughter), Mrs. Lloyd, Mrs. Raymond Marker, and Miss D. St. F. Jackson (daughters). The heir to the baronetcy, Brigadier-General Thomas Dare Jackson, King's Own Royal Lancaster Regiment, and the youngest son, Lieutenant C. S. Jackson, Coldstream Guards, were unable to attend, both being on active service in France. There were also present Lady Cameron, Lord Blyth, the Hon. Herbert W. Blyth, Sir John McLeavy Brown, the Hon. Sir Fielding Clarke, Sir Walter Gilbey, Colonel David Chapman, Co'onel Healey, Mr. Annan Bryce, M.P., Mr. G. Newell (manager of the Imperial Bank of Persia).

A Memorial Service was held at noon the same day at All Hallows Church, Lombard Street. Among those present were the Persian Minister, Viscount St. Aldwyn, the Hon. Sir Eric and Lady Barrington, Admiral of the Fleet Sir Edward Seymour, Lord Inchcape, Mr. W. H. N. Goschen, and Mr. Wynnard Hooper.

Mr. James Currie, C.M.G., has been appointed to give effect to the policy of the Labour Supply Department of the Ministry of Munitions in relation to the training of munition workers. Mr. Currie was Principal of the Gordon College, Khartoum, and Director of Education in the Sudan from 1900 till 1914. From 1911 till 1914 he was a member of the Governor-General's Council for the Sudan.

Captain Malcolm A. Macdonald, who was senior house surgeon of the Prince of Wales's Hospital, London, when he joined the Royal Army Medical Corps on the outbreak of war, is to receive the French Military Cross for conspicuous surgical services while under fire at Gallipoli. Captain Macdonald belongs to Row, Dumbartonshire.

The *Sunday Times* remarks that the ban which the Egyptian authorities is placing against any further arrival for the present of fashionable English women desirous of wintering in Cairo, has somewhat disturbed the plans of one or two notable families. The Marchioness of Tichfield, who went to pay a flying visit to her husband, the Duke of Portland's heir, is home again from Cairo, and so are Lady Henry and Lady Charles Bentinck. Lady Tullibardine is still there, and so are Lady Elcho and Lady Mary Strickland. These three ladies are doing noble work at Sir Milne Cheetham's convalescent home for officers.

Mrs. Webster, wife of Dr. Webster, a well-known professor of the School of Medicine in the Syrian Protestant College, Beyrout, arrived at Alexandria a fortnight ago from Syria, viâ Cyprus, together with some other lady passengers. According to the newcomers (says the *Egyptian Gazette*) the American College has begun to teach Turkish in its lower sections, in compliance with the request of the Turkish Government. The students of the college are about 700 in number this year, including many students from the other European schools of Beyrout, which have been closed since the outbreak of the war

Lord Ninian Edward Crichton-Stuart, the former M.P. for Cardiff, and younger brother of the Marquis of Bute, who was killed in action on October 2 last, in his thirty-third year, left unsettled personal property in England and Scotland of the value of £49,744. The bequests include £1,000 to King Edward VII. Hospital, Cardiff, to endow a bed in the children's ward in memory of his son Ninian Patrick; and a picture of himself in khaki uniform, done in the best way that can be from a photograph, to his constituents at Cardiff, to be held in trust by the Mayor of Cardiff for the time being.

Sir Charles Augustus Hartley, K.C.M.G., "The Father of the Danube," the distinguished engineer, of 26, Pall Mall, S.W who was born at Hedworth, Durham, in 1825, and died on February 20 last, left estate valued at £59,037 gross, with net personalty £58,338. Amongst the legacies were: £100 each to the English Church, the Roman Catholic School, and the British Seamen's Institute at Sulina, Roumania.

A correspondent of *The Times* recalls Lord Kitchener's opinion of the Bulgarians written nearly forty years ago, when he was a lieutenant in the Royal Engineers. In 1877 he visited the Turkish lines during the Russo-Turkish War, and in recording his experiences in *Blackwood's Magazine* of February, 1878, he says of the Bulgarians:—"They seem to be a most despicable race. Morally they appear to be at the lowest ebb."

A Bucharest telegram to the *Giornale d'Italia* says the police have arrested a Hungarian and two natives of Transylvania who had come to the Roumanian capital to blow up the residences of MM. Filinescu, Jonescu, Constantinescu, and Bratiano. The three men had in their possession 50,000 crowns.

A telegram from Cairo states that the troops in Egypt celebrated the holidays in the heartiest fashion. Concerts and entertainments were given in hospitals and camps.

According to the *Egyptian Gazette*, Mr. Maurice Abbate, grandson of the late Dr. Abbate Pasha, has committed suicide by taking a large dose of corrosive sublimate. He died a few hours later.

In addition to the £2,800 from New South Wales, the Serbian Relief Fund has this week received £750 from the Mayor of Southport's Fund for the homeless and starving refugees.

By order of King Ferdinand the Bulgarian Military Attaché at Berlin has driven fifty golden nails into the statue of Field-Marshal von Hindenburg. Each nail cost £5.

The late Mr. F. W. Manson, whose death was briefly announced in our columns last week, was the son of the late Mr. William Pitt Manson, barrister, and was born at Muswell Hill in 1850. He was educated at Highgate School, which he entered when he was eleven years of age. Mr. Manson, although a keen business man, was not generally interested in public companies, and was chairman of one only. He was Master of the Worshipful Company of Ironmongers in Coronation year, when he took a prominent part in the festivities organised on that occasion; he remained a member of the Court of Ironmongers until the time of his death. His public appointments included that of governorship of the Westminster Hospital, and he was also on the executive of the City and Guilds of London Institute. Mr. Manson was one of the oldest members of the City of London Club; his other clubs included the Union and the Arts. He was a man of exceptionally wide interests, and was a Fellow of the Royal Statistical Society. His personal tastes, however, tended rather to art, and he was a keen collector of pictures. He leaves a widow and five children—two sons and three daughters.

A correspondent writes:—"The production of Mr. Algernon Blackwood's phantasy, 'The Starlight Express,' took place at the Kingsway Theatre on Wednesday, and a brief notice of the play may be of interest to the many readers who are familiar with Mr. Blackwood, through his charming studies of Egypt or the medium of his novels. The play is adapted from 'A Prisoner in Fairyland'—the 'Book that Uncle Paul wrote'—and shows a wealth of imagination such as this author's works have led us to expect. If, as a play, it is not altogether satisfying, the fault may be traced to too keen a desire to point the moral, and a tendency to ignore the dramatic claim of action. This, however, is a fault that may very easily be remedied, and, on the whole, the piece may be welcomed as a very charming addition to our all too limited stock of children's plays. Sir Edward Elgar's music is charming. The production was very favourably received by a crowded house, which made insistent calls for the author and greeted him with vociferous applause when he appeared before the curtain."

The Countess of Chesterfield appeals for gifts for our gallant sailors and soldiers in the hospital and convalescent camps at Malta, in Egypt, and elsewhere in the Eastern sphere of the war. For the convalescent camp at Malta the Y.M.C.A. have been specially asked to send out two or three violins, two violoncellos, a double bass, and other musical instruments, new or secondhand. Games of all kinds are urgently needed, both for Malta and the Y.M.C.A. centres in Egypt. Bagatelle boards, footballs, gramophones, chess, draughts, dominoes, and cribbage are amongst the most useful. None of these can be procured on the spot. Gifts in kind and donations of money addressed to the Countess of Chesterfield (hon. secretary), Scudamore House, Regent's Park, N.W., will be most gratefully received.

Mr. G. R. Clarke, Postmaster-General in the Punjab, who is coming home on six months' leave, has been deputed to inspect the Field Post Office Administration in Egypt.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.
— EDUCATIONAL AGENTS, —
147, Cannon Street, London, E.C.

APPOINTMENTS, PROMOTIONS, Etc.

M. Kallergis, ex-Minister of Foreign Affairs, has been appointed Greek Minister in Constantinople, states an Athens telegram to the *Petit Parisien*.

Kaim. C. L. Smith Bey, V.C., second in command of the Camel Corps, Egyptian Army, has been struck off the strength of the Egyptian Army.

Bimbashi A. G. Cummins, M.B., of the Egyptian Medical Corps, has been promoted to the rank of Kaimakam.

Apropos of the appointment of Colonel G. Eskourt Matthews, C.B., R.M.L.I., to be a Companion of the Order of St. Michael and St. George, the *Naval and Military Record* gives the following details of his services, which, it will be observed, have been chiefly in Egypt and the Sudan:—He was seconded for service with the Egyptian Army, January 6, 1897, to January, 1910; served in the Egyptian Army, Nile operations, 1897 (medal and clasp), and was mentioned in the Sirdar's despatch relative to the battle of the Atbara, in which he served with the 14th Sudanese Battalion; and battle of Khartoum. He received the brevet of major, November 16, 1898; was with the Nile Expedition of 1899, including the first advance against the Khalifa (Egyptian medal with four clasps), was decorated by the Khedive with the Order of the Mejidieh, 3rd class, in recognition of his services during the Sudan Civil Administration, 1901; received from the Sirdar the thanks of the Sudan Government for his action with regard to the Mek of the Shilluks, May, 1903; 1st Class Military District, Upper Nile; Governor of Province, 1st Class, Upper Nile. On January 22, 1907, he received the King's authority to accept and wear the decoration of the Imperial Ottoman Order of the Osmanieh, 3rd Class, conferred on him by the Khedive of Egypt in recognition of valuable services rendered to his Highness. The Khedive also conferred on him the Order of the 2nd Class of the Mejidieh. He was seconded for service with the Egyptian Army September 1, 1910; and received the C.B. on the Coronation of King George V., June 19, 1911. The following, dated Khartoum, September 7, 1913, appeared in Egyptian Army Orders:—"On the departure of El Lewa Matthews Pasha, C.B., on relinquishing the command of the Khartoum District, the Sirdar desires to express his appreciation of the valuable service rendered by this officer in the above responsible and onerous appointment. By his untiring energy and devotion to duty Matthews Pasha has brought the troops under his command to a high state of efficiency. The Sirdar desires, on behalf of all ranks, to wish him all prosperity and happiness in his future career."

BRITISH REFUGEES FROM TURKEY.

Mrs. Frank Barker is giving a "White Elephant" party at Lowndes House, Lowndes Place, Belgrave Square, S.W., on January 11, at 2.30 p.m., in aid of British subjects who have had to leave the Near East owing to the war, and who in many cases are temporarily in great monetary distress.

The "British Refugees from Turkey Fund," which started a year ago under the patronage of H.R.H. Princess Louise of Argyle, has done much good work, and it is hoped that anyone interested will attend the sale, and so enable the committee to continue giving relief to many who, through no fault of their own, are in great need. Tickets, at 2s. 6d., entitling the holder to a prize, may be had from Lady Neave, George Hotel, Bangor, Wales; Lady Lowther, "Whitehall," Sandwich; Mrs. Frank Barker, Lowndes House, Lowndes Place, Belgrave Square, S.W.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

TEALL.—On December 21, at Cairo, the wife of Frederic H. Teall, Egyptian Police—a son.

DEATH.

TITE.—On the 7th inst., Norman Eric, the dearly loved infant of Mr. and Mrs. H. W. Tite, Zeitoun, Egypt, aged nine weeks.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

DEVONSHIRE SQUARE, LONDON, E.C.

Telegrams: "EASTAPROX, LONDON." *Telephone No. 618 London Wall.*

FRIDAY, DECEMBER 31, 1915.

A YEAR OF STORM AND STRESS.

With the close of 1915 another year of storm and stress has passed over the Near East. Only one country, Roumania, has succeeded in keeping the war out of her territory; but she stands ready armed, waiting for the moment when she, too, will have to take her part in the fray. In the meantime the stress has been hers. Surrounded by belligerents on all sides, except where the Black Sea bounds her on the east, she has had to watch her commercial and industrial life subjected to all the disabilities of a nation at war. Her neutrality has only been maintained at the cost of much domestic bickering and bitterness. The causes which prompted it have changed with the varying phases of the war, and at no time has the Government appeared to be sufficiently sure of itself and of its policy to take the nation into its confidence. Its attitude of reserve has left the country a prey to the worst intrigues, with the result that, while every instinct pledges Roumania to the Entente Powers, no Roumanian can be sure that any social stratum has remained entirely impervious to the arguments of German gold. If such uncertainty prevails at home, it is inevitable that the Roumanians of Transylvania, who have looked to their kinsfolk across the Carpathians for salvation, should be concerned to see month after month pass without any steps being taken to liberate them from the Hungarian yoke. There is no reason to doubt, however, that an understanding exists between the Roumanian Government and the Entente Powers, on the strength of which the former is confident of being able ultimately to justify its policy in the eyes of the people and of Roumanians abroad.

Greece, too, has clung to neutrality, and her people are divided into two opposing camps. The absence of any enthusiasm for war and the fact that the only two men who can claim any great personal popularity are at the head of the rival factions have helped to bring about the present state of affairs. If the cause of neutrality had not been championed by King Constantine, there can be no doubt that the country would have followed M. Venizelos almost to a man in his espousal of the Allies' cause. As things are, the bulk of the electorate stand aside from the polls at his bidding, but feel powerless for the time being to thwart the policy of non-intervention in the war which the King and his advisers have adopted and are carrying, it seems, to strange lengths. Some idea of the political stress through which Greece has passed may be gauged from the sequence of five Ministries which have held the reins of government during the past year, while a further Cabinet crisis is threatened. The only result of these changes, as far as the nation can see to-day, is that one group of belligerents is in occupation of an important section of Greek territory, which may shortly be put to fire and sword by the other group of belligerents in an attempt to take possession of it. That second group includes Greece's hereditary enemies, the Bulgarians; but she has so played her cards that she is no longer in a position to strike a blow for the protection of her own soil against the threatened invasion. The sins of omission and commission which have led to this disastrous position are not confined to Greece. Not the least of the difficulties of her position has been to form a correct appreciation of the intentions of the Entente Powers. As the latter have consistently refused to formulate those intentions, Greece's perplexity has been great. But for this she has herself to blame. If instead of trying to adjust her policy to that of the Entente she had boldly pursued the one to which she was solemnly committed by a written pledge, she would have saved herself much embarrassment and laid the Allied Powers under considerable obligations. By proving false to her treaty with Serbia she has contributed as directly as has her arch-enemy Bulgaria to her present troubles. The New Year finds her probably at the zenith of her dilemma; but it is impossible to say how she will escape from it. She is admittedly living from hand to mouth, and the task of a patriotic Government in the coming year will be not only to extricate the country from a false position, but also to restore Greece to the honourable place which she once occupied in European esteem.

For Serbia the year 1915 opened, for a country at war, propitiously. The Austrians had been expelled from Serbian territory, and showed no inclination to resume the offensive. Time was given to the sorely tried army to recuperate and to replenish its supplies. Soon, however, the gaunt spectre of disease—almost more terrible in its effect than the enemy—stalked through the land. The loss of life was comparatively great, but in the end, thanks to Serbian physique and to the way in which the nation lent itself to foreign ministrations, this trouble too was overcome. By the middle of the year the continued freedom from Austrian invasion was beginning to have an unfortunate effect on the counsels of the Serbian Government. The Allied Powers, who had only just begun to appreciate the inwardness of the Balkan question, found that they were hampered at every turn by Serbo-Bulgarian antagonism. In an heroic attempt to put an end to this, Serbia was called upon to sacrifice some of her Macedonian territory to Bulgaria. Before she could be brought to acquiesce the menace of a fresh invasion had arisen on her northern frontier. This time the Austrians were reinforced by German troops, and the whole expedition was placed under the successful Field Marshal von Mackensen. It moved forward, after preliminary failures to cross the Danube and Save, on October 6. Eight days later the Bulgarians, who had begun to mobilize on September 19, joined in the attack on Serbia. From this date the enemy's advance was rapid. Serbia was overrun by the end of November, and the remnant of the Serbian army was making good its escape, at the cost of its supplies and heavy artillery, across Montenegro and the Albanian mountains. But in spite of the German Emperor's proclamation to his "Serbian people," in spite, too, of Bulgarian boasts, every Serbian, from King Peter to the humblest peasant, has probably a sincerer belief in the ultimate triumph of his country's cause than the majority of the Bulgarians, and, indeed, of the Germans, have in the victory of their arms.

The prospects for the New Year would be brighter, if it could be felt that out of the storm and stress of 1915 a new and purged Near East would arise. But at first sight the purifying effects associated with fire seem to be lacking in the conflagration which has swept across the Balkans. The need of the Peninsula was for peace. Its well-being might have been furthered by joint participation in the war on the side of the Entente Powers, as such action would have promoted a feeling of solidarity and emphasized the community of interests of the different States. But the recurrence of civil strife in the Balkans may well leave the situation as unsatisfactory as it was after the signing of the Treaty of Bucharest, unless wise statesmanship is to be given a free hand in determining the settlement when the war is over. It will be hard to reconcile righteous indignation at the treachery of Bulgaria, and the disappointment which Greece's attitude has caused, with the solicitude for the future welfare of the Near East which the Entente Powers ought to feel. If punishments are to be meted out to fit the different crimes, the last state of the Balkans will be no better than the first. A solution for this dilemma can only be found by the peoples themselves. Bad and criminal leadership has brought disaster on the Near East, and there can be no hope for the future until those directly or indirectly responsible have been deprived of all further opportunity for mischief. When in this respect the various States have been purified as a result of the present ordeal, there will be some hope for a lasting federation of the Balkans.

A WAR-TIME EXIT FROM SMYRNA.

By Lilias McCrie.

A dingy Turkish gold coin rolled out from the torn lining of my old purse to-day, recalling vividly the outbreak of the war in 1914 and the plump Turkish woman at the port of Vourla, who tried to satisfy herself that I was not smuggling out of the country more than my share of Turkish gold, or any important letters or papers.

We in Smyrna first heard of the opening of hostilities on August 2, 1914, and our Vice-Consul called all his people together on August 4 to tell us that Britain, if not then at war, would probably be so on the morrow. The British subjects within the Consulate grounds took the news quietly, though there were a few excited faces and some white ones among them. We had some fatherly advice given us—Smyrna was as safe as anywhere else, and safer than a great many elsewhere; we need not anticipate any immediate rise in the price of foodstuffs; we might volunteer what services we could to help the Old Country, and so on. Then we sang "God Save the King" and dispersed, some of us feeling thankful that we had paid all our bills, and others just as thankful that we hadn't! Not a few anxious housewives made a hasty inventory of the stores they had in stock, and feverishly bought in provisions while ready money and provisions were available.

During the weeks that followed Home newspapers were very scarce, and, being in great demand, what there were had to be distributed till they were read into holes. There were no letters either for some weeks, most of the mails coming across Europe being delayed by the august German censor. The subdued excitement of the populace generally showed itself on the quay, which became more than usually a centre of interest, especially on the departure of the passenger steamers then in the harbour, these being chartered by their respective countries for the transport of reserves for the various armies in the field.

Those who returned from their summer holiday in Europe at this time brought with them thrilling tales of the spirit of the Old Country. We learned from them to sing "Tipperary" and to say to each other at meeting and parting, "Est-ce que nous avons le cœur brisé?" "*Non!*"

During August and September the Turkish army was mobilising. Bodies of troops were daily transported from the interior around Smyrna, north to Panderma, and thence, it was supposed, to the Russian frontier. Rumours of Turkey's entry into the war then began to circulate, and the last week-end in October will probably be memorable to many of the Smyrna residents. On Friday the 30th we heard of the sinking of Russian ships in the Black Sea by the Goeben and Breslau, and immediately thereafter came the news of the retaliation of the British Fleet on two Turkish ships just outside the Gulf of Smyrna. We were still without any definite information as to a final rupture between Turkey and Britain, but on Sunday, November 1, martial law was proclaimed in the city. Notices were posted up in the streets, and woe betide those who could not decipher intelligently those "squiggles on the wall," or who hadn't a kindhearted interpreter to translate for them. Even now I do not know what that notice said exactly, but as dusk came on part of its meaning became apparent, because the streets took on the appearance of a gymkhana, the people hurrying to and fro with lanterns varying from the simplest "Chinese" to the very latest invention in acetylene.

The adventures which follow concern more closely some half dozen families who were linked together by a common interest for the time being, and our own personal experiences in particular.

About half-past nine that same Sunday evening my husband was sent for to attend a meeting of a few gentlemen who were considering seriously the advisability of sending their wives and families home at the earliest opportunity. The house of Mr. X, where the meeting was held, was only a few minutes' walk from our own home, and I expected my husband to return very shortly; but as the evening wore on and it came to half-past eleven I grew a little anxious. When at length one o'clock struck, anxiety grew into certainty that something was wrong, and the long night dragged on with still no return of the wanderer. At daybreak I hurried out to make inquiries, to find that my vague fears had been realised: my husband was finding out, at first-hand experience, what it was to be a prisoner in Turkey. He had left the meeting at 11.30 the previous night, and, although he had a *kavass* (porter) in attendance with a lantern—this last in accordance with the military law that day proclaimed—the *passvante* (night watchman) stopped him and held him in parley until two gendarmes came running up, no doubt eager for the first fruits of the new law. These marched him off unceremoniously to the nearest police station, while his late convoy returned to tell Mr. X of the seizure. This gentleman tried to get word sent to me and to the proper authority to obtain his release, but the night watchman refused to let any messenger pass, so nothing could be done till the morning.

My husband had been hurrying home to tell me—what, in the unforeseen circumstances, I did not learn till 8 o'clock the next morning—that I was to be ready to leave Smyrna for Europe with a few other ladies that same day at 10 o'clock. It was short notice, but I managed to pack a suit-case and make some necessary arrangements within one strenuous hour, though there was no comforting prospect of seeing my husband set free before leaving. To my relief, however, just a few minutes before we drove down to the Consulate, he did arrive, a little grimy, but smiling, and not much the worse for his experiences. He had been challenged by the watchman the night before, and, knowing no Turkish and very little Greek, his side of the argument which followed was easily broken down. At the police station a Turkish officer questioned him most minutely, and wrote down all his answers most deliberately. It was no use protesting that he was an indispensable member of society out on urgent business; he was quietly marched off again to a second police station, where more questions were asked, and he was kept standing outside for an hour and a-half. Finally, about two o'clock a.m., he was taken to the chief prison at the Konak, and as he went, between two gendarmes and with a third close behind with his gun cocked, they met a Turkish officer, who looked at the prisoner closely and then called out something sharply in Turkish. One of the gendarmes immediately tore my husband's hat from his head and thrust it into his hand. The prisoner promptly put it on again, but this act was repeated, and, prudence overcoming valour, he carried it in his hand until the conceited young military arm of the law was safely out of sight. The small cavalcade at length reached the Konak, where the prisoner was thrust into a filthy passage some twelve feet long by six wide with iron gates giving on to the open street at one end. A few other Europeans like himself, the first victims of that day's newly enforced martial law, and a crowd of indescribably dirty loafers of mixed Eastern nationality were the other occupants of this pent-house, which itself was so filthy that the newcomer could not sit down on what available sacking there was for that purpose. So he stood there till morning, when, an order having been received through the intervention of the American Consul, an officer came to the gate, shouted his name—or something remotely like it—and on his responding, opened the gate and said peremptorily, "Git," which is quite classical Turkish, though it may not be the best English.

The Turkish Governor had promised every facility for a few ladies to leave that morning with the British Vice-Consul; and, Smyrna port being closed to all traffic and heavily mined, we were to drive some twenty-five miles down the coast to the port of Vourla in order to get a steamer for Mytilene or the Piræus. Accordingly those of us who were ready to leave on such short notice drove down to the Consulate at the appointed hour to join the Vice-Consul and his suite. The street was crowded with carriages loaded up with luggage—anxious mothers and nurses with children—and around us surged an expectant throng of spectators of all nationalities. The Consulate looked disconsolate, the flag and staff were down, and the revered emblems of Britain's greatness—the lions rampant adorning the gates—had been tenderly covered over with small sheets of tin. We waited for more than an hour while our Vice-Consul had a consultation with the Vali, and the end of it all was that, in truly Turkish manner, the potentate changed his mind, and ordained that no one should be allowed to leave

except the Vice-Consul and his immediate suite. And we? We returned to our homes with mixed feelings, a little savage at having had all the worry for nothing, but also somewhat relieved at not having had to leave our men after all.

During the next few weeks the Turks gave us a magnificent lesson in patience and, incidentally, taught us the priceless value of a sense of humour. Daily came the most unsettling rumours about internment. Ridiculous orders emanated from the Turkish authorities, and when we had adapted our mental outlook to the proposed new circumstances the orders would be countermanded, and we left exhausted by the effort of trying to follow the amazing Turk in his fantastic attempts to impose martial law. Our letters were now heavily censored, and finally ceased altogether. The English language was forbidden in foreign correspondence, a stupid imposition which caused our American friends no little annoyance. We tried French, but all our communications in this language were returned to us. I suppose our school French either baffled the overworked Turkish censor utterly, or else he mistook its halting peculiarities for some mysterious and therefore dangerous code.

The only local newspaper upon which we could rely within limits was withdrawn, and residents in Smyrna will recall the reports we read in *La Réforme* of the extraordinary victories of the Turks and the Germans, but especially of the former. "London is in flames," "India is in revolt," "Egypt is in the hands of the Turks," who, loaded with bags of sand, marched across the desert, filled up the Suez Canal, and crossed into the promised land without so much as wetting their feet—a literal "walk-over!"

Houses were commandeered in the Greek and Armenian quarters for the billeting of soldiers and the storing of kerosene, and rumours were rife that this kerosene was to be of use in setting fire to the whole town in the event of a bombardment by the Allied Fleet. There was also an undercurrent of dread of wholesale massacre. Soldiers were everywhere, picketed at street corners, and patrolling the streets night and day. But in spite of all the misapprehension the life of the town kept much to its usual routine. Food had not risen appreciably in price, and the Turkish authorities were certainly considerate to the British subjects, who were now under the protection of the American flag.

The scare stories which were circulated with almost rhythmic regularity at week-ends were certainly disquieting. We often felt so foolish for having believed them when they died a natural death during each week, only to rise again, phœnix-like, towards Saturday and Sunday. No one who has not lived through it will understand the nervous tension of a time like this. The expression "Things are looking very black indeed" became quite a jocular form of greeting among us, and I am sure many of us wished something really would happen, if only to clear the air and give us some relief.

Six weeks passed after "Black Monday," as we called the day of the departure of our Vice-Consul—weeks of uncertainty and secret plottings for flight if need be. During this period several private British families succeeded in leaving the country viâ Vourla in twos and threes; but tales of their privations, disappointments, and difficulties encountered *en route* did not add to the joyousness of our outlook.

Then matters came to a head with the half dozen families in whom we are specially interested. The Turkish Government deprived the men of their means of livelihood, actually imprisoning one of their number because he expressed and acted upon his preference for British freedom as against Turkish tyranny. So long as the civil authorities were in power the British were left in undisturbed peace, but when any Germanised military potentate happened to remember Smyrna we always knew about it by the attempts made to curtail our liberties in various ways. It became advisable for alien subjects to be provided with all sorts of protective permits and certificates, otherwise if unprepared for a sudden peremptory inquiry as to nationality and standing on the part of a zealous gendarme, they ran the risk of being imprisoned, or perhaps forced into some form of military service, as happened with some less fortunate Greeks.

The police became more and more aggressive in the streets and workshops, visiting the latter frequently in their quest for recruits. The change in the attitude of these officials came out in small things, but none the less irritating. They insisted on the wearing of the fez among workmen, although they could not enforce it legally except among Ottoman subjects. One Greek workman was doing some small repairs for me one day, and on leaving he drew out a fez. I expressed my astonishment, whereupon he opened his jacket and slyly pointed to his own cloth cap in an inner pocket. He told me it depended whether there was a Turkish officer lurking round the corner or not as to which he would wear. All his fellow-workmen did the same thing for the sake of peace.

(To be continued.)

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The British in Persia.

Dec. 23.

Replying to Colonel YATE, who asked whether he could give any information as to the safety of the British residents at Yezd and Kerman, in Persia, Lord R. CECIL said:—The British Consul and colony at Kerman left under escort for Bunder Abbas on the morning of the 18th inst. As regards Yezd it had been difficult, in view of the interruption of telegraphic communication, to obtain reliable information, but, according to the latest reports received, I understand that the Acting Governor has been able to maintain order, and that the British Consul and colony have so far been able to remain in the town.

Dardanelles Casualties.

Mr. TENNANT stated, in reply to Mr. JOYNSON-HICKS, that the casualties in the Dardanelles up to December 11, including the Naval Division, were as follows:—

	Officers.		Other ranks.
Killed (including died of wounds and died) ...	1,609	...	23,670
Wounded	2,969	...	72,222
Missing	337	...	12,114
Total	4,915	...	108,006
Grand total	112,921		

The Under-Secretary for War added that the sick admitted to hospital between April 23 and December 11 numbered 96,683.

Mr. JOYNSON-HICKS: Can the right hon. gentleman give us any hope that the sickness is decreasing?

Mr. TENNANT: Yes, sir, I think there is every reason to entertain that hope.

Mr. HOGGE: Can the right hon. gentleman say how long a time the War Office allows to elapse before men who are marked as missing are counted as dead or prisoners?

Mr. TENNANT: That is an awkward question to answer. When there is no other information at all one has to give a very long period, but in many cases unofficial reports come from brother officers and others, and in those cases from four to five months would be about the time taken to give a certificate of death.

The Turks and Aden.

Sir E. CORNWALL asked the Secretary for India whether his attention had been drawn to an official Turkish statement that after successful fighting they were advancing on Aden; and whether he was in a position to give the House any information as to the military situation in those parts.

Mr. C. ROBERTS: I have not seen the statement to which the hon. member refers. There has been no material change in the position at Aden during the last two months. On the 20th inst there was a skirmish between our cavalry scouts and an enemy patrol, in which the latter lost nine killed and one prisoner, our casualties being one man wounded.

The Suvla Bay Landing.

Mr. LUNDON asked the Under-Secretary for War whether he was now satisfied that most people were well aware of the names of the officers who had charge of the Suvla Bay landing; whether he would now give the names to the public; would he say if one of these officers who was recalled and cashiered was now doing military duty in London; and, if so, what was the nature of that duty.

Mr. TENNANT: I do not think it desirable to give publicity to the names of officers who have been relieved of their commands at the front. As my hon. friend assures me that these names are well known the publication of them would be more punitive than informative. None of these officers has been cashiered. Cashiering is a punishment which can only be inflicted by court-martial, and then only for offences of the most disgraceful nature.

INTERNED BRITISH SEAMEN IN TURKEY

Lieutenant T. W. Moore, Secretary of the Imperial Merchant Service Guild, has received a message from Captain V. E. Lazzolo, of the Ellerman liner City of Khios, who is at present interned at the Magnesia Camp, near Smyrna, Turkey. Captain Lazzolo states that only merchant seafarers are interned at the Magnesia Camp. They have received letters from home inquiring for naval and military men. They have written to other places in the hope of finding these men, but have only had one reply, and that is to the effect that E. Mitchell, late of E 15, is well. It appears that letters from England are reaching the camp with fair regularity. All the occupants are keeping well, but the cold weather has set in and is keenly felt.

THE PRESS ON THE NEAR EAST.

The Bulgar Motive.

The *Observer* (December 26) devotes its notes of the week to a general view of the existing situation, with anticipations of the coming struggle during the next few months. "The Epic of the Dardanelles" is dealt with at considerable length. The Government is criticised for its handling of matters, and for the indecision which, in the opinion of the *Observer*, stood as the one effective bar to victory, but the most lavish praise is accorded to the men who took part in the operation:

We say, God bless the men of Anzac, living and dead, for their part in the deathless epic of the Dardanelles.

In turning to the question of what will happen at Salonika, the paper emphasises the fact of supreme confidence with which the higher command of France regards the situation, but it looks for a mighty attempt on the part of our enemies to drive us from the port.

Consideration for Greece does not at all count with the enemy, for the Bulgars are the masters of the local situation now and can constrain the Kaiser's reluctance to despoil King Constantine. The Bulgars hate the Greeks, burn for revenge, and now that Macedonia is in their hands they covet Salonika above all things. . . . Whatever understanding may have existed will be put aside, for to Tsar Ferdinand in this war one agreement is necessarily pie-crust like another. For every further assistance they may give, the Bulgars will make their further bargain. If by any turn of events they could make a better bargain with the Allies they would do it. They are the least sentimental of peoples, though among the most obstinate and ambitious. Seeking aggrandisement on every side and by no means content with what they have yet gained, they follow their own interests and nothing else. Thus, if the attack is undertaken in strength, we may be certain that the Bulgarians have already made their secret pact with the Kaiser, and that King Constantine's policy has resulted as M. Venizelos predicted.

The German Grip on Turkey.

An article under the above heading contributed by Mr. Ignatius Phayre to a recent number of the *Outlook* gives one of the best pictures of Turkish subservience to Germany that we have read. Mr. Phayre's informant was one Eyoub, a Young Turk genius, undoubtedly in German pay, one-time star reporter of the Government organ, the *Tanin*:—

Now, although he served them, I knew Eyoub detested Germans, and all they stood for in the Near East. He hoped to see the day when British guns would batter their Embassy—that arrogant, hill-set palace, whose eight spread eagles appear to "boss the Bosphorus" as Prussian colonels boss the army, and as the chosen of Von Tirpitz try to breathe fire into Turkey's rusting navy. Think of the Ottoman admiral who, after forty-nine applications for arrears of pay, stripped his flagship of brass and copper fittings and sold them to Levantine dealers around the docks!

"We must live," pleaded Eyoub on the despairing officer's behalf. I was having an hour of kayf with the Turkish agent one morning when the German Councillor rode by—a tiny, effeminate man, preceded by a giant Albanian kawass, who was armed to the teeth.

"I thought they were all at Therapia," I remarked of the Corps Diplomatique in general.

"All but the Germans," Eyoub explained. "They're never still. They've money to burn, as the Yankees say. And they're burning it—they're burning *us* at the same time, and we're helping the process." He named a high official of the Imperial Debt who'd been a fortune-teller up in the Stamboul bazaars and was now a prince of politics, with a fairy konak on the European shore, commanding glorious views of the snowy summit of Bithynian Olympus.

"We're sold," was Eyoub's detached opinion, "and not all the Ulema in the Chamber can save us from God's wrath." What tragi-comic tales the man told me of Turkey's grotesque parliamentarianism! How the Exarch of the Bulgars pulled one way and the Greek Patriarch another. How the member for El Kuds (Jerusalem) glowed with reforms. The hapless rayah, or peasant, was to have spring water and railways, as well as a noble harbour at Jaffa, which would make an Eden of the arid Holy Land.

Eyoub contrasted the day of German dominion with that before we "resigned the proud place in Turkish esteem":

What spacious days they were, when Stratford de Redcliffe drove a carriage and six with outriders! When British capital nursed Ottoman trade by sea and land, when a British fleet steamed into Besika Bay to save the classic city that broods by the Golden Horn, lovely as Helen among her maids! Now all is German. On the Kaiser's birthday Pera might be Potsdam—a place of spiky helmets, silk hats, and frock-coats, filling the Grande Rue with gutturals and smirks.

In the evening a grand dinner at the Teutonia and Artisans' Clubs, with speeches, clinking glasses, and telegrams to Berlin breathing unbroken fidelity—the "unverbruchliche Treue" of the Fatherland's fanatic sons.

"Ah, it's sad," Eyoub concluded; "but now we're sold, and must needs abide by our bargain." It was clear he admired as well as disliked his new masters. "Ma'ashallah, how they ousted you from Turkish hearts and hopes, since Von Kühlemann was made manager of the Oriental Railway!"

He thought the Kaiser the ablest man in Christendom, and pointed to his state entry into Jerusalem, and his subsequent greeting to the Sultan from beside the tomb of Saladin, as evidence of his genius:

He could do anything, that Emperor; Eyoub recalled the dramatic landing and fiery speech in Tangier. Why, France herself dismissed her Foreign Minister at the Imperial frown! The Kaiser's armed men were like the locusts for multitude. They were to shield Turkey from Russia's menace—a Power who could invade the Empire from Asia in overwhelming force.

"So we accepted protection," Eyoub concluded. He had himself seen the German legions manœuvring on a vast scale through Silesian stubbles after harvest. "To-day our protector is sitting on our shoulders, and we must carry him from Pera to the Persian Gulf. The German set up a Consulate at Bushire when he'd only six nationals in the whole region. He has money to burn, you see, and all goes into the Eastern furnace. But, yawash, man, let's talk of something else."

Lord Kitchener.

Mr. A. E. P. Weigall, late Inspector-General of Antiquities in Egypt, contributes to the *Star* (December 28) some interesting anecdotes and notes concerning the War Minister. Mr. Weigall points out that the popular view which makes of Lord Kitchener a man of iron without relieving traits of humour or kindness is by no means correct. "Lord Kitchener is a great deal more human" than he is usually supposed to be. The writer continues:—

It is not generally known that his lordship is a man of considerable intellectual and artistic attainments. As the result of his being, as a young man, for several years a member of the staff of the Palestine Exploration Fund, under the auspices of which body he conducted excavations and archæological researches in the Holy Land, antiquarian journals of thirty and forty years ago contain many papers written by him discussing with great earnestness the character of the Moabites or Ammorites, and demonstrating the verity of Holy Writ. In recent years he has given full play to these interests, and has made a collection of antiquities which is notable for its artistic and historical value. He is constantly engaged in adding to this collection, and he spends a considerable amount of time in pottering around second-hand shops and the galleries of small art dealers in search of masterpieces.

He is a very great authority on old china, and has a trained eye for almost all works of art. He is a connoisseur of antique carpets, early Christian paintings, ancient bronzes, and so forth; and it may be said that he is never so happy as when he has the leisure to spend an hour or two surrounded by his artistic treasures.

The writer includes the following anecdote, which shows the sort of material upon which the public estimate of his lordship's character is based:—

When he was Commander-in-Chief in the Sudan, a young subaltern was sent by him to blow up a certain disused fort with dynamite. The young officer set out upon his mission with sensations of the utmost pleasure and excitement, this being the first piece of work of a special character that had fallen to his lot. He hoped to carry it out with precision and dispatch, and he looked forward with the keenest expectancy to the Sirdar's commendation. Alas, for the hopes of youth! Owing to an unfortunate accident the dynamite exploded before its time, blowing ten of his Sudanese troopers to atoms, but leaving the fort quite intact.

In an agony of mind, the subaltern telegraphed the humiliating news to Lord Kitchener, deeply regretting the terrible accident, and deploring the loss of life. After an hour or two of bitter mortification, Lord Kitchener's reply came to hand, and with beating heart the youth scanned the message. It read: "Do you want any more dynamite?" That was all.

The Rift in the Lute.

The correspondent of the *Times* in the Balkan Peninsula in a dispatch from Bucharest dated December 11, and received in London on the 27th inst., describes the entry of the first German contingent into Sofia, when, with band playing and flags flying, it passed through streets gaily decorated by order of the authorities. It seems, however, that Bulgar satisfaction is not altogether untroubled by thoughts of the future, as the following quotation will show:—

No doubt now remains in regard to the existence of a secret compact between the Germans and Turks for the recession of the Dedeagatch railway to Turkey. The concentration of Turkish troops on the frontier provokes lively discontent and alarm in the minds of the Bulgarian public, who are beginning to lose confidence in the sincerity of German promises.

A further cause of uneasiness is found in the mystery surrounding the movements of Enver Pasha. After visiting Sofia

Digitized by Google

where he was received by the King and decorated with the Order of Alexandre, Enver proceeded to Orsova, where he held a conference with various persons, known and unknown. The rumour is now current that the conversations which occurred related to the well-known Young Turk design of restoring the Turkish Empire in Europe.

The Problem of the Adriatic.

Mr. J. A. R. Marriot, writing under the above heading in the *Nineteenth Century* (December), considers that the problem which involves the future of the Adriatic and its coasts is one of the most difficult and perplexing, as well as one of the most intrinsically interesting, of the war. There are three primary factors to be considered in its regard:—

1. The position and claims of Italy . . .

2. The position of the Southern Slavs, who are inspired with a growing sense of national self-consciousness, but are as yet very far from having attained to political unity. They claim that the time has come for the fulfilment of their aspiration towards national unity, and they demand such access to the Adriatic littoral as will assure their national future in an economic and geographical sense.

3. The position of the central empires of Germany and Austria-Hungary.

The writer adds a fourth and "secondary element": that of the Balance of Power, the theory of a European Equilibrium.

The principal areas in dispute are: (1) the Trentino or Southern Tyrol; (2) the city and district of Trieste, with which we may conveniently group the district of Gorizia-Gradisca; (3) Istria, with the important naval dockyard of Pola; (4) Croatia-Slavonia, with the commercial port of Fiume; (5) Dalmatia, the mainland coast and the archipelago; (6) Albania, and (7) the Slavonic hinterland, including the existing kingdom of Serbia and the States such as Bosnia and Herzegovina, and perhaps Montenegro, which it is hoped to incude in the Greater Serbia of the future. At present this Serbian group touches the Adriatic only through Montenegro, with its port of Antivari. Of the whole of these contested areas, except Serbia, Montenegro, and Albania, the Dual Monarchy was, even before the war, in possession.

Following this statement of claim and position the writer includes a brief historical survey of events which constitute the origin of the Adriatic problem.

The quotation which we give below follows an examination of Italy's claim to Dalmatia:—

In Dalmatia the Slavs contribute 96 per cent. of the population. That they should possess the whole of the hinterland, to the west of the mountain barrier formed by the Carso, the Velebit, and the Dinaric Alps, is freely acknowledged even by the most extreme champions of the Italian cause. But if the Jugoslavia of the future is to be anything more than a third-rate Power, that concession is obviously insufficient. The Greater Serbia must have ample and assured access to the Adriatic coast. Had it not been for Austrian intervention, Serbia would have secured that access after the first Balkan war, and in that event the second Balkan war might never have been fought, and Bulgaria might not be at the throat of Serbia to-day. With consummate adroitness did Austro-German diplomacy attain the twofold object of heading Serbia off from the Adriatic, and thus thrusting her into sharp conflict with Bulgaria on her eastern frontier. It will be the special and urgent task of English diplomacy to frustrate any similar attempt to sow discord between Italy and Serbia.

The writer points to the fact that popular sympathy on behalf of a Greater Serbia is in England a matter of recent growth:—

It has taken a European war to open our eyes to the fact that the little Serbian nation has, with heroic endurance and self-sacrifice, been holding the gate of the East for the last fifteen months. The Serbians have, it is true, been fighting primarily for their own national existence; they have been fighting the battle of the whole Southern Slavonic race, but they have been fighting not less certainly for us and our Allies.

This fact gives them a claim which no words can adequately measure, not only to all the military assistance we can immediately afford, but to every possible consideration in the final resettlement of the map of the Near East.

The German Outlook.

In a leading article dealing with the German outlook for 1916 the *Morning Post* (December 27), while not failing to recognise and condemn the shortcomings of our own Government, considers that the situation from the German point of view is black indeed at the end of 1915. We quote from the latter portion of this article which refers to the operations in the Near East:

The Allies . . . in the Balkans bring men to her standards, but these if they are to keep the field will need to be armed and provided by her, thus aggravating the demand on her stocks. And how will it increase her opportunities except in the forms of distant and speculative enterprises leading right away from the vital theatre of operations? Salonika, doubtless to her immense chagrin, she has lost. The expedition which came too late to save the Serbians has closed that coveted gate against Austria and Germany, except at the cost of another Gallipoli, with the advantages this time on the side of the Allies. Does the prospect of Egypt or Mesopotamia console our instructed German? The chances might be attractive if the operations could be carried out by the faithful Allies, but the Bulgarians, he knows, are a dour people, who frankly repudiate altruistic enthusiasms and Quixotism of any kind, and to talk of their undertaking the descent upon Egypt is mere nonsense. On the whole, he will probably conclude that the opening of the passage to Constantinople does not do very much towards advancing the position of Germany. Meanwhile, he has to admit to himself that the sea has failed him altogether.

The Russians in Persia.

A recent number of the *Irish Times* devoted a long leading article to the subject of Persia's position in the great war:—

It is easy to see now that at the very start of the war, or as soon, at any rate, as Turkey joined the Central Powers, steps should have been taken by Russia and England in conjunction to send armed support to the Persian Government, to evict the German intriguers from the Persian towns, and to close the frontier against any more undesirable importations of the same kind. At that time, however, Russia had her hands full in other directions, and our Foreign Office was still endeavouring to carry out its generous, but unfortunate, policy of keeping the smaller nations out of the war.

Having prefaced his article with the sentence quoted above, the writer proceeds to a brief historical statement regarding Anglo-Persian relations for the past forty odd years, and arrives at the conclusion that British diplomacy has not made the most of its opportunities during that period. British mistrust of Russia, as evidenced by "a certain section in Parliament," was, in the opinion of the *Irish Times*, responsible for letting the Germans in at the beginning. The article concludes:—

The unfortunate consequence was that the moment when parallel military action by Russia in the north and Britain in the south might have brought a permanent settlement of the Persian difficulty was allowed to pass away. Germany, whose commercial interests in the country were small—her territorial interests were *nil*—was enabled to find a fertile soil for sowing the seeds of intrigue which, as we know now, she has been spreading all over the world for the last generation. Happily, the war has obliterated the last remaining vestiges of Anglo-Russian suspicion in regard to Persia. Just as Russians rejoiced in the British expedition against Mesopotamia, which was designed, among other things, to protect the British oil concessions in Persia, so do Britons wholeheartedly rejoice that at last the Russians have found themselves able to intervene by force in Northern Persia, and to rescue the young Shah from the evil influences which were surrounding him. A new and prosperous chapter, we may well believe, has now opened in the history of Persia.

A Black Sea Engagement.

The "Own Correspondent" of the *Morning Post* cables to his paper (December 28) an interesting dispatch from Petrograd regarding recent naval operations in the Black Sea, when two Turkish gunboats and a large sailing ship laden with coal were sunk by Russian torpedo-boats:—

The hero of this exploit is again Prince Trubetskoy, already well known as a dashing naval officer. . . . Details of the engagement show that the Russian torpedo-boats first attempted to cut the enemy ships off from the shore, but the Turkish gunboats, immediately they sighted the enemy, put about for shore and ran. When already close ashore they opened fire at three miles' range, but the Russian ships speedily proved their superiority. The cannonade lasted about an hour, and the larger of the Turkish gunboats struck her flag before the firing ceased. A series of explosions took place on both the enemy ships, of a character indicating the presence aboard of a considerable supply of position mines. The Russian ships were attacked during the fight by a submarine, whose attempts to torpedo them were, however, successfully evaded, and the submarine was beaten off.

Articles to Note.

"The Influence of Egyptian Civilisation upon the World's Culture," by W. J. Perry, B.A., in the *Architect* (December 24).

"Fimble," by A. H. Moreton, in the *Daily Chronicle* (December 28).

"Greece and the Four Great Powers." Interview with M. Skouloudis, by M. H. Donohoe, in the *Daily Chronicle* (December 23).

"Germany's Down Grade," by Edgar Wallace, in the *Manchester Courier* (December 24).

"Jaffa Oranges," by Eden Phillpotts, in the *Times* (December 28).

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The attention of the *Morning Post* has been called to the case of the Deutsche Baumwollpresse A.G. (see previous "Notes and News" on the subject), an enemy firm operating in Egypt, and it refers to it as "a remarkable illustration of British supineness in the matter of dealing with German firms." It is to be hoped that by now, and in view of the publicity which has been given to this enemy firm, the authorities in Egypt will take immediate steps to prevent a recurrence of the incident. It would appear by correspondence in the *Egyptian Gazette* on the Government's "supineness" that the British colony's ire is up, and judging by one signed "Four of the Old Brigade," the attention of army officers has been drawn to the incident; they rightly deplore that the British Army should be used to fatten enemy companies.

***

As stated last week, I think that the whole question of enemy companies in Egypt should be treated on a broader basis than the mere institution of controllerships. It is generally admitted that the Deutsche Orient Bank, together with its subsidiaries, the Deutsche Hypothekenbank, the Deutsche Baumwollpresse A.G., etc., were mainly interested in Egypt in provoking the natives against our rule; they were the backbone of the German anti-English campaign which has done us so much harm; they were the centre of the Kultur propaganda which consists mainly of "buying favours" by ridiculously generous loans and mortgages on nothing like adequate security—*i.e.*, bribery. All this is generally admitted. Therefore, and considering that Egypt is now under our protection, there can be but one policy for our politicians to pursue, and that is: the German companies in question must disappear for ever from the Valley of the Nile; they must be swept clean out of Egypt. The method employed in attaining this end is immaterial.

***

"The importations of fruit and vegetables into Egypt during the month of September," I read in the *Egyptian Horticultural Review*, "included 1,314,263 kilogrammes of pomegranates from Cyprus. The declared value of these is £6,534. Cyprus also sent us considerable quantities of water-melons, aubergines, peaches, and fresh figs in the same month. There is evidently a good deal of money going abroad which might otherwise benefit the Egyptian cultivators in these days of low cotton profits. Is it not time for us to give some study to these small matters whilst attending to the staple crop?"

***

Admittedly no one can criticise the writer's desire to develop kitchen-gardening in Egypt, and I hope that all attempts in this direction will meet with the fullest measure of success. But I do object to the spirit in which Cyprus has been singled out for special mention. Cyprus is in no sense "abroad," and if the writer of the above paragraph had "thought imperially"—some people find it very difficult to do so—he would never have drawn our island into his argument. Personally, I am pleased to see that the Cinderella of our colonies (whom, in a moment of folly, we were going to wed to a Greek prince) has a market for pomegranates, aubergines, etc., in Egypt. And may that market continue to develop and increase! As for the Cyprus orange trade with Egypt, it should be fostered by the authorities for all that it is worth. Hitherto this has hardly been the case, and I am not far wrong when I assert that last year the trade was indirectly penalised by the Egyptian authorities, who, in order to favour the Jaffa (Turkish) trade, permitted the importation of enemy oranges into the country when they should have been forbidden, if only to give the Cyprus trade a fillip. In this case, again, the wrong was, I take it, unintentional; it was merely a case of being unable to "think imperially."

***

I am pleased to see that the British Manufacturers' Export Union of London has organised an exhibition of British goods in Egypt. According to the Cairo papers to hand, the exhibition was opened at the Continental Hotel, Cairo, on November 29, and attracted a great many visitors. Mr. J. G. Marks, one of the managing directors of the company, was responsible for having got together the necessary samples, etc., and I wish him every success. Even if the results of this first practical attempt at bringing British articles to the notice of the Egyptian buyer should prove disappointing rather than hopeful, let us remember that the British Empire (to paraphrase a well-known saying) was not built in one day.

***

I have received a circular letter from the British Manufacturers' Association, 1915, together with a succinct summary of its objects. Some of these are worth quoting:—The association is to be conducted on purely business lines in the interests of the manufacturers of the Empire; to be formed exclusively of British manufacturers; to endeavour to establish Free Trade within the Empire; to secure the appointment of a Minister of Commerce, and *to insist that such Minister shall be a business man*; to come to an agreement with our Overseas Dominions to prohibit the importation of all enemy goods for at least twelve months after the conclusion of the war.

***

Needless to say, the association, whose chairman is Mr. G. R. Cheesman, managing director of Messrs. Cheesman, Braid and Co., has all my sympathy, and I shall give it what support I can within the limits and scope of a journal devoted to Near Eastern affairs. The association's objects are praiseworthy, and if members of Parliament can be induced to give us a Minister of Commerce who will be a *business man* and not a politician, a *business man* and not a lawyer, a *business man* and nothing else, the association will have deserved well of the Empire. Further, I see that the objects of the association are mainly concerned with home matters—*i.e.*, the British Isles and the Empire (let us not forget that Egypt and the Sudan are now integral parts of the Empire), and that consequently the development of our foreign trade, as such, does not figure prominently on the programme. However much this is to be regretted, I hope that the success to be achieved by the association in its particular sphere will be such that it will shortly be able to turn its attention to two matters of paramount importance if we are to win the coming trade war. I refer to the reform of our Consular Service and to the harnessing of capital, both State and individual, to the requirements of trade and industry. But, to achieve this result, as well as those mentioned above, the association must have the backing of the great majority of the Empire's manufacturers. Let us hope that that support will be forthcoming.

***

The Egyptian Government (says the *Times* Cairo correspondent), considering the situation sufficiently satisfactory, is desirous that the stock and share Bourses should reopen forthwith. Negotiations to this effect are proceeding with the Cairo and Alexandria Bourse Commissions. Financial establishments generally agree as to the desirability of reopening with as few restrictions as possible, but a certain element in Alexandria insists on various conditions in respect to the liquidation of existing holdings which appear to be unreasonable. It is expected that a satisfactory settlement will be obtained soon and the reopening take place shortly.

***

The news that the Government contemplates the reopening of the Bourses (there is really only one Bourse in Egypt, namely, that at Alexandria) does not come as a surprise to me. As a matter of fact, it is astonishing that this measure has not been taken before now, because, if stringent regulations as regards the liquidation of accounts were imposed, as was the case here, I see no reason why the Alexandrian Bourse could not have been operating these many months past. It is said, in the cablegram quoted above, that a certain element insists on various conditions in respect to the liquidation which appear to be unreasonable; but if the regulations to be enforced are identical (as they should be) with those in force in this country, they ought to prove acceptable to the most unreasonable client.

***

Speaking yesterday with a City broker interested in the Egyptian market, he gave it as his opinion that the opening of the Bourse was an academic question. Egypt, he argued, has been buying both here and in Paris, which is not surprising, in view of the sound economic position of the country. Everything tends to discountenance the fear that the public would attempt to unload, and, therefore, if adequate regulations are imposed, no danger can be incurred in opening the Bourse. On the other hand, the market itself will not be affected either one way or the other, whether the Bourse is opened or not.

***

The annual meeting of the Egyptian Land and General Trust was held in London yesterday. The Chairman stated that as litigation was proceeding with regard to the company's holdings, the directors were not in a position to present a report or a statement of accounts. The litigation, he thought, would be settled shortly in favour of the company, when a meeting would be held and the accounts presented.

COMMENTATOR.

Egypt's Trade During October.

(From Our Own Correspondent.)

Cairo, November 19.
(Delayed in transmission.)

The Egyptian Customs statistics for October have just been published. During the month imports amounted to £E1,672,767, and exports to £E2,414,482, as against £E930,884 and £E906,214, respectively, in October, 1914, showing an increase of £E741,883 in the former and of £E1,508,268 in the latter.

Imports.

The principal imports during the month were skins and leather good £E19,833, flour £E46,541, coffee £E44,270, petroleum £E34,656, tea £E23,762, coal £E198,003, drugs £E22,452, textiles £E618,510, worked iron and steel £E52,448, and fresh and dried fruit £E32,242. Half of the imports came from Great Britain, whose share amounted to £E823,332, while that of the British Possessions came to £E142,715, so that the British Empire figured for 58 per cent. of the total imports, which, as it happens, is approximately the proportion for the current year—quite unprecedented as a matter of fact. The chief British imports were tissues £E357,117, coal £E178,647, flour £E41,220, and worked iron and steel and machinery £E71,997, whilst British Possessions contributed all the sacks, pepper, tea and indigo. The United States sent £E79,993—skins £E4,538, all the petroleum, coal £E19,356—Brazil as usual provided nearly all the coffee—£E41,654, India supplying the balance—France £E105,617, Italy £E193,356—cotton tissues £E91,258—Switzerland £E18,727 and Greece £E85,444.

Exports.

Under exports the chief items are leather goods £E20,508, cottonseed £E285,477 (314,599 ardebs), cereals £E92,132, sugar £E40,068, cotton £E1,804,171, wool £E23,566 and gold and silver articles £E19,773. The largest buyers were Great Britain £E1,379,614—cotton and cottonseed £E1,258,497—United States £E419,469—cotton £E415,312—France £E89,854, of which £E21,323 cereals and £E43,256 cotton—Italy £E151,977, Russia £E191,188—entirely cotton.

The cigarette trade improved during the month, for twenty-two tons valued at £E18,110 were exported.

The figures for October are certainly satisfactory for they indicate clearly that trade is fast picking up. A comparison only with October, 1914, except, that it shows, what a change has come over the commercial position, does not convey a complete idea of the state of affairs, seeing that at this time last year we were still suffering from the first shock of the war and commerce was in general very unsettled. Perhaps the following table may prove of interest in this connection:—

	Aug. 1—Oct. 31.		Year to Oct. 31.	
Year.	Imports. £E.	Exports. £E.	Imports. £E.	Exports. £E.
1913	7,338,209	7,106,286	22,468,667	22,060,683
1914	3,357,120	1,592,938	19,713,316	18,327,169
1915	5,270,388	4,967,475	14,905,101	19,285,991

Satisfactory Results.

From this we see that, whereas during the first three months of the war exports fell off by £E5,513,348 and imports by £E3,981,089, during the corresponding period of this year they picked up very considerably. If, in addition, we turn to the total figures for the ten months ending October 31, we find that the position is even more hopeful. In the first place the export figures for the current year, which cover ten months of war conditions, are better by nigh on a million than those for the corresponding part of 1914, which, be it noted, included seven months of pre-war, *i.e.*, normal conditions, and that these figures are only 12 per cent. below those of the same period of 1913, which was an entirely normal year. Imports, it is true, show a marked falling off, although during the past three months there has been a decided tendency to pick up, but the comforting feature about these figures is that the balance of trade, which has in the past nearly always been against Egypt, has during this year swung over in her favour to the extent of no less than £E4,380,890.

Cotton and cottonseed, which always bulk largely in the export figures of the country, show a falling off of £E46,950,082 and £E394,286, respectively, if one compares the above two years. This is due to the low prices ruling during the opening months of the current year, for the actual quantities exported are, respectively, 315,155 cantars and 98,186 ardebs in favour of 1915. The exports are, however, as mentioned, a million up by comparison with 1913, owing to the great impetus given to the products and industries of the country, and the final figures for the year will be found to furnish some remarkable proofs of the extension which Egypt's foreign trade has undergone since the outbreak of war.

GREEK TRADE.

J. B. C. K., writing in the *Aberdeen Free Press*, argues that a study of the industrial and economic position of Greece helps to elucidate the present very uncertain political situation, and to explain why the Greek Government is so anxious to keep out of the general European conflagration, and is not prepared to face the risks of intervention on either one side or the other in the struggle now proceeding in the Balkan States.

"Greece is a comparatively small and poor country, and is very sparsely populated. The industry of the country is mainly agricultural, but of its total area only one-fifth can be cultivated, and over one-third of the total area is still waste land. Agriculture is hampered by the dryness of the climate and by the lack of rivers which can be utilised for irrigation purposes. The leading crops are currants, olives, and wheat, and the economic position of the country is chiefly dependent upon the currant, which is the most favoured and most widely cultivated crop. In return for her exports of currants, olives, and agricultural produce, Greece receives coal, cotton, and woollen goods and other manufactured products from the more highly developed industrial countries of Europe. The total trade in 1912, the last year for which the completed figures are available, amounted to £11,962,000, of which total £5,800,000 represented the value of the export trade.

"The following tabular statement shows the relative extent to which the Central European and Entente Powers share in this trade, the figures being for the year 1911, the last available:—

Trade with the Central Powers.

	Imports from. £	Exports to. £
Germany	533,000	654,000
Austria-Hungary	948,000	540,000
Turkey	357,000	192,000
Bulgaria	565,000	14,000
Totals	£2,403,000	£1,400,000

Total of combined imports and exports, £3,803,000.

Trade with the Entente Powers.

	Imports from. £	Imports to. £
United Kingdom	1,634,000	1,351,000
Russia	1,377,000	104,000
France	417,000	549,000
Italy	261,000	160,000
Egypt	37,000	458,000
Totals	£3,726,000	£2,622,000

Total of combined imports and exports, £6,348,000.

The value of Greece's commerce with the Entente group of Powers is therefore considerably greater than the value of her trade with the Central European Powers. This trade amounted to rather over one-half of her total external trade in 1911, and the risk of having it entirely cut off is not a pleasant one for a small kingdom in which the revenue and expenditure seldom balance one another. As regards the United Kingdom's share in Greece's trade, the following figures, covering five years, show that this is growing, and that the percentage of the total trade in 1912 was considerably larger than it was in 1909:

Greece's Trade with the United Kingdom for Five Years (in Thousands of £).

	1909. £	1910. £	1911. £	1912. £	1913 £
Imports from Greece.	1,600	2,286	2,273	2,171	2,143
Exports to Greece ..	1,481	1,545	1,705	2,569	2,538
Totals	3,081	3,831	3,978	4,740	4,681
Percentage of the total external trade of the country.....	32	32	31	39	—

As regards the character of this trade, currants, iron-ores, and raisins, with sponges and olive oils, account for the larger share of the exports from Greece, the value of these commodities in 1912 amounting to £2,057,000, while coal with cotton and woollen goods account for the greater portion of the Greek imports from this country. The currant exports to the United Kingdom alone were valued at £1,600,000 in 1912, and it is the fear of losing this important market for her chief staple product that is causing Greece to hesitate at the cross-roads at which she has now arrived in her military and political history.

TRADE NOTES.

Egypt.

Tenders are invited by the Secrétaire Générale des Domaines de l'Etat (Service Technique), Cairo, for the supply (1) of 15,315 okes of "huile pour mouvements"; (2) 7,670 okes of "huile pour cylindres"; (3) 16,200 okes of "huile pour moteurs Diesel." Date, February 2.

Tenders are invited by the Secrétaire Générale des Domaines de l'Etat (Service Technique), Cairo, for the supply of 6,000 kilograms of axle grease. Date, January 16.

Tenders are invited by the Director of Stores, Department of Public Health, Cairo, for the supply of equipment, etc., necessary for the scavenging and watering service for one year from April 1, 1916, to March 31, 1917. Date, January 15.

Messrs. J. Compton and Sons, Ltd. (calico bags), the Model Workshops (furniture and tricycles), Th. Hinshelwood and Co. (miscellaneous), Jeffery W. Eady (boots), and Th. De La Rue and Co., Ltd. (stamping ink, represented in Egypt by Messrs. Whitehead, Morris and Co., Ltd.), were recently among the successful tenderers to the Egyptian Postal Administration for the supply of articles as indicated in the parentheses above.

H.M. Consul at Cairo reports that a local firm of buying and commission agents wishes to get into touch with United Kingdom manufacturers of the following goods: Metal manufactures: Tin ingots, brass wire, galvanized iron sheets, tin plates, iron wire, and steel tubes. Hardware: Enamelled ware, bedsteads, buckets, nails, tacks, iron screws for wood, bolts and nuts. Paints and oils, etc.: Linseed oil, earth colours, zinc white, varnishes and brushes. Textiles: Cotton piece goods, laces, mosquito nets, woollen cloths, carpets, and cotton and woollen blankets. Clothing, etc.: Waistcoats; flannel, cotton, and woollen shirts; hosiery; and boots and shoes. The same firm also wishes to get into touch with United Kingdom buyers of old metals.

H.M. Consul further reports that a local Egyptian firm desires agencies (for all Egypt and Sudan) of United Kingdom manufacturers of the following goods: Household supplies, such as lamp glassware, earthenware, enamelled ware, buckets, safes, baskets, etc.; all kinds of leather and leather goods; cotton and woollen textiles; outer garments and underclothing for men, women, and children; fancy goods and toys; general stationery, packing paper, and cardboard; and pharmaceutical products. The same firm also inquires for the names of British firms desiring a representative in connection with contracts for the Egyptian Government.

United Kingdom manufacturers of the goods mentioned above, and exporters of United Kingdom goods, desirous of appointing an agent in Cairo, may obtain the name and address of the firm referred to on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

PURSUIT OF THE GOEBEN.

Requisitioned Coal.

Mr. Justice Sankey delivered judgment on December 14, in the King's Bench Division, in the case of Seville and United Kingdom Carrying Company, Limited, *versus* Mann, George, and Co. The action arose out of disputes between the parties owing to the requisitioning by British cruisers in the Mediterranean of coal on board the Rosemount, a vessel belonging to the plaintiffs, which had been chartered by the defendants.

The defendants had sold three cargoes of Welsh coal to a firm of Gilchrist, Walker, and Co., in Constantinople, and the Rosemount was chartered by them to take one of the cargoes to Constantinople. The Rosemount was in the Mediterranean when the Goeben and Breslau were trying to enter Turkish waters, and it was arranged between the parties that the coal should be discharged at the Piræus, Malta, or Alexandria, at the defendants' option, on paying an extra freight. When the Rosemount arrived off Tenedos the British cruisers Indomitable, Indefatigable, and Gloucester, which had chased the Goeben and Breslau in the Dardanelles, appeared and requisitioned 3,178 tons of coal out of the Rosemount.

Messrs. Gilchrist, by telegram from Constantinople, instructed the master of the Rosemount to go to the Piræus, and the defendants undertook to pay the extra freight for discharge there—5s. a ton over the original freight of 7s. 6d. a ton for Constantinople. At that time they did not know that the greater portion of the cargo had been requisitioned. But they had agreed to sell the whole cargo to the Admiralty, who desired delivery at the Piræus.

The plaintiffs claimed the freight of 12s. 6d. a ton on the whole cargo in consideration of their consenting to go to the Piræus, although part of it had been delivered at Tenedos; and they also claimed £280 for demurrage at the Piræus.

The defendants denied their personal liability, and said that they acted only as agents for Messrs. Gilchrist, and not as principals.

Judgment.

Mr. Justice Sankey, in his judgment, said that, in his view, the defendants had offered to pay an extra freight of 5s. a ton on the whole of the cargo shipped in consideration of the vessel's being taken to the Piræus. He thought that the defendants were not acting as agents. None of the parties knew that the cargo had already been broached, but the defendants heard afterwards, and with that knowledge accepted personal liability.

He had next to decide whether the agreement was made in ignorance of the true state of facts in respect of a cargo which had ceased to exist, and was therefore not binding on the defendants. Mr. Leck, for the defendants, said that the cargo, which was the subject-matter of the agreement of August 24, had ceased to exist because it had been taken by the Government, and was not conveyed by the plaintiffs to the Piræus. In his (his Lordship's) view that was incorrect. The cargo had not, in fact, ceased to exist, nor had it perished in the sense of the words used in the cases mentioned above. Part of it had been sold to—or, at any rate, taken by—his Majesty's Government, and the price of the whole of it was eventually paid. There was no mistake going to the root of the contract. The defendants wanted the vessel to go to the Piræus, and it went there. The only mistake that could be suggested was that at the time when they made the agreement they were under the idea that the whole cargo was still in the vessel, but the tonnage was used as a basis of arithmetic, and the extra freight was calculated at the rate of 5s. a ton on the cargo shipped, and not at the rate of 5s. a ton on the balance then left. He therefore held that the defendants were personally liable for 5s. a ton extra freight.

As to the demurrage claim, he held that the defendants made no agreement to pay any demurrage, and that, having regard to the circumstances at the Piræus, the vessel was not detained more than a reasonable time. He therefore disallowed this part of the claim. The parties had come to terms. There would be judgment for the plaintiffs for an agreed sum, with costs.

Harbour Works at Alexandria

Lecture at the Institution of Civil Engineers.

On November 30 last, Mr. David Ernest Lloyd-Davies, M.Inst.C.E., read a lecture on "Harbour and Coast-Defence Works at Alexandria," at the ordinary meeting of the Institution, from which the following is an abstract:—

The city of Alexandria possesses two harbours, known locally as the Western and Eastern ports.

Western Port.

The first improvement of the access to the port was undertaken in 1889 and consisted in the deepening and widening of the Boghaz Pass, the only fixed channel. High and low lighthouses were built to give the leading line at night, the higher light being visible for a distance of ten miles. In 1900, the Gabbary dry dock was built by the Khedivial Mail Steamship Company, after the designs of Sir Benjamin Baker. In 1893, the western extension of the quay, south of the old careening-basin, was undertaken.

The general expansion of commerce in the port and the consequent lack of quay-space rendered imperative the removal of the timber-trade, which had increased in value from £288,000 in 1884 to £1,337,000 in 1907, to a more convenient site. For the quays and storage sheds an area of about 420,000 square yards of land was reclaimed and levelled, and three moles, each 131 yds. long and 87 yds. wide, 60 yds. apart, were constructed. The depth alongside is 30 ft. and the quay frontage 1,225 yds. which will allow nine ships to be berthed at one time in case of necessity. The works were completed in 1911 at an outlay, inclusive of road-paving, drainage, expropriation, and administrative charges, of £282,770, or roughly £50,000 less than the value of the lands reclaimed. The main breakwater and the quarantine jetty were also extended to protect the timber quays.

The western port of Alexandria now ranks third, after Marseilles and Genoa, among the Mediterranean ports, and its 1,850 acres of sheltered area are capable of accommodating 250 large vessels 100 yds. apart. The total tonnage of the ships entering and leaving the harbour increased from 2,052,000 tons in 1880 to 7,814,000 in 1908, whilst the value of import and export trade rose from £18,856,000 to £52,075,000, during the same period. The revenue in 1911 reached £325,000.

The Eastern Port.

The deplorable condition of the foreshore in the eastern harbour, owing to the direct discharge of sewage into the bay, induced the Alexandria municipality in the early nineties to consider proposals for the amelioration of the existing state of affairs. It was finally decided: (1) To construct a promenade with a sea-wall, of suitable design to resist the roughest sea, around the eastern harbour, and to lay a main intercepting sewer along its entire length, with outfalls at both Kaid Bey and Silsileh. (2) To abandon any idea of building breakwaters to protect the harbour. (3) To construct a promenade with a sea-wall and intercepting sewer around Anfoushy Bay.

The whole undertaking was carried out in the years 1900-4 at a cost of £377,000, inclusive of the intercepting sewers and the filling of the 630,000 sq. yds. of reclaimed land. The total cost was approximately £500,000. By the sale of reclaimed land the enterprise would have yielded a profit of at least £500,000 had all gone well, but unfortunately the violence of the sea had been underrated, and the waves during stormy weather washed over the sea-wall, inundating the promenade and adjacent property.

The author, who was appointed City Engineer of Alexandria in the autumn of 1906, was instructed to report on the matter. Investigation revealed the fact that a portion of the toe of the section had been scoured out in the most exposed places, and that the 17-ton blocks had slipped forward. The impact of the waves hurled huge masses of water to a height of 26 ft., and the force of the blow was calculated to be at least 1.56 ton per sq. ft. The whole of the additional apron of 1-to 2-ton stones in front of the vertical section was washed away, and the masonry was attacked, whilst the air compressed by wave-action drove jets of water through the mound (the lightest of the three sections) to a height of 3 ft. in the roadway. Evidently, therefore, the initial error was the omission of the breakwater.

Three alternative remedies were proposed:—

(1) The construction of breakwaters at the mouth of the bay, at a cost of £220,000.

(2) The construction of smaller breakwaters within the bay, at a cost of £180,000.

(3) The addition of a long rubble bank gently sloping towards the toe of the wall to reduce the velocity of the breaking waves, at an estimated expense of £130,000.

The first alternative was chosen, as it served the triple purpose of protecting the sea-wall, creating a fine pleasure harbour 600 acres in extent for the city, and providing an additional refuge for light commercial craft, which appeared quite to justify the additional expenditure. The length of the Kaid Bey branch is to be 547 yds. and average depth of water 26 ft.; the Silsileh arm will be 765 yds. long in 16 ft. of water. The width of the entrance will be 383 yds. and the depth 30 ft. The foundation consists of hard sand.

The section is an adaptation of Pascul's Marseilles composite type, with the outstanding feature of a double slope, 1 in 1 up to water-level, and afterwards 1 in 3 for the pell-mell blocks on the exposed face.

The pell-mell and set blocks, weighing 40 tons, are composed of five parts of broken limestone, two parts of sand and one part of hydraulic lime. The variation allowed for the voids in the pell-mell mass is between 25 per cent. to 35 per cent., to give an average of 30 per cent.; special precautions with regard to the first course of blocks were taken to lay them accurately endways at the toe, in order that they should offer as small a face as possible to the impact of the sea.

It was decided to undertake the Kaid Bey branch first, and Messrs. Schneider and Company have the work in hand.

The storm conditions at Alexandria vary from year to year to a remarkable extent, so that, by fortuitously encountering a bad year, the contractor might be unjustly penalized; to avoid this it is agreed that any day during which the wind blows for any complete hour with a velocity exceeding 15 miles per hour, no matter what the direction may be, is to be regarded as a *dies non*.

Under the author's main-drainage scheme for the city, on which £350,000 will be ultimately expended, all sewage is to be conveyed to a pumping station at Kaid Bey, and discharged half-mile out to sea at Y, the depth of water at that point being 82 ft., and the set of the tidal current being westward. The present outfalls will, under the new conditions, be utilized as storm-water outlets only.

EGYPT AND THE SUDAN.

From Our Own Correspondent.

Cairo, November 19.

During October there was a total turnover in trade of £E110,568 between Egypt and the Sudan—£E40,472 in imports from, and £E70,096 in exports to, that dependency. Imports from the Sudan into Egypt included livestock £E26,923, cereals £E3,659, whilst exports comprised wheat £E7,504, refined sugar £E6,346, coffee £4,688, and cotton tissues £E20,374. To the end of October the Sudan had imported from Egypt a total amount of £E720,891, and had sent in return goods to the value of £E416,494.

An exhibition of British goods, promoted by the British Manufacturers' Export Union of London, was opened at the Grand Continental Hotel, Cairo, on November 29. A large number of visitors attended, and the large and varied assortment of goods which Mr. J. G. Marks, one of the company's managing directors, had put on view was greatly admired.

Alexandria Prize Court.

S.S. Rabenfels (ex cargo).

Judgment has been given by the Supreme Court sitting at Alexandria in prize in a salvage case relating to the s.s. Rabenfels, the facts of which are set forth in the judgment, as follows:—

The s.s. Rabenfels of the German Hansa Line arrived at Port Said on a voyage from Hamburg with a cargo of coal on August 2, 1914, her ultimate destination being Bombay. While the ship was detained at Port Said, on or about September 16, 1914, a fire broke out in holds No. 1 and 2 in the cargo of coal. . . . The Marshal of the Prize Court who had arrested the coal as prize on December 13, 1914, came to the conclusion that the best course to take was to sell the coal and have it removed, which was accordingly done, the price obtained being £E9,045 19s. 3d. for the 6,000 tons of Westphalian coal.

In January, 1915, the Procurator admitted the claim of Messrs. Turner Morrison and Co. as owners of the cargo, and granted them a release. Mr. Halford, on behalf of the Deutsche Kohlen Depot, now claims from the proceeds of the sale of the coal £1,581 17s. 3d. in payment of discharging and landing, hire of lighters and tugs, storage and Customs dues and expenses which were incurred by them in discharging the coal from the ship. Mr. Booth, who appears on behalf of the cargo owners, resists this claim on the ground that it is not a claim against the cargo, but a claim for work and labour done by the Deutsche Kohlen Depot as agents for the Hansa Line, to which the ship belongs, and that the money is due from the Hansa Line, the owners of the ship; that, if the cargo is liable in any way, the only way is by contribution in general average, because the coal was discharged not only to save the coal, but also because the ship itself was in danger from the fire and the discharging was necessary for her safety.

He further urges that the proper course for the Deutsche Kohlen Company to take is for the Bremen branch of the Deutsche Kohlen Company to bring an action against the Hansa Line in Bremen, as it is the master, or owners of the ship, who owe the money, and that the Kohlen Company cannot proceed directly against the cargo owners.

There was also a further point raised, namely, that the Deutsche Kohlen Company, being an enemy firm, had no right to appear and sue in this Court; but a licence to trade granted by the authorities to the Deutsche Kohlen Company at Port Said has been produced, which, although of a very restricted character, amply covers the present proceedings.

Mr. Halford, on behalf of the Deutsche Kohlen Company, argues that the Kohlen Company were not acting as agents of the Hansa Line, but as an independent firm, that they were acting as salvors, and salvors of the cargo only, and that the ship was never in any danger and the discharging of the coal was for the purpose of the saving of the coal only.

The first matter to consider is whether there was any real necessity for discharging the coal, and, if so, was it for the purpose of saving the ship, or the coal, or partly on account of the danger to the ship and partly for the purpose of preventing the complete destruction of the coal from the fire. . . Without any expert evidence to guide me, I feel bound to come to the conclusion that there must have been some danger to the ship.

The next thing to consider is, in what capacity were the Deutsche Kohlen Company acting. In their affidavit, they state that: "Although my company are agents at Port Said of the Hansa Line, owners of the s.s. Rabenfels, it was not in such capacity as agents that my company undertook the work of discharging and storing the cargo, but being the sole German coaling company in Port Said, our services were called on by the master of the ship and required by our director, Mr. Rickmers, as representative of the Bremen Insurance Company."

The fact is clear in this case that the master of the Rabenfels undoubtedly called upon the company to discharge the coal. But the question it is necessary to determine is whether he called upon them as salvors? . . .

In a case of salvage, the master of the ship is not bound to do everything himself; he may employ experienced persons to act for him. The master of the ship is the authorised agent of the owners of cargo as well as the ship owners, and, having custody of the cargo, is bound to do all he can to save it, and in this case he called upon the Deutsche Kohlen Company to discharge the coal not only for the purpose of saving the coal, but, as I have already found, for the purpose of avoiding the danger of the destruction of the ship.

The Deutsche Kohlen Company claim that they were not acting as agents of the Hansa Line, but were acting as an independent company in rendering their assistance to discharge the coal, but even if they were acting as agents of the Line it would not necessarily preclude them from claiming as salvors. Therefore, taking all the circumstances in this case into consideration, I am of opinion that the assistance rendered by the Deutsche Kohlen Company was that of salvors.

Mr. Booth urges that if any sum of money is due to this company they can only claim by contribution in general average, and there I am in agreement with him.

The final question I have to decide is whether the Deutsche Kohlen Depot have any power to proceed against the cargo owners for the expenses of their salving, or whether their right course is to proceed against the owners of the ship and, as Mr. Booth suggests, to bring their action through their branch in Bremen against the owners of the ship, the Hansa Line, at Bremen, in Germany. On this point I have not been able to find any precedents.

In Strang Steel and Co. v. A. Scott and Co. 14 A.C. 601, it was decided (1) Each owner of jettisoned goods becomes a creditor of ship and cargo saved. (2) He has a direct claim against each of the owners of ship and cargo for a pro-rata contribution towards in-

demnity, which he can recover (a) by direct action; (b) by enforcing through the ship's master, who is his agent for that purpose, a lien on each parcel of goods salved to answer its proportionate liability.

If any owner of cargo has a direct claim on the rest of the cargo for his losses in the preserving of the ship and cargo, surely, in equity, the salvor of the cargo should also have the same rights for his expenditure in preserving the ship and cargo.

Carver, in his "Carriage by Sea," states: "A salvor who is in possession of property which he has saved has a possessory lien on the property, and whether in possession or not, he has a more extensive right of maritime lien which he can enforce through tribunals having Admiralty jurisdiction." And gives as his authority Hartford v. Jones I. Ld. Ray, but I have no opportunity to read the report of the case. . . .

Taking these cases into consideration, although some of them may not be directly in point, it does appear to me that the salvor has the right to proceed against the owner or owners of the cargo salved for that portion of his expenses which are due from the cargo owner under the General Average Contribution.

Engineering Notes.

Gas By-Products in War Time.

People must have noticed that gaslight has recently been rather poor, seeming, at times, as if it were going out. Some consumers blame the gas companies, while others attribute it to some measure against air raids. But the real fact is that, owing to the great demand for benzol and toluol, which are constituents or by-products of gas, and which form the basis of high explosives, these by-products are being extracted from the gas for that purpose, with the result that the illuminating, as well as the calorific power of the latter, is occasionally affected. It may, therefore, be considered a patriotic duty not to grumble at the apparent poverty of gaslight.

Coke.

But there is yet another patriotic duty expected from the public in that direction. In a printed appeal the Parliamentary War Savings Committee points out that "the more coke is used the greater will be the production of the by-products which are required for making explosives for the Army and Navy." For, in order to obtain these necessary by-products, there must be an immense output of gas, which also means an immense production of coke; and unless this latter is utilised much more than has been in normal times of peace, the supply will be embarrassingly large. The use, therefore, of gas-coke by the public, and particularly by steam users and in all branches of industry where coke can be used as fuel, is a patriotic duty.

Coal Tar.

It has been justly said by a scientist that this is the era of by-products; and what modern science has discovered in recent years for the utilisation of by-products which were formerly thrown away is really wonderful. It is particularly so in the case of gas by-products. Apart from the two above-mentioned constituents of gas, we may refer to one of the principal by-products of gas—namely, coal-tar, that black substance which is so offensive to sight and smell that, only a few years ago, people did not know how and where to throw it away without causing a nuisance. Yet coal-tar, once a thing abhorred and hard to get rid of, is now the basis of many rich industries throughout the world. It yields dyes of remarkable stability and brilliancy, which have driven natural dyestuffs almost out of the market, one of them being, unfortunately, indigo, which once formed an important resource of commercial wealth in British India. It yields saccharin, which is four hundred times sweeter than sugar, and which is very extensively used instead of the latter for general purposes. A host of medicines for the treatment of various diseases, invaluable antiseptics, and most exquisite perfumes, indistinguishable from those of flowers, are also extracted from this black, ill-smelling coal-tar. It provides, also, commerce with naphtha, light and heavy oils, with pitch, which is utilised in roadmaking and in the making of varnish and roofing felt, with naphthaline and many other substitutes.

High Explosives.

A derivative, also, of coal-tar is picric acid, which forms the basis of lyddite, the most powerful explosive known to man. Picric acid was used for a long time as a dye without its explosive properties being suspected, until a method was discovered in 1888 by which these properties were developed in the formation of a compound which was offered to the British Government as a powerful explosive. Numerous experiments were subsequently carried out at Lydd in Kent, and eventually the compound was introduced into the service under the name of lyddite. The inventor of this explosive found that by reducing picric acid crystals to a liquid of the consistency of cream, and then mixing it with guncotton melted in alcohol, he obtained an explosive which, according to experts, is more terrifying and tremendous in its destructive powers than anything else known before or since. Shells which are used in British big guns are generally filled with lyddite. Some of these shells weigh nearly one ton, and can be thrown to a distance of twenty odd miles. To obtain this marvellous and terrific power, a smokeless powder, cordite, is used in firing the guns. Cordite is a great deal more powerful than either gunpowder or gun-cotton. It is composed of gun-cotton, nitro-glycerine, and vaseline, mixed together with certain parts of acetone until they form a soft putty-like paste, which is forced through the holes of a metal plate, and emerges in long strings (cords), whence the name "cordite."

The "Hog Motor."

The war, or the lack of labour arising out of it, are, undoubtedly, responsible for the numerous labour-saving mechanical contrivances that have recently been brought out. Most of them have apparently been designed with a patriotic view to help the farmer, who is suffering from lack of labour more than any other class. At a recent exhibition one of these new contrivances attracted considerable attention, for it was very ingenious as well as amusing. It is a machine by which pigs are induced to work for their living, and has been nicknamed "hog motor." The "motor" is the pig himself. The invention comprises a combined grinder and a feeding tray. The machine is cylindrical in form and is constructed wholly of metal, except the tray and sweeps, which are of wood. At the top is the hopper, which holds four and a-half bushels of grain. Within, the cylinder is rotated by the pig, using its snout as a lever, pressing against sweeps or projections attached to the cylinder, and resting on the tray The ground feed is distributed evenly to each of the feed openings by a deflector inside the cylinder, thus insuring each animal securing an equal amount of feed. The machine is 14 in. high, 40 in. wide, and the width of the cylinder is 28 in. It is said that it has been adopted by many farmers already with satisfactory results.

Reinforced Concrete.

The use of reinforced concrete has enormously increased in recent years, and it is evident that with experience it will continue to increase not only in all branches of building construction, but also for a great number of other purposes. Concrete is, indeed, a great boon to the engineers and architects, because it enables them to make or form their stones as they want them, instead of having to labour over the question of manipulation and use of natural stones for their purpose. The latest employment of reinforced concrete is in the construction of roadway arches, arch lining, etc., by an ingenious form of ferro-concrete blocks. The arching consists of a series of segmental inter-locking blocks which can be put together easily without specially skilled labour, and be made to stand even dry-laid, though in practice they are set in cement grout. It is possible to fit the blocks of the arch together without centring. Five or six blocks are first placed together and the right end of the partial ring thus formed is then lifted with jacks, and more blocks are added, and by repeating the process a complete semi-circle, or horse-shoe arch is obtained. A horse-shoe section, of course, demands solid ground to act as an abutment, otherwise outside pressure will tend to bring the feet of the arch together. There is no reason, however, why the section should not be a complete tube when needed. These blocks may be of small dimensions for the convenient handling of two men, or in sizes, weighing 5 cwt. each requiring more men. This latter size has been successfully used for a 12 feet diameter roadway, with 12-inch lining, the reinforcement being a skeleton of round iron bars. The system is very suitable for tunnelling work, and specially adapted for use in collieries and other underground works.

With reference to the Trading with the Enemy (China, Siam, Persia and Morocco) Proclamation, 1915, it is notified that inquiries as to whether specified firms in Persia or Morocco are desirable as consignees of goods, from the point of view of possible trading with the enemy, may now be made at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Near East Markets.

OLIVE OIL MANUFACTURE IN PALESTINE.

The United States Consul in Jerusalem reports that all olive oil made in the Jerusalem consular district, whether by the older processes or by more modern machinery, is considered as edible without refining, with the sole exception of that last pressed from the bruised berries. This, being dark and containing much of the pulp, is fit only for the soap industry, and then only after being mixed with better qualities.

Type of Crusher.

The old native oil presses consist of a circular stone trough elevated a little from the ground, in which a stone disc rotates around an upright shaft. This disc turns on its edge like a wheel, and is operated by a horse, mule, or camel. One man is constantly stirring, removing, and replacing the olives as they are crushed, another man carrying the whole olives to the mill and returning with the crushed ones. Once sufficiently crushed, they are placed where they can be filled into circular baskets that have a small opening and are quite flat. These baskets have been in use for a long time.

The older extraction method, and one still much in use, calls for a wooden box for a mould, in which a large piece of coarse goat's-hair cloth is laid. The box is filled with the crushed berries, pressed compactly together, after which the cloth is folded over the top in a cater-cornered style. These are now ready for the press. This method of crushing the olives is the oldest known, possibly dating back hundreds of years, as ruins of mills would seem to indicate.

Modern mills using imported machinery, when without power, employ exactly such a crusher; when driven by a motor, as many now are, two smaller stone discs are used, both placed on the same axle. In all cases these stones are from the local native quarries.

Primitive Oil Presses.

With the primitive oil presses there is built in one of the walls of the room a recess just large enough to admit the baskets of crushed berries and reaching to the ceiling, with a small cistern below to receive the oil. In the centre of the room is a mammoth wooden screw. A large beam extending across the room has one end entering the recess above mentioned, while in its centre lengthwise is a screw in which the larger one operates.

Once the olives are crushed and filled into baskets or haircloth, they are placed one upon another in the press recess, the screw is turned around and around by means of a stick of wood run through a hole for the purpose, and the gigantic beam descends, reducing the pile of baskets to half the height, while the oil runs in streams into the reservoir below. This press, being of insufficient strength, does not at once extract all the oil, so the pressed pulp is subjected to a second crushing and squeezing, and then packed away in a corner of the room until the olive season is over. It is then ground for the third time and re-pressed.

These primitive devices, while they still exist, are rapidly falling into disuse, as they are too laborious and do not produce as much oil as the more modern ones.

Modern Presses.

The modern iron oil presses are either imported from France or are copies made by local machine shops. Those used where no power exists have the pressing screw operated by a long, large beam pulled by rope and tackle, while the newer types have presses operated by kerosene engines. With these metal presses but one squeezing is the rule, after which the pulp is subjected to a second crushing and pressing only for the dark soap oil. During the pressing process boiling water is poured on the pulp to make the oil separate more easily.

Since the natives are not at all particular about cleaning their mills, especially with the old type of press, the rancid oil from the previous year soon impregnates the new. Besides this, the natives commonly collect their entire crop before beginning to press, piling the berries on the flat stone roofs of their houses. The olives thus lie in a heap, often for weeks, being left until the first winter rains descend upon them—all of which is thought to help ripen the olives and thereby produce more oil. It possibly may do so with the primitive methods, but this heating of the fruit results in a sharp and rancid product, which taste, however, the natives do not seem to mind.

Storage Methods.

A few modern mills endeavour to produce a better table oil, which they sell at an advanced price. In these the berries are not allowed to heat, and are pressed soon after being picked. The oil is stored in metal tanks, which are scoured before using, as is all the machinery employed, very sweet and clear oil being thus obtained. Some even collect the oil that of itself flows away from the crushed berries before being pressed, which is considered very superior. No methods of filtering or refining are known. The oil is simply allowed to settle and cure itself; and while it has a sharp taste when quite fresh, this taste is soon lost

PRODUCE REPORT.

LONDON, December 29.

Currants.

Owing to the holidays, the market has been very quiet this week. Prices are unchanged, but recent news from Greece predicts a further advance.

Sultanas.

Only small business was done in Afghan fruit at late rates.

Figs and Dates.

The market is quiet, but prices for both articles are steady.

Seeds.

Linseed market is very strong, with buyers at a further advance. London-Calcutta in any position is readily saleable at 78s.; same price was paid for January-February. La Plata to London, January, was sold at 70s. 6d., and January-February at 70s. Cottonseed remains quiet: London-Egyptian loading is quoted £13 15s., and January £13 18s. 9d. per ton. Rapeseed is firm, but quiet: Guzerat pure basis, December-January, is quoted 67s. 6d.; Toria ditto, 62s. 6d.; Ferozopore ditto, 61s. 9d.; and brown Cawnpore ditto, 61s. 3d.

Oils.

Linseed oil is very strong, and business was done at fully 25s. over last week's reported prices. Spot pipes, quoted to-day, £39 7s. 6d.; barrels and month, £40 10s.; January-April, £41 10s. was paid; March-April, £42 is asked. Cotton oil is also strong. Crude spot, in pipes, £42; refined pale pipes, £45; and barrels, sweet, £47 to £48, as to makes. Rapeoil is dearer: Ordinary brown, naked spot, £44 is asked; English refined, barrels, £47.

Oilcakes.

Only very small business was done this week of a retail character, but prices for all kinds are about the same as reported last week.

Locust Beans.

There is a good demand, but the scarcity continues, and nothing is expected at present, especially from Cyprus.

The Mixed Courts at Alexandria are selling two large estates in Lower Egypt. The land belongs to Messrs. B. J. Huri and Company, a large cotton firm in Alexandria and Liverpool, which is now in liquidation. One estate consists of 341 fed lans of excellent agricultural land at Nosf Tani Bechbicha, in the Mehallet Kobra district of the Gharbieh Province. The upset price is £E80,000. The other estate consists, of 2,437 feddans at Abou Badui, in the Kafr Sheikh district. The upset price is £E66,434. The sale, says the *Egyptian Gazette*, is at the request of the Crédit Foncier Egyptien.

COTTON MARKET.

Liverpool.

Thursday Night.

Messrs. Reynolds and Gibson telegraph:—There has been good demand for Egyptian spot cotton this week, and large business resulted at advancing prices. Quotations are raised twenty points. The sales, including 600 Sudan, are estimated at 4,000 bales for three days, against 4,100 bales for six days last week.

Manchester.

Although a broken week, owing to holidays, we cannot report much decline in trade as compared with a normal week. Of late there has been a fair general inquiry.

NEWS FROM ALL SOURCES.

According to an Exchange Telegraph Company's message from Cairo, a serious cotton fire broke out in Alexandria on December 18, causing damage estimated at £60,000.

The death is announced in Cairo, on the 15th inst., following an operation for appendicitis, of Mrs. F. E. Johnston, wife of Brigadier-General Francis Earl Johnston, C.B.

Among the names of those enrolled on the Commission of the Peace for the County Palatine of Lancaster last week was that of Colonel Henry Concanon, T.D., a manager and Liverpool director of the White Star Line.

Messrs. Raphael Tuck and Sons have appointed as their agents for Egypt and the Sudan Messrs. Mosseri, Curiel and Co., late A. Aboaf and Co., Nubar Pasha Street, Alexandria.

We are informed by Mr. Herbert Allen that in consequence of the suspension of telegraphic communication between England and Russia no returns of production have been received since the week ended November 28 by the following companies:—Baku Russian Petroleum, Bibi Eibat Oil Company, European Oilfields Corporation and Russian Petroleum Company.

A Reutergram from Athens yesterday stated that the scarcity of coal is seriously preoccupying the Greek Government, and a decree is being published restricting the lights in the streets and limiting the hours of places of entertainment.

SUEZ ROUTE AVOIDED.

The Nippon Yusen Kaisha announces that, beginning with the departure of the Kitano Maru now loading in London, and until further notice, the company's steamers will proceed viâ the Cape of Good Hope to the Far East instead of through the Suez Canal. In consequence of the change of route, passengers and cargo for Marseilles and Port Said cannot be accepted.

Nine days ago the Yasaka Maru, one of the finest and newest of the Nippon Yusen fleet, was torpedoed in the Mediterranean without warning while carrying 120 passengers, and sank in forty-nine minutes. On December 15 the Rotterdam Lloyd Line announced that certain of its steamers would use the Cape route to the Far East instead of the Suez Canal, the reason advanced by the company for the change being the alleged uncertainty as to the amount of coal available for bunkering at Port Said.

We understand, says the *Times*, that since the loss of the Yasaka Maru intending passengers by the Nippon Yusen Line have expressed the hope that the vessels would be diverted to the Cape route. The decision is likely to be welcomed by many merchants for the reason that lower war insurance rates are quoted by underwriters for the Cape than the Suez route. The British Government insurance scheme only applies to British ships and their cargoes, so that merchants shipping by the Japanese lines must insure either under the Japanese Government scheme or in the insurance market, where rates vary.

The change of route means an addition of ten days to the duration of the voyage by the mail liners to Japan.

EGYPTIAN FINANCES.

(From Our Own Correspondent.)

Cairo, December 10.

The State accounts for the month of October show that the total revenue collected up to the end of that month was £E9,386,753 and the expenditure £E8,932,156, as against £E8,849,284 and £E10,531,904 a year ago. In other words, the revenue during the seven months has increased by £E537,469, and the expenditure has decreased by £E1,599,748. As a result there is a surplus of £E454,597, as against a deficit of £E1,682,620 a year ago.

During October, as compared with October, 1914, Land Tax increased by £E66,670 Customs by £E81,800, Tobacco Dues by £E28,521, Legal Fees by £E29,350, Railways by £E94,374, and Domains Receipts by £E150,103. There were decreases in only minor items, and the total thereof amounted to but £E35,505.

On the expenditure side the chief reductions were :—War Office £E146,836, Railways £E458,428, Irrigation £E424,375, Main Drainage £E43,313, Public Works £E130,447, Education £E62,399, Interior £E98,018, and Justice £E61,755.

As I have pointed out before in these notes, it is not entirely satisfactory to compare this year's figures with those of a year ago, seeing that last year we were still suffering from the shock of the outbreak of war, and that comparison can only serve to show whether we are recovering by relation with 1914. The best test is a comparison with the figures for 1913. If we do this, we find that, whereas the budgetary revenue for the current year was put at £E1,784,000 less than for 1913, the revenue collected so far is only £E569,211 less than that collected during the same period of 1913. Similarly, the expenditure was fixed at £E2,714,000 less than that for 1913, and to date it is £E1,756,622 under what it stood at on October 31, 1913. Be it noted, too, that at that date there was a deficit of £E732,814, and that this year the position is one of a surplus of £E454,597. The State accounts are therefore in a better position than in 1913 by £E1,187,411, which is, to say the least of it, very satisfactory.

Of course, the weak part about it is that the improvement in the financial situation of the Government has been obtained by the almost complete cessation of new works, which is bound to react on the country. It should, however, be possible to resume part of these works early in the new year instead of awaiting the conclusion of the war, if the recovery, which the revenues of the country have shown, is maintained.

BULGARIAN WAR CREDITS.

Reuter's correspondent in Amsterdam reported yesterday that a semi-official telegram from Sofia stated that at the sitting on Wednesday of the Sobranje a war credit of £20,000,000 and a second credit of £1,200,000 were discussed. The second credit is destined for the relief of the families of poor soldiers. The Doctrinaire Socialists again expressed their pacifist views and their opposition to all war, but said they would vote for the credits. The Reform Socialists declared that they would abstain from voting. The remaining parties expressed themselves enthusiastically in favour of the credits, and demanded that peace should in every respect correspond with the sacrifices made by Bulgaria. The Agrarians and Labour members expressed themselves in the same sense.

THE CITY AND THE BALKANS

The *Economist* of December 18 contains a summary of the situation in the Balkans, from which the following are extracts :—

Roumania.

In spite of her difficult and central position, Roumania has maintained her neutrality throughout the year. Her foreign export trade and shipping have been seriously affected by the closing of the Dardanelles, which practically involved seclusion from the neutral world. Since the renewal of the campaign in Serbia the route from Salonika to Roumania has necessarily been closed, and the Roumanian Government has since been endeavouring to arrange by treaty for overland connection with Great Britain *viâ* Russia and Sweden. Her relations with Bulgaria and the Central Powers have been delicate, owing to the demands made upon the Roumanian Government to allow the passage of munitions through to Turkey. Her difficulties were enhanced by the fact that nearly 60 per cent. of her total imports are ordinarily supplied by Germany and Austria-Hungary, on whom she is almost wholly dependent for machinery and machine-made goods. The Central Powers have a certain financial grip in Roumania, especially, perhaps, due to the financing of local Roumanian banks by the large banks in Germany and Austria-Hungary.

On the other hand, in spite of the hampering of her trade, Roumania has been engaged on active military preparations; she has been deterred from war partly (it is alleged) by lack of munitions. Accordingly, a new Department (a Munitions Ministry) has been set up to work in co-ordination with the Ministry for War. Negotiations are said to have been carried through with Russia, by which Roumania is given facilities for the transit of merchandise and munitions across Russian territory to the Port of Kola. The Roumanian Government, though in a strong financial position compared with the other Balkan Governments, cannot well afford the cost of a mobilisation. Bribery and other influences have been at work to induce Roumania to abandon neutrality in favour of the Central Powers; while, on the contrary, she is bound to the Entente side by the £5,000,000 loan of the British Government in January of this year.

Among neutral States Roumania has been especially clever in drawing money from the belligerents and profits from the war. She has supplied grain to the Central Powers by selling her own supplies at exorbitant prices, and then importing cheap grain from Russia to satisfy her own needs. Then she has been getting very high prices for oil.

Bulgaria.

Perhaps the most unfortunate event in the course of the Great War was the adhesion of Bulgaria to the Central Powers. The Bulgarian peasant must have been reluctant to take arms again. Although remaining outside the conflict for so many months, Bulgaria thought it necessary to copy the economic devices adopted by the belligerents. A three-month moratorium was proclaimed on August 7, 1914, and then extended, and a week later the export of food staples and transport animals was prohibited, additions to the prohibited list being made from time to time. The closing of the Dardanelles left Bulgaria with no outlet to the world except from her inhospitable coastline on the Ægean, and Dedeagatch acquired an unwonted importance and could not cope with the stream of commerce. At that time the railway and the Turkish territory through which it ran had not been ceded to Bulgaria.

Apparently the average expenditure and revenue of the country balance one another at a little over ten millions sterling, just two days' cost of the war to us; so that Great Britain might easily have offered to pay all existing Bulgarian taxes for the next fifty years in return for her assistance in the war.

The first indication that Bulgaria was inclining towards the three Emperors was the agreement of September 6, by which Turkey ceded the territory west of Adrianople to Bulgaria. On September 28 Sir Edward Grey warned Bulgaria that we should support our Balkan Allies if she took the aggressive, yet even now the die seemed not to be cast, for two days later M. Malinoff, the Democratic leader, was authorised by the Opposition to treat with the Ministers of the Quadruple Entente. However, the end soon came. On October 3 Russia sent an ultimatum requiring the expulsion of German officers from Bulgaria, and on the 5th diplomatic relations were broken off. Up to this date, however, the Russians have taken no effective military measures against Bulgaria.

Greece.

By a curious and unexpected interpretation of her treaty with Serbia, Greece has kept out of the war. Yet she has not escaped the economic consequences of war. Piræus customs have fallen heavily as compared with 1914, the seven months to the end of July, 1915, showing a decline from 17½ million drachmæ to 14½ millions. In April France made a loan of £800,000, and last month the Allies offered a further £1,600,000 to meet the expenses of mobilisation. In all, Greece has a debt of nearly £50,000,000, against an "ordinary" revenue of £5,600,000, which does not meet her "ordinary" expenditure.

COMPANY REPORT.

COTTON GINNERS OF EGYPT, LTD.

The following are the report and accounts for the year ending August 31, 1915: The quantity of cotton ginned in our factories attained during the year 1914-15 only 1,350,594.71 cantars, as against 1,646,532.16 cantars in 1913-14. This decrease of 295,937.45 cantars in our turnover is caused principally by the same factors as those mentioned in our report to August 31, 1914, explaining the decrease in turnover of that year as compared with that of the previous year, viz.: the decreased buying in the interior of our principal clients on account of the poor quality of the crop. The same reasons have also naturally brought about a still more noticeable falling off in our steam-pressing business, which from 343,660.63 cantars in 1913-14 fell to 71,011 cantars in 1914-15. In effect, the result of the crop and the falling off in our business generally have exceeded even our own pessimistic anticipations. We have, on the other hand, to report further development in the ginning done for the smaller category of clients and no efforts are being spared to still further increase this class of *clientèle*.

The results to August 31 last are as follows:

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

Aegion, Agrinion, Almyros, Amalias, Amphissa, Arta, Atalante, Calamata, Calavryta, Céphalonia, Chalkis, Corfu, Corinth, Cythère Dimitsana, Gythium, Ithaque, Janina, Karditza, Kyparissia, Lamia, Larissa, Lévadia, Mégalopoli, Messina, Missolonghi, Naupacta Nauplia, Patras, Paxos, Piræus, Poros, Pylos, Pyrgos, St. Maure, Salonika, Santorin, Sparta, Syra, Thèbes, Trikkala, Tripoli, Volo, Zante.

Every kind of Banking Business Transacted.

Cable Address—NATIONALBANK, ATHENS.

Leaving a balance of		£E14,865

which, on account of the difficult circumstances at present prevailing, the directors recommend should, as a necessary precautionary measure, be carried forward. In view of what precedes and owing to the special circumstances existing during the year in review, due to the restriction, decreed by the Government, of the area to be planted and the continued and important damage threatened by the pink boll worm, the directors took steps in time to considerably reduce the company's expenses by provisionally closing down three factories. Certain reductions in expenses have also been made in the factories which remain open, so that, together with these and those above mentioned, economies in wages and general expenses of over £E6,000 will be realized. Two of the directors, Messrs. C. Bacos and S. Ritscher, have resigned and it is not proposed for the moment to replace them.

The retiring directors are Messrs. T. A. F. Critchley and M. Sinadino, both eligible for re-election.

BALANCE-SHEET AS AT AUGUST 31, 1915.

Liabilities.

	£ s. d.	£ s. d.

GREEK DEBT SERVICE.

NINE MONTHS' RECEIPTS.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to September 30, 1915 (New Style: January 14 to October 13, 1915) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Sep., 1915		3,084,821	1,894,000
Do. do. do 1914		2,596,500	1,683,674
Estimated Receipts for 9 months (Law of Control)		21,675,000	8,025,000
Actual Receipts, 9 months, 1915		27,258.968	17,991,887
Do. do. do., 19 4		17,642,190	20,493,378
Difference between estimated and actual receipts for 9 months	1915	+ 5,583,968	+ 9,966,887
	1914	+ 5,967,190	+12,468,378

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

The new leaven in the conduct of the war is showing very satisfactory results at Salonika, where it is of French make. On the morning of December 30 six enemy aeroplanes in all flew over the town and dropped several bombs. One Greek was killed, and, according to another account, one British soldier was killed and two were wounded, but the material damage done by the bombs was small. The same evening the German, Austrian, Bulgarian, and Turkish Consuls and Vice-Consuls were arrested, and with their families and the *personnel* of the Consulates were placed on board a French battleship. The plans for this drastic action had been prepared in advance. The French authorities had ample evidence of the secret activities of the enemy Consulates to justify their action many days, or even weeks, previously, but they waited for the first act of hostility before showing their hand. It is gratifying to find that the arrangements worked smoothly and effectively. The staffs of the Consulates were taken entirely by surprise, and the "haul" in the matter of incriminating documents must have been practically complete. It has led to subsequent arrests on a very large scale—thousands, if we accept the version of the German Press, a few hundreds, according to more reliable sources of information. For the most part the people arrested are of enemy nationality, and include a number of German and Austrian women employed at the local *cafés-chantants;* but the espionage network went beyond the nationals of the four countries, and a number of Greeks are involved. Proof is also said to have been forthcoming of the complicity of the Norwegian Vice-Consul. He is, however, of German nationality, and his arrest is no reflection on the friendly country of Norway and her people.

Greece has naturally entered a strong protest against the arrest of the Consuls, and the enemy countries have been stirred to a very high pitch of self-righteous indignation. Without doubt at an earlier stage of the War the Entente Powers would have warned the consular spies that their presence was no longer desired, and would have placed the necessary transport at their disposal in order to convey them and the *dossiers* of their intrigues to their respective countries. But no dispassionate observer, with knowledge of the whole situation, will pretend that the French authorities at Salonika could have acted otherwise in the circumstances, or will feel that the technical breach of international etiquette calls for even a perfunctory apology. A warning to the Consuls would have deprived the Allies of invaluable evidence necessary to protect their interests and the lives of Greeks as well as of their own nationals against enemy machinations. The incriminating documents seized afford abundant justification for the drastic step. If treatment on German lines had been meted out to them, probably few of the sixty or more people connected with the Consulates would have escaped the fate of Edith Cavell. As things are, they have been taken to France and allowed to return to their own countries by way of Switzerland.

The Greek Government has followed up its protest against the arrest of the Consuls by a protest to the German Government against the bombardment of Salonika from the air. When the evidence collected by the French authorities can be placed before it we may hope to hear of a further protest to Berlin against the use of Greek soil for German machinations having for their object the opening of hostilities in Greece, while Germany claims to respect Greek neutrality. The next step on the part of the Greek Government ought to be to see whether it is not called upon, as the United States Government was, to adopt drastic measures against the Dumbas and Boy-Eds in its own capital. It is reported that the decision to proclaim martial law has been arrived at, and that the Chamber will be convened a week earlier than was originally fixed in order to ratify the Government's action. If this course should be taken, the Government will have at its disposal the necessary machinery for purging the country of others besides the Salonika Consuls who have abused Greek neutrality.

Another satisfactory feature in regard to Salonika is the good-will that now reigns between the Greek General Staff and the Anglo-French authorities. General Moschopoulos, commanding the Greek Third Army Corps, testified to this feeling by sending on New Year's Day a message of greeting from himself and his officers to General Sarrail and the forces under his

Digitized by Google

command. There can be little doubt that the whole course of events, including the action of Germany and her allies, particularly in connection with Monastir, and the resolute action now being taken by the Entente Powers, is exercising a powerful influence on Greek opinion. The vacillation shown in the early days of the occupation of Salonika, following upon the failure of the Dardanelles operations, which the Greek General Staff had predicted from the outset, must have impressed the latter very unfavourably in the face of all they knew regarding German precision and thoroughness. Since then a great change has taken place. As *The Times* correspondent reports: "The utmost confidence exists amongst the Allies. The regular and systematic arrival of troops, artillery, munitions, and transport has added to this confidence. The whole organisation is reported as beyond criticism, and the Greek General Staff, always inclined to pessimism, is unstinting in its praise." He adds that the relations existing between the British and Greek authorities, in circumstances entailing no little difficulty, are excellent. The original and natural feeling of resentment has now entirely disappeared, and has given place to sentiments of mutual confidence and good-will. In view of this change, it may not be without significance that General Moschopoulos should conclude a General Order to his troops with the words: "When the opportune moment comes our glorious King and Chief will put himself again at the head of his army to assure the rights of the Fatherland and lead it again to glory and triumph."

Opinion regarding the imminence of an attack on Salonika is undergoing a change. If it be true that in the enemy Consulates documentary proof was found of a scheme to have Salonika attacked by *komitaji* bands simultaneously with an advance of the Austro-German and Bulgarian forces, the discovery of the plot will have upset the enemy's plans not a little. The chances of an attack, however, would still seem to be even. On the one hand von Mackensen is said to have been recalled to face the Russian advance in Galicia, and his visit to Sofia seems to have been in the nature of a farewell audience of King Ferdinand; on the other hand there is evidence of military movements at Monastir, from which direction an advance would probably be made at the time of any attack on Salonika, and the course of events in Galicia may make the Germans anxious to distract the attention of their Bulgarian and Turkish allies from the increasing difficulties of the Central Powers, by giving them a formidable task upon which to concentrate their minds and all their energy.

An interesting and not unimportant episode at Salonika is the arrival of King Peter after his arduous experiences in the great retreat from Serbia. Refusing the proffered hospitality of the Italian Government, King Peter proceeded at the earliest opportunity to Salonika, more as an embodiment of his nation's pluck and determination than from any desire to resume a rôle which he had previously laid aside. In the eyes of the world, however, he still represents Serbia, and it is as the Serbian monarch that the Greek Government has sent him an official message of welcome. His presence on Greek soil may provide the golden bridge required to enable Greece to recover the lost alliance with Serbia. It should not be long before he is followed by what is left of the Serbian Army. The movements of the latter are necessarily somewhat obscure. A statement is attributed to General Boyovitch, Serbian Minister of War, to the effect that the Serbians in two months will offer the Allies an army of 100,000 men, reorganised and in excellent spirits. In the meantime the reorganisation is taking place in Albania.

Some light has now been thrown on the Italian operations in Albania. From Avlona a contingent of troops was sent overland to Durazzo, where they arrived on December 21, after a march which occupied a fortnight owing to the necessity of constructing bridges and opening a way. Preparations for their arrival had been made by Essad Pasha, who once more enters upon the scene in Albania. He has thrown in his lot whole-heartedly with the Grand Alliance, and is even reported to have declared war on Austria, promising the Allies the co-operation of a force of 20,000 men. Before the arrival of the Italians at Durazzo the usual army of Austro-German spies had been let loose on Albania, and achieved some success in stirring up some border tribes to slaughter defenceless Serbian refugees. Their main purpose seems to have been to prepare the ground for the return of the Albanian chiefs who had followed Prince William of Wied to Austria. Essad Pasha is said to have taken energetic measures against the agents of the Central Powers, and in so doing has rendered good service to the Allied cause. With a junction effected between the Serbians and Italians at Durazzo, it should now be possible, with the co-operation of Essad Pasha's following, to stem the Bulgarian advance in Albania, and eventually to dispose of it altogether.

To the loss of the Yasaka Maru, to which reference was made in these columns last week, has now to be added the sinking, also by enemy submarines, of the French steamer Ville de la Ciotat and the P. and O. steamer Persia. All three passenger ships were torpedoed without warning, in direct conflict with the explicit undertakings given by Germany and Austria-Hungary to the United States Government, quite apart from considerations of legitimate warfare and the dictates of humanity. As an American subject—this time a consular official—on board the Persia was drowned, it is to be expected that an opportunity will be given to the Austro-Hungarian Government to offer some explanation. A hint has been thrown out that the submarine may not have been Austrian, but—Turkish. That aspect of the matter may concern the United States, but does not concern the Allied Powers. Whether masquerading as Turkish, Arab, or Bulgarian, the submarine originated with one of the Central Powers, and the heinousness of the offence has to be laid to their charge. The first business of the British and French Governments is to take such steps, either by reorganising their patrol areas or by other measures, as will put an end to the activities of enemy submarines in the Mediterranean. The second duty is, while the accumulated horror of these outrages is fresh in the public memory, to resolve that some conception of the villainy of this method of warfare shall be brought home to the Central Powers. A penalty over and above the ordinary terms imposed on those who have been unsuccessful in a war of their own seeking must be agreed upon, which will remain a continuous penance spread over a generation or more, for the crimes of a nation. Perhaps the most suitable form that this could take would be an embargo—to be in force for a period of fifty years—on any German or Austrian ship, or any ship belonging in part to any German or Austrian, using the ports of the Allied Powers, and a further embargo on any German or Austrian financial establishment or shipping office being established on the soil of any of the Allied countries.

The official reason given for the occupation of Castellorizo by the French is that the island will serve as a base in the event of operations against Adalia. Not less important is the fact that the presence of French troops there will prevent the island from being a base for submarines, while the occupation of the German Emperor's property, the Achilleion, at Corfu, for hospital purposes will put an end to rumours that it was also being used by the enemy. Although the enemy reports give a far larger list of submarine successes in the Mediterranean than has been made public in this country, it would appear that these vessels have been almost entirely eliminated from the northern Ægean. They continue to haunt its southern waters, and must be based on the Greek coast (Crete or the mainland) or some of the islands off Asia Minor not yet occupied by the Allies. So far the number of their victims is only a small proportion of the shipping using the Eastern Mediterranean, but the loss of three liners within a few days calls for renewed efforts in dealing with a problem

Digitized by Google

which presents probably greater difficulties than it did in home waters and the North Sea.

The British position at Kut continues to be exposed to the enemy's heavy artillery fire, a clear indication that General Townshend is still awaiting the reinforcements that are to make him more of a match for the Turkish forces. An enemy report claims that the relieving column is being successfully held up at Ali Gharbi, sixty miles distant from Kut; but, though we may expect to find the Turks in this neighbourhood, we shall do well to wait for confirmation of the nature of the opposition before placing any reliance on this version of the situation. General Townshend reports that the Turks suffered very heavy losses—estimated at 10,500—at Ctesiphon and in the recent attacks on Kut. The fact that they asked for a four hours' armistice to bury their dead and to remove their wounded in front of the British position, as well as the limitation of their efforts to artillery fire, points to the accuracy of the information regarding the Turks' losses.

The German Press devotes much space these days to Egypt and the Middle East, and some credit must be given to it for having discovered that both the British in Egypt and the French in Syria have done much in the past for the two countries. With regard to what France has done, particularly in the Lebanon, Germany is exhorted to lose no time in picking up the threads of her work and extending it. The same moral, of course, awaits Germany in Egypt. The British "mistake" of a one-sided development, by which is meant making all progress dependent on the Nile, is to be avoided. As might be expected, the fact that the British still happen to be in possession of Egypt is hardly allowed to interfere with the pleasure derived from this *Zukunftsmusik*. "When the Turco-German expedition, already in an advanced stage of preparation," Dr. Paul Rohrbach informed a Hamburg audience, "moves towards Egypt, the British have no means of stopping it; they can only await it on the Suez Canal. If they make their stand in front of the Canal, their position—the Canal behind them—is extraordinarily dangerous. If they place themselves behind the Canal, they will not be able to prevent us from closing the Canal to all shipping by means of our heavy artillery." Dr. Rohrbach, however, does not seem to contemplate Egypt in the permanent possession of Germany. He is content with an economic federation of Germany, Austria-Hungary, Bulgaria, and Turkey, with the "freedom of the seas" secured by a Turkish railway constructed to the immediate neighbourhood of the Suez Canal, "with strong military posts close to the Canal," which is to exercise such pressure on Great Britain that at any time she can be forced to give way.

In the meantime the German Press claims to be fully informed of all the steps taken to place Egypt in a state of defence. "Several hundreds of thousands of natives and English soldiers," it alleges, "are employed in strengthening the defences; six or seven lines of trenches are being dug." The strength of the British forces is stated to be 240,000 men, and will eventually amount to 400,000. Ninety thousand men, according to German information, are already stationed at Tel-el-Kebir. Waterworks for flooding part of the country are in readiness. Alas, however, for the credibility of the interesting message, which is dated from Constantinople, it ends with the statement that there is good ground for believing that Japan is only waiting for the blocking of the Suez Canal in order to take possession of China, India, and the French colonies in the Far East.

NEW YEAR'S HONOURS.

The list of New Year's honours granted by his Majesty the King, which was issued this week, contains many names that are well known in the Near East.

Earl Curzon of Kedleston, who receives the Garter, is one of the keenest students of Near Eastern politics and one of the most trenchant critics, and his book on Persia remains the standard work of reference on that country.

Lord Charles Beresford, second son of the fourth Marquess of Waterford, who is raised to the Peerage with the rank of Baron, entered the Navy as a cadet on the Britannia in 1859. He commanded the Condor at the bombardment of Alexandria, and landed there after the bombardment to institute a regular police system. He has sat in Parliament as a Unionist for various constituencies since he was first elected as a Conservative for Waterford in 1874.

Sir Thomas George Shaughnessy, who has also been created a Baron, has been during the greater part of his career connected with the Canadian Pacific Railway Company, which has done much to further British interests in the Near East.

Major-General Lovick Bransby Friend, C.B., who has been in command of the South-Western Coast Defences since 1914, has been appointed a member of his Majesty's Most Honourable Privy Council in Ireland. Major-General Friend passed into the Royal Engineers in 1873. He has had distinguished Staff service, and he was promoted to the rank of major-general in 1912. His active service was seen in the Nile Expedition of 1898, when he fought in the Battle of Khartoum and was mentioned in despatches, and received the medal struck for the Omdurman Campaign. He afterwards had employment in the Egyptian Army, and also in the Irish and Scottish Commands.

Sir William Edward Goschen, who has been created a Baronet of the United Kingdom, was our Ambassador at Berlin on the outbreak of war. He is the youngest brother of the late Viscount Goschen, and entered the Diplomatic Service in 1869. After filling many posts, he successively represented Great Britain as Minister at the Courts of Belgrade, Copenhagen, Vienna, and Berlin.

Rear-Admiral Sir Frederic Charles Doveton Sturdee, who has also received the honour of a Baronetcy, is famous for his victory over the German Fleet in the battle of the Falkland Isles. He became a lieutenant in 1880, and was present at the bombardment of Alexandria, for which he received the medal with clasp and the Khedive's bronze star; and for his services in Samoa during the Civil War he was made a C.M.G. He served as Rear-Admiral 1st Division of the Home Fleet in 1909-10, and was in command of the Third Cruiser Squadron, 1911-12, and of the Second Cruiser Squadron in 1912-14, since when he has been Chief of the War Staff.

FOREIGN OFFICE LIST.

ORDER OF ST. MICHAEL AND ST. GEORGE.

This list includes the name of William Edwin Brunyate, Esq., C.M.G., Legal Counsellor to the Egyptian Government. He entered the Egyptian Government Services in 1898 after having been educated at Kingswood School, Bath, and Trinity College, Cambridge, where he was Second Wrangler in 1888 and Smith's Prizeman in 1890.

HONORARY K.C.M.G.

Sheikh Said Ali Morghani, C.M.G., who has received this signal honour, has shown a very active spirit of patriotism ever since the outbreak of the war He is one of the most influential and popular native celebrities in the Sudan, and can claim direct descent from the Prophet.

C.M.G.

The above list includes Andrew Ryan, Esq., late First Dragoman at his Majesty's Embassy at Constantinople, and Colonel William Hacche Drake, R.A., Adjutant-General for the Sudan, who has many years of service in that country to his credit. Colonel Drake was badly mauled by a wounded leopard some years ago.

COLONIAL OFFICE LIST.

ORDER OF ST. MICHAEL AND ST. GEORGE.

Sir Edward Marsh Merewether, who has received the K.C.M.G., has served with distinction under the Colonial Office in the East. In 1902 he was Lieutenant-Governor of Malta, and in 1911 he became Governor and Commander-in-Chief in Sierra Leone.

NAVAL OPERATIONS.

K.C.M.G.

Vice-Admiral Sackville Hamilton Carden, who was in charge of our early operations at the Dardanelles, and Vice-Admiral Arthur Henry Limpus, C.B., are included in the above list. Admiral Limpus was Naval Adviser to the Turkish Navy at Constantinople when war broke out. The Admiral, who is now at Malta, was exceedingly popular in Turkish circles, and his departure from Turkey was genuinely regretted.

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 20.

Anniversary of the Sultan's Accession.

Yesterday was the first anniversary of the accession of Sultan Hussein. By contrast with last year—when, of course, his Highness made his State entry into his capital and subsequently held a reception at Abdin Palace—no ceremonies in celebration of the day have been held this year. Salutes of twenty-one guns were fired yesterday morning from the Citadel and from Abbassia, and the customary book was opened at Abdin Palace for signature by those who wished to pay their respects to the ruler of the country. During the day, H.H. received the Princes, Ministers, Advisers, Sir H. McMahon, Sir J. Maxwell and Sir Milne Cheetham, and in the evening the Prime Minister, Rushdi Pasha, gave a banquet of seventy covers to celebrate the occasion.

The Canal Defences.

There is very great activity in and around the Canal zone, where several thousand labourers are working, and every effort is being made to put the defences in the best condition possible. Exactly what scheme is being followed this year I am, of course, not permitted to state, but I think I may safely say that our defence will be on a very different scale from that of a year ago. Sir George Macauley, Under-Secretary of State for Railways, has been gazetted as Colonel R.E., Director of Railway Transport, and Major J. S. Liddell, Inspector-General of State Telegraphs, as Lieutenant-Colonel, Director of Army Signals. In addition, in view of the large Public Works staff working on the Canal defences, Sir Murdoch MacDonald, Under-Secretary of State for Public Works, has been gazetted Colonel R.E. These commissions are, of course, merely temporary ones.

The Question of Enemy Firms.

It is stated, though no official confirmation can be obtained, that an order has been given for all German and Austrian commercial establishments to be liquidated at once.* If this be true, then no decision would be more welcome; for, during the past year, many people have often wondered how much longer our policy of toleration in this matter was going to be continued. The leniency shown has certainly been amazing. to say the least of it. In Cairo, for instance, we have had Diemers, the chief bookseller; Hackh, the chief pianoforte dealer; Weinrich, the chief hairdresser; Stein and Co., Tiring and Co., Meyer and Co., the leading linen-drapers and ready-made clothiers, not to mention other more or less prominent enemy establishments in other parts, all plying their trade apparently just as in the piping times of peace.

It is true that most of these establishments have had an official controller appointed, and that it has been stated unofficially that the companies are being worked for the benefit of the Entente shareholders and the other concerns for that of their Entente creditors. Two questions, however, may in all fairness be asked. In the first place, as regards the private firms, which, it may be noted, were thriving concerns in pre-war days, how is it that after fifteen months the Entente creditors are still unsatisfied, or if they have been satisfied, how is it that the firms in question are still allowed to operate, even under British control, under their old name-signs? And, secondly, with reference to the companies, what is happening to the profits? Are they all going to the Entente shareholders, and is there any guarantee that such shareholders are not figure-heads for Swiss, Dutch, Scandinavian, or other neutral agents of Austro-German capitalists?

Neither here nor at home have we distinguished ourselves in the past by firm action when it was a question of eradicating Austro-German influences from our midst. In view of the mistaken and sentimental ideas of fair play we as a nation have displayed since war broke out, and of the added information that, although general liquidation has been decided on, exceptions will be made in special cases, it is not surprising that in certain quarters out here there is a fear that when peace is declared we may, through our at times exaggerated sense of justice, hand back intact to our enemy some of the commercial establishments which we had magnanimously kept going during the war, and which had in pre-war days constituted an effective cloak for the Pan-Germanic propaganda which their owners had carried on, thus undoing all the good that the war may have done for British trade and British prestige.

It is no exaggeration to say that no other nation would for fifteen months have tolerated in its midst the existence of enemy firms and the parade of their names before the public, or, in the case of enemy companies with national and friendly capital interests, would have delayed taking steps that would have removed all doubts as to the object for which those companies continued to be worked, and as to the chances the enemy interests might have of reacquiring the goodwill after the war.

If the intention attributed to the authorities is correct, it is sincerely to be hoped: first, that, if they are so satisfied as to the bona fides of the Entente and neutral capital interests in certain enemy establishments that they deem it necessary that they should continue working, steps will be taken to confiscate all Austro-German interests therein and ensure the severance of all outward association with our enemies, and that a definite statement of policy to this effect will be made: secondly, that the liquidation of all other enemy firms will be speeded up, and that they will be forced forthwith to remove their name-plates and all signs of Austro-German origin; and, thirdly, that, with the exception of concerns with Entente and neutral interests worthy of consideration, no exceptions will be made. Only by some such action and declaration of policy to-day will it be possible to frustrate the subsequent efforts of the slobbering sentimentalists at home and out here to favour the under dog.

A Case Meriting Investigation.

Whilst on this topic I would like to say that the military authorities might well give their attention to a certain stationer's shop in the Sharia Maghraby. Whatever its nationality may be, there can be no doubt as to the direction of its sympathies, for it boldly displays in its windows stationery and other office requisites of Austro-German manufacture. One can quite understand that, desirous of showing some consideration to firms which, in obedience to the public demands, may at the outbreak of war have had in stock a supply of German-made goods, the authorities might not interfere with the continued sale thereof; but the line should surely be drawn in a flagrant case of this sort where, so that there should be no mistake as to their enemy origin, the articles are flamboyantly displayed with the names of the maker and place of manufacture plainly marked on them. This public advertisement, with brilliant lighting effect every night, of Austro-German wares is without a doubt nothing less than a gratuitous insult to our intelligence. It is an affront which should not for one moment be tolerated, and it is to be hoped that steps will forthwith be taken to put an end to a state of things which is as little calculated to improve our prestige in the country as it is to raise us in the esteem of neutrals and of our Allies.

A Necessary Administrative Reform.

Apropos of the suppression of the first year of the French side of the Law School owing to the great reduction in candidates, referred to in last week's letter, the time has surely come when an end might well be put to the absurd practice of corresponding in French which is prevalent in Government administrations. That letters between English officials should be written in Arabic is, perhaps, excusable, as this is an Arabic-speaking land, but that such letters should have in a parallel column an official translation in French, or that correspondence between two English officials should actually pass in French, is surely the height of absurdity. The practice assumes an absolutely Gilbertian complexion when it is added that few Anglo-Egyptian officials, even if they understand and can speak it, know French sufficiently well to be able to dictate their replies therein, and that in most cases their English draft answer has to be translated into that language by an Egyptian or Syrian clerk. It is high time that this absurd practice, the relic of days when French influence

* Further references to this subject will be found on page 273.

Digitized by Google

was paramount, were done away with throughout the Government. The desire to avoid unnecessarily wounding susceptibilities is very laudable, but it has its limitations. The days when international susceptibilities had to be considered in the most trivial matters in this country are gone for ever, and our Gallic friends, who would be among the first to appreciate the humours of the present situation, would certainly be the last to raise objections to the introduction of more rational methods into the official correspondence of the Egyptian Government.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, December 23.

The Government's Dilemma.

The situation in Greece is becoming more and more critical. Government circles are now realising that it will be difficult to extricate themselves from the impasse into which they have been driven by following their policy of neutrality. It is certain that Germany and her allies will not sacrifice their vital interests in order to spare the susceptibilities of Greece by acceding to her request that Bulgarian troops should not enter Greek territory. It is stated that, after vain efforts to avoid the entry of the Bulgarians, an exchange of views is now taking place between Athens and Berlin with the object of rendering the entry of these troops as little hurtful as possible to Greek *amour-propre*. Thus it is reported that the Bulgarian troops who are to invade Greece will be allowed to do so through the zone evacuated by the Greek troops between Doiran and Salonika. Another report has it that the Germans have proposed that the Bulgarian troops crossing the Greek frontier should wear German uniforms! The Government seems faced by the impossibility of preventing their entrance, and, as it does not wish by any means to be drawn into military action, it seems disposed to content itself with a guarantee that the troops who enter Greece will leave the territory as soon as their operations against the Allies have been carried out. It has even been stated by a paper which has some connection with the Government, and is regarded as the organ of M. Gounaris, that the Sovereigns of the four allied States would also give their personal guarantee.

According to communications made by one of the Ministers to an Athens journal, the Government is of opinion that Greece, after the guarantees already received in regard to the integrity of her territory, would stand to risk nothing by letting the Bulgars enter, as, if they were not disposed to quit at the conclusion of operations, they could easily be beaten at a time when, whether successful or defeated, they would be exhausted; and in view of the present disposition of the Greek troops, they might even be made prisoners. Thus Greece, while maintaining her neutrality, would favour the weakening of the Bulgarian army. The *Hestia* attributes these views to M. Gounaris.

This line of argument does not appear to rest on very solid foundations. If the Bulgarians are successful, Greece could not defeat them so easily by herself, since, in that case, the Allies would be beaten. On the other hand, independently of the guarantees that the Central Powers may have been able to give Greece regarding her territorial integrity, is it likely that their troops would stand by while the Greek army was attacking and defeating their allies, to whom they would be indebted for the success of their Balkan campaign? In such an eventuality Greece would find herself confronted by far greater difficulties than those in which she is now placed, through not having attacked the Bulgarians at the commencement, with Serbia and the Allied troops. Besides, it is almost certain that it would be sufficient for Greece to persist in declaring seriously that she would attack the Bulgarians if they entered her territory, and to grant free passage for the Central Powers, for the latter, in their own interests, to dispense with the co-operation of the Bulgarians and prevent them from entering Greek territory, so as not to bring about fresh complications and create a new front, which would hardly suit them. In that case, it is not very likely that the Germans would decide to undertake such a campaign by themselves, in view of the fact that the only railway line—Uskub-Nish—by which their army could be provisioned, would not only be insufficient, but would not even afford absolute security, as it passes through hostile Serbian populations, and would require considerable forces to guard it.

M. Gounaris and the Cabinet.

M. Gounaris, who obtained a majority of from 200 to 250 deputies in the elections, has announced that he does not wish to assume power, and that he is prepared to support the Government. The fact is that M. Gounaris has no wish to accept responsibility at such a difficult juncture, preferring that it should be shared between his colleagues. Thus the composition of the Cabinet will remain the same. It is true that M. Rallis had a disagreement with M. Gounaris on the subject of the Attica electoral lists, and wished to resign, but he was dissuaded from taking this course by the Premier and his Majesty the King, who wishes that all the statesmen composing the present Cabinet should remain in power until the end of the crisis.

"A BISHOP IN MESOPOTAMIA."

In our issue of December 10 we referred (under the above title) to the Bishop of Lahore's visit to our Mesopotamian Expeditionary Force and the appreciation of that visit by our troops. The following passages, reproduced from an interesting letter written by the Bishop, and published in the *Civil and Military Gazette*, will, we think, prove interesting in connection with the previous note:—

My chaplain and I (writes the Bishop) were met at the mouth of the Shatt-el-Arab by the Rev. H. N. Bridge, Senior Chaplain to Force "D," and he accompanied us throughout the tour. It was a great satisfaction to find that the provision of chaplains is now adequate. At Busreh itself, where there is a large base hospital, Mr. Bridge is working. One chaplain, the Rev. O. W. Birch, is with the troops at Nasriyeh, on the Euphrates, and two—the Rev. H. Spooner and the Rev. P. Graydon Tibbs—with the force operating on the Tigris. I saw many signs that the officers and men deeply appreciate the fact of having their chaplain with them, and the response to the faithful work that is being done is real and manifest. In addition to the chaplains, the Army Branch of the Y.M.C.A. has four men under the leadership of the Rev. L. Dixon working in Mesopotamia. Good work has been done both by the Royal Army Temperance Association and the Y.M.C.A. at Busreh and Amarah, and there should be still further opportunities for this. Later on my object was to visit the British troops, and by the great kindness of those in authority, who, from the Army Commander downward, gave me the warmest of welcomes, and took endless trouble to make things easy for me, I was able to accomplish this. "S" Battery R.H.A. was the only British unit that I did not see. In most cases I was able to spend a week or sometimes more in each camp. . . .

Of one service, held on the Sunday evening before the big fight for Kut, the Bishop writes: "General Townshend had expressed his wish for a special service, and there, on the dusty aviation square, was gathered the whole of the British force. And as we said together the old words, and sang the old hymns, and I noted the strained and eager attention with which they listened to the old message, I realised and thanked God for the deep hold that the old Faith had on the officers and men of the British Army. . . .

"In conclusion, I may perhaps be allowed to bear my humble personal testimony to the spirit of the officers and men of this force, not that such testimony is needed, but for my own satisfaction. . . . Of the military side I must not presume to write, though I have seen and heard enough in the last six weeks to believe that when the full history of this campaign comes to be written, even as a military achievement it will rank very high. . . .

"I shall always remember with deep gratitude the hearty comradeship with which I was welcomed, and the readiness with which I was helped by all ranks; and while life lasts it will be an inspiration to remember the resourcefulness and courage, the patience and devotion, and the great-hearted endurance of the officers and men of the Indian Expeditionary Force."

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, December 8.

The Coming Parliamentary Session.

There is a general impression that during the coming Parliamentary session the present Government will not enjoy last year's immunity from attack on the part of the Opposition. M. Bratiano's sphinx-like attitude on the subject of the country's foreign policy, his absolute reticence with regard to negotiations which have taken place or are taking place between Roumania and the different belligerent groups, have given rise to a feeling of satisfaction or discontent in the breast of each, according to his personal attitude with regard to the great matters that sway the nations in this year of grace, and according to the sense of confidence that the Prime Minister's personality and attitude—or suspected attitude—have inspired in him. The absolute reserve which the Prime Minister has imposed upon himself and upon his colleagues has, if not strengthened his position, at least vested him in a shroud of mystery, which leaves him less exposed to the shafts of his critics. No man can say "You have done this" or "You have done that," for he would first have to produce evidence that the Prime Minister had followed one course of action or another, evidence which is not at his disposal. Nor can you rend a man for what he has said when that man has said nothing. This attitude may give rise to much dissatisfaction, but it disarms the critic to a great extent. The latter's discontent is without doubt enhanced by his feeling of impotence. We venture to prophesy that M. Bratiano's reserve will be taxed to the utmost in the coming session, for all the Opposition's ingenuity will be directed towards the framing of questions that command an unequivocal reply. The struggle promises to be of interest.

Opening of Parliament, November 28.

For the first time since Roumania has a dynasty the royal procession started from the Palace of Cotroceni instead of the Palace in the Calea Victoriei occupied by the late King Charles. Unusual precautions had been taken against some mysterious danger. The procession was accompanied by mounted police in considerable number, and on the road leading to the Metropole, where his Majesty interrupted his journey to the Chamber in order to attend a Te Deum, a line of armed police was drawn up. The previous day a house to house visit had been made along the streets to be followed by the royal *cortège*, and householders had received orders to close all windows opening on to the street during the passage of the procession—vexatious and unnecessary precautions, as everyone will agree who knows the people of Bucharest. The Roumanian may be independent in speech; he may not be by education and tradition sufficiently imbued with the sense of what is due from subject to sovereign; but for the authorities to apprehend what the above measures imply calls for a smile of amusement.

Speech from the Throne.

A little after twelve the King entered the Chamber of Deputies, accompanied by his Prime Minister and the other members of the Government. His Majesty was received with applause, to which all factions contributed. His message was as follows:—

Senators, Deputies,—This year's session opens in the same disquieting atmosphere as last year's.

The war, which claims such a toll of blood from the world around us, follows its course with increasing vehemence. New States have joined in the struggle, thus adding to the proportions of the European conflict.

These circumstances impose upon us the duty of uniting our efforts for the purpose of defending Roumania's great interests, thus raising ourselves in heart and mind above all other preoccupations.

In the course of the session which opens this day you will have to pronounce upon different legal and financial projects which my Government will submit to you in order that we may face existing difficult circumstances, and we doubt neither the good sense with which you will examine them nor the high patriotism which you will bring to their support.

More especially are we convinced that you will continue to satisfy the needs of our beloved army, that has ever known how to show itself worthy of the love and confidence of the country, and on which depends more than ever the position due to Roumania.

Gentlemen,—Full of confidence in the future of our dear Roumania, we pray that the Almighty may bless your works.

We declare opened the ordinary session of the Legislative Bodies.

Interruptions by Opposition.

A group of members belonging to the "Unionist Federation," which includes not only members of the Opposition, had at a previous meeting resolved upon an organised manifestation. A little before the King's arrival the entire Opposition entered the Chamber in a group, MM. Take Jonescu and Nicolas Filipesco seating themselves together on the front bench. All who possessed Serbian decorations seemed to be wearing them. Conspicuous by their absence were decorations belonging to the Central Powers and their allies. The King, as mentioned above, was greeted with lively applause, but no sooner had he pronounced the first words of his speech than some sixty deputies broke out into cries of "Down with the Hungarians! We want Ardeal! Long live Ardeal!" A little later the speech was again interrupted by similar cries, oft repeated. The passage referring to the Army was warmly applauded by all parties, and the end was marked by cries of "Long live the King!" and "Down with the Magyars!" Governmental organs refer to the interruptions as a premeditated breach of respect towards the Sovereign, a reproach which may be allowed to apply to the form, but does not take into account the spirit, of the manifestation.

A Step in the Right Direction.

A British telegraph agency has been instituted in Bucharest, which will offer valuable support to the French and Russian telegraphic services in supplying the public with information from sources other than German. Roumania is one of the few countries left which present a wide field of activity for German propaganda, and it was high time for us to take some measures to neutralise this state by supplying the public with reliable news. I am, of course, far from suggesting that German methods should be resorted to; this war is a great melting-pot, from which we are likely to emerge only too similar in appearance to our enemies, unless we avoid dubious methods and continue to keep ourselves from dabbling in disreputable transactions. If there is one thing we can pride ourselves on more than another it is that we have so far kept clean. The good reputation we still enjoy among the neutrals—I refer entirely to the Balkans—is largely due to this, and to the fact of our having so far adhered to the principles proclaimed by us since the outbreak of the war. The future generations may give us credit for this when they come to analyse the causes of the Balkan fiasco.

December 16.

The New Contingent.

King Ferdinand had the happy idea of suggesting that the contingent for 1916 should be reviewed on the anniversary of the fall of Plevna, and this coincidence lent special significance to the ceremony of swearing in the new recruits. Accordingly on December 11 some 10,000 young men formed up in a square at the barracks of St. George, their Majesties, King Ferdinand, Queen Marie, and the Royal children, the Prime Minister, and a number of general officers being gathered around the altar set up in the centre of the square. The almoner of the garrison having celebrated a service, the recruits raised their right hands and took the oath of allegiance, whereupon the King favoured them with an address, in which he recalled the circumstances that lent special importance to this anniversary.

Miss Cavell and Roumanian Women.

It has been decided to open a subscription for the purpose of contributing to the expenses of the proposed monument to the memory of Miss Cavell. The initiative is due, I understand, to the kind heart of Mrs.

FOR INSURANCES OF ALL KINDS.
F. W. CUMING & CO., LTD.,
THE GENERAL INSURANCE OFFICE OF EGYPT.
ALEXANDRIA: 5, RUE AVEROFF. CAIRO: 23, SOLIMAN PACHA.

Digitized by Google

Take Jonescu. Subscriptions are not to exceed 20 frs. A long list of sympathisers, rather than a large sum of money, is the aim of the subscription. The fair sex alone are invited to contribute. We do not doubt for a moment that ample funds will be collected in England alone, but Miss Cavell's martyrdom reaches the hearts not only of English women but of the women of all nations. Those of Roumania claim their right to register at once their horror of a crime that degrades humanity as a whole and their veneration for the victim whose spirit so completely dominated the flesh, and who has left mankind the richer for her example.

Escaped Serbian Prisoners.

Some twenty Serbian soldiers are reported to have reached Salonika after passing through extraordinary trials. Having been made prisoners in the course of a recent engagement, they were led into Bulgarian territory. One night on the road the captives, taking their guards by surprise, massacred them all. Seizing their arms, they contrived to escape over the frontier, subsequently making their way to Salonika. They are described as fine specimens of the soldier, active, high-spirited, and dauntless.

Russian Preparations.

It is stated that the Russian port on the Danube, Reni, was closed on December 3 for all traffic of a general kind, and that fresh troops have arrived there. Ships expected at Galatz from this port have not arrived. Another wire announces the closure of the Russian frontier at Ungheni in view of the large concentration of troops at this point and of an approaching offensive against Bukovina.

A wireless from Poldhu reports that German troops are being withdrawn from Serbia and sent to Rustchuk, in order to defend Bulgaria against a Russian invasion, which is considered to be imminent. The Austro-Germans continue to fortify the principal Bulgarian river ports. Powerful guns and projectors have recently been established at Rustchuk and Vidin. Some people think that the Bessarabian army has been formed in order to support an expected offensive on the part of Roumania, Russia being unable to send an army into Bulgaria until she has assured herself of a safe base of operations, and that she is seeking to obtain this base in Roumania.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, December 14.

The Germans in Sofia.

A diplomatist who arrived here recently from Sofia reports that on the arrival of German troops Sofia and Rustchuk were beflagged by order of the Bulgarian Government. The first German regiment to enter Sofia was the 16th Hamburg. Received on the border of the city by the Minister of War and a special deputation, the regiment marched through the principal streets headed by its band. The same evening a banquet in honour of the German officers was given at the Military Club, at which the Crown Prince was present.

The entire Fifth Division of the Bulgarian Army has been moved to Rustchuk, as has also the 1st Brigade of the First Division.

Eighteen thousand German soldiers were disembarked at Rustchuk, having been taken thither down the Danube from Lom Palanka. They were immediately sent on by train to Shumla, where the German General Staff is—or was—located.

Turkish Troops in Bulgaria.

Two Turkish regiments have arrived at Varna and Burgas. This is all the more significant in view of the fact that ever since her entry into the war Bulgaria has categorically refused to allow Turkish troops to enter the country, making no secret of her suspicion that the Turks intended to occupy all that part of Thrace which they lost during the Balkan War. It needed the intervention of Berlin to allay the Bulgarian suspicion of their former enemy and new ally, and the German Government, it is said, decided to send troops to Constantinople as a guarantee of loyal conduct on the part of the Turks towards the Bulgarians!

It is to be noted that the state of tension between the Turks and the Bulgarians appears to become more acute; and the existence of a secret German-Turkish agreement, which aims at the retrocession of the Adrianople-Dedeagatch line to Turkey, seems to be beyond all question. In these circumstances it is not surprising that the stationing of Turkish troops on the Bulgarian frontier causes lively dissatisfaction amongst the Bulgarian public, who are commencing to lose all confidence in Germany's promises.

Prohibited Exports.

The Council of Ministers has prohibited the exportation of maize and eggs. In view of the need of the former, especially in Germany and Austria, this prohibition seems rather a strange one. Germany also imported from Bulgaria between 30 and 80 tons of eggs monthly.

ROUMANIAN CATTLE SMUGGLING.

(From a Correspondent.)

Bucharest, December 8.

The high prices offered in Austria-Hungary are a great temptation to those who are not convinced that compliance with the regulation prohibiting the export of cattle will result in the starvation of the Central Powers. The authorities have to contend with great difficulties, for prices offered over the frontier are so high that in some cases smugglers can afford to bribe police and frontier troops stationed at likely points for the purpose of preventing such illegal traffic. A few days ago a herd of some eighty head of cattle was stopped as it was being driven over the frontier at Mitarcea. The smugglers were fired upon, and this led to their surrender.

A horrible crime was committed recently under peculiar circumstances. An officer of the reserve stationed at Dolhasea, on the Austro-Roumanian frontier, taking advantage of his post of confidence, agreed to offer facilities for the conveyance of cattle over the frontier. This had been going on for some time, when one night the officer and his accomplice, a sergeant, were surprised by two soldiers under suspicious circumstances. Having acquired the impression that the soldiers intended informing against them, the officer and his subordinate resolved to do away with them. They had the two soldiers placed on guard, and, creeping up in the course of the night armed with rifles, shot them down in cold blood. The shots attracted some members of the police force, who arrived in time to hear the testimony of one of the expiring victims. This led to the arrest of the officer and of his accomplice, who are now awaiting trial. The officer was a licentiate in law, and the price of his crime was the paltry sum of 90 frs.

This morning's edition of the *Dimineatza* refers to the existence of an audacious band of cattle smugglers, which has assumed the proportions of an organized association, with its headquarters at Cernowitz, and widespread ramifications along the whole Austro-Hungarian frontier. The founder of this organization, which has the approval of the Austrian civil and military authorities, is said to be a notorious business man of the name of Coco Wassilko, a baron, a deputy, and the leader of the Ruthenians of Bukovina. Thanks to the extraordinary adroitness employed, over 42,000 head of cattle are said to have been conveyed over the frontier in the course of three months, but no doubt the figure has been exaggerated. Wassilko's personal gain is said to amount to two million crowns.

NEWS FROM SYRIA.

(From a Correspondent.)

Port Said, December 21.

Referring to my last notes.* the following supplementary information has been supplied by the same person. Out of the eight individuals hanged three were Ruadians who were suspected of carrying on a propaganda among the Moslems.

The Supply of Fuel.

With regard to the persistent rumours of the cutting down by the Turkish Government of pine-trees and olive-trees in the vicinity of Beyrout, it is gratifying to learn from the same informant that they are totally unfounded. The fact of the matter is that the Turkish authorities have been buying firewood, consisting principally of pine-trees, which abound in that region, from private owners, and paying about 40 piastres per ton, delivered on the spot. Owing no doubt to the great scarcity of money, the proprietors of pine groves have found it to their interest to sell large quantities even at this low price, as the Government is said to have now a large stock of about 30,000 tons of firewood for the supply of fuel to the railway. There is, happily, no truth in the report that the Government has been cutting down the fine pine forest of Ibrahim Pasha fame, lying on the southern outskirts of Beyrout.

Street Improvements.

To the credit of the authorities at Beyrout may be mentioned also the fact that new streets have been opened up across the old city from the quay right up to the square, thus creating new arteries of considerable utility in the business part of the town and clearing away old insanitary buildings and dirty narrow lanes. The opening up of these streets has formed the principal feature of several schemes conceived by progressive *valis* and municipalities, but these plans never materialised, owing to the chronic impecuniosity of the municipality and the difficulty of raising municipal loans through existing legislation. Now, by a strange irony of Fate, these two streets have been opened up at a time of great economic distress for Beyrout. But it is precisely because of this distress that such work has at last been undertaken. The relief funds raised in America to alleviate the distress caused by war amongst the working class have, by arrangement between the American trustees and the local authorities, been allocated to the work, thus serving a double purpose of charity and utility.

Two Corrections.

My informant has also corrected the reports regarding the alleged engagement between an Allied aviator and the Turkish garrison stationed in a Lebanese village overlooking Beyrout, and the forcing by the Turkish Government of the sealed doors of the French Consulate in defiance of the protests of the American Consul-General. The aviator in question, I am now informed, never dropped bombs on the garrison, but was simply reconnoitring; and although at one time, when he hovered very low, the Turkish soldiers fired on him without effect, he never retaliated.

As to the archives of the French Consulate that were ransacked by the Turks, they contained no incriminating documents, the French Consul-General having taken the precaution to remove all correspondence that might implicate any Ottoman subjects who had had dealings with the Consulate.

Jemal Pasha and the French.

It is gratifying to all the friends of the Director of the French Post Office, who was a leading spirit in all French intellectual activities at Beyrout, to learn that he has been allowed to leave. Jemal Pasha is said to have declared to him that he is still a great admirer of the French people and of the French army, but, of course, not of the French Government, which is now at enmity with his own. This guarded and diplomatic expression of sympathy has still its significance.

THE OUTRAGE AT SHIRAZ.

By the kindness of a correspondent, we are enabled to give the following extracts from a letter written by one of the Englishwomen who were arrested and carried into captivity by the Persians at Shiraz last November. The letter was written from Bushire, and dated November 29:—

I wonder whether you have heard of what happened to us? On November 10 the whole English colony in Shiraz was arrested individually by the gendarmerie. My husband and his accountant were on their way to office, and Major O'Connor had an ultimatum sent in to him and had to surrender. We were summoned to join my husband, no special reason being given, so we got into the carriage and drove off just as we were, not dreaming that we should never return to our home. We were kept prisoners all day, then packed off in *Khajavehs* and riding, and brought as prisoners down to Borasjun. We had only a few things that our servant was allowed to scrape together for us, and for ten nights we lay on the ground and never took off our clothes. The Bank and all our private property was seized, and we left the house at a minute's notice. Our party consisted of seven men—the Consul, my husband, two telegraph officials, Mr. L——, our accountant (Mr. A——), and a Cingalese clerk, with ten Indian sowars and four women, Mrs. S——, myself, and my two girls.

At Borasjun Mr. Wassmuss, the famous German agent and the cause of all our troubles, appeared on the scene, and we were taken to Shoak, and there handed over to him and the Tangistani chiefs. Next day we were separated—the men were taken to Ahram, Mr. Wassmuss's headquarters, and we women were escorted to Ahmedi, where the chief interviewed me and made me the bearer of his terms and views, and then to the British in Bushire. . . . . Since then I have been frightfully busy in every way, and the shock has been very severe.

The prisoners are being well treated, and they are allowed to communicate with us and to receive parcels. We are absolute refugees, and feel our position keenly. The gendarmerie officer who escorted us treated us very well, and we are grateful to him. We were thankful that he realised his responsibilities and would not let Mr. Wassmuss interfere with us. You can imagine how anxious we are. On the road we kept a cheerful face, but the suspense now is most trying. Major O'Connor has been ill for months, and ought to be under medical treatment, and my husband is far from strong. Mr. P—— suffers from a recent broken leg, and everyone is more or less ailing.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

Greece and the Entente. Jan. 5.

Mr. King asked whether the Secretary of State for Foreign Affairs had given his attention to the statements of M. Skouloudis, the Greek Premier, especially to the statements that the Entente Powers offered to Greece terms which included her co-operation in the Dardanelles on the condition that Greek troops should not march on Constantinople nor come within fifty miles of Constantinople, and whether he could make any statement on the subject.

Lord R. Cecil: I think it would be very undesirable to make statements about particular communications that may or may not have occurred in past months with other Powers in previous stages of the war.

Mr. Outhwaite asked why statements made in Greece by M. Venizelos and M. Gounaris could not be repeated in the House, and whether those gentlemen had not said that Greece had offered to lend a landing force at the time of the first Dardanelles enterprise.

Lord R. Cecil: I do not think my hon. friend has seen the question.

Mr. King asked whether the noble lord realised that members had to get their information of what the Foreign Office was doing from neutrals and Allies rather than from our own Foreign Office.

Lord R. Cecil: I think that would be a very injudicious course.

Mr. King asked whether the noble lord could point to a more judicious course, and one that would be more successful.

Lord R. Cecil: No one is more averse from unnecessary secrecy than the Secretary of State for Foreign Affairs or myself. We always give information which it is possible to give with due regard to the public interest.

LOYAL INDIAN MOSLEMS.

Reuter's Bombay correspondent reports under date of January 1:—The All-India Moslem League concluded its Congress to-day. Strong demands were made for self-government under the ægis of Great Britain, which, it was declared, was the only possible form of government for India. It was admitted, however, that the matter was not imperative until the end of the war, when the whole Empire would be reconstructed. The president, Mazhar Ul Hague, emphasised the loyalty of British Moslems, and dwelt on the great good derived from the British connection and the conscientiousness of the administrators, although, he added, the Indian point of view was sometimes forgotten. The Congress passed unanimous resolutions expressing loyalty to the Crown and appreciation of Lord Hardinge, whose term of office, it was hoped, would be extended.

TANGIER TO TEHERAN.

I am pleased—and not at all surprised—to learn from a Reuter's message that there has been a scene in the Turkish Parliament between Enver Pasha and Talaat Bey, both Ministers using violent language and apparently being restrained only with difficulty from resorting to fisticuffs. When rogues fall out honest men come into their own. Even now I should not be greatly surprised to see the Committee of Union and Progress come to grief through a development of the rivalry between Enver and Talaat, which has been steadily becoming more acute of late.

***

That reminds me that it is not only Turkish statesmen who are bent on turning the war to their own personal profit. I was told recently by someone who was at least in a position to know what he was talking about that two of Bulgaria's very highest Cabinet Ministers had divided between them a very tidy *backsheesh* from Berlin as a reward for their share in pushing their country into the embrace of the Central Powers. I hesitate to give the names of there two patriots; for though, were they published, one of them would not cause any surprise to readers of these notes, the other is that of a man whose honesty has never been publicly called in question heretofore.

***

A correspondent writes:—"The courage and incapacity of the average Englishman are never more conspicuous than in his adventurous grappling with the difficulties which the pronunciation of the names of unknown places presents. The inclusion of the Near East in the theatre of the War has brought him face to face with many such difficulties, but he has tackled them without hesitation and, as usual, without success. Salonika and Cattaro are cases in point. Each has the accent on the penultimate, but everywhere in London one finds that, with his passion for dactyls, the Englishman throws the accent one syllable further back." I cannot say I entirely agree with my correspondent, especially as to the "incapacity" of the "average Englishman," who seems to me to be no more incapable than the average man of most other nationalities. I have heard even a highly-cultured Teuton, after long residence in our midst, constantly mispronounce the name of our capital city! But that is by the way. What interests me chiefly in the note is the reference to the pronunciation of "Salonika," for this was for some time a question that vexed me not a little. I have visited the place, and I have heard its name pronounced three different ways by people who have lived there—Greeks, Turks, and British. Also I have heard it pronounced in probably half a dozen different ways of late in England. Sal'onika, Salonika, Salonika, and so forth. The consequence is that I have once more become fogged, but I believe I am right in saying that, as a matter of fact, the correct pronunciation is Saloniki; and therefore the final "i"—with which the American Consular reports always spell the name, by the way—is to be preferred to the final "a."

***

One or two items in the accounts of the Civil Contingencies Fund for the year ended last March have quite a fascination for me. Thus I note that the "expenses of the journey of the Austro-Hungarian Ambassador and Suite to Falmouth" amounted to £479 4s. 10d., while "the journey of the Turkish Ambassador to Folkestone" cost only the paltry sum of £2 5s. Making all allowance for the difference in mileage, it still seems to me that these figures mark a disparity between this country's estimate of the importance of the representative of the Sultan and the representative of the Austrian Emperor which can hardly be flattering to the former; and though I do not regret the courtesy shown to the latter, I cannot help feeling just a little sorry for Tewfik Pasha, who, whatever his faults may have been, was certainly a gentleman.

***

A friend who knows my weakness for such things has sent me an "Arab Saying" which seems worth passing on. Here it is:—

> A man who knows not and knows not he knows not, he is a fool—shun him.
>
> A man who knows not and knows he knows not, he is simple—teach him.
>
> A man who knows and knows not he knows, he is asleep—waken him.
>
> A man who knows and knows that he knows, he is wise—follow him.

This is sententious, perhaps but it contains, I think, a good deal of sense and wisdom.

My attention has been called to a letter from Mr. Thomas H. Mawson which was published some little time ago in the *Manchester Guardian*, and I have read it with very real interest. Mr. Mawson, as readers of THE NEAR EAST will remember, was for some time in Greece in connection with plans for improving and beautifying Athens, and he was brought into close contact with King Constantine and Queen Sophie. Now he has written a letter designed to show that their Majesties' sympathies are with Great Britain rather than with Germany; and that if they "are now what some people assert," the change may be due to, "on the one hand, the fear of an implacable foe, and, on the other, the assurance that, whatever happens, an English gentleman may be trusted." If he will allow me to say so, this letter does as much credit to Mr. Mawson's head as it does to his heart. After reading it, so strong a case does he make out, I am inclined to feel very sorry not only for King Constantine, but also for his consort, who, we must remember, is half-English on her mother's side, and who may, therefore, have been perfectly sincere when she said to Mr. Mawson, "England is home to me, and I love it."

***

In her younger days her Majesty spent a good deal of time in this country, where she doubtless found far more freedom, and therefore more happiness, than at the Prussian Court; and early impressions are lasting ones. So, when, during her tour of a number of country seats in Sussex, she said to her conductor, referring to her hosts: "Mr. Mawson, where do these old English gentlemen get their delightful manners? They are incomparable," she was probably expressing an entirely unaffected enthusiasm. At any rate, we know that the more intelligent Germans themselves admit that one of the articles "made in Germany" that has never been able to compete with the British product is—well, you remember the remark of the German officer who, being recalled to the Fatherland when war was imminent, said to his English host: "Good-bye, old fellow. You always will be fools, and we never shall be gentlemen." Smart clicking of heels and ramrod-backed hauteur of manner are impressive in their way, but Queen Sophie's preference in this matter, at least, is easy enough to understand.

***

As for King Constantine, a friend of mine, who had met him many times, described him to me as "a capital fellow, excellent at parlour games, and given to being enthusiastic." His Majesty's enthusiasm for our old gardens is therefore quite likely to be genuine; he may even like us very, very much indeed, but—as Mr. Mawson hints—he is afraid of the mailed fist and its cr—r—r—ushing power, and he knows that the "English gentleman may be trusted." Indeed, has he not said as much? Of course, that is not a very kingly attitude to take up, according to our crude, unkultured, old-fashioned notions, but perhaps King Constantine is suffering as a result of having been placed on too high a pedestal. After the late Balkan War his subjects insisted upon the world regarding him as a kind of Napoleon-*cum*-Alexander the Great, just as they represented themselves as straining at the leash to get at the Bulgarians again and finish the job off once and for all. Now—! . . . . Yes. I am sorry for the Greeks and for King Constantine. The enthusiasm and the patriotism of the Greek are admirable qualities, but they are apt to get out of hand at times and to land him in difficult situations. True, Fortune has been very kind in the way of helping him out of awkward predicaments in the past, and she may be so in the present instance. Meanwhile I would only add that, after reading Mr. Mawson's letter, I am convinced that it would be a very good thing if *all* Kings and Queens could be compelled to live always in gardens; for, as Mr. Mawson observes, "such a setting does not conduce to high statecraft or deep-laid plots," and the world would get along quite well without such things.

CORSAIR.

THE CURATOR AND THE COIN.

To the Editor of THE NEAR EAST.

Sir,—The hero of the story, in your last issue, of the coin lost at the British Museum was, I think, Mr. Taylour Thomson (afterwards our Minister in Persia), on his return from Khiva in his search for Stoddart and Connolly. He told it to me at Teheran in 1875, and I am under the impression that he told it as having occurred to himself.

I am, etc.,

ALEXANDER FINN.

Richmond, Surrey.

NEAR EAST BOOKSHELF.

EGYPTIANS.*

It is a little difficult to understand why Mr. Wallis should have chosen the title of "Cleopatra, a Gipsy," for his latest romance. As a matter of fact, although the story is built up on the adventures of a hero who had been kidnapped by the gypsies in his infancy, the greater part of the book has nothing to do with the tribe at all. Mr. Wallis is, however, nothing if not versatile, and the wealth of incident which he introduces to the support of his plot makes any conceivable title inadequate. The plot itself is as old as the hills, and concerns the life of a young man, presumed to be the son of a traitor, but really the kidnapped son of a noble lord. This, however, is one of the books in which plot is an entirely secondary consideration—a mere peg on which to hang episode, and it may be said at once that the author has written an interesting romance. The scene of the book is laid in England in the time of Elizabeth. Incident follows incident in a fashion which, although almost bewildering to the reader, ensures his interest to the last page. And then one wonders what it was all about and why it was ever written. It is written in a manner which lacks a great deal in the way of continuity, but which is redeemed by unquestionable descriptive and imaginative power. The author has, moreover, succeeded in endowing most of his characters with very distinctive personalities; his portrayal of Miraben, the gypsy heroine, being, perhaps, the most disappointing in this respect, because it is unequal.

Throughout the book the old-time designation of Egyptian for gypsy is generally used. It is curious why these travellers should be always regarded as having originally come from Egypt, because, although it is possible they made their first appearance in the West after a passage through Egypt, it is certain that they owe their origin to the Far rather than the Near East. An examination of their language—which, by the way, is in popular use among members of the tribe in England to-day—reveals many words of Sanskrit and Hindustani origin; there are very few which can be traced to Arabic. Mr. Frank Cutriss, in his recently-published work on Romany life, deals with the subject of Romany ethnology in a manner which clears up all doubt on this score. On the other hand, he shows that the crescent of the Orient is one of the commonest designs in real Romany jewellery of the present century, and it is probable that members of the tribe as we know them to-day reflect traits of most of the different countries through which it has passed since its first migration from the Far East.

In the days of Elizabeth gypsies were, by the law of the land, outlaws, and much that Mr. Wallis has given us descriptive of their life in those days is interesting and at the same time historically accurate to a great extent. Their conditions of existence are now happily altered in this country, although they are still, in certain districts, pursued by the irritating and narrow-minded aversion of persons in authority, who regard them dubiously for the simple reason that their lack of imagination leads them to condemn anything that they cannot understand. In Serbia the gypsies have been doing yeoman service in the ranks of the army since the beginning of the present war; our own gypsies have also given largely of their numbers. And we welcome any book which may serve to induce a fuller standard of understanding and justice for a folk who, after all, retain to-day much that was common to our forbears in the way of life centuries and centuries ago, and give even to our scurrying, overwrought civilisation a much needed note of Eastern simplicity. We venture to hope that Mr. Wallis may at some future date give us another romance in which he will devote his historical knowledge to a fuller treatment of this fascinating subject. In his present work he has consistently spelt gypsy with an "i"; this, we hope, was an oversight that may be remedied in his next work.

MORGANS LTD., 88, Chancery Lane, London, W.C.

Or at Bookstalls, &c., throughout the United Kingdom.

Messrs. Harrap are shortly publishing a new book, "Warwick the King Maker," from the pen of Mr. René Francis. Mr. Francis, who was at one time in the service of the Egyptian Government and is the author of many successful books, is a part-owner of the *Athenæum*, a paper which has been connected with his family since its foundation. An interesting interview with Mr. Francis concerning the change from weekly to monthly publication of that journal appeared in the *Observer* of Sunday week.

We have received from Messrs. Hutchinson and Co., publishers, of Paternoster Row, E.C., a copy of a charming original lithograph, by Spencer Pryse, entitled "The Uhlan's Raid," which has just been published. The price of the picture is five shillings, and the entire profits are being devoted to the Belgian Relief Fund, 3, Savoy Court, Savoy Hotel. Apart from the estimable purpose to which the profits are to be given, the picture should command a large sale on its own merits. The central figure is that of a young woman who, having found her slain, gazes blankly over the desolation left in the track of the Huns. It is a vivid and pathetic picture, well reproduced.

CONSTANTINOPLE.

Last Monday, at the Kensington Town Hall, Mr. H. C. Woods delivered one of the Royal Geographical Society's lectures to young people, his subject being "Constantinople." He said that after the wearisome and often rough passage across the Sea of Marmora there was no more beautiful sight than that which confronted the traveller just before he arrived at Constantinople. When the ship rounded Seraglio Point and entered the Golden Horn this was seen to be crowded with shipping, while hundreds of *caïques* moved up and down over its deep blue waters. Over all was the sense of mystery and romance which belongs to the East. Three towns combined made Constantinople: Stamboul, on the site of the ancient Byzantium; Galata, across the Golden Horn, inhabited, with its suburb Pera, chiefly by Europeans; and Skutari, on the Asiatic side of the Bosphorus, inhabited, like Stamboul, mainly by Moslems. Constantinople, said Mr. Woods, has nearly a million inhabitants. Of the Turkish woman, he said that, with the exception that she can have no intercourse with any man except her husband or her nearest male relations, she has almost as much freedom as any European woman. Once she has put on her veil she can come and go as she wishes; she may even pass her husband in the street without his knowing her.

Lantern slides illustrated the various points of the lecture; one showed a Turkish porter with his enormous burden. Mr. Woods said he well remembered that on one occasion an amount of luggage which had completely filled a four-wheeler on his departure from London was carried from the quay to Pera (a distance of one and a-half miles) on the back of a porter. He had seen a porter carry a grand piano.

AFTER THE WAR.

Speaking at Devonshire House, Bishopsgate, on Monday last, Mr Charles Roden Buxton said that, in determining the fate of peoples such as those of Alsace-Lorraine, Poland, and the Italian districts of Austria, the chief consideration should be the wish of the people themselves. With regard to the Serbs, they desired unity with their brother Serbs within the Austrian Empire, and also with the Croats and Slovenes, the two other branches of the Jugo-Slav race, from whom they were but slightly distinguished. They desired also freedom and national independence. At the conclusion of the war they might be faced with the very difficult choice between unity and freedom. It was conceivable they might have to choose between the unity of their whole race within the Austrian Empire, with an autonomous but not independent government; or, on the other hand, the absolute independence of the Kingdom of Serbia as it has been until now, but with no hope of unity with the other southern Slavs. Whether these or other alternatives were presented, the chief factor in settling the question should be the desire of the people immediately concerned.

NOTICE TO SUBSCRIBERS.

Owing to the sinking of the "Persia," thousands of copies of THE NEAR EAST *of December 17 last have been lost with the rest of the mails, and in consequence subscribers in Egypt, Cyprus, and India will not have received their copies of that issue. An effort is being made to replace, as far as possible, the lost copies, but any subscribers who may have been overlooked, and are desirous of completing their files, are asked kindly to communicate with the Manager, who will be happy to send them a further copy post free.*

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Jan.	1915. Dec.		1334. Rebi I.	5676. Shebat.
7	25	Friday	1	2
8	26	Saturday.....	2	3
9	27	Sunday	3	4
10	28	Monday	4	5
11	29	Tuesday	5	6
12	30	Wednesday	6	7
13	31	Thursday	7	8

To-morrow is the birthday of H.M. the Queen of Italy, who is the third daughter of King Nicholas of Montenegro, and was born at Cettinje on January 8, 1873.

Sunday is the birthday of H.R.H. Princess Marie of Roumania, the second daughter (and third child) of King Ferdinand and Queen Marie, who was born at Gotha, December 27, 1899, Old Style.

H.M. the King of Serbia has arrived at Salonika from Brindisi. Telegraphing on the 1st inst., Reuter's correspondent at the former port announced that his Majesty was "still somewhat indisposed owing to the recent severe strain on his constitution." His journey from Prizrend to San Giovanni di Medua was, indeed, sufficient to try many a younger and stronger man, and at times he had to be borne in a litter by some of the devoted soldiers who accompanied him. It is understood that the palace at Caserta was placed at his disposal, but that, owing to his determination to share the lot of his troops, he preferred to go on to Salonika. It is understood that his stay there may be a prolonged one.

Reuter's Athens correspondent reports (January 1) that the Greek Government addressed a cordial message of welcome to King Peter, through the Prefect of Salonika. The *Giornale d'Italia* has received a telegram from Athens stating that the Serbian King proposes to hold a conference with King Constantine imploring the latter to keep his promise towards Serbia, but that King Peter, being so weak and ill, and it being feared that the dramatic meeting might prove fatal, his entourage are attempting to dissuade him.

The Athens correspondent of *Le Temps* reports that interviews have taken place between King Peter and Generals Sarrail and Sir Bryan T. Mahon, the French and British Commanders at Salonika.

Under date of January 4, Reuter's Rome correspondent reports :—"The *Corriere della Sera* publishes an interview which its Salonika correspondent had with Dr. Simonovic, King Peter's physician. In the course of the interview Dr. Simonovic said King Peter stayed five days at Brindisi and took frequent walks about the town. The friendship and cordiality shown towards him by Italy had been a great comfort to him. King Peter expressed his pleasure at visiting Italy, who had come to the help of Serbia in her greatest need."

The Serbian Minister in Paris has left for Salonika to confer with his Sovereign.

H.H. the Aga Khan has left town for Paris on his way to Monte Carlo, and will return to London in May.

Reuter's Cairo correspondent reports that Lord Kitchener has telegraphed to General Sir John Maxwell and to the troops in Egypt his best wishes for 1916.

H.E. the Greek Minister and Madame Gennadius, who left London on Saturday for the country, returned to town on Wednesday.

The Consul-General for Montenegro and Lady Roper Parkington arrived at Claridge's Hotel from Tunbridge Wells last week.

General Castelnau has returned to Paris from Greece and Italy.

We regret to learn that Sir Gerard Lowther, formerly H.M. Ambassador in Turkey, is still too ill to be moved to London, though his medical advisers hold out hope of his being strong enough to undertake the journey in a few weeks.

The arrival of the Serbian General Putnik is expected at Salonika.

Colonel Sir Mark Sykes, M.P., and Lady Sykes are converting their seat at Eddlethorpe, North-East Yorkshire, into a convalescent home for soldiers.

A French official report issued last Friday stated that on the previous day some Aviatiks dropped bombs on Salonika, one of which fell on a Greek detachment that was carrying out manœuvres in the presence of Prince Andrew, who thus had a rather narrow escape.

Mr. Einstein, Secretary of the American Legation at Sofia, has sent through the American Minister at The Hague the following telegram to Mr. Bertram Christian, chairman of the Serbian Relief Fund in London : "Lady Paget and all her mission at Uskub are well, and send their holiday greetings."

The Times' correspondent in the Balkan Peninsula has received a letter from Lady Paget stating that all the members of the Serbian Relief Fund Hospital at Uskub are well. A loan has been obtained for relief work from the Bulgarian National Bank in Sofia.

Dr. Clemow, head of the British Red Cross Society's units in Montenegro, arrived in Malta on December 28, and is expected in this country at almost any time now.

Admiral the Hon. Sir Stanley Charles James Colville, G.C.V.O., K.C.B., who has just been appointed to succeed Admiral Sir Hedworth Meux, G.C.B., as Commander-in-Chief on the Portsmouth Station, served in the Egyptian Campaign of '82, for which he received the medal and the bronze star. In 1884-85 he took part in the Nile Expedition, and in 1896 served with the Dongola Expedition, in which he was severely wounded. His services were rewarded with the medal with clasp and he was promoted to Captain. He became Rear-Admiral in 1906 and Vice-Admiral in 1911.

On December 27, at Khartoum, a son was born to the Rev. and Mrs. C. A. Wilson, of the C.M.S., Sudan.

The marriage arranged between Captain Evans-Gordon, Special Staff Officer, Mysore Cavalry in Egypt, late Central India Horse, only son of Colonel Evans-Gordon and Mrs. Evans-Gordon, of Wican Croft, Northwood, Middlesex, and Irene, younger daughter of Sir Henry McMahon, G.C.V.O., K.C.I.E., C.S.I., High Commissioner of Egypt, and Lady McMahon, will take place quietly, in Cairo, early in February.

A marriage has been arranged, and will take place quietly on the 18th inst. in Kilbarchan Parish Church, between Major E. H. Ross, the Leicestershire Regiment, attached Egyptian Army, and Evelyn Margaret, youngest daughter of Neil Robson, The Grove, Kilbarchan, Renfrewshire.

A marriage has been arranged, and will take place at Ulverston on February 2, between Herbert Goldsmith, eldest surviving son of the late Hon. Herbert Goldsmith Squiers, United States Minister to Panama and Cuba, and of Mrs. Squiers, of New York, and Thornes Beach, Hampshire, and Ethel Marguérite, elder daughter of Myles Kennedy and Mrs. Myles Kennedy, of Stone Cross, Ulverston.

A marriage has been arranged and will shortly take place between Mlle. Yvonne Harari, the third daughter of Harari Pasha and Mme. Harari, to Mr. M. Rolo, the son of the late Mr. J. Rolo, of Alexandria.

The marriage of Captain Barron, the Worcestershire Regiment, to Miss Elinor Blyth, will arouse the interest of a wide circle in the Near East, where both bride and bridegroom are well known. Captain Barron's military record has been one of very varied experiences, some account of which has appeared already in THE NEAR EAST. Miss Elinor Blyth is one of the daughters of the fourth Bishop in Jerusalem, whose name will long be a household word throughout "Jerusalem and the East," and a sister of Captain Blyth, of Roseires. The wedding, after the manner of war weddings, was at very short notice, taking place within two days of Captain Barron's arrival from the trenches. The bride was given away by her brother-in-law, Dr. d'Erf Wheeler, and after the wedding there was a small gathering of friends and relations at the house, after which Captain and Mrs. Barron left for Eastbourne. Captain Barron returns almost immediately to the front.

On December 18, at the British Consulate, and afterwards at the Scottish Church, Cairo, the marriage took place of Mr. Ian Stuart Mackay, of the Egyptian Irrigation Service, to Miss Mary E. Smith, daughter of Mr. and Mrs. W. H. Smith, of Sidi Gaber.

Mr. and Mrs. Maurice Bonham-Carter have returned to London after their honeymoon tour in the Southern Counties and Italy, and Mr. Bonham-Carter has resumed his duties as principal Private Secretary to the Prime Minister.

Captain Edward Courtney Moore, R.N., retired, has died at Brighton, at the age of sixty-six years. He was a lieutenant on H.M.S. Thalia during the Egyptian War of 1882, when he was employed in the transport service, and received the Egyptian Medal and the Khedive's Bronze Star. He also served as a lieutenant on H.M.S. Briton during the naval and military operations in the Eastern Sudan in 1884, and landed with the Naval Brigade for the protection of Suakin.

Captain Robert Henderson Begg, Royal Garrison Artillery, who has been killed in action in the Mesopotamian operations, took part in the operations at Aden in 1903.

Lieutenant Leonard Hall White, R.N., who was killed in the explosion on H.M.S. Natal on December 30, was serving in H.M.S. King Edward VII. in 1913, and was one of the landing party which went to Scutari under Sir Cecil Burney.

The death is announced of Captain Eustace Gambier Mansel, at Chinnor Hill, Oxfordshire. Born in 1853, he received a commission in the Oxfordshire Light Infantry in 1873. He saw service in the Egyptian Expedition in 1884, and was in the battles of Teb and Tamai. He was awarded a medal with clasp, and also the bronze star.

Captain and Adjutant Robert Hutchinson Booth, Army Service Corps, 1st East Lancashire Divisional Train, of Turton, near Bolton, eldest son of Major John Booth, was wounded in Gallipoli on Christmas Day and died in Malta Hospital on January 2. He was for some years an officer in the 4th East Lancashire Regiment (T.F.) at Blackburn, but later joined the Army Service Corps and became adjutant in Egypt. In Gallipoli he served as Deputy Quartermaster-General and Shore Commandant at Cape Helles. He was thirty-two years old and was married.

Writing on December 16, our Bucharest Correspondent says :—I hear that Mrs. Také Jonescu, the English wife of the well-known statesman, is having plum puddings made for British prisoners in Bulgaria. Without reflecting on their quality, we are sure the giver will join us in our hope that there may be few to eat them, provided they do not fall into the wrong . . . hands.

Colonel the Hon. Clive Charles Bigham, C.M.G., who was one of the passengers on the P. and O. Persia, and who had such a remarkable escape, is, we are informed, at present attached to the Residency in Cairo. He is the eldest son of Lord Mersey, upon whom the King has just conferred a Viscounty, has travelled much in the Near and Far East, and is the author of several books of travel. His "A Ride Through Western Asia" gives a racy account of a journey he made in 1895-96 in the company of Mr. Labouchere, a nephew of the famous editor of *Truth*. In 1896-98 he was an Honorary Attaché at the British Embassy in Constantinople, and in 1897 he acted as *Times* correspondent with the Ottoman Army in the Greco-Turkish War, subsequently publishing an account of his experiences, "With the Turkish Army in Thessaly." He also served as British delegate on the International Commission in Thessaly for the Repatriation of Refugees, in 1897-98. He was A.D.C. and Intelligence Officer with Admiral Sir E. H. Seymour in the Pekin Expedition of 1900, and was afterwards attached to the Intelligence Division of the Army Headquarters Staff. He also acted as Secretary at the Titanic Inquiry, over which his father presided.

Among the missing passengers of the Persia (says the Cairo correspondent of *The Times*) is Miss Etta Hughes, who was last seen talking to Colonel Bigham, with whom she was precipitated into the sea by the explosion. Miss Hughes was formerly Lady-in-Waiting to the present Queen of Spain, and, before the recent change in the Egyptian régime, she was for many years English Lady-in-Waiting to the Khedive's mother. She was much esteemed in Egyptian Court circles, and she will be greatly missed socially by our diplomatists, to whom, both here and at Constantinople, she often gave invaluable assistance.

The four Y.M.C.A. workers on board the Persia included Mr. Arthur H. Johnson, one of the branch secretaries, who had been at work in the Tring district; Mr. L. W. Gascoigne, of Northampton; Mr. R. W. Heame, of Northampton; and Mr. H. A. Hopkins, of Henley-on-Thames. The three first named are reported safe, and the Y.M.C.A. is waiting for further news of Mr. Hopkins.

Mr. and Mrs. Philip Gribble, daughter and son-in-law of Mr. R. M'Neill, M.P., whose names have appeared in the list of passengers in the Persia, were not on board the vessel when she was torpedoed in the Mediterranean. They had booked passages to Egypt in the vessel, but were obliged to cancel them at the last moment.

In a message dated January 2, Reuter's Alexandria correspondent, in reporting the loss of the Persia, says:—"So far as is at present known, two Anglo-Egyptians were drowned, Miss Hughes, sister of an Egyptian Government official, and Mr. Shilston, of Boyes, Shilston, and Co., an old-established Cairo firm."

Reuter's telegram from Alexandria dealing with the sinking of the "Persia" described the escape of two bank clerks who were seen to dive from the doomed steamer just before she disappeared. The gentlemen referred to were Mr. A. Grave and Mr. R. Warner, both of the Anglo-Egyptian Bank, who were proceeding from the London office to take up appointments in the bank's branches in Egypt.

Bimbashi Gibbons, R.A.M.C., attached to the Medical Corps, Egyptian Army, has assumed the duties of Senior Medical Officer, Cairo District.

The *London Gazette* of last Friday announced that the King has been pleased to give orders for the promotion to the honorary membership of the Military Division of the Second Class, or Knights Commanders, of the Order of the Bath, of Vice-Admiral Emile Paul Aimable Guépratte, C.B., Commandant la Division des Dardanelles, in recognition of his distinguished services in command of the French squadron which co-operated with the British Eastern Mediterranean Squadron in the Dardanelles operations.

The *London Gazette* announces that the King has been pleased to approve of the grant of the Victoria Cross to Squadron-Commander Richard Bell Davies, D.S.O., R.N., and of the Distinguished Service Cross to Flight Sub-Lieutenant Gilbert Formby Smylie, R.N., in recognition of their behaviour in the following circumstances:—On November 19 these two officers carried out an air attack on Ferrijik Junction. Flight Sub-Lieutenant Smylie's machine was received by very heavy fire and brought down. The pilot planed down over the station, releasing all his bombs except one, which failed to drop, simultaneously at the station from a very low altitude. Thence he continued his descent into the marsh. On alighting he saw the one unexploded bomb, and set fire to his machine, knowing that the bomb would ensure its destruction. He then proceeded towards Turkish territory. At this moment he perceived Squadron Commander Davies descending, and fearing that he would come down near the burning machine and thus risk destruction from the bomb, Flight Sub-Lieutenant Smylie ran back and from a short distance exploded the bomb by means of a pistol bullet. Squadron-Commander Davies descended at a safe distance from the burning machine, took up Sub-Lieutenant Smylie, in spite of the near approach of a party of the enemy, and returned to the aerodrome, a feat of airmanship that can seldom have been equalled for skill and gallantry.

The King has been pleased to give orders for the appointment of Lieutenant Wilfrid Bayley Pirie, R.N. as a Companion of the Distinguished Service Order, for his services in command of a submarine in the Sea of Marmora, where he inflicted much damage on enemy shipping, and co-operated with Lieutenant-Commander Bruce in the chase of a Turkish gunboat.

General Sarrail communicated to the troops of the Allies a letter from the Commander of the Third Greek Army Corps, conveying to the French Commander-in-Chief a message of good wishes to the Allied Army for the New Year.

We regret to announce the death, which occurred in Switzerland on December 27, of Mr. Arthur John Cotterill, who was at one time Engineer-in-Chief of the Egyptian State Railways. Mr. Cotterill, who died very suddenly, was a son of the late Dr. Cotterill, Bishop of Edinburgh.

Our Bucharest Correspondent reports (December 8):—

M. Ang. Nichy, Secretary of the Roumanian Legation at Vienna, who was recently in Bucharest, has returned to his post.

Colonel Rudeano, Director of Armaments at the Roumanian War Office, has returned from abroad.

M. N. Cantacuzene, Minister Plenipotentiary, at present "Directeur de Service" at the Ministry for Foreign Affairs, has left the country.

M. Turasoho, Roumanian Chargé d'Affaires in Serbia, has been obliged to move to Salonika in consequence of the Serbian retreat.

It is reported that the Prince of Wied is at present in Prizrend, awaiting the conquest of Albania.

A correspondent writes:—The appointment of Mr. James Currie, C.M.G., to give effect to the policy of the Labour Supply Department of the Ministry of Munitions, in relation to the training of the munition workers, will be received by his many friends in the Sudan and elsewhere as a fitting—if somewhat tardy—tribute to the abilities of a public man whose conspicuous work has too long been overlooked. It is only now, after nearly two years' retirement from the Sudan Government Service, that the opportunity of utilising Mr. Currie's services has been availed of. Scarcely more than forty-five years of age at the time of his retirement, Mr. Currie has since been desirous of taking some active part in the public life of this country. His exceptional experiences would appear to have peculiarly suited him for a further useful career. The demand for men of his stamp and ripe experience can be regarded as imperative at the present time. Especially would the House of Commons benefit from a dozen such. Mr. Currie, for example, would be able to speak upon Imperial matters with no uncertain voice, and to place at the disposal of his colleagues the fruits of a valuable and almost unique knowledge, gained over nearly two decades, in dealing with and moulding the difficult Eastern mind. For fifteen years as the first Director of Education in the Sudan, he laboured to perfect the organisation of, and to advance the results aimed at by the Gordon Memorial College; and when he resigned (in April, 1914) he must have known that his work had not been in vain. With the spirit of an enthusiast and the capabilities of a genius at organisation, Mr. Currie succeeded in placing the whole of the different educational departments in a high state of efficiency; the new office conferred upon him by the British Government will benefit enormously in its working by such experiences already gained. The labour involved and the great amount of patience necessary in training munition workers—especially women—are by no means small; neither was the preliminary work undertaken in connection with the educational awakening of the Sudan. But the task was entered upon with zeal and perseverance, the result proving one of the finest and most fruitful enterprises carried out by the Sudan Government during the whole sixteen years of its administration. It is generally admitted that this success was entirely due to the fact that Mr. Currie was at the head of affairs and to the following with fidelity the lines of the well-considered original scheme evolved by him. He will find that the work which he is now asked to take under his charge will need revision, and, not improbably, complete reorganisation. This is where his peculiar abilities should be most usefully employed.

BRITISH REFUGEES FROM TURKEY FUND.

With the help of several members of the Committee, the President of the Committee of the British Refugees from Turkey Fund, Lady Neave, has organised a "White Elephant Party," which, as announced in these columns last week, is to be held at Lowndes House, Lowndes Place, S.W. (by the kindness of Mrs. Frank Barker), next Tuesday, January 11, at 2.30 p.m. An announcement regarding the sale will be found in another column, and we commend it to the notice of our readers, who will, we hope, support it heartily.

The Fund, which was started a year ago under the gracious patronage of H.R.H. Princess Louise, Duchess of Argyll, has done much good work in assisting former British residents in Turkey who have been reduced to severe straits by the war, through no fault of their own. Friends and sympathisers have shown much generosity to the Fund in the past, but the calls upon it have been numerous, and the Committee feels bound to make fresh efforts to enable it to continue its good work. It therefore earnestly appeals for help, which in the case of this sale may take the form of: (1) "White Elephants" for prizes—soldiers' comforts will be particularly appreciated; (2) the purchase of tickets, which cost 2s. 6d. each, and entitle the holder to a prize; and (3) attendance at the party. All unclaimed prizes will be sold on the day of the party. Tickets may be obtained from Lady Neave, George Hotel, Bangor, North Wales; Mrs. Frank Barker, Lowndes House, Lowndes Place, S.W.; or Lady Lowther, 27, Belgrave Square, S.W.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.
— EDUCATIONAL AGENTS, —
143, Cannon Street, London, E.C.

ROLL OF HONOUR.

Members of Near East Bank Staffs on Active Service

The following is a complete list of members of the staff of Banks connected with the Near East who have joined His Majesty's Forces since the outbreak of war :—

IMPERIAL OTTOMAN BANK.

LONDON AND MANCHESTER.

*Lawrence, Major-General Hon. H. A.
*Goschen, Colonel Viscount, The Buffs (East Kent Regt.), T.F.
Procter, Captain J. (Manchester), King's Royal Rifles.
Fisher, Captain and Adjutant F., King's Royal Rifles.
Murrane, Lieut. H. D., King's Own (Royal Lancaster) Regt. (*Wounded.*)
Duncan, Lieut. H. H., Norfolk Yeomanry, T.F.
Brown, Lieut. A., Army Ordnance Dept.
Robertson, Lieut. D., Army Ordnance Dept.
Booth, 2nd Lieut. F. A., The Buffs (East Kent Regt.). (*Killed in Action* Sept. 27/29, 1915.)
Martin, 2nd Lieut. E. W., Norfolk Regt.
Hayes, 2nd Lieut. N., The London Regt., T.F.
Lyster, 2nd Lieut. H. N., The London Regt., T.F.
Samuel, 2nd Lieut. G., East Yorks Regt.
Green, 2nd Lieut. H. C., R.F.A.
Sharpe, 2nd Lieut. G. N., York and Lancaster Regt., T.F.
Rains-Bath, 2nd Lieut. J. G. (Manchester), Devonshire Regt., T.F.
Bond, 2nd Lieut. R. G., Army Service Corps.
Kenny, Sub-Lieut. B. W. (Manchester), R.N.V.R.
Hannan, Temporary Assistant Paymaster A., R.N.R.
Warner, Temporary Assistant Paymaster S. H., R.N.R.
Canham, Temporary Assistant Paymaster G. W., R.N.R.
Frecker, Temporary Assistant Paymaster H. E., R.N.R.
Astor, Private K. W., The London Regt., T.F.
Atter, Gunner S. R., H.A.C., T.F.
Bygrave, Gunner E., H.A.C., T.F.
Campbell, Private H., The London Regt., T.F.
Correnson, Soldat R., Regt. d'Infanterie.
Coulson, L. G., R.N.A.S., A.A.C.
Crick, Corporal C. J., Essex Regt., T.F.
Dickinson, Corporal B. N., The London Regt., T.F.
Eddowes, Private F. E., The London Regt., T.F.
Fitzmaurice, Private R., The London Regt., T.F. (*Killed in Action.*)
Garreau, Soldat A., 1ere Classe, Regt. d'Infanterie. (*Wounded.*)
Green, Private W. R., R.A.M.C.

FRIDAY, JANUARY 7, 1916.

EGYPT AND THE WAR.

The turn of the year finds Egypt occupying a far more prominent position in regard to the world-war than it has done at any time during the past seventeen months. It still remains outside the actual sphere of operations, if we except the Arab raids on the western frontier. But the importance of Egypt lies in the fact that for the moment the centre of gravity of the war has shifted to the Near East. It is not that a decisive action is to be looked for here, or that the Near East is about to supersede the Western and Eastern fronts. The main forces of the belligerents face one another as before on these two fronts; but attention is temporarily taken off their doings, in order to watch the progress of some comparatively small skirmishing on the edge of the chief arena, which may, perhaps, develop into an important flanking movement. We do not forget that the Russians are once more moving in the Bukovina, which has hitherto figured in the eastern theatre; but this fresh advance is at the end of Russia's long European line, and may at any moment become linked up with events in the Balkans. Whatever military canons may be broken by the dissipation of our fighting strength, the fact remains that the operations in Serbia or Greece and the advance up the Tigris have a particular interest for all Britons at this juncture. There is a feeling abroad that both have suffered from being associated with subsidiary theatres of the war, and however much it may be asseverated that all that is possible in the circumstances is being done for these expeditions, the conviction grows that the "possible" can be improved upon by better organisation. One of the first steps to suggest itself is that the main base of these operations might with advantage be nearer to them than England is. Unless we are mistaken, the change implied is in process of being carried into effect, and Egypt is likely to play a bigger part than it has hitherto in relation to the conduct of the campaigns in the Near and Middle East. Moreover, Egypt has its own problem to face in the menace of a Turkish attack, which requires that it should not be starved either in the matter of troops or in the competency of its highest military command. A little less than a year ago a feeble effort to force the Suez Canal was as feebly repulsed. To-day the Turkish army is almost entirely under German control, and if a second attempt on Egypt is made, it will not be the half-hearted effort of last February. We may doubt whether the Turks mean to advance again; but there can be no justification for neglecting to make all our preparations as though von Mackensen himself was to be at the head of the attacking force.

But while Egypt has its military cares and wears a warlike aspect on two fronts, it reflects to a wonderful degree its distance from the main theatre of this long-drawn war. Its main industry being agricultural, it has been able to avoid much of the dislocation that has disturbed communities enjoying a more complicated civilisation. Life in the fields and in the towns shows little variation from that of the days when American and German tourists were wont to crowd to its hotels and railways. There are more troops than usual, and the Arab street-boys have learned to sing "Tipperary"; but the economic aspects show little, if any, change. This peaceful exterior has, no doubt, only been achieved at the expense of many heartsearchings, for it is impossible that a military occupation should be superimposed on civil government without embarrassing in some measure the ordinary working of the latter. But the complete absence of any appearance of confusion of authority at the present time says much for the ability and tact with which both the civil and military administrators are facing a difficult position. The unobtrusive exercise of executive responsibility has, however, been one of the traditions of the Government of Egypt for many years past, and so long as things run smoothly and the people continue to be prosperous, there is little need to dwell on the exact procedure by which these results are achieved. The key to the situation is to be found in the fact that both sets of authority are actuated by the one desire to promote the interests of the country. While the civil Government knows that Egypt's future depends largely on the maintenance of steady progress on the lines already laid down, it recognises that everything may have to be subordinated to the elimination of the Turco-German menace. The military authorities, on the other hand, can have no object in encroaching upon the civil jurisdiction one inch beyond the point required for the adequate discharge of their duty—the defence of Egypt in the interest, present and future, of its people.

In this connection two letters which we publish in this issue from our Cairo Correspondent are of special interest. One deals with the progress of elementary education, a subject with which the future of the country is indissolubly connected; the other has reference to enemy firms in Egypt, a subject which at first sight would seem to be essentially a war matter. But in the leniency with which, it is held, the Egyptian authorities have treated enemy firms hitherto we may, perhaps, find an example of concern for the economic welfare of the country carried to excess. It would seem that throughout the war the Government has allowed a number of German and Austrian commercial establishments to continue trading to all outward appearances just as they did before the war. An official controller has been appointed in most cases, and the firms were understood to be carrying on their business for the benefit of Entente shareholders. But there is clearly some uncertainty regarding the ultimate destination of the profits made, and an order has now been given, it is reported (though our Correspondent is unable to obtain official confirmation of the report), for the compulsory liquidation of all alien firms. If the facts are as stated, there would seem to be no cause operating at this stage to necessitate their liquidation which did not exist at the outbreak of the war. The procedure contrasts strangely with that adopted in Hongkong, for example, where all enemy concerns were liquidated and persons of enemy nationality expelled from the colony. The German colony in Egypt played a definite part in the scheme of Germany's preparations for the war. A correspondent in the *Morning Post* writes of it as follows: "The members of the German colony were organised like a regiment, and given to understand that they were an outpost of Empire *in partibus*. They soon attained a local importance which had never hitherto attached to their slender numbers. Two prominent merchants, who had openly and seriously quarrelled, were summoned by the Consul-General to a meeting of the whole colony. There he ordered them, willy-nilly and in the Emperor's name, to shake hands, and they obeyed. While internal discipline was thus masterfully established, the outward signs of energy and expansion multiplied every day." The rôle allotted to the Germans in Egypt in the event of war was performed in due course, and led to numerous deportations. The action of the Egyptian authorities in delaying liquidation of a number of alien firms may be susceptible of explanation. But, apart from its possible conflict with the policy of veto on trading with the enemy, the people of Egypt are actuated by a desire to look ahead. They realize that the German is likely to be as grave a danger to the peace of the country after the war as he was before it, and that the best safeguard against foolish sentimentality which will urge that he should be given "another chance" is to have him and his affairs eliminated betimes. As both the Turkish and the German Press are full of details—some true, others false—concerning matters Egyptian, the popular view must appeal to the military authorities in the face of a possible attempt to renew the attack on Egypt.

EDUCATION IN EGYPT.

THE PROGRESS OF ELEMENTARY EDUCATION.

(By Our Cairo Correspondent.)

A very interesting pamphlet has been issued by the Statistical Department of the Ministry of Finance, giving the scholastic statistics of Egypt for the year 1914-1915. The importance of this publication reposes in the fact that for the first time a general census of the "Maktabs," or elementary native schools, has been made. Hitherto the biennial scholastic statistics have only dealt with the relatively higher order of schools.

The figures collected by the Statistical Department show that there are in all 8,726 educational establishments in Egypt—7,596 Maktabs and 1,130 other schools—and that the total number of pupils is 537,417, of whom 382,287 are in the elementary and 155,130 in the other scholastic institutions.

The Maktabs are divided into three degrees:—The first, numbering 2,686, where the Koran, religious subjects, and elementary Arabic are taught; the second, 4,689 schools, where the pupils are instructed in the Koran and the three R.'s; and the third, numbering only 215, where, in addition, they learn geometry, history, and geography. The majority of the pupils are in the Maktabs of the second degree, and it is interesting to note that, whilst most of the boys are over eight years of age, the opposite is the case amongst the girls, two-thirds of whom are under that age. The boys number altogether 340,047, and the girls only 42,240; but while there are 13,600 male teachers, there are only 408 of the opposite sex.

Of the 7,596 Maktabs, 3,630 are under private control; and of the rest, the Ministry of Education maintains 142 and subsidizes 255. The Provincial Councils maintain 509 and subsidize 2,985, and 49 are maintained by the State Railways and 20 by the Ministry of Wakfs. From this it can be seen that over half of the Maktabs are under the control of some State body.

As the compiler of the pamphlet points out, these elementary schools are sorely in need of reform. That the instruction given cannot be very satisfactory, even in the subjects given, is evident from the fact that, of the 14,008 teachers employed, only 2,696 have any educational certificates of any description. The Government is quite rightly endeavouring, by all the means in its power, to improve the situation of these schools, which, after all, constitute the basis on which the intellectual development of the masses must be built up. With this in view it is concentrating its attention on the raising of the standard of the teachers employed. The need for this is evident from the above-mentioned figures and the extension of the facilities for the education of girls.

With regard to the higher schools, the statistics show that their number had decreased by five, and that of the pupils by 7,226, as compared with the previous period reviewed—i.e., 1912-1913. This is attributed purely to the war, which, the compiler says, caused the closing of a certain number of schools and forced some parents to bring the studies of their children to a premature conclusion. Egyptian schools number 823 and foreign ones 307, with, respectively, 110,730 and 44,400 pupils.

Amongst the foreign schools, the French take first place with 128, having 18,981 pupils. The American schools appear to prosper most, for although there are only 30, they have 5,061 pupils. Of English schools there are 37, of which sixteen are in Cairo and eight in Alexandria—with but 2,427 pupils. It is interesting to note that nearly 40 per cent. of the pupils at the foreign schools—to be exact, 16,543—were Egyptian, and that, practically alone among the foreign communities, the British do not loyally patronise their own schools, seeing that of the 2,069 British children who go to school only 261 go to those run by British bodies. This lack of support probably explains why, in a country which has been under British occupation for thirty-three years, British-run educational institutions—I refer, of course, to private ones—are not more *en evidence* all over the country.

In conclusion, the compiler of the pamphlet under review points out that the statistics demonstrate a glaring error in the figures of the last general census of the country taken in 1907. According to the total figures for the scholastic establishments in the country, there were 537,270 pupils at all those schools in 1914-1915. Now, the census of 1907 put down the literates at 609,322, which is obviously incorrect and far below the correct figure, in view of the enormous impetus that was given to education at the dawn of the present century. The reason for the mistake seems to be that the census takers omitted to take particulars of the young children between the ages of five and nine who were able to read and write. Since the total of these children came in 1907 to 1,565,545, and the majority of the pupils frequenting the Maktabs are between those ages, it is evident that some such mistake must have been made. The next census, due in 1917, should show a phenomenal increase in the literacy of the country, and thus rectify the error.

A WAR-TIME EXIT FROM SMYRNA.

By Lilias McCrie.

II.

Our means of livelihood being politely taken from us, we felt there was nothing for good Britishers to do but turn "homeward," and this impulse was decidedly strengthened on receiving quiet warning from friendly Turks, who told us that the sooner we got away the better for us—lest worse should befall. So we began to make plans for our departure with seriousness and determination. First of all we had to get permission to leave Turkish territory. This meant an American passport with a Turkish visé, and it took several anxious days—not to mention piastres—to materialise. When it did it was signed by the Chief of Police, whose kindly consideration for the British population will not be forgotten by them. Then this passport, being made out for Athens, had to be viséd by the Greek Consul also. This all sounds simple enough, but once the intricacies of the avenues of approach to these dignitaries is realised—especially at a time when their staffs are already grievously overworked—unless one is a very high official indeed oneself, it is seen to be an undertaking of no common order.

There was also the quite important point of our money matters to be cleared up. The Turkish Government forbade the export of gold beyond the sum of £T10 per head. Our personal money affairs lacked the complications of the average individual, as we had no dealings with banks in Smyrna, for the excellent reason that there was a shortage of the wherewithal necessary to open up a connection with them during our first year's sojourn in this city of "payments in advance." But for a few months ready money had been accumulating, and with childlike simplicity we "buried it darkly, at dead of night," under the cellar floor. The only disquieting thing about this arrangement was that, to add to our terrors at this time, the country was visited by some very severe earthquakes. Several villages in the interior were entirely destroyed, and we were once or twice rudely shaken out of sleep by the shocks. We wondered if one of these would remove all our worldly wealth a foot or two beyond our ken, and then—well, it is humiliating to think how dependent one can be on even Turkish gold. Our gold coins had to be converted into Bank of England notes, or any other medium that would secure the realisation of their full value when we reached civilisation once more. There was a dearth of English notes in Smyrna, an astute Britisher having effected a corner in them; but our little fortune, reluctantly exhumed from the protection of Mother Earth, was converted into a most varied assortment of Egyptian, French and Italian notes, American greenbacks, Greek coins, and a slip of paper entitling the bearer to a tidy sum out of another man's private account on arrival in England.

While the men were scouring the district in search of reliable paper money and truthful shipping agents, a process involving the consumption of much *mastika* and many Regie cigarettes, we women packed and repacked suit cases, invented brainy schemes for smuggling gold out of the country, sewed our gold to us, hid letters and jewels only to uncover them again, and wondered if we would get home in time for Christmas. In our own case there was hasty provision to be made for the worldly goods we were leaving behind, the stores we had accumulated, the newly furnished house, the books, papers, music—all of little value to others, but simply the essence of home to the owners. And above all there were the many and varied cats who depended on us for at least one meal a day, for Smyrna is no paradise for the feline species, and when any of their kind discover a vulnerable Britisher they are not likely to ignore her. I remembered how, on opening the door into the garden, a small avalanche of black and grey pussies would fall in, with bright eyes and eager, expectant purring, in anticipation of good things to come. There were eight regular habitués in all on our free list!

Our affairs came to a crisis in the second week of December. We had our permits, we were free to go if we could find a steamer sailing from Vourla. One was not available, however, and we were still being urged from various friendly sources to get away from Ottoman territory as soon as possible. Ultimately a small steamer was chartered on our behalf, and this was to leave on Sunday morning, December 13. On Saturday morning we had a hasty message advising us to leave that morning and at once. Half a dozen of the party were off by ten o'clock, and we with another couple were ready by noon. It was an unforgettably strenuous forenoon; for twice in the course of it my husband rushed in to say we might as well give it up, as no horses or carriages were to be had for the long drive to Vourla. But it was done somehow, and we and two others set out on this, our second attempted flight in a *karotsa*, with a pair of sturdy horses, our luggage, a modest suit case to each person, on a similar turn-out behind. On we rolled through the crowded thoroughfares of Smyrna, and the long, rambling, picturesque, dirty outlying districts of Gueuztepe and other places, of which I feel too diffident to attempt either the spelling or the pronunciation. We were held up at every tiny police station en route, while our papers were leisurely examined by Turkish officers. Halfway we had to stop for an hour to feed and rest the horses, for the roads were very heavy after the autumn rains, and it was a hard pull for the patient beasts. When Vourla was in sight we met the returning carriages of the advance party, and, to our dismay, the drivers informed us that, while we were driving down, the port of Vourla had been closed by special order. Our first party had succeeded in boarding the vessel, but no amount of persuasion—or anything else—would achieve the same for us. The Customs officials and gendarmes were adamant; this was a Germanised military order this time, and must be obeyed. So we gazed wistfully out over the glistening expanse of water to where the little steamer lay in the rays of the setting sun, and envied those serenely tucked aboard with a prodigious envy.

Vourla was too dirty and inhospitable for us to spend the night there; so we sadly re-entered our carriage and were driven back to Smyrna, reaching it just before midnight. That melancholy drive in the dark was a memorable one. The searchlight from the fort outside Smyrna travelled round unceasingly, our tired horses slipped pitifully on the greasy mud, on which our dim lamps shed a ghastly, flickering radiance. We met a procession of patient camels toiling along the heavy roads, some of them with burdens so out of proportion to their strength that the unwieldy creatures had slipped in the mud and were unable to rise. It was like a nightmare.

As our homes had passed into other hands, we put up at the Kraemer Hotel, and next morning we gazed out from the balcony upon the quay and the glittering gulf, prisoners still, to be hailed in astonishment by those who thought we were safely on the homeward way by that time.

Disheartened by our experience on the previous day, my husband and I had resigned ourselves to remaining in Smyrna, but as we were going along to reclaim our home, we met our driver of the day before, and he informed us that the port was again open, and anyone might leave who had the necessary permits. It was on such casual sources that we had mainly to rely for news in Smyrna. This time our companions of yesterday had half an hour's start of us with fresh horses. We secured a carriage with difficulty; but our horses, although the driver swore they were fresh, soon showed us that they were not so. Some demon possessed the Turks to stop us more frequently this time, and the gendarmes persisted in saying, "*Yok vapori*" (no steamer). Our driver broke his rein, and took an interminable time to repair it with string; we met a runaway horse with a cart, which threatened to annihilate us on a steep grade; we had to give our horses as long a rest as on the day before; and when we again came in sight of Vourla it was sundown, and we were greeted with the spectacle of a small steamer disappearing among the islands that stud the bay there. Intuition, instinct, disappointment, despair, as well as a few sympathetic and many hard-hearted onlookers, told us that it was our steamer. Our two former fellow-passengers were aboard; for that at least we were thankful.

Inquiries elicited the information that a Greek steamer then in the bay would sail for the Piræus the following day, and we might board her that night if we could pass the Customs and other officials and pay the necessary fees. I was told that a woman would inspect madame, and before going into the dingy cupboard which did duty for an examination bureau I handed over our money bag to my husband quite openly, so the dame found me above suspicion. My husband quietly handed me back the bag before undergoing his examination, and we might have had secret despatches, jewels, Turkish gold untold, for all the authorities knew of it; although if the searching committee had compared notes afterwards they must have wondered how we were going to get to Athens with no money in our possession. Our suit cases were thoroughly searched by a polite but unmethodical Greek, and at last I was free to emerge from the dismal room. I went to the end of the jetty preparatory to stepping into a small boat which was to lead us to freedom. One of three Turkish officers lounging about courteously brought me a chair, which I accepted with a sort of despair, for it seemed as though my husband were never coming.

As he was leaving the Customs House, a Turkish official accosted him. Monsieur would no doubt be glad to contribute something to the Ottoman Navy before quitting these hospitable shores. My husband replied genially that he had no objection to presenting him with the price of a Dreadnought or so, and spread three octorakias (equal to three fourpenny pieces) over the table. Dazzled by the sight of so much wealth at one time, the official solemnly handed back three receipts, and then 'phoned back to Smyrna headquarters to see if it were wise to allow this Crœsus to leave the country. After twenty minutes' further delay, during which our fate hung in the balance, and I underwent a species of refined torment, my husband joined me, and at last we stepped off the jetty. When we arrived at Athens and compared experiences with the rest of the party, we found that some of them had been victimised by the "Navy" official to the tune of as many liras as we had given fourpenny pieces. It was a moment when we could enjoy jibes about our Scotch characteristics.

The night and day spent aboard the steamer was rather an anxious time, for there was still a chance that the Turkish authorities might recall us. We passed the long hours with eyes glued to the white ribbon of road stretching away along the coast, looking eagerly for the few families who were yet to come, and great was the rejoicing when all were safely gathered in. The arrival in Athens was in the nature of a triumphal entry for us all, and we felt much like school children starting on a long vacation. Life had been vivid for the last few months, breaking away from dull routine had been delightful; the war in its grim reality had not touched us yet. It was not until we reached poor, sombre Paris, so different when we had last seen her, eighteen months before, in the midst of her July festivities, that we felt the chill of the dread European conflict.

What is going on in Smyrna now, I wonder? Are the friends remaining there still going about their daily round, scared to death one day and calm to boredom the next? Is our little house in the hands of the Turks, or are the familiar objects bestowed unromantically in the safe seclusion of some British merchant's warehouse? Has the piano been ruthlessly plundered, not only of its power of music, but of the special treasures that an over-anxious housewife hid in its harmonious interior?

If we return and meet all the familiar things once more it will be more than a joyful reunion. If not, then we shall be no worse and much better off than many of our fellow-creatures to-day.

I shall keep my old Turkish half-lira, if only in the hope of bartering it away for goods to some grimy but unspeakably romantic mendicants in the streets of that fascinating Near Eastern city. And should I not return, I think I shall still keep it in memory of one of the most vivid, tantalising, humorous, annoying, reckless and interesting experiences of my life.

THE WAR IN THE BALKANS.

THE CENTRAL VOID.

Writing on the last day of the old year, we particularly emphasised the necessity for clearing Salonika of its host of spies; we also drew attention to the importance of the new Russian offensive in Bukovina.

'Clearing the Ring."

Hardly had we insisted on the urgency of this measure when news arrived to the effect that General Sarrail had ordered the arrest and deportation on December 30 of the enemy Consuls in Salonika, together with their staffs and satellites. These gentlemen had long ceased to officiate as Consuls according to international law, and had degenerated into spies and political agitators of the most dangerous type. The subsequent examination of the archives has proved their guilt up to the hilt, and has further implicated scores of nondescript individuals of both sexes, who are to be summarily dealt with. For once it looks as though Salonika were to be cleared of its most obnoxious vermin, and it was high time, in view of the continual dangers to which our men were exposed by the presence in their very midst of an unscrupulous crew of spies. The fact that just prior to the arrest of the ringleaders' enemy aircraft had bombarded our positions (without, happily, doing much damage) seems to show that General Sarrail s order went forth not a moment too soon.

The Bukovina Campaign.

The new Russian offensive in Bukovina, though, strictly speaking, beyond the scope of this survey, is fraught with so many possibilities, all bearing on the Balkan situation, that no review of the latter could be even partially satisfactory without mention being made of the new campaign to the north-west of Roumania. The advance of our brave Allies during the past week between the Pruth and Dniester has brought them to the very gates, if not to the very streets, of Czernovitz, the capital of the Bukovina and an important railway junction. Mackensen, it would appear, has left the Balkans to take command of the Austro-German forces, and troops are being hurried up from other enemy fronts to oppose the Russian successful advance in this sector. The campaign has, however, only just begun, and though it is unlikely that our Allies will be able to repeat their rapid advance into Galicia in 1914, there is no reason to doubt that the Tsar's General Staff have decided that the moment has come for them to push on into Galicia and along the western slopes of the Carpathians, inflicting as heavy losses as they possibly can on the enemy, and pressing him back from the terrible void he has created in the heart of the Balkans. No theatre of the Continental war is of greater immediate interest than the campaign in Bukovina. Successful, it will deprive the enemy of any possible benefits he may have speculated on reaping from the Serbian campaign and convince him of the futility of his strategy; if, on the other hand, the advance of our brother-in-arms should be stemmed, it will have the effect of holding immobile in Galicia a strong Austro-German army.

The Central Void.

The fact is, the enemy have created in the centre of the Balkans a vast void where Serbia used to stand. This void is now being submitted to pressure from three sides: by the Russians from the north, by the Italo-Serbs, Montenegrins, and Albanians from the west, and by the Anglo-French forces from the south. The long line from Berlin to Constantinople, passing through Austria, Hungary and Bulgaria, transveres this void, and is in imminent danger of collapsing. Had the enemy been able to destroy the Serbian army, instead of merely driving it back into Albania, there to recuperate; had he conquered Albania and Montenegro, and driven the Allied forces out of the Peninsula, his line to and from Constantinople and Berlin would have been relatively secure. But, as it happens, he succeeded in none of these attempts, and now the moment has come when, for him, the Balkan situation is a pitfall of dangers. The Russians are seriously menacing him from the north; in Montenegro the armies of King Nicholas are more than holding their own: in Albania the Italians are landing important troops, are revictualling the Serbian army, are modernizing the roads leading into Macedonia, and have obtained the adhesion of Essad Pasha, the "uncrowned King of Albania." Thus, there is being formed in the west of Macedonia a strong army which, when the time comes (its date depends on the success of the Russian advance) will burst through the Albanian gap. Then there is Roumania to be considered: a Russian success along the western slope of the Carpathians would do more to bring that country into line than all the kid-gloved overtures of diplomats.

Salonika.

As for Salonika, the situation there, with the exception of the arrest of the consuls, etc. alluded to above, remains unchanged. Unfortunately, some Greeks were arrested as spies by General Sarrail, which has naturally drawn from Athens a protest. It would be better from all points of view if the Allies took over, temporarily at least, the entire administration of the town; it would tend to remove friction between the Greek civil administration and our military authorities. As for the enemy, he has restricted his offensive to bomb-throwing, pending the arrival of big siege guns, the settlement of political differences between Germans, Austrians, and Bulgars, and the results of the Russian campaign. The latter, so far favourable to our arms, will prevent any immediate action against Salonika by the enemy, and in the meantime we are preparing to exert pressure northwards—when the time comes.

DIARY OF THE WAR.

The following are, according to the *Times*, the principal events in the Balkans during the month of December:—

December 1.—Baron Sonnino announces Italian adhesion to the Pact of London; aid for Serbia promised.
December 2.—Fall of Monastir; Serbians retreating in good order along the Ochrida road towards the Albanian frontier.
December 4.—Fresh British forces landed at Salonika.
December 5.—Austrians and Bulgarians, pursuing the Serbian Army, cross the Montenegrin and Albanian frontiers; Bulgarian attack on French bridge-head at Demir Kapu repulsed.
December 6.—Germans capture Ipek. French retiring from Krivolak and Kavadar to strong positions in the Demir Kapu Pass. Bulgarian attack on British at Strumnitza repulsed.
December 7.—British retiring from Strumnitza. Bulgarians occupy Demir Kapu.
December 8.—Fierce Bulgarian attacks on Allied front in Macedonia; Allies withdrawing towards the Greek frontier.
December 9.—Retreat of the Allies in Macedonia; British lose eight guns—1,500 casualties; Bulgarian irregulars across the Greek frontier.
December 11.—Bulgarians attack the French and British front at Furka and lose 8,000 men.
December 12.—Bulgarians enter Doiran and Ghevgeli. Greek ships detained at Malta released.
December 13.—Allied troops safely withdrawn across Greek frontier; Salonika being fortified.
December 15.—Italians announce landing of their army at Avlona and elsewhere in Albania.
December 20.—Greek Government admits Bulgarians and Greeks in collision at Koritza
December 28.—French submarine, Monge, sunk off Cattaro.
December 29.—Austrian destroyers Triglav and Lika sunk by Italian and Allied warships off Durazzo.
French occupy island of Castellorizo.
December 30.—Enemy airplanes throw bombs on Salonika: German, Austrian, Turkish, and Bulgarian Consuls arrested by General Sarrail.

BRITISH REFUGEES FROM TURKEY FUND.

By the courtesy of Mrs. FRANK BARKER,

A "WHITE ELEPHANT" PARTY

will be held at

LOWNDES HOUSE, LOWNDES PLACE, S.W.,

On TUESDAY, JANUARY 11th, at 2.30 o'clock,

in aid of the above Fund.

Tickets 2s. 6d. each, every one of which entitles the owner to a Prize.

"White Elephants!"—i.e., Ornaments, Sofa Cushions, Work Bags, Comforts for Soldiers, etc., will be thankfully received at Lowndes House.

Tickets may be obtained from:—
Lady NEAVE, George Hotel, Bangor, N. Wales.
Mrs. FRANK BARKER, Lowndes House, Lowndes Place, S.W.
Lady LOWTHER, 23, Belgrave Square, S.W.

All unclaimed Prizes will be sold on the day of the Party.

"Almost up to the Trenches"

"My son, who is somewhere in France, tells me what a great comfort your Y.M.C.A. has been to him from the time he started his training at . . . . . and all through his stopping places almost up to the trenches."
Extract from a recent letter enclosing subscription.

THOUSANDS of our brave soldiers have placed on record their joy and thankfulness at finding the Y.M.C.A. established not only in the home and base camps, but practically *up to the trenches themselves*. The Y.M.C.A. have spared no effort to place these buildings just where they are needed most. When the men return from a long spell in the firing line it is to the Y.M.C.A., with its shelter from rain and wind, its facilities for writing home, its material comforts, and, above all, its spirit of Christian comradeship, that their thoughts turn. Do you wonder that they so often describe one of the many Y.M.C.A. buildings scattered throughout the fighting area in Europe and the Near East as "Just like a bit of home."

There are now more than 1,000 Y.M.C.A. centres throughout the Empire for the men of His Majesty's forces. 87 of these are in France; there are 40 in India, 30 in Egypt and the Dardanelles, 3 in Mesopotamia, 2 in Malta, in addition to hundreds in the home camps.

To maintain this vast chain of social service, and to extend it, it is estimated that £250,000 will be required during this the second year of the war.

An Ernest Appeal for more Buildings behind the Firing Line and the means to maintain those already established.

Never has the need for the vast work of the Y.M.C.A. been greater than it is to-day. The worst of the winter is rapidly approaching with its days of rain and fog, its long and often bitterly cold nights is probably still to come. Yet there are many vast camps both at home and behind the firing line in which, as yet, there is no Y.M.C.A. Hut or centre of any kind.

Who will help to complete the chain by giving another building? If you cannot give a complete building, will you help to maintain the work in one or more of them for a day, a week, or a month?

Will you not give your own Building TO-DAY?

Donations should be addressed to Captain R. L. BARCLAY, National Council of Y.M.C.A.'s, 13, Russell Square, London, W.C.

WILL YOU POST THIS TO-DAY?

To CAPT. R. L. BARCLAY,
13, Russell Square,
London, W.C.

I have pleasure in enclosing £..... towards the special work of the Y.M.C.A. for the troops.

Name.....

Address.....

U. .....

THE PRESS ON THE NEAR EAST.

1916.

Mr. Lovat Fraser, writing in the *Daily Mail* (January 3) on the probable course of events in 1916, includes the following reference to our present position in the Balkans:—

The lull before Salonika is deceptive. The Allied positions will be attacked as soon as the enemy can bring up their heavy ordnance. Detailed discussion is meanwhile out of the question, but the Allies appear to have taken up a good although an ambitious line. As I have said before, the Salonika base is no Torres Vedras, still less is it a Chatalja; but the coming onslaught may not now be overwhelming.

The writer then turns to Egypt, and continues:—

That there will also be an attack on Egypt is beyond question. It is the price that must be paid by Germany for Turkish adherence. The Turks demand to be led by their German masters into the Nile Delta, and Enver Pasha is credited with a desire to sit upon the throne of Saladin. It may sound ridiculous, but the inflated little peacock is quite serious, and it is certain that he was bought with more than gold. We have had warning enough about Egypt, and in due course it may be necessary to ask why for a whole year we were as idle as Mark Antony in the land of the Nile.

Mr. Fraser refers to the strange way in which mobile operations have led to sieges in the present war:—

"Townshend at Kut appears to be in a position which almost resembles a siege, and we hear of relieving columns on the way. The siege of Salonika is now expected. There may be a siege of the Suez Canal. There is something like a siege at Dvinsk. The lines in the west resemble siege operations; so did the siege of Gallipoli."

He concludes:—

But the greatest siege of all is the siege of Germany by land and sea. It is telling now, and the besieged are making desperate strokes to break out. They are feeling the pinch. *Let us hope that the year* 1916 *will be for the Allies the Year of Victory.*

German and Bulgar.

In an article on the Military Situation the *Spectator* (January 1) evinces a highly optimistic mood. The blunders and disappointments of the past year are freely admitted, but an examination of the situation shows the enemy preponderance in munitions removed; Germany, with all the advantages of the early days of war on her side, has nowhere broken a hostile army; our resources in men and material are increasing day by day. "We are not safe yet by any means, but are on the right road to safety." We quote from passages in this article which deal with operations in the Near East:—

The business of the Allies at Salonika is turning out much better than even optimists dared to hope. The Greek troops by removing themselves to a distance have ceased to impede our preparations, and the tremendously strong natural features of the place are being turned along a line of some fifty miles into what is said to be an unassailable fortress line. The map will show any one what a splendid geographical position Salonika has for an army which wishes to gather strength, and (even while it is gathering strength) to act as a thorn in the flesh of its enemy. At Salonika the Allies lie on the flank of their enemy. We may be sure that the Germans will not feel very comfortable along their celebrated open road to Constantinople while the Allies hold Salonika. If the enemy try to march against the place and tackle the most formidable hills with all the lakes and marshes and the incomparable artillery positions, so much the better for us. With the sea and the ships with their big guns behind us, and the unceasing flow of supplies, we are on velvet at Salonika. And if the enemy should tempt us to try to cut his line—but again let our readers look at the map. The Bulgarians talk as though the war were ended for them. They little know! We shall be surprised if men in this frame of mind do not find the task of pleasing the Germans more than they bargained for before the winter is over. Salonika, in fine, is a magnificent place of arms. It is easy to hold, and we shall be just beginning to make real use of it when the Bulgarians are discovering raw places from the chafing of the German yoke and the embarrassments of the horribly unnatural Turkish alliance.

Where we Stand in the War.

Under the above heading Dr. J. Holland Rose contributes to the *Daily Chronicle* (January 1) a most interesting survey of military events up to the end of the year 1915. The writer insists that, although "none but busybodies and self-advertisers" would pry into the political secrets of our Dardanelles adventure during the war, it is none the less essential that a searching inquiry should be made after peace comes into all topics connected with "the administration, or maladministration, of our offices of State." He continues:—

Pessimists point to the Balkan muddle as due to us. Clearly, they do not realise either the keenness of the racial hatreds bequeathed by the fratricidal war of 1913 or the proneness of Balkan politicians to be swayed by the passions of the moment or mere peasant cunning. It is on natures such as these that Sir Edward Grey has worked without effect, and the Kaiser and King Ferdinand with effect. But (to take our enemies' standpoint) have they succeeded in the Balkans? The fiendish betrayal of the Slav cause by Bulgaria has enabled them to batter in the Serb defence and to accomplish the physical ruin of Serbia and reveal the moral bankruptcy of Greece. But the Central Empires have only conquered devastated territory; they have not conquered the Serb nation, and they have not annihilated the Serb Army, some 140,000 of whose sturdy fighters hold out undaunted in the mountains of Montenegro and Albania. Consequently there, as in Belgium, Northern France, Poland, and Lithuania, the Germans have merely extended their military responsibilities; they have not crushed either the army or the national spirit of a single one of the nations over whom they chant their pæans of triumph. The lines before Salonika may prove to be their Torres Vedras.

The Problem of the Balkans.

Writing upon the above subject in the *Globe* (January 1), Major C. W. Redway thinks that after pitting Serbians and Montenegrins against the Bulgars, and neutralizing the Turks by the Russians, the French, Italian, and British forces available should be sufficient to meet the demands of any exertions required of the Austro-German armies in the Balkans:—

Now, what suitable military objective presents itself to-day in the Balkans? There is room for choice, no doubt, but for purposes of discussion we may speak of the seizure of the Danube from Belgrade down to Widin. Why? Because the enemy's lines of supply are concentrated in this quarter. To secure these lines of supply is practically to intercept all the Austro-Germans then south of the river, and our determination to march on these communications would cause all enemy forces, including the army corps which are said to be destined for Egypt, to hasten to this point and give battle.

And presumably that is what we desire. We are in the field in order to put our fortune to the test in strategic conditions chosen by ourselves, and we cannot suppose that the Entente Generals fear to meet Marshal Mackensen or his successor.

Major Redway concludes his article in the following words: "Opportunities are abundant; plans stare us in the face, and all that is needed on the part of our leaders is courage to decide and resolution to execute."

France and Syria.

The *Evening Standard* (January 3) says that public interest in France regarding the problem of the East is increasing, and translates a portion of an article which appeared in the *Œuvre* in reference to Syria. Our quotation is from the latter portion of this article:—

Strategically, Syria is a dependence, an ante-chamber, of Egypt; the English need to dispose of it at will for the defence of that country, and both our diplomacy and fleet must second the English in their action there. Syria, her present and her future, Syria and the Syrians, with their preferences and their rights, should be a subject of conversation between France and England; but in no case a field of operation for any Franco-English expeditionary force. The English undertook to look after Egypt by the Franco-English Agreement of 1904, which was, and still is, the charter of the Entente Cordiale, the contract of Franco-English alliance

It is our duty to say loyally, frankly, clearly what we claim in the name of our interests, rights, and duties in Syria; the agreement once drawn up, signed and sealed, we know that the English signature gives to a compact, as to a cheque, a value that is unequalled in the world.

The Menace in Egypt.

The possibility of a Turco-German invasion of Egypt in force is the subject of an article by Mr. Sidney Low in the *Sunday Times* (January 2). He inclines to the belief that the expedition will materialise:—

Everything points to the probability that, as soon as weather conditions are favourable, and the Germans and their allies have got their hands free in the Balkans, the move upon Egypt will be made.

When it comes it will be unquestionably of a most formidable character. The Turkish Army of invasion will be one very different from that scratch force which we were able to repulse (without however destroying or seriously crippling it), last winter. The Sultan's Ministers, under their German mentors and masters, have been busy recruiting and reorganising for many months past. There seems no reason to doubt that the Turkish Government has or will soon have nearly two millions of men in arms, including some of the best fighting material in the world.

Assuming that a good half of this host will be required for the defence of Constantinople territory, and for operations in the Caucasus, Thrace, Mesopotamia, Gallipoli, and elsewhere, and making a liberal deduction for all other contingencies, there would still remain four or five hundred thousand men available for the Red Sea campaign.

Mr. Low thinks that it is wise to ignore the supposed obstacles of the desert to an invading force. Small

Digitized by Google

armies overcame them successfully last year; larger and more perfectly trained forces may do so now. Be prepared.

German Designs on Montenegro.

The correspondent of the *Morning Post* (January 3), in a despatch from Budapest on December 23, gives some interesting details of the situation on the Albanian-Montenegrin frontier. Our first quotation refers to the terrible hardships of the Serbian retreat over the mountains of Albania:—

The Albanian comitadji bands, under Turkish and Austrian officers, were pursuing the retreating Serbian detachments, who were generally in smaller groups, as wild beasts are hunted on the wild summits of the mountain ranges. The Albanian bands harassed the fatigued and famished Serbians on the narrow mountain passes from well-concealed positions behind the cliffs surrounding the defiles, where only one or two persons can pass at a time, and the chief amusement of these bands was to kill the mules and horses, which carried the scanty supplies of the retreating columns, rather than the men themselves. This ruffian who told the story gloated in the idea of how they picked off the mules, and how these fell headlong down the ravines, and how the men following in their wake had to come up and afford a good target for the hidden riflemen, as there was no possibility of returning by the path they had elected to follow.

Thousands of the men fell victims to the bullets of these bands, and thousands to starvation, and even those who succeeded in reaching Montenegro found little comfort there, as that little country is also suffering from famine.

The writer goes on to deal with the enemy designs against Montenegro:—

In this theatre of war they do not expect to make any further movements at present, for it seems the whole Balkan strength of the Central Empires which can be released from the frontier positions will be concentrated on the Greek frontier for the operations against Salonika. This is being prepared with the utmost vigour, and a general attack is expected early in January. The numbers of the Allied troops in Greece are known to the Austro-German General Staff to a man, and this gives them the advantage of preparing to meet the position in a manner satisfactory to them. They will not attempt to attack the Greek port unless they are certain of absolute superiority, for a long-drawn fight in Greece would not serve their purpose at all.

If they succeed in driving the Anglo-French troops away from Salonika, the next move will be Montenegro, a very hard little nut to crack, for the natural defences of the country are extremely formidable. On the other hand, it is part of the Austro-German political campaign in the Balkans to eliminate the Kingdom of the Black Mountain from the map once for all, for Austrian interests in the Herzegovina demand the absolute humiliation of King Nicholas's people after the Serbians have been driven from their country. All military critics here agree that Montenegro will suffer the same fate as Serbia at the hands of the Germanic Allies, for the programme of the Balkan campaign contemplates the settlement of this question once for all before attention is turned in other directions.

The Gulf of Ismidt.

A most interesting article headed "A Memory of the Gulf of Ismidt" appears in the *Outlook* (January 1) from the pen of Mr. F. G. Aflalo. The "memory" is five years old now, and Mr. Aflalo admits that had he realised the possibilities of the importance of this gulf "as the theatre of such deeds of daring and as the refuge of derelict German Dreadnoughts," he would have given to it more attention with both camera and notebook. As it is, however, he succeeds in giving a vivid picture of this backwater of the war.

To the angler and yachtsman the Gulf itself is more attractive than the verminous villages along its shores. Most of these are inhabited by a mixed population of Turks, Greeks, and Armenians, of which the last two are drunkards and gamblers, and may be seen on Sunday mornings crowding the waterside cafés, dicing and fuddling themselves with "mastic," while grave Muhamadans stride past and spit in their beards at the sight of these dogs who give their Sabbath to hazard and strong drink. For the rest, the southern shore, separated from the railway and from European influences by the deep and occasionally stormy waters of the Gulf, has preserved its old-time traditions. Of its villages, Ghonja is wholly Greek, Deirmenderé Turkish, and Baktchejik Armenian, with a flourishing mission under American control, but virtually self-supporting with its silkworms.

On one occasion the writer himself while visiting Lake Sabanja was forced to share his bedroom with a company of a thousand cocoons, for during the months of May and June most of the house room is given up entirely to make room for the cocoons. He continues:—

Deirmenderé, the most interesting village on the south side, is exclusively Turkish. At one time it had a bad name, and yachts from Constantinople would not anchor at night too close to its quay. I had been warned by friends against going ashore, but one morning, returning in my caïque from early fishing, I smelt delicious coffee and threw caution to the winds. I was quickly served with the steaming brew from the little brass pot embedded in glowing embers, and while one poured it out in little cups, another gave me flowers, a third sold me a clothes-basketful of cherries for a few piastres, and the whole male population begged to be photographed. Thus vanished the apocryphal ferocity of the men of Deirmenderé, and we were the best of friends for the rest of my stay on the opposite shore. The cherry orchards are marvellous, the fruit swelling with the pure water that trickles down from the hills and ripening in a summer climate as perfect as any between here and Paradise.

The article concludes with the paragraphs quoted below:—

Most of the time the Gulf is as gentle as any pond; but now and again the west wind comes raging into it, and then it goes white with anger, and the Armenian fishermen pull their nets and boats high and dry and cower in their hovels, drinking themselves helpless till the storm has passed. But for such passing disturbance, the Gulf in normal times is the same year in, year out, like the empire of which it is a part. Even under the driving power of Enver, to whom, as to the revolutionary propaganda of the "Committee of Union and Progress," the Old Turks living hereabouts are unequivocally hostile, the first two years of the "Constitution," so pregnant with changes in Constantinople itself, left it untouched. It stood for the immutable Turkey that prided itself in its heyday on standing still while Christendom rushed to ruin. It was the kind of scene that inspired a traditional conversation between Allah and the Archangel Gabriel, which they relate to this day in the bazaars. They were looking down on Europe, and Allah had declared that, whereas the rest was changed beyond recognition, Turkey was the same as when it was created.

"But who," he asks the Archangel, "are the men in red caps?"

"Softly, Sire" answers Gabriel, "or they will report us to Hamid!"

They were the Palace spies of the Padishah.

Y.M.C.A.

We would again direct the attention of our readers to the excellent work of the Y.M.C.A. in various parts of the world, and more especially in Egypt and Mesopotamia. In England, we all know how great a part this vast organisation has played in bringing comfort and recreation to our troops; but great as the need has been here, it is a thousand times greater abroad. In Egypt, for instance, the desert camps offer few opportunities for diversion, and the Association has done admirable work in establishing recreation-rooms and so on, thereby materially assisting the authorities in keeping the men fit and happy. It is the same in all theatres of the war.

The ramifications of the Association's work stop only at the actual fighting line, and every expansion of our Army necessitates increased expense and energy by the Y.M.C.A. and its officials. It already possesses twenty-seven centres in Egypt, and now the base camp at Salonika opens up a new field requiring recreation huts and the general equipment of comfort that the previous activities of the Association have led our sailors and soldiers to expect. In order that there may be no break in the good work, it is important that the Association should receive adequate financial support, and we trust that our readers may give it all the aid in their power. Donations have already been received in response to our previous appeal, but the expenses of the Association in the Near East are very great. Subscriptions for the "Egypt" fund may be sent to THE NEAR EAST, when they will be duly acknowledged in these columns, or to the London offices of the Association, 13, Russell Square, W.C.

THE BRITISH IN PERSIA.

Reuter's Agency states that news has been received in London that the members of the British community at Sultanabad, who had to leave that place after acts of looting at the end of November, arrived at Kum on December 12, and were proceeding to Teheran.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The interview granted to our Bucharest Correspondent by the President of the Union of Agricultural Syndicates for "Central Commission" is of more than usual interest. We learn, for the first time, that we had a unique opportunity to purchase Roumania's corn, thus preventing it from being acquired by the enemy; but that, as usual, we let the opportunity slip by, and now the Germans are buying it. Is this policy? Those who are unacquainted with the economic conditions obtaining in Roumania will, doubtless, blame her for selling to our enemy. The blame does not, however, hold good. Roumania depends entirely on her crops, and she must sell them. We cannot, or will not, buy them, and so she sells them to the Central Powers, with whom she is not at war. We may regret it, but the blame rests not with Roumania, but with us. Had we bought the grain in question, not only would the blockade of the Central Powers have been more effectual, but we should have increased our prestige in the Kingdom of the Danube. As it is, by neglecting to thwart Germany's corn deals in the East we have rendered ineffectual our naval blockade in the West.

***

Whether the difficulties which seem to have supervened between buyers and sellers have been overcome is not definitely known, but from messages which appeared during the latter part of the month in the Press it would seem that a contract between Germany and Roumania has been definitely arranged. News from Bucharest comes to us in such a roundabout way, viâ Zurich, Athens, or Amsterdam, that no faith is to be placed in it, but it would appear that German gold has found its way to Roumania, and that trucks of grain have left for the West as the direct result. All of which is most unfortunate, and very regrettable.

***

Apparently one of the conditions imposed by the Roumanian Government is that the buyer of the grain (Germany) must provide her own trucks. This is wise—and significant. It shows that Germany cannot be trusted. If the grain is loaded on Roumanian trucks the latter *are never returned to their proprietors!* In other words, theft pure and simple in the guise, I suppose, of military exigencies. It is a nice reputation to have, that of truck-thief. Nevertheless, that is what Germany has become. Austria is not a whit better. Our Bucharest Correspondent writes:—"The Ministry of Finance is concerned about several hundred trucks containing coal bought in Germany. They have *completely disappeared en route through Austria!*" And he adds, laconically: "Unfortunately the coal has been paid for."

***

The long and the short of it is that Roumania's position is not an enviable one. She has, at present, and in view of the closing of the Dardanelles, only one set of customers, and they are thieves. She might have sold her grain to the Entente group (and kept it in the country), but we were blind—seemingly—to the opportunity thus presenting itself, and thereby placed her unreservedly in the grip of the Huns. It will be argued that if we had purchased her grain she would have bought with our money coal in Germany, and that thereby the enemy would have profited. The question is a delicate one, but two remarks are pertinent: First, that in any case the coal would have to be bought by Roumania and that, the Dardanelles being closed, it could only be bought in Germany or Austria; and, secondly, that hard cash (or, what is more likely, paper bills) would never have fed Germany's hungry millions.

***

I read that the new bridge over the Save at Belgrade has been completed and that, therefore, the Berlin-Constantinople route is on the eve of being or is already opened to traffic. The significance of this can hardly be overrated. Turkey is a producer of raw material—foodstuffs, cotton, wool, ore, etc—eminently desirable to the Boche, and the latter is a producer of industrial articles necessary to the Turk. But here, again, the German has the best of the bargain, because the replenishing of his larder is more vital to him than his articles are to the cryptic Ottoman. The *Drang nach Osten* was, in a sense, an instinctive movement, a necessary one for self-preservation and, for the time being, its object has been achieved. Had we been earlier in Serbia, the consummation of the German plan would have failed, and she would not be in a position to-day to procure raw material from Turkey. On the contrary, it is we who have failed to prevent her from attaining her great goal, and it is going to cost us something—in time, money and men. Personally, I consider the economic consequences of the Berlin-Constantinople link, the provisioning of Germany with Turkish raw produce, to be a greater misfortune than the purely military consequences.

***

The "Persia" outrage is dastardly murder. It again raises the question of the value of the Mediterranean route to the Far East in war time. We have seen the Dutch shipping companies abandon it for the Cape route, before any of their vessels had been torpedoed, and the Japs follow suit after they had lost the "Yasaka Maru," near Malta. What about the P. and O. Company's sailings? Would it not be safer and better for them to do likewise? His Majesty's mails for the Eastern Mediterranean and the Red Sea could be taken by swift Government boats from Marseilles to Alexandria, whence they would be distributed as far south as Aden. Smaller cargo steamers could do likewise as regards freight, and the P. and O. would temporarily devote itself to the Cape and Indian trade. As far as the Cape is concerned, the departure would, I am sure, be most welcome, because there is a tremendous dearth of freight steamers. India and Australasia would, admittedly, get their mails, passengers, etc., with a considerable delay, but in view of the gravity of the issues at stake in this war they would not grumble inordinately. Better the delay than a repetition of the "Persia" outrage. As for the much overrated "loss of prestige," it is too vague and negative to be taken into consideration. There remains to be solved the question of the P. and O.'s contract with the Government, but compromise between the two parties, without Parliamentary discussion, eloquence and interference, should easily be arrived at. I strongly suggest, therefore, that the P. and O. be asked, or allowed, temporarily to change its route for the Cape route.

***

We publish on page 256 a spirited letter from our Cairo Correspondent on enemy firms in Egypt, which supplements the remarks already made in these columns on the same subject. The *Morning Post* has also during the past week published a strong article on the same subject, from which I quote the following paragraphs, at the same time upholding the opinions I have expressed in these columns during the past three weeks:—

"The Entente with France altered much in Egypt, but public attention was then and thereafter mainly concentrated on the improved relations with France. France no longer played the part of a sleepless opponent, versed in every form of enmity, from open political rivalry to secret commercial intrigue. But her abandoned rôle was at once taken up, studied, and extended by Germany. The few Englishmen in Egypt who had any independent knowledge or experience of German ways soon found growing reasons both for interest and apprehension. In the first place, the members of the German colony were organised like a regiment and given to understand that they were an outpost of Empire *in partibus*. They soon attained a local importance, which had never hitherto attached to their slender numbers. The entire hotel system of Egypt had long been mainly in German or Austrian hands. The highly educated managers of the various establishments were excellently placed for acquiring information on many details of British administration and policy in Egypt and our Empire generally—for most of our great roads lead to or from Cairo. This knowledge was soon assimilated and carried home by the swarms of German waiters who made their annual appearance for the winter season.

***

"Meanwhile much was going on outside the coffee-rooms. Churches and schools of pretentious size arose in the best sites obtainable, and flew the Imperial colours on every possible occasion. German booksellers, engravers, electricians, agricultural implement makers, engineers, chemists, dentists, and hairdressers appeared, flourished, and bore down all competition. The State Railways found their demands for engines and rolling stock more readily and quickly met in Germany and Austria than in England. In 1878 one might search all over Cairo for a few grains of quinine. Some twenty odd years later the most elaborate chemical analyses for judicial or other purposes could be performed by a learned German chemist.

***

"There appeared banks with fields of operation, embracing the entire East, and offering, with a kind of missionary enthusiasm, facilities for loans hitherto rare in the world of business. Germany had an Orient Bank before owning any of the Orient. It is here that we may look for the financial parentage of the 'Presses Allemandes' and other like concerns. The chief interest for us lies in the proof here afforded that in Egypt, as throughout the Empire and at home, one and the same situation prevailed until the first gun was fired in this war."

Roumania's War Exports.

Interview with M. Demetre Greceano.

(From Our Own Correspondent.)

Bucharest, Dec. 20.

M. Demètre Greceano, late Minister of Justice, and now President of the Union of Agricultural Syndicates, has granted me an interview, the substance of which is as follows :—

If there is one subject which interests all classes in Roumania at the present moment, it is that relating to the exportation of the grain derived from the harvest of 1915. This country, as most people are aware, is eminently agricultural, so that not only individuals, but the State, have only agricultural produce to fall back upon in order to meet their expenses. Since the beginning of this war Roumania has been unable to avail herself of the chief route by which she exports her produce, namely, the Black Sea and the Dardanelles, and, therefore, Germany and Austria-Hungary are the only buyers.

Grain Exports.

This economic situation might have given rise to a certain form of political activity on the part of the Central Powers, who are thus provided with a powerful means of exercising coercion in the matter of Roumania's attitude. In order to obviate this very real danger, certain public men of the country, resolute partisans of the Quadruple Entente, proposed to the representatives of these Powers that they should acquire the produce of the country that was destined for exportation. It would have been a matter of some seven or eight hundred million francs (thirty million sterling), a portion of the harvest having to remain in the country for internal consumption. This harvest, acquired by England and France, would have been stored away and guaranteed for by the State up to the time when access by way of the Dardanelles should have been re-established. In spite of insistence on the part of those diplomats who were aware of the political importance of such a transaction, the project did not prove acceptable, so that the Roumanians, who have no other means of existence than their agricultural produce, found themselves at the discretion of the Central Powers. The danger of political pressure on the part of Germany became especially menacing when that State formed a monopoly for the purchase of grain. By buying exclusively from sources indicated by the German and Austrian Legations at Bucharest, and backed by efficient means of corruption, Germany was in a position to create an atmosphere more or less favourable to herself. In order to guard against this danger the Roumanian agriculturists have, in agreement with the Government, formed a special "Central Commission," which has secured a counter-monopoly for the sale of grain. In this way the Central Powers are forced to pay for the corn according to its quality, and not according to the owner's political opinions.

During the first week of December the "Central Commission" entered into negotiations for the sale of 50,000 truckloads (500,000 tons) of corn to Germany, on terms which promised to be advantageous. There is reason to anticipate a satisfactory termination to this transaction, which will bring some relief to the precarious situation in which most of this country's agriculturists find themselves. Meanwhile, it may be of interest to note some of the difficulties that have arisen.

Negotiations with Germany.

The total stock of grain designated for exportation amounts to about 600,000 truckloads, of a value of some two thousand million francs. The 50,000 truckloads, the sale of which is being negotiated, represent 150 million francs, to which must be added the export taxes payable in gold, which amount to 50 million francs.

The obstacles which have arisen in the way of the transaction may be summarized as follows :—

(1) The question of exchange. One of the conditions insisted upon is that payment shall be made in Roumanian *lei*, and not in Austrian crowns, which are quoted at 83·84, nor in German marks, which are also low. The National Bank of Roumania insists that Germany shall buy the Roumanian *lei* with marks at the exchange of 1.20 per mark. German representatives propose 1.22, but will come down to a minimum of 1.21.

(2) The Minister of Finance insists that the export taxes, which amount, for instance, to 500 fr. per truckload of wheat, shall be paid in gold. His reasons may be explained as follows :—The National Bank has the right to issue banknotes representing three times the value of the stock of gold in its vaults. It has now reached the limit in the output of paper, and therefore needs no less than fifty million francs in gold in order to be able to issue 150 millions in banknotes, this last sum, as I stated above, representing the price of the 50,000 truckloads of grain in question.

A few days ago the Austro-German representatives were received by the Minister of Finance, and offered him value on Berlin, but the Minister declared that he could not accept any payment other than in gold.

The Roumanian Minister told the Austro-German representatives that Germany had exported large quantities of gold to Bulgaria and Turkey, and that if Germany needed Roumanian corn she could not do less for this country. The Germans replied that they give gold to those who are allied to them. From which we deduce that they have not given up all hope of exercising political pressure on Roumania through this channel. As Roumania cannot afford to give in, the sale will only be concluded in the case of Germany's need of grain becoming greater than her political ambitions.

LOSS OF THE S.S. "PERSIA."

The s.s. Persia, of the P. and O. Company, was torpedoed at 1.10 p.m. on December 30, and by 1.15 p.m. the vessel had completely disappeared. No warning was given and no periscope was seen, but the track of a torpedo was observed by the Second Officer Wood four points on the port bow one second before impact.

The torpedo struck the ship abaft No. 3 hatch opposite the boiler-room, and Eves, the second engineer, is of opinion that the forward port boiler blew up, this accelerating the sinking of the ship.

The outrage took place at a point about forty miles due south of Crete. There were about 200 passengers aboard, and the crew numbered from 200 to 300 men. Six boats were known to have got clear, of which the occupants of four were brought to Alexandria on the night of January 1, and a fifth was rescued on the following day. The total number saved of crew and passengers was 170.

The Persia had letter mails on board for Egypt, Cyprus, Aden, British East Africa, Zanzibar, Mauritius, Seychelles, Ceylon, India, Persian Gulf Ports, Malay States, Straits Settlements, Dutch East Indies, North Borneo, Sarawak, Siam, Manila, and Hong Kong, containing letters for those destinations which reached the General Post Office, London, after 7 a.m. on Friday, December 17, and up to the same hour on Friday, December 24; also newspapers and other printed matter, received at the General Post Office, London, between Wednesday, December 15, and Wednesday, December 22.

There were also parcel mails on board for Egypt, Cyprus, Aden, Seychelles, and India, containing parcels which reached the General Post Office, London, after Wednesday, December 8, and before the evening of Wednesday, December 15.

So far as is known no mails were saved.

Until this loss the liners carrying on the mail services of the P. and O. Company had been immune from disaster of the kind, points out the *Times*. It was only on December 8 that Lord Inchcape, the chairman, referred at the annual meeting to this immunity, and to the possibility that disaster might have to be borne. The passage in his address to the proprietors dealing with the subject was as follows :—

"I am glad to say that week after week with unfailing regularity, without exception, all through these sixteen months of war, the P. and O. mail steamers have started on their voyages from this country to the far ends of the earth with their usual complement of passengers just as in times of peace. . . .

"We cannot be too grateful to the Admiralty and to the Navy for the complete immunity from casualty from enemy ships with which the P. and O. vessels, their passengers, and their ships' companies have been able to sail the seas all through this war. Of course, we cannot tell when some disaster may overtake us, but if and when it should come, the board, and, I feel sure, the proprietors also, will bear it philosophically, knowing that all that could have been done by the Admiralty, the Navy, and our commanders, officers, and engineers has been done to avert it."

It was in no boastful spirit that Lord Inchcape mentioned the previous immunity which he tempered with a warning, but with a sense of indebtedness to the Admiralty and the company's officers.

The Persia was of 7,974 tons, built by Caird and Co. at Greenock in 1900, was fitted for wireless signalling, and had a speed of 18 knots. She was a very popular boat with passengers. She was of the same size as the India, built by the same company four years earlier, which when commissioned as an armed cruiser was destroyed by an enemy submarine on August 8 last. The India was manned by a Government crew, and there was considerable loss of life.

The Persia met with a mishap in July, 1912, when, while bound from London for Bombay, she stranded outside Marseilles in dense fog. The passengers were safely landed, and the liner was refloated with the assistance of the French cruiser Jules Ferry and the naval tugs Goliath and Vulcain. Presentations on behalf of the P. and O. Company were subsequently made to the Préfet Maritime at Toulon, the captain of the cruiser, the lieutenants in charge of the tugs, and other officers.

The Persia was insured against war risks under the British Government scheme. The loss falling on marine underwriters should not be very serious, because, though heavily laden with parcel post and mails, she carried little cargo. In any case the liability of underwriters and insurance companies for cargo would have been strictly limited, since for some weeks past their rates for cargo viâ the Mediterranean have, as a rule, been considerably above the Government flat rate of £1 1s. per cent. It was because the Government scheme only applies to British vessels that the destruction of the Japanese liner Yasaka Maru last month involved London underwriters in one of the heaviest war losses they have had to meet.

GREEK LINER ABANDONED.

Seventy-five per cent. was quoted in London on Wednesday evening for reinsurance on the Greek liner Thessaloniki of 4,682 tons, on news from New York that her passengers had been transferred to the steamer Patris and that her crew had left in their boats. The Thessaloniki, which belongs to the National Steam Navigation Company of Greece, was reported on December 31 to have been 150 miles south of Nantucket unable to proceed owing to engine trouble, and, according to a Reuter message from New York, she is known to have been badly buffeted during the past few days and to have had her engine-room filled with water. She was built at Belfast in 1890 as the City of Vienna, and is valued at £30,000.

Egypt's Trade During November.

(From Our Own Correspondent.)

Cairo, December 22.

The Egyptian Customs returns for November just published show a continuation in the improvement already reported. During the month imports amounted to £E1,787,213 and exports to £E3,276,832, as against £E938,099 and £E3,018,191 respectively in November, 1914. The totals up to the end of last month stood at £E16,692,314 for imports and at £E22,562,823 for exports. It is interesting to note that for the same period of 1913 the figures were respectively £E25,054,508 and £E26,566,995, so that although the import trade has by no means caught up, exports are within very appreciable distance of their level in the last normal period prior to the war.

Imports.

Under imports the chief items for the month were:—Alimentary products £E72,255, cereals £E136,549. It is to be noted that in 1913 this category stood at £E411,280 at the end of November, the falling off being due entirely to the increased local production. Sugar £E102,957, tea £E37,454, coffee £E28,390, coal £E186,341; although the value is £E71,710 more than in 1913, the quantity is 29,838 tons less, and the situation locally is becoming serious owing to the non-arival of further cargoes. Matches £E27,908, chemical products £E34,983, textiles £E572,147—only £E42,308 below the figure for November, 1913—and worked iron and steel £E54,048.

For the eleven months the chief heads showing decreases are cereals £E1,468,644, skins and tanned goods £E159,673, chemical products £E282,088, textiles £E103,079—£E5,116,091, as against £E5,219,170 (£E6,304,578 in 1913)--ironwork £E1,618,265, stone and glass £E196,443, construction wood £E809,034. The principal items with increases were frozen meat £E316,448, coffee £E132,638, tea £E107,524, coal £E604,326, cotton tissues £E311,408, and sacks £E162,216.

Exports.

Under exports during November the figures were:—Eggs £E9,190, skins £E21,176, cereals £E167,905, cotton seed £E296,793, sugar £E29,406, natural phosphates £E13,327, cotton £E2,641,818 (752,640 cantars). For the eleven months the chief increases were:—Eggs £E163,643, skins and tanned goods £E47,526 (the total is £E57,246 better than in 1913), cereals £E1,147,120 (only £E300,183 was the total for the period of 1913, it is to be noted)), cotton seed £E118,237, sugar £E391,473 (£E542,629 as compared with £E74,656 in 1913), wool £E88,584, and gold and silver bar £E411,788. Cotton during the period has fallen off by £E1,208,476 in value, but the quantity has increased by 876,206 cantars. Cigarettes improved in November by £E7,688 (the imports fell off by £E5,649), but the eleven months show a falling off of £E48,850.

The British Empire is certainly improving its relations with this country; its total share of the imports during November was £E978,621, or 54.7 per cent., as compared with 31.6 per cent. in November, 1913. The proportion for the entire eleven months of the two years was 57 and 37 per cent. respectively. Great Britain during November provided 80 per cent. of the coal and of the ironwork, 60 per cent. of the entire textile imports (80 per cent. of the cotton threads), whilst the whole of the flour imports amounting to £E51,327 came from British Possessions, which also supplied 90 per cent. of the tea, 50 per cent. of the chemical products, and practically all the butter. India sent 50 per cent. of the cotton threads, all the sacks, rice and indigo—all the latter previous to the war came from Germany. Of the exports the Empire took a little over 50 per cent. both during the month and the rest of the year (as against 42 per cent. in 1913), mostly cotton and cotton seed.

Amongst the other countries America again sent all the petroleum and benzine and the balance of the coal (£E35,135), Switzerland condensed milk for £E14,310 out of a total of £E16,795, whilst Japan appears on the market as a supplier of millinery and linen goods with £E13,553 out of a total of £E46,285. Under exports Morocco took, again, a large portion of the sugar; America took one-third of the cotton—of the balance, Russia bought £E193,737 and France £E108,429—whilst wheat to the value of £E38,013 was sent to the Hedjaz for the holy shrines, and a third of the gold bar went to India.

Sudan Trade.

During November traffic with the Sudan amounted to £E113,886, imports thence into Egypt £E49,888, and exports to the Sudan £E63,998. The former included livestock £E27,545, cereals £E7,435, and senna £E2,506. Exports to the Sudan comprised, among other things, flour £E2,139, sugar £E4,488, coffee £E5,063, cotton tissues £E15,260, tanned goods £E2,589. The total imports into Egypt from the Sudan since the beginning of the year amount to £E466,382, and the exports to that dependency £E784,889.

DELICIOUS COFFEE.
RED WHITE & BLUE
for Breakfast & after Dinner.
Wholesale, of Hanson's, London, England.

NEWS FROM ALL SOURCES.

Turkey is said to be demanding a cash advance of twenty million pounds from Germany to meet the deficiency disclosed by the recent Budget.

A telegram received in Zurich from Bucharest states that the Bourse Committee has asked the Minister of Commerce to permit the reopening of the Bourse. The Minister has refused, remarking that the present conditions are unfavourable for Bourse operations.

Reuter reports from Amsterdam that a Constantinople telegram states that the Turkish Government has prepared a Bill introducing the Gregorian Calendar for the civil year. The financial year will begin on March 14. The ecclesiastical year will remain lunar.

It is reported from Sofia that the Bulgarian Minister of Finance estimates the cost of the war to Bulgaria from September 16 to January 1 at the figure of 250,000,000 fr., says a Reuter message from Athens.

It is reported that the Bulgarian War Credits, totalling £21,200,000, were adopted by the Sabranje with only a few dissentient votes.

The name of Reuter's Bank has been changed to the "British Commercial Bank, Limited." The new title was adopted as from yesterday.

It is announced that Austria-Hungary, Germany, and Turkey have come to an agreement concerning the import of cotton from Asia Minor to Austria-Hungary and Germany.

A Hamburg telegram states that the German Christmas market was very short of meat, but that ample quantities of Serbian pork have now arrived. The military administration in Serbia is despatching thousands of live hogs to Dresden, where they are slaughtered, the pork being sent to cities where the scarcity is greatest.

TRADE NOTES.

Egypt.

Tenders are invited by the Secrétaire Générale des Domaines de l'Etat (Service Technique), Cairo, for the supply (1) of 13,315 okes of "huile pour mouvements"; (2) 7,670 okes of "huile pour cylindres"; (3) 16,200 okes of "huile pour moteurs Diesel." Date, February 2.

Tenders are invited by the Controller, Cairo Tangier Department, for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-1917. Samples shall be submitted at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 1, 1916. Date, March 1.

A Ministerial Decree has been issued permitting the free export of coffee from Egypt. It is pointed out that this "free export" is subject to the regulations which are in force as to the destinations to which this commodity may be exported.

Sudan.

The general manager, Sudan Government Railways, is prepared to receive tenders for the supply of the following timber:—

100,000 ft. run of Swedish pine in sizes varying from ¾-inch by 9 in. to 2 in. by 9 in.
2,500 ft. run of 3 in. by 3 in. by 13 ft.
1,500 ft. run of 4 in. by 4 in. by 13 ft.
25,000 ft. run of pitch pine in sizes varying from 1 in. by 9 in. to 4 in. by 12 in.
6 pitch pine baulks, 9 in. by 9 in. by 36 in.
6 pitch pine baulks, 9 in. by 12 in. by 20 ft.
12 pitch pine baulks, 12 in. by 12 in. by 20 ft.

Tenders, which should state prices and possible date of delivery of timber, may be sent to any of the following:—

Sir A. L. Webb, Queen Anne's Chambers, London, S.W., quoting price f.o.b. London.
Agent, Sudan Government Railways, Alexandria, quoting price for delivery in Alexandria.
General Manager, Sudan Government Railways, Atbara, quoting price c.i.f. Port Sudan or for local delivery.

From all of whom also tender forms and fuller information as to the sizes of timber required may be obtained. Tenders, which should be enclosed in sealed envelopes, plainly marked on the outside "Tender for Timber," must reach any of the above addresses by not later than noon of February 1, 1916.

Cyprus.

A notice has appeared in the *Cyprus Gazette* (Extraordinary) notifying that the High Commissioner has approved of special licences being granted by the Provost Marshal for a limited quantity of potatoes being exported to Egypt, subject to certain regulations which are designed to facilitate exportation after local requirements at reasonable prices have been satisfied.

The Government of Cyprus has for sale about 266 Cyprus okes of harpoon-fished sponges, good quality, and 29 okes skarta from Cyprus waters this year; also 748 okes of machine-fished sponges, good quality, and 89 okes skarta. Tenders for the purchase of same will be received by the Inspector of Fisheries up to 12 noon on January 29, 1916. The sponges may be seen on application to the Collector of Customs, Limassal, and full information obtained by application at the office of the Inspector of Fisheries, Nicosia.

A correspondent writes:—

"Sponges of good quality are taken annually in Cyprus waters, the industry being in the hands of Greek islanders, who visit Cyprus with their own boats. They are taken both by harpoon, or dragging system, and by divers. The sponges belonging to the Government are advertised for sale by the Inspector of Fisheries, as above."

The French Government has informed the Greek Government that it holds at its disposal 10,000,000 fr. as an advance from the loan now under negotiation. This demonstration of French goodwill forms an eloquent denial of the malevolent rumours alleging that unsatisfactory relations exist between the Entente and Greece.

Engineering Notes.

"Ethol."

The problem of finding new contributory sources of fuel that can be adequately used as a substitute for petrol is evidently going to be practically solved in South Africa. In our Engineering Notes, December 3rd, ult., we referred to an alcohol-fuel produced in Natal—wherefore named "Natalite"—which in prolonged tests, carried out by the Royal Automobile Club last autumn, has given most excellent results with an ordinary petrol engine. We now hear of another new alcohol-fuel called "Ethol," which has recently been introduced in the Transvaal. From its name it may be inferred that it is a mixture of ether and alcohol. In extended official tests it was shown that the consumption of this new fuel was .165 gallons per h.p., compared with .125 gallons of petrol; while its thermal efficiency was about 2½ per cent. better than that of petrol. "Ethol" can work up to compressions of about 180 lb., and as the tests were carried out with an ordinary petrol engine, it is asserted that the results will be even better with engines designed for taking advantage of the special characteristics of alcohol-fuels, such as high compression, expansion, etc. It must be mentioned here that this substantial progress in the solution of the alcohol-fuel problem is due to the incessant and practical efforts of the Government of South Africa, which is offering every possible encouragement and assistance for research.

An "Iron Horse."

When one has read of the wooden horse of Troy, the invention of the wily Ulysses; or the wooden horse of the Arabian Nights, which was fitted with two pegs by which, on turning the one, the horse rose into the air, and on turning the other it descended wherever the rider wished—an evident prediction of the modern aeroplane—or the wooden horse in Alkman's "Reynard the Fox," which could go a hundred miles an hour; or the brass horse of King Cambussan, in Chaucer's "Canterbury Tales," which could within a single day transport its rider to the most distant region of the world—one naturally cannot resist the invitation to view an "iron horse" at an exhibition where there was to be found nothing mythical, but only samples of the latest products of modern science and industry. The view was by no means a disappointment, for although not an effigy of the quadruped, the "iron horse" is a very interesting, compact, and light three-wheeled tractor for agricultural use, and has probably been so nicknamed because it is designed to haul and operate any farm implement with only one man in attendance. Having started the engine, the driver can sit either on the tractor or on the implement and steer it, by means of a pair of rope reins, which are a special feature of the "iron horse." Stopping and starting are effected by means of a telescopic rod, which works by tension. It is fitted with an 8 h.p. semi-Diesel engine, and uses paraffin as fuel. One minute only is required to start the engine, and the gearing is entirely enclosed, being thus protected from any dirt or stones whilst at work in the field or on the road. The drive is transmitted through one of the road wheels, which runs on the land, whilst the outside guide wheel runs in the furrow when ploughing. A suitable pulley is also provided, which enables the tractor to drive, when desired, barn or other machinery. The weight of the "iron horse" is between 6 and 7 cwt. (240 to 280 okes), there being one speed forward and reverse; and it is stated that a two-furrow plough was hauled by this tractor, in stiff clay, with very satisfactory results. The machine is not intended for road haulage, but, as we noted above, it can haul ploughs, cultivators, sowing, mowing, and other machines and implements in the field, and drive pumps or barn machinery. This light and useful machine will interest farmers in the Near East, who, owing to the scarcity of labour and the commandeering or forced sale of horses, mules, and draught

bullocks, are unable to cultivate their lands. To farmers who find it inconvenient to purchase outright such a machine—although, we were informed, its price is not beyond the means of the average smallholder—we would suggest the co-operative purchasing system, or the buying of one by two or three jointly. It would help them out of their difficulties, and they could rest assured that their "iron horse" would not be commandeered.

ENEMY TRADING ACT.

Engineers and Banks.

In view of the general and growing dissatisfaction with the attitude of the Government in permitting enemy concerns to carry on trade in Great Britain during the war a representative of the *Morning Post* has interviewed Mr. Stafford Ransome, the Organizer and Secretary of the British Engineers' Association, on the subject. Mr. Ransome pointed out that since the war began the British Engineers' Association has repeatedly drawn the attention of the Government to the inadequacy of the Trading with the Enemy Act.

"In the Trading with the Enemy Act, 1914, the Government has adopted certain of the suggestions put forward by the Association in the way of appointing supervisors to enemy concerns in this country, etc., but the Amended Act does not in any way deal with the matter satisfactorily.

"The law in its present form supports enemies and enemy concerns in this country. This will strengthen the hands of enemies after the war at a time when the Allies will be very seriously weakened financially and commercially. It will, in fact, tend to nullify the effects of a victory. Though it professes to prohibit, it does not in effect prevent trading with enemies in enemy countries or the passage of British money to enemy countries. This is rendering victory more difficult and is prolonging the war."

German Influence.

Mr. Ransome considered it inconceivable that a British Government, whatever its party-political views might be, could adopt the line that had been adopted unless there were some influence behind it about which the public were altogether ignorant. No doubt Cabinet Ministers, he said, would be grieved if they were told that they were pro-German, and yet it was difficult to conceive that if our "Trading with the Enemy" law had been framed in Berlin how it could have played more directly into the hands of Britain's enemies. He was sorry to say that German influence was being used for all it was worth in all the countries of the Allies, but while the Russian and French Governments had seen their way to ignore these influences by framing their legislation, the British Government had not done so.

"Great Britain has lent enormous sums to Germany—money in many cases which ought to have been employed by our bankers in the development of British industries. People often wonder why our financial people should have adopted this unpatriotic method. In practice, however, a banker or a bank is a thing without a soul. It puts its money out in the markets which it considers the most secure, and our bankers have found a ready market for their loose cash among the German banks, whose security was practically backed by the German Government and therefore the assets of the Empire. On the sound, if not patriotic, principle our bankers were right in preferring such a security to that of an individual firm in this country. They would have been right, that is to say, if it were impossible for us to be at war with Germany; but the moment such an event came about the bottom was entirely knocked out of such a policy. Now our financial people are wondering, when the war is over, if they are going to get their money back and they say to themselves and to the Government: 'How shall we do this if we crush Germany's trade?' Certain it is that financial influence will be very strong against any drastic steps which will really inconvenience the German trade after the war."

Banks.

"The attitude of the British banks in recent years is best exemplified in the following manner. The money actually placed in the banks on deposit by our engineering firms was lent in the ordinary course of the bank's business to German firms, who at once lent it to their manufacturers for the development of their trade, more particularly abroad. But the English engineering firms could not obtain the same facilities from their own bankers. The result was that the money accumulated by our own manufacturers was actually being used to finance their foreign competitors.

"In spite of the Government attitude there is a great feeling against dealing with enemy firms in this country, and I am happy to say that it is extending to the municipalities. At the instigation of this Association, a number of these have already passed a resolution not to deal with such firms in the future. Among them are Manchester, Aberdeen, Dundee, Lincoln, and Newark. It is to be hoped that all of them will follow their patriotic lead, and that some day the British Government may wake up to the conviction that patriotism is not only desirable, but the best policy."

ENEMY SUBMARINES IN THE MEDITERRANEAN.

A correspondent writes in the *Echo de Paris*:—It is estimated that there are now twenty-five enemy submarines operating in the Mediterranean. A few of them are Austrian-built; others have been sent overland in sections by rail to the Austrian naval arsenals; many have made their way round by sea.

At the outset German submarines, coming by way of Gibraltar, were supplied on the Spanish coast, between the Portuguese and French frontiers, then in the Balearic Isles, where there was a determined provider of petrol. But these coasts are now so closely watched that the supplying of U boats has become impossible.

Another centre of supplies was organised later, it is thought, in Sicily, on the Girgenti coast, and in Augusta Bay (S. coast of Sicily), into which a French destroyer pursued a German submarine and nearly caught it. Since the month of May, i.e., ever since Italy declared war on Austria, things have changed; the Sicilian coast-line has been closely watched by the Italian navy, and the German submarine suppliers have found other lurking places.

General gossip states that they are now installed in Greece, where they form a powerful organisation with an ex-Minister, whose name is common property, at its head.

It is on the Adriatic coast of the Peloponnesus that the supply bases are most numerous. Two other bases of supply are still said to exist on the south coast of Crete and on the island of Corfu, where submarines, it is said, found shelter for a long time in the roadstead of the Achilleion, the Kaiser's property. Other bases of supply are reported in the Greek islands of Cos, Leros, and Samos. To complete the story, I should mention a base which is said to be situated on the Spanish coast of Morocco, near Melilla.

The submarines are fitted with Diesel engines, which can work at will on petrol, the heavier petroleum oils, and petroleum residue. But the Greek Government has a monopoly of these products, which come exclusively from the Standard Oil Company in oil-tankers, and are quite familiar to the British Navy. All such oil arriving in Greece is consigned to the Government, and any German control of it is impossible. All we can say is that petroleum imports into Greece have increased in enormous proportions.

The *modus operandi*, says the *Daily Chronicle*, quoting from the French paper, is as follows:—

The German supply agents buy the oil or petrol from the Government; they then consign the precious liquor to depots hidden inland not far from the sea. On certain specific days or nights—usually nights—the tanks are transported on muleback to the point of the coast where local craft are waiting. The oil tanks are put aboard, and the boats carry out their cargo to the submarines, which are lying in wait in the offing. In a few hours the whole thing is over. Another method is to sink oil-barrels out at sea, indicating their position by buoys.

Now that the Greek Government has allowed the Allied warships to exercise a close inspection of the coasts, it is hoped that these alcoves will become rarer.

EGYPTIAN DATES.

There is a good market in the United Kingdom for dates of superior quality suitable for household consumption and for use in confectionery, and the demand would appear to be capable of considerable expansion provided that a high standard of quality of the dates is maintained, says the *Chamber of Commerce Journal*. At the present time, it is understood, the Egyptian Government desires to encourage the export trade in dates from Egypt to the United Kingdom.

Date cultivation in Egypt and the Sudan has been carried on since very ancient times. In the Nile valley the date palm is cultivated with little interruption from the Mediterranean coast to Khartoum, a distance of about 1,100 miles, the longest continuous north and south extent of date cultivation in the world. This embraces a range in mean annual temperature of more than 15 degrees, and a range in the percentage of mean relative humidity varying from 74 per cent. at Port Said to only 24 per cent. in Dongola Province in the Sudan. The cool and humid maritime zone produces few packing dates, but almost exclusively those used in the fresh or "rutab" state. In the moderately hot and dry portions of the desert subtropical zone packing dates of superior quality are produced. The hotter, less humid portion of the desert subtropical zone and the desert tropical zone produce almost exclusively the hard, dry, self-cured dates, which are easily stored and transported, and which form an important part of the diet of the Arab people.

The following table shows the imports of dates into the United Kingdom during the years 1913 and 1914:—

From	1913. Cwt.	1914. Cwt.
France	37,565	23,647
Asiatic Turkey	497,074	120,398
Egypt	3,485	1,952
Persia	5,426	86,165
India	7,620	361
Other countries	7,639	3,194
Total	558,809	235,717

About 40 per cent. of these dates were re-exported to America, the continent of Europe, Australia, South Africa, etc.

Near East Markets.

THE TURKISH MARKET.

(From Our Special Correspondent.)

Athens, December 22.

The prospect of direct railway communication soon being established between Constantinople and the Central Powers seems to have created quite a flutter amongst the Turks in Constantinople, and many of them are said to be going in for commerce. It remains to be seen, however, whether their expectations will be realised.

It is reported that Austria is sending several hundred wagons to Constantinople to facilitate transport, but where transport is deficient is in Asia Minor, and not so much from want of wagons, but rather from want of coal, and also of carts and horses to convey produce from the villages to the railway.

In anticipation of the possibility of making sales to Germany, the prices of many articles, such as figs, raisins, valonea, cotton, etc., have gone up, though in one article—namely, mohair—in which a large trade has been done with Germany, there has been a large drop in price. As much as 36 piastres per oke was paid for good Kutahias, but according to latest advices there has been a drop to 27 piastres, owing partly to slackening of demand and to loss on exchange. It is difficult to learn what the stock of mohair is in the interior; some reports put it as low as 15,000 bales, but this is probably too low an estimate In Constantinople there were a few weeks ago only 500 bales.

There has not been much demand for opium lately, and prices remain at 180 to 210 piastres the oke, according to quality. The stock in Constantinople was about 300 cases, and in the interior there are now only 3,500 to 4,000 cases.

Sheepskins, of which there was a stock of about 200,000 in Constantinople, were selling at 7½ piastres the kilo with the wool. Lambskins were selling at 20 piastres the pair.

There are, it is estimated, some 15,000 bales of sheepswool in the interior, for which the quotation was 8 piastres the oke at the railway, but this article is generally requisitioned by the Government and the export is prohibited.

Hazelnuts continue to be cheap, and can be bought at the Black Sea ports at about 3½ piastres the oke for shelled, but the absence of any means of transport renders any business impossible. The stocks at Kerassunde, Ordou, and Trebizonde are estimated to be about 400,000 kantars (20,000 tons).

The total stock of canary seed is estimated at about 27,000 bags, practically the whole of which is at Rodosto. The price there is 60 paras the oke, but at Constantinople 71 paras has been paid by a few speculators in expectation of shipments to Germany becoming possible. A demand from Germany for the article would probably send up the price, considering the small stocks and the probability of the coming spring sowings being very limited.

The stock of linseed is practically exhausted, though there are buyers at 110 paras the oke.

It is impossible to obtain any reliable information about stocks of grain in Asia Minor. There are reports that the stock of wheat is running very low, and Talat's visit to Angora and Konia is said to be in connection with the accumulation of supplies for the capital. The price quoted for wheat is 4½ piastres per oke, which would indicate that there is very little in the hands of merchants and that the authorities secure all they can. Maize is quoted at 3 piastres the oke, but apparently there is not much offering.

Barley is quoted at 3½ piastres at Constantinople, the high price no doubt being due to the difficulty of bringing supplies in from Anatolia, where stocks must be fairly large.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.
— CAWNPORE, INDIA. —

Everything in Pure Wool.

MANUFACTURERS OF

"LALIMLI" WOOL WEAR

Flannels, Serges, Blankets, Tweeds, Broadcloths, Coatings, Hosiery, Rugs, Puttees, Uniforms, &c., &c. . . . .

ROUMANIAN NOTES.

(From Our Own Correspondent.)

Bucharest, December 14.

It has been decided that all the grain remaining from the 1914 crop can be exported. Of the present crops permission has been given to export 60 per cent. of the wheat crop, 30 per cent. of oats, 30 per cent. of barley, and 50 per cent. each of beans and peas.

The Roumanian Tobacco Monopoly directors have concluded with a Viennese firm a contract for the supply of 500 tons of Roumanian tobacco.

The Roumanian Mission despatched by the Railway Direction to Petrograd to consult as to the transit of goods and munitions for Roumania through Russia are expected back in Bucharest in a few days. The results of their interviews with the Russian railway authorities have been completely successful, an agreement of a satisfactory nature having been come to.

The engineers of the Roumanian State Railways have commenced surveying the new railway line which is to be constructed from the river port of Calarash, on the Danube, to the point known as Chiciu, 20 kilometres above that town, and just opposite Silistria. Communications between Bucharest and the territory received from Bulgaria after the Balkan War will thus be greatly improved.

According to the plans drawn up at the time, it was intended to construct a bridge across the Danube, which would put the newly acquired districts in direct railway communication with Roumania proper. This has had to be left over for the time, but the idea is in no way abandoned, and peace will see this and other railway and bridging projects successfully carried through.

PRODUCE REPORT.

London, January 6.

Currants.

There has been a noticeable activity in the market this past week, especially in medium qualities, and prices are well maintained.

Sultanas.

The demand is only moderate, but holders remain firm in their quotations, and do not sell except at full prices.

Figs and Dates.

There is a fair demand for both, small business passing at late rates.

Seeds.

Linseed is very firm and dearer. There are buyers for London-Calcutta January-February at 79s. 6d., whilst large business was done in La Plata at a further advance for January-February at 71s. 6d. to 71s. 9d.; February-March, 71s. 6d.; January-February and February-March combined, 71s. 9d. For Bombay on passage 81s. is asked. Cotton seed is very strong, sellers being scarce. London Egyptian loading is quoted £14 15s., whilst Egyptian to Hull, December, was sold at £15, with more buyers to-day at same price. Rapeseed is firm and largely nominal. Toria pure basis January-February is quoted 66s.

Oilcakes.

Nothing special to report, except that linseed cake and kindred foods continue in very short supply.

Gums.

Only very moderate business is being done. Turkey sorts (Arabic), £3 5s. to £4 10s.; Ghezira, 15s. to 2s. 6d.; East India, common to fine, £2 5s. to £2 15s.; Myrrh, good to fine, 50s. to 60s.; Tragacanth, first £28 to £42, low to good sorts £4 10s.

COTTON MARKET.

Liverpool. Thursday Night.

Messrs. Reynolds and Gibson telegraph: There has been an active demand for Egyptian cotton this week, and large business has resulted, a fair portion of which is said to be for export to America. Prices have rapidly risen, and quotations show an advance of 65 to 80 points for Medium grades, while Fine qualities are 50 to 70 points higher. Sales, which include 450 bales Sudan cotton, are estimated at 5,500, against 4,000 last week.

COTTON FOR GERMANY.

German spinners who are without cotton are discussing the possibility of getting a supply from Asia Minor, now that a route has been opened out. The output of that part of the world in recent years, the *Egyptian Gazette* is informed, has been equal to about 70,000 American bales, but it does not follow, of course, that there is anything approaching that amount available now. Very probably there is enough to make a difference to the manufacturers of explosives, but certainly not enough to relieve the cotton famine at the factories. The extent of the need may be judged from the fact that in 1913 Germany's cotton imports amounted to about 620,000 tons, and 440,000 tons of this was required for home consumption. Before the war most of the Turkish crop was exported to France and Spain, but last year almost all of it was sent to Germany via Genoa. There is a spinning mill at Smyrna which since the outbreak of hostilities by Turkey has been engaged solely on military contracts.

EGYPTIAN COTTONSEED.

It was reported from Alexandria on January 3 that the arrivals of cottonseed for the previous week were given as 6,400 tons, and the shipments as 12,100, leaving stocks in hand at 72,260, as compared with 74,600 tons a year ago.

JEWELS CONFISCATED.

Judgment was recently delivered by the Mixed Court of Commerce, Alexandria, in the case brought by Messrs. Orosdi Back and Co. against the Customs Administration, which had ordered a parcel containing jewels sent to the firm without the value being declared to be confiscated. The plaintiffs contended that the sender, the Italian firm of Bernacchi, of Milan, omitted to declare the value by error, and had no fraudulent intent.

The Court pointed out that valuable jewels imported under registered cover without the exact value being declared was a breach of the Egyptian law involved. The importation of such articles through the medium of the Post Office can be made only by parcel or registered envelope with the value declared. Cases of the kind come under Article 33 of the Customs regulations, and the judge is not concerned in ascertaining whether there is or is not any fraudulent intent. The Court decided, therefore, that the jewels, which were of a value of 1,050 fr., had been properly confiscated.—*Egyptian Gazette.*

COMPANY NOTES.

Near East Trust.

Under a compulsory winding-up order made against the Near East Trust, Limited, 1 and 2, Great Winchester Street, E.C., Mr. E. C. Bliss, Official Receiver and liquidator, reports that the company was formed in September, 1913, to obtain concessions for public works, etc., in the Near East and to finance and exploit them. Mr. David Paisley agreed to sell to the company for £100 the benefit of certain negotiations resulting from his connection with Serbia. Shortly after the company was formed Mr. Paisley went to Serbia and Roumania and purchased on behalf of the company an option to acquire the "Baican" oil wells at Bustenari for £8,800, and the "Orient" petroleum refinery at Ploesti, Prahova, for £15,000. He subsequently acquired options for the purchase of the "Sultana" oil wells and the "Cometa" oil refinery in Roumania. The options, however, have all now expired, and £1,600 expended upon them is stated to have been irrevocably lost.

Oriental Carpet Manufacturers.

As announced elsewhere, the annual general meeting of the shareholders will be held on the 17th prox. in London. In consequence of the war and communication between the various branches of the company being cut off from the head office at Smyrna and the branches in enemy countries, it has been impossible to prepare and submit a report and balance-sheet, and the declaration of a dividend is altogether out of the question. The meeting will be asked to pass the following resolutions:—(1) That until the expiration of three months after the cessation of the war the headquarters of the company shall be in London or such other place as the board shall from time to time appoint; (2) that no dividend be declared for the financial year ending December 31, 1914.

Imperial Bank of Persia.

Sir Hugh Shakespear Barnes, K.C.S.I., K.C.V.O., has accepted the chairmanship of the Imperial Bank of Persia, rendered vacant by the recent death of Sir Thomas Jackson.

*** Sir Hugh Barnes, the son of James Ralph Barnes, of the India Civil Service, joined the Indian Service at Allahabad in 1874. Two years later he was appointed private secretary to Sir John Strachey, the Financial Member of the Viceroy's Council. After having occupied the post of Political Officer in Kandahar, he rose rapidly to be Resident in Kashmir (1894), Foreign Secretary to the Government of India (1900-1903), and Lieutenant-Governor of Burmah (1903-1905). He was decorated for distinguished service in 1903, in which year he also acted as President of the Central Committee for the Delhi Durbar.

Anglo-Bulgarian Oilfields.

At the recent annual meeting of the Anglo-Bulgarian Oilfields, Limited, it was stated by the chairman (Mr. Montagu Summers) that, owing to the state of war, it had been impossible for the directors to take any steps with regard to dealing with their oil concessions. Several battles had been fought in the vicinity of their property.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CAPITAL - Dr. 20,000,000. RESERVES - Dr. 13,500,000.

Head Office: ATHENS.

BRANCHES.

THE CLEOPATRA ESTATES.

The Egyptian Appeal Court has given judgment in the case of liquidators of the Zervudachi bankruptcy v. Luigi Stagni, confirming the judgment of the lower court, and stating that in order to justify the remuneration claimed it was necessary that an express convention should have recognised this as due to the firm of Stagni at the time that it agreed to recognise the Salvago Company instead of the Zervudachi firm as regards all future payment. The Court orders Messrs. Stagni to pay the liquidators interest at 7 per cent. on the amounts recovered for the common account. The following is the story of this remarkable lawsuit (says the *Egyptian Gazette*) :—

According to an agreement signed in 1886 between Commendatore Stagni and Mr. Constantin Zervudachi, it was decided to acquire, by means of payments of the purchase price in half portions each, a large stretch of land in the locality known as Cleopatra's Baths. Commendatore Stagni bought the land in his own name, but for the common account, and also took upon himself the management of the lands thus acquired. He divided them into lots, which he also sold; sold deeds of sale, cashed the money, and supplied all the expenses.

As soon as a little profit was realised it was divided between Messrs. Stagni and Zervudachi.

The sale of land lots proceeded slowly and in small instalments. In June, 1906, when the value of land had enormously increased, a group was formed, which was known later as the Société Civile des Bains de Cleopatre, who offered to buy the property of 149 lots from Messrs. Stagni at a price of P.T. 101 per pic.

The offer having been accepted, the 149 lots were sold by Messrs. Stagni for £E299,266. Of this sum £E70,112 was paid in cash to the vendors, who, as was the custom, hastened to hand half of the sum over to Messrs. Zervudachi, after the deduction of expenses and brokerage.

As the purchasing company did not make any more payments, Messrs. Stagni and Sons brought an action of expropriation, and in September, 1911, Messrs. Stagni handed to Messrs. Zervudachi £E15,000 on account of the sums due to them from the judicial sale of the property. Some days later Messrs. Zervudachi contracted a loan of £E39,900 with Messrs. Salvago, in guarantee for which Messrs. Zervudachi ceded the balance of the money due from the Société Civile des Terrains Cléopatra.

Later, in 1913, the liquidators of Messrs. Zervudachi asked Messrs. Stagni for a balance-sheet of the encashments effected since the date of the failure of Messrs. Zervudachi. In reply, Messrs. Stagni sent a digest of accounts, in which there figured for the first time the sum of £E2,046 as 5 per cent. commission under the heading of working expenses.

As the parties were unable to agree to this item the matter was taken before the Alexandria Civil Court, which decided that Messrs. Zervudachi need not pay any commission whatever to Messrs. Stagni, as nothing had been signed by either of them to that effect.

COMPANY RESULTS, &c.

Anglo-Egyptian.—Telegram from Egypt states that Hurgada No. 7 stopped producing at 10 a.m. on December 31, starting again at 1 p.m. and continuing until midnight. It recommenced producing at 10 a.m. on the 1st instant.

Egyptian Markets.—First Five per Cent. Debenture Coupons No. 34, which fell due on December 1, 1915, are payable at the Anglo-Egyptian Bank, Limited, 27, Clement's Lane, London, E.C., at the face value, and at the Anglo-Egyptian Bank Limited's Branch Offices at Cairo and Alexandria, at the current rate of exchange.

Egyptian Delta Light.—Ten days ending November 30, £6,589 (increase £428); aggregate from April 1, £113,955 (decrease £14,547).

Egyptian Salt and Soda.—A dividend of 8 per cent. for the year ending August 31 (less income-tax) will be paid on or after January 10.

Land Bank of Egypt.—The annual meeting of shareholders will be held on the 18th inst., at the offices of the bank in Alexandria.

Oriental Carpet Manufacturers.—The annual general meeting will be held at No. 4A, Newgate Street, E.C., on Monday, January 17, at 11 a.m.

Piræus, Athens, and Peloponnesus Railway (Three per Cent. Bonds).—Coupons due January 5 will be paid on and after that date at the offices of Messrs. R. Raphael and Sons, Austin Friars House, E.C.

Piræus, Athens, and Peloponnesus Railway Co. (Four per Cent. Bonds).—The Bank of Athens announces that Coupon No. 8, due January 15, will be paid on presentation on and after that date at 22, Fenchurch Street, E.C.

Roumanian Consolidated Oilfields.—Production for week ending December 11, 1,314 tons.—Office note: Owing to interruption a telegraphic communication, above return has only just been received by post.

"IN THE CITY."

The demand for rubber shares continues an outstanding feature of the Stock Exchange. In this connection special interest attaches to Johore Rubber Lands. This company, whose authorised capital is £400,000 in £1 shares (issued, 399,507 fully paid), has a property of 5,936 acres, of which a considerable portion is in bearing, and the rest is coming on. From the very satisfactory reports to hand there is every indication that the crop harvested during the current year will exceed the official estimate of 400,000 lb. of rubber. The financial year ended December 31, and a one-shilling dividend for the current year is the minimum of market expectations. From this date enormous progress is expected; the official estimate for 1916 is 874,450 lb., and for 1917 1,405,575 lb., from which large increases in dividends and capital appreciation can be confidently looked for. The all-in cost of production last year was 1s. 2d. per lb., and this should be reduced to the neighbourhood of 1s. this year, and taking rubber at only 2s. 6d. (the present price is actually 4s.), the profit for 1916 should be £62,000, and for 1917 £99,500. The Johore Rubber Lands also holds 30,000 shares in the Segemat Company, which stand in the Johore balance sheet at only 5s. each, whereas the present market value is 25s. per share. Johore Rubber Lands are round about 21s., and it is certain that they will have a big rise before very long; in fact, they are talked to 30s. In Java shares, Waverley Plantations are in demand at about 2s. 3d. for the fully-paid 5s. share, and are expected to go to par.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to October 30, 1915 (New Style: January 14 to November 13, 1915) :—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Oct., 1915		2,907,481	2,224,000
Do. do. do 1914		2,997,624	2,161,475
Estimated Receipts for 10 months (Law of Control)		24,083,333	8,916,666
Actual Receipts, 9 months, 1915		30,166,449	20,215,887
Do. do. do., 1914		30,639,815	22,654,854
Difference between estimated and actual receipts for 10 months	1915	+ 6,083,116	+11,299,220
	1914	+ 6,556,482	+13,738,187

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

Gallipoli Peninsula has now been completely evacuated by the British and French forces. The fact that the operation of removing the Allied troops from the southern point of the Peninsula was carried out with the loss of only one man wounded constitutes a triumph of organization and judgment. When the evacuation of Anzac and Suvla Bay was effected with only three casualties it seemed impossible that the Turks should allow themselves to be outwitted a second time. But the more difficult task was accomplished with the same measure of success and within two weeks of the first withdrawal. The troops were taken off by night. On the last day the Turks launched a determined attack on the Allies. After a bombardment lasting for more than three hours, an attempt was made to attack along the whole line. But the Turks could only be induced to advance at two points, and were completely repulsed. Our casualties amounted to 135 killed or wounded, but the engagement kept the enemy quiet during the night and facilitated the withdrawal of the remainder of the troops. A gale sprang up in the evening and necessitated modifications of the original programme. But by 4 a.m. on January 8 the last parties had been embarked, and the stores left on the beaches had been simultaneously fired. The enemy artillery at once became active, and firing was continued until after daybreak. As soon as the real state of affairs became known the first consideration of the Turkish commanders was to despatch messages to Constantinople describing the manner in which the Allied forces had been driven off the Peninsula.

Now that the evacuation of Gallipoli has been accomplished so easily there is a natural tendency to ask why the step was not taken a long time ago. The main reason, apart from the fact that the Allied Governments are only just emerging from a period when decisions on any point were not the order of the day, will probably be found in the bogey, started at the time of the first bombardment of the Dardanelles, that a withdrawal would seriously affect British prestige in the East. We entered a *caveat* against this view, but it was insisted upon on all sides, mainly with the idea of galvanising the authorities into such action as would make failure impossible. As things are, the actual withdrawal takes place almost simultaneously with a setback in the Eastern operations in Mesopotamia. We have never believed, and do not believe now, that any temporary reverse to British arms would be taken seriously in the Eastern world, provided the general conduct of the war is characterised by determination and sound policy. No doubt a bad impression would be created in Egypt and east of Suez if the evacuation of Gallipoli meant that the Allies were abandoning the Eastern Mediterranean to the enemy. That course, however, was never proposed. What ought to have been done was, as soon as the hopelessness of the Dardanelles Expedition was realised, to have withdrawn our forces in order to use them elsewhere. It was not suggested that the effort to reach Constantinople should be abandoned, but that we should not choose the only way that had little chance of success. The prestige of the Allies is far more likely to be undermined by the knowledge that the Greek General Staff had warned them against the Dardanelles route than by a change in their military plans. It is too soon to gauge the effect of the evacuation on the Eastern mind, but we may be certain that a determined offensive in any other quarter will soon distract attention from the Gallipoli failure.

At first sight it would appear that by evacuating Gallipoli the Allies had made the enemy a present of a large mobile force which may now be thrown against them in some other theatre of the war. In practice the effect of the withdrawal will not be quite so advantageous to the Turks. That it will liberate a certain number of troops is clear, but no great harm will be done if the few divisions help to increase Bulgarian uneasiness by their presence in Thrace and Macedonia. That a sufficient number of Turks will at once be available to exercise a decisive influence at one or more of Turkey's battle fronts may be doubted. There will certainly be a substantial nucleus of German officers and gunners at the disposal of the German Commander-in-Chief in the Balkans, and these will be used to good purpose somewhere. But so long as the Allied force at Salonika remains a menace to the line of communication connecting Berlin and Constantinople, the German Government will show increasing unwillingness to

Digitized by Google

detach large bodies of Germans for enterprises in regions where they can be permanently cut off from the Fatherland.

The capture of Mount Lovtchen by the Austrians is a serious matter for the Montenegrins, for the position dominates the capital Cettinje. At the same time the enemy is advancing from the East. Unless help comes speedily, Montenegro will be overrun as completely as Serbia was, and its brave inhabitants must follow the Serbians into the wilds of Albania, unless they make terms with the enemy. It is difficult to believe that it was absolutely impossible for the Allies to save the Montenegrins from such a fate. They represent the extreme left of our fighting line on this southern front, and it was to the interest of the Allies to keep every portion of the line intact. It will probably be found that no one of the Allied Powers has made it its business to inquire into the situation in Montenegro. The Anglo-French authorities at Salonika may well argue that their jurisdiction does not extend beyond the territory occupied by their troops, while the Serbians have not been in a position to give their Montenegrin brethren any practical assistance. Italy, it might be thought, would have taken definite steps to spare the country Serbia's fate, if only on account of the relationship between the two reigning houses. Little, however, is known of Italy's military preparations outside her northern theatre. She has landed troops in Albania and sent foodstuffs for the relief of Serbian troops and refugees. But the delay in realising that her interest in this European war cannot be restricted with any advantage to herself to the operations in *Italia irredenta* is likely to embarrass both the Italians and their Allies.

No very large force was required to stem the Austrian invasion of Montenegro, provided it were well supplied with artillery. But unless an adequate army is already on its way, and is in time to rally the Montenegrins on their own territory, the work of ejecting the Austrians will be difficult when once their two forces from the western and the eastern frontiers have joined hands. If Montenegro should be completely overrun, the need for the strictest co-ordination of all the Allies' efforts in the Near East will become more urgent than ever. There will be no point in allowing Italy to fritter away her resources over impossible country, if a more effective blow can be dealt at the enemy elsewhere. So long as the Allied line on this southern front remained unbroken, there was much to be said in favour of a general advance from the Adriatic to the Gulf of Saros, but the situation is changed, if Austria is in possession of an ideal terrain for withstanding attacks in one quarter. It is to be hoped, therefore, that a War Council for the Near East may yet be formed with a view to retrieving the mistake of the past and prosecuting the war in this theatre with determination and efficiency.

The importance of the discoveries made in the enemy consulates at Salonika renders an official statement on the subject desirable. From information gleaned by correspondents it would appear that a more serious charge can be laid against the representatives of the Central Powers than that of merely maintaining a comprehensive system of espionage on Greek soil on the lines with which the German and Austrian Embassies in the United States have made the world familiar. The Austrian Consulate at Salonika, it is stated, was found to be a military arsenal in miniature. Among the articles discovered in it were 180 Mauser and Mannlicher rifles, 150 revolvers, 10 dynamite cartridges, one parcel of unspecified explosives, 50 cartridge belts, 50 complete Turkish uniforms, 2,000 Turkish flags, 2,000 red-cloth armlets bearing the Crescent. There can be but one explanation of this ominous collection of material. It must have been intended for the purpose of equipping the Turkish rabble of Salonika with a view to inciting them to murder and pillage at a preconcerted moment, which would bear some relation to the progress of the attack to be made on the town by the Austro-German and Bulgarian forces. Evidence of this nature places the activities of the representatives of the Central Powers in a different category from what was anticipated when it was decided to deport them as the fountain-head of the spy system. Consequently it is not a matter for surprise that the *personnel* of the consulates on arrival at Toulon should not have been given a safe conduct to Switzerland, but have been interned for the present until there has been time to consider the matter more carefully. It would not be possible for any evidence to show German morality in a worse light than that in which it appears already before the world, but an official *exposé* of Austro-German activities on Greek soil would convince the Greek Government that the step taken by the Anglo-French authorities in Salonika was as much in the interests of Greece and her sovereign rights as it was in the Allied interest.

The situation at Salonika has undergone no material change during the past week unless the gunfire now reported from the frontier implies that the attack has begun. Evidence that it was pending was said to be accumulating daily. The Bulgarians continued to receive important supplies of munitions and guns of all calibres, while considerable activity was noted at Monastir, where an Austro-German force had assembled. But it is to the interests of the Central Powers that the Allies should be kept in expectation of an attack, if only in the hope that it will deter them from assuming the offensive before the Austro-German and Bulgarian forces have had time to strengthen their positions. One reason for the enemy's delay is said to be that the repairs to the line connecting Veles and Ghevgheli are not yet completed, but it is also probable that the Bulgarians are not altogether satisfied with the part they have to play in the new venture. So long as the Allies remain at Salonika they constitute a menace to the permanency of Bulgaria's success in this Balkan campaign, and for this reason there must be considerable anxiety in Bulgaria to see them expelled. On the other hand, if the brunt of the work before Salonika is to fall to the Bulgarians, then, in the event of the attack failing, they must be in a much less favourable position to withstand an Allied advance than they would be if they kept their present army intact. In the circumstances, therefore, King Ferdinand's acquiescence in the plans of the Central Powers is likely to depend on the value he places on their assurances that they will give him at a later date, if it should be necessary, the assistance that they are unable to let him have now. If he is well informed regarding the progress of events in Galicia he will contrive to interpose still further delay before he arrives at a decision.

Further information regarding the operations in Mesopotamia has thrown not a little light on the situation. The chief factor is that for over a month General Townshend's force has virtually been besieged at Kut. The Turks, while holding him at that point, were able to advance some twenty-five miles further east, and there established themselves in a position on the river, where they hoped to withstand all attempts to relieve General Townshend. On January 6 General Aylmer's relief expedition left Ali Gherbi, and on the following day engaged the enemy in force. The fighting was of a stubborn character, and lasted for two days. General Aylmer was unable to dislodge the Turkish infantry from their main position, but succeeded in inflicting heavy losses on the enemy. His own casualties, however, were also heavy. The next day the experience of practically every engagement in the original advance up the Tigris was repeated; it was found that the Turks, without waiting for further fighting, had withdrawn. Weather conditions, the necessity of sending the wounded down by river, and the exhaustion of his own force prevented General Aylmer from following the retreating Turks. They had, however, been located by the cavalry at Es Sinn, a place only six miles from Kut, and it speaks volumes for the closeness of the siege in which General Townshend is held that with the Turkish force between him and the relief expedition at only this distance away he should be unable to co-operate with General Aylmer.

It is evident that the facts now made known regarding the situation in Mesopotamia reveal the campaign in a very different light from that in which it appeared

Digitized by Google

before. The difficulties experienced by the relief expedition in reaching Kut and the losses it has sustained make it doubtful whether General Aylmer's and General Townshend's combined forces will suffice to gain any decisive victory over the Turks. It was noticed in the first advance that the enemy's plan was to spare his regular troops as much as possible, and to withdraw them at the first sign of any danger of their being overwhelmed. By these tactics a strong nucleus of Turkish troops was kept intact all the way back to Baghdad, and when reinforced they were able to render a good account of themselves at Ctesiphon. A fresh advance on Baghdad would only be justified in two sets of circumstances: if adequate reinforcements for all eventualities could be sent up the Tigris, or if a Russian force could simultaneously threaten Baghdad from the north. We have no means of knowing whether either or both of these conditions can be fulfilled, for they seem to depend on a variety of factors which must of necessity remain indeterminate for some little time to come.

An Austrian communication to the British Government provides an instance of the "lighter vein" in a grim war. It appears that a certain number of women and children of enemy nationality who have been in India during the war were about to be repatriated to Europe. Their male relatives, being concerned for their fate in view of the ruthless way in which passenger ships are being torpedoed by German and Austrian submarines, drew up a set of suggestions with a view to ensuring their safety at sea. In passing this petition on to the British Government through the American Embassy, the Austro-Hungarian Government makes the amazing statement that it will hold the British Government responsible for the lives and well-being of these passengers, "the majority of whom are better class people"—*scilicet*, against the danger of their losing their lives through the action of Austrian or German submarines. Perhaps when the Vienna Government reads Sir Edward Grey's reply the humour of the position will appeal to its dormant intelligence. The tacit admission that one of its own submarines is liable to sink a ship with its own nationals, unless it is kept off by the vigilance of the Allied fleets, throws a lurid light on the methods of warfare to which the Central Powers have stooped.

"The Adriatic Slavs and the Overland Route to Constantinople" was the subject of an illuminating address given by Sir Arthur Evans last Monday to the members of the Royal Geographical Society. As the war drags on and attention is concentrated on the necessity of crushing Prussian militarism, it is well that the Allies should be reminded that there can only be lasting peace in Europe after the war if effect is given in the final settlement to the principle of nationality in certain parts of Europe. One of these parts is undoubtedly the mainland on the eastern side of the Adriatic inhabited by a solid Slav population of strong national sentiments. Until these people achieve national unity and independence the germs of an upheaval must remain. Their struggle to-day is against German or Austro-German dominion, and it is in the interests of the Allies and of the peace of Europe that a strong South Slavonic State should be created as a permanent bulwark against the Central Powers. That consummation, as Sir Arthur Evans reminded his audience, cannot be attained if a tract of the Dalmatian *terra firma* or large Slovene or Croat districts east of the valley of Isonzo and of Italian Istria are annexed by Italy. It is the duty of the Allies, therefore, to keep the details of the final settlement of this region constantly in view, and to avoid all commitments likely to prejudice the ties of friendship which will be established between the new Slavonic State and themselves. Recent events in Serbia and Montenegro point to the far-reaching effects that an extension of Austro-German power in these regions would have on the position in the Mediterranean. When, therefore, the war comes to an end there should be no obstacle to a close understanding between the Powers on either side of the Adriatic. In the meantime there would seem to be an urgent call to Italy, and the Allies as a whole, to stem the Austro-German thrust to the south.

The only contribution that the Allies have made so far to the solution of the troubles of Montenegro and Serbia is to seize the Achilleion, the German Emperor's property at Corfu, with a view to placing the remnant of the Serbian army there. In a Note to the Hellenic Government it is pointed out that after a minute inquiry into the conditions of the Serbian evacuation the Allied Governments recognized that only the island of Corfu offered the necessary facilities from the point of view of the health of the Serbian troops, the speed and security of transport, and the means of revictualling the soldiers. Accordingly a detachment of French troops has been landed on the island and preparations for the reception of the Serbian troops are being pushed forward. The troops now on their way to Corfu are presumably those recently at Scutari. In referring to them last week Sir Edward Grey stated that there was a period when the force was in acute distress, but there had been considerable improvement, and supplies were by that time reaching them.

BRITISH SEAMEN'S HOME, CONSTANTINOPLE.

The Foreign Office has circulated for publication the copy of a despatch sent to Washington by the American Ambassador at Constantinople, and transmitted to the British Foreign Office through the American Ambassador in London. The despatch relates to the evacuation by order of the Turkish authorities of the British Seamen's Home at Pera, and the removal of its inmates to a building formerly occupied by the Russian Archæological Institute.

Mr. Morgenthau reports, under date October 30 last, "that a house belonging to the British Government, known as the 'British Seamen's Home,' which for the past ten months has been affording shelter to over seventy destitute British subjects, was yesterday ordered to be evacuated by the Turkish police authorities in spite of the protests of the Embassy—which had been given formal assurances that this building would not be taken so long as it was used for charitable purposes.

"The Director-General of Police further gave orders that the people who had been living in the 'British Seamen's Home' should move into a building at No. 25, Rue Sakiz Agatch, Pera, formerly occupied by the Russian Archæological Institute. The Embassy objected to this arbitrary assignment, and suggested a different building, but the authorities refused. As no delay was possible without risk that the families would be forcibly ejected from the 'British Seamen's Home' by the police, they had to be installed in the building assigned to them. The Embassy, however, has made it clear to the authorities that it in no way consents to, or acquiesces in, the above dispositions."

In acknowledging the Note, Sir Edward Grey requests "that the thanks of his Majesty's Government may be conveyed to Mr. Morgenthau for the efforts made by his Excellency to induce the Ottoman authorities to abandon this arbitrary and unwarrantable proceeding."

LETTERS FROM CAIRO.

(From Our Own Correspondent.)

Cairo, December 28.

H.H. the Sultan.

The Sultan's birthday falling on December 26 this year—he is sixty-two according to our calendar, and sixty-four according to the Arabic—European and Western Christian Government officials had three days' holiday this week. No reception was held at the Palace, but his Highness gave special audience to the members of his Household and the Ministers, and to Sir Milne Cheetham, who conveyed the congratulations of the High Commissioner, who, with Lady McMahon, is spending the Christmas holidays at Luxor. The health of the Sultana-Mother is causing a great deal of anxiety to the Sultan, who spends a portion of each day at his mother's residence at Heliopolis.

An Educational Reform.

The Higher Education Board of the Ministry of Education met this week, and decided to recommend the abolition of what is known as the primary certificate in the Government schools. The Council of Ministers will be asked at its sitting this afternoon to approve of this proposal. Introduced in 1891, the primary certificate was intended to serve as an entrance diploma, if one may so term it, to the secondary schools, and aimed at checking the promiscuous promotion of backward pupils from the primary to the secondary schools, which had become an unfortunate practice. In 1892 it was decided to divide the Egyptian Civil Service into two distinct divisions—an Upper and a Lower—for admission to which candidates had to possess respectively the secondary and the primary certificate. At the same time minimum salaries were fixed for holders of these certificates who might be selected for vacant posts in the State administrations. The object, of course, was, in the first place, to feed the secondary schools with pupils of a recognised standard of education, and, secondly, to provide a satisfactory element from which the Government could recruit its Egyptian staff.

To-day a great change has come over the country by comparison with 1892. The secondary schools turn out quite as many pupils as the State can provide with employment every year; indeed, the number of candidates holding the secondary certificate for even the most minor positions in the Government administrations has of late years become alarmingly large. The State, therefore, has no longer any need to recruit its staff from holders of the primary certificate as well, and can fill all its vacant posts from amongst the holders of the higher certificate. The *raison d'être* of the lower certificate, except as regards its position as an entrant diploma to the secondary schools, has thus disappeared, and since arrangements have been made to safeguard the satisfactory selection of entrants to those higher schools, the Government has deemed it advisable to abolish the primary certificate altogether. The reform, it is hoped, will enable an improvement to be made in the syllabus of the primary schools; it will also raise the standard of education in the country generally; for there is no doubt that service in a Government administration being the sole ambition of most Egyptians, parents were tempted to, and to a great extent did, stop the education of their sons on the completion of their course at the primary schools if, as repeatedly happened, there was a chance of their obtaining State employment with only the primary certificate. Henceforward this temptation will not exist, and the standard of education of the coming generation of young Egypt should accordingly show a great improvement.

The Khedivial Wakfs Scandals.

In a recent letter I reported that Ahmed Khairy and Hussein Moharram Pashas had appealed against the sentences passed on them in the Seif-ed-Dine Daira cases. The Parquet had a month within which it could appeal, but that period has lapsed without any such action being taken by the Public Prosecutor, although as a general rule the Parquet appeals in all cases where the accused have done so—this in order to enable the higher court to increase the penalty. As a consequence the Parquet will merely ask for confirmation of the sentences. Counsel for the defence will claim an acquittal on the grounds that the accused were throughout the tools of the ex-Khedive, who was very much the principal in all the transactions complained of, and that they derived no pecuniary benefit from the carrying out of those transactions. The reason the Parquet has taken no action in the matter is, I gather, that the main motive of the prosecutions was to establish publicly the scandalous and dishonest conduct, especially in Wakfs matters, of Abbas Hilmy Pasha. Having attained its object, the Ministry of Justice is of opinion that any further action on its part, such as appealing against the sentences, would lay it open to the accusation of spite and vindictiveness towards the two Pashas concerned, who, it may be noted, are appealing because anything short of an absolute acquittal will close the doors of the Palace to them. One cannot help feeling that from every point of view the decision of the law officers is an ill-advised one. There is no valid reason, legal or political, why in a highly important case like this one any deviation should be made from the course which as a general rule is followed in the most minor cases.

The Question of Enemy Trading.

With reference to my remarks last week anent the latitude accorded to enemy firms in this country, it should be added that, in addition to the appointment of controllers to certain enemy establishments, licences to trade are in certain circumstances granted to persons of enemy nationality in virtue of the Proclamations of January 25 and August 16 last. The *Egyptian Gazette* in a note on the subject states that it has received a communication from the Cairo branch of Siemens Schukert, the representatives in Egypt of Siemens and Halske, of Berlin, to the effect that they have been authorised by licence No. 239 to collect amounts due to them. Whilst the fact that this licence is the 239th granted in this country does not necessarily mean that that is the number actually in operation to-day, seeing that some of them may since their issue have been cancelled, nevertheless this figure *donne furieusement à penser*. It would be interesting to know exactly how many of these licences are in operation. There is every fear that the interpretation placed at home on our obligations towards "persons of enemy nationality" is not having the effect on trade in Egypt—and other parts of the Empire where that interpretation has to be followed—that one might in the present political circumstances be entitled to expect; and your contemporary is perfectly justified in stating that there is good ground for believing that after the war Germany and Austria will recover, as a result of the policy being followed at present, all the hold that they had over Egyptian trade prior to the war.

January 4.

The High Commissioner.

The High Commissioner returned to Cairo on New Year's Eve from his trip to Upper Egypt. His Excellency, who had been accompanied by Lady McMahon, Miss McMahon, and Lord Edward Cecil, had been away just a week. He made a short stay at Luxor, and went as far south as Assuan, where, in addition to inspecting the schools and the hospital, he paid a visit to the Dam and Philæ. Sir Henry McMahon also visited the temple at Edfu and the Kom Ombo estate, where he was much interested in the pumping station.

Yuletide and the Troops.

The Yuletide festivities have passed off quietly. At one time the military authorities contemplated ordering the cessation of the sale of alcoholic liquors after 5 p.m. during the holiday week, but in the end they decided to leave the time-limit at 9 p.m. One is glad to say that, despite the, even for present war conditions, abnormally large number of troops in the cities, there has not been one single untoward incident, and the authorities have had no cause to repent their decision. Every effort has been made to cheer the wounded and sick soldiers in the various hospitals; concerts and entertainments of all descriptions were held; whilst, in addition, the convalescents were similarly catered for outside the homes. Altogether the season was made as cheerful for "the boys" as it is possible for it to be to anyone away from the home country.

The Bomb Outrage.

The preliminaries in connection with the actual trial of the men implicated in the bomb outrage last July

Digitized by Google

on H.H. the Sultan have now been practically concluded, and very shortly will appear the order convening the special military court.* Although no official pronouncement has as yet been made, I gather that only two men will be brought before the military court on the direct charge, viz., Ibrahim Neguib El Helbawi, the schoolmaster who threw the bomb, and Mohammed Shams-ed-Dine, the man who rented the house from which the bomb was thrown. The other seven men originally implicated in the same charge, together with several others at present in custody, will, I understand, be taken most probably before a commission, which is specially to be constituted for the purpose of investigating the cases of persons suspected of political intrigue and of deciding whether they should be deported or not. This new departure, if as proposed it is carried out, ought to have a very salutary effect on the agitator element which has been at the back of these outrages, but which has so far never been laid by the heels, owing to the absence of any direct evidence of complicity. Henceforward it will be possible to take action against "suspected" accomplices, and we may expect that these gentlemen will be less active in getting weaker-minded men to do their dirty work when they find that, however cleverly they cover up their own tracks, the absence of direct evidence will not prevent their being deported on account of the well-founded suspicions to which their actions and their antecedents may have given rise.

The New Year Honours.

The bestowal of the K.C.M.G. on Mr. W. E. Brunyate amongst the New Year Honours has given very great pleasure out here. Mr. Brunyate, who is regarded as one of the soundest lawyers the Government possesses, has done yeoman work in Egypt. He has for several years been legal adviser to the Ministry of Public Works—one of the most onerous legal posts in the service—and has on several occasions acted for Sir Malcolm McIlwraith, the Judicial Adviser to the Egyptian Government. Mr. Brunyate has played no unimportant part in the administration of the country since the outbreak of war, and soon after Egypt was declared a British Protectorate he was appointed legal adviser to the Residency, which post he combines with that held by him at the Ministry of Public Works. In the judicial reorganisation, which is bound to take place on the conclusion of war, the new knight is destined by his experience and his ability to figure prominently, and it is generally conceded by all who have been able to appreciate his work that his promotion in the Order of St. Michael and St. George is one of the best-deserved honours bestowed of late years on Anglo-Egyptian officials.

SUDAN NOTES.

(From a Correspondent.)

Sheikh Ali El Morghani, C.M.G.

Sheikh El Sayed Ali El Morghani, C.M.G., upon whom the King has recently conferred the distinction of an Honorary K.C.M.G., is one of the most powerful chieftains of the Sudan. At the time of the outbreak of the European War he and his brother, Sayed Ahmed, the heads of the influential and widely-established Morghani sect, at once struck the keynote of fervent loyalty to the British Government, thus killing at a blow the long-cherished hope of the German agitators of a strong current of opposition to the Administration, with the consequent trouble involved in suppressing it. The honour which His Majesty has now bestowed, at the suggestion and with the approval of the Governor-General of the Sudan, will be regarded as a just and well-merited reward for faithful and most timely services. Indeed, Sir Reginald Wingate, in his dispatch of November 13, 1914, addressed to Sir Milne Cheetham, K.C.M.G., Acting British Agent at Cairo, said: "I attach as typical of the general sentiments, translations of the declarations sent to me by El Sayed Ali El Morghani and by his brother. I need hardly point out that these declarations by influential leaders of Mohammedan opinion afford striking testimony to the appreciation by the natives of this country of British rule, of which they have now had some fifteen years' experience."

The early good work of the British Administration in Egypt has thus had its recognition. In the pre-Mahdi days a magnificent mosque stood at Kassala, known then, as now, as the Khatmia. That sanguinary iconoclast, Osman Digna, to whom nothing was sacred, not even the prayer-house revered by the members of his own faith, burned and defaced the beautiful structure, enraged to find that he could not tear down the solidly-built walls. One of the first tasks undertaken by the Anglo-Egyptian Army of Occupation in 1897 was to rebuild, as far as possible, the Khatmia mosque, which was deeply venerated by the natives throughout the Sudan as containing the tomb of the celebrated missionary, Sheikh-el-Morghani, who, with an equally famous brother, had done much to convert pagan Africa to Islam. The Sheikh, who was then living in Egypt, was sent for and installed as custodian of the tomb and mosque of his ancestors. This move proved at the time very wise, since it inflicted a deadly blow at the holy reputation and the influence of the Khalifa, and it has since been the cause of the unswerving adherence of the whole powerful Morghani sect to the British Administration.

A Hun's Gratitude.

In The Near East of November 26 last, under the title of "The Situation in the Sudan," I referred to the enemy agitation against constituted authority, observing: "In the capital one of the most prominent citizens, of alien birth and long residence, was found to be in active correspondence with German and Austrian agents. He was promptly expelled, but there were those who declared that, rightly, he should have been shot, in compliance with the conditions of the Governor-General's Proclamation." The name of this individual has now been revealed through the Central News Agency, and the seriousness of the results attending the leniency shown by the Sudan authorities towards him, even when his malafides were no longer in doubt, is now apparent.

When the British troops under Lord Kitchener arrived in Omdurman in the month of September, 1898, they found a number of wretched prisoners, neglected and starving, in the terrible "zaptia" of that town, where they had for long years been under the tyranny of the bestial gaoler known as the "saier." Among these victims of the Mahdists' rule was Charles Neufeld, who had been in their hands since 1887, when he had fallen into the power of the Dervishes while pursuing his calling as a trader. He was rescued and treated with the utmost kindness, liberally fed, and provided with means to exist until he could obtain assistance from his own country, which, it may be added, at no time since his imprisonment had made the slightest effort to obtain his release. It is this same Charles Neufeld who has since acted as the willing and successful *agent provocateur* among the Mohammedan races in the Sudan. The Germans chose their representative with some shrewdness, since, during the ten years of his captivity, Neufeld had made himself thoroughly acquainted with the Arabic language and with the peculiar attributes of his captors, not the least conspicuous of which is the tendency to conspiracy and revolt even against those who—like the British—have befriended them and rescued them from a hideous fate. After his expulsion from the Sudan, and, in fact, while still enjoying all the advantages of living under the protection of the Anglo-Egyptian Administration, Neufeld devoted himself to the congenial and doubtless well-paid task of spreading fantastic stories concerning the heavy hand of the British governors, the benevolence of the German rule, and the immense number of happy Moslems living under Teutonic administration. The blood-stained Kaiser he represented as the embodiment of all that was just and noble—a veritable God-sent Khalif and the designated protector of all good Mohammedans. He declared that Germany had gone to war "for the deliverance of the Prophet's faithful followers from their Christian oppressors." Then he is said to have returned to Berlin "with a mass of useful information and a flask of miraculous water which Arab admirers had sent to Field-Marshal von Hindenburg as a curative of gout."

LOSS OF NILE STEAMERS.

Telegrams from Cairo received in London this week announce the destruction by fire of three steamers of Messrs. Thos. Cook and Sons' Nile fleet. The cause of the outbreak has not yet been ascertained, but the loss is a heavy one, the lost steamers being the "Rameses," "Rameses the Great," and "Tewfik." These boats were fortunately not of the very latest type, Messrs. Cook having recently increased their fleet by additions of the "Egypt" class, but they were large and valuable steamers. According to the telegraphic information we have alluded to, these steamers had recently been taken over by the Government, although whether they were purchased outright or merely chartered we are unable to say.

* Telegraphing on Wednesday, Reuter's Cairo correspondent states that the trial will take place early in February. Sir Wm. Brunyate, Legal Counsellor to the Egyptian Government, will lead for the prosecution. The military authorities have appointed Mr. Perrott and Mr. Foster to defend the accused.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, December 30.

The Situation at Salonika.

The situation at Salonika remains unchanged. German circles declare that the attack will not be delayed, and that a force of 100,000 men will advance from Uskub on the south, but so far the German Government has not made any representations to Greece to the effect that Greek territory will be invaded. On the other hand, the way in which the Greek army is distributed and the encounters which, besides those at Koritza, took place a few days ago on other points of the frontier between Greek and Bulgarian detachments—and which resulted in a defeat for the latter, who were driven back some kilometres on their own territory—were not of a character to dispel their doubts about crossing the frontier. Moreover, from the point of view of their own interests, the Bulgarians have no further incentive to go on with the war, since the Germans cannot make up their mind to advance on Constantinople without first freeing themselves of the danger threatening their flank.

The Government's Attitude.

As I have already reported, according to declarations made by certain Ministers to the Press, the Government appeared to be disposed to permit the entrance of Bulgarian troops on Greek soil without any formal guarantees for a subsequent evacuation, but these declarations produced a painful impression. The Venizelist Press has been at pains to point out the grave dangers—to say nothing of the shame and discredit—to which such a course would expose the country. Indeed, what guarantees could reassure Greece, and who would undertake to evict the Bulgars from Greek territory if they decided to stay on there? Certainly the Germans would not go so far as to attack them in order to drive them out. In these circumstances, it is generally held in political circles that, should the Bulgars decide to enter on Greek soil with their allies, Greek public opinion could not remain mute, and that certainly the army—which was mobilized solely to ward off the Bulgarian peril—could not stand idly by, a passive witness of a Bulgarian invasion. In such case the Government and others responsible for the direction of affairs would be placed in a position of extreme difficulty, and should they decide still to abstain from taking action, and endeavour to impose their will on the nation, they would assume a heavy responsibility and be playing an exceedingly dangerous game.

These considerations lead one to believe that in the eventuality referred to the King and the Government will have to decide to attack the Bulgarians. Possibly they may endeavour to make it appear otherwise, in the hope of inducing the Allies to quit Salonika, and thus avoiding the invasion that might compel Greece to abandon her neutrality. For the Government declines to recognize that Austria is still bent upon securing Salonika for herself, that, similarly, Bulgaria still covets Kavalla, and that they are only kept from realizing their ambitions by the presence of the Allied forces on Greek soil; and, therefore, it is bending all its efforts to getting rid of those forces. Its Press indulges in the most violent attacks upon the Anglo-French troops, and one of its organs—which has been characterized by M. Venizelos as a mercenary of the German propagandists—goes to extraordinary lengths in its insinuations against the Allies' soldiers. In Entente circles, however, no importance is attached to these attacks, for it is recognized that the Greek people still preserves its feelings of friendship and of gratitude towards its former protectors and helpers. Those feelings it demonstrated recently at the elections, when, by its abstention, it proclaimed in favour of the Ententist policy of M. Venizelos. Again, the day before yesterday, on the occasion of his Onomastic Day, M. Venizelos was made the object of a great popular demonstration, in which all classes of society took part, and which amounted to a popular verdict in favour of his policy and of regret for his absence from power.

M. Venizelos on the Situation.

Replying to an address presented to him by a deputation of business men, and expressing the confidence of the commercial world, M. Venizelos criticised the present Government for—amongst other things—failing to recognise that it is geographical situation and circumstances that ought to determine its attitude in the present great struggle. "To-day," said he, "our interests in the East are in no way opposed to those of the two Great Powers who will prove the final arbiters of the present conflict, while they are diametrically opposed to Austro-German interests. But the present Government remains blind to this fact and to the Bulgarian peril. I hope that all the ills I foresee may not materialise. Our only hope lies in the presence of the Franco-British forces at Salonika and their reinforcement in the near future. I do not wish to be a prophet of evil, but I much fear that before we celebrate the centenary of Greek independence, or, possibly, long before that, the Bulgarians may attack us and compel us to withdraw to our old frontiers. There will then be left to us only the sacrifices in men and money that Greece will have made. Certainly we have to-day no longer any hope of realising our great national aspirations. The only thing we can still hope is that Bulgaria may not become immeasurably greater."

These declarations, being in flat opposition to the views of the Government, the Censor has only allowed foreign correspondents to telegraph them in a much modified form. They have, however, made a deep impression upon the country.

HELLENIC CONGRESS IN PARIS.

Under date of January 10, Reuter's Paris correspondent reports:—

The resolutions adopted by the Hellenic Congress, which has just concluded its sittings here, were as follow:—

(1) That it is of urgent importance to see that the Constitutional liberties of Greece are respected.

(2) That it is to the interest of Greece to abandon her neutrality and join the Entente.

(3) That the Congress will only dissolve when its task is completed, and that meanwhile it delegates its powers to an Executive Committee, whose duty it shall be to secure the accomplishment of the above decisions.

At a dinner which was given at the close of the Congress M. Triantaphillides, the President, expressed the hope that the voice of the Greek colony would be heard by those whom the Greek Constitution rendered responsible for the present situation, and that they would stop on the brink of the abyss whither they were leading the nation.

M. Joseph Reinach said that, in spite of the mourning and sorrows of the war, which she had not sought, France was still with Greece, whom she had saved from the Turk.—Reuter.

There seem to be two sorts of neutrality—neutrality and Greek neutrality.—*Kansas City Star.*

Considering the effectiveness of the relief expeditions to Belgium and Serbia, nobody could blame Greece and Roumania for demanding the relief first.—*New York Evening Sun.*

"MILKMAID" BRAND

Sterilised Fresh Milk

Obtainable from all leading Grocers and Druggists in Egypt and the Levant.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of the "NEAR EAST" to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

SALONIKA LETTER.

(From Our Special Correspondent.)
Salonika, December 27.

Elections Extraordinary.

While the Anglo-French troops were still fortifying Salonika and putting it in a state of defence, the inhabitants of the town were invited to elect their parliamentary representatives for the new Chamber. A strange situation truly: the townsfolk, naturally peace-loving, making their preparations for departure in the not improbable event of a bombardment of the town; the Allies, especially the British, making prodigious exertions to bar the way to any advance of the enemy; the disembarkation of troops going forward, and at an accelerated rate, day by day; and—the citizens called to the polling stations!

As might have been foreseen, the result of these elections was a complete fiasco. Of 40,000 electors, barely 4,000 registered their votes; and telegrams from the interior announce similar results. The abstention of the Venizelists and the Socialists, the entirely abnormal situation, and the stirring events in progress around us, have combined to make the elections valueless. The Gounarists, or Government party, have gained the victory, but it is a victory without glory.

The Allies' Activities.

The visit of General Castlenau to this town has naturally given rise to much speculation; for the third General of France would not abandon his work in Paris, even for a short time, save for some purpose of extraordinary importance. General Castlenau, accompanied by General Sarrail, inspected the Allies' positions and their lines around Salonika, which has been made a second Calais, and as impregnable. From the preparations that the British and French are making, the former all round the town, and the latter farther out, it would appear that the Allies intend to make a vigorous fight in this region. In fact, the British force have cleared the neighbouring villages of their inhabitants—who have been amply compensated—and have installed themselves therein; and the defence works constructed are of a most formidable character.

Citizens and Soldiers.

The local inhabitants show much interest in the British soldiers, and particularly in the Scots. Indeed, the Scottish and Irish soldiers, who greatly distinguished themselves in the last fighting against the Bulgarians, are objects of admiration to all the people of the town. Even the Greek soldiers, *blasé* though they be, cannot refrain from remarking, "Orea afta ta Scotchas" ("Admirable, these Scots").

In the midst of the continual disembarking of troops and munitions, of the elections carried on in such warlike surroundings, the town presents an aspect of outward calm. First a Greek police force and then Franco-Serbo-English police maintain perfect order, which is in no wise disturbed by the alarming reports that are put into circulation by interested parties.

Exodus of Spies.

Diplomatic *pourparlers* are still being carried on regarding Turco-Bulgarian co-operation with the Germans and their entry upon Hellenic territory. Whatever other effect it may have, the suspension of military operations has served the interests of the Allies well, enabling them to carry on uninterruptedly the work of putting Salonika into a state of defence and converting it into a base for a Balkan campaign. On the chance of a commencement of hostilities in Macedonia many subjects of the Central Powers, of Turkey, and of Bulgaria have begun to take themselves off from the town. In so doing they are rendering good service to the Allies, who are thus rid of a lot of spies who formed part of an organised system.

The Soldiers' Christmas.

True to his traditions, the British soldier contrived to enjoy his Christmas. On the 23rd and 24th *pioupious* and "Tommies" made large purchases in the town, in order to enable them to observe this, the second Christmas of the war, in a fashion as fitting as possible in the circumstances; and one of the leading pastrycooks received orders for more than 1,500 *tortas* (special cakes for the holidays). While religious services were held in both Catholic and Protestant places of worship, the Franco-British troops guarded their new front in Macedonia, their weapons to hand, ready for any surprise attack by the enemy. But the English troops on the mountains of Hortiadj, which command the peninsula of Chalcidice, spent a happy Christmas, the inhabitants of the neighbouring villages doing everything in their power to make a few hours pass pleasantly for them.

The "British Army Central Office" in the town is always a scene of animation, night or day. Situated on the quay, the half-dozen powerful motor-lorries stationed before it serve to attract a large crowd of idlers and sightseers; and when any high officer enters or leaves his car, and the sentries present arms, these spectators instantly uncover mechanically.

Admiration for the Allies' fighting men, and still more for their armament, grows each day in the town. The people watch with deep interest the unloading of French flying machines and British guns, which did such wonders in the last battles of Strumitza and Demir-Kapu, and from which such great things are expected in the near future. According to competent military critics, the Allies' defences round the town, provided as they are with Franco-British armaments of the latest type, should suffice to keep back any advance of the enemy, and may render it possible to undertake a bold offensive and to dislodge the Austro-Bulgaro-German forces from the Serbian territory that they now occupy. For the time being military action is suspended, however.

A NEW-OLD ROAD TO CONSTANTINOPLE.

Sir Arthur Evans, speaking last Monday before the Royal Geographical Society, said that in the most ancient days the road from Rome to the East was by way of Brindisi, but later, when the empire had extended over Gaul and Britain, the road from its western parts was by way of Milan and Aquileja at the head of the Adriatic. From Aquileja the road went over the Julian Alps and by the Save valley to the Roman predecessor of Belgrade. Thence it made its way along the southern shore of the Danube, one branch crossing into Dacia, while the main road made its way southwards by the Morava valley and divided at Naissus (now Nish), one branch going on to Salonika, while the main road continued to Constantinople. To-day the road from Western Europe to the East made a long detour by way of Vienna and Budapest, but the old road could be revived. The Simplon tunnel has greatly shortened the distance from London and Paris to Milan. From Milan the railway could be followed to Mestre (the junction for Venice) and so to the Austrian frontier. Then by making a short link across the lowest pass of the Julian Alps on the line of the old Roman road, the whole western system could be joined with that of the Save valley railways; and by shortening that system in one place Belgrade could be reached by a route taking only 30½ hours from London—a saving of about fourteen hours. Moreover, it would be a route which ought to be entirely through friendly territory—France, Italy, the country of the Adriatic Slavs and the Save valley. One result of the present war would be to make it immeasurably less desirable that our through route to the East should pass through German-Austrian-Magyar territory, and in this connection the extraordinary geographical importance of Belgrade should be remembered. It was situated on the very confines of the Serbian kingdom, but on the other side of the Danube was a compact Serbian population; and in any future re-arrangement of that part of the world it was much to be hoped that Belgrade would be protected by the union of that population with Serbia on the other side of the Danube

In the discussion that followed Dr. Seton-Watson said that the Southern Slav question was one that concerned the vital interests of the British Empire. The attempt to annihilate Serbia was made in pursuance of a great political plan to establish an area under German control extending from the North Sea to the Persian Gulf. Austria-Hungary, Turkey and Bulgaria were the tools—to some extent the unwilling tools—of Germany in doing this. It was for us to meet and oppose this scheme by encouraging the formation of a great Jugo-Slav nation.

Mr. Charles Woods said that since 1881 the policy of Austria had been to divide the peoples of the Balkan peninsula. He did not think a reconstituted Serbia would be a sufficient barrier to the German advance; our policy should be to encourage good feeling among the Balkan States, so that strife might be avoided amongst them and no encouragement be given to projects to destroy communities that lay in the German path.

THE WAR IN THE BALKANS.

A KEY TO THE ADRIATIC.

"The strategic importance of Mount Lovtchen," we wrote on December 31, "is enormous, and it is to be hoped that Italy, with her fleet, will come to the aid of its defenders, should their defensive position be imperilled."

Unfortunately, our hopes have again been shattered, as they have been continuously throughout our inglorious Balkan campaign. We have gone from one error to another, from one neglect to another. We arrived too late to save Serbia; we occupied Salonika for months before we thought it necessary to "clear the ring" of a vile horde of paid spies and *provocateuses*, and now we—the Quadruple Entente—have gone to no special effort to keep Mount Lovtchen from falling into the hands of the enemy.

A Key to the Adriatic.

The paramount strategic value of Mount Lovtchen is that it commands the Bay of Cattaro; that, together, the bay, with its harbour, etc., and the Mount, form the most invulnerable naval base in the Adriatic. So long as Montenegro held the Mount, the Austrian base in the bay was not safe against attack from the land side. For the past many decades the Hapsburgs have been trying, by foul means rather than by fair ones, to obtain possession of Lovtchen, and had Italy been more rapid in the small help she was enabled to send to Montenegro towards the latter part of last and the beginning of this year, doubtless we should still be defending the height against General Koewess. But once again we have been tardy, or neglectful of the importance of side issues, and Lovtchen fell on Tuesday. Admittedly, the Italians are, after the Montenegrins, the chief losers, owing to their intensely difficult Adriatic position; their loss, however, is not our gain, but that of the enemy.

The Fate of Montenegro.

Apart from its strategic importance in the Adriatic, Mount Lovtchen dominates the plain leading to Cettinje and its surrounding defences. The capital of Montenegro is thus at the mercy, practically, of the enemy, who, advancing from the newly acquired position to the east of Cattaro, and also from the Bosniak frontier to the north and from Novi Bazar to the east, can surround the defenders of the capital on three sides. The overwhelming superiority of the Austrians in artillery, ammunition, and number of men must tell in the long run, and however bravely the heroic Montenegrins, whose country has never been sullied by a foreign oppressor, fight against tremendous odds, the hour is at hand when, driven along the only available route of retreat towards the south, King Nicholas's army will have to escape into Northern Albania, already seething as it is with a population bought by enemy gold and promises. Heroically have the Montenegrins fought against the Austro-Germans, but odds have been against them from the first. They saw Serbia left in the lurch by her friends, and still they helped them; they saw Serbia destroyed as was Belgium, and still they stuck to their guns; they saw the Austrian armies take yard after yard of their defences during the month of December, but still they fought on. Now—the fate of Montenegro, in the absence of any timely, reliable help, bids fair to equal that of Belgium and Serbia. It is piteous. If pledges are to be kept, however, it cannot, dare not be lasting

Albania.

To all intents and purposes Central and Southern Albania, with the island of Corfu (where French soldiers have landed) off the Albanian-Epirus frontier, are to form an enclave in the Balkans similar in strategic significance to our enclave at Salonika. From the very beginning of the Balkan campaign we urged on the Entente Powers the necessity for speedy action in Albania. The idea was pooh-poohed in many quarters because of the topographical difficulties to be overcome. They are being overcome now. Then, why, in the name of all that is logical, could they not have been overcome six months ago, when the Serbian and Montenegrin armies were intact? This is a question, we think, which will have to be answered some day by those who have been responsible for the Entente war policy. In the meantime, in Central Albania, where Essad Pasha's influence among the hill tribes remains paramount, the tardy concentration of troops under Italian auspices continues. The Serbs, driven back from their own country, are reorganising in this region, Italian troops—to the best of our knowledge—are being landed, and soon their ranks will be strengthened by the arrival of the plucky Montenegrins ousted from their own country. In these circumstances it is likely that serious attempts will first be made to contain the enemy in Northern Albania, The military value of the whole Albanian enclave, like that of Salonika, is, of course, its strong position on the flank of the Belgrade-Sofia (*i.e.*, Berlin-Constantinople) line, and it is, therefore, essential to the enemy's plans that he should dislodge us, and equally important to us that we should not be dislodged. The German campaign in Montenegro is a phase of this general plan, and when, and if, it is consummated, the armies under Koewess will attempt to force their way into Northern Albania, the while other enemy forces attack Central Albania from the east.

Salonika.

The situation in Salonika has considerably cleared. The discoveries made in enemy Consulates, both in Salonika and Mytilene, have revealed a whole network of espionage, with the result that we have been able to get rid of a great number of spies. This undoubtedly renders our position much more secure than hitherto. There is little or no information about military operations in this sector during the past week, excepting for a vigorous bombardment of our Doiran lines by the enemy on Monday last. The *Giornale d'Italia* (quoted by Reuter) states that, according to news received from Athens, the attack of the enemy appears to be developing in grand style, the German command proposing to employ with its own troops Austrian, Bulgarian, and Turkish forces. The participation of the Turks (continues the same journal) was doubtful up to a few days ago, but now it is certain, and has, perhaps, been determined by the evacuation of the Gallipoli Peninsula.

The same journal gives the distribution of the troops to attack the Anglo-French positions as follows:—"The Germans, with their headquarters staff and main concentration at Monastir, are to the west, in the centre the Bulgarians are disposed along the Gevgheli-Doiran line, and the Turks are to the east on the line Kanthi-Gumuldjina."

Mr. Ward Price, the representative of the London Press at Salonika, emphasizes in a recent despatch the confidence of the Allies in their almost impregnable positions, and gives the following interesting description of the lines held by the French:—

The French are responsible for the western flank of the Allied front, and their line starts in the marshes at the Vardar mouth, then runs up on the eastern bank of the river for about fifteen miles before it turns eastward and goes on to join the English sector, which follows the chain of lakes right across the head of the Chalcidice Peninsula and reaches the sea at the Gulf of Orfano on the other side. Much of this French sector of the line is naturally strong from the military point of view, and in the low-lying swamps that surround the Vardar mouth there is no need to cover the front with a continuous trench line. Farther up the stream, towards the place where the French front makes a right angle with the left bank of the Vardar, which they hold, the line rises to higher ground and dominates the plain on the western bank of the river, across which the enemy would have to advance. The River Vardar, without a bridge, boat, or ford, to cross, is the most formidable obstacle in the defence. Even then, if they won through so far, the Germans and Bulgarians would at last come up against the entrenchments. The French have been working at them ever since they arrived here on December 17 from their previous positions farther up the river. They have employed every device, art, and expedient that this campaign of trenches has taught them, and the result is a redoubtable position.

TANGIER TO TEHERAN.

Two questions regarding the Armenian massacres which were asked by Herr Liebknecht in the German Reichstag on December 20 last must have made even that pachydermatous Personage, the Imperial Chancellor, a little uneasy in his conscience, if he has one. For the Socialist leader did not mince matters. I have been reading the text of his questions, as published in the *Morning Post* of last Wednesday, and I note that he spoke roundly of hundreds of thousands of Armenians having been "driven from their homes and butchered," of "atrocities," and of the necessity of taking steps "to ensure the remainder of the Armenian population in Turkey being treated as human beings." In reply, the Pachydermatous One talked vaguely of "seditious intrigue of our enemies" having compelled the Porte to "remove the Armenian population from certain districts of the Turkish Empire" and to "assign them new places of residence." For sheer callousness such a reply would surely be hard to beat. The world knows quite well—and the Imperial Apologist's cant will not deceive anyone outside Germany—what became of the majority of the poor people who were "assigned new places of residence." What new place of residence, I wonder, will be eventually assigned to the Imperial Chancellor, his Imperial Master, his Imperial Master's son, and the rest of the gang that, for the sake of Turkish aid, countenanced—and, indeed, urged on—the massacre of these hundreds of thousands of helpless women, children, and old men? I am not at all surprised to learn that the Chancellor announced that details of the interchange of views that is taking place between the German and Turkish Governments "cannot be published."

***

In addressing the House of Representatives on Tuesday, Mr. Fess, member of Congress for Ohio, declared (so I learn from a Reuter's message from Washington) that "Great Britain's guilt in violating American rights on the seas was greater than that of Germany and her Allies." I should like to ask Mr. Fess whether he has ever heard of the sinking of the Lusitania, the Ancona, and the Persia, to say nothing of a few other vessels on which a good many innocent people lost their lives. Then I should like to ask him whether he can point to a single instance in which Great Britain and her Allies have caused the loss of innocent lives by similar methods of piracy, and whether he considers that any amount of interference with dollar-making can possibly be regarded as balancing such crimes. I should also like to ask him how much—but no, on second thoughts, Mr. Fess, member of Congress for Ohio, cannot be regarded, fortunately, as representative of American opinion. I suspect that he really represents the opinion of —Mr. Fess, if that.

***

I wonder if many people who read this column are interested in coincidences? There may be some, and, if so, the following experiences which have occurred to me during the past fortnight or so seem to me to be worth the telling. One morning I was in the telephone room at my club waiting for a reply from a number I had called. On a table in front of me lay an open telephone book. For some inexplicable reason I suddenly thought of a soldier man I used to know in Egypt, but whom I had not seen for fully six years, and of whose whereabouts I had not the vaguest idea. I turned the pages of the book and found his name—not a common one—correct initials and all. My other call over, I rang up his number. The people owning it had, I was informed, just had the instrument removed. Half an hour later I met the man himself in Brompton Road! He was not, by the way, the owner of the name in the telephone book. The similarity of initials had been a mere coincidence.

***

A few days later I dined with him. At dinner I met a man who had that afternoon visited a palmist in Bond Street. She had told him that he was about to meet a man he had never seen before, a man who had been to Egypt and who would ultimately be of great assistance to him. The latter part of this prophecy is unproved as yet, but it must be admitted that the former part came true pretty rapidly. This is not all.

***

The following week a friend complained of the difficulty he was experiencing in finding a man to do certain work he required done. I happened to know the very man capable of the work, but, unfortunately, had not seen him for several years, and did not even know whether he was in England. He, also, had been a friend in my Near Eastern days. We met in the Strand on the day following this conversation; he had just returned from the East, where he had been touring with the "Quaints" in "The Pedlar of Dreams." I turned into the theatre in his honour and found that the spirit of the East had laid tender hands upon the entire production. I have seldom seen any play so light and charming. From the roof-tops of Pierrotland I looked across the moon-bathed cities of Egypt; in the music I felt the soft throb of an Egyptian night. But this is by the way.

***

After the performance I went round to the back and was commenting upon the coincidence of meeting with my friend, when Salisbury, the producer, burst into the room and, unknowingly, into our conversation: "It's not coincidence and it's not superstition; it's fate," he said. He was in a rage. Earlier in the day he had encountered an individual with cross eyes, and it had affected his receipts. For twenty minutes he discoursed on coincidence, and he certainly has a remarkable record of experiences in that direction. But he will not have it called by the name of coincidence. Telepathy, Fate, anything but that. I have never met any man of the Western world with such a strong regard for such experiences as a direct working of Fate. In the East such things are common. I am beginning to wonder whether the pressure of war in that quarter is driving the ethnical characteristics of Eastern psychic penetration into other minds.

***

I wonder whether "Who's Who?" of 1917 will come out in two volumes to meet the growing demand of names for inclusion in its pages. Many names will, alas! be erased, transferred to a never fading scroll; but their places will be more than filled, for these are the days of opportunity. It is curious how great accomplishments of the past recede from one's memory in the light of present-day events. Viscount French of Ypres is certainly remembered as the "man who never made a mistake" in the Boer War, but I doubt if 50 per cent. of our people remember General Mahon as the reliever of Mafeking. It will be remembered that during the South African War mobility of force was one of the points of greatest importance in the campaign. On one occasion a division had failed, or imagined that it would fail, in the execution of some ordained movement, because of its shortage of horses. An officer of high rank was inclined to cast blame on the colonel of the impoverished regiment. "Horses," he snorted, "look at the———; *they* are never short of horses." And, "Faith, they never were," said Mahon, telling me the story afterwards; "they were the most expert horse-thieves in all Africa."

***

Hajji Wilhelm is in a dilemma again. Why did the Young Turks carefully exclude the Germans from the post of Sheikh Ul Islam when they were apportioning other positions of State to gallant Teutons? Why is the greatest post they have to offer withheld from the disposal of Islam's latest and greatest recruit? Why? Are the Young Turks not taking their Imperial and devout master as seriously as they wish the world to believe? Poor old Hajji. He will certainly need a rest cure when the war is over, and as he is so well qualified to go there, why not let him pay a protracted visit to the Kharga convict settlement, where he will meet other birds of his feather? It is almost as healthy as St. Helena and far more suitable, if we have due regard to the creed of the patient. Apropos of this, a writer in the *Irish Times* tells an amusing story. The report of Wilhelm's conversion to Mohammedism spread to Persia. Shortly afterwards a German official died in one of the Persian cities, whereupon a band of Persian notables appeared at his house to carry off the body for sepulture in the Mohammedan burying ground, much to the annoyance of his friends.

***

When the war is over and tourists flock to Egypt as of old, I hope that they will remember that their careless patronage of German concerns in the past assisted that country to the great campaign which has spelt so much desolation to the world. Personally, I hate to think of the money I have spent at German establishments in the Near East and Egypt in particular. The list of mercantile houses in Cairo owned by our enemies which appeared in this paper last week led me to an examination of conscience that has left me a sadder and a wiser man. It has, however, also left me with a clear resolve that the Huns will never again profit by my carelessness, and if we, as a nation, combine with our Allies in giving the cold shoulder to all goods bearing the mark of the beast in future, and if our business men support us, the Hun will be robbed of those powers of recuperation that might enable him to repeat the horrors of the nineteenth century for generations and generations to come.

NEAR EAST BOOKSHELF.

OUR NEW PROTECTORATE.*

Divided into three parts, "Sixty Centuries," "The Nile," and "The Dwellers in Egypt," Mr. W. Lawrence Balls has written a book about Egypt. It is a small book, 7½ by 5½ inches; it numbers 266 pages, and contains the most comprehensive survey of Egypt of the Egyptians that we have ever read. Anyone who knows Egypt will appreciate the difficulties which beset an author who attempts to confine an adequate survey embracing an historical resumé of ancient Egypt into the limited space we have described. Mr. Balls has not only succeeded in doing this, but he has accomplished his task in a manner which will make his work acceptable equally to the readers who know their Egypt and to those who have never been out of England. The secret of the author's success is probably to be found in the fact to which he alludes in an introductory note, "To Some Friends in Egypt." He is a specialist, accustomed to weigh his words and to avoid rhetoric when a plain phrase will serve to make his meaning clear. In a book of this description, which strikes the balance between a work of reference and a "travel" book of the ordinary descriptive variety, rhetoric is unnecessary, and the author's personal opinions are less valuable than a plain, easily digested statement of fact. Mr. Balls has evidently recognised this. His nine years' residence in Egypt has enabled him to pass matured judgment upon many of the questions that are of the greatest importance to the future of the country, and when he offers advice he will be listened to with all the greater attention, because he seldom proffers it.

The book is, as we have already said, divided into three parts. The first part is entitled "Sixty Centuries," and deals in a brief manner with the essentials of Egyptian history from its earliest recorded periods up to the time of the British Occupation. All through this history of early times the author writes with evident regard for its bearing upon the country and people to-day.

> The East in general, and Egypt in particular, will never be impressed by democratic control. More than one man saying the same thing suggests collusion to her, and stimulates impish desire to make them say different things. It is sufficient that one man shall say something firmly and clearly. Therefore, when the Caliph sent a strong man called El Ikshid, already Governor of Syria, to Egypt in A.D. 935, the country sprang smartly to attention and there was not a single disturbance during the eleven years of his control.

No one who knows the Egyptian can deny the reasoning of the above remark. A Kitchener can accomplish more in Egypt in one week than the most learned assembly of Cabinet Ministers could accomplish in fifty years.

To Mohammed Ali Mr. Balls gives the credit for establishing a cult which is still alternately blessed and cursed by officials of the Egyptian Government—the cult of the amateur:

> His head was buzzing with projects for the advancement of the country, and almost every one of them was materialised direct into full working order, without wasting time on experimental trials. The result was, naturally, variegated. . . . Still, even if he had confined his efforts merely to putting the country in order, as he did—it was his private estate—and clearing the stilted canals, he would have been a notable ruler. As it was, he did all this, and very much more, for he brought Western civilisation into Egypt. It was a dangerous experiment, and even to this day it produces sad and ludicrous and amazing results—not always by the fault of the Egyptians—but it started a new line of development and gave food for thought.

In his first mention of the present war Mr. Balls shows that his conviction regarding the people, arrived at after mature study of their characteristics and political tendencies, coincides with the opinions of newspaper correspondents who cable to their journals in London the attitude of the Egyptian to-day:

> Financially, it would have been better for Egypt if the Great War had come a year or two sooner, before her reserves had been locked up in constructional works; but this has only involved minor discomforts. So long as Egypt is taxed to the minimum possible, concurrently with the maximum safe State expenditure on productive works, she will henceforth be easy to govern and reasonably loyal to her protectors, provided only that they hold the dominion of the High Seas and the respect of Islam.

In the second part of his work, "The Nile," the writer utilises his extensive knowledge of the country to good purpose. No place of importance appears to have escaped general description and comment. As we have intimated, Mr. Balls does not waste words. Cairo, as Cairo, is dismissed in a few short sentences, which, however, go straight to the point:—

> There is a Cairo of the "season" and a Cairo of the summer. The one is restless as a catherine wheel, pivoted on the great hotels, and the other is nearly as peaceful and subdued as a Trappist monastery. The Opera Square in the winter is a dancing maze of traffic: taxis, cabs, and donkeys, itinerant vendors and snake charmers, dragomans and tourists. On a summer afternoon it is a wide emptiness, with a native asleep in every patch of shade, the kerbstone his pillow, and the two mules drawing the water-cart prop one another up affectionately as they jingle along.

To the late Sir Eldon Gorst the author accords the credit of having saved Egypt by the raising of the Assuan Dam. The completion of this work took place, it will be remembered, just in time to reserve 1,400,000,000 tons of water for use in a year which proved to supply the lowest flood recorded for over a century. Mr. Balls looks forward to further improvements in the irrigation system of the country. Great as have been the achievements of our engineers in this direction, he is confident that there are many more to follow.

The third part of the book, "The Dwellers in Egypt," reveals Mr. Balls as he is most generally known—as an authority upon cotton. The first chapter of this part is entitled "Clover, Corn, and Cotton," and deals exhaustively with the methods adopted by the natives for the raising of these three essentials of the country. The question of small holdings was much discussed before the war, and the author's remarks on this subject are interesting:—

> The future of the small-holder is a matter for interesting speculation. Under a certain limit of size, which is the amount one family can handle, a small-holding is economical. On the other hand, there can be no doubt that agriculture in Egypt will, in the course of time, become a more exacting business for the brain, if not for the body, than it has formerly been, and unless the mental activity of the fellah increases, he will stand but little chance in competition with the big landholders and companies, who can counteract the disadvantages of mercenary labour by mechanical devices and by their capital resources. It would seem as if machinery is likely to present the Egyptian with two alternatives: either to become a hired labourer, or else to devise some means of letting the able men get to the front, while yet remaining fellaheen, so raising the mental average of the race. Up to the present time the effect of the British Occupation has been steadily and deliberately to increase the proportion of small holdings, but there seems to be some reason to believe that there is a temporary swing of the pendulum, which must presently begin to move in the opposite direction.

The author is emphatically of the opinion, which all students of Egypt will endorse, that the training of the fellah must be in the direction of fitting him for a prosperous continuance of his accustomed mode of life. "The development of the fellah into a town-dweller's clerk is unthinkable." It is here that the difficulty of education arises. Everyone agrees that education is necessary to progress; no one will deny that any attempt can seriously be made to graft an extended system of knowledge upon the fellah without jeopardy to his contentment. Lord Kitchener was known to favour a line of practical education while he was at the Agency. Mr. Balls advocates a course of nature study and in the training of the faculties to observation and deduction. With his assertion that the failure of the examination system to turn out anything more than "a useful routine clerk, who might equally well have belonged to other nations," is due to the fault of the Egyptian rather than to the system, we are inclined to disagree.

It is not the "fault of the Egyptian" that centuries of ignorance have left him incapable of at once grasping the correct interpretation of benefits which the lower classes, even in our own country, do not understand. It is in the nature of the uneducated to distort the advantages of education when they acquire it suddenly and without hereditary preparation. Practical education in the department of life that the student is destined naturally to live is the first essential. The remainder will follow; but future generations will not bless us if we press the matter too rapidly.

Mr. Balls thinks that the next century of the world's history will possibly be the farmers' epoch, and he urges that nothing but the best scientific work will be of any use to Egypt if she is to achieve agricultural distinction.

His book is a valuable contribution to the literature of a country which is often considered to have been over-written. Its arrangement is admirable, and it is admirably turned out. It contains numerous photographs by the author, some good and some indifferent. The frontispiece is an autographed portrait of the Sultan.

* "Egypt of the Egyptians." By W. Lawrence Balls. (London: Sir Isaac Pitman and Sons, Ltd. 6s. net.)

BOOK NOTES.

The Oxford University Press has published "An Historical Atlas of Modern Europe, from 1789 to 1914," by C. Grant Robertson and J. G. Bartholomew. The price is 3s. 6d. net. Several maps of the Ottoman Empire at different periods and two of the Balkan States (1878-1911 and 1911-14) are included.

The C.M.S. has published recently, at the price of 3s. 6d., "Mary Bird in Persia," by Clara C. Rice. The Rt. Rev. C. H. Stileman, lately Bishop in Persia, contributes a foreword.

The Waifs and Strays' Society has published, at the price of one shilling, "Serbia and the Serbians: Letters from Lady Muriel Herbert." The letters are published by permission of Lady Beatrix Wilkinson.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE BULGARIAN PRESS ON ENGLAND.

To the Editor of THE NEAR EAST.

Sir,—It is not without importance to know what the enemy Press is writing on England. Some newspapers are to be found that are regularly publishing extracts from the German Press, but, generally speaking, not much attention is paid to what appears in the Bulgarian dailies. This is a mistake. The Bulgars are the foes of England just as much as are the Germans themselves, and if one cares to ascertain what the latter are thinking, one should take the same interest in what the former are saying. No doubt it is very difficult to come across Bulgarian newspapers in this country; but the German and Austrian Press ventilates what the Bulgarian Press has to say, and through this channel we may get the necessary information.

By what cynicism and insolence the Bulgarian Press is inspired when writing about England I trust the little selection of extracts quoted below will help to form an idea.

The *Narodni Prava*, the organ of Radoslavoff, Prime Minister and leader of the Liberal Party, published in its issue of November 3 an article entitled "The Road to India." England, it was said, is making desperate efforts to save India. She is trying by all possible means to induce her Allies to help her to that end. She does not, however, meet with much success. The Dardanelles expedition has proved a failure, and so have been her several attempts in Mesopotamia and Persia. "Until now English statesmen have done nothing beyond employing all means through which they might impose upon the Allies in order to satisfy England's egoism."

What it says about England generally, the same journal (see its number for December 5, in a leader "The Bankrupts") says in a still more violent way about Mr. Asquith and Sir Edward Grey:—

> The intervention of Bulgaria—so the article runs—caused Mr. Asquith and Sir Edward Grey to lose their heads. They ceased to be the overbearing lords they had been until then, and their ideas got confused. They began by making on one day certain declarations which they hastened to deny on the day following. . . . The unworthy leaders of world politics are now but a shame in every country. . . . They resemble the merchant who sees bankruptcy drawing nigh. Bulgars have every reason to rejoice at such a situation.

Glorifying the success of the Bulgarian Army against the Allies, the Deputy Daskaloff wrote in the *Kambana* (see the *Neue Freie Press*, December 15):—

> On December 12 the Bulgarian Army defeated for the first time the pirates from England and France, who have the pretension to represent civilized countries. These two Powers have hereby lost in a most shameful way all the glory with which past centuries had covered them.

On the same subject the military critic, Angeloff (see the *Neue Freie Press*, December 15) writes:—

> The great Anglo-French Army, after a terrific defeat, has been compelled to retire on Greek territory. . . . It has no excuse, since it was occupying excellent positions and was truly like a powerful bulwark of soldiers and guns. . . . The Bulgar has been giving a terrible lesson to those Westerners who affected to despise him, thinking they were his superiors. Glory, therefore, to our heroes who took the devil by his horns when he dared attack Bulgaria!

These Bulgars, however, are not satisfied with deriding the Anglo-French Army; they go so far as to accuse it of having used barbarous methods of warfare. "The Bulgarian Government," says the Bulgarian Telegraphic Agency (see the *Frankfürter Zeitung*, December 18), "has sent to its Allies and to neutral countries a Note *protesting most categorically against the barbarous methods which the English and the French have used in Macedonia.*" So that we find these Bulgars—the same, alas! who cut off the ears of Serbian soldiers in 1913, and whom the Carnegie Committee found guilty of more atrocities during the Balkan wars than even the Turks ever perpetrated themselves—daring to protest now. The Bulgarian Government has the impudence to declare openly, in the same Note, that in return it is going to have recourse to most severe reprisals upon English and French war prisoners!

From these extracts we see that it is not only the Bulgarian Government that is delivering itself up to such ferocious hatred against England, but also the organs of the various political parties, and the journalists generally.

Everybody in Bulgaria is decidedly siding with the Triple Alliance against the Allies. It suffices to read what the Russian Chargé d'Affaires in Sofia declared when he left the Bulgarian capital (see *Birmingham Post*, October 27), and what Mr. Stephen Graham, who last summer paid a visit to Bulgaria, said in his article "The Truth About the Bulgars" (*English Review*, November); and it will then be seen that the Bulgarian Press as we have quoted it is but expressing the feelings of the whole Bulgarian nation, and all its political parties. And so that no shade of doubt may be left on this point, the Bulgarian Minister, Petkoff, lost no time in declaring in an interview (*Berliner Tageblatt*, December 27) that "the sympathies of all the leading political parties in Bulgaria are decidedly with the Triple Alliance. The ideal of every true Stambulovist—so he declared—has always been to seek the friendship of the Triple Alliance. Therefore, in every question that concerns foreign policy, complete harmony reigns among the Radoslavists (Liberals), the Toncheffists (Young Liberals), and the Stambulovists (Dr. Ghenadieff's party).

Unfortunately, it is for this very foe, who is so cynically laughing at England, that the English Press has still occasional moments of weakness and sentimentality. Quite recently the Balkan correspondent of a great English journal was rejoicing at the entrance of the Bulgars into Ochrida, which he considered "an event of the highest importance"—an event of the highest importance, this? The final success of Bulgaria against Serbia in Macedonia, an event of the highest importance? The final success, likewise, against the Allies, an event of the highest importance? But for whom does it carry so high an importance? For the Allies, perhaps? Well, then, if ever, and for our misfortune, the Bulgars were to enter Salonika, will it be, too, an event of the highest importance and one at which we ought still more to rejoice?—I am, etc.,

D. JANITSCH.

London, W., January 11, 1916.

TROODOS AS A HILL RESORT.

To the Editor of THE NEAR EAST.

Sir,—I should like to call the attention of your business readers to the natural attraction which Tröodos, in Cyprus, offers as a hill station to British officers, residents, and officials in Egypt and the Levant, and to the fact that, while this place is being now used for this purpose, there is scarcely any accommodation worthy of the name. I do not complain of the nature of the existing building, which is necessarily rather primitive, because it is liable to demolition by the military authorities at twenty-four hours' notice. The sense of injury under which I and many of my fellow visitors to Tröodos are labouring is due to the fact that, while good food is plenteous in the neighbourhood, it was certainly unprocurable at the hotel. It seems a great pity that this opportunity for establishing a hill station which might remain a popular Mediterranean resort for all time should be lost for the want of a little enterprising management. Tröodos is, by the way, only thirty-six hours from Cairo, and its position is unique. If a good hotel with a decent *cuisine* could be established there, I, for one, would prefer staying there to wandering about the Levant during short leave, even when the war is over. But I have a certain regard for the inner man; hence this letter.—I am, etc.,

Cairo, January 3. ANGLO-EGYPTIAN.

17	4	Monday	11	12
18	5	Tuesday	12	13
19	6	Wednesday	13	14
20	7	Thursday	14	15

To-morrow is the birthday of Princess Margaret, Princess Royal of Sweden.

Tuesday is the birthday of Princess Eudoxia of Bulgaria, who was born in Sofia on January 5, 1898 (O.S.).

Athens messages report that King Peter of Serbia has decided to take the waters at Aidepsos, whither he will proceed very shortly.

Prince Alexander of Serbia has received the French War Cross and the Legion of Honour which have been conferred on the Serbian Army. The Prince has telegraphed his thanks to President Poincaré.

The French Government has appointed Vice-Admiral Sir Arthur Henry Limpus, K.C.M.G., Admiral Superintendent of Malta Dockyard, a Grand Officer of the Legion of Honour.

General Sarrail, Commander-in-Chief of the Expeditionary Force in the East, has been promoted to the Grand Cross of the Legion of Honour, and General Bailloud has been awarded the Military Medal.

Sir Bryan T. Mahon, commanding the British troops at Salonika, has been appointed Grand Officer of the Legion of Honour.

Earl Kitchener, Secretary of State for War, went to Buckingham Palace on Wednesday evening and was received in audience by his Majesty, with whom he was engaged for about an hour.

M. D. G. Métaxas, formerly Greek Minister to the Court of St. James, left London on Wednesday for Athens.

M. Miyatovitch, formerly Serbian Minister to the Court of St. James, has left London for New York. We understand that he will deliver a course of lectures in the United States on Serbia.

Dr. Clemow and the members of his unit of the British Red Cross, who were lately working in Montenegro, have arrived safely in England.

Lieut.-General Sir Percy Lake, K.C.M.G., K.C.B., who has been appointed to succeed General Sir John Nixon in the command of the Mesopotamia Expeditionary Force, has been Chief of the General Staff in India since 1912. From 1905 to 1908 he was Chief of the General Staff, Canadian Militia, and from 1908 to 1910 he acted as Inspector-General of Canadian Militia. In 1911 he received a divisional command in India. His active service was in the Afghan War, 1878-9, when he acted as assistant field engineer with the Southern Afghanistan Field Force, and received the medal, and in the Sudan Expedition, 1885. In the latter campaign he took part in the actions of Hasheen and Toprek and the advance on Tamai, being awarded for his services the medal with two clasps and the bronze star.

Major-General Fenton John Aylmer, V.C., K.C.B., who is leading the advance of the relief to Kut-el-Amara, was appointed Adjutant-General in India in 1912. He has taken part in five frontier campaigns in India, including the Burmese Expedition, 1886-8, the Hunza-Nagar Expedition, 1891-2, and the operations in Chitral in 1895. He was awarded the V.C. for gallantry in the Hunza-Nagar Expedition.

The following appointment was announced in Saturday's *London Gazette*:—Memoranda—Maj.-Gen. Hon. Sir J. H. G. Byng, K.C.M.G., C.B., M.V.O., to be temp. lieut.-gen. May 7.

Mr. Prowde, secretary to Sir Murdoch Macdonald, Under Secretary of State for Public Works, Egyptian Government, has gone to the Sudan, where he intends to join Mr. Buckley and his mission on the Blue Nile.

Reuter's Agency learns that news has reached London through the American Consul at Baghdad and the American Ambassador at Constantinople that the members of the British Colony at Baghdad were removed from that city at the end of November, and left travelling in a north-westerly direction. It has been ascertained that they were deported by the Turkish authorities, probably at the time when it was feared that the British troops might be approaching, and that they were sent in the direction of Mosul. When last heard of, the colony in Baghdad comprised two men—Messrs. Levack and Walker—and nine ladies, with their children. The ladies included Mrs. Levack, Mrs. Walker, Mrs. Cree, and Mrs. Whitley.

The marriage arranged between Phillip Bertie Petrides, barrister-at-law, of the Middle Temple, Legal Adviser and Crown Prosecutor to the Seychelles, and Clare, elder daughter of George Cosens, of Woodleigh, Sydenham, will take place very quietly at St. Philip's Church, Sydenham, on Saturday, January 15, at 2.30 p.m.

On Tuesday, the 11th inst., at the Parish Church of Falkirk, the marriage was solemnised of Lieutenant R. Douglas King-Harman, R.N., son of Sir Charles A. King-Harman, K.C.M.G., formerly High Commissioner of Cyprus, and Lilly, daughter of Mr. Alexander Moffat, Advocate and Sheriff Substitute of Stirlingshire, Arnotdale, Falkirk. The Rev. the Hon. Arthur Gordon, D.D., officiated, assisted by the Rev. Professor Lawson, D.D., and the Rev. Alexander Loudon, B.D.

The marriage took place at Evenley Church on Monday of Miss Madeline Ethel Worsley, daughter of Canon Worsley, to Major John Willoughby Scott, son of the late Sir John Scott and Lady Scott. Canon Worsley gave his daughter away, and Mr. Arthur Worsley was best man. The wedding was arranged at two days' notice on the return of the bridegroom on leave from France.

On December 20, at the British Consulate, and afterwards at All Saints' Church, Cairo, the marriage took place of Mr. Charles C. Morris, of the Egyptian Irrigation Service, and Miss Joy Doreen Yule, only daughter of the late Mr. T. G. Yule and Mrs. Fox, of Swindon, Wiltshire.

We regret to announce the death of Colonel Morgan Crofton, C.B., D.S.O., which occurred at his residence, 5, Brunswick Terrace, Brighton, on Sunday last after a long illness. Born in January, 1850, and educated at Cheltenham College, he entered the Second Battalion South Staffordshire Regiment. He served with distinction in the South African War, 1879-80, in the Zulu Campaign (medal with clasp), in the Sudan, 1884-5 (mentioned in Despatches, medal with clasp, Bronze Star, brevet lieutenant-colonel), and again in the Sudan, in 1885-6, when he was present at the action at Giniss (mentioned in Despatches, and received the D.S.O.). He was Chief Staff Officer and A.A.G. South Africa in 1904-3, and A.A.G. Eastern District 1899-1900, and was nominated a C.B. in 1899.

Rear-Admiral John A. Tuke, who died last week at King Manuel of Portugal's Home for Officers at Brighton, had retired in October, 1913, but had been serving during the war as temporary captain in the Royal Naval Reserve. He was lieutenant of H.M.S. Northumberland during the Egyptian War of 1882, and was decorated with the Egyptian Medal and the Khedive's Bronze Star. He was appointed Master of the Fleet for the Naval Review at the Coronation of King Edward VII., 1902, and afterwards held several Admiralty positions, including that of Dockyard and Deputy Superintendent and King's Harbourmaster of the Hamoaze, Devonport (1908-1911), and membership of the Admiralty Committee on Berthing Accommodation of his Majesty's Ships at Home Ports. He was promoted Rear-Admiral in July, 1911.

A Cairo message announces the death of the Coptic Patriarch of Alexandria, Cyrillos VIII.

Much sympathy will be felt with the Rev. C. T. and Mrs. Horan, of Church House, Cairo, in the severe loss which they have sustained by the death of their elder son, Lieutenant Beresford K. Horan, of the 30th Wellington Rifles. Lieutenant Horan, who was twenty-three years old, was training with the Canadian Expeditionary Force when he contracted diphtheria; pneumonia supervened, and terminated fatally, death occurring on Christmas Eve.

Next Thursday evening, in commemoration of the birth of the founder of Islam, the Islamic Society will hold a conversazione at the Hotel Cecil. Mr. A. Yusuf Ali will deliver a short address, and Lord Headley will preside.

At a meeting of the Central Asian Society to take place next Wednesday afternoon (at 4.45), at 22, Albemarle Street, Mr. Perceval Landon will read a paper entitled "Central Mesopotamia." Sir Mortimer Durand, P.C., will take the chair.

According to the Greek calendar last Friday was Christmas Day, and a service was held at the Greek Church in Moscow Road, Bayswater, in the morning. The officiating clergy were the Very Rev. the Great Archimandrite Dr. Pagonis and the Archimandrite Agathangelos Moschovakis. There was a large Hellenic congregation. The service was attended by the Greek Minister, Madame Gennadius, the *personnel* of the Legation, the Greek Consul-General, and the staff of the Consulate.

A large number of Serbian orphans have recently arrived in France. The mail steamer "Alda," of the Cie. Paguet, reached Marseilles on the 30th ult. from Salonika with 111 scholars, their teachers, and a number of Serbian officers and soldiers. Before arriving at Marseilles the "Alda" called at Ajaccio, where she disembarked 500 orphans. The little ones have been reclothed and were the recipients of presents, many of them being sent to Cannes and Villefranche. Several other contingents of orphans and refugees from Serbia are shortly expected to reach Marseilles. Mons. Alfred Fraissinet, Consul-General for Serbia in that city, has opened a relief fund there, the amount collected up to December 30 being frs. 10,690. In addition, many gifts of linen, clothing, etc., have been received at the Consulate.

A correspondent writes:—"The *Hornsey Journal* states that there will be an interesting service at the Holy Trinity Church, Stroud Green, London, N., next Sunday morning, when the very Rev. Father Nicholas Vilimirovitch, D.D., Mark of the Holy Orthodox Church of Serbia, Priest of the Chapel Royal, and Professor of Theology at the Belgrade University, will assist in the choir, and plead the cause of his country from the pulpit. He is a member of the Anglican and Orthodox Church Union Society, but this address will be a simple appeal for his unhappy country. He will be in Eastern vestments.

"Both for the cause and for the opportunity of hearing one of Serbia's most eloquent preachers, there will certainly be a crowded church. The Serbian National Anthem will be sung in English. An overflowing congregation will show the sympathy with the little nation whose gallantry has won all British hearts. Father Nicholas is not only an eloquent preacher, he is a writer of note. He will increase our knowledge of his country, far too little before the outbreak of war, and little enough even now. Serbia claims not only our regard, but our help. It is another Niobe of the nations, crushed, overrun by brutal oppressors, but still neither broken-spirited nor lastingly defeated."

Digitized by Google

One of our readers enquires for the present address of M. Alex. Theodorides, formerly of Constantinople. If M. Theodorides, or any other reader, will forward the information to the Editor, the kindness will be much appreciated.

The *Egyptian Gazette* states that Fuad Bey Selim, who was recently appointed Ottoman Diplomatic Agent in Switzerland, is the son of the late Latif Pasha Selim, who was for several years the Honorary President of the Mixed Tribunals in Egypt, and was connected with the Arabic movement in conjunction with the late Sheikh Mohammed Abdou. Fuad Bey is quite young, and left Egypt only a few years ago for Constantinople where he was admitted into the Ottoman Consular Service.

A telegram from Berlin sent through German wireless stations and received by the Marconi Company states that the Military Commander of Vienna, Count Salis-Seeves, has been appointed Governor-General of the Serbian territory occupied by Austro-Hungarian troops.

The president of the Serbian Committee in Corsica, where a number of Serbians have taken refuge, has telegraphed their "warmest and sincerest thanks to the noble English people, whose nobility we feel in the greatest measure to-day that we have lost our Fatherland."

A special night (Monday, the 17th inst.) has been set aside by the National Sporting Club for a boxing entertainment (to which ladies will be admitted) in aid of the funds of the Wounded Allies Relief Committee of Sardinia House, Kingsway, W.C. The entertainment begins at 8 p.m., and the prices are from £3 3s. to 10s. 6d. A collection of 5,000 stamps in two volumes has been presented to the committee, and this will be sold by auction during the evening. The collection has a value (at catalogue prices) of over £500.

APPOINTMENTS, PROMOTIONS, Etc.

Bimbashi T. B. Vandeleur, of the Camel Corps, Egyptian Army, has been promoted to the rank of Kaimakam and appointed as second-in-command of the Camel Corps.

Captain Viscount Eustace Hawarden, attached to the Egyptian Army, has been promoted to the rank of Major.

Baron Jean Villenfagne de Sorinnes, Secretary of the Belgian Legation in Bucharest, has been appointed to act in the same capacity in Pekin.

Lieutenant A. T. Cull, Seaforth Highlanders (a former member of the Imperial Ottoman Bank's staff in Egypt), has been transferred to the Royal Flying Corps.

Mr. Gerald Delany, Reuter's Chief Agent in Egypt, has been appointed Lloyd's Agent in Cairo, in succession to the late Mr. David Rees.

SCHOOLS for BOYS & GIRLS.

THE B.R.F.T. FUND.

"WHITE ELEPHANT" SALE AT LOWNDES HOUSE.

The "White Elephant" sale announced in our last issue to take place on Tuesday at Lowndes House, by the kindness of Mrs. Frank Barker, was a great success. Exactly 1,000 objects were given for the purpose. Most of them were of the kind that one is accustomed to find displayed at fancy bazaars, but some were genuine "white elephants"—i.e., objects of some value, but for which the owners happened to have no use. Most of the thousand tickets were disposed of, each ticket being numbered and entitling the owner to the article to which the corresponding number had been given. The sum thus realised was increased by the sale of articles not claimed, so that over £130 was obtained during the day. Three large rooms, each furnished with ten or a dozen tables, were given up to the display of the goods. Sir Louis Mallet gave some beautiful Oriental objects, mostly antiques. Mr. Cheese, formerly of Beyrout, gave a handsome collection of blue Chinese china, which was purchased by private contract by Mr. Heinemann, the publisher. The Marchesa Imperiali, wife of the former Italian Ambassador at Constantinople, gave several charming objects; Lady Victoria Hobart, an embroidered panel; Sir Gerard Lowther, some Japanese china, Mrs. Vere, a number of useful articles; and, among others, there were handsome gifts from the jewellery and other departments of Messrs. Reville and Rossiter, from Harrod's Stores, and from Messrs. Derry and Toms. Among the objects shown were a pair of handsome brass candelabra, a bronze Buddha, a handsome screen, and a lady's travelling coat. This was among the unclaimed prizes that were subsequently disposed of at auction. Other goods were paintings, china, handwork, fancy work, glassware, toys, music books, handkerchiefs, dusters and other household requisites, work baskets, statuettes, pipes, pincushions, Turkish embroideries, etc., etc., including some hospital garments which had been sent to Lady Neave by friends in Pekin.

Among those present were Lady O'Connor, the Countess of Kintore, Lady Lawrence, Lady Abinger, Lady Rumbold, Sir Adam and Lady Block, Captain and Mrs. Du Vallon, Captain and Mrs. Clifton, Dr. Clemow, Mrs. Surtees (wife of General Surtees), Mrs. Bell (of the American Embassy), Mrs. Tower, Mrs. and Miss Barker, Mr. and Mrs. Arthur Vere, Mr. and Mrs. Harry Vere, Mrs. Townsend, Mrs. Alfred Farrar, Mrs. Einstein, Mrs. Makins, Mrs. Tristram, Mr. Barnham (formerly Consul-General in Smyrna), Mrs. Arthur Hill, Mrs. Harry Pears, Mrs. Satow, and Mr. P. Martindale.

Among those who helped to make the sale a success should be mentioned Lady Neave, president of the British Refugees from Turkey Fund, on behalf of which the sale was organised. It was with Lady Neave that the idea of the sale originated. Mrs. Frank Barker, besides lending her house, worked hard to carry the sale successfully through. Lady Lowther was another energetic helper. So were Mr. Baker, Mr. Myddelton Edwards, Mr. and Mrs. Charnaud, Mrs. Holmes, Mrs. David Forbes, Mr. and Mrs. Cumberbatch, and Mr. La Fontaine. Most of these were present, many wearing red rosettes and acting as stewards of the gathering, distributing the prizes, and assisting generally. It was an interesting assembly of people, many of whom had been formerly resident in the Near East, brought together to help friends, acquaintances, and others from that part of the world suffering misfortune through no fault of their own. The articles left unsold will be disposed of for the benefit of the Fund, or given to soldiers' hospitals or other charities connected with the war.

THE SOUTHERN FRONT.

The position of the Allied Powers in the Near East would benefit if this theatre of war were regarded as a single front and if plans and movements were co-ordinated as they are in the West or East. At present the tendency, we fear, of both the military authorities and the man in the street is to look upon each point of contact with the enemy as a separate sphere of operations, as distinct as the fighting in Mesopotamia is from that in East Africa. Thus during the past week the Allies have been concentrating attention on the final withdrawal from Gallipoli Peninsula, but have given little heed to the course of events on the west of the same line, where the Montenegrins are being hard pressed by the enemy. Now, as the Allied Powers have not sent large forces to the Near East in order to reproduce the condition of temporary stalemate prevailing in the West, but rather with the object of turning the enemy's flank, they cannot remain indifferent to a reverse at any point in the line. The success of the operations in the Balkans depends on a general advance which will so seriously threaten the enemy from this direction that he will be obliged to weaken his western and eastern fronts in an effort to stem it. No doubt the situation is complicated by a variety of political and military considerations. Unless, however, the Allies are minded to forgo the advantage which superiority of numbers gives them, they cannot be content with merely defensive action in the Near East, but must be preparing a blow which will convince Germany that her southern thrust was an unfortunate challenge. In these circumstances, the uniform strength of the Allied line is a matter of prime importance, for a setback at any one point may delay the advance when all other preparations have been completed. There can be little doubt that the Allies have allowed their preoccupations at the Dardanelles and Salonika to distract their attention from the enemy's movements in Montenegro and Albania. When the Serbians were driven out of their own territory there was a tendency to believe that there would be no serious pursuit over the difficult country in which they had taken refuge. But the Austrians, finding themselves opposed by comparatively insignificant forces, have tried to follow up their successes in Serbia with the conquest of Montenegro. With the help, which may not be permanently reliable, of some Albanian tribes, they have virtually surrounded the Montenegrins, and are daily drawing their cordon tighter. In the interests of the Allies' position on this southern front, relief ought to be sent as soon as possible to Montenegro. If that country shares the fate of Serbia, the ultimate advance of the Allies will be rendered so much the more difficult, and the war, with its drain on the economic resources of all the belligerents, will be prolonged to a corresponding extent.

The advantages which the enemy's unity of direction in the conduct of the war gives him are clearly seen in the Balkan operations. To turn the Serbian line of defence which had proved too formidable for the Austrians single-handed and for the first efforts of the Austro-Germans, the Bulgarians were used. As soon as the Serbians were overwhelmed the bulk of the German forces were withdrawn, the Allied centre at Salonika is now contained mainly by the Bulgarians, a separate Austrian force is left to deal with the Montenegrins, and the Turks hold the eastern end of the line. From lack of co-ordination of effort the Allies have allowed Serbia to be overwhelmed in detail, and now Montenegro is threatened with the same fate. But there can be little doubt that they dispose of sufficient strength in the Near East to deal with all the forces that the enemy has mustered. In the absence of the necessary unity of direction the Allies are in danger of being dealt with piecemeal. A supreme war council of the Quadruple Entente, taking stock of the situation and of the forces at its disposal would long ago have decided to push forward Italian troops to the relief of the Montenegrins. As things are, the troubles of Montenegro run the risk of being nobody's business but her own, or if some responsibility is felt in Allied circles, much valuable time has been lost in an interchange of views between three or four Governments, which in turn will have had to consult their military advisers. In all the circumstances it is provocative of some wonder that the Italians have remained so long indifferent to the march of events on the other side of the Adriatic. For several days the main efforts of the Austrians have been directed against Mount Lovtchen, and this important position has now fallen into their hands. Mount Lovtchen dominates the Bay of Cattaro, and with both in her possession Austria will be able to render the former an impregnable position for the purposes of this war; while if it were retained after the war, the whole balance of power in the Adriatic would be affected. In view, therefore, of what Italy has marked out as her destiny in those waters, it is as vital to the Italians that Austria should not overrun Montenegro as that she should be ejected from the Trentino. Italy's major purpose in entering upon the war was to achieve the latter, and it may well be wondered that she should have been content to ignore the progress of the Austrian armies on the other side of the Adriatic.

Such resolution as has been shown at Salonika is due to the joint war council of the British and French Governments. If the operations along the southern front are to be carried out successfully, the Italian Government must be represented in the council or special arrangements must be made to secure co-ordination for the military operations in the Near East. The troops of no less than five nations will be co-operating in this movement—British, French, Italian, Serbian, and Montenegrin. Others may join them later. It is inconceivable that a general advance should be ordered before all these forces have been brought under one Generalissimo. The main outlines of the campaign and the strength of the co-operating armies may be decided beforehand in general council, at which all the higher commands are represented; but if the maximum efficiency is to be obtained there must be no opportunity of divided counsels when once the advance has been launched. If the Allied Governments have any belief in their cause, and have undertaken the campaign in the Balkans with any conviction, they must realise the necessity for pushing on with the operations with the least possible delay. It has been suggested that the direction of the war in the Near and Middle East ought to be centralised in the hands of one man, who would make Egypt his headquarters. We are of opinion that the operations on the southern front will prove of sufficient magnitude and importance to occupy the whole attention of any Generalissimo. They will at the same time be bound up with a variety of intricate political questions, which, if the advance progresses, will have to be dealt with on the spot. Thus an Allied war council in the Near East becomes as essential as one in Paris. It cannot aspire to the distinction of the latter; but within certain restrictions it ought to enjoy similar freedom of action, in order that decisions may be reached and acted upon rapidly. The time, for instance, may come when Bulgaria may wish to open up negotiations with the Allies. It would suit the Central Powers to have these negotiations indefinitely protracted, while the Allied advance was delayed for the same period. But when such a stage is reached, it will be essential that there should be no check to the momentum then gained. Bulgaria's case will have to be settled beforehand, and at the first overtures she must know exactly the conditions she has to accept or refuse. It matters not that this stage may seem still a long way off. It can be brought appreciably nearer by a resolute policy which makes provision betimes for all eventualities and does not require military operations to be suspended for weeks or months while Cabinets wrangle or are lost in a maze of indecision.

RED CROSS WORK IN EGYPT.

We have received for publication the following letter from Egypt. Names are omitted.

—— Hotel,
Ramleh,
Alexandria,
— November, 1915.

My Dearest T——,

In my last letter I told you that when V—— left for the front I should try to get some work at one of the hospitals here, if only for a few hours a day.

Well, the inevitable has happened, for he left me a week ago. Parting from him was simply dreadful, and the fact of the air being heavy with farewells does not soften the blow one whit. The hotel is almost full of people, interesting and otherwise, but they only make me realize my loneliness the more. The eternal sunshine and blue sky seem almost aggressive at times, and I am oppressed by those "Twin Destinies of Fear and Hope."

That morning, after he had gone, I tried to read, but lacked the concentration. I then wandered into the music room. The piano before dusk is almost as bad as bridge in a country house before luncheon. I played, twice over, that delicious little "Elegy" by Mme. Skabo, with the soft pedal down. I had memorized it from a copy that a man lent me on the voyage out. Before I had finished I had decided to call at the Red Cross offices in the town that very afternoon and beg for some employment to keep me from fretting.

Meals are somewhat dull at present, as mother (under the sinister influence of an Anglo-Egyptian medico whom she met at Brighton two years ago) extracted a promise from me that I wouldn't touch hotel salad. Butter, unless from a known source, is also taboo, as well as both milk and water, unless boiled. In Egypt the deadly microbe stalks abroad, and when disinclined for terrestrial exercise, he boards a fly. I have written home for a dispensation as regards butter and water, at any rate, and if mother's conscience is as troublesome as mine, she will cable her reply.

Luncheon over, I walked to the tramway station. The service is good, and the line passes within a hundred yards of the hotel. I sat down in the corner of the tram nearest the door, and was lost in contemplation of a caricature of a horse which is an inartistic feature of a little framed advertisement of the Alexandria Races, when the conductor put his head inside the door. With one hand extended for my fare, his attention was momentarily distracted. Turning his head without corresponding movement of his body, he sounded an ear-piercing blast upon some instrument of torture carried between his clenched teeth. I almost jumped out of my skin! There came an echo from the recesses of a second-class vehicle which we were hauling, and then we rumbled on our way once more. Some time elapsed before I recovered my self-possession. Arrived at the terminus, I took a carriage and told the native to drive me to the Red Cross offices. He understood perfectly. It was more than half-an-hour's drive.

On sending in my card I was immediately ushered into the comfortably furnished office of the Deputy Commissioner. A very tall man, with a kindly face, rose to greet me. I told him of my errand, and he asked what I could do. At this stage I commenced to feel "As though he were a band of music and I a small, shy, garden party." His manner reassured me, however, and he proceeded to explain the scope of the work, which seemed to embrace almost every kind of labour that a woman is capable of. Eventually it was decided that I should undertake writing letters for those who were unable to write for themselves.

I was soon on my way back to Ramleh with a Red Cross brassard clutched tightly in my hand.

On the afternoon of the following day, clad in virginal white, with the brassard round my left arm, I made my way to the hospital and entered one of the largest wards. The sister-in-charge was most agreeable. Evidently voluntary workers are appreciated in that quarter, and also by the patients, who seemed delighted to have someone from the world without to talk to. I have seldom felt myself so popular. The difficulty is to break away from them without hurting their feelings. I am awestruck by the overwhelming evidence of self-sacrifice represented by these suffering yet uncomplaining heroes.

I remember taking leave of a French priest who was proceeding to some far inland mission station in China. "When do you expect to return to France?" I asked. "Never, madame," was the laconic reply. That was an instance of individual self-sacrifice and devotion, but here, in this hospital, is self-sacrifice in a collective form.

Prompted, doubtless, by feelings on the subject similar to my own, almost every Englishwoman in Alexandria, including those whose invariable custom it is to spend the majority of the summer months in Europe or England, has worked, and worked hard, throughout the long hot weather.

Well, on that, my first afternoon, having written an epistle for an Aberdonian to "My youngest brother Alec" ("Somewhere in France"), and another to "Mother who is nigh on sixty year old and gets up at five o'clock every morning of her life" (at Skinner's Lane, Oldham), I spent my last twenty minutes with an Irish boy from Connemara, who was very busily demolishing a jelly which was, he told me, one of the many good things provided by the Red Cross kitchen in the hospital grounds. It wasn't at all a question of writing a letter for him. He talked and I listened. I was reminded of an occasion on which an Irishman read aloud for me Synge's "Playboy of the Western World." I ultimately beat a retreat in the face of another Red Cross worker, who appeared with tea and bread and jam.

Before leaving the hospital enclosure I lingered to listen to a vocal and instrumental concert, given by some Alexandria amateurs, assisted by members of the hospital staff. Three or four hundred patients had foregathered in a semi-circle, and formed an audience that must have gladdened the hearts of the performers. All the local talent has been recruited for these concert parties, which make a round of the convalescent homes and hospitals.

That night I went to bed in a much happier frame of mind.

. . . . . .

I have breakfast served in my room, from which I can catch just a glimpse of the sea. After breakfast I sit in my dressing gown, smoke a cigarette (or two), and read the local paper, in whose columns large blank gaps appear from time to time, revealing how the Censor has baulked the poor editor of another journalistic triumph.

I must tell you that one afternoon before V—— left I was invited by a wounded friend of his to take tea at one of the officers' convalescent homes. It is in a large furnished house, whose German owner never returned from Europe after the outbreak of war. When the Gallipoli campaign commenced the military authorities commandeered the place. The Syrian community, headed by a Pasha who is a well-known and popular sportsman, generously offered to provide all the funds for maintaining the establishment. The internal arrangements are in charge of a Sister, whose choice reflects great credit upon the committee. "Everybody thinks her a perfect dear," so a subaltern informed me.

We had a very cheery tea party, and I saw and heard enough to convince me that a convalescent officer could not be more comfortably looked after anywhere. The secretarial work is undertaken by one of the ladies resident in the neighbourhood. The Red Cross Convalescent Homes are run by a committee of ladies and gentlemen, with one of the high officials, the Egyptian Postmaster-General, I believe, as chairman. Someone at the hotel pointed him out to me the other day in a motor. Just before we arrived in Egypt, when the Red Cross funds were running low, this gentleman, in another capacity—that of chairman of "Our Day" appeal—collected more than £17,000 from Alexandria citizens and visitors within a week. What do you think of that?

The Sultan, whom I am disappointed not to have seen, has helped the cause immensely, not only with financial assistance, but also by the great personal interest he has taken in it. People say that he is as generous as his father, Ismail Pasha, of whom your father so often talked.

Yesterday I had to go into the town, and drove down to the docks to see about the despatch of some stores for V——. I thought it best to interview the Transport Officer myself. Returning along the quays, I saw several little huts, whence, under the auspices of the Red Cross, the Ramleh ladies dispense warm drinks and food to the

soldiers as they embark on the transports, at all hours of the night and day.

I hear that the "Sunbeam," R.Y.S., with its owner aboard, is in harbour, and has been here most of the summer, taking convalescents for sea trips and landing its guests for work ashore.

You will no doubt have read in the home papers that a large contingent of V.A.D. nurses arrived in Alexandria some time ago for work in the hospitals. Since their arrival, the Alexandria ladies, who were assisting in the wards and kitchens, have been relieved of their duties, which had taxed their powers of endurance to the full.

Well, I had a few lines from Mrs. L—— a fortnight ago, telling me that Lucy had come out with the contingent, and so I called at the hotel in town where they had been housed. The place was as busy as a hive. Whilst waiting in the hall for Lucy I amused myself by observing the only man on the horizon, who was sitting near me, also waiting. The poor fellow looked unaccustomed to so much female society, and reminded me of an episode in one of Byron's poems. Lucy was awfully glad to see me, and we arranged to meet again. She tells me, however, that a cousin whom she has met, and who is in one of the regiments here, monopolizes most of her spare time, so that I cannot hope to enjoy very much of it. She says many of the girls have relatives or friends among the military—which is very jolly for both parties.

Before ending this long letter I must just tell you of a little incident connected with my own particular job. One afternoon I approached the bedside of a gnarled-looking warrior of middle age. My timid inquiry as to whether he had written home lately met with an unequivocal negative. He was a married man with two children, and it was his second visit to hospital, as he had been wounded earlier in the campaign. He had not, however, written home for eight months, and was by no means sure that his wife knew in what part of the world he was. I asked the reason of his silence, drawing a harrowing verbal picture of the misery it must have wrought in the family circle. He replied that he "Didn't hold with flashing letters about!" After much parley, he promised to write there and then, and have the letter ready for me to post before I left the hospital. Returning in half-an-hour's time, I found the meagre result of my eloquence in the shape of a printed field postcard, which the reprobate handed me with a mischievous twinkle in his grey eyes.

My excuse for this long letter is that you, as a war worker in England, are sure to be interested in the Red Cross effort out here.

Write soon to your devoted, ——.

THE PRESS ON THE NEAR EAST.

German Intrigue in Egypt.

Under the above heading a Delta correspondent of the *Morning Post* (January 10) gives some interesting sidelights on the tireless methods of German agents in Egypt. This correspondent points out that when the war began it was regarded by the fellah as merely a "struggle for power between nations of unbelievers," and he really took little interest in the whole thing. The Turkish threat to the Canal brought things home to him a little, but with the defeat of the invasion his interest again lagged:—

Since the Serbian campaign began, however, a new effort seems to have been made to stir up the fellah. It has been represented to him that all Germany has now become Moslem, and that the Kaiser is not only a true Moslem, but has actually been to Mecca on a pilgrimage! He is commonly called, in the villages of Egypt, Hadj William Mohammed, and one sometimes hears him styled the Mahdi. The idea seems to be to incite the fellah with a vision of a new Islam. All this may seem absurd enough to us, but to the fellah, with his limited knowledge of the world, it is readily believed. The pro-German party is thus trying to make capital out of the faith of the fellah.

So far the writer considers that the evil seed has fallen upon barren soil:—

One fellah put the result aptly to the writer recently when he said: "If we could rule this land without the British we would do so, but we accept the facts as they are, and, therefore, we remain loyal to England and will continue to do so as long as they remain in the country."

He thinks that we need have no fear of trouble from the fellah in any circumstances as long as we keep the enemy out of the country.

Serbia's Soldier King.

We take the following extracts from an article on King Peter of Serbia, by Mr. Joseph Reinach, which appeared in a recent number of the *Morning Post*. Mr. Reinach's acquaintanceship with King Peter dates from the year 1880, and he devotes the beginning of his article mainly to a biographical statement. Coming to the time of King Peter's accession to the throne of Serbia, he continues:—

During his reign King Peter has proved that he is possessed of remarkable political qualities. He is primarily a soldier, and that is the impression he left on all his friends in Paris. He took pleasure in talking of his campaigns in 1870 and 1875, of the war in France and the revolt of Herzegovina, and was passionately interested in all military questions. He used to be envied for his Puebla promotion by his comrades, whom he saw rising one after another to the higher ranks of the Army.

We quote below from Mr. Reinach's reference to the assassination of Alexander and Draga and King Peter's attitude towards this much-discussed event:—

But his whole loyalty as a soldier and as an honourable man would have been up in revolt had he been asked to take a share in plots having as their object the assassination of a poor imbecile King and his wife.

From my personal investigations, I, at any rate, am convinced that the conspirators invaded the palace with the single idea of forcing Alexander to abdicate, or, if he refused, of expelling him beyond the Save. They wandered about for more than an hour in the royal palace, which was in absolute darkness owing to the destruction of the electric installation that had been blown up by a dynamite cartridge, when they discovered Alexander and Draga hidden. They heard the shots exchanged in the streets of Belgrade between their partisans and the soldiers who remained loyal to the dynasty. They took fright, and slew the two hapless rulers and threw their corpses, which were still warm, into the palace courtyard.

The abominable murder marred the restoration of the Karageorgovitch dynasty with a great stain of blood. King Peter suffered for a long time from the horror that the crime provoked in the world, and that he himself felt at it, but it is very questionable whether he could have refused the throne and left Serbia a prey to anarchy and shame. For some time he was the prisoner of the political chiefs who had carried out the coup. As soon as he felt strong enough to impose his will he dismissed them from power.

It is not generally known in England that King Peter refused to live in the palace of his predecessors, but caused a new one to be built for him at Belgrade. Mr. Reinach goes on to describe his Majesty's unremitting interest in the military affairs of his nation:—

I can say, too, without indiscretion that since 1909 the King was keenly alive to the gravity of the crisis threatening in the Balkan peninsula. He had drawn closer to Russia, where he had many friends, but he would have liked to establish good relations with Austria. He only asked that Austria should respect the independence of Serbia, and that she should not treat the Serbs in the dualist Monarchy with cruel sternness. But Austria at the time had sworn the destruction of Serbia, which was barring her road to Salonika.

The following striking passages refer to King Peter of the present day:—

Weakened by illness and old age, King Peter, some months before the outbreak of war, had handed over the government of Serbia to his youngest son. But neither sickness nor old age prevented him from again becoming a soldier on the first day of the war. It is as a soldier, going into the trenches and sharing all the trials of his armies, that he has lived through the war in good and evil fortune. . . . . He was one of the last to leave successively all of the towns of Serbia. He wandered seeking death over the twice historic battlefields of Kossovo. He accompanied the retreat of his armies with his indomitable Minister Pashitch in the desolate country and in the forests of Schunadia, having often only a morsel of bread to satisfy his hunger, lying on the naked ground during the freezing nights of pitiless winter.

He is a more tragic King Lear than the Lear of legend. But all his daughters have remained faithful to him, and all the women of Serbia have been to him as Cordelia. He might have gone to recuperate his worn-out strength in the great Caserta Palace that the King of Italy placed at his disposal. But he would have been too far from his armies that were beaten, but not reduced, and that are now being reconstituted. So he came to settle at Salonika by the side of the French and English generals, who did not have the good fortune to arrive in time to help the Serbs and prevent their defeat, but who are preparing the revenge.

All heads bow before him to-day, ours with respect, those of the Greeks with pain, and those of his very enemies with shame.

Famine at Monastir.

The correspondent of the *Morning Post*, telegraphing from Salonika recently, includes the following reference to the position of affairs at Monastir:—

The Austrians at Monastir sent secret agents to Koritza and Florina to try and buy or induce certain refugees, by offers of a sum of 100 fr. (£4) each and free passports, to return and settle down in their homes. A number of men, sharper than the others, accepted the money and the passports and then returned to receive the congratulations of their envious and sorrowful comrades who had missed such a unique opportunity of despoiling the enemy.

The famine at Monastir is becoming intenser from day to day. No data have yet been received as to the mortality from this cause among the civilian population, but the Bulgarian troops,

Digitized by Google

about 5,000 of whom are still at Monastir, are famished. Their daily ration of bread has now been reduced to one loaf for five men. Some few of them have deserted during the last fortnight and have surrendered to the Greek authorities for the sake of appeasing their hunger. The Bulgarians at Monastir are sick of the Austro-Germans, whom they hate because of their domineering ways and because the latter are better fed, each of them getting a whole loaf daily.

The correspondent goes on to say that "Even the Bulgarian inhabitants of Monastir Province are now bewailing the arrival of their 'liberators,' who they say have brought them famine instead of plenty, and that they are eating up the food of the starving people."

Victory.

M. Take Jonescu, writing in a recent issue of the *Matin*, makes the following remarkable forecast, which we quote from the *Morning Post* (January 10):—

I regard the future with absolute confidence, though the first years that will follow a peace dictated by the Allies in 1916 or 1917 will be sad and difficult ones. I foresee with certainty the victory of the Allies, and France taking again the first place in Europe, German reaction definitely crushed, a fresh era of true national sovereignty in all countries, and the principle of nationalities, which is the prolongation of the theory of national sovereignty in international relations, triumphing over the ruins of Austria and Turkey, whose existence dishonours humanity.

I see disarmament and a long and fruitful peace becoming a reality instead of a Utopia. I see also my country paying the debt of blood that it owes to itself, to our brothers in Hungary, and to the Allied nations that are struggling for our independence and our liberty.

The End in Gallipoli.

We quote below extracts from leading articles on the evacuation of Gallipoli which appeared in various papers on the 10th inst. *The Times* echoes the tribute paid by Sir Charles Monro to Generals Birdwood and Davies and to Admiral de Robeck, and thinks that General Monro's "countrymen will not be slow to assign much of the credit for this remarkable feat to the General in supreme command."

The article concludes:—

The effect of the evacuation upon the general military position can be only for good. The characteristic Turkish report, which says we were driven out as the result of a "violent battle" and with "heavy losses," makes one statement which is true. "Not a single soldier," it announces, "remained behind." That is just the gratifying feature of the operation. These splendid troops, who have added to the proudest amongst the glories of our Army, and who have reaped for the Dominions their first laurels in a European war, are now all available for service elsewhere. It cannot be service more splendid than that they have done. We confidently expect that it will bring the victories they so richly deserved, but which Gallipoli denied them.

The *Manchester Guardian* concludes its leading article in the following words:—

We cannot record the final withdrawal from Gallipoli without sorrow that so much heroism and sacrifice of noble life should have gone unrewarded by victory, but the sorrow is mingled with pride in all those who fell or suffered there, and now we have the relief of knowing that the withdrawal, if it had to be, has at least been carried through without the heavy loss which had been feared.

The *Daily Chronicle* says:—

The Allies have no reason to despair of the larger issue. Once our attempt to force Constantinople by that entrance had failed, it would have been folly to continue useless sacrifices for the sake of supposed prestige. Governments need to be courageous in withdrawing as well as in advancing; and this withdrawal is to be praised, not cavilled at. We do not believe that it will seriously affect our prestige in the East. It might have done so had it been carried out before the German diversion to Serbia produced our own diversion to Salonica. But the East knows that we have a long arm; and as long as it sees that we can strike, it will not be over-hasty to criticise the direction which we prefer to give to our blows. It has known pretty well for a long time past that in Gallipoli the dice were loaded in the Turks' favour; and it will put a pretty correct value upon a bloodless withdrawal, which enables us to fight at better advantage elsewhere.

The *Standard* expresses profound relief at the successful and bloodless evacuation:—

Future historians will be better able to judge how far the course of events elsewhere was affected by our ability to hold up during a lengthy period so much of the strength of Germany's Turkish ally. But, in any case, regrets would avail nothing. The road to Constantinople, for the time being, does not lie through the Dardanelles. To many others than the Turks the evacuation of Helles will be a surprise. By the contraction of the front after the first operation, Mr. Asquith remarked, operations at other points of the line would be more effectively carried out; and it was doubtless assumed generally that those points were situated in the Gallipoli peninsula. Their real location has yet to be revealed.

All these papers give unqualified praise to the heroism of our soldiers and the quality of our seamen in this sphere of operation.

Submarines in the Mediterranean.

In a leading article on submarines in the Mediterranean, inspired by the recent loss of the Persia, the *Manchester Guardian* points out that it is futile any longer to touch upon the wickedness of German submarine acts—German contempt for humanity having been established since the earliest days of the war. The paper fears that the most likely source of supply to enemy submarines is to be found in one of the Greek islands, and continues:—

It is reasonable to ask that Greece should take all possible precautions against her territory being used as a basis of supply against British shipping, and it is the more necessary that we should make this request because we ourselves propose to use Greek territory as a basis against the Central Powers. Because circumstances have led us to Salonika it must not be supposed that there is a general licence to use Greek territory as a basis of operations. Salonika is a solitary exception to Greek neutrality, due to circumstances which create no sort of presumption with regard to other portions of Greek territory, and certainly do not suspend the duty that is upon the Greek Government to see that its territory is not put to non-neutral uses.

It is, of course, admitted that so far Greek complicity in the supply of stores and fuel to enemy submarines is only conjecture.

The Menace in Egypt.

In our last number we published under the above heading quotations from an article by Mr. Sidney Low in the *Sunday Times* (January 2). The following extracts are from a reply to this article by "A Correspondent," which appeared in the last number of the same paper (January 9). This writer begins by asserting that there is an answer to Mr. Low's article which may be summed up in one word—"Japan." He continues:—

I do not wish to take too seriously the menace to Egypt and to the Suez Canal. It is a "large order," colloquially speaking. Germany and Turkey are handicapped, fortunately for us, by having no merchant shipping available, and no Fleet. The French are already established close to the Gulf of Adalia, ready to thrust at the long line of land communications which would be necessary for the enemy to reach Egypt. We ourselves have large forces in Egypt and ample time for preparation. The enemy's men and money are not inexhaustible.

Above all, there is the possibility of the whole thing being a bluff. It was a bluff when Germany purported to threaten Kieff and Odessa when her real intention was Serbia. Similarly the talk about taking Egypt may be a blind to hide some other purpose.

Assuming Mr. Low's contention that the threat is a real one, however, the writer turns to the argument on which his article is based—Japan.

He points out that if the Suez Canal is our highway to the East, it is also Japan's highway to the West, and although it does not lead that country to any possession of her own it is still of vital importance to her. We take the following extract from the concluding portion of his article:—

Commercially speaking, the interest for Japan is as great as for us. If the Canal were unfortunately to be destroyed by the enemy, or to be seized and held in enemy hands, Japan would be seriously cut off from the West. The Panama Canal is blocked at the moment by a land-slide, and offers many probabilities of being blocked again. The route round the Cape is costly in time and in money. . . . Therefore, Japan has every motive for helping us to save the Canal and to keep Germany from getting astride of the trade route. Moreover, Japan has just had an object lesson in the sinking of two Japanese steamers in the Mediterranean.

I quite agree that it has been better, and is better, for us to carry on a European war without invoking the aid of Japan. But the taking of Egypt would carry the war into Asia, as Germany and her Allies would have to march through a portion of Asia, and Asia is Japan's sphere where Europe is not. . . .

The Japanese fought side by side with us in expelling the Germans from China. There is no reason why they should not protect their own interests by doing the same in Egypt. Their appearance on the spot would be decisive. If they are to come they must mobilise soon, and commence the work of transport as early as possible. Their co-operation would remove any possible danger of German success, and the mere knowledge that they were going to co-operate would probably ensure the complete abandonment by the Germans of their scheme.

Articles to Note.

"What I Saw in Serbia," by Phyllis Shakespear (illustrated), in the *Lady's Pictorial* (January 8).

"Climate and Architecture," in the *Builder* (January 7).

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Allies in Greece.

Jan. 6.

Sir E. GREY, replying to a question put by Sir E. CORNWALL, said that he did not think there was any reason to regard the diplomatic situation of the Allies in Greece as other than satisfactory.

Colonel Napier's Capture.

Mr. S. SAMUEL asked the Secretary for Foreign Affairs whether it was a breach of neutrality for the enemy to seize two British subjects on a Greek steamer on the high seas; and, if so, whether the Greek Government made any protest to the Austrian or German Governments when they seized two British subjects.

Sir E. GREY: I presume the hon. member is referring to the removal of Colonel Napier and Captain Stanley Wilson, M.P., from a Greek ship by an enemy submarine on the high seas. This action was not contrary to the generally accepted view of international law.

Suez Canal Pilots.

Mr. PETO asked the President of the Board of Trade whether persons of Austrian or other alien enemy nationalities were employed as pilots on the Suez Canal; if so, whether he would take steps to see that this employment ceased; and whether he was aware of the number of senior officers of the British merchant service at present without employment who were qualified to undertake these duties now performed by alien enemies.

Captain PRETYMAN said the Board of Trade had no control over the employment of pilots on the Suez Canal.

The Suvla Bay Landing.

Mr. TENNANT informed Mr. LUNDEN that while the circumstances of the landing at Suvla Bay had been carefully considered at the War Office, no formal inquiry had been made.

The Serbian Army.

Mr. RONALD M'NEILL asked the Secretary for Foreign Affairs whether a considerable force of the Serbian Army were at Skutari in a condition of distress after suffering great privations in retreat through the mountains; and whether, in view of the obligations of the Allies, and especially of England, to Serbia, his Majesty's Government would offer to the Serbian Army some suitable locality in the Mediterranean area where they might rest and recuperate, and would, further, offer to transport them to such locality and provide them there with food and other necessaries as the guests of the British nation.

Sir E. GREY: There is a considerable Serbian force at Skutari. There was a period when this force was in acute distress, but I am glad to say that there has been considerable improvement, and that supplies are now reaching them. The Allies have already considered the problem raised in the latter part of the question, but I cannot, for obvious reasons, make any statement as to the result of their deliberations or the destination of Serbian forces for whom special provision can be made. His Majesty's Government have given, and continue to give, all the assistance in their power.

Jan. 10.

Sir E. CORNWALL asked whether the Secretary for Foreign Affairs could state what arrangements, economic and material, had been made by the Entente Powers for the maintenance in the field of the reconstituted Serbian Army; where the Serbian Government had established its headquarters; and whether adequate provision now exists for its organisation and operations.

Lord ROBERT CECIL: I regret I cannot make any statement on military matters of this kind. It is obvious that information of this sort would be very useful to the enemy, and I deprecate it being pressed for in this House in a way that must make it known to him.

Sir I. Hamilton's Report.

Mr. ASQUITH, replying to a question by Sir H. DALZIEL, as to granting an opportunity to discuss Sir Ian Hamilton's report in reference to the Suvla Bay operations, said: No, Sir. I think it would not be desirable to discuss Sir Ian Hamilton's report at the present time.

Albania and Montenegro.

Sir E. CORNWALL having asked for information regarding the present position in Albania and in Montenegro, and the attitude of those countries towards the Allies and the War, Lord ROBERT CECIL replied that it was impossible to speak of Albania as an entity at the present moment. In the central area, over which Essad Pasha's authority extended, the relations between the population and the Serbian troops had been friendly, and Essad Pasha had rendered valuable assistance to them. The northern tribes, among whom the enemy had conducted considerable propaganda, had shown hostility towards the Serbians and Montenegrins, but none towards this country. The Government in Montenegro had changed within the last few days, but he had no reason to suppose that this implied a change in policy or in the sentiments of the Montenegrin people in regard to the operations in the Balkans.

A Turkish Atrocity.

Major CHAPPLE asked the Secretary of State for Foreign Affairs whether the Turkish military authorities early in 1915 sent to Gallipoli fifty British and French non-combatants for the purpose of exposing them to the Allies' fire; whether he informed the Turkish Government that, if this were done, Enver Pasha, his Highness Said Halim Pasha, and the Ottoman authorities would be held personally responsible for their lives; whether, as a result of this announcement the prisoners were immediately released; and whether he would, in conjunction with our Allies, make an analogous announcement with regard to all future enemy atrocities.

Lord ROBERT CECIL: The answer to the first two parts of the question is in the affirmative. As regards the third part, any explanation of the subsequent release of these British subjects would be incomplete which did not take into account the efforts made by Mr. Morgenthau, the United States Ambassador at Constantinople, and the members of his staff, for the protection of those whose interests had been committed to his charge. As regards the last part, I am not in a position to make any general statement.

Australia and Gallipoli.

Mr. KING asked the Prime Minister whether a report on the Gallipoli expedition had been specially prepared for the Australian Government; if so, whether it had been communicated to the British Government; and whether, if and when such a report was received, it would be communicated to the House?

Mr. ASQUITH: I do not know to what the hon. member refers. I have made inquiries, and I cannot find that anything is known of any official report.

The Gallipoli Withdrawal.

Referring to the successful withdrawal from Gallipoli, Mr. ASQUITH said:—The House and country will have learnt with extreme gratification of the successful retirement of the forces at Cape Helles, without the loss of a single life. Eleven guns only were left behind, of which ten were worn-out 15-pounders, and before being abandoned all were rendered unfit for further service. Such of the stores and reserve ammunition as could not be removed were set on fire at the last moment; and the whole retirement was conducted with an absolute minimum of loss. This operation, taken in conjunction with the earlier retirement from Suvla and Anzac, is, I believe, without parallel in military or naval history. That it should have been carried through with no appreciable loss, in view of the vast amount of *personnel* and *matériel* involved, is an achievement of which all concerned, commanding officers, officers, and men in both Services, may well be proud. It deserves, and I am sure will receive, the profound gratitude of the King and the country, and will take an imperishable place in our national history. His Majesty will be advised that General Sir Charles Monro, Admirals de Robeck and Wemyss, Lieutenant-Generals Birdwood and Davies, and other officers who worked under them will receive special recognition for their services.

Success in Mesopotamia.

Replying to Sir E. CORNWALL, who asked whether any information was available concerning recent operations in Mesopotamia, Mr. CHAMBERLAIN said:—On the 6th inst. General Aylmer left Ali Gherbi with the troops marching to the relief of Kut-el-Amarah. On the same day General Townshend at Kut reported that on the previous night the enemy had opened a heavy fire on his north-west front and on the village opposite Kut, but that they made no attempt to attack him. On the night of the 7th General Aylmer reported contact with the enemy and heavy fighting on both banks of the Tigris two or three miles below Sheikh Saad. On the right bank General Kemball's column had carried the enemy's position, taking two guns and 700 prisoners, and was then entrenching in a position close to Sheikh Saad. Meanwhile the main attack on the left bank had been retarded by outflanking movements of the enemy. General Aylmer adds that he was apparently opposed by three Turkish divisions. On the evening of the 8th General Aylmer reported that owing to the fatigue of the troops he was unable to make any progress. On the 9th General Aylmer reported "the enemy are in retreat and I am pursuing, but heavy rain hinders the pursuit." From a later telegram it appears that the enemy had reached Orah in his retirement. I regret to add that General Nixon has been compelled by ill-health to relinquish his command and return home. Lieutenant-General Sir Percy Lake, at present Chief of the General Staff in India, has been appointed to succeed him.

Troops from the Dardanelles.

In a written reply, Mr. TENNANT informed Mr. GRANT that leave to visit this country could only be given to the soldiers who had been engaged in operations in the Dardanelles by the General Officer Commanding the Forces in the Mediterranean, and must obviously depend upon the exigencies of the military situation. The troops removed from the Gallipoli Peninsula would be given rest, but to bring them to this country on leave would obviously be a large, difficult, and costly undertaking.

The Suvla Bay Arrangements.

Jan. 11.

Sir FRANCIS EDWARDS asked whether the Under-Secretary of State for War could state the number of men who had lost their lives from exposure in the Gallipoli Peninsula in the three weeks preceding the evacuation of the Suvla Bay position, and

THE COMMERCIAL INTELLIGENCE OFFICE OF EGYPT

the number who had been admitted to hospital suffering from frostbite and other results of inadequate arrangements and insufficient shelter. He also wished to know whether it was proposed to hold any inquiry into the alleged absence of all preparation to meet the conditions of winter warfare in that region.

Mr. TENNANT: My hon. friend's inquiry begs the question whether the arrangements and shelter provided were or were not insufficient. In reply to his inquiry regarding the three weeks preceding the evacuation of the Suvla Bay position, I would inform him that the information asked for cannot be given without reference to the Mediterranean Expeditionary Force, and, in view of the difficult task upon which the military authorities there have been and are still engaged I have not thought it right to ask for a special return. It is not proposed to hold an inquiry as suggested in the question.

Italy and the Ægean Islands.

Sir E. GREY, replying to a question put by Mr. KING, said that the same islands in the Ægean as were in Italian occupation before the outbreak of war were still occupied by Italy. He could not make any statement as to communications that might have passed between any of the Allies respecting future territorial arrangements.

The Relief of Kut-el-Amarah.

Mr. CHAMBERLAIN, replying to Sir E. CORNWALL, made the following statement regarding the Mesopotamian campaign: Owing to weather conditions and the necessity of evacuating all wounded by river (which presents some difficulty), General Aylmer's force was still halted on the 10th in the neighbourhood of Sheikh Saad. The enemy were located by our cavalry in the Es Sinn position, six miles east of Kut. This is the position from which the Turks were driven in September by General Townshend in the battle of Kut-el-Amarah.

Persian Looters.

Sir E. CORNWALL asked the Secretary for India whether he could give any details of the recent Persian raid into Baluchistan, and whether the country was now quiet.

Mr. CHAMBERLAIN: Perhaps the hon. member refers to a rather alarming report quoted from a Russian newspaper. In fact, there has been no Persian raid into Baluchistan recently. Towards the end of September last a Persian chief, Bahram Khan, of Baranzai, with 3,000 Persian tribesmen, entered Mekran and attacked the Khan of Kolat's forts at Mand and Tump, which were held by the Nizam of Mekran with local forces and a small detachment of the Mekran levy corps. These places are respectively about 10 miles and 30 miles within the Mekran border, and more than 300 miles outside the frontier of British India. Failing to take either, Bahram Khan withdrew to the south, and then, on the reported approach of reinforcements, into Persian territory, taking much loot with him. The tribesmen were unusually well armed—a fact attributable to the presence of Germans with considerable supplies of arms at Karman. Since September there have been no further inroads.

Gallipoli Reinforcements. Jan. 12.

Mr. TENNANT, replying to Mr. G. TERRELL, who asked when the Government decided to give Sir Ian Hamilton the reinforcements asked for on May 10 and 17, said he had not yet been able to get the date when it was decided to send the reinforcements and when they were despatched to Gallipoli.

Aliens on the Suez Canal.

Lord ROBERT CECIL informed Mr. PETO that the question of employment as pilots on the Suez Canal of persons of Austrian or other enemy nationality was inquired into on the outbreak of war. He did not think any such persons were now employed, but he would make inquiries.

Dardanelles Dispatches.

Mr. ASQUITH informed Sir E. CORNWALL that dispatches covering the operations in Gallipoli up to the time of the withdrawal would be published in due course.

GREECE AND THE ALLIES' DIPLOMACY.

Writing to the *Morning Post* on the subject of "Greece and the Entente," Mr. E. B. Ellice-Clark suggests that the criticism showered upon Greek diplomacy and the Greek Government is not wholly justified, and that it is probably "based upon erroneous conceptions arising out of the almost complete ignorance of the public, whose views are formed on what little information is permitted to appear in the Press both here and in France." The Greek side of the question, he declares, is "that the present state of affairs is due entirely to the inefficient, if not stupid, diplomacy of the Allies and the obstinacy of those in authority in England, who insisted in prosecuting the Gallipoli adventure in spite of the warnings of the Greek Staff. The latter were well aware in the early part of 1915 that a secret arrangement existed between the Turks and the Bulgarians, a fact which was freely discussed amongst the Greek community in London, though how far Germany had committed itself to Bulgaria was not so well known here; but that it was well understood in Athens is clear from the fact that owing to Bulgaria's military preparations, Greece and Serbia, as early as February last, approached the Allies with the definite proposal that they, having agreed between themselves, should each send a force, consisting of 300,000 men in all, to invade Bulgaria. This combined attack was never proceeded with owing to the fact that no reply was ever received from the Allies; the proposal was again made by the two Balkan States in April, and again met with no encouragement.

"The next Greek point is that when the Allied diplomacy became alarmed at the attitude of Bulgaria it coquetted with that country, and finally, after much procrastination, made definite offers of territory at the expense of Greece and Serbia. The cession of territory, the richest part of Greece, so recently won at great cost, would have been hard to bear even had it been 'compensated' for in other directions, but nothing would compensate the Greek nation for barring the road to Constantinople, the possession of which is the dream of every true Hellene.

"The final Greek contention is that the King offered to join the Allied forces for an attack on Constantinople from the north-west, but would not listen for a moment to joining in an expedition to Gallipoli, as the Higher Staff had long formed the opinion that such a venture must end in failure. This view was, to the writer's knowledge, fully shared by leading Greeks in London, some of whom knew the country and had friends who lived there.

"When the history of these offers on the part of the King of the Hellenes comes to be more widely known, it is not unreasonable to suppose that the opinion will be formed that Entente diplomacy was much more to blame than the Greek monarch, and that had the advice of the Greek Staff not been ignored the lamentable expedition to Gallipoli would never have been undertaken."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The letter from Alexandria, which we publish on another page, is written in a most optimistic vein. Cotton and cotton-seed prices are all that can be desired, and there is no tendency towards a decline. Imports are much lower than exports, thus leaving a trade balance in favour of Egypt; company results, with the exception of land companies, are showing a marked improvement, and though State revenues show a decline, this is due rather to decreased imports than to the results of direct taxation. The fellah is reaping a golden harvest, and so are local traders, who are thriving on Tommy Atkins as they never did on Cook's shoals of tourists. This is all most welcome, the more so considering that Egypt is no longer a foreign country (though, for some unaccountable reason, the Foreign Office is still arbiter of its destinies, the Capitulations have not been abolished, and the Mixed Courts continue at their leisure), and that it is now an integral part of our Empire. It behoves us in future to remember this. So far, and speaking casually of people whom I chance to meet, the inclination is still to regard Egypt as a "foreign" country. To such an extent is this true that in a recent pamphlet, issued by no mean association, our High Commissioner in Cairo was called the British Ambassador! Decidedly, we must mend our ways, and regard Egypt as something more than a foreign country. Her interests are our interests, and if, after this war, we really intend promoting "Trade within the Empire," let us remember Egypt, the nucleus of our great "Empire of the Nile."

***

These remarks lead back to our Alexandria Correspondent's letter. He touches lightly on two subjects which might well be included in the "Trade Within the Empire" movement, namely, the cultivation of Egyptian rice and the Egyptian cigarette industry. Egypt, he writes, grows the best rice in the world, and England—*ergo*, the British Empire—does not know it. Here, then, is a chance for the Empire to buy up Egypt's rice, giving her in exchange commodities which she does not produce Incidentally I draw my readers' attention to the report—given elsewhere—on rice samples issued by the Egyptian Ministry of Agriculture.

***

Regarding the cigarette industry, I have already written frequently and at some length about it. An industry employing 20,000 workpeople and represented by a capital of £12,000,000 should not be inordinately penalised. Tobacco re-exported should be taken out of bond exactly as it is in this country. To penalise it by reducing the drawback cannot be recommended. Temporarily it may have the effect of bringing in greater revenues, but in the long run it tends to reduce the industry, and with it the quantity of tobacco imported, each pound of which pays an *ad valorem* tax. The loss to the country of a flourishing industry, said loss being promoted by fiscal covetousness—*vide* the fable of the hen and the golden egg—would mean a serious reduction in State revenues, and should be prevented if possible. Doubtless the attention of the authorities has already been drawn to this matter, and better days are in store for the greatest, if not the only appreciable, Egyptian industry. Besides, it is now an Imperial industry, a unit in the great industries of our Empire. Here, again, we can in future increase our purchases of Egyptian cigarettes, in exchange for articles produced or grown elsewhere.

***

It will, perhaps, be argued that I need not insist here on "Trade within the Empire"; that it will follow in due course, just as day follows night. Perhaps. But, from a quotation (reproduced elsewhere) from the *Egyptian Gazette*, there is no reason to suppose that, after the war, Germany and Austria will not resume their old trade rôle in the Valley of the Nile. Emphatically, this must not be allowed. Let Germany and Austria supply themselves with each other's cheap wares—Germany exchanging penny tin-trumpets for Austria's cotton socks—but let us do our utmost to keep those trumpets and socks from flooding the Imperial (including, of course, the Egyptian) market. For behind each trumpet there blows a German political agent, and in each pair of socks there walks an Austrian provocateur! I cannot insist on this too frequently, and any peace which does not satisfactorily exclude Germany from trading with our Empire is a peace unworthy of the heroism of Britain's sons who have fought, let us hope not in vain, for the Empire. Better another two years of war now than a repetition of the past.

***

If the Egyptian cigarette industry, which, apparently, it would take little to rehabilitate, is in a bad way, how about the cultivation of tobacco in that peculiarly administered island known by the name of Cyprus? The correspondent whose letter is published elsewhere, and who ought to be in a position to know something about the subject, is another optimist with whom State exigencies have not dealt kindly. He believes in the possibilities of tobacco cultivation in Cyprus because he has tried it and results have been satisfactory. Nevertheless, he seems to have come up against vested interests with unfortunate results. Did the Government of the island help him in any way to assert himself, thus creating a new source of revenue for the State and a new source of wealth for the people? Apparently not. Nevertheless, here we have two members of the Empire, the one, Cyprus, able to grow tobacco of a seemingly good quality but having no cigarette manufacturing industry, and the other, Egypt, growing no "weed," but possessing an important tobacco industry. The deduction is obvious: Let the one help to feed the other, beginning on a small but on an ever-increasing scale. It remains, of course, to be proven that Cyprus tobacco is, or will be, acceptable to the Egyptian manufacturer, but unless it is given a fair trial, and the cultivation supported by Government, I fail to see how the proof can be forthcoming. The fact that the small quantities held in stock in Cyprus were bought at a good price by a Turkish tobacco expert is, I think, a good recommendation.

***

The Egyptian Ministry of Justice has introduced certain amendments to the Five Feddan Law by virtue of which the mortgage of any land mortgaged previous to the introduction of the law, and the renewal of the mortgage of which was allowed under the law until January 4, 1918, may now be extended for a further period of five years from the date on which the original mortgage period expired, to enable the proprietors of such land to pay off their debts. This amendment, says the *Egyptian Gazette*, has been sent for the approval of the Mixed Court of Appeal so as to make it applicable to Europeans also.

***

The *Chamber of Commerce Journal* for January contains the annual trade review dealing with the future. Everything, it says, naturally depends upon the end of the war and the conditions of peace, but victory must sooner or later rest with the Entente Powers. A well-known American writer recently pointed out that, even assuming Germany everywhere successful on land, she would still be beaten, because no German vessel could sail the seas without the consent of the British and Allied Fleets. England has worked day and night to furnish the Allies with equipment and supplies, while the part she has played in connection with finance will probably surprise many when the full history of the war is written. At present it is, of course, obvious that our manufacturers, with depleted staffs, are so fully occupied with urgent war requirements that they are largely precluded from accepting orders in the ordinary course, but possibly, in this respect, matters may become a little easier in the near future. It is, therefore, necessary that immediate consideration shsould be given to the future of trade and industry when peace conditions once more obtain. Steps are being taken by qualified commercial bodies to arrive at a prompt decision on practical issues which will then be raised, while evidence is not wanting that the British Government is alive to the need for early action in certain directions. Among all sections the feeling appears to be growing in intensity that never again shall our present unscrupulous enemies receive equal treatment with our relatives and friends in future commercial arrangements.

***

As previously referred to in these columns, two of the steamship lines which ply between Europe and the East—namely, the Nippon Yusen Kaisha and the Dutch Lloyd, are now following the Cape instead of the Suez route. Yesterday Reuter's Agency reported from Rotterdam that it had been arranged that a Dutch steamer should sail to the East Indies round the Cape once in every ten days. No goods, but only passengers and mails, will be taken to South African ports for the present. The passenger rates to South Africa will be identical with those of the Union-Castle Line. Moreover, I have been given to understand that the Japanese line has likewise come to an arrangement with South African lines, whereby there will be no clashing of interests. On the other hand, the impression prevailing in shipping circles is that the present state of unrest in the Mediterranean will not be of long duration, and that the normal running of steamers bound to and from the Near East will be resumed at a relatively early date.

COMMENTATOR.

Tobacco Culture in Cyprus.

(*To the Editor of* THE NEAR EAST.)

Sir,—In the lecture delivered by Mr. Roland Michell at the Royal Colonial Institute in November last it is rightly mentioned that, owing to fiscal restrictions, tobacco cultivation has been stamped out.

During the year 1912 I carried out elaborate experiments with various renowned tobacco seeds on different soils to test the most favourable conditions under which the plants could thrive. This being satisfactorily solved, I viewed the commercial possibilities with keen interest no less than the advantages the cultivation would bring to the country as a whole if it were revived. I thereupon bought a tract of land (Cherkez Chiflic) near Limassol of alluvial formation and rich in nitrate salts. Cultivation was begun on a fairly moderate scale, and the first stock of leaf gathered in the year 1913 possessed high qualities, judging from the reputation which the cigarettes acquired both in aroma and flavour.

The question turned to the disposal of the crop. Of this outcome I can only speak with bitter regret. Manufacturers in Cyprus, as well as in Egypt, import their leaf from Balkan and Turkish growers, who are mere instruments in the hands of companies and merchants in their respective regions, and who enjoy great advantages in growing. Consequently, my industry was looked upon as that of a dangerous rival. The first task of these people was, therefore, to boycott the purchase of my crop, and consequently to try and put an end to it. This being conducted on a systematic scale, notwithstanding my vigorous efforts, the only resort left open to me was to float a company for the manufacture of the Cyprus-grown leaf.

Here again obstinate troubles confronted me. The manufacture of cigarettes is still governed by the Occupation Law, dating some thirty-nine years ago, demanding from all manufacturers a minimum annual output, so as to assure the income of a certain amount of Excise revenue, and thus to enable the authorities chiefly to maintain Customs officials for that purpose. This specified quantity was beyond my powers of production, at least for the first few years. Unable, however, to comply with this regulation, I tendered to defray the extra expenses entailed by not agreeing to the minimum output, and offered to pay the salaries of the officials appointed. The offer was flatly refused. Confident, nevertheless, of the reforms that will certainly follow the annexation, including the amendment of the archaic law, I hope eventually to attain the desired results.

A large stock of leaf is accumulating from year to year. Quite recently one of the leading authorities on the Turkish tobacco trade who sought refuge in this island on Turkey's entry in the war was remarkably impressed on inspecting the leaf grown here, and admired the natural qualities which distinguish it. So much impressed was he that he finally purchased a large portion of the stock I had on hand at a most favourable price. In consequence of this sale of nearly 12,000 lb. at about 1s. a lb., I have been prompted more than ever to carry out the cultivation on a larger scale. Incidentally, it may be mentioned that tithe dues paid amounted to over £100, and the economic benefit, therefore, to be derived from the cultivation of tobacco on a deserving scale will be marked by a considerable increase in the general revenue.—I am, Sir, yours truly,

NAJIM HOURY.

ALEXANDRIA PRIZE COURT.

SS. Derflinger (ex-Cargo).

Judge Grain has handed down in the Alexandria Prize Court a judgment in a case in connection with cargo ex the Derflinger from which the following are extracts:—

In this case there are various consignments of merchandise consigned either to or from Herren Winckler and Co., of Yokohama (Japan), and some consigned to or from Herren J. Winckler, of Hamburg. The point which is now raised before me in this matter is the status of the firm of Winckler and Co., of Japan.

The Procurator maintains that it is a German firm, a German partnership consisting of six members—namely, F. Dankwerts and H. Winckler, both German subjects and both resident in Germany; J. Westphalen, F. Gensen, F. Fachtmann and G. Seling, also all German subjects, but all resident in Japan. They each hold shares to the value of 10,000 yen in the partnership, but the liability of Dankwerts, Westphalen, Gensen, Fachtmann and Selig is unlimited, while that of H. Winckler is a limited liability.

This partnership is registered at Yokohama in accordance with the laws and regulations of the Empire of Japan as a Goshi Kwaisha, which appears to be an association of individuals of whom the liability of some is limited and others unlimited.

There is also a Herr J. Winckler, who is sometimes in invoices and bills of lading described as Herren J. Winckler, who resides at Hamburg. This individual is described in the affidavits of the claimants as being merely a "buying agent," but from the correspondence placed before me he appears to carry on a very considerable business in Germany, and that he alone or together with other persons is conducting a business house in Hamburg, and carrying on a business in Germany on a somewhat considerable scale, on far too large a scale to be called a "mere buying agency."

The Procurator asks that this firm shall be treated as an ordinary partnership, and that the property which is in the German subjects who reside in Germany may be confiscated, as was done in the Clan Grant case.

Mr. Booth, who appears on behalf of Winckler and Co., maintains that a partnership which is registered as a Goshi Kwaisha in Japan is a corporation with a separate legal entity, and must be treated as a Japanese company carrying on business in Japan, and not as a German partnership firm. Another affidavit is put in sworn by Rokiuchiro Masujima, barrister-at-law of the Middle Temple, and of the Japanese Bar, who states that he is legal adviser to the Hong Kong and Shanghai Banking Company. This affidavit states that "acording to Japanese law a Goshi Kwaisha has its own legal existence distinct from that of any of the members composing it."

The first point to be decided is whether I am to decide this matter wholly by reference to the law of Great Britain or in part by reference to the law of Japan. Dicey, in his "Conflict of Laws," states:—"The principle is now well established that a corporation duly created in one country is recognised as a corporation in other countries." And I feel sure that if the registration of a partnership as a Goshi Kwaisha does confer on that partnership all the attributes of a British Company in Great Britain I am bound to deal with it accordingly.

A Goshi Kwaisha must have among its members "one or more partners with limited liability, and one or more partners with unlimited liability." Therefore, directly either of these elements is wanting, the Goshi Kwaisha is ipso facto dissolved.

In a Goshi Kwaisha, if certain members fall out of the partnership, the whole construction falls to the ground. Again, certain members of the Goshi Kwaisha are liable for partnership debts to the full extent of their possession while other partners have no responsibility for the obligations of the concern.

Both these elements are absent from that body of individuals which is usually designated a "company." For instance, a transfer of shares in no way affects the company as a whole.

It may be, as the two learned gentlemen in their affidavits state, that a Goshi Kwaisha has a separate entity for some purposes, for instance, for the purpose of holding land, and there seems no doubt that when any of these four different associations of individuals have registered themselves in Japan they are entitled to hold land. But these affidavits are not sufficient to convince me that a Goshi Kwaisha has all the attributes of a British company, and, as I have already said, a Goshi Kwaisha appears to me to be more or less the same as a registered partnership.

I have, therefore, come to the conclusion that I must merely treat this as a partnership and deal with it under the Clan Grant case—viz., release the shares of those members who are resident in Japan, and confiscate the shares of those subjects who reside in Germany.

SALE OF GREEK STEAMER.

H.M. Consul at Pirseus has forwarded a copy of the Greek Government *Gazette*, of December 8, containing a call for tenders by the Ministry of Finances for the sale by public auction of the Greek ocean-going steamship Macedonia, built by Messrs. Laing, of Sunderland, in 1912, and classed 100 A1 at Lloyd's.

This vessel, formerly a unit in the Greek Navy, has been damaged by shell fire and the resultant conflagration. The engines, boilers and auxiliary machinery are stated to be in good order and the vessel recently steamed at 16½ knots. The furnishings and fittings of the ship are entirely destroyed, but the vessel is stated to be capable and worthy of being restored as an ocean-going liner.

The following are the principal dimensions of the vessel, which is at present anchored in the port of the Royal Arsenal at Salamine:—Length, 422 ft.; breadth, 51 ft.; depth of hold, 23.4 ft.; gross tonnage, 6,333; net tonnage, 3,540; engines, 1,108 N.H.P. A minimum sale price of 1,300,000 drachmae (about £52,500 at current exchange) has been fixed and no tender for less than that amount will be accepted. Sealed tenders, addressed to the "Commis d'enrégistrement, Ministère des Finances," Athens, will be received there up to noon on March 27.

Tenders must be accompanied by (1) a guarantee of having deposited with one of the State banks the sum of 130,000 drachmae (about £5,250 at par) in cash or Greek Government bonds; or (2) a cheque for that amount on the National Bank of Greece, payable to the order of the Minister of Finances; or (3) a letter of guarantee for that amount from the National Bank of Greece, or the Ionian Bank, Limited, in London.

[The above-mentioned copy of the *Gazette*, containing further particulars (in French) regarding the vessel, may be consulted by United Kingdom firms interested at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.]

The following note is issued in Paris:—Certain newspapers announced the arrest of the Norwegian Consul at Salonika. The person arrested is Herr Seefelder, an Austrian subject, and a well known merchant in Salonika. He was merely honorary Norwegian Consul. Thus, says Reuter, he is not a Consul "de carrière," and has no political connection with the Christiania Cabinet.

Egypt in 1914.

An American Opinion.

The U.S. Consul at Alexandria has published his annual report for 1913-14, from which the following are extracts :—

As a one-crop country the basic element of Egypt's economic prosperity lies in its ability to market its cotton. The outbreak of hostilities brought with it an almost complete cessation of demand for cotton in the world's market. This condition confronted Egypt just at the time when the moving of the 1914-15 cotton crop was about to begin. The funds to finance the annual cotton crop are drawn principally from London. This financial support from abroad was entirely withheld and an almost complete deadlock of financial and business activity ensued. Excepting the small-note issue of the National Bank of Egypt and the subsidiary coinage of the Egyptian Government, the money medium in Egypt is the British gold pound and in a small measure the French gold 20-fr. piece. The almost wholly restricted exportation of gold from London together with the hoarding of such coin as was in the country created a shortage of money that was met by expanding the note issue of the National Bank of Egypt. By special decree of August 2, 1914, the notes were made legal tender and their inconvertibility into gold temporarily suspended. The 50 per cent. statutory gold reserve, however, was at all times maintained. The note issue aggregated about four times that of the usual, and approximated £E8,000,000.

Advance in Cotton.

A scheme was evolved to ameliorate the condition of the small grower and facilitate the marketing of the crop. The Egyptian Government, through a loan guaranteed by the British Government, arranged with the National Bank of Egypt for temporary advances on cotton at the rate of 6½ per cent. Later this governmental support was extended to the purchase of cotton at the market price in small lots from such growers as were unable satisfactorily to dispose of their holdings. Toward the end of December exportation of cotton began to assume normal proportions.

The difficulties of the financial situation induced by the outbreak of the war were by no means overcome with the extended note issue mentioned above. Recourse was had to a moratorium.

Precautionary measures were put into force at the beginning of the war seeking to maintain a sufficiency of life necessities in Egypt by prohibiting the export of foodstuffs. Restrictions at first were stringent and wide in their application, but were gradually relaxed as the condition of the country's needs was fully studied.

A factor in the commercial life of Egypt is the trade with Syria and the Levantine Islands. While the value of this business each year is not very great, the volume is considerable. Being almost exclusively in the hands of smaller native traders, it is of vast importance to the general commercial prosperity of the country. Upon the declaration of war with Turkey, this phase of Egyptian commercial activity was brought to an abrupt standstill.

Tourist Season.

The tourist season in Egypt begins in November and continues until the end of April. The 1913-14 season was the most prosperous Egypt has experienced in years. During the last months of 1914 there was absolutely no tourist movement. None of the larger hotels in Cairo were opened, and all of the resorts in Upper Egypt remained practically without visitors. The shopkeepers, cabmen, and others in Cairo and Alexandria, whose business is dependent on the tourist season, were compensated to a considerable degree by the arrival of the large bodies of British and French troops for the Turkish campaign.

The larger portion of the ocean traffic with Egypt and the ports of Mediterranean Europe has been carried on under German and Austrian flags. Italian and Greek ships did a certain amount of carrying to Levantine ports. Freight and passenger traffic ceased almost entirely with the commencement of hostilities.

The compressing of cotton and the warehousing and shipping of cotton and cotton seed together with general port work and cargo handling employs a large amount of native labour. By the sudden stoppage of these activities thousands were thrown out of employment. So vast a number of idle suddenly imposed on an urban population was a great menace to the internal peace of the country. The problem was met by distributing as many as possible of the unemployed in the country districts. Large numbers were returned to their native villages. A plan inaugurated by the municipality of Alexandria, by which large tracts of municipally owned lands were graded and levelled gave daily employmen to about 2,500 men.

While Egypt is primarily an agricultural country with a one-crop product (cotton and cotton seed representing fully 85 per cent. of its exports), its consumption of manufactured products is limited in proportion to its population when compared with such consumption in Western European countries and the United States. The life of the agriculturist is most primitive. Fully 75 per cent. of the cultivated land is worked by individuals owning two acres or less. The wants of this class for a manufactured article goes a little beyond material for wearing apparel, which is limited to a cotton gown. Egypt can produce its cereal food requirements. The agriculturist, as a rule, does provide these for his own needs; the urban population, however, is fed from imported products.

During the past three years there have been no noteworthy changes in the conditions governing Egypt's foreign trade relations, and whether any permanent radical changes will result from the war is a matter which may not be determined until normal peace conditions have again prevailed for at least a year. As with every country at war, Egypt's imports and exports show a large decrease during the period from the commencement of hostilities until the end of the calendar year. This reduction is due to the sudden severance of transportation facilities, the disruption of commercial relations with hostile nations, and embargoes on exports from Egypt and friendly countries.

Banking.

Egypt's banking facilities are fully adequate. With the exception of the National Bank of Egypt, a quasi-governmental institution, the other larger banks are branches of banking corporations with principal offices in London, Paris, Berlin, Rome, and Athens. Advantageous transactions with the United States, however, can only be done through London. American purchases of Egyptian cotton are all paid for by credits in London. Payments for American coal and lumber are likewise made in London. Payments for purchases from America that make up the articles of lesser values in the imports, for the most part, are made by drafts collected through the European houses of local banking institutions. In some instances collections are remitted direct from New York banks to local ones.

The absence of the jobber or wholesaler in the make-up of Egyptian commercial conditions requires that the ordinary manufactured goods be sold direct to larger retailers. This fact necessitates the employment of the commission house and smaller sales agent. In dealing with an import commission house the responsibility of local credit is often assumed by the latter. When goods are placed through smaller selling agents the credit responsibility must always rest with the exporter. While the agent will attend to delivery and collections, he assumes no responsibility outside of the diligence in placing orders only for apparently sound purchasers.

TRADE NOTES.

Egypt.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-1918). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, March 1.

Tenders are invited by the Ministry of the Interior, Cairo, for the supply of coal and coke necessary for the branches of the Department from April 1 to September 30. Date, January 22.

Tenders are invited by the Secrétaire Générale des Domaines de l'Etat (Service Technique), Cairo, for the supply (1) of 13,315 okes of "huile pour mouvements"; (2) 7,670 okes of "huile pour cylindres"; (3) 16,200 okes of "huile pour moteurs Diesel." Date, February 2.

Tenders are invited by the Controller, Cairo Tangier Department, for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-1917. Samples shall be submitted at the Roads Service Depô, Sharia Abbas, Cairo, before noon, on March 1, 1916. Date, March 1.

Sudan.

The general manager, Sudan Government Railways, is prepared to receive tenders for the supply of the following timber :—

100,000 ft. run of Swedish pine in sizes varying from ¾-inch by 9 in. to 2 in. by 9 in.
2,500 ft. run of 3 in. by 3 in. by 13 ft.
1,500 ft. run of 4 in. by 4 in. by 13 ft.
25,000 ft. run of pitch pine in sizes varying from 1 in. by 9 in. to 4 in. by 12 in.
6 pitch pine baulks, 9 in. by 9 in. by 36 in.
6 pitch pine baulks, 9 in. by 12 in. by 20 ft.
12 pitch pine baulks, 12 in. by 12 in. by 20 ft.

Tenders, which should state prices and possible date of delivery of timber, may be sent to any of the following :—

Sir A. L. Webb, Queen Anne's Chambers, London, S.W., quoting price f.o.b. London.

Agent, Sudan Government Railways, Alexandria, quoting price for delivery in Alexandria.

General Manager, Sudan Government Railways, Atbara, quoting price c.i.f. Port Sudan or for local delivery.

From all of whom also tender forms and fuller information as to the sizes of timber required may be obtained. Tenders, which should be enclosed in sealed envelopes, plainly marked on the outside "Tender for Timber," much reach any of the above addresses by not later than noon of February 1, 1916.

Malta.

The Crown Agents for the Colonies notify that tenders for the supply of about 4,000 tons of steam coal, to be delivered at Malta not later than March 1, will be received at the offices of the Crown Agents for the Colonies, Whitehall Gardens, London, S.W., up to January 17. Copies of the conditions of contract may be obtained on application to the Crown Agents, as above.

Cyprus.

A notice has appeared in the *Cyprus Gazette* (Extraordinary) notifying that the High Commissioner has approved of special licences being granted by the Provost Marshal for a limited quantity of potatoes being exported to Egypt, subject to certain regulations which are designed to facilitate exportation after local requirements at reasonable prices have been satisfied.

The Government of Cyprus has for sale about 266 Cyprus okes of harpoon-fished sponges, good quality, and 29 okes skarta from Cyprus waters this year; also 748 okes of machine-finished sponges, good quality, and 89 okes skarta. Tenders for the purchase of same will be received by the Inspector of Fisheries up to 12 noon on January 29, 1916. The sponges may be seen on application to the Collector of Customs, Limassal, and full information obtained by application at the office of the Inspector of Fisheries, Nicosia.

Foreign Trade Conditions.

The following general remarks on trade in Spain, from a recent Consular report, apply so adequately to conditions in the Near East that we reproduce them, at the same time advising British manufacturing exporters interested in the Levant market to apply the suggestions and deductions to their own business sphere, because conditions obtaining in Spain are identical to those obtaining in the Near East.

"In visiting the various shops in Vigo one cannot but help being impressed by the amount of German goods with which they are all stocked. Most of the articles are of good appearance, but will not bear close inspection. However, they appear to suit the market. The German manufacturers seem to have gone in for supplying the poorer class of customer all over the world, and undoubtedly this is the class which, collectively, consumes most. Most people of slender means in these southern countries have not the patience to save up their money in order to buy articles of good quality, and in general both the poorer class and people of moderate means are more attracted by a showy appearance and get-up—quality being a subordinate consideration. There is also the desire for novelty and change, which could not be so easily gratified if the better-class article were bought.

"Catering for the masses is without doubt the best business, and the German manufacturers and merchants know this. They also seem to have studied the tastes of the people, and pack their goods in such a manner that the covering boxes or wrappers alone create an incentive to purchase.

"There is also the question of credit, which is never less than ninety days with the Germans, and more often than not is six months. Of course, these long credits have to be paid for in the price put on the articles, but the shopkeeper does not mind that; what he objects to is having to pay for goods before any of them are sold.

"In spite of the recommendations by various Consular officers that catalogues should be printed in the language of the country to which they are sent, many British firms still continue to send catalogues to Spain printed in English. The amount spent in this manner is money absolutely thrown away. Catalogues for Spain should not only be printed in Spanish, but the measurements and weights should also be given in the metric system; likewise the prices in pesetas should be given alongside the sterling prices based on the local currency at par (the price can then be worked out according to the rate of exchange of the day). Whenever possible c.i.f. prices should be quoted, as the retail merchant is then able to work out what each article will cost to put in his shop after paying Customs duties, etc. These suggestions mean a more or less elaborate catalogue which may be expensive to draw up, but it is the only way to convey an intelligent idea of the cost of goods to foreign buyers.

"In regard to commercial travellers, H.M. Consul states that during the nine months he has been at Vigo only two travellers for British firms have passed there to his knowledge. One would think that the present is an opportune time for British merchants to step in and capture trade in Spain. Even if the business done at the outset proved to be of little importance, the fact should not be lost sight of that a certain amount of experience of the market would be gained, not to mention the advantages which would be derived from a personal acquaintance with the merchants and business men of the place. Of course, it is essential that a traveller should speak Spanish."

TURCO-BULGARIAN AGREEMENT.

According to a Sofia telegram, says a Reuter message from Amsterdam, the agreement relating to the adjustment of the Turco-Bulgarian frontier provides that the ceded Adrianople-Luleburgas Railway may be used by the Turks in a most liberal manner for a further five years, so that Turkey, both in peace and war times, will be able to transport arms, troops, ammunition and provisions over the railway without restriction or control on the part of the Bulgarian Government.

ENEMY FIRMS IN EGYPT.

The following paragraphs appeared in recent issues of the *Egyptian Gazette*, and supplement our Cairo correspondent's remarks on the same subject, on page 284 :—

Trade After the War.

There is little likelihood that the war will have any permanent and serious effects on German and Austrian trade with Egypt. There is, in fact, very good ground for believing that after the war those two nations will recover all the hold that they had over Egyptian trade prior to the war. It is by no means surprising that such may be the case. There is no public opinion here, and the Press is to all intents and purposes powerless, so nothing can be done.

It is generally held, no doubt, that the enemy firms cannot do business here, but this is not the case, because of the system of licences. Under the Proclamation of August 16 last, persons of enemy nationality are forbidden during the continuance of the war to carry on business in Egypt except under a licence, and this is also applicable to all agents for persons of enemy nationality.

The Proclamation is practically null if licences are being granted wholesale, as there is good reason to believe they are. Yesterday, for instance, we received a letter from a German firm, the Cairo branch of Siemens' Schuckert and the representatives in Egypt of Siemens and Halske, of Berlin, to inform us that they were in possession of licence number 239, whereby they were enabled to encash the amounts due to them by virtue of the Proclamation of August 16 last. If this licence is the 239th that has been granted since the Proclamation—and there is no reason to suppose that that number is anywhere near the limit—it is clear that the distribution of licences must be proceeding on a liberal scale.

There is no need to criticise the authorities here, for things are just as bad in England, where the Proclamations of the Government, as well as the judgments of the Courts, might have been calculated expressly to help the German traders to live through the war. As the *Morning Post* remarks, these Proclamations and regulations were promulgated with the object of making the public think that a great deal was being done, while in reality the intention was to do nothing at all.

German Analine Dye Agents.

In October, 1914, the firm of Agourl and Fils, Alexandria, bought 6,000 okes of synthetic indigo, from the German firm of Kortenhaus and Hammerstein, of Cairo, for a sum of £1,500. Owing to the sudden rise in price of this commodity, supplies of which in Egypt are nearly exhausted as they came exclusively from Germany, the sellers refused to deliver the goods. Messrs. Agourl, therefore, sued them for £2,880 damages for breach of contract.

The case was heard before the Mixed Court of Appeal. Messrs. Kortenhous and Hammerstein contended that they acted merely in their capacity of agents of the Bedische Analine and Sodafabrik, so that the case brought against them as such could not be justified. The Court decided that this argument could not stand under the present circumstances, trade with enemy countries having been prohibited. The Court, however, approved the decision of the Cairo Commercial Court which had admitted the responsibility of Messrs. Kortenhaus and Hammerstein, and ordered the parties to appear again personally in order that the amount of damages to be awarded should be discussed.

Engineering Notes.

A Plantation Plough.

Fruit growers and gardeners in the East, and in almost all districts of the Mediterranean coast, are often faced with a serious difficulty when digging and trenching operations are needed in fruit plantations and in gardens, or in fields bordered by fruit trees. The work has to be done seasonably and quickly, and be done mostly by hand, as for such work the ordinary plough cannot be used under trees because of branches being in the way. Hence the wages at such seasons are often doubled and trebled; and, according to recent reports, owing to the present great scarcity of labour, and especially of diggers, many fruit plantations and vineyards will be left unattended this year. We thought of this the other day when viewing the operating of a new plantation plough in an orchard. It has been designed to meet the great needs of fruit growers at home and abroad. A special feature of this new plough is that it is fitted with swivelling handles, so that it can be used underneath the branches of fruit trees and bushes, turning the soil over against the butts of the trees, or away from them if desired; whilst the pony and man walk clear of the branches. The line of draught may be instantly altered by slackening a couple of hand-screws; whilst the depth of ploughing can be adjusted as desired. The weight of the plough is 1½ cwt. (about 76 kilogr., or 60 okes). It is an invention of a light and practically useful agricultural implement which will appeal to all fruit growers, and especially those in the East.

One-Man Timber Carrier.

Lack of labour and the severe rules of trade unionism are, undoubtedly, the inspiring guides to many modern inventors in their efforts to find ways and means for the replacement of man by machinery. Profits are nowadays so curtailed in all industrial enterprises that means for saving costs and working expenses are imperative in order to secure success. Thus, a labour-saving appliance which, operated by one man, can do the work of two, three, or four men is highly appreciated by employers of labour. Realising the difficulties experienced in removing logs or timber from forests or saw mills in the East, and the slow progress made owing to the want of suitable appliances for this purpose, we were much interested to see recently a new timber trolley which enables one youth to pick up and walk away with heavy logs of timber. It is designed for use in timber yards, or where timber is being cleared in the woods or forests, or on sidings connected with stations belonging to different railway companies. It is a two-wheeled carrier, light, yet very substantial; two pairs of grippers, which form an important feature of the vehicle, are actuated from the front part of the trolley, or carrier, so that whilst the labourer, or youth, is at the handle adjusting the wheels over the log, he is enabled to manipulate the grippers by means of two separate levers or rods, which are situated above and underneath the central bar or carrier, and close to the handle. Thus the gripper at the back is first made to engage with the log, and afterwards, the handle being lowered, the front gripper becomes engaged, and it is quite easy to judge and balance the log on this carrier, which is also very useful for lifting and carrying square timbers, boxes, stones, iron pipes, girders, and other heavy goods.

Dyeing by Machinery.

Apart from the native dyers (the ever-busy Oriental boyatjis), with their archaic vat equipments and methods for dyeing textile materials, but who, nevertheless, do considerable business all the year round, there are several steam and other power cotton and wool factories in the East, which, in spite of their modern plant of textile machinery, still adhere to the old and cumbersome boyatjis' methods of dyeing. Nevertheless, there are modern machines of the vat system which could be obtained at a very reasonable outlay, and which give far better results at a much lower scale of working expenses. We may allude to one of these machines, which is especially adapted for vat colours. It is so constructed that the operation of dyeing, washing, diazotising, developing, oxidising, and hydro-extracting can be performed without disturbing the material in any way, once it has been placed in the machine. In this machine the hydro-extractor is self-contained in the dyeing chamber, so that as soon as dyeing is complete, hydro-extracting commences. Dyeing takes place in a partial vacuum, which ensures perfect and even penetration. Air may also be blown through the material for oxidising purposes when necessary. A great saving of labour and dye-stuff, a larger output, improved conditions of the manufactured goods, and economy of power and space are claimed as characteristics of this machine.

Improvements in the Helouan Line.

Since taking over the Helouan railway line from the Delta Light Railways Company, on December 1, the Egyptian State Railways have started the promised improvements, says the *Egyptian Gazette*. The number of trains has been increased from fifteen a day to twenty, and it will continue to be increased until the end of the month, when forty trains, or even more, are expected to be running daily. The reduction of the time required for the journey appears, however, to be entirely impracticable at present owing to the bad condition of the permanent way, which requires relaying; and to the ruined condition of the houses adjacent to the line between Bab el Lonk until past Old Cairo. The relaying of the line will be carried out when the doubling of the line between Ismailia and Zagazig is completed. As regards the locomotives and carriages these will also be gradually changed until the old ones disappear altogether.

Damietta as a Port.

El Ahram, a native Cairo paper, writes :—The opening of new Egyptian seaports besides Alexandria has been demanded on many occasions by those who see that Port Said, Rosetta, and Damietta deserve to be cared for. The distribution of commerce and industry among different towns and seaports is a fundamental rule in political economy. Had they opened Damietta as a seaport the whole of the Dakahlieh province would have made greater progress than it actually has done. Damietta is situated opposite Anatolia, and near Syria and Cyprus. On the other side, the town is connected with the interior by means of both the Nile and the railway, and vessels from Damietta can be seen sailing through the Nile up to Cairo. The late French delegate in the railway administration once wrote that "Cairo is a seaport." Damietta was created to be the seaport of Cairo, and it is unfair economically to place it in an inferior position.

Near East Markets.

EGYPTIAN RICE CULTIVATION.

(From Our Own Correspondent.)

Alexandria, December 28.

The rice crop this year was a record, as a result of the plentiful Nile flood. However, prices are very low owing to lack of exports. Egypt produces the best rice in the world, and it is a pity that it is not appreciated in England at its proper value. Turkey is Egypt's best purchaser of rice, but since the war there are, of course, no sales to that country. Consequently, other markets will have to be sought.

The Egyptian Ministry of Agriculture publishes a report from London on some samples of Egyptian-Japani rice, which had been sent to England for examination. The samples, says the report, sent were of unhusked paddy, and of cleaned and polished rice, both grown in Gharbia, and the latter prepared in the mills at Damietta. The report continues:—

(a) A firm of rice merchants stated that there was no sale in London for rice of the quality represented by the samples. A second firm of merchants, however, reported that the value of the rice in the husk would be approximately 8s. 6d. per cwt. c.i.f. London, if shipped in bulk, or 9s. per cwt. if shipped in bags, whilst the decorticated rice would be worth about 12s. per cwt. c.i.f. London (November, 1915).

(b) A firm of starch manufacturers reported that as a general rule they use only "broken rice," and they feared that the present sample of decorticated rice would be too good for their purpose. They stated that at present the prices for rice are very high owing to the increased cost of freight from the East, and mentioned that "c.i. Siam broken rice" is now valued at about 10s. per cwt. c.i.f. London (November, 1915), although the normal price is only about 7s. per cwt.

The firm expressed their willingness to test this Egyptian rice for their manufactures, and asked to be informed when consignments came on the market. They would also be particularly interested in consignments of broken husked rice.

These reports show that there will probably be a market for this Egyptian rice in England, but, as the rice market is limited owing to the war, care will have to be taken in placing the Egyptian rice on the market.

In order to facilitate further inquiries, the following particulars are required:—

(1) The names and addresses of firms who are prepared to ship rice from Egypt, with the names and addresses, if any, of their agents in London.

(2) The quantity of rice likely to be available for export (a) husked, (b) unhusked.

This information, if sent to the Bureau of Commercial Intelligence, Ministry of Agriculture, would be communicated to the buyers in England, with a view to leading to direct negotiations between them and the growers.

It is mentioned that in previous years it has been difficult to sell unhusked rice in the United Kingdom, the chief market for this product being Holland, where there are important rice-husking and claying mills. It may be necessary, therefore, to husk all the rice in Egypt before export.

The s.s. Mossoul, of the Messageries Maritimes, has arrived at Marseilles from Salonika and Malta, having on board Captain Webster and twenty men of the crew of the British steamer Glengyle, which was torpedoed without warning, when ten men of the crew—three Englishmen and seven Chinese—lost their lives. A steamer rescued the survivors and conveyed them to Malta.—Reuter.

ROUMANIAN CROPS IN 1915

(From Our Own Correspondent.)

Bucharest, December 14.

The crops this year were superior to those of the preceding season. The following are the official figures for the two seasons :—

	1915. Hectolitres.		1915. Hectolitres.
Wheat	31,448,292	..	17,362,613
Rye	1 025,970	..	690,198
Barley	10,109,752	..	8,987,873
Oats	10,283,548	..	8,815,075
Rape	285,459	..	584,451
Linseed	47,187	..	58,297

Especially noteworthy is the great differenc in the wheat crops, especially as the area cultivated in 1915 (1,904,249 hectares) was less than that of the preceding year. The quality of the new wheat is also superior to that of 1914, bring 77.1 kg. average weight per hectare, as compared with 72.6 kg. in 1914. Apart from this the production in metric quintals in 1915 is nearly double that of 1914, being 24,436,309, as against 12,599,745 quintals.

As regards the autumn crop of maize, the statistics are not yet completed, but it is known that the yield is superior to ordinary years, so that the crop of 1915 may be reckoned as greater than that of the previous ten years.

PRODUCE REPORT.

London, January 13.

Currants.

There has been a good demand this past week, with a noticeable hardening of prices for all grades. Provincials are quoted 38s. to 41s., Patras 44s. to 46s., Gulf 44s. to 47s., Vostizzas 43s. to 50s., Zante 40s. to 44s., and Smalls 40s. to 47s. The market in Greece is reported strong, and above the parity of London. The stocks of currants in London on December 31 were 6,275 tons, against 7,102 tons last year, the same period.

Sultanas.

The market is comparatively very quiet, small business only passing, mostly in Afghan fruit, which continues to arrive in small quantities. Prices for Afghan and other Eastern kinds are from 85s. to 100s., and Greeks from 92s. to 120s. The stocks of Sultanas, of all kinds, in London on December 31 were 1,240 tons, against 2,175 last year, and 5,152 tons in 1913, the same period.

Figs and Dates.

Only small business passing in the former; whilst the latter are very quiet.

Seeds.

Linseed is very firm, and rather dearer. Calcutta to London, in any position, has buyers at 84s., while sellers are asking 85s. La Plata, Feb.-March, sold to Hull at 76s. 9d. Bombay to Hull, Jan.-Feb., 84s. 6d. Cotton Seed is firm. London-Egyptian, spot, £14 15s.; loading and afloat, £15; to Hull, spot, £15; loading, £15 10s. was paid, with further buyers. Bombay to Hull, spot, and Jan.-Feb., £14 15s. is asked. Rapeseed is firm, with few offers.

Oils.

Linseed oil is firm. Spot pipes £44 2s. 6d., barrels £45 2s. 6d., month £45 was paid; Jan.-April, £46 paid; May-Aug., £47 paid. Cotton oil is dearer. Crude spot, pipes, £45 15s.; refined pale, pipes, £50; and sweet barrels, spot, £51 to £52. Rape oil is dearer. Refined English, in barrels on spot, £56. Olive oil is very firm. Spot Levant or Spanish, £57 to £58 per tun, ex store.

Oilcakes.

Shortness of supplies continue, resulting in a hardening of prices for all kinds.

Various.

Greek Cream of Tartar, quoted £185 to £190 ton. Beeswax, 125s. to 180s. cwt. Almonds, Jordan, 155s. to 240s. cwt.; Sicily, etc., 125s. to 140s.; Barbary, sweet, 80s. to 90s.; bitter, 60s. to 65s.

EGYPTIAN COTTON.

(From Our Own Correspondent.)

Alexandria, December 28.

The market is surprisingly firm, and in view of our reduced crop (4½ million cantars) it is likely that it will remain so; even higher prices are expected. Next season's acreage will show an increase, cultivators devoting all available space to cotton in the expectancy of maintained prices next winter, coinciding with the remnant sales of old stocks and the conclusion of the war.

Land is being actively prepared throughout Egypt for next season's crop. Sakellarides is being almost exclusively planted.

The demand for Egyptian cotton is very important, and if exports continue to be active, we shall soon be without any cotton.

Cottonseed prices are likewise higher than they ever were before the war. The principal reasons are the great demand from abroad, increased local consumption, and the reduced crop. The tendency of the market continues firm.

SUDAN COTTON.

At the January meeting of the British Cotton Growing Association it was stated that the reports generally from the Sudan for the new crop are very satisfactory, notwithstanding attacks by locusts, and picking will soon commence. The Association was able to render very valuable assistance to the Government in financing and purchasing last year's crop.

THE TEXTILE INDUSTRY.

Lancashire business men engaged in overseas trade are of the opinion that the textile industry will be one of the first in the country to be benefited when the war is over. Stocks will be at a low figure, and with German competition largely discounted the great outlets in the Far and particularly the Near East will of necessity require immediate attention. Many matters, however, will need adjusting. There are the questions of new and sounder credit in the Levant and South America; United States competition in neutral countries; a better system of Consular adaptability to the requirements of each particular nation; the extension of British cotton-growing in Africa and Egypt; and, above all, the labour problem, with its special Lancashire difficulty of securing the craftsmanship necessary to keep the concerns running. Trade potentialities are already disclosing themselves (says the *Times*), but everything gives way to the immediate necessities of the war. One factor is already being dealt with, and the experiment is being tried of bringing women labour from other counties for the purpose of training them in the different classes of manufacture.

ALEXANDRIA NOTES.

(From Our Own Correspondent.)

Alexandria, December 28.

The Economic Situation.

When war broke out Egypt passed through a serious crisis, owing to the depreciation of cotton prices and the absence of credit. Banks to a great extent stopped their payments and suspended their activity. Business was thus practically paralysed, and mistrust prevailed everywhere.

However, during 1915 a miracle was performed in Egypt. The unexpected rise in cotton prices, and in those of onions, eggs, and cereals, rapidly increased Egypt's exports, which are to-day superior to her imports. The result is a balance considerably in favour of this country. On the other hand, the presence in the country of considerable bodies of British troops turned out to be a boon for local trade. The result is that Egypt, instead of suffering from the war, is really benefiting therefrom.

It is true that State revenues have diminished, but this is mainly due to a fall in imports, and to decreased receipts from ports, lighthouses, railway traffic, and postal services. On the contrary, revenue from land has given better results.

Results of the improved economic situation are to be discovered in the receipts of certain companies, such as the Delta Light Railways, the Société des Sucreries et de la Raffinerie d'Egypte, the Cairo Tramways, Alexandria Tramways, Alexandria and Ramleh Company, Alexandria Water Company, Crown Brewery, Société des Brasseries d'Egypte, Salt and Soda Co., Kafr-Zayat Cotton Co., etc., etc. —all of which can show an improved balance-sheet. Moreover, banks have never done business so advantageous and healthy as now. The "recouvrements" of the Agricultural Bank increased three-fold during the months of October and November, as compared with the same period in 1914.

It is true that the improvement has not extended to our land companies. These still suffer from the results of the Five Feddan Law. But the fellah is gradually paying off his debts, and happier days are in store for the land companies which have successfully weathered the storm.

The Cigarette Industry.

The Near East has frequently pointed out the precarious situation of the cigarette industry. It was the first to raise the cry of alarm when the industry, which employs 20,000 working men and women and is represented by a capital of £12,000,000, was all but ruined. The recent increase in tobacco import dues aggravates the situation. Whereas the majority of countries, such as Great Britain, the United States, Switzerland, Holland, etc., pay back the import duties on re-exportation (drawback), and Canada even grants an additional bonus, Egypt only pays back one-half the import duties. It thus happens that Egyptian cigarettes, which are exported, pay a local tax here, plus the import tax exacted by the importing market.

The voluntary liquidation of the Eastern Petroleum Company and of the Suez Oil Company is officially announced. Their reconstruction and amalgamation is now proceeding, to be followed by the registration of a new company. Mr. A. H. Bonnard has been appointed liquidator.

NATIONAL BANK OF GREECE.

BANKRUPTCIES IN EGYPT.

The Association of Commercial Importers (Alexandria) has published a report of the question of failures and concordats preventifs. The report also deals fully with the publication of patents, the excessive slowness of the Courts with regard to summonses for simple payments, the £E12 deposits, filing of petitions, etc. It has been presented by a special commission to the President of the Court of Appeal and the Procureur Général, who have promised to support and to bring the matter before the Commission which is now sitting in Cairo for the purpose of studying future changes in the Mixed Courts.

Among the suggestions in this report worthy of the attention of the authorities is one for the extension of the power of placing in bankruptcy debtors who are not technically merchants, but who none the less enter into commercial transactions, such as land proprietors, houseowners, those who purchase manure, seeds, coal, building material, those who borrow money or who guarantee a concordat, etc. Another good suggestion is to establish for the failure syndics a series of ten questions, in answering which it would be very difficult for a reprehensible act committed by a debtor to pass unobserved. The suggestion for a change in the method of choosing syndics and in the period of their work is also worthy of notice, says the *Egyptian Gazette*.

The report explains how the inconvenience, at first sight inexplicable, of concordats which are brought in voted with ridiculous dividends arises, and the Association demands that, as is enacted by the Italian Law of March 24, 1903, all persons to whom debts have been ceded, the cession to whom is posterior to the decree convoking the creditors, shall have no right to vote at the concordat.

It may be hoped that the grievances of the Commercial Importers' Association will be taken into serious consideration.

ALEXANDRIA AND RAMLEH RAILWAY.

The report for the year 1914-15 presented to the shareholders at the general meeting held on the 14th ult., shows that the total traffic receipts earned by the company during the twelve months were £E169,281, of which £E83,332 was derived from the Ramleh service and £E85,949 from the service in the city. With the addition of various sums coming in from other sources, the total receipts figure at £E170,596. Expenditure, including the running expenses, municipal dues, and the payment of the debt service totalled £E118,881, leaving a credit balance of £E51,715. This, with the sum of £E2,076 brought forward from the preceding year, makes a total of £E53,791. Of this sum, £E6,000 has been placed to the Ramleh special reserve, £E8,000 to the City special reserve, £E36,562 has been absorbed by the dividend of 4s. per share, while £E1,500 has been distributed as a bonus to the employees and £E881 allocated to the Administrators and Director-General, leaving a balance of £E847 to be carried forward. It is pointed out, says the *Egyptian Gazette*, that the traffic receipts were fairly satisfactory during the first half of the year, but that they fell off considerably in the second six months. In the total, the traffic receipts exceeded those of 1913-14 by only £E308, though receipts from other sources showed an increase of £E7,038. For the same reason that dictated a similar policy last year the directors asked that the payment of the 4s. dividend should be deferred until the distribution could be made without inconvenience to the Treasury.

Reuter reported from Athens on the 6th inst. that with reference to the Commission composed of representatives of the Allies appointed to examine the needs in regard to foodstuffs of neutral countries having a common frontier adjoining enemy States, the Greek Government contends that Greece's only frontier is Bulgaria, which is willing to supply her with the full quantity of flour needed if the railway communications are free. Uneasiness prevails here on the question of the supply of flour, the Minister of the Interior having publicly announced that there were only stocks for four days.

COMPANY RESULTS, &c.

ORIENTAL CARPET MANUFACTURERS.—Notice is given that the general meeting which was to have been held on Monday, January 17, 1916, is cancelled.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for week ending December 18, 1,137 tons.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 196 tons; Gemsah production for last week, 347 tons (including 130 tons recovered from sediment). Hurgada production for the week, 1,212 tons; Hurgada production for last week, 2,626 tons. Telegram received, dated noon Monday, states that Hurgada No. 7 produced since 4 p.m. Saturday at an estimated rate of 1,500 tons during twenty-four hours through three 3-in. outlets.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the ten days ended December 20 amount to £E6,990, as against £E6,012 for the corresponding period of 1914.

OIL INTERESTS IN GALICIA.

An application was made on Wednesday to Mr. Registrar Hope at the London Bankruptcy Court on behalf of Mr. Edward Thomas Boxall, merchant, Cornhill. The debtor, who carried on business under the style of E. T. Boxall and Co., failed in August, 1914, and now asked for an order of discharge.

Mr. E. Leadam Hough, Senior Official Receiver, reported that for several years prior to the failure the debtor had been concerned in the formation of some twenty-six companies and syndicates, mainly oil concerns, in connection with which he was frequently away in Galicia—particularly in Lemberg, where he had a flat. He attributed his insolvency to depreciation in the value of his shares and interests in oil and other properties; to money advanced by him to companies not being presently recoverable; and to bad debts. The total liabilities were returned at £225,000, but certain of the creditors had withdrawn their proofs of debt, and in other cases voluntary abatements had been made, with the result that the ranking debts were reduced to £59,107. The assets were valued by the debtor at £71,704, but, in the view of the Official Receiver, were not likely to produce more than £5,000.

The discharge was suspended for three years.

IN THE CITY.

The rubber share market is firm and prices should continue to rise; probably more and more quickly as the public awakes to its potentialities. A cheap share promising excellent profits to the present buyer is the Way Halim (Sumatra) of the Lyall Anderson group. This company with an issued capital of £21,393 in 2s. shares, 1s. 8d. paid, owns 5,619 acres in Lampong district of Sumatra, of which 572 are planted with Hevea, 287 with Ficus rubber, 260 acres being interplanted with Liberia, and 225 acres with Robusta coffee. Of the Hevea only the 322 planted in 1909 are at present in bearing. Cash assets at March, 1915, exceeded liabilities by £7,250. With the shares at 1s. 6d. the market capitalisation works out at £19,253, or deducting cash assets at £12,926. For the current year ending next March there should be a net profit from rubber of £2,100, taking an average price of only 2s. 6d. per lb., and an additional £1,000 from coffee. Official crop estimates indicate on the same basis profits of £4,500 for 1916 and 1917, and £7,500 for 1917 and 1918, from rubber alone, and since the price of rubber is so much above the 2s. 6d. basis these estimates ought to be considerably exceeded. An improved price in the value of the shares is anticipated, and perhaps the state of the market and the merits of the Company justifies this. The net earnings in the past year were sufficient to have paid 5 per cent., but the directors followed a conservative policy with a view to strengthening the financial position of the Company. The revenue for 1916 (taking rubber at only 2s. 6d. per lb., now about 4s.) should be sufficient to pay at least 5 per cent. for the year ending March 31, 1916, while the profits for 1917 and 1918 should enable the Company to pay much larger dividends. The shares are a good purchase round about 1s. 6d. to 1s. 9d.

NOTES OF THE WEEK.

The capitulation of Montenegro has let loose a number of reports, the purpose of which is to show that King Nicholas and his Government have betrayed the Allies' cause. For reasons which are stated elsewhere in this issue, we shall do well to await further evidence before believing the veteran King to be as black as he is painted. In any case, there can be no harm in trying to arrive at the Montenegrin point of view. But before this can be done we must know whether the action of the Government in surrendering to the Austrians is repudiated or acquiesced in by the people. On this point there is at present no trustworthy information. All that can be established at present is that the collapse of the Montenegrins has been unexpectedly rapid. There was good ground for supposing that Mount Lovtchen could have withstood Austrian attacks, however fierce, for more than a few days; but when it passed into the enemy's possession the alternative before the Montenegrins was to capitulate or to follow the Serbians into the wilds of Albania.

The situation calls for a frank avowal on the part of the Allied Governments as to whether they were cognisant of Montenegro's intention to surrender, and whether they tacitly acquiesced in it. If they were not expecting it, had they contemplated the hopelessness of the Montenegrin position as a result of the defeat of the Serbians, and made any attempt to discuss things with the Government with a view to arriving at the wisest course for the Montenegrins to pursue? Clearly, if the Allies took no steps to correlate the operations of the Montenegrin army with their general military policy, there can be no question of breach of faith on Montenegro's part, unless it be in regard to Serbia. In that case it will be necessary to know the nature of the understanding between the two countries, and the course of the negotiations between them since the elimination of the Serbian army.

Montenegro's action requires to be put in its true light not only in justice to all concerned, but also in preparation for the settlement after the war. If the Allies were merely settling a personal quarrel with Germany, the defection of one of their number to the opposite camp—not that such an expression is applicable to the step taken by Montenegro—would present no difficulty when terms of peace came to be arranged. But the war is being fought with higher aims, and when it is over the object of the Allies must be to see that, as far as possible, no injustices creep into the final settlement. The fate of Montenegro is bound up with the future of the Slavonic State which it is in the interests of the Allies to see established on the eastern shore of the Adriatic. It is, therefore, essential to have the inwardness of Montenegro's capitulation clearly revealed—whether it was prompted, in the face of the hopelessness of the military position, by a patriotic desire to save the country from ruin, or whether it represents a betrayal of the Slavonic cause to the Central Powers. If it was the former, then, however much Montenegro's methods may be deprecated, the nation will have done nothing to forfeit the advantages to which the Allies' victory will entitle it. On the other hand, if there has been a betrayal of the Allies' cause, and with it of the cause of the Southern Slavs, then it becomes necessary to determine on whose shoulders the responsibility rests, with a view to purging the nation of the elements that have tried to subordinate its interests to their own personal advantages.

That the Allies cannot escape some responsibility for the course of events in Montenegro will hardly be controverted. No doubt, as a result of the manner in which the war has been conducted, the military difficulties in the way of giving support to the Montenegrins were insuperable. The fact, however, remains that the Serbo-Montenegrin front was part of the Allied line, and the ideal handling of the war would have made provision for this front with almost the same thoroughness as has been applied to either of the extreme ends of the Western front. It will be argued that uncertainty regarding the attitude of the Montenegrin Government prevented the Italians from sending the necessary assistance. If that reason is advanced, it should be substantiated by dates and facts showing that suspicions of Montengro's conduct had been aroused before the time was ripe for coming to her help.

Sir Roper Parkington, Consul-General for Montenegro, suggests that the lot of the Montenegrins under Austrian domination will be a tragic one. According to the alleged terms of surrender, the whole male population is to be interned in "a certain district," while the

Digitized by Google

women will be left "in some of the villages." But unless the Austrians give themselves up to vengeance for the general discomfiture they are suffering in the war, we cannot help thinking that their treatment of the Montenegrins will be much better than the treatment of the population left in Serbia. The Montenegrins' crime in Austrian eyes can never equal that of the Serbians. Moreover, if visions of a Triple Monarchy, extending from the Adriatic to the Ægean, are still entertained, the Austrians will be at pains to win the good graces of potential subjects. Military precautions, however, may bring about a set of circumstances in which it will be extremely difficult to secure adequate food supplies for the Montenegrins. Arrangements to ration them would then have to be made on a much bigger scale than the measures taken to relieve certain distress in the country, and it may be necessary to institute an early investigation by a neutral of the actual conditions prevailing in Montenegro.

Salonika still awaits the threatened attack. If the gun-firing at Doiran a week ago was in any way connected with plans for an advance, the enemy has changed his mind. Since then the Allies have blown up the railway bridge over the Struma at Demir-Hissar, and have thus seriously impaired the value of the line, which would have played an important part in any Turco-Bulgarian advance. This step and the landing at Corfu are logical developments of the situation which Greece prepared for herself by the interpretation she placed on her treaty obligations to Serbia. They will not be the more palatable to the Greek nation as a whole for that fact; but the point must be borne in mind, in view of the protests that greet each fresh step taken by the Allies in safeguarding in the Near East the interests which are Serbia's, their own, and Greece's as well, if she could but recognize it.

General Sarrail is in supreme command of the Anglo-French forces at Salonika. This appointment is welcomed for two reasons, primarily because unity of command is infinitely to be preferred to dual control, and also because the French General has already proved himself a man of action, capable of rapid decision and equally rapid execution. Indeed, "Salonika methods" are a new feature in the war, and it is hoped that they indicate the passing for all time of the indecision that has been so largely responsible for the Allies' failures in the Near East. It is in this hope that we can wait patiently for the advance along the southern front, knowing how elaborate in regard to the smallest detail must be the preparations for any advance on a large scale in the present war.

The attitude of Roumania continues to be a subject for speculation to the man in the street. A "prominent" member of the Roumanian Government is reported to have expressed the following views to a correspondent of the *Matin*:—"Our aspirations are Transylvania; our forces are on the Hungarian frontier, and in no case will they fight against other enemies than those of the Allies. Two conditions are requisite for us to start our action—a favourable economic situation, and above all a strategic position on our frontier which shall place us in a position of security against possible disaster. When a great country goes to war it risks one or two provinces and can hold out for a long time. A little country risks its existence, and can only fight for several (*sic*) weeks. We have 950,000 men, of whom 600,000 are armed and provided with ammunition. It is an appreciable help, but can only produce its full effect if it is thrown into the scales at an opportune moment." In this connection it is of interest to note that last month, in contradistinction to the usual references to Roumania in the German Press, the *Cologne Gazette* published a letter from Bucharest under the title of "Premature Hopes Regarding Roumania." The writer set out to prove the following contentions: that the Roumanians hate the Hungarians, despise the Austrians, dislike the Germans, are jealous of the Bulgarians, are frightened of the Russians, and love the Latin races. He also maintained that the majority of Roumanian politicians do not want Bessarabia even as a gift. His message must have brought cold comfort to his German readers.

The situation in Mesopotamia has not altered materially during the past week. Further messages have been received both from General Townshend and from General Aylmer, but the latter's relief expedition has not yet reached the former. The position of General Townshend's force at Kut must be far from enviable. It has now been besieged for six weeks—how closely may be inferred from the fact that it was apparently unable to interfere with the Turks when they fell back before the relief expedition to a point only six miles away from Kut. This fact would point to a shortage of artillery ammunition. General Townshend, it must be remembered, took up his position at Kut only after an arduous retreat from Ctesiphon, during which he had been subjected to at least one heavy attack by the Turks. His possession of wireless telegraphy, which enables him to communicate with the relief column and the outside world, must be of considerable assistance, if only in keeping up the spirits of his force, but it is not an adequate substitute for munitions and food supplies.

General Aylmer, in command of the relief expedition, is making some headway, but very slowly. The reason alleged is the "bad weather," a generic term, perhaps, which is meant to include the floods that can be a serious obstacle at this season in Mesopotamia. After retiring to Es Sinn on January 11, the Turks rallied again, and advanced to meet the vanguard of the British force where the Wadi joins the Tigris. There was an engagement on January 13, as a result of which the enemy again retired, and General Aylmer was able to bring his headquarters up to the scene of the fighting. The Turks fell back on Es Sinn, six miles from Kut, once more, but the pursuit was hampered by the bad weather. Provided further reinforcements do not reach the Turks first, General Aylmer ought to be in a position to effect a junction with General Townshend in a very short time. Their subsequent movements will be awaited with great interest.

Persia is rapidly qualifying to be regarded as one of the many theatres of war. The Turks now claim that their regular troops have entered Kermanshah. If this statement be true, this force will have been detached from the Baghdad command, and must bear some relation to the Turco-German scheme for spreading the war to the Indian frontier. Kermanshah has been the headquarters of German influence in Persia, and the arrival of Turkish reinforcements will doubtless galvanise into fresh activity a movement that was within a short distance of being completely overwhelmed by the rapidity of Russia's blows. From Hamadan a Russian force advanced towards Kermanshah, and has come into conflict with the enemy at Kangavar, half-way between the two towns. The Turco-German force was routed. If the Russians are able to follow up this success by the occupation of Kermanshah, they will have gone a long way towards crushing Turco-German intrigue in Persia.

In view of the general situation in the Middle East, it is satisfactory to learn of a considerable Russian success in the Caucasus. For nearly a year the fighting in this region has been confined to small encounters, which, relatively unimportant in themselves, have resulted in the clearing from Russian territory of the small bands of Turks scattered along the frontier. Now, however, the Russians have found themselves in a position to assume the offensive on an extended front of nearly seventy miles, which has brought them within thirty-three miles of Erzeroum. The Turks appear to have been taken entirely by surprise, and to have broken and fled without putting up any serious fight. The Russian report speaks of the retreat being in the nature of a panic-stricken flight, and adds that several Turkish units were almost entirely annihilated. Koprikeui is in the hands of the Russians, and the Turkish headquarters at Erzeroum is once more threatened. If the Russians are able to follow up this victory within a reasonable time the Turks may have to introduce no small modifications into their plans for strengthening their force in Meso-

Digitized by Google

potamia. With a Russian column operating south-west of Urumiah and another force advancing on Kermanshah, the danger of a strong Turco-German offensive in Persia becomes more remote.

The investigation of the documents found in the enemy Consulates at Salonika continues. The correspondent of *The Times* mentions the discovery at the Austro-Hungarian Consulate of fifteen hundred copies of a proclamation in Arabic to the Chiefs of the Senussis inciting them to a holy war on non-German Christendom. The fact that these were in a sealed parcel, addressed to the Austrian Military Attaché at Athens, illustrates the extent to which the diplomacy of the Central Powers is organized for the war, and may possibly provide a clue as to the medium used for stirring up the tribes of North Africa. Whether the origin of these particular proclamations was German or Austro-Hungarian will probably not be determined, but that Austro-Hungarian diplomacy was lending itself to inflaming Moslem fanaticism against Christendom is established. The point may be commended to the notice of the Vatican, which has hitherto decided that it lacks sufficient evidence to take sides in the quarrel between the Belgian and Austro-German sections of the Catholic Church.

A further encounter with Arabs within the western border of Egypt took place on January 13, when a small force was dispersed at a point some forty miles from Mersa Matruh. The Arabs, however, offered no resistance, but fled, leaving their animals and tents. Elsewhere in this issue the attitude of the Arabs to the great war is discussed in an article from a correspondent in Cairo. The writer is of opinion that the British and Egyptian Governments have failed to enlighten the Arabs on the subject of the war, and quotes a somewhat negative declaration of the Bedouin sheikhs in connection with the frontier raids on the west. In view of the fact that the Germans and Turks have combined to intrigue and to create unrest among the Arabs, it cannot be sound policy to leave the latter entirely to their own devices, trusting to the example of British administration and its advantages that they have in Egypt. Something more definite is required to counteract the enemy's machinations, and only the personal touch can supply it. The Arabs on the frontier must be reached through their own people.

From a brief report that appears in another column it will be seen that Colonel Sir Thomas Holdich has been drawing attention to the subject of early surveys in Mesopotamia. Everything that concerns that part of the world is of interest to Britons, and just now, when there may be a tendency to feel that the region is causing us more anxiety that it is worth, it is well to be reminded of the great potentialities of the land between the rivers. Questions of strategy have taken us there, and will keep us there; but it is comforting to reflect that no sacrifice we are likely to be called upon to make will be disproportionate to the worth of the province. Colonel Yate put his finger on the salient point when he said that he looked forward to Mesopotamia being the prize of British soldiers and to the establishment of irrigation colonies along the Tigris and Euphrates similar to those in the Punjab.

MORE ARMENIANS MASSACRED.

The following telegram was last week received by Lord Bryce from an Armenian, known to him, who left England to help his countrymen. It was sent from Erivan on January 10:—

"Refugees just arriving from Mush state that, in answer to the Government amnesty, 1,500 Sassun Armenians, forced by famine and cold, surrendered to the authorities at the end of November. By order of the Governor of Mush the men were massacred, women and children drowned in the Euphrates."

CAIRO NOTES.

(From Our Own Correspondent.)

Cairo, January 4.

Government Holidays.

It is announced that henceforward the King's Birthday and Accession Day are to be kept as public holidays by the Government administrations. This brings the total of Government holidays up to twenty. It has often been complained that these holidays are too unevenly spread over the year—most of them fall between the months of August (end of Ramadan Fast) and October (end of the Kourban Bairam Feast)—and the new holidays, since they come in May and June, will no doubt be welcome to those officials who feel the strain of working for four months on end without any *dies non* excepting holidays.

The S.S. Persia.

The sinking of the P. and O. s.s. Persia has come as a terrible shock to all communities out here. There seems no doubt whatever that the submarine gave no warning, and that the passengers had little chance of getting away in the boats. The ship was struck amidships at the lunch hour, when most people were below, and the fact that she sank within five minutes explains why so few were saved. There is a good deal of feeling out here on the subject of the submarine activities, and not without reason either. The sinking of the Persia coming so soon after that of the Ville de Ciotat and other steamers seems to indicate that the arrangements for protecting the Entente mercantile marine and for dealing with the submarine menace are neither well organised nor effective.

IN MEMORY OF GORDON.

Thirty-one years have passed away since Charles Edward Gordon—on January 26, 1885—gave up his life at Khartoum, at once a martyr to the faith and duty that were in him and to the incapacity of the Government which, by purposeless delays and procrastination of policy, had sacrificed him. It is to be feared that in the existing state of affairs, when men's minds are inclined to dwell upon current rather than upon past national trials, the memory of the heroic Gordon may be permitted to fade, if only temporarily, from recollection. And yet surely no better opportunity than the present could exist for impressing upon the minds of the young generation the lesson that Gordon taught during the all-too short life that he passed in the service of his country.

It is perhaps not inopportune, therefore, to call attention to the excellent institution that bears the name of the hero of Khartoum—the Gordon Boys' Home—which was founded as a national memorial under the favour of the late Queen Victoria, and has been consistently supported by her successors on the throne. It is difficult to over-estimate the value of the good effects by this institution, which claims to have sent out into the world many lads of the class whom Gordon designated "his kings." In practically all branches of the public services they have distinguished themselves—in the army, the navy, the police, and in less adventurous walks of life. Of the 1,000 boys who had by the end of last year joined the British Army since the foundation of the Home, the authorities knew of at least 132 who were on active duty at the front. Since then the number has been appreciably added to, and among them have been several who have earned commissions, some who have been mentioned in despatches, and, alas! not a few who have yielded up their young lives to the service of their country.

Under the excellent supervision of General George W. Higginson, chairman of the committee of management, the institution is continuing its beneficent and useful work. It is not improbable that there may shortly be issued an appeal for further assistance towards carrying out the aims of the founders; should this be so, it is greatly to be hoped that subscribers to The Near East may find it possible to do something substantial in aiding one of the most admirably conceived as well as one of the most excellently conducted benevolent institutions in this country.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, December 25.

Espionage.

The public is quite in the dark with regard to the police measures that are being taken to keep in observation the German and Austro-Hungarian elements in the country—in Bucharest alone they number some 60,000—of which no doubt a large proportion is occupied with spying. We are all struck by the number of young men speaking German that can be observed in the cafés, in the trains, and on the streets, who appear eminently fitted for military service. All the small States are, of course, hotbeds of espionage, but Roumania, partly on account of her geographical position, partly from the circumstance that her present attitude is looked upon as temporary, seems to be specially favoured in this direction. No doubt the measures taken by the police are rather tepid, but espionage is a dangerous trade in any country, and liable to accidents. We read even here from time to time of some member of the unwholesome profession being disturbed in the pursuit of his occupation. The other day the police thought good to examine a Hungarian who passed himself off as a trader in grain. On his person were found a note-book, the contents of which appeared to be the source of some interest to the authorities, and a match-box, the inside of which was inscribed with quite illuminating details concerning the Roumanian troops concentrated on the frontier. Details are rarely forthcoming, and, as a rule, the public has to be content with a bald statement that so-and-so has been expelled from the country. So-and-so's name is generally foreign and unfamiliar, and we always wonder when the time will come for better known names, likewise with a foreign sound, to be mentioned in this connection. . . . The task would be difficult even for a better organised police force, and the question will crop up persistently of what is to be done with the large numbers of Teutons and Magyars in the much-hoped-for event of Roumania taking up arms against her hereditary enemy.

The Plot.

The public still continues to read with interest any details connected with the recently discovered plot against a number of public men. I refrained from mentioning the affair in my last letter, expecting to hear at any moment that it was the product of some vivid imagination, but I have since acquired the conviction that the affair is genuine, and, further, from the silence which is kept by the police, I deduce that it is serious. Suffice it to say that the papers appeared about a fortnight ago with sensational details regarding a plot to blow up the houses of MM. Filipescu, Costinescu, Take Jonescu, and, some said, of M. Bratiano, the Prime Minister. Much has been written since upon the subject, of which a good part is contradictory, but the following facts seem established:—

Disclosures reported to have been received by M. Filipescu in person led to the arrest of two individuals at a certain hotel. They were subsequently identified as Hungarian police agents, who had entered the country under false passports, their real names being respectively Babosh and Todt. At the same time, in the room which they occupied, two handbags were found, one containing several bombs with a quantity of explosive matter at first thought to be ecrasite, but which subsequent analysis has discovered to be picric acid and melanite, and the other containing no less than 180,000 frs. in gold. Other arrests are also reported, and full confessions are said to have been made.

Negotiations with Bulgaria.

For over a month both Roumanians and Bulgarians have been subject to vexation on account of the interrupted transit of goods through their respective countries. Military movements in Serbia had, of course, made the use of the line from Salonika via Nish impossible, and it was understood that the Bulgarian authorities were making difficulties with regard to the transit via Adrianople-Tirnova. Counter-measures were consequently taken by holding up in Giurgiu and other ports some 1,000 truckloads of Bulgarian goods. A Bulgarian delegate arrived in Bucharest a few days ago with the object of coming to an understanding on the matter. It would appear that the delay experienced by Roumania in receiving her merchandise is due not to ill-will or negligence on the part of Bulgarians, but to the fact that the goods have remained at Salonika, communications between this port and Bulgaria having been interrupted by recent events. Representations are being made on the part of Bulgaria with a view to obtaining the goods detained in Roumanian ports. The reported arrival of sixty truckloads at the station of Oborishte suggests that the difficulties are being settled to the satisfaction of the Bulgarians.

Queen Marie and the Cinema.

The *Pester Lloyd*, referring to Queen Marie's literary activity, states that her Majesty has joined the ranks of that very modern class of *littérateurs* who supply texts for cinematograph films. The subject of the drama in question is said to be drawn from the life of the people. "The chief character is a young man who loves a maiden, and in a moment of jealous rage slays his rich rival. While expiating his crime the girl dies in a convent. The action of the drama is illustrated by a series of pictures representing popular holiday scenes, the daily life of the Roumanian peasantry, and incidents connected with prison life."

The "Nationalul."

It is a pleasure to record the appearance in Bucharest of a new daily which really seems to fill a gap. It bears the name of *Nationalul*, with the explicative subtitle of "National Liberal Organ," its founder being M. Toma Stelian, a dissident Liberal. The new journal represents the current of opinion entirely favourable to the Quadruple Entente and inimical to the Central Powers, advocating at the same time an energetic national policy alongside the former. The articles that have appeared so far are clear, forcible, and succinct; the general tone is dignified. There is no reason to wonder at the enormous sale which the paper commands. Its success has been instantaneous, and is due not only to the form in which its contents are presented, but to the circumstance that it has been founded with a purpose which the public is quick to grasp and to appreciate.

M. Stelian.

M. Toma Stelian, besides being the founder of the new daily, is also a deputy, and as such has been delivering some remarkable speeches recently, which have won over a number of his Parliamentary colleagues. It may, therefore, interest some of our readers to know who he is.

M. Stelian was formerly Professor of Commercial Law at the University of Jassy, being subsequently transferred in a similar capacity to Bucharest. He is known to be a great worker, very conscientious, and clear-headed. He is not expansive, not popular in the ordinary sense, and is said to be authoritative. He has repeatedly been returned to Parliament. M. Sturdza having consented to assume the heavy responsibilities of Government at the time of the peasant movement of 1907, M. Stelian accepted the portfolio of Minister of Justice. As such he completely reorganised the legal machinery, among other matters making the law more accessible to the peasant classes. He was the author of legal measures directed against a certain class of capitalists, who, having leased most of the land property in a district, formed a kind of Trust enabling them to control the prices of agricultural produce.

The fact of M. Stelian not forming part of the present Government caused no little astonishment. It is rumoured that he has of late attempted to convince M. Bratiano of the advisability of altering his foreign policy, also that he refused a portfolio about the time of the Bulgarian mobilization.

M. Stelian practises as a barrister, and as such he is reputed to possess great talent, being precise and very clear in speech. As a man he enjoys a spotless reputation. During the five years that followed his term of office he refused to take up any legal case, in order not to plead before the judges whom he had appointed.

The "Gazette des Ardennes."

The French Legation at Bucharest is responsible for the following communication:—

For some time the Legation has been aware that the *Gazette des Ardennes*, a journal published in that part of France occupied by the enemy, is being distributed in Bucharest, more especially among the officers of the Roumanian Army. Though issued in French, this periodical is inspired and composed by the Germans, and is but an addition to their propagandist organs already so numerous in Bucharest. The French Legation considers it a duty to warn the public against this fresh manœuvre.

In answer to this warning the German Legation has sent to the Press a statement to the effect that the *Gazette* in question never had the pretension of being a French publication, and has never denied its character as a German organ "serving the requirements of the French population in the parts of France occupied by German troops." Fortunate indeed are the Frenchmen whose intellectual needs are the special solicitude of the invader! We hear that the Bulgarians, inspired by similar altruistic motives, and unwilling to be deemed remiss as transmitters of the high form of Kultur which they have made their own, are publishing at Nish a paper which appears in the Serbian language.

Absence of Fuel.

Apart from a short spell of cold weather, the season has so far been exceptionally mild. This is fortunate, for there has been a great lack of coal in the country, the small quantity imported being mostly requisitioned by the gas companies, a minimum being distributed to the public, and that only to a few favoured individuals. Roumania produces in considerable amount a quality of coal of low caloric value known as lignite, but the supply even of this is insufficient, its exploitation not having been organized to meet the increased demand. We hear that the cargo boat Carpatzi, of the Roumanian Maritime Service, has at last arrived at Constantza from Odessa with 6,000 tons of coal. The vessel's progress has been followed with interest—nay, anxiety—by all householders whose stoves are not adapted to the combustion of wood.

ROUMANIAN HISTORY.

Last Monday at the London School of Economics Mr. Mitrany delivered an address on the history of Roumania. He said that historically, but not geographically, Roumania was a Balkan State. The country had originally been inhabited by the Dacians, but these had been conquered by Trajan and its population had been thoroughly Romanised under him and his successors. In A.D. 274 the Roman Empire was withdrawn behind the Danube. No record showed what became of that part of the population which did not retire with the legions, but it was supposed to have gone into the mountain forests of Transylvania. Successive waves of barbarians swept over the country; but eventually the Roumans returned to the plains and founded the two provinces of Wallachia and Moldavia. After Kossovo these became vassal States of the Turks, but Roumania was never a Turkish province; the Sultan had no right to interfere with its internal affairs, and would have no opportunity to do so, except for continual dynastic quarrels. The country reached its lowest ebb in the 18th century, when the thrones of the two provinces were sold to Greek Phanariots, no one of whom ever ruled more than three years. Having bought the right to govern at a high price, the Phanariot prince recouped himself by what was little better than organised brigandage. This régime came to an end, but in the early part of the 19th century Greeks were still exploiting the country. Greek was the language of school and church, and the Roumanian language itself was written in the Cyrillic character. The revival of the Latin spirit came with a Russian occupation of the country. French was then the language of the Russian *salon*, and French was used as the medium of intercourse between Russians and Roumanians. In 1817 was founded the first Latin school, and a series of historical works was published which emphasised the Latin origin of the people. Thus commenced the movement which has resulted in the independence of the Roumanian kingdom.

Next week Mr. Mitrany will deliver a second lecture dealing further with his subject. The lectures are free by ticket.

FOR THE WOUNDED AT LEMNOS.

To the Editor of THE NEAR EAST.

SIR,—Will you kindly allow Mrs. Anderson and myself, through your columns, to express our most grateful thanks to those of your readers who have so generously responded to my recent appeal on behalf of our gallant wounded at Lemnos? Many handsome contributions, both in money and in kind, have been sent to both of us, so that several cases of comforts have already been despatched from Southampton Docks.—I am, etc.,

MARION LEE.

22, Pulteney Street, Bath, January 17, 1916.

MESOPOTAMIA.

Speaking last Wednesday before the Central Asian Society, Mr. Perceval Landon said that, except dates, Mesopotamia exported practically nothing that was of any use to the civilised world. The answer to the question, "What could Mesopotamia export?" was to be found in the work done by Sir William Willcocks, of which a small part had already been carried into effect. It was not merely England, nor even the British Empire, but the whole civilised world that owed an enormous debt to him. The plan by which he suggested turning Mesopotamia into a second and greater Egypt was to revive with newer and better methods the old system of irrigation, which provided the country with its ancient teeming population and wealth. The scheme was divided into five main portions, of which one was completed—the Hindieh Barrage. This barrage took the place of a broken dam constructed, by a French engineer, of bricks each of which was stamped with the image of Nebuchadnezzar. It would raise the water in the old Hillah Canal, and eventually revivify the old Babylonian area of cultivation. There was also a scheme whereby Lake Habbania would be used both as an outlet for the flood waters of the Euphrates and as an enormous reservoir, which would some day be employed in what might be called the Kerbellah circle of cultivation, on the western bank of the Euphrates. Then there was the great project by which the territories between the Euphrates and the Tigris would be re-canalled by a project roughly following the old lines of cultivation, extending from above Ramadieh to Baghdad on the Tigris, and thence in a southerly direction till the Euphrates received the superfluous water again. The restitution of the old irrigation works in what might be called the Diala district was rather a magnificent scheme of drainage than of irrigation; by it hundreds of square miles of swampy land below Kut-el-Amarah would be rendered fertile. Thus would be completed a scheme which for sheer benefit to humanity deserved to rank with the work of De Lesseps. No soil in the world could produce greater or more frequent crops than that of the long fallow levels of Mesopotamia.

Of Mesopotamia viewed in another aspect Mr. Landon said it is a country of contrasts. The old jostles the new; the Yezidis, who worship the devil and cannot abide the colour blue, are not unkindly hosts to the Christian missionaries who seek their rare encampments. The Arabs maintain their prejudices and their magnificent tradition of hospitality as fully as when the leaves of the Koran were first turned. But the engines of the Baghdad Railway snort amid the ruins of Carchemish, and there is nothing the Arabs love so much as a short ride on the railway—sixteen to a compartment.

SERBIA'S NEED.

To avoid any possibility of confusion in the administration of contributions intended for the benefit of the distressed Serbian population, the Serbian Legation requests that subscriptions intended for the Serbian Relief Fund, of which H.M. the Queen is patroness, should be sent to the Earl of Desart, K.C.B., at the offices of the fund, 5, Cromwell Road, South Kensington, S.W.

The Serbian Legation will continue to receive subscriptions for the following Serbian funds:—

1. The Archbishop of Belgrade's Fund for the families of the killed and wounded soldiers.
2. The Society of the Serbian Red Cross.
3. The Parliamentary Commission for the Refugees.
4. The Society of St. Helena for the orphans whose parents have been killed in the war.

All contributions addressed to the Serbian Legation (195, Queen's Gate, London, S.W.) for these funds will be gratefully received and acknowledged.

CYPRUS AND JEWISH REFUGEES.

A Cyprus Correspondent writes:—Amongst the refugees who are still expected it is stated that there will be some hundreds of Jews from Palestine and Syria. The deep-rooted feeling of hostility against the Hebrew race which has so long existed in Cyprus and had its origin in far distant historic events, has tended to diminish in late years although it will probably be long before the antipathy entirely disappears.

NEWS FROM TURKEY.

(From Our Special Correspondent.)
Athens, December 29.

The Situation in Constantinople.

It is difficult to obtain any reliable news from Constantinople nowadays, as postal communications are very irregular and very few travellers come through. The Greek papers from time to time have some sensational incident to relate, but no reliance can be placed on them. There does not appear to be any material change in the situation apart from the steady increase in the prices of the necessaries of life.

On the 13th inst. the Chamber of Deputies passed the law authorising the issue of paper money to the extent of £T6,583,094, but no details have so far transpired respecting this financial transaction.

A rather serious explosion occurred on the 20th inst. in a building near the workshop of the Bosphorus Steam Navigation Company on the Golden Horn, which was evidently being used for the manufacture of explosives. There appear to have been several killed and many wounded, and much damage to property in the neighbourhood.

Turks and Germans.

Count Wolff Metternich, the German Ambassador, who arrived in Constantinople some time ago, was only received by the Sultan to present his credentials on the 11th inst. It is said that the reason of the delay was because the Germans were insisting upon being represented in the Cabinet, to which the Turks demurred. A compromise is reported to have been arrived at by German under-secretaries being placed in each of the departments with the exception of the Sheikh-ul-Islamat, but no announcement on the subject has yet been made in the Press.

The Germans are insisting upon the military authorities calling up for military service all those who have paid the exoneration tax; but the Turks, be it said to their credit, are apparently loth to do this. It is said that those who have paid the tax number about 85,000, and with these the Germans propose to form two new army corps. All military students above the age of seventeen are being taken for active service.

Our Interned Countrymen.

The news from the Englishmen who are interned at Chorum is satisfactory, and their treatment by the Turkish authorities is in striking contrast with the treatment received by English prisoners in Germany. Mr. James La Fontaine writes that they are able to circulate freely, and that the authorities are kind and considerate. Food is plentiful and cheap, especially game, which is abundant. On more than one occasion in this war the Turks have shown that they possess many qualities superior to the much-vaunted German Kultur, and it is impossible to avoid feeling great regret that the nation should, through a few unscrupulous traitors, have been dragged to its ruin by the Germans, to suit their own purposes.

Berlin-Constantinople Communications.

An announcement appeared some time ago in the *Hilal* to the effect that a through train from Berlin to Constantinople and *vice versâ* would soon be running. The train was timed to leave Berlin at 8.16 in the morning and to arrive at Constantinople the following day at 7 p.m. The train from Constantinople would leave at 1.15 p.m. and arrive in Berlin at 9.53 p.m. the following day. Recently, however, another announcement has appeared, that from January 1 a through train will run from Berlin and Vienna to Constantinople and *vice versâ* twice a week only, leaving Berlin on Wednesdays and Saturdays and arriving at Constantinople on Fridays and Mondays. The journey will take sixty hours. The departures from Constantinople will be on Tuesdays and Saturdays.

The Anzac Withdrawal.

The withdrawal of the British troops from Suvla and Anzac evidently came as a great surprise to the military authorities, and they appear to be smarting under their disappointment at having been unable to inflict a heavy loss during this operation. The official *communiqué* of December 20 announcing the departure of the British troops has been drawn up with that total disregard of the truth which has characterised all the German *communiqués*. It is worded with the view of conveying the impression that the British were actually "driven into the sea" after a heavy battle, leaving munitions and stores behind, whereas as a matter of fact the Turks were taken completely by surprise, and awoke one morning to find that the enemy had disappeared! The *Hilal* of the 21st is a curious study in contradictory statements. Although the official telegram purporting to come from the Dardanelles announces that the British, thanks to a fog, were able to get away without leaving many prisoners in the hands of the Turks, the leading article in the *Hilal*, which is printed on the same page, states that they captured thousands of prisoners!

SALONIKA LETTER.

(From Our Own Correspondent.)
Salonika, January 1, 1916.

The Aeroplane Attack.

During the early part of the past week the situation at Salonika has been one of calm and confidence, as transport after transport arrived with troops and munitions. The tangle of British, French, and Greek troops and motor vehicles in the streets had become so familiar that it came to be regarded as the normal condition of things at the present time, and the unfortunate pedestrians had become quite expert in dodging the constant wheeled traffic and the copious showers of mud which were projected in all directions. Whilst the feeling of confidence remains and increases daily, the calmness of the city and its very mixed population was most dramatically disturbed two days ago by an aerial attack on the part of four enemy aeroplanes

Details of this attack have already been telegraphed to London by the host of correspondents who are waiting here for something to turn up, and it must have come to them as a perfect godsend after the dulness of the previous week. However, I may add a few particulars which have come to my own knowledge. Early in the morning the aeroplanes were observed to cross the Greek frontier and make for Salonika. The first warning which the majority of the population received was when the Allied warships commenced firing at the visitors. Then, of course, everyone rushed out and gazed heavenward. The morning was clear and cloudless, and the "taubes" could be distinctly seen at an altitude estimated at about 3,000 metres. They dared not come lower on account of the danger from the Allied guns, and I am assured by a British aviator here that at such a height the enemy could only get a very hazy and imperfect view of what was going on upon the earth. I was standing near an immense pile of British stores, the exact position of which I must not indicate, and could not help thinking what a tempting target these offered to the daring *boche*, as they are in a very prominent position and seem to be in no way disguised. This was my first taste of real warfare, and the interest of the spectacle seemed to banish all feeling of fear. In this connection I may mention that I had a long conversation last night with a soldier belonging to one of our Highland regiments, who declared that he and his comrades in the trenches on the French front were so interested in watching the aerial combats that they often remained in the firing line long after they were at liberty to retire for their well-earned rest

For a time the bombardment of the "taubes" by the Fleet was quite lively, and many of the 3-in shells were seen to burst near the enemy, but the distance was too

Digitized by Google

great, and the targets too small, to hope for a hit. After hovering over the western outskirts of the town for a short time they evidently realized that it would be too risky to fly over the Fleet, and accordingly they turned tail and made for their base on the frontier. Their flight, however, was intercepted by Allied aircraft, and an aerial battle, which was not visible from the town, took place. As a result I am assured on good authority that one aeroplane, manned by Bulgarians, fell within the Allied lines.

The aeroplanes dropped at least a dozen bombs, and it now remains to sum up the total damage. From the most trustworthy source I learn that the list of killed and wounded is made up as follows:—Killed, 5 sheep; wounded, the Greek shepherd of the aforesaid sheep. What a glorious result! Of course, the notorious Wolff Agency will suitably vary the real facts to suit the German palate. The curious thing about this attack is that the only persons who suffered or were exposed to serious danger were Greeks. One bomb fell within fifty yards of the Greek General Zymbrakakis, in command of the 11th Division, a second fell not far from Prince Andrew of Greece, who was then with his regiment, while still another fell near an encampment of Greek troops and stampeded their horses.

Arrest of the Consuls.

The most dramatic event of the past week has undoubtedly been the arrest of the enemy consuls and their entire staffs, which was carried out with the utmost promptness and success within a few hours of the opening of hostilities by the German aircraft. This bold and admirable act of General Sarrail must have been quite unexpected by the consuls, as all of them, with the exception of the Bulgarian representative, were found at their posts. The Bulgarian consul was also soon discovered and arrested, so that the "bag" is now quite complete. Of course, they one and all protested that this was a violation of Greek neutrality, ignoring the fact that that very morning their own countries were the first to begin such a violation and convert Salonika into a fighting area. The Austrian Consul in particular was very violent, but the ring of British and French bayonets in and around his consulate soon convinced him that resistance would be useless. The Turkish representative, on the other hand, seemed to have been suddenly stricken by his guilty conscience, seeing that he grew quite faint and called for a glass of water before he could move. Besides the consuls, the whole of their staffs and servants, as well as all visitors present, were taken into custody. The prisoners numbered altogether about sixty persons, of whom four were women. Among the visitors at the Austrian consulate was the editor of the leading pro-German newspaper her, the *Nouveau Siècle*, who protested that he was a Greek subject. He was led away along with the others, and it is curious to observe that the next issue of his paper made no reference whatever to his arrest. All these people were taken on board a warship to be interrogated, and were afterwards transferred to a French steamer, which at once weighed anchor and left for an unknown destination.

Documents Seized—Expected Revelations.

The archives and other documents found at the various consulates were seized and conveyed on board one of the warships, where they are now being carefully examined. I am told by a French officer that these papers are of great and even startling importance. They are said to reveal a far-reaching plot on the part of the consuls and their friends to create a powerful band of *komitajis* and others, who should be well armed, and should at the proper moment foment disturbances in the city, assassinate certain persons, and set fire to certain buildings. It is also said that lists of spies and others who are aiding the enemy have been discovered. Some colour is given to this rumour by the fact that the headmaster of a German school here and several other enemy subjects have been arrested by the Allies in the course of yesterday and to-day.

A City of Spies.

Salonika is full of spies. Hitherto they have enjoyed complete immunity and have been able to take note of every movement of the Allies. In the cafés and places of amusement they sit near British and French officers, and sometimes enter into conversation with the latter. Then they move freely about our stores of ammunition and other depots. It has been a matter of extreme surprise to us civilians that no steps have yet been taken to check this dangerous espionage, which acquaints the enemy with all our doings; and it is devoutly to be hoped that the drastic steps taken by General Sarrail will be followed up by really effective measures against this army of spies.

Of course, the Greeks have formally protested against the arrest of the foreign Consuls; but everyone knows that this will have no more effect than the very formal protest made when the Allies landed here. Since the Allies have been attacked, they have every right to defend themselves in whatever manner they think proper.

The Patrols—A Strange Spectacle.

What strikes the visitor as one of the most absurd results of the presence of the Allies is the system of night patrols. The Greeks have their own patrols, and the British and French have theirs. It is a common sight to see all three patrols marching along, sometimes in succession and sometimes abreast. Last night I saw a Greek and French patrol marching together shoulder to shoulder, two deep, with the two officers walking and chatting together in front. It is noticeable that there seems to be a much stronger feeling of *cameraderie* between the Greek and French soldiers than between the Greek and British; but, on the whole, both the police and the Greek troops seem quite friendly to both, and refrain from interfering in any way with the Allies.

Serbian Refugees.

Thousands of Serbian refugees have reached here, and their plight excites the utmost pity. I travelled recently from Athens with Sir Edward Boyle and Lady Boyle (his mother), who are administering the Serbian Relief Fund, and I afterwards visited Sir Edward at the Serbian camp just outside the city. I found him working there like a Trojan among these unfortunate people, providing them with absolute necessaries and arranging for the shipment of many of them to Corsica and other places. His work, as well as that of Lady Boyle, in connection with this arduous duty, is deserving of the highest praise, and cannot be too warmly appreciated by those who provided the fund and secured his services in making the best use of it.

ALLIED PRISONERS IN SOFIA.

Our Bucharest Correspondent writes:—With reference to a convoy of English and French prisoners recently arrived at Sofia, the correspondent of the *Journal des Balkans* reports:—

The French were in front, all admirably equipped. They walked with a firm step, holding their heads high as though at a parade. . . . Among the English were several who, during an engagement, had lost their caps and coats—but not one had forgotten his pipe.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, January 7.

The Problem of Salonika.

The threat of an imminent invasion of Salonika by the Central Powers, and especially the probable participation therein of the Bulgarians, has kept the Greek public in a state of excitement and anxiety. In political circles everyone is asking whether the Bulgarians will enter Greek territory, and what action the Greek Government will take in that event. A Ministerial journal to-day says that should the co-operation of Bulgarian troops become inevitable, they will be distributed amongst the German regiments, under the command of German officers. This, however, seems improbable. In responsible quarters and in military circles it is still thought that the Bulgarians will not bring themselves to take part in such an attack. The Central Powers' inability to promise or to guarantee Bulgaria the territorial compensations for which she asks at the expense of Greece may effectively deprive them of the co-operation of their ally. Venizelists are of opinion that the Germans cannot employ troops in the Balkans at a time when the Russian attack in the Bukovina region claims all their attention, and believe that the object of the preparations made is to assure the defence of the German lines rather than to carry out an attack.

Nevertheless, the possibility of a Bulgarian invasion is causing deep anxiety owing to the attitude of the Greek Government, and the consequences that might result. There are rumours of an organized opposition to the passive policy of the Government, and certain high officers are said to be concerned in the movement. Should the Bulgars be allowed free entry into Salonika, and the Greek troops be ordered to retire, it might well cause a reaction in the country. It is said that the members of the Cabinet are not in perfect agreement on this subject, and that if the Bulgarian invasion should take place M. Rallis and Admiral Condouriotis will hand in their resignations, not being disposed to tolerate the entrance into Greek territory of Bulgarian troops. Their resignation might bring about the resignation of the entire Cabinet. Indeed, M. Skouloudis stated the day after the elections that should any member of the Cabinet resign, thus avoiding the responsibility, he too would resign. In such an event, the situation created would indeed be a difficult one. The present Cabinet consists of ex-Premiers, and, including among its members the famous Admiral Condouriotis, who is extremely popular, it is invested with a certain authority, covering in some measure the responsibility of the Crown. Should this Cabinet resign the King would be faced with a very difficult problem. It is doubtful if he would call on M. Gounaris to form a Government after the result of the last elections, when the majority of the people, by abstaining from voting, marked their disapproval of the present Cabinet very plainly. Moreover, as M. Gounaris is looked upon as a pro-German, it would hardly tend to smooth away the difficulties of the situation if he were to be in power at a time when part of Greek territory is occupied by French and British troops, when the warships of the Allies are in Greek harbours and Greek territorial waters, and when Greece's imports depend upon these two Powers. In the event referred to the King might call upon M. Zaimis once more, though in some circles it is thought that he might even summon M. Venizelos.

Regarding the proclamation of martial law, it is stated that the Cabinet is unable to agree, some members being of opinion that there is no reason to have recourse to such stringent measures, which would deprive the Press of its freedom. Should the step be decided upon, the Chamber would probably be convoked before the 24th inst., in order to sanction it.

Athens in Darkness.

The shortage of coal has necessitated such economy in the matter of public lighting that, save in the main thoroughfares, one can hardly see well enough to walk in the central part of Athens. The reduction of the lighting in the outlying portions of the city having laid their inhabitants open to the depredations of pickpockets and petty thieves, it has been necessary to abandon it, and therefore the central part is plunged in darkness.

A Compromising Letter.

Amongst the documents found in the German Consulate at Salonika after the arrest of the four Consuls the Allies found a letter from the Consul-General's wife, written from Monastir, and addressed to her husband. In this epistle the good lady wrote: "Fortunately the Germans will very soon occupy Salonika, in order to drive out the French and British, and with them the rascally Greeks."

A REMARKABLE SERVICE.

Father Nicholas Velimirovitch, priest to the Serbian Chapel Royal, pleaded the cause of his heroic fellow countrymen before an overflowing congregation at Holy Trinity Church, Stroud Green, London, N., on Sunday last. The Serbian flag was placed in front of the high altar. The Mayor and Corporation of Hornsey attended officially, and were supported by the members of the public bodies in the borough. Solemn Eucharist was sung at 11 o'clock, the celebrant being the Rev. W. D. Dixon, the deacon, the Rev. E. D. Arundell (vicar), the sub-deacon, the Rev. F. P. Harton. Father Nicholas took his place in the sanctuary during the service and participated in the beautiful and ancient ceremonies of the Holy Eucharist, which are common alike to the Churches of the East and the West. At the close of the address, which was a brilliant and eloquent exposition of Serbian history, the Serbian National Anthem was sung.

Father Nicholas and the Vicar of Stroud Green are brother members of the Anglican and Eastern Orthodox Church Union, a society which exists for the purpose of drawing into closer union the Church of England and the Eastern Churches. It is a hopeful sign to Churchmen generally that the war is bringing the desired union of the separated parts of the Church within nearer view. Churchmen see in external unity of the Church the great promise of world peace. They are therefore anxious to do all in their power to foster the spirit of friendly intercourse, of which Father Nicholas's visit is a striking instance.

A sum of £44 has been handed to the Serbian Relief Fund as a result of the service.

LORD MONTAGU OF BEAULIEU

rescued from the "Persia," telegraphed to GIEVE, LONDON:

"YOUR WAISTCOAT CERTAINLY HELPED SAVE MY LIFE."

A well-known lady passenger and her maid, rescued from the torpedoed "PERSIA," also telegraphed to friends in London:

"SAVED BY GIEVE'S WAISTCOAT."

Remarkable rescues have also been attributed to the "Gieve" Life-Saving Waistcoat when the "Lusitania," "Arabic," "Hesperian," "Falaba," and several warships were sunk.

If sea-going travellers wear the "Gieve" Life-Saving Waistcoat **day and night** when in any danger zone, they are assured the utmost safety. They cannot sink, but will be kept afloat indefinitely and safely, head and shoulders well clear of the water, even in a rough sea.

Worn as a waistcoat in daytime—can be slept in comfortably at night—fitted with brandy flask.

AGENTS WANTED. PRICE 50s. NET. Made to any size. AGENTS WANTED.

On View and Sold by the well-known Naval Outfitters,

GIEVE, MATTHEWS & SEAGROVE, Ltd., 65, South Molton Street, LONDON, and all their Branches.

THE ARABS AND THE WAR.

By "An Observer."

CAIRO, December 29.

More than passing interest attaches to the declarations that an enterprising Syrian paper in this city has been able to elicit from the leading Bedouin sheikhs and omdas of Egypt in connection with recent incidents on the Western frontier. After disavowing, and, indeed, condemning in no unequivocal terms, the hostile action of the few misled Arabs, these chiefs declared that—

> the first thing which occurs to a Bedawi's mind in speaking of Egypt, its independence, peace, and the protection of its frontiers, is that we Bedouins were the first to protect it; for we obtained our prerogatives by rendering such a service in the past; and what more peace, justice, prosperity, and progress do we need? Is it possible for us, therefore, to risk our fortunes, tranquillity, peace, and prosperity in Egypt? Such being the case, what interest have we to help the assailants? To these assailants the doors of the prosperity of Egypt were open, but they have now closed them by their own acts, and placed themselves between the fire of the Italians on the coast and that of the forces of Egypt. They are ignorant people who sold themselves; but we are too right-thinking and far-seeing to help them in their evil act. What interests us is that our Government should have confidence in us and be sure that we are well-intentioned, and we hate with all our hearts what our neighbours have done.

Satisfactory as they are, these declarations seem to be of rather too negative a character; something more was expected of the sheikhs than a mere disavowal of any sympathy with the foolish and reprehensible action of their brethren across the border and the attempt to prove it so by an argument based on the comfortable doctrine of material self-interest. Old Arab traditions were inspired by loftier aims; and one would wish to believe that it is only because they have not been sufficiently enlightened on the higher moral and political issues of the present war that, in their declarations of loyalty, the Bedouin of Egypt did not sound the note of old racial pride and solidarity. Now that after centuries of stifled vitality Arab nationalism has come to life again, and the awakening of the national conscience has been accompanied by an assertion of the national will which, favoured by political developments, is translating itself into organized movement, it becomes the duty of the Arabs to show a deeper interest in the great movement, and to lend it more active support.

The underlying principle of the Young Turks' policy is known to have been the crushing of every effort on the part of the Arabs towards national development, even under Turkish overlordship; and now, by handing over the Empire to the Germans, they have helped to snap the last flimsy shreds of the bond of religion by which they had till then held the only too trustful and patient Arabs. In Arabia, Irak, and Syria, bitter disillusion, growing slowly into suspicion and hatred, has filled the Arab heart; and the smouldering fire has glowed responsive to each fresh gust and current of the political storm. In Irak, with the exception of a few bands of irresponsible nomads led by venal chiefs, the people, thanks to British action, are beginning to have real hope of the realization of their long-cherished dreams, and of reconstructing eventually, under British guidance and protection, the fallen edifice of their land's old glories. In Arabia itself, aided by the nature of their country and other factors of inherent strength, and thanks also to British sea power, which has closed all access to the coast to the Turk, the people, who had never been brought to complete submission, but who, through hereditary feuds and inter-tribal wars, allowed the Turk to carry on his policy of intrigue and corruption, have at last awakened to the seriousness of the times; and now, taking advantage of the exceptionally favourable situation, are waging more seriously and successfully the war of emancipation.

In Syria fate has been less kind to the Arabs, who, besides their material ruin, are being subjected to the worst forms of persecution. Like all peoples of countries possessing strategic value and forming a link between great empires, they have paid in war the penalty of a position so valuable in time of peace. But the Arabs of Syria know that the hour of salvation is bound to come, and hope sustains them in their dark hour of trial. They know that salvation will come at the hands of the Allies, who are fighting for the noblest principles, and first and foremost for the liberty of nations. When the time comes they will, like their brethren of Irak and Arabia, lend loyal co-operation to the liberators.

Happily for themselves, the Bedouin Arabs of Egypt were freed from the Turkish yoke long ago, and they have given their share of loyal support to the liberators. Now, however, that the destiny of the Arab race is at stake, that the freeing of Arab-speaking countries is being accomplished at such a sacrifice on the part of the Allies, and of Great Britain in particular, and that a revival of Arab civilisation on modern lines looms ahead, the Bedouin Arabs of Egypt are expected to take a deeper interest in this momentous struggle and to display a more intelligent sympathy with the noble cause. Perhaps, living, as most of them do, far from the centres of intellectual activity and engrossed in their own peaceful agricultural and pastoral occupations, they have been out of touch with the great political developments which this world war is bringing about. It would be both to their own and to the Government's interests if they were to be better enlightened regarding the vital issues of the war and its aims from the Allies' standpoint.

In the East the peoples, having, through long centuries of crushing despotism, lost the spirit of initiative in thought as well as in action, require to be led even in their personal convictions and national aims. The success of Germany's Near and Middle Eastern diplomacy is largely due to her recognition of this fact. The Germans did not confine their activities to preaching, but actually led—or rather dragged—those people whom they could along the road they wished them to travel. Far be it for us to recommend the general adoption of German methods and means; but much might be gained by a judicious imitation of their thoroughness and organised activity—of course, along more legitimate and honest lines, and for worthier ends. If with a wrong cause, such as theirs, the Germans have achieved signal success, what would be the measure of the Allies' success if, with the inspiring character of their cause, they were to display the same thoroughness of method and efficiency of means? If the Bedouin Arabs of Egypt had been properly enlightened on the subject of the war, not only by general propaganda and Press publications, which lose much of their effect with an illiterate people, but also by personal instruction of their leading members, they would have realised that the Arab cause is identified with that of the Allies, and especially Great Britain, the great protector of Islam; and the salient feature of the recent declarations of their chiefs would have been a spontaneous offer of help for the overthrow of the enemy who is insidiously working for the complete destruction of Arab development on nationalistic lines. The Bedouin Arabs, although mostly uneducated, possess nevertheless the keen intelligence and the proud spirit that distinguish their race, and such a manifestation of sympathy on their part would have been consonant with their noblest traditions.

Although the Government disposes of sufficient resources in men and money, and can dispense with outside help, yet it would certainly welcome co-operation on the part of the Bedouin Arabs in a cause that is, in a way, also their own, not only for the moral advantage of example in a land that has been corrupted by the dissemination of false political principles, but also for the sake of making of the Bedouin a more useful community. It is only by affording a people the occasion of exercising a certain measure of self-reliance and initiative that it is possible to create in it self-respect, the essence of true citizenship.

TANGIER TO TEHERAN.

Apropos of my note of last week concerning enemy traders in Egypt, events have since transpired which bring one to the melancholy conclusion that the Government do not look at the matter in my light. An official list of enemy firms which have been licensed by the Egyptian Government to continue in trade number no less than 253. I am not a business man and candidly I do not understand this business. I was under the impression that having been forced into this war we were out to crush the enemy root and branch. But no; naked fists are indecent; we must keep the gloves on; we may bruise the enemy but not much. We are apparently conducting our sea blockade of Germany in the same spirit. The whole thing is incredible, and the only bright face to it is that a great and overwhelming majority of the British public is becoming heartily sick of it. I don't like war, but now that we are in it let it be bloody and real. We must fight our way quickly to the doors of effective peace, or they may remain for ever closed.

***

What would have happened at Omdurman if, side by side with our armed forces, had marched an unassailable army of politicians ready to counter each move of our fighting men by the gift of guns and material to the enemy? That, it seems to me, is exactly what is happening in this war. Our men in khaki are fighting magnificently wherever they meet the enemy. Traders and politicians, however, are supplying our enemies with the essentials of further fight. They are supplying them with a lancet wherewith to draw fresh blood from our soldiers. I will call them thoughtless, although there is another word beginning with a "T" which is, to my mind, a far more suitable appellation for these gentlemen.

***

The surrender of Montenegro has not surprised me so much as it would have done had it taken place two or three months ago; for about that time I was shown a letter, written by an Englishman of much experience in Balkan affairs, which led me to wonder whether all was well with the little kingdom. What the writer said I cannot, unfortunately, repeat now, but when Peace comes it may be possible to return to the subject. In the meantime I can only regret that the gallant people of the Black Mountain have suffered for faults that are not their own. The story is a distressing one, and the only bright spot I can see in it is contained in the announcement: "Generals Mistovitch and Valutovitch, refusing to surrender, escaped and joined the Serbians." That shows that the Montenegrin spirit is not yet dead or broken.

***

The following story of the King's solicitude for the wounded is told by one who vouches for its truth. Not long since His Majesty, being unable to visit a certain hospital himself, sent a member of the Household as his representative to visit each patient, and to convey a message of sympathy and good wishes from the King. As the King's representative was making his round his guide pointed out a soldier returned from the Dardanelles who, he said, was too ill to be disturbed, and who he thought was even then past understanding anything, and had but a few hours to live; but the nurse came forward and said she thought the man could understand what was said, though he was too weak to answer. The King's representative delivered His Majesty's message very slowly and distinctly, and passed on. Strange to say, the patient took a decided turn for the better almost from that moment, and is now making a steady recovery. Some days later, when he was able to talk a little, the nurse asked him if he had taken in the King's message. "Oh, yes," he answered, "and I thought if the King cares enough to send someone from his own house just to ask about us, and to say *he* hopes we shall get better, it's worth trying to get well again!" There can hardly be a better or more delightful instance of "the King's touch."

***

Jemal Pasha is surely to be pitied, for that he feels himself more and more on the wrong side as the war progresses is very evident. His liking for his enemies the French is well known, and his dislike for the Germans—which blazed out in his famous saying, "Ce cochon de Souchon"—is notorious. Now I see he has flatly "refused to have any German officers on the staff of his army, with the exception of one German general, whose name is not disclosed, and who was nominated by Enver Pasha as adviser without any command." Having arranged this to his satisfaction, and having also settled "all political and strategic questions in connection with the Egyptian campaign," during a short visit to Constantinople, he has now returned to Syria to prepare for his much-discussed advance. I am free to admit that I still have a sneaking regard for Jemal, who has "played the game" and shown himself a chivalrous opponent; and I am, therefore, glad for his sake that he is not to have a staff of arrogant Prussian-made officers and officerlings. But, on the other hand, it would have afforded me a good deal of pleasure to picture these gentry *en route* for the Canal, enjoying (?) the desert journey, and finally being "bagged" by our patiently-waiting forces. The fact that his opposition was not swept aside by Enver and the Germans is, of course, a healthy sign from our point of view.

***

An unhappy infant has been christened "Gallipoli," and a contemporary suggests that we may yet have a "Kut-el-Amarah Jones." I hope not, for the child's sake. "Amarah Jones" does not sound quite so bad. "Busreh Brown" would be pleasantly reminiscent of "Buster Brown," and "Suvla Smith" sounds soft and soothing. But "Kut-el-Amarah Jones" will not do at any price.

***

My attention has been called to a paragraph that appeared in the "Morning's Gossip" columns of one of the ha'penny papers on Thursday of last week. It will, I am sure, be of interest to all my readers from Turkey; and in case any of them may have missed it, I take the liberty of reproducing it here. Headed "A Diplomat's Burden," the paragraph runs thus:—

> In Pont Street, in the rain, I met Sir Louis Mallet staggering under the most miscellaneous load of bazaar trifles imaginable. He had, it appeared, just come from a "white elephant sale" at Lowndes House, where, for a consideration of some half-crowns, he had acquired this load. The bazaar was got up by Lady Neave, I understand, in aid of the Albanians. As Sir Louis was Ambassador to Turkey and much connected with the Near East, his burden was a very honourable one.

Obviously this refers to the successful "white elephant party" reported in THE NEAR EAST last week, and organised for the benefit of British refugees from Turkey. How anybody can at the present moment conceive of a bazaar being "got up," in this country, "in aid of the Albanians" passes my comprehension; for the Albanians' conduct is hardly likely to endear them to Englishmen. But perhaps the writer of the paragraph, unlike Sir Louis, is not "much connected with the Near East." In the same paper, by the way, I note a photograph of Lady Boyle at Salonika, and under it the legend: "Lady Boyle, who is helping her husband to administer the Serbian Relief Fund at Salonika, talking to two tiny refugees," etc. Lady Boyle, it may be worth while to point out, is the mother of Sir Edward, not his wife. Indeed, unless my memory plays me false, Sir Edward is still unmarried. The subject of refugees appears to be a somewhat unfortunate one for the journal referred to.

***

I wonder how far the shoulder-rubbing business of this war will affect the various nationalities concerned. It is quite possible, for instance, that we shall find words and phrases of the French language interlarding the conversation of our soldier men for a generation or more to come. And when the circle narrows and our own men come into contact with the Russian forces, there will be a new possibility to face. Sometimes, when I feel very strong, I try to imagine what a conversation will sound like when it is conducted in pigeon Russian on one side and pigeon Welsh on the other. We appear to have already adopted two enemy words, "kultur" for murder and refined cruelty, and "strafe" for "punish." The Germans, however, are dropping, or have dropped, any words of English which were formerly common in their vocabulary. I read in some paper the other day that they had resolved never to use the word "gentleman" again. I am not surprised. In the same way, it is probable that the word "virtue" is not popular with His Satanic Majesty. But I suppose the old characteristics will remain; it takes even more than Armageddon to alter these, or at least our reputation for their possession.

***

"Give a dog a bad name and hang him." John Bull will probably be represented as a portly, bewhiskered individual until the end of time, the Frenchman as a smiling gentleman in a flowing cape and an imperial; and in writing of the manner in which a people once effectually dubbed with a reputation of some peculiarity retains it in the face of all change, I am reminded that in Bucharest there are two hotels, one frequented by Roumanians, the other by Jews. When last in the town I questioned someone as to which place offered the best lunch. "Go to ———," he advised; "there you can watch the Roumanians eat and hear them talk." "And the other?" I questioned. "At the other, you can hear the Jews eat and watch them talk."

NEAR EAST BOOKSHELF.

BULGARIAN ATROCITIES.*

"Balkanicus" has cast a flood of light on the tangled politics of the Balkans by giving the world a resumé of official documents bearing on King Ferdinand's attitude. His editing leaves much to be desired, and does not assist Western readers to follow the course of events in Bulgaria since 1812. Being a Serbian, he is constitutionally unable to appreciate the fine qualities of the Bulgarian people, as distinguished from their foreign ruler, his camarilla and clique of politicians. But, making allowance for a very natural bias, it may fairly be said that "Balkanicus" has made a valuable addition to the literature of the Eastern Question.

History shows that despotic sovereigns are apt to crystallize their peoples' characteristics. Just as our Henry VIII. and George III. stood forth as personifications of their country's genius, so the German princelet who fought and intrigued his way to a throne twenty-eight years ago is an epitome of his subjects' defects. The Bulgarians are now known to descend from a Turkish tribe which crossed the Danube in the sixth century of our era, and rapidly assimilated the culture of their Slav predecessors. But patriotism and dauntless courage are the only qualities which they share with Russians, Serbians, Czechs, and Croats. For Bulgarians idealism and chivalry are empty sounds. Their ambitions have a purely material aim in view—to attain a predominant position in the Balkan peninsula at the expense of other races inhabiting that much-vexed region. The Bulgarian programme is summarised in a letter concocted by M. Ghenadieff and two other conspirators a few days after the felonious attack had been made on Serbia and Greece:—

1. Break entirely with Russia, and with the policy of gratitude towards her. It is by ingratitude towards Russia that Bulgaria has obtained the best results (1877, 1886, 1903, and 1908).

2. Give up all idea of solidarity with Slavdom; there is no Slavdom for us where there are no Bulgarian interests. Over all, and, above all, place the national egoism of Bulgaria.

3. Plot against Serbia and Greece; with Austria and Albania against Serbia; with Turkey against Greece. But keep on friendly terms with Bucharest, and through Bucharest undo the treaty signed there.

Passing from the Bulgarians to their sovereign, we recognise in him an ultra-modern German of the Bismarckian school; while on the distaff side he descends from Louis Philippe, whose vulpine craftiness brought France to the verge of war with England, and eventually cost him his throne. Ferdinand's eyes have ever been fixed on the Greater Bulgaria of San Stefano, embracing Macedonia, and bounded by three seas, over which he hopes to reign as a vassal of Austria. His assumption of the title "Tsar" in 1908 synchronised with Franz Josef's annexation of Bosnia and Herzegovina. Both were deadly blows aimed at Serbia's legitimate aspirations; and they ought to have sounded a note of warning to our Foreign Office.

Ferdinand's domestic policy has always been that of a crafty and unscrupulous despot. Bulgaria's imperfect political development has saddled her with no fewer than ten parliamentary parties, whose perpetual squabbling increases the influence of the Crown. It is used solely for dynastic ends. Ferdinand juggles with his Cabinets, intrigues against them, and confronts them with the accomplished fact before which they are compelled to bend. He has laboured with some success to inspire his troops with hatred for Russia, to whom they owe deliverance from the Turkish yoke. Under his malign example their worst qualities have grown apace, until it may almost be said that they rival Germans in brutality and lack of scruple.

Ferdinand loves to fish in troubled waters, and the disorganization of Turkey after the Tripolitan campaign gave him an opportunity of indulging his passion. In 1912 he engineered a league against her, comprising Serbia and Greece. With their effectual assistance he scored an easy victory over the war-worn Turks. But the ink on the treaty of peace executed in London (May, 1913) was scarcely dry ere he began to intrigue against his allies. Russia's advice to demobilise was ignored; her offer to arbitrate under the Serbo-Bulgarian Treaty of 1912 was accepted only that time might be gained for the concentration of his armies on the Serbian and Greek frontiers. Like the wolf in "Little Red Riding Hood," he laid the blame for a gratuitous quarrel of his own making on Serbia, whose attitude had been thoroughly loyal to the alliance. When all was ready, Ferdinand ordered a night attack on Serbia and Greece (June 28, 1913). Its result must be fresh in the memory of readers of THE NEAR EAST. For once in a way political and strategic felonies did not succeed. Bulgaria lost much territory south of the Balkan Range, which she had secured by the Treaty of London, and another large slice bordering on the Danube was appropriated by Roumania.

Ferdinand sulked like Achilles in his tents until the inevitable European conflagration gave him an opportunity of restoring his fallen fortunes. From its very outset he worked hand in glove with Austria. He permitted German munitions to pass through his kingdom *en route* for Constantinople, and supplied that city with coal shipped from its Black Sea ports. But for our Dardanelles adventure he would have openly ranged his armies against us in the spring of last year. Its failure was the signal for an act of ingratitude which has no parallel in history.

Three salient facts emerge from the mass of documentary evidence adduced by "Balkanicus." The first is Russia's earnest desire to maintain the Balkan League of 1912 intact in the interests of European peace. The second, alas! is the impotence of our Foreign Office and its late representative at Sofia. Great Britain, to whom Bulgaria owes her very existence, is only once alluded to in the course of this volume. The third is the ultra-Machiavellianism of General Savoff, whose telegrams and despatches to Ferdinand reveal a degree of moral obliquity worthy of his German wire-pullers. *Arcades ambo;* they are the evil geniuses of their country. But we may well take heart of grace. By this time the scales have fallen from Bulgarian eyes, revealing the abyss towards which Ferdinand is driving his subjects. They will learn by bitter experience that honesty is the best policy.

F. H. S.

* "The Aspirations of Bulgaria." Translated from the Serbian of "Balkanicus." (London: Simpkin, Marshall, Kent and Co., Limited, 1915. 2s. 6d. net.)

BOOK NOTES.

The "Quarterly Statement" of the Palestine Exploration Fund for January contains another instalment of the interesting "Occasional Papers on the Modern Inhabitants of Palestine," by Dr. E. W. G. Masterman and Professor R. A. S. Macalister; a paper entitled "The Jews as Builders," by Professor A. C. Dickie, reprinted from the Journal of the Manchester Egyptian and Oriental Society; a continuation of Mr. Philip Baldensperger's "The Immovable East"; "Notes on Damascus," by Mr. F. G. Newton, who deals at some length with ruins near the so-called "House of Ananias"; and "Archæological Notes," by Mr. Joseph Offord. It well supports the opinion expressed in the "Notes and News" that "there are still many subjects of interest for discussion," although the war has necessarily put an end to excavations for the time being.

We have received a copy of the *Empress Mail*, a small, illustrated daily publication distributed on board the Canadian Pacific Railway steamers plying between Canada and this country. The issue corresponding to Thursday of each week is devoted exclusively to Egypt, and contains useful and attractive descriptions of some of the best known scenes and monuments in the valley of the Nile. It will do much to popularise Egypt among Canadians, and though to speak of a tourist season now is to speak of snow in midsummer, the C.P.R. is to be congratulated on preparing now for future harvests.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916.	1916.		1334.	5676.
Jan.	Jan.		Rebi I.	Shebat.
21	8	Friday	15	16
22	9	Saturday.....	16	17
23	10	Sunday	17	18
24	11	Monday	18	19
25	12	Tuesday	19	2[illegible]
26	13	Wednesday	20	21
27	14	Thursday	21	22

To-day is the birthday of H.I.M. Sultan Ahmed Mirza, Shah of Persia, who was born at Tabriz, January 20/21, 1898 (Shaban 27, 1314, according to the Moslem calendar).

To-morrow is the birthday of H.R.H. Prince Nicholas of Greece, second brother of King Constantine, who was born at Athens on January 9, 1872 (O.S.).

Sunday is the birthday of H.R.H. Princess Militza, Princess Royal of Montenegro, who was born in 1880, and married Prince Danilo at Cettinje in 1899.

Reports received in London last Saturday state that the health of King Peter of Serbia is appreciably improving.

A Reuter's message from Athens, dated the 16th inst., says:—The King of Serbia arrived at Edipsos at six o'clock last evening on board a French torpedo-boat in which he embarked at Salonika. Apparently his Majesty found the longer sea route less fatiguing than the short sea and land journey which had been arranged.

Reuter's Rome correspondent reports that King Nicholas of Montenegro has expressed his intention of returning to Italy with the Royal Family.

Crown Prince Danilo of Montenegro and the Crown Princess have returned to Rome from Naples.

M. Misu, the Roumanian Minister, left the Legation on Tuesday afternoon for Paris to visit some relatives. During his absence M. Boresco, the First Secretary, will act as Chargé d'Affaires.

On Thursday of last week Sir Ralph Paget had the honour of being received by the King at Buckingham Palace, on his return from Serbia, where he has been acting as Commissioner for the supervision of British hospital units.

Rear-Admiral Mark Kerr had the honour of being received by the King at York Cottage, Sandringham, on Wednesday.

Lord Kitchener, accompanied by Surgeon-General Sir Alfred Keogh, last Friday afternoon, visited the blind soldiers at St. Dunstan's, Regent's Park. He conversed with the officers he met, and expressed his appreciation of the good work being done at the institution, and the cheerfulness of its inmates.

On Monday, M. Pashitch, the Serbian Premier, was received in audience at Brindisi by King Victor Emmanuel.

We are officially informed that Mme. Slavko Grouitch, the American wife of the Serbian Permanent Under-Secretary for Foreign Affairs, who arrived in Paris recently from Salonika, after a long and perilous journey from Nish during the Serbian Army's retreat, will arrive in London this week.

Under date of January 19, the *Morning Post's* Rome correspondent reports:—Mr. des Graz, the British Minister to Serbia, has arrived here after an arduous journey across Albania. It is pleasant to record the gratitude expressed by all Serbians with whom I have spoken for his services and sympathy with the Serbian cause in its darkest hour, especially as some British agents sent to Serbia are more adapted to deal with Albanians than with the Serbs.

Apropos of our report of the White Elephant Party, held last week in aid of the British Refugees from Turkey Fund, we are indebted to a correspondent for the following list of ladies and gentlemen who took, and helped to sell, tickets: The Dowager Marchioness of Dufferin and Ava, the Hon. Lady Herbert, Lady O'Conor, Lady Nicolson, the Marchioness of Tweeddale, Lady Lawrence, Lady Collins, Mrs. Surtees, Mrs. Eyres, Sir Vincent Caillard, Sir Henry Howard, Mr. La Fontaine and Mr. Martindale.

Mr. J. MacD. Russell, formerly British Postmaster at Smyrna, and now Postmastter at Shanghai, is at present on a short visit to England. Many of our readers will much regret to learn that this visit is due to the sudden death of Mr. and Mrs. Russell's younger son, Ronald, which was caused by an accident, an iron gate collapsing and, falling upon him, killing him instantaneously. The death, as announced in these columns on December 17, took place on December 5, and Mr. Russell hurried home immediately upon receipt of the news.

Among the survivors of the Yasaka Maru, which was recently torpedoed off Port Said, was Lewa Butler Pasha, late Governor of the White Nile Province.

Miss Winifred Wells, younger daughter of the Director-General of the Department of Technical Education, Egypt, who was injured in a motor accident on the Meadi Road some weeks ago, has now been able to be moved from the Anglo-American Hospital to her home at Gezireh. Miss Wells is making good progress, but will not be able to walk for some time.

As a mark of appreciation of the heroism displayed by the Australian troops in Gallipoli Mr. Austin Taylor has presented to the Commonwealth Mr. Charles Dixon's picture, "The Landing at Anzac," recently exhibited at the Fine Art Society's Gallery. The Australian Prime Minister has cabled cordially thanking the donor.

On Thursday of last week, at 240, Amesbury Avenue, Streatham Hill, S.W., the wife of Second Lieutenant T. D. Scott, R.E., Mediterranean Expeditionary Force, and of Cairo, Egypt, gave birth to a daughter.

An engagement is announced between Captain Basil Hamilton Hebden Spence, M.B., Royal Army Medical Corps, attached Egyptian Army, eldest son of Mr. T. W. L. Spence, C.B., of Uyea, Shetland, and Margaret Alice, only daughter of the late George Hunter Mackenzie, 44, Inverleigh Row, Edinburgh.

The marriage arranged to take place on January 18 between Mr. Norman Macnaghten and Miss Ida Gunning has been unavoidably postponed.

Major Horace H. Wilson, 4th Battalion King's Own (Royal Lancaster Regiment), who was drowned in the sinking of the Persia, had served for ten years with the Egyptian Army (1899-1909); and at the time he met his death he was on his way to Egypt to take up duties on the Headquarters Staff, having been gazetted Staff Officer (2nd Grade) on December 24. A son of the late Lieut-Colonel W. H. Wilson, he obtained his commission as second lieutenant in the Lancashire Fusiliers in June, 1894, and served with the regiment in India and Egypt, being present at the battle of Kerreri, in September, 1898. He was mentioned in dispatches and received the Queen's medal for Egypt and the Khedive's medal with three clasps. He was promoted captain in January, 1900. In March, 1899, he was seconded for service with the Egyptian Army, and acted as Bimbashi, 3rd Battalion, from 1899 to 1902. He was appointed Inspector, Upper Nile Province, in 1902, and held that office until 1905, during which time he made two journeys into Abyssinia with the object of establishing trade between the Abyssinian and Sudanese tribes. He also made other expeditions into hitherto almost unknown districts of the Southern Sudan. From 1905 to 1907 he was Assistant Civil Secretary in Khartoum, and from 1907 to 1909 Assistant Adjutant-General, Khartoum. The decoration of the Imperial Order of the Mejidieh, 4th Class, was conferred on him in 1903 and the Order of the Osmanieh, 4th Class, in 1909. He was specially promoted to the rank of major in July, 1912, and transferred to the King's Own Regiment, going with his battalion to India, from whence they returned in December, 1914, and proceeded on active service in France, where he was in temporary command of the battalion for a time, and was again mentioned in dispatches.

We much regret to have to record the death of Captain Arthur John Byng Wavell, 1st Battalion the Welsh Regiment, the explorer, who is reported to have been killed in British East Africa on January 8, when in command of the Arab Rifles. He was the eldest son of Colonel R. H. Wavell, the Welsh Regiment, and of Mrs. Wavell, of 7, Egerton Gardens, and was born in 1882. Educated at Winchester and Sandhurst, he joined the Welsh Regiment in 1900, and fought in the South African War. In 1904 he was specially employed by the War Office to travel and make maps and report on practically the whole of Swaziland, Togoland, and North Zululand; and the following year he was again employed by the War Office to cross the Kalihari Desert and report on the Bechuanaland Protectorate. He resigned his commission in the Welsh Regiment in 1906 and bought land in British East Africa, starting a sisal plantation near Mombasa. In 1908 he went on a pilgrimage to Mecca, and, for further exploration in Arabia, he went to Hodeida, and from there to Sanaa, but was there arrested by the Turks and prevented from going farther. He joined the special reserve of his old regiment in 1913. He was in British East Africa visiting his plantation when war was declared, and not being permitted to leave the country to join his own regiment at the front he devoted his energies to raising a force. This consisted mainly of Arab water-carriers, and with them he was able to protect Mombasa till troops arrived from India. On September 24 the Germans attacked in large numbers at Majorini, near Vanga. He managed to drive them back, but was seriously wounded in the left arm, and was for some time in hospital at Mombasa.

Major Hugh E. R. Boxer, D.S.O., Lincolnshire Regiment, who was previously reported wounded and missing, is now reported (unofficially) to have been killed in action last June, at Hooge. Born in January, 1871, he obtained a commission in the Lincolnshire Regiment in 1892, and reached the rank of major in 1911. For five years from September, 1903, he was adjutant of Militia and the Special Reserve of the Lincolns. Before the present war his active service was seen with the Nile Expedition of 1898. He was severely wounded in the battle of Atbara, and for his services was mentioned in despatches, and had the Egyptian medal with clasp and the Atbara medal. He won his D.S.O. in the present war. He was the only surviving son of Mrs. Le Grice, of Thorpe Lodge, Sandown, Isle of Wight.

Colonel F. W. Mackenzie Spring, late of the Royal (Bombay) Artillery, who died at Midhurst, Sussex, on Wednesday of last week, aged seventy-four years, had served in the Abyssinian expedition in 1867. He retired with the rank of colonel in 1894.

Our Bucharest Correspondent reports, under date of December 25: I record with regret the suicide of the well-known professor, Em. Grigorovitza. He had recently become involved in financial difficulties, the result of speculations which in the existing crisis proved disastrous. The prospect of financial ruin had told on his mind to such an extent that he finally took his own life by shooting.

M. Shebeko, formerly Russian Minister at Bucharest and later Ambassador at the Austrian Court, arrived in Bucharest on De-

Digitized by Google

cember 19, coming from Russia. In local diplomatic circles considerable importance is given to the visit of the well-known diplomat.

In spite of the circulation of trains on the line Odessa-Ungheni being interrupted in consequence of military transports, two truck-loads of drugs have arrived at Jassy, from Russia, for the Roumanian Red Cross Society. Fourteen truckloads have been received up to date from this source.

The announcement made last week that Captain Arthur Warden Baker, 7th Royal Scots Fusiliers, has been awarded the Military Cross will be received with much pleasure by his many friends in this country. Captain Baker, who was mentioned in despatches, was wounded at Loos, but has since recovered sufficiently to resume his duties. He is, we understand, the first of the former British residents at Constantinople to receive the Military Cross.

Last Friday's *Gazette* contained the announcement that the King has been pleased to approve of the Albert medal of the second class being conferred upon Michael Sullivan Keogh, Chief Petty Officer, his Majesty's ship Ark Royal, in recognition of his gallantry in endeavouring to save life. On August 19, 1915, an aeroplane piloted by the late Captain C. H. Collet, D.S.O., R.M.A., was ascending from Imbros Aerodrome, and had reached a height of 150 ft. when the engine stopped. The machine was upset by the powerful air currents from the cliffs, and fell vertically to the ground, while the petrol carried burst into flames, which immediately enveloped the aeroplane and pilot. Chief Petty Officer Keogh, upon arriving at the scene of the accident, at once made an attempt to save Captain Collet by dashing into the midst of the wreckage, which was a mass of flames. He had succeeded in dragging the fatally injured officer nearly clear of the flames when he was himself overcome by the burns which he had received from the blazing petrol.

Last Friday, being New Year's Day according to the Greek calendar, a service was held at the Greek Church in Moscow Road, Bayswater, in the morning. The Very Rev. the Great Archimandrite, Dr. Pagonis, and the Archimandrite, Agathangelos Moschovakis, were the officiating clergymen, and there was a large Hellenic congregation.

Sir Francis Gore has been elected treasurer of the Serbian Relief Fund, in succession to the Earl of Desart, who has resigned in consequence of the pressure of Government work.

The Serbian Relief Fund has received a cheque for £1,000 from Lieutenant-Colonel Davies, M.P., of Llandinan, Montgomeryshire, towards the relief of starving and homeless Serbian refugees.

The Marchioness of Londonderry will open a bazaar, organized by the Women's Volunteer Reserve, in aid of the Serbian Relief Fund, to be held at the Portman Rooms, Baker Street, on Thursday, the 27th inst. Entertainments will be given during the afternoon by several well-known artists.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

The British Farmers' Red Cross Fund, which has done such good work in the Near East—in Serbia, in Egypt, and at the Dardanelles—as well as in France and Belgium, had collected close upon £180,000 up to the end of last week. Further subscriptions are urgently required, and should be sent to the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.

A message received from Switzerland early in the week stated that Prince Eitel Friederich, the Kaiser's second son, had visited King Constantine of Greece on a special mission from the German Government.

King Ferdinand of Bulgaria and the German Emperor met at Nish on the 18th inst. King Ferdinand was accompanied by Prince Boris and Prince Cyril of Bulgaria, and by M. Radoslavoff, the Bulgarian Prime Minister.

In response to our appeal on behalf of the Y.M.C.A. work in Egypt, we have received subscriptions amounting to £12 2s., which have been forwarded to the Acting Honorary Treasurer. We trust that our readers will continue to lend their support to this very deserving cause, and should further subscriptions be sent to these offices we shall be happy to forward them to the Y.M.C.A. headquarters.

Four public lectures by Dr. R. W. Seton-Watson, arranged in co-operation with the Council for the Study of International Relations, will be given on the evenings of Monday, at 5.30 p.m., at University College, on the following subjects and dates:—January 24, Austria-Hungary: Racial Problems; January 31, the Southern Slav Question; February 7, Serbia's Place in the War; February 14, Bohemia.

THE LATE KYRILLUS V.

A correspondent writes:—

Kyrillus, or Cyril V., the Coptic Patriarch, who died last week at the age of ninety-five, was the 112th successor of St. Mark the Evangelist, by whom the ancient Egyptian Church was founded. Cyril V. was elected Patriarch in 1875, and since the early days of his tenure of office a certain section of the Coptic community have been asking for reform in the Church and striving against his authority. About twenty years ago, a party formed of young Copts succeeded in getting the Government to exile the Patriarch to Nitria. But, later, when Riaz Pasha became Prime Minister, he recalled the Patriarch, who was given a most enthusiastic welcome on his return to Cairo.

The private life of Cyril V. was always admired by his enemies as well as his friends. The mere fact that he did not spend on himself more than £50 a year, while he was free to deal with his income of £35,000 a year, speaks volumes. The vast sums he received were spent on churches, schools, and the poor.

His death will renew the strife between the young Copts, who are known as the Reformers, on the one hand, and the clergy and the Conservative Copts on the other. The first party would seek to have a modern Copt as Patriarch; the second party would wish to elect one of the type of the late Cyril V. But the people in Egypt are occupying their thoughts at the present time with the critical position in which their country is placed with regard to the war, so it is not at all likely that Coptic differences will manifest themselves to any considerable extent.

DOMESTIC ANNOUNCEMENTS

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

RYAN.—On January 13, at 9, Downshire Hill, Hampstead, N.W., the wife of Andrew Ryan, of twin sons.

SCOTT.—On January 13, at 240, Amesbury Avenue, Streatham Hill, S.W., the wife of Second Lieut. T. D. Scott, R.E., Mediterranean Expeditionary Force, and of Cairo, Egypt, of a daughter. (Cairo papers, please copy.)

APPOINTMENTS, PROMOTIONS, Etc.

A Reuter's message from Salonika announces that on Sunday last General Sarrail assumed supreme command of the Franco-British forces concentrated at Salonika.

Our Bucharest Correspondent writes (December 25):—

M. Al. Guranesco, Second Secretary of the Roumanian Legation at Sofia, is about to be transferred to the Roumanian Ministry of Foreign Affairs. He will be replaced by a councillor of legation.

The rumour of M. Derussi's transfer from Sofia, and his replacement by M. Pissoski, proves to be a mere fiction, emanating, of course, from a German source.

Colonel Rudeano, Director of Armaments at the Ministry of War, has gone abroad on a special mission.

Mr. A. L. Butler, Superintendent of the Game Preservation Department, Sudan Government, has been retired on pension from January 1, 1916.

Jemal Pasha, who recently went to Constantinople, has been promoted General of Division.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

FRIDAY, JANUARY 21, 1916.

MONTENEGRO.

Events have marched with even more dramatic suddenness in Montenegro than they did in the case of Serbia. Almost before it was realized that the Austrians were attacking Mount Lovtchen in earnest news came that this important position, which had held out against the same enemy for eighteen months, had been captured within a few days. The fall of Cettinje was then a foregone conclusion, and it was followed by the Austrian announcement of the capitulation of the Montenegrin Government. It is inevitable that the circumstances attending the surrender of Montenegro should have given rise to fresh doubts regarding the wholeheartedness of the opposition offered to the Austrian advance. Four or five months ago it was reported from Montenegro that the attitude of the military authorities was open to suspicion, that some of the official statements regarding engagements with the enemy bore no relation to facts, and that the object of these reports must be to throw dust in the eyes of Montenegro's Allies. At the time we dismissed all such rumours as due to some misunderstanding, in view of the impossibility of any foreign observer being in a position to follow the plans of Montenegrin strategy. Moreover, there was no occasion for the Montenegrins to undertake any considerable operations against the Austrians; their Allies were content to see both them and the Serbians husband their resources and employ the respite to improve their military positions. When finally the Austro-German forces moved south against the Serbians the Montenegrins at once engaged the enemy, and their actions seemed to prove the unreliability of previous reports concerning their attitude. It will be well, in any case, to withhold judgment until more conclusive evidence is forthcoming. There is some indication that the Montenegrins themselves have not accepted the capitulation unanimously, and the possibility exists that fighting will be continued. Prince Mirko, who is second to his father alone, if to anyone, as a popular idol, has left the country in apparent disagreement with the conduct of the war. The official statement made by Count Tisza in the Hungarian Parliament was to the effect that King Nicholas and his Government had agreed to an unconditional surrender before peace negotiations were begun. The white flag was said to have been hoisted at Grahovo, the scene of one of Montenegro's famous victories over the Turks, and King Nicholas had handed over his sword to an Austrian general. That the terms imposed upon the Montenegrins provided that all men fit for military service should be assembled in a large body for the purpose of laying down their arms and should then be interned may well have led to a general repudiation of the surrender.

If it should be established that the Montenegrin Government has been in negotiation with the Austrian for some time past we shall hope to learn that the step has been taken in full agreement with, or with the tacit consent of, the Allies. Two points have to be borne in mind. In the first place, Montenegro's participation in the war was brought about by her alliance with Serbia, and was not the outcome of any direct concern in a struggle between the Great Powers. It is true that Mount Lovtchen has always been coveted by the Austrians; but Italy's veto could be relied upon in all ordinary circumstances to keep Austria's hands off the mountain. Secondly, while the Montenegrins entered the war with all the necessary enthusiasm, the Allies were never in a position to give them any practical support, so that they should feel themselves definitely incorporated in the Allies' military schemes. To some extent the Montenegrins co-operated with the Serbians, but their campaign against Austria was in the main carried out on their own initiative. For a long time, while they were dealing the enemy just as hard blows as they received, the situation was, no doubt, to the liking of a hardy fighting stock; but as the war dragged on indefinitely there may well have arisen some misgivings in the mind of King Nicholas. If the Allied Powers had been able to reassure him and to make good the drain on the country's resources, all might have been well. But when the Quadruple Entente failed to support Serbia, the Montenegrin Government was confronted with a serious situation. For the Serbians there could be no alternative to resistance to the death, for no terms which the enemy would give them would save their country. The Montenegrins, on the other hand, had no such fate to fear. They might be called upon to surrender Mount Lovtchen, but no one coveted the rest of their mountainous country. In such circumstances it was almost an obligation on the part of the Allied Powers, as soon as they found themselves unable to assist either Serbia or Montenegro, to make it easy for the latter to be spared the fate of the Serbians. If this course was not adopted, and it be proved that the Montenegrins entered into negotiations with the enemy without consulting their Allies, we shall still do well to suspend judgment until the whole of the Montenegrin case is known. An advanced picket which has satisfied itself that it has been abandoned by the main force, and is surrounded by the enemy, may have to make its own terms. Not many years have passed since Tennyson wrote:—

> O smallest among peoples! Rough rock-throne
> Of Freedom! . . .
> Great Tsernagora! never since thine own
> Black ridges drew the cloud and broke the storm
> Has breathed a race of mightier mountaineers!

It is not asking too much, therefore, that the inner history of the movement for surrender should be learned before a brave people is condemned. The one desire of the Allies, with their knowledge of the deadly potency of Austro-German intrigue, can only be that Montenegro's loss of independence should be brief, and that she may still be found on their side when the settlement at the end of the war takes place.

From a military point of view, the surrender of Montenegro could be regarded with equanimity. With the Montenegrin army still in being and falling back into Albania before a pursuing Austrian force, the Allies would have been obliged to devote some attention to this western flank before a general advance along the southern front could be made. If, on the other hand, the inducement to the Austrians to press on southwards were removed, Montenegro and Albania would be eliminated from the theatre of war, and the southern line shortened on the west. This should facilitate the operations directed from Salonika; for, in view of the necessity of garrisoning Montenegro and guarding against an Italian surprise, the Austrians will not find that the capitulation liberates any large portion of the invading army for service on the Greek frontier. On the other hand, if there is to be an advance from the Ægean, by the time the Allied line is abreast of Montenegro the Austrians will have had to evacuate the country. The more vigorous the offensive in the Balkans, and the sooner it can be launched, the shorter will be the day of Montenegro's undoing. For the moment she is being forced into the orbit of the Central Powers, but it cannot be her final position, for it suits neither the traditions nor the instincts of this Slav people.

THREE FAMOUS SIEGES.

THE DARDANELLES, PORT ARTHUR, TSINGTAU.

(From a Correspondent.)

The news on my arrival in England from the Far East of the complete evacuation of the Gallipoli Peninsula brought home to me very forcibly the wonderful military capacity and reckless bravery of our Japanese Allies, whose triumph over the German stronghold in China freed us from a heavy drain on our Fleet and our men, and ended the German dreams of a prominent, and even foremost, place in the Rising Sun.

In ordinary times an article dealing partly with the Far East would be out of place in the pages of The Near East; but these are no ordinary times, and a short study of the Japanese methods which were successful at Tsingtau against the Germans and at Port Arthur against our present Allies, the Russians, may prove of some interest.

At the commencement of each of the operations respectively against Port Arthur, 1904, Tsingtau, 1914, and the Dardanelles, 1915, the same opinion was held by many people, viz., that the place was impregnable, and could not be taken by assault. The Russians had converted a naturally strong port into what was actually one of the strongest fortified places in the world; the Germans had spent twenty millions sterling on Tsingtau, and numerous military barracks, forming a considerable part of the town, showed that there were plenty of defenders for the hidden guns on the crests of the heights; whilst the Turks had, with the aid of their German allies, added considerably to the many strong positions guarding the entrance to the Sea of Marmora. To-day the first thought that occurs to one who knows all three places is that, whilst the small Japanese nation had to contend with the mighty Russian Empire at Port Arthur and the up-to-date scientific Germans at Tsingtau, and the British and French had as their opponents "only" the Turks, backed up by a few thousand Germans, the Japanese alone were successful in both of their sieges, whilst we not only failed to take the Dardanelles, but even had to beat a retreat after colossal losses. I write "only," for, unfortunately, since the Turkish wars of 1912 and 1913 it became common to speak of the Turkish army with contempt, whereas the last few months have proved that the Turks have not lost the fighting qualities that once carried them as far as the gates of the capital of one of their present allies.

Where does the secret of the successes of the Japanese and of our failure lie? We know that our men performed deeds of valour unsurpassed even by the "forlorn hopes" of the Japanese, but we also know from Sir Ian Hamilton's despatches that some officers were relieved of their command, whilst discussions in a certain place showed that all were not unanimous as to the methods of attack. The world did not hear of such incidents at Port Arthur and Tsingtau, where the Japanese left nothing to chance, but, on the contrary, had studied everything carefully and closely for years beforehand. Having, then, equally brave soldiers on our side, it would appear to me that if the same foresight and measures of preparedness had been employed by our Staff, the Dardanelles would have gone the same way as Port Arthur and Tsingtau.

Looking at the mighty forts of Tungchikuanshan, Erlungshan, 203-Metre Hill, and Bodai at Port Arthur, and Forts Bismarck and Iltis at Tsingtau, one might well wonder how they ever fell to the armies of a little nation like Japan; but a knowledge of the incredible recklessness of the Japanese soldiers, added to the scientific attainments possessed by the officers, makes one understand how, after unheard-of losses, Russian fort after fort fell and gave Port Arthur to the men who had already conquered it by force of arms from the Chinese. A few weeks of brilliant operations, carefully planned previously, sufficed to make the Germans haul down their flag at Tsingtau to give way to the Rising Sun.

To one whose military service is confined to turning out against Chinese revolutionists the difficulties of the operations at the Dardanelles are, of course, unknown, but, after seeing the very formidable positions at both Port Arthur and Tsingtau, and especially at the former place, garrisoned by as brave soldiers as the Japanese themselves, the natural question arises: "How would the Japanese have fared at the Dardanelles?"

Well, the best reply is perhaps that at Port Arthur the gallant Russian soldiers, armed with the latest weapons of the time and taking full advantage of the so-called impregnable iron-stone forts, further strengthened with all possible defence works, such as tunnels, trenches, mines, and electrified entanglements, had to surrender in less than five months from the beginning of the general attack. That the attacks were fierce and costly is proved by the fact that one shrine contains the cremated remains of 22,183 Japanese soldiers. The stuff of which their officers were made is shown in one of the orders issued by Major-General Nakamura during the attack against one of the forts: "Our object is to sever the fortress in two parts. No man must hope to return alive. If I fall, Colonel Watanabe will take over the command: if he also falls, Lieutenant-Colonel Okabo will take his place. Every officer must consider himself his senior's successor. The attack will be delivered mainly with the bayonet. However fierce the Russian fire may be, our men are not to reply with a single shot until we have established ourselves."

The Russians were equally brave, but, as we unfortunately know, bravery alone will not prevail, and nothing was able to hold out against the Japanese methods. Of the Russian defenders of one of the hills alone, viz., 203-Metre Hill, 5,380 corpses were collected after its fall.

This war has proved the necessity of artillery, and our French Allies have done excellent work with their guns, but I doubt whether they surpass the Japanese. It is only a few days since I had a proof of the remarkable accuracy and effect of their big guns, and, as the test was visible to anyone on the hills which are now open to the public, the results were no doubt seen by many others. After the capture of Tsingtau the Japanese military authorities took over the entire administration of the German territory, shipping most of the Germans as prisoners to Japan. A short time ago a new gun was brought over and mounted on Fort Iltis, from which it was desired to test its power on one of the lower forts formerly commanding part of the entrance to the harbour. Standing on Fort Bismarck, I was able to see clearly the results. The first shot fell a few yards from the fort; the second struck it fair in the centre. There was no third! The little fort had ceased to exist. At Fort Bismarck there are many evidences of this fine shooting. One of the German big guns, a 28 cm., I think, received a shot in its nozzle, whilst its twin, a few yards away, got a smack from a shell on the barrel. There they are still just as the two shots left them, an eloquent testimony to Japanese marksmanship. Four of the other big guns were blown up by the Germans when they surrendered, but all round there are holes made by Japanese shots.

To return to the question, "How would the Japanese have fared at the Dardanelles?" most people who know the race would probably reply that the Japanese

would have been successful, for they have shown that they do not begin any military operations without previously having everything fully prepared for success. Our men at the Dardanelles were as brave as our Far East Allies, but the most enthusiastic supporter of British military plans must admit that everything was not thought out so fully as to let our men gain the full advantage of their bravery. It is not saying too much to assert that the Japanese Staff would have adopted different methods, with probably very different results. In one of his despatches Sir Ian Hamilton stated: "The divisional commanders believed themselves, it seems, unable to move. Then had come hesitation. The advantage had not been pressed. The one fatal error was inertia. And inertia prevailed." One can scarcely ever imagine a Japanese generalissimo having to make such a statement about his divisional commanders! I don't think the word "inertia," or its equivalent, is known in Japan.

In conclusion, the operations at the Dardanelles were being very closely watched by the Japanese, and it would be interesting to our leaders to learn the conclusions of the Far East military experts, which, I may say, they are not likely to do, as discreet silence is one of the virtues of the clever little nation; but one thing may be taken for granted, and that is that any errors made by our side at the Dardanelles will be taken to heart, analysed, and not repeated by the Japanese during any of their future military operations.

THE WAR IN THE BALKANS.

It will be remembered that a fortnight ago Mount Lovtchen fell into enemy hands. The fate of Cetinje, the unsullied capital of the brave Montenegrin people, was thereby sealed, and last Friday the following Austrian communiqué was issued in Vienna:—

After surrendering Cetinje, the Montenegrins are retreating on all points of their south and west front, pursued by our troops, who have crossed the line Budua-Cetinje-Grab-Grahovo, and are now advancing east of Bileca and near Avtovas into Montenegrin territory. Near Grahovo we captured three guns, with their gunners, 500 rifles, one machine gun and much ammunition, and other war material. Nothing new has taken place near Berane and west of Ipek.

This communiqué was followed on Sunday by a second, as under:—

In pursuit of the defeated enemy, our forces with their southern wing yesterday occupied Spizza. At Cetinje 154 guns of different calibres, 10,000 rifles, ten machine guns, and much munition and war material was captured. The number of guns captured during the battles in the region of Mount Lovtchen has increased to forty-five. The number of prisoners brought in yesterday was 300. South of Berane, where the enemy is still stubbornly resisting, our battalions stormed the trenches on the height of Gradina.

It was at the time thought that a portion of the Serbian Army was fighting side by side with the Montenegrins, and it was believed that the despatch of a relatively small Allied force with guns would enable the Montenegrins to maintain their position, prevent the country being overrun by the enemy, and enable the remainder of the army, if it came to the worst, to escape through northern to central Albania where, it is presumed, they would have found safety in the shelter of the Italo-Serbian army. However, matters seem to have moved swiftly, Monday's Vienna communication stating that

North of Grahovo the pursuit and fighting is proceeding. In this region we captured 250 Montenegrins and a storehouse filled with ammunition also fell into the hands of our troops. The number of prisoners captured during the last few days near Berane exceeds five hundred.

On the same day a Buda-Pest telegram, received in Amsterdam, reported (says Reuter) that Count Tiza addressed the Hungarian Parliament as follows:—

"I beg leave to interrupt the discussion in order to announce that the King and Government of Montenegro have asked to be allowed to open peace negotiations. In reply to this request we demanded, as a preliminary to the initiation of peace negotiations, unconditional capitulation. I have now received the news that Montenegro has agreed to unconditional surrender. Therefore, after the capitulation has been accomplished, peace negotiations can begin. Without over-estimating the significance of this event, I think that I can in any case describe it as an important and gratifying event, which shows that the Hungarian Monarchy and nation are reaping the first-fruits of their perseverance and heroism."

Up to the moment of writing there has been no confirmation of the report of the unconditional surrender of the Montenegrin Army, and, frankly, we doubt its accuracy. The only document, official or semi-official, which is of interest is a note issued in Paris on Tuesday by the Montenegrin Consul-General. It says:—

The newspapers announce that unhappy Montenegro has had to submit to the inevitable after having struggled heroically in particularly disadvantageous conditions against an enemy much sueprior in numbers and formidably armed. It may be considered as certain that if the King and Government have yielded it is because the army had exhausted its last munitions.

Even flight was impossible. The enemies were on the frontiers; there was no escape by the sea; inveterate hostility was to be encountered in Albania. If the Serbian Army was able to escape from Serbia the weak contingents of Montenegrins, exhausted by the superhuman efforts of their long and desperate but effective resistance and by privations of all kinds, were not able to seek refuge on friendly territory. It is possible to discuss *ad infinitum* the conditions of the suspension of hostilities, the details of which, it is to be observed, come from enemy sources; it is even possible to heap insults on the unfortunate conquered, but that will in no way detract from the reputation of valiant little Montenegro nor from the sublime rôle of heroism which she is proud of having played in the great war.

***On going to press we are informed that Reuter's Agency has received the following from Rome:—"Thursday.—The Montenegrin Consulate-General this morning informed the Ministry of Foreign Affairs, by order of M. Muskovitch, the Montenegrin Premier, who arrived yesterday at Brindisi, that the King of Montenegro and his Government had refused all the terms offered by Austria-Hungary, and that fighting had been resumed on all the fronts. The King and his sons are still in Montenegro, in the midst of their troops, organising the last stand." A later message from Brindisi last night states that it is understood that King Nicholas is staying at Scutari to organise the resistance. On the other hand, Sir J. Roper Parkington, the Consul-General for Montenegro in London, received yesterday a telegram bearing out the above news, and stating that the Queen and the two Princesses were on the way to France. The message added that the King, with his sons, are at the head of the troops, determined to fight to the last. It is only what we should have expected from heroic Montenegro.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Mesopotamian Expedition. Jan. 13.

Sir J. D. REES asked whether recent developments in Turkey, Mesopotamia, Persia, and the Middle East would occasion any change in the military administration of affairs in these countries, and whether the Mesopotamia expedition was still controlled entirely by the Government of India?

Mr. TENNANT said he could not answer for changes that might be occasioned by future developments, but at present the Mesopotamia Expedition was controlled by the Government of India.

Sir J. D. REES asked whether Mesopotamia was not rather remote from India, and whether its connection with Egypt did not make a change desirable.

Mr. TENNANT said he was not aware of any geographical changes.

Sir J. D. REES: The right hon. gentleman may not be responsible for the geography, but is he not responsible for answering as regards military proximity?

Mr. TENNANT: It is true that measured by miles Mesopotamia is nearer to Egypt, but for military convenience it has been arranged—and I do not think it is likely to be altered—that the Mesopotamia Expedition shall remain under the control of India.

Administration of Egypt.

Sir J. D. REES asked Sir E. Grey whether recent developments in Turkey, Mesopotamia, Persia, and the Middle East would occasion any changes in the administration of Egypt or in the political direction of affairs in these countries.

Sir E. GREY said no changes of the nature referred to by the hon. member were in contemplation.

Sir J. D. REES: Does not the direction of affairs in Egypt at present possess a paramount importance compared with that of previous conditions, and is not any change contemplated there in consequence?

Sir E. GREY: There are no changes contemplated in the political direction of affairs, but of course there may be military changes according to the progress of the war.

Our Representative at Teheran.

Sir E. GREY informed Sir J. D. REES that the post of His Majesty's Minister at Teheran had been held since April 17 by Mr. Charles Marling.

Sir J. D. REES: Is it not the case that our representative acted with great tact and diplomatic skill during a most crucial period?

Sir E. GREY: Oh, yes, that is quite true. Mr. Marling has conducted affairs with great judgment and skill.

British Interests in Bulgaria.

Sir E. CORNWALL asked who was now representing British interests in Bulgaria, and what information had reached the Foreign Office with regard to the status and property of British subjects in that country.

Sir E. GREY said British interests in Bulgaria were now in the hands of the United States Chargé d'Affaires at Sofia, and British subjects in Bulgaria were free to leave the country if they wished to do so. As far as he knew none was interned and no complaints had reached him of damage to British property.

The Case of Lieut.-Col. Barrett.

Captain AMERY asked whether Lieutenant-Colonel J. W. Barrett, Australian Medical Corps, occupied the Imperial appointments of Assistant Director of Medical Services on the staff of the Director of Medical Services, Egypt, and consulting oculist to H.M. Forces in Egypt; whether he was removed from these offices without inquiry by the Australian Government on a recommendation of the Army Council, which the General Officer Commanding in Egypt subsequently pointed out was due to a misunderstanding; whether a Court of Inquiry has been held and what was the finding of that Court; and whether, if that report is favourable, the Army Council is prepared to reinstate Lieutenant-Colonel Barrett, and whether he is prepared to make any statement with regard to the value of the work done by Lieutenant-Colonel Barrett?

Mr. TENNANT: I believe the facts as stated in the first two parts of the question are substantially accurate. A Court of Inquiry was held in Egypt in October of last year, and in its finding the Court exonerated Lieutenant-Colonel Barrett and spoke in the highest terms of his work. The High Commissioner of the Commonwealth was informed that there was no objection to Lieutenant-Colonel Barrett being employed in Egypt or elsewhere provided the Government of the Commonwealth concurred.

Turks and Germans. Jan. 17

Sir E. CORNWALL asked whether the Secretary for Foreign Affairs had received any information indicating German aims with regard to the future of Constantinople and as to the growing apprehension of the Turkish people at the real objects of Germany.

Lord R. CECIL: We have no authentic information as to the feeling in Constantinople, but inasmuch as the result of the war so far has been to place Germany's allies in a state of administrative dependence on her, it would not be surprising if Turkey, as one of those allies, felt apprehensive as indicated in the question.

The British in Baghdad.

Lord R. CECIL, replying to a question put by Sir E. CORNWALL, said the latest information in his possession was that nine British women and children were deported from Baghdad on November 24 in the direction of Mosul. If that was the case, there were no British women and children left in Baghdad. On the 7th inst., he requested the United States Ambassador at Constantinople to be so good as to obtain any news procurable as to the fate of the party, and how many British subjects remained at Baghdad.

The Mediterranean E.F. Command.

Mr. TENNANT, in reply to Mr. R. GWYNNE, said that Sir Archibald Murray had been appointed to succeed Sir Charles Munro in charge of the Mediterranean Expeditionary Force. General Maxwell was part of the organisation commanded by Sir Archibald Murray.

The Mesopotamian Campaign.

Replying to questions regarding the operations in Mesopotamia, Mr. CHAMBERLAIN said that recent operations in that region, including the advance on Ctesiphon, were considered and approved by the War Council. It would not be in the public interest to make any statement as to the scope of the military operations now in progress; information of that kind in present circumstances would be much more valuable to the enemy than to the members of the House. He might, however, take the opportunity to bring up to date the information which he had given to the House as to the operations which had already taken place. On the 11th inst. he announced that the enemy had retired six miles east of Kut. He apparently advanced again on the 12th from what was called the Wadi position. Since then the Government had received telegrams from General Townshend up to the morning of the 15th, and from General Aylmer, commanding the relieving force, up to the 16th. From these telegrams, it appeared that on the 13th General Kemball, on the right bank, was holding a Turkish Division, and General Aylmer was pressing back other forces on the left bank. There was continuous fighting on the 13th, and on the 14th General Aylmer reported that the enemy had again retired, and that he himself had moved his headquarters and water transport to the mouth of the Wadi. On the 15th he reported that the whole of the Wadi position had been captured and that the enemy rearguard had taken up a position at Es Sinn. General Aylmer's operations had been hampered by weather throughout, and the weather was still reported to be bad. All the wounded had been sent down the river.

In answer to further questions, Mr. CHAMBERLAIN said that, so far as he was aware, General Sir John Nixon was in command of the British Forces in Mesopotamia pending the arrival of Sir Percy Lake, which would take place shortly.

Serbia and the Allies. Jan. 19.

Mr. BOOTH asked whether the Under-Secretary for Foreign Affairs was aware of a statement by the Serbian Prime Minister that they had expected from the Allies help which did not come, and that otherwise the Serbians would have engaged their three adversaries in a big battle.

Lord R. CECIL: I have seen the statement in the Press, but I have no information on the subject.

War Prisoners in Turkey.

Lord R. CECIL, replying to a question by Mr. R. M'NEILL as to prisoners of war in Turkey, said that since the reply given to the hon. member for Argyll on the 13th ult., information had been received as to ten other prisoners, which had been communicated to the War Office and Admiralty.

Mr. M'NEILL asked whether there was any hope that any large number of those reported missing in the Gallipoli Peninsula would be traced.

Lord R. CECIL: My hon. friend will realise the great difficulties we are under, owing to the character of the Turkish Administration, but we are constantly in communication with the American Ambassador at Constantinople, and do everything we can; but if my hon. friend will suggest anything further we can do I will consider it.

Stores Left at Gallipoli.

Sir W. BYLES asked whether the Under-Secretary of State for War had any official information showing that booty was found in Gallipoli of the value of £2,000,000, and included 50,000 woollen blankets and millions of kilogrammes of oats and barley.

Mr. TENNANT: On the evacuation of Gallipoli the object, of course, primarily, was to bring away safe and sound the troops, and, secondly, to bring away intact as much material as possible. It has already been stated that a considerable amount of stores was abandoned after being destroyed, but it was not possible to prepare an accurate estimate of their precise value. It is possible that at the expense of valuable lives a greater amount of stores might have been saved, but I think this House and public opinion generally will endorse the action of those responsible in directing their primary efforts to bringing away safely the personnel.

Mr. R. M'NEILL: Were any stores left behind that were undestroyed?

Mr. TENNANT: So far as the bulk of the stores the answer would be in the negative. Whether there was a small part undestroyed I cannot say

Colonel LOCKWOOD: Would it approach £2,000,000?

Mr. TENNANT: No, nor anything like it. I think about a quarter or an eighth of that.

Operations in Mesopotamia.

Mr. CHAMBERLAIN, replying to Sir J. REES, stated that the latest information with regard to the military operations in Mesopotamia was to the effect that the weather conditions had been atrocious, and had stopped all progress. So far as he knew, the region between General Aylmer's Force and the Persian Gulf was tranquil.

THE PRESS ON THE NEAR EAST.

Lower Mesopotamia.

Writing under the above heading in the *United Empire* (January) Mr. H. Valentine Geere has given us a most comprehensive picture of the field of our Mesopotamia operations. Our first quotation is from the opening portion of his article, in which he pays a deserved tribute to our forces in this expedition:—

The reduction of Fao, the capture of Busreh, the brilliant success at Shaiba, the steady advance up the Euphrates and the Tigris, together with the effective handling of what threatened to become a dangerous situation on the Karun, go to the making of a page in the history of our Empire-building of which every member of the Indian Expeditionary Force D, from highest to lowest, may well feel proud. The reports of the force's doings that were vouchsafed to the public at home were few and far between, and sometimes much belated; but they were uniformly favourable, and accustomed us to think that whatever news we might receive from other theatres of the war, that from Mesopotamia was almost sure to be good.

In spite of these facts—or, perhaps, because of them—the achievements of General Nixon's gallant little force had hardly been appreciated at their true value. It is characteristic of us as a nation that we have heard more of them since the set-back than ever we did before. Fortunately for the interests of the Empire, it is equally characteristic that upon the whole the determination to "see the thing through" appears to have hardened as a result of the check.

Mr. Geere considers that the last doubt concerning the advisability of pushing through to Baghdad has disappeared. "Sooner or later . . . we may reasonably hope, the Union Jack will fly over the city of the Khalifs. And once planted there—let us hope—it will remain." He looks forward to the day when, under British guidance, the Arabs of Irak may be trained to self-government, and the city of Baghdad again become a centre of Arabic learning and culture. We quote below from the writer's description of the gradual formation of the tract of land with which his article deals:—

In remote times a great part of this area was under water, being, in fact, part of what we now call the Persian Gulf, known to the Babylonians as the Nar Muratti; and the Twin Rivers emptied into it through two distinct embouchures. Gradually, however, the silt brought down by them filled the shallow head of the Gulf, as it is actually still doing; what was sea became salty marsh; the salty marsh in turn became more or less solid ground; and the rivers, working their way towards one another, finally united to form the fine waterway that we call the Shat-el-Arab, into which the Karun also now pours its stream.

The whole of the plain thus built up on the old bed of the sea is formed of silt brought down by the rivers, to the chemical composition of which it owes its extremely fertile character. From the Armenian mountains come washings of gneiss and granite, limestone and sandstone; farther south are added gypsum and mica, feldspar and chalk; the whole combining to form an extraordinarily rich alluvium. To-day, however, owing to the neglect of irrigation and cultivation, much of this valuable plain is rendered unfit for use by the presence of salts in excessive quantities.

From a description of the country the writer turns his attention to the various towns and villages which have figured in recent despatches. They are not imposing:—

In a word, the entire plain, which disputes with the Nile Valley the right to the title of "The Cradle of Civilization," is to-day little better than a vast wilderness. But we know that formerly, in the days of the Babylonian kings, and again in the times of the Abbasside Khalifs, it was almost incredibly fertile and prosperous; and should Great Britain, as one result of the present war, make herself responsible for its future, there can be no doubt that it would once more return to its former state, to the great gain of its inhabitants, of ourselves, and of the world at large.

All through the article we find frequent reference to the persistent attempts of Germany to capture our trade in this region, happily without any great success: "But in future, if German traders are to be backed by their Government, as they have been in the past, British firms will certainly be justified in looking for more support from our own Government than it has heretofore accorded them."

The article concludes:—

To Britons to-day the chief interest of the region lies in its present and its future. Given the advantages of British rule, that future should be a brilliant one. And though at the time of writing the outlook is not as promising as it was a month ago, it is unthinkable that, after all the sacrifices that have been made in this region, it will be permitted to remain in the hands of the incompetent Turk, or to pass into the hands of the competent but most truly "unspeakable" Hun. In its own interests no less than in ours, it should be brought under the British flag, when it would certainly return to its former prosperity and become one of the most valuable portions of the Empire.

Greece and Her Policy.

The following quotation is taken from a new Greek journal, the *Hysperia*, which, printed in Greek, is published in London, working with the object of contributing towards a better study of Greek national questions and a closer union between Greeks living abroad and those in the Hellenic kingdom, and also of acquainting the Greek public with the political and social principles which form the basis of the greatness of the Western nations:—

It is with a real agony that the Greeks living abroad follow the policy of the Hellenic Government, which, ignoring undisputable political principles and sacred national traditions, has created a situation full of external perils and internal dangers, and is threatening with disruption the most vital force of the nation, viz., its unity. . . . The policy of the Greek Government has put the Hellenic nation in the discreditable position of depending for its existence and its future on the goodwill of its hereditary enemies.

The Military Situation.

The Military Correspondent of the *Morning Post* (January 17), in a review of the situation consequent upon the overrunning of Montenegro, says:—

The fundamental error, for which all must share the responsibility, is to be found in the want of foresight and of a combined military policy, which it may be hoped is now, though somewhat late, a thing of the past. The advantages derived by the Teutonic Powers from their central position and from the unity of direction which was ensured by the assumption of the supreme control of operations by the German General Staff could not be successfully overcome by the parochial system of warfare which resulted from the independent pursuit of individual interests. As to the more precise allocation of blame for this state of things, it is necessary to preserve an open mind till the circumstances are fully known. The *Messaggero*, indeed, hints that things would have happened differently in the Balkans if the Allies had listened to the advice of Italy "at the opportune time." This and many other matters which are now obscure cannot, obviously, be cleared up till after the war.

General Cherfils, in an article contributed to the *People* (January 16) on the same subject, thinks that:—

If the Serbian Army, unable to maintain itself in Albania, has to be removed in its entirety to some safe spot, leaving the roads to the Adriatic open to the Austrians and Bulgarians, we shall have committed a desertion comparable to the disaster of leaving Salonika. To my mind the Serbian Army ought not to leave the Albanian coast unless Italy can send 200,000 or 300,000 men to replace the Serbians in Albania. There are in Albania, according to the Rome newspapers, 30,000 Italian labourers and 30,000 Albanian labourers employed in building roads. This is a proof of the importance which Italy attaches to her domination of Albania. Albania, indeed, is the only sphere in which Italy can carry on a war of movement, the only form of warfare which can produce decisive results, whereas siege warfare means months and years of impotence. The ground in Albania is very difficult, but this is really an advantage for us, for the topographical difficulties prevent the Austro-Germans from employing their heavy artillery and favour the individual qualities of the Serbian and Italian soldiers.

This writer considers that it would be a double strategical error not to remain in Albania. In writing of Gallipoli the General writes:—

The total abandonment of Gallipoli after the success of our installation at Salonika in no way injures our prestige in the Near East. This prestige was definitely acquired by our determination to land in force at Salonika. The evacuation even added to our military, if not our political, prestige, inasmuch as the delicate withdrawal reflects the greatest credit on those responsible for its organisation—namely, Sir Charles Monro, Generals Birdwood and Davies, and General Brulard. Personally, I in no way regret the abandonment of Seddul-Bahr, which is dominated by the heights beyond Krithia, which constitute a veritable Gibraltar at the entrance to the Straits, for I never have been enamoured of the attack at that particular point. Success there never appeared to be within the bounds of realization.

Carmen Sylva.

Writing in the *Asiatic Review* (January), Mr. Oliver Bainbridge gives us an interesting character sketch of Queen Elisabeth of Roumania. The following anecdote shows how powerful is the humane side of the Queen-Poetess's character:—

The Roumanian has in every walk in life a strange pride which causes him to abhor the idea of medicine and surgery, and to consider the loss of a limb as terrible as that of life itself. He has become accustomed to the idea that only beggars

Digitized by Google

are so disfigured, and believes that no necessity should constrain him to such a loss.

It occurred to the Queen that if one yielded, others would follow, and one day, when the surgeon was turning away sorrowfully from an obstinate patient who could be saved only by an operation, she approached, and added her own entreaties. Still the soldier reiterated that, if his leg were amputated, he should be taken for a mendicant, like the wretched outcasts of the Carpathians. "I am not a beggar," said he, proudly. "I will lose my life, but not my honour." "It is true," said the Queen, "you are not a beggar, but I am"; and she threw herself on her knees at the bedside. "I have never prayed but to God, but now I supplicate you to listen to His wish and mine. Let your leg be taken off, and spare your life to your country, and me, and——" "And if I consent, my lady, what then?" "Why, then," she said, joyfully, rising and seizing his hand again, "I will give you the most beautiful cork leg in Europe; it shall work with springs, and, when the war is over, you shall come and dance at the Palace with your sons." "I consent," he said, softly; "but you must hold my hand during the operation." After that there was no more opposition to the surgeon's wishes.

Her Majesty has always shown keen interest in and sympathy with the blind, and thousands of pounds earned by her writings have been devoted to their help.

It is the object of the Queen to make Esperanto the medium of uniting the blind of all nationalities through an interchange of library-books in Braille Esperanto. Mr. Adams says that "Brailling a book is not only a long, expensive, and trying work, but it becomes very bulky. If done in any national language—English, for example—it can only be read by English-speaking people; but if, on the contrary, the book is done in Braille Esperanto, it is at once readable by blind people of all nationalities, so that, instead of selling one copy, they can sell a hundred at least. The Queen appreciates this fact, and has instructed the Professor of Esperanto to do everything in his power to advance the study of the language.

Queen Elisabeth is not in sympathy with the militant suffragettes in England. The opinion of this brilliant and gifted woman on this subject is of considerable interest.

She said: "We have the right to suffer, to be patient, to work hard, to help, to nurse, to be virtuous, and make men so. What more do we want?

Her Majesty's own accomplishments are many and varied, literature and music taking the first place in her interest.

The Queen, who is a brilliant pianist and organist, spends three hours a day in her music-room. Some years ago she was told by many of her admirers that her voice was equal to Patti's, but she did not believe them, and decided to have it tested. She went to a great French master, who, after hearing her sing, said: "Madame, you have musical feeling, but no voice. You might make a success in operetta, but, to be frank, your face isn't worth anything." This honest opinion amused the Queen, who rather confused the poor master by revealing her identity as she left his studio.

Tried in the Fire.

The *Morning Post* (January 19), in a leading article, entitled "Montenegro and the War," says:—

Montenegro has made an heroic stand against overwhelming force, unaided, and she has fallen. It is the fortune of war, and Montenegro has at least earned the admiration of her friends and, we hope, the respect of her enemies. The little kingdom was no party to the treaty binding her Allies not to conclude peace except by common consent among themselves. The fact that Montenegro has yielded does not possess the political significance which the Central Powers attribute to it; nor, indeed, does it involve any grave military consequences as regards the main course of the war.

The paper points out that the boasts of the enemy, reduced to plain terms, consist in triumphing over the least of their antagonists after a year and a-half of war. The article continues:—

The military gain acquired by Austria consists in her occupation of the heights commanding the valuable harbour of Cattaro, the possession of which may enable Austria, if time permit, to make a formidable naval base there. But even this advantage is largely neutralised by the occupation of Valona and of Corfu by the Allies, who thus command the entrance to the Adriatic. That command enables the Allied Fleets effectually to blockade at a distance the Austrian Navy. A navy which is shut up in an arm of the sea to which passage from the main trade routes is denied is useless. The Austrian seaboard, with its fortified ports and its men-of-war, is a perpetual menace to the Italian seaboard on the Adriatic shore, but so is the Italian naval force a menace, and a more powerful menace, to Austria, whose sea traffic, in so far as information is available, has long been stopped. Therefore the mere occupation by Austria of a range of hills dominating a part of her seaboard is of no material importance for the time being.

Turning the Tables.

The *Standard* (January 14), in a leading article on the Allies' landing at Corfu, says:—

It has been suspected, we know not with what truth, that the island of Corfu has been used as a base for enemy submarines operating in the Mediterranean. The Kaiser has seldom done anything without an ulterior political motive, and, although at the time he bought the Achilleion, the submarine campaign could not have been foreseen, it is likely enough that the facilities afforded by the German *pied à terre* in the island have been utilised. Anyhow, the advantages afforded by Corfu will henceforth be available for the Kaiser's enemies, and not for the Kaiser. There is a hint in this for his Imperial Majesty of the workings of sea-power which he can hardly fail to take note of. No doubt there will be the usual crop of German tirades against the perfidy of Albion in committing this further outrage on Greek neutrality; but the point seems answered in advance by the observation of the Foreign Office that the Greeks can surely not object to a Greek island being used to succour the starving troops of the Ally whom Greece deserted.

Impression of a French Optimist.

We take the following quotation from an interesting article by Mr. Henry D. Davray in the *Nineteenth Century* (January). The author thinks that historians of the future, when they come to consider the situation, with due regard to men and munitions, as it was when Germany violated the neutrality of Belgium, will be surprised that she accomplished so little. He shows that ever since his first big set-back in France the enemy has been making frantic efforts to "free himself from the grip that is strangling him," and has failed at all points:—

Will he succeed in his thrust towards the East? It is improbable. The only side-results which he will obtain will be a prolongation of the war—hardly to his advantage—and an extension of the area of hostilities. This, indeed, is a misfortune for the Allies, who suffer there the punishment of their want of foresight and the blindness of their diplomatists. But even were the road free as far as Bagdad, the Germans would remain in the same positions on their Western and Eastern fronts. It is scarcely in Turkey that they will find gold; on the contrary, they will have to furnish financial support to that ally accustomed to live on loans. It is doubtful whether they will find a sufficient number of Turks to fill the gaps in their effectives, since they will have to find men in sufficient force to complete the new Eastern front and guard against a probable offensive on the side of the Russians. No doubt the Allies were lamentably late in reaching the Balkan Peninsula, and in that quarter we must expect bad news for some time to come; for all that, a time will come when the news will be good.

Nothing but a lack of perseverance on our part could save the Central Powers, and we shall see that to attain their end the Allies will be lacking neither in necessary energy nor in resources.

Articles to Note.

"British Diplomacy in the Near East," in the *Quarterly Review* (January 20).

"Looking Ahead," by H. G. Wells, in the *Daily Chronicle* (January 17 and 18).

"What I Saw in Serbia, II.," by Phyllis Shakespear, in the *Lady's Pictorial* (January 15).

PROFESSOR BURROWS ON THE WAR.

Dr. R. M. Burrows, Principal of King's College, delivered a lecture on "The Near East" at the college on Wednesday in the presence of a distinguished audience, which included Sir Maurice de Bunsen, late Ambassador at Vienna; M. Gennadius, the Greek Minister; and the First Secretary of the Serbian Legation. The Earl of Plymouth presided. Referring to the statement made by the Spartans to the Athenians that war is largely a matter of luck, Dr. Burrows said that while the Allies had certainly had bad luck, they had also suffered from the other drawback alluded to by Thucydides—bad judgment. The lecturer was unsparing in his criticism of the Allies for the lack of any provision for Serbia and Montenegro. The success of our diplomacy which prevented munitions going through Roumania to Turkey had made the invasion of Serbia a matter of necessity to the Germans, yet we took no means to prevent it. He considered that the failure of Greece to keep her promise to Serbia had obscured the fact that we seemed in a fair way of breaking our promise to Greece, and it was that very argument which did a great deal to turn Venizelos from office. On the other hand, this did not excuse Greece for not acting up to her treaty with Serbia. Had the Greek army taken the field, it was quite possible that Germany would have deferred the invasion, and Bulgaria—the hereditary enemy of Greece—would by now have been crippled for a generation. Dr. Burrows had worked hard as an amateur for the Salonika expedition. He thanked God for the expedition, and he thanked God that General Joffre had forced our Government to carry out the wishes of the British people in this matter. It was essential that all over the Balkans our friends should feel that we were strong and true. He did not disregard the possibility of a Bulgarian intrigue, and it was not unlikely that Ferdinand would encourage his Opposition to argue with the Entente, in order to make better terms with Germany.

The Earl of Plymouth, in thanking Dr. Burrows, said that criticisms of past events were perfectly useless, and he was not going to criticise the Government. At the same time we could not blind ourselves to the fact that mistakes had been committed. He was, however, convinced that the present conditions only made the people of this country more earnestly determined to see the wrongs that had been done righted.

EARLY SURVEYS IN MESOPOTAMIA.

In the course of a paper read last week before the Indian section of the Royal Society of Arts, Colonel Sir Thomas Holdich spoke of the earliest surveys made in modern times in the Persian Gulf and Euphrates region. The first surveys of the Persian Gulf were made, he said, by the Indian Navy between 1820 and 1830, and the surveying was carried on in the intervals of slave-trade suppression, pirate hunting, commerce extension, visiting chiefs with the object of maintaining the political *status quo*, and generally establishing British supremacy in the Gulf. Stories of wild adventure of that time had survived until the present day. Not less remarkable was the venturesome survey of Mesopotamia. It would not be too much to say that never since those first expeditions to the land of the Tigris and Euphrates had continuous map-making been possible there. Considering the importance of the geographical position of Mesopotamia, its wealth of historical association, its extraordinary capabilities, and the difficulties and dangers encountered during the twenty-six years of surveying that were carried on almost without interruption by officers of the Indian Service, this extraordinary work of map-making might well be regarded as an imperishable record for the old Indian Navy. In 1837 Captain Lynch traversed the whole course of the Tigris from its source in Armenia to Baghdad; he then connected Nineveh, Baghdad, Babylon, and Ctesiphon by triangulation; and when he had done with the Tigris, he set to work on the Euphrates, and connected the head of that river with the Mediterranean by chronometric measurements. In 1843 Lynch was succeeded by Felix Jones, who boldly made his headquarters at Baghdad in command of the Nitocris, and, although nearly single-handed and full of other duties, carried his explorations into the country of the wild and dangerous tribes of Arabs. He explored the ancient Nahrwan Canal system, surveyed the ancient bed of the Tigris, discovered the site of Opis, and exploited the Median wall. In 1852 he made a trigonometrical survey between the Tigris and the Upper Zab, fixing the position of Nineveh; and he completed an extraordinary survey career by making a plan of the city of Baghdad on a large scale. He was the authority for the original mapping of Mesopotamia.

CORFU.

Referring to the protest of the Hellenic Government on the action of the Allies in Corfu, the *Scotsman*, in the course of a leading article, says:—

In so far as this signifies a formal reservation of Greece's sovereign rights, originally obtained by favour of the Entente Allies, this caveat need not give rise either to surprise or resentment. These rights are in no real danger; and we may take it that many of her people will rejoice that the brave troops who, in the last two Balkan wars, were the comrades and sworn brothers of her own sons, have found temporary shelter on her soil. To those who remember their Homer and the old story of the Peloponesian Wars it will seem appropriate that Corcyra, the most northerly pendicle of ancient Hellas, the scene of the shipwreck and rescue of Ulysses after weary and perilous wanderings, the site of the Gardens of Alcinous, and in historic times the naval base and rallying-place of Hellenic freedom and civilization in the struggle with northern barbarism, should become the haven of rest and safety for the heroes of Serbia before resuming the interrupted struggle for freedom and right.

ROLL OF HONOUR.
British Subjects from Turkey in H.M.'s Forces.

The Editor of THE NEAR EAST *would be obliged if relatives of former British residents in the Near East who have joined H.M.'s forces would communicate additional names or other particulars for insertion in our Roll of Honour. Biographical details concerning those who have fallen in their country's service would also be appreciated.*

ASHE, Lance-Corp. R., R.E.
ATKINSON, Bombardier G. M., 266th Battery, 85th Brigade, R.F.A., Colchester.
ATKINSON, Gunner T., "A" Co., Royal Field Artillery.
BAKER, Captain A. Warden, 7th Royal Scots Fusiliers.
BARKER, 2nd Lieut. C., Interpreter, British Central European Expeditionary Force.
BARRON, Captain J. B., Worcester Regiment, France.
BATH, Nurse, Sister, Army Hospital, Malta.
BELL, Sister M. J., Edinburgh War Hospital, Bangour.
BINNS, Lieut. C. E., R.M. (Interpreter to Mediterranean Forces).
BINNS, Lieut. Harold H., Royal Naval Division Headquarters, British Mediterranean Expeditionary Force.
BINNS, Lieut. W. Hylton, care of The British Consul, Brindisi.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The London Press has been publishing during the past few days some startling statistics concerning the abnormal increase of American exports to such neutral countries as have a common frontier with Germany. Unfortunately, America is not the only delinquent, and we have not to go beyond the boundaries of our own Empire to find a similar state of affairs progressing under the very nose of our Government. I quote from the *Egyptian Gazette*. Referring to the extraordinary increase in Holland's imports of Egyptian cigarettes, it says:—"From a total of 14,365 kilos of Egyptian cigarettes sent into Holland during the first eleven months of 1914, the figure has swelled this year (1915) to not less than 35,155 kilos, being an increase of 20,790 kilos."

***

The fact of the matter is—and I refer here merely to the Egyptian aspect of the great problem—that we do not, will not realise that Egypt is to-day (and let us hope permanently) part of our Empire. We look upon it as a semi-foreign country over which an unkindly fate has entrusted to our somewhat negligent care. Neither in London nor in Cairo have those who rule over the country grasped the fact that Egypt is British, that her interests are ours, that our enemies are hers. She is governed from Downing Street, which, according to the popular version, is feeding the Boches, and which has given trading licences to no fewer than two hundred and fifty enemy firms established in Egypt! It were time that a clean sweep were made of these two hundred and fifty obnoxious institutions, that Egypt's exports were controlled, and that we no longer played ducks and drakes with a situation that demands energetic action.

***

While on this subject, I cannot refrain from referring again to the Egyptian cigarette industry. News which reaches me privately from Cairo points to the threatened destruction of the industry. It is penalised so heavily and so indiscriminately that unless the fiscal screw is loosened, it will disappear. Admittedly, the sale of Egyptian cigarettes to the enemy ought to be stopped without a second's delay, but I hardly think that the right way to go about it is to strangle the industry. I shall, however, refer to this vexed question at some length in next week's notes. In the meantime, let us not forget for one moment that come weal or woe, Egypt is part of our Empire, and that if, as is to be hoped, stringent measures are introduced in this country to do away with enemy concerns, the same measures will apply, without any exception whatsoever, to the two hundred and fifty enemy concerns in Egypt which have received trading licenses.

***

I received a letter a few days ago from some one who had just left Constantinople. The news he gave me is rather meagre, but I give it for what it is worth. He says that at the time (January 1) coffee cost 20 francs per oke, and that bread was practically unobtainable five days in the week, and that then the smallest loaves fetched the exorbitant sum of 30 piastres. Enver, Talaat and Company, he added, were not affected, being privileged persons in more ways than one.

I read in the *Cyprus Gazette* that two agreements have been signed between the Government, on the one hand, and three American gentlemen—Messrs. C. G. Gunther, S. W. Mudd, and P. Wiseman—on the other, whereby the latter obtain, for a period of fifty years, the exclusive right to exploit the mineral ore contained in Foucassa Hill, a State property situate near the village of Katydhata, district of Nicosia, and, further, that they do construct, within two years and a half, an extension of the Government railway to a point near Karavostasi, with a railway pier at the latter point, and a second extension to the mine at Skouriotissa. Further particulars of these concessions will be found elsewhere.

***

The *Deutsche Export Revue*, to which I have frequently referred in these columns, states that, in order to replace as soon as ever possible the ships lost as a result of the war, the Deutsche Levante-Linie has ordered the building of three new cargo steamers of 5,700 tons each. Commenting on it, the German paper praises the D.L.L. on its foresight, and predicts a great future for German shipping in the Near East. It says:—"It is still too early to give definite information concerning the future of German trade and shipping in the Levant, but the following may be divulged—namely, that the prospects are exceptionally brilliant. The Bulgarian Minister of Finance, who has been in Berlin, stated that in Bulgaria there was a strong movement on foot for the development of national shipping, and that the Government have already received offers of assistance from some of the leading shipping companies."

***

It would not be a difficult task to point to the so generously inclined shipping companies, that when the recent scandals in connection with the Austrian Lloyd's working agreement with the German shipping companies is remembered, the fate of a Bulgarian Lloyd, financed and enslaved by the Ballin group, is a foregone conclusion. The selfless generosity of the group in question is, in these circumstances, comprehensible, but it likewise shows that the German pre-war policy of strangling rival interests by controlling them financially is to be pursued unabated in the future. Until we have rendered such a policy impossible we can sign no peace.

***

Road and railway construction in the Near East is going on as rapidly as circumstances will permit. It is said that under German direction thousands of soldiers and peasants are constructing roads in Macedonia for the transport of heavy artillery from Serbia, as well as a railway along the Prilep road to connect the Veles and Monastir lines. Strange to say, this latter line was, according to the Serbian 1914 railway progress (see THE NEAR EAST, May 22, 1914), to have been built by a British company, and was, as a matter of fact, to be the only British-built line in Serbia. It was to leave the Uskub-Salonika line at Gradska, south of Veles, proceed along the Prilep road to the town of the same name, and then work up to Monastir. The line was being surveyed when war broke out, but I have no information to the effect that constructional work had been begun.

***

Another railway news item of interest is that the Semlin-Pirot section of the Berlin-Constantinople line has now been reopened, and that the first through car from Berlin to Stamboul travelled over the line on January 5. May it do the Boches a bit of good! I hardly think, however, that either Bulgaria or Turkey will live to bless the day when that car became a symbol of their thraldom to the insensate ambition of the Hohenzollerns.

***

According to the *Jewish Chronicle*, the line to Bersheba has been opened. It crosses the Jaffa-Jerusalem line at Lida and passes the Jewish colonies Kastinie and Rechamah, situated in South Judæa. The line also passes the Jewish National Fund's farm Benschemen, and is likely to promote in a considerable degree the sale of their products in Jaffa, Jerusalem, Haifa, and Damascus. The Merchawjah colony, which is already connected with Jerusalem by rail, thus becomes an important railway centre.

***

Mr. Hilaire Belloc, referring to this line in *Land and Water*, gives it an entirely different trace. According to this writer, the new line starts at a point west of Deraa (on the Damascus-Haifa line), and proceeds south through Jerusalem and Hebron. Whichever trace is followed is, of course, immaterial from a military point of view, but I am inclined to think that the Lida-Bersheba route is the one likely to have been chosen. The essential fact is that the line has now been completed as far as the last-named base. Mr. Belloc states, moreover, that from Bersheba to El Audja—forty miles nearer the Egyptian frontier—it would seem that the line is not only surveyed, but its embankments, culverts, etc., are prepared; only the rails are not yet laid down.

***

The prices of various commodities, especially foodstuffs, have increased enormously in Bulgaria, says the *Times* correspondent. The Germans are eagerly buying up cereals, meat, fowls, eggs, etc. A considerable amount of gold comes into the country, but a food crisis is feared, especially as Turkey is also buying provisions. The Turks, who anticipated large supplies from Bulgaria, are indignant at the extent to which the Bulgarian market has been drained by Germany.

***

A leading Alexandria house, writing to Liverpool firms, says that the prospect of the growing of a large Egyptian cotton crop next year is not considered as very favourable. The very high prices for wheat and other foodstuffs are likely to be an inducement of a voluntary decrease of the cotton acreage. Beyond this, there exists a good deal of apprehension on account of the state of irrigation canals, which have not been cleared at all this year, and the very high prices for coal and chemical fertilisers. Coal is now to be got at a price four to five times higher than its normal cost, and quite prohibitive for a sufficient irrigation, aggravated as it will be by the bad state of the canals. Government having enforced this year for the first time the destruction of the cotton sticks which usually substituted coal to some extent for the working of the water-lifting machines, this fact perplexes further the irrigation problem. There exists also, says the *Liverpool Daily Courier*, a good deal of apprehension owing to the rotten state of seed, and the climatic conditions having so far been particularly mild a late winter might prevent the earlier planting of cotton.

Cyprus Government Agreements.

The *Cyprus Gazette* contains two agreements, which were signed on November 20, between the Government of the island and an American group, comprised of Messrs. C. G. Gunther, S. W. Mudd, and P. Wiseman. The first agreement grants the "lessees" a mining licence, and the second authorises the "contractors" to construct two railway lines as an extension of the Government's system. The following are extracts from the two agreements:—

Mining Licence.

The Government (lessor), in consideration of the premises and of the sole fee of £100 now paid by the lessees, and of the covenants and conditions hereinafter appearing, hereby grants unto the lessees the exclusive licence to mine, win, and remove in, under, and from that area of State land situate at Foucassa Hill, near the village of Katydhata, district of Nicosia, and contained within the following boundaries—namely, from the top of Foucassa Hill, one-fifth of a mile south, two-fifths of a mile east, four-fifths of a mile north, and three-fifths of a mile west, a square bounded by east-west and north-south lines, and containing by measurement one square mile or thereabouts—all the following minerals—namely, cupriferous pyrite (iron pyrites containing copper), together with copper, gold, silver, iron, lead, manganese, tin, nickel, cobalt, and sulphur, metallic or in combination.

To hold and exercise the said licence unto the lessees for the term of fifty years from the date hereof, subject to the provisions of the Mining Regulations, 2 Shaban, 1285, and the Mines Regulations Amendment Law, 1882, and any other law in force and to the covenants and conditions herein appearing.

The lessees shall within two years from the date of these presents excavate not less than 50,000 tons of ore containing the abovementioned minerals or some of them from the said area, and thereafter annually a similar quantity at the least.

The lessees shall, in lieu of rent or other royalty in each year, at such times as the lessor may require, hand over to the lessor at the pit's mouth 3 per cent. of the first 50,000 tons of ore so excavated in such year, 2 per cent. of the second 50,000 tons of ore so excavated in such year, and 1 per cent. of any ore in excess of the said 100,000 tons so excavated in such year, or at the option of the lessor pay in lieu thereof to the lessor the full amount in money of the current market value at the pit's mouth of the said percentages of the said ore, such amount to be paid in the following year in two equal payments, to be made on June 30 and December 31 in each year.

Railway Concession.

The contractors, at the request of the High Commissioner, shall, at their own charges and expenses, within thirty months, construct of the gauge and materials approved by and generally in accordance with the directions and to the satisfaction of the High Commissioner or of the general manager of the Cyprus Government Railway (hereinafter called the general manager), on behalf of the High Commissioner, the following extensions and alterations of the Government Railway:—

(*a*) From a point, "A," on the present Government Railway the contractors shall construct an extension of the Government Railway to a point near Karavostasi, with a railway pier at the latter point. At or about the point "A" the line so constructed shall cross the present line at an elevation above the present line, and they shall there make all suitable connections and sidings.

(*b*) From the said point to the point "B" the contractors shall make the Government Railway into a double track railway.

(*c*) From "B" the contractors shall construct an extension of the Government Railway to the mine at Skouriotissa. At "B" they shall make all suitable connections and sidings.

The contractors shall repay to the High Commissioner all the costs and expenses which the High Commissioner may incur in connection with the purchase of the land necessary for the said extensions and alterations.

The charges to be paid by the contractors for services rendered to them during construction of the said extensions and alterations by the parent line or the staff thereof shall be worked out as nearly as may be on the lines of the charges debited against the Evrykhóu branch construction in favour of the parent line.

All machinery, engines, rolling stock, fuel, and other materials used or required in connection with the construction or maintenance of the said extensions and alterations shall be imported duty free into the island.

Upon the said extensions and alterations of the Government Railway being completed to the satisfaction of the High Commissioner or the general manager on his behalf, the contractors may, subject to the conditions herein mentioned, during the continuance of the mining lease of the Skouriotissa mine, run such trains over the said extensions and alterations as they may desire for the purpose of conveying minerals from Skouriotissa to Karavostasi, or for the purpose of conveying machinery or other supplies intended solely for the working of the mine or the said extensions or alterations from Karavostasi to Skouriotissa.

Provided always:—

(*a*) That the contractors shall, at their expense, keep the said extensions and alterations and all the connections and sidings thereof in good order and condition.

(*b*) That the contractors shall, at their expense, provide all the necessary engines and materials, as well as all rolling stock, for the conveyance of minerals and machinery and supplies, as aforesaid, and shall keep the same in good order and condition, and also all the necessary duly qualified engine-drivers, servants, and workmen, fuel and other materials, for the purposes aforesaid, and that the contractors shall not employ or offer employment to any person as an engine-driver, servant, or workman, as aforesaid, who is or has been an employee of the Cyprus Government Railway without the consent, in writing, of the High Commissioner or of the general manager on his behalf.

(*c*) That the contractors shall pay to the High Commissioner the sum of 20 paras for each ton of minerals or machinery or supplies, as aforesaid, carried over the said extensions and alterations or any part thereof.

In the event of the transfer of the mining lease at Skouriotissa, now vested in the contractors to some other person or company, then the rights herein vested in the contractors shall, at their request, be transferred to such person or company.

Upon the determination by effluxion of time or otherwise of the mining lease at Skouriotissa, now vested in the contractors, then the rights herein vested in the contractors shall forthwith cease and determine, and the contractors shall cease to have any right whatsoever in connection with the said railway extensions and alterations which shall remain vested in the Government free from any claim on the part of the contractors or any person claiming under or through them, and all engines, rolling stock, and other materials furnished by the contractors shall be the property of the Government, free from any claim on the part of the contractors.

GREEK COAL IMPORTS.

Referring to the coal famine in Greece, a correspondent writes to the *Morning Post* as under:—

In ordinary peace times, Greece depends almost entirely for her coal supplies on the United Kingdom. She has no coal resources of her own, and in 1913 her imports from this country amounted to about 727,000 tons. It is probable that that quantity was supplemented by a number of cargoes from other countries, but the volume of trade represented by these other foreign cargoes would be negligible in relation to that transacted by Greece with this country.

In 1915 the total exports of British coal to Greece amounted to only 309,000 tons, as compared with 579,000 tons in 1914 and with 727,000 tons in 1913. This country has thus sent her less than half her normal consumption, and unless she has been able to obtain supplies from the United States her situation must indeed be serious. But our first duty is obviously to ourselves and to those countries which are our Allies. If we had a superabundance of coal to export, nothing would be easier for us than to supply Greece to the full extent of her needs. But we have not. It is probable that the production of coal in the United Kingdom in 1915 will be about ten million tons less than it was in 1914, or between twenty-five million and thirty million tons below the record output of 1913; but last year we were compelled by the exigencies of war to curtail our exports to the extent of close on forty million tons, and in some at least of the neutral markets, which we have been obliged to neglect, our competitors have made great progress, probably to our permanent detriment. Of this forty million decrease compared with 1913, thirty million represents diminished cargo export trade; but it has had to be sacrificed because there has been a more imperious need for the coal for the use of ourselves and of our Allies.

But Greece has also suffered in consequence of her devious diplomacy and also in consequence of the thriving mercantile use which has been made of her shipping. It is doubtful whether any of the other neutral maritime States of Europe has reaped such large profits in the carrying trade of the world as that of Greece. I do not pretend to know what proportion of Greek tonnage is now under requisition by the Greek Government; but till lately, if not at the present moment, the great bulk of the Greek mercantile marine was employed in the remunerative work of transport between the British Isles and the Mediterranean and between Europe and America. Had private interests been subordinated to national interests Greece, in the earlier months of last year, would have had little difficulty in obtaining from this country and in storing at her own depots as much coal as she would have needed for ordinary requirements. Her diplomacy in the early autumn made it necessary for the War Trade Department to exercise increased vigilance over our exports. Greece cannot very well blame us for taking precautions against the export of the produce of our own mines when there was a danger of that produce being applied to uses which might be inconsistent with our own interests at Salonika; and if it has been more difficult for shippers to obtain licences for Greece during the past few months than it was in the first half of last year, the people of Greece must recognise that the interests of ourselves and those of our Allies come before those of neutral countries.

Yet Greece owns sufficient tonnage to bring her all the coal and food-stuffs which she needs for the support of her own population, and in the United States there is abundant coal available for export. Why, then, is it that Greek tonnage is not requisitioned by the Government and employed for this purpose?

GREEK SHIPPING.

The *Times* Athens correspondent (January 16) stated that several Greek grain steamers which had been detained in Allied ports have been released, and their arrival is anxiously awaited, especially in the provinces where wheat is scarce.

The Athens Gas Company has issued a fresh recommendation to consumers to economize their lighting.

Progress in Tripoli.

Libya Under Italian Rule.

The following are extracts from the U.S. Consul's report for 1914-1915 :—

Commercially and industrially the year 1914 in Libya, the Italian colony in North Africa, was unsatisfactory. It opened with depression and almost every factor tended to aggravate that condition.

Withdrawal of Troops.

Several circumstances contributed to this state of affairs. The withdrawal of troops continued until by the end of June only a few thousand remained and a large percentage of their purchasing power was taken away by the decree placing all forces in Tripolitania on a peace footing. But the greatest disappointment came when the Government decided to postpone further contracts for carrying out public works planned for the benefit of the colony. Coupled with inactivity in private enterprise, this decision seriously affected the building trade, probably the most important industry in the city of Tripoli, embarrassing some forty odd concerns liberally stocked with manufacturing or construction materials. As the journal of the local chamber of commerce said, in part, the life of the colony, in which there is no developed productive industry, rests entirely on construction work, and its curtailment means not only stagnation for a number of commercial lines, but lack of employment for many labourers.

The outbreak of war in Europe added to the difficulties and eliminated all prospects of having the Government undertake public works to relieve conditions. The diminution of export demand, inability to obtain goods from usual sources, the impossibility of effecting exchange on countries other than Italy, the withdrawal of French, Austrian, and German ships from an already inactive port all added to the general stagnation. Financial accommodation was carefully accorded, much protested paper passed through the banks, and there were several failures. Then came the native disturbances in the Fezzan and other regions outside of Tripoli; caravan routes again became insecure, thus arresting the movement of cargoes to the interior, a movement that had only revived in the spring of last year and whose renewal had been the one brightening ray of the year.

Official statistics showing the value of the imports and exports of the colony are not yet available. Those at hand relate only to shipping.

Shipping Returns.

The shipping returns comprise figures for all of Libya; in the past only those for Tripoli were recorded. Vessels entered and cleared at seven ports of Tripolitania show a loss of 504 bottoms but a gain of 187,929 tons. At Tripoli, where 49 per cent. of all shipping in the province was noted, the loss in vessels was 708, while the carrying capacity was augmented by 51,776 tons. In Cirenaica, the sister province, 2,929 ships of 3,023,891 tons entered and cleared six harbours, Bengasi accounting for 1,473 of 1,406,930 tons burden, against 1,427 of 1,551,757 tons in 1913. Owing to the war, German, Austrian, French and other European vessels ceased operating to this coast after July with the result that the Italian flag flew over 91 per cent. of the tonnage at Tripoli as compared with 82.5 per cent. in the preceding year. Of Italian steamers at the same port 71 per cent. were subsidized mail ships contrasted with 65 per cent. in 1913.

The Sicilia Company maintained its bi-weekly fast-mail service to Syracuse throughout the year, and the service from Genoa viâ Italian ports and Malta was also kept up without interruption, as was the service along the Libyan coast. After the outbreak of the European War the weekly service from Naples, viâ Trapani and Palermo, was suspended as well as that via Messina and Syracuse. Toward the end of the year the latter was revived, but, after a few voyages, was again suspended for lack of business. The steamers of the Società Italiana di Servizi Marittimi operating from Venice were also withdrawn in August, but resumed operations at the end of October, and afford communication with the Adriatic, and an outlet, by way of Venice, for Austrian cargoes of sugar and other articles. The services of the Deutsche-Levante Line (German), the Touache Line (French), and the Adria Line (Austrian) also ceased and have not been resumed.

Foreign Trade.

The statistics available showing the foreign trade of the district for 1914 in relation to the preceding year are of more than usual interest. Merchandise landed at twelve Libyan ports during 1914 is placed at 352,492 metric tons, as compared with 374,433 tons at eight ports in 1913, the five ports not then included accounting for 94,108 tons of the total for 1914. These figures show conclusively that the tendency of trade to recede to normal levels has not been confined to Tripoli, but has prevailed along the entire coast. Sirte, the only port giving even a slight increase, is at the head of the caravan route by which communication was maintained with the garrisons in the Fezzan, and was also the starting-point for supplies to troops engaged later in adjacent territory. Cargoes embarked totalled 73,003 tons; of this, 41,392 tons left the Tripolitanian ports, as contrasted with 44,949 tons in 1913. No figures are given for Cirenaica for 1913, but the total for 1914 was 31,611 tons.

In every port of Tripolitania, except Sirte, there was a decrease in imports. At Tripoli, the metropolis, the loss was more than 29 per cent.; the average cargo per steamer was 170 tons, and less than 39 tons per sailing craft. In Cirenaica the only port for which comparison is possible is Bengasi, and here the decrease was more than 20 per cent. The principal cause for the widespread decline is to be found in the gradual return of trading to its natural economic level. The European war was a contributing factor, but not to the same extent as local conditions.

At Tripoli merchandise exported decreased by 36 per cent., and the average outward lading was 25 tons for steam vessels and 10 tons for sailing vessels. At other Tripolitanian ports good increases are noted in most instances, but it is possible that shipments were largely exchange of products between coast ports and not for foreign commerce. No values or details as to character of wares are available. Although at Tripoli nearly 90 per cent. of all merchandise arrived under the Italian flag, it embraced British, American, and other products throughout the twelve months, as well as those from France, Austria, and Germany after the withdrawal of their ships in July.

U.S. Trade Decreases.

Notwithstanding the general decrease in imports from the United States, satisfactory increases were recorded in several lines, the most important being in canned goods, which doubled; this is probably due to locating more distributors than to greater consumption. California fruits and asparagus, Pacific coast salmon, lunch tongues and roast beef from Chicago, and pickles from Pittsburgh are to be found on the shelves of all leading purveyors of foodstuffs and are acquired in Italy. Recently a few dealers have sought to trade direct, but have in every instance been referred to the Italian agent.

The advance in the imports of American agricultural implements is not without importance in a country where improved husbandry points the only way to local prosperity. The Government experiment station acquired ploughs and harrows of spike-tooth and disc type. One merchant imported a reaper, which he hoped to hire for cutting barley on the plains outside Tripoli. Native disturbances, however, prevented harvesting by owners in that area, and the implement remained idle.

In the export trade the effect of war on Tripoli's foreign commerce has been most strongly felt. Shortly after its commencement a decree was issued forbidding the exportation of all foodstuffs, and the lessened demand for other articles in several countries has made a deep impression on other lines. With uninterested buyers in Great Britain, France, and Austria, nearly 40 per cent. of the large sponge catch remained unsold on December 31. Exports of henna, amounting to about 1,122,000 lb., were 83 per cent. of the harvest, and compare with 1,140,590 lb. in 1913. Although the quality was much improved, owing to certain regulations imposed by the Government, prices were considerably below those of the previous season. The export trade in skins was also adversely affected, but it is believed that increased purchases by Italy will prevent a great decline in the ordinary article; shipments of Sudan tanned goatskins fell off by 20 per cent. Esparto grass or alfa, that formerly held an important place in the export list, again failed to approach its old level. Dealers assert that there were practically no exports of ostrich feathers. Arrivals were few during the first half of the year, and the closing of the Paris market, where practically all were absorbed in the past, has resulted in a congestion of stocks.

Agriculture.

Agriculturally, the year as a whole was less depressing than in other directions, and was an improvement over 1913. The three great crops are barley, dates, and olives, and upon these depend the prosperity and well-being of the natives. The barley harvest in Tripolitania was only about 70 per cent. of a normal year, but was in excess of the previous season, and export was not allowed. Dates yielded about three-fourths of a full crop, sufficient for local needs, and olives were abundant, probably 25 per cent. in excess of the preceding year.

Other important field crops are esparto grass and henna. The former developed well, but the harvest was small. The gathering of this crop was retarded by the fact that the natives found better employment for their camels in carrying supplies for the Italian forces, and this fact had a corresponding effect upon those charged with its gathering. The henna harvest was below that of 1913, and is estimated at 12,000 cantars. The quality, however, was improved owing to certain regulations, and only leaves were sold, the removal of stalks and stems being required. In spite of the quality, prices, on account of poor demand, were considerably below those of the previous season. It is stated that the tobacco crop was also greater owing to the increased acreage, and, as it is all grown for the Government monopoly, was not affected by conditions in the outside world.

Notwithstanding the economy practised in all civil departments in this colony, Italy lent some assistance and encouragement to agriculture. An agrarian office was established, with headquarters at Tripoli, and under its direction an experiment station has begun operations, while general supervision of plans for agricultural betterment was entrusted to it.

Colonization Schemes.

Colonization schemes began to take shape, and the Government, having, by the decree of July 13, 1914, settled questions concerning titles to land, authorised the granting of concessions of Crown property for agricultural purposes under regulations to be devised by the agrarian office and approved by the governor of this province. These regulations provide for concessions for fifty years with reversion to the Crown, impose the planting of three-fourths of the area in trees in seven years, and exact rentals according to location. The grants so far have been generally for small tracts, but a few are important, and one contains about 1,500 acres. It is believed that legislation will be urged to permit holdings in perpetuity, for the present limitation tends to retard the colonization so essential to this colony.

Additional evidence of the Government's solicitude for husbandry is found in the decree placing certain articles necessary to the industry on the customs free list.

To foster arboriculture the Government offered money premiums for olive and fruit trees successfully planted by March 30, 1915, and in addition authorized the free distribution of nursery stock for such trees. A law also came into effect under which the cutting of old olive and fruit trees without permission was prohibited.

Digitized by Google

Sponge Industry.

Sponge catching was the only section of the fishing industry that assumed importance. Operations were again confined to the Tripolitanian coast, and a record haul was made amounting to 123,750 pounds of sponges, as compared with 77,000 pounds in 1913. Demand and price were greatly affected by the European war, and nearly 40 per cent. of the sponges remained unsold.

There were no extensions in the manufacturing industries. Some formerly established found conditions unfavourable to expansion, and suspended operations. The large oil mill of the Banca di Roma did not open for the olive season, in spite of the abundant yield of olives; the largest brick factory closed down before the end of the year, and the cement works have had little to occupy them. The most important machine shop has curtailed operations, awaiting better conditions, and other establishments are feeling the effects of the present conditions.

No new contracts for public works were given out except one for harbour improvements at Tripoli, involving an expenditure of £260,000. This included an extension of the breakwater 692 metres long, dredging, and construction of wharves. Good progress was made on the first and security given to a greater harbour area. Considerable dredging was completed at various points to a depth of 24.6 ft. and one new wharf was opened. This contract was awarded early in 1914, and after the order for retrenchment, a Government commission decided that the dock schemes were not urgent and the sum to be disbursed under the original agreement was reduced by almost one-half.

Public Works.

Further road improvements were completed, notably on the highway to Gargaresch, which was macadamized for a distance of about three miles; a fine driveway was completed along the sea front for nearly a mile.

A new cavalry and an infantry barracks were completed. Two reinforced concrete school buildings for Italian children and a small fish market were completed by the civil administration.

About forty miles of track were added to the railways of Tripolitania and about fifteen to those of Cirenaica. Work proceeds on the line from Tripoli to Zuara, which has now reached Zavia, and on the line to Garian, a new section of which was recently opened as far as Henscir el Abeat, at the foot of the mountains. Toward the end of last year a contract was awarded for a new central railway station at Tripoli to cost £20,000. Work was to have begun on January 1, 1915, but operations have been delayed.

The Eastern Telegraph Co., of England, withdrew during last year, and its functions were taken up by the Italian State telegraphs. Figures published during the year place the restored telegraph land lines at 670 miles. Agitation has continued for a telephone system for civilian needs, but no concession has yet been granted.

Trade Opportunities.

The beginning made in the scheme for colonization by Italian farmers should be watched, for upon its success depends not only a new market for American agricultural implements, but the future prosperity that may cause a demand to grow up here along the same lines, if not to the same extent, as in Tunis and Algeria.

Certain wares purchased in other countries in the past will be sought in the United States. The electric light company, which until recently used only Roumanian oil for fuel, now burns 80 per cent. American product, acquired from Italy; there has also been some inquiry for American flour and business may result if prices are satisfactory. Small orders for manufactures of iron may result, especially if American stocks can be found in Italy.

Demand will continue in greater or less degree for most of the articles listed among imports from the United States in 1913, but the opportunities for special American endeavour that are now presented in other quarters will not accrue here. The presence of increased numbers of troops will add some purchasing power to the country and create a demand for refreshments, postcards, and the sundry other small articles on which the soldiers like to spend their money. Army supplies, such as uniforms, arms, saddlery, forage, etc., will be bought through the headquarters in Italy.

Engineering Notes.

The Trade War.

The speech of Mr. Runciman, the President of the Board of Trade, in the House of Commons last week, had a reviving effect on the much discussed question of "capturing the enemy's trade," while further plans are being suggested for securing a victory in the forthcoming great commerical struggle which eventually will succeed the present war. It is evident that the Government, as well as manufacturers, trade associations and Chambers of Commerce, are alive to the importance of the question, and the urgent necessity of taking immediate measures for the achievement of the desired results. It is well known that Germany and Austria, with their characteristic sagacity, are preparing for the same struggle, and, as was mentioned previously in these columns, both States are making their plans for the recapture of foreign markets after the war, and are already laying up great stocks of goods with which they propose to flood the markets of other countries as soon as the war is over. In this connection, Mr. Runciman's speech ought to be read and well studied by all business men, because it points out clearly and in a convincing way what is wanted and what must be done for the industrial regeneration of Great Britain and the restoration of her commercial supremacy in foreign markets. Most of the proposed measures suggested therein require time and prolonged organization before they can be effective. Failing their realization, the special opportunities that are now available for action before peace is concluded and while the enemy is incapable to act under the present war conditions will be lost.

Engineers' Plans.

In spite of the apparent disorganisation of the ordinary engineering business owing to the urgent and great demand for munition work, engineer-manufacturers are particularly alive to the importance of the inevitable trade war, and jointly with other allied manufacturers are preparing for it. But, unfortunately, the plans and resolutions put forward as necessary and adequate for the occasion are so numerous and multiform that, though excellent for the future organisation of the engineering industry, they are not what is now urgently needed to fight the approaching crisis. They suggest, for instance, the organisation of various departments, one to deal with railway, canal and shipping companies for the improvement of conditions and reduction of freights; another to analyse Consular reports, technical and commercial papers, etc., and circulate the results; another, a production department, to raise the standard of manufacturing methods and organisation, and with that object to direct the attention of manufacturers to engineering developments and improvements in workshop practice, to stimulate manufacturers to adopt a progressive and enterprising policy in commercial, technical, and manufacturing matters; to encourage a keener study of customers' requirements, and greater readiness to satisfy them by supplying appropriate goods and comprehensive catalogues, and by sending abroad qualified representatives. Again, others suggest a Department of Publicity to organise the preparation for distribution at home and abroad of printed information relating to the British engineering industry for the purpose of increasing the demand for British products, etc., and yet another Department of Finance is suggested for the better financing of the industry, both in manufacture and in relation to home and foreign countries. Several other departments are also proposed which, with the above-mentioned, provide for everything that is necessary for the complete organisation of the engineering industry to a degree never before attempted. But, as mentioned above, excellent as undoubtedly the scheme is, it requires a considerable time to be carried out, while the present existing urgency requires the individual as well as joint efforts of all British engineer manufacturers for an immediate organised action adequately to meet the approaching crisis, and secure a trade supremacy before the enemy is able to put into effect his commercial tactics.

ALEXANDRIA PRIZE COURT.

S.S. "Lutzow" (ex Cargo).

In H.M. Supreme Court, Alexandria, sitting in Prize, Judge Grain rendered a judgment in the case of the cargo of s.s. Lutzow, from which the following are extracts :—

The goods in this case were shipped on board the s.s. Lutzow at Hamburg on or about July 8, 1914, consigned by various German firms to a Japanese firm at Kyoto named Yokota and Co. There is no evidence as to whether the contract was documents against acceptance or documents against payment. The bills of exchange were never accepted, but they were paid, some on August 26, 1914, and some on September 2, 1914.

Mr. Booth, who appears to support the claim of the Japanese firm, Yokota and Co., pleads that on August 26 the s.s. Lutzow had not been captured as prize, and that she was still free to deliver and deal with her cargo; and further, that it is not contrary to the law of Japan to carry on trade with the enemy, and quotes as his authority for this proposition Takahashi, the Japanese writer on International Law.

But it appears to me that Takahashi is very doubtful about this point, as in discussing the question of trading with the enemy he says : "While engaged in hostilities with China, the export of coal to the enemy's land was winked at by the Japanese Government, and if winking at may be considered synonymous with implied recognition the principle of the Japanese Government adhered to at that time must have been the opposite of the prohibition of trading with the enemy. However, the absence of any settled principle whatever most probably induced the Japanese Government to take such an indulgent step," and later on he states "even during the Russo-Japanese War no definite declaration was made on this subject."

An affidavit made by a Mr. G. O. Heath, a solicitor of the Supreme Court of New South Wales, who has been practising at Yokohama for some years, is put in, in which he says : "There is no law in force in Japan prohibiting trading with the enemy." That may be, and, as Takahashi says, "no definite declaration was made," and, as Takahashi also suggests, it may have been "winked at."

These are somewhat undecisive statements as regards the Japanese law of trading with the enemy. But all the decisions in the British Prize Courts are perfectly clear that trading with the enemy by Allies is contrary to the law.

Sir W. Scott in the Neptune (No. 5) I.E.P.C. 596 states : "Between Allies it must be taken as implied if not an expressed contract that one State should not do anything to defeat the common object and interest."

Sir Samuel Evans in the case of s.s. Panariellos (cargo ex), Trebern's British and Colonial Prize Cases (Part 2), page 203, follows this judgment in the Neptune and states : "It remains to note a rule of a correlative nature, that whatever intercourse commercial trading or otherwise is prohibited, the same obligations are laid upon the citizen of an Ally as upon the subjects of a single belligerent State and the same penalties of confiscation fall upon the allied citizen as upon such subjects on non-observance of such obligations."

And in Wheaton's International Law it is laid down as a rule of law that "during a conjoint war, no subject of an Ally can trade with the common enemy without being liable to forfeiture in the Prize Court of the Ally of his property engaged in such trade."

On this point, therefore, I cannot accept Mr. Booth's argument that trading with the enemy is allowed by Japanese law.

The next question I have to determine is, what was the date of the capture of the s.s. Lutzow?

On August 1 she arrived at Suez, having passed through the Canal on July 31, 1914, and steamed as far as Ras Gharib, where she received a wireless message from her agents that on account of the danger of the outbreak of hostilities she was to return to Suez, where she arrived on August 1. Her captain, in his affidavit, states that "on August 6, by the order of the captain of the port, the antennæ of the wireless apparatus was taken down and her boilers were dismantled and pieces taken away from them." And on August 12 the captain of the ship received a formal notice of detention. The ship remained at Suez till about October, when she was taken through the Canal and formally captured at sea by H.M.S. Foxhound on October 15 and brought to Alexandria.

It is laid down in the "Twee Gebroeder" (No. 1) E.P C. vol 1. p. 286, that the Court is entitled to consider all the circumstances that lead up to the final capture. And it has been held on many occasions that the date of the capture of a prize ship is not of necessity the final and official seizure.

Sir Samuel Evans, in s.s. Feliciana (cargo ex) states : "I have pointed out before and I think it is the right view . . . that the first act of detention, as it has been called, is really the act of seizure."

In this case I am of opinion that the hand of the captor was first put upon the ship when the captain of the port on August 6, 1914, as representing the authorities, sent his men on board to remove the parts of her engines, thereby preventing her departure, which he followed up on August 12 by a formal order of detention. Therefore, although her final and formal seizure was not till October, nevertheless her capture dates from August 6. These goods were shipped at Hamburg in July by German firms, and there is no doubt that at that time the property was in the German firm.

None of the drafts had been paid or accepted up to August 6, 1914. "In a state of war existing or imminent, it is held that the property shall be deemed to continue as it was at the time of the shipment till the actual delivery." (Lord Stowell in "Vrow Margarita," I. Ch. Rob. 338.)

And "it is a general rule that, during hostilities, or imminent and impending danger of hostilities the property of belligerents cannot change its national character during the voyage, or, as it is commonly expressed, in transitu." (Mr. Justice Storey's "Principles and Practice of Prize Court.")

Nothing therefore happened between the shipping of this cargo in Hamburg by the German firm in July and the capture of the s.s. Lutzow on August 6 to change the property in the goods from the enemy firms to the present claimants, the Japanese firm.

I find therefore that these goods are the property of enemy subjects, and as such must be condemned to confiscation and sale.

Trade Notes.

Egypt.

Tenders are invited by the Ministry of Wakfs for the supply and installation of a compound steam engine. For further particulars apply to the offices of THE NEAR EAST, Devonshire Square, E.C. Date, January 31.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-1918). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, March 1.

Tenders are invited by the Secrétaire Générale des Domaines de l'Etat (Service Technique), Cairo, for the supply (1) of 13,315 okes of "huile pour mouvements"; (2) 7,670 okes of "huile pour cylindres"; (3) 16,200 okes of "huile pour moteurs Diesel." Date, February 2.

Tenders are invited by the Controller, Cairo Tangier Department, for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-1917. Samples shall be submitted at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 1, 1916. Date, March 1.

Messrs. John Day and Company, of Cairo, were the successful tenderers recently to the Egyptian State Railways for the supply of sacks.

The Vacuum Oil Company were the successful tenderers recently to the Egyptian State Railways for the supply of petroleum.

The following were among the successful tenderers recently to the Egyptian State Railways for the supply of stores to the Ministry of Interior:—J. Compton and Sons, Limited; the Limerick Clothing Factory, Limited; the Commercial and Agency Co. of Egypt, Limited; Walter W. Davies; Thos. Hinshelwood and Co., Limited; Model Workshops, Cairo; Th. W. Petersen and Co., Limited; McGregor and Co.; and Brushware, Limited, of Cawnpore.

Tripoli.

The U.S. Consul in Tripoli publishes a partial synopsis of a Royal decree of August 22, which approves provisional rules to control certain administrative functions and to regulate governmental accounting in Tripolitania and Cirenaica, the two Provinces composing the Italian colony of Libya, in North Africa. These rules will remain in force until permanent regulations have been drawn up and promulgated. The report sets forth at length the essential features of Chapter 2 of the decree, which defines the procedure to be followed in awarding contracts for public works, supplies, transport, purchases, sales, rentals, or labour.

Roumania.

The U.S. Consul-General at Stockholm states that it is reported in that city that a Roumanian business commission will shortly arrive from Petrograd with the object of making a study of the trade routes from England to Russia, in order that goods from England may reach Roumania by the way of Sweden. This, it is stated, is owing to the fact that it is absolutely necessary for Roumania to have some course of business communication with the outside world, and under present conditions the only way appears to be over the Swedish route.

Prominent Industries of India

Cyprus.

Tenders are invited by the Cyprus Government for the conveyance of letter and parcel mails within the island from April 1, 1916, to March 31, 1917. Date February 9.

A notice has appeared in the *Cyprus Gazette* (Extraordinary) notifying that the High Commissioner has approval of special licences being granted by the Provost Marshal for a limited quantity of potatoes being exported to Egypt, subject to certain regulations which are designed to facilitate exportation after local requirements at reasonable prices have been satisfied.

The Government of Cyprus has for sale about 266 Cyprus okes of harpoon-fished sponges, good quality, and 29 okes skarta from Cyprus waters this year; also 748 okes of machine-finished sponges, good quality, and 89 okes skarta. Tenders for the purchase of same will be received by the Inspector of Fisheries up to 12 noon on January 29, 1916.

Sudan.

The general manager, Sudan Government Railways, is prepared to receive tenders for the supply of the following timber:—

100,000 ft. run of Swedish pine in sizes varying from ¾-inch by 9 in. to 2 in. by 9 in.

2,500 ft. run of 3 in. by 3 in. by 13 ft.

1,500 ft. run of 4 in. by 4 in. by 13 ft.

25,000 ft. run of pitch pine in sizes varying from 1 in. by 9 in to 4 in. by 12 in.

6 pitch pine baulks, 9 in. by 9 in. by 36 in.

6 pitch pine baulks, 9 in. by 12 in. by 20 ft.

12 pitch pine baulks, 12 in. by 12 in. by 20 ft.

Tenders, which should state prices and possible date of delivery of timber, may be sent to any of the following:—

Sir A. L. Webb, Queen Anne's Chambers, London, S.W., quoting price f.o.b. London.

Agent, Sudan Government Railways, Alexandria, quoting price for delivery in Alexandria.

General Manager, Sudan Government Railways, Atbara, quoting price c.i.f. Port Sudan or for local delivery.

From all of whom also tenders forms and fuller information as to the sizes of timber required may be obtained. Tenders, which should be enclosed in sealed envelopes, plainly marked on the outside "Tender for Timber," must reach any of the above addresses by not later than noon of February 1, 1916.

URGENT TELEGRAMS FOR ROUMANIA.

The Secretary to the General Post Office has issued the following announcement:—

The Postmaster-General has made arrangements with the Russian and Roumanian Telegraph Administrations for the introduction on January 20 of a service at triple rates for urgent telegrams sent between this country and Roumania via Russia, similar to the service recently established between this country and Russia. The charge will be 1s. 3d. a word.

The telegrams will be subject to censorship in the same way as other private telegrams, and, like them, can only be accepted at the senders' risk.

In view of the heavy pressure on the Russian land lines it must be understood that, though the "urgent" telegrams will receive priority of treatment on these lines, a rapid service cannot be guaranteed.

Near East Markets.

PEACH-GROWING ON THE BOSPHORUS.

Peach growing in the region about Constantinople, says the United States Consul-General at Constantinople, is confined to the Bosphorus orchards and certain districts on the Marmora Sea, especially Brusa, with its abundantly watered, low hinterland. The requisite mild climate prevails throughout the year in these sections.

The Brusa peach is an early fruit, very juicy, and rich in flavour. Its weight averages 7 ounces. It is called here "etli," which means fleshy, and possesses the distinctive feature that the meat of the fruit firmly adheres to the kernel, so that the peach can not be parted in two with a little pressure of the fingers, as is the case with other varieties. It is the best peach produced in this district.

The Bosphorus peaches may be divided into kinds—the "yazsheftelissi," or summer peach, and the "sari-papa," or yellow peach. The summer peach, as its name implies, is an early-season variety which, if properly cultivated, weighs up to 6 ounces. The predominant colour is dark red, shading into pale yellow-green. The most succulent peaches are obtained during the first three years. Older trees yield more fruit, but it is harder, drier, and less tasty. In the peach itself the central part in contact with the kernel is blood red in the case of old fruit, and yellow-pink, light red speckled in the case of younger fruit.

According to the local growers' observations, a healthy tree will yield beween 140 and 290 pounds of summer peaches. These are not attacked by worms and other parasites as readily as the sari-papa, a winter variety, the kernels of which are very often split open and worm-eaten. This variety is usually softer than the summer peach, less juicy, and more mealy. The predominant colour is yellow, with red. It is exceptionally aromatic, and has a flavour similar to apricots. The full-grown peach weighs from 3 to 5 ounces.

According to native growers, peaches dry if the weather is too cold. They grow best on black earth, and in order to become full-grown require abundant water and frequent care. Local cultivators plant, early in November, a number of full-grown selected peaches or their kernels in a small space of about 4 square feet. The offshoots appear in March. They are left for a year, during which the surrounding earth is frequently dug and watered. Then the young nurslings are transplanted and scattered over the field, where, for another year, they require constant attention. The following year the first fruit is yielded.

The trunk of the tree, as a rule, reaches between the second and third year a diameter equal to that of the full-grown fruit it bears. Generally the trees are cut when between six and eight years old, a stage at which the fruit they bear is no longer palatable. Grafted peaches can not be used for seed purposes.

COTTON MARKET.

Liverpool. Thursday Night.

Messrs. Reynolds and Gibson telegraph:—

Egyptian Spot.—There has been an active market this week, large business having been done at advancing prices. The demand for export continues on fair scale. After several fluctuations, quotations show an advance of 30 points for all descriptions except for good and above in Joannovitch, Sakellarides, and Abassi, which are advanced 40 points. The sales, which include 860 bales Sudan cotton, are estimated at 7,600 bales.

PRODUCE REPORT.

London, January 20.

Currants.

The demand has been good this past week, with fair amount of business done at full prices. The Greek market is strong, and a further advance is probable.

Sultanas.

There has been a good demand during the week, with business passing at about the same prices reported last week. There is a noticeable preference for Afghan and Indian fruit, while owing, evidently, to the high prices, Greek is neglected.

Figs and Dates.

There is only a small demand for the former, while fairly good business is being done at 36s. to 40s. for Egyptian and 15s. to 22s. for Persian.

Seeds.

Linseed is steady, but very inactive. London-Calcutta is quoted at 84s. 3d., La Plata, Feb.-Mar., Hull, 76s. 9d., and 76s. 6d. buyers. Bombay to Hull, Jan.-Feb., 85s. 6d. is asked. Rapeseed is nominal. Cottonseed is quiet all round. Egyptian to London, spot, £14 5s.; Hull, spot, loading, and Jan., £15 11s. 3d. is asked.

Oils.

Linseed oil is dull, and easier; spot pipes, £43 12s. 6d.; spot barrels, £44 10s.; Jan., £44 10s.; Jan.-Apr., £44 15s.; and May-Aug., £45 15s. Rape oil is firm. English refined, £56. Cotton oil is steady; crude pipes, £45 15s.; refined pale pipes, £51; and sweet barrels, £52 to £53. Olive oil is very firm, but inactive; spot, Levant or Spanish, £57 to £58 per tun ex store.

Oilcakes.

Linseed cakes are only in moderate demand, owing to the high prices asked. Best London sold at £13 7s. 6d. to £13 10s. East India seed pures selling at £13 to £13 7s. 6d. per ton. Cotton cakes offered only in small supplies; Egyptian, at £10 5s. to £10 7s. 6d.; English, £10 10s. to £10 12s. 6d.; and Bombay, at £10 per ton.

Gums.

The market is inactive, but prices are well maintained. Arabic, Turkey sorts, £3 5s. to £4 15s.; East Indian, common to fine, £2 5s. to £2 17s. 6d.; Ghezira, 15s. to £2 7s. 6d. Myrrh, good to fine, £2 15s. to £3 10s. Tragacanth, first, £29 to £46; low to good sorts, £5 to £6 15s.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CYPRUS NOTES.

(From a Correspondent.)

Great annoyance is felt at the ports of Famagusta, Larnaca, Limassol, and Papho owing to the frequent failure of the weekly mail steamer of the Khedivial Company to take on board all the merchandise lying ready for shipment. One of the last occasions 1,000 cases of oranges and lemons, besides many of potatoes and other produce were left on the quay at Famagusta. So far, complaints made to the Government and the company have had but little effect. A deputation from Famagusta, including the Mayor, a member of council, and some leading merchants has, therefore, proceeded to Nicosia, and have had an interview with the Chief Secretary, representing the serious loss and interference of trade which are being caused. It is considered by the merchants that a second steamer should be furnished under the circumstances, especially considering that the Khedivial Company practically enjoys at present a monopoly of the carrying trade between Cyprus and Egypt. The Chief Secretary replied that the terms of the contract do not permit the Government to compel the company to despatch a second steamer, but that every effort will be made to bring about some satisfactory arrangement. The serious losses sustained by shippers are fully admitted, especially as in many cases the goods have to be delivered under contract within specified periods. The exportation of fresh fruit and of potatoes to the Egyptian market is of great importance to the island at the present season.

Weather Conditions.

There has been a continued absence of rain, which causes serious anxiety in most parts of the island. In some places the sowing of wheat has been suspended. All-night services have been held in some of the principal churches of Nicosia, and throughout the island prayers have been offered for rain.

In the poorer parts of the island considerable hardship is being experienced, high prices and want of employment being much felt. The price of wheat is, of course, for many prohibitive. At Nicosia it has reached 9s. 6d. the bushel; the cost of barley being 4s. 8d. Fortunately the price of potatoes remains low, and these are largely consumed.

Asbestos Mines.

Under a new agreement between the Cyprus Government and the Asbestos Company of December, 1915, it is provided that the company shall pay to the Government 1 per cent. in money on the value of all asbestos exported, or under certain circumstances in kind, for a period of five years; and 2 per cent. for a further period of five years. These mines are the only ones in which this mineral is being worked. They lie high up in the Troödos range.

RUBBER SHARES IN DEMAND.

Amidst the recent activity in rubber shares there has been a good demand for the Java specialities, and in this particular group attention should be given to Waverley Plantations. The company offers prospects of good dividends and a big rise in quotations, as the 5s. fully-paid shares at present stand at only about 2s. 6d. each. The company's estates cover 2,593 acres, but only 1,705 acres are now under cultivation with rubber and coffee, and there is, therefore, the prospect of a large increase in production as the estates are fully opened up. According to the estimates of an expert of long local experience, the production for the next three years will increase as follows:—For 1916, 30,000 lbs. of rubber and 1,800 piculs of coffee; for 1917, 60,000 lbs. of rubber and 4,500 piculs of coffee; for 1918, 100,000 lbs. of rubber and 4,500 piculs of coffee. Taking both rubber and coffee at much below the present prices, it is calculated that this production will give increasing dividends, averaging 12½ per cent. to 15 per cent., for the next three years. With the prices standing at such a low price as 2s. 6d. for the fully-paid share this would give a splendid yield, and in the meantime prices should rise appreciably; in fact, they are expected to go over par.

COMPANY RESULTS, &c.

Anglo-Egyptian Oilfields.—Telegram received from Suez dated January 12:—Hurgada.—Well No. 7, 4 p.m. yesterday till 4 a.m. production 200 tons; recommenced 8 a.m., stopped at 9.40 a.m.

Anglo-Egyptian Spinning and Weaving Company.—Notice is given by the liquidator that 2,569 ordinary shares of £1 each and 819 deferred shares of 5s each, have not been presented for exchange against shares in the Filature Nationale d'Egypte S.A.E., and further notice is given that the liquidator will conclude the winding up of the company and lodge the final statement of accounts on June 30. All shares of the Filature Nationale d'Egypte unclaimed at that date will be sold and the net proceeds of the sale thereof paid into the companies liquidation accounts in the Bank of England in compliance with the requirements of section 224 of the Companies Consolidation Act, 1908.

Egyptian Markets.—The directors have declared an interim dividend of 4 per cent. for the year 1915, less income-tax at 2s. 8d., payable 31st instant.

Societe Anonyme de Behera.—Payment is being made at the National Bank of Egypt on Coupon No. 43 of the debentures which fell due on January 1, 1916.

THE AGRICULTURAL BANK OF EGYPT.

The necessary quorum for the Extraordinary General Meeting called for the 11th January, 1916, not having been secured, notice is hereby given that an ADJOURNED EXTRAORDINARY GENERAL MEETING of The Agricultural Bank of Egypt will be held on Thursday, the 27th day of January, 1916, at 4 o'clock in the afternoon, at the Head Office of the Bank in Cairo, for the purpose of modifying the Statutes in the following way:—

(1) To substitute the word "Avril" for the word "Mars" in the first paragraph of Article 31.

(2) To eliminate the words "au profit de fonds social" in the third paragraph of Article 42, and to substitute therefore the words "Le paiement pourra en être refusé et le montant passé au profit du fonds social."

A print of the Statutes can be inspected at the Offices of Messrs. Norton, Rose, Barrington, and Co., 57½, Old Broad Street, London, E.C., between the hours of eleven and three (except Saturdays).

Every Shareholder holding a minimum of five Shares has the right to attend the above Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in Egypt is the 22nd January, 1916, and the last day fo rdepositing the Shares in London is the 20th January, 1916), when Cards of Admission and Forms of Proxy will be handed to them at one of the following places:—

IN EGYPT:
At the National Bank of Egypt, Cairo.
At the National Bank of Egypt, Alexandria.
IN LONDON:
At the National Bank of Egypt, 6 and 7, King William Street, E.C.

F. T. ROWLATT, President.

NOTES OF THE WEEK.

The mystery of the alleged Montenegrin capitulation has yielded to the logic of facts without being definitely solved. All that is established is that there has been no capitulation. For the rest, the most plausible explanation is that the Austrians had based their hopes on the power of the *Krone*, and had overlooked its depreciated value. Their intrigues in Montenegro had met with some measure of success, but stopped short of the surrender of the Montenegrins, body, soul, and rifles, to an Austrian overlord. That some overtures were made, ostensibly in the name of King Nicholas and his Government, is admitted. Whether they aimed at securing more than an armistice is obscure. That negotiations had progressed as far or as rapidly as Count Tisza stated in the Hungarian Parliament is proved to be false. It is more than probable that the Austrian authorities were too hasty in announcing the terms on which they were prepared to accept Montenegro's capitulation, and had overlooked the difference of attitude between a venal clique and the bulk of a sturdy and independent nation.

Much of the credit for saving Montenegro from a great betrayal appears to belong to General Martinovitch. He is understood to have voiced the determination of the army to continue the struggle rather than submit, and his resolute action swept away any attempts that were being made to convert a possible desire for an armistice into an abject surrender. The position of the Montenegrins was none the less precarious. The enemy was in possession of the main strategic points, and there was little prospect of their being able to check his advance. In the circumstances the only course to adopt was for the Government to withdraw and to leave the army to prolong its resistance as best it might. King Nicholas, the Royal Family, and the Government have accordingly quitted the country, and have found a refuge at Lyons. Prince Mirko, the second son, remains with the army, which is now reported to be under the command of General Vukotitch.

There can be no doubt that a fight to the bitter end is more in keeping with the spirit of the people than a capitulation. It came as a shock to those who know the Montenegrins to have to picture them rounded up in bands and throwing down their arms at the feet of Austrian soldiers, to be marched off subsequently for internment, leaving their women and children to the tender mercies of the spoliators of Serbia. It was not thus that many knew Montenegro. Above all, it was hard to think of King Nicholas playing his Allies false. At the worst, it could only be supposed that all efforts on his part to get into touch with the Entente Powers, to obtain a definite answer from them which would enable him to adopt a strong line, had failed, and that in the end, confronted with the semblance of treachery at Mount Lovtchen, he had found himself compelled to inquire what terms the invaders were prepared to offer. The Austrians filled in the rest of the news bill.

When all the facts are known it may be that even the extent of the headway made by Austrian intrigue will be found to have been exaggerated. The condition of the Montenegrin army must have been parlous in the extreme, and a surrender might have been contemplated without the agency of actual treachery. That the Austrophil party, which had already secured seats in the Government, would seek to take advantage of such a state of affairs need cause no surprise. Austrian anxiety to detach Montenegro from the Allies and to magnify the importance of her surrender would at once come into play. Misled by the claims of Vienna and Hungary, the Italians appear to have been over-eager to throw all the blame on the Montenegrins. Hence the stories of intrigue and treachery, circulated, it is to be feared, as much from a desire to disarm criticism against the Italians themselves for their failure to send aid to Montenegro as in the interest of historical accuracy. In any other circumstances it would seem strange that the Montenegrin Royal Family, which is so closely related to the Italian reigning House, should pass through Italy and seek a refuge in France.

The march of events across the Adriatic may yet cause Italy to abandon the policy of *laissez-faire*, which has led to the undoing of the Montenegrins. Enemy reports of the progress of the Austrians have to be discounted, but Scutari has been occupied, and there would seem to be some ground for supposing that Durazzo, and possibly Valona, may eventually be threatened. The chagrin of the Austrians at having been robbed of the capitulation of Montenegro will prompt them to follow up the retreating army, and to secure some success as an offset

Digitized by Google

to the frustration of their earlier hopes. For the present the attitude adopted is that peace negotiations with Montenegro have been broken off pending the surrender of the people. The process of rounding up and disarming the latter is represented as being in progress, and will, no doubt, be made to apply to operations against the Italians at Valona if a reasonable chance of success offers itself. Some attempt should certainly be made to help the remnant of the Montenegrin army, but Italian operations in Albania should be co-ordinated with the general military policy of the Allies.

While the enemy's attack on Salonika stands postponed, the work of strengthening the defences of the town and district is being completed with a thoroughness that seems to have made a great impression in many quarters, including Athens. The most notable incident of the past week, however, was an air raid over Monastir and Ghevgeli, carried out by French squadrons from Salonika. Statements of the number of machines engaged vary, but the official *communiqué* issued in Paris gives the strength of the squadron at thirty-two aeroplanes, but does not distinguish between the section which visited Monastir and the other that went to Ghevgeli. The former town is a hundred miles from Salonika. In spite of the unfavourable weather conditions and the altitude at which the airmen had to fly in order to cross the intervening mountains, all the machines taking part in the raid returned safely, with the exception of one biplane, which was compelled to come down in Greek territory owing to a broken wheel. The objectives of the raids were the enemy's camps, the buildings occupied by the Headquarters Staffs and other military establishments. As over two hundred bombs were dropped on Monastir alone, there is no reason to doubt the accuracy of the report that considerable damage was done. Particular interest attaches to the raid, not only from its success and the fact that it was the largest of its kind up to the present time, but also because it established the superiority of the Allies in aircraft in the Balkans. Not a single enemy aeroplane rose to challenge the attack.

King Constantine has once more unburdened himself in the public Press. This time an American correspondent has been requested to record his Majesty's profound indignation at "the unheard-of high-handedness of recent Allied action towards Greece." The burden of the complaint is the growing extent of Greek territory occupied by the Allied troops and the absence of any military reason for the destruction of the bridge at Demir Hissar. King Constantine discloses the fact that the Allies have promised to pay for the damage done when the war is over, but declares that they cannot pay for the suffering of the people driven out of their homes, and that the destruction of the railway line exposes the Greek troops around Serres and Drama to the risk of starvation. He cannot accept the plea of military necessity, as that is the excuse which Germany urges for the invasion of Belgium and the occupation of Luxemburg, and, indeed, the King implies that the Allied Powers have now placed themselves on the same level as Germany in regard to the violation of neutral territory. "The history of the Balkan politics of the Allies," he exclaimed, "is the record of one crass mistake after another, and now, through pique over the failure of their every Balkan calculation, they try to unload on Greece the results of their own stupidity." The outcome of this action on the Allies' part was to reduce the proportion of Greeks favourable to the Entente from 80 per cent. to less than 20.

It would be churlish not to lend a patient ear to King Constantine's laments. There is something pathetic in the spectacle of a Sovereign, who has deliberately rejected the constitutional safeguard of a Government representing the majority of the people, being reduced to proclaim his grievances from the palace roof. "The only forum of public opinion open to me," the King of the Hellenes is reported to have said, "is the United States. The situation is far too vital for me to care a snap about Royal dignity in the matter of interviews, when the very life of Greece as an independent country is at stake. I shall appeal to America again and again, if necessary, for that fair hearing which is denied me by the Allies." As the appeal does not appear to have been very successful in the United States, it is of interest to analyse it dispassionately. No one will deny that it must be disagreeable to the Greek King to see the Allies making themselves at home in Greece, "and not so much as 'by your leave'"—to use his own words—when he had worked hard to keep the country out of the war. Whether it is equally disagreeable to those of his subjects who are benefiting by the presence of the Allied troops is another matter. As far as the outside world is concerned, the people of Salonika have raised no very loud complaint. The question of military necessity is not one for argument, as there would be no common ground for King Constantine and the military authorities of the Allies. It may be pointed out to the former, however, that extensive operations in a foreign country are not possible without a base entirely given up to the jurisdiction of the Power operating. This point is exemplified in the experience of the Allies in France; it has been admitted by the Greek General Staff when they proposed to attack Constantinople from Dedeagatch, and decided that the operations could only be carried out with Bulgaria hostile or friendly. In other words, Dedeagatch, the base, had either to be captured and held or to be surrendered for temporary occupation by a friendly Bulgaria.

All that has happened in Greece bears out this contention, the truth of which King Constantine and his General Staff would be the first to admit as a general principle. With the Allies landed at Salonika, it could only be a question of time, if military operations on a large scale were contemplated, before the port, the peninsula, and Greek Macedonia had to pass temporarily under the sole jurisdiction of the Allies. Indeed, the geographical relation of Greece to the European war made it impossible that military operations should be extended to the Near East and that Greece should remain neutral. Just as Constantinople, according to the Greek view, was to be reached through Dedeagatch, and Bulgaria forced to declare herself either foe or ally, so the Allies and the Central Powers had to come to grips across Greek territory, and it was for Greece to make her choice between the rôle of ally or enemy of those who arrived first. At the instance of King Constantine Greece refused the issue, and the Allies, to spare her feelings, have made the best of a compromise. It has not worked—the Greek General Staff knew that it could never work—but it is hardly for King Constantine, who is responsible for the repudiation of the Greek treaty with Serbia, which lies at the root of the whole trouble, to complain. At the same time we have never sought to disguise the fact that the Greek problem could have been handled in a far more satisfactory manner by the Allies.

It is to be hoped that no one has been playing practical jokes at King Ferdinand's expense in "editing" his toast to the German Emperor at Nish. As reported in a telegram purporting to come from Nish to Amsterdam, it was a masterpiece of Oriental pleasantry. Its fulsomeness was prodigious, but by lapsing into Latin King Ferdinand gently probed a weakness of the Emperor William's for saying a sentence learnt by heart in a language that he does not speak, while the picture of Bulgarian peasants "co-operating in future in the work of Kultur" must have caused the Imperial guest physical suffering. Undoubtedly the honours were with the Bulgarian monarch. The German Emperor, in his reply, was not equal to the occasion. He thanked his host for the honour of an appointment as Colonel of the 12th Balkan Infantry Regiment, "than which he could expect no better," and brought in a reference to Turkey, reminding the Bulgarians that she, too, had "secured her world position." But there was no attempt to remind King Ferdinand of his place as a dutiful vassal, as in happier circumstances the Emperor William could not fail to have done. An eye-witness of the ceremony reports that Germany's ruler wore the look of a tired and broken man. This evidence finds some confirmation in the perfunctory answer which the Emperor gave to the challenge in the speech of his crafty ally.

The expedition which, under General Aylmer, is endeavouring to relieve the British force in Kut is still more than twenty miles from its objective. The official statement that the Turks had been thrown back to a point seven miles from Kut has been found to have been based on a "misunderstanding." In the battle that took place on January 21 General Aylmer's forces made a determined effort to win through, but without avail. The heaviness of their losses necessitated an armistice of a few hours on January 22 for the removal of the wounded and the burial of the dead. According to Turkish reports, the number of the killed amounted to 3,000. There is no need to credit this statement; but it is admitted that the British casualties were serious. Since January 21 there would seem to have been no fresh move on General Aylmer's part. The margin of strength with which he was sent to effect the relief of the troops at Kut is proving, it is to be feared, too small in the face of large Turkish reinforcements. A *communiqué* from Constantinople speaks of a surprise attack made on January 18 on a British camp west of Kurna. This may refer merely to an Arab raid on an advanced post guarding the approaches to Busreh, or may imply that a further attempt is to be made by a different route to reach General Townshend. In spite of the latter's reassuring statement that he still has sufficient supplies, his position necessarily causes the liveliest anxiety. The unexpected strength of the enemy would seem to constitute a grave reflection on our intelligence system, and the references now being made in the official statements to floods suggest the inquiry whether the possibility of their periodical recurrence had been foreseen and steps taken to turn them to the advantage of the forces with unlimited shipping at their disposal.

The Russian success in the Caucasus proves to have been more complete than was at first to be inferred from the Russian despatches. For the present we must accept with reserve the estimates of the Turkish losses, but there can be no doubt that the blow carefully prepared by the Grand Duke Nicholas has fallen with unexpected intensity on the enemy. In addition to the stores and equipment abandoned, the retreat of a considerable number of Turks has been cut off, and we may hear of their capture in the course of the next few days. Russian artillery is bombarding the forts of Erzeroum. The town is strongly defended, but we shall hope to find that the preparations of the Russian Commander-in-Chief are adequate for the reduction even of this fortress.

After occupying Kangavar, between Kermanshah and Hamadan, the Russians, according to enemy reports, have had to withdraw from that town in the face of strong Turkish forces operating from Kermanshah. For the rest, the situation in Persia remains obscure, but it is satisfactory to learn that the outlook in the south has improved. Reuter's Agency learns that some of the more powerful tribes have expressed their readiness to assist Great Britain against German agents and their Persian dupes.

A further engagement in Western Egypt on January 23, when the Senussi were found to be 4,500 strong, with three guns and three or four machine-guns, indicates that the movement among the tribesmen is not yet on the wane. Indeed, each successive encounter reveals the enemy in greater strength, and it is to be feared that the effect of such defeats as the Anglo-Egyptian forces are able to administer is only local. In this last engagement British casualties amounted to 28 killed and 274 all ranks wounded. The enemy's casualties were much heavier, but the nature of the ground enables him to make good the escape of the bulk of his forces on each occasion.

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND FOR THE SUPPLY OF COMFORTS.

To the Editor of THE NEAR EAST.

Sir,—I shall be obliged if you will allow me to draw attention to the advertisement appearing in your issue of to-day, from which it will be seen that in view of the large augmentation in the number of troops now operating in Mesopotamia it has been decided to extend the scope of this fund, which has hitherto been of a private nature, by making an appeal for subscriptions to the general public.

Subscriptions will henceforward be received by the Imperial Bank of Persia, and in view of the great discomforts which our troops operating in that theatre of war have to suffer, and of the extremely arduous task which is before them, I trust that there will be a generous response from the public to Mrs. Marling's appeal.

I would point out that the money collected is, at the request of the General Officer in Command of the Expeditionary Force, and of Sir Percy Cox, the Chief Political Officer, being remitted to Bombay, where it is employed by Sir Percy Cox in the purchase of such comforts as are most suitable for the requirements of the troops (both British and Indian) in the variable conditions of climate and life which they are called upon to endure. To anyone acquainted with these conditions the advantages of this course, as compared with the indiscriminate supply from this country of articles, many of which are unsuited to the climate and others so deteriorated before arrival that they are useless, are obvious.

In closing the private list of subscriptions which I have hitherto been administering I should like, on behalf of Mrs. Marling, to take this opportunity of again thanking the various subscribers, a list of whom is given below, for their generous response to Mrs. Marling's appeal.—I am, etc.,

C. GREENWAY.

LETTER FROM CAIRO.

(From Our Own Correspondent.)
Cairo, January 11.

The Cairo City Police.

Two important decisions have just been taken by the military and civil authorities respectively. The first is the appointment of Colonel Harvey Pasha, Commandant of the Cairo City Police, as Provost-Marshal in the capital; the second is that henceforward the nomination or the promotion of non-Egyptians in the police force can be carried out by the Ministry of the Interior without, as in the past, having to obtain the previous consent of the Finance Committee of the Ministry of Finance. The appointment of Harvey Pasha as P.M. will certainly facilitate his task and remove all chances of friction between the military and civic police; whilst the other decision, albeit for obvious reasons it will not be possible for the Interior fully to avail itself of this liberty of action until the war is over, is an exceedingly welcome one, and may be regarded as a recognition of the difficulties under which the police force has laboured in the past.

I should like to take this opportunity to say a few words about the Cairo City Police. In certain circles it has become the fashion to complain about the administration and organization of that force. Residents who remember the condition of things that existed some eight years ago freely admit that a great change for the better has taken place, and those who utter the complaints referred to do so quite irresponsibly; for I feel sure they would refrain from such criticism did they possess any real knowledge of the gigantic task that has to be handled day in day out by those whose shortcomings they are so keen to proclaim abroad. In normal times the Cairo City Police, in addition to the other duties ordinarily attaching to such a force, lends assistance to the foreign Consuls whenever they want to arrest any of their nationals, and controls the secret police, the fire brigade, and the licensing of motor vehicles, etc. Since the outbreak of war its work has been considerably increased by the various proclamations issued under martial law to deal with the control of licensed establishments, etc., and of the activities of the political agitators and spies, of whom the secret police has had to keep close track. When I mention that Cairo is a city of over 600,000 inhabitants, and that the only Englishmen in the city police are the commandant, the assistant-commandant, two sub-commandants, three inspectors, and some head constables, the number of whom can be counted on the fingers of one hand, I think it will be admitted that the task of the "higher command," if one may so term it, is a gigantic one, and that, even if the criticisms referred to were well founded—and in most instances they are not—they cannot detract one whit from the admirable manner in which that task has been carried out.

I cannot close these remarks without reference to the work done during the early days of the war. At the time when, politically, things were so uncertain, and even the Foreign Office did not quite know what its policy was going to be, Harvey Pasha and his assistant, Russell Bey, handled the difficult and delicate situation with a courageous initiative and a firmness that stood for a lot in the ultimate peaceful settlement of the crisis. I pay them this well-merited tribute with the firm conviction that those in authority over them will fully endorse my words.

The Empire Nurses' Red Cross Club.

A very interesting ceremony took place on Wednesday when the Empire Nurses' Red Cross Club was inaugurated by Lieut.-General Sir John Maxwell, G.O.C. the British Forces in Egypt. Ever since the beginning of last year nursing sisters and other workers have been steadily drafted into Cairo to cope with the enormous number of wounded and sick from Gallipoli and elsewhere. As time went on the need for some central place where these workers could foregather and meet friends working in other parts of the city began to make itself more and more felt; and at last a committee, headed by Lady McMahon, decided to establish a club to meet the emergency. The club has been installed in the historic house belonging to the famous Nubar Pasha, one-time Prime Minister of Egypt, which has been lent, together with its magnificent rooms, by that statesman's grandson, Arakel Bey Nubar; and H.H. the Sultan, ever ready to open his purse when good works require assistance, has made a donation of £E100 to the funds. The opening ceremony was attended by a very representative gathering of British residents, officers, and Army nurses. For the sake of the latter, whose devoted work out here is deserving of the highest recognition, one sincerely hopes that this club will be entirely successful. Miss N. Baird is the hon. secretary, Mr. F. de Halpert the hon. treasurer, and Lady Victoria Hicks-Beach the lady resident in charge.

In his inaugural speech Sir John Maxwell made the sad announcement that Miss Hughes, who was to have undertaken the secretaryship, had lost her life in the s.s. Persia. Miss Etta Hughes was a well-known figure in Cairo and Constantinople society. She was for many years English lady-in-waiting to H.H. the Khediva Mother, and in that capacity had gained the esteem of the European and Egyptian circles in which she moved. Her loss will be very much felt, and deep sympathy is everywhere expressed with her brother, Mr. George Hughes, Senior English Inspector attached to the Parquet of the Native Court of Appeal.

The Hellenes of Egypt.

About a month ago the Hellenic community of Paris summoned a congress, which was to consider how best the interests of Pan-Hellenism could be safeguarded during the crisis which the Balkans are traversing. An invitation was addressed to the communities of Alexandria and Cairo asking them to send delegates. Neither community felt itself in a position to accept this invitation. Meetings were, however, summoned in both cities; but whilst the Cairo community unanimously decided to send a telegram expressing its cordial approval of the sentiments expressed by its Paris compatriots, a certain amount of opposition was organised in Alexandria, and a telegram which was sent on the same lines as that from Cairo gave rise to much controversial discussion. A further request having been received from Paris for fuller expression by the community of its adhesion to the congress in the French capital, a meeting has been held in Alexandria, with Mr. Michel Sinadino, the president of the community, in the chair. An even stronger resolution than that passed at the previous meeting was voted by the audience, which included all the most prominent Greeks. It characterised the Greek Government's policy as being to the advantage of Pan-Germanism and to the detriment of Pan-Hellenism, and called for the immediate co-operation of Greece with the Allies. Copies of this resolution were telegraphed to the Greek Premier, the Athenian Press, and the Paris Congress. A feature which somewhat embittered the proceedings was the intervention of M. Sachtouris, the Greek Consul-General, who prior to the meeting published a letter disapproving of the proposal of the Alexandria community and referring in somewhat offensive terms to the Paris Congress. There is little doubt that the Consul-General's action was as unnecessary as it was tactless, and the net result seems to have been to increase the determination of the Pan-Hellenists and to have driven towards them many who held aloof before, but who object to be dictated to in this manner by their consular representative.

A Suspicious Fire.

A serious fire broke out on Wednesday night at Boulak in the shipyard of Messrs. Thos. Cook and Son (Egypt), Limited. The fire brigade was soon on the spot, but, owing to the strong wind blowing, the fire was not got under until next morning. The fire broke out on one of the Nile steamers, Rameses I., which got away from its moorings and set alight three other steamers, Rameses III., Tewfik, and Rameses the Great. All those who have made the journey to Upper Egypt by river will remember these fine steamers, and will be sorry to hear that only the last-named was saved. The Rameses I. broke its back and sank, and the other two

Digitized by Google

are gutted. The damage done is estimated at £60,000, which is covered by insurance. The origin of the fire is as yet uncertain.

CAIRO, January 18.

The Mouled-en-Nabi.

Yesterday Government offices were again closed, this time in celebration of the birthday of the Prophet. The festivities in connection with this event had been held during the best part of the past week, but the evening preceding the public holiday witnessed, as usual, the most important ceremony of all, the reception of the religious heads and the attendance of H.H. the Sultan in the special tent at Abbassia during the reading of the story of the Prophet's life. By special order of the Ministry of the Interior the Mouled-en-Nabi was allowed to be celebrated in the provinces as well as in the capital, on condition that the inhabitants did not attend any celebration other than the one held in their particular locality. It is reported that the festival has passed off satisfactorily, wherever it took place. H.H. the Sultan once again caused generous distributions of alms to be made from his privy purse to the poor, and in certain cases himself defrayed all the expenses of the celebration.

Irrigation Schemes in the Sudan.

The departure of Mr. Buckley, the irrigation inspector in charge of the Blue Nile irrigation scheme for Abyssinia a month or so ago, gave rise to no little comment locally, especially when it was announced that he would be followed by Sir Murdoch Macdonald, the Under-Secretary of State for Public Works, on his return from England. In semi-official circles it was freely hinted that this expedition had a political as well as a technical object, and that a great "pow-pow" was to take place between the Anglo-Sudanese authorities and the representatives of the Negus. Sir Murdoch has been back several weeks now, and shows no signs of proceeding south; far from that, as already announced, he has received a local commission as colonel, and is very much taken up with the execution of the work that his Ministry is engaged on in connection with the defences on the eastern bank of the Suez Canal. By the time that undertaking is finished it will be far too late for any expedition to the Abyssinian frontier, such as that announced As a matter of fact, I understand that the publicity given and the importance assigned to Mr. Buckley's mission are altogether misplaced. Although no work on any extensive scale is being carried out in connection with the Sudan irrigation schemes for which a loan was obtained three years ago, that embarked on before the war broke out is being continued within certain limits in order to ensure that the money already expended shall not be lost through the complete suspension of new works—just as is being done with the Delta Drainage Scheme. In addition a certain amount of research work is being carried out by the permanent staff, such as the taking of levels, the measuring of currents, etc.; and the object of Mr. Buckley's journey to Abyssinia comes under this heading. It is being made for the purpose of studying and taking the levels of Lake Tsana—nothing more, nothing less. Lake Tsana, whence the Blue Nile takes its rise, is destined in the near future to play an important part in the irrigation projects of the Sudan, and the Anglo-Egyptian authorities, in whose hands the execution of those projects will lie, quite naturally insist on having the fullest data before definitely embarking on the "heavy" part of the enterprise, which will have to be proceeded with as soon as peace is restored.

The Ex-Khedive's Commercial Enterprises.

By proclamation this week receivers have been appointed to the Société Belge-Egyptienne de l'Esbekieh and the Société des Biens Fonds Urbains et Ruraux. These two companies were really only constituted as a cloak for the commercial enterprises in which the ex-Khedive from time to time engaged himself. In both of them the Daira Khassa of Abbas Hilmi Pasha is the chief shareholder; but whilst the Daira guaranteed the financial engagements of the Société des Biens Fonds, in the case of the Société Belge-Egyptienne its property is mortgaged to a group of debenture-holders, most of whom are Belgian. Both companies own property in the Emad-ed-Din quarter in Cairo—enormous buildings let out in flats, the imposing nature of which strikes the new arrival in the city. It is interesting to note that it was in the construction and administration of these buildings that the ex-Khedive was so imposed upon. His suspicions were finally aroused by a chance incident, and he found to his disgust, after a special inquiry had been held, that he had had to pay double the price that the construction had actually cost, and that in addition he was receiving but a fraction of the rent-roll that the tenants were paying. That was about a year or so ago prior to the war, and Abbas Hilmi Pasha, who for reasons best known to himself could not discredit those principally concerned, took speedy steps to remove them to other positions.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, January 7.

Sports of the British Troops.

On January 6 the British troops held their annual sports. The programme was long and varied—from a mile race for the enthusiasts to a lemonade and bun race for those more sedentarily inclined. There was a tug-of-war in which the different companies of the battalion (1st Royal Warwickshire Garrison Battalion) and the other units competed, and the Garrison Artillery finally was successful. A donkey race for native boys employed in the barracks and a half-mile handicap for the same supplied comic relief, which was maintained throughout the afternoon by two humorists in disguise.

At the close of proceedings Lady Wingate presented the prizes, to which she had herself kindly added a watch and a case of pipes for the first and second in the mile race. It was remarkable to observe how many of the recipients of the prizes were men who still showed signs of their hardships in France a year or more ago, but were able still to compete successfully.

Transfers.

Some of the transfers which take place at the end of the year have already been made. Mr. R. Munro, the well-known Rugby footballer, left for Kosti with Mrs. Munro on December 31, and Mr. Bardsley has gone from Khartoum North to take up duty in the Blue Nile Province, whence his relief, Mr. T. A. Leach, of athletic fame at Oxford, will come to take his place.

Mr. O. Bentley left for El Obeid on his way to Talodi, to take up his new duties on promotion to Senior Inspector in the Nuba Mountains Province. He has been several years at Tokar, the chief centre of cotton growing in the Sudan until the Gezira scheme materialises. He had been previously in Dongola, White Nile, Khartoum, and Berber Provinces.

Captain R. S. Wilson, Governor of the Nuba Mountains Province, returned from leave, taken on medical grounds, but was delayed some days in Khartoum to cope with an incipient abscess in the jaw. He left on January 6 for El Obeid.

Mr. A. G. Pawson, the cricket Blue, passed through Khartoum on his way to the Upper Nile Province, to which he is transferred from the Legal Department. It is understood he will be posted to Renk.

Dr. J. B. Christopherson, who has been for some years in charge of the hospitals in Khartoum and Omdurman, volunteered in the summer for work in Serbia. It is said that the hospital in which he was working was captured fairly early in the Austrian advance on Nish, but it is hoped that he has been allowed to continue in his work. Dr. G. W. Footner is acting for him temporarily at Khartoum.

Captain H. E. Dumbell, Slavery Repression Department, has proceeded to Roseires to inspect his department post there. He will afterwards go on tour through the tribes in that part.

Cerebro-spinal Meningitis.

There has been a slight recrudescence of this epidemic in Omdurman. Effective isolation and quarantine, however, confined the spread of the disease, whilst prompt inoculation in actual cases was reassuringly successful in saving the patient. It is hoped that the colder weather which has been experienced in the last week will put an end to the outbreak.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, January 5.

The Grip of the Teuton.

Recent arrivals from Constantinople all give prominence to two factors in the situation in the capital: the appalling increase in the cost of living, and the increasing discord between the Turks and their taskmasters.

It seems quite evident that there was considerable dissension respecting the efforts made by the Germans to assume complete control over Turkey, and at a meeting of the Union and Progress Committee some strong remarks were made about Turkey becoming a second Egypt. Pending the acceptance of the German demands the German Ambassador would not present his credentials to the Sultan; and, though no public announcement has been made, the Turks apparently agreed at last to the appointment of "*Mustechars*" at each of the Ministries, with the exception of the Sheikh-ul-Islamat, to "advise" and to "help" the Ministers, who will, however, retain their responsibilities! The effect of this will be to give the Germans a still greater hold of the administration of the country, and *Boches* are being placed in every possible office. The city, it is stated, is full of Germans, military and civilians; but no soldiers in any number appear to have arrived, though it is rumoured that German troops are to replace the Turks who are being withdrawn from the Dardanelles to take part in the Egyptian and Mesopotamian campaigns.

Jemal Pasha, the commander of the expedition against Egypt, has been in Constantinople. He still appears to possess sufficient power to have his own way, and has been promoted to the rank of General. He has refused to allow the expedition to be under the command of a German, and would not have any German troops. He has now returned to Syria, to undertake his expedition at the head of an army of 200,000 men.

Reinforcements for Mesopotamia.

Large reinforcements of Turkish troops and German officers also appear to have been sent to Mesopotamia, and the soldiers on passing through Constantinople are provided with new uniforms, evidently received from Germany. Every Ottoman capable of bearing arms between the ages of eighteen and fifty-one is being called up. Supplies of ammunition and some heavy guns are also reported to have arrived; but there has been some difficulty in getting the guns to the Dardanelles along the bad roads from Uzun Keupru.

Allies' Submarines Active.

The Allies' submarines have during the past month been very active in the Sea of Marmora, and they evidently do considerably more damage than one hears of in the destruction of sailing craft carrying munitions and stores to the Dardanelles. A Turkish destroyer was sunk a few weeks ago, and the next day the German steamer Leros, loading at the quay at Haidar Pasha, was torpedoed, and sank in shallow water. Two lighters were destroyed at the same time, and considerable damage was done to the railway quay. Other steamers are reported to have been sunk since then in the Marmora, but it has not been possible so far to ascertain their names.

Outrage on Persian Subjects.

There appears to have been a great hubbub amongst the Persians a short time ago, when, on the strength of the "Jehad," all Persian Moslems were called up to serve in the Turkish army! In the course of a few days hundreds were collected, and many paid their "bedels" (exoneration tax) to get off; but the Persian Ambassador intervened, declining to accept this interpretation of the "Jehad," and on his protesting, the measure was rescinded and the money returned to those who had paid.

A law on requisitioning was recently passed by Parliament. Churches and seminaries of enemy subjects have, however, been excluded from its operation, so those which have been occupied by the Turks since the outbreak of the war are expected to be evacuated. Some 200 German Catholic priests are expected in Constantinople; in fact, a few have already arrived, so some of the churches and seminaries will doubtless be taken over by these new arrivals. In spite of the efforts of the Germans to introduce their language in Turkey, it is said that Robert College last term had more Turkish students than it ever had before.

Anti-German Feeling.

The enormous increase in the cost of living in Constantinople and the exhaustion of many things are naturally producing a very disquietening effect on the population in general, and it is not surprising, therefore, that the feeling among the Turks against the Germans is becoming more marked. The misery among the poor is very great. Bread and meat are the only two articles which remain at their normal prices; but it is feared that sheep will now find their way to the troops in Macedonia, and that meat will then become expensive. Bread is maintained at its usual price, but it is still black and unpalatable. Bread of a better quality is being sold at an exorbitant price.

Talaat was evidently not reassured about supplies of wheat on his tour of inspection in the Interior, for after his return a commission was formed to attend to the provisioning of the capital, and a law was rushed through Parliament exempting import duty on cereals. From what foreign country the Turks expect to import grain is not mentioned. There is evidently not an abundance of wheat in Asia Minor.

The explosion at Hasskeui, referred to last week, was much more serious than the notice in the papers indicated, and there was considerable alarm until it became known what had happened. The origin was apparently accidental, but enormous damage was done, and the number of killed and wounded is estimated to be between two and three thousand. Many windows of houses in Pera and plate-glass windows of shops were broken by the concussion, and the number of buildings wrecked in Hasskeui is said to be considerable. The loss of life was caused principally by the collapse of houses in the poor Jewish quarter.

Life in the Capital.

Wounded continue to arrive in the capital, and the hospitals seem as full as ever. Coal continues to be imported, and stocks seem to be sufficient for present requirements on a limited scale. There is still no gas in the town, and all the side streets are in total darkness at night.

After the cold snap at the end of November the weather was very fine and springlike in December, and fires were not necessary, much to the relief of those who find the price of fuel beyond their means.

Thanks, it is said, to the Papal Representative, the enemy subjects, who are obliged to be in their homes before nine o'clock, were all allowed to be out on Christmas Eve.

The Turks propose adopting the Gregorian Calendar for general use, and a law is being prepared to be laid before Parliament. The Calendar of the Hegira will be retained for religious purposes.

The Ottoman Post Office is using a variety of old stamps with the imprint of a star and crescent and the year 1331.

DOOM OF THE KAISER.

Foretold in Monk Johannes' startling 300-year-old Prophecy.

8-page Pamphlets sent post free; 6 copies 1s. 1d., 12 copies 2s. For distribution purposes—50 copies 5s. 3d., 100 copies 8s. 6d.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, January 8.

Salonika Continues Calm.

In spite of further visits from the German "Taubes," Salonika still continues calm. The hostile aircraft are kept at a respectful distance by the guns of the Allies, and their bombs, all of which have fallen outside the town proper, have caused little or no damage. These unwelcome visitors turned up again on the Greek Christmas Day (January 7), and also on the following morning. The Salonicians seem rather to enjoy the spectacle than otherwise, and turn out in great numbers to watch the shells of the Allies bursting all around the aeroplanes. They pass humorous remarks in about ten different languages, and freely applaud a particularly good shot. If there is any feeling of uneasiness, it is only on the part of the army of spies and others in our midst who have been working against the Allies, and among whom many arrests have already been made. These are not all enemy subjects. There is a good sprinkling of Greeks among them, who are prepared to undertake any dirty work against any persons, be they friends or foes, so long as they are paid for it. From documents seized at the enemy Consulates and the private residences of the Consuls the military authorities have been able to discover the names of many persons in league with the *Boches*, and these are being promptly arrested. But, as I have said, the remainder of the population continue wonderfully calm, for they have every confidence in the strength of the Allied forces and their ability to protect the town.

Contents of Seized Documents.

The examination of the archives and other documents seized at the Consulates has not yet been completed. As these are very numerous, it will take a long time to make a thorough examination. It is unlikely that their contents will be fully disclosed for the present, but some idea of their interesting nature may be obtained from the samples which have already been made known. These include numerous reports by the German Consul to his Government on the numbers and movements of the Allied troops, lists of spies and others in German pay, and some very private correspondence of Mme. Anna Walter, this Consul's wife, which throws a lurid light on the pretended friendly relations with Greece. I should like to give several "elegant extracts" from these documents, but considerations of space oblige me to confine myself to one of these titbits. *Ab uno disce omnes.*

Mme. Walter, while professing the deepest friendship for her Greek neighbours, whom to all appearance she delighted to entertain at her residence, confided her real sentiments in a series of letters to her intimate friend, Herr Pfister, a compatriot of her own. To him she freely opened her heart on political questions without the shadow of a suspicion that her letters would ever be made known to her dear Greek friends and to the world at large by the unfeeling enemies of her Vaterland. One of these very private and confidential epistles to Pfister is dated Salonika, December 10, and is well worth giving *in toto;* but, like many other women with a full heart and a pen in her hand, Anna Walter writes at inordinate length. I cannot, however, refrain from translating the following interesting extract: —

We are living in the greatest anxiety from day to day, very much surprised that we are still here. All the races of the earth are gathered together in this city creating an extraordinary amount of movement and noise. Salonika has become unrecognisable. A journey by tramway side by side with English, French, and Serbian soldiers in a crowded car forms one of our daily pleasures. One has to fight for a place, as we had to fight a few weeks ago to get bread. . . . Our people are now at Monastir, and they will no doubt soon enter Ghevgeli. . . . And what will then happen here? The Entente has no idea yet of packing up their belongings. Alas! here we are near Christmas, but who thinks of that? There will be no Christmas tree this year, but what does it matter? Perhaps as some compensation we shall have German soldiers in Salonika. But we have not the least idea what our people propose to do. And I ask you, if the Greeks will not move their little finger to chase away the Entente, ought our brave soldiers to get themselves killed for these Greek *canailles?* . . .

If we could only kick out the Greeks at the same time as the troops of the Entente, then our sacrifices would not be in vain. . . . Owing to a thick fog we can see little or nothing of the sea or the huge ships in the harbour—a bad time for a bombardment.

It may be said that the declarations of a consul's wife are not official, and therefore do not deserve serious notice; but the fact that she reflects her husband's ideas is clearly shown by the official reports which he regularly transmitted to his Government. He is constantly urging that Salonika be attacked without delay and occupied by Germany and Austria—adding the following significant remark: "Salonika would form a naval base of the greatest value to Germany and Austria-Hungary."

Austrian Consulate as an Arsenal.

An immense quantity of arms and ammunition, as well as other warlike material, has been found in the cellars of the Austrian Consulate. This includes Mauser and Mannlicher rifles, revolvers, and a large number of armlets or badges to be worn by the hired ruffians when the proposed disturbances should break out. It is significant that a large portion of the arm-bands bear the Turkish Crescent. Since the above material was discovered a search at the Consul's house has brought to light bombs and dynamite, with fuses, detonators, electric batteries, and similar peaceful furnishings of a quiet consular residence. In short, the Austrian Consulate was a veritable arsenal, and even the Greeks, on realizing the reign of terror which their *Boches* friends had in store for them, are very thankful to find the villainous plot nipped in the bud.

Women as Spies.

Among the persons arrested by the Allies as spies are a number of women. One of these, the gay *amie* of one of the consular officials already arrested, had the courage to make inquiries about her beloved at the British Headquarters. The Huns, of course, hesitate at nothing, however dishonourable, to obtain information about the doings and intentions of the Allies, and in this work they frequently employ women of easy virtue. Very many of these undesirables have recently been imported into Salonika. Their duty is to make the acquaintance of British and French officers at cafés and elsewhere, and in the course of a developed intimacy to get out of these officers all the information they can which may be useful to their employers.

The Population of Salonika.

Salonika is in Greece, but there are very few Greeks in Salonika—I do not reckon the present military element. About a year ago the proportion of Greeks was less than 20 per cent. The great bulk of the people are Jews, and these form about 56 per cent. of the inhabitants. No wonder Salonika is regarded as a city of Jews; most of the business is in their hands, and when the visitor remarks to a Greek what a rich harvest the presence of the troops has brought, the latter shrugs his shoulders and says: "It is not the Greeks who are making so much money at present, it is the Jews." On coming here from Athens I was surprised to hear so little Greek spoken in the streets and shops. The language of the place is really Spanish, which everyone seems to know. Turkish holds second place, and when I found my Greek inadequate to express my requirements in making purchases I fell back on Turkish, and usually found that it was at once understood. French, of course, is also understood in all the principal shops and cafés.

Since the arrival of the British troops Salonika has brushed up its knowledge of English, and our language is fast gaining popularity. Even the bootblacks in the streets can now say "Shine boots, sir," and the itinerant vendors of oranges, chocolate, and articles of all sorts have acquired quite a large vocabulary of such words as "good," "cheap," "one penny," and other commercial terms. At the cinematograph theatres also they cater for the English by an attempt to translate part of the programme into English, with results which are certainly remarkable. For example, a film described in the French section of the programme as "*Pas de roses sans épines*" (No roses without thorns) is translated as "Not roses without pins!" and what the French text indicates to be a screaming farce is described as "A gentle, joyful comedy!"

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, January 15.

The Salonika Revelations.

The revelations contained in the documents seized at the German and Austrian Consulates at Salonika have caused a lively sensation in Athens. The publication of particulars of the amounts paid regularly by the German Consulate to certain journalists has greatly disconcerted the pro-German Press at Athens, which was continually protesting against the "calumnies" of the Venizelist journals that accused them of corrupt practices. Especially strong has been the impression created by certain passages in official reports of the consulates referred to, which show quite clearly that the Germans and Austrians have always cherished the hope of gaining possession of Salonika in order to convert it into a naval base. This discovery has knocked the bottom out of the official assurances given to Greece by Austria to the effect that she had no designs upon Salonika. The arms discovered in the Austrian Consulate and the arrangements made at the Bulgarian Consulate for organizing and arming bands of *Komitajis* were undoubtedly in preparation for a rising as soon as the expected invasion took place. Thus the British have had a full revenge for the Germans' capture of Colonel Napier's dispatch case, which contained nothing official.

The Occupation of Corfu.

The occupation of Corfu is said by the Allies to be due to the necessity of transporting thither part of the Serbian Army now in Albania; but in official circles it is generally held that the Entente Powers have availed themselves of an excellent opportunity to make a thorough investigation of the Achilleion and other parts of the island in the hope of discovering enemy submarine bases. This point of view, involving the belief that the Allies place no confidence in the present Government and its control of the authorities under its orders, has produced a state of nerves in official circles, which have been especially upset by that passage in the *communiqué* of the Entente Legations which states that their Governments are sure that Greece will not raise objections to the transfer to Corfu of Serbians who are *her allies*. Thus the Ministerial *Nea Himéra* writes that "the Allies wished by this allusion to throw fresh blame upon Greece for not having fulfilled her engagements, by insisting again upon the validity of this treaty, in spite of the explanations given by the Government."

The Government and the Entente.

The same Ministerial organ, having now desisted—temporarily, no doubt—from attacking Great Britain, has turned its attention towards France, and notably to the French Minister, M. Guillemin, whom it accuses in very unparliamentary language of showing mistrust of the Government. On the other hand, one of the representatives of the four Powers openly complained the other day of the attitude of M. Skouloudis towards them.

The Demir-Hissar Bridge.

The destruction by the Allies of the Demir-Hissar bridge across the Struma has further exasperated official and military circles, since it has made it very difficult to victual and supply the Greek forces now in the east of Macedonia. General Moscopoulos made representations in this sense to General Sarrail, and pointed out that the Allied forces had nothing to fear from the enemy in this direction, since the Greek troops were there. The French commander replied by reminding General Moscopoulos of the declaration made before to him (General Sarrail), that as soon as their enemies should invade Greek territory the Hellenic Army would be withdrawn in order to take no part in the conflict.

A Royal Interview.

In the course of an audience which he granted to the correspondent of the *Lokal Anzeiger* the King declared that by remaining neutral until the end of the war Greece would keep her army intact, and that when peace was concluded it would constitute an important factor for the solution of Balkanic questions in favour of Greece. These declarations have been strongly commented on by the Venizelist *Nea Hellas*, which asks against whom this factor will then be used, and in whose favour. "This army will not be able to be used," observes the *Nea Hellas*, "against anybody at all without the consent of England, who holds the mastery of the sea. Still less will it be able to be used against Bulgaria, if the latter should later co-operate with England—which is not at all improbable, since we do not wish to be the allies of the Entente!"

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, January 7.

Socialists and the War.

The Socialist Party has laid on the table of the Chamber an interpellation which asks:—1. What were the conditions on which the war was commenced? 2. Is there an agreement with the Central Powers and Turkey, and, if so, what is its character? 3. What are the chances of making peace after the occupation of Macedonia? The same party announces its intention of abstaining from voting the extraordinary credit of 500 million levas, and the leader of the party, M. Blagoff, has declared his intention of voting against the credit.

The Sobranje.

The Sobranje has despatched a great number of telegrams to all points, among others, to the Commander-in-Chief of the Bulgarian army, to Generals Boyadjieff and Todoroff (commanding the armies on the frontier), to the Presidents of the Reichstag, the Austrian Parliament, the Hungarian Parliament, and to the President of the Chamber of Magnates and the President of the Ottoman Chamber. All these telegrams were "edited" in Berlin, then sent to Sofia with orders for their despatch. "Kultur" is working in Bulgaria!

The places vacant in the Sobranje have been filled as follows:—The place of M. Alexandre Stambulovski, Deputy for Shumla and leader of the Agrarian Party, who lost his seat on account of his condemnation to twenty years' hard labour, will be occupied, according to the electoral law, by M. Martcho Athanassoff, who obtained the most votes among the candidates rejected at the elections; the place of Mehmed Pasha, the assassinated Mohammedan deputy, by M. Altimiroff, who gives up his seat for Widin to M. Vasile Karapandjoff. In the place of M. R. V. Radeff, elected Mayor of Sofia, M. Staman Mircoff, of Widin, has been appointed. The place of Kristo Tchernopeceff, the Macedonian chief killed in the combats at Tcherna, will be occupied by M. Alex. Stancheff, who renounces his seat for Tirnovo in favour of M. Athanas Slavcheff.

Bulgaro-German Relations.

A reliable journal here publishes the following:—

We hear from a very good source that a sharp conflict is on the point of breaking out between Bulgaria and Germany. The motive is Salonika. On December 21 the Council of Ministers sat all night. The President of the Council, M. Radoslavoff, was absent under pretext of illness. But the indisposition was "diplomatic," as he wished to avoid meeting Mackensen. The Secretary-General for Foreign Affairs, M. Ratcho Kossef, visited M. Radoslavoff twice during the night, and the Chief of the Secret Cabinet of the King, M. Dobrovitch, visited the Prime Minister also; but no one could persuade him to take part in the Council. It is also declared that M. Radoslavoff is on the point of resigning.

"Do Vizndanie Faf Saloun"!

What do these words signify? Is it Chinese or some dialect of Hindustan? No, simply Bulgarian, the language of the last addition to our enemies. The phrase is now the regular greeting among the Bulgarians—at least among those favourable to the Central Powers. It originated on the taking of Monastir, when the officers commenced using it one to another on parting in the streets. "Do vizndanié faf Saloun!" "Au revoir at Salonika!" The dream is still a somewhat nebulous one, and we venture to think will never be fulfilled, unless perhaps the misled Bulgarian officers meet there as prisoners of the Allies.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, January 3.

Spies' Activities.

The authorities are said to have discovered in Moldavia a widespread organization, the object of which is espionage. The greatest secrecy is maintained by the police on the subject. The headquarters of the organization are reported to be at Yassy, with branches in different North Moldavian towns and frontier points. Its connections have been traced over the Austrian frontier, and a number of arrests have been made, valuable documents of a compromising character being confiscated. The vague details that have leaked out regarding this matter have given rise to widespread indignation against Austrian and Hungarian subjects, who perfidiously take advantage of the hospitality accorded them. The public is at the same time seized with a vague anxiety, for the increasing number of affairs of this kind that leak out give rise to the assumption that the number with which the police alone are familiar must be far greater, and the question becomes positively alarming when one thinks of all the cases of espionage that must escape the vigilance of the police. And these are the dangerous ones.

German Propaganda.

The *Nationalul* raises a warning voice against the German newspaper propaganda which is being made in the New Dobruja, as the territory acquired in 1913 is named. The greater part of its population consists of Turks and Bulgarians, so one cannot view the matter with entire indifference, and preventive measures are called for. In the rest of the country German newspaper propaganda no longer gives rise to a shadow of anxiety, for the extent of its influence has long since been gauged.

A complete list of the spies who have chosen Bucharest as the field of their activity is reported to have been compiled. The list is said to be enormously long, and to be composed, as one would expect, almost exclusively of German and Hungarian names, some of which are familiar to every inhabitant of the capital.

Two Aviation Incidents.

Roumanian aviators have another accident to deplore. Lieutenant Craiu was piloting a Taube at a height of 200 ft. when his machine suddenly fell. The lieutenant received severe injuries, from which it is hoped that he will recover. His mechanic was killed on the spot. The accident is ascribed to the difficulty of manipulating the heavy German machine. It took place before the eyes of Prince Carol, who was much affected, the lieutenant being a personal friend of his.

A peasant belonging to the district of Dorohoi has recently been awarded the medal for "valour and faith" for an exploit which is unusual, consisting as it does in the capture of a German aeroplane. The pilot having been obliged to descend on Roumanian territory, he and his passenger, an officer, set about the repair of the machine in all haste. The motor having started, they were about to take flight when the peasant Moraru, running up with several villagers, seized the pilot by the leg. This led to the capture of the machine and of its two occupants, who, though armed, hesitated to fire on the peasants.

Army Promotions.

To the numerous advancements that have taken place in the Roumanian Army during the last two years there have been added 300 promotions to the rank of sub-lieutenant of reserve. This brings the total number of officers up to 16,000, which allows of 800,000 men being enrolled in case of war.

The State of Bulgaria.

A correspondent of the *Nationalul* gives interesting details regarding a recent journey in Bulgaria. On landing at Rustchuk the traveller is struck by the empty appearance of the streets and the number of shops that are closed. Public buildings and private residences are filled with the wounded and sick. In the cafés and other public places are notices warning the public against persons practising espionage. The Bulgarian papers bear in large type the words "Beware of Spies." According to the author of the article, one is impressed with the obvious terror of a Russian invasion. Feverish activity is being displayed in the construction of fortifications facing the Roumanian frontier, and the hill dominating Giurgevo is scattered with observation posts provided with searchlights, which in the night explore the Danube and the Roumanian bank unceasingly. A quantity of heavy artillery has been brought to Rustchuk in anticipation of a Russian attack. The garrison is composed entirely of Germans. Even the Administration is subordinated to the authority of the German commander, who disposes of it as he wills. These measures have given rise to open dissatisfaction, more especially as the Germans are said to treat the Bulgarian population with scant consideration.

Hungarian Pin-Pricks.

Roumanians, especially of the gentler sex, will hardly feel inclined to cross the Hungarian frontier unless forced by circumstances when they hear of the vexations to which some of their compatriots have been subjected. Whereas the Hungarians are allowed to enter Roumanian territory without annoyance or difficulty of any kind, and to pursue their occupations, often illegal, without hindrance, the Roumanians who leave their own country have to submit to a rigorous examination which is not limited to the inspection of luggage and clothing, but has been, in cases which have come to my knowledge, of a particularly intimate and humiliating character.

M. Shebeko's Departure.

M. Shebeko left Roumania for Petrograd on December 29 by way of Yassy. Great political importance is ascribed to his visit to the Roumanian capital, which seems to have caused no little alarm in Austro-German circles. An apparently unfounded report had been circulated to the effect that M. Shebeko had been charged with the mission of negotiating the passage of the Russian army through the Dobruja.

The English Mails.

On December 31 the English and French post arrived once more in Bucharest via Ungheni. For over a month the public had been deprived of French and English papers.

SHAKESPEAREAN STORY IN SERBIAN FOLKLORE.

At King's College on the 21st inst., at a meeting of the Shakespeare Association, Professor Pavle Popovitch, of the Belgrade University, gave a lecture on "Shakespearean Story in Serbian Folklore." In the first place, he gave an account of Shakespeare's work in Serbia, and stated that Serbian literature possesses translations of twenty-two of Shakespeare's works and many studies on "Hamlet," "Romeo and Juliet," the Shakespeare-Bacon controversy, etc. He then proceeded to his main subject—the points of contact between Shakespeare and Serbian folklore, with special reference to "The Merchant of Venice," "Cymbeline," and "Macbeth." No less than five Serbian folk-tales contain all the principal features in the story of Shylock. One of them, which is a delightful one, recalls in a striking manner not only the bargain between Antonio and Shylock, Portia's disguise, and the celebrated judgment, but also the minor details, as, for instance, the manner in which Portia teases her husband Bassanio. The same resemblance is met with in the Cymbeline subject. It is highly interesting to remark that Serbian Tachimo proceeds in the same way as the Shakespearean hero in exposing the proofs of the supposed seduction, and mentions as the last proof that the wife in question has a mole on her leg. As far as the story of "Macbeth," two main elements of it are to be found in Serbian tales, especially that of the moving forest, of which the Serbian tale on King Solomon is a charming example. How did these Shakespeare plots come to be subjects of Serbian folktales? Professor Popovitch indicated some possible solutions of this difficult problem, and suggested that these Serbian tales proceeded probably from "Pocorone," "Gesta Romanorum," "Syntippas," "Decamerone," "Legends of Solomon," and other Byzantine or Italian popular mediæval works.

THE WAR IN THE BALKANS.

The Montenegrin situation remains obscure, and, as hitherto, we have to rely for our information almost exclusively on Austrian reports.

Montenegro's Capitulation.

It will be remembered that last week, when the most absurd rumours of Montenegro's unconditional surrender to General Koevess were rife, we declined to place any faith in the report. The few facts which have since leaked out go to strengthen our opinion, though at the same time it must be admitted that peace negotiations did take place between the Austrian authorities and certain Montenegrin authorities for the conclusion of peace. For reasons as yet unknown—probably they are to be found in excessive enemy demands—these pourparlers were still-born. King Nicholas, and the ladies of his family, left his unfortunate kingdom, and has since proceeded to France (it is strange that he should not have remained in Italy as the guest of King Victor Emmanuel), while the command of the remnants of the Montenegrin army was taken over by Prince Mirko.

The Retreat.

Owing to the tremendous superiority of the enemy in men and munitions, and owing, moreover, to the fact that he was able to bear down on the small Montenegrin army from the west, north, and east, the latter was obliged to retreat in a southerly direction into Albania. This was, it will be remembered, foreseen by us weeks ago, but whether the commanders will be able to save as many men as would have been the case if the retreat had taken place at an earlier date remains to be seen. According to all accounts, a great many Montenegrins have remained behind in their country to conduct a guerilla warfare against the Austrians, and their numbers will, naturally, greatly impoverish the effective value of the retreating army. The latter, accompanied by the remnants of the Serbian contingent which was fighting in Montenegro, have now retreated beyond Scutari (reported by the Austrians to have been captured), and are moving in the direction of Alessio and Durazzo. From a military point of view, therefore, the kingdom of Montenegro, like that of Serbia, is non-existent, and the enemy line in the Balkans has been lengthened until it comprises the whole peninsula, with the exception of Albania and Greece.

Albania.

We have so frequently insisted on the great strategic value of Albania that it is utterly useless to do so again, the more so if, as seems almost certain, the country is already doomed. Should this be so, then the Entente Powers have only themselves to blame for having waited too long before realizing that the present aim of the German General Staff is to straighten its line in the Balkans until it is contiguous with the northern frontier of Greece, from the Adriatic to Salonika—and beyond. By achieving this end the enemy succeeds in (1) threatening Greece with a gigantic land attack from the north, and (2) in turning our position in Salonika. The only way in which to prevent the enemy from succeeding in this attempt is for the Allies to acquire, and hold, in Albania an important and invulnerable enclave corresponding to that held by us now in Salonika. The one would thus complement the other, and together they would form the extreme western and extreme eastern bastion of the northern Greek frontier.

It stands to reason that those responsible for our military acts in the Balkans are not going to reveal our plans or the measures taken to counteract the enemy's plans, and we, therefore, hope—it is our last hope—that silently and unobtrusively the Italians have, since their landing in Albania, taken up an impregnable position and fortified themselves so that no enemy can oust them. Essad Pasha's Albanians and the remnants of the Serbian Army—to be strengthened by the retreating Montenegrin army—will, we feel sure, stand by the Italians, and together they will, if well supplied with munitions, etc., make the Albanian enclave as invulnerable as that at Salonika. Should, however, the Italians have failed to take these most important measures, the fate of Albania is sealed. The fact, moreover, that the enemy is at the present time devoting its attention in the Balkans exclusively to Albania—which it is threatening from the north and east with all available troops—shows that the German General Staff is unwilling to attack our Salonika position until Albania to the Adriatic and Epirus has fallen into their power. From the foregoing it will be seen that, in our opinion, Albania will continue to be the chief point of military interest in the Balkans. How long she will occupy this rôle will depend almost exclusively on the preparations made (or not made) by the Italians during the past six weeks.

The Actual Situation.

At the time of writing, messages from Rome state that the Austrians have occupied San Giovanni di Medua; an enemy column is advancing from the east and north on Alessio; a Bulgarian attack is proceeding from Ochrida in the direction of Elbasan, but is still being held up by Essad Pasha's Albanian troops. The enemy has, moreover, been reported at Berat, the "White Capital" of Southern Albania, in his attempt to push from Macedonia to Avlona, where the Italians are known to have landed troops. The situation, therefore, is intensely dramatic, our hold on Albania being limited to the littoral from Alessio to Santi Quaranta, and inland to Elbasan in Central, and to the region west of Berat in Southern Albania.

ARAB WEATHER WISDOM.

The *Egyptian Gazette* recently published some interesting comments on a pamphlet, "Some Arabic Weather Sayings," written by Mohammed Bey Kasim, F.R.Met.Soc. "These," says the *Gazette*, "make a remarkably interesting collection. The author explains that, as in every country, there is in Egypt a great variety of these sayings, which have grown up through centuries, and it is interesting to note how some of them accord with scientifically observed facts, and without investigating the question of their reliability, it is hoped that the collection and publication of them will be of interest to those engaged in meteorological research, and also to those interested in folk lore. Some well-known weather sayings are given, and some that are seldom heard. Here are a few examples:

"'If the door of your house faces north, enlarge it; if it faces east, leave it alone; if it faces west, block it up; if it faces south, pull it down.' And in the same connection: 'The north is a Sultan, the east his Vizir; the south is a devil, the west his compeer.' Upon which the author rightly remarks that the unpleasantest weather conditions in Egypt are brought on the south winds that are so popular in England and the north. In Egypt, owing to the fact that the prevailing wind is from the north, a northerly aspect is much to be desired. There is no doubt, too, that an easterly aspect has advantage over a westerly one. In the former case the house receives the morning sun, whereas in the latter case it gets the hottest of its rays."

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given.

Mrs. Marling, when making her appeal, wrote as follows:—

"There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—

"'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; we have not had so much as a box of matches from England."

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,
25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

PERSONAL & SOCIAL

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Jan.	1916. Jan.		1334. Rebi I.	5676. Shebat.
28	15	Friday	22	23
29	16	Saturday.....	23	24
30	17	Sunday	24	25
31	18	Monday	25	26
Feb. 1	19	Tuesday	26	27
2	20	Wednesday	27	28
3	21	Thursday	28	29

We much regret that in these columns last week it was stated that January 21 was the birthday of the Shah of Persia. His Imperial Majesty's birthday actually falls in July.

Sunday is the birthday of Princess Helen of Greece, wife of Prince Nicholas, who was born in 1882.

Monday is the birthday of Boris, Crown Prince of Bulgaria, who was born at Sofia in 1894.

Monday is also the birthday of Prince Boris's sister, Princess Nadejda, the younger daughter of King Ferdinand, who was born in 1899.

Wednesday is the birthday of H.R.H. Prince Andrew of Greece, who was born in Athens in 1882, and who is married to Princess Alice of Battenberg.

Our Bucharest Correspondent writes (January 3):—Queen Elisabeth of Roumania, the venerated widow of the late King Charles, celebrated her seventy-second birthday last week. Her Majesty is at present interesting herself in a scheme for the erection at Curtea de Argesh of a convalescent hospital for officers. At the Queen's instigation a large sum of money has already been raised by subscription, to which she contributed in generous measure. Her Majesty has devoted her entire civil list for this year, which amounts to £12,000, to the realisation of this project. A similar sum was dedicated last year for the purpose of bringing drinking-water to Curtea de Argesh, and it is well known that her Majesty, whose kindness and generosity are unlimited, proposes devoting her civil list each year to some charitable undertaking. I hear with pleasure that Queen Elisabeth's eyesight, which has been failing for some years in consequence of cataract, has, as a result of recent operations, been completely restored, which allows of her following with renewed ardour her well-known literary and artistic pursuits.

Under date of the 24th inst., Reuter's Lyons correspondent reports:—The King of Montenegro, Princes Danilo and Peter, and Princess Lilitza, with their suite, arrived here at five o'clock this afternoon. As soon as the train entered the station the Prefect of the Department, accompanied by General d'Amade, M. Merriot, Mayor of Lyons, the Military Governor of Lyons, the Consul-General for Italy, and the Montenegrin Chargé d'Affaires, entered the Royal coach and greeted his Majesty in the name of the Republic and welcomed him on behalf of the Government. The King, accompanied by the Prefect and the Mayor, proceeded to his hotel amid the acclamations of a large crowd. His Majesty, who was dressed in the Montenegrin national costume, appeared on the balcony twice to salute the crowd. About seven o'clock M. Denis Cochin, Minister without portfolio, visited the hotel to greet the King in the name of the Government. He conversed with him for about twenty minutes.

We understand that the Duke of Sutherland has left England for Egypt.

The Roumanian Minister returned to London on Monday from Paris.

M. Boeresco, Secretary to the Roumanian Legation, who was acting as Chargé d'Affaires during the absence of H.E. the Minister, has recovered from his recent illness.

Rear-Admiral Mark Kerr was received by Queen Alexandra at Marlborough House on Thursday of last week.

Dr. E. J. Dillon has returned to London from Rome.

The King of Serbia has bestowed upon Lieutenant Hilton Young, R.N.V.R., who is Member of Parliament for Norwich, the special Medal for Valour, in recognition of his services with the British Naval Mission at the Battle of Semendria.

Mr. Roland L. Michell, C.M.G., who recently underwent an operation in a nursing home in London, is, we are glad to learn, making very satisfactory progress towards complete recovery.

Mr. Chas. E. Hamson, formerly H.M. Vice-Consul at Constantinople, who was acting at Dunkirk, France, has returned to London and is working again at the Foreign Office.

Captain Nicolas Arion, Roumanian Delegate, arrived in London last Friday from Paris.

Mr. and Mrs. Frank Streater have left Athens.

Mr. W. S. Edmonds has left Athens.

A Vienna telegram announces that M. Carp, the Roumanian ex-Premier, has arrived in that city.

Our Special Correspondent at Athens, in forwarding us news of Constantinople, writes, under date of January 5:—

It is reported that Mr. James La Fontaine had been liberated and was expected back in Constantinople, but since the arrests of the Consuls at Salonika the authorities may become aggressive again, and the newspapers have been advocating reprisals on the enemy subjects in Turkey. Before this event, however, Mr. Reginald Scudamore, the Registrar of the British Consular Court, who was the only member of the British Government staff remaining in Constantinople, was arrested, after having had his house at Candilli searched. He was being detained in the Stamboul prison for political offenders of the first class, but efforts were being made to obtain either his release or his expulsion. So far no further news of him has come through. Mr. Ferguson, of the Imperial Ottoman Bank, was being transferred from Chorum to Marsowan or Konia. None of the batch of Englishmen who were interned at Karahissar have returned with the exception of the two mentioned a few weeks ago.

Sir Edward Boyle, British Commissioner in Serbia and hon. treasurer of the Serbian Relief Fund, has arrived in Corsica.

Under date of January 23, the Rome correspondent of the *Morning Post* reports: Sir Edward Boyle informs me that all the Serbian refugees have left for San Giovanni di Medua. Seventy Serbian Deputies have arrived here, and will remain about a week.

The thirty-first anniversary of the death of General Gordon was commemorated on Wednesday, and, in accordance with the practice of former years, wreaths were placed upon the statue in Trafalgar Square.

At a meeting of the Photographic Society, held at 35, Russell Square, last Tuesday, Dr. C. A. Swan showed some lantern slides prepared from photographs taken on the occasion of a voyage around the Mediterranean and in the Near East. Among others were views of the Acropolis and Parthenon, of the Bosphorus, Gallipoli, the Golden Horn, of Constantinople in various aspects, and of interesting scenes in the town, including some of the principal streets, the mosque of Santa Sofia, and the famous "pigeon mosque," where at one time the photographer who took his camera did so at some risk to his life.

Last Friday afternoon, at the Æolian Hall, Miss Pattie Mayor gave a dance recital in aid of the Lord Mayor's Fund for Armenian refugees. The entertainment was under the patronage of Viscountess Bryce.

An Anglo-French fête in aid of the Red Cross Hospital at Salonika was held at the Gaumont Palace, Paris, on the 20th inst. Six thousand people were present, and Lord Bertie, the British Ambassador, was given a splendid reception on his arrival.

An entertainment in celebration of the Armenian Christmas was given last Sunday afternoon at the Elysee Rooms, Queen's Road, Bayswater. Songs, vocal and instrumental music, recitations, etc., were given by Miss Ida Sagar and Zareth Tiratzian, tenor of the Petrograd Opera, Mr. Ardash, and others. The chair was taken by Archbishop Utudjian.

The death of M. Theotókis, Greek Minister of National Economy, is reported from Athens. The deceased statesman, who was seventy-nine years of age at the time of his death, was certainly the most prominent statesman whom Greece had produced from the time of the assassination of his only dangerous rival, M. Déliyannis in 1905, until the advent of M. Venizelos in 1910. Born in Corfu, M. Theotókis entered public life as one of the deputies of the island at Athens after the union of the seven islands to Greece. He became Minister of Marine in 1886 and remained in office for the four and a-half years that the Tricoúpis Ministry (to which he was attached) remained in office. He served again on two occasions under M. Tricoúpis, and became Prime Minister three years after the death of that statesman in 1896. Thenceforward, until the year 1909 M. Theotókis held the Premiership on several occasions, and he fell in that year, after four years of office. His last cabinet appointment was in October last, when he accepted office in the Zaimis Cabinet, which was formed on the resignation of M. Venizelos. He was a pronounced pro-German. As a statesman M. Theotókis would probably have gone further had he not lacked energy and strength. His capabilities were undoubted, but his preference for society overruled his political instincts, and his lack of strength just prevented him from reaching the highest rung of the ladder. His knowledge of Near Eastern politics was exceptional and his foreign policy was always marked by perspicacity and reserve.

The death is announced from France of Brigadier-General Hugh G. Fitton, C.B., D.S.O., who was for five years (1894-1899) employed with the Egyptian Army. He had seen much fighting in Egypt and the Sudan. He took part in the Sudan Expedition from Suakim (1885), receiving the medal with clasp and the bronze star; and in the Sudan in 1885-6 he saw more fighting at Giniss and in the attack on the Ambigole Wells. In the Dongola Expedition (1896) he was wounded, and in that campaign he won his D.S.O., and was mentioned in despatches, securing also the Egyptian medal with two clasps. He took part in both the Nile Expeditions. For that in 1897, when he received the Fourth-class Medjidieh and clasp, and was mentioned in despatches, he was Staff Officer to the G.O.C. of the flying columns that occupied Berber and reached the Atbara River. In 1898 he fought in the battles of the Atbara and at Kerreri, and received two clasps to the Egyptian medal and also the Nile medal. He also served on the Staff throughout the South African War. He was appointed A.D.C. to King Edward in 1907, and to King George in 1910. In 1914 he was given command of a brigade, and at the time of his death he was on service in France.

Major Herbert Augustine Carter, V.C., 101st Grenadiers, who is reported killed in East Africa on January 13, won his V.C. in the Somaliland Campaign in 1904, for conspicuous bravery in saving the life of one of his men. He also served in the Tirah campaign (1897-98).

Digitized by Google

The death of Lieutenant-Colonel Nicholas Leader, of Craven House, Brentwood, and of Keale, County Cork, occurred on Saturday, at his Essex residence. He entered the R.A.M.C. in 1878, and saw much active service. He was with the Egyptian expedition in 1882, the Sudan expedition in 1885, took part in the operations in Chitral in 1895, and was with the Nile expedition in 1898. He retired from the Service in the latter year, but rejoined upon the outbreak of the present war. His health, however, failed, and he was unable to go on active service.

Major Frank Douglas Browne, 56th Punjabi Rifles, who has died in Mesopotamia from wounds received on January 13-14, saw service in Somaliland in 1903-4, being present at the action at Jidballi. He also took part in the Waziristan Expedition, 1894-5; and he held the medals for both campaigns.

A supplement to the *London Gazette* announces that the King has been graciously pleased to approve of the grant of the Victoria Cross to Lieutenant-Commander Edgar Christopher Cookson, D.S.O., R.N., in recognition of the following act of most conspicuous gallantry during the advance on Kut-el-Amarah: "On September 28, 1915, the river gunboat Comet had been ordered with other gunboats to examine and, if possible, destroy an obstruction placed across the river by the Turks. When the gunboats were approaching the obstruction a very heavy rifle and machine-gun fire was opened on them from both banks. An attempt to sink the centre dhow of the obstruction by gunfire having failed, Lieutenant-Commander Cookson ordered the Comet to be placed alongside, and himself jumped on to the dhow with an axe and tried to cut the wire hawsers connecting it with the two other craft forming the obstruction. He was immediately shot in several places and died within a very few minutes.

The King has been graciously pleased to give orders for the award of the Distinguished Service Cross to the undermentioned officers in recognition of their services during the advance on Kut-el-Amarah on September 27 and 28, 1915:—

Flight-Lieutenant Vivian Gaskell Blackburn, R.N., who did excellent air reconnaissance work, and came under heavy fire on the afternoon of September 28 whilst carrying dispatches between the General Officer Commanding and the Comet.

Surgeon Dermot Loughlin, M.B., R.N., who attended the wounded on board the Comet under a heavy fire at close quarters on the night of September 28.

Engineer Thomas Kerr, R.I.M., who not only kept the Lascar engine-room complement of the Comet in excellent order during action, but assisted in carrying down the wounded under fire.

Sub Lieutenant Lionel Charles Paul Tudway, R.N., who was in command of the armed launch Sumana, and showed remarkable ability and coolness in manœuvring his vessel under heavy fire on the night of September 28, and on several other occasions under fire.

The following officers are mentioned for their services during the advance on Kut-el-Amarah: Lieutenant Mark Singleton, D.S.O., R.N.; Lieutenant William Vesey Hamilton Harris, D.S.C., R.N.; Sub-Lieutenant James Hardy Brown, R.N.V.R.; and Gunner John Mackay, R.N.

A supplement to the *London Gazette* announces that the following officers are mentioned for their services with the British Naval Mission in Serbia:—

Captain (temporary Major) Bertram Nowell Elliott, D.S.O., R.M.L.I.

Lieutenant-Commander Charles Lester Kerr, D.S.O., R.N.

Temporary Lieutenant George Bullock, R.M.

Temporary Surgeon Edward Rowland Alworth Merewether, R.N.

A correspondent writes:—"The conversazione given by the Islamic Society at the Hotel Cecil last week (January 20), in honour of the birth of Mohammed, the founder of Islam, was a very successful and enjoyable function. Among those present were Prince and Princess Ourasoff, Lord Headley (president of the British Moslem Society), Moulvi Sadr-ud-Din, Sir Muncherji Bhowanagree, Dr. Pollen, the Rt. Hon. Syed Ameer Ali, Sir Ali Imam, Mr. Mirza Abbas Ali Baig, H. E. Barada Bey, Mr. Jaakoff Prelooker, Dr. Arnold, Mr. Humayoon Mirza, and Mr. O'Donnell. Lord Headley and M. Yusuf Ali gave interesting addresses. There were recitations in Arabic, in Persian, and in English, and music both of the East and of the West. The Islamic Society and its able and energetic hon. secretary (Mr. M. H. Kidwai) are to be congratulated on the success of the gathering.

American newspapers report that Mr. Morgan Shuster, former Treasurer-General in Persia, will shortly visit the Orient.

Next Sunday morning, at St. Catherine's Church, Hatcham, Father Nicholas Velmirovitch, D.D., Professor of Pastoral Theology at Belgrade University, will preach on behalf of the Serbian Relief Fund.

In connection with the Department of Archæology, London University, a public lecture will be given on Thursday, February 10, at half-past five o'clock, by the Principal of King's College, Dr. R. M. Burrows, the subject being "The Most Recent Discoveries in Crete," illustrated by lantern slides. Persons desirous of attending this lecture should make application to the Secretary, University College (Gower Street), enclosing a stamped addressed envelope.

The ceremony of the "Blessing of the Waters" took place at Piræus on Wednesday of last week, the festival being attended for the first time on record by King Constantine, the Crown Prince, the Cabinet Ministers, and the officers of the General Staff. The Metropolitan of Athens threw a cross into the sea, and simultaneously a white dove with the Greek colours attached to its neck was let loose.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

LLOYD.—On January 20, at Cairo, the wife of Ernest Herbert Lloyd, M.I.C.E., of a son.

WILSON.—On January 9, at Cairo, Egypt, the wife of L. W. O. Wilson, Egyptian Civil Service, of a daughter.

MARRIAGE.

BAIRD—ELSWORTH.—On the 8th instant, at the British Consulate General, Alexandria, Arbuthnot George Muir Baird, elder son of William Baird and Mrs. Baird, of Kelvinside Gardens, Glasgow, to Dorothy Vera, second daughter of John F. Elsworth and Mrs. Elsworth, of Ramleh, Alexandria.

DEATH.

PASPATI.—On January 19, in Rome, George N. Paspati, of Athens, and 3, Devonshire Road, Liverpool.

APPOINTMENTS, PROMOTIONS, Etc.

Captain R. K. B. Walker, South Wales Borderers, has been attached to the Egyptian Army as a Special Service Officer, with effect from December 3, 1915. This officer is granted the temporary rank of Bimbashi and posted to the 13th Sudanese for duty.

Miralai A. Cameron Bey, Governor, Sennar Province, Miralai R. C. R. Owen Bey, C.M.G., Governor, Mongalla Province, and Miralai J. F. Carrole Bey, M.B., Medical Corps, have been granted the temporary rank of Lewa. This rank carries with it the title of Pasha.

Our Bucharest Correspondent reports (January 3):—

M. Filality, Roumanian Minister at Nish, and M. Luvashco, Secretary of the Legation, who had been obliged to retire to Salonika in consequence of the invasion of Serbian territory, have now moved to Athens, communications with Salonika presenting increasing difficulty.

Madame Alexandre Lahovary, the wife of the Roumanian representative in the French capital, has left for Paris with her family.

M. Jean Lahovary, First Secretary of the Roumanian Legation in Paris, is expected in Bucharest.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

ANGLO-EGYPT'S ROLL OF HONOUR.

In our issue of November 13, 1914, we published a list of Anglo-Egyptians who at that date had joined His Majesty's Forces. Since then their number has increased considerably, and we have decided to establish what may be termed "Anglo-Egypt's Roll of Honour." It is not claimed for the appended list that it is accurate in every detail or that it is complete. Every effort has been made to make it as representative as possible, but in the absence of any official record from which full details could be obtained, and in view of the fact that a great many Anglo-Egyptians either obtained their commissions in England or have been promoted since news of their appointment was last received in Egypt, it is unavoidable that errors and omissions should have crept in. Readers and relatives of Anglo-Egyptians concerned are requested kindly to call our attention to any shortcomings in this respect, and thus to enable us to make our record as comprehensive and as accurate as possible.

THE TROUBLES OF TURKEY.

All accounts of the situation in an enemy country have to be accepted with some reserve owing to the difficulties that confront a foreign observer in distinguishing between the essential and the superficial. These difficulties will be enhanced in such a country as Turkey, where the experiences or feelings of the public will carry no weight with the Government, unless they find expression in a revolutionary movement. At the same time it would be bad policy to ignore the evidence that is forthcoming of the state of affairs in the Turkish capital, for in the circumstances in which Turkey is at war with the Allied Powers the trend of public and of official opinion may sooner or later become an important factor in the conduct of the war against the Turks. Two letters which we publish in this issue from our Special Correspondent at Athens are of considerable interest in this connection: one deals exclusively with the question of Turkey's finances; the other touches upon a variety of features in the general situation. Regarding the financial position of the Turkish Empire, there can be little doubt that it has reached a stage of practical bankruptcy. It required to be in a far healthier state than it was to be able to stand the strain of the war. The example of Germany, as well as the absence of any practical alternative, would encourage the Turkish Government to base its policy on the expectation of having everything set right by the indemnity to be received at the end of the war. Germany will have supplied some ready money, but the details of the note issues tell their own story. Shortage of funds, however, will not prevent the Turks from prosecuting the war with vigour under German instigation, and the acuteness of the financial problem will not be felt in its entirety until after the war. What is more likely to influence the course of the campaign in their cumulative effect is the shortage of supplies, the increase in the cost of living, and the friction between the Turks and Germans. We are far from wishing to lay undue stress on any of these features. That they exist can hardly be doubted; but it may be long before they undermine Turkey's power of resistance or lead to a new order of things in Constantinople. The food requirements of the Turkish people are modest, and they are capable of enduring great privations. But the shortage of such a commodity as coal may be a more serious matter. Already there has had to be a drastic curtailment in the use of coal in Constantinople, but supplies still seem to reach the city, and it is unfortunate that a more effective blockade of the Bosphorus cannot be maintained.

In estimating the possibility of friction between the Turks and Germans we may offset the intolerance and *brusquerie* of German officials against the thoroughness of their methods in making themselves masters in the countries of their unfortunate allies. There is nothing improbable in the report that Germans have been installed as advisers in all the Ministries. As soon as a large number of German officers were appointed to the Turkish army and navy, it would be necessary to insure that the motive power behind the two services should be adequate to the new standard of efficiency. German military and naval officials would thus become the real heads of the Ministries of War and Marine, and from this it would be a natural and easy step to insist upon the leavening of the whole Government. The same process, it may be inferred, has taken place in Bulgaria, and to a considerable extent, though less ostentatiously, in Austria-Hungary. In Turkey, as in Bulgaria, the fiction of an independent Government would be maintained in all outward appearances as far as possible. But the Germans would not be likely to jeopardise the success of their schemes by sentimental considerations. If Enver Pasha and Talaat Bey should fail to pull together, or if their Administration were threatened by popular discontent, the Germans, we may be confident, would have no hesitation in stepping in to save the situation by taking over full control themselves. It is evident that something has happened in Constantinople to call for German intervention and the strengthening of Germany's hold over the Turks. If all were as satisfactory as could be desired, the German Emperor can hardly have failed to extend his journey to Nish by paying a visit to the Sultan. The latter has deserved the honour as much as King Ferdinand. His knowledge of Latin may not be equal to the exigencies of a toast, but the Turks, in taking German chestnuts out of the fire, have been burning their fingers far more disinterestedly than the Bulgarians. King Ferdinand did at least have a national grievance against the world in general, which the German Emperor led him to believe that he was in a position to gratify. The Turkish Government had no quarrel with the Allied Powers, and merely threw in the lot of the Turkish Empire with the Central Powers for the benefit of the latter and for any monetary advantages that a few of its members might derive from close association with German taskmasters and paymasters. It may be that the Emperor William's visit to his trusted Ally on the Bosphorus has had to be postponed until an indispensable preliminary—the drafting of German troops into the Turkish capital—has been completed.

If it be true that a large body of German troops has arrived in Constantinople, we are inclined to think that their presence will tend to mar the rejoicings in which the inhabitants were, not unjustifiably, indulging as a result of the evacuation of the Gallipoli Peninsula by the Anglo-French forces. That German troops will be sent in any great numbers to Mesopotamia or Sinai may be doubted; but whether their dispatch to Constantinople is intended to secure the safety of the Enver régime or to enforce its good behaviour must remain an open question. We must not do the German Emperor the injustice of supposing that he is in any way concerned with what takes place in Turkey so long as the Turks continue to fight Germany's battles with some skill and determination. But next to a Turkish defection during the progress of the war the Emperor William must fear most a display of independence on the part of the Turkish Government, which may affect German schemes for the economic absorption of the Ottoman Empire after the war. Already the absence of any enthusiasm in Turkish governing circles for the inclusion of Turkey in the "economic spheres of interest" of the Central Powers will have been noted in Germany. When to this is added the amazing self-confidence of Enver Pasha, who not only usurps the prerogatives of the Sultan as supreme "War Lord," but claims for the Turks that it is they who have helped the Germans, and shows no disposition to acknowledge Turkish indebtedness to Germany, there may well be misgivings in Berlin lest the situation in Constantinople should get out of hand. Between the upper and nether millstones, represented by the designs of Germany and the Committee of Union and Progress, the unfortunate Turk is in danger of being crushed beyond recognition. The shorter the process can be made for him, the better the material that will be left to build up a sounder, if smaller, Ottoman State, freed from the vortex of European politics. At no time very articulate, the true Turk will be at a still greater disadvantage when the Enver spy system is supplemented by German troops. The Allied Powers, however, will do well not to lose sight of him, but to remain on the lookout for any overtures that he may be able to make, remembering in the meantime that a signal military success over the Turco-German forces is the greatest benefit they have in their power to confer upon him.

ANGLO-EGYPT AND THE WAR.

THE MEN WHO HAVE ANSWERED THE CALL.

(By Our Cairo Correspondent.)

With regard to the list (published on another page) of Anglo-Egyptians who have joined the colours, a few words of explanation are necessary. It will be noticed that it contains, roughly, 300 names, of which about 200 are those of Government officials and the rest those of men employed in commercial establishments. At first glance the list may not appear to be anything to boast of, considering the figures given by the last census of the British civilian population in this country, but in reality Anglo-Egypt has every reason to be proud of its contribution to the war.

It is an admitted fact in Egypt that the list would have been very much larger if all the Britishers had been free to follow their own inclination. Practically every man of military age has moved heaven and earth to get away to the war, but for reasons that will be mentioned permission has been refused to all but those who could be actually spared.

At the outbreak of war new works were suspended and educational reforms were postponed in view of the necessity for economy. As a consequence, it was possible to liberate many Public Works and Education officials for military service. The staff in the other administrations, however, with but few exceptions, could not be accorded the same privilege for the simple reason that the introduction of fresh blood into the Egyptian Civil Service had of late years been greatly neglected, so that at the commencement of hostilities most of the administrations were already very much understaffed.

It must, moreover, always be borne in mind in considering the question of recruiting that Egypt cannot in this matter be compared with the British Isles or with the Colonies. As to the Civil Service, the material available is specially selected; the men engaged in it cannot be replaced, as at home or in the Colonies, by female labour, nor can the staff be much reduced in size, even when it is up to its normal expansion, without fear of loss of efficiency or injury to the working of the machinery, on which the successful prosecution of the war in a great measure depends. What became imperative for skilled labour at home became equally so for the Egyptian Civil Service and for the staff of the English banks and commercial establishments, the operations of which are essential to the welfare of the State, and which in most cases are rendering great services to the Army, the Navy, and the Empire in general.

These men had to be prevented from misdirecting their energies by joining the colours, and from wasting the special qualifications which had prompted their original selection for their posts, and which in the crisis were to prove so valuable to the Anglo-Egyptian Administration. As has so often been asserted in the past, and as this war has plainly demonstrated, Egypt is a vital point in the Imperial organisation. It was absolutely essential that the life of the country and of its inhabitants should be as little changed as possible, and it was considered that the continued presence in their old positions of men who knew the country and the conditions, and who were known to and trusted by the Egyptians, would be of infinitely more value to the Empire than if those self-same men had been allowed to obey their patriotic instincts and take their place alongside their fellow-countrymen on the field of battle.

Whilst it was a blow to many, the Government's decision, after the first few months of the war, that no one else should be allowed to enlist or take a commission unless there were very special reasons, was prompted by high Imperial motives, and it has undoubtedly tended to keep the country quiet and conduced to the general feeling of confidence that has reigned since August, 1914. Even those whose lot it has been to be kept at their posts have not been deprived of their share of war work, which, whilst it may have been less conspicuous, has been just as important as that of their comrades in the field. Military and political exigencies in time of war are multifarious, and a good deal of the routine work necessitated thereby in this country has fallen on civilian shoulders. Thus there is a Press censorship, a postal censorship, a telegraph and telephone censorship; there are various commissions, whose labours have been deemed necessary either to the economic welfare of the country or to economical action on the part of the military authorities, amongst them the Supplies Commission, which since the outbreak of war has watched over the provisioning of the country and to a certain extent has controlled prices; the Arbitration Commission, which settles the prices the Army has to pay for commodities and properties commandeered; the Resources Commission, which is co-ordinating the resources of the country for military purposes, etc. Then there are all the works that are being carried out on the Canal by Government engineers under the supervision of Sir Murdoch Macdonald and Sir George Macaulay, the Under-Secretaries for Public Works and Railways respectively; and in addition there is the question of enemy trading and the supervision of enemy firms. These are but a few of the branches of activity in which Anglo-Egypt has been called upon to lend a hand since the outbreak of war with, be it noted, a reduced staff, for it must not be forgotten that in addition to Englishmen the Egyptian Civil Service and British establishments employ a good many Allied subjects, who have had to rejoin their regiments, and a considerable number of German subjects, who have had to be interned.

Appearances are deceptive, so also are statistics, and I think that when peace is restored an impartial record of work done during the war by the various portions of the Empire will show that, while the number of its representatives in khaki may not bulk largely beside those of other sister Colonies, Anglo-Egypt has made a contribution to the great war second in importance to no other British dependency.

FOR ARMENIAN REFUGEES.

The Lord Mayor's Fund for Relief of Armenian Refugees, which was inaugurated on October 15 last, has already provided £23,050 towards this object. Out of this £2,550 has been sent to the British Consul at Tabriz for the relief of Assyrians, for although the fund was primarily intended for Armenians, it has been devoted from the start to all refugees fleeing from Turkey.

The latest estimate of the number of these refugees is that they exceed 200,000, mostly women and children, with a number of old men. All subscriptions will go directly to the refugees, all expenses of the fund being defrayed privately. Donations can be sent to the hon. secretary at 96, Victoria Street, Westminster, S.W.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.
CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.
ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.
PORT SAID. Charles Evans, and on board vessels in the harbour.
KHARTOUM. Sudan Stationery and Bookstore.
CYPRUS. Cababe and Wilson, Nicosia.
SALONIKA. Librairie Francaise, Rue Sabri Pasha.
ATHENS. Librairie Th. Vafiades.
BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.
CALCUTTA. 1, Royal Exchange Place.

NEAR EAST BOOKSHELF.

ARMAGEDDON.*

Working upon the basis that the Anglo-Saxon race is to be identified with the Lost Tribes of Israel, and our enemies, Germany, Austria, and Turkey, with the hereditary enemies of Israel, "L. D." has produced a volume which contains innumerable quotations from the Bible in support of her theory. It is, however, unfortunately impossible to treat the work seriously owing to the astonishing reasoning, or lack of reason, on the part of the author, who includes the Papacy as the "unclean spirit out of the mouth of the dragon" (Revelation xvi. 13, 14, 16). The assertion is an ingenious one, but even supported by a denunciation of the Papacy, "nearly a hundred years ago," by the Rev. John Brown—whoever he might be—it leaves us entirely unconvinced. For our part we cannot adopt the author's attitude of masterly indifference to the fact that Italy and France, who are warring against the "enemies of Israel," are both Catholic countries. Nor can we forget that, in spite of the official attitude of the Papacy in regard to certain incidents in this war which might reasonably give colour to the idea that Rome was prepared to strain her neutrality to the breaking-point rather than offend Austria, the spirit of Catholicity is making firm and determined progress in our own country. If only for these reasons the author has failed in the case which she has otherwise presented with considerable knowledge and ability. "The strength of a chain is that of its weakest link," and although we do not say that "L. D." is wrong in her assumption that Armageddon is being fought before our eyes, we do say most emphatically that she has failed to forge a convincing chain of evidence to prove it.

Messrs. Longmans and Co. have published recently "Amentet: An Account of the Gods, Amulets, and Scarabs of the Ancient Egyptians," by Alfred E. Knight. The book is illustrated, and its price is 12s. 6d. net.

SERBIA'S PLACE IN THE WAR.

Lecturing last week (20th inst.), at Kensington Town Hall, on "Serbia's Place in the War," Dr. R. W. Seton-Watson said it was quite evident that the destruction of Serbia had knocked the bottom out of the talk of exhaustion by giving the Central Powers what they needed from the Eastern countries. There were some well-meaning people who thought that if Belgium and Northern France were evacuated peace could be brought about, but they ignored the vital importance of the position in Eastern Europe, which had to be settled by this war if the programme of nationality was to be carried out. The Central Powers had a definite constructive policy; they wanted to create a dominion from Berlin to Baghdad; and they openly avowed this to be a war of domination. Had we got a definite policy to counter them? We could not win unless we had a policy of our own. Either we were too lazy, incompetent, stupid, or too late to smash the Berlin-to-Baghdad scheme, in which case we were idiots to have entered the war, or we had got to do something to make the German programme impossible.

In the course of his lecture, Dr. Seton-Watson told two interesting anecdotes. One concerned an experience of his own. He said that in April, 1909, just after the Bosnian crisis was at an end, he was at Cettinje, and had a conversation with the then Prime Minister of Montenegro. He asked the latter his opinion of the situation, and the reply was, "Oh, of course it has only delayed the thing a little. Mark my words. In five years' time there will be a European war over this very question, it is either Austria-Hungary or Serbia-Montenegro; one or other has got to go." Dr. Watson said he had thought the man a megalomaniac, but the time came when he remembered the prophecy. The other anecdote concerned the Morocco crisis of 1911. After it was over a distinguished French diplomatist and an equally distinguished German professor were discussing amicably the situation. The diplomatist said, "Well, my dear Professor, surely we ought to congratulate ourselves on having got out of a very dangerous situation and on having settled up everything. We ought not to have any more cause of friction between the countries after this new arrangement." The professor leant over and tapped the diplomatist on the knee and said, "Your Excellency forgets one thing—when trouble is wanted in Europe it can always be made over Serbia."

"Thoroughly sane. Practically everything one would want to say is given."—THE NEW WITNESS.

OXFORD: B. H. BLACKWELL, BROAD STREET.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE MONTENEGRIN DAGGER.

To the Editor of THE NEAR EAST.

Sir,—No wonder the first news we heard from Montenegro was contradicted a few hours later. We were told that the hereditary weapons of the Men of the Black Mountains were to be given up along with cannon and trash of that sort, but no one who knew his Balkan peninsula believed that for a moment. The Montenegrin will give up his sheepskin coat, his ration of rye bread and kid's flesh, his hut on the mountain side, his wife herself if need be, but never while he lives will he part with his knife, dagger, dirk, poniard, scimitar, djerrid, yataghan—call them what you will; he mostly has one of each in the rainbow sash which curls round his splendid form. Was it not with this knife that his great grandfather killed the Greek who did him wrong, and with it that another ancestor finished off an Armenian, not to speak of those half-dozen Bulgarians whom, helped by one other compatriot only, he wiped out in continuation of a feud of who shall say how many generations? Each inch of that beloved weapon could tell its own tale of grim vengeance, and it is not to be given up at the first bidding of a Hun. Can we not at least save heroic Montenegro out of the Balkan Hades?—I am, etc.,

C. SUTCLIFFE MARRIOTT.

IN MEMORY OF GORDON.

To the Editor of THE NEAR EAST.

Sir,—The article "In Memory of Gordon" which appeared in your paper last week touched upon a subject in which I am greatly interested. For many months past I have been accustomed to employ boys from the Gordon Home in this town, and although I am not quite clear as to what constitutes the "aims of the founders," to which reference is made in your article, I do know that boys subjected to training in these homes are invariably smart and obliging. I was, however, sorry to learn that any public appeal for funds is feared to be necessary in the near future on behalf of these homes. It is upon this point that I venture to send you a letter for publication. The Committee of Management, excellent and efficient as it doubtless is, appears to have ignored or overlooked the advantages of advertising. Personally, I was resident in Bournemouth for many months before I casually learned that strong, reliable boys were available for garden and other work at low wages from these homes. It seems to me that money paid out in judicious advertisement would probably be productive of results which would render any public appeal unnecessary. The memory of Gordon is by no means becoming dimmed, even in these terrible days; there is surely a light which can never fade behind the name of the "Christian General." An appeal in his name—not for money, but for work for his lads—would assuredly not be made in vain. At the present moment especially it is a patriotic duty to honour the dead who by their devotion and patriotism helped, in their lifetime, to build up the Empire which is battling with the powers of darkness now. Surely no more fitting way of honouring the memory of General Gordon could be found than by providing work—not charity—for the homes founded in his memory. Only let the public know that they exist.—I am, etc.,

N. W.

Bournemouth, January 23.

TANGIER TO TEHERAN.

The Huns have given yet another example of their utter lack of chivalry. During the flight of the King and Queen of Montenegro from Podgoritza to San Giovanni di Medua, enemy aeroplanes hovered over them constantly, dropping bombs and using their machine guns on the party of fugitives. And after their Majesties had left the port, attempts were made by submarines to sink the vessel they were travelling on. This is indeed carrying the doctrine of "frightfulness" to extremes. But I suppose the Huns are beginning to realise, at last, that they have no reputation left to bother about.

***

Judging from letters which from time to time appear in the columns of provincial papers, all does not seem to be right in Egyptian postal arrangements. Complaints regarding the non-delivery of parcels sent to soldiers in Egypt are numerous, and the statement of one correspondent that newspapers are delivered regularly while other packets as regularly go astray seems to point to more than carelessness somewhere. I hope that this state of affairs will soon be remedied. There is nothing like a cheery line from home to put heart into white men on foreign service.

***

In writing of these matters I am reminded of an incident which occurred at a station in the Sudan in the early days of our occupation. A certain soldier-man returned from leave devoted the next part of his life to penning epistles to a lady whom he had left on the other side of the water. Then for some time after his transfer to a pestilential station up-country he lived happily on the strength of her replies. Suddenly, however, these ceased, and for many weeks his temper expanded as his heart contracted. Then he bethought him of the cable, and despatched a runner with an "Urgent" to the nearest telegraph station some 200 miles away. The reply elicited by this expensive communication led to an investigation of the postal quarters at his station and to the discovery of his own letters lying undisturbed in the red box which had been built into the mud-brick wall of the local office. The postmaster was repentant, but suave. He was accustomed to receive all letters for post from the hands of the senders' servants; how was he to know that an examination of this box would mean anything more than a waste of time and energy? How? He caught the officer's eye and, retreating a pace or two, changed his argument. "You can fine me, sir," he said, quickly, "but you cannot beat me." "Oh," replied the infuriated one, thinking back on how the laziness of one had meant the misery of two as he advanced, "*in*-deed!"

***

Not very long ago I was talking to a friend about the outlook at Salonika, and he expressed himself in such pessimistic fashion as to surprise me; for he is generally a cheery soul, and though he had been confined to the house for some days by a slight chill, that seemed a quite inadequate explanation of his mood. But when I discovered that he had been reading the parliamentary reports and the views of certain "military correspondents," the mystery was explained. I was sorry for him, so I passed on some items of real news that had just reached me from a naval officer "on the spot"; and left him a good deal more cheerful as a result. The change was wrought not so much by the actual facts given in the letters from which I quoted—though they were certainly encouraging—as by the obvious cheerfulness of the writer and his quiet confidence regarding the future. As the convalescent remarked: "If that is the way the men out there feel about it, I'm not going to let a crowd of paid politicians and armchair brigadiers-as-ought-to-be upset me!"

***

Unfortunately I cannot reproduce the letters referred to, or there would indeed be fat in the fire in certain quarters. But I may safely give one or two extracts, which will serve to show that our fighting men still manage to look on the bright side of things, in spite of Taubes, submarines, von Mackensens, and all the rest of the paraphernalia so dear to the heart of the apostles of Frightfulness:

> The Bulgars are calling up the people who had paid for exemption, and are reported to be in difficulties with their commissariat—the latest news being that a man only gets a loaf (and nothing else) every third day. . . Ferdy is at Uskub and proposes to visit Monastir, where the Germans have shot forty-two *komitajis* for looting. This hitherto latent respect for the property of others on the part of their Allies has caused much comment among the surviving Bulgars.

***

The above extracts are from a letter written on December 20. In a second letter, dated January 10, the writer refers to "the fun we have been having here, arresting Consuls and other spies," and mentions casually that his own "bag" was quite a respectable one—lucky man! He also, I regret to say, refers to a certain high ecclesiastic whom he visited as "a jolly old bird"; and his summing-up of "a couple of air raids over the town last week" is refreshing. "No great damage, fortunately," he writes, "and we think one of the Hermanns died a nasty, squashy death." There is a certain satisfaction about that. But it is not half so satisfactory as the parts of the letters that I have had to omit.

***

In the midst of war any touch that is essentially of peace seems strange and surprising. In England, after long years of tranquillity and rest, with only the echo of war dimly heard across the blue, we have taken it to heart now, and, especially during the past month or so, the War God dominates us. It is left to Roumania—the peace spot of Europe—to think of other things. So in the midst of the war, when one paper vies with another to give a correct forecast as to when and how Roumania will jump, Roumania thinks out and produces a new magazine on the royal game of chess. I am not a chess player myself, but I play chess, and the new magazine interests me enormously. This would have been the case at any time; it is especially so now in the circumstances of its production. On thinking it over, however, chess is not altogether remote from war, and it may be that in the publication of this magazine the Roumanian has found a safety valve for war-like feelings well-nigh suffocated beneath the weighty cloak of neutrality. In chess he has the attack and the counter-attack, the strategic advance and the diplomatic retreat, the final advance that leaves the opposing forces at his mercy, as in the ways of war. But at first sight it seemed strange to see a publication from Roumania which contains no reference to the dread happenings of our day. For some moments at least it appeared as if the country producing a new monthly magazine devoted to a game while Europe was in the throes of war must be either heroic or mad.

***

The following true story of an event which took place quite recently will give some idea of the increased difficulties our soldiers encounter when they leave the West. Somewhere in the East there is stationed a battalion of the Middlesex Regiment. A telegram was dispatched to a native merchant at a large town in the neighbourhood: "Send 1,000 rations flour next train for Middlesex." The train which should have brought the rations in response to this order brought instead a curt note from the outraged merchant: "Male sex I know, female sex I know, middle sex we none of us know." He evidently thought that someone had been joking.

***

Apropos of this there is another story which shows the surprising results that occasionally follow an uneducated native's attempt to think things out. The engineer who was in charge of the construction of a light railway in Egypt tells me that it is only possible to use the theodolite for the purpose of setting out long distances of curve or straight very early in the morning—between dawn and sunrise. Later the heat refraction blurs the distance and makes accurate work impossible. It is therefore necessary to rise at some abnormal hour to start and complete the work at one stroke, otherwise the instrument must be reset at short distances during the day. Under usual circumstances he decided at night that he would adopt the former method in the morning, but changed his mind when the morning came. On one occasion, however, he came to a straight of over six miles, and decided that he must really do all this in the morning, thus saving himself the necessity of touching his instrument for four or five days. He sent out parties of men with the necessary pegs over night, and at the first streak of dawn he was signalling the position of the first of them. For the benefit of the uninitiated I may explain that the pegs so set out show the exact centre of the line to which the platelayers have to work. Everything went well, and almost before the sun touched the desert the work was done and our engineer went home to breakfast. A couple of hours later the gang that had driven in the pegs to his direction returned—laden. They had carefully collected every peg on their return journey!

THE PRESS ON THE NEAR EAST.

Units of the Navy.

The Naval Correspondent of the *Times* (January 22) calls attention to the "effective support which the Navy has afforded to the military expedition which has been operating on the rivers at the head of the Persian Gulf."

After commenting upon the gallantry for which the posthumous reward of the Victoria Cross was bestowed upon Lieutenant-Commander Cookson for services in these regions, the writer continues:—

In all the operations in Mesopotamia, from the time that a force was landed at Fao, in November, 1914, continuous assistance has been afforded by gunboat flotillas, and although no naval dispatches have been published, the military officers have spoken in the highest terms of the courage, endurance, and cheerfulness of the seamen in affording effective help under circumstances of great difficulty. The "Comet" appears to have been engaged against the enemy on two of the three great rivers in this neighbourhood. Her gunner was treacherously shot at Naseri, on the Karun, in February last, and she is now heard of in the advance to Baghdad, on the Tigris; while, oddly enough, in the retreat after the Battle of Ctesiphon, the Turks claim to have captured a gunboat which had been disabled and abandoned, which they called the "Kemet," but which may possibly be identified as the "Comet." The landing at the mouth of the Shatt-el-Arab was covered by the guns of the "Espiègle" and "Odin," and a naval brigade participated in the capture of Basra. A naval flotilla also assisted at the capture of Qurnah, and was on that occasion commanded by Captain Wilfrid Nunn, who received the D.S.O. for his services. In the expedition up the Euphrates, another naval force was employed, and assisted at the occupation of Nasariyeh on July 27. The report of the operations stated that a gunboat flotilla pushed on ahead of the troops and shelled the place, which was occupied on the following morning without opposition.

Stricken Serbia.

A Serbian officer who was in command of a machine-gun section during the great retreat of the Serbian army across Albania has contributed two most interesting and pathetic articles to the *Morning Post* (January 24 and 25). The articles should be read *in extenso*, as they give by far the most vivid description of the retreat which we have read, and our quotations on this page are necessarily limited. The following passages speak for themselves:—

Particulars of the hand-to-hand fight at Belgrade have been published in the British papers. But perhaps what you don't know is that on the night of October 7 to October 8 over 6,000 shells were fired on Belgrade, and a good half of them were directed against the six British heavy guns which were taking part in the defence of Belgrade. The British gunners, under the command of Major Kerr, fought splendidly and arose the admiration of all Serbia.

The civilian population tried to fly from Belgrade, leaving behind everything they possessed, as the attack was so unexpected and violent, but very few people succeeded in making good their escape. The Austro-Germans prevented the escape by firing on the road from Belgrade to Torlak, with the result that endless women and children were killed by the big shells and shrapnels. Another proof of German kultur is furnished by the diaries found on prisoners. The Kaiser, in an order of the day to his soldiers, informed them of the campaign against Serbia and advised them to kill every male above fourteen years of age. I saw personally two of these diaries, taken from dead German soldiers.

So much for the unfailing characteristics of German kultur. The next quotation refers to a later period, by which time the writer had been left with only eighteen men, four non-commissioned officers, and one subaltern out of his division:—

One day I thought we were all lost. One of the horses carrying one machine-gun fell down a ravine. We lost over two hours in rescuing the gun. . . . The result was that we lost the connection with the regiment, and at about five o'clock in the evening we could not find the way followed by the regiment.

Suddenly an Albanian peasant appeared, and offered to show us the proper way to Slatina, which was the place where we had to spend the night. I shall never forget the night. The Albanian peasant had simply led us to the mountain with the object of informing his friends of our situation and trying thus to capture us. I must say that the Albanians of the region between Younkula and Debar have proved very unfriendly to us. They attacked our munitions column twice—took over 18 officers prisoners, of whom five were shot, four being captains in my own regiment.

In order to get out of our difficult position I had to order the Albanian peasant to be shot and then find my way by instinct and luck. That night I nearly gave the game up. I was not physically fit for such a big effort, and if I am to-day alive I must thank my sergeant-major, a young Irishman, who by his help and attentions saved my life.

General Aylmer's Advance.

We take the following quotation from an interesting despatch from Mr. Edward Candler to the *Times* (January 22). Mr. Candler's telegrams do not, of course, deal with the latest operations, but they serve to show the enormous difficulties under which our gallant troops have been labouring:—

A pelting rain and a strong, cold wind has prevailed with but few intervals during the last ten days, and further military operations have been hindered by the weather. The mud of Flanders is repeated here, only there is not the relief of roads and billets, and troops have to bivouac in the mire. The gallantry of the ammunition carriers has been a conspicuous feature of the recent fighting. They might have been seen crossing ground exposed to a hail of fire, advancing steadily at a slow walk with heavy ammuntion boxes balanced on their heads or puggarees. The conduct of the regimental stretcher-bearers and ambulance *kahars* is equally worthy of praise. . . . The patient courage of the Indian transport drivers is also remarkable. The inferiority of the enemy's artillery fire, as compared with the Western front, is largely discounted by the natural advantages for defence afforded the enemy by the ground, unbroken as it is by hedges, villages, roads, trees, or deep watercuts, as in Flanders. Across this vast, open plain our infantry have had to attack entrenched positions, and the casualties have naturally been heavy. . . . The dash and fearlessness of the British infantry in this affair was the admiration of the whole column, and the Indian regiments fully sustained the best reputation of the gallant Indian infantry. The costliness of the advance and the depressing climatic conditions have not affected the spirit of the force, which is one of cheerful determination.

An Insoluble Problem.

Writing in the *Sunday Times* (January 23), Colonel F. N. Maude deprecates the action of those sections of the Press and public which "are endeavouring to weaken national trust in the several headquarters *whose interaction controls the course of the war* by renewing an outcry for concentration in the Western theatre."

He continues:—

The bedrock of the whole present situation lies in the determination arrived at by the Allies before the close of 1914 to adopt against the Central Powers exactly the same policy as the Great Alliance of 1813 embodied in the Treaty of Trachtenberg against Napoleon—viz., to avoid all attempts to seek for a military decision in the field until by attrition the numerical chances had turned very greatly in their favour, and the fact that our "Treaty of Trachtenberg" has taken longer to work itself out than was hoped or imagined is due primarily to the far larger numbers and higher organisations involved, also that we have had to assail these at the moment of their highest efficiency instead of attacking them, as in 1813, when the retreat from Russia in the previous winter had brought the Emperor's resources almost to the verge of annihilation.

After a close examination of recent military events up to date, the Colonel proceeds:—

From the enemy's standpoint the situation seems to me insoluble. Unless they abandon Bulgaria and Turkey altogether —politically an impossible supposition—as long as we hold Salonika and are known to have a further large army in the Eastern Archipelago available at a moment's notice, they must keep something in the shape of not less than a quarter of a million men immobile in their present positions—men most urgently needed to meet the Russians in the Bessarabian sector —whereas beyond a relatively weak screen at Salonika itself we are free to go back to France, or anywhere else we please, and can move faster over the sea than the enemy can by land. Hence for purposes of a great decision this quarter of a million Germans are as much out of the field as if they were dead and buried, or in captivity. But to this 250,000 men thus held in check we must add the very great number sacrificed already on the Serbian battlefields, or incapacitated for months to come by wounds, sickness, and so forth (probably another quarter of a million).

The Senussi.

The Alexandria correspondent of the *Pall Mall Gazette* (January 22), writing on the 9th inst., includes the following references to the Sheikh Senussi, whose part in the crisis he considers to be the most interesting problem of the whole Egyptian affair.

From the statements of prisoners and from other reliable sources of information, it now appears that the Tripolitan Arabs, who form a large part of the Senussi's following, have already given indication of the real object of their attempt to attack Egypt. On three separate occasions at three different places they are reported to have looted the tents of the Egyptian Bedouins; and on one occasion, near Sollum (some sixty miles east of Mena Matra), they even forcibly removed the ornaments from the women of a tribe, the men of which had been forcibly enlisted. The Sheikh Senussi himself has given orders that only the Bedouins who were able to support themselves are to be allowed to stay in his camp. Those who have no private sources of supply are to be driven away with their families. It is evident that the Senussi understands that the practice of looting goes ill with professions of friendship. Although the

Digitized by Google

professions of the Senussi go for nothing, he can very well be credited with having more expansive ideals than theft and rapine.

The *Standard* (January 24) inclines to the idea that Sheikh Senussi will not greatly trouble us in the future.

Among the suspicious documents found in a hostile Consulate at Salonika was an inflammatory proclamation in Arabic to the tribesmen on the borders of Egypt and Tripoli, in which they were exhorted to strike a blow for the German protectors of Islam. The pretence that this would be in accordance with the wishes of the Sheikh-es-Senussi does not square with the repeated assurances he has given of his goodwill towards the British and Egyptian Governments. In any case the further punishment inflicted on the Arab raiders who threatened our outpost at Mersa Matru shows that these sons of the desert will not gain much by listening to German persuasion.

In Constantinople.

The following quotations, taken from various daily papers, refer to the fact, vouched for by many reputable correspondents, that the number of Germans in Constantinople has been increased to 50,000. Mr. G. J. Stevens, cabling from Salonika to the *Daily Telegraph* (January 24), says:—

Recently a conspiracy was discovered by the police among a body of Turkish officers to assassinate all the German officers in the capital. In one night twenty-one suspected officers were arrested, taken to the Bosphorus, and there drowned, without any further formalities. By these summary methods the Germans, who control the police and all army services, are keeping down the discontent and hatred they have inspired. The Germans are opposed to the expedition against Egypt. They consider the enterprise risky, and fear a crushing defeat, which would considerably damage their prestige in Turkey, as well as react disastrously on German public opinion. They tell the Turks that the campaign in Mesopotamia must be disposed of before attention is turned to Egypt. This has disappointed the Turks, who look to Egypt only for a recompense for all their sacrifices. Their leaders insist on a campaign against Egypt, and will not hear of postponement, but the Germans are so strong that it is considered the latter will end by imposing their will.

The *Globe* (January 25), in a leading article, says:—

The Germans are not the sort of people to send a great army into a foreign capital out of love for its rulers or from any other altruistic motive, and of their own free will they will certainly never withdraw. Enver has betrayed his country to the yoke of the foreigner, and it will lie heavy upon her neck. The arrival of these German troops means that Turkey has now lost every shred of independence which she possessed since she was tempted into an alliance with Germany, and that the Sultan is now no more than the Kaiser's vassal.

The following quotation is from a dispatch from the special correspondent of the *Times* (January 24), who wires from Salonika:—

This sudden and unexpected descent of a German army on the Turkish capital is viewed with deep distrust and resentment by all Turks save Enver Pasha and a small band of adherents whose very lives depend upon the maintenance of German domination at Stambul. My informant does not believe that the Kaiser's troops are intended for the much-advertised Egyptian expedition. On the contrary, he states that while the Young Turks still hanker after that adventure, the Germans have set their faces against it, realising the virtual impossibility of success in that direction. The foreign legions now being poured into Turkey are primarily intended to rivet the yoke under which Turkey is groaning. There have been several plots against the present hated oligarchy, and they have been stamped out with ruthless savagery. That willing and capable adept in German frightfulness, Enver Pasha, governs by terror alone, and my informant states that swift and secret executions, or rather assassinations, are of daily occurrence. In one night lately twenty-one Turkish officers suspected of disaffection were dropped, with stones round their necks, into the Bosphorus. Before the arrival of the German Army there had been many broils between the Turks and the Germans, and in one of these ten Turkish and five German officers lost their lives. Henceforward there is little likelihood of such signs of hostility to Germany being repeated until we and our Allies rid the Turkish nation of its oppressors.

The Pressure of Want.

Dr. E. J. Dillon has a two-column article on the war in the *Sunday Times* (January 23). He is severe in his criticism of the dilatory methods of war in the Balkans, and considers that the Dardanelles fiasco could have been altogether avoided had we approached the campaign with less wildness and a keener perception of the possibilities of failure as well as of success. In writing of Salonika, Dr. Dillon says:—

The Salonika expedition is another memorable instance of the Allies' shortsightedness. There was a moment when the scheme might have turned the tables in our favour and brought the war to the desired issue. . . . Of the two objects which it was to have achieved—to bring help to the Serbs and to afford us an offensive base against the Germans—neither was found to be attainable. To-day we are holding the place for quite different and, one hopes, adequate reasons. Military authorities believe that it can be defended indefinitely against all the forces that the enemy can spare for attack—and one trusts that this time the military authorities are right. If they are, the danger to be guarded against is the bottling-up of a large Anglo-French force by a small number of Germans, Turks, and Bulgars. The Near East offered the Allies a free field for military strategy of a classical character as distinguished from the trench warfare of the West. That was our best, if not unique, chance of winning the war in the field. But we threw it away. At present it might be rash to assert that all hope of bringing the enemy to his knees by dint of military strategy and prowess has faded into thin air. But it is certain that the most effective means of which we now dispose of unsetting the joints of the compacted German fabric is the pressure of want.

Townshend of Kut.

The above heading is given by a writer in the *Evening News* (January 25) to a eulogistic article on the defender of Kut, from which the following extracts are taken:—

The Empire is beginning to learn that this officer, shut up in the little town in Mesopotamia, surrounded by an overwelming number of enemies, knowing that the relieving army is held up by natural obstacles, is one of the most brilliant soldiers it has produced.

When the full story of the battle of Ctesiphon and the retreat to Kut is known, it will make as thrilling a chapter as any in the history of the world war. And General Townshend will figure in that story as the great master mind, the cool and resourceful commander, the prompt and brilliant tactician.

He was backed by some of the bravest troops in the world, but it was the personality of the general that, perhaps, counted most in that sanguinary fight.

There were critical moments. But it was at those moments that General Townshend was greatest. Four times he rallied his men, and himself led them in their charges against the masses of the enemy.

The victory at Ctesiphon was a magnificent one, but the retreat to Kut will equal if not surpass it, as a successful military achievement under disadvantages of an extraordinary kind. Not only did General Townshend—who had hardly any sleep during the retirement—keep off the Turks, but he did so with a loss insignificant in the circumstances, and he succeeded also in bringing down with him all his wounded.

It has been said that the men under him would follow General Townshend anywhere. That is true, and it has been proved over and over again in the campaign in Mesopotamia.

General Townshend is a keen student of Napoleonic methods, and, according to the *Evening News*, had long studied the possibility of war with Germany, and had accurately foretold the magnitude of our military task.

The City of Dreadful Hate.

Under the above striking heading Mr. Jan Gordon writes of Scutari in the *New Witness* (January 20). The article is one which should be read in its full text, but the following quotation may be of interest:—

On a flat marsh, at the edge of a great green lake, surrounded on all sides by high and gloomy mountains, lies the City of Dreadful Hate. It has no country, for those who hold it are not its owners, and to those who are its countrymen it will not submit. The greatest city in all those regions, yet has it no sovereign power, for hate constructs nothing; and so hating itself it lies supine, a prey to any who will possess it. Within its walls a great street divides hate from hate, and at night he who does not hate must carry a lantern so that the haters shall not kill him. This is not romance: this is a description of Scutari, in Albania. . . . Scutari itself is pro-English. The late Governor, Colonel Phillips, was an Englishman, and Admiral Burney, Miss Durham, and George Paget have graven themselves deep upon Scutarian memories. Even the village idiot carries about with him a paper written in English, which he imagines is a money-producing talisman, though it really says: "If this chap worries you, kick him."

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

A "Goeben" Story.

Jan. 20.

Mr. R. M'Neill asked whether the Secretary for Foreign Affairs had any official information showing that in August, 1914, the French Admiral in the Mediterranean informed his Government that he was in pursuit of the Goeben and the Breslau, which he intended to sink before Constantinople, and that he was forbidden to do so by the French Government, in consequence of the objection of England to do anything to annoy Turkey.

Sir E. Grey: The answer is in the negative. There is no record of any such communication at the Foreign Office, and I have no recollection of having heard of it before.

The Allies in Greece.

Sir E. Grey, replying to a question put by Sir E. Cornwall, said: The co-ordination between the military and diplomatic efforts of the Allies in Greece is secured in the same way as elsewhere, that is, through telegraphic and postal communication between the military commanders, the diplomatic agents, and, where necessary, their Governments.

The Dardanelles Operations.

Mr. J. Redmond asked the Prime Minister whether, in view of the imputations upon the corps and divisional commanders in Suvla contained in the despatch of Sir Ian Hamilton, an inquiry before a competent and impartial tribunal would be at once instituted to investigate all the circumstances of the case and the loss of life owing to the absence of artillery and the failure of the water supply.

Mr. Asquith: After careful consideration the Government have come to the conclusion that no such inquiry is under present conditions practicable, for the reason that the officers who would be needed to constitute a competent tribunal and many of those who would be necessary witnesses cannot be withdrawn from active service in the field.

Replying to further questions put by Mr. Redmond, Mr. T. M. Healy, and Mr. Dillon, Mr. Asquith stated that General Sir F. Stopford had asked for an inquiry into the circumstances of the landing at Suvla; that the War Office had taken every means to secure that an adequate inquiry shall be made in due course, and that an opportunity will be given to officers of junior rank to put on record their account of what occurred.

General Sir I. Herbert: Will the right hon. gentleman consider the advisability of seeing that officers whose names have been prominently connected with this affair, and who may have been temporarily withdrawn from the Service, are not placed in a prejudiced position until their case has been judged?

Mr. Asquith: These are very delicate matters and apply not only to this particular operation but to a number of other operations which have taken place during the war. All I can say is that we are doing the utmost we can to secure that at the end ample inquiry should be made and care taken to see that full justice is done to everybody concerned.

The Mesopotamian Campaign.

Sir E. Cornwall, asked the Secretary of State for India whether the Cabinet had now before it the scope of the Mesopotamia campaign and the plans for its successful prosecution; and whether he could give the House any information as to the decisions arrived at by the Cabinet.

Mr. Chamberlain: No, I can give no information as to Cabinet business.

Answering a later question, Mr. Chamberlain said: I am glad to be able to say that, the weather having moderated, General Aylmer has been enabled to continue his advance. His troops were yesterday evening close to Es Sinn position, and consequently only about seven miles from Kut. General Townshend reports that no fighting is taking place there. I may add that General Sir John Nixon, who was obliged to relinquish the command-in-chief owing to illness, left, I think, yesterday, and the command was taken over by General Sir Percy Lake.

The Situation in Montenegro.

Jan. 24.

Lord R. Cecil, replying to Sir J. Lonsdale, said that he could make no statement as to the reported capitulation of Montenegro. Telegraphic communication was interrupted, and he had no definite information as to what had happened.

Mr. Lynch asked whether there existed under the control of the Government any body of men forming what might be called a thinking department, whose function it was not merely to deal with events as they arose, but to anticipate them; if so, whether the question of the Near East was dealt with in the manner indicated, and whether it was possible to fix responsibility as far as this country was concerned for the failures which the actions of the Allies have encountered.

Mr. Asquith: The Government, aided by their expert advisers, endeavour to fulfil these functions.

Mr. Lynch: When will they get to work?

Mr. Asquith: They are at work now.

"MILKMAID" BRAND

Sterilised Fresh Milk

Obtainable from all leading Grocers and Druggists in Egypt and the Levant.

Questioned by Mr. MacMaster as to the number of British prisoners in Turkey and the treatment they received, Mr. Tennant, in a written answer, said: Although letters from individuals not infrequently speak of markedly good treatment, there is reason to fear that the general conditions of internment in Turkey are far from satisfactory, but owing to the remoteness of some of the camps and the difficulty of communication it is hard to ascertain the actual state of affairs. The American Ambassador at Constantinople has done everything possible to ameliorate the lot of British prisoners, and has supplied them with certain comforts and articles of clothing which the Turks have apparently neglected to provide, but notwithstanding all his efforts he has, by latest reports, been unable to obtain the consent of the Turkish Government to visit the internment camps. The number of prisoners of the Royal Navy and the British Regular, Colonial and Indian Forces is as follows, according to reports available:—Officers, 47; other ratings, N.C.O.'s and men, 598.

Post to Salonika.

Jan. 25.

Mr. Pike Pease informed Mr. Newdegate that letters and parcels for our soldiers at Salonika were sent by the most expeditious route known to the Post Office, and there was no avoidable delay.

British Minister to Montenegro.

Jan. '26.

Lord R. Cecil replying to Major Newman, said:—His Majesty's Minister at Cettinje, who at the time of the recent occurrences in Montenegro was without any staff, has now reached Italy, and arrived in Rome on the 22nd inst.

CYRENAICA.

At the meeting of the Royal Geographical Society last Monday Professor J. W. Gregory gave an interesting account of Cyrenaica, which classical country he visited in 1908 with an expedition whose object was to estimate its suitability as a colony for Jewish refugees from Eastern Europe. He found the country to consist chiefly of a plateau of soft limestone, in places 1,800 feet high. The rainfall is low, not more than 12 inches, and falls entirely in torrential showers during the winter months. This method of precipitation is not well suited to cultivation without irrigation, but is the most favourable to storage. The rocks are extremely permeable, so that the water rapidly sinks and finds its way by deep underground channels to the southern oases or the sea. The depth of these buried channels was shown by the fact that at the time of Professor Gregory's visit *wadis* 700 feet deep and more had no springs upon their floors, while a well on the coastal plain sunk almost to sea level proved to be dry. There are, however, some permanent springs, notably the fountain of Apollo, with a discharge summer and winter of 84,000 gallons a day. The soil is light, easily worked and very fertile; but it is found mostly in patches surrounded by areas of bare rock. Good crops of dry, hard barley are raised by the Arabs, and are largely exported to Scotland for use in the manufacture of whisky. Other products are rice, oil, dates and wool. In classical times Cyrenaica also produced honey, condiments and drugs. The country shows abundant evidence of its early civilisation, the ruts worn by chariot wheels can still be seen in the ancient Roman roadways, and the broken piers of Marsa Susa help Greek smugglers to land arms for the Senussi. Cyrenaica had a long period of independence under Barbary pirates, and fell into the hands of the Turks in 1835. These improved the roads, introduced the telegraph, and established garrisons which kept peace between the turbulent Arab tribes. A few years since it was taken by the Italians. Professor Gregory said he had reported unfavourably on the country as a field of settlement for Jewish refugees, but he considered it might prove a not undesirable possession for Italy; though it was too soon to judge Italian progress there. This would necessarily be slower than that of the French in Algeria, or of ourselves in Egypt. We could watch it with sympathetic interest, feeling grateful to any power that would help in the pacification and development of the long derelict lands of northern Africa.

Mr. Hogarth, who followed, said that Professor Gregory having visited the country in August had obtained an excessively bad view of the aridity of Cyrenaica. He thought, moreover, that the local Arabs had contrived that Professor Gregory should not see the best parts of the country. He had seen the ruins of many ancient cities, and none had impressed him more than those of Cyrene. The country was now well inhabited, as such countries go, by a vigorous population of Arabs, extremely well armed, who would have strongly resisted the taking up of the scattered fertile areas. Colonists such as the Jewish Territorial Organisation proposed to send there would have been quite unsuitable.

All the stations of the Church Missionary Society in Persia have now been evacuated. The mission partly left Ispahan, under Government orders, early in October, and after a short stay at Ahwaz and Mohammerah, on the Persian Gulf, the majority of the party proceeded to India. The Rev. W. A. Rice telegraphed from Kerman on December 12 to the effect that the missionaries at that place were obliged to leave, and in the House of Commons on December 23 the Under-Secretary of State for Foreign Affairs, in reply to a question, said that the British Consul and colony at Kerman had left under escort for Bunder Abbas, on the Persian Gulf (some 225 miles distant), on the morning of December 18. This party reached the Gulf early in January. Now we hear that all the British, French, and Russian subjects have left Yezd and reached Ardistan, within the Russian sphere of influence, on the road to Teheran, and that there is no cause for anxiety respecting the safety of any individuals.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The Roumanian grain deals, to which reference is made elsewhere, are of more than usual interest. Some weeks ago our Roumanian Correspondent pointed out that Germany was on the eve of buying important grain supplies, and urged that the Entente Powers should step in and purchase the Roumanian harvest, if only with a view to prevent the Central Powers from acquiring it. I upheld our correspondent's views in these columns, but in the meantime the German purchase of 50,000 wagons had been concluded, the buyers having accepted the Roumanian sellers' conditions. Within a week we followed suit by purchasing 80,000 wagons, admittedly an important deal, but still far too small to affect the political situation or to hamper German intrigues in Roumania. It is a great pity that we have again had tardy recourse to half-measures instead of "taking the bull by the horns" when the opportunity arose. Still, it is in accord with the whole policy which has directed the war on our side.

***

I draw the attention of my readers to the extracts reproduced elsewhere from the article on the Turkish situation which appeared yesterday morning in the *Daily Mail*. The article by our Special Correspondent in Athens on Turkish finances will also be read with interest. Incidentally, it may be mentioned that the correspondent of the *Daily Mail* had an interview with Halil Bey at the Foreign Office in Stamboul, in the course of which that official said: "We Turks need the German business initiative. Look what Germany did for Roumania. Germany has reorganised Roumania and set her on her feet. She is now rich and prosperous and full of enterprises. The Germans are with us only for the duration of the war, and they will help Turkey to become a wealthy nation. See what the Germans are doing for us in Anatolia. There we have two hundred German non-commissioned officers teaching our people modern farming." This last assertion certainly gives food for thought.

***

Mr. Hutton's lecture read before the Royal Society of Arts on Wednesday night is most hopeful as regards the future of cotton-growing in the Sudan. Lancashire wants fine cotton, and the Sudan is the country to give it. There are, I know, certain expenses to be met in the way of irrigation, etc., before the Sudan is in a position to meet the ever-growing demand for cotton of a superior quality, but in the opinion of Mr. Hutton the initial outlay will be more than justified—an opinion which I have always endorsed in these columns. "It is the duty of the Government," says the lecturer in his article, quoted at greater length elsewhere, "to do all that is possible to develop every district capable of giving high-class cotton. For it is no exaggeration to state that in the success of these efforts depends the whole future, indeed, the very existence, of the Lancashire cotton industry."

I need not insist on the fact that the Sudan is one of the most promising districts "capable of growing high-class cotton." Unfortunately the rapid development of the Sudan as a cotton-growing country is essentially a financial proposition, but "however much the Government may be compelled to cut down expenditure, I should consider it an economic blunder if they were to go back on their promise to guarantee the interest on the loan of £3,000,000 to the Sudan Government." Personally, I do not believe for a moment that they will attempt thus to go behind an enactment voted by Parliament. Besides, as Mr. Hutton rightly said, "The British Government will never be asked to find a single penny through failure of the Sudan Government to provide the interest on the loan." So that "it would be an obviously mistaken policy to delay the issuing of the capital through any mistaken idea of economy"—a sentiment with which I heartily agree.

***

The possibilities of the Sudan are not restricted, however, to cotton-growing. There has lately been some mention in the Press of a probable shortage of wood-pulp, the raw material out of which paper is made. Hitherto, for "trust" rather than any other and more plausible reasons, this material has been imported into the United Kingdom from abroad, but I see that the Imperial Institute has risen to the occasion, and has enumerated in a communiqué where the raw material (wood-pulp) can be procured within the Empire. Canada and Newfoundland are already too well known to need special mention, whereas the circumstance that India can produce a waste-grass suitable for the manufacture of paper-pulp will come as a surprise to no one. That, however, the Sudan should be rich in material out of which paper can be made, and that this material is a weed called sudd—the papyrus of the ancients—is less known. In the past the possibilities of this grass have been so largely scoffed at that he was a bold man indeed who prophesied that some day sudd, if properly bleached, would come to the fore as a paper-pulp. The fact, therefore, that such a careful, consultative body as the Imperial Institute mentions the Sudan as a possible source within the Empire for the supply of a vegetable material capable of being turned into paper-pulp, is a welcome admission—all the more welcome because we have been urging the claims of sudd for many years past. Hitherto, the "ring" which controlled the supply of paper-pulp has been so strong that the development of the sudd industry has been rendered impossible. Now that the war has come to show us that we must in future rely more on ourselves, perhaps we will turn to the Sudan for our paper-pulp. Unfortunately, however, the success or non-success of the venture depends largely on the attitude taken up by the paper ring. About this, in its time, I shall have something more to say.

***

On Monday M. Basili Pandeli, partner in the firm of Pandeli Brothers, ship-owners, of St. Mary Axe, the Piræus, and Constantinople, was ordered at the Guildhall Police Court to pay a fine of £45 and £50 costs for trading with the enemy. What happened was this: The three brothers Pandeli, one of whom was in Constantinople, another in the Piræus, and the third in London, held a great number of shares in the steamship "Pandeli," and they were desirous of buying up the other shares from the holders—people in Constantinople or the neighbourhood. As a result of correspondence with M. Zani Pandeli at Constantinople, the defendant, on August 16 telegraphed to Mr. Demetrius Pandeli at the Piræus the sum of £3,000 in order to buy the shares.

***

The Dallas case, which is now occupying the attention of Sir John Dickinson and a special jury at Bow Street Police Court, is interesting inasmuch as it has to do with Ottoman Jews. Prior to December last restrictions were placed on their leaving this country, but they were then removed without, however, the fact being given that publicity which it deserved. The consequence was that many Ottoman Jews, anxious to leave the country, sought to obtain passes by other than licit means, without knowing that they could have obtained them without incurring heavy expenditure. One result of this action which is now being tried is that Ottoman Jews will no longer be left in the dark as to their right to leave the country if they should wish to do so.

***

The Sudan Government recently imposed a surtax on freights, to take effect on January 1. The collection of this new impost has, however, been postponed until February 1, whereas, in its place, an increased rate has been levied on sugar and simsim. Commenting on this, the *Sudan Times* says:—"The increase in freight dues were decided on in order to make up for the increased expenditure incurred by the Government railways owing to the great rise in the prices of coal; they were not arbitrarily decided upon by the Government, but were fixed at such a figure as was calculated to make up, during the year 1914, for the additional expenses incurred by the railways during the year." The Chamber of Commerce seems to have asked the Government, for obvious reasons, to postpone the introduction of the new rates, at least until February 1, to which the Government agreed. "But this postponement means a reduction of the revenue for 1916 by at least one-twelfth of the estimated increase. This has to be made up somehow, otherwise there would be a Budgetary deficit. To avoid such a deficit, the royalty rates on gum were increased about 2 piastres per kantar, the increase to take effect only after March 1. It is estimated that the increased royalties collected during the latter half of the gum season will just balance the loss on the increased railway rates during the month of January."

***

In the ordinary course the contract with the P. and O. Steam Navigation Company for the conveyance of the weekly mails to and from India and other Eastern countries would have expired at the end of this month, but as it is impossible for the authorities to give close attention to the terms of a fresh contract in present circumstances, the existing arrangements have been extended into next year.

Roumanian Wheat Deals.

Great Britain and Germany's Purchases.

On January 13, *The Times* correspondent in the Balkan Peninsula, now in Bucharest, wrote as follows :—

"Arrangements have virtually been concluded between the British Legation, representing a financial syndicate, and the Central Commission of Export, for the purchase of 80,000 wagons or 800,000 tons of wheat to the value of about £10,000,000. The exact cost will depend on the rate of exchange, the price being fixed at 3,200 lei per wagon. The whole amount of 800,000 tons must be delivered by April 17. Payment will be made immediately on delivery at the railway stations, ports, or elsewhere."

This message was followed on the 21st inst. by a second stating that the contract for the sale of 800,000 tons of Roumanian wheat to the British Government had been signed.

*** On January 7 we published an interview granted by M. Demitre Greceano, the President of the Roumanian Union of Agricultural Syndicates, to our Correspondent in Bucharest, in the course of which the purchase of Roumanian grain by the Entente Powers was strongly urged. Since then, our Correspondent had a further interview (January 3) with M. Greceano which, though it reaches our hands after the conclusion of Great Britain's purchase of Roumanian grain, contains many points of interest. It will be remembered that at the time of the first interview, Germany was negotiating the purchase of 50,000 truckloads of Roumanian grain, but difficulties arose at the last moment, and the scheme fell through. Our Correspondent, writing on January 3, said :—

The agreement for the sale of 50,000 (fifty thousand) truckloads of grain has at last been signed between the Roumanian Agricultural Commission and the Austro-German Commission, formed in consequence of the creation in these latter States of a monopoly for the importation of grain. The Austro-Germans have accepted the terms proposed by the Roumanians in their entirety : the prices to be double of anything ever realized before ; payment to be made in Roumanian money ; the purchase of Roumanian *lei* to be made with *marks*, the exchange for which being that fixed by the Roumanian Government ; and, finally, in spite of protestations on the part of the German representatives, the export taxes, which amount to fifty millions of francs, to be paid *in gold*.

The unconditional acceptance of these terms are uncontrovertible evidence of Germany's precarious economic situation, and of the necessity in which she finds herself of procuring corn at any cost. Her economic needs exceed her political requirements.

Contract Conditions.

The contract has to be executed within a time limit, for one of the terms of the agreement stipulates that Germany shall, not later than April 3, 1916, furnish for the transport 30,000 closed railway trucks and the number of barges requisite for the conveyance of the remaining 20,000 truckloads of grain by way of the Danube. In the case of the grain not having been removed by the Germans on the date fixed, it will be deposited in the storehouses attached to railway stations at the cost, as well as at the risk and peril, of the buyers, the price paid being retained by the Roumanian agriculturists. The latter have every reason to hope that the exportation will be effected without a hitch, for they have sold no part of the harvest of 1915, and have remained with a good portion of that of 1914 as well. They have thus a total of approximately one million truckloads of corn on their hands, of which 60 per cent. is available for exportation. And this does not cover the whole ground, for the prospect of the 1916 harvest is drawing near, and it promises to be a rich one.

Entente's Mistakes.

So we see how enormous is the mistake of the Quadruple Entente in not acquiring the Roumanian harvest, for the sale of which serious proposals have been made by Roumania, for Germany thus acquires a powerful means of creating a current of opinion in favour of peace, which alone will allow of the country's alleviating her burden of accumulated harvests. None the less, the Roumanian agriculturists' sense of patriotism is such that they will not hesitate to sacrifice their personal interests to the legitimate and rightful claims of the nation, which have lost nothing of their force, of their intangibility, through the measures of coercion and corruption practised by the Germans. This statement is supported in a manner that brooks no contradiction by the debates that have taken place in the Chamber and in the Senate on the subject of the reply to the King's Message, on the occasion of the opening of Parliament. There were but two speakers who advocated adhesion to the Central Powers, M. Stere, and the former leader of the Conservative Party, M. Peter Carp. The latter alone was listened to with attention, his great age, his reputation for integrity, the sincerity of his convictions, and the high offices he has held in the State commanding a respect that the character of his opinions could not have imposed. This was the only concession he obtained, his speech being accomplished without any sign of approval or applause indicating that his words had fallen on sympathetic ears. The current of opinion against the Austro-Germans is such that even the friends of M. Marghiloman, a pronounced philo-German, did not venture to express in public their approval of the speech delivered by M. Carp. On the other hand, the members who spoke in favour of the Allies, with M. Take Jonescu at their head, were warmly applauded. The latter, with his accustomed lucidity, pointed out how great was the fault of the Government for not having intervened in the war when the moment was opportune, and emphasized the fact that Roumania's legitimate claims and aspirations could only hope to be realized by the assumption of arms against Germany and Austria. His words provoked an enthusiasm which has been re-echoed from every corner of the country.

This attitude of the Roumanian people, which is well known in Germany, accounts, perhaps, for the great effort in the direction of Bessarabia which the Austro-German armies are reported to be meditating, for if they succeed in occupying this territory Roumania will be completely encircled and all possibility of military action with the Allies definitely removed. She will have lost all contact with the Quadruple, and find herself clasped as in a vice by the Austro-German forces.

BRITISH SHIPPING COMPANIES.

At ordinary times it is interesting to watch the annual growth in tonnage of British shipping companies. In making comparisons today with sizes of fleets a year ago, changes are chiefly due to reductions occasioned by war. The *Syren* of January 6 gives as usual its annual table. This year, as last, British India line heads the list with 145 vessels and a gross tonnage of 700,318, the aggregate having grown during 1915. The Ellerman, White Star, and the P. and O. Lines have all lost weight. So heavy is the reduction in the White Star figures that that company goes down to sixth place with 434,039 tons. Addition of 41,000 tons has lifted the fleet of Messrs. Holt from fifth to third place. The P. and O., despite the reduction of 33,000 tons, remains fourth, while the Furness line, gaining 29,000 tons, comes up from sixth to fifth. The Royal Mail and the Union-Castle have changed places owing to a substantial diminution in tonnage of the former and a slight increase of the latter. A decrease of 44,000 tons in the Cunard figures brings that company two places lower, the Elder Dempster and Leyland line having both climbed above it. It may interest German pirates to know that, in addition to our Royal Navy, there are still 69 British mercantile fleets, each possessing a gross weight of over 50,000 tons. In fact, the first eleven lines range from 700,000 to 300,000 tons apiece, and between them have 837 vessels.

TRADE NOTES.

Egypt.

The Secrétaire Général des Domaines de l'Etat, Cairo, invites tenders for the supply of 6,000 kilogrammes of axle grease. Date, February 16.

Tenders are invited by the Ministry of Wakfs for the supply and installation of a compound steam engine. For further particulars apply to the offices of THE NEAR EAST, Devonshire Square, E.C. Date, January 31.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-1918). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, March 1.

Tenders are invited by the Secrétaire Générale des Domaines de l'Etat (Service Technique), Cairo, for the supply (1) of 13,315 okes of "huile pour mouvements"; (2) 7,670 okes of "huile pour cylindres"; (3) 16,200 okes of "huile pour moteurs Diesel." Date, February 2.

Tenders are invited by the Controller, Cairo Tangier Department, for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-1917. Samples shall be submitted at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 1, 1916. Date, March 1.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on February 29, for the supply of timber required by the above Department in 1916.

Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, London, S.W., and from the Agent, Sudan Government Railways, Alexandria.

Morocco.

A London firm of general exporters to Morocco desires to act as export agents for United Kingdom firms wishing to do business in the Moroccan markets. The same firm wishes to act as buying agents in Morocco for United Kingdom importers of Moroccan produce. Communications in this connection should be addressed to the Secretary, Statistical and Information Department, London Chamber of Commerce.

H.M. Consul at Fez reports that galvanised ironware, such as pails and corrugated sheets for roofing, is in brisk demand in that district. The following hardware lines are also suggested as being likely to meet with a demand, on a small scale :—Portable cooking stoves for burning wood or roots, fire-place suites, register grates, interiors, dog grates, verandahs, balconies, porches, bandstands, shelters, columns, brackets, crestings, friezes, gates and railings, tomb railings, lamp pillars, general constructional ironwork, electric light columns and brackets, section pillars, castings of every description for electrical engineers, garden rollers, seats, vases and pedestals, feeding troughs for cattle, pigs, poultry, etc., portable boilers, umbrella stands, rain water goods, air bricks, gratings, ventilators, cart brushes, plough castings and fittings, and enamelled iron advertising signs.

Metallic and porcelain enamelled baths, soil pipes and connections, enamelled and tinned cast-iron hollow ware, camp ovens, soap pots, rice bowls, Dutch stoves, etc., are articles in which trade already exists at Fez.

H.M. Consul adds that traders at Fez are practically all native merchants, scarcely any of whom know any language except Arabic, and sending out catalogues to them in any other language would not be likely to be of much use. A list of Fez traders may be obtained by United Kingdom manufacturers interested on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Digitized by Google

Persia.

The Commercial Adviser at the British Residency and Consulate-General at Bushire reports, under date November 15 last, that in the southern part of Persia fashions change but slowly, and the same types of goods are in demand year after year, cheapness alone affecting the market, while the requirements of the tribal folk are almost entirely restricted to the necessaries of life.

Among the goods of enemy origin said to have been in demand prior to the war are the following :—Woollen prints, very thin and of inferior quality; cotton prints of soft and superior cotton in imitation of the woollen variety; woollen and cotton yarns; Berlin wool, zephyr yarns, velvets and plushes; thin woollen mantles (to imitate the locally woven "aba"); cotton chintz, resembling Kashmir shawls in colour; safety matches of inferior quality of very thin wood; glassware, lampware, china and earthenware, including teacups, sherbert glasses, small teacups (to contain about 2 ounces of tea), thick water tumblers, tumblers with saucers, and thick glass trays; woollen socks, handkerchiefs, cotton undershirts and vests; knives, penknives, scissors and needles; drugs and chemicals; paper; linseed and turpentine.

One of the most important of pre-war imports by enemy firms was sugar from both Austria and Germany. In the year ended October, 1913, some 40,000 tons of loaf and crystal sugar, valued at £770,000, were landed from Hamburg-America steamers alone at the Gulf and Tigris ports. The total import of sugar up the Persian Gulf was expected before the outbreak of the war to rise rapidly to 60,000 tons, and of this quantity only 1,500 to 3,000 tons of crystals were expected to be British refined. The loaf sugar (beet) imported was almost entirely controlled by German firms, and since the war, the import of this sugar into Gulf ports has almost ceased.

The Post Office announces that the parcel post services to Russia, Roumania, and Persian post offices in Northern Persian *viâ* Sweden and *viâ* Norway and Sweden are suspended; but parcels for Russia can still be accepted for transmission *viâ* Canada and Japan at the rates of postage already announced.

NEWS FROM ALL SOURCES.

Messrs. Thomas Mosley and Co., Gibraltar, announce that Captain Wilfred Humphrey Mosley, son of their Mr. Alexander Mosley, C.M.G., has been admitted as a partner in their firm as from January 1.

The Egyptian *Official Journal* publishes the new Suez Canal dues, that come into force on April 1, 1916. They are 6.75 frs. (in lieu of 6.25 frs.) per ton for loaded vessels, and 4.25 frs. (in lieu of 3.75 frs.) per ton for vessels in ballast.

Sir Alfred A. Booth, Bart., who figured in the New Year's Honours List, is the Chairman of the Cunard Company, a position he has held for the last six years. He has been a director of the company since 1901, and was formerly associated with the Booth Line. He is the nephew of the Right Hon. Charles Booth.

Mr. Edward A. Cohen, head of the firm of Messrs. H. E. Moss and Co., shipowners and shipbrokers, valuers, etc., of Liverpool, London, and Newcastle, died at Liverpool on Thursday. He was often consulted by British and foreign Governments.

In Hamburg a Perso-German Economic Association has been formed to promote commercial relations between Persia and Germany after the war.

Within the last day or so the Egyptian railways have put out an inquiry for 12,000 tons of flange rails, says the *Morning Post*, but there would appear to be very few makers in this country in a position to deal with the business.

It is stated in Athens that the negotiations between Greece and the Entente Powers for a loan are progressing favourably and are nearing conclusion.

Sudan Cotton.

Mr. J. A. Hutton, Chairman of the Council of the British Cotton Growers' Association, read a lecture on Wednesday night before the Royal Society of Arts on "The Effects of the War on Cotton-Growing in the British Empire." Unfortunately the Egyptian situation was not dealt with—the lecturer evidently, and erroneously, siding with those who regard Egypt as "foreign" territory, because still under the control of our Foreign Office. His remarks anent the Sudan are, however, of some interest. After passing in review the development of cotton growing in the "Anglo-Egyptian" Sudan, he stated that it would take too long to describe in detail the possibilities of that wonderful country, but he would mention that there were five distinct and separate propositions as follows :

1. Tokar.—Good possibilities of producing 10 to 20,000 bales in the immediate future.

2. Khartoum and North.—Fair prospects for 5,000 bales or more of good quality of Egyptian cotton with further possibilities in the future.

3. Gezira.—One of the finest cotton propositions in the world. There are possibilities of raising 50,000 bales of high-class Egyptian cotton in the immediate future, and there is no reason why the production should not be increased to 250,000 bales or more within the next ten to fifteen years, with ultimate possibilities of an annual production of more than 1,000,000 bales. As I stated before, the Egyptian crop is less than a million bales.

4. Rain-Grown Cotton.—This is a proposition for the future, but there is land enough to grow millions of bales.

5. Gedaref and Kassala.—Here there are also fair possibilities of producing considerable quantities of both rain-grown and irrigated cotton.

Experimental Stations.

Referring to the two experimental stations which have been established in the Sudan, Mr. Hutton said :

"A most interesting Socialistic experiment has been inaugurated at these two stations. Lord Kitchener was much disturbed by the fact that in Egypt the cultivator, on whom the brunt of the work falls, only receives a very small proportion of the proceeds of his crop as a reward for his arduous labours. He was determined that in the Sudan the farmers should not be left at the mercy of capitalists, and I understand that he himself drew up the proposals which have since been adopted. The scheme is shortly as follows :—The total proceeds of the crop are pooled together and divided into shares. The Government provide the land and the water and receive 35 per cent. of the total. The syndicate who look after the financing, direction, and management receive 25 per cent., leaving 40 per cent for the farmer as the reward for his time and labour."

The great demand for fine cotton was next dealt with by the lecturer, who said : "Lancashire urgently requires increased supplies of cotton of superior quality. It is becoming more and more difficult to obtain cotton of suitable quality for fine yarns, and this is clearly shown in the price of Egyptian cotton. In the five years ending in 1915 the American crop averaged 14,400,000 bales as compared with 8,300,000 bales in the five years ending in 1895, an increase of 6,100,000 bales, but the average price has increased from an average of 4½d. to over 6½d. If we eliminate 1915, when the price was unduly depressed owing to the war, the average would be over 7d. per pound, giving an increase in twenty years of 1¾d. per pound. During the same period the Egyptian crop has increased from an average of about 900,000 to 1,500,000 bales of 500 lbs., an increase of only 600,000 bales in twenty years, but the average price has increased from 5¾d. to 10½d., a difference of no less than 4¾d. per pound. This means that whereas twenty years ago Egyptian cotton commanded a premium of only 1d. per pound over American, the average premium to-day is over 3d. per pound. This increase in premium is almost entirely due to the growing demand for, and the consequent scarcity of, long-staple cotton. One therefore cannot resist the conclusion that it is the duty of the Government to do all that is possible to develop every district capable of growing high-class cotton, for it is no exaggeration to state that on the success of these efforts depends the whole future, indeed the very existence, of the Lancashire cotton industry."

Future of the Sudan.

In the Sudan, the lecturer thought, we could look confidently to the prospects for the future. But, he argued, "there can be no large increase unless the money is found for the construction of the necessary works for the irrigation of the Gezira plain. No doubt after the war is over the financial position will be one of the gravest difficulty, but however much the Government may be compelled to cut down expenditure, I should consider it an economic blunder, and almost a breach of faith, if they were to go back on their promise to guarantee the interest on the loan of £3,000,000 to the Sudan Government. It should not be forgotten that this is not a mere paper scheme. It has already been proved. We have at the present time two large experimental areas in full working order, one of which has been under cultivation for nearly five years. "Experimental" is really the wrong word to use, for these plantations are respectively about 1,500 and 2,500 acres in extent, and are therefore business propositions. I am not at liberty to give you the figures, but I can assure you that these two propositions are already commercially successful, even from a purely commercial point of view. The full scheme therefore cannot fail to be a success, and it would therefore be an obviously mistaken policy to delay the issuing of the capital through any mistaken idea of economy, for I am convinced that the British Government will never be asked to find a single penny through failure of the Sudan Government to provide the interest on the loan."

COTTON MARKET.

Liverpool. Thursday Night.

Messrs. Reynolds and Gibson telegraph :—Egyptian Spot. There has been a quieter demand for cotton this week, but a fair amount of business has been reported. Quotations show an advance of ten points for Uppers and five points for other descriptions.

Estimated sales amount to 3,700 bales, as against 7,600 last week.

Manchester.

During the past week trade has been of very little importance, and still presents a hesitating appearance. Buyers for the moment do not feel inclined to pay current rates.

EGYPTIAN COTTON.

Sensational Break.

Last Friday, the *Daily Chronicle* Liverpool correspondent wrote :—"There was a big break in the Egyptian ring to-day. Futures, on Alexandrian and local bulls liquidating, dropped 10 points at a time until active months touched 40 to 44 points decline. A fair recovery followed, and the market closed steady, 27 to 29 points net decline. This collapse was unexpected, and was due to profit-taking by Continental and Indian interests.

"Alexandria selling was said to have been caused by the expectation that the high prices of cotton and favourable weather would lead to an increase in the area under cultivation for the new crop.

"The whole cotton market has been feverish and unsettled all week, with wild and erratic price movements. The height to which cotton has mounted, and the crisis in shipping, which is gravely interfering with shipments, has produced a feeling of pessimism here. There is a poor spot demand and an absence of outside interest. The bears have, consequently had it all their own way, but the future is too uncertain to say that a reaction may not ensue."

Enemy Trading in Egypt.

(From Our Own Correspondent.)

Cairo, January 18.

Apropos of remarks made in recent letters regarding the question of enemy trading, the military authorities have just published a list showing the persons, firms and companies of enemy nationality to whom licences have been granted as laid down in Article 1 of the proclamation of August 16, 1915. Three styles of licences have been issued: A, to carry on trade without special restriction, subject to official inspection of the books at any time; B, to trade in Egypt with the British Empire and with Allies of Great Britain with the same condition as to inspection of books; and C, to trade for the purpose of liquidation only. According to the notice, 346 licences have so far been issued. Under Licence A appear five names, including the Cassa di Sconto e di Risparmio, the Egyptian Bonded Warehouses Co., Ltd., and the Regie Ottomane de Tabacs; under Licence B there are 249 names, most of whom appear to be enemy-protected subjects, and so presumably entitled to this special consideration; and under Licence C there are sixty names. There are thirty-three numbers missing, presumably of licences cancelled or lapsed, and one number (256) has been duplicated.

A footnote to the Licence B list states that the Deutsches Kohlen Depot, Port Said branch, has been licensed to liquidate certain outstanding business. It is not clear why this concern was not given a C licence. Special licences have been given to the Deutsche Orient Bank and the Egyptische Hypoteken Bank to carry on business in Egypt under a controller with instructions to undertake no new business, so we may assume that those concerns will in time definitely disappear. The same feeling does not, however, exist in regard to firms like Mayer and Co., Stein's Oriental Stores, Ltd., Tiring Frères, who have been granted licences B. As these firms are, it is understood, capitalized partly with enemy capital, one would like to have some assurance that, at the end of the war, those enemy capitalists will not be able to enter again into their own. No doubt the authorities have taken the necessary steps to prevent this, but the form of licence published does not indicate this.

It is to be noted that Licence C is granted on the condition that the business done shall be only that strictly necessary to the liquidation, which is to be carried out with all due despatch and with no greater delay than may be reasonably required for the realization of the assets. It may be asked whether these conditions are being strictly adhered to by the licensees, for eighteen months seems a more than adequate period within which certain of the enemy firms could have been liquidated. It is interesting to note that the Licence C list contains the name of Boehme and Anderer, the firm to whom I referred a few weeks back as still exhibiting in its shop windows—next door to the Turf Club—German and Austrian goods with the name of the manufacturers plainly marked on them. The fact that this firm holds a licence connoting the closest official supervision of its work makes this proceeding all the more extraordinary, to say the least of it. The published list also contains a glaring omission—the name of F. Diemer and Co., the German booksellers, of Sharia Kamel. It was generally understood that this establishment—the premier library in the capital—had been ordered to liquidate under a British controller, and surprise had been frequently expressed that it had not completed its liquidation long ago and sold off its stock. Is the omission of its name to be taken as the reason this establishment is still doing business? And if it is, why has it not been dealt with long since like other enemy establishments?

BRITISH FIRMS IN BAGHDAD.

Dr. F. Johnson, writing about British interests in Mesopotamia in the *Church Family Newspaper*, says:—

"British commerce is represented at Baghdad by a few well-known firms. The longest established is that of Messrs. Lynch Brothers, with which is associated Stephen Lynch and Co. The former has the direction of the Tigris and Euphrates Steamship Company, the pioneers of steam navigation in Mesopotamia, whose boats now ply between Busreh and Baghdad.

"Messrs. Blockey, Cree and Co. do a large trade in various goods, a special line of late being the importation and fixing of oil engines to pump water from the river and replace the primitive Arab methods of irrigation.

"David Sassoon and Co., of Manchester, have an important branch at Baghdad. Cotton piece-goods find their way into the country in considerable quantities through this firm.

"McAndrews, Forbes and Co. is an Anglo-American firm engaged in the liquorice trade. Liquorice grows wild in Mesopotamia, and large quantities of the root are exported to America.

"The shipping firm of Strick, Scott and Co. has recently opened an office in Baghdad, and is in the initial stage of developing a large trade in petroleum, to be brought up from the Persian oilfields.

"In 1911 engineers belonging to the firm of Sir John Jackson, Limited, came out to construct the great Hindia barrage on the Euphrates, and made Baghdad their headquarters. This work was completed in 1913, but is only the first step in the carrying out of Sir William Willcocks' great scheme for the irrigation of Mesopotamia. For the past thirty-two years the Church Missionary Society has had representatives in the city of Baghdad.

Reuter's Agency reports from Rotterdam that it has been arranged that a Dutch steamer will sail to the East Indies round the Cape once in every ten days. No goods, but only passengers and mails, will be taken to South African ports for the present. The passenger rates to South Africa will be identical with those of the Union Castle Line.

Engineering Notes.

Forthcoming Trade War.

Mr. Runciman's speech in the House of Commons, to which reference was made in our engineering notes last week, has given occasion for the opening of an interesting discussion in the Press on the question of what is needed for the defence and improvement of British trade during and after the war. Some of the arguments put forward, especially those referring to the engineering industry, are of a more or less academic character, ignoring, apparently, the existing rules and methods which control workshop practice and which often lead to restricted production. But one of the periods of Mr. Runciman's speech which seems to interest a wider circle is that in which he insists on the improvement of our research methods and his suggestion that "we should not attempt to economise on the money we now spend on the technical colleges and modern appliances." These suggestions of the President of the Board of Trade are, of course, very important and must be carried out; for with the continuous discoveries that are being made by the aid of modern science the improvement of research methods is indispensable in order to retain efficiency. The same may be said against any attempt to economise on the expenses required for the efficiency of technical colleges and modern appliances. Moreover, in the various articles which have appeared in the Press this week it has generally been suggested that new institutions for researches should be established, that there should be created a Ministry of Science or new departments in existing ministries, also new technical colleges, implying a radical reform of existing colleges, etc., etc. On the other hand, several writers suggest that existing colleges and institutions are quite efficient for the training of men for industrial and research purposes, but that British manufacturers are not sufficiently interested in the facilities which such institutions offer for their benefit. The argument of the latter regarding the sufficiency of existing colleges and institutions is quite correct, and these, apparently, Mr. Runciman had in mind when he referred to what is mentioned above, but as to the lack of interest on the part of manufacturers, the imputation is unjust, for there are many men who obtained in these institutions an excellent training in science and scientific methods, and who hold prominent industrial positions in Great Britain, the Colonies, and other countries. Other faults, such as conservatism in the methods of distribution, lack of individual and joint efforts in trade competition may be attributed to the British manufacturer, but, at the same time, it must be remembered that he is the most handicapped master of industry in the pursuit of his vocation. He is handicapped by the excessive rules of trade unionism; and it is a question whether some of the methods suggested for aiding production could be adopted without contention from trade unionism.

Influence of Trade Unionism.

In an article entitled "A Nation of Workers," which Mr. H. E. Morgan, the right hand of Mr. Lloyd George in the Ministry of Munitions, contributes to the *Edinburgh Review*," the writer says:—"Not only shall we have to develop our overseas trade, but to develop it in the teeth of such competition as we have never had to face before." Mr. Morgan admits that "the attitude of trade unions may largely determine our position in the future," pointing out that "the worst feature of trade unionism, in practice, if not in theory, is the deliberate limitation of the productiveness of the individual worker. The spirit which governs employment of labour has not yet been sufficiently divorced from the spirit of greed. More co-operation and greater sympathy between employer and worker are absolutely essential." But apart from the writer's remarks, it has been admitted by foreign trade competitors that the greatest blow to British industry was dealt when the trade unions were were allowed to get their hands into works management. The "shop-steward" is the curse of masters and men alike, for his mission really is to see that every man does the smallest possible amount of work spread over the longest possible number of hours. No industrial system can survive the blighting influence of such practices. And if such practices are not discontinued it is very doubtful whether any proposed organisation, or the improvement of methods, educational or other, could be of any avail in the forthcoming commercial struggle. In closing these notes we may ask the manufacturers why do they not take part in the discussion, since almost all letters appearing in the press suggest a remarkable apathy on their part? It is hoped that they are not influenced by the dreamy suggestions that are often put forward that with victory in war we shall secure victory in trade. The words of Mr. H. E. Morgan, referring to competition after the war, should be noted, particularly by manufacturers.

Oil Fuel on Roumanian Railways

An American contemporary states that for the past few years the consumption of liquid fuel on the Roumanian railways has been steadily increasing, and though the figures of consumption for the past year do not reach those for the preceding twelve months, it must not be inferred that the use of oil fuel for the Roumanian State locomotives has reached its zenith. As a matter of fact, the opposite is the case, for the decrease for the past twelve months in the consumption is explained by the reduced traffic upon the lines owing to the European war. During the twelve months the engines consumed about 198,000 tons, which is a decline of just over 6,000 tons when compared with the figures for the preceding twelve months. To-day no less than 85 per cent. of the locomotives on the Roumanian railways use liquid fuel in preference to coal, there being 751 engines regularly using oil out of a total of 873 working on the various State railways. The value of the consumed oil for the past twelve months is estimated at about £260,000, which is admittedly a low figure.

SUDAN COAL.

The Sudan Government Railways announces the addition of a surtax of 10 per cent. to the ordinary freight rates on the Sudan Government Railways, which takes effect from January 1, 1916. The reason for this increase is the increased cost of coal brought about by the war. The price of coal delivered at the Sudan has reached twice its former cost; and it is only fair that the railway administration, who have now to pay such high rates for the coal they consume and whose traffic expenses have, therefore, increased, to increase the freight rates; otherwise, they would be running the railways at a loss. The increase of the freight charges will naturally increase the cost of goods exported from the Sudan or imported to it, and will thus tend to a rise in the prices of the former and a decline in the prices of the latter. But this rise and fall will hardly be appreciable, says the *Egyptian Gazette*. In the cases of valuable goods, the freight of which bears a small ratio to their cost, the surtax will mean only the increase of a fraction per cent. of the cost. But even in the bulky and cheap goods, the freight of which stands at a large ratio to the cost, the surtax will hardly mean more than an addition of 2 or 3 per cent. to the cost.

The quantity of coal imported into Alexandria in 1914 was 1,147,678 tons, as compared with 1,390,860 tons in 1913, and 1,311,092 tons in 1912. In these totals, imports from the United Kingdom figured for 1,024,500 tons in 1914, 1,222,082 tons in 1913, and 1,174,387 tons in 1912. The value of the coal imported into Alexandria in 1914 was £1,365,956, as compared with £1,651,478 in 1913, and £1,287,436 in 1912. In these totals, the value of British supplies figured for £1,206,730, £1,436,143, and £1,136,358 respectively.

NEAR EAST MARKETS.

SUDAN CATTLE TRADE.

(From Our Own Correspondent.)

Khartoum, January 7.

An outbreak of disease amongst the cattle in the quarantine station at Khartoum has made an inevitable pause in the very brisk export that has been continuing for some months of Sudan cattle for slaughter. In out stations there seems to be no similar trouble, and possibly this is an isolated case that has contrived to slip through the cordon maintained by the Veterinary Department, within which no cattle may come till they have been thoroughly examined.

PRODUCE REPORT.

London, January 27.

Currants.

The market has been fairly active this past week, and prices are very steady, with inclination, in some instances, to be dearer. Provincial is quoted 38s. to 40s., Amalias 41s. 6d. to 44s., Gulf 44s. to 48s., Patras 44s. to 47s. Vostizza 44s. to 51s., Zante 40s. to 45s., and smalls 40s. to 48s.

Sultanas.

There has been a fair demand with good business passing in Afghanistan and Indian fruit at late rates. There has been no business in Greek fruit, which is still held at the recent high prices.

Figs.

There is no demand, and holders seem inclined to accept slight reduction; but, apparently, the available supplies now in the market do not interest buyers.

Dates.

There is very little demand with small business passing, mostly in Persian at 15s. 6d. to 22s. 6d., while Egyptians are quoted 35s. to 38s.

Seeds.

Linseed is cheaper, but quiet. London-Calcutta spot is offered at 80s. 6d. buyers 80s., afloat ditto. La Plata to Hull, Jan.-Feb., realised 74s. 7½d.; Feb.-Mar., 74s. 7½d., with buyers at 74s. 9d. for March-April. Rape-

Digitized by Google

seed is not offered, hence prices are only nominal. Cottonseed remaining quiet. London-Egyptian is quoted at £14 spot and £15 loading.

Oils.

Linseed oil is easier. Spot pipes are quoted £42 2s. 6d.; barrels £42 2s. 6d.; month £42 12s. 6d.; Feb.-April £43 5s.; May-Aug., £45 15s. Rape oil is steady. Ordinary brown naked spot £25, and English refined barrels £54 to £56. Cotton oil is steady, but rather quiet. Ordinary brown naked spot is quoted £45 5s.; refined pale pipes £51; and barrels sweet £52 to £53. Olive oil remains inactive, but prices remain as reported last week.

Oilcakes.

Linseed cakes.—Owing to a remarkable falling off in demand, holders seem inclined to accept reduced prices in order to effect sales. Best London made is quoted £13 5s. to £13 7s. 6d. East Indian seed pure is selling at £13 to £13 5s. per ton. Cotton cakes.—There is a scarcity of Egyptian on spot, and prices remain the same as reported last week. English is slightly easier at £10 7s. 6d. to £10 10s., and Bombay £10 per ton.

Locust Beans.

There is a scarcity of all kinds, and an entire absence of any offer of Cyprus. Prices are only nominal.

EGYPTIAN COTTON PROSPECTS.

A leading Alexandria house, writing to Liverpool firms, says that the prospect of the growing of a large Egyptian cotton crop next year is not considered as very favourable. The very high prices for wheat and other foodstuffs are likely to be an inducement of a voluntary decrease of the cotton acreage. Beyond this, there exists a good deal of apprehension on account of the state of irrigation canals, which have not been cleared at all this year, and the very high prices for coal and chemical fertilisers. Coal is now to be got at a price four to five times higher than its normal cost, and quite prohibitive for a sufficient irrigation, aggravated as it will be by the bad state of the canals.

Government having enforced this year for the first time the destruction of the cotton sticks which usually substituted coal to some extent for the working of the water-lifting machines, this fact perplexes further the irrigation problem. There exists also, says the *Liverpool Daily Courier*, a good deal of apprehension owing to the rotten state of seed, and, the climatic conditions having so far been particularly mild, a late winter might prevent the earlier planting of cotton.

A branch of the Banco di Roma has been opened at Port Said, and M. di Castro has been appointed manager.

PORT OF RENI.

(From Our Own Correspondent.)

Bucharest, January 10.

The port of Reni, closed for some time on account of the massing of troops, has now been re-opened for the passage of goods and passengers. The Russian steamer Caserinor runs between Galatz and Reni three times weekly as long as navigation is possible.

COAL FOR GREECE.

An agreement has been reached in principle on the question of the supply of coal to Greek industrial enterprises, says a Reuter message from Athens. The British Government has consented to authorise the export of coal for the use of railway and other companies in Greece, in proportion to their needs, and also for the use of the Greek Admiralty for the needs of the fleet. In addition no difficulties will be placed in the way of the export of coal from America to Greece.

In virtue of a judgment of the Alexandria Mixed Courts, the liquidators of the Bank of Egypt, Limited, have been authorised to sell by public auction the estates of Moheb Pasha, formerly Minister of Wakfs. These estates are situated at Mehalla Kobra and consist of 340 feddans. The upshot price is £E200.

Turkey's Finances.

(From Our Special Correspondent.)

Athens, January 12, 1916.

The financial position of the Turkish Empire, never brilliant, has now, thanks to the Germans, reached a stage of practical bankruptcy. The Germans are evidently no longer able to supply their Ally with funds, and the Turks are, therefore, forced to resort to the issue of more paper money to meet pressing requirements.

New Notes.

When the Minister of Finance presented the budget for the year 1332 to the Chamber, he mentioned that a further issue of notes to the value of £T.6,000,000 would be made. These notes are now being put into circulation, but no details of this financial transaction have appeared in the Press beyond the statement that the notes would be guaranteed by the Administration of the Public Debt, but against what security this guarantee would be given is not stated.

It will be recollected that when the previous issue of paper was made last May, it was asserted that the equivalent in gold had been deposited in banks in Berlin and Vienna. The present notes differ from the previous ones in the inscription at the back, and the colour is also somewhat different. The inscription on the first lot stated that the countervalue in gold had been deposited, and that they are payable six months after the conclusion of peace, but the new ones state that the countervalue ("Karshoulouk") has been deposited at the Public Debt and that they are payable at Stamboul one year after the conclusion of peace in Turkish liras, but the word gold is omitted. They are signed by Djahid as President of the Administration of the Public Debt, and dated 18 Teshrin, Evel 1331 (October 31, 1915).

The first notes were signed by Djahid Bey, as President of the Public Debt and also by the Austrian Delegate, but on this occasion the signature of the latter is apparently missing.

The object of making it appear as if these notes had been issued by the Public Debt is doubtless, firstly, to give them an appearance of greater security, and, secondly, to make that administration responsible for their payment after the war.

Scarcity of Gold.

Gold is becoming scarce in Constantinople, and silver coin also, to such an extent that only five medjidiehs (or 100 piasters silver currency) are obtainable at a money changer for a Turkish lira, against the normal exchange of 108. The medjidiehs are evidently being hoarded in the same way as gold. This scarcity of silver currency has not only produced much inconvenience to the public, but means a loss of almost 8 per cent. on the normal currency, an additional burden to the populace already faced with a daily increase in the cost of everything.

With the object of finding a remedy for this shortage of small currency, the Minister of Finance recently called a meeting of the managers of the Imperial Ottoman Bank, the Deutsche Bank, the Wiener Bank, and the Deutsche Orient Bank. The following two decisions were arrived at: Firstly, that a portion of the new notes which still remain to be printed should be issued in halves and quarters of a lira; secondly, that until these arrive, a certain number of the one and five lira Government notes now in circulation should be cut in half at the Public Debt and put into circulation by the banks; and, thirdly, that the nickel coins of a quarter, half, and one piaster should be issued to the public at the rate of 108 piasters to the lira. It is also proposed to coin more Medjidiehs to the value of £T.300,000.

Under the influence of the Germans, Enver, Talaat, and Co. have burdened Turkey with debts, the liquidation of which will be a difficult problem.

Apart from the above paper money, which will be worthless when the war is over, and which will involve loss to the holders of it, Germany must have large sums to receive for war material, etc., etc., as well as the value of the German steamers employed by the Turks and destroyed by the Allies, but, in addition to all this, Turkey's liabilities for "requisitions" must reach a very large figure.

War on Credit.

Turkey has been conducting her war on credit. She makes practically no cash payments, and whatever requirements are obtainable in the country are requisitioned against a scrap of paper, and oft-times even without.

There can be few Christian merchants or tradesmen in Constantinople who have not been victims of this robbery, for of late requisitioning has developed into a shop-to-shop visit to obtain money or the equivalent in kind, whatever may be the nature of the shopman's wares.

The Turkish mercantile fleet has been practically completely wiped out, and the Turkish flag flies over very few ships nowadays. Turkish shipowners succeeded in obtaining the appointment of a commission to assess their losses, but that is about the extent of the redress which they are ever likely to obtain, unless they are clever enough to lay their hands on the private fortunes of the Young Turks.

TURKEY IN WAR TIME.

The *Daily Mail* published yesterday a remarkable article from the pen of the "Man who Dined with the Kaiser"— a correspondent who has been travelling through the Balkans and Turkey. We reproduce below some observations made by the writer whilst living in Constantinople and other Balkan capitals:—

The "Balkan Express."

"The 'Balkan Express' (Berlin-Constantinople) is probably the handsomest train in Europe, and has been designed beyond doubt by the Germans for the purpose of impressing the thousands of people who see it twice a week on its way between Berlin and Constantinople. It impresses and alarms the Turks as a proof of German efficiency. It impresses and delights the Germans, Austrians, Hungarians, Bulgarians, and the rest of the people who see it on its journey. Its name is blazoned in three-foot letters on each wagon. Engine and carriages are decorated with flags and flowers. Every passenger wears a German flag, with the words Balkan Zug and the date, in his buttonhole. On the day in which I travelled in it, it consisted of four sleeping-cars, one dining-car, and one ordinary first and second-class carriage. The food, doubtless for advertising purposes, is infinitely better than that to be had in Constantinople, Vienna, or Berlin. Here, at any rate, one is free from the tiresome bread ticket. For a mark (a shilling) I had an early breakfast of coffee, rolls, butter and marmalade *ad lib.*

Foodless Constantinople.

"But Constantinople is a very different story. In Constantinople one realises the war pressure more than in any of the great capitals in the war zone that I have yet visited. I had been there a few months before, but to-day things are much worse. The dearth of the necessities of life is now of an alarming nature.

"On my way through Constantinople I stayed at the Pera Palace—electric light reduced to a solitary bulb here and there, no gas, bad food, bread tickets, or, rather, bread books, the bread practically uneatable, and the hotel swarming with German officers grumbling bitterly at the fare, but all talking of Egypt. At the Continental, where I stayed on my return from Asia Minor, things were even worse.

"The condition of affairs approaches famine. The electric tramway-car service has now practically disappeared. In the matter of prices I took careful notes. Sugar is 5s. a lb., coffee 6s. a lb., and the Government have advanced even the price of cigarettes about 40 per cent., and anybody who knows Turkey will understand what that means to a people who smoke practically all day long. Matches are 3d. a box. Of paraffin oil none is left. Chocolate is finished. Cheese is unobtainable, apart from the horrible Turkish kind. Mutton has advanced 40 per cent., and beef cannot be had. The small Turkish eggs, which were four a penny seven months ago, are now 2d. each. There is no rice. Fish, of course, is as plentiful as usual.

"When I was in Constantinople seven months ago there was comparative gaiety in the city. It is extraordinary to see the difference that has been made by the absence of electricity and gas. It has at once closed theatres, cafés, kinemas, and all other places of amusement. Nearly all the shops are closed. With the cutting off of the coal supply the whole life of the city has thus been destroyed. The only means of getting about at night is by the aid of electric torches, the very smallest of which cost me 8s.

The Money Question.

"The money question in Turkey is in a most extraordinary position. Seven months ago gold was given at banks in return for cheques. To-day there is a shortage not only of gold, but of silver, and the official Turkish paper money. There has been substituted a kind of Turkish £1 note. Taking the Turkish pound to be worth 17s. 6d., these new £1 notes only realise about 12s. 6d. each.

"For example, when I bought my railway ticket at the station at Stamboul for the Balkan express the clerk made me pay £15 in paper money for it, although its price is £12. As showing the economy of the Germans, the tickets are the old sleeping-car tickets in French, with the words 'Balkan Express' printed across them in English."

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

CONTRACTS IN EGYPT.

The Colonial and Mutual Life Insurance Co., Ltd., the head office of which is in London, was recently ordered by the Alexandria Civil Court to pay the widow of George Yatroudakis the sum of £1,000, as insurance money payable at the death of her husband, who resided at Port Said. The company has appealed against this, urging that as the deceased has been a resident of Port Said, the Alexandria Court was not competent to deal with the case. The plaintiffs contend, on the other hand, that the company has a branch at Alexandria, at the offices of Edouard Suares and Co.

It appears, however, says the *Egyptian Gazette*, that the latter contention does not hold, as Messrs. Suares only cash instalments of policies, the receipts for which are issued and signed in London by the manager of the company.

The Court of Appeal in its judgment states that in all matters of contracts, foreigners who are not residents in Egypt cannot be assigned before Mixed Courts except when it has been stipulated that the contract must be executed in Egypt.

The contract in question was concluded by correspondence; thus, the place where the contract was signed and accepted is the place where any litigation must be settled. This was in London. The Court of Appeal also points out that in case of any stipulation to the contrary, debts of the nature in question are payable at the offices of the debtor. Thus, payment must be made in London. For these reasons, the Court of Appeal has quashed the judgment issued by the Lower Court, stating that Mixed Courts are not competent to deal with matters concluded with the Colonial and Mutual Life Insurance Co., Ltd., unless there be a special local clause.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for week, 53 tons, recovered from sediment. Gemsah production for last week, 162 tons (including 95 tons recovered from sediment). Hurgada production for the week, 397 tons (last week, 2,286 tons). Last report of Hurgada well No. 7 is that there are periodical blows, producing on 21st inst. 10 tons, on 22nd inst. 15 tons, on 23rd inst. 10 tons.

CREDIT FONCIER EGYPTIEN.—The annual general meeting of shareholders will be held on January 31 at Cairo.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the eleven days ended December 31 amounted to £E7,977, as against £E6,716 for the corresponding period of last year.

EGYPTIAN MARKETS.—Coupon Serial No. 22 on share warrants to bearer for an interim dividend declared of 4 per cent., less income-tax, for the year ended December 31, 1915, will be payable on and after January 31 at the Anglo-Egyptian Bank.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for December, 4,754 tons. Production for week ending January 1, 723 tons, for week ending January 8, 873 tons, and for week ending January 15, 815 tons. A fire occurred on Moreni field on 3rd inst., but was speedily extinguished, only four of our derricks being burnt. Production of whole field is temporarily interfered with; damage in course of being repaired. Hope to resume normal production in two or three weeks.

SUEZ CANAL.—Receipts for the 24th inst. amounted to 360,000 frs., against 300,000 frs. for the corresponding day last year.

PRICES IN BULGARIA.

The prices of various commodities, especially foodstuffs, have increased enormously in Bulgaria, says the *Times* Correspondent in the Balkan Peninsula. The Germans are eagerly buying up cereals, meat, fowls, eggs, etc. A considerable amount of gold comes into the country, but a food crisis is feared, especially as Turkey is also buying provisions. The Turks, who anticipated large supplies from Bulgaria, are indignant at the extent to which the Bulgarian market has been drained by Germany.

GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to November 30, 1915 (New Style: January 14 to December 13, 1915):—

—		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross Receipts, Oct.,	1915	2,718,555	1,571,000
Do. do. do	1914	2,925,270	1,863,637
Estimated Receipts for 11 months (Law of Contrct)		26,491,666	9,808,333
Actual Receipts, 11 months,	1915	32,885,005	21,786,887
Do. do. do.,	1914	33,563,086	24,518,491
Difference between estimated and actual receipts for 11 months	1915	+ 6,393,339	+11,978,553
	1914	+ 7,071,419	+14,710,158

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate of the month is above par the conversion is made at that average rate.

ENEMY TRADE IN THE BALKANS.

The Berne correspondent of the *Morning Post*, writing on January 18, stated that for the further development of the Austro-German commercial *rapprochement* the Hungarian Association of Commercial Travellers will send representatives at the end of January to visit German commercial industrial cities to get into personal touch with German merchants, manufacturers, and chambers of commerce, with a view of furthering commercial relations between Hungary and Germany, the Balkan States, and Turkey.

The running of the Balkan express from Berlin to Constantinople is greeted throughout Germany and Austria as an event of the greatest importance to the Central Powers. The German Press describes the inauguration of the train service as a notable advance in the successful protection of Germany's Balkan policy, while the Austrian Press sees in it a step towards the attainment of the ideal of a Central European Union. At all stations, which were decorated where the express on its initial run on January 15 stopped, deputations of magnates met it, and speeches were delivered.

NOTES OF THE WEEK.

Such news as there is from the Near East this week is mainly of a negative character. While the Austrians are consolidating their hold on Montenegro—it is still difficult to determine precisely the official status attaching to the surrenders that may be taking place—the Allies are settling down at Salonika and overcoming the initial drawbacks of an anomalous situation. Perhaps the most interesting development is the more thorough effort now seemingly being made to cope with the submarine menace. Some days have elapsed since one of these craft has been able to claim a victim in the Eastern Mediterranean. In the meantime, the work of eliminating their bases is being carried out systematically. On January 28 the Greek fort at Kara Burnu, at the entrance to the Gulf of Salonika, was occupied by the Allies. The reason for this step was stated in the French *communiqué* to be that it was impossible any longer to allow enemy submarines to navigate with impunity within range of the Kara Burnu batteries. Again, the occupation of Xantophiel, a small island opposite Castellorizo, and the arrest of a German at Retimo, in Crete, were no doubt undertaken with the object of checkmating submarine activities in the Southern Ægean.

While the grip of winter hinders land operations in the Balkans, aerial warfare is being waged with some persistency on both sides. The bombardment of Monastir by a large French squadron was followed by a further attack on the Bulgarian position near Doiran. By way of reprisal, a Zeppelin visited Salonika in the early morning of February 1 and dropped bombs in the usual indiscriminate way. A score or more of people were killed or wounded, the majority of them civilians, but no damage of military importance was done. In contrast to the blind methods of the Zeppelin, which is concerned more with keeping at a height that ensures its safety from gunfire than with accuracy of aim, a raid, carried out on January 25 by Austrian aeroplanes over Durazzo, achieved a definite military purpose. A bomb is said to have destroyed a house in which were lodged a number of Serbian officers, some twenty of whom, it is declared, were killed.

The future of Albania has been provided for by the Central Powers. It is to become, according to the *Volkszeitung* of Cologne, an Austro-Hungarian protectorate. The advantages of such an arrangement leap to the eye. Albania cannot stand alone yet as an independent State; it needs a guiding hand during the period—which may possibly prove of long duration—of political upbringing. Its troubles in the past were due to Italian intrigues. True to her policy of the Balkans for the Balkan peoples, Austria-Hungary will help the Albanians to work for a real and complete independence—presumably, though the writer does not add this, on the lines which have rendered the Government of the Dual Monarchy so popular in the past to all its subject peoples. The heterogeneous nature of Austria-Hungary, it is pointed out, will be a strong recommendation to the Albanians, who cannot be attracted by the example of a rigidly organised national-state, such as modern Italy is. It remains to be seen whether recent Austro-Hungarian history is better known in Albania than it is in Cologne.

Meanwhile, the actual situation in Albania remains obscure. What would seem to be established is that the Austrian and Bulgarian forces are not able to overrun it as rapidly as they had expected. Durazzo will be their first objective, but Essad Pasha has still to be reckoned with, and the delay in the enemy's advance has given the Italians time to formulate plans with him. For the present the Italians are on the defensive; but Essad Pasha's following can be relied upon to adopt the guerilla warfare which can be terribly effective against an enemy operating at a distance from his base. It would be a mistake, however, to regard the situation in Albania as satisfactory. If the military efforts of the Central Powers are to be correlated to their political ambitions, we may expect to see an attempt to penetrate to Southern Albania. Italy in this connection remains an unknown factor. The decision to defend Valona is understood to have been taken, and a decree has been published conferring absolute powers on the commander of the Italian expedition in Albania; but offensive tactics on a large scale are now required, if a final check is to be administered to the enemy's advance.

Due recognition must be given to the part played by Italy in the withdrawal of the Serbian troops from Albania. She provided most of the shipping and escort necessary to transport across the Adriatic the food supplied by Great Britain and France. To facilitate the progress of the Serbians the British Adriatic mission had to make itself responsible for the repairing of roads and the construction of bridges and ferries. The requisite material was obtained from Italy, and the work was carried out by British engineers, Serbian pioneers, and Albanians, under the direction of British officers. At Durazzo and Valona, as we learn from the Rome correspondent of *The Times*, British and Italians worked together, and it was left to the Italian army to make jetties, unload ships, and convey the food from the base depots to the Serbians.

It is natural that the meeting between the German Emperor and King Ferdinand at Nish should be connected in the public mind with the delay on the part of the Central Powers and Bulgaria to deal with the menace which the presence of the Allied forces at Saloniika interposes to their schemes for conquests in Asia. The explanation that finds most favour is that the honours bestowed upon King Ferdinand were intended to galvanize both him and the Bulgarians to further efforts in the Balkans. A campaign of indefinite duration can have little attraction for the Bulgarians, and, although King Ferdinand must know that his only chance now lies in carrying out German orders to the last syllable, he will be shrewd enough to play off popular feeling in Bulgaria to the best of his ability against any further sacrifices for the German cause. The banquet at Nish would be intended to convey to the dull Bulgarian intellect a sense of the greatness of Bulgaria's new "world-position," and thus to render him more willing to play his part in its maintenance. It is becoming more and more apparent that Germany's scheme in the East can only be carried out by means of long-sustained efforts on the part of both Bulgarians and Turks. We may look, therefore, for a variety of measures which German contempt for the Oriental mind may suggest as useful means to this end.

The latest news from Mesopotamia is the most heartening that has been received for some time. True, it does not hold out any prospect of the early relief of General Townshend's force; but it represents its plight as being less hopeless than was feared. On the withdrawal of the Turks from their trenches on the north-west of Kut, which were exposed to the floods, a British reconnoitring patrol was able to advance 1,200 yards and fill up the intervening trenches. The fact that fifty dead Turks were found in one place, the victims of British gun fire a few days previously, when the enemy was flooded out of his nearest trenches, indicates that General Townshend has not yet wholly exhausted his ammunition. It is to be hoped that food supplies also remain "sufficient," although the term used many days ago may even then have covered an uncomfortably long period of shortened rations and general privation. An official statement from India mentions that General Aylmer's force holds a strong position on the Tigris, but repeats the previous report that the floods render a forward movement impracticable. The emphasis on the safety of the relief expedition is satisfactory, and probably necessary in view of the fears aroused by the failure to publish any details of the last engagement on January 21, when the British losses were admitted to be "heavy." It is to be feared that General Aylmer stands in need of strong reinforcements just as much as of an improvement in the weather conditions before he can resume his advance for the relief of Kut. The enforced delay should have enabled him not only to make good his previous losses, but to accumulate a large enough force to render it impossible for the Turks to bar his way to Kut when once the floods have abated.

The Russians are once more up against the outer line of defence of Erzeroum, known as the Deve Boyun. The strength of this position and the necessity for making good their rapid advance will probably leave us for a little time without much news from this region. In summing up the result of the recent operations an official statement says that the Russians have dislodged the enemy from a region forty miles long, which had previously been organized by him, and have come down from the mountainous regions with a very severe climate into regions that are well populated, easily accessible, and suitable for the encampment of troops for the winter season. To prevent the Russians taking full advantage of these new conditions will be the immediate object of the Turks; hence the counter-attacks that figure almost daily in the Russian reports. There is also a good chance that Erzeroum will be completely isolated from Mush, the second main depôt of the Turks in Armenia. If this should happen, we may expect to see the Turkish higher commands concentrate all their efforts on the relief of Erzeroum, to the exclusion of other schemes which may be nearer to the hearts of their German overlords.

No fresh light has been thrown during the past week on the situation in Persia. In the district between Kermanshah and Hamadan the Russians appear to have achieved some minor successes, which have had the effect of checking the advance of the Turkish force that was reported to have occupied Kangavar. The absence of Turkish *communiqués* on the fighting on this front justifies the inference that the invaders have had to withdraw from some of the ground they had previously occupied.

The stronger the defences of Egypt the greater the equanimity with which the British Government can view the outcome of the German and Turkish efforts to make their joint military operations subserve German military interests in Europe and Turkish political interests in Asia. Thus whether the whole of Turkey's strength is to be retained for Asia, where it must be divided between two or three fronts, or whether she must spare a further contingent for a campaign in Europe, the object of Great Britain must be to leave Egypt equal to any emergency, and not relying on the hurried despatch of reinforcements to meet a threatened invasion. To attain this end, without having to keep too large a force idle in the country for an indefinite period, the defences of the Canal must be so planned that they require a minimum number of troops to man them. For many months after the attempted invasion of a year ago the need for economising troops does not appear to have been appreciated, and Egypt relied for its protection more on numbers and less on mechanical and artificial devices than should have been the case. Within the last two months all this has been changed. It has been realised that if the Suez Canal is to play its full part in the defence of Egypt it must be defended itself, and there is reason to believe that the whole system of defence has been remodelled. Not the least important in the measures adopted for this purpose is the step taken on January 20, when all reservists in the Egyptian Army, with the exception of those employed in Government departments, were called up for service in connection with the defence of the Canal. They will, of course, not be employed for fighting purposes.

The death of the Turkish Heir Apparent, Yussuf Izz-ed-Din, in circumstances which are labelled suicide, comes at a time when it is impossible to gauge its precise significance. On one point, however, there can be little doubt his death constitutes a loss to Turkey, for he was an enlightened Prince, and, as he was credited with some strength of character, his presence at the head of a new Turkey after the war might have proved of lasting benefit to the nation. There have been reports of a breach between Prince Yussuf and Enver Pasha since Turkey entered the war; and it is, therefore, no surprise to find that the theory of suicide is not generally accepted. But whether he died by his own hand or was murdered, his death indicates that all is not well in the domestic affairs of Turkey.

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, January 15.

Salonika Resumes its Sloppiness.

After a short spell of bright, sunny weather Salonika has resumed the slushy, sloppy, muddy and cold aspect which it bore a few weeks ago. This week is ending with a downfall of sleet and rain, and the temperature has fallen very low. I do not refer to this threadbare topic in default of anything else to write about, but in order to remind our friends at home of the sufferings of our brave soldiers in the Balkans. Some of them are already inured to cold and exposure through hard experience on the Western front, but others who have not passed through such a preparation, and especially those who have just come from Egypt and India, are having a cruel time. But all, without exception, are wonderfully bright and cheerful under these trying conditions, and as I sit in my room this chilly night I can hear evidence of Tommy's cheerfulness from an adjoining camp. He sings "God Save the King," "Auld Lang Syne," and "Tipperary"; but that is not all. He is on the best terms with his French brothers-in-arms, and the songs of Old England—and Scotland—are frequently varied with the strains of the "Marseillaise."

The Gentle Art of Fleecing.

I referred in my last letter to the efforts of the shopkeepers and itinerant vendors to secure the custom of the British and French soldiers, and the extent to which our language is being used—and murdered—in the process. What I particularly wish to call attention to now is the scandalous way in which the Salonikians are fleecing our men. For example, Tommy orders a bottle of beer, drinks it, and *then* asks the price. The seller, knowing that the goods cannot be returned, asks just what he pleases. The other night I heard one of our men protesting to his comrades that his bottle of beer had cost him 2 fr. The usual price is 6d. Of course, matters are better managed in the canteens established at the various camps, where the tariff is fixed by the British officers in charge.

Theft of Stores.

Salonika is full of thieves as well as spies. The British have landed an immense quantity of foodstuffs and are employing a little army of refugees and others to handle the goods and stack them up in huge piles in the open air. Sometimes a case gets broken and the contents mysteriously disappear. Then Tommy himself sometimes gets tired of the eternal bully beef and barters his rations for something he likes better. In this way a considerable quantity of corned beef tins and other eatables have found their way to the shops of the local grocers, and are there sold at a very low figure. Although I have no desire to encourage this sort of thing, I am still human and sometimes hungry; so the sight of Libby's corned beef at 6d. for the 12-oz. tin was too much of a temptation. I therefore bought a few tins and consoled my conscience with the delightful legal fiction that they had been obtained in "market overt." The price of similar tins in Athens is about 2s.; what they cost in London I don't know. Of course, soldiers are severely punished if they are found selling their rations, but it is impossible to prevent it altogether. I understand, however, that extra precautions are now being taken to stop this traffic in army stores.

The Spy Hunt.

Many spies continue to be quietly arrested and shipped away to various destinations, but an immense number of undesirables still remain. In fact, every person who is not in uniform is looked upon with suspicion. A few days ago the correspondent of a London newspaper who called at the British Headquarters was taken upstairs and handed over to the guard by a stupid and excited sentry. He was, of course, immediately released and an ample apology was subsequently made. On making the acquaintance of a British soldier I have myself been asked more than once, "Why are you not in khaki?" Indeed, our men have been warned to be very chary of speaking to any civilian unless they know him well. A perfect knowledge of English is not always a sufficient indication of one's innocence. A Red Cross officer told me the other night that while engaged on the Western front he had as fellow-worker—in the regulation uniform—a very clever man whose English was beyond suspicion, and who could even use the Scottish dialect. A wounded soldier was brought in, and the clever one at once proposed to perform the slight operation necessary. This being against the British regulations, my informant became suspicious, and said: "Very well, but let us first tell that officer over there." He then conducted the would-be operator towards a picket and communicated his suspicions quietly to the officer in command. The man was at once searched, when he was found to be a German medical man with plans and other damning documents in his possession.

The Press of Salonika.

We have a host of newspapers in this city in Greek, Judæo-Spanish (Hebrew characters), Turkish, French, and even English. The English production is called the *Balkan News*, and both its English and its news might be greatly improved. It is a poor effort. The leading and most reliable French paper is the *Independant*. It is an evening newspaper friendly to the Entente. There are also two French pro-German rags, called the *Nouveau Siècle* and the *Courier de Salonique*. These contain material manifestly "made in Germany," and their leading articles, under flaring headings, are mainly confined to the threatened sweeping of the Allies into the sea at Salonika and the much-advertised expedition against Egypt. Their telegrams are mostly of the veracious "Wolff" variety. The two Greek evening papers are the *Angira* (Anchor), Ententist and Venezelist, the anchor being the Venezelist emblem. The other is the *Nea Alithia* (New Truth), which usually promulgates a decidedly new kind of "truth," of German manufacture. The most popular morning paper in French is *L'Opinion*, which is favourable to the Allies. The leading Greek morning paper is the *Macedonia*, which tries to steer a middle course. It will thus be seen that, just as at Athens, about half the Press is pro-German or openly in German pay. The striking thing about some of these *Boche* productions is that they are not only anti-Entente, but in many respects anti-Greek. Yet the Greeks seem to tolerate them calmly.

The Aeroplanes.

We have had no return visits from hostile areoplanes since I last wrote you, but on New Year's Day (O.S.) we were provided with an interesting aerial spectacle by the French. No fewer than fifteen aeroplanes manœuvred close together over the town, some of them flying very low, and the sound of these fifteen motors created a deep hum, which brought everyone out of doors. The streets and house-tops were crowded with people gazing at the unusual sight. It was just like a flock of huge crows flying close together. Now we have innumerable real crows at Salonika, and I remarked that these birds flew calmly over, under, and even through the crowd of aeroplanes in quite an unconcerned manner, while the sparrows and other small birds appeared to be alarmed and darted away in all directions.

CYPRUS NOTES.

(From a Correspondent.)

Welcome Rain.

The much-needed rain fell on January 2 and following days, being welcomed throughout the island. The torrents have brought down their deposits of silt, so essential for the annual fertilisation of the great Mesaoria plain and other regions. Recently there have been further downpours, and prospects are generally bright. Many complaints are, however, heard from several districts that much land may remain uncultivated owing to lack of seed corn, which the peasants are in many cases too poor to buy. The alternative is to be driven more and more into the clutches of the money-lenders, whose rapacity is seldom abated. The Government is urged to be more liberal in its loans of seed corn in the general interest of the island.

The Greek New Year.

The Greek New Year day (January 14) was celebrated quietly. Charities were distributed by Church and other philanthropic committees. The funds, however, have been quite inadequate to meet as could be desired the needs of the poor, the number of whom has been largely increased. At Nicosia, in the Cyprus Museum there was an exhibition of about 450 skins of Cyprus birds and of butterflies, the charge for entrance being 1s., the proceeds to be devoted to the Red Cross. Several English residents have devoted attention to the ornithology of the island. Mr. Baxendale, Commissioner of Famagusta, has formed an admirable collection of birds, the work of many years.

Camel's Flesh as Food.

An unusual event in the market at the capital has been the appearance of camel's flesh in butchers' shops. This meat is appreciated by many Turks, although it is not sold regularly, as, e.g., in Cairo. A camel is sometimes slaughtered on festive occasions. This species of food has, however, never become popular among the Greeks, and the innovation is not welcomed. One of the leading papers protests against the sale on grounds of "public health." If, it argues, the authorities cannot prevent the sale, let them at least provide that the camels slaughtered shall be healthy and not over-aged, and that there shall be no repetition of what is said to have occurred recently, when a permit was given to kill an animal of advanced age and suspiciously "high" condition. Also the vendors should be compelled to inform their customers, and to have a notice posted in their shops, so that purchasers may not become the "victims of error, or ignorance, as was lately the case with many, who, as they assure us, bought camel's flesh thinking it was beef."

Loss of the "Persia."

News of the sinking of this liner was received with deep regret. It is believed that a heavy mail to Cyprus was on board, containing letters of the mail December 17 to December 24, and papers up to December 22. It is not surprising that Cyprus mails should leave and arrive with less than usual regularity. Trade is still hampered; for, while there is a good demand for Cyprus produce, difficulties are caused by higher freights and other circumstances referred to lately. Communication between Greece and Egypt is said to be suspended owing to the prohibitive price of coal.

"MILKMAID" BRAND

Sterilised Fresh Milk

Obtainable from all leading Grocers and Druggists in Egypt and the Levant.

THE SUDAN: THEN AND NOW.

(From a Correspondent.)

Seventeen years have passed since the signing of the Sudan Convention—January 19, 1899—between the British Government and the Government of the then Khedive, and it is permissible at this, perhaps the most critical, stage of the Sudan's political history, to ask how far the promise then held forth has been redeemed. The placid condition of the country might in itself afford a sufficiently eloquent reply, the latest official efforts to hand showing that the whole people are remaining absolutely quiet and unaffected by either the repeated attempts to stir up discontent among them or the threat of the invasion first of Egypt and then of the Sudan.

The determination by the responsible authorities that, once restored to Egypt, the Sudan should not be governed as Egypt had been governed has proved its salvation. There have been no hampering Capitulations, no Mixed Tribunals, and no Consular Courts with their interminable and perplexing claims for special privileges, exempting from ordinary obligations, and the numerous abuses and injustices to which these and other demands had led. The system of administration adopted at the outset, and persevered with until now, for the regulation of the conquered province has proved the best that could possibly have been selected. The treaty above referred to was the able work of the late Marquis of Salisbury, an undisputed administrative genius, and the present Earl of Cromer, the latter, by personal experience gained in Egypt and the Sudan, having been enabled to avoid the inclusion of anything likely to prove antagonistic to the people of the Sudan or to give rise to friction with the resident aliens.

Above all has been the strict regard for the religious susceptibilities of the people, and the studious observance of their privileges. Whatever qualms or misgivings the Sudanese may have felt upon passing under the control of Christian rulers were dispelled by Lord Cromer's assurance: "There will be no interference whatever with your religion." There has been none; neither, sensitive and excitable as the people are, has the dreaded religious question yet occasioned any feelings of disappointment to Moslem subjects, or any great anxiety to their Christian governors. A sufficiently severe test has been applied of late by the preaching of a "Holy War" at the instigation of the Germans; and nothing could have fallen more flat or have proved more ineffectual so far as the people of the Anglo-Egyptian Sudan are in question. It is, therefore, timely to recall the memorable words used by Lord Cromer at Omdurman on January 5, 1899, when, addressing an assembly of Sudanese sheikhs and notables, he said:—"No attempt will be made to govern your country from Cairo, still less from London. You must look to the Sirdar alone for justice and good government; and I do not doubt that you will have no cause for disappointment." These encouraging words have been followed by honest deeds, and it would be difficult to find a people more thoroughly contented with their government than the Sudanese to-day. They have found their rulers animated by a spirit of justice and moderation entirely different from anything of the kind experienced by them or their forbears in former times.

ISLAM AND HUMANITY.

Speaking at a dinner given last Saturday by the Islamic Society of London, in honour of the anniversary of the birth of Mohammed, Dr. S. H. R. Abdul Majid, president of the society, said that one of the principal things which had been impressed upon him by the study of Islamism was that it was pure democracy. In so far as the system of government in England was democratic, it was founded upon the principles and teachings of Islam. There were those who saw in Islamism a combination of Judaism and Christianity, but while he did not acquiesce in that opinion he was inclined to believe that there really was no very material difference between the essential doctrines of Islam and of Christianity, except in regard to the dogma of the Trinity. Islamism was a humane religion, and so was Christianity, but the practices of some of the professedly Christian nations engaged in the present world-war were the negation of the humane principles of their faith. He could imagine nothing more barbarous or inhumane than the raids of Zeppelins on towns or the sinking of passenger ships by submarines.

"THE NEAR EAST" has largely increased its circulation in the United Kingdom since the war, and the Management is convinced that there are many people still who would be glad to know of its existence. Specimen copies will be forwarded post free if the names and addresses of friends are sent to the Manager, at 16-17, Devonshire Square, E.C.

A FLIGHT FROM NISH.

The following letter from our Correspondent formerly in Belgrade, has only just reached us, though it is dated October 24. It is forwarded from a town in Greece by a doctor, to whom it was entrusted by our Correspondent, and who, in a covering letter dated December 7, writes:—

"About five weeks ago I met at Kralievo, in Serbia, your correspondent, Mr. ——, who had come on there from Tchachak, the place of his last refuge. As he was not strong enough to follow the further retreat of the Serbian army, and communication with Salonika was interrupted, he requested me to accept the enclosed letter, and post it as soon as I should feel sure that it will reach you. So I took it with me on my troublesome journey through Albania, and, as I am obliged to stay here for a day or two in order to rest, will give it now to a reliable gentleman who leaves to-morrow for Salonika. Mr. —— told me at Kralievo that he would go back to Tchachak in order to expect there the further development of events."

We are much obliged to the writer, who will, we trust, see these lines. Unfortunately we have no further news of our Correspondent.

TCHACHAK (Serbia), October 24.

The routes from Nish to the north, south, and east frontiers of Serbia are barred, the direct communications in each case broken, with the result that the inhabitants who would seek escape from any place likely to be invaded find themselves caged, shut in on all sides, unable to flee from the approaching danger. On the south the Bulgarian troops have seized several Serbian frontier positions in the new Serbian Macedonian territories, and are endeavouring to advance into Serbia proper. On the north the Austro-German troops have taken possession of Belgrade and converted Serbia's modern capital into an Austrian provincial town, the newspapers being printed in the German, Hungarian, and Croate or Serbian languages, and the postal and telegraphic communication with Vienna being in perfect working order. They also entered Serbia by Semendria and at other points on the Danube and at several spots on the Sava. In some places they are held in check by the Serbian troops, and in other parts they progress slowly.

All along the lines, north, east, and south, the battle rages with unabated fury, and the numerous wounded soldiers daily transported to Nish, Kragujevatz, and other towns provided with hospitals testify to the intensity of the fighting going on. The small Serbian army is split into two and has to combat against superior forces on both the north and south fronts.

The landing of the Allied British and French troops at Salonika, and their despatch to the aid of the Serbian army, though rapidly carried on, does not progress so quickly as the urgency of the situation demands. The time required for bringing, landing, and concentrating the Allied forces creates a fear among the distressed people lest the help may come too late.

Nish has been overcrowded with fugitives who fled from Belgrade, Valievo, and other Serbian towns, but now the people are fleeing from Nish towards the central part of Serbia, where they find themselves fixed. To go further north would be to approach the Austro-German forces, and in the south the Bulgarian army is advancing.

On the railway lines they are working at high pressure for war requirements, and passenger trains experience unbearable delays. Coming from Nish to Tchachak we proceed by the main line running to Belgrade as far as Stalatz, a distance of three hours by rail, where there is a branch line running west passing through Krushevatz, Kralievo, and Tchachak. The train by which I travelled from Nish to this town was crowded. To secure a seat I arrived at the railway station three hours before the time of departure, and was seated in the railway carriage one hour before the train started. When we set off there was no longer standing room in any of the compartments of the train.

A tedious journey it was! Leaving Nish at 8 p.m., I arrived at Stalatz at 12 midnight, and there should have been a train to continue the journey to Tchachak at ten in the morning, but the passengers, after passing the early hours at Stalatz in an over-crowded waiting-room or in the open air in a drizzling rain, had to remain the whole of the day until 10 p.m.—altogether twenty-two hours' exposure and fatigue—before resuming the journey on the branch line to a place of supposed greater security. The main line for many days was almost blocked. Military trains conveying troops, material, and wounded soldiers were constantly passing to and from the north front, and these trains, for which the train on the branch line waited, arrived, as they often do, ten to twelve hours overdue.

Most of the fugitives coming from Nish carried with them a small portion of their wardrobe, but there were some who had come from Belgrade having nothing but the clothes they were wearing.

The experiences of these poor Belgrade fugitives were indeed terrible. In Belgrade for three days they and all the other inhabitants had to endure a terrible bombardment of the town. The enemy posted heavy guns behind the heights of Bezhania (in Hungary, a long distance from Belgrade), beyond the reach of the Serbian guns, which were of smaller bore and carried shorter distances; and poured a torrent of shells, falling every two or three minutes, from a hundred guns, now on one part, now on another, of the devoted city. In many instances the shells and shrapel did not fall one foot apart, demolishing buildings, killing and maiming all living creatures within reach, setting fire to the houses, and producing ruin in entire districts.

The Belgrade fortress was battered and knocked to pieces. Of the French batteries, some were broken and some rendered useless, the British big guns were repeatedly upset, and as often replaced in position and refired; and great was the destruction executed by the Allied gunners. They poured a devastating fire upon the ranks of the enemy, and of the four Austrian monitors, one was sunk and one disabled. The valour of the British gunners and the accuracy of their fire exceeded all expectations.

But, under cover of their own fire, where nothing could live, it was possible for the Austro-German troops to effect a landing. A German soldier, when taken prisoner, stated that the Germans never expected to meet with resistance after such a cannonading, but, to their surprise, they were met on landing with a bayonet charge by Serbian troops.

For three days the German and Austrian troops fought their way in the town of Belgrade from street to street. Obstinately fighting, the inferior Serbian forces fell back foot by foot, and only when the enemy forces had reached the central part of the town, where the theatre stands, did the Serbians beat a hasty retreat towards the heights of Torloch. There they made another determined stand.

Amidst the falling houses and in the streets many women and children were killed. Thousands tried to escape; many met their death in the attempt, many were wounded, but many succeeded in getting away uninjured.

Sad tales are told by fugitives who arrived at Nish.

Two German aeroplanes hovered over Belgrade, and, circling over the roads outside the town, through which the fugitives were fleeing, indicated the positions to the enemy batteries, which poured a storm of shells amidst the flying people. Civilians and military, men, women, and children, hastened by the sides of the roads, seeking the protection of the straggling houses so far as buildings extended.

They were nearly all on foot, with here and there a cab or cart procured at exorbitant expense by some wealthy refugees, but which did not always ensure their lives, as in some cases drivers and passengers alike lost their lives in the attempt to escape from destruction.

INTERESTING HISTORICAL PARALLELS.

Speaking at King's College last Wednesday on "The War and the Problems of Empire," Mr. Sidney Low said that two centuries ago a plan was laid before Louis XIV. for the conquest of Egypt and Asia Minor. This conquest, it was maintained, was the best and easiest way by which any European Power could attain the domination of the world and destroy the Empire of Britain. A century and a-quarter ago the same scheme was conceived by the imagination of Napoleon, and an attempt was made to carry it into practice by the invasion of Egypt and Syria. The same plan on a larger and more formidable scale was being attempted at the present moment, and if it could succeed (which it could not) the effect would be to shatter the British Empire and to destroy its cohesion and security.

THE MASSACRES OF SIVAS.

(From a Correspondent.)

Tiflis, January 1.

Within the last few days there have come to light some new revelations regarding the horrible massacres of Armenians in the province of Sivas. Murad of Sivas, a well-known leader in the Armenian movement, and some of his comrades, after struggling for the last eight months against enormous odds, when all was over fought their way out from Sivas to the Black Sea, north-west of Samsoun, and sailed for Batoum, the Russian port, after a thrilling "naval battle" with the Turks.

"A Rehearsal of Massacres."

An interview which Murad gave to me adds something yet more dreadful to the indictment which the civilised world ought to bring against Turkey. The tale of the preliminary phases of the persecutions in Sivas, as recounted by Murad, sounds like a rehearsal of the massacres carried out in many other provinces in Turkey, with one difference—that in Sivas there was one, Muamer Pasha, a bloodthirsty Governor of the Enver Pasha type. The tragedy began with ruthless military requisitions throughout the province, which weighed heavily upon the Armenians in particular. This was followed by endless quarrels over the question of Armenian deserters from the Turkish Army. The Divisional Commander of Sivas gave an order in January last that reservists above thirty-three years of age liable to service might get a permit for temporary exemption; but Muamer Pasha, the Governor, regarded men benefiting by the above order as deserters from the Army.

Fiendish methods were employed by the Turks in disarming the Armenian element, and brigands of the lowest type were utilized for the purpose. With a view to compelling the Armenians of Khourokhon, for instance, to give up their arms, Turks actually shod one, Harutiun, like a horse, and a peasant was done to death by placing a red-hot iron crown on his head.

Sivas lying on the main caravan road from Angora (the terminus of the Anatolian railway) to Erzeroum, the great fortress in Armenia, there was from the beginning of the war an uninterrupted movement of troops. The billeting of these Turkish soldiers upon the Armenian families caused great suffering to the population. Like famished wolves, they consumed everything they found, and they outraged every woman they saw. In the village of Ketcheurd alone, east of Sivas, six good-looking women were so ill-treated by soldiers that they succumbed before the very eyes of their torturers.

Treatment of Russian Prisoners.

In last March some 1,700 Russian prisoners, captured on the Trans-Caucasian front, were brought to Sivas under horrible circumstances. On their way to Sivas they were grossly insulted, spat on by passers-by, and whipped by their Turkish escort. Half of their number reached Sivas almost naked, covered with filthy rags, their feet swollen, and in some cases their sheepskin coat glued to their sore bodies. Armenians organized medical help and comforts for these unfortunate Russians; elementary humanity which, however, elicited considerable resentment among Moslems. The Governor then organized a plot against the leaders of the Armenian people. His aides-de-camp had already killed the Armenian Bishop Odabashian; now he wished to dispose of Murad and his comrades. The latter, however, informed by Turkish friends, did not fall into the trap, and defied the Governor's order.

Fiendish Cruelties.

In the last week of June and early in July, massacres on a large scale began throughout the province. All the male adult population were led away from their women and herded together into camps or prisons, and then massacred in small batches in some neighbouring valley. At Maltepe, an hour's ride east of Sivas, twenty Armenian officials in the Government service were hacked to pieces. At Habesh, east of Sivas, 3,800 Armenians of the neighbourhood were pole-axed, bayoneted, or stoned in blood-curdling circumstances. At Khorasan, the headman of the village, named Nigoghos, was hanged head downwards on a bridge. At Gotni, a village containing 120 Armenian families, bands of criminals released from prison gloried in the exploit of having killed every male above twelve and outraged every female above the same age.

The women of Malatia were stripped naked and, amid the gibes and jeers of the rabble, were led on their way into the Mesopotamian desert. Many of these unfortunate women actually went mad; others employed painful means to end their lives. It would be possible to prolong this tale of fiendish cruelties, but it will suffice to say that the Armenians of Shabin-Karahissar and Amasia, exasperated by the savagery of the Turks, retaliated upon them by burning down the Moslems' quarters and Government buildings. The Armenians of Gurin, Divrig, Mandjalik, etc., fought for days against considerable numbers of Moslem hordes, and treated the enemy in the manner they were treated before. Mademoiselle Sirpouhi Tufekjian, a nineteen-year-old graduate of the American College at Marsovan, refused to save herself by embracing Islam; she would have nothing to do with the murderers of her father, whereupon she and seventeen other Armenian girls were brutally ill-treated by Turks and afterwards killed near a bridge at Herag.

The sum total of these massacres carried out throughout the province of Sivas and the subsequent deportations to south of Euphrates appears to stand at the frightful figure of 150,000 Armenians killed or deported; and, given the circumstances of deportation of these hopeless people, it would seem to be inevitable that death must have overtaken them all by now.

THE SOUTHERN SLAV QUESTION.

Speaking last Monday at University College, London, Dr. Seton Watson said that the Southern Slav question was the result of the movement for unity between the three western branches of the Southern Slav race, Serbs, Croats, and Slovenes, the fourth branch, the Bulgarians, standing apart for the present. The idea that the question could be solved on a purely Serb basis was as absurd as the other idea, held in Austria-Hungary, that it could be solved on a purely Croat basis: it could only be solved on the Jugo-Slav basis. This movement for Southern Slav national unity underlay all the various phases of the last ten years of conflict between Austria-Hungary and Serbia; it had given to Serbia the rôle of a Slavonic Piedmont; and it was still permissible to hope that the present war would end for her in a similar way to that in which the war for Italian unity ended for Piedmont in 1859.

Serbia and Montenegro were occupied by between four and five millions of Serbs, but seven or eight million people of the same and kindred races lived in Hungary. The Serbs and their kinsmen had occupied their present territories since the seventh century. They had been Christianised at a time when the Greek and Roman Churches were temporarily in communion with each other, but when the schism reappeared the Serbs had been drawn towards Byzantium and the Croats and other more westerly branches of the Jugo-Slav race towards Rome. These western branches had lived under the rule of the House of Hapsburg since the battle of Kossovo, when Serbia passed under the heel of the Turk. An awakening of the national spirit among them had come in the early part of the nineteenth century, when Napoleon founded the short-lived State of Illyria; and this spirit had developed under the influence of various remarkable men—poets, agitators, and priests, both Greek and Roman Catholic. It had been opposed by most unscrupulous methods on the part of the Hungarian Government, notably by the trial for high treason of fifty-three Serbs some years ago. The basis of the trial was the attempt to prove the existence of widespread revolutionary plots in Croatia for the union of Croatia and Serbia, and in that way to provide a case for Austria-Hungary in the military action which she contemplated as the result of the annexation of Bosnia in the preceding autumn of 1908. The attempt was to implicate Serbian official circles. The trial lasted seven months, and the behaviour of judge and public prosecutor gave rise to the most unheard-of scandals. There had been nothing like it since the days of Judge Jeffreys.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Naeamulli and Company, 12, Rue Sesostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiades.

BUCHAREST. No. 1, Strada Academiei, and Socec and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

BULGARIA'S DEBT TO RUSSIA.

(From Our Own Correspondent.)

Odessa, December 14.

The Bulgarian Committee of Odessa has issued an "Appeal to the Bulgarian Nation," of which the following is the substance:—

Dear Fellow-countrymen,—Forty years ago, in 1876, when the waters of the Maritza were stained with the innocent blood of numberless Bulgarian fathers, of pitilessly butchered mothers, and of infants torn from their mothers' breasts and bayoneted; when our land was pillaged, drenched in blood, and was forgotten and forsaken by all; in those days of suffering only the Slavonian Mother—Holy Russia—from the banks of the Neva cried to the criminals to stop. She marched with the Cross to the assistance of her suffering Bulgar-brothers. The immortal Tsar-Liberator, the Emperor Alexander II., acted in unity with his people. Never was the national spirit of Russia so overwhelmingly expressed as in that bloody epoch. And at the gates of Tzarigrad—predestined by history to be the centre of united Slavdom—on February 19, 1878, in the ashes of the remains of our country and over the bones of hundreds of thousands of Russian heroes, Bulgaria was born after five centuries of oppressive Turkish slavery.

The hundreds of thousands of Russian heroes who sacrificed their lives for fraternal Bulgaria marked with their blood the right course for the Bulgarian nation—the only one that guarantees to it its place amongst the family of Slav nations—of travelling with its great Liberator on the road to the unity of all the Slav races.

In this sacred covenant the eternal enemy of the Slavonian races—the Germans—saw a danger for their immoral interests. They energetically rose up against the political integrity of Bulgaria. They never tired of sowing discord amongst Bulgarians with the one object of deflecting us from our political course and morally weakening us.

Fellow-countrymen, you, faithful to the sacred covenant of the immortal sons of Russia, who marked out for us our historical road in our new political life—you, following up this course two years ago, succeeded in realizing the political reunion of the Bulgarian nation. The world was astonished at the triumphant march of the sons of Bulgaria, who broke the military might of the Turkish Empire, which military critics thought impossible of fulfilment by the united Balkan nations.

Fortress after fortress fell before the armies of the allied nations. In the battles of Lozengrad, Lule Burgas, etc., etc., we witnessed unexampled heroism which brought the Bulgarian troops to the walls of Constantinople. The second capital of the Empire, Odrin, also fell before the Bulgarians. Bulgarian ideals were realised, Bulgaria fulfilled her sacred duty to the memory of those Russian heroes who gave her political existence, and together with whom the sons of Bulgaria fought on the heights of Shipka and freely sacrificed their lives for Bulgaria, the land of their birth. . . .

But, alas! in the day of the great triumph of Bulgaria and of Russia that evil genius, Ferdinand of Coburg, the representative of German interests, unhappily standing at the head of Bulgaria, following his own ambitious designs, in opposition to all human instincts and morals, destroyed the great fabric, the fruit of united Slav work. Against the nation's will he began the fratricidal war of 1913. The fatal word was spoken, and the evil genius of Bulgaria dug a grave for her. . . . The criminal Ferdinand remained unpunished, and, continuing his evil course, in alliance with Turks and Germans he decided finally to wrench Bulgaria from the motherly embrace of Russia, to strip her morally, to bury her existence as an independent Power. . . .

Russia, with tears and with moral suffering, prays for the blessing of God as she unsheathes her sword to punish the evil-doers and deliver her child, Bulgaria, from the chains of her Turco-German enemies, and to keep her within the family of Slavonian nations. Russian soldiers are coming to Bulgaria to fight, not against you, but against the Germans, Turks, and their allies, Ferdinand and his placemen. Receive with open arms the sons of your Liberators from the Turkish yoke, who, fulfilling the wishes of their heroic fathers, desire to free you from the present Turco-German slavery. Formerly your valiant fathers fought shoulder to shoulder with the Russian heroes on the heights of Shipka and elsewhere. Be you also valiant sons of the Bulgarian nation and join the ranks of the sons of your Liberators.

This, in the present fatal hour, is the only way to save the Bulgarian nation from spiritual treason to herself, her historical past, and the Russian heroes who disinterestedly and freely shed their blood in order to create Bulgaria. In this hour of suffering in the political life of Bulgaria, in consideration of its seventy years of activity on behalf of the political and social awakening of our native country, the Bulgarian Committee of Odessa considers it its duty now to appeal to your highest honour and with you to induce the unoffending sons of Bulgaria to withdraw from participation in the crime by means of which Ferdinand of Coburg hopes to change the face of Bulgaria and to bury for ever the Bulgarian race, and to consign him and his manipulators to the bottomless grave instead.

THE WAR IN THE BALKANS.

ITALY AND VALONA.

There has been little activity in the Balkan theatre of the war during the past week.

Montenegro.

The fate of Montenegro has evidently been sealed—for the time being. It is by no means proved, however, that the remnants of the brave little army which defended its country to the last did not retire at the last moment into Northern Albania, though it appears likely that the Montenegrins as a whole capitulated, and are now living in their homesteads under the iron spur of the Hapsburgs. In any case, as pointed out previously, Montenegro as such ceases to be of military value, the only immediate help we can expect being from King Nicholas's troops now in Albania.

Albania.

It will be remembered that in our notes last week we urged on the Italian Government (if it had not already done so) to strengthen and fortify an enclave in Albania so as to render it impregnable. We pointed out that this was essential as tending to prevent the turning of the left flank of our position in Salonika, and also as a protection against an enemy incursion into Greece. It was, therefore, with great satisfaction that we learnt, towards the end of last week, that the Italian Cabinet had decided to fortify Avlona (Valona), and to hold it at all costs. Better late than never, and we can trust our Mediterranean Allies, now that a definite decision has been taken at Rome, to hasten and perfect the strengthening of the town. A glance at the map will show how an impregnable Salonika and a likewise impregnable Valona will tend to checkmate any further progress of the enemy in the direction of the Ionian and Ægean Seas.

In the meantime, there has been little fighting reported from Albania. Austrian aeroplanes made on the 31st ult. an aerial raid on Durazzo, corresponding with the raid on Salonika, but little damage seems to have been done. Essad Pasha's men are helping the Italians to fortify themselves in and around Valona, and doubtless Serbs and Montenegrins are concentrating in the same region. How far south of Scutari or west of the old Serbo-Albanian frontier the enemy have penetrated is at the moment unknown, but as the prevaricating Bôches, generally so adept at making a mountain out of a molehill, have not been able to magnify a single incident in Albania during the past week, we can take it for granted that they have not advanced in either direction more than a mile or two, perhaps even less.

The Enemy Campaign.

All interest centres at the present moment in the campaign to be begun by the enemy. The fact that the air-raid on Salonika coincided with a similar demonstration against Durazzo, and, the fact, moreover, that the week has passed quietly in Albania, seems to indicate that an attack is to be launched simultaneously against the two sectors. Latest news shows that the enemy are feverishly restoring the Ghevgheli-Strumnitza sector of the Vardar railway, destroyed by us during the historic retreat from Doiran; moreover, preparations are being made in the east to attack the Italian position in Albania. When, therefore, the way seems, to the German General Staff, to be clear in both sectors, the drive will be pushed forward and a desperate attempt will be made to deploy the troops as they advance. In other words, we are on the eve of witnessing an attempt on the part of the enemy to repeat in the Balkans the Hindenburg strategy of last summer in Courland. Von Mackensen, in charge of the Balkan campaign, has arrived in Monastir, where there has taken place a concentration of enemy troops, and it is from this centre that the attack will be launched towards the south-west, south, and south-east. Admittedly, other attacks will take place from secondary points along the enemy line extending from San Giovanni di Medua to Dedeagatch, but the nucleus of the enemy position, the centre of the semi-circle sweeping from Salonika to Valona, is at Monastir.

NEAR EAST BOOKSHELF.

THE BALKANS.*

During the Turco-Balkan War of 1912 Mr. Fox was war correspondent for the *Morning Post*, and afterwards, when the victorious allies fell out and took to fighting one another, he stayed on in the troubled area—apparently as a free lance. The volume under review gives the impressions he gathered at that time, and though it was written before the present war broke out and no attempt is made to touch upon the events immediately preceding the outbreak, it is a valuable and interesting book. Mr. Fox had opportunities of studying the peoples of the Balkans at a time when their best qualities were in evidence, and subsequently when their lowest feelings of greed and cruelty had been excited; he also met many prominent politicians and well-known men of action; and he shows himself a close observer and often a shrewd critic.

Like most people who have studied the question on the spot, he has reached the conclusion that the only real hope for the Balkans lies in sinking their long-standing rivalries, differences, bickerings and feuds and reconstituting the Balkan League on a broader basis. But he confesses that he "hardly dares to hope for such a happy ending to the long, miserable story of the Balkans"; and, of course, events that have happened since he penned this, the concluding sentence of his last chapter, have not helped to better the prospect. Nor can we, with the best will in the world, find much reason to hope that the "great man" who "could build up a greater Switzerland, perhaps, of the Slavs, the Greeks and the Roumanians in the Balkan Peninsula, with Great Britain, Russia and France as joint sponsors for the freedom of the new Federation," will be forthcoming. Indeed, the Balkans have always been unfortunate in the matter of statesmen, though they have produced many patriots.

The first half of the book is historical, chapter i. giving a sketch of the Balkan Peninsula from earliest times down to 1912, chapters ii. and iii. dealing with the period of the Turkish rule, chapters iv. and v. with the wars of 1812-13. The remaining five chapters are entitled "The Troubles of a War Correspondent in the Balkans," "Jottings from My Balkan Travel Book," "The Picturesque Balkans," "The Balkan Peoples in Art and Industry," and "The Future of the Balkans." The sketch of the early history is naturally a very slight one, but it will at least enable the uninitiated reader to form some idea of the number and variety of the conflicting causes that went to the making up of that Riddle of the Sphinx which has so long troubled the peace of Europe: the Balkan Question. The story is an interesting one, even in the compressed form in which it is given here; but it is hardly calculated to afford much satisfaction to the reader who hopes to find in it support for the theory that with the disappearance of the Turk from Europe all will be well with the troubled region. It appears, indeed, that as long as the Turk was strong his presence in the Peninsula was not an unmixed evil for its peoples. It was only when his powers began to wane that, conscious that Europe regarded him as an intruder—which he was—and affected to regard him as a tyrant and oppressor without redeeming qualities—which he was not—he began really to merit the bad opinion which the world had already formed of him. Then he began to massacre, and with the Hamidian régime he became "unspeakable" indeed. But even at his worst the Old Turk was never quite as black as he was painted, and when Mr. Fox writes (page 26) "The atrocities in Bulgaria which shocked Europe in 1875 were not the continuance of a settled policy of cruelty and rapine," he is stating a simple truth which it did not suit Europe to recognise at the time. Those massacres, which were horrible enough in all conscience, were the direct result of a Bulgarian rising, and—

> The Turks felt that they had been making an honest effort to promote the interests of the Bulgarian province. They had just satisfied a Bulgarian aspiration by allowing of the formation of an independent Bulgarian Church, though this meant giving grave offence to the Greeks. Probably they felt that they had a real grievance against the Bulgars.

Again (page 185), we find an incident which throws a curious light on this subject of "atrocities":—

> During my stay in the Balkans I found no evidence of Turkish cruelty. There was plenty of evidence offered by the Bulgarians, but it usually smelt of the lamp of some patriotic journalist of Sofia. Once, near Mustapha Pasha—when all the war correspondents were cooped up under strict censorship, prevented from seeing any of the operations around Adrianople—the Bulgarians found it necessary to burn a village for strategic reasons. The chance was offered to the Press photographers of seeing this, if it were represented in their pictures as the atrocious burning of a village by the Turks. I believe that the offer was accepted by some. The "atrocities" by Turks, regularly recorded by the Bulgarian Press Bureau, were, as far as the main theatre of operations was concerned, founded on similar evidence.

We are not likely to forget for some time that the Bulgarians have lately been accusing the Franco-British troops of "atrocities." Apparently the air of the Balkans is favourable to the growth of such charges, as it is favourable to intrigues in which, alas! questions of churches and schools play an all-too-prominent part—to the great loss of the unhappy peasants who make up the bulk of the population.

For these peasants Mr. Fox has a real liking; for the priests and politicians he has none. Thus we find him writing (pages 78, 79) of the Balkan statesmen:—

> There were some exceptions . . . . but as a rule they were men of very ordinary ability and very extraordinary conceit. Close association with them dissipated for a time the extremely good impression that Bulgarian, Serbian, Grecian, and Roumanian peasants and officials and traders had made on me.

And again (preface, page v.):—

> The Balkan peoples left me with a steady affection for the peasants and the common folk generally; a dislike and contempt, which made few exceptions, for the politicians and priests who governed their destinies.

The account given, in chapter iv., of the wars of 1912-13 is full of interest. The author is ungrudging in his praise of the manner in which the Bulgarian army was mobilized and the first operations of the campaign were carried out—"up to the point at which Adrianople was invested from the north, Kirk Kilisse captured, and the cavalry sent raiding southwise to attack the Turk's lines of communication." He considers, however, that "Kirk Kilisse . . . was a vastly over-rated fortress," and criticises the failure to press on with the capture of Adrianople instead of merely "masking" the city. He is of opinion, it must be added, that the hand of the Bulgarian generals was forced by political considerations, and that they were handicapped by their sappers being of stuff much inferior to their artillery. At Chatalja, too, they were undoubtedly seriously hampered by a shortage both of ammunition and of food; and, of course, "before the Peace Conference had actually begun its work, charges and counter charges of atrocities were bandied about between Bulgar and Greek." In such circumstances the wonder is not that Constantinople did not fall to the allies, but that they actually achieved what they did.

The chapter on the work—and worries—of the War Correspondent is full of interest at the present time, and it throws a good deal of light upon the methods of the Military Press Censor. Mr. Fox reminds us that it was in the Near East that the War Correspondent achieved some of his earliest and greatest successes, but he thinks that the Balkan War "probably will close the book." Certainly the Correspondent in the present War is of a new type; but we have yet to learn whether the author will be justified in his estimate when he writes:—

> Ko-Ko's account of the execution of Nankipoo (*sic*) is, in short, the model for the future war correspondent. The other sort of war correspondent, who patiently studied and recorded operations, seems to be doomed. In the nature of things it must be so. The more competent and the more accurate he is, the greater the danger he is to the army which he accompanies.

It would be easy to quote many entertaining passages from this chapter, but lack of space forbids. Nor can we do more than refer briefly to many other interesting topics touched on by the author. His description of the Bulgarian army's wonderful ox transport is capital, and his reference to the "fierce indignation" aroused in Bulgarian breasts when a French war correspondent compared the passage of a great train of these waggons with a passage of the Huns seems to have about it a prophetic touch! His comments on the sanitary services of the belligerents and the physique of the peasant soldiers will be read with quickened interest at the present time, as will those on the Bulgarian army's

* "The Balkan Peninsula." By Frank Fox. (A. and C. Black. 7s. 6d. net.)

"The most comprehensive survey of Egypt of the Egyptians that we have ever read."—*Near East.*

EGYPT OF THE EGYPTIANS

By W. LAWRENCE BALLS, Late Fellow of St. John's College, Cambridge.

Cloth gilt, gilt top, 32 Illus., 3 Maps, **6s.** *net.*

The Manchester Guardian says: "Mr. Balls has written a wonderfully vivacious and interesting book. In a style purposely but skilfully colloquial, he has tersely set forth the evolution of ancient and the life of modern Egypt with the competence given by a scholarly study of the former and a working knowledge of the latter. . . . No one has written on Egypt at once so readably and so weightily . . . a brilliant book."

The above volume is the latest addition to Pitman's well-known "***Countries and Peoples Series.***" Other volumes in the series on the Near East are:—

RUSSIA OF THE RUSSIANS. By H. W. Williams, Ph.D.
GREECE OF THE HELLENES. By Lucy M. J. Garnett.
TURKEY OF THE OTTOMANS. By Lucy M. J. Garnett.

work in trench digging and so forth. But perhaps the general reader will find even more interesting the estimates of national character and the descriptions of leading men, such as Generals Dimitrieff and Savoff, and MM. Venizelos, Nikolitch, Take Jonescu, Gueshoff and Daneff. These are not, perhaps, marked by any great originality of view or expression; but they appear to be eminently sound upon the whole, and, being the result of personal observation, are of more value than certain more "brilliant" efforts.

In the spelling of proper names and foreign words Mr. Fox is not always satisfactory. Vranja, Vranje or Vranye we are accustomed to, but "Vranga" is new to us; "Venizuelos" instead of Venizelos (or Venezelos) is positively irritating; and "Bashi Bazouks," though sanctified by constant mis-usage, is almost equally so. The transposition of Enos and Midia which occurs on page 88 is a deplorable slip, which an examination of the sketch map included in the volume will not serve to check, neither place being indicated thereon. Taken all round, however, the book is emphatically a good one, and a word of special praise must be accorded to the illustrations, which are mostly well chosen and all admirably reproduced.

BOOK NOTES.

A book of interest is "The Foundation of the Ottoman Empire: A History of the Osmanlis up to the Death of Bayezid I. (1300-1403)," by Herbert Adams Gibbons, Ph.D. It is published by the Clarendon Press at the price of half-a-guinea. In his preface the author states: "This book is written because I feel that the result of my research brings a new point of view to the student of the twentieth-century problems of the Near East, as well as to those who are interested in fourteenth-century Europe."

It is a far cry from the Near East to Australia, but there appears to be good reason to suspect that in the remote past adventurous explorers from the region of the Persian Gulf found their way to Australasia, and not only explored but actually made some attempt to colonize near Port Darwin. It is thought that they coasted by way of Colombo and from the Malayan peninsula by the Indonesian Bridge by Timor, right to the spot. There is here an attractive theme for an author to handle, particularly in the form of a novel, and the well-known writer "Coo-ee" is dealing with it in his new book, "Koi."

Part VIII. of "The Great World War: A History," edited by Frank A. Mumby, and published by the Gresham Publishing Co., contains "The Campaign in Mesopotamia" and "With Sir Ian Hamilton in Gallipoli," by the Editor, and "The Navy in the Dardanelles—Second Phase," by David Hannay.

ALLIES HONOUR SERBIA.

Under date of January 27, Reuter's Paris correspondent reports:—A demonstration by the Allies in honour of Serbia was held in the Sorbonne to-day in the presence of President Poincaré, the Ambassadors and Ministers of the Allies, and representatives of all the State bodies. In order to give the meeting as international an aspect as possible, speeches were made by representatives of all the Allied nations.

M. Vesnitch, the Serbian Minister, said: "It is not Great Britain who will fail in keeping her promises. Great Britain has known us ever since Richard Cœur de Lion received our hospitality and caused to be built for us a most beautiful church on the spot where our ancestors had saved him from shipwreck on his way back from the Crusades. Great Britain has always been the champion of the liberty of national autonomies."

M. Barthou, the ex-Premier, declared that the cause of Serbia was that of Russia, just as the cause of Belgium was that of Great Britain. M. Barthou said the restoration of Serbia, the deliverance of Belgium, the liberty of Poland, and the restitution of Alsace Lorraine were essential conditions of peace, for without them peace would be neither honourable nor lasting.

Sir Thomas Barclay said that England did not rest content with expressing sympathy and speaking kind words. The maintenance of small countries against absorption by great States was the century-long foreign policy of Great Britain. "We cannot stand aside to-day and be indifferent witnesses," he said, "of the crushing of peoples who have acquired the right to live by their capacity to govern themselves properly. The idea of Germany to impose on other States its Kultur because it had succeeded on its own soil, is profoundly repugnant to us. We wish to see Serbia remain Serbia. That will be one of the objects of the present war with the approval of the whole English people."

LUTHER'S "HYMN OF HATE."

By Estelle Blyth.

Not long ago I was hunting through an old book, picked up secondhand at the seaside. It is called "Exotics," and is a collection of "Spiritual Songs," translated from the old German and Italian by George MacDonald into English verse, which is surely not less beautiful and melodious than the original. It is chiefly a selection from the spiritual and mystical songs of Novalis and of Martin Luther, and half-way through the book I came upon what the Monk of Wittenberg has called "A Children's Song, to Sing Against the Two Arch-enemies of Christ and His Holy Church—the Pope and the Turks." It is quite a nice little hymn, of which I quote two out of the three verses, the third being only the Ascription of Praise without which no ancient hymn was ever ended:—

> Lord, keep us by thy word in hope,
> And check the murder of Turk and Pope,
> Who Jesus Christ, thine only Son,
> Fain would tumble from off thy throne.
>
> Proof of thy might, Lord Christ, afford,
> For thou of all the lords art Lord;
> Thy own poor Christendom defend,
> That it may praise thee without end.

That is quite a good Hymn of Hate in its way, but what a gulf separates it from the Hymn of Hate that Germans trumpet forth so lustily to-day, and from the parrot-cry of "Gott strafe England," that is taught to the small Teuton in the nursery. Germany has strayed somewhat widely from the paths of Luther. The pious Teuton has always been so fond of dinning Luther's praises into the ears of whoever could not escape—much in the same way that the average American cannot keep the amazing excellence of George Washington out of either his conversation or his magazines; both Teuton and American being in the somewhat lonely position of having but one outstanding national hero, the old world has listened with toleration and politeness. However, Germany has now crowded Bismarck and Bernhardi on to the pedestal where Martin Luther has stood for over three centuries in solitary glory.

Lo! what a change is here. The two chosen friends and allies of Protestant Germany to-day are just those whom Luther bluntly called "the Arch-enemies of Christ and His Holy Church"—Latin Austria and the Turk. When the Kaiser came to Palestine eighteen years ago, amongst the high Turkish officials sent from Constantinople to attend upon him everywhere was that Djevad Pasha whose hands were scarcely dry after certain horrid deeds done in Crete; but this was the man whom the Kaiser picked out of his Turkish suite to attend him constantly; he went nowhere without him. And now we hear from German sources of the unholy bribe he has offered to the Pope for his passive acquiescence in a war wherein thousands of Roman Church-people are killed, and wronged, insulted, robbed, and tortured almost daily—namely, the bribe of the restoration of temporal power to the Papacy in Palestine, and the holding of the holy places at Jerusalem. No doubt the Pope will reject such an impudent offer; but that does not exonerate the Kaiser, who is so generous with other men's goods, including those of his allies. Certainly, he provides us with what grim humour there is to be found in this ghastly war.

On the whole, I think that Martin Luther's little Hymn of Hate, though somewhat mediæval in character, is a cleaner thing than the Hymn of Hate as sung by his compatriots to-day. A good deal might be said on this subject, but I forbear; for though Martin Luther once threw ink at the devil, I am not going to imitate him—nor any other German.

TANGIER TO TEHERAN.

I hope the appeal made by Mr. Greenway on behalf of Mrs. Marling's Fund for the supply of comforts to the men of the Mesopotamia Expeditionary Force will meet with a prompt and generous response from the public. Some time ago—as some of my readers may remember—I referred to the subject in these columns and mentioned that officers with the Tigris force had said that their men were well supplied, thanks to friends in India. But the Mesopotamian affair has grown enormously since the letter on which I based my former note was written, and I feel sure that every penny subscribed to Mrs. Marling's fund will be welcome and—what is quite as much to the point—will be laid out to the best possible advantage for the men who are now fighting such an uphill fight amidst most deplorable conditions. When all was going well in this theatre of the war the British public paid little attention to the doings of the force—after the manner of the B.P., which takes such things as advances as a matter of course. Now that General Townshend is beleaguered at Koot we hear far more of him and his gallant little force than ever we did in the days of their wonderful progress up-river. We may have our own opinions about the circumstances that have led to the changed aspect of affairs; but there can be no two opinions about the debt we owe to the M.E.F. Mrs. Marling's Fund gives us an opportunity to show our appreciation of the fine achievement of the British and Indian troops in Mesopotamia, and the obvious thing for us to do is to take the chance, with thanks to Mrs. Marling for giving it to us.

***

I see that a lady clerk has been appointed to a position in the Ministry of Education, Cairo. I wonder who is responsible for this innovation, and why? I have considered the idea carefully and it likes me not. In England it is well enough, but England is so different. The appointment, if, as I have not the slightest doubt will be the case, the lady does well, will probably be followed up by others of the same kind. A new scheme of things will be introduced—a scheme which, to my mind, is foreign and should remain foreign to Egypt. It is possible, though, that the feminine element has been introduced into the Ministry only because the rush to the colours has left the Department short of male workers, and, if so, there is nothing more to be said. *Any* change is justified if it gives one more *fit* man to the services, and thus hastens us along the road to victory. But when again we settle down to calm days of peace let us restaff the Egyptian Ministries with male workers alone. A thousand reasons prompt me to insist upon the advisability of this.

***

The results of the bomb-dropping at Salonika by a Zeppelin airship have not been made officially public; but if the military importance of this event is no greater in the East than it was at home this week our authorities will have good cause for sneers. I had almost written "amusement" instead of "sneers," but after all there is, to the English mind at least, no cause for amusement in slaughter. The *Boches* are however, cast in a different mould. The slaughter of the innocents in Paris has been marked by the demonstrations of a cheering crowd at Berlin. I am glad that the aged inventor of the airship which bears his name was not at home when the cheering scum appeared before his house. By the time that the war is over we will have few Germans to remember by their untarnished fame. Let us give Count Zeppelin the benefit of the doubt, and imagine him responsible only for his invention, and guiltless of the murderous use to which it is put.

From the morass of Germany's degradation it is quite cheerful to turn to one deed of our enemy which is apparently free from the stain of innocent blood. On the broad, clean waters of the Atlantic a German raider has appeared, and by the capture of a liner has added a chapter of romance to the full volume of the sea. The commander of the raider appears to have acted with due regard to the dictates of common humanity, and although this trait in his character may not commend itself to Berlin, it is good to be able to add one more name to the short list of uniformed Germans who can claim to be regarded as men. I hope that the end of this gentleman's career at sea will leave him with as clean a record as that of his predecessor, von Müeller.

***

In the illustrated papers I see pictures of a troupe of Serbian players who are making a round of Scottish towns. Dressed in the national costume of their country, they are reported to be drawing good houses; the natural sympathy of the Briton with members of a suffering race is standing them in good stead. Where they came from before they sprang into fame before the footlights of the bigger music-halls I know not, neither do I know whether their advent was before or after the declaration of war. The photograph shows the troupe to number eight—two men, two women, two children, a boy and a monkey—and I take it that they are, with the exception of the monkey, members of one family. I wonder if their coming is to be the herald of other similar troupes in the future. In the old days companies of strolling players were common enough in our country places, but cheap railway fares making it easy for the villagers to enjoy the larger entertainments of the towns the wandering minstrel has gradually disappeared. Perhaps we may look for his resurrection now.

***

Some weeks ago I referred to the *Exmouth Express*, a lively journal published on H.M.S. Exmouth, and mentioned an adaptation of "The Jackdaw of Rheims" which had appeared therein. I also remarked that I should much like to have an opportunity of reading the complete poem, the Jackdaw being an old favourite of mine. Now, thanks to the kindness of a reader, my wish has been gratified, and I am glad to say that I find the verses quite up to sample. I hope the Editor of the *E.E.* will not be very wroth if I quote the opening lines:—

> King Constantine sat in his chair of state
> To decide on a policy big with fate.
> Counsellors, Ministers, all were there,
> But a little bird perched on the back of his chair
> And chirruped, I fear, in the Royal ear
> Certain words, which none else were intended to hear,
> Which caused him to take up an attitude queer.

The "bird," one is hardly surprised to find, "represents Kaiser William." Its fate, at the hands of "a Man"—"he spoke to the King and, his methods were terse, He caused that Bad Bird to entirely disperse"—is tragic, if not lamentable. And the Moral is above suspicion:—

> By way of a moral, if I may remark,
> It isn't a good thing to work in the dark;
> Don't send your advisers away. In a word,
> Have nothing to do with any dark *Bird*.
> And lastly, the proverb's as old as it's true—
> Be off with the old ere you're on with the new.

***

Parts of the *Exmouth Express* are not to be understood by a mere rover like myself, but it is a joyous production, and seems to suggest that there is a good deal of fun to be had "somewhere down the Mediterranean." (The Censor will kindly note that I do *not* state that the Exmouth is, was, or ever will be anywhere near the Mediterranean. Even though I have seen Mr. Norman Wilkinson's book I regard such evidence as a picture of "H.M.S. Exmouth in Kephalo Harbour" as merely a clever bit of bluff, skilfully designed to mislead the Enemy.) What I chiefly envy the Editor and his talented staff is the facilities they enjoy for collecting—and publishing—information denied to stay-at-home *confrères*. One political note begins: "The profound significance of the momentous events which hourly involve the sinuous coils of an involved skein of secret history before the bewildered eyes of our wondering readers cannot fail to become apparent when observed with that clarity of vision which befits the impartial spectator." It is a gem worthy of the expertest of our Home experts, and it reads equally well backwards, forwards, or from top to bottom.

***

A correspondent sends me a cutting from a Sunday paper in which the writer of certain notes begins one paragraph with the remark, "So Erzerum means 'fortress of Rome.'" My correspondent, who is an Oriental scholar, comments: "Erzerum is no doubt a fortress, but its name does *not*

Digitized by Google

mean 'Fortress of Rome.' *Erze* is the Turkish way of pronouncing the Arabic *ardd*, which means 'land,' and *roum* is the plural of *Roumi*, the name by which the Arabs designated the Greek masters of Constantinople. . . . Therefore Erzeroum means 'Land of the Greeks.'" I am obliged to my correspondent. But I would respectfully suggest to him that we should more correctly render the name as indicating "Soil of the Greeks"—with a shade of meaning attaching to it of "Greek territory"—rather than "Land of the Greeks," which to the average English mind would imply "Country of the Greeks."

***

A total eclipse of the sun is advertised to take place to-day, but as I write the sun appears to have made a masterly movement of retreat, and is anyway determined to give the Londoner no chance of prying into its affairs. I console myself with the knowledge that at the best the phenomenon will be only partial in England, and as I was fortunate enough to be at Wadi-Halfa, in the Sudan, on the occasion of the last eclipse, I know what it is like. I remember that day well because I had to break a window that had been the joy of my existence in order to obtain fair glass to smoke. I recollect, too, the incredulity of the natives when I informed them that the world would darken before its time that day. At Assuan, some distance further north, the eclipse was total; at Wadi-Halfa a tiny crescent remained like the most slender moon in a sky of grey. The whole world became grey: I remember that effect so well. Even the desert took on a leaden hue quite different from anything I had ever seen before. And the natives from their incredulity coming to anxiety through astonishment, and passing again to relief as they felt the sun's returning glow—the whole thing is a very vivid memory. To-day in modern Babylon it is pleasant to recall such scenes. I suppose there are thousands of Englishmen at this moment wishing that they were in London—I wish I were anywhere else.

***

In the "Press on the Near East" page of this paper I noticed extracts from an article by Mr. Ignatius Phayre the other day. Now, I have read this article, and in it I find references to a gentleman whom I have previously mentioned in these columns, Baron Max von Oppenheim to wit. Says Eyoub of Mr. Phayre's article, in speaking of the Baron:—

> He had Ministerial rank in Cairo; he ran the German Agency and set the Nile on fire with anti-British machinations. Baron Max was here on Baghdad Railway business. I met him again at Port Sudan with a general in his train, an ex-admiral too, and Dr. Pruefer, his Oriental secretary, to whom the Panislamic lot look up—the Hisb el Watani leaders, Sheikh Shawish, Mohammed Farid, and the rest. Last I heard of Pruefer he was dictating recipes for bombs to the "Extreme" young men!

And so the tale goes on. I wonder if our Intelligence Department ever guessed what Oppenheim was doing? Later the Baron journeyed to the Khabur to exhume Hittite statues in his spare moments, and to attend to other little businesses of his own in which his country might be interested. I wonder where he is now? Somewhere, it is safe to say, where his exceptional knowledge of Arabic will stand him in good stead.

CORSAIR.

THE EGYPT EXPLORATION FUND.

A lecture of unusual interest and charm was recently delivered under the *ægis* of the Egypt Exploration Fund by Mr. Aylward M. Blackman, M.A., at the rooms of the Royal Society, Burlington Gardens.

Mr. Blackman took as his subject "The Old Kingdom," the name given to the period covered from the Third to the Sixth Dynasties. In a previous lecture ending with the Second Dynasty he had shown how, out of the conglomeration of barbarous communities, arose the United Kingdom of Upper and Lower Egypt, the first civilised nation in the history of the world, and explained how Egypt attained this position by the invention of copper implements, culture having rapidly advanced when once the significance of this momentous discovery had been grasped.

After an interesting description of the gradual development in the structure of tombs, which led to the construction of the Pyramids of Giza, and a dissertation upon these "wonders of the world," the lecturer went on to give a graphic description of the highly organised system of government which exemplifies well the civilisation of the Old Kingdom. He explained the procedure of court and the gradual evolution of a feudal system which, by the assumption by local governors of hereditary rights and their steady increase in power, was firmly established by the Sixth Dynasty and continued until the reign of Sesostris III., of the Twelfth Dynasty. Through it the Old Kingdom gradually came to an end, its slow decline being reflected in the growing greatness of the provincial nobles at the expense of the central authority.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST *are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE ARABS AND THE WAR.

To the Editor of THE NEAR EAST.

Sir,—The Egyptian correspondent who in your issue of last week was dissatisfied with what he calls the negative attitude of the Egyptian Arab Sheikhs towards the war, overlooks the fact that no one goes to fight without an object in view, and also that these Arab Sheikhs are not free agents, but Egyptian subjects. Helping the British to defend Egypt would certainly be an object near to their hearts, but the British Government has said that it will not call upon Egypt for assistance.

There is, however, to my mind a subjective reason for Egypt to wish to draw the sword, and that is, her own dignity and sense of chivalry in view of the misery in which she finds her brothers in Syria and Asia Minor under the cruel government of a worthless Turkish clique sold body and soul to Germany. Let us hope that if H.H. Sultan Hussein chooses to do so, our Government will put no obstacles in his way and will give him full support. Egypt should have a greater, not a lesser, future under British protection.—I am, etc.,

January 27. ALEXANDER SEFI.

IN MEMORY OF GORDON.

To the Editor of THE NEAR EAST.

Sir,—Apropos of the letter from "N. W." published in your paper last week, it may be of interest to some of your readers to know that there is—or was some years ago—a "Gordon Boys' Home" at Southampton as well as at Bournemouth; and unless I am much mistaken, there is a similar institution in Brighton also.

As far as Southampton is concerned, the Home always seemed to me to be one of the best institutions in the town. I often thought, however, that it would have been better if the boys could have been boarded in the institution, and thus kept away from influences which, though those of "home," were not, I fear, always desirable. The boys themselves were available for any kind of work, and were, as a rule, obliging, civil lads, though drawn from a somewhat rough class. The existence of the Home in Southampton was due to the fact that General Gordon lived there for some years—in Rockstone Place, if my memory serves me aright; and it is not without interest to note that Sir Charles Wilson, who endeavoured to relieve Gordon at Khartoum, also resided in the same town for some time, when he was Director of the Ordnance Office.—I am, etc.,

AN ADMIRER OF GORDON.

Southfields, January 31, 1916.

DIARY OF THE WAR IN THE BALKANS.

The following chronological order of events in the Balkans during the past month are from the monthly review published by *The Times*:—

January 9.—Austrian assault on Mount Lovtchen, Montenegro.
January 10.—Austrians take Mount Lovtchen.
January 11.—Austrians approaching Cettinje, the capital of Montenegro. French land at Corfu to prepare for the Serbian Army; Greek protest.
January 12.—Allies blow up the bridge at Demir Hissar, on the Salonika Railway.
January 13.—Fall of Cettinje. French submarine Foucault sinks Austrian cruiser off Cattaro.
January 17.—Capitulation of Montenegro reported by the Austrians.
January 18.—Dedeagatch again bombarded by the Allied fleet.
January 19.—Negotiations between Austria and Montenegro broken off.
January 23.—Austrians occupy Skutari. French air raid on Monastir.
January 25.—Austrians occupy San Giovanni di Medua.
January 28.—Allies occupy the Cape and Fort of Kara Burnu, commanding the harbour of Salonika; Greek protest.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Feb.	1916. Jan.		1334. Rebi I.	5676. Shebat.
4	22	Friday	29	30 Adar.
5	23	Saturday.....	30 Rebi II.	1
6	24	Sunday	1	2
7	25	Monday	2	3
8	26	Tuesday	3	4
9	27	Wednesday	4	5
10	28	Thursday	5	6

Thursday is the birthday of H.R.H. Princess Eugenie of Greece, daughter of H.R.H. Prince George, who was born in Paris in 1910.

The Montenegrin Royal family visited the Fourvière church at Lyons on Wednesday afternoon. The newspaper *Salut Public* formally denies the report that the Royal family intend to take up their residence in Marseilles.

A report from Lyons mentions that King Nicholas of Montenegro is suffering from an attack of malarial fever.

General Sir Charles Monro had the honour of being received by the King at Buckingham Palace on Thursday of last week.

The *London Gazette* of last Friday contained the announcement that the King has been pleased, by Letters Patent under the Great Seal of the United Kingdom of Great Britain and Ireland, to confer the dignity of a Baron upon Admiral Sir Charles William de la Poer Beresford, G.C.B., G.C.V.O. (commonly called Lord Charles William de la Poer Beresford), and the heirs male of his body lawfully begotten, by the name, style, and title of Baron Beresford of Metemmeh, and of Curraghmore, in the County of Waterford.

On the 24th ult., at Government House, Brisbane, the wife of Sir Hamilton Goold-Adams gave birth to a son.

The *Egyptian Gazette* of January 22 announces: Lord and Lady Brassey have engaged rooms at the Continental Hotel and are expected to arrive on the 25th inst.

According to a telegram from Constantinople, Mr. Morgenthau, the American Ambassador at the Porte, left on Wednesday for America on leave of absence. He is travelling via the Balkans and Berlin. The Dutch Minister saw Mr. Morgenthau off at the station.

Lord Oranmore has returned to Castle Macgarrett.

Sunday next will be observed in most of the churches throughout the country as "Armenia Sunday." There will be special prayers on behalf of the Armenian and Assyrian peoples, and collections will be made for the Armenian Refugees (Lord Mayor's) Fund.

Lady Loughborough, who is now staying at Shepheard's Hotel, will remain in Cairo as long as Lord Loughborough is on active service in the Near East.

Amongst those present at St. Margaret's Church, Westminster, for the wedding of the Marquess of Granby and Miss Kathleen Tennant were: Prince Bibesco, Lord and Lady Lamington, Lady Ian Hamilton, Baroness d'Erlanger, Sir Walter and Lady Susan Townley, Colonel Yate, M.P., and Miss Yate, Mrs. Charles Van Raalte, and Mr. and Mrs. Bonham Carter.

Sir Francis Gore, K.C.B., late Solicitor of Inland Revenue, has been elected Hon. Treasurer of the Serbian Relief Fund, in succession to the Earl of Desart, who has resigned in consequence of the pressure of Government business. Sir Francis Gore is a brother of the Bishop of Oxford.

In a Convocation held at Oxford on Tuesday a decree was carried constituting Dr. Bernard P. Grenfell, Fellow of Queen's College, Honorary Professor of Papyrology.

Lieutenant Arthur Podmore, Royal Engineers, who was recently mentioned in despatches, has been awarded the Military Cross for gallant conduct at Loos. Before the outbreak of war he was chief engineer to the Constantinople Telephone Co.

Under date of January 29, the Rome correspondent of the *Morning Post* reports: News reaches here from Montenegro that that famous old Voivode Elia Plamenatz, cousin of Queen Milena, and formerly Minister for War, fell down dead in the street of Cettinje on hearing the news that the Austrians were about to enter. Plamenatz was a centenarian, and the most celebrated of Montenegro's old school of fighters.

Brigadier-General George Benjamin Hodson, C.B., D.S.O., of the Brigade Staff, Mediterranean Expeditionary Force, whose death from wounds is reported, entered the service in 1882. After much service in India, he took part in the Egyptian Expedition of 1882, and received the medal and bronze star. He served also in the Burmese campaigns (1885-7), the Hazara Expedition (1891), on the North-West Frontier (1897-8), and with the Aro Expedition (Southern Nigeria) of 1902. He was frequently mentioned in dispatches, and held many medals. General Hodson, who was made a C.B. in 1911, married in 1910 Dorothy Clara, daughter of Mr. William Murray, of Clanricarde Gardens.

Captain Sir Robert Marcus Filmer, 4th Battalion Grenadier Guards, who died of wounds on January 27 in France, was in the Grenadier Guards from 1898 to 1904. Afterwards he was in the Reserve of Officers, and held a commission as major in the Yeomanry. In July, 1915, he rejoined his old regiment. He took part in the Nile Expedition of 1898, fighting in the Battle of Omdurman and obtaining the Egyptian medal with clasp. In the South African War (1899-1902) he was engaged in many other chief actions, and for his services he received the Queen's medal with five clasps and the King's medal with two clasps. He won further distinction in the present war, and was recently awarded the Military Cross for conspicuous gallantry and skill near Neuve Chapelle on the night of December 11-12, 1915, when he made a most daring reconnaissance of the German trenches previous to a successful attack, crawling down the entire length of one trench to a point where it joined another.

The *Egyptian Gazette* (January 14) reports: The death has occurred, at Cairo, of Madame Gerane Artin Pasha, the wife of Yacoub Artin Pasha. The funeral took place at the Armenian Catholic Church in the Darb el Gineneh yesterday morning.

A service in commemoration of the death of General Gordon was held at Rochester Cathedral last Sunday evening. Kipling's Recessional, "Lest we Forget" was sung, accompanied by the band of the Royal Engineers. The Vice-Dean (Canon J. Wood) preached in the absence of Dean Storrs through illness. Gordon was prominently associated with Chatham, and there are many mementoes of him in the Royal Engineer Museum, including his yellow jacket.

The 1388th anniversary of the birth of the Holy Prophet of Islam was celebrated by the Islamic Society of London by a dinner and symposium at the Imperial Hotel, Russell Square, on Saturday night. Addresses were given on "The Life of the Prophet" by Dr. Henri M. Leon, formerly Professor of Arabic at Constantinople; "The Spiritual Teaching of Islam," by Maulvie F. M. Sayal; "The Practical Teaching of Islam," by M. Kassimoff; "The Esoteric Teaching of Islam," by Professor Inayat Khan Sufi; and "The Influence of Islam on Humanity," by Dr. S. H. R. Abdul Majid.

The *Egyptian Gazette* announces that Dr. Reisner has just left Cairo for archæological research in the Sudan, and the work near the Giza Pyramids is temporarily suspended.

The Montenegrin Prime Minister, M. Muchkovitch, has arrived in Paris.

The Prisoners of War Help Committee has received, through Lady Chalmers, a contribution of £1,000 from the Moslem Community of Ceylon, for the relief of prisoners of war.

The Wounded Allies' Relief Committee, of Sardinia House, Kingsway, have received a letter from Dr. Aspland, who was in charge of their Serbian unit and is now a prisoner of war at Vrnjatchka Banja, Serbia, saying that he and his wife (who is also a prisoner) are well and cheerful. He cannot, of course, say when they will be liberated, but adds that they are well treated by the Austrians.

Major the Hon. Edward Stuart St. Aubyn, who is a brother of Lord St. Levan and heir-presumptive to the peerage, is reported "missing, believed to have been drowned in the Eastern Mediterranean." Born in 1858, he entered the King's Royal Rifles in 1879, joined the Reserve of Officers on November 29, 1900, and on November 12 last year was appointed a Staff officer of the third grade. In Egypt in 1882 he was present at the reconnaissance of Ramleh, the affair at Tel-el-Mahuta, the action at Kasassin, and the battle of Tel-el-Kebir, and was awarded the medal with clasp and the Khedive's bronze star. He also served in the South African War. He was D.A.A.G. on the Headquarters Staff of General Sir Redvers H. Buller's Natal Army, was mentioned in dispatches three times, promoted to major, Reserve of Officers, for his war services, and awarded the Queen's medal with four clasps. He was a Knight of Grace of St. John of Jerusalem. Lord St. Levan's heir is now his nephew, Mr. Francis Cecil St. Aubyn, Grenadier Guards, son of the late Hon. Arthur St. Aubyn.

Next Monday afternoon, at 5 o'clock, at the London School of Economics, Kingsway, the Hon. W. Pember Reeves, Ph.D., will deliver the first of a course of six public lectures on "The Balkan States." H.E. the Hellenic Minister will take the chair at the first lecture. The five remaining lectures of the course will be delivered on following Mondays.

Lord Reay will preside over a meeting of the Royal Asiatic Society to be held at 22, Albemarle Street, next Tuesday afternoon (4 p.m.), when Professor D. S. Margoliouth, D.Litt., will read a paper entitled "The Islamic Pulpit."

Next Monday evening, at a meeting of the Royal Geographical Society, Mr. H. Charles Woods will read a paper, "Communications in the Balkans."

On Tuesday next, at 8.30 p.m., under the auspices of the Royal Colonial Institute, Mr J. L. Garvin will read a paper on "The British Empire and the Near East" at the Hotel Cecil. Lord Curzon will be in the chair.

The Marchioness of Londonderry opened at the Portman Rooms on January 27 a bazaar and entertainment organised by the Women's Volunteer Reserve with the object of rendering aid to distressed Serbians. Each of the stalls had been organised by one of the seven companies of the London Battalion. Mrs. W. M. Charlesworth said that a cheque for nearly £400 had been received from Vancouver, through Dr. Scarlett Synge, who had been out in Serbia. Lady Londonderry, in declaring the bazaar open, said that her own sister had been out in Serbia nursing for a year, and she had written home an account of the hardships the Serbians had undergone which would make the heart bleed. Her sister and the other members of the unit were prisoners now, but they were still carrying on their nursing work.

Digitized by Google

Lady Murray, who has succeeded Lady Monro as president of the Mediterranean Expeditionary Force Fund, has sent to the Press an appeal for gifts and comforts to alleviate the hardships of the troops now in Salonika and Egypt. She writes:—"I should like specially to draw attention to the fact that, although the troops have been withdrawn from the Dardanelles, their needs are as urgent as ever. At present what are most required are:—Underclothing, mufflers, cardigans, pipes, tobacco, cigarettes, matches, tinned milk and fruits, towels, handkerchiefs, gloves, chocolate, and writing wallets. Cheques should be made payable to Lady Murray, and gifts should be addressed to her, care of Queen Alexandra's Field Force Fund, 24a, Hill Street, Knightsbridge, London, S.W."

The amount received to date for the purchase of motor ambulances for presentation to British troops in the Balkans by the Hellenic community of London totals £6,193 19s. The latest subscriptions being: Mr. S. A. Agelasto, £10; Mr. J. M. Agelasto, £5; Mr. M. A. Embiricos, £100; Mrs. Amb. Ionides, £5; Mr. E. E. Mavrogordato, £5; Mr. S. Manuel, £5 5s.; Mr. A. Mavrogordato, £10; Mrs. J. A. Ralli, £10; Mr. A. A. Ralli, £25; Mr. S. S. Ralli, £20; Z. A., £5. Nine ambulances will shortly be delivered. The treasurer now earnestly appeals for donations to the extent of £350. This sum, together with the balance in hand, would complete a tenth ambulance. Subscriptions should be sent to Mr. N. Giannacopulo, care of Messrs. Ralli Brothers, 25, Finsbury Circus, E.C.

Another instance of remarkable heroism and devotion to duty on the part of a clergyman is related by a correspondent in the *Times*. Upon the outbreak of war with Turkey, the Rev. W. A. Wigram, D.D., acting Chaplain of the Crimean Memorial Church at Constantinople, volunteered to stay at his post. It may be remembered that shortly after the beginning of our attack upon the Gallipoli Peninsula, the Turks selected fifty Allied subjects in Constantinople, and took them to the battle area for the purpose of exposing them to our fire. This atrocity was prevented mainly by the intervention of the American Ambassador.

After the victims had been selected, Dr. Wigram came forward and volunteered to take the place of one of them. His proposal being assented to, he accompanied the party to the Straits, devoting himself to furthering their spiritual and material welfare, "in circumstances," so the narrator of the incident says, "which were not always pleasant, and might at any moment have become dangerous."

Dr. Wigram, who is the head of the Assyrian Mission, is a son of the late Canon Wigram, of St. Albans, and is a nephew of the late Mr. Reginald Wigram, of Leeds. Before going East, he was curate of St. Jude's, South Shields, and of St. Barnabas, Hendon, Sunderland. His relatives in this country still hear from him, and he is quite well.

A telegram from Geneva states that the Turkish Consul at Salonika, who arrived there on Monday, has left for Germany.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

APPOINTMENTS, PROMOTIONS, Etc.

The appointment of Lieutenant-General Sir J. G. Maxwell, K.C.B., K.C.M.G., C.V.O., D.S.O., to be temporary General (dated January 28) is announced in the *London Gazette*.

The promotion to the rank of general of Lieutenant-General Sir James Willcocks is announced in the *London Gazette*.

Mr. Williams, Inspector-General of the Egyptian Ministry of Public Works and Assistant Under-Secretary of State for that Ministry, will retire from the Government service at the end of the present financial year, when his post will be abolished.

His Excellency the High Commissioner of Cyprus has appointed Mr. John Richard Holmes to fill the office of Judge of the Supreme Court from January 3, 1916, and until further orders.

Lewa F. F. Carrol Pasha, M.B., of the Medical Corps, Egyptian Army, has been appointed Principal Medical Officer in place of Lewa Bray Pasha, who was struck off the Service a few months ago.

Bimbashi G. T. Raikes, 13th Sudanese, has been struck off the strength of the Egyptian Army, on reversion to the British Army.

SUDAN APPOINTMENTS.

(From a Correspondent.)

Captain R. C. Greenwood, who has hitherto acted as 1st Inspector at Wau, in the Province of Bahr-el-Ghazal, has been promoted to the position of Senior Inspector in the same province. Captain Greenwood has seen some ten years' experience in the service of the Sudan Government, and holds the rank of Lieutenant-Colonel (Kaimakam) in the Egyptian Army.

Mr. E. D. Bally, 2nd Inspector of the Sennar Province, has been appointed 1st Inspector of the U.N. Province.

Captain E. H. Ross, hitherto a 2nd Inspector serving in the Upper Nile Province, and with eight years' service to his credit—much of which has been passed in the Khartoum station—has been advanced to a 1st Inspectorship, to date from the beginning of the year.

It was announced some time ago in the columns of The Near East that Mr. A. L. Butler, who for over fifteen years had been Superintendent of the Game Preservation Department (Sayadin), would soon retire from the service of the Government on pension. A public notification to this effect has just been published in the *Government Gazette*, the retirement dating from January 1.

It is generally conceded that Mr. Butler rendered considerable assistance to the Administration, first in organising and then in controlling the Game Preservation Department, often under very trying circumstances.

Among some of the more recent appointments under the Administration have been the transfer of Mr. R. A. Bence-Pembroke, 2nd Inspector of the Kordofan Province (with official residence at Nahud), to a similar post in the Province of Khartoum; the confirmation of the appointment of Mr. F. C. C. Balfour, hitherto temporary 2nd Inspector at Talodi, in the Nuba Mountains Province, and with ten years' service to his credit, to the vacant Second Inspectorship at Nahud; the transfer of Mr. T. A. Leach, hitherto 2nd Inspector at Rufaa, in the Blue Nile Province, to a similar position in the Khartoum Province; the transfer of Mr. P. Munro, formerly 2nd Inspector at Omdurman, in the Khartoum Province, to the White Nile Province; the transfer of Mr. A. P. Coote, 2nd Inspector of the Halfa Province with official residence at Halfa, to the Red Sea Province; the transfer of Mr. R. V. Bardsley, a 3rd Inspector at Khartoum North, to the Blue Nile Province; and the transfer of Mr. W. L. Cheesman, hitherto a 3rd Inspector, with residence at Port Sudan, in the Red Sea Province, to the Halfa Province. Mr. Cheesman has had a little over two years' experience in the Sudan Government's service.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTH.

Carver.—On January 30, at Oasis, Ramleh, Egypt, to Ralph and Mary Carver—a son.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

MESOPOTAMIA.

In a war of so many fronts, full of incident in its daily progress either at sea, on land, or in the air, it is difficult for public attention to be held for long to any one sphere. The very length of General Townshend's stand against a superior force of Turks under German direction has caused the siege of Kut to be accepted in this country with almost the same fatalism as is applied to the temporary stalemate in the western theatre of war. But a brief official statement to the effect that the recent floods have rendered a forward movement on the part of General Aylmer's relief expedition impracticable has more significance than a bulletin from France stating that there is nothing to report. Nearly nine weeks have passed since General Townshend's column, falling back before the enemy after an unsuccessful attempt to hold the ground captured at Ctesiphon, took up its position at Kut. It was immediately invested, and we must suppose that steps were taken without delay to send forward reinforcements for its relief. A month elapsed before this expedition under General Aylmer, advancing from Ali Gherbi, some 150 miles from Kurnah, came into touch with the enemy. On January 7 and 8 the engagement became general, and the Turks withdrew some eight or ten miles up the river. By this time bad weather had set in; coupled with the determined resistance of the enemy, it made any advance on General Aylmer's part a formidable and necessarily slow undertaking. The relief expedition, however, held on its way. The Turks were engaged once more on the 13th, and this time the fighting continued for three days. A further withdrawal for a few miles brought the enemy back within a carefully prepared position. The British attacked on January 21, but in spite of the heavy losses suffered were unable to dislodge the Turks. For the last fortnight no further operations have been attempted owing to the heavy rains and floods. In the meantime General Townshend's force remains beleaguered at Kut. The latest telegram from this centre, despatched on January 28, reports that the Turks have had to evacuate the entire length of their advanced trenches owing to the inundations, and have fallen back two thousand yards. General Townshend's position, being on higher ground, has escaped the worst consequences of the flood; and the message adds that all is well in his camp. Rescue, however, must come from without, as it would be too much to expect that the garrison should be able now to fight its way to the relief expedition.

Fortunately, the position at Kut was a strong one when the Turks evacuated it, and it will have been rendered even more formidable during the British occupation. But that a force sent forward on what was virtually a raiding expedition should be able, after nearly reaching its objective, to fall back a considerable distance and then make its supplies last for a siege of over two months, is a striking testimony to the organising powers of those in command and to the spirit actuating all ranks.

But while our immediate concern is to see General Townshend's column extricated from a position of danger and hardship, we cannot overlook the fact that its fate is bound up with the larger question of the future of these regions. In the early days of the attempt to force the Dardanelles we combated the theory that a withdrawal was impossible on account of the serious blow it would inflict on British prestige in the East. We maintained that the ultimate issue of the war would determine the place that Great Britain would occupy in Oriental esteem, and the contention still holds good in connection with the course of events in the Middle East. But it would be idle to suppose that the British nation could contemplate with indifference a serious reverse on the Tigris, which might render further operations in Mesopotamia too costly for the resources at our disposal in view of our commitments in other parts of the world. The question of prestige might, perhaps, wait until the end of the war; but the failure to make good now would almost inevitably be followed by results which might endanger the British position from Egypt to India. A claim on the part of the Turks that they had been able to drive the British out of both Gallipoli and Mesopotamia would cause the unsophisticated native of those regions to credit at once all the stories that had been poured into his ears by Turco-German agents of the impending collapse of the British Empire. The subsequent pacification of the Middle East could not be effected by a decision reached in a council chamber in Europe, but would have to be carried out by extensive military operations on the spot. It is for the purpose of avoiding these that we have to guard against the temptation of treating the Mesopotamian expedition as of no military importance. Its effect on the campaign in Europe may be nil; its significance throughout the length and breadth of the Middle East at this stage of the world war can hardly be over-estimated.

Fortunately, a variety of circumstances combine to hearten us in the vigorous prosecution of the Mesopotamian campaign. The Russian success in Armenia comes at a time when the Turks were badly in need of a breathing space after their exertions on the Gallipoli Peninsula. Difficulties of transport will have made them rely more on the original accumulation of supplies in their different theatres of war than on any regular system of provisioning their armies at the front. Thus the sudden advance of the Russians against Erzeroum and Mush, which were the depots for the campaign in the Caucasus, will have thrown the whole Turkish organisation much more out of gear than a similar thrust would affect the arrangements of any other belligerent. It is unlikely that even with German supervision to help them they will be able to cope with the danger threatening them in Armenia without weakening the Baghdad command. The latter, however, is already responsible for the expedition into Persia and for its own defence against the British forces on the Tigris. For the moment the three Russian lines of advance from the north and east and the operations of the British force in the south are too far apart to be co-ordinated; but if they can be pressed home until Baghdad is reached by one or other of the forces, the Turco-German menace to Persia and the Indian frontier will be removed and Turkey's usefulness to Germany will be largely impaired. This is not the time to relax at any one point the pressure now being brought to bear on the Turks. A mistake was made in entrusting the dash on Baghdad to an inadequate force. Whatever political considerations could be urged in support of the hurried advance must carry yet more weight in favour of a renewal of the attempt. But this time a more accurate estimate of the enemy's strength will have been formed, and there can be no question of entrusting the task to one or two divisions. A dash on Baghdad may be ruled out of court; but there does seem to be solid ground for continuing the pressure the British are exerting on the enemy from this direction, always with the ultimate view of joining hands with the Russians, and thus finally breaking Turkish power in the Middle East.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of the "NEAR EAST" to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

BATTLE SONGS OF SERBIA.

Probably no nation under the sun has such a continuous fighting tradition as Serbia. That is why most of her literature is patriotic. In the bookshops of Belgrade and Nish could be found translations of Maeterlinck, Shaw, Tolstoy, Daudet, and other European "classics," but few Serbian romances or poems. Their history is romance, their battle-song is their verse.

From the day when they were forced by invading tribes to leave the slopes of the Carpathian mountains and to petition the Eastern Emperor for permission to settle in the unoccupied parts of the Balkan mountains, the Serbian people have sustained warlike activity. The story of their political conflicts with Turkey, Austria, Russia, and Bulgaria is long and complicated, and often ends in defeat. Like the heroes of Homer they cradled their children to antique chants of the exploits and the unflinching bravery of their forefathers. Many an old rhymed and musical ballad recounts the misfortunes of a race which has been compelled to fight against oppression again and again. Talk with a Serbian soldier and you will find him a veteran of three wars, talk with an older warrior and he will prove to have served six or seven times. In all the hopeless muddle of Balkan warfare there is no nation with a finer record for courage than these Serbs. Their worth has been tested not only in victory, which means nothing, but in the hour of bitter defeat.

Among the persons celebrated in the Serb legends is Marco Kralyevitch, last survivor of Kossovo. Courageous as his sword, strong as Hercules, he seems to incarnate the very genius of his people. At the hour of his death he climbed a high mountain, with one stroke decapitated his faithful horse, then broke his sword and shattered his battle lance in seven pieces, that the enemy might never boast of taking his arms. On the great plain of Kossovo to-day the Serbs have ruined their abandoned cannon and destroyed their material for the same reason. It was not so very long since that the Austrians crossed the Danube, and a certain Serbian battery, rather than leave their munitions to the enemy, stayed at their posts until the last shot was fired, and so rapidly did they work the overheated guns that the enemy imagined heavy reinforcements had arrived, and so retired.

The story of the old defeat on Kossovo, as related in the ballad, is worth recounting:—

The next day at the break of dawn two great black ravens soared over the vast plain of Kossovo. They came to rest on the white tower of the illustrious Serbian prince. One croaked mournfully and the other spoke: "Is not this the tower of the glorious prince? Is there anyone in the tower?" The princess heard them; she climbed the white tower and questioned them thus: "God bless you both! Tell me, whence come you so early in the morning? Is it by chance from the field of Kossovo? Have you seen there two powerful armies? Have they fought? But which, tell me, which is victorious?"

And the two black ravens replied: "Many thanks for thy blessing, Militza. It is from Kossovo that we come. There we saw two powerful armies which engaged in a great battle yesterday. Of the Turks a few remain, but of the Serbs all that are left are bleeding or wounded."

Turkey or Austria, it matters not which, Serbia has ever fought for freedom. "Tipperary" or "The Girl I Left Behind Me" do not form the themes of their battle-songs. An expeditionary corps fighting away from home is unknown in their military annals: they always fought on their own soil to resist aggression. The national song reflects the situation:—

Rise, rise up, ye men of Serbia.
  Unsheath the sword in honour's cause.
Rise in defence of King and of country;
  Never submit to enemies' laws.
Rally, rally, duty calls us,
And the foemen we shall slay.
    With hearts aglow and colours flying,
    Serbia shall crush her foes:
Save once more our Fatherland,
Our King, and patriotic band.
    Save once more our Fatherland,
    Our King, and patriotic band.

Spare us, God, whom we adore,
From the shame of new defeat.
Hear again what we implore—
Strength in this our great distress.
Protection bring us as before,
Our fate is in Thy hands.
    With hearts aglow and colours flying,
    Serbia shall crush her foes:
Save once more our Fatherland,
Our King, and patriotic band.
    Save once more our Fatherland,
    Our King, and patriotic band.

It is not by chance that reference to the Deity appears in these songs; for in the past the Cross was raised against the Crescent whenever the flag of Serbia marched against the Turk. Like the "Marseillaise," the patriotic tunes were, if not written, at least immortalised on the march. These were the strains which urged the warriors on to battle, this was the music which stirred the hearts of the very soldiers. Like "Rosalie," in praise of the cold steel of the bayonet—a mistress who can be glowing as well as chilly—and the "*Soixante-quinze ça c'est à nous*," sung to-day by the *poilus* of France, these traditional Serbian verses grew out of the life at the front.

Another typical piece will close the present comment. Some officers were gathered together one evening last summer at a little country inn near the Danube. One of the Americans present wanted to sing the following characteristic song, and was requested not to, because it was deemed distinctly a piece of battle music, to be used only in the trenches.

Hear, ye brother Slavonians,
  A Serbian mother's voice.
Our enemies are rising
  Our downfall to rejoice,
To soil by greedy force
Our honour sanctified.
    For liberty and Serbia
    Oh, God, with us abide.
      Come, Oh, come! Serbians arise,
        Follow, brothers, follow,
      For home and family ties.

Rally now, ye Serbians true,
  To battle without dread.
Take up the rifle, grip the sword,
  The powder and the lead.
Don't allow the race to die,
Name and tongue so dear.
    Fight to keep your liberty,
    Then slavery never fear.
      Come, Oh, come! Serbians arise,
        Follow, brothers, follow,
      For home and family ties.

Mighty Marco Kralyevitch,
  Bring forth spiked mace;
Peter Karageorgevitch,
Lead on your loyal race.
Shield the people from disgrace,
And let us bravely die
For Serbia, our Mother dear,
  While you hear our battle cry:
      Come, Oh, come! Serbians arise.
        Follow, brothers, follow,
      For home and family ties.

If, as Burns said, songs make the country, in Serbia at least 'tis courage makes the songs.

ELBRIDGE COLBY.

FOR OUR SERBIAN ALLIES.

The Serbian Minister in London wishes to convey his warmest thanks to all the benevolent donors who have sent until now their donations through the Serbian Legation for several relief funds existing in Serbia.

At the same time, the Serbian Minister has to announce that several relief funds in Serbia are sending through him their appeal to all benevolent men and women, fathers and mothers, and all philanthropic institutions, emphasising the horrible suffering of the Serbian refugees, the starvation of the population staying at home in Serbia, the painful scenes of the desperate mothers and frozen children. Many thousands of refugees are dispersed in the villages of Greece, in the Albanian desert, or in the rocky hollows of Montenegro, without home, without food. The life of these refugees is now nothing else than a slow dying out. This help will be a real help only if it comes as quickly as possible. Such appeals have been made from the following funds:

The Serbian Archbishop of Belgrade's Relief Fund for the Families of the Fighting Men.

The St. Helen's Relief Fund for the Orphans whose fathers were killed in the war.

The Parliamentary Fund for the Relief of Serbian Refugees.

The Serbian Red Cross Fund for the Wounded Soldiers.

All those who would help any of the above-mentioned funds are requested to send their contributions through the Serbian Legation, 195, Queen's Gate, London, and they should notify for which of the funds the donation is intended.

THE PRESS ON THE NEAR EAST.

The Position in Egypt.

The *Daily Graphic* (January 31), in a leading article on our position in Egypt, thinks that—

The men responsible for the defence of Egypt and the Sudan will not be guilty of the folly of underestimating what the enemy can effect against us in that part of the Allies' zone. They will prepare not for a small but for a big risk, all the more because they have to think for and fight for a people easily excited and made fanatical. On the other hand, the news which has come to hand during the last day or two of the results of the Germans' efforts in Western Egypt is as heartening to ourselves as it is depressing to the Teuton agents who have worked so long and so patiently to make the Senussi movement against us a success. The entrance of Turkey into the war naturally disturbed the fiery Berber tribes, especially the Senussi, who for years have indulged in sporadic outbreaks. On the strategic withdrawal of our force to Mersa Matruh, the Senussi and other tribes attacked the British, were defeated, and withdrew some miles away. Before they could re-form effectively General Wallace attacked them and broke them up. The moral effect of this is very great indeed.

German Press and Egypt

The correspondent of the *Sunday Times* (January 30), in an interesting article dealing with the internal conditions of Germany to-day, concludes with the reference to the proposed Egyptian expedition which we quote below:—

The confidence with which German journalists write of the Egyptian expedition might lead one to suppose that the country is practically in German hands. We are told that the expedition planned by von der Goltz has not yet started because everything is not quite ready. You see, there is the desert to be crossed before the Suez Canal is reached, and it would be foolish to set out without proper water transport, etc. Meanwhile readers are told what will happen when this "neck" of the British Empire is hewn asunder. When Djemal Pasha and his Chief of Staff, Freiherr Cress von Cressenstein, have accomplished their picnic, the British Empire will be no more; India, East Asia, Australia will, of course, separate automatically. Meanwhile, the illustrated papers are publishing photographs of Alexandria, Cairo, and other scenes in Egypt or on the Canal. It is significant that the subscriptions to these reproductions are nearly always preceded by the legend, "Zorm Vormarsch gegen Aegypten."

The Royal Meeting at Nish

The Budapest correspondent of the *Morning Post* (February 1), in a dispatch on the Royal meeting at Nish, says that despite official assurances that the people of Serbia were "most friendly towards the Germans and Austrians, and were gratified to them for liberating them from their rulers," the fact of the Kaiser's move was kept a dark secret until he had left Serbian territory. The writer continues:—

As to the object of the visit, nothing can be read in the Budapest and Viennese newspapers, and one is naturally confined to hearsay, but it is generally agreed that the Emperor came to persuade King Ferdinand, and through him the Bulgarians, to take up a more favourable attitude towards the Central Powers on the question of participation in the campaign against the Allies on Greek territory. The German Emperor in the evening had an hour's conversation with King Ferdinand in his railway carriage, the only other persons present being General Falkenhayn, the Chief of the Staff, and M. Radoslavoff, the Bulgarian Premier. What was arranged in the railway carriage, which was guarded on all sides by a double row of German sentries, is, of course, not known, but it is conjectured that most important questions were settled.

The same correspondent also includes the following reference to Salonika:—

Direct messages from Salonika state that the Allies are still landing great numbers of troops almost every day, and that the British have brought up numerous heavy guns, the necessary ammunition being landed from a great Atlantic liner. The Serbian refugees, who were very numerous in Salonika, are leaving almost daily for Italy and France, for the Greek authorities did not show so much sympathy towards these unfortunate people as they expected to meet.

Made in Germany.

Canon J. T. Parfitt, "Vicar of Mesopotamia and Rural Dean of the Garden of Eden," who has been contributing a series of articles to the *Evening News*, has some pertinent things to say regarding Germany and the proclamation of the "Jehad."

The massacre of a million Armenians was the smallest part of the wholesale slaughter contemplated by Germany when she forced the Sultan to proclaim a "Jehad." . . . I have no hesitation in saying that this "Jehad" was made in Germany, and was long ago planned as an essential part of the great world-war. It was never initiated by the Turks; the Shereef of Mecca refused to recognise it; the Sheikh of Islam demurred, and the Sultan himself hesitated till the guns of the Goeben looked in at the palace windows, till Enver Pasha and his clique of assassins practically surrendered the capital of Islam to the Kaiser, who straightaway commandeered the Khalifate, imposed his imperious will on the Khalif, and is now running the Ottoman Empire to its inevitable doom. As far back as 1906 there were Germans who openly declared they would make a tool of Islam in the event of a world-war, and, with the aid of fanaticism, would forge the dynamite to blow into the air the rule of the Western Powers from Morocco to Calcutta. The great Pan-Islamic movement was set on foot soon after the Kaiser proclaimed himself in Damascus "the Defender of Islam." Fanatical enthusiasts were then sent from Constantinople to every Moslem State to stir up discontent, to promote the prestige of Turkey, and to prepare for the great and terrible day when, at the Kaiser's signal, a "Holy War" would massacre millions in the East while unholy Huns made havoc of civilisation in the West.

The whole of the article, which is fourth of the series, is of exceptional interest.

The Balkan Question.

Sir Edwin Pears, writing under the above heading in the *Contemporary Review* (January), attributes the danger in the Balkan question partly to the shortcomings of our diplomatic system and partly to the fact that "while our Consuls in all these States compare favourably with those of Germany, they have nothing to do with politics." The beginning of his article is devoted to an examination of the various causes which have worked for Balkan discord. In referring to the attitude of King Constantine (it must be remembered that this article was written some weeks ago) Sir Edwin writes:—

His obstinacy is supposed to be based upon the opinion that the Central Powers are certain to win. He should at least remember that so far as Greece is concerned, the countries which have sea power at their disposal are necessarily the victors. Greece occupies certain of the islands of which she took possession during the Balkan wars. England and France made no objection to her retaining them. Indeed, a peaceful Greece ought to be the ruler of nearly all the islands of the Ægean. Their people are all Greek in race, language, and religion, but if Greece is going to become a traitor to her liberators she may easily be made to suffer the penalty of her treason. Her possession of any islands will be determined by the will of the Entente Powers. Her fleet, of which the "Averoff" is the most important unit, is a respectable one, but of course could not complete for a week with either the French or the British Mediterranean squadron. The Allies not being barbarians, the sacred stones of the Acropolis would be religiously respected, but the Piræus is a fortied town, and is full of factories, which would be tempting in case of a naval blockade. The sober-minded men of Greece, therefore, could entertain little doubt of the powerlessness of their country in presence of the combined fleets.

The writer thinks that so long as Mr. Skouloudis retains his position as Premier we may trust the Greek Government. "If he should resign, except to give place to Venezelos, the Allies would be wise in dealing with Greece as an enemy." The following paragraph refers to the events which marked the concluding phases of the Balkan war and their relation to present-day affairs:—

It is, however, known that Serbia and Greece, apparently anticipating foul play on the part of Bulgaria, signed an agreement setting aside that which constituted the Balkan League. So far as I have been able to judge, the agreement was an act of injustice to Bulgaria. The arrangements made on March 13, 1912, which were the basis of the Balkan League, were ruthlessly disregarded. Macedonia was divided between Serbia and Greece. I know nothing to justify such a division. It was provided, however, that if Bulgaria should attack Serbia, Greece should come to her assistance. Greece has failed to do so. She has offered as excuses the most miserable quibbles. King Constantine, judging from what he is reported to have said, instead of using his Danish common sense, has chosen the unkingly part of adopting these Greek advocates' subterfuges. Mr. Venezelos on this matter has spoken out like a man.

German Dreams.

Sir Edwin then includes an examination of the progress of the war from the German point of view, which insists that the German dreams of expansion in the East are materialising with the defeat of Serbia and the check of the Franco-British forces that went to her relief. From the Entente point of view the writer says:—

Let us first ask how far the entry of Turkey and Bulgaria will affect the main issue of the great war. . . . It is asserted that these two States can array upwards of a million additional men against us. . . . England alone has already a million on whom neither she nor her Allies counted twelve months ago. Russia, whose *amour propre* and whose resentment are more aroused by the conduct of Turkey and Bulgaria than are England and France, has a practically exhaustless supply of men. Time is on her side and on ours. Time saved Paris and Calais. But is it true that a million of men will be added to our enemies? Turkey has made a brave fight for

Digitized by Google

her existence under her German leaders, but her best regiments have been destroyed, her resources are nearly exhausted, and she can only obtain munitions from Germany. It is doubtful whether she could bring an effective quarter of a million into the field. The Bulgarians are excellent soldiers, but 350,000 is about the outside number they could put into the field.

As to our position at Salonika, Sir Edwin thinks that we can afford to rely upon the decision of the military commanders. If they think we can attack with the certainty of success, well and good; if not, time spent in waiting works to our advantage. The writer includes the following reference to the Turks:—

I wish it were possible to think of the Turks apart from their treatment of subject races, in which they have proved themselves hopeless. Considered simply as soldiers, they compare favourably with any others in their general conduct. Numerous recent letters speak even of a certain chivalry towards their enemies which recalls the estimate of the Crimean war when the Turk was spoken of as a gentleman. British prisoners speak well of their treatment. As I have already suggested, I believe the mass of the Turkish people, Moslems as well as Christians, remain with friendly feeling towards Englishmen.

He thinks that Roumania will remain neutral until by their deeds the Allies have shown her the way to immediate and certain victory. He concludes:—

Something must be said of the set-back that our troops have received in their advance towards Baghdad. It seems to have been one more of our usual blunders, due to our despising our enemies. To send "two men and a boy" is the traditional remark in India on the way we meet risings and other troubles with small States. If this be the explanation, it will not, in spite of the Kaiser's emissaries, produce much ill-effect in India. The natives, prince or soldier, will simply remark upon the repetition of the old blunder. The matter may have to be done again.

Our country has much reason for complacency, much justification for what our enemies incorrectly call hypocrisy. We have no cruelties with which to reproach ourselves, no Rheims Cathedral, no "Lusitania," no Edith Cavell, nothing like support or toleration of Armenian massacres. Our hands are clean. We have played and are playing the game. Therefore it is that without hypocrisy we may claim that the nation has strength because it has possessed its soul in quietness and patience.

Germany and the Balkans.

M. Joseph Reinach, writing in the *Morning Post* (January 28), points to the swift revival of Russia as one of the greatest surprises which Germany has suffered as the result of miscalculation. After showing that not only have the German attacks been stopped, but that fresh Russian armies, "more powerful and admirably armed," are entering upon the scene, the writer continues:—

It is now that the German Emperor has conceived the hope of getting a decisive success in the Balkan Peninsula; but here, too, his dream is dissolving. In point of fact, Serbia has been crushed and Montenegro is succumbing. But the Franco-British are turning Salonika into a vast entrenched camp like the lines of Wellington at Torrès-Védras. . . . The Serbian Army is in process of reformation, and will be seen again in the battle line. The King of Montenegro, after an hour of despair, has recoiled before the infamy of the Austrian conditions of peace. . . . It would seem that the German Staff does not share the Emperor's illusions as to the diversion in the Balkans. When one considers that the two European theatres of the Franco-Anglo-Belgian and Russian War are the principal ones for Germany, and those on which the result of the world-war has to be decided, one is forced to believe that the Grand German Staff at first considered its participation in the Balkan operations as quite temporary. One proof of this is that, once the invasion of Serbia was accomplished, the withdrawal of the German troops began, at first towards their second lines and then to the French and Russian fronts. But meanwhile circumstances arose that have greatly complicated the situation in the Balkans and have given the German Staff fresh and gravely difficult problems to solve. Above all, Germany's new ally, Bulgaria, though she has helped to increase the Austro-German forces on the Balkan front, has demanded exceptional sacrifices from Germany.

Roumania's Attitude.

We take the following paragraph from a dispatch from Mr. A. Beaumont at Milan to the *Daily Telegraph* (February 2):—

The attitude of Roumania is openly declared by the Vienna and Budapest papers to be giving great concern to Austria-Hungary. A despatch from Galatz, Roumania, says that some days ago a mixed commission, composed of artillery and veterinary officers, left aboard a Russian steamer, the "Admiral Kaschmiroff," to purchase horses in Russia for the Roumanian Army, which is being rapidly equipped with everything necessary for a severe campaign. Large consignments of horses already arrived at Galatz and Reni six days ago, and others are expected. An influential Roumanian who has just been in Rome, and is proceeding to Paris and London, declares that the sentiment in favour of the Allies has greatly increased latterly. Quite a considerable change has been produced in the minds of the Agrarians since the large grain purchases by England Roumanian farmers, who were being slowly ruined, have been saved by this action, and the pro-Entente feeling it has engendered is giving grave concern to Germany and Austria.

The *Morning Post* correspondent, writing from Budapest on January 18, says:—

Some change has been observed in the policy of Roumania recently, and her attitude is greatly exercising the diplomatic representatives of the Central Powers in Roumania, as well as Vienna and Berlin. According to reports received, the events in Salonika are being followed with much greater interest in Roumania than the fighting on the Bukovina frontier, in spite of the adjacent position of the latter, for, naturally, Roumania considers herself first of all a Balkan State, and all its interests are bound up with her position among the other States of the Peninsula. It is stated by all the Hungarian correspondents in Bucharest and by those diplomats who have been in the Roumanian capital lately that the landing of the Allied troops at Salonika and the fact that the Entente Powers are about to embark on serious operations in the Balkans have had considerable effect on Roumanian public opinion. It was noted during the early stages of the offensive against Serbia that the pro-Russian feeling in Roumania declined to a certain extent, and the friends of the Entente Powers became less active, but at present the pro-Russians are again in the ascendant.

The City of Panics.

The *Daily Chronicle* (February 2) publishes a long dispatch from its New York correspondent, who quotes at length from an article by the Athens correspondent of the *New York World* on the situation in Turkey. This neutral observer, after weighing the evidence of travellers arriving from Constantinople, has come to the conclusion that all is not well between Turk and German.

While in appearance preparations are made for the Egyptian expedition, and every means is sought for the maintenance of the war, in reality all the Turks, old and young alike, are looking forward to the end of this bloody affair and for peace at any cost. . . . Only half a pound of bread is allowed each person daily; coffee is worth 4s. a lb., petroleum 1s. 3d. a lb., rice 1s. 8d., macaroni 1s. 5½d., sugar 1s. 8d.; a box of matches, formerly sold for ½d., now sells for 5d. In a word, prices are now five to ten times higher than in normal times.

Referring to the proposed expedition to Egypt, the writer continues:—

So the expedition for Egypt is purely a German scheme, and the Turks are driven into it, although they well understand that they have nothing to gain from such an exhausting and dangerous undertaking. If the Turks fail to attack the English before the end of February, in the month of March the usual sandstorms will begin, and the much-advertised undertaking will have miscarried. About three weeks ago, with much ceremony, three Turkish divisions, about 30,000 men, left Constantinople, and now I learn here, from authentic sources, that they have already crossed the Taurus Mountains. I am informed that all the soldiers are destined for Egypt, and are provided with blue glasses. No German or Bulgarian soldiers will take part in the expedition, but the Germans will equip the Turks and furnish the artillery, and, through specialists and officers, will direct the entire operations. Travellers have seen hundreds of wagons full of soldiers going from the Dardanelles to Constantinople to join the Egyptian army. The English and French at the start of the Turkish war underestimated the Ottoman military power, and now they are overestimating the so-called Turkish army, which is only a mob of half a million men. The gates of Constantinople are not to be reached through the Straits of the Dardanelles, but by crossing the Taurus Mountains.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Greek Islands.

Jan. 28.

Lord R. CECIL, replying to Sir C. HENRY, said Germany and Austria had on several occasions endeavoured to utilise several of the Greek islands for hostile operations, but it was hoped that the measures which were being taken by the Hellenic Government, in conjunction with the British and French naval and military authorities, would effectively put a stop to these practices.

The Roumanian Grain Deal.

Mr. KING asked whether the British Government had acquired any rights over grain or flour in Roumania, and, if so, what were the intentions of the Government as to the disposal of the supply acquired.

Lord R. CECIL (Under-Secretary for Foreign Affairs): His Majesty's Government have concluded contracts for the purchase of a certain amount of Roumanian grain. The purchases will be spread over a period of several months. The grain is to be held at our disposal in Roumania and exported after the war, so soon as export facilities permit.

In reply to a supplementary question as to the amount of money involved and the price at which the purchase was made, Lord R. CECIL said he thought he ought to be given notice of questions involving figures.

The "Baghdad" Railway.

Colonel YATE, having asked the Secretary for India if he could give any information as to the present state of the Baghdad Railway; how far the cuttings through the Taurus and Amanus ranges were nearing completion; where was the railhead at present; when it was expected that communication would be established with Mosul; and how far the line north from Baghdad had been completed,

Lord R. CECIL replied: The area dealt with in the hon. and gallant member's question lies entirely in enemy territory. I regret, therefore, my inability to make public such information on the subject as may be in the possession of his Majesty's Government. I shall, however, be very glad to give my hon. and gallant friend what information I have.

EASY DIVORCE IN HIGH ASIA.

In the course of her paper, "Seven Months in High Asia," read before the Central Asian Society, at 22, Albemarle Street, on Wednesday evening, Miss Ella Sykes said that in Kashgar, inhabited by a wild race of peasant cultivators and shopkeepers who appeared content with the rule of the Chinese, the status of the women was decidedly superior to that of their Persian sisters. Divorce was extremely common—anybody could be divorced for the small sum of 4d.—and was carried to such lengths that quite young girls had been married several times. The custom of temporary marriage among traders was much in vogue. There were plenty of shrines reputed to cure human maladies.

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given.

Mrs. Marling, when making her appeal, wrote as follows:—

"There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—

"'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; we have not had so much as a box of matches from England."

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,
25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

WOMEN'S VOLUNTEER RESERVE AND STRICKEN SERBIA.

Last Thursday a bazaar organised by the Women's Volunteer Reserve, in aid of the Serbian Relief Fund, was formally opened by the Marchioness of Londonderry at the Portman Rooms, Baker Street. Among those who were present on the platform with Lady Londonderry were Mrs. Charlesworth, the Earl of Meath, and Dr. Holmes, who has spent some years in Serbia and has done a great deal of work in connection with the hospital units that have gone out there from this country.

Mrs. Charlesworth, in the course of a few remarks, formally introducing Lady Londonderry, stated that the Vancouver branch of the W.V.R. had sent a cheque for close on £400, the result of a week's effort on behalf of Serbia.

Lady Londonderry said that she knew the admirable and patriotic work the Women's Volunteer Reserve had performed, but nothing it had done would appeal more to the sympathy of the British public than the holding of the present bazaar. It was not necessary to enlarge upon the disasters that had fallen on the gallant little nation. They had driven off the Austrians time and again. At last, faced by overwhelming odds and deprived of the assistance they had been led to expect, they faced single-handed the combined attack of Austrians, Bulgarians, and Turks; and though defeated they made their enemies pay a terrible price for victory. Now their homes were a desert, and those who still remained in the country were at the mercy of their traditional foes, the Bulgarians. She appealed to all present to help make the bazaar a success.

Dr. Holmes followed with an account of experiences in Serbia. He said that about half the Red Cross nurses who had gone out from this country had escaped, but the remainder were left behind. The gratitude of the Serbians to England for the surgical, nursing, relief and other assistance that had been given was extreme. All honoured the name of Englishman; it was a passport to their homes and to their hearts. One effect of this cordial feeling would be that after the war young Serbians would come to England for their education rather than go to Vienna. Commerce between the two countries would also grow.

OTTOMANISING TURKEY.

A recent number of the *Egyptian Gazette* contained the translation of an interesting article, from the pen of a correspondent who has spent a long time in Constantinople, which appeared in *Al-Mokattam* (Cairo). This writer announces that a large society has been formed in Turkey for the purpose of Ottomanising the Turkish elements and making the Empire purely Turkish. The society is known as the "Turks Ushaghy," or "Turkish Family." It has the following branch societies:—

(1) The Turk Yurdi, or the "Turkish Empire," the object of which is to purify the Turkish language of Arabic words and make it Mongolian in the strict sense of the word. (2) The Turk Drinky, the object of which is to disseminate the national idea among the Turks, not only in the Ottoman dominions, but also in all countries inhabited by the Turks. (3) The Turk Balkishy, i.e., the "Turkish Flag," for the translation of scientific works into the old Turkish language. (4) The Turk Kushy, or the "Turkish Force," for popularising games to strengthen the muscles and improve the health of the Turks. Candidates for admission to this Turk Ushaghy Society, or to any of its branches, must be of Turkish nationality, pay a monthly subscription, and change their names. . . . The Turk Ushaghy Society and its branches have established clubs in Constantinople and in all the towns and villages of the country in which the ancient history of the Turks is studied. . . . Only Turks are allowed to join the Ushaghy Society's clubs, and members on entrance have to produce their tickets bearing also their photographs. Efforts are being made to have the Koran translated into Old Turkish, as well as the Friday sermon, religious prayers, etc., which were formerly rendered in Arabic. They also propose to remove from the mosques the names of the Sihhaba, or the Prophet's companions, as, according to a modern Turkish writer, "a Turkish horse is superior to the prophets of other nations."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

We publish this week a comprehensive list of the more important enemy firms in Egypt to be affected by the new regulations, together with some pertinent remarks made last week by our Cairo Correspondent. Evidently he thinks that the special licences granted to the Deutsche Orient Bank and Hypotheken Bank are an earnest that these firms will automatically disappear—an optimism which I feel far from sharing. The first-named, it will be remembered, is a powerful German organisation operating directly or by means of branches throughout the Near East, and it stands to reason that after the war is over it will leave no stone unturned to re-establish itself in Cairo and Alexandria under any suitable name or guise. Therefore, something more drastic than the special licence is needed to put an end to enemy intrigues in Egypt, but we have no assurance that the Government intends adopting a Draconic policy as regards obnoxious enemy concerns. It has taken us eighteen months to bring forth the regulations as reproduced elsewhere, and though, as a half measure, they may be approved, they do not, be it said frankly, cut the Gordian knot. As a writer in the *Egyptian Gazette*, referring to our recent remarks on the subject, pithily put it, it is simply ludicrous that after eighteen months of war we should still be *discussing* the status of enemy firms in Egypt. Surely, they are not so condescending in Germany.

***

I gave it as my opinion last week that the British Government would hardly be likely, as feared in some quarters, to release itself from its responsibilities towards the Sudan, in so far as the irrigation loan was concerned. This is borne out by a recent despatch from our Cairo Correspondent, in the course of which he said that "although no work on any extensive scale is being carried out in connection with the Sudan irrigation schemes —for which a loan was obtained three years ago—that embarked on before the war broke out is being continued within certain limits in order to ensure that the money already expended shall not be lost through the complete suspension of new works." This statement should reassure those who are inclined to be too pessimistic. On the other hand, there are others, the Egyptian Press included, who have been weaving around Mr. Buckley's visit to the Sudan and the Abyssinian frontier a grandiose scheme, political as well as technical. According to our Cairo Correspondent, Mr. Buckley's visit to the country has no such object. "It is being made for the purpose of studying and taking the levels of Lake Tsana—nothing more, nothing less. Lake Tsana, whence the Blue Nile takes its rise, is destined in the near future to play an important part in the irrigation projects of the Sudan, and the Anglo-Egyptian authorities, in whose hands the execution of those projects will lie, quite naturally insist on having the fullest data before definitely embarking on the 'heavy' part of the enterprise, which will have to be proceeded with as soon as peace is restored."

***

It is, of course, still too early to discuss the future of Asiatic Turkey, but the following analyses of Italy's pretensions are of more than purely academic interest. The writer is the well-known Italian Imperialist, Sig. Giuseppe Piazza, who recently published a work, entitled *I Dardanelli, L'Oriente e la Guerra Europea*. Minimising the importance of the Adalia sphere, he says—and I reproduce his statement without comment:—"We ought to claim an extension of the Adalia concession by means of sufficient hinterland to give it a real value. The immediate hinterland of Adalia does not extend further than Bourdour and Isparta, that is, to a maximum depth of 100 kilometres. But traffic from the interior is diverted towards the West by the Smyrna-Aidin Railway, and the region situated beyond the lakes is cut by the first section of the Baghdad Railway, with its two exits, one to Constantinople and the other along the Adana branch to the port of Mersina. Consequently the concession of Adalia is of no interest, unless completed by the concession to Italy of the Smyrna-Aidin Railway to the West, or of the territory situated to the East, comprising the small Austrian concession of Alaya, as far as Mersina, perhaps even up to Adana, and to the head of the Gulf of Alexandretta, already coveted by others. A third hypothesis, with a view to enhance the value of the Adalia concession, would be the annexation by Italy of the flourishing vilayet of Koniah, situated to the North East, together with all that part of the Baghdad Railway which crosses it."

***

Lecturing on Armenia at the Association Hall, Manchester, on Wednesday night, Mr. Llewellyn Williams spoke of the industrial and commercial possibilities of Armenia. The country south of Erzerum was exceedingly rich in mineral wealth. The largest copper deposits in the world were there. Gold was there, and coal and iron, oil and zinc in large quantities. Nor was this the only wealth. On the great uplands there was sufficient pasture for as many sheep as would supply wool for the whole of Germany's industrial demands. In 1913 on the fertile plains of Cilicia 200,000 bales of cotton were harvested, and he was told it was equal in quality to the best Egyptian. In the north of Asia Minor other experiments in cotton-growing had been made with most promising results, and Paul Ranbach, when desiring to enlist the financial support of German-Americans, said that when Germany had control of Asia Minor she would be independent of the whole world for raw materials, and, more than that, would be absolutely independent and careless of the British Fleet.

***

Two important events took place during the week, the first being the business meeting at the Guildhall on Monday, when resolutions were adopted for the furtherance of our trade war, and the second being the report, published on Monday, of the Board of Trade Sub-Committee. A synopsis of both is published elsewhere.

***

Ever since the beginning of the war THE NEAR EAST has taken a strong attitude in urging that steps should be taken now to prepare for the trade war which is bound to ensue as a result of the present military war. Among the measures frequently suggested in these columns are four, namely:—(1) The reform of the consular service (2) the direct participation of banks in our industrial and commercial developments; (3) tariff reform; and (4) the organisation of sample exhibitions. The first and third points were expressly emphasised at the Guildhall meeting; and all four points were emphasised in the Sub-Committee's report. It is to be hoped, therefore, that at last our Government of lawyers, in view of the fact that practically all business men, men who know something about business even if they are foreign to politics, insist on the introduction of necessary reforms, will dilly-dally no longer, but take measures to meet the business men whole-heartedly.

***

The greatest interest, as regards the above two events, centres in the suggestion that there should be instituted a Ministry of Commerce. The strong demand for such a department, at whose head should be placed a strong business man, has become so universal now that I do not think the Government can hesitate any longer in creating it. I do not mean, by these remarks, to cast a slur on the activity and enterprise of the Board of Trade, but the work undertaken by the Board is already so greatly in excess of its forces that it must be relieved if the trade machinery of the country is not to become clogged. The creation of the Ministry of Commerce, therefore, becomes imperative.

***

The following official communication appears in Khartoum papers:—"In view of the difficulty experienced by the authorities in balancing the 1916 Budget and the fact that the Government's financial year begins on January 1, a circular has been issued to the effect that until the 1916 Budget is issued, all departments of the Sudan Government should consider the provisions of the 1915 Budget as the basis of their expenditure. In case, however, any additional expenditure is found necessary, the case should be referred to the financial authorities for special approval."

***

The Cairo Bourse has reopened its doors, and, we are told, business was good on the first day. The Alexandria Bourse remains closed. On inquiring yesterday in the City, I was told that it mattered very little as far as London was concerned, whether the Egyptian Exchanges were open or not. The restrictions here make it impossible for us to take any advantage of prices ruling in Egypt, and Egypt will only be a buyer in London (she cannot be a seller) if prices here are lower than in Egypt. As for the amount of business done in Cairo at the beginning of the week, the impression here is that it was no heavier than the usual private buying and selling which has been going on in Egypt since the war started.

COMMENTATOR.

Enemy Firms in Egypt.

Special Licences Granted.

With reference to our Cairo Correspondent's letter on the above subject, published in last week's issue of THE NEAR EAST, we have now received a copy of the *Official Journal* giving a list of enemy firms affected by the new proclamation. They are 346 in number and are divided into three classes, A., B., and C.

A.—Trade without Special Restriction.

The text of the licence is as follows:—

"This is to certify that the ———— is authorized to carry on business in Egypt subject to any provisions with regard to trading which are now, or may be, from time to time in force in Egypt. Provided that the books of the licensee shall be open to inspection at any time by the Licensing Officer or such officer as he may appoint for that purpose."

Licences in these terms have been granted to the following:—

Cassa di Sconto e di Risparmio.
Egyptian Bonded Warehouses Co., Ltd.
Egyptian Petroleum Storage Co.
National Insurance Co. of Egypt.
Régie Ottomane des Tabacs.

B.—Trade with the British Empire and with Allies of Great Britain.

The text of the licence is as follows:—

"This is to certify that the ———— is authorized to carry on business in Egypt subject to any provisions with regard to trading which are now, or may be, from time to time in force in Egypt, provided that the licensee shall not, except with the special permission of the Licensing Officer, trade or have commercial communications direct or indirect with persons outside Egypt, except only with such persons as may be resident in the British Empire, or in countries in alliance with Great Britain; provided also that the books of the licensee shall be open to inspection at any time by the Licensing Officer or such officer as he may appoint for that purpose."

Licences in these terms have been granted, among others, to the following:—

Alexandria Arenolith Co.
Anglo-Egyptian Cigarettes Co.
Behrend and Co., Ltd.
Berlitz School of Languages (Alexandria).
Braunstein, Haim (Alexandria).
Cattaui, J. M., Figli, and Co. (Cairo).
Cohen, Félix (P.O.B., 141, Port Said).
Cohen and Co., J. (Port Said).
Del Mar, E., Société des Drogueries d'Egypte.
Delta Foncier et Agricole.
Eggert, Joseph (Cairo).
Egyptian Delta Land and Investment Co., Ltd.
Electricity and Ice Supply Co., Ltd. (Alexandria).
Fernandez and Co. (Cairo).
Fischer, Max (Cairo).
Fischer, R. E. (Cairo).
Flash, F., Halim Pacha Square (Cairo).
Frankel, Mayer (Cairo).
Frankel, Jacob (Alexandria).
Freylinger, Charles, 127, rue du Vieux Caire (Cairo).
Green, J. E. and A. (Cairo).
Green, N. E., and Co. (Cairo).
Green, M. S. (Cairo).
Green, Felix (Alexandria).
Heinzle, Giovanni F. (Alexandria).
Hergel, P. E., National Hotel (Cairo).
Hess, Constantinidis and Co. (Alexandria).
Hirsch, Moses (Alexandria).
Lancaster, Sasson and Co.
Lanz, Jacob, Bazar Français (Alexandria).
Menasce, Charles de.
Menasce, Alfred de.
Menasce, E. J. L. de.
Menasce, Edmond de.
Menasce, Emile de.
Menasce, Félix.
Menasce Figlio and Co.
Menasce, Georges de.
Menasce, Jacques B. de.
Mohr and Fenderl.
Morison, Carl.
Nahmann and Co.
Oelbam and Selbermann.
Ott and Co.
H. Pollack and Co.
Poppel and Co.
Reiser, Lucien (Alexandria).
Roemer, Charles (Cairo).
Rosetta and Alexandria Rice Mills Co., Ltd.
Rudman, Max and Co.
Ruelberg, Georg (Alexandria).
Sachs, David (Alexandria).
Sachs, Halifa and Sons (Alexandria).
Sachs, John V. (Alexandria).
Sachs, Jacques and Co.
Salvago and Co., C. M. (Alexandria).
Sanguinetti and Co. (Alexandria).
Société du Chemin de Fer Kench (Assouan).
Société Anonyme des Eaux de Tanta.
Société Générale d'Electricité et de Mécanique (Alexandria).
Société Egyptienne d'Entreprises Urbaines and Rurales.
Société Foncière d'Egypte.
Société Anonyme des Immeubles du Caire.
Société Anonyme Egyptienne des Immeubles d'Egypte.
Société Anonyme des Presses Libres.
Stross, A. (Alexandria).
Trapp and Co., Wm.
Villforth, Henriette, Pension Villa Nationale (Cairo).
Weinrich, K., and Co.
Werner and Co.
Wirth and Co.
Zola (Schustermann, Pauline) (Cairo).
Eckhardt, Victor (Cairo).
Filature Nationale d'Egypte, Société Anonyme.
Green, Ralph S. (Cairo).
Nahman, Alfred (Alexandria).
Mayer and Co., A.
Salamander Shoe and Clothing.
Stein's Oriental Stores, Ltd.
Tiring and Frères, Victor.
Société Anonyme des Presses Allemandes (Alexandria).

N.B.—The last five firms are further subject to the supervision of a Controller appointed under the authority of the General Officer Commanding the Forces in Egypt.

The Deutsches Kohlen Depôt, Port Said branch, has also been licensed to liquidate certain outstanding business.

C.—Trade for the Purpose of Liquidation Only.

The text of the licence is as follows:—

"This is to certify that the ———— is authorized, subject to any provisions with regard to trading which are now, or may be, from time to time in force in Egypt, and subject to the following conditions and restrictions, to carry on business for the purpose of liquidation only.

"1. The business to be done under this licence shall be limited to such acts as may be strictly necessary for the liquidation of the business of the licensee.

"2. The licensee shall proceed with the liquidation of the business with all due dispatch and with no greater delay than may be reasonably necessary for the realization of the assets.

"3. The licensee shall not, except with the special permission of the Licensing Officer, have commercial communications, direct or indirect, with persons outside Egypt, except only such persons as may be resident in the British Empire, or in countries in alliance with Great Britain.

"4. All funds now in hand shall be paid into an account with a bank in Egypt to be approved by the Licensing Officer, and all payments received or made in the course of the liquidation authorized by this licence shall be paid into or out of such account, which shall not be drawn upon except for the payment of liabilities of the business (exclusive of partnership capital) or for reasonable current expenses.

"5. The books of the licensee shall be open to inspection at any time by the Licensing Officer or such person as he may delegate for the purpose."

Licences in these terms have been granted to the following:—

Abel and Schellenberg (Cairo).
Austro-Orientalische Handels-Aktiengesellschaft.
Bayer Bruder (Cairo).
Boehme and Anderer.
Bohm, Friedrich and Heymann.
Brach, Gustav and Co., Succ.
The Colloid Wolfram Lamp Co., 45, Sharia Abdine (Cairo).
Continental Caoutchouc and Guttapercha Co.
Cotton Export Company, Soc. Anon.
Gasmotorem-Fabrik Deutz.
The Egyptian Lloyd.
Engelhardt, Leopold and Co.
Fix and David.
Flick, H. and C.
Soc. Anon. d'Electricité Ganz.
Prima Fabbrica Birra di Graz.
Hess and Co.
Holz and Co.
Kirchmayer, Rudolf and Co.
Klink and Lauer.
Koenig and Jessenitzer.
Kortenhuis and Hammerstein.
Kunzler and Co.
Lichtenstern, Jos. M. (Cairo).
Lindemann, R. and O. (Alexandria).
Mulhauser and Co.
Bornstein, L. and Co.
Pollack, Leopold and Co.
Schneider and Rothacker.
Seeger Bros. and Co. (Alexandria).
Siemens-Schuckert.
The Upper Egypt Artesian Boring Co.
Andres and Co., Fritz (Alexandria).
Orenstein and Koppel-Arthur Koppel.
Steaua Romana.

The Deutsche Orient Bank, A.G., and the Egyptische Hypotheken Bank, are licensed to carry on business in Egypt under the supervision of a Controller with instructions the effect of which is to prevent these banks from undertaking new business.

***Lists B and C, as reproduced above, are not complete: in the former, 249 names appear, and in the latter sixty. The full list may be examined at the offices of THE NEAR EAST, Devonshire Square, E.C.

Our Cairo Correspondent, analysing the new regulations in last week's issue of this journal, pointed out that most of the names in List B are those of enemy-protected subjects, and are "presumably entitled to the special licence." "As for the Deutches Kohlen Depot," he adds, "it is not quite clear why this concern was not given a C licence." On the other hand, our correspondent assumes from the special licences granted to the Deutsche Orient Bank and the Egyptische Hypotheken Bank, that "these concerns will in time definitely disappear," but "the same feeling does not exist in regard to firms like Mayer and Co., Stein's Oriental Stores, Ltd., and Tiring Frères. As these firms are, it is understood, capitalized partly with enemy capital, one would like to have some assurance that, at the end of the war, those enemy capitalists will not be able to enter again into their own. No doubt the authorities have taken the necessary steps to prevent this, but the form of licence published does not indicate this."

Our correspondent continues:—"Licence C is granted on the condition that the business done shall be only that strictly necessary to the liquidation, which is to be carried out with all due despatch and with no greater delay than may be reasonably required for the realization of the assets. It may be asked whether these conditions are being strictly adhered to by the licensees, for eighteen months seems a more than adequate period within which certain of the enemy firms could have been liquidated.

"Licence C list contains the name of Boehme and Anderer, the firm which still exhibits in its shop windows—next door to the Turf Club—German and Austrian goods with the name of the manufacturers plainly marked on them. The fact that this firm holds a licence connoting the closest official supervision of its work makes this proceeding all the more extraordinary, to say the least of it.

"The published list also contains a glaring omission—the name of F. Diemer and Co., the German booksellers, of Sharia Kamel. It was generally understood that this establishment—the premier library in the capital—had been ordered to liquidate under a British controller, and surprise had been frequently expressed that it had not completed its liquidation long ago and sold off its stock. Is the omission of its name to be taken as the reason this establishment is still doing business? And, if it is, why has it not been dealt with long since like other enemy establishments?"

British Trade After the War.

Board of Trade Committee's Recommendations.

The report drawn up by the sub-committee of the Advisory Committee to the Board of Trade on Commercial Intelligence on measures for recovering the position, after the war, of certain branches of the British industry, was published on Wednesday, and contains several important recommendations, the majority of which have been urged in these columns from time to time.

The Committee state that the following were the branches of industry to which it apeared that their inquiries could most usefully be directed:—Paper manufacture, the printing trade (including colour-printing), the stationery trade, the jewellers' and silversmiths' trade, cutlery, fancy leather goods, glassware (including table glass, laboratory ware and glass bottles), china and earthenware, toys, electrical apparatus, brush, etc., trade.

The following are the principal recommendations of the sub-committee:—

Scientific Research and Training.

Larger funds should be placed at the disposal of the new Committee of the Privy Council, and also of the Board of Education, for the promotion of scientific and industrial research and training.

The universities should be encouraged to maintain and extend research work devoted to the needs of the main industry or industries located in their respective districts, and the manufacturers engaged in those industries should be encouraged to co-operate with the universities in such work either through their existing trade associations or through associations specially formed for the purpose.

An authoritative record of consultant scientists, chemists and engineers, and of persons engaged in industrial research, should be established and maintained by some suitable Government department, for the use of manufacturers only.

Copyright.

The United Kingdom copyright law should be brought into line with that of the United States.

Patents.

The efforts which have been made to secure uniformity of patent law throughout the Empire should be continued.

Trade Marks.

All German and Austrian goods imported into the United Kingdom should be required to be marked with an indelible mark "Made in Germany," or "Made in Austria-Hungary," and goods imported from other foreign countries should be similarly marked either with the country of origin or with the words "Foreign Made," or "Not British." Such marking should be in all cases on the actual goods and not merely on the package.

Alien firms and alien-owned companies should be prohibited from registering in the United Kingdom trade marks containing English words.

The Government of India should be urged to reconsider the question of the establishment of trade mark registration in India.

Transport Facilities.

An impartial tribunal should be set up to secure that no preference is accorded to traders in other countries by British shipping companies or shipowners, or by home railways; that is, that rates charged by British shipping companies, shipowners and railways to British traders shall in no case be higher under similar conditions than those charged to traders operating from another country, the principle adopted being that equality of payment entitles traders to equality of services.

Financial Assistance.

The joint-stock banks should be invited by his Majesty's Government, so soon as opportunity offers, to consider the possibility of affording a greater measure of assistance to British industrial enterprise.

All Government Departments, local authorities and statutory bodies entrusted with the control of moneys raised by taxes or rates should be under legal obligation to purchase, so far as possible, only goods produced within the British Empire.

British financial houses concerned in the issue of foreign loans in the United Kingdom should be urged to endeavour to secure that preferential treatment be accorded to British contractors and manufacturers in respect of the public works to be carried out by means of such loans.

Trade Exhibitions.

The following broad principles should be adopted in respect of future trade exhibitions:—

Trade exhibitions should be held under the control of the Board of Trade.

Exhibitions should be exhibitions of manufacturers' wares for traders, and should not be organised with a view to attracting the general public.

Exhibitions should not be too general in scope, but should be for a limited number of branches of industry at a time, according to the importance and dimensions of each particular industry in this country.

Establishment of a Ministry of Commerce.

His Majesty's Government should be urged to consider anew the advisability of establishing a separate Ministry, charged solely with the safeguarding and extension of British industry and trade, and freed from the regulative duties in respect of railways, shipping, and harbours, and the duties in respect of labour, which at present devolve upon the Board of Trade.

The appointment of trade commissioners, responsible, and reporting directly, to the Board of Trade, should be extended to the principal foreign countries.

Consular Service.

The organisation of the Consular service should be dealt with so soon as possible after the completion of the report of the Royal Commission on the Civil Service, with a view to the increase of its commercial utility.

Commercial Travellers.

Representations should be made to the Governments of the self-governing Dominions and of the Colonies with a view to the preferential treatment of British commercial travellers in respect of licence fees.

Trade Catalogues.

Representations should be made to the Governments of such British Possessions as levy import duties on imported catalogues and trade circulars, with a view to the substantial reduction of such duties in respect of the catalogues and circulars of British manufacturers.

Tariff Protection.

We are of opinion that where the national supply of certain manufactured articles which are of vital importance to the national safety or are essential to other industries has fallen into the hands of manufacturers and traders outside this country British manufacturers ready to undertake the manufacture of such articles in this country should be afforded sufficient tariff protection to enable them to maintain such protection after the war.

With reference to the strongly-expressed opinion of many of the witnesses that the enactment of protective duties on the industries, other than those referred to in the preceding paragraph, which have formed the subject of our inquiry, is essential to their maintenance, we wish to report that, in view of the following considerations:—

(a) That there exists a strong desire to respond to the feeling in our Dominions in favour of an Imperial preference in trade, and that there is also a strong desire to arrange preferential trading with those who are our Allies in the present war, and

(b) that the present high direct taxation tends to raise the rate of interest on money, and cheap and abundant capital for the employment of their labour is of the greatest importance to the working classes,

it will be necessary to impose some widely-spread import duties, and we are therefore prepared to recommend that a larger proportion of the revenue should be raised by reasonable import duties. We are of opinion that such import duties would go a long way towards satisfying the requests for special protective treatment for the industries which we have had under consideration.

We would only add that, in view of the threatened dumping of stocks which may be accumulated in enemy countries, the Government should take such steps as would prevent the position of industries likely to be affected being endangered after the war or during the period required for a wider consideration of the whole question.

The members of the sub-committee—Sir Algernon F. Firth, Mr. A. J. Hobson, Mr. Stanley Machin, Mr. E. Parkes, and Sir Albert Spicer—are unanimous in their recommendations, except that Sir Albert Spicer makes a reservation in regard to the immediate enactment of protective duties. Sir Albert thinks that the consideration of a tariff for these special industries should wait until after the war, unless it can be undertaken earlier, when the whole issue can be again considered in the light of what, he hopes, will be an agreed policy with our Dominions overseas and our present Allies

Value of Imports.

The report contains a table showing that the value of the imports into the United Kingdom during 1913 of goods of the kinds included within the scope of the inquiry may be taken as approximately £16,000,000, of which nearly £7,700,000 represented goods of German origin and £500,000 goods of Austro-Hungarian origin. The total value of such goods imported into the five self-governing Dominions and India in 1913 is estimated to have been not less than £3,000,000.

In reviewing the evidence given the sub-committee state that the value of scientific research in industry, and the desirability of Government assistance in the promotion thereof, was generally recognised both in the memoranda furnished and by the witnesses who appeared before them, though it was admitted that British manufacturers and workmen have not always shown themselves in the past sufficiently appreciative of the value of scientific investigation into industrial problems or of technical training. It was recognised that the "Made in Germany" mark had served somewhat as an advertisement of that country in the past, but there appeared to be a consensus of opinion that for some considerable time it would have the opposite effect in the British market.

With regard to the improvement of transport facilities, it is stated that the evidence showed clearly that there is widespread dissatisfaction with the working of the United Kingdom railway system, and a general belief that the State railway system of Germany is operated greatly to the advantage of the export trade. The Sub-Committee are disposed to think that there is some foundation for the belief that the German railway authorities have as a rule shown themselves more ready to give special facilities to individual traders and to have more regard for their individual circumstances than has been the policy of the British railway companies.

With reference to tariffs, it is stated that practically all the representative firms and associations consulted asked for a measure of protection.

The causes of the ability of German firms in the past to undersell their British competitors on which most emphasis was laid in the representations made to the Sub-Committee are:—(a) The low railway rates charged in Germany on goods for export and other transport advantages. (b) The industrial combinations in Germany which, with a large home market secured to them by the tariff,

were able to produce on a large scale, and to dispose of their surplus product abroad at very low prices. (c) The low rates of wages prevailing in certain industries in Germany.

GUILDHALL MEETING.

A meeting, called at the suggestion of the London Chamber of Commerce and other associations, was held at the Guildhall on Monday to consider measures which should be taken after the war for the promotion of trade and commerce, and to deal with the subject of industrial employment.

The Lord Mayor presided, supported by the Sheriffs and many members of the Corporation, and those present included many representatives of Chambers of Commerce, Mayors, and Lord Provosts, bankers, merchants, and business men.

The Lord Mayor read a message from Lord Derby expressing regret that he was unable to be present, and adding that he was in hearty agreement with all the resolutions to be put before the meeting. Mr. Andrew Fisher sent a message declaring himself "heart and soul with all the meeting symbolizes."

In moving the first resolution, which expressed loyalty to the Throne and confidence in final victory, the Lord Mayor said he thought they must ensure that, whatever happened, the relations—the misguided relations—which existed before the war between ourselves and those who were now our enemies should never again prevail.

Sir George Pragnell said our technical and commercial education must be remodelled if the English race was to keep its position. They wanted the world, and especially their enemies, to know that above everything else they placed the smashing of Germany, both as a maritime Power and as a commercial competitor. The Consular service ought to be composed of our best educated and most practical business men, who should be paid good salaries, with a commission or bonus on the increase of British trade.

A Ministry of Commerce.

Sir Algernon Firth moved:—

"That in the opinion of this meeting it is desirable that immediate steps be taken by his Majesty's Government, Chambers of Commerce, and other kindred associations, throughout the country, to formulate in close co-operation adequate action for the defence and improvement of trade and employment after the war, and with this object in view this meeting suggests full discussion of the fiscal, legislative, and voluntary efforts which ought to be made, and of the concentrated action and decisions which must be taken; and recommends the establishment of a Ministry of Commerce to carry out a constructive commercial policy for this country."

He said the President and officials of the Board of Trade had every desire to promote trade, and within their powers were efficient; but they had many functions and were choked with administrative work. Frequently since 1869 Chambers of Commerce had urged the appointment of a Ministry of Commerce. Twice a resolution in its favour had passed the House of Commons, and in 1905 a Bill was promised in the King's speech. This great war had found us in a chaotic position in regard to commercial matters. Too long had we gone on in this haphazard fashion. It was our duty to lose no time in formulating a policy. It was essential to have a new Minister who would gather round him men of experience and judgment, and confine himself to steps to be taken after the war for development of trade.

International Trade Relations.

Lord Desborough moved:—

"That steps be taken by means of close co-operation to improve the commercial relations between the United Kingdom, his Majesty's Dominions beyond the seas, and our Allies, and also to make certain that Germany and her Allies shall not be able again to acquire an undue influence upon trade and employment in the British Empire."

Mr. Neville Chamberlain, Lord Mayor of Birmingham, suggested that they should take with them on the deputation the approval of Labour, and that they should include representatives of Labour on the organising committee. "It has been justly said," he concluded, "that this is not a tariff reform meeting, but I trust that as the son of a man who in this building once begged his countrymen to think Imperially—(cheers)—I may be permitted to express my satisfaction at being present at this great gathering, with whose objects and whose spirit he would have found himself so entirely in accord."

KERMAN CARPETS.

In his annual report on the district of Kerman for the year 1914, H.B.M. Consul gives the following particulars concerning Kerman rugs and the state of the trade as a whole. He says:—Two kinds of carpets are produced in the Kerman and neighbouring districts, the Kerman carpet and the Afshari rug.

Kerman Carpets.

The carpet, which much predominates, is woven in the town of Kerman, and in the villages of the district such as Sar-asiab, Jupar, Chatrud Rawar, etc. It is, in general, a finely woven fabric, worked on cotton warp. The designs in part are indigenous, or at least in the common possession of the trade, and in part special designs introduced by the various European firms who retain or try to retain their sole right in them. The colours used in Kerman are in general decidedly bright. Design, colours and mingling of colours are questions of taste, but it would seem that Europe and America are satisfied with the choice made by the Kerman carpet firms. Aniline dyes are banned in principle, and even in fact are little used. Carpets are to some extent bought by the exporting firms, ready-made in the open market, but the larger proportion are woven on contract to the order of the firms, who supply the designs and sometimes the cotton yarn for the warp.

These carpets are exported both to America (New York) and Europe (Constantinople, London, Berlin, Paris).

Afshari Rugs.

These are small rather coarse rugs, with somewhat crude designs, woven entirely of wool, by the Afshar nomads. They are not woven to order. Aniline dyes are common in these rugs. The principal foreign demand for them is in Austria-Hungary and Germany, the market being Constantinople. America does not take them at all. European firms do not in general pay much attention to Afsharis. There is some difference of opinion as to whether the trade is a rising or a falling one. It is stated by some that the Afshari is being displaced by a better and cheaper type of rug made in the Hamadan district. An average price for the ordinary small rug (about 6 feet by 10 feet) is 80 to 100 krans.

The year was not a prosperous one for the carpet trade. During the first half of the year the European and American markets were satisfactory, but the demand did not equal the exports from Kerman and stocks gradually accumulated in Europe. London and Constantinople became over-stocked, while American buyers held back in order to benefit by the new Customs tariff which came into force on January 1, 1914. Unfortunately, before that date arrived a financial crisis had arisen in the United States, and New York in turn began to become over-stocked.

By an unhappy coincidence the local market had also in the meantime become prejudicially affected. The entry of a new European firm (the Persian Carpet Company) in the field in June, and consequent increase of competition, led to a considerable rise in the local market, and most of the firms endeavoured to secure themselves for the future by giving long contracts at high rates to weavers and designers. The conditions so introduced will for long continue to embarrass the exporting firms, and will probably, in the long run, prove equally disadvantageous to the weavers who have for the moment been profiting by them. Small demand and low prices in Europe and America are incompatible with large orders and high prices in Kerman. If the cost of production continues high the Kerman carpet trade will probably permanently lose headway.

A complaint is made by European firms that Persian exporters are doing much to ruin the market in Constantinople. It is stated that these merchants do business on a commission basis. They forward carpets to Constantinople and then obtain advances on them from the banks. The carpets remain for months spread out in the Customs-house. Eventually they are sold for what they will fetch or auctioned as bankrupt stocks. The banks are sufficiently covered to have no particular interest in the prices accepted, and the owners are in Persia. It thus often arises that carpets are sold in Constantinople at smaller prices than were originally paid for them in Kerman, leaving out of the question all expenses and commissions. It is obvious that such conditions are highly injurious to ordinary sound business.

Engineering Notes.

Agricultural Implements in Greece

The U.S. Vice-Consul at Athens states that one of the principal objects of the Royal Agricultural Society of Greece is to increase the use of agricultural machinery and modern farming implements. In order to encourage its use the society imports from time to time such machinery as it feels it can dispose of to farmers and others. The society has in the exhibition buildings of the Zappion, in Athens, a sales office, and has on exhibition agricultural implements. It is intended to open branch offices in other parts of Greece. The records of the Athens office show sales to landowners and farmers during 1914 amounting to £695. The society endeavours to furnish full instructions relative to the working of each machine sold, and by a "follow up" system to see that each buyer secures the best possible results from his purchase. It is the policy of the society to keep in its headquarters a permanent exhibition of machinery of general agricultural interest, such as apparatus for horticulture, arboriculture, vinicultural, apiculture, cheese and butter making, and general dairy farming.

Submarine Oil Storage

At a recent meeting of the Institution of Petroleum Technologists, Mr. H. Barringer, M.Inst.C.E., gave an interesting description of a method for submarine oil-storage, devised by Messrs. Doxford, of Sunderland. The subject is of great importance at the present time when the question of how enemy submarines replenish their supplies of fuel in the Mediterranean and elsewhere, occupies the attention of naval and military authorities. The design consists in providing a submerged storage for oil where the containing vessels would be safe from bombardment either by guns on land, aircraft, or submarine boats. The inventors suggest as a convenient size of tank a cylindrical vessel, 150 ft. in length and 30 ft. in diameter, with hemispherical ends and internal dividing bulkheads of dished form, in order to minimise weight as far as possible. This vessel would carry a deadweight of about 2,400 tons of liquid fuel and could be submerged in any reasonable depth of water, a ballasting compartment being arranged at each end. The joint capacity of these two compartments would be somewhat in excess of the reserve buoyancy when the vessel is fully loaded, and in this case would be about 150 tons, viz., 30 tons in excess of the reserve, so that if required the vessel could be sunk to the bottom of a harbour.

How it is Controlled.

Each oil compartment has three connections leading to the valve-room, one for ballasting, one for dealing with oil, and one for the expulsion or admission of air. The connection can also be used for the admission of compressed air when this is employed as the means of discharge. The ballast tanks have connections to deal with water. The submersion of the vessel can, of course, be carried out without any attendant power-craft, but to bring her to the surface compressed air must be supplied from an auxiliary vessel, in order to force out the ballasting water. The expulsion of a little over thirty tons in this case would bring the vessel to the surface. If compressed air is not available, and the vessel is not lying in too great a depth of water, oil or water can be pumped out by flexible hose until she rises, a second hose being provided to admit air. When it is required that the vessel should remain on the bottom, the ballast-valves are open, and water allowed to enter and take the place of the oil pumped out. Under these conditions water must come in direct contact with oil, but by fitting the sea-valves and pump suctions well apart, and introducing baffle-plates in the way of the pump-suctions, any disturbance of the oil immediately in contact with the water, and possible mixing, is avoided. Arrangements for mooring and towing the vessel are provided; thus, in addition to securing absolute safety from a military point of view, this submersible type may be equally valuable from a commercial standpoint. Being movable, it can be brought alongside a vessel if required, or be used as a temporary or permanent oil-storage in a port where there is no ground available on shore for an installation of oil tanks, etc.

German Oil Storages.

To those who are acquainted with the topography of the Ægean archipelagoes, and the Eastern Mediterranean coast, and know the natural condition of the numerous and closely-scattered islands, islets and lotty rocks that stud that historic sea, the treacherous activity of the German submarines is not so wonderful as it generally appears. It is well known that throughout that sea, inhabited by seafaring people connected by tradition with the British and French mercantile marine service, the Germans and Austrians are disliked, and it is very doubtful if the enemy could get any assistance from them in carrying out their piracy. It is the uninhabited Ægean islets and rocks with their tricky inlets and hidden caverns, that offer a convenient lair to the pirates. Excellent spots for submerging oil tanks, and using them as a base with absolute safety are numerous between Cape Malea and Crete, Karpathos and Rhodos, in the Gulfs of Smyrna and Adramiti, and in some deserted islets in the Ionian Sea, where there are very suitable sandy bottoms along apparently rocky coast. And it cannot be doubted that oil storages of the character described above are being used by the enemy.

Trade Notes.

Egypt.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, March 1.

Tenders are invited by the Ministry of Public Works for the supply of 50 tons of natural asphalt required during the financial year 1916-1917. Samples shall be deposited at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on February 29.

Tenders are invited by the Director, Technical Schools, Cairo, for the supply of raw materials required for 1916-1917, such as wood, hardware, paints, oil, cement, bricks, building stones, sand, quicklime, etc. February 29.

Tenders are invited by the Ministry of Public Works for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-17. Samples shall be submitted at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 1.

Tenders are invited by the Ministry of Public Works for the supply of sundry materials, such as lime, homra, sand and cement tiles, required during the financial year 1916-1917. Samples shall be deposited at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 4.

H.M. Vice-Consul at Alexandria has forwarded a specification and tender form in connection with a call for tenders by the Egyptian Ministry of the Interior (Lunacy Division) for the supply and delivery of 320 metric tons of Newcastle coal required by the Abbassia and Khanka Asylums at Abbassia, Cairo, for the period of fifteen months from April 1, 1916, to June 30, 1917. Copies of the specification and form of tender may be obtained from the Director of the Lunacy Division, Ministry of the Interior, Cairo, at which address sealed tenders, on the proper forms, will be received. No date for the receipt of tenders is mentioned. A copy of the specification and form of tender may be consulted by United Kingdom coal exporters at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

The Secrétaire Général des Domaines de l'Etat (Service Technique), Cairo, invites tenders for the supply of accessories for workshops, etc. Lists, samples, etc., can be seen at the head offices in Cairo. Date, March 1.

The Secrétaire Général des Domaines de l'Etat (Service Technique), Cairo, invites tenders for the supply of 20 tons of coke. February 15.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on February 29, for the supply of timber required by the above Department in 1916.

Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, London, S.W., and from the Agent, Sudan Government Railways, Alexandria.

Cyprus.

Tenders are invited by the Public Works Department and the Royal Engineers at Limassol for the supply of materials, etc., for the year 1916-17, delivered at the Depot, Limassol, as in Lists numbered I., II., and III., obtainable from the Director of Public Works. Tenders may be made for any one, two, or all three lists at the option of the person tendering. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Materials, Limassol," in the left hand top corner of the envelope, and should reach the Office of the Treasurer not later than 11 a.m. on February 18. All details regarding the articles to be supplied can be obtained from the Office of the Divisional Engineer, Limassol.

Tenders are invited by the Public Works Department, Nicosia, for the supply of materials, etc., for the year 1916-17, as per the Lists numbered I. to VII., to be obtained at the P.W.D. Office. Tenders may be made for any or all of the seven lists at the option of the person tendering. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Materials, Nicosia," in the left hand top corner of the envelope, and should reach the Office of the Treasurer, not later than 11 a.m. on February 18, 1916.

The Public Works Department, Nicosia, invite tenders for the supply of petroleum and petrol for the year ending March 31, 1917, delivered at the Public Works Department Yard, Nicosia, or at the Municipal Store. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Petroleum for Public Works Department," or "Tender for Petrol for Public Works Department," in the left hand top corner of the envelope, and should reach the Office of the Treasurer not later than 11 a.m. on February 18, 1916. All details regarding the articles to be supplied can be obtained from the Office of the Director of Public Works, Nicosia.

Gibraltar.

A London firm of general exporters, having agents in Gibraltar, desires to act as export agents for United Kingdom firms wishing to do business in that market. The same firm wishes to act as buying agents in Gibraltar for United Kingdom importers of local produce. Communications in this connection should be addressed to the Secretary, Statistical and Information Department, London Chamber of Commerce, 97, Cannon Street, E.C.

Greece.

The Board of Trade are in receipt, through the Foreign Office, of translation of a Greek Royal Decree, dated October 18-31, 1915, which establishes, as from November 1-14, 1915, a State Monopoly of the importation and sale of chemical matches and playing cards in the new Greek territories (Macedonia, Epirus, the Ægean Islands, Crete, and Samos). The Decree contains particulars as to the form in which, and prices at which boxes of matches and packs of playing cards are to be sold, and as to the inscriptions which the labels on such articles are to bear. The translation of the Decree may be seen by persons interested, on application, at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C.

Morocco.

The Board of Trade have received from H.M. Agent and Consul-General at Tangier copies of a Tariff showing the valuations of the principal articles of merchandise imported into Morocco. These valuations form the basis on which duty is to be assessed by the Moorish Customs Administration during the first half of the year 1916. The Tariff (in French) may be seen by persons interested, on application, at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall Street, London, E.C. Goods imported into Morocco by sea are, with certain exceptions, subject to duty at the rate of 10 per cent. ad valorem, and also to the special tax of 2½ per cent. ad valorem, imposed as a temporary measure by Article 66 of the Algeciras Act.

NEAR EAST MARKETS.

SUDAN CATTLE ROYALTY.

(From a Correspondent.)

Owing to the continued misfortunes experienced by the people of the Dongola Province, the Administration has very wisely reduced the amount of the annual tax payable on each head of cattle by one-half. This impost is now, therefore, only P.T. 5 instead of P.T. 10. This concession will prove an immense boon to the large number of natives interested in the cattle trade, which has suffered considerably of late years owing to one cause or another. There are certain exemptions from this concession provided for.

COTTON MARKET.

Liverpool. Thursday Night.

Messrs. Reynolds and Gibson telegraph:—There has been a moderate demand for cotton this week and a fair amount of business is reported. Prices have ruled easier and quotations show a decline of 10 points for Sakkelerides and 20 points for all others, except Abbassi, which is exceptionally five points down. The sales, which include 110 bales of Sudan cotton, are estimated at 4,100 bales.

Manchester.

We have experienced a quiet market this week, with no new features in evidence, and the turnover is disappointing.

PRODUCE REPORT.

London, February 3.

Currants.

There has been a good demand this past week, with good business passing at late, and in some instances higher, prices. One more steamer has been unloaded this week, while another is still waiting for her turn. The Greek market is reported strong.

Sultanas.

Good business continues in Afghan and Indian fruit at recent rates. Greek sultanas are quiet, and quotations are firm and unchanged.

Figs and Dates.

Only small business passing at more or less steady prices.

Seeds.

Linseed has improved during the week, but at time of writing the market appears lifeless and without any inquiry for any kind. Sellers, however, want Calcutta to London, spot, Jan.-Feb. and Feb.-Mar., 81s. 6d.; La Plata to London, Jan.-Feb. and Feb.-Mar., 75s.; La Plata to Hull, spot, 80s.; Jan.-Feb., Feb.-Mar., and Mar.-April, 75s. 6d.; and April-May, 76s. Cottonseed is quiet and nominal. Egyptian to London, passage, £14, and loading, £15. Egyptian to Hull, spot and loading, £15 5s., and Feb., £15 6s. 3d. asked. Bombay to Hull, passage and Jan.-Feb., £14 10s. is asked. Rapeseed, nominal; Canary seed is very scarce and dearer. Spanish spot 115s. to 130s. ex store, per 464 lbs. White Rangoon beans, old crop, steady but quiet; spot, £24 5s., ex store; afloat, £23 15s. c.i.f.; new crop is easier, Mar.-April, £23 c.i.f.

Oils.

Linseed oil recovered a little during the week, but to-day has again declined, and spot pipes are at £42 15s., barrels £43 5s., month £43 5s., Feb.-April £43 15s., May-Aug. £44 15s. Cotton oil is dull, crude, pipes, spot, £49, and sweet, barrels, £52. Rape oil is firm, ordinary brown naked nominally £52; English refined, barrels, £56.

Locust Beans.

Stocks are very limited. Cypros are quoted £10 to £10 5s., store, net terms.

GREEK ORANGE CROPS.

The U.S. Consul at Athens reports, under date of December 3, that the orange crop of the Athens district is being gathered, and despite the large consumption by the Allied forces in or near Greece the prices remain low. A good lemon crop is being gathered, and prices remain low. The mandarin crop is large and of excellent quality.

CAIRO BOURSE.

Cabling on Monday, the Cairo correspondent of the *Times* said:—The Cairo Bourse was reopened this morning for cash transactions. The conditions were excellent, with buyers predominating and sellers restricted, and there was a tendency of a rise all along the line, some categories, especially hotels, being demanded at higher prices than before the war.

"At Alexandria the Bourse has not yet been reopened as it refuses to accept the proposal that it should reopen free of all restrictions, as the Government wishes, but it is believed that it will be forced shortly to fall into line with Cairo."

EX-KHEDIVE'S ENTERPRISES.

The *Official Journal* of the Egyptian Government (January 13) publishes the following two decrees:—

Societe des Biens Fonds Urbains et Ruraux.

Whereas the principal shareholder in the Société des Biens Fonds Urbains et Ruraux is the Daira of H.H. Abbas Pasha Hilmi, Ex-Khedive of Egypt, of which Daira Mr. P. Claudio Jannet has been judicially appointed receiver and manager; and whereas the engagements of the said company have been guaranteed by the said Daira; notice is given that Mr. P. Claudio Jannet has been appointed receiver and manager of the property in Egypt of the said company in accordance with Articles 9 and 10 of the Proclamation of January 25, 1915, with power to do all such acts as may be necessary to the good management of the said property.

Societe Belge Egyptienne de l'Ezbekich.

Whereas the principal shareholder of the Société Belge Egptienne de l'Ezbekieh is the Daira of H.H. Abbas Pasha Hilmi, Ex-Khedive of Egypt, of which Daira Mr. P. Claudio Jannet has been judicially appointed receiver and manager; and whereas the company has issued debentures the majority of which are held by persons of Belgian Nationality whose interests may advantageously be represented in the management of the company; notice is hereby given that Mr. P. Claudio Jannet and Mr. M. Van Regemorter, manager of the Cairo branch of the Banque Belge pour l'Etranger, have been appointed joint managers and receivers of the property in Egypt of the said company in accordance with Articles 9 and 10 of the Proclamation of January 25, 1915, with power to do all such acts as may be necessary for the good management of the said property.

*** Our Cairo correspondent, referring to these two companies in last week's issue of the NEAR EAST, said:—

"These two companies were really only constituted as a cloak for the commercial enterprises in which the ex-Khedive from time to time engaged himself. In both of them the Daira Khassa of Abbas Hilmi Pasha is the chief shareholder; but whilst the Daira guaranteed the financial engagements of the Société des Biens Fonds, in the case of the Société Belge-Egyptienne its property is mortgaged to a group of debenture-holders, most of whom are Belgian. Both companies own property in the Emad-ed-Din quarter in Cairo—enormous buildings let out in flats, the imposing nature of which strikes the new arrival in the city. It is interesting to note that it was in the construction and administration of these buildings that the ex-Khedive was so imposed upon. His suspicions were finally aroused by a chance incident, and he found, to his disgust, after a special inquiry had been held, that he had had to pay double the price that the construction had actually cost, and that in addition he was receiving but a fraction of the rent-roll that the tenants were paying. That was about a year or so ago prior to the war, and Abbas Hilmi Pasha, who for reasons best known to himself could not discredit those principally concerned, took speedy steps to remove them to other positions."

NEWS FROM ALL SOURCES.

The National Bank of Egypt, Cairo, Alexandria, or any of its branches, offers its services to any persons who may wish to buy the Exchequer Bonds now being issued by the British Government

According to latest information received in Paris, the desert line being built from Syria towards Egypt now reaches a point twenty miles south of Bersheba, where all trains stop.

ALEXANDRIA AND PORT SAID QUAY DUES.

The following is the text of the decrees relating to the quay dues at Alexandria and Port Said published in the *Official Journal* of December 27, 1915 :—

We, the Sultan of Egypt.

Whereas quay dues were instituted at Alexandria on September 22, 1880, and considering that the quays of Port Said are now in a fit state to minister to the needs of commerce and that Port Said can as well as any other Egyptian port so provided be made liable to quay dues in the same degree as Alexandria, on the proposal of our Minister of Finance and in conformity with the opinion of the Council of Ministers, Decree.

Art 1.—Quay dues ad valorem are established on all goods landed or embarked at Port Said both with regard to exports and imports. The tariff of these dues shall always be the same as those of the port of Alexandria.

Art. 2.—Our Minister of Finance is authorised to establish by simple decision and within the limits of the quay dues for the port of Alexandria, quay dues on all other Egyptian ports as soon as he shall judge such action possible.

Art. 3.—Provisionally and during the length of the war the quay dues for exports are fixed at twelve per thousand of their value, both for Alexandria and for Port Said.

The present decree will come into force thirty days after its publication. Our Minister of Finance may, however, waive the right to payment of the whole or a part of the dues on exports of cotton or cotton seed for contracts that he may recognise as having been made before the publication of the present decree. This abatement, however, may only be allowed for cotton and cotton seed exported during the present cotton season ending August 31, 1916. He will establish by a Ministerial decision to be published the conditions under which the abatement may be obtained.

The text of the decision relative to the abatement of quay dues on exports of cotton and cotton seed at Port Said and Alexandria is as follows :—

Art. 1.—In order to benefit by the abatement of the quay dues provided for by the above decree exporters must within a period of fifteen days from the publication of the present decision send their applications with the necessary papers to the Customs Administration as well as proof that the contract was signed before the publication of the decree. This latter document must indicate the date of the contract, the quantity sold, the country of destination, the name of the buyer and the date for delivery.

Art. 2.—The Customs Administration will have the right to verify applications either by the examination of the exporter's books or by other means.

Art. 3.—Only cotton and cotton seed effectively exported according to the details and indications above mentioned may benefit by the abatement. This rebate will be twelve per thousand for exports from Port Said and ten per thousand for exports from Alexandria.

COMPANY RESULTS, &c.

ANGLO-EGYPTIAN OILFIELDS.—Gemsah production for the week, nil (last week, 53 tons); Hurgada production for the week, 460 tons (last week, 397 tons); Hurgada Well No. 7 has been producing since January 27 from 60 to 75 tons a day.

CREDIT FONCIER EGYPTIEN.—The ordinary general meeting of January 31 having failed to collect the number of shares required by the by-laws for rendering legal its proceedings, a new ordinary general meeting will be held at the Registered Office at Cairo on Thursday, February 17, at 3 p.m.

CREDIT FONCIER D'ORIENT.—The annual meeting of shareholders will be held in Paris on February 26.

EGYPTIAN DELTA LIGHT RAILWAYS.—Receipts for the week ended January 10 amounted to £E6,200, or an increase of £E489 over the corresponding period of last year.

EGYPTIAN MARKETS.—Week ending January 20, £1,375 (increase £142); aggregate to date, £3,904 (increase £319).

NESTOR GIANACLIS.—The Bank of Athens announces that the coupons for the 5 per cent. debentures due to-day will be paid on and after that date at the London office, 22, Fenchurch Street.

ROUMANIAN CONSOLIDATED OILFIELDS.—Production for week ending 22nd ult., 680 tons.

SOCIÉTÉ ANONYME DU BEHERA.—Payment is being made on Coupon No. 43 of the debentures at the offices of the National Bank of Egypt.

SOCIÉTÉ ANONYME DES CHEMINS DE FER DE LA BASSE EGYPTE.—The annual meeting of shareholders will be held on February 18 at Cairo.

SUEZ CANAL RECEIPTS.—The traffic receipts of the Suez Canal for the 31st ult. amounted to 150,000 frs., as compared with 260,000 frs. for the corresponding day last year.

ROUMANIAN OIL EXPORTS.

The *Frankfurter Zeitung* of January 6 publishes the following official figures of the exports of petroleum from Roumania in 1914, as compared with the previous year :—

—	Total Exports. 1913. Metric tons.	1914. Metric tons.
Crude oil	28,622	15,405
Residues and gas oil	341,912	167,523
Mineral oil	9,543	8,617
Lighting oils and distillate	418,622	297,800
Benzine	237,168	164,143
Paraffin	579	536
Total in 1914	—	654,024
Total in 1913	1,036,446	—

—	Exports in 1914 to— Germany. Metric Tons.	United Kingdom. Metric Tons.	Austria-Hungary. Metric Tons.	Italy. Metric Tons.
Crude oil	92	—	11,180	—
Residues and gas oil	17,362	17,144	31,467	58,928
Mineral oil	3,678	—	1,974	14
Lighting oils and distillate	22,742	45,769	20,898	35,349
Benzine	55,290	15,058	18,732	13,783
Paraffin	—	—	2	70
Total in 1914	99,164	77,971	84,253	108,144
Total in 1913	126,295	232,880	77,184	118,643

The decline in the exports in 1914 (about 37 per cent.) was in part due to the effects of the war, such as the closing of the Dardanelles, and temporary restrictions and prohibitions to export benzine or residues. In the first seven months of 1914, however, the exports amounted to only 522,777 metric tons, as compared with 619,602 metric tons in the corresponding period of 1913.

NOTES OF THE WEEK.

On all sides fears are being expressed that the blight of the negative is settling down on the Allies' operations in the Near and Middle East. A little while ago we were bidden to rejoice because on Gallipoli, while fortune refused our arms to bless, we withdrew our troops with wonderful success. Now, just as the impregnability claimed for Salonika is hailed as a subject for satisfaction, so we are asked to receive with outward manifestations of complacency the news that "all is well" with General Townshend after a nine weeks' siege, and that the expedition sent to relieve him occupies a very strong position—twenty-three miles away. To what extent this unsatisfactory state of affairs is due to divided counsels regarding the value of the different operations it is not possible to say, but the total effect of the Allies being everywhere on the defensive is prejudicial to their prestige in the East, and can only serve to embarrass any neutral State waiting for an opportunity to declare itself on their side.

The case between the "extreme Balkanics" and the "extreme Westerners" was well put by Mr. J. L. Garvin in an address given last Tuesday under the auspices of the Royal Colonial Institute. The very title of the paper, "The British Empire and the Near East," it may be said in passing, was a condemnation of the policy laid down for Great Britain eight years ago, and again a few days before the outbreak of the war, that the affairs of the Balkans were not of sufficient concern to her to justify a declaration of war on her part. It may be that a lingering attachment to this short-sighted view prompts the unwillingness to venture far in any direction in the Near East to-day. But it is only necessary to consider the present situation to arrive at the conclusion that it is one which the Allies cannot accept indefinitely. Mr. Garvin's contention was that Germany, having abandoned the grandiose idea of conquering the world at one blow in the Western theatre, had reverted to her previous plan of two wars—the first to consolidate her position on the Continent, the second to bring the world overseas under her power. For the moment the programme embodied in the words *Drang nach Osten* had become a fact, and without a complete reversal of this fact there could be no real victory for the Allies and no future security for any of them. For the British "it would be of small avail to have kept such a mastery on the seas as we hold now, if the enemy were left in a position on land which would jeopardise both Egypt and India."

A permanent occupation by Germany of the position she now holds in the Near East—a Middle Empire stretching from Hamburg to Persia—is unthinkable, and there is no difference of opinion between the two schools of strategists regarding the necessity of depriving her of it. They part company, not in respect of the direction in which the final blow is to be dealt to Germany's hopes, but in respect of the locality in which the first real blow is to be delivered. Mr. Garvin summed up the arguments for a "determined offensive initiative" in the Near East. Even at present, he said, in spite of the primitive means of transport and the poor conditions of production, Germany hopes to draw from Turkey in Asia many of the supplies that are cut off by sea. The German Chancellor asserts that there is already plenty of cotton coming up the Danube. We do not know what he means by plenty; but if Germany holds her own and a bit more for another year she will throw organising energy into the work of getting cotton from the East, with considerable contributions as well in the shape of copper and chrome and grain. All this is as good as making large gaps in our naval blockade. The surest way of preventing Germany from drawing upon further supplies from Asia is to cut her lines of communication by means of a successful offensive in the Balkans. Again, there is the obligation to make it possible for Roumania to declare herself on the side of the Allies, and it is certainly worth some risks to obtain the support of a fresh army numbering from half to three-quarters of a million men.

The arguments in favour of vigorous action in the Near East are so overwhelming—for in addition to those mentioned there are all the potential developments that might result from the strengthening by such a move of the hands of those in Bulgaria and Turkey who are at heart on the side of the Entente Powers—that it is difficult to believe that we shall not see the Allies in due course taking the offensive in this theatre. A further delay will make for an improvement in the weather, and may possibly enable the Allies to benefit

Digitized by Google

by some of the enemy's preparations in the way of roads. Moreover, the need for co-operation among the Allies is paramount, and there should be no question of an advance until a maximum effort can be made. Such an effort, it need hardly be said, predicates the support of the Roumanian army, which should be in a position to hold any force sent against it in the Carpathians, while devoting its main attention at first to Bulgaria.

But while the Allied Powers postpone their advance in the Balkans, it cannot be overlooked that the enemy also makes no move. In view of the fact that the initiative rested with him as a result of the overrunning of Serbia, the delay on his part is the more significant. It has enabled the Allies to complete their defensive works round Salonika, and to accumulate a force capable of taking the offensive. Various reasons are assigned for the enemy's hesitation. As there are symptoms of dissatisfaction among the Turkish authorities over the course that events are taking in the Balkans, it may be inferred that the delay in the attack on Salonika is not exclusively due to broken bridges and damaged railways, which prevent reinforcements being hurried to the front. The exchange of visits between the German Emperor and King Ferdinand, and the honours heaped on the latter, while no corresponding favours are extended to the Sultan in Constantinople, point to anxiety on Germany's part to coax Bulgaria into yet greater efforts without relying too much on Germany's co-operation, and tend to confirm the reports of increasing reluctance on the part of the Bulgarians to continue the war after they have gained possession of all, and more than, they desired. On the other hand Germany and Austria-Hungary have their preoccupations elsewhere, and cannot want to extend their commitments before they are sure how things are likely to go in other theatres of the war.

If the latest reports are to be credited, the Central Powers are at last alive to the fact that any hold they may have flattered themselves they still had on Roumania has already slipped from them. This discovery may well paralyse their action in the direction of Salonika. For some time past they cannot have been too sure of the Roumanians; but they will probably have relied on the spectacular effect of the blow that fell upon Serbia to put off for some time the day of Roumania's participation in the war. Even now we cannot count on any action taken by the Roumanian army finding the Germans unprepared. They are more likely to be well informed of the Bucharest Government's intentions, and in such circumstances will seek to steal a march on the Roumanians instead of waiting to be attacked. Fears that this may happen are finding expression in reports that German and Austrian troops are concentrating on the Roumanian frontier, and that Germany is threatening the Roumanian Government. The Allies must see to it that no miscalculation on their part imposes on the Roumanian army a burden too great for its numbers, or even heavy enough to affect its fighting value at the time of a general advance against the Central Powers.

Further examination of the various versions of the course of events that preceded the withdrawal of King Nicholas from Montenegro reveals only unimportant discrepancies. A formal demand for an armistice was made, and the Austrians insisted upon an immediate surrender. To this the Montenegrins signified a general assent and asked for the terms of the capitulation. When these were made known they were at once rejected on behalf of the bulk of the army, which left the country, together with the King and certain members of the Government. Whether the latter as a whole came to an agreement that certain of their number should remain behind to conduct the negotiations for the surrender of the defenceless population has not been stated. But the capitulation was carried out with certain formalities, although the number of able-bodied men involved must have been small. The rejection of their original demands caused the Austrians to modify them, and the terms ultimately imposed were less rigorous than those published in the first flush of success.

The withdrawal of what was left of the Montenegrin army does not detract much from the value of the Austrian success, which lies more in the importance of Mount Lovtchen to the nation in possession of the Bay of Cattaro than in the elimination of Montenegro. It is claimed that so long as its waters were dominated by the guns on Mount Lovtchen the Austrian men-of-war were not safe in the bay. French guns of small calibre had at an earlier stage of the war driven them from the inner and middle basins. If the French had carried out the scheme at one time attributed to them of replacing these guns by others of a larger calibre, it is probable that the outer basin also would have been made untenable for the Austrian fleet. Before the French plan could be adopted Italy entered the war and took over the defence of the Adriatic. Mount Lovtchen never received its heavy guns. The Austrian fleet, finding itself no longer closely confined within the Bay by the vigilance of the British and French fleets, recovered its courage, and submarines sallied forth to raid in the Adriatic and Mediterranean. Now that Italy has decided to accept her responsibilities in the Balkans, and has undertaken to defend Valona, it is to be hoped that her Navy will once more keep the Austrian fleet a prisoner in the Bay of Cattaro. A long time must elapse before Italian heavy guns can be placed on Mount Lovtchen; but the vigilance of Italian ships can help to restore to the Mediterranean the sense of security of which the presence of Austrian and German submarines temporarily deprived it.

General Townshend's force has entered upon the tenth week of its siege at Kut. The fact that it is able to communicate with the outside world by wireless telegraphy lessens the mental strain of the investment, but does not mitigate the physical hardships of its position. Another favourable feature is the absence of any Turkish attacks for a considerable period. The fate of the force, however, depends almost entirely on its capacity to make what must have been at first a scanty stock of provisions last until the arrival of the relief expedition. Three weeks have passed since General Aylmer delivered his last attack against the Turks. His losses on that occasion and the state of the weather and the river precluded any further operation against the enemy; but he has been joined since then by General Lake, who has succeeded Sir John Nixon as Commander-in-Chief in Mesopotamia, and it must be assumed that the strength of the expedition is now equal to the task before it as soon as the floods render an advance possible.

In our last issue we touched upon the critical situation of the expeditionary force in Mesopotamia, and emphasised the danger of yielding to the temptation to belittle the military importance of the operations in this theatre and of regarding a possible withdrawal as a matter of little account. The reference would hardly have been justified had there not been some reason for supposing that the possibility was being entertained in responsible quarters. It is the more gratifying, therefore, to find that the Government of India, also considering it necessary to take note of the suggestion of a withdrawal, has issued a formal denial that any such step is contemplated. A *communiqué* published on February 7 states that General Townshend is holding Kut "as a point of strategical value," and that General Aylmer's operations are intended to support him there. This pronouncement, it may be assumed, would not have been made unless General Lake was already, or very nearly, in a position to make good the policy enunciated.

Activity still prevails in Armenia, in spite of the severity of the weather. In the absence of any statement regarding the investment of Erzeroum it would appear to be the intention of the Russians to contain the fortress while straightening out their line from the Black Sea southwards. The pursuit of the Turks carried the Russian centre a long way in advance of the right flank, and here the work of accounting for the enemy may take some time owing to the nature of the

Digitized by Google

country. In its effort to belittle the Russian successes in Armenia the official German Press reveals the anxiety which prevails, if not in the German, at least in the Turkish higher command. The claim that the Turks can afford to be indifferent to any Russian success on this front because they have more important work on hand elsewhere will bring little comfort to the Turks themselves. An advance of seventy miles at one stroke is no bagatelle—the more so when other Russian columns farther south are being brought within striking distance of the Baghdad line of communication.

In Persia the Russians are also in close touch with the Turco-German forces based on Kermanshah. As there has been no denial of the enemy report that Kangavar had been retaken from the Russians, we may accept its accuracy. The Turks, however, do not seem to have been able to advance beyond this town, as the latest engagements have been in its immediate neighbourhood. Against the raiding tactics of the enemy the Russians are adopting the plan of deliberately clearing the country of the invaders as they advance. The absence of communications makes it difficult to bring up reinforcements, but in this respect our Allies are more favourably situated than the Turks. The only news from the south of Persia during the past week is to the effect that communication has been established with Major O'Connor, the British Consul at Shiraz, and other members of the British colony in that town who were kidnapped some time ago. They are now at Ahram, and report that they are all well and are being well treated.

It will come as a surprise, if not as a shock, to many people to learn that the old vexed question of the Mixed Courts in Egypt is still *sur le tapis*. That there would be no drastic changes until the end of the war was understood, but the natural corollary to that arrangement was that the machinery of "carrying on" should continue to run without any possibility of a hitch. Thus the renewal of the mandate for the Mixed Courts was to be regarded as merely a matter of form, which would give no rise to discussion. It appears, however, that Italy is making her consent conditional on the appointment of an additional Italian judge in view of the larger proportion of Italian subjects amongst the foreign population of Egypt compared with other Powers having equal representation on the Bench of the Mixed Courts. The matter will, of course, be adjusted satisfactorily, but as the new status of Egypt presupposes a radical modification of the present judicial system, it is unfortunate that the subject should have been brought up for discussion at this time.

One of the results of the Alliance between Germany and Bulgaria, King Ferdinand informed his hearers at the Nish banquet, was to be the promotion of *Kultur* in the Near East. We have no means of knowing the interpretation that Ferdinand of Coburg places upon this word, but it is evident that so far the results of the intimate relations between Bulgarians and Germans have been very different from the qualities usually associated with the word. To set against the Armenian massacres, carried out for the most part under the eyes and with the approval of German officials on the spot, we have the report of a cold-blooded murder of Serbian prisoners by their Bulgarian captors. The details of this gruesome act need not be repeated here; they merely reproduce *en masse* some of the methods practised by the Germans at an earlier stage of the war in Belgium. But of such acts it can always be said that they were the crimes of individuals rather than the deliberate policy of a Government. The excuse does not apply to the Armenian massacres. In any case the Bulgarian Government is not making a good start in a *Kultur* campaign, if it be true that it has refused to allow any assistance in the form of food or comfort to be given to prisoners of war in the country. Our Bucharest Correspondent relates that a sum of £4,000 has been collected in Roumania for the benefit of French and British prisoners of war in Bulgaria. The Dutch Minister in Sofia was asked to distribute the money, but the Bulgarian Government will not sanction the proceeding. The matter is, perhaps, of minor importance in the sum total of Bulgaria's official shortcomings; but it cannot fail to be entered up against her at the day of reckoning.

Reports of renewed liveliness in the Black Sea are to be welcomed. A Russian *communiqué* speaks of torpedo boats fighting an action with a Turkish coast battery, and evading the attentions of a "Turkish" submarine. Even more significant—a squadron of Russian hydroplanes attacked with bombs a large steamer anchored at the jetty of Zunguldak. In view of the splendid efforts that the Russians are putting forth in the Caucasus and Persia, in addition to the gigantic task with which they are confronted in the eastern theatre of the war, their Allies cannot press for activity in any other direction. But it would undoubtedly be an invaluable contribution to the Allied cause if the Black Sea fleet could enforce its mastery over those waters. It was a great disappointment when it was realized that Russia's fleet was not equal to the task of keeping the Turks' attention continually occupied at the entrance to the Bosphorus; but it was hoped that it would at least put an end to navigation along the Anatolian coast. We hear, however, of a large steamer at Zunguldak, Constantinople's chief coal depôt. Hydroplanes introduce a fresh element, and inspire the hope that the veil recently drawn over naval matters in the Black Sea has concealed preparations of which the Allies may shortly expect to reap the benefit.

CHRISTMAS IN CONSTANINOPLE.

We are indebted to a correspondent for permission to reproduce the following extracts from a letter written from Constantinople on January 10. The information they give regarding the prohibition against American ladies visiting our wounded soldiers in hospital appears to mark a further extension of the Hunnish influence in the Turkish capital. Our readers will, however, join us in thanking the Dutch ladies who undertook the errand of mercy that their American sisters were debarred from fulfilling:—

"Thousands of wounded come in every day since 'the Allies have left the Dardanelles.' We have about fifty-four of our men in hospital, and we boiled four puddings for them, and twelve for the prison camps, for Christmas. Cases of things were sent down to them—sweets, games. cards, boots, clothes, mending materials, puddings, etc., and the Dutch ladies went to serve the puddings, pies, etc., that were made for those in hospital. Not even American ladies were allowed to see them, but the Dutch are supplied with extras to feed up our men.

"Things here get dearer and dearer, and we cut down something every week. Washing soap is now 30 piastres the oke, rice 18, coffee 101, and tea 100. They say things are being sent through to Germany."

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, January 25.

The Situation on the Frontiers.

There is little to report from the two frontiers on the East. The defences are rapidly nearing completion. However successfully the Turkish invasion may have been resisted last February, it is generally recognised now that it is a mistake to try to defend the Suez Canal by making that waterway the first line of defence; that the attack should be met out in the open, and that the Canal should only be treated as a position—unrivalled in its strength—on which to fall back in case of need. As a result of the change in strategy now adopted, and of the great activity displayed by all concerned, the Turks, if and when their attack materialises, should find our defences a very tough proposition—one that it will baffle all their ingenuity to tackle with success. With regard to the western frontier, heavy rains have interfered with operations, and the country is reported to have become a quagmire. An engagement took place yesterday to the west of Matruh, in which our troops were entirely successful, but up to the time of writing no details are available.

The Egyptian Army Reserves.

The sensation of the week—if one may so term it—has been the calling up of the Egyptian Reserves, which was done by Ministerial *arrêté*. The reservists are not required for fighting purposes, but solely for transport work. It appears that a camel transport corps is being organised on a very large scale. The ordinary camel-driver has proved useless for this work, and, in fact, has in the past considerably hindered operations. The G.O.C. the British Forces in Egypt decided that to ensure the success of this new organisation he must have a body of men accustomed to military discipline, and, considering that the Egyptian reservists fulfilled this condition, he asked the Egyptian Government to assist him by calling up the reserves, which it was empowered to do in time of war by the Recruiting Law.

The reservists are being called up gradually, and retired officers are being appointed to command them. The mobilization has, on the whole, been well received by the population. When the news first spread there was a certain amount of uneasiness; but the publication of an explanatory note by the Ministry of War, to the effect that the reservists were required for transport work, has had an entirely tranquillising effect.

The reservists will receive double the ordinary army pay. The British Government offered to meet the expense, just as it is doing in the case of the civil servants whose services have been lent to the military authorities. The Egyptian Government declined the offer, stating that it considered it only right that it should freely give the services of its subjects for any work that was connected with the defence of what is, after all, its canal.

The Question of Court Uniforms.

The *Official Journal* has published particulars of the dress to be worn on all official occasions by Government servants and the public. It may be remembered that a new system of grades and decorations was instituted last year. Those persons who have one of these grades are to wear the uniform laid down for such grades. The general public admitted to State ceremonies is to wear ordinary evening dress, as heretofore; but for civil servants not possessing a grade a brand new uniform has been designed. Briefly, it is a frock-coat of a prescribed style with green silk revers, black velvet collar and cuffs, and a stipulated number of gilt buttons bearing three stars and crescents inset in a floral wreath down the front, on the cuffs, on the back, and at the tail; the trousers are to be of the same stuff as the coat, and there is to be a low-cut white waistcoat.

No doubt it is meet and right that guests at the Sultan's Court should wear some more distinctive dress than the old "Stambouline" or frock-coat, but one may, I think, reasonably ask whether the present is a fitting moment to introduce this reform and place a further burden on the Egyptian civil servants, who, as it is, are suffering heavily from the penalty attaching to fixed incomes at a time of stress like that of to-day. The notification of the obligation to purchase and wear this new Court uniform was hailed in certain circles as an earnest of the Government's intention to increase salaries next April. But I fear that the civil servants concerned are for the most part foredoomed to disappointment, and that this notification can but be regarded as an indication that the change in Egypt's status has not driven out the "topsy-turvydom" that has been her peculiar characteristic since time immemorial; for while the Government at home preaches rigorous economy in all directions, the Egyptian Government is, it would appear, pressing its employees to practise what, without any disrespect, and to put it mildly, is the reverse. Frock-coats were considered adequate for the great Coronation ceremony of December 20, 1914, and they could quite reasonably be permitted to continue service until normal conditions set in once again, when the powers that be could by all means insist on the adoption of the new uniforms.

State Banquet to General Murray.

H.H. the Sultan gave a banquet at Abdin Palace this week in honour of General Sir Archibald Murray. It was one of the largest functions of its kind that has been held here since the institution of the new régime. The guests included the Sultania, the princes, General Maxwell and his staff, Sir Henry McMahon and the Residency staff, the Ministers, the Advisers, the Under-Secretaries of State, and many of the generals commanding the various British forces at present stationed in Egypt, with their aide-de-camps.

THE EMPIRE AND THE NEAR EAST.

On Tuesday last, at a meeting convened at the Hotel Cecil by the Royal Colonial Institute, Mr. J. L. Garvin delivered an address on the British Empire and the Near East. In the absence of Lord Curzon, Dr. G. R. Parkin, C.M.G., presided, and among those present were M. J. Renkin (Belgian Minister for the Colonies), Admiral Sir E. Fremantle, G.C.B., Captain Muirhead Collins, Lt.-Col. J. W. Barrett, C.M.G., Major-General the Hon Sir R. Talbot, K.C.B., and Sir Harry Wilson, K.C.M.G.

In the course of his address, Mr. Garvin said that in the latter part of the nineteenth century the legitimate pride of the Germans at their success in many directions had turned to a boundless arrogance, dangerous for themselves and the world. The assumption made by many of our writers that the future would be to the English-speaking peoples and the Slavs had rendered them furious. "The twentieth century will belong to the Germans," said General von Liebert, and they bent themselves to create by sheer force of war a Middle Empire, which by combined power and position would be the greatest in the world. The British Empire they did not believe would survive, and when it broke up they hoped to pick up some of the spoil. In pursuance of their plans, the Kaiser paid his famous visit to the Holy Land, appearing as a kind of cross between Parsifal and a commercial traveller. A concession was obtained for the Baghdad railway, founded on Chesney's surveys, just as the German aniline dye industry was founded on Perkin's discovery.

Having traced the course of events up to the present time, Mr. Garvin said that the Allies had allowed themselves to be surprised by the obvious, and Serbia was crushed while they debated. As the result of Germany's decisive idea and effort in arms and policy, her push to the East had reached almost the furthest goal of practical ambition at the present stage. Upon the use of this fact the Germans rested their real hope of a substantial victory which would give them in the end the effective control of the Old World. Without a complete reversal of this fact there could be no real victory for the Allies and no future security. Even at present Germany hoped to draw from Turkey-in-Asia many of the supplies that had been cut off by the sea; and, looking ten years ahead, Asia Minor and Mesopotamia would be one of the richest mining and agricultural regions in the world. To such a Middle Empire Greece and Roumania would gravitate. So would Serbia, for the Serbs were resolved to be one people. They had shown they would passionately prefer to be united in one independent State, but if that proved to be impossible, they would prefer union under German control to continuing divided. The Allies could not accept the present situation. No part of the game had yet been finally lost in the Balkans; and with sea-power in our hands and the forces that we have to-day it would be the fault of the Allies in general and our own gross fault in particular if the Entente Powers did not wrest from the Germans the mastery of the Near East on both sides of the Bosphorus.

NEWS FROM TURKEY.

(From Our Special Correspondent.)

Athens, January 26.

Interruption of Communications.

The destruction of the Demir-Hissar bridge and the cutting of the telegraph wires caused an interruption of postal and telegraphic communications with Constantinople, and for a fortnight no mails were received in Athens. Postal communication has now been established viâ Kavalla and Drama, and a batch of belated mails has come to hand. Telegraphic communication for commercial purposes is practically impossible.

Travellers from Constantinople have now a difficult and disagreeable journey to perform, and not a few have come viâ Smyrna, embarking at Vourla on sailing vessels. Hundreds of refugees are continually coming away from Smyrna in this manner. There is great misery there, and, it is said, much sickness through eating too many figs, a diet which the poor have been obliged to resort to in the absence of anything else within their means. Imported articles, such as sugar, tea, coffee, etc., can no longer be procured.

Reported New Vali of Smyrna.

There is a report that the Vali, Rahmi Bey, is to be transferred to Constantinople, and is to be replaced by the famous Bedri Bey, the chief of the police at Constantinople. This change will doubtless prove very distasteful to the subjects of the Allies in Smyrna, whose unmolested existence has undoubtedly been due to Rahmi Bey, whatever his ulterior motives may have been. The appointment of Bedri to Smyrna seems to indicate that the Germans intend making it hot for the English and French there.

Many guns have been removed from that district—in fact, men and munitions are being hurriedly despatched south, but whether to Syria or to Baghdad it is impossible to say definitely. There appears to be a very general opinion that there is much bluff about the proposed expedition to Suez, and that the Turks are really concentrating all their energies upon plans for inflicting a crushing defeat on the British forces in Mesopotamia. Von der Goltz is evidently there with a large staff of German officers. The occupation of Baghdad by the British would no doubt be very much more distasteful to the Germans than a Turkish defeat on the Suez Canal, and everything points to a great effort being made to prevent the fall of Baghdad. Moreover, it is hoped by the Turks that another setback to the British on the Tigris, following the evacuation of the Gallipoli Peninsula, would have favourable results amongst the Mussulmans in general towards the Turks.

It is reported that about 100,000 troops have been withdrawn from the Dardanelles, and that after receiving new equipment in Constantinople they have been sent south by the Anatolian Railway, on which all ordinary traffic had been stopped.

Naval Activities.

Since the British evacuated the Gallipoli Peninsula large numbers of wounded have been arriving in Constantinople, an indication that the bombardment by the ships had inflicted considerable loss on the enemy. The British submarines continue to be active in the Marmora, and do considerable damage to small craft, but few vessels now attempt to navigate the Marmora.

The Sultan's yacht Ertogrul, which had been transformed for carrying munitions to the Dardanelles, was torpedoed on her first trip, but it is reported that she succeeded in beaching at Phanaraki Point, and has since been refloated. The repairs she requires, however, as with other damaged vessels in Constantinople, are probably impossible to effect in view of the absence of the necessary material.

The Goeben has again ventured into the Black Sea, and the Turkish *communiqué* of January 11 stated that she exchanged shots with the Russian cruiser Imperatrice Maria, without receiving any damage. She was apparently convoying a coal-laden steamer from Zunguldak, and was caught by the Russian fleet. The steamer was sunk by a Russian torpedo, and the Goeben was chased into the Bosphorus. She is evidently still able to navigate at a high speed—when running away!

The severe explosion which occurred at Hasskeui a short time ago appears to have taken place in a shell-filling department, and was caused by the explosion of cordite. Some thirty to forty German workmen were among the large number of casualties.

Anti-German Feeling Spreading.

The situation in Constantinople appears to be deplorable and most trying for Europeans—the Huns excepted, who evidently take good care to provide themselves with all they require.

The Germans are evidently becoming thoroughly hated by the Turks, and the feeling in the Army against their brutal taskmasters is constantly growing. In fact, Constantinople is being ruled in much the same way as a town in Belgium, and the Turk is less than ever his own master. German officers are now never seen together with their Turkish colleagues, and by their overbearing manners they create a feeling of disgust amongst all Turks with whom they come into contact.

Evidently no German troops have arrived in Constantinople, though there are by this time many thousands of German soldiers of the different services drafted into the Turkish Army, and it it reported that the Dardanelles fortifications are to be garrisoned by them.

The Germans are gradually obtaining full control at Constantinople, and are trying to make their position secure against the effects of a possible revolution against Talaat, Enver, and company.

There is a growing pacificist party, which realises that further resistance on the part of Turkey against the Entente Powers is useless, and would like to get rid of the German yoke; but there is apparently no means of bringing about a change as long as Enver's influence over the Army exists.

The Cost of Living.

There is intense misery in Constantinople, and the cost of living is higher than ever. Coffee, for instance, is now 90 piastres the oke, and the price of sugar fluctuates between 40 and 50. Rice is 18 piastres the oke, and cheese 30. There is scarcely any silver money seen now, and only 104 piastres in nickel coin are obtainable for a lira. It is stated that the *mejidiehs* have been sent to Mesopotamia and Syria, to bribe the different Arab tribes. The half-lira notes, cut in half by the Public Debt and signed by the President of that Administration, are now in circulation.

Talaat's Threats.

On January 3, in reply to a question in the Chamber of Deputies about the arrest of the Turkish consul at Salonika, Talaat made a statement to the effect that he hoped the question would be satisfactorily settled, otherwise the Government would take the steps necessitated by the circumstances, and would throw the responsibility on those who perpetrated the illegal action. What the nature of the reprisals would be was not mentioned, but as a matter of fact, several members of the staffs of the French Embassy and Consulate who had remained in Constantinople have since been arrested. The names mentioned are Dugardier, Baudouy, and Gojon.

British Subjects.

An Englishman residing at Kadikeui, named Robinson, has also been arrested. Naturally, all the Allied subjects are in a state of nervousness, and each one expects, as he retires to sleep, to be awakened in the middle of the night and conducted in a semi-comatose and semi-attired condition to one of those filthy dens which in Turkey serve as prisons. That is the way it is usually done! Mr. Scudamore is still under arrest, but Mr. James La Fontaine has been released and has returned to Constantinople safe and sound.

Instructions have been given by one of the Ministries that a note should be made of all houses and property belonging to the subjects of the Allies, and that particulars should be given as to how they are occupied at present and the whereabouts of their owners.

It is also reported that a law is to be passed that rent should be paid for all houses requisitioned by the military authorities, evidently with ulterior motives. The form of payment will doubtless be a "scrap of paper"!

SALONIKA LETTER.

(From Our Own Correspondent.)

Salonika, January 22.

A "Dull" Week.

The past week has been one of comparative dulness in Salonika. We have the usual endless stream of Allied troops and transport in the streets, but this has become such a familiar spectacle that the novelty has worn off. Occasionally, however, a newly landed battery of artillery or a regiment attracts momentary notice. The feeling among the people as well as the military is one of ever-increasing confidence as the Allies steadily add to their forces here. Indeed, the attitude of the Greeks in general appears to become more and more friendly every day, and the Greek soldiers now fraternize much more openly with the British Tommy. Although few if any Tommies know modern Greek, it often happens that one of the Greek soldiers speaks English, learnt either at school, or, more likely, during a sojourn in America.

"Scots Wha Hae."

I suppose the Censor will allow me to mention that we have several Highland Regiments here. It is bitterly cold weather for the kilt, but these hardy sons of the mountain and glen do not seem to feel a bit more uncomfortable than their trousered comrades. One particular café-keeper must have had his eye on these regiments when he painted in bold letters on his window, "Scots Wha Hae"—on the inspiration of some Scot, no doubt. At first sight it does not seem a tactful way of attracting the Southern Tommy also to remind him of those who "wi' Wallace bled" in fighting against his English ancestors; but, of course, he thinks nothing of and cares nothing for the ancient quarrels of those days. So he sits beside that window along with his Scottish comrades oblivious of the original meaning of the words. English, Scottish, and Irish—all are now brothers and all are *British*.

Salonika's "Metropolitan Police."

As I have already indicated, the main streets of Salonika are full to overflowing of wheeled and other traffic, but what particularly strikes an Englishman on reaching a corner or cross-roads is the sight of a British policeman regulating all this traffic. And everyone—Greeks and all—obey him implicitly. You might almost imagine you were at the Mansion House or Ludgate Circus instead of nearly 2,000 miles from London. The policeman is, of course, in khaki, but on his armlet you can read the letters M.P. (Military Police), and as a matter of fact most of these stalwart fellows are ex-members of the Metropolitan Police Force.

With all this military traffic the tramway cars are being continually held up. But this matters little; the service is so meagre and irregular that most persons prefer to walk. The machinery at the electric station broke down about two months ago, and the company still awaits necessary new parts which are expected from England or France. They are thus losing a golden opportunity.

"Don't Buy My Goods"!

Who ever heard of a regular vendor of any commodity begging the public not to buy his goods, or else to husband what they do buy so as to make it spin out as long as possible before making a further purchase? Yet that is just what the Salonika Gas and Electric Light companies are doing. The one sells gas and the other electric current, and both have pleading notices in the newspapers in which they ask their customers to use as little as possible, the former because of the scarcity of coal, and the latter both for that reason and because their plant is in a damaged condition. The unfortunate shareholders must grind their teeth when they realize the opportunities they are losing of making exceptional profits under present circumstances.

The Cost of Living.

We hear a good deal about the enormous increase in the price of food and other necessaries in Constantinople, but Salonika is not far behind. The cost of living here is increasing by leaps and bounds. This is not entirely due to the scarcity of these necessaries, but partly to the characteristically grasping nature of the merchants. Roughly speaking, the price of the oke (about $2\frac{3}{4}$ lbs.) has more than doubled within the last month. Let me give a few examples, converting the prices per oke into English money. Bread, already so dear, costs 1s. 3d. per oke, and is sometimes unobtainable at any price. Yesterday I saw crowds waiting at each bakery, and Greek soldiers were selling their bread rations to the public at from twice to thrice that high price. Beans have jumped from 1s. 1d. to 2s. 1d., potatoes from 2d. to 7d., charcoal from $1\frac{1}{2}$d. to $3\frac{1}{2}$d., and petroleum from 3s. to 13s. per tin (five gallons). Then, babies must have milk, although it has risen from 6d. to 1s. per oke. Eggs have risen from 1d. to $2\frac{1}{2}$d. and 3d. for two. Sugar, for which an official tariff of 1s. 4d. per oke was supposed to be in force, costs 2s. and more, and meat has risen from 2s. to 3s. 4d. As to imported goods, such as cheese, wine, ham, candles, etc., prices have become more prohibitive still. Finally, drinks of all kinds at the cafés have recently been more than doubled in price for the benefit of us strangers.

It is proposed to form a joint Greek and Allied commission to deal with this matter, but the weeks roll by, and nothing is done. Those of us who earn salaries have therefore to accept with the best grace we can what in effect is only equivalent in purchasing power to less than one-half our former emoluments. This state of things affects with special cruelty the poorer classes and the crowds of refugees who are pouring into Salonika, for all of whom charity cannot provide even the most necessary food.

Contraband Traffic.

The Greek is a born contrabandist, both by sea and land. Now that railway communication between Salonika and Bulgaria has been interrupted by the blowing up of various bridges by the Allies, large quantities of goods are finding their way across the frontier in carts in the neighbourhood of Ghevgheli. The Allies have no proper guards along this frontier, and the Greek troops seem to interfere in no way with their fellow-countrymen in thus earning an honest—or dishonest—penny. I also know, on the best authority, that several Greek sailing vessels engaged in this traffic have recently been captured. As regards petroleum and benzine, there are special regulations under which no shipments can be made except by permission of the British authorities. But after such permission is granted for a particular port and the vessel has left Salonika, there is nothing to prevent the captain from directing his course towards a convenient spot, where, perhaps, a German submarine awaits him. One vessel which recently sailed from Kavalla to Piræus was discovered near a small island in the vicinity of Rhodes, and another which left Piræus for the same port was captured near the coast of Asia Minor. As the Standard Oil Company of New York has practically a monopoly of the market here for petroleum and its products at the present time, some people may be under the erroneous impression that this American—and consequently neutral—company is in some way responsible for part of this traffic. I have the best authority for saying that this is an entire mistake. My information is that not a drop of the company's products is sold without express permission from the British authorities and heavy guarantees on the part of the purchasers; but no restrictions and no guarantees, however heavy, can always prevent a dealer or a captain at sea from yielding to the temptation of trying to earn the big profits to be derived from such contraband traffic. Indeed, I hear that the naval authorities have specially recognised the very correct attitude of the company towards the Allies in this respect.

Spies and Thieves.

The local newspapers report that a German spy who arrived here a few days ago from one of the Greek islands was immediately tried by court-martial and shot.

Thieves are as plentiful as spies, and it requires constant watching on the part of the military to prevent stores being carried away. Besides the crowds of labourers employed in handling the goods, there is always a gang of boys with sacks hovering about the outskirts of the enormous stacks of corned beef and other foodstuffs ready to take advantage of the slightest inattention on the part of the sentry or other guardian. A small shanty near these supplies was raided by the British a few nights ago, and the three male occupants were promptly arrested. The place was cram full of stolen British goods.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, January 11.

Transit of Roumanian Goods.

In a previous letter it was mentioned that Roumania was negotiating the transit from Salonika of the goods ordered abroad. The Bulgarians explained that they were in no way responsible for the delay, since all communications between Salonika and Bulgaria had been interrupted. The Roumanian Government has now decided to have the goods, which amount to about 1,500 truckloads, embarked at Salonika, and sent round viâ Sweden and Russia. This means a delay of some months, in spite of the facilities offered by the Russian authorities for the transit of goods for Roumania. The Swedish authorities have refused the transit of munitions. These will, therefore, have to be forwarded by way of Archangel.

Misery in Bulgaria.

The Bulgarian regiments forming the garrisons on the Roumanian frontier points are reported to have been entirely replaced by German, Austrian, and Turkish troops. I am, however, disinclined to believe this news, which does not appear reasonable. Persons arriving from Varna relate interesting facts regarding the economic situation in Bulgaria. All the most important foodstuffs have been exported into Austria and Germany, so that the population is in a state of great material want. Prices have risen very high. Many families, having relatives in Baltchik, have moved over the frontier, the conditions of life in Bulgaria having become intolerable.

Miss Cavell's Monument.

The subscription organised by *La Roumanie*, one of the newspapers appearing in the French tongue, with the object of contributing to the expenses of the monument to be raised to the memory of Miss Cavell, now amounts to the sum of 2,000 francs.

January 19.

Bye-elections.

The public has been much preoccupied with the candidature of two Roumanians from Transylvania for the vacant seats of Galatz and Caracal. Special significance was lent to these bye-elections by the unique circumstance that the two candidates, Father Lucaci and the poet Goga, are Austro-Hungarian subjects, and that their election would have given a somewhat official character to the solidarity which exists between the Roumanians of the kingdom and their co-nationals who live beneath the sceptre of the Habsburgs. Their candidature was warmly supported by the leaders of the Unionist Federation, MM. Filipescu and Take Jonescu, but met with violent opposition, accompanied by some bloodshed, which can only be accounted for by the liberal expenditure of German gold. The Government cannot reasonably be made responsible for the disturbances, which were of a riotous nature; but, on the other hand, the authorities may be suspected of not having done their utmost to maintain order. The candidates set up a good fight, which resulted in what is known as a "ballottage." Dissatisfied with this result, and as a protest against the hostile measures employed by their opponents, the two Nationalists have withdrawn their candidature.

The *Nationalul* of January 19 affirms that the German Government has informed the Roumanian Minister in Berlin that it regards the candidatures of Father Lucaci and Octavian Goga, as well as the sale of wheat to Great Britain, as acts of provocation. The communication is said to have been phrased in a menacing tone, but the news has not been confirmed, and may, therefore, be provisionally ignored.

Recall of Von dem Busche.

The German Minister in Bucharest, who was said to have left for Berlin on leave, is now reported to have been definitely recalled. The recklessness with which German money has been squandered for purposes of propaganda and corruption, and the totally inadequate results from a German point of view, together with the failure to prevent the sale of wheat to Britain, are given as reasons for his recall. Herr von dem Busche's substitute is said to be the Duke of Mecklenburg, who will at the same time assume the direction of German diplomatic affairs in the Near East. Prince Hohenlohe has also been mentioned in this connection. This news has not been confirmed, and is, therefore, subject to caution. Meanwhile, it is Count Waldburg who remains in charge of the Legation. He is popular in Bucharest society; indeed, the only fault the majority of people find with him is that he was born a German.

Divorce in Roumania.

According to recent statistics, Roumania is the country that boasts the highest proportion of divorces in Europe. In Germany there are said to be seventeen divorces per 1,000 marriages, in France twenty-one, and in Switzerland—who would believe it?—no less than forty. Roumania easily holds the first place with fifty divorces per 1,000 marriages. The number is said to have doubled in this country during the last twenty years. There can be no doubt, however, that divorces were much more frequent a few decades ago. There are no statistics to prove it, records not being strictly kept at that time, but the history of so many well-known families supports this opinion. Of course, early marriages had something to do with it. The grandmothers of the present generation were mostly married at the age of sixteen or seventeen, and a few of them earlier.

An Anniversary.

It is exactly fifty-seven years since the Moldavian deputies, recklessly oversetting the resolutions of the Great Powers as expressed in the Convention of Paris, took the first step towards the realisation of national union by unanimously electing Colonel Alexander Couza as Prince of Moldavia. Within a few weeks he was elected Prince of Walachia, the union of the principalities becoming a *fait accompli*, which maintained itself in spite of Austria's efforts to defeat a development eminently foreign to its own organisation, and destined by its character to form an obstacle to the accomplishment of her plans.

Are you going East—or West?

In either case you must pass through danger zones, and should provide yourself with a

"GIEVE" LIFE-SAVING WAISTCOAT

which can be worn day and night with comfort—being always ready for inflation in case of sudden disaster at sea.

Inflated in a few seconds. Will keep you afloat indefinitely in any sea—head and shoulders clear of water, as illustrated.

THIS WAISTCOAT SAVED LORD MONTAGU'S LIFE.

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, January 22.

Bulgarians in Macedonia.

According to information published in the local press there would seem to be very little reason to doubt an early attack on Salonika by the Austro-German troops. Certain facts, such as the activity of German aeroplanes, which, coming from Xanthi, frequently fly over Serres and the neighbouring districts, tend to confirm this information. In speaking of an "early" attack one must, however, take the words only in a relative sense. What has become of those great hosts, the German armies of 800,000 men, with which Serbia was to be crushed? Nobody knows, or, rather, everybody knows that this was all merely a piece of bluff, intended to alarm Greece. It must be remembered how at that time the Germanophil Press tried to terrorise the Greeks by threatening them with the fate of Belgium. The truth is that, in spite of their boasts, the Austro-Germans would never have succeeded in defeating the heroic Serbs without the help of the Bulgars. So to-day, without the help of King Ferdinand's troops, they would be powerless to attack Salonika.

Apparently there is no longer any doubt as to the entrance of Bulgarian troops upon Greek territory. The promises made by Germany guaranteed us against such an unhappy eventuality—at least, so we were serenely assured by the organs of the German propaganda. Their tone, however, has now changed, and they state that if the Bulgarians penetrate into Greek territory the Greek Army will withdraw before them, as before the Germans and Austrians. Yet it appears that the object of our mobilization was to prevent them from making this entry. What matters? We have seen strange things happen, and others are happening, and doubtless we shall live to see many more.

A Stroke of Policy.

In February, 1915, when M. Venizelos wished to intervene on the side of the Entente, we were told: "Do nothing! Bulgaria would profit by it, and move also to realise her ambitions." We did nothing. It was the Bulgarians who acted, and took what they coveted.

Well, now that the calamity that was foretold has arrived, our Germanophil journals prove that it is great luck for us. Bulgaria has become immeasurably greater, it is true, but it is precisely her aggrandisement that will prove to be our strength. Roumania, become anxious over the extension of her neighbour, Bulgaria, will inevitably become the ally of Greece.

How well it has all been thought out! We will be weak alone, and redoubtable with an ally. At that price, the Republic of Saint Marino, by allying herself to a victorious Germany, could impose its will on the universe!

The Coming Attack.

Shortly after the retreat of the Allies the Germanophil journals stated that in ten days' time the Anglo-French troops would be turned out of Salonika and driven into the sea. Since then more than a month has passed, and not only are the Allied troops still there, but the Austro-Germans have not yet even shown themselves. True, their arrival is announced for ten days hence. They are completing the construction of a railway to ensure their supplies. They are provided with abundant munitions and numerous artillery, especially heavy pieces. Austria is said to have sent several 42-cm. guns. On the other hand, the Allies are not lacking in either the means of defence or big guns. If the Austro-Germans, with their Bulgarian allies, bring up 300,000 men, the Anglo-French troops are quite ready for them.

According to the *Neon Asty*, Allied torpedo-boats have discovered in a Chalcedean monastery, near the village of Soufla, a store of fifty barrels of benzine, hidden in the guardian's cave. The use for which this oil was destined is obvious. For some time past it had been patent that the German submarines were obtaining supplies in the bays of Chalcedea, but the exact locality has hitherto remained a mystery.

The Serbs at Corfu.

The French landed at Corfu in the dead of night. They immediately proceeded to occupy the Achilleon, covering up the escutcheon bearing the German Imperial arms with a French flag. They arrested the custodian, as well as the Austrian Vice-Consul. The apprehension of the latter gave rise to a funny incident. This worthy had only recently changed his abode, and the military picket sent to effect his arrest presented itself at his former residence, where the officer was amazed at being confronted by a harmless old couple, who were, not unnaturally, greatly perturbed at this nocturnal visit. The members of the Serbian Government continue to reach Corfu. M. Pashitch, the Premier, several Ministers, and a number of Deputies have already arrived. King Peter, who is undergoing treatment at Ædypsos, is not expected there for two months. There is a likelihood that the Skuptshina will soon meet in Corfu. Serbian soldiers reach the island daily. They are being supplied with arms and munitions by the Allies.

A MEDITERRANEAN SUBMARINE ATTACK.

At Mudros we took on board the crew of a steamer that had recently been sunk in the Mediterranean by an enemy submarine. And this is the way one of the ship's officers told me the story.

The s.s. Provincia, of the Fabre Line, had left Mudros. She was a small boat, not very fast, of 4,800 tons displacement, 2,245 registered. At 8.45 in the morning of the first of October she was in longitude 21 degs. 09 min. east of Greenwich, and in a direct latitudinal line with the south point of Cerigotto, just about 120 miles from that same land. The *Unterseebot* approached, flying the Austrian flag, and demanded that the whole complement of thirty-eight persons should take to the boats. One was rowed over to the submarine and then used by the Austrians for their own visit to the doomed vessel. A bomb in the hold did the rest.

These are the simple facts of the case. But the most amazing part of the whole performance follows. When the ship's boat was on its journey the officer with whom I conversed was asked, in excellent French:

"What line do you belong to?"

"The Fabre Line.'

"Oh, the same as the Santa Anna!"

And the Santa Anna had had her little experience with enemy bombs coming out of New York harbour so recently that the crew of the Provincia had not yet even heard of it. Yet these officers on the Austrian submarine knew it all.

When the ship's boat returned, what was the surprise of the Provincia's crew to find it crammed full of extra food supplies.

"So this is the way you revictual?"

"No, not at all. These supplies are for you! You may be at sea for some time yet."

"But why this extraordinary consideration?"

"Well, you see, you are French. We would not treat Englishmen so well; but we have no malice towards you."

And the sturdy little Breton sailor replied: "We ask no favours from our enemies. Not even our lives."

Whereupon the small boats were set free, the submarine proceeded onwards, the bomb in the Provincia sent her to the bottom, and the members of the crew spent seven hours in the open sea until they were picked up by a British boat, the ——, and taken to Mudros, where we met them. But the "Austrians" would not have treated Englishmen so well.

BULGARIAN NOTES.

(From Our Correspondent.)

Bucharest, January 18.

The German Taskmaster.

The internal situation is passing from bad to worse. From the moment the Germans took charge of affairs the conditions of life began to become more difficult, and things have gone so far that numberless families are on the verge of starvation. This state of things is due in part to the exportation of grain. Large quantities of corn have been sold to Germany at a low price, and the same thing has happened in the case of Greece as a result of German pressure, the motives for which are obviously of a political character. The indigent population is suffering heavily as a result of these measures, for the stock of grain has fallen considerably below that necessary for internal consumption, and prices have risen in consequence. M. Radoslavoff has attempted to justify his action by invoking motives of a higher order, which do not appeal to the populace, so that his excuses have failed to dispel the existing state of dissatisfaction. The Austro-German command, being all-powerful, requisition all edible articles that they can lay hands on, exporting the same to Austria and Germany. Another factor which contributes to bring about this state of affairs is the absence of all healthy males up to the age of fifty, the pecuniary aid which the State grants to the families of the mobilized being totally inadequate.

Here are a few details with regard to prices: 1½ lb. of black bread is said to cost 5d. to 6d., and then it is in a state of impurity due to admixture with foreign bodies. White bread is sold only to the sick upon presentation of a medical certificate countersigned by the commander of the garrison. The price of this is about 8d. for 1½ lb. Pork, which was formerly sold at 5d. the lb., has now reached 1s. 8d. The price of many other articles of consumption has risen five times above the normal. This applies to tea and coffee. All the milk is requisitioned for the hospitals, which is specially hard upon the children. All eggs are exported. At Rustchuk some fifty head of cattle are killed daily for the exclusive use of Austro-German troops.

The New Governor of Serbia.

The appointment of an Austrian—General Salis-Seewis—as military Governor of Serbia has produced much dissatisfaction in Bulgarian political and military circles. This nomination has come as a complete surprise to the Bulgarian authorities, who consider that they should have been consulted in the matter; and has, in consequence, given rise to the suspicion that in case of victory the Austro-Hungarians will claim for themselves a part of Macedonia. The Bulgarians had previously sought (and obtained) Germany's sanction to the appointment of a Bulgarian governor in the person of M. Ceaprashikoff, formerly Minister at Niah, with the idea of anticipating Austro-German pretensions in this direction. The new appointment is looked upon as a provocation; for the Bulgarian functionaries already established in Serbia thus become subordinated to the authority of an Austro-Hungarian governor.

Even in the impossible event of the Central Powers being victorious, the Bulgarians would probably have to submit to many a humiliating disappointment.

Sofia Bombarded.

On January 11 a French aviator flew over Sofia, throwing bombs on to the town. This caused an indescribable panic among the inhabitants, who but once before in the history of the city had been visited by an enemy aeroplane. This was in 1913, when Lieutenant Capsha, of the Roumanian army, performed the feat of flying over the Balkan Mountains. Too gallant a soldier to frighten an unarmed populace, he could not refrain from dropping a gracefully-worded message of greeting to the fair inhabitants of the Bulgarian capital. But, then, circumstances were different in those days.

Allied Prisoners in Bulgaria.

The Bulgarians have really succeeded in surpassing the limits of inhumanity. The respectable sum of £4,000 had been collected in Roumania for the purpose of alleviating the sad lot of French and British prisoners of war in Bulgaria. The Dutch Minister in Sofia had been requested to act as intermediary in the distribution of this sum. He now reports that the Bulgarian Government have categorically refused their consent to assistance of any kind being given to their prisoners. There is no precedent for such conduct in the history of the war. May this item be added to the sum of Bulgarian ignominy on the day of reckoning!

Bulgarian Troops Pass into Austria.

Bulgarian troops numbering 80,000 (over three divisions) are reported to have passed into Austrian territory by way of Orshova. Their destination is unknown. It is not probable that they will be sent to the Russian front, so that the choice must be between the Italian and French fronts. It is supposed that they will be replaced by Austro-German troops, the exchange being a concession to the aversion the Greeks entertain to having their territory invaded by Bulgars.

A Political Crime?

M. Tontchourmanski, a member of the Stamboulovist party, and a political friend of M. Ghenadieff's, is reported by telegram to have been assassinated on January 13 as he was leaving the Union Club at Sofia. Near the National Theatre he was accosted by one Dimitroff, who, drawing a revolver, fired three shots at him. The assassin then took his own life with the three remaining bullets. Both victims died almost immediately. Tontchourmanski was a great landowner in the Roumanian Dobruja, and one of the richest men in Bulgaria. Dimitroff was his agent. The motive of the crime is unknown. Some attribute it to a private quarrel; others give it a political significance. The report that accomplices of Dimitroff's have been arrested supports the latter hypothesis.

Boycotting Charities.

A painful impression has been created in certain Bulgarian circles by the boycotting of a charity bazaar on the part of the wealthy inhabitants of the capital. There is, however, nothing very astonishing in this, for, as we mentioned above, there is great misery in the country, the German régime is weighing heavily on all, and people are very much alive to the fact that Bulgarians may have much to gain by victory, but that their chief function is to help save the Central Powers.

IMPORTANT TO SUBSCRIBERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

TWELVE MONTHS	£1 0 0
SIX MONTHS	0 11 0
THREE MONTHS	0 6 0

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galignani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamulli and Company, 12, Rue Secostris; Librairie Calebotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Française, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafiadès.

TANGIER TO TEHERAN.

The correspondent of an Austrian paper, in describing the meeting of the Kaiser and Ferdinand of Coburg at Nish, says that:—

> "German motor-cars brought the Bulgarian party to their quarters through the 'Mackensenstrasse,' over the 'Wilhelmplatz' into the 'Bismarckstrasse.' In the whole town one saw everywhere German street signs."

What a truly German touch! What a horrible fate for Nish! It's surely bad enough to have *Boche* and Bulgarian stalking its streets without this crowning horror. But, after all, the thing is a cheap insult to the heroic Serbian people, an insult at which their heroism can afford to laugh. The Germans, in their love for such petty circumstance, remind me of a child which, trembling in the dark, reiterates its courage in spoken words, hoping that they may become true. To label a street with a familiar name doubtless gives to the invaders a fine sense of ownership, but unfortunately for his gentle sensibilities the end is not yet. Lord, what fools these mortals be!

***

Apropos, I suppose, of my note on Zeppelin airships in this paper last week, a correspondent writes asking for my candid opinion of the North Sea incident, when the captain of the British trawler King Stephen left the crew of a wrecked Zeppelin to its fate. My opinion is that the action was entirely justified, for I look upon the matter in the following light. Germany has, from the moment that war was declared, striven to impress all nations with the fact that no consideration of God or man is important to her if it interfere with her own interests. No oaths are binding, no claim of humanity important if by disregarding them the German cause may be in any way advanced. It would plainly have been to the German interest had she been able to counter the loss of her Zeppelin by the capture of a British trawler and its crew. The commander of the airship might take what oaths he chose, knowing as he spoke that if chance enabled him to break them he would be hailed as a hero throughout the length and breadth of Germany. With this knowledge before him the British skipper not only did right in refusing to trust the German word; he had no right whatever to risk the loss of his ship and liberty by acting otherwise. The value he placed on German honour was its exact worth; its standard was set by the Kaiser on his throne. And though it is not pleasant to contemplate death in cold blood, I had rather think of a hundred Germans bent upon an errand of murder dying thus than of one woman or her child struggling in the water while German sailors jeer as a torpedoed ship goes down.

***

The Rev. W. A. Wigram, Acting Chaplain of the Crimean Memorial Church at Constantinople, to whom reference was made in the Personal pages of THE NEAR EAST last week, is one of the joint authors of "The Cradle of Mankind," the other being his brother, Mr. E. T. A. Wigram. The work is one of the most entertaining and withal instructive works on life in the eastern parts of Turkey in Asia and on the Tigris that I have read. It was reviewed in THE NEAR EAST at the time of its publication, some two years ago; so I must not quote any of the good stories with which it abounds. But I think that some of my readers may be glad to be reminded of it just now, when the advance of our Russian Ally over ground that is described by the authors, makes the book a profitable one to study. Incidentally, it helps one to understand how it comes about that Dr. Wigram should have risen to the occasion so finely when the Turks decided to send our countrymen off to the Gallipoli Peninsula last year as an act of "frightfulness."

***

In the note published in last week's NEAR EAST on the paper, "Seven Months in High Asia," read by Miss Ella Sykes, before the Central Asian Society, I observe that the lecturer stated that in Kashgar the custom of temporary marriage among traders is much in vogue. This reminds me that such marriages are not confined to the traders of Kashgar, but are quite common amongst another class, which one would think would be more particular, to wit, the Shiah pilgrims to Meshed Ali and Meshed Hussein. I heard a good deal about this subject when I was in the neighbourhood of the famous shrines, and there is no doubt whatever that these "temporary marriages" do take place, and very frequently. Apart from what I heard from my friends the Arabs, I may refer to what is written by the Rev. J. P. Peters, in his "Nippur" (vol. ii. p. 316). "Besides the ordinary bad practices of the country regarding marriage, the Shiite Moslems have in connection with their pilgrimages a curious practice of temporary marriage. The pilgrim marries a woman for a day, week, or month, as the case may be; the price and the time are agreed upon beforehand; the marriage is regularly performed by an imam; at the end of the stipulated time the man divorces his temporary wife, and she is ready for another contract of marriage." It reminds one of certain arrangements connected with some of the temples that stood in this same land thousands of years ago; and it seems to suggest that customs linger on in countries in spite of changes of rulers and of religion. Indeed, that is what we find in other lands less conservative than the Chaldean plain, which is to-day the Busreh vilayet of the Turkish Empire. And since custom is largely the outcome of climatic influences and of tradition, we need hardly be surprised to find the Shiah pilgrim treading in the footsteps of his forerunner of thirty or forty centuries ago in more ways than one.

***

A few days ago I was told by a friend a quaint story which centres round a small cafe in Bucharest, and upon which, it seems to me, a clever author might easily build up a quite fascinating romance. The building referred to stands not far from King Ferdinand's palace, but it is not the imposing, flourishing place one would expect to find in such a neighbourhood; on the contrary, it is small and somewhat faded-looking; and to an imaginative person who has heard its history it wears an air of depression. Moreover, if rumour may be trusted, nobody cares to sleep in the place. So there you have the setting for a story; and if you wish to write a sensational "thriller," I would suggest as a title: "The Haunted Café, or The Gypsy's Warning."—For, as you will see, one of my old friends, the gypsies, figures in the romance, though only in a subsidiary part.

***

In the 'Seventies, or thereabouts, this Bucharest café enjoyed a reputation very different from that which now attaches to it—though, to be sure, as a café it may, for aught I know to the contrary, be not unpopular even to-day. At that time it was kept by a genial Roumanian, who was married, and had for many years lived on affectionate terms with his wife. But in his old age he fell a victim to the charms of a fresh fair, and after some little hesitation, he determined to be off with the old love and on with the new. Accordingly, he announced his intention to his better half, and—they seem to do this kind of thing almost as easily in Roumania as in certain of the American states—obtained a divorce. But, odd though it may seem to us, the divorce did not lead to any ill-feeling between the parties. The husband actually built a new house for his first wife at the end of the little *parc* attached to his café; and there she took up her residence, while her rival was installed in the café itself. Moreover, the husband used regularly to visit the divorced wife, and took a very real interest in her welfare.

***

Bucharest may not have been quite so surprised at this state of things as—let us say, Upper Tooting, would be; for it is not so far from Constantinople, where *kiosks* and pavilions in *parcs* are not so rare as they are in Clapham—or Tooting, in which haunts of suburban respectability these things are managed in a quite different fashion. Nevertheless, Bucharest *was* mildly puzzled by the husband's intense solicitude for Wife Number One's well-being, which was palpably unaffected. But at last the secret came out. In his young days the proprietor of the café had consulted a gypsy fortune-teller, who had informed him that he would certainly die at the same time as his wife (Number One). Therefore, in guarding her, he was guarding himself, and his anxiety whenever she was unwell was comprehensible. Certainly he was to be pitied! When the lady suffered from any indisposition he became perturbed; and once or twice when she was confined to her bed his inquiries were constant and his agitation intense. Bucharest smiled at first, but presently it realized that the matter was serious enough in all conscience to the poor man; and then it became sorry for him. For his first wife was obviously breaking up fast, and he, by fretting and worrying, was doing his best to fulfil the gypsy's prophecy. Finally, he did fulfil it, for his first wife passed away in her little house at the end of the garden, and he followed her at once. Doubtless the gypsy, had she appeared then in Bucharest would have made her fortune in a fortnight; but probably, being so talented, she had already done so elsewhere—in Regent Street or in the United States.

***

As to that, my friend could tell me nothing, but he was able to round off the story of the café. The second wife attempted for a time to carry on the business; but public feeling seemed to be against her, and ere long she sold the concern and betook herself elsewhere. The new proprietor found the house "unlucky," and retired; his successor had a similar experience. As I said above, to-day nobody is over anxious to sleep in the café; and the moral I draw from the tale is: Keep clear of gypsy fortune-tellers. It may be after the style of the "Moral" to "Nell Cook." But I decline to draw any other.

Sunday is the birthday of H.R.H. Princess Irene of Greece, second daughter of King Constantine, who was born at Athens, January 31, 1904 (O.S.).

Her Majesty the Queen has now fixed Monday next at a quarter past two o'clock for the unveiling of the Florence Nightingale Memorial which has been erected in the crypt of St. Paul's Cathedral.

Prince Alexis of Serbia, brother of King Peter, has arrived at Mentone from Italy.

Under date of February 6, Reuter's Corfu correspondent reports:—The Crown Prince Alexander of Serbia arrived in Corfu this afternoon from Albania, on board a French torpedo-boat. In company of the French Admiral the Crown Prince left the French warship and landed amid loud cheering from the crowd and the playing of the Serbian and French National Anthems. On the quay were all the Serbian Ministers, representatives of the Allied countries, Serbian and French high officers, and the Greek civil, Greek military, and Allied authorities. After having shaken hands with the Ministers, and exchanged a few words with each, his Royal Highness reviewed the two guards of honour, and then proceeded to the hotel where apartments had been reserved for him, loudly acclaimed along the whole route.

The *Matin* publishes the following from Athens under date February 8:—"The newspapers state that in Serbian official circles it is declared that the Prince Regent Alexander of Serbia, who is shortly expected in Athens, intends to proceed afterwards to Paris and London."

Under date of January 11 our Bucharest Correspondent writes:—Their Majesties King Ferdinand and Queen Marie of Roumania celebrate to-day the 23rd anniversary of their wedding-day. Prince Ferdinand of Hohenzollern had been for three years Heir-Presumptive to the throne of Roumania, when, on January 11, 1892, he was married to Princess Alexandra Victoria Marie, daughter of the Duke of Edinburgh and of the Grand-duchess Alexandra of Russia.

The French Government has decided to confer the Grand Cross of the Legion of Honour and the Croix de Guerre on Lord Kitchener.

Vice-Admiral Richard Peirse had the honour of being received by the King at Buckingham Palace on Tuesday morning, when his Majesty conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Order of the Bath.

The same day Rear-Admiral Ernest Troubridge, recently returned from Serbia, had the honour of being received by the King.

Lady Lang has left the United States on her return to England, where she is expected to arrive on the 20th inst.

Mr. Morgenthau, the United States Ambassador at Constantinople, says a telegram from The Hague, will return to America via Copenhagen.

Sir Charles and Lady Waldstein and the Misses Seligman have arrived at 41, Park Street, Mayfair, which they have taken for two months.

A Reuter's message from Cairo, dated the 9th inst., reports:—

Miss Irene McMahon, younger daughter of Colonel Sir Henry McMahon, High Commissioner for Egypt, was married quietly this afternoon to Captain Evans Gordon. The Sultan of Egypt last night gave a banquet in honour of the bridal couple.

The engagement is announced of Evelyn Amy, the only child of Lieut.-General Sir G. M. Bullock, Governor and Commander-in-Chief of the Bermudas, and late G.O.C. of the British Army of Occupation in Egypt, and Lady Bullock, to Captain John Goldsmith, R.M.L.I., H.M.S. "Cumberland."

A marriage has been arranged, and will shortly take place, between Major Luke Tunnard, Oxfordshire and Buckinghamshire Light Infantry, attached Egyptian Army, and Joan, only daughter of the late Frederick Koski and Mrs. Koski, of Chicago, U.S.A.

The engagement is announced of Aida, eldest daughter of Mr. Diacono, of Cairo, with Major Hugh Poate, of Sydney, 1st Surgeon attached to the Ghezireh Palace Hospital, and son of the Surveyor-General of Lands in Australia. The wedding is expected to take place in a few months.

The Earl of Kinnoull, who died at Hove on Monday morning, succeeded his father in 1897. Formerly a lieutenant in the 1st Black Watch, Lord Kinnoull became Divisional Inspector of Egyptian Police, and during the campaign on the Red Sea he served as Chief of the Staff to Baker Basha, receiving the Egyptian medal, the bronze star, and other awards.

The death is announced of Commander George Douglas Jephson at a convalescent home in Nice. He saw service in the Persian Gulf and at the Dardanelles during the present war.

The death has taken place at Merstham, Surrey, in his seventy-ninth year, of Deputy Inspector-General James Trimble, late of the Royal Navy. He was present at the naval and military operations in the Eastern Sudan in 1884, and was mentioned in despatches and received the medal and the Khedive's bronze star. He retired in 1893 as a Deputy Inspector-General of Hospitals and Fleets.

Under date of January 11, our Bucharest Correspondent writes:—

His Excellency M. Blondel, the French representative in the Roumanian capital, has recently undergone a minor operation. His state of health is reported to be satisfactory.

I have to record with deep regret the death of Professor Heresco, the well-known surgical specialist, whose sudden decease has filled with dismay his colleagues as well as his patients. He had barely reached middle age, but his name is known in Europe and America to every specialist in his particular branch. Not merely Roumania, but the whole medical world is the poorer by his loss. He was a passionate supporter of the cause of the Allies, and the last words that passed his lips were expressive of regret that he could not live to see the downfall of Germany.

In a later letter (January 19) our Correspondent reports:—

M. Blondel, the French Minister in Bucharest, has not completely recovered from the effects of the small operation he had to undergo, but his convalescence is reported to be progressing favourably.

Bucharest society has suffered a great loss in the person of Madame Simone Lahovary, the widow of the statesman Alexander Lahovary. She had organised an entertainment in favour of the Serbian refugees, and while distributing to these the proceeds she developed typhoid fever, to which she finally succumbed. Madame Lahovary, née Ghermani, enjoyed a high position in Roumanian society, her intellectual gifts being much appreciated.

Monseigneur Camilli, Roman Catholic Archbishop of Jassy, has died at the age of 76.

Baron Otori, the Secretary of the Japanese Embassy, has left for Greece (states a Rome telegram) to report to his Government on the situation there, Japan not having a diplomatic representative in Athens.

Second-Lieut. R. G. Bond, Army Service Corps, of the Imperial Ottoman Bank, London, has been promoted to lieutenant.

Mr. R. Johnston, of the Imperial Ottoman Bank, Cairo, has been appointed second-lieutenant in the 2nd Camel Transport Corps.

Mr. A. H. Orensteen, of the same agency, is also joining the forces in Egypt, probably as an interpreter on the staff.

Mrs. Wynne, who was recently employed by the Grand Duke Nicholas in organizing dressing stations and field hospitals for the Russian Army at the Turkish front near Batum, is now in the Caucasus on her way to Persia. She is accompanied by Miss Macnaghtan and Mr. Bevan, with her ambulance cars and their English and Russian personnel. She is officially attached to the Russian Army, and will accompany it during the Persian campaign.

Miss Kathleen Burke, delegate of the Scottish Women's Hospitals, left England last Saturday for a lecturing tour in the United States and Canada "to raise £10,000 in two months." Before her departure the Serbian Minister wished her "God-speed," and stated that he was desired by his Government to express the profound gratitude of Serbia for the "extraordinarily useful work which was accomplished in Serbia by the Scottish Women's Hospitals for Foreign Service during this war."

The Scottish Women's Hospitals have now established a hospital in Corsica for Serbian refugees, and Dr. Milan Curcin, Chief of the Department for Foreign Missions of the Sanitary Section of the Serbian Army Headquarters, has been directed to place himself at the disposal of the Scottish Women's Hospitals to facilitate the installation of this hospital by procuring all requisite information concerning the refugees.

Forty members of the Second Scottish Women's Hospital Unit have arrived in Zurich after internment in Austria as common military prisoners of war. They at once proceeded to Berne, and expected to travel direct to London on Wednesday night. With them are thirty other British women, including nineteen members of the First Scottish Unit. Nearly a hundred more women were expected to arrive yesterday.

The King has been pleased to grant permission to Mr. Frederick Terry Rowlatt, Governor of the National Bank of Egypt, to wear the Grand Cordon of the Order of the Nile, which decoration has been conferred upon him by the Sultan of Egypt in recognition of valuable services.

The King has been pleased to grant permission to Mr. Henry Higgs, C.B., of his Majesty's Treasury, ex-Inspector-General of Finance to the Egyptian Government, to wear the Insignia of Grand Officer of the Order of the Nile, which decoration has been conferred upon him by the Sultan of Egypt in recognition of valuable services.

MRS. FRANK BARKER wishes to recommend MANOLI CORBETTI, 22, Great Chapel Street, Oxford Street, W., to anyone wishing to purchase YAOURT, HALVA, TOMATO PASTE, BLACK OLIVES, ORIENTAL JAMS, or CIGARETTES, all of which he gets direct from Salonika and other parts of Greece.—[Advt.]

The Rome correspondent of the *Morning Post* reports that Prince Alexander of Serbia has conferred the Order of St. Sava upon Professor Bosanquet, of Liverpool, who crossed and recrossed to Valona, at great risk, on behalf of the Serbian Relief Fund, and was bombarded by an Austrian aeroplane during the voyage. Professor Bosanquet is now at Corfu, whither M. Grouitch, formerly Serbian representative in London, has proceeded to join him.

An Exchange telegram from Cairo states that the funeral of Sayed Mohammed El Morghani was of the most imposing character, the Sultan and the Sirdar being represented. El Morghani was hon. C.M.G., which was conferred on him when the New Year's Honours were issued. He had always been pro-English, and was the most influential man in the Sudan in favour of Great Britain. He accompanied Baker Pasha to Suakin in 1883, and made whole-hearted but unavailing attempts to induce Osman Digna to lay down his arms.

On Thursday last week, at Buckingham Palace, the King conferred the Victoria Cross upon Corporal Cyril Royston Guyton Bassett, of the New Zealand Divisional Signal Company, for most conspicuous bravery and devotion to duty on the Chunk Bair Ridge, in the Gallipoli Peninsula, on August 7, 1915. After the New Zealand Infantry Brigade had attacked and established itself on the ridge, Corporal Bassett, in full daylight and under a continuous and heavy fire, succeeded in laying a telephone line from the old position to the new one on Chunk Bair. He has subsequently been brought to notice for further excellent and most gallant work connected with the repair of telephone lines by day and night under heavy fire.

Serbian deputies, who left Rome for Nice on Thursday, deputed five of their number to thank Baron Sonnino, Minister for Foreign Affairs, for their reception in Italy and for the assistance rendered by the Italian Government in convoying Serbian refugees across the Adriatic.

We are informed that it was the Greek Catholic Patriarch of Egypt, and not the Coptic Patriarch, as was stated, who died on January 10.

On Monday, February 14, at 5 p.m., at the London School of Economics, the Hon. W. Pember Reeves, Ph.D., will deliver the second of a series of public lectures on the Balkan States. The remaining lectures of the series will be given on following Mondays. We regret that owing to pressure on our space our report of the first lecture is unavoidably held over until next week.

On Monday next Madame Grouitch will give an account of the Serbian nation in exile at 35, Grosvenor Square.

The Chairman of the Serbian Relief Fund has received a cable from Corfu informing him that the French and Serbian authorities there would welcome the establishment of a British hospital. Accordingly arrangements have already been made by the Serbian Relief Fund to despatch such a hospital (the seventh hospital organised by the Serbian Relief Fund) to Corfu, and Mr. E. P. Warren has been appointed Administrator. It is hoped that Mr. Warren, with an advance party of the hospital staff, will leave London for Corfu on Monday next.

Before a meeting of the Society for the Promotion of Hellenic Studies, held at Burlington House on Tuesday evening, Mr. A. Hamilton Smith, Keeper of Greek and Roman Antiquities at the British Museum, read an illustrated paper on "Some Greek and other Reliefs recently acquired by the British Museum." Many interesting photographs were shown of votive and tomb reliefs, the latter including single figure, double figure, and group examples.

Sunday was "Armenia Sunday," and at many churches in the metropolis and throughout the country collections were taken on behalf of the Lord Mayor's Fund for the relief of the Armenian and Assyrian peoples in their extremity.

According to a Sofia telegram, the Greek and Roumanian Governments, on account of the military situation created by recent events, and in accord with the Bulgarian military authorities, have thought it desirable to recall their Consuls from Monastir.

The Imperial Merchant Service Guild has received messages from Turkey from Captain Ernest Allen, late of the steamship Assiout, and Captain V. D. Lazzolo, late of the steamship City of Khios, interned in Turkey, together with the crews of these vessels, stating that they are all well.

Mr. Arnold Bennett is organising a grand concert to be given at the Haymarket Theatre, on Sunday evening, February 20, in aid of the funds of the Wounded Allies Relief Committee, Sardinia House, Kingsway, W.C.

The committee of the Association of Serbian Students at the University of Zurich makes an appeal for funds for the support of those Serbian students, now cut off from all communication with their homes, who are unable to continue their studies unaided. Subscriptions may be sent to M. Cloetta, the rector of the University of Zurich.

The death has taken place, at his residence in Malvern, of Admiral John F. G. Grant, who served in the Black Sea in 1854. He afterwards took part in the China War of 1862. He retired from the Navy in 1894, and was in his eighty-first year when he died.

An armlet scheme, similar to that in force in England, will shortly be introduced for British subjects in Egypt.

The following announcements are published in the *London Gazette* :—

ORDER OF ST. MICHAEL AND ST. GEORGE.

The King has been graciously pleased to give directions for the following appointment to the Most Distinguished Order of Saint Michael and Saint George, for services rendered in connection with military operations in the field :—

To be an Honorary Member of the Third Class, or Companions, of the said Most Distinguished Order :

El Lewa Shehata Pasha Kamel, Chief A.D.C. to his Highness the Sultan of Egypt.

D.S.O. AND MILITARY CROSS.

His Majesty the King has been graciously pleased to approve of the undermentioned rewards for distinguished service in the field :—

To be an Honorary Companion of the Distinguished Service Order :

El Bimbashi Mohammed Effendi Shahin, Egyptian Cavalry.

Awarded the Military Cross :—

El Yuzbashi Mahmud Effendi Hilmi El Samma, Egyptian Infantry.

Sadek El Esfahani, Military Works Department, Egypt.

El Yuzbashi Mustafa Effendi Mansur, Egyptian Infantry.

El Yuzbashi Aref Effendi Lebib, Military Works Department, Egypt.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.
— EDUCATIONAL AGENTS, —
143, Cannon Street, London, E.C.

OBITUARY.

SIR CHARLES RIVERS WILSON.

The death is announced of Sir Charles Rivers Wilson at his residence in Berkeley Square. Sir Charles, who was eighty-four years of age, had a distinguished career, which included important service in Egypt. He entered the Treasury in 1856, and after only three months he was appointed private secretary to Mr. James Wilson, and later acted in the same capacity to Mr. Robert Lowe when he was Chancellor of the Exchequer in the Gladstone Administration of 1869-74. He was appointed Comptroller-General of the National Debt in 1874, and having become closely acquainted with Egyptian affairs by reason of his connection with the Council of the Suez Canal Company as a representative of the British Government, he was appointed Joint Finance Minister of Egypt, with M. de Blignières, in 1877. He received the K.C.M.G. in 1880 in recognition of his services during the difficult years of Ismail's obstinacy. He remained on the Council of the Suez Canal after he had relinquished the post of Finance Minister, and his tact and knowledge went a long way towards securing a satisfactory arrangement with France regarding the admission of extra British directors to the Board in 1884. Sir Charles, who retired from the Council in 1895, was twice married. His first wife, Caroline, daughter of Mr. R. Cook, died in 1888, and seven years later he married the Hon. Beatrice Violet Mary Mostyn, sister of the seventh Lord Vaux.

BRIGADIER-GENERAL W. J. ST. J. HARVEY.

It is announced that Brigadier-General William James St. John Harvey died at Amarah, on the Tigris, on February 2, from wounds received on January 20. He was employed with the Egyptian Army for eight years (1906-1914), and his death will be sincerely deplored in Egypt and the Sudan.

Born in 1872, he was educated at Eton and Sandhurst, and, passing out of the R.M.C. with honours, entered the Black Watch in November, 1892. He became captain eight years later, major in 1910, brevet-lieutenant-colonel in February and colonel in July of last year; and last September he was gazetted to the command of a brigade. After serving with his regiment in Mauritius, Cape Town, and India, he volunteered for service in the 2nd Battalion in the South African War. He was wounded in the advance on Kimberley, but afterwards took part in the fighting at Paardeberg and Driefontein, and in other operations; and he was mentioned in despatches and received the Queen's medal with four clasps and the King's medal with two clasps. He joined the Egyptian Army in February, 1906, and commanded the 9th and the 11th Sudanese; he was also D.A.A.G. and A.A.G., and later became Head of the Recruiting Department. He served in the Sudan (Blue Nile Province) in 1908, and in 1910 commanded the expedition against the Atwoot tribe; and he held the Egyptian medal, the Sudan medal with clasp, the 3rd Order of the Mejidieh, and the Osmanieh.

M. K. MAVROMICHALIS.

M. Kyriakoulis Mavromichalis, a former Premier of Greece, died in Athens on the 2nd inst. He came of an influential family of Maina, and entered the Greek Parliament as one of the members for Maina. In 1902 he was Minister of the Interior in M. Deliyannis' Cabinet, and in the next (and last) Cabinet of that statesman he was Minister of War and, *ad interim*, of Marine. On the assassination of M. Deliyannis (1905) it was thought possible that M. Mavromichalis would succeed to the leadership of his party; but the majority chose to follow M. Rhallis, and it was not till 1909 that M. Mavromichalis came into power. Then he was called upon to form a Cabinet at the time of the crisis brought about by the rise of the Military League; but the Cabinet, which depended upon the pleasure of the military, fell early in the following year. M. Mavromichalis was well disposed towards the Entente, especially towards France; but he was strongly opposed to M. Venizelos, and therefore lent his support to a policy of neutrality in the present war. He was a wealthy man, and popular socially, but his political abilities were not of a marked order.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 3s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

ARCHER.—On February 4, at Cairo, the wife of Bimbashi H. G. F. Archer, Cairo City Police, of a son.

DUDGEON.—On the 6th inst., at Khanka, near Cairo, the wife of Herbert William Dudgeon, of a son.

JACOMB.—On February 8, at Giza, near Cairo, the wife of Capt. F. Bernard Jacomb, R.E., of a son.

DEATH.

ALSTON.—On the 8th inst., at Ryde, Isle of Wight, after an operation, Catherine Haultain Alston, widow of Colonel Sydney Vere Alston, and second daughter of the late Major-General E. M. Boxer, R.A., F.R.S.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.
Open all the year round.

SEMIRAMIS HOTEL.
Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.
Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.
In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

UPPER EGYPT.

Luxor.
The Winter Palace. The Luxor Hotel.
The Karnak Hotel.

Assouan.
The Cataract Hotel. The Savoy Hotel.
The Grand Hotel.

Are the Finest on the Nile.

Alexandria.
MAJESTIC HOTEL.
Every modern comfort and luxury. Private apartments with bath-rooms attached & combined suites.
150 ROOMS AND SALOONS.
Hot and cold water in each bedroom. Large and luxurious dining rooms. American bar and restaurant stocked with best wines and liquors. Garden terrace. Verandah. Lift. Motor Car, Guides and Interpreters meet all trains and ships on arrival.
Moderate and Inclusive Terms

CYPRUS PALACE HOTEL
NICOSIA, CYPRUS.
Charming position. Beautifully situated the best part of Nicosia.
Most magnificently built and furnished.
FRENCH and ENGLISH CUISINE.
Every Comfort. Moderate Charges.
Special terms for extended visits.
BRANCH OF THE CYPRUS HOTEL CO.

Cyprus.
THE CYPRUS HOTEL CO.
Open all the Year round—
LIMASSOL (Olympus Hotel).
FAMAGUSTA (Savoy Hotel).
For Summer Seasons—
PLATRES (Platres Hotel). 4,000 ft. from the sea level. Opens from May till Oct.
TROODOS (Olympus Hotel). 6,000 ft. from the level of the sea. Opens from May till Oct.
Perfect Situation. French and English Cuisine. Moderate Terms. Also Excursion to Mount Troodos.
For Tickets and further particulars apply to—
NAJER HOURY, Limassol, Cyprus
(*Proprietor of the Army and Navy Stores*).
Head Office: Najer Houry Stores, Limassol, Cyprus.
Branches: Polymedia, Troodos, Nicosia, Famagusta, Larnaca, and Platres.

FRIDAY, FEBRUARY 11, 1916.

ROUMANIA AND THE WAR.

Evidence accumulates that Roumania will abandon before very long her present attitude of neutrality. Her position has been one of considerable difficulty. The outbreak of war found her technically within the orbit of the Triple Alliance. She was, however, no more bound than Italy to accompany the Central Powers in a venture for conquest, and at the Crown Council held on August 3, 1914, the treaty that linked her to Germany and Austria-Hungary was for all practical purposes denounced. The proposal that she should avail herself of her military convention with the object of taking Bessarabia from Russia was rejected. In a war that for the moment appeared to arise more or less legitimately from a difference of opinion between two groups of Powers, it was held that Roumania must observe neutrality. As the weeks passed, however, the real significance of the European struggle came to be appreciated. It was seen that the war was no longer to be regarded as the outcome of an unfortunate misunderstanding, but that its causes had to be looked for in a clash of principles profoundly affecting the whole basis of international relations. In such circumstances Roumania was not long in making up her mind in which direction her duty and interest lay. But certain material factors had to be taken into consideration. She had to make sure of the position in the Balkans before she engaged in a war on her northern and western frontiers, and, above all, it was necessary to be equipped on a scale adequate to the demands of modern fighting. When Greece pleaded her misgivings about Bulgaria as an excuse for not joining in the war, Roumania hoped to find the support she needed in Italy. But she was kept in the dark regarding the negotiations between Italy and the Triple Entente, and was not given the opportunity of co-operating in a joint campaign. Italy, indeed, soon showed that she was concerned only with her northern border. Participation in the war, therefore, would impose on Roumania a far greater military strain than she had originally anticipated, and every week increased the amount of munitions that she had to regard as the irreducible minimum with which she would be justified in starting the war. Then followed a long period of neutrality under protest, no less trying to the Roumanians themselves than to the Allied Powers, whom they were eager to join. The withdrawal of the Russians confirmed them in the correctness of their policy. From a purely military point of view no other course was open to Roumania than to push on steadily her preparations for war and to wait until the time arrived when her intervention on the side of the Allies was calculated to secure the maximum effect.

The psychological moment for Roumania's participation in the war is, we believe, now drawing near. For many weeks past the Central Powers appear to have given up all hope of influencing her policy in their favour. As long as there was the least prospect of success they worked hard to win the Roumanians over, and their efforts were not always as open and above board as that entailed by the purchase of cereals last December. Unfortunately for Germany, who after protracted negotiations was only able to offer a million sterling in ready money as part payment, any effect the purchase might have had on the Roumanian public was neutralised by Great Britain coming forward as a purchaser for four times the amount, and handing over ten millions sterling without waiting for delivery of the goods. But Roumania's policy has not been determined by the question of markets for her cereals. The money she now receives will ease the financial situation, and will enable her to face a campaign with greater confidence. The fact that her total war credits up to the present time amount to £24,000,000 affords a valid reason for not continuing indefinitely an attitude which adds to the indebtedness of the country without helping to bring nearer the day of the realization of the national aims. Not the least regrettable feature in the internal situation in Roumania has been the apparently wide gulf between the Government and the Opposition on the question of the policy to be pursued by the country. That gulf would now seem to have been bridged. The Government is less concerned with the punctilious observance of the letter of neutrality; the Opposition has come to appreciate the reasons for delaying action until Roumania is in a position to put forth her maximum effort. It remains to be seen whether, as a result of the delay, the task imposed upon her army has been enhanced by the opportunity afforded the enemy of completing his defences on the Roumanian frontier. We shall hope, however, to see the Roumanian Army spared the ordeal of a serious campaign in the Carpathians. If it must advance by that route, it should be when the Russians have penetrated once more far enough into Bukovina to render the retention of a strong Austro-Hungarian force on the actual frontier of Roumania too hazardous a proceeding. There are other directions in which the Roumanian forces can be profitably employed.

As public opinion in Great Britain has been exercised by Roumania's delay in taking up the part which her destiny has clearly mapped out for her, and is apt to credit her with a desire to adopt "the tactics of the hyena," by joining in the war when the enemy has been defeated, the recollection of some of the difficulties in her way can but serve to enhance the merit of two vigorous speeches by M. Take Jonescu, an abbreviated report of which appears on another page. Throughout the war M. Jonescu has pleaded for the immediate participation of Roumania on the side of the Allies. The greater the danger of his country being led astray into a false attitude, the more insistent has he been on a policy of staking all for a righteous cause. He is still opposed to a "policy of carrion-crows," but he realises that there is something to be said for the past delay, and he was able at the opening of the session at the end of the year to deal with the subject of Roumania's participation in the war from the standpoint of dispassionate statesmanship. There is ground for supposing that his views are shared by the bulk of the Roumanian people, although few could be found able to express them in the masterly manner in which M. Take Jonescu's oratorical gifts enabled him to present them to the Roumanian Parliament. Of special interest is his summary of Roumania's foreign relations during the last forty years. He did not seek to disguise the national fears of Russia, but he believed with Bismarck that Russia, with her desire of access to the open sea once realised, will be a lesser danger to small nations than when they stood between her and her ambition. In no circumstances could he admit that it was Roumania's part to act for ever the policeman whose task it was to bar Russia's way to the open sea. Further, M. Take Jonescu repudiated the idea, so sedulously circulated by Germany that it had come to be generally believed, that Roumania had had to take refuge as a humble adjunct of the Triple Alliance from fear of Russia. She entered into a treaty with the Central Powers as the only means of escape from the hostility of Austria-Hungary. Her action did not remove the hostility, but it made it less aggressive. In spite of the advantages Roumania gained from the Alliance, Austria-Hungary has remained her real enemy, and there can be no settlement of the point at issue between them until Transylvania is incorporated in the Roumanian kingdom.

A ROUMANIAN STATESMAN ON THE WAR.

(From Our Bucharest Correspondent.)

The following is the summary of a speech delivered by M. Take Jonescu in the Roumanian Chamber of Deputies in the debate on the reply to the King's message during the last week of the old year:—

M. Take Jonescu naturally begins his great speech by referring to the extraordinary events that are taking place, and to the unusual importance of the situation as far as Roumania is concerned. He points out that Roumania's future hangs in the balance, and that there never were days more critical for his country. He deplores the short-sightedness of people who will look upon the present conflict as though it were but an ordinary war on a large scale, instead of realising that we find ourselves in the midst of a catastrophe that has befallen the whole of mankind, and that we are witnessing the death of an old world and the birth of a new one. The inability which so many display to recognise the magnitude of the events that are taking place he explains by a reference to a certain speech of Mr. Balfour's, in which, to justify his retirement from the leadership of the Unionist party, the latter gives it as his opinion that at a certain age a man becomes less adaptable to new currents, less receptive of new ideas, and, his authority increasing in inverse ratio, he becomes a drag upon the progress of the State. The superhuman struggle into which mankind has thrown itself voluntarily is not the consequence of a simple lawsuit between Germany and France, Germany and England, Germany and Russia; nor are their misunderstandings founded upon a question of commercial competition, a matter of colonies, a trifle of some thousands of square miles in Alsace and Lorraine: the causes that have set vibrating so many human souls lie deeper, must be sought for beneath the surface of things. This war is something quite different. It is the last battle delivered by the forces of reaction against the principle of national sovereignty. Have you not asked yourselves what the new nations, the new republics created by the Anglo-Saxon beyond the seas, are seeking in this conflict? Why have 7-8 per cent. of the Canadian, Australian, and New Zealand populations thrown themselves voluntarily into this war? For love of the Mother Country? Mankind does not act in this manner for a mere sentiment. Why is the American conscience moved as it is? From motives of affection for England? No public speaker in the United States used to strike a more popular note than when he "twisted the British Lion's tail." Why has this democracy of 100 millions been thus strangely moved, this democracy which is carrying out upon mankind the most beautiful of experiments: the building up of a civilisation without prejudices, without classes, without monarchies, without militarism, without a single impediment, based upon the sole principle of national sovereignty carried to its extremest limits? This vast movement can not be explained otherwise than by the supposition that mankind is undergoing a complete transformation, which has found its expression in the form of a general massacre. This war, provoked without a doubt by Germany, is the last attempt on the part of a single people to acquire universal domination. And on what grounds has this attempt been undertaken? What is its justification? Superiority of culture? A more refined civilisation? None can deny Germany's contribution to the common treasure of civilised humanity. But is this contribution of greater value than that of France, than that of Italy, than that of the Anglo-Saxon people? Were the whole contribution of Germany wiped out, man's wealth of intellectual, artistic, and material treasure would indeed be reduced, but not impoverished. German culture has produced one thing which is unique: a political machinery which presents the paradox of an ultra-modern economic organisation with a mediæval political system.

Passing on to the subject of neutrality, M. Take Jonescu ridicules the very idea of it, and rebukes those who would adopt what has been called "a policy of carrion-crows." He knows of cases, he continues, when, the circumstances being insignificant, it has been possible to adopt the tactics of a hyena; but he knows not a single case in history in which a people has announced such intentions beforehand; for that would be the height of incapacity matched with the blackest depth of immorality. Leaving out of discussion all considerations of a racial character; all considerations based on the feeling of gratitude on the one hanr, or, on the other, of the sense of injury received—all considerations, in a word, of a sentimental nature—there remains one policy which, in his judgment, the Roumanian people should adopt, a policy founded on the instinct of the nation. And what is the national instinct? The national instinct is that potent factor which throughout its history has made the Roumanian people comprehend, sometimes consciously, sometimes unconsciously, that for a thousand years the problem has lain between them and the Hungarian people. In a word, "either the Magyars dominate us from the Carpathian summits, or we, established in the Transylvanian stronghold, dominate the Hungarian plain. Other solution there is none."

M. Take Jonescu proceeds to discuss at considerable length Roumania's relations with Russia. He admits that the neighbourhood of Russia is a danger, because in every case the neighbourhood of a great Power is a menace to a small nation. With Bismarck, he finds not unjustified Russia's desire of access to the open sea, and he quotes Bismarck's words to the effect that Russia, her wish once realised, will be a lesser danger to the small nations when these no longer stand between her and her ambition. He scoffs at the part that some would assign to Roumania, of acting for ever the policeman whose task it is to bar Russia's way to the open sea.

M. Jonescu then refers to the tragic days, so ominously charged with thunder, that followed on the crime of Serajevo. People who were aware of the state of enervation that had reigned in Viennese political circles, especially in the year 1912-1913, knew that the Austrian Cabinet would not fail to make the most of the crime perpetrated in the Bosnian capital. The few who were initiated into the secrets of Roumania's foreign relations were full of foreboding lest the provokers of the war should succeed in wearing to the end the mask of peace, thus forcing the provoked into a declaration of war; for Roumania would then have found herself in the sad plight of having to fulfil the terms of the military convention imposed upon her by Austria in 1883. When events took a form that relieved Roumania of all obligations imposed by the spirit as well as the letter of the treaty, the great burden that weighed upon the minds of those responsible was to some degree lightened; but it was not entirely removed, "for it is not possible to be the ally of a State for one-and-thirty years, and then, on the morrow, to draw your sword against her." There are things that are morally impossible. Little nations that have come into existence as a result of their own efforts cannot indulge in the luxury of immorality. This treaty, which continued to weigh on the minds of Roumanian statesmen, ceased to exist politically on the day of the Crown Council, and juridically on the day of Italy's declaration of war on Austria. Politically it ceased to exist when it was agreed that a defensive alliance formed with the object of maintaining the peace of Europe could not be transformed by one of the parties into an offensive alliance designed to disturb the general peace and satisfy the lust for conquest. It ceased juridically, to the satisfaction of the casuist in international law, when Italy resorted to arms, for, allied with three others, what is your duty when two of these take to quarrelling between themselves?

Before the establishment of her independence there was no question of Roumania possessing a foreign policy, in the European sense of the term. After the war the Roumanian nation found itself constituted into an independent State, even raised to the dignity of a kingdom, and in possession of something even more important, viz., a quality acquired on the Bulgarian battlefields, confidence in its own strength, which is, perhaps, the most powerful weapon a nation can possess in the fulfilment of its mission. And this gave rise to a movement which may be described as a blossoming of the spirit, an awakening of confidence in its own capacities, a birth of more vivid hopes for the future. This was the moment at which Austria chose to administer a crushing blow. She invented the question of the Danube at a moment eminently favourable for it, there being no power in Europe at that time who could prevent her. Russia had a Danubian question of her own to settle, and her relations with Roumania in 1881 could not be expected to be very friendly; Germany had but recently allied herself to Austria; Italy was to enter the Triple Alliance a year later; France had lost much of her weight as a factor in international politics since the tragedy of 1870; England was on intimate terms with Germany. So that was the moment Austria chose to take up the question of the Danube, and in Roumania everyone knew that the question was not limited to the Danube; that there was something more serious behind; that Roumania was threatened with the loss of her independence. The question arose whether Roumania would be admitted to the London Conference. The German Ambassador opposed the idea, and the Conference gave Austria protective rights over the lower Danube, and secondarily over Roumania.

Meeting with resistance on the part of Roumania, Austria sought some other weapon. On June 5, 1883, at a banquet following the unveiling of the statue of Stephen the Great at Jassy, M. Gradishteano spoke of the two pearls that were missing from the crown of Stephen the Great. The two gems were: Bessarabia, the larger one beyond the Pruth; and Bukovina, the lesser one. From Russia came no word of protestation. Russia could not imagine that her military power could dissolve in a gluss of champagne. But from beyond the Carpathians—where the one thought was to find a way of stamping out Roumania's new-born spirit of independence, which was considered a danger to Hungary—there came the noisiest protests. Excuses, explanations, alike proved unacceptable. Roumanians were accused of wishing to provoke Austria. The accusations brought against Serbia in 1914 are but a repetition of those brought against Roumania in 1883. The situation became intolerable. Escape from this situation became imperative. The Alliance presented the only way of escape. But be it understood that the formation of the Alliance was not the result of fear inspired by Russia. It was due to the other neighbour having made life intolerable; and no other means of escape from this unbearable state of affairs presented itself.

This Alliance, which was forced upon Roumania, has brought her advantages as well as disadvantages. It has brought her money, and M. Carp points out that this has come almost entirely from Germany. But, asks the speaker, addressing himself to M. Carp, if he (M. T. Jonescu) were at the head of the Government to-day, would he not be charged with lunacy if he demanded money from Austria? The Alliance has brought tranquillity to Roumania—a real advantage, for it has allowed her to develop in peace. This must be acknowledged to the credit of those who, though under compulsion, signed the treaty. Another point gained was that the persecutions against the Roumanians of Transylvania became, from time to time, less harsh as a result of Roumania's inclusion in the Alliance. Lastly, the Alliance was productive of projects entertained at Budapest for concessions to be made to the Roumanian inhabitants of Hungary, projects that constituted a genuine thermometer: whenever there was apprehension of a general war the proposed concessions would become more generous: as the fear of war became lessened they would be withdrawn. Such concessions no serious-minded man can accept as a solution of the problem. Concessions are inadmissible in questions in

which the life of the one necessarily excludes the life of the other. At their best they can only form a temporary *modus vivendi*.

M. Take Jonescu then mentions the proposals made by Bulgaria and Serbia on different occasions to form an alliance with Roumania, which came to nothing through opposition on the part of Austria. Passing on to the events of 1912 and 1913, the speaker traces the difficulties of the situation created by Austria-Hungary's apprehension that Serbia and Roumania should become too strong, a powerful Bulgaria, on the other hand, being in her interest, since there is no Bulgarian Irredentism in Austria-Hungary. Speaking of the Roumanian campaign in 1913, he says: "The national instinct was so powerful at that time that when we mobilized in order to cross into Bulgaria the people interpreted the mobilization by means of placards bearing the words 'Down with Austria.' When we were sending our army over the Danube the soldiers thought they were crossing the Danube to reach Transylvania. *Through Bulgaria into Transylvania!* Our experience of to-day proves that their instinct was wiser than all our judgment."

Then follows a striking account of the disadvantages accruing to the State, from a military point of view, from the erroneous assumption that the western frontier would always be open, and that everything that might be needed in case of war would be forthcoming from this direction. Finally, M. Take Jonescu discusses the different moments at which Roumania's participation in the war might have been favourable, insisting at length on the great part Roumania might have played when Bulgaria mobilized, had the Government possessed the courage to seize the opportune moment. He deplores the short-sightedness which prevented the Government from grasping the fact that it was not only Roumania's duty, but eminently her interest, to offer a protecting hand to Serbia.

THE WAR IN THE BALKANS.

THE COMING STORM.

Though, to all intents and purposes, no serious fighting has taken place in the Balkan theatre of war since last Thursday, it looks, from the growing complexity of the situation, as though we were on the eve of great happenings. It has frequently been said, during the past eight days, that the Bôches have been massing men on the Western front for a decided attack on our lines, but it is more than likely that these reports have been intentionally spread by the enemy in order to throw dust in our eyes, and lead us to expect the great attack there when it will not take place. Conforming with this, we see it reported that the Germans have, practically speaking, evacuated Macedonia, leaving the Bulgars to hold us in check at Salonika; but up to the present, at any rate, there is no confirmation of any such withdrawal.

The German "Couloir."

The facts of the case are that, as long as Southern Albania and Salonika are held by the Allies, and Roumania is an unknown but by no means negligible quantity, all Germany's boasted conquests of territory in the Balkans are a source of danger rather than an advantage, and all her aspirations in the Middle East —Turkey-in-Asia, Egypt, etc.—remain dreams without a shred of reality to clothe them. It is, therefore, imperative for her to clear the Balkan situation as rapidly as possible, and to protect the two threatened flanks of her Belgrade-Sofia "couloir."

Albania.

From the military point of view, the western flank of this "couloir"—namely, Albania, offers more immediate interest, because here General Koevess is attempting to throw the Allies back from the old Serbian frontier. According to Wednesday's news, the Austrians were advancing on Tirana, with Durazzo as their ultimate objective, and were co-operating with the Bulgarians, who have occupied Elbasan. Yesterday, a Serbian official *communiqué* from Corfu reported a successful rearguard action fought by the Serbs near the Ischz River on February 1, but admits the evacuation of Alessio. This gives us some information regarding the position occupied by the Serbs, but the best account of the situation in Albania as a whole is given by the Budapest correspondent of the *Morning Post* on January 27 (published on Tuesday). Though admittedly compiled from information gleaned in an enemy capital, it, nevertheless, throws some curious light on what has been a carefully darkened picture of Italian activity in Albania.

We quote therefrom as follows:—

Coming events around Valona and Durazzo will create quite a novel situation in the Balkan theatre of war, for it is well known in the Monarchy that the Italians are concentrating large numbers of troops there, and that they are prepared to put up a most desperate resistance. The Italians continue to land large numbers of men at Valona, and from an Austro-Hungarian point of view it is most essential to deal with this menace first of all. I learn that Bulgarian troops will be employed in this campaign against the Italians. The miltary critics in Budapest and Vienna are quite confident that the Italians at Valona will not be able to oppose the offensive movement of General Koevess for more than a week, although the terrain in that part of Albania presents even greater difficulties than those attendant on the Montenegrin campaign. The number of the Italian forces in the Balkans is estimated here at something between seventy and a hundred thousand, if they have continued to land troops at the rate at which they began. On the other hand, the Austro-Hungarian and Bulgarian armies who will oppose them are at least double that number. The marshes round about the town of Valona are a great hindrance to both sides, and it is reported that the Italians are trying their best to drain the roads leading over them. They have a considerable number of heavy guns at Valona, a great camp has been built for the troops, and an immense quantity of ammunition and some mountain artillery have been landed. The coming operations around Valona will be a struggle for Otranto Bay, one of the most important points on the Adriatic.

It will be noticed that the above message was written a fortnight ago, since when the Italians will have been able greatly to strengthen their position. The interlude will, likewise, have been taken advantage of by the enemy, and it is to be assumed, with the military history of the Serbian campaign before us, that when Koevess begins his real "drive" through Albania, it will coincide with a similar attempted drive by Mackensen in the direction of Salonika. On the other hand, it is probable that if the German scheme fails to materialise promptly, the initiative will pass into our hands, or events on the northern flank of the "couloir" will prohibit the carrying out of the enemy's strategic plans.

The Northern Flank.

These considerations bring us to the northern edge of the Belgrade-Sofia "couloir." Happenings here are extremely obscure, so obscure, as a matter of fact, that they are, happily, interfering with the schemes of the German General Staff. This flank is controlled by Roumania, and its position as regards the world war is, as yet, an unsolved riddle. Therefore, a general enemy advance, either towards Albania or Salonika, or against Mesopotamia and Egypt, is utterly impossible as long as Roumania has not declared herself. In these circumstances, the immediate object of the German General Staff must be to procure a decision in Roumania before furthering their Balkan projects. From all accounts, attempts are already being made to oblige her, by means of the mailed fist, to fall in with the enemy plans, but so far no definite result has been obtained. Latest information, however, reveals some interesting facts: The Roumanians are leaving their Russian frontier exposed and are massing troops on the Austro-Hungarian and Bulgarian frontiers; the Bulgars have declared Rustchuk a war zone, and are fortifying the right bank of the Danube (whether they are moving troops from Macedonia on the northern Bulgarian frontier, or whether Turks are being used for this purpose is, as yet, unknown); the Kaiser, personally, has steamed down the Danube to inspect the Roumanian forts; and, finally, Austro-German troops are concentrating on the Carpathian line, on the northern Roumanian frontier. At any moment, therefore, we may read that Roumania has thrown the die. There is no denying the fact that the political situation is one of extreme gravity, and that the Bôches will do all in their power to precipitate an issue in order to enable them to proceed with their plans in the Near East. Fortunately for us, we have no reason to doubt the pro-Ally sentiments of the Roumanian people and statesmen; and we would point out that, in the event of an Austro-German attack on the Carpathian frontier, a strong Russian army can immediately come to the aid of the Roumanians, thus tightening our grip on the ephemeral Belgrade-Constantinople "couloir."

To sum up, the key to the situation in the Balkans, and to the realisation of the enemy's plans, lies in Bucharest. A great deal, however, depends on the measures adopted by the Allies to prevent a recurrence of our diplomatic disasters of the past six months.

NEAR EAST BOOKSHELF.

ZION'S GLAD MORNING.*

Mr. Frank G. Jannaway is a firm believer in the contention that "we are living on the eve of 'Zion's glad morning,' so long predicted by Israel's inspired prophets," and his new book is principally concerned with arguments and quotations in support of this view. The sincerity with which he approaches his subject and the unquestioning faith that leads to its elaboration are, indeed, among the pleasantest features of the book. His admiration for all people and things Jewish is very real, but it is more than a pity that it tempts him to the inclusion of numerous uncalled-for comparisons between Jew and Gentile, always of course, with the intention of proving the great superiority of the former people. The incidents he quotes are not of sufficient strength to be of any real value to his argument, and they form an irritating background which might well have been dispensed with in a book of such undoubted interest. The following quotation illustrates our meaning:—

A card was handed in to us one evening at "Olivet House," the well-managed and homelike hotel of Mr. and Mrs. Hensman and nephew, where we were staying. On it was printed "Isaac Nissenbaum, Clokes Pressed." We interviewed him, and inquired the object of his coming. "Oh," he replied, "I have come to clean your clothes." Yes, they sadly needed cleaning after all the rough exploring we had been doing; but we had no others to wear while these were being cleaned; that, however, was no obstacle to "Isaac." "You take them off and go to bed, and I will bring them back nicely done in two hours." "Isaac" was as good as his promise. No wonder the Gentile is being ousted by the Jew.

Beyond its graceful advertisement of a popular and well-known hotel, this paragraph, which is headed "The Jew at the Top," hardly contains more than the sneer with which it ends. The "we" referred to by Mr. Jannaway is presumably the author himself, because throughout the book he consistently refers to himself in the manner usually reserved to editors and kings.

Mr. Jannaway's description of the gradual increase in the number of Jews in Palestine is interesting. In 1827 there were not more than 500 Jews in the whole of the country, while last year their number had increased to no less than 100,000 Jews settled in Palestine. Thus it will be seen that the author has some ground for his enthusiastic support of the call made by the late Dr. Theodore Herzl—"Palestine for the Jews." A list of Jewish colonies in Jerusalem is included, showing the date of their foundation and the approximate number of their inhabitants. The present war has to a certain extent affected these ghettoes, but the author looks forward to the day when the Jews will return in increased numbers.

The Turko-Italian War of 1911-12, and the great European War, commencing 1914, both directly affected the three seaports of the Holy Land (Jaffa, Haifa, and Beyrout), thereby interfering with the tide of Zionism. But only short-visioned people will look upon such as a waning of the movement. We admit that on the outbreak of the great European War a few thousands of Jews hurried away to British protected Egypt, and a few to America. But the latter were very little above the yearly average, and the former will, no doubt, quite as quickly hurry back to the Land as soon as the war is over. Hundreds of Italians left Palestine when war broke out between Turkey and Italy in 1911, but thousands went back when peace was proclaimed. And history will repeat itself, for there is no doubt that where thousands left in 1914 tens of thousands will hurriedly return as the result of peace, especially when it is fully realised what a British Protectorate means. We make bold to predict that the undesired period of interrupted progress will have the same effect that enforced idleness has, and that the reaction will be great.

Each contention of this sort that Mr. Jannaway makes he supports with Biblical quotations, and in dealing with the departure of Jews from Palestine at the present time calls attention to the passage in Isaiah, and attempts to prove that this exodus was necessary in order that the fulfilment should be given to the prophecy:—

"It shall come to pass in that day that the Lord shall set his hand again the second time to recover the remnant of his people which shall be left . . . from Egypt. (Isaiah xi. 11.)

In his interpretation of the Scriptures the author recognises the Turkish Empire as the symbolic Euphrates; Britain as Tarshish; Russia as Rosh; Germany as Magog. And it must be admitted that his quotations are well chosen, and, as far as may be, give colour to his theories. But his anxiety to shower discredit upon the Gentile leads him into a strange display of ignorance at times, as, for instance, in the paragraph which we quote below, and which is headed "Armageddon."

The nations are fast getting ready for this unparalleled and sanguinary scramble upon the mountains of Israel. The strange thing about it all is that, although these nations profess to be Christian, and to have the God of the Bible on their side, they are in total ignorance of His programme, and have not the slightest idea that their ceaseless piling up of armaments is most graphically set forth in the Holy Scriptures.

Mr. Jannaway must indeed have been dazzled by the contemplation of Jewish greatness if he has failed to notice the controversy on this subject which has raged since the outbreak of hostilities. Such passages as these, loosely included in support of his own contention, can have no other effect than to destroy the value of the work as a whole. The unquestionable qualities of the Jewish race, as shown by such an ardent champion as Mr. Jannaway, should surely stand far above the need of anything like this.

The political argument of the work is based almost wholly upon the authority of the Scriptures, and, as we have intimated, this has been cleverly done. It cannot, however, be overlooked that there is a reverse to the medal; other authorities no less informed have produced series of quotations which place quite another construction upon the divine purpose of the war. Any book of this kind is of value now, and though Mr. Jannaway leaves us unconvinced, his work is certainly interesting, especially as a record of Jewish accomplishments in Palestine during recent years. The arrangement of the matter, which is set out under small heads and is not divided into chapters, is, in our opinion, a mistake, especially as the index at the end is inadequate for the purpose of reference.

The book is illustrated by many photographs.

THE ISLAMIC PULPIT.

Professor Margoliouth delivered an interesting address last Tuesday in the rooms of the Royal Asiatic Society, his theme being The Islamic Pulpit. The records, he said, left the inquirer in some confusion as to whether the original pulpit was a seat or a platform; but the Arabic name *minbar* was clearly derived from the Ethiopic *manber* or *menber*, which signified "chair" or "throne." The chief or only piece of furniture in an Abyssinian church is a wooden erection called by this name, and the introduction into the Prophet's Mosque of a *minbar* is placed by historians at the time of the return of the exiles from Abyssinia.

Of the sermon itself, Professor Margoliouth said that orthodox jurists enumerated its elements as five: the words, "Praise be to Allah," a blessing on the Prophet, an admonition to piety, a blessing on the believers, and a lesson from the Koran. Besides these it was customary to add a prayer for the reigning sovereign and a mention of the "pious Caliphs." The Prophet had recommended brevity to preachers, and some of the discourses attributed to him were of "ten words," *i.e.*, a few sentences. The most famous of sermon-writers belonged to the middle of the fourth century of Islam. His sermons were throughout in rhymed prose, and occupied on the average five minutes in delivery.

In the course of a short discussion that followed the address, Mr. Yusuf Ali said that Moslem preachers were beginning now to address themselves to the question of how to explain their religion in direct relation to the life of the people; and if that tendency continued they would make some contribution not only to the religious thought of their own faith, but to religious thought generally.

THE PRESS ON THE NEAR EAST.

Diplomatic Mistakes.

Dr. E. J. Dillon, who has been contributing an interesting series of articles on the Diplomatic History of 1915 to the *Daily Telegraph*, says in the concluding number (February 8), that the "two cardinal mistakes of Entente diplomacy during the year 1915 turned upon the Near East, and were caused by a misconception of the respective contributions which each of the Allies was expected to make to the final victory."

In the first place he refers to the debated question of the future of Constantinople. He admits the temptation that confronted the statesmen concerned to reward the splendid services of Russia by formally giving her a free claim to the Turkish capital, and continues:—

But the essence of statesmanship is to yield not to temptations, but to reasons deriving from the interests of the cause they are championing. And whatever one may think of Russia's right to Constantinople, the cause of the Allies was certain to be impaired by disposing of the city at such an early stage of a long and uncertain campaign. It must have occurred to Entente statesmen—for it was self-evident—that to dispose of the Turkish capital just then was to throw away a trump card in our subsequent dealings with the domestic adversaries of the Young Turks. The Turkish Opposition was eager to overturn the Government, establish a new régime, and reverse the Germanophil policy of the Talaat-Enver Cabinet. Whether this projected revolution would have come to anything is dubious, but once Constantinople was known to have been made over to Russia the stimulus to organise it was gone. . . . On the Balkan neutrals the effect was still more sinister, Bulgaria was roused to indignation by the tidings. King Ferdinand's hope and impatience to use the Byzantine robes he had ordered and to get crowned in Aya Sofia were known throughout Europe. And when the news of the decision of the Allies reached Sofia it strengthened tenfold the links that already bound Bulgaria to the Central Empires.

Dr. Dillon then turns to the two other countries which were favourable to the Allies, but which have not yet abandoned their neutrality.

Roumania's resentment was, if possible, stronger still. Roumania is a Black Sea Power, dependent on the freedom of its waterways for economic prosperity. And the perspective of Russia possessing Constantinople, dominating the Straits, and thus commanding Roumania's principal outlet, went far to extinguish whatever ardour may have subsisted in the breast of Bucharest Ministers for the Allies. This arrangement was one of the chief grievances in Bratiano's indictment against Russia, and one of the mainsprings of his attitude towards the Entente. . . . Even Greece, whose King was called Constantine as a reminder that the Hellenes once were—and still aim at being—masters of Constantinople, took umbrage at the premature bargain. It was also clear that Italy could not be expected to relish the establishment of Russia on the Golden Horn while a Southern Slav State, Russia's protégé, was to have access to the Adriatic.

In short, that unlucky transaction was the fertile source of grievous trouble and disappointment. And it was easy to foresee that it could not be otherwise.

It would be unjust to charge any one country or even any one party with this amazing blunder. They are collectively responsible. . . . When all the extenuating circumstances have been fully taken into account, the agreement disposing of Constantinople and flinging away our cheering prospects in the Near East will remain the most fateful piece of diplomatic folly perpetrated during the war. And disconcerting as its consequences have already been, we have by no means experienced the last of them.

So much for the first mistake. The second, in Dr. Dillon's opinion, was "embodied in the Dardanelles Expedition, also conceived and organised for the sake of our Russian ally, to whose land operations we were then looking for the definitive decision."

The Position of Greece.

We take the following quotation from an article by Dr. Ronald Burrows in the *Contemporary Review* (February):—

When our Governments talked of the great future that lay before Greece if she joined us, the Zaimist Ministry replied that, anxious as it was about the future, *le danger actuel* was too great. Yet any danger of a German or Bulgarian invasion, granting such a thing as possible, is as nothing, either in actuality or in terror, to the danger that would overwhelm Greece if England and France were to judge her traitor.

This is the tragic possibility that we Philhellenes have had to face. It is one that the Greek world has not faced. Too many Greeks imagine that their country is in the same position as Holland or Sweden or Spain, whose neutrality is understood and respected. There could be no greater delusion. Rightly or wrongly, England and France regard Greece as a friend who, on two critical occasions, in the first days of March and the first days of October, has drawn back and failed them. Their own blunders, the just causes that Greece has had for misunderstanding them, are forgotten. If the neutrality of Greece were to change to a hostile, or even to a strict neutrality, love would turn to anger. This is as true of France as of England, or even more true, as the love is greater.

The Turkish Royal Tragedy.

The tragic death of the Turkish Crown Prince is regarded by M. Emile Galli, formerly in control of the *Levant Herald*, as due to assassination and not suicide. According to the Paris correspondent of the *Morning Post*, M. Galli says that this terrible act had been long foreseen. We quote from portions of his dispatch on the subject:—

A Prince of the Blood, he had for many years been in opposition to Enver Pasha. In April, 1914, after a secret interview with the German Emperor at Berlin, Enver summoned to Turkey fresh German instructors in so great numbers as to resemble an invasion.

General Liman von Sanders on reaching Constantinople was presented by Enver to the Sultan, who smiled, but refused to speak. The Crown Prince refused to see him, saying when pressed that if Liman arrived he would be thrown out of the window. . . . Later, after the arrival of the Goeben and Breslau, Enver acknowledged the *coup d'état*, and said that the Turks had just bought the two boats, Germany giving credit till after the war. "Will no one," said the Crown Prince, "blow out the few brains you have left?"

Similarly when the attack was made on the Russians the Sultan was furiously indignant because the blow was delivered without his authorization. The Prince was with the Sultan at the time, and as Enver was leaving said: "Your accomplices and you are about to ruin Turkey. Beware the rage of the people. You will be killed like dogs." It is presumable, M. Galli writes, that the Prince was unable to withhold a protest at the occupation by Germany of Turkish districts. That was presumably his death warrant. Unquestionably the Prince foresaw his assassination, for, says M. Galli, he left six sealed papers to friends, only to be opened in case of his assassination.

The *Times* (February 7) publishes the following illuminating references to the event:—

The news of the "suicide" of the Turkish Heir Apparent was in Germany subordinated to the announcement that the Sultan had been made a Prussian field-marshal. A paper like the *Vossische Zeitung*, which specializes in Near Eastern affairs, actually devotes about half as much space to the death of Prince Yussuf as to that of "Missie," the famous chimpanzee of the Berlin Zoological Gardens. There are, however, certain signs that even the German Press does not believe in the official Turkish story. The *Berliner Tageblatt*, which states openly that Prince Yussuf's father, who met a similar death forty years ago, was "murdered," speaks of Prince Yussuf's Liberal leanings, and then remarks:—"It cannot be said that in recent years, after the complete victory of the Young Turk programme, he played any leading political part."

But the most interesting and most damaging evidence is a telegram of Wednesday's date from the Constantinople Correspondent of the *Frankfurter Zeitung*. After the usual remarks about the sad state of Prince Yussuf's nerves, the correspondent betrays the fact that Prince Yussuf was trying to get out of Turkey. He puts it thus:—

"The Heir Apparent intended to take the Balkan train yesterday, in order to make a short trip to Vienna *incognito* for the benefit of his health. On the previous day he visited the graves of his grandmother and his father at Stambul, and after praying there for a long time distributed rich gifts in money."

Bulgarian Atrocities.

A special correspondent of the *Morning Post* (February 5), writing from Salonika, gives a description of Bulgarian atrocities which is revolting in the picture of sheer inhumanity that it pourtrays. The details were for the most part supplied by a Bulgarian deserter, stung to speech by the horror of scenes he had witnessed. We take the following quotation from his narrative, at a point where he tells of three hundred Serbian prisoners—of course unarmed—boys of fifteen and old men, gathered before a newly-dug pit to which they had been marched:—

By this time the guards had loaded their rifles and stood round the Serbians in a ring with levelled bayonets, while, huddled together, their prisoners embraced each other or sank in apathy to the ground. The cavalry captain rode up to the miserable throng. "Each man will bind the eyes of his neighbour," he shouted in Serbian. They did so. It took a long

time, and was a pitiable sight. Some young boys were crying. Many of the men shouted defiance at the guards, who looked expectantly on, and at the cavalry, whose swords were drawn ready for the butchery. They blindfolded each other with strips torn from their waistcloths or whatever else they had. "Now kneel down," came the harsh order. One by one the victims crouched to the ground. The captain turned again to his troopers. "Start work" was the order he gave. The infantry guards, still keeping a circle to drive back any who might try to flee, drew off a little to give more room, and the Bulgar cavalry rode in among the kneeling throng of prisoners at a canter. With yells of cruel delight, they slashed at the unarmed victims. Some of the Serbians tried to seize the dripping sabre blades in their hands. An arm slashed off at the shoulder would fall from their bodies. Others, tearing off the bandages that blindfolded them, attempted to unhorse their executioners, gripping them by the boot to throw them out of the saddle.

But even three hundred, though brave, could do nothing against eighty armed men.

At length, at the end of half an hour, "the troopers were tired of cutting and thrusting":—

A few of them dismounted and, sword in hand, walked here and there among the bleeding groups, pricking them to see if any still lived. Some, though badly wounded, were still alive, but the Bulgarian captain did not give time for all to be finished off, and at his orders the whole pile of mangled prisoners, whether breathing or dead, were pushed by the infantry into the grave which had been dug earlier in the afternoon, and the earth was shovelled at once on top of them.

Some of the butchers appear to have been touched by conscience even as they worked, for they shouted "We are doing this in charity, we have no bread to feed you, so if we spared you it would be to die of hunger."

German Designs in Egypt.

The *Glasgow Herald* (February 5) devotes a leading article to the above subject, leading up by presenting a parallel of Napoleonic times with those of to-day. Our quotations are taken from the latter part of the article:—

The real point of contact of the two great designs is, of course, that a German conquest of Egypt would be the most serious blow which Germany can hope to inflict upon Great Britain. If the Germans could establish themselves in Egypt, they would be in a more favourable situation than that of Napoleon during the French occupation. . . If this country were fighting Germany with no allies, or if the Germans had suffered less severely in the fighting of the last eighteen months, the menace would be immeasurably greater. Can Germany, suffering from the slow but exhausting pressure of our blockade, approaching the end of its reserves of men, committed to the defence of lines of enormous length both in the West and in the East, its Balkan ally menaced by the strong Allied forces at Salonica, spare a sufficient force to lead the Turks to victory in Egypt? Napoleon effected an easy landing at Alexandria; the German-Turkish army must face a march across a desert. Napoleon made a sudden attack upon badly equipped Ottoman troops; there can be no element of surprise in an attempt on Egypt to-day, and the British Army has had plenty of time for preparation and is not likely to be unequal to its responsibilities. There is little chance of picking up incidental glories by the way, as Napoleon dazzled the East by his successes at the Pyramids and Jaffa and Aboukir. Such considerations do not inevitably lead to the conclusion that no attempt upon Egypt will be made, for the Germans are not accustomed to be daunted by the anticipation of difficulties, and we do not know all the conditions which, in their view, may offer a reasonable prospect of success, or the circumstances which may drive them to something like a gambler's throw. But the season of the year in which such an expedition may best be made has come and is going, and we shall probably know before long whether the Kaiser is going to emulate Napoleon in this respect or not.

Bread Scarcity in Turkey.

A special correspondent of the *Morning Post* (February 8) at Salonika supports the rumours that have been current for some time that all is not well at Constantinople in regard to food, and the concluding paragraph of our quotation again emphasises the brutality of the official Turk. The behaviour of the Turkish officials on this occasion stands out in plain contrast to that of Turkish soldiers, described under a separate head on this page.

Though the withdrawal from the Dardanelles, as represented to the public of Constantinople through official organs, may have given a fillip to the popular temper, it is a melancholy story that travellers from the Turkish capital bring. Bread, an Armenian who escaped under American protection tells me, is rationed at the rate of 2½ lb. among eight people per day. Petrol is said to cost two Turkish liras, which is about 36s. a tin. Business is stagnating.

Encouraged by the ruthless attitude of mind of their new military preceptors, Turkish officials have regained all the old brutality that characterized them in the days of Abdul Hamid. One of the first fruits of their unnatural alliance with the Bulgarians was the arrest by the latter of the many Christian deserters from the Turkish Army who had found, as they thought, safe refuge in Bulgaria, a country of their own faith. They were all returned to the tender mercies of the Turkish Courts-martial, and my informant assures me that most of them were beaten to death.

Turkish Humanity.

The following quotation from a communication of a British officer who had served for several months in Mesopotamia, to the *Morning Post* (February 7), adds another link to the chain of evidence that the true Turk is a clean and honourable opponent:—

I have such an admiration for the Turks (the Pucca Turks, I mean; not the Kurdish savages, who butcher Armenians, or the Baghdad Turco-Arabs) that I wonder more and more how they ever came into the German net. They did a thing after Ctesiphon that commands recognition. A barge-load of 300 of our wounded stuck in the mud, and, with some medical personnel on board, had to be abandoned. The Turks towed the barge down stream, and, under cover of the white flag, sent the whole lot, including the medical personnel, back to the British camp unharmed in any way. I know of two wounded British officers left out on the night after the battle who were found by the Turks. In both cases the Turks took away all their equipment, haversack, belt, revolver, papers, and field-glasses, but both men say that they were not harmed in any way, and in the case of one man they gave him water to drink, loosened his coat, and made him more comfortable. They left both for our people to collect next morning. It is the Arabs who maltreat our wounded and commit all sorts of atrocities.

Italy and the Adriatic.

To the *Westminster Gazette* (February 7) Mr. H. Charles Woods contributes an interesting article under the above heading. He thinks that the real position of our Ally is imperfectly understood by many people. She, like England, France, and Russia, has a "western front" of nearly 300 miles, which must be adequately defended against attack at all costs. It is due to no lack of loyalty to the Allies that Italy has not undertaken the operations on the east of the Adriatic which appear to have been expected of her in some quarters. The writer continues:—

For Italy the balance of power on the Eastern coast of the Adriatic, the Albanian question, and the numerous problems connected with the situation there are so important that they must rightly be watched with the closest attention in Rome. Possessed of practically no satisfactory harbours on her Eastern coast, Italy is faced by a long stretch of shore provided with havens of absolute safety. Consequently, whilst she is perfectly willing to admit the establishment of a Greater Serbia on part of the Adriatic littoral, and whilst she has always shown much less desire to annex Albania than have Austria, Serbia, or Greece, Italy cannot consent to the establishment of an Adriatic régime which now or in the future would be unfavourable for her. This accounts for her early occupation of the town and bay of Valona—the only port on the Albanian coast where landings can be undertaken with comparative safety, and the point which can and must be defended, cost what it may in sacrifices to Italy.

Mr. Woods then turns to Corfu, and refers briefly to events which are taking place there and at other points of the Adriatic coast:—

Even were Greece not bound to Serbia by her treaty obligations—obligations upon the maintenance of which the Allies

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given.

Mrs. Marling, when making her appeal, wrote as follows:—

"There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—

"'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; we have not had so much as a box of matches from England."

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,
25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

Digitized by Google

would have had every right to insist—the occupation of Corfu by the Allies is fully justified by a Hellenic breach in the arrangement made in 1863, when the Ionian Islands were incorporated in the Hellenic Kingdom. According to that agreement, those islands were to form part of a *Constitutional* State, they were to enjoy the advantages of perpetual neutrality, and no armed force, either naval or military, was at any time to be stationed upon the territory or in the waters of those islands. Greece can hardly still be called a *Constitutional* country, and even before the outbreak of the present war it might have been possible to point to occasions when the neutrality of Corfu had not been held as sacred by that country.

Further to the north the recent and present positions are far from clear. But whether the Montenegrins were or were not compelled to surrender, Italy alone cannot be held responsible for the fall of the Lovtchen position, and for the various disasters which followed it. . . .

In conclusion, it may be well to repeat that those in this country who are inclined to criticise the policy of Italy should remember that she is far less responsible for the maintenance of the conditions which rendered possible the Austro-Germanic-Bulgarian invasion of Serbia last October than are some of the Allies who have been at war since the beginning of hostilities.

SERBIA'S GRATITUDE TO VICTORIA.

Sir Peter McBride, Agent-General for Victoria, has received the following letter from the Serbian Minister in London: "It was with great gratitude that I received a further donation from Victoria of £4,000. We have received through you, up to now, £19,300. Through this sum, may I tell you, Victoria has saved many thousands of Serbians, of sick and desperate ones condemned to starvation by our merciless enemies. The Serbian people know very well how many sacrifices Victoria and Australia have made for the common cause of the Allies. It is for the cause of justice and true civilisation. Moreover, Serbia will always remember how the people of our Allies helped her in the darkest hours of her history. Serbia is a country which fights for the elementary human rights and liberty. In helping Serbia, Australia, be sure, helped one who is akin to her, akin in love of liberty and of rights for all the nations, big or small, living upon the earth. By their donations to stricken Serbia the Australians promoted not only the Allied cause, but also the cause of ideal brotherhood of men and nations. In the name of all the Serbians, suffering people whom your fine country helped so very gallantly, I express to you, and through you to all the benevolent donors in Victoria, my deepest and most grateful thanks."

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Mr. H. Chester Wood's lecture on Monday, a detailed summary of which is reproduced elsewhere, is useful inasmuch as it gives a cursory survey of the means of penetration from the sea-coast into the interior of the Balkan Peninsula. These means are three in number: by river, by rail, and by road. As regards the first-named, the Danube is the only reliable waterway. It is the Thames, the Nile, or the Rhine of the Balkans, and truly a great river. Between Peterwardein and Cernavoda no bridge spans it, and in places it is almost a mile wide. Apart from its military significance—foreign to these notes—it is a great commercial highway. Its international status has been guaranteed by the Powers, a circumstance which, at the present moment, gives food for thought, as can be easily gathered from the following: the upper navigable reaches of the Danube are in Austria, and, to a smaller extent, in Germany; hence the international value of the lower reaches of the Danube and their control by an international board can only favour Germany and Austria. In other words, we have been guaranteeing, for the past many years, the inviolability of the mouth of the Danube, in order to further the expansion towards the East of German and Austrian river-borne trade.

***

We must remedy this error, and it seems to me that when the day of reckoning with the enemy comes, we should see to it that the control of the Danube from Turnu-Severin (at least) to Galatz, Braila and Sulina should be in the hands of a Power friendly to us; that is to say, that both banks of the river, from Serbia to the sea, should be controlled by one State, that State to be preferably Roumania—if she proves our friend. As for Austro-German shipping in the Lower Danube, it will not be difficult to penalise it properly, if the Allies decide to do so. A few years ago—I believe it was in 1913—the Germans, under the auspices of the Deutsche Band and the Hamburg-Amerika (the same egregious company which recently acquired a controlling interest in shipping on the Rhine), floated a gigantic Deutsch Danube steamship company, to be called the Bavarian Lloyd. The Roumanians will, I am sure, if given both banks of the Danube, as far west as the Serbian frontier, and a free hand, make short shift of the enemy steamship company. As it is, Roumania has a river fleet of her own, and is developing it extremely well.

***

The second part of Mr. Wood's lecture deals with railways in the Balkans, and by far the most interesting reference is to the linking up of the Roumanian and Bulgarian lines in the Dobruja. Between Belgrade and the mouth of the Danube there is only one bridge across the river, and consequently only one possible route for the linking-up of the Roumanian and Bulgarian lines. The bridge in question is situate at Cernavoda, and is really a marvel of engineering skill. From here a line runs to Constantza on the Black Sea, and a second line to the Dobruja, the newly acquired territory on the Black Sea, has just been completed meeting the Bulgarian branch line at the frontier station of Oborishte. "With a total length of ninety miles, about seventy of which are in Roumania, this line is now highly important, not only from a commercial, but also from a strategic point of view. Indeed, whilst it enables passengers and goods to be conveyed from Bucharest to Sofia, or *vice versa*, without the necessity for any transhipment on the banks of the Danube, it also greatly facilitates a Roumanian and a Bulgarian military concentration just within the frontiers of these countries." The natural question to be asked in this connection is whether both systems, the Roumanian and the Bulgarian, are of the same gauge. I have every reason to believe that they are, considering that the Orient Express to Constantinople passes indifferently through both countries, and that neither State is likely to have altered the gauge of its Dobruja line. At any rate, this line is likely to loom large in the immediate future if Roumania decides that her future lies in the Allied, rather than the enemy, camp.

***

The third question touched on by the lecturer is that of roads, and principal interest will, of course, attach to his reference to the state of roads in Albania. The best road, we learn, is that inland from Santi Quaranta, which is adaptable to wheeled traffic. Doubtless our generals have not overlooked this fact. From Valona, it would appear that no efficient road leads into the interior, and the reason may be found in the marshes, which, according to the *Morning Post* Budapest correspondent, surround the town on the land side. As for the Via Egnatia, the great historical trade route between the Danube and the Adriatic, it is little better than a bridle-path. From which it would seem that the easiest route to be turned into a motor-road for military purposes would be the Santi Quaranta-Monastir road. At the same time it must not be forgotten that the enemy doubtless are quite as well aware of this fact as we are.

***

We publish elsewhere two messages from our Bucharest correspondent on the recent British purchase of wheat in Roumania. The details of the contract will be found interesting. Incidentally, reference can be made here to a message published by *The Times* from its correspondent in the Balkan Peninsula, now in Bucharest, on Friday last. He said: "I understand that an arrangement has practically been concluded with an Austro-German syndicate for the sale of 1,000,000 tons of maize, 350,000 tons of wheat, 150,000 tons of barley, and 100,000 tons of oats. The price of the wheat is the same as that fixed at the recent sale to the British Government. The whole amount of Roumanian cereals available for exportation has now been disposed of."

***

The message has not been confirmed. Supposing it to be true (and to represent 160,000 wagons, at the rate of ten tons per wagon) the total reported sales of Roumanian corn since December would be 290,000 wagons, of which 210,000 wagons would have gone to the Central Powers, and 80,000 wagons held by us in the country. It is impossible to estimate the stocks of corn held in Roumania, and even the proportion of the whole stock allowed to be exported has been variously reported, varying from 200,000 to 600,000 wagons. The latter figure, it will be remembered, was given to our Bucharest correspondent on December 20 (published in THE NEAR EAST on January 3) by M. Demetre Greceano, President of the Union of Agricultural Syndicates. Therefore, if these latter figures are accurate, and unless further sales abroad have taken place about which nothing has transpired here, we must conclude that Roumania still holds considerable stocks of grain for export.

***

Several extensions of the Canal-Cairo lines are being carried out for the defence of the Suez Canal in the event of a Turkish attack—says the Cairo correspondent of the *Railway News*. The doubling of the line between Zagazig and Ismailia, which was commenced some time ago, and on which several thousand native labourers have been busily working, is now practically completed, and is already taking light traffic. In addition, several new branches are being constructed in the Canal zone. The line from Zagazig to Saihla (a branch of the Zagazig-Mansura line) is being continued to Kantara, which is on the Canal about half-way between Ismailia and Port Said. In addition, lines are being made from Salhia to Tel-el-Kebir and Ismailia. Thus practically the whole of the Canal zone will be in direct communication, and the transport of troops from any one point to another will be both easy and rapid.

***

The following quotation from the *South Wales Daily News*, anent enemy trading in Egypt, is outspoken:—"The control exercised over enemy traders is of the most perfunctory and ludicrous character, and their presence is giving great offence. It is certainly anomalous that even now, after eighteen months of war, and in spite of the fact that Egypt has become a British Protectorate, there are enemy firms in that country doing business in exactly the same way as in pre-war days. Not only so, but one of their chief customers is the Government itself, which for some mysterious reason ignores both British and Allied firms that could equally well supply its demands. The only possible excuse which the Government could have for dealing with these enemy firms, or for permitting them to exist at all, would be the securing of some distinct material or moral advantage not otherwise obtainable. But according to all accounts no such excuse exists. The importance of putting an end to the anomaly is seen in the facts that Egypt occupies the most important strategic position in the world, and that in no part of the Empire is it therefore more essential that German commerce should be swept away than it is in that country. Ever since the outbreak of hostilities there have been the most convincing proofs that German trade in Egypt is but a part of German policy and strategy. Yet the Government allows these German firms to make profits out of contracts for the provisioning of the British Army. It is obvious then that if this sort of thing continues there will be at least one part of the Empire in which the policy of ousting German trade after the war will not be operative.

Egypt's Trade in 1915.

(From Our Own Correspondent.)

Cairo, January 23.

The Egyptian Customs Administration last evening published its returns for December, which give us the figures for the entire year ending the 31st of that month. Imports during the year amounted to £E19,328,903 and exports to £E27,046,872, as against £E21,724,606 and £E24,091,796 respectively in 1914. There has therefore been a decrease of £E2,395,613 in the former and an increase of £E2,955,076 in the latter, the total volume of trade done being to all intents and purposes the same—1915 is in fact a little over 1 per cent. to the good.

It is customary to compare one year's figures with those of the twelvemonth just preceding. I do not, however, propose to do this with those under review for the simple reason that the year 1914 was abnormal, including as it did five months of war conditions, and that a comparison with it will give no proper indication of the progress—or the reverse—that the country may have made. The year 1913 was the last complete normal one preceding the outbreak of war with its abnormal conditions, and in this note I shall confine myself to an analysis of the results of the past year as compared with those of 1913.

The following table shows the position at the end of those years—

	1915.	1913.	Difference in favour of 1915.
Imports	£E.19,328,993	£E.27,865,195	—£E. 8,536,202
Exports	27,046,872	31,662,065	— 4,615,193
Total ..	£E.46,375,865	£E.59,527,260	—£E.13,151,395

From this table it can be seen that there has been a shrinkage of 30 per cent. in imports and one of 14 per cent. in exports; in other words, a decline of 22 per cent. in total trade during 1915 as compared with 1913. It is interesting to note that in 1914 the decline in total trade was 23 per cent.—22 per cent. in imports and 24 per cent in exports. Considering that 1915 was a complete year of trading under war conditions and that at the date (July 31), when the present war broke out, the trade of the country was already showing an improvement as compared with the corresponding period of 1913, the deduction that one may, I think, reasonably make, is that Egypt is fast recovering the leeway that she lost in the early days of the war. Certainly it is satisfactory to note that the balance of trade is swinging more and more in favour of the country, £E7,717,879 as compared with £E2,367,190 in 1914, and £E3,796,870 in 1913.

Imports.

Under imports the chief items that showed a diminution—the comparison is, as already stated, with 1913—were: Live stock from £E476,082 to £E26,074—the Sudan is now meeting Egypt's requirements to a great extent; skins and tanned goods from £E385,198 to £E199,321, cereals from £E3,448,203 to £E1,055,172, sugar (imported solely for refinery purposes) from £E379,500 to £E349,948, construction wood from £E1,381,537 to £E27,550, furniture from £E227,566 to £E52,186, building material from £E280,676 to £E115,911, textiles from £E5,763,376 to £E4,740,761, worked iron and steel from £E1,685,660 to £E567,428, machinery from £E1,088,859 to £E89,214, tobacco from £E1,082,386 to £E854,895, artificial indigo from £E68,381 to £E7,878, ready-made clothing from £E870,290 to £E537,961, and tarbrushes from £E33,676 to £E4,646. On the other hand, the following heads showed increases: Frozen meat from £E124,077 to £E639,109, tea from £E67,637 to £E165,834, beer from £E80,956 to £E153,749, coffee from £E377,038 to £E450,089, pepper from £E46,459 to £E74,258, sacks from £E335,318 to £E406,062—all these undoubtedly due to the large military forces maintained in Egypt during the past year and a half, natural indigo from £E19,775 to £E29,947, coal from £E2,011,527 to £E2,373,698, matches from £E82,800 to £E135,322, petroleum from £E572,069 to £E590,990, benzine and liquid fuel from £E117,378 to £E151,587.

En passant it is interesting to note that although the imports of coal have increased by £E262,171, the quantity has fallen off by no less than 714,341 tons. This has been due to the scarcity of bottoms and the high rate of freights ruling, and, as a result, the local retail price has risen from about 35s. before the war to 120s. per ton to-day.

IMPORTS.

Country.	1913.	1915.	Difference in favour of 1915.
Great Britain	8,436,483	8,738,598	+ 302,115
British Possessions	1,985,477	2,187,862	+ 202,385
United States	525,160	1,248,859	+ 723,699
Brazil	265,872	385,126	+ 119,254
Belgium	1,177,998	24,936	— 1,153,062
Spain	63,384	99,813	+ 36,429
France	2,513,108	983,500	— 1,529,608
Greece	528,195	1,114,046	+ 585,851
Holland	141,895	150,510	+ 8,615
Italy	1,473,033	1,614,210	+ 141,177
Morocco	17,539	10,125	— 7,414
Japan	70,704	124,740	+ 54,036
Roumania	1,091,507	3,833	— 1,087,674
Russia	890,866	41,368	— 849,498
Sweden	350,994	159,102	— 191,892
Switzerland	149,852	218,323	+ 68,471
Persia	48,144	27,858	— 20,286
Norway	22,110	38,598	+ 16,488
Germany	1,608,881	28,893	— 1,579,988
Austria	1,940,512	7,686	— 1,932,826
Turkey	2,723,898	171,031	— 2,552,867

Exports.

Turning to the exports we find, as might be expected, that the decline is entirely due to cotton, for the value of the textile exported has fallen by £E6,367,465, whilst that of cottonseed has decreased by £E942,126. It is to be noted that the quantity has in each case been less than that exported in 1913—73,564 cantars less of cotton and 573,933 ardebs less of seed. The only commodities connected with the cotton industry that have improved are the two by-products, cotton-cake and cotton seed oil, which have increased by £E200,303 and £E39,476 respectively.

The situation created by the low prices ruling in the cotton market early in the year and by the restriction of the cotton area in 1915 would have been exceedingly serious for the country had its other products not come to the rescue. Thus eggs increased by £E233,974 to £E485,931, cereals by £E1,059,285 to £E1,388,315, onions by £E73,293 to £E348,783, sugar by £E494,547 to £E573,615, wool by £E118,534 to £E255,273, and skins and tanned goods by £E66,726 to £E303,848. Natural phosphates fell by £E32,328, cotton tissues by £E24,021, and henna by £E12,437, whilst benzine and liquid fuel rose from nothing to £E79,284, and gold and silver bar by £E564,276 to £E715,495. The cigarette trade decreased by 37 per cent., £E145,037 less in value, and 182 tons less in weight.

To all intents and purposes, as the above figures clearly indicate, Egypt has made herself felt on the world's markets for sugar and cereals. In the case of the first-named product she has been able to compete because she has now an annually increasing area under cane, and the shutting off of the German beef supply has eliminated a very serious competitor. As regards cereals she was able to dispose of a large quantity just at the time when the world's supply was short. Whilst it is, perhaps, too much to expect in the future a repetition of these favourable conditions, insofar as foreign supplies on the world's markets are concerned; nevertheless, there is no reason why Egypt should not continue to compete within certain limits in those markets.

So much for a detailed analysis of the trade of the country during the past year. It may now be of interest to study the share taken by the various countries in that trade as compared with that before the war. The following table will assist in this study:—

EXPORTS.

Country.	1913.	1915.	Difference in favour of 1915.
Great Britain	13,648,479	13,935,625	+ 287,146
British Possessions	122,455	537,509	+ 415,054
United States	2,484,905	4,961,531	+ 2,476,626
Brazil	—	145	+ 145
Belgium	115,979	117	— 115,862
Spain	586,358	509,894	— 76,464
France	2,787,243	1,506,055	— 1,281,188
Greece	53,758	337,343	+ 283,585
Holland	125,523	31,464	— 94,059
Italy	1,012,594	1,788,013	+ 775,419
Morocco	559	209,679	+ 209,120
Japan	719,201	525,202	— 193,999
Roumania	18,302	3,717	— 14,585
Russia	2,241,701	1,078,386	— 1,163,315
Sweden	13,073	14,190	+ 1,117
Switzerland	1,012,217	1,247,170	+ 234,953
Persia	11,248	20,071	+ 8,823
Norway	12,464	12,238	— 226
Germany	4,066,287	—	— 4,066,287
Austria	1,756,993	—	— 1,756,993
Turkey	664,214	50,413	— 613,801

From this table we find, as was to be expected, that the trade of the Central Empires has dwindled down to nil, for the amounts which appear against their names as having entered the country in reality represent goods that have lain in bond ever since the outbreak of war and that have been cleared during the year, whilst the amount recorded as having been sent to Turkey went, as a matter of fact, to the Holy Places. Trade with Roumania has, of course, stopped, and that with Russia and France has, for obvious reasons, decreased considerably. The small amount done with Belgium represents goods in bond since that country fell into the hands of the Boches. The rise in imports from Brazil is due to large purchases of coffee, and that in exports to Morocco and Persia to increased sales of sugar. Greece, it is to be noted, has doubled her sales to this country; of the increase £E208,235 represents tobacco. he has, on the other hand, taken six times the usual quantity of goods from this country; for the most part these consist of livestock and cereals. Italy has managed to improve her commercial relations with Egypt, despite the fact that she is at war, the increase in her shipments being in stationery, cotton tissues, and stone and glassware. She has also purchased 75 per cent. more from Egypt, cereals and cotton bulking largely in the total. The United States have done uncommonly well out of the commercial crisis, for they have not only increased sales by 136 per cent., but they have also doubled their purchases. The chief imports from the States were petroleum, entirely replacing the Roumanian supply, cut off by the closing of the Dardanelles, coal, benzine, and flour, whilst cotton represented 97 per cent. of the exports across the Atlantic.

Of the suspect countries, Holland has reduced her purchases from Egypt by 75 per cent., and her sales have increased slightly; Sweden has reduced her sales by over 50 per cent., and her purchases are negligible; Norway, on the other hand, has increased her exports to Egypt by 80 per cent. Spain, who was suspected of acting as a transit house for Germany in the matter of cotton, has also reduced her purchases. With regard to Switzerland—the other highly suspected channel—it is to be noted that at the end of 1914 her purchases from this country had increased by £E192,950 by comparison with 1913, and that during 1915 a further increase of £E42,000 had been recorded, making a total increase of nearly 25 per cent.

And, finally, we come to the share taken by Great Britain and her Possessions. In every respect the year has been satisfactory for the relations between the Empire and its latest entrant. Whereas at the end of 1914 its sales to and purchases from Egypt showed a marked falling off by comparison with 1913, during 1915 they recovered all the leeway lost—so much so that they are very much to the good even when compared with a normal year like the one in question. The principal categories in which the Empire increased its trade with this country were under imports—frozen meat, cereals, tea, Beeré coal, natural indigo, drugs, sacks, and, under exports, eggs, cotton seed, cereals, sugar, and gold and silver bar. What is, however, most satisfactory is that the Empire is now entering more into its own, for its share of the foreign trade of Egypt has under imports risen from 37 per cent. to 56 per cent., and under exports from 45 per cent. to 53 per cent.

Communications in the Balkans.

On Monday Mr. H. Charles Woods lectured on the above subject at the Royal Geographical Society. The following is a cursory summary of the lecture. The speaker's object, he said, was "to examine a few of the geographical and semi-geographical problems which have influenced and do influence the situation is the Balkan Peninsula, and in particular to enumerate some of the more important lines of communication which of necessity govern the operations in that area." The first of these lines of communication is the Danube.

The Danube.

It may be interesting to remember that at Belgrade the Danube is nearly one mile wide, and that with certain exceptions its general width between Vienna and the Iron Gates is from 650 to 2,000 yards at low river. From the Iron Gates, where the channel is only about 80 yards broad, the river widens out, and throughout its course to Braila its average breadth, when the water is low, is about half a mile On the Upper Danube, that is on the part above the Iron Gates, traffic is maintained by barges and by special river steamers drawing, I believe, up to 5 or 6 feet of water. So far as one is able to ascertain such vessels can now navigate the stretch between Vienna and Turnu Severin at practically all times except when the river is stopped by the presence of ice. Below Turnu Severin and between there and Braila there are about 12 feet of water, and small sea-going vessels can therefore pass up and down. Between Braila and the Black Sea, by way of the Sulina branch, there is a minimum depth of about 18 feet of water. This last-named section of the river is under the control of the Danubian Commission.

The above details are sufficient to prove the enormous importance of the Danube, not only as a thoroughfare for traffic, but also as an obstable to through communication between the north and south. No bridges span the river between Petervarad—a Hungarian town situated about 40 miles to the northwest of Belgrade—and Cernavoda in Roumania, that is for a distance of nearly 600 miles. This means that the greater part of Roumania is separated from the Balkan States by a natural barrier, the width of which is in many places much greater than that of either the Bosphorus or the Dardanelles. Thus whilst eight more or less independent Roumanian railways run down to the northern bank of the Danube at seven different places, and whilst six Bulgarian lines approach its southern bank near five different towns, connection between these Roumanian and Bulgarian termini, which are for the most part situated almost opposite to one another, is maintained solely by ferry boats which do not carry trains. Indeed, the only route by which the railway systems of the two countries are actually connected is by way of a new line through the Dobruja.

Cernavoda is on the main line from Bucharest to Constantza. Here a great viaduct, or more correctly, a series of viaducts, cross the river and the lower ground and marshes which border upon it. In addition to the supplementary sections, which have a length of nearly two miles, the bridge over the river alone is not only more than 800 yards long, but the roadway is 100 feet above the level of the water. Built by Roumanian engineers at a cost of about £1,400,000, and opened in September, 1895, it constitutes a possession of which the Roumanians may be justly proud. Indeed, its existence, as also that of the port of Constantza, which is now one of the most important on the Black Sea, are the fundamental causes for which the Roumanians desired to secure a properly defensible frontier on the south of the Dobruja, and therefore one of the most important reasons for which they insisted upon the acquisition of the areas which they obtained during and as a result of the two Balkan wars.

The international status of the Danube depends upon various treaties and arrangements which date as far as 1814 and 1815. This brings us to a point at which it is necessary to consider under more or less separate headings the work which has been and still is carried out by the Danubian Commission, and the larger political position of the Danube. This international Commission was created with the special object of executing the works necessary to put the lower part of the river and its mouths into the best possible state for navigation. The Commission is possessed of extra-territorial powers, and it is not in any way under the control of the Roumanian Government. It has the right to levy tolls, to carry out public works, and to institute regulations for the navigation on the part of the river which it controls. By the Treaty of Berlin it was determined that all the fortifications on the river between its mouth and the Iron Gates should be razed and that no new ones should be created. At the same time it was settled that no vessel of war, with the exception of those light ones in the service of the river police and of the "Stationnaires" of the Powers, which were to be allowed to ascend as far as Galati, should navigate this stretch of the river. These regulations, and especially those connected with the presence of war vessels, have not been carried out to their letter, for Roumania certainly possesses river monitors which can hardly be necessary for police work.

International Railways.

By far the most important railway in the Balkan Peninsula is that which connects Belgrade with Constantinople. It constitutes the Balkan section of the great trunk route from West to East. Of its total length of 659 miles, 212 miles are in Serbia, 271 miles are in Bulgaria, and the remaining 176 miles are still in the Ottoman Empire. The line, which has no kilometric guarantee, was built during the period between 1869 and 1888, when it was opened to through traffic. . . . . There remains one other railway of very considerable importance. It leaves the main Belgrade-Constantinople route at Kuleli Burgas—a junction situated on the right bank of the river Maritza, and lying at a distance of about eighteen miles to the south of Adrianople. This line forms the connecting link between the Constantinople-Adrianople Railway and Salonika. The first section—that part between Kuleli Burgas and Dedeagatch, which runs down the valley of the Maritza—was originally constructed and worked with and by the Oriental railways. Its length is approximately sixty miles. The second section, that is the part between Dedeagatch and Salonika, was built and exploited up to the time of the Balkan wars by a French company. With a very large kilometric guarantee—the highest guarantee ever given for a railway built on this system—this line, including two short branches, has a length of about 265 miles. Of these some ninety miles are now in Bulgaria, and the remainder is in Greece. The main line from Dedeagatch to Salonika runs practically parallel to, and at an average distance of, some fifteen miles from the Ægean coast, and it traverses the plain which lies between that coast and the Rhodope Balkans. Passing Gumuljina in Bulgaria and Drama, Seres and Demirhisar in Greece, it approaches within a distance of about twenty miles of Kavalla, but it touches the sea-coast only at Dedeagatch and near Porto Lagos. As the geographical position of this railway may soon become one of extreme importance it is advisable to remember that a loop or branch line connects the Maritza Valley Railway with the line to Salonika without passing through Dedeagatch, and that big ships cannot enter the arm of the sea which lies to the north of Porto Lagos. The loop at Dedeagatch has its strategical significance, for instead of absolutely approaching the coast, it follows a route which lies behind the hills and at a distance of nearly nine miles from the shore.

National Railways.

For some years, and particularly since the annexation of Bosnia and Herzegovina, in 1908, the Serbian Government has been devoting large sums of money to railway construction. All the railways in Serbia, except two, really constitute branches of or feeders to the main trunk line from Belgrade to Constantinople. One is a line which leaves the eastern highway at Mladanovatz and goes to Valjevo—a distance of nearly sixty miles. This line has an important branch which connects it with Obrenovatz and Zabrej on the southern bank of the Save, and opens up a district of Serbia hitherto not accessible by railway. Although of the narrow gauge these lines have been and are of very considerable importance, because they jut out towards and form a means of communication with Austro-Hungarian territory.

Important is the normal-gauge line which actually does, or soon will, connect Prahovo on the Danube with Nish. This line, which is certainly open as far as Zaichar, and, I think, as far as Kniajevatz, if not by now to Nish, was constructed with the object of forming part of the Serbian section of the Great Danube-Adriatic Railway. Following the valley of the river Timok, which for a large part of its course forms the Serbo-Bulgarian frontier, this line, which is now open for an approximate length of about 55 miles, was very easy of attack by the Bulgarians. The second line, running in an easterly direction from the trunk route, is that which connects Parachin with Zaichar. Of the narrow gauge its length is approximately eighty miles.

Turning to Bulgaria, we have the Balkan country in which by far the greatest amount of attention has been paid to the construction of railways and roads. Whilst some of them are so important that they can hardly be considered as branches of the main line, it is convenient for the present purposes to consider the railways of Bulgaria as feeders of the great trunk route from Belgrade to Constantinople. A line runs from Sofia up the gorge-like valley of the Isker and then across the plains of Northern Bulgaria to Varna on the Black Sea. This line, which has a length of 336 miles, was only opened to through traffic in the year 1899. In its turn it has what may be called five distinct branches which approach the Danube at five different places, opposite to most of which there are Roumanian railway towns from which connection is made with the interior of that country. (1) The line from Miezdra to Vidin, on the Danube, and opposite to Calafat in Roumania (2) A line from near Plevna to Somovit, with a length of approximately twenty-two miles, approaches the right or southern bank of the Danube at a point situated about halfway between the Roumanian railway towns of Corabia and Turnu Magurele. (3) A line from near Levski to Sistov, with a length of about thirty miles, approaches the Danube at a point situated immediately opposite to Zimnicea on the Roumanian railway system. (4) A line from Gorna-Orjahovica to Ruschuk, which has a length of seventy-two miles, is the railway by which traffic usually passes between Sofia and Bucharest, for a through connection is made by means of a ferry service. (5) A line from Kaspichan to Ruschuk. With a length of about ninety miles this railway provides a means of communication between Varna and Bucharest.

Although far too important really to be classed as a branch, it is convenient here to study the details of the only railway (except the trunk line passing through Belgrade) by which through communication exists between the Balkan Peninsula and the remainder of Europe. I refer to the Bulgarian and Roumanian lines which now meet at Oborishte on the now common Dobruja frontier of these two countries. Part of this railway, namely, the section from Devnja (on or near the Varna line) to Dobrich was planned and under construction as a Bulgarian line before the Balkan wars. After those wars and only during the last few months, the Roumanians completed their section and prolonged it to Medgidia, on the railway between Cernavoda and Constantza. With a total length of ninety miles, about seventy of which are in Roumania, this line is now highly important, not only from a commercial, but also from a strategic point of view. Indeed, whilst it enables passengers and goods to be conveyed from Bucharest to Sofia, or *vice versâ*, without the necessity for any transhipment on the banks of the Danube, it also greatly facilitates a Roumanian and a Bulgarian military concentration just within the frontier of these countries.

The Sofia-Varna line is connected with the Phillippopolis-Burgas railway, by one which

Digitized by Google

traverses the Balkan Range. This line, which is obviously of the greatest importance, was only opened quite recently. With a length of just over sixty miles it connects Gorna-Orjahovica in Northern Bulgaria with Stara Zagora in Eastern Rumelia. The use of this line enables merchandise or troops to be rapidly conveyed by railway from Northern to Southern Bulgaria, or *vice versâ*, without being compelled, as formerly, to pass through Sofia. As a matter of fact it played a considerable *rôle* even before the entry of Bulgaria into the war, for it was by it that munitions destined for Turkey were for the most part forwarded from the Danube to the Ottoman frontier.

For many years there have been two more or less rival schemes for uniting the Danube with the Adriatic. First a Great Slav railway, to run through Serbia and either Montenegro or Albania; and, second, a line through Bulgaria and thence through Serbia and Albania to the sea coast. In view of the present political and military situations, it is impossible to discuss the considerations which may influence the ultimate construction of one or both of these lines. Sufficient, therefore, be it to say that the Serbian scheme is by no means a new one. It would provide connection with Roumania by a bridge across the Danube somewhere near Negotin, and it would run, via Nish and Mitrovitza, probably to San Giovanni di Medua or to Antivari. The Bulgarian scheme for railway construction has always been to establish through communication from Roumania to Salonika or to the Adriatic by way of Sofia. The construction of a bridge across the Danube has been proposed at Vidin, Sistovo, or Ruschuk. The missing links are therefore the section from Gyueshevo to Kumanovo, and from Uskub or Monastir to the Adriatic.

Roads.

In approaching a discussion of the communications between the lower part of the Adriatic coast—and the lower part is the only one which seems to concern the Allies at the present time—it will be convenient to classify the existing routes into sections devoted respectively to descriptions of the roads running through Montenegro alone, through Albania and Montenegro, and through Albania alone.

To advance through Montenegro alone would mean the use of the port of Antivari and of the Antivari-Virbazar railway—a short stretch of narrow-gauge line which, with the port of Antivari, was constructed by an Italian company. In Montenegro an excellent road connects the Austrian port of Cattaro—on the Bocche di Cattaro—with Cettinje, Podgoritsa, and Nikshich. As branches of this main route, there are roads from Riyeka to Virbazar and thence to Antivari, and from Podgoritza to Plavnitza, a port on Lake Scutari. As things stand at present a road actually exists from Podgoritza to Andrijevitza. It is finished and fit for motor traffic, but in the month of December last some of the bridges and part of the roadway had been washed away by the heavy rains. From Andrijevitza to Ipek, the road which passes over the mountains is not completed, and a great deal of engineering work will have to be carried out before it is passable to wheeled traffic. From Ipek to Rudnik on the frontier there is a good road, but no work has been done upon the Serbian side. The most direct and easy route to be followed by a possible future railway is that by way of Andrijevitza, Berane, and thence to Novipazar and up the valley of the river Ibar to the railway town of Kralyevo in Serbia. Further to the north there is a Serbian road from Ujitze—a railway terminus—by way of Priboy to Plevlje on the Montenegrin frontier. This route is passable for wheeled traffic and even for strong motors. Some work has been carried out between Pleylje and Nikshich, but the road could not be completed in less than about two years.

In order to use routes for passing through Albania and Montenegro one would land at San Giovanni di Medua, and go from there to Scutari by road, or else go up the river Bojana to the capital of Northern Albania. The port of San Giovanni di Medua consists of a few houses located on the northern side of a small bay. That bay is more or less sheltered, but no facilities exist for the disembarkation or embarkation of men or war material. The road to Scutari, which was passable for wheeled traffic some two years ago, was considerably improved during the summer of the year 1914, when the new bridge over the river Drinitza and near Scutari was opened, and the road was then fit for at least a limited amount of motor traffic. To use the Bojana, men and goods would have to be transhipped to small steamers at San Giovanni di Medua or at the mouth of the river. As already stated, they would have to be again transhipped at Oboti. From Scutari Lake boats would be used as far as Virpazar, Riyeka, or Plavnitza in Montenegro.

Albanian Roads.

Through Albania alone there are three possible general lines of communication between the coast and the interior. The first follows the above-mentioned route to Scutari, and from there, after running up the Drin Valley for some miles, crosses the mountains to Prizren. This route, which continues to Ferisovich on the Uskub-Mitrovitza railway, was used by the Serbian Government and by the French Aeroplane Mission for their recent journey to Scutari. Its surface has been somewhat improved, and, therefore, though it is still impassable for wheeled traffic, it can be utilised for mule traffic, I believe, at all times except when there has been a heavy fall of snow.

The second route runs into the interior from Durazzo. This city is located on the northern shore of a commodious bay in which it is almost always safe for ships to lie. Landings are effected in rowing or sailing boats, which can generally make the trip from ships to the small jetty even in bad weather. The city is almost entirely surrounded by rocks and by the sea, except on the side where the promontory on which it is built is joined to the mainland. The road from Durazzo into the interior follows the line of the celebrated Via Egnatia for about 125 miles, reaching the head of the Salonika-Monastir railway at the last-named place. Of these 125 miles not more than the section from Monastir to Struga—that is about 45 miles—is passable for wheeled traffic. The remainder of the road consists of nothing better than an extremely bad and ill-kept path, and unless improved it could not be utilised by a European force made up of all arms and accompanied by the big guns and by the transport required in modern warfare.

The third and most southerly route through

Albania is by far the best road in that country. Throughout its length it is passable for wheeled traffic, and it must now have been greatly improved by the Greeks who are in occupation of the greater part or all of it as a result of their re-entry into Southern Albania after the outbreak of the war. It is now certainly fit for motor traffic, and I believe that a Greek postal motor-service has been inaugurated by it since the Balkan wars. The road, which starts from Santi Quaranta—a port situated almost immediately opposite to the northern end of the Island of Corfu—connects that place with Korche and with Monastir. The total distance from Santi Quaranta by way of Delvino, Leskovik, and Korche to Monastir is roughly 115 miles, and an alternative route from Korche approaches the Monastir-Salonika railway at Florina.

Bulgarian Roads.

Regarding the routes leading into the heart of Bulgaria from the south and south-west, it may be said that there are three principal lines, none of which is followed by a railway, and all of which are practicable for wheeled traffic. The first or most easterly of these routes is that which connects Gumuljina on the Dedeagach line with Haskovo in Old Bulgaria. The greater part of the road, which now lies wholly in Bulgaria, was constructed by the Turks for military purposes during the closing years of the reign of Abdul Hamid. After the Balkan wars it was greatly improved by the Bulgarians, who foresaw its enormous importance as a means of communication with the coast should they not have secured possession of the whole of the railway between Adrianople and Dedeagach. Always well engineered and laid out, this road is certainly now practicable for motor traffic, for before the entry of Bulgaria into the war it was easy to make the whole journey in a day.

After running across the narrow plain which separates the Rhodopes from the sea, the road soon begins to wind its way into the heart of the mountains. At the entrance to the Segudlu Valley a road branches off to the east and thus provides a means of communication with Demotika and Adrianople. Following the banks of the Seugudlu River, which runs in a northerly direction across the Mastanli Plain, the main road subsequently enters the Arda Valley at a point situated a few miles to the east of Kirjali. From that town the road ascends the northern branch of the Eastern Rhodopes, and after a journey of roughly sixty-five miles the traveller finds himself in the town of Haskovo, and eight miles further to the north he reaches the station of Haskovo on the main trunk line from Sofia to Adrianople.

If we ignore the road which leads into but not right across the Rhodopes from Drama, and which runs up the Mesta Valley, the next route by which it is possible to advance right into the interior is that which takes the valley of the Struma, and therefore hugs the banks of the river that name. This line constitutes the natural outlet for Bulgaria towards the Ægean, and particularly by way of the port of Kavalla. It is for this reason that the Government of Sofia was particularly anxious to obtain possession of that port, and to secure a frontier which gave to Bulgaria the whole Struma Valley.

A good and thoroughly passable Struma Valley road, about 110 miles in length, connects Demirhisar on the Salonika-Dedeagach railway with Radomir—a town on the Bulgarian line from Sofia to Kustendil. About fifteen miles of this road are in Greek, whilst the remainder are in Bulgarian territory. Branching at Dupnitza another road runs to Sofia by way of Samakov. During the period which intervened between the two Balkan wars this route was followed by postal motor diligences, and in peace time it is the one chosen by those possessed of motor-cars who desire to travel rapidly from Salonika to Sofia without the inconvenience of a long railway journey by way of Nish.

As the means of communication between the valleys of the Vardar and of the Struma are bad, the only other route into Bulgaria which is worthy of consideration here is that which connects Kumanovo on the Uskub-Nish railway with Gyuveshevo, the Bulgarian frontier terminus. The road, about forty-six miles in length, is certainly passable for wheeled traffic, and it is probable that ere now it has been rendered practicable for motors.

Engineering Notes.

Water-hammer.

"Water-hammer" is the name applied to that sudden sharp knock, as from a hammer, which is heard inside a water-pipe when a tap, connected to it, is suddenly turned off. The danger attached to this "hammering" is not generally known, and, occurring in a water-main, the effect may be very serious. It may cause the bursting of the main, followed by an explosion, which often tears up and floods the roadway. A proportionately similar effect may be produced in other water-pipes. With reference to this, Mr. W. Ransom has made a communication to the Institution of Municipal and County Engineers pointing out that if a cock is suddenly closed the pressure in the pipe immediately behind the cock may rise to as high as 550 lb. per square inch, the normal pressure in the main being 125 lb., and only 20 lb. at the tap when water is flowing. Furthermore, the pressure in the main is affected, as well as that of the water immediatey behind the tap, this rising to 220 lb. Mr. Ransom maintains, as a general precaution against water-ram, that all valves should be closed slowly, so that the flow of water will not be suddenly impeded; and that relief valves should be provided, which, upon any sudden increase of pressure, will permit the escape of a small quantity of water to relieve the pipes from concussion. It would be expedient if Mr. Ransom's suggestions were studied by municipal engineers in the Near East, where, as a rule, inferior water-pipes of Continental origin are used, and bursting of mains is not an unusual occurrence.

Flexible Multiple Ploughs.

The very restricted use of double or treble furrow horse-drawn ploughs in the East is generally attributed to the inefficiency of the native draught animals, which are small and weaker than those employed in the West. But the same restriction is observed even in districts where powerful buffaloes and strong mules or horses are available; moreover, while the economic advantages and labour-saving qualities of the double or treble furrow ploughs are recognised and fully appreciated by the average Oriental farmer, the single-furrow plough is still his favourite implement; and on being asked why, if he recognises the good qualities of the former, he does not make more use of it, his invariable answer is that "it is somewhat difficult to handle." The same difficulty is evidently experienced by farmers in this country, where, like in the East, the multiple ploughs are apparently not very popular. The reason given recently by an agriculturist is very practical and convincing. He attributes their unpopularity to their rigidity. The great fault of the rigid-frame, rigid-breast multiple ploughs as made is, he asserts, that they cannot adapt themselves to the inequalities of the surface of the soil, and it is pointed out that when setting-in a plough at the ends of a field on hard ground the share point will often skid yards before it enters. It does not enter until it strikes a softer patch, which allows it to be drawn in; and then once down in softer ground it may be kept there. It is difficult on a hard ground to find two soft places where two shares will enter at once; if one would enter its purchase on the ground would drag the other in, but the hard ground keeps the other out; the one over the soft patch is pulled out by the one on the hard piece. It is merely a matter of getting one in deep enough to drag the other in; but whilst there is rigid resistance at both points there is no chance for the other to enter deeply enough to give a holding purchase. If one is made with play so that it can yield to allow the other to be drawn in, it also, when it reaches to the limit of its give, will be drawn in. The difficulty, therefore, which the Oriental farmer declares he meets in handling a double or treble furrow plough is well explained and better realised when the inequalities of the surface of the soil and the dry condition of the ground upon which he has to work is considered. The above-mentioned agriculturist asserts that there is no reason why rigid plough breasts should be adhered to, and recommends the construction of flexible multiple ploughs; a suggestion which, if taken up by British manufacturers, may find an excellent market in the East.

Repairing the Vardar Railway.

The Times correspondent at Salonika states (February 3) that enemy deserters who arrive at Salonika report that the Germans are still busy repairing the big bridge over the Vardar at Hudovo, near Strumnitza Station, and the tunnel at Demir Kapu which was destroyed by General Sarrail during his retreat They say that this work will take another fortnight, after which railway communication will be re-established.

Storm Damage to Egyptian Railways.

During the early part of January, says the Cairo correspondent of the *Railway News*, very severe storms were experienced in Northern Egypt, and considerable damage was done to the western railways. This was especially the case on the Mariout and Rosetta lines, and on the former there was a wash-out, and considerable damage was done between the Hawaria and Beheg stations. The Rosetta line was damaged near Dahria Station, and though repaired at once was damaged again the following night. Since then the weather has improved, and the lines have been repaired.

The Greek Railway System.

Referring in his recent lecture before the Royal Geographical Society to the linking up of the Greek with the European railway system through New Greece, Mr. H. Charles Wood said:—"For years two more or less rival schemes, each destined to accomplish this object, have been under consideration. The Turkish (pre-war) proposal was for the construction of a line to join Larissa in Greece with Verria on the Salonika-Monastir line. This line would have run parallel to, but well away from, the coast. The Greeks, on the other hand, favoured the provision of a line extending almost along the shore of the Gulf of Salonika from Karate Derven—their terminus—to Gidia on the above-mentioned line. As a matter of fact, in January, 1914, a contract was signed between the Hellenic Government and a French company for the building of a line to follow this, the original Greek route. The length of this new section will be just under fifty-eight miles, and, as there are no serious engineering difficulties, it must now actually be open, or if not it will very shortly be available at least for military traffic."

TRADE NOTES.

Egypt.

The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of equipment, clothing, material, paraffin, milk in tins, etc., necessary for Central Stores for one year from April 1, 1916. Date, March 20.

The Ports and Lights Administration, Alexandria, invite tenders for the supply of petroleum and benzine required for the financial year 1916-1917. Specification may be seen, and all information obtained, at the above office, on any day, Sundays and official holidays excepted, from 9 a.m. to 1 p.m. Date, March 20.

Tenders are invited by the Egyptian Ministry of Public Instruction for the supply to the Government School of Arts and Crafts of (*a*) wood; (*b*) iron, steel, copper and brass piping, bolts, screws, etc.; (*c*) painters' materials; (*d*) hardware; (*e*) building materials; and (*f*) miscellaneous articles; required during the financial year 1916-17. Copies of the conditions of tender, together with lists of the articles required, may be obtained, at the School of Arts and Crafts, Cairo, where also samples may be seen. Sealed tenders on the proper forms will be received, up to noon on February 29, at the Ministry of Public Instruction, Cairo, and must be accompanied by a receipt for a deposit of £2 in respect of each tender.

Tenders will be received at the office of the London agent of the Egyptian Government (Sir A. L. Webb, K.C.M.G.) for the supply and delivery to the Egyptian State Railways and Telegraphs Department, of 20,000 oak sleepers, for normal gauge track; 180,000 pine sleepers, for normal gauge track; and 1,300 pine sleepers for turnouts. The sleepers must be of very good quality wood, and preferably of one of the following species: European and Japanese oak, Montenegrin, Swedish and Norwegian and Baltic red pine, or any other species of oak or pine of equal quality. In default, tenders for sleepers of any other quality of wood coming from Japan, America, India or Australia would be taken into consideration. Further particulars may be obtained on application to the office of Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W.

Tenders are invited by the Ministry of Public Works for the supply of 50 tons of natural asphalt required during the financial year 1916-1917. Samples shall be deposited at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on February 29.

Tenders are invited by the Director, Technical Schools, Cairo, for the supply of raw materials required for 1916-1917, such as wood, hardware, paints, oils, cement, bricks, building stones, sand, quicklime, etc. Date, February 29.

Tenders are invited by the Ministry of Public Works for the supply of 320 tons of "extra hard pitch" required during the financial year 1916-17. Samples shall be submitted at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 1.

Tenders are invited by the Ministry of Public Works for the supply of sundry materials, such as lime, homra, sand and cement tiles, required during the financial year 1916-1917. Samples shall be deposited at the Roads Service Depot, Sharia Abbas, Cairo, before noon, on March 4.

The Secrétaire Général des Domaines de l'Etat (Service Technique), Cairo, invites tenders for the supply of accessories for workshops, etc. Lists, samples, etc., can be seen at the head offices in Cairo. Date, March 1.

Tenders are invited by the Postmaster-General, Alexandria, for the supply of uniforms during one year (1917-18). Persons wishing to tender can see the specification and obtain all other information at the Central Stores, General Post Office, Alexandria, or, in England, at the offices of the Egyptian Government Representative, Sir Arthur Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, London, S.W. Date, March 1.

Sudan.

Tenders will be received at the office of the Director, Steamers Department, Sudan Government, Khartoum Dockyard, Khartoum North, before noon, on February 29, for the supply of timber required by the above Department in 1916.

Persons wishing to tender can obtain full particulars and conditions of the contract by application to the above office, Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, London, S.W., and from the Agent, Sudan Government Railways, Alexandria.

Tenders will be received at the offices of the Assistant Financial Secretary, E. A., Khartoum, and the Governors, Dongola and Berber, up to 12 noon, on March 7, 1916, for the supply of 8,000 straw hats to the War Department, Khartoum North.

Persons wishing to tender for the above can obtain full particulars from either of the above-mentioned offices, any day between 9 a.m. and 1 p.m., except Fridays and general holidays.

Malta.

The Crown Agents for the Colonies notify that sealed tenders (in duplicate) will be received by the Treasury, Valletta, Malta, for the supply of stationery for the Government of Malta. Forms of tender and specifications may be obtained and samples of stationery may be inspected at the office of the Crown Agents for the Colonies (Pattern Room), Whitehall Gardens, London, S.W. Date, March 2.

Cyprus.

Tenders are invited by the Public Works Department and the Royal Engineers at Limassol for the supply of materials, etc., for the year 1916-17, delivered at the Depot, Limassol, as in Lists numbered I., II., and III., obtainable from the Director of Public Works. Tenders may be made for any one, two, or all three lists at the option of the person tendering. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Materials, Limassol," in the left hand top corner of the envelope, and should reach the Office of the Treasurer not later than 11 a.m. on February 18. All details regarding the articles to be supplied can be obtained from the Office of the Divisional Engineer, Limassol.

Tenders are invited by the Public Works Department, Nicosia, for the supply of materials, etc., for the year 1916-17, as per the Lists numbered I. to VII., to be obtained at the P.W.D. Office. Tenders may be made for any or all of the seven lists at the option of the person tendering. All tenders should be sealed, and should be addressed to the President of the Tender Board, the Office of the Treasurer, Nicosia. Tenders should be marked "Tender for Materials, Nicosia," in the left hand top corner of the envelope, and should reach the Office of the Treasurer, not later than 11 a.m. on February 18, 1916.

NEAR EAST MARKETS.

EGYPTIAN DATURA LEAVES.

The Commercial Intelligence Branch of the Egyptian Ministry of Agriculture issues the following:—

A sample of about 2 lb. of dried Datura leaves was sent to the Imperial Institute, London, in order to determine the value of it for medicinal purposes. The Director of the Institute remarks that, in order to obtain a sale for the product, a consignment of at least 2 cwt. in tightly packed bales should be sent. This is now being done, and the result will be published in due course.

The report of the small samples was, however, favourable, and the manufacturing druggists in London, to whom it was submitted, mentioned that they doubted whether leaves could be supplied in such good condition on a commercial scale. The firm mentioned that the present price of Datura leaves was rather high, French supplies selling at 67s. per cwt., and Italian at 57s. 6d. per cwt., whereas the normal price was 30/40 per cwt.

The sample sent was described as consisting of leaves varying in colour from light to brownish green, and measuring from 6 by 3½ inches to 9½ by 7 inches. The leaves were in excellent condition, but a few had been attacked by insects, and some showed signs of mould.

The chemical analysis showed that they contained 28 per cent. total alkaloid, equivalent to 32 per cent. of the dry material. The alkaloid was principally hyoscyamine, and in this respect they agreed with Datura leaves from other sources. The amount of alkaloid was, however, lower, than that recorded from India, Europe, and South Africa. It was stated that Datura leaves might possibly be used as a substitute for those of belladonna, owing to the present scarcity of the latter.

PRODUCE REPORT.

Currants. LONDON, February 10.

The market has been very strong this past week, with good business passing in all available grades at advanced prices; while the possibility of the currants being included in the list of restricted articles led to some speculation. The same activity prevails in the Liverpool market. The stocks of currants in London on January 31 was 7,241 tons against 6,691 tons last year.

Sultanas.

There has been a good demand, with business passing at full prices. The stocks of sultanas in London on January 31 was 2,048 tons against 1,865 tons last year.

Dates.

The demand is good, with business passing in Egyptian at 35s. to 38s., and Persian 15s. to 30s.

Seeds.

Linseed is steady in tone, and prices are well maintained. London-Calcutta, spot and near, 83s., and for shipment 82s. to 82s. 6d. La Plata to Hull, 76s. is asked. Feb.-Mar. and Mar.-April, 75s. 6d. Cotton seed is dull and neglected in the absence of a market for the oil. Egyptian to London £14 10s., same is asked for Bombay to Hull. Rape seed is slow. Toria, Mar., Hull, is quoted 74s.

Oils.

Linseed oil is steady, but inactive at late rates. May-August £45 2s. 6d. is asked, and £44 15s. offered. Cotton oil is dull and in buyers' favour. Crude, spot, pipes £43, soap-making refined £48. Rapeseed is quiet, ordinary brown naked, spot, nominally quoted £52, and English refined barrels £56.

DATES.

SPHINX BRAND.

PRODUCE OF BASRAH.

Selected from the famous Gardens.
Only superior qualities of
Hallawees, Khudrawees, Sayers and Zehdi
are packed.
In cartons of one to four pounds, small boxes, ordinary cases, baskets, tins, and skins.
SPHINX competes with all other brands in quality, packing, and is guaranteed to be clean, sound, fresh, and free from disease.
Sole Proprietor:
BAHJET S. FORAGE, BASRAH.

Roumania's Corn Deals.

Further Details and Impressions.

(From Our Own Correspondent.)

Bucharest, January 11.
(Delayed in transmission.)

Readers of this morning's papers were electrified by the news that England was purchasing Roumania's available stock of grain. It forms the chief topic of conversation, and has produced an excellent impression, which is not to be wondered at, when it is remembered that the existence of nearly all classes in this country depends directly or indirectly upon the quality of the harvest and its sale.

German Pressure.

I have insisted frequently in these columns on the political pressure which Germany, as the sole purchaser of Roumanian agricultural produce, was able to exert. Even after the agriculturists had formed a syndicate with a monopoly for the sale of cereals, thereby curtailing the individual efforts on the part of German agents. The sale of 50,000 truck loads of grain, and the prospect of further sales, naturally influenced public opinion. The wise, but tardy, action of the British Government irrevocably sweeps away the last traces of economic pressure that Germany can bring to bear upon this country.

To insist on the political aspects of the transaction, other than those associated with the exclusion of German economic influence, is unnecessary. The excitement which the rumoured sale produced in German circles, together with the subsequent depression in those circles, have given rise to a touch of malicious satisfaction on the part of the public. The prospect of further sales to Germany created an unpleasant feeling that the Government might be hampered in its foreign policy.

January 18.

The Anglo-Roumanian agreement, whereby Great Britain purchases 80,000 truck loads of Roumanian corn, has been signed on the part of Roumania by three delegates named by the Central Commission for Export, and on the part of Great Britain by Sir George Barclay, British Minister in Bucharest. The rumour has been persistenly spread that the wheat is being bought by a British syndicate, but this has been officially denied in a communication emanating from the British Legation to the effect that the purchase is being made by the British Government.

Details of Purchase.

The wheat, the object of this deal, is part of the 1915 harvest, and represents the bulk of what is left over from the sale to Germany. The contract has not yet been published, but we understand that the following particulars are substantially accurate:—

The price fixed is nominally 3,200 lei (£128) per truck load, with small variations according to quality, the total, therefore, amounting to ten million sterling. Payment has to be made in Roumanian lei, the rate of exchange being in the neighbourhood of 26 lei per £ sterling; export taxes, payable in gold, are to be met by the buyer, and amount to £20 per truckload. The terms of the contract stipulate that the sale is to be concluded within six months, payment being made immediately. The goods are to be stored in the country until such time as the Dardanelles become navigable.

NATIONAL BANK OF ROUMANIA.

Further Loan to Government.

(From Our Own Correspondent.)

Bucharest, January 11.

On the basis of a convention entered into on December 1, between the Ministry of Finance and the National Bank of Roumania, the State has contracted a new loan of £4,000,000 at the rate of 2½ per cent. The loans made by the National Bank to the State amount since the beginning of the war to a total of £16,000,000.

Reuter reports from Amsterdam (February 5) that a telegram from Bucharest announces that on February 4 the Minister of Finance introduced a Bill into Parliament authorising a supplementary military credit of 200,000,000 lei (£8,000,000). He also submitted another Bill sanctioning the military expenditure incurred during the Parliamentary recess. The total war credits up to the present amount to 600,000,000 lei (£24,000,000).

BULGARIAN FINANCES.

(From a Correspondent.)

Bucharest, January 20.

The Sobranje has voted a new credit of 530,000,000 levas, to be apportioned as follows:—450,000,000 levas for war expenses; 35,000,000 levas for construction and upkeep of roads; 15,000,000 levas for railways and rolling-stock; 30,000,000 levas for pensions and allowances.

EGYPTIAN LAND ACTION.

In October, 1914, the Egyptian Government published a Decree restricting the area to be cultivated under cotton during last year. Previous to the Decree, certain cultivators had rented land with the special condition they should be allowed to cultivate cotton on half area.

Messrs. Selim and Amin Massad, of Cairo, who rented land on this stipulation, lately brought an action against their landlords, claiming damages for the profit they had been deprived of owing to the restrictive Decree. The case came before the Cairo Mixed Court, which refused to grant any damages, arguing that the Decree benefited both landlord and tenant.

This decision has now, however, been reversed on appeal. The Appeal Court points out that the rent was adjusted to the amount of cotton expected to be derived from the land and that a lower rent would have been agreed upon had the restrictions then been in force. The Court, therefore, ordered the landlords to indemnify the tenants in respect of their reduced profits.

COMPANY NOTES.

Egyptian and Foreign Trust.

In their report, to be submitted to the forthcoming meeting of shareholders, the directors of the above company state that the year's working has resulted in a net profit of £942 18s., which has been carried to credit of profit and loss account, reducing the debit balance (after making sundry adjustments amounting to £2 18s. 2d.) from £3,977 3s. 3d. to £3,037 3s. 5d. Owing to the continuance of the war, reliable data from which the directors could make a valuation of the company's securities are still lacking, and a valuation therefore has not been made. Major B. A. H. Goldie retires from office as a director, and being eligible, offers himself for re-election. Meeting on February 18 at Dashwood House, E.C.

Alexandria-Ramleh Tramway Company.

Although to meet the increased traffic the company has considerably increased the number of cars on the Ramleh line, while the service has also been augmented, it is probable, says the Cairo correspondent of *Railway News*, that in the near future the company will have to reduce its services considerably owing to the lack of liquid fuel. No liquid fuel can now reach Egypt from Burma or America, as all the tank steamers have been requisitioned by the Admiralty, and the Diesel engines, which generate the electric power for the tramways, are worked by liquid fuel. There are reserve engines at Karmous, a suburb of Alexandria, but these are only sufficient to cope with about half of the present service on the Ramleh line.

The Eastern Bank.

In its annual banking review, the *Financier* devotes the following paragraph to the Eastern Bank:—

"This young and promising institution was founded in 1909, and the first report was issued for 1910, when there was a profit of £4,760, out of which £3,585 was applied to the writing off of the whole of the preliminary expenses and the balance carried forward. The accounts of the bank are made up annually to December 31, and the report submitted in March. Having started on sound lines during the great rubber boom, the company was able in the following year to pay a dividend of 4 per cent. This was increased in 1912 to 5 per cent., and in 1913 to 6 per cent. The profits in 1913 available for distribution totalled £47,150, out of which, after paying a dividend of 6 per cent., the directors placed £15,000 to reserve and carried forward £8,150. The dividend for 1914 was 5 per cent. In June, 1914, 50,000 new shares were created, and the subscribed capital of the company now stands at £1,500,000 (of which £600,000, or £4 per share, is called up), in shares of £10 each. Of the balance £900,000 is reserved liability. The 50,000 shares already referred to were issued at a premium of 15s. per share, and these ranked for 5 per cent. per annum till the end of 1914, since which date all the shares have ranked equally. The reserve stands at £55,000 and the carry-forward is £6,477."

It is reported that Austria has sent 1,500 (?) wagons to Constantinople to facilitate transport on the Berlin-Constantinople line.

NATIONAL BANK OF GREECE.

ESTABLISHED IN 1841.

BULGARO-GERMAN SOCIETY.

(From a Correspondent.)

Bucharest, January 20.

M. Mandelbaum, the Belgian Consul at Berlin, and author of the work "Bulgaria, her Present and Future," has been at Sofia for some time. He is trying to found a Bulgaro-German Society to develop economic and financial relations between the two countries.

On the Bulgarian side, Prince Cyril, with the consent of King Ferdinand, has condescended to become patron of the society.

In Germany the exalted position has been offered to Prince Johann Albert of Mecklenburg.

MONTENEGRIN FINANCES.

Commenting on the financial situation of Montenegro, the *Lokalanzeiger* says it will be difficult to set the country on its legs again. During the war Montenegro concluded an internal loan for 9,000,000 marks., and this debt has swollen to 100,000,000 marks. Since the Austrian offensive and the retreat of the Montenegrin army the financial department has remained without a head. A good many bank notes were issued which were very badly printed, and for this reason they had to be withdrawn. After the flight of the army, however, they were again put into circulation, though they had no more value than waste paper. The *Lokalanzeiger* claims to have received this information from the former Minister of Finance, M. Zergovic, who is now at Cettinje.—Central News.

THE WARDAN COMPANY.

By order of the Mixed Courts, Cairo, in consequence of a judgment in favour of the National Bank of Egypt, a part of the estates of the Wardan Company are to be sold by public auction. The total land to be thus disposed of amounts to 1,398 feddans of agricultural land at the villages of Beni Salama, Ghiza Province, and Khatatbeh, Behera Province. The upset price of all the lots is £E12,070.

The Wardan Company was formed with the object of purchasing, for the purpose of developing and dealing with the same, the Khatatbeh Estate and Wardan Lease, which latter was granted by the Egyptian Government to Mr. John W. Williamson for a period of forty years from January 1, 1903, and which carried with it an option to purchase the lands so leased after certain conditions have been fulfilled at the fixed price of £E5 per feddan. These lands, whose area is exactly 7,528 feddans, 22 kirats, and 12 sahmes, are a sandy tract about 23 kilometres long and of an average width of about 1,800 metres, situated twenty-five miles from Cairo, and running parallel with the railway and the Behera Canal. The land is a coarse desert sand overlying the ordinary black soil of the Nile Valley. The effect of the muddy water of the Nile flood was said to be magical on such land, and a large canal of 43 kilometres was constructed to flood the land with red water during flood time. The planting of 1,000 feddans with trees or fibre plants was obligatory by the terms of the Government lease before the option to purchase could arise.

COMPANY RESULTS, &c.

Anglo-Egyptian.—Production for the past week:—Gemsah, 34 tons; Hurghada, 341 tons, against 460 tons. Hurghada Well No. 7 ceased flowing on February 2.

Bank of Egypt (in Liquidation).—The Senior Official Receiver is about to make a fifth return of £1 per share to the shareholders, making, with the previous payments, a total return of £8 per share. The payment will be made on the 21st inst., and the warrants will be issued on the 19th inst. to all shareholders whose shares are now fully paid.

Egyptian and Foreign Trust.—The twelfth ordinary general meeting of shareholders will be held at Dashwood House, E.C., on February 18, at 2 p.m.

Roumanian Consolidated Oilfields.—Production for week ending January 29, 690 tons.

NEWS FROM ALL SOURCES.

Mr. E. W. P. Foster, C.M.G., and Mr. A. Harter have accepted seats on the board of the Egyptian Agricultural Company.

The Secrétaire Général des Domaines de l'Etat, Cairo, invites tenders for the supply of 6,000 kilogrammes of axle grease. Date, February 16.

Messrs. John Day and Co. were recently the successful tenderers to the Egyptian State Railways for the supply of sacks.

With reference to a previous notice to a call for tenders for the construction of a lighthouse at Cape Tres Forcas, H.M. Agent and Consul-General at Tangier (Mr. H. E. White, C.M.G.) reports that as no tenders have been submitted the work will be carried out by private contract.

The Central News reports from Cairo under Tuesday's date that a proclamation now permits the export of ginned and unginned cotton to Switzerland if consigned to the Société de Surveillance Suisse. Hitherto the Egyptian Government has endeavoured to prevent cotton from reaching Germany under the strict supervision of the Customs and Swiss consignees.

An industry worth cultivating, says *Kelly's Monthly Trade Review*, is the collection and grinding of the musenna bark in Sudan. The director of the Commercial Intelligence Branch of the Government at Khartoum states that upon application by interested persons the Department will endeavour to arrange for supplies of the bark.

It is predicted in Alexandria, says the same journal, that the new crop of onions will be of very inferior quality. It is expected that the crop will amount to about 950,000 bales of 500 lb. each.

According to information from an authoritative source (says Reuter's Athens correspondent), out of three million frs. (£120,000) worth of goods destroyed by the recent Zeppelin raid, only 100,000 frs. (£4,000) worth was insured. Several British insurance companies have telegraphed to their agents in Salonika to accept insurances on goods against all war risks. The agents have, as a result, effected insurrances in two days to the amount of over £200,000.

Reuter reported from Athens on Tuesday that the question of the importation of petroleum into Greece had been satisfactorily settled. An agreement was signed on Monday between the British Minister and M. Koffinas, head of the Department of Direct Taxation, in virtue of which vessels carrying petroleum to Greece will be allowed to pass unmolested provided that timely notice is given of each voyage. The agreement also applies to the transport of petroleum from one Greek port to another.

At the monthly meeting of the British Cotton Growing Association, held on the 1st inst., it was stated that reports had been received from the experimental stations in the Sudan up to the middle of December. At all the stations the temperature had been very low during December, and it was not anticipated that the crop will show any increase over last year.

The Asiatic Petroleum Company were recently the successful tenderers to the Coastguards Administration for the supply of petroleum and benzine.

The *Egyptian Gazette* of January 14 states that H.E. the High Commissioner has granted to the Khedivial Mail Steamship and Graving Dock Company, Limited, an extension of the permission to increase the maximum passenger and freight rates specified in the Articles of Agreement by an amount not exceeding 25 per cent., for a further period of three months commencing from January 1, 1916, and ending March 31, 1916.

NOTES OF THE WEEK.

The capture of Erzeroum after a five days' bombardment is a feat of which the Grand Duke Nicholas and his army may well be proud. It comes at a moment when its moral effect cannot be overestimated, for it will hearten the Allies at the opening of a new campaigning season, and it must necessarily cause misgivings to the Turks. The outstanding features of the Russian success are the months of careful preparation under the new Commander-in-Chief in the Caucasus and the rapidity with which the blow was delivered in spite of physical obstacles and the terrible weather conditions. From the enemy's efforts to explain away his failure to withstand the Russian advance in its early stages we may infer that he has been demoralized as much by the wonderful fighting capacity of the Russian soldier in the most adverse circumstances as by the Russian guns.

With the fall of the capital the importance of the Russian operations in Armenia manifestly extends beyond the small front over which their advance has been taking place. The danger of an unbroken spell of success for the Turks from Gallipoli to Persia was not restricted to the possible effects on restless Arab tribes. German agents, knowing the ground and the material they had to work with, were well able to turn the Turkish achievements to good use throughout Persia right up to the frontiers of India, and it was probably on the strength of what they had already accomplished that a more formal expedition into Persia was planned and taken as far as Kermanshah. Our Allies have now spoilt the harmony of this picture by a vigorous thrust from a quarter in which the offensive was least expected. The Russians have little to gain for themselves by advancing from the Caucasus. On the other hand, they can exercise a potent influence on the whole course of operations in the Middle East by threatening the enemy's lines of communications.

It is still early days to predict the tangible results that will follow the capture of Erzeroum by the Russians. The first effect must be to shake the complacency of the Turco-German authorities in Constantinople and to disorganize their present plans. The Turks are as little likely to lend themselves to co-operation in Germany's European schemes, if there is a prospect of their Asiatic Empire becoming disrupted, as the Germans are to spare fresh drafts for Turkey's support at a time when the whole complexion of the Near Eastern campaign may suddenly be changed by the appearance of Roumania in the field on the side of the Entente Powers. The distances to be covered before Russia can link up her successes in Armenia with her own operations in Persia and the British campaign in Mesopotamia are still great, and the best chance of profiting by the favourable turn of events on the Erzeroum front would seem to lie in a vigorous offensive against the Turkish lines of communication in Europe. The fate of Baghdad, the collapse of Turco-German intrigues in Persia, and the dissipation of the "Army of Egypt," if even the nucleus of it remains in being—all these can be more effectually hastened by cutting off the Turks from their German supports than by isolated actions in Asia Minor itself.

A profound sense of relief will have been experienced as a result of the information regarding the situation at Kut given in Parliament on the opening day of the session. For the first time it was announced that General Townshend "has sufficient supplies at his disposal to maintain his force for a considerable period." Mr. Asquith was more communicative than Lord Kitchener. The course of the campaign in Mesopotamia, he admitted, had given rise from time to time to not a little anxiety, but he considered that the situation had "distinctly improved," and that there is every ground for hope "that the two forces may unite, and that anything in the nature of a serious British check may be averted." Not the least satisfactory part of Mr. Asquith's remarks was the statement that General Aylmer's reinforcements "ought to have completely reached him by this time." The weather that has proved such a serious obstacle to operations is said to have cleared, and it should now be possible to discover whether in the period of inaction, which has lasted four weeks, since General Aylmer tried to force the Turkish position at Fehahieh, fresh accessions of strength have enabled the enemy to maintain his superiority in numbers over the British force.

An announcement made by the War Office regarding a reconnaisance despatched from Nasriyah up the Shatt

Digitized by Google

el Hai reports that, failing to find any sign of a Turkish advance in this direction, the detachment on the 7th instant commenced its return to Nasriyah. Thereupon it was closely followed by a force of hostile Arabs, who endeavoured to turn its flanks, and was "also attacked by numbers of other Arabs, hitherto believed friendly, who issued from villages along the route." Our total casualties amounted to 373, while "those of the enemy amounted in killed alone to considerably over 300." A later report, forwarded from Busreh, puts the enemy's losses in killed at 636, so that the free-lances paid dearly for their temerity and their treachery. The Turkish official reports, which, as usual, exhibit a combination of Oriental exaggeration and Teutonic untruthfulness, magnify the affair into an operation of some importance, and contain much "corroborative detail, intended to give artistic verisimilitude to a bald and unconvincing narrative." The British reply to this imaginative effort is a cold, but satisfactory, announcement that "the correct account of the incident is contained in the War Office *communiqué*.

An interesting feature of the incident is that it serves to show that the Arabs of Irak still remain as fickle and utterly unreliable as they have been ever since the days when they intrigued with Zubeir and Talha against Ali. History records how, accepting Ali's leadership after the Battle of the Camel, they deserted him shamelessly at Siffin, and finally assassinated him at Kufa. It records, too, how, having invited Hussein, the son of Ali, to become their ruler, they fell away from him at the first sign of danger, and left him and his little band of devoted friends and followers to be butchered by Yezid's brutal officer, Shamir; and how later, having persuaded yet another descendant of Ali, Zaid, to lead them in revolt against the Omayyad Khalif, they let him and a hundred followers be cut down by the Khalif's troops at the very door of the mosque in which a thousand of them had taken refuge—too fearful to strike a blow for honour and that liberty which they professed to hold so dear. To-day those who know them best tell us that these Arabs of Lower Mesopotamia are still ever ready to fall back before an advancing force, and as ready to close in on one which is—or appears to be—retreating. They have indeed all the vices of the Bedouin, with none of their virtues; and though we may make allowances for the fact that they have long suffered under Turkish misrule of the most exasperating kind, which is calculated to bring out all that is worst in the Arab character, it would appear that henceforth the leaders of our Mesopotamian expeditionary forces would be well advised to be chary of placing too much reliance on their "friendliness."

The vigorous pursuit of the enemy in Persia appears to have forced the bulk of the Turco-German agents and their supporters to concentrate in the neighbourhood of Kermanshah. Here alone is it probable that any determined resistance will be offered to the Russian sweeping movements. Irregular bands are still to be met with in other parts of the country, but they display unwillingness to risk an encounter with the Russians. The capture of Assim Bey, the Turkish Ambasador to Persia, and the Austrian Military Attaché will deprive the insurrectionaries of at least one figurehead and possibly of a useful leader. That these two men, together with two Austrians who had been made prisoners of war by the Russians and had escaped to Persia, should have been discovered by a patrol of Cossacks, points to a break-up of the enemy's organization in the country. The Russian forces are relying largely on mechanical transport, which enabled the Union Government to crush the rebellion in South Africa so rapidly. British co-operation in the good work our Allies are doing in Persia might take the form of increasing their supply of suitable motor vehicles.

Albania is still the centre of such military operations as are taking place at the moment in the Near East. Austrian and Bulgarian forces continue to advance on Durazzo, and an enemy report speaks of an engagement west of Tirana. The Italians, it is alleged, attempted to capture a height in the possession of the Austrians, but their attacks were repulsed. The statement, whether accurate in its details or not, confirms the report in the *Morning Post* from its Budapest correspondent that the Italians had already concentrated "large numbers of troops" in Albania. Tirana is not much more than a score of miles due east of Durazzo, while Elbasan, already in Bulgarian hands, is twice that distance away to the south-east. An attack on the Austrian position at the former town might, therefore, only be intended to check the enemy's advance, and not form part of an Italian offensive in Albania. The time for that will come when the other factors in a combined general movement are ready.

The information that we published last week that an understanding on the subject of Roumania's participation in the war had been reached between the Government and the majority of the Opposition is confirmed in a message, dated February 12, from *The Times'* correspondent at Bucharest. The followers of M. Take Jonescu and M. Filipescu, he states, have agreed to abstain from any action calculated to embarrass the Government. In other words, the Government has been able to satisfy the Interventionists that it is at one with them in support of the Allies' cause, which is also Roumania's cause, and that its delay in participating in the war is due solely to military considerations. For a long time we have urged such an understanding between the chief Roumanian parties, and it may now be welcomed as heralding the approach of the time when Roumania will be in a position to take her legitimate place in the world-struggle. It must not be overlooked, however, that there is a Germanophil party in the country, largely recruited from the landowners, who have formed until recent years the all-powerful oligarchy which has directed Roumanian affairs. M. Marghiloman and M. Carp are indefatigable in their efforts to push German interests, and it is not difficult to imagine the nature of the support they derive from the Central Powers. The Allies have no need to imitate German methods in Roumania, but in their dealings with the Roumanian Government they need to adapt themselves to local conditions, which are in many respects different from those to be met with in a Great Power.

In their dealings with Roumania the Central Powers have had the advantage of established interests in the country. The fact that the commercial centre of Bucharest should derive its name from a German town is only one indication of the economic dependence of the Roumanians on Germany and Austria-Hungary. Germans occupy the premier position in the oil industry, and with Austrians are naturally more frequent visitors to the country than the subjects of the Allied Powers. Roumania's intellectual ties, however, are with France, and French among the upper classes is as favourite, if not as common, a medium of conversation as Roumanian. When the war is over Roumania will have the right to expect, as a reward for her co-operation, that her Allies will take definite steps to rescue her from a too exclusive economic dependence upon the Central Powers.

The proceedings in the Greek Chamber place the seal of public approval on the Government's policy. Greece hugs to herself her neutrality, and gives no thought to the future political reformation of the Balkans. Her position in the Peninsula is her own affair, but her friends, especially the Powers of the Triple Entente, regret to see her reserving for herself contentedly the lowest seat in the Near Eastern Council Chamber. Her attitude, however, ought not to be allowed to influence the details of the settlement which, it is hoped, will finally regulate the Balkan question. That problem has to be treated as a whole, and on lines which offer the best chance of a permanent solution. The present eclipse of Greece, of her own volition, does not affect the principle of that solution, but we fear that it will affect the prestige of Greece among the virile communities of the Near East. The war, however, has yet many months to run, and in spite of the one-sided judgment of a one-party Chamber there are faint signs that a reconsidera-

Digitized by Google

tion of the national policy has not been irrevocably excluded. Cogent reasons, M. Gounaris declared, prevented him from explaining why the army could not yet be demobilized; nor did he hesitate to admit that he had contemplated during his Premiership the possibility of Greece emerging from her neutrality.

The Italian version of the incident in regard to the renewal of the mandate of the Mixed Courts in Egypt places it in a somewhat different light from that in which it appeared in the Egyptian version. The trouble, it is stated, arose through the appointment of a French barrister practising in Cairo to fill one of the places left vacant by the absence of six German and Austrian representatives on the bench. It was understood by Italians that the places would be filled by the subjects of the smaller Powers, and the choice of a Frenchman gave four representatives to France as against three to Italy. In the circumstances an Italian protest was inevitable according to the unwritten law of international diplomacy, which, owing to a physical inability to climb mountains, loves to crow shrilly from the top of molehills. In view of the war and the fact that the Mixed Court system will eventually come up for regulation in keeping with the new status of Egypt, the incident would have seemed unfortunate, if it had been more important. As things are, there should be no difficulty in meeting Italian susceptibilities.

"No change" is becoming the stereotyped form of bulletin on the situation at Salonika. To cover their inaction, the enemy circulate a number of versions of what they intend to do, and reports of great activities preparatory to the promised attack. One point, however, emerges plainly from the general uncertainty: both the Germans and Bulgarians are devoting more attention to Roumania than they did a few weeks ago. The declaration of Rustchuk as a war zone is only one of many indications. The expulsion of the Greek and Roumanian Consuls from Monastir may ostensibly rest on some technical ground—it is stated that their respective Governments had failed to provide them with new *exequaturs*—but it probably reflects a mistrust on the part of the Bulgarians of at least one of the two countries, and a desire to be rid of foreign representatives in Monastir. As for the Allies, they are without doubt adopting the right course in accumulating men and supplies at Salonika. The rumoured movement of a French force across the Vardar has since been reduced to the modest proportions of a cavalry reconnaissance. But in the meantime the enemy's positions are being subjected to bombardment by aircraft, and in this theatre of the war the dread of an attack must be on their side rather than on the Allies'.

The question of Jugoslav aspirations is dealt with on another page. It is one that ought to engage the careful consideration of the Allied Governments. Jugoslavs who have found refuge outside Austria-Hungary fear lest the concessions which it is alleged that the Allies are prepared to make to Italy may give such offence to their compatriots that their enthusiasm for the Allied cause will grow lukewarm. The position in any case is one which the Austro-Hungarian Government will try to exploit. As a sign of the times, it is recorded that, whereas formerly the Slav names of towns, such as Zadar, did not appear on postmarks, and then, since the outbreak of the war, figured as an alternative name, now they have pride of place, and the German or Magyar name is given in brackets. There is much to be said for a frank discussion of the Jugoslav question among the Allied Powers.

CYPRUS NOTES.

(From a Correspondent.)

Cyprus, January 31.

Convalescents at Polemidia Camp.

Our convalescents at the camp near Limassol are well looked after. Captain Williamson, at one time District Medical Officer at Larnaca, is in medical charge, as he was at Troödos, and his services are most valuable. Welcome comforts reach the camp from generous hands in many parts of the island. Its proximity to Limassol adds not a little to the social life of the town community, besides being of benefit to local trade.

Mails and Train Services.

No mails have reached the island for a fortnight (January 31). There is now always the prospect of outgoing mails being delayed in Egypt. The weekly service will probably continue to be irregular under present and newly threatening circumstances.

The railway service has been curtailed. Owing to shortage of coal only one train instead of two runs daily each way between Nicosia and Famagusta. High freights and increasing cost of living continue to be depressing features. A sudden rise in the price of potatoes has been causing some anxiety, but the Government regulations providing for the supply of local dealers should meet the situation. The Khedivial S.S. Company is said to have fixed limits for the quantities of goods that can be shipped weekly at some ports, *e.g.*, as regards oranges and potatoes.

Progress at Limassol.

Limassol maintains its lead as the most go-ahead place in Cyprus. The appearance of the town is being greatly improved by works on the sea front. The latest addition to the town institutions is a newly opened and an excellent poorhouse. It was much needed, and it puts an end to various forms of begging which prevailed. The foundation is largely due to the generosity of a well-known citizen of Limassol, Mr. Stephanos Laniti. Great credit is also due to the Mayor, Mr. Spiros Araousos, who in this, as in all matters, has shown great zeal and energy. He has been one of the ablest members of the Legislative Council, and is a member of the Executive Council. The Bishop of Kition, the Hellenic Consul, and British officials were present at the opening ceremony. This poorhouse may serve as a model for others. It is probable that one will be opened at Larnaca shortly owing again to the liberality of a family—that of Mr. I. Pierides.

The Islanders and the War.

The Greek newspapers, while devoting much space to the war, regard with deep anxiety the outlook for Greece, which is "not mistress in her own house." They discuss the policy and attitude of the King, the spirit of the Greek Army, the bitter prospects of an invasion of Hellenic territory by the hated Bulgarians, or by Turks, the inexpediency of neutrality, and the designs of the Central Powers. Greeks who live outside their mother country have for the most part, if not unanimously, declared their strong disapproval of the country's present and recent policy, and bitterly lament lost opportunities as defined by M. Venizelos.

LIFE IN CONSTANTINOPLE.

In a letter dated January 26, an Englishman formerly resident in Turkey, and now residing at Athens, writes:—Communications with Constantinople are becoming more difficult, travellers now taking about fifteen to twenty days on the journey. It will interest your readers, especially those from Constantinople, to know that the service held at the Crimean Memorial Church on Christmas Day brought a full congregation. The old well-known hymns were sung, the whole congregation joining in; and a correspondent writes, "The service, especially the sermon, did us all good, and afforded us great comfort."

LETTER FROM CAIRO.

(From Our Own Correspondent.)

Cairo, February 1.

The Situation on the Frontiers

All is quiet on the Canal, and on the western frontier the Bedouin have had administered to them the worst defeat they have suffered since they started their hostilities. It is reported that they are returning to their homes fast, and that is quite possible, for they have lost pretty heavily in men and cattle—the possession or the reverse of the latter counts for much with such folk. But although these losses and the failure to secure booty may quite possibly have disheartened them, it would be rash to declare that the trouble in the west, such as it is, is now on the wane. The country in which, or on the border of which, all the fighting has taken place, is by no means desert. It is what might be called "steppe," dry and stony, but with some extensive "pockets" of good soil, in which barley is cultivated during the rainy season (November-March). There is altogether quite a fair amount of vegetation at all times, and the heavy rains that have fallen of late will certainly have assisted this, and will, indeed, have had a good effect on the harvest further to the west. It is quite on the cards that if, as is expected, the harvest is good, the Bedouin will return to the fray, and we may be sure that the Turkish emissaries will do all they can to encourage them. Our military arrangements on the west have all been made in anticipation of the possibility of further aggressive tactics later on on the part of the Tripolitan and other Bedouin.

The Mixed Courts.

Yesterday a decree was promulgated extending, as foreshadowed in my letter of November 16 last, the mandate of the Mixed Tribunals for another year from to-day. The last quinquennial period, it may be remembered, expired on January 31, 1915, and by a decree published on January 26 a further year's extension was granted to this very necessary section of the Egyptian judicial organisation. From the present decree it appears that Italy has not yet signified her assent to the new extension, and, consequently, it is decreed that until that assent is received Italian subjects cannot benefit from the services of the Courts. Since by the extension the mandates of the judges themselves are automatically renewed, it follows that the Italian judges on the Mixed Bench, who are two in number, one in Appeal and one in First Instance, will not be able to sit until their Government comes into line with the other Allied and neutral Powers concerned. No political significance is, however, attached to the non-receipt of the adhesion of Italy to the proposal to extend the mandate of these courts, the necessity of which is admitted by everyone, and it is highly probable that the assent, which has undoubtedly been delayed unintentionally, will very soon be received from Rome.

The Fuel Question.

The great question of the hour is the supply of coal and petroleum. Coal has gone up enormously in price —£8 a ton, as compared with £3 a few months ago, and 30s. before the war—and very little is coming in. The situation is serious, not so much from the point of view of the town-liver as from that of the agricultural population, which depends in a great measure on coal for driving the pumps irrigating the land. It is understood that the main difficulty is the shortage of shipping, and that the authorities are in communication with the Home Government. No time should be lost in coming to a satisfactory agreement, however, as the period is approaching when the great demand will be made in the provinces, and any further delay may unduly put forward the date of arrival of the new stocks destined to relieve the situation. There is no doubt that stocks should never have been allowed to get so low, and that steps should have been taken much earlier to remedy the matter, for the present price is an exceedingly serious thing for the fellah, for whom it has reached an almost prohibitive level.

The question of petroleum is also in an acute stage. Somehow—it is impossible to fix the authorship, though one has one's suspicions—the rumour got about that there was a shortage of petroleum. It spread like wildfire, and at once the oil-carts going their usual rounds were besieged by panic-stricken natives and Levantines, who prevented the better-class districts being served, and then, when the oil-carts were taken off the streets, transferred their attention to the oil stores. The two companies who have the monoply in the local market—the Vacuum Oil Company and the Asiatic Petroleum Company (Worms and Co.)—declared that they had sufficient supplies in hand and on the way to meet the country's requirements, but the panic continued. The maximum price fixed by the tariff was at that time P.T.20¾ per tin of four gallons, tin included. The Vacuum, who sell only American petroleum, adhered to this price; Worms and Co., who sell for the most part Egyptian oil and oil from the East refined at Suez, demanded P.T.16¾ per tin. (In each case P.T.3½ was deducted if the oil was taken without the tin.)

Naturally, there was a greater run on Worms and Co. than on the Vacuum, owing, in spite of the alleged inferiority in quality, to the marked difference in price. Especially was this so when the Vacuum a week ago forced the hand of the Government, and insisted on raising the maximum tariff price to P.T.22¾, and Worms and Co. were so besieged at their depot out at Gamrah that they could not dispose of the consignments which had arrived, while the Vacuum went on delivering oil at the new maximum. The Government was appealed to for protection and support, but the situation got so serious that it was evident that no ordinary measures would suffice. A special meeting took place between the Council of Ministers and the managers of the two oil companies, and it was arranged that the retail sale should be carried out through the caracols (police-stations), to which the companies would deliver oil in bulk, the police guaranteeing protection to the carts, and no one being allowed to purchase more than one tin-full at a time—this to prevent any cornering by merchants.

Police Offices as Oil-stores!

So far so good, but the only effect of the new arrangement has been to transfer the pressure to the caracols, where crowds congregate all day, fighting for permission to purchase oil, and the time of the police officers is taken up in superintending operations. As it is, although no one is allowed to take more than one tin, a very large portion of the consumers has to go without, as an absurdly small quantity is retailed at the caracols every day. The oil is sold at the maximum tariff price without the tin, no distinction being made between that of the Vacuum and that of the Asiatic Petroleum Company. The latter, on inquiry, declare that their stock of *Egyptian* oil is exhausted, and that they have had to stock American oil, which they are now supplying to the caracols. One has, of course, to take their word for this, however surprised one may feel at the sudden disappearance of the stock of Egyptian oil that was available the day the new arrangement as to sales was made with the Government. But one may, I think, reasonably ask what is being done with the oil supply which the Asiatic Petroleum Company regularly receives from Gemsah and Suez. Since we have not heard that the mines and refinery have stopped work, it is to be assumed that supplies are coming and will come from the Red Sea and the East as usual. Is Egyptian and Eastern oil going to be kept out of the local market, and the latter to be left at the mercy of the American variety? If not, is the Asiatic going to be allowed to make an extra profit of P.T.6 per four gallons over and above that which its previous price gave it, and with which it was quite content? These are questions that are exercising the minds of the general public, which is far from satisfied

with the present position, for it must be borne in mind that the worst hardship falls on the lower European classes and the fellaheen. Had all this occurred in the early stages of the war one could have understood it, but we are now in the second year of the war, when a situation like the present one should not have arisen. The whole circumstances of this crisis do not tend to inspire confidence in the future. One has the unpleasant feeling that the oil companies have obtained control of the situation, and that Egypt, an oil-producing and oil-refining country, is, notwithstanding all the past efforts made to avoid this eventuality, after all going to have the local prices for her oil entirely regulated by foreign combines. This deduction may, of course, be wrong, but the events of the next week or so will prove its accuracy or the reverse.

GERMAN PLOTS IN EGYPT.

A correspondent writes:—Some interesting observations from the pen of "Corsair" in THE NEAR EAST of last week relative to one Baron Max von Oppenheim may be supplemented by a few facts concerning that extremely active German propagandist, whose methods out-Teutoned the Teutons for sheer audacity and unscrupulousness. In the month of December, 1905, the Jewish Baron von Oppenheim occupied the post of Councillor at Cairo with Ministerial rank. He had practically sole control of the German Agency from 1905 to late in 1909. Between 1905 and 1908, when Prince Hatzfeldt was appointed German Agent *pro tem.*, the baron corresponded with his Imperial master in Berlin over the indignant heads of his official chiefs. From the Kaiser he certainly received signal marks of favour, culminating in an invitation to a "*lunch intime*" at Potsdam, to which even his then chief, Count Bernstorff, in Berlin, was not invited. The Baron speaks Arabic fluently, but with a bad accent—like so many Germans—and he has always maintained the best possible relations with Egyptian journalists, both respectable and disreputable. Baron Max quitted Cairo in 1909, and in 1910 he passed through Constantinople on an enigmatical journey to the Khabur River and the Urfa region. His pretended object was to exhume the statue of a Hittite goddess on the banks of the Khabur; but according to more trustworthy authorities the real aim of his travels thither was to purchase the support of Arab and Kurdish tribal chiefs of the Khabur region for the Baghdad Railway Company. Just before he left Egypt the Baron made a hurried trip to the Sudan, visiting Port Sudan; in 1908 three Germans—an ex-admiral, a general, and a doctor—also visited that port and stayed there for several days.

But it was only after the Baron Max von Oppenheim had left the Near East that the German intrigues both in Egypt and the Sudan assumed a more vigorous and unrestrained form. Herr Ruecker-Jenisch, another prominent German official, was not in favour of the subterranean methods of his colleagues, and even Count Bernstorff at that time seemed disinclined to countenance the innumerable plots and conspiracies proceeding under the régime of the ex-Khedive Hilmi Pasha. It was left to Prince Hatzfeldt and his Oriental Secretary, Dr. Pruefer—mentioned by the correspondent, Mr. Ignatius Phayre, and quoted by "Corsair"—to inaugurate the systematic anti-British propaganda in Egypt to which, as to similar propaganda in French Africa, much interesting reference is made in the most-recently issued Yellow Book of the French Government.

Prince Hatzfeldt succeeded Count Bernstorff as German Agent in Cairo in 1908; he lost no time in establishing relations with the Egyptian Nationalists of the Extremist fashion, generally known in Egypt as the "Hisb el Watani." The leaders of the Extremists were, as mentioned by Mr. Phayre, Sheikh Shawish and Mohammed Farid, with whom Prince Hatzfeldt kept up the most intimate connection. Both were constantly in and out of the German Agency, and Dr. Pruefer continued to be the moving spirit of the whole affair. Dr. Pruefer left Cairo in 1914, and after disappearing from view for months suddenly reappeared in the pages of the White Paper relating to the rupture of this country with Turkey, and wherein are given particulars of the trial of the German Agent, Lieutenant Mors, and his suddenly arrested activities in the Sudan.

Speaking at a meeting of the Egyptian Exploration Society in the rooms of the Royal Society last Tuesday, Mr. A. M. Blackman said that the ancient Egyptians believed that the personality of man did not perish with the body, but survived, and offerings of food and drink were made to the dead man, who, it was believed, was nourished by the immaterial essence of the things offered. The remarkably preservative effect of the desert sand apparently led to a belief that to attain immortality the body must be preserved. Afterwards statues of wood or stone were made, and it was believed that the soul could reincarnate itself in these as well as in the crumbling mummy. Pictures took the place of the actual offerings, and it was thought that these not perishing were a source of perpetual nourishment; while spells were painted on the walls of the tomb for the dead man to use in his adventurous journeying in the spiritual world. Later still came sun worship and the Osiris legend, which in various forms was common to all the primitive peoples around the Mediterranean. Here for the first time is to be found an ethical idea as to the hereafter, for the soul is weighed, and the result of this test decides its fate. In the course of the various changes which their religion underwent the ancient Egyptians never entirely abandoned an old idea, but always grafted on the new ones. The result was an inextricable jumble.

SUDAN NOTES.

(FROM A CORRESPONDENT.)

The Department of Finance.

Colonel E. E. Bernard, C.M.G., upon whom the Sultan of Egypt has recently conferred the Order of the Nile, Second Class, will shortly have completed sixteen years' service with the Administration of the Sudan. As head of the important Department of Finance, he has rendered invaluable aid in bringing out the finances of the country from a condition of something like chaos into one of order and progressive prosperity. Colonel Bernard Pasha has shown himself a careful and shrewd custodian of the country's resources. The problems confronting a Government greatly dependent upon revenues closely affected by natural causes, and which have to be collected from a people scattered over an enormous area of country like that of the Sudan, are exceptionally difficult to solve, and need the services of a particularly able man to solve them.

Perhaps at no time in the history of this African Protectorate can its economic conditions have occasioned more anxiety to the Administration; indeed, but for the fact that they are in the capable hands of the self-same Financial Secretary who has guided them *ab initio* there might even be reason to take a gloomy view of the prevailing position. But Colonel Bernard has had some strenuous times to face upon other occasions, and he has faced them both boldly and skilfully. There is little reason to anticipate any other than a successful issue of the present situation.

It must always be borne in mind that the Sudan, unlike most countries, is not susceptible to sudden or irregular increases in the form of raised revenues from imposts. The very nature of the people's pursuits prevents any fresh taxation at the present time. Therefore the only resource open to the Government is that of still further curtailing expenditure. That the application of the pruning knife has been both drastic and general is proved by the fact that even official salaries have been laid under tribute, inasmuch as certain legitimate advancements have been temporarily arrested.

Relations with Abyssinia.

The Civil Secretary's Department of the Sudan Government—the Dakhlia—is one of the most heavily worked as well as the most capably handled at the present time. The fact that the head of the department, Colonel O. F. Stack, C.M.G., should have been selected by the Sultan of Egypt for special honour can be readily appreciated. The Civil Secretary is supported by two Assistant Civil Secretaries and one Deputy Assistant, as well as one Commercial Agent at Cairo and another at Gambeila, on the Abyssinian frontier. Of late both Commercial Agents have been performing extra and special duty, the first as temporary British Consul for North-West Abyssinia, and the second as H.B.M. Consul for Western Abyssinia.

Notwithstanding constant attention and the skilful manner in which the Sudan relations with Abyssinia have been and still are being handled, but little improvement can be reported in the unsatisfactory state of affairs on the frontier. Here the burden of the preservation of public security continues to rest almost entirely on the Sudan Government. While the presence of the police and military posts which have been established have done much to restrict the operations in the Sudan of the various hunters and raiding parties from Abyssinia, it has not been found possible to extend the administration to the north and south of the Sobat river; and it is here that the traffic in arms and ammunition continues to prove a serious menace. The one remarkable thing is that, notwithstanding these admittedly bad conditions, trade continues to flourish. Much of the success that has attended the actions of the Sudan Government in maintaining the peace, and even in bringing about a certain amount of improvement, has been due to the services of Mr. C. H. Armbruster, H.B.M. Consul for North-West Abyssinia, and Mr. Walker, Consul for S.W. Abyssinia, located at Gambeila. Special mention may be made of the opening of the branch of the Bank of Abyssinia at that station between March and November,

ATHENS LETTER.

(From Our Own Correspondent.)

Athens, January 28.

Bulgarian Pretensions.

The claims put forward by Bulgaria to Germany regarding compensation for her participation in the campaign against the Franco-British forces at Salonika —which Germany cannot prosecute by herself—give rise to lively feelings of uneasiness here. Moreover, M. Radoslavoff has declared to the journal *Mir:*—"All (the territory) that we have occupied will remain ours. Just as we have occupied Kumanovo by force of arms, so shall we by ourselves solve the question of Salonika." These declarations have naturally increased the uneasiness felt here. The *Patris*, sounding the alarm, reminds the Government of the grave responsibility it will incur if it allows the Bulgarians to enter Salonika. For even if Germany has guaranteed Greece's territorial integrity, it must be asked how she could fulfil her guarantee if, as a result of a defeat, she should be compelled to withdraw from the Balkan peninsula, when, should Bulgaria be treacherous, she would be isolated. Those questions are difficult to answer. Greece, in fact, has only one guarantee regarding Salonika—the presence of the Allied troops, as M. Venizelos has always said.

The Death of M. Theotokis.

The Governmental Press has taken advantage of the feelings of sympathy naturally aroused by the death of M. Theotokis to depreciate to some extent the achievements of M. Venizelos, by exalting the work done by M. Theotokis in organising the army, and by attributing the successes of the two Balkan wars to the supplies of guns and munitions provided by M. Theotokis, without even mentioning the name of M. Venizelos. One Ministerial journal has not scrupled to declare that in the moments of his delirium M. Theotokis railed against those who wish to abandon neutrality and qualified them as traitors to their country!

Position of the Government.

In spite of declarations made by the Government regarding the good understanding existing between its members, it seems that on the death of M. Theotokis, who by his authority imposed some unity upon his colleagues, the dissensions which are known to exist amongst them will certainly break out with fresh intensity. Already there is talk of a difference between M. Gounaris and M. Rallis, who does not wish to accept the candidate proposed by M. Gounaris for the Presidency of the Chamber.

It seems that the Theotokist party, consisting of thirty-six deputies, wishes to maintain its independence and its unity, and is going to elect a leader. The Liberal party is well pleased to see the reconstitution of this party, which maintains all the good constitutional traditions of Trikoupis, hoping that it may replace the new Gounarist party. There is talk of the formation of a new party, composed of three score deputies from the new provinces, but this seems to be premature.

Another Interview with King Constantine.

King Constantine informed the correspondent of the *Novoe Vremya* that, "if his Government should propose the step to him, he would not hesitate to put the country under martial law, for he could not permit Greek papers, abusing the liberty of the Press, to express themselves in a manner wounding to Hellenic sentiment, and to appeal to foreign countries, encouraging them to interfere with the sovereign rights of the country." These declarations have been strongly commented on by the Venizelist journals. The *Hestia*, considering that these expressions were put into the mouth of the King by the Government, retorts that the Liberal Press, which represents the policy that still enjoys the support of the greater part of the nation, has only made appeals on behalf of Greece and of Hellenism, and that the Government ought not to use the King to make declarations which, quite naturally, expose the Crown to criticism and comment.

A Manifesto at Salonika.

According to telegrams received the day before yesterday from Salonika, placards have been posted up in the town, addressed to the King, and signed "Your People and your Army." These placards express the fidelity of the army, its eagerness to bear every fatigue and privation, and its inability to tolerate the invasion of Greek soil by Bulgarian and Turkish soldiers. The Venizelist journals confirm the fact without comment. The Ministerial organs announce that the officers have indignantly repudiated these misleading manœuvres, that the soldiers have torn down the placards, and that an inquiry has been instituted with a view to finding out who is responsible.

M. Theotokis' Policy.

M. Theotokis died at the age of seventy-two, succumbing to a severe attack of pneumonia, which he apparently contracted on the night of the occupation of Corfu by the French, when he had to leave his bed and spend the night in conference with his colleagues.

He directed the affairs of Greece for nearly ten years —1899-1909. Having regard to the difficulties, internal and external, through which the country had to pass after the unhappy war of 1897, it can hardly be said that he was entirely fitted to fill the position to which he was called on the death of M. Trikoupis; though amongst the leading men of the Trikoupis party he was the best choice. His energy and political courage, however, sometimes failed him. Thus, having undertaken the reorganization of the army mapped out by the present King, to whom he confided the supreme command, he was only able to carry out a small part of the programme, because he hesitated to provide the necessary funds by increasing taxation. It was necessary at that time slightly to increase the duty on imported wool, in order to provide the amount required for this army reorganization, but it was M. Rallis who, having succeeded him, actually imposed this increased duty. The delay thus caused in creating an army of from 120,000 to 150,000 men, as planned by Prince Constantine as early as 1905, debarred Greece from welcoming deputies from Crete to the Greek Chamber after the deposition of Abdul Hamid, for she was unable with her small army to defend her frontiers against a Turkish invasion. The situation resulting from these circumstances and from the humiliations to which Greece was exposed at the hands of Turkey, together with the economic troubles caused by growing taxation without benefit to the country, caused the feeling of irritation in the army and amongst the working classes which led up to the revolution of August, 1909.

For the rest, both as regards the external policy and the internal policy of the country, M. Theotokis rendered great services to Greece, pursuing faithfully the programme of reform of his great predecessor; and under other conditions it is certain that, with his great qualities, he would have done much more for his country. But he was faced by a task of great difficulty. Political corruption was at its height; he was called upon to combat it, and to overcome it he ought to have got into close touch with the people and have gained their confidence, as M. Venizelos has done. This popularity was denied to M. Theotokis, as it was to M. Trikoupis, and they both had to adapt themselves to the situation and work in a vicious circle, coming to terms with the deputies in order to maintain their Parliamentary position. M. Venizelos, on the other hand, as soon as he arrived in Greece, got into close touch with the people, and, so to say, entered into an arrangement with them, afterwards fulfilling faithfully the promises he made to them. Thus he made a clean sweep of all those middlemen who exploited both the people and the Government. He no longer needed them, since their influence was gone; on the other hand, it was the politicians who had need of his help to become deputies. In this way M. Venizelos was able to free himself from the yoke that galled his predecessors; but now that he is no longer in power the old methods are once more cropping up afresh to the great harm of the country. It must be recorded, however, in fairness to M. Theotokis, that by legislative measures he did much to reduce the pernicious influence of parliamentarism. He also introduced many other reforms which have greatly benefited the country. Therefore he leaves a good reputation behind him, and the Greek people are sincere in their expressions of regret for his death. As to the Germanophil tendencies which he showed since the visit of the Kaiser to Corfu in 1908, it were better to say nothing about them.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, January 25.

A Critical Moment.

Roumania's position between the different belligerent groups appears to be a critical one at the present moment. Germany is aware that she will never find an opportunity more convenient than the present one for urging Roumania either to abandon her neutrality in favour of the Central group, or to adopt an attitude of *permanent* neutrality favourable to the latter; for Roumania cannot be succoured at this juncture by the Russian army, which is marking time in Bukovina, nor can she count on the Allied forces which have been landed at Salonika provoking a diversion, since they are not as yet in sufficient strength to undertake an offensive action. As a pretext, Germany seizes upon the fact that the Opposition have presented as candidates at the by-election two Roumanians of Transylvania who are still Austro-Hungarian subjects, and also upon the sale of wheat to Great Britain, which is to be paid for without being exported, and which can therefore be interpreted as a political rather than an economic transaction.

Von Bussche's Bluff—

Herr von dem Bussche, cutting short his stay in Berlin, has returned, apparently in haste, to Bucharest. He is said to have telegraphed from Berlin a request for immediate audiences with King Ferdinand and M. Bratiano, and these have been granted. The German Minister is said to have informed M. Bratiano that Roumania's sale of wheat to Britain had created a disastrous impression in Berlin, since she thereby supports the policy of starvation directed against Germany. This is interesting, but need trouble no one outside Germany. What is of graver import is that von dem Bussche is said to have insisted at the same time that Roumania should commit herself by treaty to a policy of definite neutrality, demanding in addition that the troops in the Carpathians should be disbanded.

—Rebuffed.

I have it on good authority that King Ferdinand much resented von dem Bussche's somewhat cavalier procedure. Further, that His Majesty, as well as his Prime Minister, replied to the blustering Minister's demands in a manner calculated to convey absolute conviction that Roumania, considering as an affront all attempted interference in her internal affairs, would place the maintenance of her dignity as a sovereign State above all other considerations.

Once Bitten.

Submission to the alleged demands would be a complete renunciation on Roumania's part of her sovereign rights as a free nation. It is scarce twelve months since she threw off the yoke imposed upon her by Austria thirty and more years ago, at a moment when she was not free to choose. She will not easily be prevailed upon to resume the burden. Platonic arguments being unacceptable, there would remain nothing but menace, which, to be effective, would have to be backed up by an army of at least a million men.

The Coburg Fox.

The step said to have been taken by the German Minister may be the outcome of an understanding arrived at between the Kaiser and Ferdinand of Bulgaria on the occasion of their meeting at Nish, the question of the sale serving merely as a pretext. The report that territorial concessions have been granted to Bulgaria at the expense of Austria seems plausible enough; for the participation of the Bulgarian army in an eventual attack directed against Salonika is a *sine quâ non* if it is to be undertaken by the enemy with any hope of success. That Bulgaria should in addition ask for guarantees ensuring in this event immunity from attack on the part of Roumania is eminently reasonable from her point of view. That some preoccupation exists on this score is indicated by the increasing number of Bulgarian troops which are being massed upon the Dobrujan frontier.

The King to His Army.

On the occasion of the Roumanian New Year, King Ferdinand addressed the following message to his armies:—

Soldiers,—It is with deep joy that, on the threshold of a new year, we testify our lively satisfaction with the zeal which you have shown in the accomplishment of your military duties. The passing year has demanded from you labours of a particularly arduous nature, in view of a better preparation for war.

You have submitted as usual to the exigencies imposed by the general welfare with the devotion which yesterday was your glory and to-morrow will be your pride. The country and Ourself are proud of you, and extend to you our confidence and love.

With all our heart we wish you a long and prosperous life.—Ferdinand.

In His Majesty's reply to addresses delivered by the President of the Council and the Metropolitan Primate, the following sentences occur:—

God grant that the prayers which find their source in the ardent patriotism which unites us in these difficult times may be answered in the course of the year which is now beginning.

God grant that all Roumanians may strengthen their confidence in the future, and along this path I will be to them a guide, loving his country and his nation.

Regard these lines in what light one may, they cannot be interpreted as a commonplace official greeting. They are patriotic, pregnant with promise, and full of significance for the great mass of the Roumanian peoples.

New Form of Propaganda.

An enormous paper balloon landed in the department of Dorohoi on January 20. It had apparently been constructed and let loose in Austria, as it contained manifestoes in Russian and Polish inciting the Russian soldiers to lay down their arms, on the ground that the Central Powers were victorious all along the line. They further warn the troops that Japan is conspiring against Russia.

Contraband Cattle.

The price of meat is rising in Roumania, and it is causing some anxiety, for one naturally connects it with the loss of cattle due to contraband. I have explained in a former number of The Near East how cleverly this had been organised in Bukovina. It was hoped that the authorities would find a means of putting an end to this illegal traffic, but the smugglers still seem to have it all their own way. Up to the present some 120,000 head of cattle are said to have found their way over the frontier.

An Englishman resident in Athens writes, under date of January 26:—

A good many of the people here criticise and severely blame the correspondents who have interviewed the King and been led away by his statements, which may possibly also mislead the British public. I understand that correspondents of French newspapers have refused to ask for an interview, although they had received the hint to do so.

The King's declaration to the correspondent of the Associated Press of America that only 20 per cent. of the people are in favour of the Entente Powers is not correct; it would be more correct to say that 80, if not 90, per cent. of the people are Anglo-Francophiles. At the same time, notwithstanding his Germanophile tendencies, the masses love the King, but it is really only the legend attaching to his name (Constantine) and the fact that he brought them out victorious in the Balkan War which keep the population loyal, for they do not approve of the King's unconstitutional policy.

BULGARIAN NOTES.

(From a Correspondent.)

Bucharest, January 20.

Captured Serbian Rolling Stock.

Of the 3,000 railway wagons taken from the Serbians by the Bulgarians during the invasion, 2,000 are reported to be in a good state of repair, but the remainder are practically useless. The hundred locomotives captured will all have to undergo repairs of one sort or another before they are fit for use.

Interview with General Teodoroff.

A few days ago the editor of the *Mir* (a Bulgarian journal) and a correspondent of the *Az Est* (Hungarian) were accorded an interview by General Teodoroff, commanding the Second Bulgarian Army. Among other things he said to the pressmen: "A complete understanding has been arrived at between General Mackensen and ourselves. We have drawn up a complete programme, and the army waits orders to advance to fresh exploits. As you know, the Greeks have ceded to the Anglo-French only a strip running north and south from the frontier to the sea, while their own troops have retired east and west to Karaferia and Nigritza. The Franco-British front is only 50 kilometres long. It is hardly likely that in the event of an attack on our part the French and English will be able to maintain themselves long in this position. They will rather prefer to fall back on the very strongly fortified camp which they have prepared at Salonika. If our troops were not compelled by political considerations to halt before the frontier of neutral Greece, the Anglo-French would be driven into the sea"!

Questioned regarding the Franco-British troops, the General replied that they were "serious adversaries," and that the fight with them had been a sanguinary one, first by reason of their high qualities, and second on account of the special conditions in Macedonia. He emphasized especially the fine qualities of the French soldiers, who were highly disciplined and profoundly conscious of their duty.

Famine Fears in Sofia.

Ever since the famous joining up of the German and the Bulgarian armies the spectre of hunger has haunted the more imaginative of the population of Sofia. A *communiqué* issued by the Committee of Public Safety, and appearing in the Bulgarian journals, tends to confirm these fears, though it aims at dispelling them by means of fair promises. Measures are being taken, it says, which will ensure that Sofia shall not be left without flour for even a short period; and to this end the Committee has distributed 700 sacks of flour of 75 kilos each. This is, however, an entirely inadequate quantity for a population of 150,000 inhabitants.

BALKAN MEGALOMANIA.

(From Our Own Correspondent.)

Bucharest, January 18.

"In what Sense do the Balkan States Exist?" is the title of a lecture recently delivered by the great Roumanian historian, Professor Iorga. He pointed out that the Roumanian people, whose hopes and ambitions draw them towards the West, would thereby approach the Adriatic, with which they have associations of ancient date. Nevertheless, to whatever degree the Roumanian people may become Westernized, their connection with the Balkans cannot lose its importance. Even without possessing any large extent of territory, the Roumanians could succeed in playing a great part in the Balkans, on the principle that "a square mile in Belgium is worth more than one in Siberia, and one of ours of greater value than those taken from the Bulgarians." One characteristic there is which all the Balkan peoples have in common, namely, megalomania. The Greeks, after 1821, thought themselves the legal heirs of the Byzantine Empire. The Serbians, influenced by their dreams, also elaborated a theory according to which the whole of the Balkans was their due. The Bulgarians, brought into existence in 1877, demand to-day the whole of the Balkans and three seas. Nothing but harm has resulted from this state of affairs. All the crimes and all the bloodshed that have reddened the face of the Balkans are the direct consequence of this megalomania. It was desirable that each nation should spread in the direction indicated by its geographical position. The Serbs must find an outlet on the Adriatic, the Bulgarians and Roumanians on the Black Sea, the Greeks on the Archipelago. To-day the Bulgars are drunk with the successes gained in common with their powerful allies, and demand three seas!

MAGYARS AND ROUMANIANS.

(From Our Bucharest Correspondent.)

Ever since the defeat of Austria at Sadowa in 1867, and the establishment of Austro-Hungarian Dualism, the Roumanian population of Transylvania has been at the mercy of the Magyars, and the latter have carried out a campaign of denationalization which, in spite of scant success, has been continued up to the present day with a tenacity that is only less than the resistance opposed by the Roumanians. Their most persistent efforts have been directed towards suppression of the use of the Roumanian tongue. They have founded, with this end in view, thousands of elementary schools of the "kindergarten" type, attendance at which is compulsory, and in which the Hungarian language is enforced to the exclusion of all others. Up to 1900 the Roumanians, poor as they are, had built no less than 3,279 primary schools. Many hundreds of these have been closed by the Hungarian authorities, no less than 200 in the last two years alone. But the Magyar Chauvinists have not been satisfied with such pacific proceedings. They have interfered in the most revolting manner with the liberty of the Press; have prohibited the formation of literary and scientific societies among the Roumanians; have prevented at the point of the bayonet the election of Roumanian representatives to Parliament (there are five for a population of nearly four millions); have, in short, perpetrated every form of persecution upon a people that has been exceptionally tried in the course of its career, which has been one unending struggle for bare existence, with scarce a hope of anything better.

And now hark to Count Tisza's perorations!—"The national state of Hungary is not founded upon oppression of other races, but on a complete equality before the law, upon wide privileges as regards the language and culture of individual nationalities, and upon the principle of true brotherhood." And again: "The national policy of Hungary, such as I understand it, has always recognized as its basis the necessity of uniting the different nationalities with that of the Hungarian nation, so as to form one harmonious whole; of drawing them towards us, of keeping them near us, in all our struggles, in all our dangers."

These words can only have been intended for British ears, for their author can have hoped to deceive neither the peoples that groan beneath the heel of the Habsburgs nor the parent nations from which they spring. Hungary has for long enjoyed in England an unmerited popularity, due in part to personal connections established by members of the Hungarian aristocracy, and then, as M. Take Jonescu said in his recent speech: "Hungarians have traditions in the countries of the West, they have the reputation of being the sole people in Eastern Europe possessing liberal institutions." This tradition undoubtedly has a foundation, but few people in England realize how little the non-Magyar elements profit by these "liberal institutions." There is nothing in common between the free peoples of the West, who have so generously responded to the cry of the small nations, and the dominating races of the Habsburg monarchy.

It may be permissible to remind the reader that there was a time (not so very long ago for those who dare to remember) when no one ventured to raise a warning voice against the Bulgarians, or to utter a word of doubt regarding the purity of their intentions, for fear of being given the lie direct, or, at least, secretly taxed with calumny.

SERBIAN OFFICERS' FAMILIES.

In connection with a scheme for assisting Serbian officers' families, a meeting was held on Monday afternoon at 35, Grosvenor Square, by permission of the Duchess of Somerset, at which an interesting account of the Serbian retreat and the Serbian nation in exile was given by Mme. Slavko Grouitch, wife of the Serbian Under-Secretary for Foreign Affairs. She explained that there are upwards of 2,000 families of the upper social classes of Serbians, chiefly officers' wives and children, who had lost all they possessed, and were badly needing aid. The civilian population remaining in Serbia were in a starving condition, and it was hoped that something would be done for them through neutral countries; but just as the military assistance came too late so it was feared friends would be too late to prevent many thousands dying from starvation. Many of the officers' families were staying at Athens and a few at Corfu in order to be near their husbands, and to them help was being sent under this new scheme through the courtesy of the Greek Embassy. The Duchess of Somerset said the response made to the appeal on behalf of the Serbian officers' families had already been considerable and very gratifying.

LETTERS TO THE EDITOR.

IN MEMORY OF GORDON.

To the Editor of THE NEAR EAST.

Sir,—Having followed with much interest the recent correspondence in your paper regarding the "Gordon Boys' Home" and certain other institutions in England bearing Gordon's name, may I ask for space in your columns to make it quite clear that the "National Memorial to General Gordon, the Gordon Boys' Home," situated near Woking, of which His Majesty the King is the patron, has no connection whatsoever with institutions elsewhere, nor has it even any branches. Those institutions of various kinds that also bear Gordon's name, and are in existence, I believe, at Bournemouth, Dover, Nottingham, Brighton, Southampton, and other places, fulfil, no doubt, some very useful purpose locally, but their aims and methods, so far as I know, are not at all identical with those of the "National Memorial," which probably is in its way unique. It aims at meeting the needs of the boy requiring a helping hand at that very important period from 13½ to 17, an age when many establishments have discharged their lads. Supported to a great extent by the voluntary effort of its generous friends, it provides entirely for the 250 boys which the Home can accommodate at a time, bringing them up not only accustomed to military discipline, whether they be destined eventually for one or other of the Services or for ordinary civil life, but giving them, as far as possible, both a sound general education and a technical training as well. Thus the lad who might otherwise have drifted into such nondescript employment as newsvending is started instead, whenever practicable, in a more or less skilled career, and this system of training, while adding fresh laurels to the name of Charles Gordon, has produced, as shown in your issue of January 21, many scores of young citizens who, particularly of late, have deserved right well of their country.—I am, etc.,

E. G. MARKHAM
(Secretary, Gordon Boys' Home).

London Office, 5, York Street, St. James's, S.W.,
February 15, 1916.

THE TRAGEDY OF ARMENIA.

To the Editor of THE NEAR EAST.

Sir,—A shock of horror and indignation has pulsated through all civilised communities at the ruthless killing of her Christian subjects by Turkey. It was recently estimated by Lord Bryce that 800,000 Armenians had been cruelly done to death, while only a week or two ago the news reached him that 1,500 had been forced to abandon the shelter of the mountains, and had been massacred by their persecutors.

One feels stunned and helpless in the face of this monstrous wrong, and for these victims there is nothing to be done; they are in their Father's hands, and at rest for ever.

But the survivors claim our pity and help. Nearly a quarter of a million—by Lord Bryce's estimate—escaped into the Caucasus, destitute and starving; many fell by the way, others reached their destination only to die of disease and exhaustion. America has sent a Relief Commission to aid these refugees in the Caucasus; two members of the Commission are well known to us, as for many years they have been almoners of our funds in Turkey, and they are entirely devoted to the interests of the poor people among whom they have lived for so long. At Port Said there are over 4,000 refugees who were rescued in a remarkable manner from the Syrian mountains. These people are living in tents provided by the British authorities, but it is necessary that they should become self-supporting, and our chief aim in helping them is to provide materials for starting industrial work among them, and helpers to organise the work. To this end we have sent out a lady of great experience, formerly a worker in Syria, and we hope that two other workers will shortly follow her, sent out under our auspices to give the assistance so greatly needed. But for even partial help for all these thousands of unhappy people money is needed and more and more money! In the Caucasus winter accommodation is required, fuel in large quantities is needed. Warm clothing and an ample supply of foodstuffs, medicines, medical appliances, and disinfectants are of paramount necessity, and although these cannot be sent to the Caucasus until the Port of Archangel re-opens, about the middle of April, funds will enable us to prepare them. We have recently forwarded £1,000 to Urumia, for the help of the Armenians and Nestorians there, and we plead for further adequate assistance, to keep alive this remnant of a nation. We know the many demands on the charitable at this time—demands which must be heeded, but this, surely, is as urgent as any can be! Which among the nations has suffered as this nation has suffered? The majority of the refugees consist of women and children—little tender things, many of whom are suffering from bronchitis and other ills brought about by want and exposure.

We ask all who can to help relieve this tragedy of sorrow—to make some sacrifice for these men, women, and children of grief, misery, and bereavement.

Remittances in aid of our fund should be addressed to E. Wright Brooks, Esq., Hon. Treasurer, Friends of Armenia, 47, Victoria Street, London, S.W. Cheques and postal orders should be crossed "London County and Westminster Bank," and Treasury notes registered.—I am, etc.,

MARY HICKSON
(Hon. Secretary, Friends of Armenia).

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

Lord Kitchener's Statement. February 16.

The MARQUIS of CREWE, in the course of replying for the Government in the debate on the Address, referred to the German control of all warlike operations—and of her Allies. The will and power of Austria and Hungary, he said, appear to have ceased altogether in the present war, and he added: "Bulgaria is the washpot of Prussia, and over Turkey Prussia has cast her shoe."

Earl KITCHENER, in reviewing the military situation, sketched the events in the Balkans, and remarked that the enemy's chief objective in undertaking recent operations against Serbia was no doubt to secure direct communication with Constantinople. This accomplished, the Turkish Army, reinforced by German supplies, was able to organise a movement of troops either against Egypt or to strengthen their forces in Mesopotamia, and at the same time were able to bring a far more powerful artillery attack to bear on our positions in Gallipoli. It was therefore decided to withdraw our troops from the peninsula to reinforce Salonika and Egypt. "During the last week of December," he continued, "our positions at Anzac and Suvla were evacuated with practically no loss. This military achievement was only surpassed by the later strategic withdrawal from Cape Helles. Although when on the spot I had formed the opinion that this withdrawal could be accomplished with less loss than had been originally anticipated, the method of its execution by the naval and military officers in charge exceeded my most sanguine expectation. The Franco-British Forces operating in Macedonia were gradually concentrated in a strongly entrenched position surrounding the town of Salonika. Its line of defence was completed and occupied before the end of the year, and, in order to emphasise the principle of unity amongst the Allies, the supreme command of the forces at Salonika, both British and French, was placed in the hands of the French Commander-in-Chief, General Sarrail."

Turning to Egypt, Lord KITCHENER said: "It will be remembered that during last winter an abortive attempt on the Suez Canal was easily brushed aside by a small British force operating in that neighbourhood. But as a more serious attempt has been threatened by the Turks to invade Egypt from the East adequate preparations have been made to defend the Canal. The Turco-German influence with the religious Chief of the Senussi, on the western flank of Egypt, has succeeded in inducing the Arabs of Cyrenaica and Tripoli to assume a hostile attitude towards us in Egypt. The first attempts made by the tribes have resulted in complete failure and disaster to them, and though this movement in the western desert still causes a certain feeling of unrest, the admirable loyalty of the people of Egypt forms an effective barrier to any penetration by these raiders into the cultivated areas."

Of the operations in Mesopotamia, Lord KITCHENER said: "Our forces at the end of September, advancing up the river Tigris, defeated the Turks at Kut-el-Amarah, and were at the beginning of November threatening the city of Baghdad. The Turkish forces driven back had, however, received considerable reinforcements, and at the action of Ctesiphon, on November 22, showed themselves to be in such strength as to outnumber our Expeditionary Force. A retirement from our advanced position, therefore, became necessary, and this was carried out under General Townshend's direction as far as Kut-el-Amarah, a strategical point which he decided to hold until the arrival of fresh troops which were being pushed up the river under the command of General Aylmer. General Aylmer and his forces drove back small parties of Turkish troops, and reached a point twenty-three miles below Kut-el-Amarah, where the Turks had entrenched themselves. The Turkish position was attacked on January 27, but proved too strong to be forced, and General Aylmer, who has been joined by General Lake, is now awaiting further reinforcements before renewing his forward movement to effect a junction with General Townshend's forces. The behaviour of the British and Indian troops in Mesopotamia has been one of the traditions of our Army, and the operations, which have been hampered by the worst possible weather, will, it is hoped, before long reach a satisfactory stage. General Townshend has sufficient supplies at his disposal to maintain his force for a considerable period. The operations in Mesopotamia, which have hitherto been controlled from India, will now come under the direction of the War Office."

HOUSE OF COMMONS.

Statement by the Prime Minister. February 15.

Mr. ASQUITH, in the course of his speech in the debate on the Address, said that "he thought we might recall with satisfaction the fact that, largely owing to the zealous and well-organised assistance of our Italian Allies, the Serbian Army, which a month or two ago was in a very precarious position, has been safely evacuated from Albania to the number of about 100,000—a number which in the course of a week or two will be a good deal more—and is now being reconstituted and refitted, and will, we believe, form an effective factor in the future conduct of the war." Turning, later in his speech, to Mesopotamia, he declared that the situation there, which had from time to time given rise to not a little anxiety, has distinctly improved. "General Townshend," added Mr. Asquith, "is holding his own, and has supplies which ought to last still a considerable time. General Aylmer's reinforcements ought all to have reached him by now. Notwithstanding the abnormal and most unfavourable climatic conditions prevailing during the past few weeks, I think there is every ground for hope that the two forces may unite, and that anything in the nature of a serious British check may be averted."

TANGIER TO TEHERAN.

The tragic end of Prince Yussuf Izzedin naturally recalled the mystery surrounding the end of his father, the Sultan Abdul Aziz, who died in 1876. Officially, Abdul Aziz "committed suicide," opening the veins in his arm with a pair of scissors; but there has always been a great deal of doubt whether it was a case of *felo de se* or of assassination. A few days ago I received a letter from a valued correspondent who, on first going to Constantinople, met two of the doctors (one of them an Englishman) who were among the medical men asked to report on the suicide. My correspondent writes:—"They were simply given the opportunity of passing by the Sultan as he lay in his coffin and were expected to sign a certificate that he committed suicide without having any opportunity of examining the body." That seems to me to be fairly conclusive evidence—but not of the kind that was sought for at the time. The circumstances surrounding Prince Yussuf Izzedin's death and the "report" of the doctors thereon would lead one to suppose that the same procedure was followed in his case.

***

According to that usually well-informed paper of Cairo, *El Mokattam*, Jemal Pasha is not behaving at all nicely to his dear former friends and monitors in Turkey. It is a curious thing, but it seems to be nevertheless true, that after several months of association with the Huns he still retains his soul. In regard to the proposed expedition to Egypt, for instance, Jemal refuses point blank to lay further lives upon the reeking altar of German ambition. If the expedition is to be undertaken, he argues, let the Allies march side by side to the conquest of Egypt, let Teuton and Turk be in at the death together. But, having regard to the probable protagonists in the death scene, the Hun does not approve of this scheme. It's all very well for a few thousand Turks to add their bones to those of their fellows in last year's enterprise; German lives are a different thing. If Jemal continues to show such an ungentlemanly spirit of obstinacy, he will probably be sent to join the late Crown Prince of Turkey—another Turk who had the intrepidity to think.

***

If recent reports are to be relied upon, Sheikh Mohammed Mustapha, Grand Kadi of the Sudan, is responsible for a change that will make his name famous in history and beloved of the Suffragists for all time. At one stroke he has revolutionised the divorce laws of his people by the introduction of a code which enables a woman to divorce her husband either for desertion or maltreatment. According to the old law, the power of divorce was in the hands of the husband alone, and it will be interesting to see how the male Sudani will regard this astonishing change. He will probably receive it in the spirit of philosophy that is characteristic of the East; but, in any case, the act of the Grand Kadi is one of extraordinary importance. How far it will affect the Moslem world in general I cannot say; but a committee, composed of the Mufti of Egypt and the leading Ulema in that country, is now debating the subject of divorce, and a recasting of its laws is anticipated. Not without reason has the Sudan been regarded as a country of exceptional promise. A few hundred miles up-river from Khartoum a decent wife may still be purchased for four cows; from Khartoum comes this astonishing change, the thin end of the wedge that, driven between woman and utter dependency, will ultimately set her free.

***

Mr. Edmund Candler, the British Press representative with our Mesopotamian Expeditionary Force, is not an entire stranger to Irak Arabi, though he is perhaps better known for his work further East. In 1898 he visited Baghdad and made a rather adventurous little journey from that city to Damascus, travelling with the camel post across the desert, and falling in with Bedouin robbers on the way. The journey is not exactly a dangerous one to anyone acquainted with Arab character, as Mr. Candler's own account of his experiences goes to prove, but it is certainly trying; for one has to travel almost incessantly, day and night, with little to eat and less to drink. Moreover, camel riding for any distance is a nerve- and body-racking business for anyone who has not accustomed himself to it by degrees, and Mr. Candler was not in hard condition when he was in Baghdad. In fact, when I met him, a day, or perhaps two days, before he set out on the overland trip, he was suffering from fever, picked up in Burmah, I think, and I felt sure he would have to abandon his project. However, he carried it through, and was able afterwards to write an interesting, if not very enlightening, account of his experiences. This time I hope he will have the good luck to see Baghdad under happier conditions. In any case, I congratulate him on his good fortune in being attached to the expedition, and I shall look forward to a first-rate account of its doings from his pen as soon as he is allowed to give us one.

***

Ever since I read his fascinating "Dar-ul-Islam" I have been a warm admirer of Sir Mark Sykes, and always look out for his speeches in the Parliamentary Reports, in which they appear as refreshing oases in a desert of dreary talk. His contribution to the debate on Tuesday seems to me to have been one of the best speeches that has been made in the House of Commons for a long time; it was full of ideas and practical suggestions, and was lightened by touches of true humour. In case it is not reported in "The Near East in Parliament" I venture to give a couple of extracts, which serve to show how Sir Mark turns to account his intimate knowledge of the Near East and of Oriental history. The first is an illustration of the circumlocution that has so hampered our men of action in this war:—

> "I will give an imaginary case which shows how the factor works. I will suppose that a great Imperial decision is to be made—I will say at Aden, to select a place which will show that this is merely an illustration. What would happen? Aden has to consult Bombay, Bombay has to consult Delhi, Delhi to consult the India Office, the India Office would consult the War Office and the Foreign Office, the War Office and the Foreign Office would have to lay the matter before the War Committee, and the War Committee would eventually refer the matter to the High Commissioner in Egypt. From there it would go back to the Foreign Office, thence to the War Committee, and then to the Cabinet. The Cabinet decision would be sent to the India Office, from the India Office to Bombay, and then to Aden. If nobody was ill and if no Sundays intervened this would cost £250 in telegrams, and might be done in sixteen days with extraordinary luck."

This reminds me of a paragraph I wrote in these columns in the early days of the war on the subject of the roundabout way "news" reached us. The second Oriental touch in the speech occurred when Sir Mark was advocating a Cabinet of four, when he said:—"The Khalif Omar, when he wished to appoint a committee for the selection of his successor, chose four men, and said that if there was one in a minority he should have his head cut off, and that if there should be an equal division the members were all to have their heads cut off." The speaker was careful to add that he did not urge the decapitation hinted at. But why not?

CORSAIR.

MESOPOTAMIAN EXPEDITIONARY FORCE.

MRS. MARLING'S FUND

For Providing Comforts for Troops Serving in Mesopotamia.

Hitherto the subscriptions in this country to the above Fund, which subscriptions now amount to £1,583 10s., have been collected privately among those more particularly associated with the Persian Gulf.

In view, however, of the large augmentation of troops now operating in that theatre of war, and of the greatly increased difficulties of the task which they are called upon to perform, Mrs. Marling desires to extend the scope of the Fund by making an appeal to the general public, whose assistance in such a worthy cause will, it is hoped, be readily given.

Mrs. Marling, when making her appeal wrote as follows:—

> "There are many people who have personal experience who will realize how terribly trying to troops the carrying out of military operations in Mesopotamia and the Persian Gulf must be at this season. The following paragraph, taken from the 'Near East,' quoting a letter from a soldier serving with our forces in those parts, brings home to us that the brave men fighting under such exhausting climatic conditions are not benefiting by the many organizations formed at home for the purpose of giving small comforts to our Armies abroad:—
>
> "'The People of England seem to have forgotten us' is the pathetic cry of a soldier serving with the British Expeditionary Force at the head of the Persian Gulf; 'we have not had so much as a box of matches from England.'"

All money collected is being remitted to the credit of Colonel Sir Percy Z. Cox, K.C.S.I., Senior Political Officer to the Expeditionary Force, who is employing it in the purchase of comforts for the troops suitable to the local conditions.

All donations should be sent to:—

THE IMPERIAL BANK OF PERSIA,

25, ABCHURCH LANE, E.C.,

and cheques should be crossed and made payable to "Mrs. Marling's Fund."

NEAR EAST BOOKSHELF.

THE ETERNAL EAST.*

Although the book which Miss Sykes has just written deals with India, the Arabian Nights atmosphere which lingers about all Eastern history, near or far, brings it sufficiently within our province to justify a notice in this paper. Primarily written to meet the requirements, and to whet the interest of young students in India, the appeal of this book will be immeasurably wider now, when, as the author puts it, "the stirring deeds of her brave men fighting side by side with ours . . . have brought India so much nearer to all our hearts." Were it not, indeed, for two things, we would predict for this little work a place high among the popular books of the day. Neither of these really affect it at all, but we fear that they may both mitigate against real popularity. The first is the title. It savours too much of the class-room, and the average reader will scarcely give the book a second thought when he sees it on the bookstall. The second thing is the practice which Miss Sykes has adopted of capitalizing all proper nouns. It is an excellent thing for the student, it exactly fits the purpose which the author had in her mind when she passed the book through the press, but it will not appeal to the ordinary reader. Were the work of less general interest, these things would not matter one way or another. It would find its way to the class-rooms where it was most needed, and it would take its place among the educational works on India in the ordinary way, its title and its form would be quite immaterial. But this is not an ordinary schoolbook; it breathes the romance of Eastern history, and we would wish for it a wide publicity.

The present volume, Part I., deals with Indian history from Vedic times to the coming of the English, and it is to be followed by another in which the coming and influence of the Western races will be described. The first volume is of especial interest now when our enemies are striving to force their way through the East, as Alexander the Great strove in the early days of history. Miss Sykes describes this campaign well. Apart from the desire for conquest, there is of course no comparison to make between the *Boche* of civilized to-day and the Alexander of "barbaric" times. Miss Sykes quotes the following declaration of Alexander with reference to his treatment of conquered Persia:—

The possession of what we got by the sword is not very lasting, but the duty of good deeds is eternal. If we have a mind to keep Asia, and not simply pass through it, our compassion must extend to them also, and their fidelity will make our Empire everlasting.

We can find nothing in German declarations to correspond with this. In the tracing of the legendary history of India the author works with sympathy and knowledge, and it is a fascinating subject. While it must be remembered that she wrote first of all for "boys and girls," and her work is entirely devoid of literary embroidery, we can confidently recommend Miss Sykes' volume to all who are interested in the East. The book is profusely illustrated, many of the reproductions being of rare and hitherto unpublished pictures.

BOOK NOTES.

Messrs. Black's announcements include "The Seven Churches of Asia," by Dr. Christopher N. Johnston, Procurator of the Church of Scotland, containing a short illustrated account of each of the seven churches, based on the results of recent archæological research.

Among Messrs. Chatto and Windus's announcements is "In Seven Lands," by E. A. Vizetelly, forming the third volume of the author's reminiscences of his earlier years.

Mr. John Lane is publishing to-day "Domestic Life in Roumania," by Dorothea Kirke.

A new book from the pen of Mr. Douglas Sladen, author of "Egypt and the English," "The Tragedy of the Pyramids," and other works on Egypt, is shortly to be published by Messrs. Hutchinson and Co. Mr. Sladen's new work is entitled "The Douglas Romance," the central figure of which is the twenty-fifth Earl of Douglas. This title can be inherited by a woman, and when his only child, the late Lord Avondale, was killed near Givenchy, in August, 1915, the heir was discovered to be a leading lady in musical comedy, whose romantic secret marriage led to many strange developments.

The Cambridge University Press will issue shortly a third and enlarged edition of the "Companion to Greek Studies," edited by Mr. Leonard Whibley. One of the topics dealt with for the first time is the prehistoric house, which is discussed by Mr. A. J. B. Wace—a subject treated at greater length in a separate monograph shortly to be published by the Cambridge University Press under the title "The Greek House: Its History and Development from the Neolithic Period to the Hellenistic Age," by Dr. Bertha Carr Rider.

A GREAT ARABIC SCHOLAR.

The *Birmingham Daily Post* of February 15 contains a fine appreciation of "John Payne: Poet and Translator," from which we take the following passages:—"One hesitates to talk about Payne's crowning glory—his translation of the 'Arabian Nights.' Whatever is said one knows that the surviving kinsmen of Richard Burton and John Lane may swoop down and reopen the miserable business again. This is no place to relate the story of 'The Nights.' . . . 'The Book of the Thousand Nights and One Night,' translated by John Payne, was published in nine volumes between 1882 and 1884, the work having been commenced in 1877. Only 500 copies were printed for subscribers. In his preface Payne wrote that there were three printed editions, more or less complete, of the Arabic text of the 'Nights'—namely, the Breslau ('horribly corrupt'); the Boulac (Cairo), very incomplete, and added to by 'a learned Egyptian'; and the Calcutta edition, which he used in conjunction with the other editions for additions and corrections. In 1884 he added three other volumes, 'Tales from the Arabic,' and in the following year he translated the story of 'Alaeddin and the Enchanted Lamp,' and two other tales from an Arabic text discovered by M. Zotenberg, Keeper of Oriental MSS. in the Bibliothèque Nationale at Paris. The translation of those thirteen volumes was a great undertaking, and a wonderful example of hard work and scholarship. Not only were they a rendering into English, but every word was, as far as possible, given the exact English equivalent. The result is that for the ordinary reader the style appears rather clumsy, but from the point of view of scholarship the versions are not to be surpassed.

"When Burton heard that Payne was bringing out his edition of the 'Nights,' he wrote and told him that he had a translation in course of preparation; but Mr. Wright, in his 'Life of Sir Richard Burton,' makes out a good case to show that it was not even begun. Mr. Payne, however, offered to collaborate, but Burton refused. It was in 1885 that Burton published the first volume of his edition of the 'Nights,' and the tenth volume, with the notorious 'Terminal Essay,' was issued to the subscribers the following year; the six supplemental volumes being sent out between 1886 and 1888. In the introduction to his translation of Omar Kheyyam (1898), Mr. Payne, 'with much reluctance,' broke the silence with regard to Burton's 'Nights,' and stated that Burton 'again and again borrowed whole pages in difficult passages,' while two stories where 'he was obliged to rely upon his own resources, unaided by any translation,' contained 'five hundred blunders of the most unqualified description.'"

Of Payne's translation from the Persian of "The Quatrains of Omar Kheyyam of Nishapour," with a biographical and critical introduction, the writer says: "Payne greatly appreciated the beauty of FitzGerald's 'Omar,' but showed that although it was a charming poem, it gave practically no idea of the original; and, indeed, it was but a very free paraphrase of about a sixteenth part of the whole poem. Payne consulted many editions and manuscripts, but his translation is mainly taken from the Lucknow autograph, and contains 845 verses. This was issued by the Villon Society in 1898."

* "Readings from Indian History" (Part I.). By Ethel R. Sykes. With 79 Illustrations and Maps. (London: C.L.S.I.)

Any Books mentioned on this page, or any other Publication, can be obtained at the published price, plus 3d. postage in the United Kingdom, or 6d. abroad, from
THE NEAR EAST (Book Department),

"The most comprehensive survey of Egypt of the Egyptians that we have ever read."—*Near East.*

EGYPT OF THE EGYPTIANS

By W. LAWRENCE BALLS, Late Fellow of St. John's College, Cambridge.

Cloth gilt, gilt top, 32 Illus., 3 Maps, **6s.** *net.*

The Manchester Guardian says: "Mr. Balls has written a wonderfully vivacious and interesting book. In a style purposely but skilfully colloquial, he has tersely set forth the evolution of ancient and the life of modern Egypt with the competence given by a scholarly study of the former and a working knowledge of the latter. . . . No one has written on Egypt at once so readably and so weightily . . . a brilliant book."

The above volume is the latest addition to Pitman's well-known *"Countries and Peoples Series."* Other volumes in the series on the Near East are:—

RUSSIA OF THE RUSSIANS. By H. W. Williams, Ph.D.
GREECE OF THE HELLENES. By Lucy M. J. Garnett.
TURKEY OF THE OTTOMANS. By Lucy M. J. Garnett.
SERVIA OF THE SERVIANS. By Chedo Mijatovich.

Of all Booksellers.

LONDON: SIR ISAAC PITMAN & SONS, LTD.,
1, Amen Corner, E.C.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)	—	Moslem.	Jewish.
1916. Feb.	1916. Feb.		1334. Rebi II.	5676. Adar.
18	5	Friday	13	14
19	6	Saturday.....	14	15
20	7	Sunday	15	16
21	8	Monday	16	17
22	9	Tuesday	17	18
23	10	Wednesday	18	19
24	11	Thursday	19	20

To-day President Raymond Poincaré enters upon the fourth year of office as head of the French Government.

Wednesday is the birthday of Princess Vera, second daughter and fourth child of Prince Mirko of Montenegro, who was born at Rieka, February 10, 1887 (O.S.).

The Queen, who was accompanied by Princess Mary, performed the ceremony of unveiling a memorial tablet to Florence Nightingale in the crypt of St. Paul's Cathedral on Monday afternoon.

Lord Kitchener had the honour of being received in audience by the King at Buckingham Palace on Monday.

General Sir Julian Byng arrived at Marseilles on Tuesday.

The Greek Minister had a prolonged interview with Sir Edward Grey at the Foreign Office on Tuesday afternoon.

Madame Grouitch, the wife of the Serbian Permanent Under-Secretary for Foreign Affairs, is leaving London this week for America.

Lieutenant R. C. Cumberbatch, 7th Battalion Rifle Brigade, has been promoted to the rank of captain.

Second Lieutenant H. D. Cumberbatch, 6th Battalion of "The Buffs," has been promoted first lieutenant.

Miss Florence Chaplin, daughter of Mr. Henry Chaplin, M.P., who had been for some time engaged in nursing at the Red Cross Hospital at Vranja Banye, in Serbia, and was recently reported to be a prisoner in the hands of the Austrians, has returned safely to this country.

On the 10th inst., at Assiut, Egypt, the wife of Mr. W. D. Roberts, of the Egyptian Public Works Department, gave birth to a daughter.

A marriage has been arranged, and will shortly take place, between Commander W. G. A. Kennedy, R.N., fifth son of the late Myles Kennedy, of Stone Cross, Ulverston, and Feodora, daughter of Commander Lund, of Hjortnes, Christiania, Norway.

A marriage is arranged and will shortly take place in Cairo, between Captain Ernest O'Farrell, Royal Irish Fusiliers, only son of the late Sir George O'Farrell and Lady O'Farrell, the Croft, Oxshott, and Ina Geraldine, second daughter of Mr. and Mrs. John C. Partridge, 38, First Avenue, Hove.

The special correspondent of the *Matin* at Athens telegraphs, under date of the 15th inst., that General Sarrail is coming to Athens to pay a visit to the King of Greece.

MRS. FRANK BARKER wishes to recommend MANOLI CORBETTI, 22, Great Chapel Street, Oxford Street, W., to anyone wishing to purchase YAOURT, HALVA, TOMATO PASTE, BLACK OLIVES, ORIENTAL JAMS, or CIGARETTES, all of which he gets direct from Salonika and other parts of Greece.—[Advt.]

The *Matin* Corfu correspondent states that the glorious generalissimo of the Serbian army, the Voivode Putnik, is with his family in Corfu.

A message from Constantinople states that Rifaat Bey, commander of the Hamidieh, has been appointed Chief of the Turkish Naval Headquarters Staff.

Colonel Charles Owen Hore, C.M.G., late of the 2nd Battalion Royal Garrison Regiment, died on Monday in London in London aged fifty-five. He entered the Army in 1878 and was with the Egyptian Expedition in 1882. He took part in the actions at El Magfar, Tel-el-Mahuta, Mahsameh, Kassassin, and Tel-el-Kebir, and in the forced march to and the occupation of Cairo. He also served with the Sudan and Nile Expeditions.

The death took place on January 26 in Alexandria of M. Victor Nourisson, Director-General of the Municipal Library.

The death is announced as having taken place at Oak Grange, Pangbourne, of Colonel B. L. Reilly, late of the Indian Army. He saw active service in the Egyptian Expedition of 1882, as well as in the Afghan War of '78-80, the Zhob Valley Expedition of '84, and the Tirah campaign ('97-98). He was sixty-six years old.

Our Bucharest Correspondent writes (January 22):—

M. Arion, Secretary of the Roumanian Legation at Petrograd, has arrived in Bucharest on leave.

M. P. P. Carp, whose philo-German views are well known, has left for Vienna. In German circles his visit is interpreted as indicative of an impending rapprochement between Roumania and the Central Powers.

Herr von dem Bussche, German Minister in Bucharest, has returned to his post, his leave having apparently been cut short.

M. Tresnea Greceano, Minister Plenipotentiary and "Directeur du Protocole" at the Ministry for Foreign Affairs, has returned to Bucharest from Vienna.

M. Jean Rallett, Professor at the University of Jassy, has died. Roumania loses in him one of her best mathematicians.

I have regretfully to announce the death also of General Benjesco-Dabija on January 26 at Bucharest. He was known as a dramatic author.

Winter sport at Sinaia claims its usual toll of victims. Prince Démètre Ghica is afflicted with a broken thigh, resulting from a bobsleigh accident, from which Lady Kennard, daughter of Sir George Barclay, also derived slight injury. Happily the latter is now completely restored to health.

Dr. Stoicesco, the brilliant surgeon who was looked upon as Professor Heresco's successor, put an end to his days on January 13 by shooting himself with a revolver. His death is ascribed to neurasthenia, the result of overwork. The death of these two specialists in the same surgical branch leaves a gap which it will be difficult to fill.

Major Th. Demetresco, Roumanian military attaché in Serbia, has arrived in Roumania after an eventful journey extending over two months. After the fall of Nish he followed the Serbian Army in its retreat towards Albania. From here he reached Italy, and has now returned by way of Switzerland and Austria.

The *Egyptian Gazette* of January 21 reports: The American Diplomatic Agent and Consul-General, Mr. Olney Arnold, has suddenly resigned, and he left Cairo on Saturday last on his way to the United States. Mr. Olney Arnold has held the post of Diplomatic Agent at Cairo since October, 1913. It is announced that he has had to retire on the grounds of ill-health owing to excessive strain of the work entailed in looking after the interests of the Swiss, Austro-Hungarian, and German subjects since the war broke out, as well as the superintendence of the relief work in Palestine and Syria. The American Government has instructed the U.S. cruiser Des Moines to convey Mr. Arnold to Naples. He will sail to-day and on arriving in Naples will proceed direct to Florence, where he proposes to stay with his wife and daughter, the Marchese Strozzi, for a week or ten days before proceeding to America. Mr. P. Knabenshue has taken over the duties of American Diplomatic Agent in Cairo.

Recent subscriptions to the Prince of Wales's Fund include a sum of £148 1s. 4d. from the Cairo Committee of the Prince of Wales's Fund, Egypt (making a total of £11,148 1s. 4d.); and a sum of £76 15s. from the staffs of certain stations of the Eastern Telegraph Company (Ltd.).

A Cyprus correspondent writes (January 31):—The health of the Greek Archbishop, Kyrillos, continues to give trouble. His Eminence was unable to hold his usual reception on the occasion of his name-day.

At a Congregation held at Cambridge on Saturday, the degree of B.A. was conferred on Mr. R. W. Jackson, a lieutenant in the Serbian Army.

Miss E. Simmons, of Constantinople, has joined the staff of the Royal Herberts' Hospital, Woolwich.

The Chairman of the Serbian Relief Fund on Monday received a telegram from Zurich stating that thirty-one members of the Second British Farmers' Unit (which was sent to Serbia by the Relief Fund Committee) had arrived at Zurich on the way home after having been interned at Vernyalchka Banja. They expected to leave Zurich on Tuesday and to reach London on Thursday.

Mrs. Wilson Noble, of Park Place, Henley-on-Thames, recently arranged a Serbian Gift Day in aid of the Serbian Women's and Children's Fund. About 2,200 articles, including tinned foods, clothes, and drugs, were contributed, and her efforts proved most successful. Nurse Collins, who has recently returned from Mrs. St. Clair Stobart's unit in Serbia, gave an interesting account of her work.

Two parties of Scottish nurses, members of the Scottish Women's Hospital Units which went to Serbia, who had been imprisoned in Serbia and Austria for more than two months, arrived in London on Sunday. The first unit included Miss Bowhill (matron), of Perth; Dr. Davidson, of Edinburgh; Dr. McDougall, of Islay and Edinburgh; Sisters Fletcher (Edinburgh), Brown (London), Scorgie and Skae (Royal Infirmary, Manchester), Mortimer (Diss), Hiney, Gibson, Pettigrew, Smith, Jones, and Lamb; Miss Madden (chauffeur), Miss Duke (X-ray operator), Misses Gregory, Hare, and Lees (Volunteer Aid Detachment).

The second unit had been sent out nine months ago to Serbia under the charge of Dr. Alice Hutchison, who returned with the party. The unit had been stationed at Valievo, but removed to Vrinzi, where they were located at the time of the Austrian occupation. The party comprised Doctors Alice Hutchison, Laura Hope, Sybil Lewis, Agnes Procter, and Charles Hope; administrator, Miss Jack; matron, Miss Philp; sanitary inspector, Miss Gordon; Nurses Bayne, Carter, Caton, Donovan, Dew, Duguid, Ellis, Evans, Gordon, Hall, Hamer, Hart, Kilty, Oldfield, Pinder, Richards, Saunders, Walmsley, Williams, and Wilson; orderlies, Misses Nicholls, Kerr, M. Fraser, A. Fraser, and Tebbutt.

The British Farmers' Red Cross Fund has sent a further cheque for £40,000 to the British Red Cross Society. Of this cheque £20,000 is to be used for hospital work in connection with the sick and wounded of our Expeditionary Force in the Persian Gulf. Further help for the fund is urgently wanted, and offers of assistance will be gratefully received by the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.

Professor Alexander van Millingen, Rusthall, Kent, formerly Professor of History in Robert College, Constantinople, son of Dr. Julius van Millingen, who was associated with Lord Byron in the War of Greek Independence, and who was subsequently Court Physician to four Sultans, left property valued at £5,195.

Probate has been granted of the will of Sir Henry Drummond-Wolff, of 28, Cadogan Place, S.W., formerly Minister to Persia and Roumania, and Ambassador at Madrid, 1892-1900, who died on October 11, 1908. He left property of the gross value of £22,414, and bequeathed everything of which he might die possessed to his wife.

Mr. W. G. Middleton Edwards has written a most interesting letter to *The Times* on the subject of the escape of the Goeben and the Breslau in August, 1914. It appeared in yesterday's issue.

The Lord Mayor's Committee for the Relief of Armenian Refugees held a meeting at the House of Commons on Wednesday, at which they considered a report from the American committee which is working in the same field. The American committee painted the situation in very dark colours. They reported that the Russians were harbouring no fewer than 310,000 refugees, and that destitution and disease were widespread. The Lord Mayor's Committee agreed to send out at once £2,000 to the American committee and £1,000 to the British Consul at Tabriz for distribution among the refugees. Altogether the committee have collected over £37,000.

The Rev. James Blakie, F.R.A.S., delivered a lecture entitled "Knossos and Mycenae : The Story of a Forgotten Civilisation," under the auspices of the Egyptian Research Students' Association, in Edinburgh last week.

An urgent appeal is made by the Duchess of Somerset, Adeline Duchess of Bedford, Lady Ermyntrude Malet, and Lady Olga Egerton on behalf of Serbian refugees—those of the upper social classes, upon whom the loss of all their personal belongings in the terrible retreat has fallen most heavily. The signatories to the appeal are undertaking to send out a certain amount of suitable clothing as gifts to the ladies and children who lost all their possessions, and these will be distributed by the direction of Madame Slavko Grouitch, the wife of the Serbian Under Secretary for Foreign Affairs. Gifts in money and kind, and also gifts of materials for making bandages and hospital garments for their own soldiers, are welcomed. Cheques should be made out to the Duchess of Somerset for "Serbian Officers' Families," and addressed in the same way to 35, Grosvenor Square, S.W., where all other gifts and parcels should also be sent similarly marked.

The programmes of the special concert to be given at the Haymarket Theatre on Sunday evening, the 20th inst., on behalf of the funds of the Wounded Allies Relief Committee, of Sardinia House, Kingsway, will be sold by well-known actresses. The concert will begin at eight o'clock. The artists who have kindly promised their services include Madame Ada Crossley, Madame Gleeson-White, Miss Phyllis Lett, Miss Caroline Hatchard, Mr. Walter Hyde, Mr. Robert Radford, Mr. Leonard Borwick, Mr. Henry Ainley, and Mr. Nelson Keys.

SCHOOLS for BOYS & GIRLS.

TUTORS for ARMY, UNIVERSITY, CIVIL SERVICE and ALL EXAMS. REFINED HOMES with EDUCATION for children whose parents are abroad.

Messrs. J. and J. PATON, having an intimate, unique, and up-to-date knowledge of the best Schools and Tutors in this country, will be pleased to aid parents in their choice by sending (free of charge) Prospectuses and Trustworthy Information regarding Establishments which can be thoroughly recommended.

The age of the pupil, district preferred, and rough idea of fees should be given.

J. and J. PATON.

— EDUCATIONAL AGENTS, —

143, Cannon Street, London, E.C.

APPOINTMENTS, PROMOTIONS, Etc.

Our Bucharest Correspondent reports (January 18) :—

Mr. Alexander Adams, Vice-Consul at the port of Sulina, has been transferred provisionally to Constantza. Mr. G. Marshall has meanwhile taken charge of the Vice-Consulate at Sulina.

M. Bileiuresco, Roumanian Consul-General at Budapest, who had been in Roumania, has returned to his post.

The Roumanian Government has given its assent to the appointment of a United States military attaché at Bucharest.

The King has been pleased to grant authority to Major Edward Abadie Plunkett, Lincolnshire Regiment, late British Military Attaché with the Serbian Army, to wear the Insignia of Third Class of the Order of the White Eagle, which decoration has been conferred upon him by his Majesty the King of Serbia, in recognition of valuable services rendered by him.

The King has been pleased to grant authority to Temporary Lieutenant-Colonel Arthur Patrick Bird Harrison, late British Military Attaché with the Serbian Army, to wear the Insignia of Third Class of the Order of the White Eagle, which decoration has been conferred upon him by his Majesty the King of Serbia, in recognition of valuable services rendered by him.

The Egyptian War Office Gazette announces that El Kaimakam C. E. Cox Bey, Assistant Director of Supplies, has been struck off the strength of the Egyptian Army, with effect from December 24, 1915.

OBITUARY.

SIR H. WYNDHAM, K.C.M.G,

Sir Hugh Wyndham, K.C.M.G., C.B., died at his residence, Rogate Lodge, Sussex, on Thursday last week, at the age of seventy-nine. The eldest son of Colonel C. Wyndham, he was educated at Harrow and Oxford, and entered the Diplomatic Service in 1857. After holding minor appointments in Berlin, Warsaw, Brussels, and Paris, he became Secretary of Legation at Athens in September, 1875, and was Acting Chargé d'Affaires there from June to October in the following year, and again for shorter periods in 1877 and 1878. He next went to Madrid and then to St. Petersburg. In August, 1881, he was transferred to Constantinople, where he remained until 1885, during which period he several times acted as Chargé d'Affaires. He was next promoted to be Minister Resident to the King of Serbia (February, 1885), and in the following year became Envoy Extraordinary and Minister Plenipotentiary. In 1888 he went to Brazil, as Envoy Extraordinary, first to the Emperor and then to the United States of Brazil. In 1894 he returned to the Near East, being transferred to Bucharest, and in 1897 he retired from the service. He was made a C.B. in 1878, and a K.C.M.G. in 1894.

MR. J. PAYNE.

We regret to announce the death of Mr. John Payne, the Arabic scholar and poet, which took place on the 11th inst. at his residence, 28, The Boltons. Mr. Payne was born on August 23, 1842, was educated privately, and was a solicitor by profession. He enjoyed a high and well-deserved reputation as a translator of French, Italian, Persian, and Arabic works. His translation of the "Thousand Nights and a Night," which was published in 1884 for the Villon Society, is at least as accurate as that of Burton, though not perhaps as racy; and it is maintained by many people that Burton owed much to Payne's work. Amongst other books Mr. Payne was the author of "The Mosque of Shadows, and Other Poems," "Tales from the Arabic," "The Quatrains of Omar Kheyyam of Nishepour," "The Poems of Shemseddin Mohammed Hafiz of Shiraz"; and early in 1914 the Villon Society announced that there were in preparation two important translations : "The Marvellous History of Seif ben Dhi Yezn : King of Yemen : A Romance-Cycle from the Ancient Arabic," in from four to six volumes, and "Ali Baba and the Forty Thieves," from the newly discovered Arabic text.

DOMESTIC ANNOUNCEMENTS.

The charge for Announcements under this Heading is 2s. for three lines and 1s. per line afterwards. Minimum charge, 3s. All announcements must be authenticated with the name and address of sender.

BIRTHS.

CARVER.—On January 30, at Oasis, Ramleh, Egypt, to Mr. and Mrs. S. R. P. Carver, a son.

SETON-WATSON.—On the 15th inst., at Corner House, Buckingham Street, S.W., the wife of R. W. Seton-Watson, of Ayton, Abernethy, Perthshire, of a son.

MARRIAGE.

AINSLIE—STEWART-WILSON.—On 14th inst., quietly, at Yateley Parish Church, by the Rev. J. Beardall, Vicar of Yateley, assisted by Rev. H. M. Piercy, Captain John Archibald Ainslie, King's Own Scottish Borderers, eldest son of Archibald Ainslie, Esq., and Mrs. Ainslie, of Dolphinton, Launceston, Tasmania, to Jean Blanche, only child of Sir Charles Stewart-Wilson, K.C.I.E., and Lady Stewart-Wilson, The Manor House, Yateley, Hants.

DEATH.

SMEED.—At Beni-Suef, Egypt, on January 23, Constance Violet, aged six years, daughter of Mr. and Mrs. A. E. Smeed.

FRIDAY, FEBRUARY 18, 1916.

THE GOAL IN THE NEAR EAST.

In face of the grim issues involved in the struggle now convulsing Europe there is a danger that the need for a separate settlement of the Near Eastern problem will be overlooked. That problem before the war was part of the European question. It remains so in some respects, for there can be no permanent peace on the Continent unless a final settlement is reached in the Near East. But as a result of the division of Europe into two hostile camps it will rest with the victors in the war to determine the main lines on which the problem is to find its solution, and any Peace Conference that may assemble on the suspension of hostilities should be called upon to take note only of the settlement, not to discuss its terms. It is as essential to the future peace of Europe that harmony should reign among the Balkan States as that Prussian militarism should be broken. The more doubtful the prospects of the separate States achieving good relations among themselves of their own free will, the more urgent the need that some authority superior to them all should remove the main causes of antagonism between them and impose upon them the observance of peace. In these circumstances the present situation in the Balkans has comparatively little bearing on the final settlement. The immediate concern of the Allies must be the elimination of Bulgaria as a factor in the war, and when this has been achieved they will have advanced a notable distance on the way to victory over the Central Powers. But in the meantime they will do well to keep clearly in view the goal they have set before themselves in the Near East. They desire the establishment of a durable peace, based on the recognition of the principle of nationality. With this object in view the Allies can afford to place all their cards upon the table, and by so doing they may materially shorten the military operations south of the Drave and Danube. Among those in arms against us are Jugoslavs and a number of Bulgarians who at heart are equally on the side of the Entente Powers. If all uncertainty regarding the future could be removed from the minds of both of these, their action must in due time have its effect on the course of the war. But the subject is one that calls for firm handling, inspired by knowledge and conviction. The lead among the Entente Powers can only be taken by Great Britain, and there must be no equivocal attitude towards either Allies or neutral States.

Let us take first the case of the Jugoslavs. Serbs, Croats, and Slovenes alike are heart and soul with the Entente Powers. For the time being the greater part of the male population within Austro-Hungarian jurisdiction is serving with the colours, but these no less than others who have found refuge abroad look to the present war to bring about the union of all their peoples and territories into one independent State. Their interests are inseparably linked with those of the Allied Powers, for such a State would form a permanent obstacle to the expansion of German Imperialism to the East. To what extent the war has been brought about by the anxiety of the Central Powers to crush for all time the Jugoslav aspirations we need not stop to inquire, but it is noticeable that recent events south of the Danube prompted the *Frankfurter Zeitung* to write as follows:

"The political reformation of the Balkans, which is to be one of the most important consequences of the war, has progressed during the last few days, inasmuch as the main resistance has been completely overwhelmed in the conquest of Serbia. Under the attacks of the Central Powers *another Jugoslav State* in the Balkans is collapsing." Community of interests should prompt the Allied Powers to make the Jugoslav cause their own, not only with a view to a permanent settlement in South-Eastern Europe, but also for the immediate purposes of the war. At any moment an opportunity may present itself to the Jugoslavs in the Austro-Hungarian army to detach themselves from a hated allegiance; but before they could contemplate such a step they must be sure of what the future has in store for them. There is reason to believe that they would hesitate to throw in their lot unreservedly with the Allies, because they suspect that the latter are capable of what they consider to be treachery to the Jugoslav idea. They make no secret of their fears, which have found expression in a number of resolutions and in published documents. It is supposed that the Allies are prepared in the event of a victory over the Central Powers to allow the Dalmatian coast to be handed over to Italy. Rightly or wrongly, the Jugoslavs believe that any partition of their national territory, and, above all, the cession of any part to a foreign Power, would not only check the development of Jugoslav unity, but would perpetuate the system now obtaining in Austria-Hungary, with all its consequent struggles and unrest. It is for the Allies to decide how far these fears are justifiable, and whether it is worth while to allay them. Until the Jugoslav population in Austria-Hungary has been reassured, we can reckon on little or no assistance from it in the struggle against the Central Powers. The Allies must, moreover, take note of their warning of a heritage of unrest which an inadequate solution of the Jugoslav question would bequeath to the new Europe, and, if they choose to ignore it, they will do well to state their reasons, in order that the Jugoslavs may learn the other side of the question.

There is an adage dear to grandmotherly minds which deprecates an attempt to divide the bear's skin before the animal is killed. If the moral has any practical application, it is for those who would spoil their chances of killing the bear by quarrelling amongst themselves. Neither proverbs nor commonsense discourage foresight and provision for the future in the event of certain happenings, and the principle has already been admitted in the solemn undertakings given to Belgium. *Consules videant ne quid respublica detrimenti capiat.* The formula applied to a state of war, and the Allied countries have the right to expect that their Governments will lose no opportunity of curtailing this war by adding to the resources on which they must rely for the final defeat of the enemy. If there is reason to suppose that a large Jugoslav force, whose interests are bound up with those of the Allies, is waiting to throw in its lot with them, the Entente Governments incur a grave responsibility, in allowing the opportunity to pass without sufficient justification. Promises made to Italy on incomplete knowledge cannot be allowed to prejudice the whole Allied cause. The Italians could be brought to realize that they will gain more by surrendering what they may have come to regard as theirs than by insisting upon the letter of an unwise agreement. The goal that the Allies have before them in the Near East includes also a permanent settlement of the differences between Bulgaria and her neighbours. As things are, that settlement must needs be an arbitrary one in the sense of being imposed from without; but it should not be artificial. A settlement can be found which will have been inspired by justice and due observance of the principle of nationality. It may entail compulsory migration here or there under proper safeguards and with full compensation; it must entail some sacrifice for the good of the Balkan Peninsula as a whole. Now is the time to thresh out that settlement in consultation (within clearly defined limits) with those concerned, in order that when the Bulgarians realize the certainty of their ultimate defeat, they may know what is the alternative to the prolongation of a hopeless struggle. No Government can well plead the stress of other preoccupations as an excuse for losing sight of one of the main objects of the war.

THE EGYPTIAN ARMY.

(By Our Cairo Correspondent.)

The calling up of the Egyptian *redifs* (reserves) for service with the camel transport that is being organised in connection with the Canal defences brings into prominence the Egyptian Army, and a short account of its constitution and its mode of recruiting may not be out of place at the present juncture, when the topic of universal service is so much to the fore.

Like all Continental countries, Egypt lives under the régime of conscription; but on the banks of the Nile compulsory service is enforced under very easy conditions and with the minimum of hardship to the people. According to the recruiting law of November 4, 1902, which laid down the conditions under which military service could be exacted—at a time, of course, when this country was still part of the Ottoman Empire—and which, with some slight modifications, holds good to-day, all males who are Ottoman subjects, born in Egypt of parents ordinarily resident there, and who have not become habitually resident in another portion of the Ottoman Empire; or who, being Ottoman subjects, have, or whose parents have, ordinarily resided in Egypt during the fifteen years prior to their attaining the age of nineteen or to their inscription on the recruiting lists while still under twenty-four years of age, or whose place of origin is in the Sudan, but who are ordinarily resident in Egypt, and have not been recognised as being of foreign nationality, are liable to compulsory military service.

Such liability commences with the age of nineteen, calculated according to the Gregorian calendar; but if a man has not been called up by the time he reaches the age of twenty-seven, he becomes exempt for life. Exemption can be purchased, as in the Ottoman dominions, by the payment of a sum—in Egypt £E20—made before the conscript's name comes on to the list of eligible men. It is also granted in certain specified cases. Thus, permanent Government officials and those serving on probation, Omdas and Sheikhs performing certain duties, sanitary barbers appointed by the Government, and N.C.O.'s and men voluntarily serving in the police or the coastguard on a ten years' contract, are exempt. So also are Ulema and Sheikhs of El Azhar and other mosques, including those of Sid El Bedawi and Said Ibrahim El Dessuki, recognised heads of religious corporations in Cairo, Sheikhs of Takias, certain employés attached to mosques and Fikis, who know the Koran by heart, provided they have no other regular occupation, priests and similar officials belonging to recognised religious communities, Christian and Jewish, students devoted to religious studies to the exclusion of secular occupations, and those in the personal service of the Sovereign. Persons of Bedouin extraction in the male line of descent, under certain limitations, are also entitled to exemption; so also are students at the various professional colleges during their training and provided they obtain their diplomas. In addition, exemption is granted to those whose fathers have held commissions in the army or have died from wounds or illnesses contracted during such service, and to those who are the only support of their parents or who have brothers serving under certain conditions. There are various other cases of exemption, but the foregoing are the more important.

Recruiting is carried out annually by commissions in each district, and the order in which persons liable for service are called up is determined by an annual ballot, those figuring thereon being taken as and when the needs of the army require. Conscripts called up may provide substitutes, who must be under twenty-four years of age and be already exempted; but they are held responsible for their substitutes during their service, which is in every respect the same as for ordinary recruits, and must take their place in the event of their substitutes deserting.

As the list shows, exemptions are granted on a very liberal scale. This is rendered possible by the fact that, although the country has a local male population of at least five millions, its standing army cannot exceed 18,000 men. Perhaps I should say "could not," for that limit was fixed by the Ottoman firmans which conferred the title of Khedive on the ruler of Egypt and laid down the powers that he could exercise as the vassal of Turkey. Now that the country has been emancipated from the yoke of Othman, this limitation no longer holds good.

So far, however, no advantage has been taken of the change in status to increase the Egyptian Army, the strength of which, as a matter of fact, is at the present moment about 15,000 men. These are enrolled in two squadrons of cavalry, three companies of mounted infantry, five batteries of artillery, three companies of garrison artillery, seventeen infantry battalions (eight Fellaheen, seven Sudanese, one Arab, and one Equatorial), with the addition of a camel corps, a reserve battalion of Sudanese, and a company recruited from the Nuba tribes.

Service in the army is for five years, after which the men remain for a like period in what is known as the *redif*, unless they are recruited on their release from the regular army for service in the police or the coastguard. Volunteers for ordinary service with the colours are accepted, provided they are of military age, or, if not, provided they have the consent of their legal guardians. Men discharged from the regular army may re-enlist for the five years which they have to serve in the reserve; but, although there is no limit, except age, to the time for which a man may remain with the colours, ten years is the maximum that he can be forced to spend in military service. The reserves may be called up for training annually for a period not exceeding thirty days. In practice, Egyptian reservists do no training, but the Sudanese put in fifteen days every year. The reserves may also be called up to assist in time of disturbance, or in carrying out sanitary regulations in time of epidemic. They can be likewise called out for military service in time of war or of national emergency, and it is in virtue of this clause in the recruiting law that the present summons has been issued. The last known occasion when the *redifs* were called out was during the Sudan campaign, when they were used in connection with the laying of the railway line, which played such a great part in the success of that campaign. Discharges take place every six months, and the number of men on the reserve list is always about 15,000—i.e., equivalent to the strength of the regular army. Those called out to-day are only the Fellaheen *redifs*, and the number concerned is, consequently, only 10,000, roughly, and not 15,000, as at first stated.

The Egyptian Army of to-day is organised on the lines laid down by Sir Evelyn Wood when he undertook the task of reorganisation, after the events of 1882 had brought about its disbandment. Since the day when, with his small band of twenty-six assistants, the great Field-Marshal, in the teeth of the most pessimistic opinion, put his hand to the plough and boldly set himself to retrieve the military reputation of Egypt, the Egyptian Army has not looked back. By good treatment and administration, and by efficient training, he succeeded in an incredibly short space of time in converting the Fellaheen from an undisciplined, cowardly, and incapable horde into a fighting force of real value, and the traditions which he inaugurated have been manfully carried on by those who succeeded him and his subordinates, amongst whom stand out prominently Lords Grenfell and Kitchener, the president Sirdar, Sir Reginald Wingate, and the present G.O.C. in Egypt, General Sir John Maxwell. Since the reconquest of the Sudan, in which the Egyptian Army took a highly creditable part, it has assisted in keeping the peace in that vast territory, and in subjugating the various tribes that resisted the central authority; and it has never failed to respond to all the calls made upon it by its officers, who, it may be mentioned, are selected from the best material that the British Empire can produce. It was very much to the regret of the Egyptian Army that the British Government decided that Egypt should not bear the burden of protecting her frontiers against the Turkish and German invader; but during the past eighteen months the troops have been afforded several opportunities of showing of what they are made, notably at Toussoum, at Tor, and at Abu-Zeneima. On all these occasions the units engaged acquitted themselves in a manner that fully came up to the expectations of those best qualified to know, and that reflected as much credit on the Egyptian Army as it did on the handful of British officers who, notwithstanding that they are debarred from seeking alongside their countrymen the laurels that they would most certainly earn, are assuredly doing just as valuable work for the Empire by remaining at the head of their Egyptian regiments.

THE WAR IN THE BALKANS.

THE FALL OF ERZEROUM.

The fall of Erzeroum is the salient feature of the week's military operations, and though, strictly speaking, the great Russian gain in Asia Minor does not concern these columns, nevertheless the disastrous defeat of the Turks in Armenia will doubtless find an echo in the Balkan theatre of the war. As is pointed out in our "Notes of the Week," "the best chance of profiting by the favourable turn of events on the Erzeroum front would seem to lie in a vigorous offensive against the Turkish lines of communication in Europe. "The fate of Baghdad, the collapse of Turco-German intrigues in Persia, and the dissipation of the 'army of Egypt'—if even the nucleus of it remains in being—all these can be more effectually hastened by cutting off the Turks from their German supports than by isolated actions in Asia Minor itself."

The Balkan Theatre.
